

**DEPARTMENT OF ZOOLOGY
S.V.U. COLLEGE OF SCIENCES
SRI VENKATESWARA UNIVERSITY :TIRUPATI**

**RESTRUCTURED CURRICULUM FOR
M.Sc. ANIMAL BIOTECHNOLOGY PROGRAMME
TO BE IMPLEMENTED WITH EFFECT FROM THE ACADEMIC YEAR
2021-2022**

SYLLABUS

Amended as per NEP-2020

December-2021

Animal Biotechnology:

Vision

1. Provide a sound knowledge in development of biological therapeutic agents through stem cells, recombinant technology and monoclonal antibody production etc.,
2. Provide inexpensive educational services to the weaker sections of society
3. Inculcate respect for nature and concern for ethical values among students through good and scientific educational practices.
4. Recognizing the essential roles of science and biology in the lives of citizens today and tomorrow, we emphasize biological literacy in our teaching and outreach programs.

Mission

1. To promote knowledge about the Animal biotechnology including cell culture, gene transfer technology, use of stem cell in therapies and guidelines to conduct experiment on animals.
2. To impart to the students the contemporary advancements in life sciences.
3. To impart a global perspective and such skills among students that benefit humanity.
4. To develop research aptitude and a scientific advancement.
5. Reinvent ourselves in response to the changing demands of society with high moral values as a good citizen

Choice Based Credit System (CBCS):

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

Students of this course would be expected to:

1. Be able to play leading role in industry, research and the public services;
2. Understand and appreciate major public concerns and issues associated with Animal Biotechnology;
3. Have an understanding and grasp of international research environment where the frontiers of knowledge in Animal Biotechnology are under research;
4. Be able to adapt and respond positively and flexibly to changing circumstances;
5. Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively;
6. Have the capacity for individual work and teamwork;
7. Be lifelong learners with intellectual and practical skills.

Animal Biotechnology Course Objectives:

The course is having the following objectives:

1. To create awareness on advanced streams like Stem Cell Biology, Animal Cell Culture, Genomics and Proteomics, Drug Design, Genetic Engineering and Bioinformatics.
2. To expose students to updated curricula and to recent advances in the subject and enable the students to face NET, SET and other competitive examinations successfully.
3. To provide hands on experience related to Animal Cell Culture, Molecular Techniques, Drug Design and Instruments handling so that the students can become familiar with practical works which would help to get bright future in the field of Pharmaceuticals and Biotechnology industries.
4. To prepare students to attract and develop interest in Drug Design, Cancer Biology, Animal breeding techniques, Fermentation technology and Downstream process so that the students can select Animal Biotechnology as their career.
5. The BOS in Animal Biotechnology expects that this new framework of curriculum caters the need of enabling students of subject to accept new challenges of dynamically changing modern era.

Program Educational Objectives:

1. Exposure of students to Animal Biotechnology and to provide them systematic tools of traditional and modern types to acquire this knowledge and skill.
2. To update the syllabus essential for appearing in NET, SET, GATE, ASRB and other competitive exams of UPSC and APPSC.
3. To make aware the students to know the natural resources of country, to utilize by sustainable methods and conservation of living resources.
4. To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self reliant India.

Program Specific Outcomes:

To develop self-employable ability and to apply knowledge for pharmaceutical and Biotechnology industries; it will also provide employment to other dependents.

The M.Sc. degree in Animal Biotechnology being offered by this University provides its students with a course of study that integrates a range of learning and teaching techniques relevant to their educational development and career ambitions. This Masters programme covers the latest developments in Animal Biotechnology and Drug Design. It provides theoretical knowledge as well as training in the practical and intellectual skills to enable students to better understand and then solve some of the problems in this subject. Graduates in this programme will be induced into critical thinking, and would be able to solve complex problems in Animal Biotechnology. The students would also be inculcated with personal and problem-solving skills that will enhance their employability prospects. Enhanced competence of students has been the key concern in designing and developing this syllabus. Careful thought has gone into selection of topics and setting their scope. Major areas of Animal Biotechnology like Molecular Biology, Animal Cell culture & Stem Cell Biology, Toxicology, Animal Reproduction, Breeding and Transgenic Technology, Genetic Engineering, Animal Biotechnology and Industrial Applications and Cancer Biology have been included in the syllabus only after multiple rounds of thorough discussions and intensive study. Special attention has been paid to subjects like Bioinformatics, Molecular Biology and Genetics to incorporate the latest developments in these fields.

Semester - I

S.No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	ABT-101	Mandatory	Metabolic Regulation & Cell Function (MRCF)	6	4	20	80	100
2		ABT-102	Mandatory	Tools & Techniques (TT)	6	4	20	80	100
3	Compulsory Foundation	ABT-103A	Optional - 1	Microbiology and Diseases	6	4	20	80	100
		ABT-103B		Environmental Biology					
4	Elective Foundation	ABT-104A	Optional - 1	Environmental Biotechnology	6	4	20	80	100
		ABT-104B		Human Health and Infectious Diseases					
5	Practical - I	ABT-105P	Paper 1 & 3	Lab-1	6	4		100	100
6	Practical - II	ABT-106P	Paper 2 & 4	Lab-2	6	4		100	100
Total					36	24	80	520	600
7	Audit Course-I				0	0	100	0	0

***All CORE Papers are Mandatory**

- **Compulsory Foundation - Choose one paper**
- **Elective Foundation - Choose one paper**
- **Audit Course – 100 marks (Internal) – Zero Credits under self study**
- **Interested students may register for MOOC with the approval of the concerned DDC but it will be considered for the award of the grade as open elective only giving extra credits.**

Semester - II

S.No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	ABT-201	Mandatory	Molecular Biology (MB)	6	4	20	80	100
2		ABT-202	Mandatory	Animal Cell culture & Stem Cell Biology (ACC-SCB)	6	4	20	80	100
3	Compulsory Foundation	ABT-203A	Optional - 1	Cell Biology & Immunology (CB&IM)	6	4	20	80	100
		ABT-203B		Animal Biotechnology					
4	Elective Foundation	ABT-204A	Optional - 1	Toxicology	6	4	20	80	100
		ABT-204B		Endocrinology					
5	Practical - I	ABT-205P	Paper 1 & 3	Lab-1	6	4		100	100
6	Practical - II	ABT-206P	Paper 2 & 4	Lab-2	6	4		100	100
Total					36	24	80	520	600
7	Audit Course-II				0	0	100	0	0

***All CORE Papers are Mandatory**

- **Compulsory Foundation - Choose one paper**
- **Elective Foundation - Choose one paper**
- **Audit Course – 100 marks (internal) – Zero Credits under self study**
- **Interested students may register for MOOC with the approval of the concerned DDC but it will be considered for the award of the grade as open elective only giving extra credits.**

Semester - III

S.No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	ABT-301	Mandatory	Enzymology (ENZ)	6	4	20	80	100
2		ABT-302	Mandatory	Animal Reproduction, Breeding & Transgenic Technology (ARBTT)	6	4	20	80	100
3	Generic Elective	ABT-303A	Optional - 1	Bioinformatics & Biostatistics	6	4	20	80	100
		ABT-303B		Genetic Engineering (GE)					
4	Practical - I	ABT-304P	Core & Generic Electives	Lab-I	6	4		100	100
5	Skill Oriented Course	ABT-305	Mandatory (Theory + Practical)	Bio resource Technology (Apiculture, Sericulture, Aquaculture, Vermiculture)	6 (3+3)	4	10	90 (40 + 50)	100
6	Open Elective	ABT-306A	Optional - 1	Animal Biotechnology & Industrial Applications	6	4	20	80	100
		ABT-306B		Cancer Biology					
Total					36	24	90	510	600

***All CORE Papers are Mandatory**

- **Generic Elective - Choose two**
- **Core papers and Generic electives opted paper held Practical-I**
- **Skill Oriented Course is Mandatory. Relevant to Society along with practical (10 marks Internal, 40 final theory & 50 for practical's)**
- **Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**
- **Interested students may register for MOOC with the approval of the concerned DDC.**

Semester - IV

S.No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	ABT-401	Mandatory	Medical Biotechnology (MBT)	6	4	20	80	100
2		ABT-402	Mandatory	Fermentation Technology and Downstreaming Process (FTDSP)	6	4	20	80	100
3	Generic Elective	ABT-403A	Optional -1	Drug design and Development	6	4	20	80	100
		ABT-403B		Biosafety, Bio Ethics & Intellectual Property rights					
4	Practical - II (Project)	ABT-404	Mandatory	Project (Dissertation preparation & Submission)	6	4		100	100
5	Project Work	ABT-405	Mandatory	Viva-Voce	6	4	10	100	100
6	Open Elective	ABT-406A	Optional -1	Advanced Genomics and Proteomics	6	4	20	80	100
		ABT-406B		Animal Cell Culture Techniques					
Total					36	24	120	480	600

***All CORE Papers are Mandatory**

- **Generic Elective - Choose two**
- **Core papers and Generic elective opted paper held Practical-II**
- **Project Work – Collaboration with various firms/companies/societies.**
- **Multi-disciplinary course is Mandatory. Circle formation with other subjects/Dept. of Arts/Commerce**
- **Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**
- **Interested students may register for MOOC with the approval of the concerned DDC.**

CORE ABT-101:METABOLICREGULATIONAND CELLFUNCTION

Course Objectives:

1. To gain knowledge on chemical bonds, thermodynamics principles and metabolisms of Glycolysis, TCA Cycle and their biomedical importance.
2. To understand metabolic discords of urea cycle and importance of proteins structure and functions.
3. To learn biosynthesis of purine and pyrimidine nucleotide and Clinical disorders of purine and pyrimidine metabolism
4. To become proficient in Biomedical importance of lipids and over view metabolism of carbohydrate, protein and lipids

UNIT-1.

- 1.1 Chemical Bonds (Covalent, Ionic and Hydrogen Bonds) and Thermodynamic principles in Biology (Enthalpy, Entropy, Free energy, First law and Second law of thermo-dynamics in relation to Biological system).
- 1.2 Carbohydrates: Definition and Classification- Structure and function of important Mono, Oligo and Polysaccharides.
- 1.3 Intermediary Metabolism-I: Glycolysis, TCA Cycle and their Bio-medical importance.
- 1.4 Intermediary Metabolism-II: Gluconeogenesis, HMP Shunt, Metabolism of Galactose andFructose and their Bio-medical importance.

UNIT-2.

- 2.1 Proteins: Definition and Classification- Structure (Primary, Secondary and Tertiary structures, Protein folding and denaturation) and function of important Proteins- Haemoglobin, Myosin and Actin.
- 2.2 Bio-synthesis of nutritionally non-essential amino acids and their Bio-medical importance.
- 2.3 Catabolism of Proteins and Amino acids-I: Biosynthesis of Urea- Detoxification ofAmmonia- Metabolic disorders of Urea cycle.
- 2.4 Catabolism of Proteins and Amino acids-II: Phenylalanine, Tryptophan, Biosynthesis and degradation of Polyamines and their Bio-medical importance.

UNIT-3.

- 3.1 Chemistry of purines, pyrimidines, Nucleosides, Nucleotides, Synthetic derivatives.
- 3.2 Biosynthesis of purine nucleotides, Catabolism of purines.
- 3.3 Biosynthesis of pyrimidine nucleotides, Catabolism of Pyrimidines,
- 3.4 Clinical disorders of purine and pyrimidine metabolism; Hyperurecemia or gout; Hypo-urocemia, Oroticaciduria.

UNIT-4.

- 4.1 Biomedical importance, Classification of lipids; Saturated and unsaturated fatty acids; Triacylglycerols (tri-glycerides), Phospholipids, Glycolipids, Steroids, Lipid peroxidation.
- 4.2 β - oxidation of fatty acids, Oxidation of unsaturated fatty acids, Ketogenesis.
- 4.3 Biosynthesis of long chain fatty acids (Palmitic acid), Clinical aspects.
- 4.4 Overview of Metabolism(Carbohydrate, Protein and Lipid): Integrated metabolism at tissue and organ level(Kidney, Liver, Muscle, Adipose tissue and Small intestine);Metabolic interrelationships among Adipose tissue, Liver and Extra hepatic tissues

Course Output:

1. Thermodynamics principles and metabolisms of Glycolysis, TCA Cycle and their biomedical importance can be learnt
2. Students can understand metabolic discords of urea cycle and importance of proteins structure and functions
3. Biosynthesis of purine and pyrimidine nucleotide and Clinical disorders of purine and pyrimidine metabolism; Biomedical importance of lipids and over view metabolism of carbohydrate, protein and lipids can be understood

SUGGESTED READING MATERIAL:

1. D.Voet and J.G Voet, Biochemistry, 1. Wiley & Sons.
2. David L. Nelson and Michael M. Cox, Lehninger; Principles of Biochemistry, McMillan Lange Medical
3. Robert K. Murray, D.K. Granner, P.A. Mayes and V. W. Rodwell; Harper's Biochemistry, Worth Publishers.

CORE ABT-102:TOOLS&TECHNIQUES

Course Objectives:

1. To acquire skills in chromatography, centrifugation, electrophoresis and blotting techniques
2. To get knowledge on cell and tissue culture, cell types, culture media and overview of stem cell biology
3. To acquire skill on electromagnetic spectrum, type of detectors, electrophysiological methods and brain activity recording techniques
4. To learn microscopic techniques, different fixation and staining techniques, tissue processing for microtomy, cryotechniques

UNIT-1.

- 1.1 Chromatography: Molecular sieve chromatography: Principle, Determination of void volume and molecular mass of native molecules. Ion exchange chromatography: Ion exchange materials – Cation and anion exchange materials. Principle and separation of charged molecules. Principle and application of TLC and HPLC.
- 1.2 Centrifugation. Techniques-Density gradient, ultra centrifugation.
- 1.3 Electrophoresis: principle, Matrices used in electrophoresis – PAGE for separation of proteins, molecular mass determination. Separation of nucleic acids using agarose gel- electrophoresis. Pulse field electrophoresis and isoelectric focusing.
- 1.4 Blotting techniques: western, southern and northern blotting techniques.

UNIT-2.

- 2.1 Introduction to cell and tissue culture: Preparatory techniques – cleaning, sterilization, sterile handling tissue culture laboratory requirements, Design of tissue culture laboratory: Equipments and purpose.
- 3.1 Cell types (Primary and secondary) and cell lines, Cell proliferation measurements, Cell viability testing: Dye inclusion and dye exclusion tests.
- 2.2 Culture media: composition, preparation and sterilization, macro and micro nutrients, Importance of serum and limitation with serum media, cell harvesting methods.
- 2.3 The biology of stem cell: overview; different types of stem cells – embryonic stem cells, fetal tissue stem cells, adult stem cells, stem cell nuclear transfer; somatic cell nuclear transfer, Animal cloning.

UNIT-3.

- 3.1 Electromagnetic spectrum of light- Simple theories of absorption of light by molecules. Beer-Lambert law.
- 3.2 Types of detectors: UV-Visible spectrophotometry, Infra-red spectrophotometry, Fluorescent spectroscopy. Flame photometry, AAS.
- 3.3 Electrophysiological methods: Single neuron recording, patch-clamp recording, ECG
- 3.4 Brain activity recording, lesion and stimulation of brain, pharmacological testing, PET, MRI, CAT.

UNIT-4.

4.1

Microscopic techniques: Principles of microscopy Scanning and transmission microscopes. Image processing methods in microscopy.

4.2 Different fixation and staining techniques for Light microscope and Electron microscope.

4.3

Microtomy and processing of tissues for Light microscope and Electron microscope. Cryopreservation and cryotechniques for microscopy

4.4 Freeze-etch and freeze-fracture methods for EM.

Course Output:

1. Technical skill can be gained on chromatography, centrifugation, and electrophoresis and blotting
2. Cell and tissue culture techniques can be learnt, knowledge on cell types can be gained
3. Skills can be acquired on electromagnetic spectrum, type of detectors, electrophysiological methods and brain activity recording techniques.
4. Microscopic techniques, different fixation and staining techniques, tissue processing for microtomy, cryotechniques can be understood

SUGGESTED READING MATERIAL:

1. A Biologists Guide to Principles and Techniques of Practical Biochemistry, K. Wilson & K. W. Goulding, ELBS Edn.
2. Animal Cell Culture – A practical approach, Ed. John R. W. Masters IRL Press.
3. General Zoological Microtechniques - P.M. Weesner.
4. Principles and techniques of Biochemistry and molecular biology by Kein Wilson and John Walker, VII volume, Cambridge press Edition.
5. Neuroanatomical Techniques, N.J. Strassfeld and T.A. Miller Springer Verlag, New York Heidelberg, Berlin.

6. Principles of NeuroPsychopharmacology-Robert S. Feldman, Jerrold S. Meyer and Lind F. Quenzer. Sinauer Associates, Inc. Publishers. Sunderland, Massachusetts.
7. Biophysical chemistry by Upadhyay– Upadhyay-Nath.

CF ABT-103A:MICROBIOLOGYANDDISEASES

Course Objectives:

1. To understand microorganisms classification and structure of prokaryotic and eukaryotic microorganism
2. To get knowledge on Nutritional requirements to microorganisms, growth of microorganism, control of microorganism and microbes of biotechnological importance
3. To become proficient in chemical nature of gene, plasmids incompatibility, horizontal transfer of genome among the microbial community and Benzer's classical studied on II locus
4. To learn diseases caused by microorganisms

UNIT-1.IntroductiontoMicrobiology

- 1.1 Discoveringthemicrobialworld.Classificationofmicroorganismsuptoorderlevel-bacteria, algae, fungi, protozoa.
- 1.2 Structureofprokaryoticandeukaryoticmicroorganisms.Generalanddistinctivecharacteristics of the major groups of microorganism bacteria, mycoplasma, chlamydiae, rickettsias, actinomycetes, fungi, algae, protozoa Prions and viruses.
- 1.3 Isolation, cultivation and enumeration of microorganisms - direct and indirect methods, Maintenanceof culture.
- 1.4 Outlinesofcharacterizationandidentificationofcommonbacteria, fungi, algaeandprotozoa.

UNIT-2.Microbialnutrition,growthandregulation

- 2.1 Nutritional requirements to microorganisms - Mode of nutrition - phototrophy, chemotrophy - methylotrophy organotrophy, mixotrophy, saprophytic, symbiotic and parasitic, Interaction of microbes.
- 2.2 Growth of microorganism (bacteria) - normal and biphasic growth curve, batch and continuous cultures, chemostats, shift up and shift down. Growth determination, Microbial metabolism - energy yielding and energy requiring processes.
- 2.3 Control of microorganisms - principles, physical and chemical agents, Assay of antimicrobial action. Batch and continuous sterilization of media and air. Viruses - nature, cultivation and assay methods, structure, physico-chemical properties, classification, pathogenicity, Replication of viruses.

2.4 Microbes of biotechnological importance - examples of bacteria, yeast, algae and viruses.

UNIT-3.

Microbial Genetics

3.1 Chemical nature of gene, Concept of gene, operon, mosaic genes/split genes.

3.2 Plasmids incompatibility. Classification: copy number, control and its significance. Structure and functions of insertion elements (IS)- transposable elements. Mechanism of transposition. Catabolic transposons and their significance.

3.3 Horizontal transfer of genome among the microbial community - transformation, conjugation, transduction - generalized transduction, specialized transduction - cotransduction.

3.4 Benzer's classical studies on *III* locus. Cistron complementation - Elucidation of co-linearity between DNA and protein sequence. Genetics of viruses - bacteriophage, lambda, SV40, retroviral genome (HIV), replication, lytic and lysogenic cascades.

Unit 4. Diseases caused by microorganisms

4.1 Viral diseases: Flu, Dengue fever, Hepatitis,

4.2 Bacterial diseases: Cholera, tuberculosis, anthrax,

4.3 Fungal diseases: Athlete's foot, Dutch Elm disease, ergotism

4.4 Protozoan diseases (Protista): Malaria, Sleeping sickness, dysentery And Plant Pathogens: TMV, Rust

Course Output:

1. Microorganisms classification and structure of prokaryotic and eukaryotic microorganism can be learnt
2. Nutritional requirements to microorganisms, growth of microorganism, control of microorganism and microbes of biotechnological importance can be understood
3. Chemical nature of gene, plasmids incompatibility, horizontal transfer of genome among the microbial community and Benzer's classical studies on *II* locus can be proficient
4. Diseases caused by microorganisms can be understood

SUGGESTED READING MATERIAL:

1. Microbiology - M.J. Pelczar, E.C.S. Chan, Noel R. Krieg. Tata McGraw-Hill Edition.
2. Prescott's Microbiology - Christopher J. Woolverton, Linda Sherwood, Joanne Willey. Tata McGraw-Hill Edition.
3. Textbook of Microbiology - Ananthanarayan and C.J. Paniker, 7th Edition

CF ABT-103B: ENVIRONMENTAL BIOLOGY

Course Objectives:

While studying the **Environmental Biology**, the student shall be able to:

1. The objectives of the course are to develop the ability to solve the problems related to the environment, to make them aware of various eco-friendly techniques and modern techniques to solve various environment-related problems.
2. The objective of this course is to make awareness among the young students about the surrounding environment, the impact of climate change and its mitigation and biodiversity.
3. The aim of the contents of this course is to introduce and explain about various conservation issues of the ecosystem and animals.
4. Man himself is a part of ecosystem. The ecosystems in the world are continuously under the pressure of anthropogenic activities and human mediated ecological changes. Several animal species are under the survival threats. To introduce the students about wildlife and wild habitats, about depleting wild life and human wildlife conflict.
5. Generate an interest in Ethology in order to understand the complexities of both animal and human behavior.
6. To understand the basic theories and Principles of Ecology.
7. To learn about current environmental issues based on Ecological principles.
8. To study Environmental pollution and their management.

UNIT-1.

- 1.1 A general account on Biomes and their environments.
- 1.2 Fresh Water: Classification and Characteristics, eutrophication, seasonal changes.
- 1.3 Marine: Classification and Characteristics.
- 1.4 Terrestrial: Forests – Grass lands – Tundra – Desert.

UNIT-2.

- 2.1 Trophic dynamic view of ecosystem and energy flow.
- 2.2 Ecological Energetics and productivity of ecosystems.
- 2.3 Impact of environmental factors on Energy flow.
- 2.4 Bioaccumulation and Biological magnification.

UNIT-3.

- 3.1 Air Pollution: Criteria and standards in India, health hazards and Toxicology – Green house gases and Green House Effect.
- 3.2 Water Pollution: Criteria and standards in India, health hazards and toxicology.
- 3.3 Role of environmental epidemiological studies and health indices in evaluation of environmental health hazards: environmental epidemiological episodes in India and Abroad.
- 3.4 Environmental Laws; Environmental Laws in India – legislation and Execution.

UNIT-4.

- 4.1 Biomonitoring
- 4.2 Bio indicators and environmental monitoring, Environmental impact assessment.
- 4.3 Bioremediation: Need and scope of bioremediation, Environmental applications of bioremediation. Future outlook of Bioremediation: Phytoremediation, Biotechnological cleaning up of the environment by plants.
- 4.4 Natural calamities and disaster management.

Course Outcomes:

1. The student will get idea about the ecological process in its surrounding and at National and Global level and the use of student knowledge on Ecology, Behaviour can be applied to Education, Research and Extension programmes in his further career.
2. Students will be understanding the various features and aspects of population ecology, community ecology and ecosystem ecology. They might have the knowledge about environmental biology in details. They will acquire knowledge about various tools and techniques of field ecology.
3. Students will be able to apply the scientific method and quantitative techniques to describe, monitor and understand environmental systems.
4. Students will be able to use interdisciplinary approaches such as ecology, economics, ethics and policy to devise solutions to environmental problems.
5. Students will be able to be proficient in ecological field methods such as wildlife survey, biodiversity assessment, mathematical modeling and monitoring of ecological systems.
6. Students will be able to use technology, such as geographical information systems and computer programming, to assist in problem solving.

7. This paper will help in creating skilled personnel in the field of environment protection and research.
8. Demonstrated an understanding of Ecological relationships between organisms and their environment.

SUGGESTED READING MATERIAL:

1. Animal Physiology - Adaptation & Environment. 4th Edition Knut Schmidt - Nielsen - Cambridge University Press.
2. Biochemical ecology and water pollution - PR Dugan, plenum press, London, 1972.
3. Biodegradation & Bioremediation - 2nd edition, Martein Alexander - Academic Press, 1999 USA.
4. Chemical and biological methods for water pollution studies R.K. Trivedy and P.K. Goel, 1984.
5. Current pollution researches in India - RK. Trivedy and P.K. Goel. Karad.
6. Ecology & Environment - P.D. Sharma, 1991.
7. Ecotechnology for pollution control and environmental management, enviromedia, Karad, RK. Trivedi.
8. Encyclopedia of environmental pollution and control, enviromedia, Karad, Vol. 1 & 2, R.K Trivedi.
9. Environmental Biology and Toxicology - P.D. Sharma, Rastogi Publications, Meerut (India), 1998.
10. Environmental Physiology of desert organism. Ed. by N.F. Hadley - Dowden Huchinson and Ross, Inc. Penn. USA.
11. Environmental Science Research Volumes: Vol.1. Indicators of environmental quality - W.A. Thomas, 1972. Vol.3. Environmental pollution by pesticides - C.A. Edwards, 1974.
12. Field Biology & Ecology - Allen H Benton & E. Werner, JR, 1980.
13. Health hazards and human environment, World Health Organization (WHO) 1972.
14. Industrial Pollution - VP. Kudesia, 1990.
15. Methods in Environmental Analysis - Water soil and air by P.K. Gupta - Agrobios (India), Jodhpur, 2001
16. Pesticides in the environment - R White Stevrens, Marcel Dekker Inc. New York, 1971.
17. Practical methods in Ecology & Environmental Science, RK. Trivedy, Goel, Trisal, 1997.
18. The Ecology of waste water treatment - H.A. Hawkes pergoman press, 1963a. Vol.5 Environmental dynamics of pesticides - R. Hague and V.H. Preed, 1975.
19. Water Treatment and purification technology - W.J. Ryan, Agrobios (India), Jodhpur, 2002.

EF ABT-104A: ENVIRONMENTAL BIOTECHNOLOGY

Course Objectives:

1. To gain knowledge on waste and pollutants, hazards from wastes and pollutants and hazards from chemicals in wastes
2. To understand waste treatment, treatment of liquid wastes, treatment of solid waste and contributions of biotechnology to waste treatment
3. To become proficient in aerobic waste water treatment and measurement of pollution levels
4. To learn anaerobic treatment of waste water, biodegradation of xenobiotics compounds, hazards from xenobiotics and bioremediation

UNIT-1.

- 1.1 Introduction,
- 1.2 Waste and Pollutants: Manufacturing, energy production, agriculture and dairy, transport, House Building and Domestic activities.
- 1.3 Hazards from wastes and pollutants; biological agents present in wastes.
- 1.4 Hazards from chemicals in wastes, Hazards from physical pollutants.

UNIT-2.

- 2.1 Waste treatment: Biofilters.
- 2.2 Treatment of Liquid wastes
- 2.3 Treatment of solid waste.
- 2.4 Contributions of Biotechnology to waste treatment.

UNIT-3.

- 3.1 Aerobic wastewater treatment
- 3.2 Measurements of the level of pollution.
- 3.3 The process of waste water treatment. Aerobic reactors or digesters, Microorganisms.
- 3.4 Anaerobic treatment of wastewater: Microorganisms, Sludge Treatment

UNIT-4.

- 4.1 Biodegradation of Xenobiotic compounds: Types of Recalcitrant Xenobiotic compounds.
- 4.2 Hazards from Xenobiotics, General features of Biodegradation of Xenobiotics.
- 4.3 Biodegradation of halogenated compounds. The origin of capacity to degrade Xenobiotics.
- 4.4 Bioremediation: Microbial Bioremediation.

Course Output:

- 1. Knowledge will be gained on waste and pollutants, hazards from wastes and pollutants and hazards from chemicals in wastes
- 2. Waste treatment, treatment of liquid wastes, treatment of solid waste and contributions of biotechnology to waste treatment can be understood
- 3. Aerobic waste water treatment and measurement of pollution levels will be proficient
- 4. Anaerobic treatment of waste water, biodegradation of xenobiotics compounds, hazards from xenobiotics and bioremediation will be learnt

SUGGESTED READING MATERIAL:

- 1. A Text Book of Biotechnology, HD Kumar (WE Pub.)
- 2. Biodegradation and Detoxification of Environmental Pollutants – Chakrabarty
- 3. Biotechnology by B. D. Singh. Kalyani Publishers, 2007.
- 4. Concepts in Biotechnology – Balasubramanian, Bryce, Dharmalingam, Green and Jayaraman.
- 5. Environmental Biotechnology by Alan Scragg. Pearson Education Limited, England.
- 6. Environmental biotechnology by S.N. Jogdand. Himalaya Publishing House. Bombay.
- 7. Environmental chemistry by A.K. De Wiley Eastern Ltd. New Delhi.
- 8. Environmental Microbiology – Grant and Long.
- 9. Environmental Microbiology – Mitchall.
- 10. Introduction to Biodeterioration by D. Allsopp and K.J. Seal, ELBS/Edward Arnold.
- 11. Microbial Ecology – Fundamentals and Applications – Atlas and Bartha.
- 12. Prescott and Dcenn, S Industrial Microbiology – Reed (Ed).

EF ABT-104B: HUMAN HEALTH AND INFECTIOUS DISEASES

Course objectives:

While studying the **Human Health and Infectious Diseases** course, the student shall be able to:

1. To introduce the basic concepts of pathophysiology of infectious diseases
2. To study the major infectious diseases transmission to humans and response of immunity
3. To understand the Pathogenesis, mechanisms of pathogenesis; transmission and epidemiology of various bacterial, viral, fungal and protozoan diseases.
4. To study the Sexually transmitted diseases.
5. To study the prevention and control measures of infectious diseases

Unit-1.

Introduction to Infectious Diseases: Basic concepts in pathophysiology of infectious diseases, Outline of physiological mechanisms leading to diseased state, Infectious disease transmission, Infection and immunity, Acute and Chronic Infections, Major infectious diseases of humans.

Unit-2.

Bacterial Infections: Pathogenesis, mechanisms of pathogenesis; transmission, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major human infections (Tuberculosis, Cholera, Typhoid).

Unit-3.

Viral Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and anti-retroviral therapy of Human immunodeficiency virus (HIV/AIDS); Sexually transmitted diseases.

Unit-4.

Fungal and Protozoan Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major Fungal human pathogens: (Dermatophytes, Candida, Aspergillus); Protozoal human pathogens (Plasmodia and Trypanosoma).

Course Outcomes:

1. Learn the basic concepts of Infectious diseases and the role of immunity to control infections
2. Provides knowledge on the physiological mechanisms leading to diseased conditions.
3. Students gains knowledge on the pathogenesis and transmission of infectious diseases.
4. This insight allows the students to learn the treatment methods to control the growth and control of microbes.

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand& Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.
3. Biotechnology-V.Kumaresan.Saras Publication-1994.

ABT 105P : ABT -101 (Core) & ABT -103A or ABT -103B (CF)

ABT 106P : ABT -102 (Core) & ABT -104A or ABT -104B (EF)

AUDIT COURSE

ABT-107:HUMAN VALUESANDPROFESSIONALETHICS-I

Course Objectives:

1. To gain knowledge on nature of ethics its relation to religion. Politics, Business
2. To understand nature of values Good and Bad, end and means, analysis of basic moral concepts, good behavior and respect for elders, character and conduct
3. To become proficient on Bhagavad Githa
4. To learn crime and theories of punishment

I. DefinitionandNatureofEthics-

ItsrelationtoReligion,Politics,Business,Law,MedicineandEnvironment.NeedandImportanceofProfessionalEthics-Goals–EthicalValues invariousProfessions.

II. NatureofValues-GoodandBad,EndsandMeans,ActualandpotentialValues,Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty,obligation, justice, responsibility and freedom, Good behavior and respect for elders,Characterand Conduct.

III. Individualand society:Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha (Non-stealing).Purusharthas (Cardinal virtues) Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

IV. BhagavadGita–(a)Niskamakarma.(b)Buddhism–TheFourNobleTruths–

Aryaastangamarga,(c)Jainism–

mahavratasandanuvratas.ValuesEmbeddedinVariousReligions, Religious Tolerance, GandhianEthics.

V. Crime and Theories of punishment – (a) Reformative, Retributive and Deterrent. (b)Viewson manu and Yajnavalkya.

Course Output:

1. Knowledge on nature of ethics its relation to religion. Politics, Business will be gained
2. Nature of values Good and Bad, end and means, analysis of basic moral concepts, good behavior and respect for elders, character and conduct can be understood
3. Will be proficient on Bhagavad Githa
4. Crime and theories of punishment can be learnt

SUGGESTED READING MATERIAL:

1. JohnSMackenzie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Management Ethics—integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books: New Delhi.
4. "Ethics in Management" by S. A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S. K.: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed.) G. C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol. I, II and III, Varanasi, Vol. I, 16-20, 21-32 and 74-77 only.
11. Caraka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkamba Sanskrit Series office, Varanasi, II, III, IV, 183-191.
12. Ethics, Theory and Contemporary Issues, Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.

CORE ABT-201:MOLECULARBIOLOGY

Course Objectives:

1. To gain knowledge on DNA structure, genome of Nuclear and mitochondrial and maternal Inheritance
2. To understand replication in prokaryotes, Enzymology of DNA replication, Discontinuous replication and Bidirectional replication
3. To understand synthesis of RNA, Types of RNA, Genetic code and Ribosome structure
4. To learn gene regulation I and II and Operon concepts

UNIT-1.

- 1.1 Watson and Crick Model: Types of DNA; Properties of DNA(C-value paradox, Cot value)
- 1.2 Nuclear and mitochondrial genome, mitochondrial and maternal Inheritance
- 1.3 Structure of gene (Cistron, Muton, Recon, Cis-trans test)
- 1.4 DNA damage and repair: Biological indication of repair, photoreactivation, Excision repair, Recombination repair, SOS repair, and Mismatch repair.

UNIT-2.

- 2.1 Replication in Prokaryotes: Geometry of DNA replication, semi conservative replication.
- 2.2 Enzymology of DNA replication: DNA polymerase I, II and III; Replication of Eukaryotic Chromosomes; Eukaryotic DNA polymerases; Multiple fork; Replication of Chromatin.
- 2.3 Discontinuous Replication: Fragments in Replication fork and detection of fragments; Events in the Replication fork; De novo initiation and covalent extension.
- 2.4 Bidirectional replication, Termination of replication.

UNIT-3.

- 3.1 Synthesis of RNA:- RNA Polymerase, Promoter, Auxiliary Proteins, RNA chain initiation, elongation, termination and Splicing mechanism
- 3.2 Types of RNA, Processing of mRNA, rRNA and tRNA, Ribozyme.
- 3.3 Genetic code, Identification of start and stop codon, Universality of genetic code Degeneracy, Wobblers Hypothesis. Codon usage, Genetic code of Mitochondria.
- 3.4 Ribosome structure (Prokaryotic and Eukaryotic), Protein synthesis: Initiation, Elongation and Termination of polypeptide chain, Signal peptide hypothesis, Post translational modification, Polyproteins, Inhibitors of translation.

UNIT-4:

4.1 Temporal response, Induction, Repression, Lac Operon, Galactose Operon.

4.2 Lambda Operon, Tryptophan Operon.

4.3 Generegulation in Eukaryotes-I: Gene families, Gene alteration (Gene loss, Gene amplification, gene rearrangement), Regulation of synthesis of primary transcripts (gene organization that affects regulation-Activator gene; Transcriptional control by hormones, Methylation).

4.4 Generegulation in Eukaryotes-II: Brief description of fundamentals of Chromatin remodeling, Enhanceosome, Reporter or Chimeric genes, Role of binding motifs in gene expression (Helix-Turn-Helix motif, Zinc finger and Leucine Zipper), miRNA.

Course Output:

1. DNA structure, genome of Nuclear and mitochondrial and maternal Inheritance will be understood
2. Knowledge will be gained on replication in prokaryotes, Enzymology of DNA replication, Discontinuous replication and Bidirectional replication
3. Synthesis of RNA, Types of RNA, Genetic code and Ribosome structure can be understood
4. Gene regulation I and II and Operon concepts can be learnt

SUGGESTED READING MATERIAL:

1. Biochemistry by A.L. Lehninger
2. Cell and Molecular Biology - E.D.P. De Robertis and E.M.F.
3. Concepts in Molecular Biology - S.C. Rastogi, V.N. Sharma and Ananda Tandon (1993) Genes VII by Benjamin Lewin.
4. Harper's review of Biochemistry by D.W. Martin et al 1990
5. Molecular Biology by David Freifelder, 1993

CORE ABT-202:ANIMALCELLCULTURE&STEMCELLBIOLOGY

Course Objectives:

1. To understand animal cell culture, biology of stemcells and embryonic stem cell
2. To learn propagation of embryonic stem cells, nuclear transfer technology, animal cloning and stem cell differentiation
3. To gain knowledge on stem cell plasticity, stem cell assay and protocols, stem cell separations and stem cell therapies
4. To learn stem cells and tissue engineering, human embryonic stem cells and society, intellectual property results

UNIT-1.

- 1.1 Introduction to animal cell and tissue culture: Components of cell culture, cell types and cell lines, different substrates, types of culture.
- 1.2 Animal cell culture: experimental works – Technological uses of Animal cell cultures - Prospects.
- 1.3 The biology of stem cells: Overview; different types of stem cells- embryonic Stem cells, fetal tissue stem cells, adult stem cells; nuclear transfer of stem cells; human & animal cloning. Animal stem cell protocols & research.
- 1.4 Embryonic stem cells: the blastocyst and inner cell mass cells primitive endoderm implantation; blastocyst development in vitro.

UNIT-2.

- 2.1 Isolation and propagation of embryonic stem cells; chimeras; generation of knockout mice.
- 2.2 Nuclear transfer technology: Transfer of nuclei into eggs; development potential of transplanted nuclei; reprogramming a nucleus.
- 2.3 Animal cloning: Overview; challenges in human therapeutic cloning; somatic cell nuclear transfer in humans: pronuclear early embryonic development.
- 2.4 Stem cell differentiation: Overview; adult stem cells; fetal stem cells; human embryonic stem cells; human parthenote stem cells.

UNIT-3.

- 3.1 Stem cell plasticity: Overview; self-renewal potential; differentiation versus stem cell renewal; transdifferentiation; cell cycle dynamics of different stem cells.
- 3.2 Stem cell assays and protocols: Isolation of defined stem cell populations; progenitor cell assays, sources of progenitor cells, cytokine and chemotherapy approaches to mobilization of progenitor cells; flow cytometric techniques; methods of cell selection using monoclonal antibodies.
- 3.3 Magnetic approaches to cell separation, Dyna beads, nano particle preparations; growth factors and ex-vivo expansion of hematopoietic stem / progenitor cells bioreactors for expansion.
- 3.4 Stem cell therapies: Clinical applications of stem cell therapy; neurodegenerative diseases- Parkinson's disease, Alzheimers, spinal cord injury, other brain syndromes; tissue system failures- diabetes, cardiomyopathy, kidney failure, liver failure, hemophilia, lymphoma and leukemic malignancies requiring stem cell therapy.

UNIT-4.

- 4.1 Stem cells & tissue engineering: Role of nanoparticles; organ development; nanoparticles as scaffolds.
- 4.2 Human Embryonic Stem Cells and Society: The religious, legal, ethical and scientific debate; the future of the debate; the regulatory aspects of therapeutic use of stem cells.
- 4.3 Bioethical, Environmental and Health issues related to Biotechnology.
- 4.4 Intellectual property results – patents and protection of ideas – Risk and Reward.

Course Output:

1. Knowledge will be gained animal cell culture, biology of stem cells and embryonic stem cell
2. Propagation of embryonic stem cells, nuclear transfer technology, animal cloning and stem cell differentiation can be learnt
3. Stem cell plasticity, stem cell assay and protocols, stem cell separations and stem cell therapies can be understood
4. Stem cells and tissue engineering, human embryonic stem cells and society, intellectual property results can be proficient

SUGGESTED READING MATERIAL:

1. Handbook of Stem Cells Volume 1 and 2 Eds Robert Lanza and others Elsevier Academic Press.
2. Austen C.R. and Short. R.V. Reproduction in animals.
3. Schatten and Schatten. Molecular Biology of Fertilization.
4. R.G. Edwards. Human Reproduction.

5. S.F.Gilbert.DevelopmentalBiology.SinauerAssociation Inc.,Massachusetts.

CF-ABT-203A:CELLBIOLOGYANDIMMUNOLOGY

Course Objectives:

1. Able to learn organization of prokaryotic and eukaryotic cell, Nucleus structure, Eukaryotic chromosome and polytene and lamp brush chromosomes
2. To learn mechanism of cell division, regulation of eukaryotic cell cycle, chromosomal abnormalities and tumor biology
3. To understand types of immunity, types of cell involved in immune response, structure and function of antibody and complement cascade
4. To gain knowledge on Antigen presentation, hypersensitivity reactions, immune tolerance and immunopathology

UNIT-1.

- 1.1 Organization of prokaryotic and eukaryotic cell. Structure and function of Plasma membrane, mitochondria endoplasmic reticulum, Golgi apparatus, lysosomes, peroxisomes.
- 1.2 Nucleus-structure and function of nuclear membrane, nucleolus.
- 1.3 Eukaryotic chromosome and its high resolution organization.
- 1.4 Polytene and lamp brush chromosomes.

UNIT-2.

- 2.1 Mechanism of cell division - mitotic apparatus, cytokinesis, chromosome movement - present concept.
- 2.2 Regulation of eukaryotic cell cycle - Over view of cell cycle. Mutation causing cell cycle control. Meiotic process - stages, chromosome pairing, chiasma formation. Molecular mechanisms of recombination, synaptonemal complex. Nondysjunction,
- 2.3 Chromosomal abnormalities-euploidy, haploidy-their fundamental and practical significance. Polyploidy-induction -Aneuploidy-type and genetic significance.
- 2.4 Tumor biology - cell to cell interaction, cell adhesion, cell transformation mechanism and oncogenesis.

UNIT-3.

- 3.1 Immunity- innate and acquired, innate immune mechanisms, Immunogens and antigens –Properties, factors governing immunogenicity, haptens, epitopes-size and identification. Adjuvants-properties and mechanism of action.
- 3.2 Cells involved in the immune response T cells, B cells, CD antigens, neutrophils, eosinophils and natural killer cells. Macrophages, dendrites, Phagocytosis, Lymphoid tissues.
- 3.3 Functions of antibody in relation to structure. Antigen-antibody interactions- affinity of antibody, avidity, boose effect, classical precipitin reaction, antigen-binding site of antibody, forces involved in antigen-antibody complex formation, Generation of antibodies, Theories of antibody formation. Monoclonal and polyclonal antibodies.
- 3.4 Complement-nature, physicochemical properties, complement cascade pathway, complement fixation.

UNIT-4.

- 4.1 Antigen Presentation- pathways of antigen processing and presentation of intracellular and extracellular antigens. Cell mediated immunity (CMI): Induction and mechanism
- 4.2 Hypersensitivity reactions – Classification, Type I – IV reactions. Immunity to bacterial, fungal, viral and parasitic diseases. Allergy: classification and details.
- 4.3 Immune tolerance, immune suppression. Transplantation and G.V.H. reactions.
- 4.4 Immunopathology- Autoimmune diseases; immune complex diseases; immunodeficiency diseases; immunity to infection.

Course Output:

1. Organization of prokaryotic and eukaryotic cell, Nucleus structure, Eukaryotic chromosome and polytene and lamp brush chromosomes will be understood
2. Mechanism of cell division, regulation of eukaryotic cell cycle, chromosomal abnormalities and tumor biology can be learnt
3. Types of immunity, types of cell involved in immune response, structure and function of antibody and complement cascade will be proficient

4. Knowledge will be gained on Antigen presentation, hypersensitivity reactions, immune tolerance and immunopathology

SUGGESTED READING MATERIAL:

1. Cell and Molecular Biology by E.D. Robertis and E.M. Robertis Jr, Indian edition, 3.1 B.I. Publications, Pvt. Ltd.
2. The Cell (A Molecular Approach) by Geoffrey M. Cooper, 7th Edition.
3. Kuby, J. Immunology, 7th edition, W.H. Freeman and Company, New York.
4. Janeway's Immunobiology, 9th edition, Garland Science.

CF ABT-203B ANIMAL BIOTECHNOLOGY

Course objectives:

While studying the **Animal Biotechnology** course, the student shall be able to:

1. To introduce a detailed achievements of Biotechnology, Genetic Engineering and r-DNA technology principles.
2. To gain knowledge on cloning vectors and their uses in gene cloning technologies.
3. Principles of Cloning strategies and screening analysis of Re-combinations.
4. To apply principles of Biotechnology concepts in veterinary sciences i.e. production of Transgenic animals, Artificial insemination, In vitro fertilization, Embryo transfer technology.
5. Application of Biotechnological principles in Medicine and Gene transfer techniques.
6. To understand the uses of Fresh and marine pearl culture technology, IPR, Patents and Copyrights.

UNIT-1.

1.1 General Introduction and Achievements of Biotechnology

1.2 Enzymes used in gene cloning- Restriction endonucleases, DNA ligases, Kinase, Phosphatase, Nucleases, Polymerases, Reverse transcriptase

1.3 Cloning vectors (Plasmids, Phages, cosmids, yeasts Shuttle vectors), viral vectors (SV40, Adenovirus and Baculovirus) used in Gene cloning.

1.4 Cloning and selection strategies of recombinants (antibiotic selection, blue white screening, colony hybridization, Fluorescence in-Situ Hybridization (FISH) and immunological test.

UNIT-2.

2.1 Preparation of cell lines, types of cell lines. Types of Stem Cells, Stem Cell Therapy

2.2 Application of cell culture in Veterinary – Disease diagnosis, virus vaccines, hormones

2.3 Application of Biotechnology in Medicine- Production of monoclonal antibodies (Hybridoma technology), Production of vaccines and Production of Growth Hormone

2.4

Gene therapy: Introduction, principle of gene transfer and examples (Adenosine deaminase deficiency disease, Duchenne Muscular dystrophy disease and Cystic fibrosis)

UNIT-3.

3.1

Livestock improvement: Manipulation of reproduction in animals (Artificial insemination, multiple ovulations, *in vitro* fertilization, Embryo transfer technology)

3.2 Methods of gene transfer – Microinjection, electroporation, lipofection and viral mediated gene transfer techniques

3.3 Generation of chimeric, transgenic and knockout mice and other animals and their characterization. Gene editing- Gene silencing-CRISPR-associated protein-9 nuclease (Cas9) technology

3.4 Potential application of transgenic animals: models for various diseases/disorders, production of peptides and proteins of biopharmaceutical interest (molecular farming)

UNIT-4.

4.1 Growth hormone transgenics and sex reversal in fishes and their applications, Production of monosex populations. Aquaculture and fish seed production: Hypophysiation, hCG injections

4.2 Marine bio/fish resources and its applications in pharmaceutical and Nutraceutical Industries

4.3 Freshwater and marine (oyster) pearl culture technology, pearl culture in India, uses of pearl culture

4.4 Intellectual Property Rights: Introduction; Types of IP; Patents and its types, Trademark Copyright & Related Rights, Protection of GMOs; ethical and legal issues in biotechnology.

Course Outcomes:

1. Imparts the knowledge to cells lines and stem cells in culture media.
2. It gives insight into various cell/ tissues culture techniques and their applications
3. Understanding of *in vitro* culturing of organisms and production of transgenic animals.

4. Understanding of cloning of mammals, large scale culture and production from recombinant microorganisms and cloning vectors.
5. This insight allows students to take into consideration about ethical issues involved in production of transgenic animals and BT products.
6. Use in gene transfer technology, genetic manipulations and in a variety of Industrial processes and prominence of IVF, Artificial insemination and embryo transfer techniques.
7. Gives knowledge to culture of animal cells and its culture medium.
8. Learn basic concepts and principles of recombinant DNA technology, Gene manipulation for transgenic animal production and therapeutics/ vaccine production.
9. Provides knowledge on Livestock, improvement aquaculture and pearl culture
10. Provides knowledge on Intellectual property rights and genetically modified organisms

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand& Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.
3. Animal Biotechnology-M.M. Ranga, Agrobios (India), 2000.
4. Biotechnology-Fundamentals & Applications-S.S .Purohit& S.K. Mathur, Agro Botonics-1999.
5. Biotechnology-V. Kumaresan. Saras Publication-1994.

EF ABT-204A: TOXICOLOGY

Course objectives:

While studying the **Toxicology** course, the student shall be able to:

1. Provides broad theoretical knowledge within toxicology and development of a general working knowledge of the principles and practice of clinical toxicology.
2. Basic toxicology concepts including: mechanisms of toxicology, absorption, distribution and excretion of toxicants, xenobiotic metabolism, toxicokinetics, chemical carcinogenesis, hepatotoxicology. Based on student interest some of the following areas may be included: genetic toxicology, developmental toxicology, renal toxicology, toxic effects of pesticides, toxic effects of metals, toxic effects of radiation, venoms and animal poisons, air pollution, ecotoxicology, food toxicology, forensic toxicology, occupational toxicology, regulatory toxicology, other.
3. This course includes the study of Pesticides that are agrochemicals and used for preventing, repelling, mitigating or destroying any pests. It includes insecticides, fungicides, rodenticides and herbicides etc. These insecticides are of chemical or biological origin that control the insect. The course indicates the mechanism of Pest control that may result in the form of killing the insects or otherwise preventing it from its destructive behaviors. Insecticides are either natural or man-made synthesized and are applied to target pests in a myriad of formulations (EC, WP, SP, FP, G etc.) and delivery systems (sprays, baits, slow-release diffusion, dust, etc.). In recent years, the bacterial genes coding for insecticidal proteins have been incorporated into various crops that deal with the mortality of the pests feeding on them.
4. The course highlights various categories of insecticides and their relative efficacy in relation to other control methods in a particular ecosystem. Use of bio-pesticides and other plant derived pesticides form an important part of IPM (Integrated Pest Management).
5. The course indicates the biodiversity of insects in different ecosystems and the impact of global climatic changes on insects diversity and their behaviour. Insects are important for the survival

of different biota on the earth. Effect of various anthropogenic activities and pollutants on insects is correlated with maintenance of different ecosystems.

6. To apprise the students about the toxicants along with their application and their effects on biosphere as well as human health.

Unit-1.

- 1.1 Introduction and scope of toxicology and classification of xenobiotics.
- 1.2 Principles of toxicology- Dose response relationship- Toxicity tests {acute (LD₅₀, LC₅₀, ED₅₀) and chronic toxicity tests on aquatic and terrestrial animals}, Variations in toxic response.
- 1.3 Mechanism of toxic action of pesticides (Receptor concept, nature of receptors, Theory of toxicants-receptors interactions and mechanism of action of some pesticides)
- 1.4. Toxicokinetics-
 - i) Classic toxicokinetics
 - ii) Physiologic toxicokinetics

Unit-2.

- 2.1 Translocation of toxicants; Absorption of Toxicants, Distribution of Toxicants, Excretion of Toxicants
- 2.2 Biotransformation of Xenobiotics; Biotransformation sites, Biotransformation enzymes, Biotransformation reaction and bioactivation
- 2.3 Bioaccumulation of Xenobiotics; Bioconcentration, Bioaccumulation and Biomagnification; Biomagnification of lipophilic and recalcitrant substances
- 2.4 Toxic effect of metals - Mercury, Lead, Cadmium and Arsenic

Unit-3.

- 3.1 Toxic Response of Blood: Toxicology of erythron, leukon, platelets and homeostasis
- 3.2 Toxic Response of Liver; Mechanism and types of toxin – induced liver injury; critical factors in toxicant induced liver injury; detoxification mechanisms by liver.

3.3 Toxic Response of Kidney; Susceptibility of the kidney to toxic injury; Biochemical mechanisms / mediators of renal cell injury.

3.4 Toxic Response of Reproductive system; Endocrine disruption (including screening and puberty) in humans and mammals. Testicular and ovarian dysfunction. Deterioration in fertility by toxicants.

Unit-4.

4.1 Xenobiotic effect on basic metabolism (Carbohydrates, Proteins, Lipids)

4.2 Teratogens and Teratology (Relationships between maternal and developmental toxicity)

4.3 Antidotal therapy; Types of antidotes and antidotal procedures.

4.4 Risk assessment – Hazard identification; Risk characterization and Safety evaluation of Chemicals.

Course outcomes:

1. The awareness about toxic agents, their effects and knowledge about mode of transformation of toxicants will help in creating skilled personnel in the field of environment protection and research.
2. It is a discipline overlapping with biology, chemistry, medicine that involves the study of toxicants, their mechanism of action.
3. It involves the study of the adverse effects of chemical substances on living organisms.
4. Skill development in environmental and occupational Toxicology.
5. It provides opportunities for students research projects, internships in assessing the effects of toxic pollutants on the environment and in the food chain.
6. Identification of different routes of exposure of environmental toxins.
7. Understanding of the physiological and genotoxic effects of drugs and environmental toxins.
8. Knowledge of various techniques for Toxicity evaluation.
9. The students having this course will study various types of insecticides and understand their mode of action to kill/control the insects. Also, the students will learn about novel categories of insecticides that may be compatible with other control strategies.
10. The students will learn handling of the pesticides in crop protection and understand the therapy and antidotes at the time of poisoning.
11. Further, Insects being the important component of various food chains/ food webs, the students will be understand their crucial role in homeostatic maintenance of ecosystems and their biota.

12. The students will learn about the impact of anthropogenic pollutants and climatic changes on the survival and propagation of insects, and may appreciate the insects as bio-indicators of ecological changes/disturbances.

SUGGESTED READING MATERIAL

1. Casarett&Doull's- Toxicology- The basic science of poisons- C.D. Klassen, Mary, O.D & John Doull.
2. Concepts of Toxicology Dr. Omkar, Vishal Publishing C.2003.
3. Environmental toxicology of pesticides- F. Mastimura, G.M.Boush and T.Misato.
4. Introduction of Biochemical Toxicology- E.Hodgson&F.E.Gutherie.
5. Pesticides action and metabolism- O'Brrien.
6. Pesticides and Human Welfare- D.L. Gunn and J.G.R.Stevens. Oxford University Press-1978.
7. The Encyclopedia of Americana- Vol.15

EF ABT: 204B ENDOCRINOLOGY

Course Objectives :

1. To study the concepts of Classification of Hormones, Structural features of Endocrine Glands
2. Compare the structure, functions and regulation of the endocrine organs of vertebrates
3. Identification of Endocrines glands of the body and their secretions
4. To study the Steroid and Peptide hormones and their role
5. To study the evolution of Pancreatic and Adrenal gland hormones
6. To study the evolution of Thyroid and Parathyroid hormones and their role in the regulation of metabolism
7. To study the role of hormones in the growth, development and reproduction.
8. to study the aspects concerning Hormones – Human health

Unit-1.

- 1.1 Classification of hormones. Brief account of structural features of endocrine glands. Hormonal effects and regulation – basic concepts and methods
- 1.2 Biosynthesis and secretion of pituitary. Factors influencing secretion. Endocrine disorders - brief description
- 1.3 Biosynthesis and secretion of pancreas, adrenal, and thyroid hormones. Factors influencing secretion.

1.4 Biosynthesis and secretion of sex steroid hormones. Factors influencing secretion.

Unit-2.

- 2.1 Peptide hormones, Steroid hormones. Hormones as messengers. Cell surface receptors. Cascade of reaction linked to signal transduction.
- 2.2 Evolution of pituitary gland; Physiological actions of pituitary hormones. Urophysis and action of its hormone(s). Pancreatic hormones and glucose homeostasis.
- 2.3 Evolution of discrete adrenal gland; Synthesis of corticosteroid, structural diversity of glucocorticoids among vertebrates.
- 2.4 Sex steroids. Cytoplasmic and nuclear receptors. Mechanism of action of steroid hormones. Prostaglandins. Calcium-magnesium-protein Kinase. Hormones and eukaryotic metabolic regulation.

Unit-3.

- 3.1 Evolution of thyroid gland.
- 3.2 Thyroid hormone synthesis and its regulation, paradigms of thyroid hormone action in poikilotherms and homeotherms.
- 3.3 A comparative account of parathyroid gland and ultimobranchial body/C cells, synthesis of parathyroid hormone, calcitonin and of vitamin D₃;
- 3.4 Hormonal regulation of calcium and phosphate homeostasis.

Unit-4.

- 4.1 Hormones, growth and development and reproduction
- 4.2 Hormones regulating reproduction
- 4.3 Hormones and human health
- 4.4 Production of hormones as Pharmaceuticals-Insulin, GH and Prolactin.

Course Outcomes :

- 1. Understand the structure, function and regulation of endocrine & neuroendocrine glands,

2. Develop a deep knowledge of the role of endocrine secretion in regulation of reproductive Cycle
3. Understand the pathways associated with Biosynthesis and secretion of Endocrine hormones and their role in the control of metabolism
4. Acquiring the knowledge of signal transduction mechanisms
5. Through understanding of several endocrines including Peptide hormones, Steroid hormones, Pituitary hormones, Sex hormones, Thyroid hormones etc in the control of metabolic pathways
6. Understanding the influence of hormones on Growth, Development and Reproduction and their regulatory pattern

SUGGESTED READING MATERIAL:

1. Barrington. E.J.W. General and comparative Endocrinology Cambridge Press, Oxford.
2. Bentley, P.J. Comparative Vertebrate Endocrinology, Cambridge Press, Oxford.
3. Martin, C.R. Endocrine Physiology. Oxford Univ. Press, Oxford.
4. Prakash S. Lohar. Endocrinology-Hormones and human health-2005. MJP Publishers-Chennai.
5. Williams, R.H. Text Book of Endocrinology, W.B. Saunders Co., Philadelphia.

ABT 205P : ABT -201 (Core) & ABT -203A or ABT -203B (CF)

ABT 206P : ABT -202 (Core) & ABT -204A or ABT -204B (EF)

AUDIT COURSE

ABT-207:HUMAN VALUESANDPROFESSIONALETHICS–II

Course Objectives:

1. To get knowledge on value education
2. To learn medical ethics
3. To become proficient on business ethics
4. To understand environmental ethics and social ethics

- I. Value Education- Definition – relevance to present day -Concept of Human Values –Selfintrospection–Self-esteem.Familyvalues- Components,structureandresponsibilitiesoffamilyNeutralizationofanger– Adjustability–Threatsoffamilylife – Status of women in family and society – Caring for needy and elderly – Time allotmentforsharingideas andconcerns.
- II. Medical ethics- Views of Charaka, Sushruta and Hippocrates on moral responsibility ofmedicalpractitioners.Codeofethicsformedicalandhealthcareprofessionals.Euthanasia,Ethicalobligationtoanimals,Ethicalissuesinrelationtohealthcareprofessionals and patients. Social justice in health care, human cloning, problems ofabortion.EthicalissuesingeneticengineeringandEthicalissuesraisedbynewbiologicaltechnologyorknowledge.
- III. Business ethics- Ethical standards of business-Immoral and illegal practices and theirsolutions. Characteristics of ethical problems in management, ethical theories, causes ofunethicalbehavior,ethical abuses andwork ethics.
- IV. Environmental ethics- Ethical theory, man and nature – Ecological crisis, Pest control,Pollution and waste, Climate change, Energy and population, Justice and environmentalhealth.

V. Sociaethics-

Organtrade,Humantrafficking,HumanrightsviolationandsocialdisparitiesFeminist ethics,surrogacy/pregnancy.Ethicsofmedia-
ImpactofNewspapers,TelevisionMovies andInternet.

Course Output:

1. Value education can be understood
2. Medical ethics can be learnt
3. Knowledge will be gained on business ethics
4. Environmental ethics and social ethics can be learnt

SUGGESTED READING MATERIAL:

CORE ABT-301:ENZYMOLGY

Course Objectives:

1. To understand enzyme specificity, enzyme catalysis and isolation and purification of enzymes
2. To gain knowledge on theories of enzymes kinetics, enzyme kinetics and its importance, effect of reactant concentrations and effect of temperature of pH and enzyme concentration reaction rate
3. To learn inhibition of enzyme activity, kinetics of allosteric enzymes, regulation of enzyme activity and mechanism of enzyme action
4. To become proficient on clinical aspects of enzymology, immobilized enzymes, isoenzymes and enzyme engineering

UNIT-1.

- 1.1 Historical Background, overview and specific examples, nomenclature and classification of enzymes–IUB system, chemical nature and properties of enzymes.
- 1.2 Enzyme specificity (Absolute specificity, Group specificity, Broad specificity).
- 1.3 Enzyme catalysis, Quantitative measurement of enzyme activity, Assay of enzyme activity-units of enzyme activity.
- 1.4 Isolation and purification of enzymes, intracellular distribution of enzymes.

UNIT-2.

- 2.1 Theories of enzyme kinetics -kinetic theory and collision theory.
- 2.2 Enzyme kinetics and its importance, derivation of Michaelis-Menten equation, Methods of V_{max} and K_m determination, construction of Line weaver burk plots.
- 2.3 Effect of reactant concentrations (Rate constant, First order, Second order and Zero order kinetic reactions, Ramachandran plot, determination of slope).
- 2.4 Effect of Temperature, pH and enzyme concentration on reaction rate.

UNIT-3.

- 3.1 Inhibition of enzyme activity (competitive, non-competitive, uncompetitive and mixed inhibition).
- 3.2 Kinetics of allosteric enzymes.
- 3.3 Regulation of enzyme activity (Metabolic regulation), Catalytic efficiency of enzymes (feedback inhibition, covalent modification).

3.4 Mechanism of enzyme action (Lock and Key, Induced fit model), catalytic site, role of metal ions.

UNIT-4.

- 4.1 Clinical aspects of enzymology, Medical and Therapeutic applications of enzymes; Enzymes - Clinical diagnosis.
- 4.2 Immobilized enzymes, various methods of immobilization - ionic bonding, absorption, covalent bonding (based on R groups of amino acids).
- 4.3 Isoenzymes and multiple forms of enzymes.
- 4.4 Enzyme engineering - economic importance of enzyme production. Enzymes in industries - food, biotechnology and other industries.

Course Output:

1. Enzyme specificity, enzyme catalysis and isolation and purification of enzymes can be understood
2. Knowledge will be gained on theories of enzyme kinetics, enzyme kinetics and its importance, effect of reactant concentrations and effect of temperature of pH and enzyme concentration reaction rate
3. Inhibition of enzyme activity, kinetics of allosteric enzymes, regulation of enzyme activity and mechanism of enzyme action will be learnt
4. Clinical aspects of enzymology, immobilized enzymes, isoenzymes and enzyme engineering will be proficient

SUGGESTED READING MATERIAL:

1. Biochemical calculations. I.H. Segel, 2nd Ed., John Wiley & Sons.
2. Biochemistry. D. Voet & J.G. Voet, J. Wiley & Sons.
3. Enzyme Kinetics. I.W. Segil.
4. Enzyme Kinetics. D.V. Roberties, Cambridge University Press.
5. Harper's Biochemistry. Robert K. Murray, Peter A. Mayer, D.K. Granner, V.W. Rodwell, Lange Medical.

CORE ABT-302: ANIMAL REPRODUCTION, BREEDING AND TRANSGENIC TECHNOLOGY

Course Objectives:

1. To become proficient on structure and function of male and female reproductive system; reproductive cycles and contraception in male and females
2. To gain skill on sex determination, selection for qualitative inherited characters, parental determination and verification and progeny testing
3. To understand artificial insemination techniques, in vitro fertilization, embryo transfer technology, microinjection and macroinjection
4. To learn transgenic technology development, generation of chimeric, transgenic and knockout mice

UNIT-1.

- 1.1 Structure and function of male reproductive system- hormonal regulation of spermatogenesis and spermiogenesis; inhibin and androgen binding proteins; capacitation of spermatozoa.
- 1.2 Structure and function of female reproductive system- influence of hormones on development of ovarian follicles and oogenesis;
- 1.3 Reproductive cycles: estrous and menstrual cycle; ovulation, atresia and corpus luteum formation; pregnancy and lactation; implantation and placentation.
- 1.4 Contraception in males and females: Hormonal and chemical; recent advances in contraception research

UNIT-2.

- 2.1 Introduction - Sex determination; principles of animal breeding; structure of the livestock breeding industry: dairy cattle, beef cattle, swine, sheep and poultry
- 2.2 Selection for qualitatively inherited characters- gene frequency and selecting against recessive genes; detecting heterozygotes for recessives.
- 2.3 Parental determination and verification; the use of markers and/or molecular probes, selection criteria: multiple records, pedigree selection, family selection.
- 2.4 Progeny testing: breeding value, transmitting ability and heritability; correlated characters; selection for maternal ability; factors affecting selection response; genotype-environment interactions

UNIT-3.

- 3.1 Artificial insemination (AI) techniques and their development: estrus synchronization; semen collection, evaluation, storage.
- 3.2 *In vitro* fertilization, ICSI and preservation of endangered species.
- 3.3 Embryo transfer technology, Superovulation, cryopreservation of embryos, Hormones involved in embryo transfer technology.
- 3.4 Microinjection and Macroinjection – introduction – procedure – applications advantages and limitations.

UNIT-4.

- 4.1 An overview of transgenic technology Development of transgenic mice and other animal models: by injection of foreign DNA/gene into zygote; optimization of construct for *in vivo* expression
- 4.2 Generation of chimeric, transgenic and knockout mice and other animals and their characterization.
- 4.3 Transgenic fishes, transgenic poultry and transgenic insects as bioreactors.
- 4.4 Potential application of transgenic animals: models for various diseases/disorders, production of peptides and proteins of biopharmaceutical interest (molecular farming).

Course Output:

1. Knowledge will be gained on structure and function of male and female reproductive system; reproductive cycles and contraception in male and females
2. Sex determination, selection for qualitative inherited characters, parental determination and verification and progeny testing will be understood
3. Artificial insemination techniques, *in vitro* fertilization, embryo transfer technology, microinjection and macroinjection can be learnt
4. Transgenic technology development, generation of chimeric, transgenic and knockout mice will be learnt

SUGGESTED READING MATERIAL:

1. Comparative Reproductive Biology. Edited by H. Schatten and G.M. Constantinescu. Blackwell Publishers, UK.

2. Comparative Endocrinology and Reproduction. Edited by K.P. Joy, A. Krishna, C. Halda r, Narosa Publishers, Delhi.
3. Daltons Introduction to Practical Animal Breeding. Edited by Malcolm B. Willis, Black well Science, UK..
4. Williams Text Book of Endocrinology, Edited by J.D. Wilson and others, Saunders, USA
5. Animal Transgenesis and Cloning. Edited by L.M. Houdebine, Wiley, USA.

GE ABT-303A: BIOINFORMATICS AND BIOSTATISTICS

Course Objectives:

1. To know the importance of bioinformatics, internet basics, sources of websites and data base types
2. To understand prediction of protein structure and protein sequence database, prediction of gene structure, submission of sequence to database, phylogenetic analysis
3. To learn biostatistics, measures of location and dispersion, curve fitting and correlation and regression
4. To understand probability distribution, tests of significance, student t-test and F-test, chi square test and their application

UNIT-1.

- 1.1 Scope, importance and status of Bioinformatics.
- 1.2 Internet basics, Tools for web search, Data retrieval tools.
- 1.3 Sources of websites.
- 1.4 Database types- primary, secondary and specific annotation databases.

UNIT-2.

- 2.1 Database types, Prediction of protein structure and protein folding, Protein sequence databases.
- 2.2 Prediction of gene structure, Functional genomics, Genomic databases.
- 2.3 Submission of sequence to the database, Homology, BLAST- Types of BLAST
- 2.4 Phylogenetic analysis, Human genome project.

UNIT-3.

3.1

Definition of statistics: Biostatistics, classification, variables and attributes, Diagrammatic distribution of biological data.

3.2 Measures of location and dispersion: Arithmetic mean, median and mode. Mean deviation, quartile deviation, Standard deviation and coefficient of variation.

3.3 Curve fitting: Fitting straight line, parabola exponential curve and geometric curve to the data. Fitting of straight line using Ms-Excel.

3.4 Correlation and regression: Scatter diagram, types of relationship. Positive and negative correlation, computation of correlation coefficient, Interpretation of correlation coefficient. Simple regression lines and its interpretation.

UNIT-4.

4.1 Normal probability distribution & its applications.

4.2 Tests of significance: level of significance, null and alternative hypothesis, power of test and p-value of a test.

4.3 Student t-test for one sample and two samples means-paired t-tests.

4.4 F-test, chi square test and their application, concept of ANOVA.

Course Output:

1. Importance of bioinformatics, internet basics, sources of websites and data base types can be understood
2. Prediction of protein structure and protein sequence database, prediction of gene structure, submission of sequence to database, phylogenetic analysis can be learnt
3. Knowledge will be gained biostatistics, measures of location and dispersion, curve fitting and correlation and regression
4. Probability distribution, tests of significance, student t-test and F-test, chi square test and their application can be understood

SUGGESTED READING MATERIAL:

9. Introduction to Biostatistics—By Sokal—
Rohlf (2nd Edn) Freeman International Editor (1973).
10. Introduction to Biostatistics by Holdan Bancroft (1962) Pual B. Hoebar Inc., New York.
11. Introduction to Instrumental analysis, Ronert Braun. McGraw Hill Intemationa edition.

GE ABT-303B:GENETIC ENGINEERING

Course Objectives:

1. To understand use of enzymes in DNA and RNA synthesis, restriction enzymes and ligation and modification of DNA
2. To learn vectors for constructions of genomic libraries, expression vectors, promoters and vectors used for cloning
3. To gain knowledge on DNA fragments, cDNA synthesis, PCR
4. To become proficient on ligation between cohesive and blunt end DNA fragments, introduction of cloned genes into host and expression of cloned genes

UNIT-1.

- 1.1 Enzymes used for the synthesis of DNA: DNA Polymerase I, Klenow fragment, Sequenase, Taq Polymerase, Reverse transcriptase, Terminal Transferase
- 1.2 Enzymes used for the synthesis of RNA: T3 and T7 RNA polymerases, SP6 RNA polymerase
- 1.3 Restriction enzymes - Outlines of bacterial restriction and modification systems – Classification of restriction enzymes - Type II restriction enzyme: Nomenclature, Production of DNA fragments with 3' protruding ends and blunt ends and their significance in molecular cloning - RFLP and its significance.
- 1.4 Enzymes used for ligation and modification of DNA: DNA ligase, Methylases, Kinase, Phosphatase.

UNIT-2.

- 2.1 Vectors for construction of genomic libraries - cosmids, bacterial artificial chromosomes(BACs), yeast artificial chromosomes(YACs)- vectors for construction of cDNA libraries- λ ZAP. Multipurpose vectors -pUC 18/19, Blue script vectors
- 2.2 Expression vectors – structure - promoters used in expression vectors - lac, tac, λ pL, T7 promoters and their significance in constructing expression vectors.
- 2.3 Promoter-probe vectors – Structure promoter probe vector - Reporter genes (lacZ, gfp, gus, luciferase) and strategies used to assay promoter activity.
- 2.4 Vectors used for cloning into mammalian cells-SV40 Vectors.

UNIT-3.

- 3.1 Isolation of gene/DNA fragments. Mechanical shearing, restriction digestion, cDNA synthesis, PCR amplification and chemical synthesis of gene.
- 3.2 cDNA synthesis - Mechanism of cDNA synthesis, Strategies used to obtain full length cDNA. 5' and 3' RACE.
- 3.3 PCR - Concept and technology- Properties of primers - Inverse, multiplex PCR, RAPD and its significance. Real time PCR.
- 3.4 Chemical synthesis - Designing gene from amino acid sequence, solid phase synthesis of oligonucleotides - In vitro synthesis of gene

UNIT-4.

- 4.1 Ligation between cohesive and blunt end DNA fragments - T4 DNA ligase - Conversion of blunt end DNA fragment into cohesive ended DNA - linkers, adapters, homopolymer tailing.
- 4.2 Introduction of cloned genes into host-
Transformation, conjugation, transduction, electroporation, particle bombardment, microinjection, liposome mediated DNA delivery.
- 4.3 Identification and characterization of cloned genes- Screening of genomic/cDNA libraries- genetic, molecular hybridization-immunochemical techniques
- 4.4 Expression of cloned genes – detection of expressed proteins – biological and molecular methods.

Course Output:

1. Use of enzymes in DNA and RNA synthesis, restriction enzymes and ligation and modification of DNA can be understood
2. Vectors for constructions of genomic libraries, expression vectors, promoters and vectors used for cloning can be learnt
3. Knowledge will be gained on DNA fragments, cDNA synthesis, PCR
4. Will become proficient on ligation between cohesive and blunt end DNA fragments, introduction of cloned genes into host and expression of cloned genes

SUGGESTED READING MATERIAL:

1. Biotech's Dictionary of Genetic Engineering by Dinesh Arora.
2. D.Green; Philip Hiltner; Richard M. Myers Sue. Klapholz; Harold Riethman Jane Roskams.
3. DNA Cloning: Mammalian systems - A Practical Approach by D.M. Glover, B.D. Hames.
4. From Genes to Clones Introduction to Gene Technology by Ernst-L-Winnacker.
5. Genetic disorders of Man by M.R. Goodman.
6. Genetic Engineering and its Applications by P. Joshi

7. Genetics-MonrveW.Strickberger.3rdEd.,May,2000.

**SKILL ORIENTED COURSE ABT-305: BIO RESOURCE TECHNOLOGY
(APICULTURE,SERICULTURE,AQUACULTURE,VERMICULTURE)**

Course Objectives:

1. To understand Types of honey bees, life history of honey bees, management of apiculture and by products of honey bees and economic importance disease and their control
2. To learn historical back ground of sericulture, economic importance of silk
3. To become proficient on fresh water fin fish culture, shell fish (prawn and Pearls) culture
4. To understand historical background of vermicompost, methods of vermiculture and problems involved in vermicompost

UNIT-1. APICULTURE

- 1.1 Types of Honeybees.
- 1.2 Life History of Honeybees.
- 1.3 Management of Apiculture.
- 1.4 By products of honeybees and economic importance Disease and their control.

UNIT-2.SERICULTURE

- 2.1 Historical back ground of Sericulture
- 2.2 Types of Silkworms. Life history of mulberry silkworm.
- 2.3 Economic importance of Silk.
- 2.4 Diseases of Silkworms.

UNIT-3.AQUACULTURE

- 3.1 Freshwater fin fish culture.
- 3.2 Shellfish (Prawn & Pearls) culture.
- 3.3 Fish breeding (Bund & induced breeding).
- 3.4 Integrated fish farming and Economic importance of Aquaculture.

UNIT-4.VERMICULTURE

- 4.1 Historical background of Vermicompost.
- 4.2 Different methods of Vermiculture.
- 4.3 Advantages and economic importance of Vermiculture Vermicompost.
- 4.4 Problems involved in Vermicompost.

Course Output:

- 1. Types of honey bees, life history of honey bees, management of apiculture and by products of honey bees and economic importance disease and their control can be understood
- 2. Historical back ground of sericulture, economic importance of silk can be learnt
- 3. Fresh water fin fish culture, shell fish (prawn and Pearls) culture can be proficeint
- 4. Knowledge can be gained on historical background of vermicompost, methods of vermiculture and problems involved in vermicompost

SUGGESTED READING MATERIAL:

- 1. Manual of freshwater Aquaculture. R. Santhanan. Oxford, IBH Publications-1987.
- 2. Aquaculture principles. T.V.R. Pillay. Backwell scientific publications-1993.
- 3. Biology Culture and Production of Indian Major Carps, "Chakaraburthy", N.M. Narendr a publishing house, New Delhi-1999.
- 4. Silkworm rearing, Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi-1997.
- 5. Silk Dying and Finishing, Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi-1997.
- 6. Economic Zoology, G.S. Shukla & V.B. Upadyay. Rastogi publications, 1994.

OE ABT-306A:ANIMAL BIOTECHNOLOGY AND INDUSTRIAL APPLICATIONS

Course Objectives:

1. To gain knowledge on preservation animals engineered bacteria/yeast/ cell lines, metabolic engineering, fermentative production and glycolytic pathway
2. To understand monoclonal antibodies, DNA biotechnology and genetically engineered products
3. To learn transgenic, poultry, piggery, dairy sciences and aquaculture applications
4. To know the DBT guidelines, Global scenario of transgenic micro organisms and ethical issues related to biotechnology products.

UNIT-1.

- 1.1 Preservation animal engineered bacteria/ yeast/ cell lines – reversal strategies – optimizes of expression of restriction primer– mechanism of restriction, isolation digestion.
- 1.2 Metabolic engineering: enzymatic cultivation of domestic and agricultural wastes–saccharification – large scale purification of cellulases – and their use in conservation of agriculture waste in to sugars.
- 1.3 Fermentative production of bioEthanol, Propanol and Butanol.
- 1.4 Glycolytic pathway, manipulating increased flux towards alcohols.

UNIT-2.

- 2.1 Products from animal and plant cells, monoclonal antibodies, hormones etc. Genetically engineered products, DNA biotechnology, Modern methods for the detection of pathogens.
- 2.2 Bioinformatics and Biotechnology, Disease Processes, Extremophiles and the search for new biocatalysts.
- 2.3 Transgenics: Transgenic animal: production and application; transgenic animals as models for human diseases.
- 2.4 Transgenic animals in live-stock improvement; expression of the bovine growth hormone; transgenics in industry; chimera production; Ethical issues in animal biotechnology.

UNIT-3.

- 3.1 Poultry.
- 3.2 Piggery.
- 3.3 Dairy Sciences.
- 3.4 Aquaculture applications.

UNIT-4.

- 4.1 Safety in the contained use and release of transgenic animals-
Mechanism of implementation of biosafety guidelines-at Institutional, national and International level.
- 4.2 DBT Guidelines-Actus and treaties related to biosafety of GMM and GMP"s-
Public awareness perception and acceptance of products of biotechnology.
- 4.3 Global scenario of transgenic microorganisms and plants-Intellectual property rights-Patent laws at national and international level.
- 4.4 Ethical issues related to biotechnology products-
Ecological risks of engineered microorganisms remedies.

Course Output:

1. Knowledge will be gained on preservation animals engineered bacteria/yeast/ cell lines, metabolic engineering, fermentative production and glycolytic pathway
2. Monoclonal antibodies, DNA biotechnology and genetically engineered products can be understood
3. Transgenic, poultry, piggery, diary sciences and aquaculture applications can be understood
4. DBT guidelines, Global scenario of transgenic micro organisms and ethical issues related to biotechnology products can be learnt

SUGGESTED READING MATERIAL:

1. Tzotzos, G.T. 1995. Genetically modified organisms- A guide to biosafety, CAB International, Wallingford, U.K. 213p.
2. DBT 1998 Background document for workshop on biosafety issues emanating from use of genetically modified organisms (GMOs). Bangalore. September 1998. 289p.
3. Subbaram, N.R. 1998. Handbook of Indian patent law and practice. S. Viswanathan (Printers & Publishers) Pvt. Ltd. Chennai 628p.

OE ABT-306B:CANCER BIOLOGY

Course Objectives:

1. To gain knowledge on cancer types and tumor development
2. To learn oncogenes, mechanisms of onogene activation and chromosomal translocation
3. To understand cell cycle regulation and cancer, DNA Damage and repair
4. To learn tumor immunology, Vaccine development, tumor cell evasion of immune defenses

UNIT-1.

- 1.1 Introduction:Cancertypes,Characteristicsofcancercells.
- 1.2 Carcinogenesis:cancerinitiation, promotionandprogression,termination.
- 1.3 Factorsresponsibleforcarcinogenesis:Physical, chemicalandbiological.
- 1.4 TumorDevelopment:Models,Tumorangiogenesis.Overviewofinvasionandmetastasis.Cell-cell interactions in cancer.Invasion and the extracellular matrix.Specific cases ofProstate,Breast,Intestinal cancers.

UNIT-2.

- 2.1 Oncogenes andtheirroleinCancer:Introductiontooncogenes.
- 2.2 Mechanismsofoncogeneactivation(geneamplification.
- 2.3 Mechanismsofoncogene activation(chromosomaltranslocations).
- 2.4 Chromosomaltranslocationswithdominantnegativeeffects.Introductiontotumorsuppressor genes.

UNIT-3.

- 3.1 Cell-CycleRegulationandCancer:Mutationsaffectingmitogenicsignaltransductionpathways. Cell Cycle Regulation - Mutations affecting the cell cycle. Loss of checkpointcontrolandgeneticinstability. Replicativesenescence
- 3.2 DNA Damage, Repair failure and Carcinogen Mechanisms:Carcinogens, DNA damageandrepair.
- 3.3 Carcinogenesis:Chemicalandphysicalagents.
- 3.4 Carcinogenesis:Repairmechanisms.Aberrantrepairandgeneticinstability.Geneticpredispositionto cancer.

UNIT-4.

- 4.1 Tumor Immunology: Tumor immunology [tumor antigens, cytokines,
- 4.2 Vaccine development, Immunotherapy and its limitations.
- 4.3 Tumor cell evasion of immune defenses.
- 4.4 Principles of chemotherapy and chemoprevention. Drug screens: High throughput Screening (HTS) approaches.

Course Output:

1. Cancer types and tumor development can be understood
2. Oncogenes, mechanisms of oncogene activation and chromosomal translocation can be learnt
3. Cell cycle regulation and cancer, DNA Damage and repair can be understood
4. Tumor immunology, Vaccine development, tumor cell evasion of immune defenses can be learnt

SUGGESTED READING MATERIAL:

1. Oxidative Stress and Inflammatory Mechanisms in Obesity, Diabetes, and the Metabolic Syndrome, Edited by Lester Packer and Helmut Sies, CRC Press LLC (2007).
2. Oxidative stress and neurodegenerative disorders. G. Ali Qureshi and S. Hasan Parvez, Elsevier, St. Louis, MO 63146 USA (2007).
3. Oxidative Stress Disease and Cancer. Edited by Singh, World Scientific Publishing (2006).
4. Fatty Acids and Oxidative Stress in Neuropsychiatric Disorders. Edited by Ravinder, M.D. Reddy and Jeffrey K. Yao, Nova Science Pub Inc (2007).
5. Oxidative Stress, Inflammation, and Health. Edited by Young-Joon Sur and Lester Packer, CRC Press LLC (2005).
6. Critical Reviews of Oxidative Stress & Aging. Edited by Cutler, World Scientific Publishing (2002).
7. Free Radicals, Oxidative Stress, and Antioxidants: Pathological and Physiological Significance" Edited by Tomris Özben, Springer (1998).

ABT 304 P : ABT-301 (Core), ABT-302 (Core) & ABT-303 A& B (GE)

ABT Lab 2: ABT-305 (Skill Oriented course)

CORE ABT-401:MEDICALBIOTECHNOLOGY

Course Objectives:

1. To understand disease diagnosis, monoclonal antibodies and detection of genetic disease
2. To learn Disease treatment, interferons, growth factor, and antisense nucleotide as therapeutic agent
3. To gain knowledge on gene therapy, types of gene therapy, augmentation therapy and targeted transfer
4. To become proficient on forensic medicine, preparation of DNA sample. Approaches for DNA analysis and applications of forensic medicine

UNIT-1.

- 1.1 Introduction,Diseaseprevention(Vaccines),Anidealvaccines.
- 1.2 Diseasediagnosis:Probes.
- 1.3 Monoclonalantibodies.
- 1.4 DetectionofGeneticDisease.

UNIT-2.

- 2.1 Diseasetreatment.
- 2.2 Interferons.
- 2.3 Growthfactor.
- 2.4 Antisensenucleotideastherapeuticagent.

UNIT-3.

- 3.1 GeneTherapy.
- 3.2 Typesofgenetherapy.
- 3.3 Augmentationtherapy.
- 3.4 Targetedtransfer.

UNIT-4.

- 4.1 Forensicmedicine.
- 4.2 Preparationofthe DNASample.
- 4.3 ApproachesforDNAAnalysis.
- 4.4 ApplicationsofForensic medicine.

Course Output:

1. Disease diagnosis, monoclonal antibodies and detection of genetic disease can be understood
2. Disease treatment, interferons, growth factor, and antisense nucleotide as therapeutic agent can be learnt
3. Knowledge will be gained on gene therapy, types of gene therapy, augmentation therapy and targeted transfer
4. Forensic medicine, preparation of DNA sample. Approaches for DNA analysis and applications of forensic medicine will be proficient

SUGGESTED READING MATERIAL:

1. Biotechnology by B. D. Singh. Kalyani Publishers, 2007.
2. Text Book of Biotechnology by H.K. Das (Wiley Publications).
3. Strategies in Transgenic Animal Sciences - By Glenn M.M. and James M. Robl ASM.2000.
4. Essentials of Biotechnology for Students by Satya N. Das.2001.
5. Gene series by Benjamin Lewin, Oxford University Press
6. Molecular Biology of Cell by Bruce Alberts
7. Molecular Biology David Freifelder, Narosa Publishing House
8. E.coli and Salmonella typhimurium - Cellular and Molecular Biology by Neidhardt, American Society for Microbiology, US A.
9. Molecular Biology of the Gene by Watson.

CORE ABT-402:FERMENTATIONTECHNOLOGYANDDOWNSTREAMING,PROCESS

Course Objectives:

1. To understand cell distribution methods, separation techniques, purification by chromatographic techniques and isolation and screening and maintenance of industrially importance microbes
2. To learn bioreactor design, fermentation economics, upstream processing, membrane based separations
3. To gain knowledge on importance of downstream processing economics of downstream processing
4. To become proficient in adsorptive chromatographic separations, electrophoretic process, hybrid separations technologies and gel permeation chromatography dialysis and crystallization

UNIT-1.

- 1.1 Cell distribution methods: Sonicatron – frush press – freeze than methods. Cell distribution for intracellular products, removal of insolubles, biomass (and particulate debris).
- 1.2 Separation techniques, flocculation and sedimentation, centrifugation and filtration methods.
- 1.3 Purification by chromatographic techniques; Reverse osmosis and ultra-filtration; Drying; Crystallization; Storage and packaging; Treatment of effluent and its disposal.
- 1.4 Isolation, screening and maintenance of industrially important microbes; Microbial growth and death kinetics (an example from each group, particularly with reference to industrially useful microorganisms).

UNIT-2.

- 2.1 Bioreactor designs; Types of fermentation and fermenters; Concepts of basic modes offermentation- Batch, fedbatchandcontinuous;Conventionalfermentationv/sbiotransformation;Solid substrate,surfaceand submergedfermentation.
- 2.2 Fermentation economics; Fermentation media; Fermenter design-mechanically agitated;Pneumatic and hydrodynamic fermenters;Large scale animal and plant cell cultivationandair sterilization.
- 2.3 Upstreamprocessing:Mediaformulation;Sterilization;Aerationandagitationinbioprocess; Measurement and control of bioprocess parameters; Scale up and scale downprocess.

2.4 Membrane-based separations(micro and ultrafiltration theory, design and configuration ofmembrane separation equipment, applications, precipitation methods(with salts, organicsolvents, and polymers, extractive separations, aqueous two phase extraction, supercritical extraction)insitu product removal, integratedbioprocessing.

UNIT-3.

3.1 RoleandImportanceofdownstreamprocessinginbiotechnologicalprocesses.

3.2 Problemsandrequirements ofbioproductpurification.

3.3 Economics ofdownstreamprocessinginBiotechnology, cost-cuttingstrategies.

3.4 Characteristics ofbiologicalmixtures, processdesigncriteriafor variousclasses ofbioproducts (high volume, low value products and low volume, high value products), physico-chemicalbasis of bioseparation processes.

UNIT-4.

4.1 Adsorptivechromatographicseparationsprocesses.

4.2 Electrophoreticprocesses (allelectrophoresistechniquesincludingcapillaryelectrophoresis)

4.3 Hybridseparationtechnologies(membranechromatography, electrochromatographyetc).

4.4 GelPermeationChromatography, dialysis, Crystallisation.

Course Output:

1. Cell distribution methods, separation techniques, purification by chromatographic techniques and isolation and screening and maintenance of industrially importance microbes can be understood
2. Bioreactor design, fermentation economics, upstream processing, membrane based separations can be learnt
3. Knowledge will be gained on importance of downstream processing economics of downstream processing
4. Adsorptive chromatographic separations, electrophoretic process, hybrid separations technologies and gel permeation chromatography dialysis and crystallization will be proficient

SUGGESTED READING MATERIAL:

1. Wankat P.C, "Rate Controlled Separations", Elsevier, 1990.
2. Belter P.A and Cussler E, "Bioseparations", Wiley, 1985.
3. "Product Recovery in Bioprocess Technology", BIOTOL Series, VCH, 1990.

4. Asenjo J.M., "Separation processes in Biotechnology", 1993, Marcel Dekker Inc.

GE ABT-403A: DRUG DESIGN AND DEVELOPMENT

Course Objectives:

1. To learn drug design, analog approach of drug designing
2. To understand SAR Vs QSAR, Partition coefficient, Hammett's substituent constant and Taft's steric constant, Free Wilson model, 3D-QSAR approach like COMFA and COMIA
3. To gain knowledge on pharmacological screening and assays, pharmacological screening models for therapeutic areas, cell based assay, biochemical assay, radiological binding assay, small molecule manufacturing
4. To learn Drug Laws, FDA, OECD, ICH, Schedule Y, drug registration, Regulations of human pharmaceuticals and biological products, and clinical trial design

UNIT-1.

- 1.1 History of drug design, Current approaches and challenges in drug design.
- 1.2 Conventional Methods: Lead, Discovery of lead, Lead optimization, Objective of lead optimization.
- 1.3 Analog approach of drug designing: Bioisosteric replacement, rigid analogs.
- 1.4 Alteration of chain branching, changes in ring size, ring position isomers, design of stereo isomers and geometric isomers, fragments of a lead molecule, variation in interatomic distance.

UNIT-2.

- 2.1 SAR versus QSAR, History and development of QSAR, Objectives of QSAR.
- 2.2 Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammett's substituent constant and Taft's steric constant.
- 2.3 Hansch approach, Free-Wilson model, statistical methods, Non-computer-assisted search operations like Topliss decision tree, Simplex method, Fibonacci search technique.
- 2.4 3D-QSAR approaches like COMFA and COMSIA.

UNIT-3.

- 3.1 Pharmacological Screening and Assays: General principles of screening, correlations between various animal models and human situations.
- 3.2 Pharmacological screening models for therapeutic areas. Correlation between in-vitro and in-vivo screens.
- 3.3 Special emphasis on cell-based assay, biochemical assay, radiological binding assay, high throughput screening, specific use of reference drugs and interpretation of results.
- 3.4 Manufacturing & process development; small molecule manufacturing; development of protein therapeutics and vaccines.

UNIT-4.

- 4.1 Drug Laws, FDA, OECD, ICH, Schedule Y, Design non clinical toxicity studies and clinical development, clinical risk/benefit analysis.
- 4.2 Drug registration: Regulatory affairs, WTO, Patent regime, Accreditation and harmonization process.
- 4.3 Regulations of human pharmaceuticals and biological products. Clinical Trials: Main features of clinical trials, including methodological and organizational considerations and the principles of trial conduct and reporting.
- 4.4 Key designs surrounding design, sample size, delivery and assessment of clinical trials.

Course Output:

1. Drug design, analog approach of drug designing can be understood
2. SAR Vs QSAR, Partition coefficient, Hammett's substituent constant and Taft's steric constant, Free Wilson mode, 3D-QSAR approach like COMFA and COMIA can be learnt
3. Knowledge will be gained on pharmacological screening and assays, pharmacological screening models for therapeutic areas, cell based assay, biochemical assay, radiological binding assay, small molecule manufacturing
4. Drug Laws, FDA, OECD, ICH, Schedule Y, drug registration, Regulations of human pharmaceuticals and biological products, and clinical trial design can be learnt

SUGGESTED READING MATERIAL:

12. Korolkovas A, Burckhalter JH. "Essentials of Medicinal Chemistry" Wiley Interscience.

GE ABT-403B: BIOSAFETY, BIOETHICS & INTELLECTUAL PROPERTY RIGHTS

Course Objectives:

1. To understand socio-economic and legal impact of biotechnology, use of genetically modified organisms, moral and ethical issues in biotechnology and safety issues with GMO
2. To learn intellectual property right, evaluation of patenting, application of GATT and IPR and WTO Act and global and Indian biodiversity
3. To gain knowledge on Indian Patent Act 1970, role of country patent office, U.S. Patent trademark office and U.S. Patent system Vs Indian Patent system
4. To gain knowledge on Ethics and genetic engineering, patent of genes, human cloning, stem cell, regulatory requirements for drugs and biologics, GLP and GMP

UNIT-1.

1.1 Socio-economic and legal impacts of biotechnology, rDNA guidelines, national and international guidelines, experimental protocols approval, level of containment.

- 1.2 Use of genetically modified organisms, their release in the environment.
- 1.3 Moral and ethical issues in biotechnology.
- 1.4 Safety issues with GMO.

UNIT-2.

- 2.1 Intellectual property Rights: Definition of IPR, Types of IPR, Patent, Trade secrets, copyrights, trademarks – legal Implications.
- 2.2 Evaluation of patenting, IP relevance to Biotechnology and few case studies.
- 2.3 Application GATT & IPR, WTO Act.
- 2.4 Global & Indian biodiversity act.

UNIT-3.

- 3.1 Indian Patent Act 1970, Recent Amendments filing of a patent application – Precautions before patenting-disclosure/non-disclosure.
- 3.2 Role of a country patent office.
- 3.3 U.S. Patent Trademark Office.
- 3.4 U.S. Patent system Vs Indian Patent System.

UNIT-4.

- 4.1 Ethics and Genetic Engineering, Patent of Genes.
- 4.2 Human cloning, Stem cells,
- 4.3 Regulatory requirements for drugs and biologics.
- 4.4 GLP, GMP.

Course Output:

1. Socio-economic and legal impact of biotechnology, use of genetically modified organisms, moral and ethical issues in biotechnology and safety issues with GMO can be understood
2. Intellectual property right, evaluation of patenting, application of GATT and IPR and WTO Act and global and Indian biodiversity can be learnt
3. Knowledge will be gained on Indian Patent Act 1970, role of country patent office, U.S. Patent trademark office and U.S. Patent system Vs Indian Patent system
4. Ethics and genetic engineering, patent of genes, human cloning, stem cell, regulatory requirements for drugs and biologics, GLP and GMP can be proficient

SUGGESTED READING MATERIAL:

OE ABT-406A:ADVANCED GENOMICS AND PROTEOMICS

Course Objectives:

1. To learn structure of Prokaryotic and Eukaryotic genomes, Isolation and purification of genomic DNA, Construction of Physical maps and Whole genome sequence alignment
2. To understand genome annotation, methods for gene identification, functional genomics, transcript profiling
3. To learn protein structure, sample preparation and separation 2D-analysis, Multidimensional liquid chromatography, protein-protein interactions analysis
4. To gain knowledge on DNA /protein sequence homologies, Gene duplication and divergence, and evolution of novel genes and proteins, DNA quantities and non-coding sequences (transposons) in genome evolution

UNIT-1.

- 1.1 The structure of Prokaryotic and Eukaryotic genomes
- 1.2 Isolation and purification of genomic DNA. Generation of BAC and YAC libraries.
- 1.3 Construction of Physical maps—Restriction maps, FISH and STS maps. Maxim & Gilbert, Sanger and Next generation DNA sequencing methods.
- 1.4 Whole genome sequence alignment; Clone by clone and Shotgun sequencing. Finished sequences and DNA sequenced data bases.

UNIT-2.

- 2.1 Genome annotation, methods for gene identification (location)
- 2.2 Assigning gene function by experimental analysis: gene inactivation by homologous recombination, RNA interference (RNAi) and gene knockout.
- 2.3 Functional genomics: Array fabrication, types, method and application of DNA Micro arrays.
- 2.4 Transcript profiling: Serial analysis of gene expression (SAGE) and Massively parallel signature sequencing (MPSS)

UNIT-3.

- 3.1 Protein structure: secondary structures, domains, motif and folds
- 3.2 Sample preparation and separation—2D-analysis, Multidimensional liquid chromatography.
- 3.3 Characterization of proteins by Mass spectrometry and protein sequencing. Protein microarrays.

3.4 Protein-protein interaction analysis; yeast hybrid systems, phage display and protein complexes.

UNIT-4.

4.1 DNA/protein sequence homologies—Analogy, Orthology and Paralogy.

4.2 Gene duplication and divergence, and evolution of novel genes and proteins

4.3 DNA quantities and non-coding sequences (transposons) in genome evolution.

4.4 Molecular clocks, Molecular Phylogenetics and construction of phylogenetic trees. Applications of genomics in medicine, agriculture and industry.

Course Output:

1. Structure of Prokaryotic and Eukaryotic genomes, Isolation and purification of genomic DNA, Construction of Physical maps and Whole genome sequence alignment can be learnt
2. Genome annotation, methods for gene identification, functional genomics, transcript profiling can be understood
3. Protein structure, sample preparation and separation 2D-analysis, Multidimensional liquid chromatography, protein-protein interactions analysis can be proficient.
4. Knowledge will be gained on DNA /protein sequence homologies, Gene duplication and divergence, and evolution of novel genes and proteins, DNA quantities and non-coding sequences (transposons) in genome evolution

OE ABT-406B: ANIMAL CELL CULTURE TECHNIQUES

Course Objectives:

1. To understand Animal cell culture, culture medium, characteristics of cell in culture
2. To learn primary culture, established cell line culture, Measurement of viability and cytotoxicity, cell types and apoptosis
3. To gain knowledge in scaling up of animal cell culture, cell transformation, tissue engineering, transgenic animals, animal cloning
4. To become proficient in improvement of biomass, pharming products, plasminogen activator and ethical issues related to biotechnology products

UNIT-1.

- 1.1 Animal Cell Culture: Equipment and materials for animal cell culture technology. Various systems of tissue culture, their distinguishing features, advantages and limitations.
- 1.2 Culture medium: natural media, synthetic media, sera. Introduction to balanced salt solutions and simple growth medium.
- 1.3 Brief account on the chemical, physical and metabolic functions of different constituents of culture medium, role of carbon dioxide, serum and supplements.
- 1.4 Characteristics of cells in culture: Contact inhibition, anchorage dependence, cell-cell communication etc.; Cell senescence; cell and tissue response to trophic factors.

UNIT-2.

- 2.1 Primary Culture: Behaviour of cells, properties, utility. Explant culture; suspension culture.
- 2.2 Established cell line cultures: Definition of cell lines, maintenance and management; cell adaptation.
- 2.3 Measurement of viability and cytotoxicity: Cell cloning, cell synchronization and cell manipulation.
- 2.4 Cell types and Apoptosis: Various methods of separation of cell types, advantages and limitations; flow cytometry. Measurement of cell death, Apoptosis (death domain, role of cytochrome C)

UNIT-3.

- 3.1 Stem cells: Scaling up of animal cell culture. Cell transformation. Scope, embryonic and adult stem cells, properties, identification, stem cell culture, techniques and their applications in modern clinical sciences.
- 3.2 Tissue Engineering: biomaterials used in tissue engineering, three-dimensional culture and transplantation of engineered cells. - Skin, bone and neuronal tissues.
- 3.3 Transgenic Animals: Methods involved in the production of transgenic animals, importance and applications of transgenic animals. Gene knock out and mice models for tackling human diseases.
- 3.4 Animal cloning: methods of cloning and their importance with reference to domestic animals. IVF- technology for livestock and humans.

UNIT-4.

- 4.1 Improvement of biomass, disease resistant, recombinant vaccines for poultry, livestock.
- 4.2 Pharming products. Pharmaceutical products produced by mammalian cells.
- 4.3 Plasminogen activator, erythropoietin, blood clotting factors, Glycoprotein hormones, interleukins, interferons, Cell culture based vaccines.
- 4.4 Ethical issues related to biotechnology products - Ecological risks of engineered microorganisms remedies.

Course Output:

- 1. Animal cell culture, culture medium, characteristics of cell in culture can be understood
- 2. Primary culture, established cell line culture, Measurement of viability and cytotoxicity, cell types and apoptosis can be learnt
- 3. Knowledge will be gained in scaling up of animal cell culture, cell transformation, tissue engineering, transgenic animals, animal cloning
- 4. Improvement of biomass, pharming products, plasminogen activator and ethical issues related to biotechnology products will be proficient
