

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF BIOTEHNOLOGY

Course

M.Sc. BIOTECHNOLOGY

Choice Based Credit System (CBCS)

Academic Year 2017 – 18

Vision:

The vision is to become a leader and centre of excellence in technology based training and innovative research in the fields of Plant, Agriculture, Animal and Medical Biotechnology.

Mission:

The Department's academic and research programmes will provide the students and research scholars value based, technology oriented education in a trusting and caring environment. The faculty strive to equip the students with technical expertise and knowledge to keep pace with the changes in technology and meet the new challenges in Life Sciences.

Programme Objectives

1. Students will gain necessary knowledge and develop specialized skills in the different areas of Biotechnology.
2. Students will think critically and creatively about the use of biotechnology to address local and global problems.
3. Students will be able to implement the scientific skills for development of industrial applications and entrepreneurship

Programme Outcomes, Programme Specific Outcomes and Course Outcomes**Programme Outcomes**

Upon completion of the M.Sc. Biotechnology programme, the candidate should be able to:

No.	Programme Outcomes
PO1	Demonstrate knowledge for in-depth analytical and critical thinking to identify, formulate and solve the issues related to Biotechnology Industry, Pharma industry, Medical or hospital related organizations, Regulatory Agencies & Academia.
PO2	Develop an ability to solve, analyze and interpret data generated from experiments done in project work or practical courses in reaching conclusions.
PO3	Apply the knowledge based on research and other related methods to investigate the problem and provide valid conclusions
PO4	Design and develop methods to measure experimental data by following ethical principles
PO5	Demonstrate skills to use modern analytical tools/ software/ equipments to design & develop experiments and analyze and solve problems in various courses of biotechnology.
PO6	Appreciate and execute their professional roles in society as biotechnology professionals, employers and employees in various industries, regulators, researchers, educators and managers.

PO7	Augment and demonstrate the knowledge acquired to address environmental issues and evolve methods for sustainable development
PO8	Adopt code of ethics in professional and social context and demonstrate exemplary professional, ethical and legal behaviours in decision making.
PO9	Execute responsibilities efficiently in solving different issues as an individual/ member of team/ team leader
PO10	Apply written and oral communication skills to communicate effectively in healthcare, industry, academia and research
PO11	Acquire basic and advance skills in in various fields of biotechnology for self-employment and entrepreneurship
PO12	Develop skills, attitude and values required for self-directed, lifelong learning and professional development.

Programme Specific Outcomes (PSOs):

- Students will be able to demonstrate and apply their knowledge of cell biology, biochemistry, microbiology and molecular biology to solve the problems related to the field of biotechnology.
- Postgraduate students will be able to demonstrate and apply the principles of bioprocess engineering in the design, analysis, optimization and simulation of bioprocess operations.
- Students will be able to gain fundamental knowledge in animal and plant biotechnology and their applications.
- Students will be equipped to understand three fundamental aspects in biological phenomenon: a) what to seek; b) how to seek; c) why to seek?
- Student will be able to (a) Describe fundamental molecular principles of genetics; (b) Understand relationship between phenotype and genotype in human genetic traits; (c) Describe the basics of genetic mapping; (d) Understand how gene expression is regulated.
- Students will be able to (a) To elaborate concepts of biochemistry with easy to run experiments; (b) To familiarize with basic laboratory instruments and understand the principle of measurements using those instruments with experiments in biochemistry.
- Students will be able to understand various facets of molecular procedures and basics of genomics, proteomics and metabolomics that could be employed in early diagnosis and prognosis of human diseases.
- Students will be able to gain hands on experience in gene cloning, protein expression and purification. This experience would enable them to begin a career in industry that engages in genetic engineering as well as in research laboratories conducting fundamental research

SRI VENKATESWARA UNIVERSITY, Tirupati-517502

M. Sc programme in Biotechnology CBCS pattern (with effect from 2017-18)

Semester-I

Semester-II

S. No	Code	Components of Study	Title of the Paper	Instruction hours per week	Credits	Internal Assessment Marks	End Semester Exam Marks	Total
1	BTH101	Core 1	Structure and functions of Biomolecules	6	4	20	80	100
2	BTH 102	Core 2	Advanced tools and techniques	6	4	20	80	100
3	BTH 103P	Core 3	Practical related to Analytical methods	6	4	-	-	100
4	BTH 104P	Core 4	Practical related to Biochemical Preparations and Analysis	6	4	-	-	100
5	BTH 105	Compulsory Foundation	Microbiology and Immunology	6	4	20	80	100
6	BTH 106	Elective foundation	Human values and Professional ethics-I	6	4	20	80	100
		Total		36	24	-	-	600

S. No	Code	Components of Study	Title of the Paper	Instruction hours per week	Credits	Internal Assessment Marks	End Semester Exam Marks	Total
1	BTH201	Core 1	Enzymes and Intermediary metabolism	6	4	20	80	100
2	BTH 202	Core 2	Molecular Biology	6	4	20	80	100
3	BTH 203P	Core 3	Practical related to Molecular Biology	6	4	-	-	100

			b) Animal Biotechnology	6	4	20	80	100
			c) Applied Biotechnology					
6	BTH 406	Open Elective to others (For other department students)	a) Tools in Biotechnology b) Immunology c) Applications of Biotechnology d) Genomics	6	4	20	80	100
		Total		36	24	-	-	600

Semester - I

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 101	Structure and functions of Biomolecules	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To explore the knowledge and awareness of the basic principles and concepts of Biomolecules.
2. To acquaint the classification of carbohydrates, proteins, lipids and nucleic acids
3. To know the characteristic features of biomolecules
4. To understand the structure and functions of biomolecules

UNIT - I: Carbohydrates

- 1.1 Chemistry of carbohydrates - Definition and classification of carbohydrates.
- 1.2 Outlines of structures and properties of important mono- (Glucose & Fructose), di- (Lactose, Sucrose, Maltose) and polysaccharides (Glycogen, Cellulose, Chitin).
- 1.3 Physical and Chemical reactions of carbohydrates
- 1.4 Analysis of carbohydrates- Qualitative and Quantitative

UNIT - II: Amino acids and Proteins

- 2.1 Chemistry of amino acids and proteins - Classification of amino acids, Structures of amino acids, Chemical reactions of amino acids.
- 2.2 Peptide bond - Nature of peptide bond, π/ϕ rotation. Ramachandran plot, Secondary structure predictions, helices and beta-sheets, Determination of primary structure.
- 2.3 Proteins and their classification, properties of proteins, determination of amino acid sequences (N and C terminus) Tertiary/quaternary structure of proteins (myoglobin/ hemoglobin model).
- 2.4 Structural organization of proteins - Outline structures and biological functions. Protein folding and significance.

UNIT - III: Lipids

- 3.1 Chemistry of lipids - Classification of lipids, Properties of lipids,
- 3.2 Outline structures of saturated and unsaturated fatty acids, fats and waxes,
- 3.3 Phospholipids, glycolipids, cholesterol, prostaglandins, leukotrienes. Lipids as signaling molecules.
- 3.4 Structure and functions of, heterocyclic molecules, porphyrins and vitamins.

UNIT - IV: Nucleic acids

- 4.1 Chemistry of nucleic acids - Structure of purines and pyrimidines, modified bases nucleosides and nucleotides
- 4.2 Properties of nitrogen bases and nucleotides
- 4.3 Structure, variation and properties of DNA and RNA.
- 4.4 DNA denaturation and renaturation kinetics, Determination of DNA complexity, Hyperchromicity, T_m , cot curves and their significance.

16. Biochemistry Voet & Voet.
17. Comprehensive biochemistry - Florkin & Storz, Academic Press.
18. Organic Chemistry, T.L. Eeunar, ELBS.
19. Organic Chemistry, J.P. Cohen, Vol.3, Edward Arnold & Co.
20. Basic principles of organic chemistry Roberts & Cashino (Benjamin).

Course outcomes:

The student will be able to

1. Understand the classification of carbohydrates and their biochemical functions.
2. Correlate the reactions of amino acids that are basis for identification tests and biochemical pathways.
3. Know the structure of different classes of lipids and their roles in biological systems.
4. Comprehend the structure and functions of nucleic acids

-------------	--------------	-----------------	---------------

		week	
BTH 102	Advanced Tools and Techniques	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about the various analytical and biophysical techniques.
2. To make the student to be able to carry out purification and characterization of various biomolecules.
3. To educate the student to characterize the separated biomolecules by electrophoresis and spectroscopic techniques.
4. To familiarize with the concepts and the techniques of Radioactivity

UNIT - I: Cell and its components analysis

- 1.1 Isolation techniques - Cell disruption techniques - sonication, french press, enzymatic, non-enzymatic techniques.
- 1.2 Isolation of proteins - salting in/out, ammonium sulphate fractionation. Nucleic acids - polar solvents precipitation. Lipids - extraction by differential solubility.
- 1.3 Concentration of macromolecules flash evaporation, lyophilization, pressure dialysis, reverse dialysis, hollow fiber membrane filters and reverse osmosis.
- 1.4 Microscopic studies (principles and applications): Light, compound, phase contrast, confocal and SEM

UNIT -II: Separation techniques

- 2.1 Adsorption chromatography - principles, counter current distribution and its significance, Adsorption materials - paper, silica gel, cellulose acetate, affinity chromatography, merits and demerits – Instrumentation -TLC, GLC, HPLC.
- 2.2 Size- Filtration, Dialysis, principles and applications-molecular sieve chromatography - principle. Determination of void volume, extension co-efficient and molecular mass of native molecules. Density- Centrifugation technique - density gradient - sucrose, cesium chloride, Determination of sedimentation co-efficient, Molecular mass.
- 2.3 Charge- Ion exchange chromatography – Matrices - Principles of separation of charged molecules. Chromatography separations
- 2.4 Electrophoresis - principles governing the movement of charged molecules in the electric field. Relationship of voltage, current and the mobility of biomolecules. Matrices used in electrophoresis - starch, cellulose acetate, agarose, polyacrylamide. Use of PAGE for separation of proteins, molecular mass determination. Immunoelectrophoresis, Separation of nucleic acids using agarose gel electrophoresis. Blotting techniques - western, southern and northern blotting techniques.

UNIT - III: Spectroscopy

- 3.1 Characterization of biomolecules by Spectroscopy - Electromagnetic spectrum of light, simple theory of absorption of light by molecules, Beer-Lambert law, Types of detectors.
- 3.2. UV-visible spectrophotometry, infrared Spectroscopy, Raman Spectroscopy, fluorescence Spectroscopy, flame photometry, atomic absorption, plasma emission, mass, ESR and NMR spectrophotometry.
- 3.3 Optical rotatory dispersion (ORD) and Circular Dichroism (CD)
- 3.4 X-ray diffraction and X-ray crystallography.

UNIT - IV: Radiobiology

- 4.1 Radioisotope tracer techniques - Nature and types of radioactivity, half life, decay units, Preparation of labeled biological compounds,
- 4.2 Detection and measurement of radioactivity (GM counter, scintillation counter), quench correction, Autoradiography.
- 4.3 Labeling of carbohydrates (C^{14} acetate), proteins (S^{35} methionine, I^{125} aminoacid) and nucleic acids (P^{32} dATP).
- 4.4 Biological uses of radioisotopes, Isotope dilution techniques, Safety measures in handling radioisotopes.

17. Principles and techniques of Practical biochemistry, 1994 (4th ed.) by K. Wilson and J. Walker (eds).

Course outcomes:

The student will be able to

1. Learn about various techniques for isolation and concentration of macromolecules. They will also understand the principles and applications of different Microscopes

- Understand the techniques of chromatography, centrifugation and electrophoresis
- Achieve a basic understanding of characterization of biomolecules by different Spectroscopic techniques
- Familiarize with the various radioisotope tracer techniques and their role in biology. Eventually they learn safety measures in handling radio-isotopes.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 103 P	Practical related to Analytical methods	04	4
End Semester Examination Marks: 100			

Core 3P: Practical related to Analytical methods

- General reactions of carbohydrates. Specific reactions of different sugars: arabinose, xylose, fructose, galactose, sucrose, maltose and lactose.
- General reactions of proteins and amino acids. Precipitation reactions of albumins and globulins.
- General reactions of lipids and cholesterol.
- Isolation and estimation of cholesterol from brain.
- Isolation and estimation of glycogen/starch.
- Preparation of Casein from milk.
- Crystallization of albumin.
- Estimation of proteins in biological samples:
 - Biuret method
 - Folin-Lowry method.
 - UV method
 - Bradford's dye binding method.
- Titration curve of amino acid and calculation of PK and PI value.
- Estimation of amino acids by formal titration.
- Estimation of amino acid by Ninhydrin method.
- Estimation of tyrosine by Million's –reaction.
- Identification of N-terminal group of proteins by Sanger's method.

14. Estimation of fructose in Fruit-juice.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 104 P	Practical related to Biochemical Preparations and Analysis	04	4
End Semester Examination Marks: 100			

Core 4P BIOCHEMICAL PREPARATION AND ANALYSIS

1. Effect of solvent system on the R_f value of two solutes using TLC.
2. Separation of purines and pyrimidines by Paper Chromatography.
3. Separation of amino acids by Paper Chromatography.
4. Separation of sugars by TLC.
5. Isolation & Characterization of Brain Lipids by Solid phase extraction and TLC.
6. Separation of amino acids by Paper Electrophoresis (Demonstration).
7. Separation of amino acids by Ion-exchange Chromatography (Demonstration).
8. Separation of Serum proteins by Paper Electrophoresis.
9. Measurement of pH of a biological fluid using pH meter.
10. Absorption spectra of phenol red, amino acids and nucleic acid.
11. Verification of Beer's law and determination of molar extinction coefficient using p-nitro phenol.
12. Isolation and spectrophotometric characterization of plant pigments.
13. Isolation of Mitochondria from Rat liver by density gradient centrifugation (Demonstration).

14. Viscosity measurement of Bovine serum albumin.
15. Measurement of inversion of sucrose by Polarimetry.
16. Measurement of refractive index of Biological sample.
17. Dialysis.

3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell.
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry–Ed. Alan W.Gowenlock (Heinemann Medical Books, London,

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 105	Microbiology and Immunology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

COMPULSORY FOUNDATION 5: MICROBIOLOGY AND IMMUNOLOGY

Course objectives:

1. To impart the knowledge on discovery and classification of microorganisms
2. To develop understanding on microbial nutrition, cultivation and growth pattern of microorganisms
3. To provide knowledge on the types of immunity and the immune organs
4. To demonstrate the structure of antibody types and their interaction with antigen

Unit I

Introduction to Microbiology

- 1.1 Discovering the microbial world. Classification of micro organisms up to order level - bacteria, algae, fungi, protozoa.
- 1.2 Structure of prokaryotic and eukaryotic microorganisms. General and distinctive characteristics of the major groups of microorganism bacteria, mycoplasma, chlamydiae, rickettsias, actinomycetes, fungi, algae, protozoa Prions and viruses.
- 1.3 Isolation, cultivation and enumeration of microorganisms - direct and indirect methods, Maintenance of culture.
- 1.4 Outlines of characterization and identification of common bacteria, fungi, algae and protozoa.

Unit II

Microbial nutrition, growth and regulation

- 2.1 Nutritional requirements to microorganisms - Mode of nutrition - phototrophy, chemotrophy - methylotrophy organotrophy, mixotrophy, saprophytic, symbiotic and parasitic, Interaction of microbes.
- 2.2 Growth of microorganism (bacteria) - normal and biphasic growth curve, batch and continuous cultures, chemostats, shift up and shift down. Growth determination, Microbial metabolism - energy yielding and energy requiring processes.
- 2.3 Control of microorganisms - principles, physical and chemical agents, Assay of antimicrobial action. Batch and continuous sterilization .of media and air. Viruses - nature, cultivation and assay methods, structure, physico-chemical properties, classification, pathogenicity, Replication of viruses.
- 2.4 Microbes of biotechnological importance - examples of bacteria, yeast, algae and viruses.

Unit III

Architecture and types of immune system:

- 1.1 Immunity- innate and acquired, innate immune mechanisms, acute phase reactants, properties of acquired immunity, Toll-like receptors.
- 1.2 Immunogens and antigens – Properties, factors governing immunogenicity, haptens, epitopes-size and identification. Adjuvants-properties and mechanism of action.
- 1.3 Cells involved in the immune response- T cells, B cells, CD antigens, neutrophils, eosinophils and natural killer cells. Macrophages, dendrites, Phagocytosis
- 1.4 Lymphoid tissues- Primary and secondary lymphoid organs, structure and cellular organization. Lymphocyte traffic.

Unit IV

Humoral Immunity

- 2.1 Functions of antibody in relation to structure. Antigen-antibody interactions- affinity of antibody, avidity, bonus effect, classical precipitin reaction, antigen-binding site of antibody, forces involved in antigen-antibody complex formation
- 2.2. Generation of antibodies, Theories of antibody formation. Monoclonal and polyclonal antibodies.
- 2.3 Complement - nature, physicochemical properties, complement cascade pathway, complement fixation.
- 2.4 Antibody response-primary and secondary antibody response, antibody response to haptens, enumeration of antibody-forming cells, T-dependent and T-independent antigens, MHC, Interleukins, cytokines

Course outcomes:

The student will be able to

1. Acquire the knowledge on classification and structure of different microorganisms
2. Understand the microbial techniques for isolation, cultivation and maintenance of pure cultures
3. Out line, compare and contrast the key mechanism of innate and adaptive immunity
4. Apply knowledge in disease diagnosis through serological tests

BTH 106	Human values and professional ethics-I	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

ELECTIVE FOUNDATION 4: HUMAN VALUES AND PROFESSIONAL ETHICS-I***Unit I***

Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics- Goals- Ethical Values in various Professions.

Unit II

Nature of Values – Good and Bad, Ends and Means , Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right , ought, duty, obligation, justice, responsibility and freedom , Good behavior and respect for elders, Character and Conduct.

Unit III

Individual and Society:

Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non possession) and Aparigraha (Non- stealing). Purusharthas (Cardinal virtues) – Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

Unit IV

Bhagavad Gita- (a) Niskama Karma (b) Buddhism- The Four Noble Truths- Arya astanga marga, (c) Jainism- mahavratas and anuvratas. Values Embedded in various Religions, Religious Tolerance, Gandhian Ethics.

Unit V

Crime and Theories of punishment (a) Reformative , Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

16. I.C.Sharma Ethical Philosophy of India, Nagin & Co Julundhar.

Semester-II

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 201	Enzymes and Intermediary Metabolism	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide knowledge on classification, nomenclature, isolation, and purification of enzymes
2. To educate them to understand the importance of energy relationships and its transformation in living organisms
3. To explain the metabolic pathways involved in biosynthesis of macromolecules
4. To impart awareness on the types and symptoms of metabolic diseases and their inheritance

UNIT - I: Enzymes

1.1 Classification of enzymes and their significance - Isolation and purification of enzymes - assay of enzyme activity

1.2 Determination of K_M , V_{max} and K_{cat} . Enzyme inhibition - competitive, non-competitive, uncompetitive allosteric regulation and irreversible enzyme inhibition.

1.3 Enzyme action, Active site determination

1.4 Isoenzymes - detection, characterization and significance. Ribozymes, Abzymes, multicomplex and multifunctional enzymes,

Unit-II: Metabolism of carbohydrates

2.1 Bioenergetics - Free energy change in biological transformations, thermodynamic principles in biology, Redox potential, high energy compounds

2.2 Glycolysis - Biochemical steps involved in glycolytic pathway, TCA cycle and their Regulatory mechanisms.

2.3 Glyoxalate cycle, gluconeogenesis, HMP shunt, interconversion of hexoses and pentoses, amylogenesis, glycogen metabolism.

2.4 Brief account of enzymes and co-enzymes involved in biological oxidations, Organization of respiratory electron transport system, Mechanism of oxidative phosphorylation. Biological energy transducers, Chemiosmotic regeneration of ATP.

Unit III: Lipid metabolism

3.1 Biosynthesis, degradation and regulation of saturated fatty acids.

3.2 Degradation of lipids from membranes, Oxidation of unsaturated fatty acids and synthesis of UFA by enzymatic (synthesis of prostaglandin and leukotrienes) and non-enzymatic (free radicals and lipid peroxidations) mechanisms.

3.3 Cholesterol and ketone bodies Metabolism and regulation

3.4 Metabolism of triglycerides, phospholipids, glycolipids.

UNIT - IV: Proteins, nucleic acids and heterocyclic compounds metabolism

4.1 Metabolism of amino acids and proteins - Hydrolysis of proteins, proteases, Biosynthesis of essential amino acids and their catabolism (deamination, decarboxylation, and transamination), Coordinated control of metabolism, Formation of ammonia and urea. Nitrogen fixation by bacteria,

4.2 Metabolism of purines and pyrimidines, Biosynthesis and catabolism of Nucleosides and nucleotides, role of DNases and RNases on nucleic acids.

4.3 Outlines of biosynthesis of porphyrins (Chlorophyll and Haeme)

4.4 Inborn errors in metabolism - Phenylketonuria, Alkaptonuria, Sickle cell anaemia, Fructosaemia, galactosuria, Gaucher's and Krabbe's disease..

REFERENCE:

1. Principles of Biochemistry: White. A, Handler, P., and Smith.
2. Biochemistry, Lehninger A.L.
3. Biochemistry, David E. Metzler.
4. Biochemistry, Lubert Stryer.
5. Review of Physiological Chemistry: Harold A. Harper.
6. Outlines of Biochemistry, Conn and Stummf.
7. Text of Biochemistry, West and Todd.
8. Metabolic Pathways - Greenberg,
9. Mitochondria, Munn.
10. Biochemistry, 2nd Edition, G. Zubay (1988). Practical Course
11. Practical Biochemistry - H. Varley.
12. Methods in Enzymology S.P. Colowick & N.O. Kaplan, Academic Press.
13. Methods in Biochemical analysis.
14. Oser: Hank's Physiological Chemistry.
15. Food analysis - Woodman.

Course outcomes:

Students will be able to

1. Gain knowledge on different enzymes and their significance

2. Correlate how the living organisms exchange energy and matter with the surroundings for their survival, and store free energy in the form of energy-rich compounds
3. Recognize how the catabolic breakdown of the substances is associated with release of free energy; whereas, free energy is utilized during synthesis of biomolecules i.e., anabolic pathways
4. Apply the knowledge of metabolic pathways to biotechnological and biochemical research.

	PO ₁	PO ₂	PO ₃	PO ₄	PO ₅	PO ₆	PO ₇	PO ₈	PO ₉	PO ₁₀	PO ₁₁	PO ₁₂
CO ₁	3	3	3	3	3	2	3	-	1	3	-	-
CO ₂	3	3	3	2	2	2	2	-	1	2	-	-
CO ₃	3	3	3	2	2	2	2	-	1	2	-	2
CO ₄	3	3	3	3	3	2	3	-	1	3	3	3

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 202	Molecular Biology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide comprehensive background of Salient features of Nucleic acids, DNA models and its replication to the course learners.
2. To impart detailed understanding of key events of transcription and post transcriptional modifications
3. To develop understanding of translational process in protein biosynthesis in prokaryotic and eukaryotic organisms
4. To make them understand the regulation of catabolic and anabolic gene expression

UNIT - I: Replication

1.1 DNA replication - Enzymes involved in DNA replication. Accessory proteins. Structures of oriC. Replisome – oriC - accessory protein interactions - Mechanism of formation of oriC open complex. 1.2 Replication initiation – elongation - okazaki fragments synthesis and processing - Direction of replication fork movement. Termination - Nature of termination sequences - Interactions between polymerase III and *ter* sequences

1.3 Mode of DNA replication Messelson and Stahl experiments. Replication of single stranded DNA - ϕ X174. Replication of bacteriophage lambda DNA (rolling circle). Replication of closed covalent circular DNA (θ model of DNA replication).

1.4 Problems associated with replication of linear DNA molecules - Structure and synthesis of telomere sequences. Cell cycle and its regulation - Interphasing of cell cycle and DNA replication.

UNIT - II: Transcription

2.1 Prokaryotic RNA polymerase - σ factors: $-\sigma^{70}$, σ^{32} , σ^{54} , σ^{28} promoter elements-Structural differences between σ^{70} , σ^{54} dependent promoters - Promotor polymerase interaction - Foot printing assays - Mapping of transcription start point (TSP).

2.2 Gene structure, Upstream activating sequences and their role in regulation of transcription. Transcription elongation and termination.

2.3 Eukaryotic RNA polymerases - Transcription factors – transcription. Structure and functions of RNA pol I, II and III dependent promoters. Enhancer sequences.

2.4 Post transcriptional modification of RNA and its regulation, Mechanism of tissue specific transcription.

UNIT - III: Translation

3.1 Translation - Central dogma theory and flow of genetic information, Genetic code and its elucidation, Wobble hypothesis, Structure and composition of prokaryotic and eukaryotic ribosomes, Structures of mRNA and tRNA,

3.2 Events of protein synthesis (amino acid activation, initiation, elongation and termination) in prokaryotes and eukaryotes,

3.3 Post-translational modification of proteins, Inhibitors of translation.

3.4 Protein trafficking - Concept of signal peptide - transport and membrane targeting of proteins - Sec pathway - Alternative protein transport mechanisms.

Unit IV: Regulation of gene expression

4.1 Regulation of gene expression. Constitutive and inducible gene expression, Use of mutants in gene expression. P and O site determination.

4.2 Regulation of catabolic gene expression Eg: lac operon, ara operon and gal operon.

4.3 Regulation of anabolic gene expression Eg: Trp and His operons

4.4 Hormonal regulation of genes.

6. Biochemistry of the Nucleic acids. 1992. 11th ed. R.L.P. Adams, J.T. Knowler, D.P. Leader, Chapman and Hall.

Course outcomes:

1. Understand the biochemical composition and genome organization in living cells
2. Learn about the mechanism of tissue specific transcription and role of RNA polymerases
3. Appreciate the correlation of genetic code with protein synthesis in prokaryotic and eukaryotic cells.
4. Gain insights of mechanism of gene expression and regulations

	Enzymology		
End Semester Examination Marks: 100			

1. Isolation of DNA from bacterial, plant and animal cells.
2. Estimation of DNA by Diphenylamine method.
3. Isolation RNA from yeast cells.
4. Estimation of RNA BY Orcinol method.
5. Estimation of DNA and purity determination by UV absorption method.
6. Determination of melting temperature (T_m).
7. Isolation of plasmid DNA from *E.coli*.
8. Detection and differentiation of open circular, linear and closed covalent circular plasmid DNA by submarine gel electrophoresis.
9. Transformation of *E.coli* with ampicillin resistant plasmid.
10. Trasfection of M13 DNA into *E. coli* JM103.
11. Isolation of phage M13.
12. Isolation of single and double standard M13 DNA.
13. Conjugation: Use of broad host range plasmid RP in demonstrating conjugation transfer of plasmid bacteria.
14. Catabolite repression: Evidence of B-Galactosidase induction in presence of lactose in *E .coli lac* strains.

Recommended Books:

6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann Medical Books, London)

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 205	Technical writing, Biostatistics and Bioinformatics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis
4. To provide knowledge about the basics of sequence alignment and analysis.

Unit I

Technical writing: Sentence writing, paragraph writing, story writing, review writing, various types of letters writing, critical comments writing.

Project proposal preparation: Preparation of informal proposal, modified proposal and formal proposal. Experimental design and Collection of results, submission of progress report (year wise) and submission

of technical report (Format: Title page, Introduction, Aims of the proposal/research, methodology, results, references, acknowledgments, budgetary preparation). Submission of final technical Report. Patenting and intellectual property rights.

Introduction of computation: Computers components, storage devices, graphic devices, concepts of hardware and software, methods and types of networks. Basics of operating systems and types python, cython.

Unit II

Bio-Statistics: Data - Data types, collection of data, classification and tabulation. Measures of central tendencies. Mean, median and mode. Measures of variation - Range, quartile deviation, mean deviation and standard deviation. Coefficient of variation. Probability. Addition and multiplication theories, conditional probability and probability distributors. Binomial, poisson and normal distribution. Correlation and linear regression. Regression: Regression coefficients and properties. Small sample tests- t, F and chi square tests. ANOVA - one way and two way classifications.

Unit III

Bio-Informatics-I: Origin of bioinformatics biological data (genome projects), Disciplines of bioinformatics, transcriptomics, functional genomics, structural genomics, metabolomics, pharmacogenomics, structure prediction, drug design and Microarrays.

Genome projects - General introduction to genome projects (rice and Mycobacterium tuberculosis genome project). Special emphasis on Human Genome Project (HGP). Science behind HGP, benefits of HGP, ELSI of HGP in use of genetic information, genetic testing standard, quality and commercialization.

Biological database - Introduction of database (DB), need, organization, search of DB. An over view of biological databases - NCBI, EMBL, DDBJ, SWISS-PROT, PDB, KEGG. Decoding of the genome (Nathan blow study), Ribosomal bar codes, Molecular signatures.

Unit IV

Bio-Informatics-II: Database querying with NCBI using key words, sequences (proteins and genes), finding similarities, identifying genes and proteins from different organisms.

Sequence alignment - Introduction, significance of sequence alignments and use of dot matrices. Pair wise and multiple sequence alignment (MSA) using Clustal programs.

Sequence analysis - concepts of sequence analysis and their importance. BLAST. blastn, blastp, blastx, tblastx, output analysis matrix BLOSSUM, PAM, e-value.

Proteomics - Introduction, principle, technique, 2-D data base. Gel analysis, post gel analysis, MALDI-TOF. Significance and applications of proteomics in modern biology.

Recommended Books:

1. Statistical methods. S.P. Gupta
2. Fundamentals of mathematical statistics. S.C Gupta & Kapoor
3. Statistical methods in biological and Health Science. J. S. Milton & J.O. Tsokan.
4. Primrose SB. Principles of Genome Analysis: a guide to mapping and sequencing DNA from different organisms. 2nd Ed. 1998. Blackwell Science: Oxford. ISBN 0-632-04983-9.
5. Genome Mapping: A practical approach. Dear P (Editor). 1st Ed. 2000. Oxford University Press: Oxford.
6. Developing Bioinformatics Skills. Alfonso Valencia and Blaschke. L (2005) Oreille.s Publication.
7. Bioinformatics sequence, structure and data banks ed. By Des Higgins Willie Taylor. (2006).
8. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins" (Andreas D. Baxevanis, B. F. Ouellette), Paperback, 2nd ed., 470 pp., ISBN: 0471383910, Publisher: Wiley, John & Sons, Inc., Pub.
9. David W. Mount, Bioinformatics: Sequence and Genome Analysis, 2nd edition, Cold Spring Harbor Laboratory, 2004, ISBN 0-87969-687-7.
10. Introduction to Bioinformatics by T.K.Altwood and D.J Parry-Smith (Pearson Education Asia 1999).
11. Voet D, Voet JG & Pratt CW, Fundamentals of Biochemistry, 2nd Edition. Wiley 2006
12. Discovering Genomics, Proteomics and Bioinformatics, 2nd edition-A. Malcolm Campbell and Laurie J. Heyer (ISBN 0-8053-4722-4)-Cold Spring Harbor Laboratory press and Benjamin Cummings, 28

Feb 2006.

13. Campbell AM & Heyer LJ, Discovering Genomics, Proteomics and

Course outcomes:

The student will be able to

1. Discuss the various steps involved in conducting research
2. Learn to apply hypothesis testing via some of the statistical distributions
3. Develop understanding about Biological data and database search tools
4. Acquire hands on training on various computational tools and techniques employed in Biological sequence analysis

	PO ₁	PO ₂	PO ₃	PO ₄	PO ₅	PO ₆	PO ₇	PO ₈	PO ₉	PO ₁₀	PO ₁₁	PO ₁₂

CO ₄	3	3	3	3	3	2	3	-	1	3	3	3

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 206	Human values and Professional ethics-II	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Unit I

Value Education- Definition- relevance to present day- Concept of Human Values- self introspection- Self esteem- Family Values – Components, Structure and responsibilities of family- Neutralization of anger- Adjustability- Treats of family life – Status Of women in family and society- Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit II

Medical ethics- Views of Charaka, Sushruta and Hippocrates on moral responsibility of medical practitioners. Code of ethics for medical and Health care professionals. Euthanasia, Ethical obligation to animals, Ethics issues in relation to health care professionals and patients. Social justice in health care, Human cloning, Problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit III

Business ethics- Ethical standards of business- Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit IV

Environment ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justice and Environmental health.

Unit V

Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/ pregnancy. Ethics of media- Impact of Newspaper, Television, Movies and Internet.

Recommended Books

1. John S Mackenjie: A manual of ethics.
2. The Ethics of Management” by Larue Tone Hosmer, Richard .D. Irwin Inc.
3. Management Ethics-integrity at work” by Joseph A. Petrick and John F. Quinn, Response Books: New Delhi.
4. Ethics in management” by S.A.Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today.
6. Maitra, S.K: Hindu Ethics.
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu : Comprising the Indian System of Duties: Religious and Civil (ed.) G.C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjalal ,Kunjatal Brishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varanasi, Vol 1 OO, 16-20, 21-32 and 74- 77 only.
11. Caraka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office , Varanasi Vol 100, 16-20,21-32 and 74-77 only.
12. Ethics: Theory and Contemporary Issues., Barbara Mackinnon Wadsworth/ Thomson Learning , 2001.
13. Analysing Moral Issues, Judith A. Boss, Mayfield Publishing Company ,1999.
14. An Introduction to Applied ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Text Book for Intermediate logic, Ethics and Human Values , board of intermediate Education & Telugu Academic Hyderabad.
16. I.C.Sharma Ethical Philosophy of India, Nagin & Co

Semester-III

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 301	Genetic Engineering	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about major events in the development of rDNA technology
2. To acquire skills on techniques of construction of recombinant DNA - Cloning vectors

and isolation of gene of interest.

3. To familiarize with the concepts of constructing genomic DNA library and cDNA library
4. To understand the principles and applications of Polymerase Chain Reaction (PCR).

UNIT - I: Introduction to gene Cloning

Requirements and steps involved in gene cloning, Isolation of gene/DNA fragments. Purification of genes, Mechanical shearing, restriction digestion, cDNA synthesis, and chemical synthesis of gene.

Enzymes involved in gene cloning: polymerases, kinases, ligases, nucleases

Restriction enzymes - Outlines of bacterial restriction and modification systems – Classification of restriction enzymes - Type II restriction enzyme: Nomenclature, Production of DNA fragments with cohesive ends and blunt ends and their significance, vectors and hosts.

UNIT – II: Plasmids and Vectors

Vectors for construction of genomic libraries - cosmids, bacterial artificial chromosomes (BACs), yeast artificial chromosomes (YACs) - vectors for construction of cDNA libraries - lambda ZAP. Multipurpose vectors - pUC 18/19, Blue script vectors - multiple cloning site - Strategies for unidirectional deletion of cloned DNA fragments - Generation of sequence of cloned DNA fragments. Site directed mutagenesis.

Expression vectors – structure - promoters used in expression vectors - *lac*, *tac*, λpL , T7 promoters and their significance in constructing expression vectors. Promoter-probe vectors – Structure promoter probe vector - Reporter genes (*lacZ*, *gfp*, *gus*, luciferase) and strategies used to assay promoter activity. Vectors used for cloning in to mammalian cells - SV40. Vectors - Cloning in plants by Ti and Ri vectors.

UNIT - III: cDNA and chimeric DNA synthesis

cDNA synthesis - Mechanism of cDNA synthesis, Strategies used to obtain full length cDNA. 5' and 3' RACE. Chemical synthesis - solid phase synthesis of oligonucleotides - Designing of gene from amino acid sequences, *In vitro* synthesis of gene. Ligation between cohesive and blunt end DNA fragments - T4 DNA ligase - Conversion of blunt end DNA fragment into cohesive ended DNA - linkers, adapters, homopolymer tailing.

UNIT - IV: Gene Transfer and Screening methods

Cloning strategies: Introduction of cloned genes into host - Transformation, transduction, conjugation, transfection, electroporation, particle bombardment, microinjection, liposome mediated DNA delivery. Identification and characterization of cloned genes - Screening of genomic/cDNA libraries - genetic, molecular hybridization - immunochemical techniques. PCR - Concept and technology- Properties of primers -Taq DNA polymerase and its significance Inverse, multiplex PCR, RAPD, RFLP, AFLP and its significance. Real time PCR. Applications of genetic engineering

Course outcomes:

The student will be able to

1. Familiar with the tools and techniques for isolation and purification of genes
2. Acquire knowledge on vectors for construction of genomic libraries and cDNA libraries
3. Understand the mechanism of cDNA synthesis
4. Know the techniques for transfer and expression of cloned gene and applications of genetic engineering in biological research.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 302	Cell and Tissue culture	04	4
Sessional Marks: 10		End Semester Examination Marks: 90(40+50)	

Course Objectives:

1. To impart knowledge about the organization of Plant Tissue Culture Lab and to give insight of nutrient requirements and factors influencing plant tissue culture.
2. To develop skill on micropropagation of forest trees, medicinal plants and endangered plants and to educate the student to learn methods to in vitro germplasm conservation and production of secondary metabolites through cell culture.

3. To gain knowledge on the biology of stem cells
4. To acquaint with Nuclear transfer technology, stem cell therapies and animal cloning

Core 2: CELL AND TISSUE CULTURE

UNIT - I: Plant cell and culture

Introduction to plant tissue culture: Preparatory techniques - cleaning, sterilization, sterile handling tissue culture lab requirements. Media - Composition, preparation and sterilization. Genetic manipulation through tissue culture techniques - Concepts of differentiation and dedifferentiation.

Callus - growth pattern/characteristics, Organogenesis and plant regeneration. Somatic embryogenesis. Anther, endosperm and pollen cultures, Significance and advantages of haploid plants. Production of virus-free plants by meristem tip and other tissue culture techniques.

UNIT - II: Micropropagation

Cell culture techniques for micropropagation of elite plants - Food and fruit crops, forest trees, fibre crops, ornamental plants, medicinal plants and endangered plants.

Cell culture techniques for production of useful compounds - Hairy root cultures - transformed roots using *Agrobacterium rhizogenesis* - Production of secondary metabolites of commercial importance - Elicitors - factors affecting their yield, immobilized cell systems, bioreactors.

Selection of clones for nutritional, disease resistance, salt and drought resistance. Germplasm preservation by tissue technology, Artificial synthetic seeds. Protoplast culture -isolation of protoplasts, culture and fusion methods, Somatic hybrids and cybrids.

UNIT - III: Animal and stem cells

Introduction to animal cells and tissue culture - Components of cell culture, cell types and cell lines, different substrates, types of culture.

The biology of stem cells: Overview; different types of stem cells - embryonic stem cells, fetal tissue stem cells, adult stem cells; nuclear transfer of stem cells; human and animal cloning.

Embryonic stem cells: The blastocyst and inner cell mass cells - primitive endoderm implantation; blastocyst development *in vitro*; Isolation and propagation of embryonic stem cells; chimeras; Generation of knockout mice.

Stem cell plasticity: Overview; Self renewal potential; differentiation versus stem cell renewal; Transdifferentiation; Cell cycle dynamics of different stem cells.

Stem cell assays and protocols: Isolation of defined stem cell populations; progenitor cell assays, sources of progenitor cells, cytokine and chemotherapy approaches to mobilization of progenitor cells; Flow cytometric techniques; Methods of cell selection using monoclonal antibodies; magnetic approaches to cell separation, Dyna beads, nano particle preparations; growth factors and *ex-vivo* expansion of hematopoietic stem / progenitor cells bioreactors for expansion.

UNIT - IV: Applications of cell culture

Nuclear transfer technology: Transfer of nuclei into eggs; development potential of transplanted nuclei; reprogramming a nucleus.

Stem cell therapies: Clinical applications of stem cell therapy; Neurodegenerative diseases-parkinson's disease, Alzheimer's, spinal cord injury, other brain syndromes; tissue systems failures - diabetes, cardiomyopathy, kidney failure, liver failure - hemophilia, lymphoma and leukemic malignancies requiring stem cell therapy.

Animal cloning and application in wild life and life stock: Overview; Challenges in human therapeutic cloning; Somatic cell nuclear transfer in humans; Pronuclear early embryonic development.

Human embryonic stem cells and society: The religious, legal, ethical and scientific debate; the failure of the debate; the regulatory aspects of therapeutical use of stem cells

Course outcomes:

The student will be able to

1. Learn important milestones in the plant tissue culture and understand the concepts and principles of Plant tissue culture.
2. Learn different pathways of plant regeneration under in vitro conditions – organogenesis, somatic embryogenesis, synthetic seeds and applications, techniques of virus elimination by meristem and shoot tip culture.
3. Acquire knowledge on the biology of stem cells
4. Acquaint with Nuclear transfer technology, stem cell therapies and animal cloning

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303 P	Practical related to Microbiology	04	4
End Semester Examination Marks: 100			

Core 3P: PRACTICAL RELATED TO MICROBIOLOGY

1. Handling of Microscopes: Calibration of Microscopes.
2. Sterilization techniques: Autoclaving (Moistened-heat), Oven sterilization (dry-heat), Filtration, UV irradiation and Chemical.
3. Preparation of media: For Bacteria and Fungi.

4. Isolation and cultivation of pure cultures: Serial dilution, Pour plate method, Spread plate method and streak plate method.
5. Methods for the estimation of Growth (Growth rate and generation time in bacteria).
6. Staining techniques for bacteria and yeast: Gram Staining and Spore staining for bacteria; Methylene blue staining for Yeast.
7. Antibiotic sensitivity test.
8. Starch hydrolysis assay for the identification amylase-producing microorganisms.
9. Gelatin hydrolysis assay for the identification protease-producing microorganisms.
10. Preparation of wine from Grapes.
11. Production of Alcohol from molasses and its estimation by specific gravity method.
12. Production of Citric acid and its estimation by Marrier and Boulet method.
13. Production of Lactic acid and its estimation by Barker and Summerson method.
14. Induction of mutation in bacteria using physical and chemical mutagens.
15. Isolation of nucleic acids (DNA and RNA) from bacteria and yeast.
16. Water analysis for bacteria and determination of BOD and COD of water.
17. Observation of *Rizobium* from root nodules of groundnut plant.
18. Isolation of phages from sewage and quantification by plaque assay.

Recommended Books:

1. Microbiology laboratory Manual 4th Edit. By Cappuccino
2. Microbiology laboratory Manual (2001) by Aneja, K.M
3. Laboratory Manual in Microbiology by P.Gunasekaran (1996), New Age Publ.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303 P	Practical related to Tissue culture	04	4
End Semester Examination Marks: 100			

1. Organizing Plant tissue culture Laboratory
2. Culture of plant cells, tissues and organs.
3. Preparation of Tissue Culture Media
4. Callus Induction
5. Shoot tip culture

6. Embryo / Endosperm Culture
7. Organogenesis
8. Somatic Embryogenesis
9. Hardening and Planting in field
10. Isolation of protoplasts
11. Cell suspension culture
12. Anther and Pollen cultures
13. Isolation, purification and culture of protoplasts
14. Economics of micropropagation project

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 305 a	Bioprocess Engineering and Technology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about Isolation, screening and maintenance of industrially important microbes
2. To make the student to learn about fermentation technology
3. To educate the student to gain knowledge in reaction kinetics, kinetics of enzyme catalyzed reactions
4. To familiarize with the concepts and the techniques of bio separation

UNIT -1: Role of Microbes in Bioprocessing

Isolation, screening and maintenance of industrially important microbes; microbial growth and death kinetics (an example from each group, particularly with reference to industrially useful microorganisms); Strain improvement for increased yield and other desirable characteristics.

UNIT - II: Bioreactors

Bioreactor designs; types of fermentation and fermenters; Concepts of basic modes of fermentation – batch, fed batch and continuous; conventional fermentation v/s biotransformation; Solid substrate, surface and submerged fermentation; Fermentation economics; Fermentation media; Fermenter design -

mechanically agitated; pneumatic and hydrodynamic fermenters; Large scale animal and plant cell cultivation and air sterilization: Upstream processing; media formulation; sterilization; aeration and agitation in bioprocess; Measurement and control of bioprocess parameters; Scale up and scale down process.

UNIT - III: Bioreactors - Enzyme kinetics

Kinetics of Enzyme catalyzed reactions - immobilization - Kinetics of immobilized enzyme catalyzed reactions - Kinetics of balanced growth - Transient growth kinetics. Gas-liquid mass transfer in cellular systems - Aeration – Agitation - Estimation of oxygen transfer rates.

UNIT - IV: Bioseparation and purification

Bioseparation - filtration, centrifugation, sedimentation, flocculation; cell disruption; Liquid-liquid extraction; Purification by chromatographic techniques; reverse osmosis and ultra filtration; drying; crystallization; Storage and packaging; Treatment of effluent and its disposal. Large scale production and purification of recombinant therapeutics (streptokinase, epidermal growth factor, insulin)

8. Fundamentals of Biotechnology by P.Prave , U.Faust W.Sitting and DASukatsch, VCH.
9. A Text Book on Biotechnology by HD Kumar, Affiliated East West Press Private ltd.

Course outcomes:

The student will be able to

1. Handle the axenic cultures of industrially important microbes and appreciate the relevance of microorganisms from industrial context.
2. Gain an overview on design, operations and types of fermentation systems
3. Calculate yield and production rates in a biological production process, and also interpret data
4. Apply knowledge on separation and purification of end products of fermentation

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303 b	Legal, Ethical and Implications of Biotechnology	04	4
Sessional Marks: 20		End Semester Examination	
Marks: 80			

Course Objectives:

1. To make them understand the concept of intellectual property rights and its importance in biotechnology
2. To acquaint them to identify legal and ethical issues raised in Biotechnology
3. To make them know the social and moral implications in biotechnology research.
4. To impart knowledge on pros and cons of genetically modified foods and microbes

UNIT - I: IPR

Intellectual property rights - Definition - types -patents - copy rights-trade marks: essential requirements for IPR, procedures of filing patents-provisional and complete specifications-Pan-Co-operation treaty (PCT)-application: GATT and IPR: WTO Act - Global and Indian Biodiversity Act- Indian Patnt Act and their revised versions.

UNIT - II: Ethics

Legal and Ethical aspects of Biotechnology -Prenatal diagnosis - Genetic screening - Surrogate mothers and exploitation of women - designing of plants and animals- gene therapy - cloning - Manipulation of human genome -Technology transfer.

UNIT - III: Society and Government roles

Social and Moral aspects of Biotechnology -Biotechnology and International trade - Privatisation and patenting of Biotechnology products - Role of Government, Industries and society in promoting, accepting and regulating the rDNA research.

UNIT – IV: Health Measures

Environmental and Health aspects of Biotechnology - Generally engineered organisms - Introduction of novel species and natural equilibrium - Environmental security and safety -Precautionary measures - Genetically modified foods - health safety.

REFERENCES:

1. Gene cloning - Brown
2. Concepts in Biotechnology- Balasubramanyam.D
3. Basic Biotechnolgy - Colin Rotledge and Kristainsen
4. Gene Biotechnology - Jogdand

5. From Genes to Clones, Introduction to Gene Technology-Winnacker, Ernst.L
6. Safety, Moral, Social and Ethical issues related to geneticall modified foods - Smith J.E.
7. Molecular Biology and Biotechnology - Meyer R A
8. Environmental Biotechnology- Forster and wase
9. Biotechnological Innovations in Environmental Management - Leach and Van Dam-mieras
10. Industrial Microbiology and Biotechnology- Demain and Solomon

Course outcomes:

The student will be able to

1. Develop awareness on types IPR and patenting process
2. Understand legal and ethical controversies in biotechnological innovations
3. Apply knowledge in providing safety of food, water and environment
4. Gain overview of GM crops and microbes and their impact on environment
- 5.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303C	Food and Industrial Biotechnology	04	4
Sessional Marks: 20		End Semester Examination	
Marks: 80			

Course Objectives:

1. To impart knowledge about the principles of food preservation and processing
2. To make the student to be learn about various aspects of the Nitrogen fixation and mass production of bio fertilizers
3. To educate the student about bioenergy and its production.
4. To give insight on role of microorganisms in environment and their applications in food and dairy Industry

GENERIC ELECTIVE c: FOOD AND INDUSTRIAL BIOTECHNOLOGY

UNIT – I: Food and Spoilage Scope of biotechnology in the food and drink industry: Contamination of foods by pesticides, fertilizers, industrial waste and chemical contaminants. Principles under lying food spoilage - chemical, physical and physiological changes caused by microorganisms. Control measures for food poisoning. Principles of food preservation, foods produced by microorganisms. Milk and Dairy

products, Cereal products, Brewing, Protein products, Food additives and ingredients, Fruits and vegetables, large scale cultivation of edible mushrooms, meat and sausage products.

UNIT - II: Alternate Foods

Nitrogen fixation and mass production of biofertilizers - diazotrophic microorganisms, Biochemical aspects of diazotrophy. Genetics of free living and symbiotic diazotrophs. Blue Green Algae and Azolla, Micorrhizae, Vermiculture, Mass cultivation of commercially valuable macro and micro algae for agar agar, alginates, single cell protein and other products

UNIT - III: Microbes use in food industry

Energy and Biotechnology : Biomass, solar energy technology, Agriculture and forestry, conversion to fuel, bio fuel cells and other devices. Biogas production – design and types of biogas digesters.

Production of biohydrogen.

Microbial leaching, Metal transformation, accumulation and immobilization by microbes. Application of microbes in mining and petroleum industry. Microbial enhanced oil recovery. Biodegradation of xenobiotic compounds, Hazards from xenobiotics.

UNIT - IV: Nutraceuticals

Materials and Biotechnology : Biomolecules production - microbial polysaccharides, organic acids, amino acids, vitamins, antibiotics, enzymes, alcohols, food flavours, significance of Agrobacterium in enhancing food quality and yield Microbial toxins.

Pharmaceuticals - vaccines, hormones, diagnostics. Applications of enzymes in industry and medicine; immobilized enzymes - their preparation and applications. Use of microbes in biodegradation of organic wastes. Industrial production of fungal, bacterial and viral biopesticides.

16. Industrial microbiology, Prescott and Dunn. 1997. Ed. Gerald Reed.

Course outcomes:

The student will be able to

1. Acquire knowledge on food preservation, processing and control measures for food poisoning
2. Establish indoor and outdoor cultivation units for algal cultivation
3. Learn effective management of solid waste for energy production.
4. Appreciate the industrial role of microorganisms in production of biomolecules

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 306a	Plant Tissue Culture	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about the organization of Plant Tissue Culture Lab.
2. To give insight of nutrient requirements and factors influencing plant tissue culture.
3. To develop skill on micropropagation of forest trees, medicinal plants and endangered plants.
4. To educate the student to learn methods to in vitro germplasm conservation and production of secondary metabolites through cell culture.

OPEN ELECTIVE a: PLANT TISSUE CULTURE

UNIT - I: Plant cell and culture

Introduction to plant tissue culture: Preparatory techniques - cleaning, sterilization, sterile handling tissue culture lab requirements. Media - Composition, preparation and sterilization.

Genetic manipulation through tissue culture techniques - Concepts of differentiation and dedifferentiation.

Callus - growth pattern/characteristics, Organogenesis and plant regeneration.

UNIT-II:

Somatic embryogenesis. Anther, endosperm and pollen cultures, Significance and advantages of haploid plants. Production of virus-free plants by meristem tip and other tissue culture techniques.

UNIT - III: Micropropagation

Cell culture techniques for micropropagation of elite plants - Food and fruit crops, forest trees, fibre crops, ornamental plants, medicinal plants and endangered plants.

Cell culture techniques for production of useful compounds - Hairy root cultures - transformed roots using Agro bacterium rhizogenesis - Production of secondary metabolites of commercial importance - Elicitors - factors affecting their yield, immobilized cell systems, bioreactors.

UNIT-IV:

Selection of clones for nutritional, disease resistance, salt and drought resistance. Germplasm preservation by tissue technology, artificial synthetic seeds. Protoplast culture -isolation of protoplasts, culture and fusion methods, Somatic hybrids and cybrids

Course outcomes:

The student will be able to

1. Learn important milestones in the plant tissue culture and understand the concepts and principles of Plant tissue culture.
2. Learn different pathways of plant regeneration under in vitro conditions – organogenesis, somatic embryogenesis, synthetic seeds and applications.
3. Understand techniques of establishing cell suspension culture, techniques of virus elimination by meristem and shoot tip culture.
4. Acquire skill of propagation of elite medicinal and economically important plants and establish micropropagation unit for commercialization.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 306 b	Bioethics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about intellectual property rights

2. To make the student to learn about legal and ethical aspects of Biotechnology
3. To educate the student about Social and Moral aspects of Biotechnology
4. To train students on Environmental risk assessment and food and feed safety assessment.

OPEN ELECTIVE b: BIOETHICS

UNIT - I: IPR

Intellectual property rights - Definition - types -patents - copy rights-trade marks: essential requirements for IPR, procedures of filing patents-provisional and complete specifications-Pan-Co-operation treaty (PCT)-application: GATT and IPR: WTO Act - Global and Indian Biodiversity Act- Indian Patent Act and their revised versions.

UNIT - II: Ethics

Legal and Ethical aspects of Biotechnology -Prenatal diagnosis - Genetic screening - Surrogate mothers and exploitation of women - designing of plants and animals- gene therapy - cloning - Manipulation of human genome -Technology transfer.

UNIT - III: Society and Government roles

Social and Moral aspects of Biotechnology -Biotechnology and International trade - Privatisation and patenting of Biotechnology products - Role of Government, Industries and society in promoting, accepting and regulating the rDNA research.

UNIT – IV: Health Measures

Environmental and Health aspects of Biotechnology - Generally engineered organisms - Introduction of novel species and natural equilibrium - Environmental security and safety -Precautionary measures - Genetically modified foods - health safety.

REFERENCES:

1. Gene cloning - Brown
2. Concepts in Biotechnology- Balasubramanyam.D
3. Basic Biotechnology - Colin Rotledge and Kristainsen

CO ₄	3	2	3	3	2	-	-	-	1	1	2	-

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 306 c	Bioinformatics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To gain working knowledge on computational tools and methods
2. To gain knowledge about various Biological databases that provide information about nucleic acids and protein
3. To get exposed to computational methods, tools and algorithms employed for Biological Data Interpretation
4. To provide knowledge about the basics of sequence alignment and analysis.

OPEN ELECTIVE c: BIOINFORMATICS

UNIT I: Basics of Personal computer and its components

Concept of programming languages, hardware and software. The basics of operating system. Windows operating systems commands to create and handle directory and files, creation of biological data bases and MS access.

MS office: introduction and facilities available, shortcut bar, customizing tool bars, starting an office file, MS word, Excel, Power point

UNIT II:

Introduction to internet and biologists: Basics on internet, getting into the internet, email, file transfer protocols, gopher, www, browsing and downloading from the sites

Networking of computers and overview of networks: Virtual library I, II, III and information networks: www, http, html, URLs, EMB net, NCBI net, Virtual tourism.

UNIT III: Databases and predictive tools

Primary information resources for proteins and genes, biological databases for protein and DNA sequences, Specialized genomic resources, DDBJ, Gen Bank, and EMBL public DNA sequence databases, SWISSPORT data base, information retrieval from biological data bases, the NCBI data model, submitting the DNA sequence to the database and updating.

Sequence Analysis: Wisconsin GCG, DNASIS, DNASTAR, CLONE Manager, packages for nucleotide sequence analysis, sequence alignment and database searching, practical aspects of multiple sequence alignment.

UNIT IV:

Phylogenetic analysis: phylogenetic models, multiple alignment procedures, (CLUSTAL, ALIGN, PHYLIP), tree building methods, trees evaluation, rooting trees, phylogenetic software.

Predictive methods: Detecting regulatory elements in the DNA, Physical properties of proteins based on proteins based on sequences, differential protein structural motifs, RNA binding domains and folding classes, transcription factors and their DNA binding, protein structure predictions.

Course outcomes:

The student will be able to

1. Develop understanding about Biological data and database search tools
2. Acquire hands on training on various computational tools and techniques employed in Biological sequence analysis
3. Learn about pathway and enzyme databases, Sequence submission tools
4. Develop understanding on protein folding and its significance

Semester-IV

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 401	Environmental Biotechnology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. Make them understand the concept, organization and energy flow in an ecosystem
2. Impart knowledge on the process of biodegradation and bioremediation
3. Equip with the knowledge on biological control and scope of bio fertilizers in agriculture
4. Educate about different types of wastes and their ecofriendly management

Core 1: ENVIRONMENTAL BIOTECHNOLOGY

UNIT -1: Ecosystem and energy flow

Structure of model ecosystem - terrestrial, aquatic ecosystems - Energy flow - Degradation of ecosystem. Consequences - Ecosystem managements - Energy conservation - Alternative energy sources - Biofuels: Production of bioethanol, boibutanol from agriculture waste - Problems and perspectives - Biodiesels: mass cultivation of *Jatropha* and use of *Jatropha*, marine algae for production of biodiesel.

UNIT-II: Biodegradation and remediation

Nature of recalcitrant compounds - Anthropogenic activities generating recalcitrant chemical waste - BHC, DDT, nitrophenols, polycyclic aromatic carbons. Biodegradation - microbial conversion of recalcitrant toxic compounds into TCA cycle intermediates eg: *Pseudomonas putida*. Bioremediation, Degradation pathways - naphthalene, BHC, and nitrophenols. Use of microbes for reconstruction of ecosystems - Genetics of biodegradation. Microbes as biosensors for detecting pollution. Superbug – cleaning of oil spills.

UNIT - III: Biopest and Biofertilizers regulation

Biological methods of pest management - Role of Juvenile hormones, pheromones and its analogues for pest management, Chromosomal manipulation and androgenesis of pest, sterile male technology, Biological control of weeds. Bacterial (BT), viral, fungal insecticides - Technology for mass production and formulation of biopesticides - Problems and prospects.

Biofertilizers - Important diazotrophic, microbes - mechanism of symbiotic and asymbiotic biological nitrogen fixation - Regulation of nitrogen fixing genes (Nif genes). Manipulation of Nif genes for constitutive expression of nitrogenase - Ammonia transport and its significance. Mass production of biofertilizers - *Ribozium*, *Azolla*.

UNIT - IV: Waste disposal

Waste management - Nature and classification of agriculture, domestic and industrial waste - Recycling methods. Solid waste treatment. Biological and non-biological methods of waste water treatment. Reclamation of treated waste water.

10. Methods in Enzymology. Vol. 152. Guide to molecular cloning techniques. 1987. S.L. Berger and A.R. Kimmel, eds. Academic Press.

Course outcomes:

The student will be able to

1. Learn the relation between biotic and abiotic factors in different ecosystem models and predict how changes in free energy availability affect ecosystems.
2. Appreciate the role of microorganisms in biodegradation and pollution detection
3. Develop skill on large scale production and applications of bio pesticides and bio fertilizers fin agriculture
4. Apply knowledge on solid waste management and reclamation of waste water

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 402	Plant Biotechnology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about transgenic plants: herbicide, pest and disease resistant, abiotic stress resistant, nutritional enhancement and traits for improved quality
2. Impart knowledge on biosynthesis of plant compounds
3. Improve understanding on the role of algae as food, feed and medicine
4. Train in identification of plant pathogens using immunological and molecular techniques

Core 2: PLANT BIOTECHNOLOGY

UNIT - I: Introduction to Plant Biotechnology

Concepts and scope of plant biotechnology -Application of genetic engineering technology for crop improvement - production of transgenic plants resistant to herbicides, pathogens, pests and abiotic stresses (drought, salt, frosts); production of transgenic plants with improved yields and nutritional quality; transgenic plants for production of viral antigens.

UNIT - II: Role of Industry on Plant Biotechnology

Industry and Plant Biotechnology: Biosynthesis of plant compounds – Selection of cell lines for high yields of secondary metabolites – Enzymes from plants – Food and food additives from plants – Breeding strategies for enhancing the active principles in plants.

UNIT - III: Algal Biotechnology

Algae as a source of food, feed, single cell proteins, biofertilizers, industrial uses of algae.

Mass cultivation of commercially valuable marine microalgae for agar agar, alginates and other products of commerce and their uses. Mass cultivation of macroalgae as a source of protein and feed. Indoor and outdoor cultivation of economically important algae – Use of algae in waste water treatment.

UNIT - IV: Plant pathology

Nutrient film culture techniques - plant diseases – Physiology of infection in plants – disease resistance in plants - phytodiagnosics based on immunological and molecular techniques. Biological control of pests and diseases of crop plants and weeds - biopesticides - predators, parasites, insect viruses, antagonistic fungi and bacteria, antifeedants, and insecticidal activities of the compounds of Botanicals.

Course outcomes:

The student will be able to

Students will be able to

1. Develop skill in production of transgenic plants resistant to biotic and abiotic stress
2. Apply knowledge for industrial production of plant metabolites
3. Cultivate the micro and macro algae of commercial importance on large scale
4. Identify different plant pathogens and apply biological control methods

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 403	Project	04	4
End Semester Examination Marks: 100			

Core 4 PROJECT WORK (100 marks):

Marks allotted to thesis preparation-80 (40 marks for the progress performed by the student in laboratory will be awarded by project research supervisor and another 40 marks for content of the thesis)

Marks allotted to viva presentation-20

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 405 a	Pharmaceutical Biotechnology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge on production of pharmaceutical products by biotechnological applications
2. Provide training in clinical testing of pharmaceutical products
3. Give insight on the drug designing and development
4. Explain the comprehensive overview on the conventional and recombinant vaccines and bioethical issues

GENERIC ELECTIVE a: PHARMACEUTICAL BIOTECHNOLOGY

UNIT -1: Pharmaceutical Products

Definition - History of development of Pharmaceutical Products by biotechnological methods like genetic recombinant vaccines, microbial and non-microbial products - scope of biotech products and biochemical in pharmaceutical industry. Need to design a drug, drug receptor interactions, antagonisms, biological activity, efficacy and stimulus, receptors and ion channels, ion gating co-operatively effect of solvent on drug - receptor interactions, drug docking.

UNIT- II: *In vitro* development of drugs and pharmaceuticals

Methods of testing products for abti-microbial potentials, pharmacological activities and biopesticidal properties -conventional and rapid enzyme inhibitor techniques; in vivo methods - use of animals models for confirmation of in vitro properties - transgenic systems - preclinical, toxicological studies, Acute, subacute, chronic studies. Clinical trials -definition - design - specific objectives - types of clinical trials - phase I, II & II - randomised controlled clinical trails - multicentric double nblind clinical trials - pharmaceutical/drug regulations for commercialising new biotech products for human use - PDA and Indian regulations.

UNIT – III: Biotech medicines and pharmaceuticals

Biotech products as medicines and pharmaceutical products: Biochemicals - enzymes like proteases - chemical like ethanol, vinegar, citric acid and glutamic acid; vitamins like B12; drugs for infection and metabolic, immunomodulatory -insulin - interferons, B-cell growth factors, Tissue plasminagen activator. r-DNA based production of regulatory protins, blood products, hormones, vaccines, Application of RELP in forensic, disease prognosis, genetic counselling, pedigree, variation.

UNIT - IV: Health development

Vaccines - cell culture based vaccines - genetic recombinant vaccines - recombinant vector based vaccines -live and subunit - their production model - fermentation technology - expression systems - guideline for the production of genetic recombinant vaccines - Eg. Hepatitis B vaccine, HIV vaccine and other vaccines in pipeline.

Application of biotechnology to Animal health and disease diagnosis, Development of kits and their application in disease diagnosis. Gene therapy, vector engineering, strategies of gene deliver, gene replacement, augmentation, gene correction, gene regulation and silencing safety and bioethical issues in biotechnology.

5. Alice Sr. Bringhamtpn, NY13904,US Drug discovery, Tamas bartifai, Harold L.Dorn's The Scientific world Ltd., Newburry, U.K.

Course outcomes:

The student will be able to

1. Gain knowledge on preparation and formulations of different drugs
2. Develop skill on commercial production of pharmaceutical products for human welfare
3. Learn the techniques of drug validation and vaccine production
4. Understand the bioethical principle, values, concepts and social and judicial implications of pharmaceutical biotechnology

	PO ₁	PO ₂	PO ₃	PO ₄	PO ₅	PO ₆	PO ₇	PO ₈	PO ₉	PO ₁₀	PO ₁₁	PO ₁₂

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 405 b	Animal Biotechnology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. Develop understanding on the structure and functions of male reproductive system and methods of contraception
2. Make them learn the principle and methods of animal cloning
3. Provide knowledge on gene cloning and production of transgenic animals
4. Impart the knowledge on role of biotechnology in health care system

UNIT - I: Reproduction

Structure and function of male reproductive system - Hormonal regulation of spermatogenesis and spermeiogenesis; Inhibin and androgen binding proteins; Capacitation of spermatozoa.

Structure and function of female reproductive system - influence of hormones on development of ovarian follicles and oogenesis; Reproductive cycles; estrus and menstrual cycle; Ovulation, atresia and corpus luteum formation; Pregnancy and lactation; Implantation and placentation.

Contraception in males and females; Hormonal and chemical; Recent advances in contraception research.

UNIT - II: Sex and Breeding

Introduction - Sex determination; Principles of animal breeding; Structure of the live stock breeding industry: dairy cattle, beef cattle, swine, sheep and poultry.

Selection for qualitatively inherited characters - Gene frequency and selecting against recessive genes; detecting heterozygotes for recessive; parental determination and verification; the use of markers and/ or molecular probes, selection criteria: multiple records, pedigree selection, family selection; progeny testing: breeding value, transmitting ability and heritability; correlated characters; selection for maternal ability; factors affecting selection response; genotypes - environment interactions.

Artificial insemination (AI) techniques and their development; Estrus synchronization; Semen collection, evaluation, storage, *in vitro* fertilization, Embryo transfer - ICSI and preservation of endangered species.

UNIT-III: Transgenesis

An overview of transgenic technology.

Development of transgenic mice and other animal models: by injection of foreign DNA/gene into zygote; optimization of construct for *in vivo* expression

Generation of chimeric, transgenic and knockout mice and other animals and their characterization

Potential application of transgenic animals : Models for various diseases/disorders, Production of peptides and proteins of biopharmaceutical interest (molecular pharming), Transgenic fishes, Transgenic poultry and Transgenic insects as bioreactors.

UNIT - IV: Applications

Applications of biotechnology to animal health - Production of vaccines, diagnostics, hormones and other products. Animal nutrition and biotechnology - Microbial supplements, non-genetic and genetic manipulation of rumen microbes, Utilization of animal waste as live stock feed.

3. Animal Cell Biotechnology, Vol.6, 1994, R.E. Spier, J.B. Griffiths, Eds. Harcourt Brace. PP

Course outcomes:

The student will be able to

1. Understand the organization of reproductive organs and advances in contraception research
2. Learn the techniques of In Vitro Fertilization and artificial insemination
3. Develop skill in molecular techniques for production of transgenic animals
4. Apply knowledge on molecular farming for production of vaccines and hormones

	PO ₁	PO ₂	PO ₃	PO ₄	PO ₅	PO ₆	PO ₇	PO ₈	PO ₉	PO ₁₀	PO ₁₁	PO ₁₂

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 405 c	Applications of Biotechnology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide understanding on different areas of biotechnology
2. Impart knowledge on the role of biotechnology in agriculture
3. Develop skill on the cell & tissue culture system for vaccine production
4. Give insight on the xenobiotic environmental pollution and methods of degradation of toxic compounds

UNIT - I: Introduction

History and scope of Biotechnology, Definition of Biotechnology, Old & Modern Biotechnology, Different areas of Biotechnology.

UNIT- II: Plant Biotechnology

Biotechnology and Agricultural, Micro propagation, (Cell and Tissue culture) Transgenic plants, Biofertilization, organic farming, Biopesticides.

UNIT - III: Animal Biotechnology

Application of Biotechnology in Animal sciences, Animal cell and tissue culture, production of transgenic animals, cloning of animals (IVF & ET) cryopreservation somatic production of animals, application of human vaccines in improving productivity.

UNIT - IV: Environmental Biotechnology

Biotechnology and Environment: Microbial agents and Biochemical methods of xenobiotic degradation, GEMs, Waste water and solid waste management.

12. Management - Leach and Van Dam-mieras
13. Industrial Microbiology and Biotechnology- Demain and Solomon

Course outcomes:

The student will be able to

1. Acquire the knowledge on applications of plant, animal and environmental biotechnology
2. Develop skill on organic farming and preparation of bio pesticides and bio fertilizers
3. Establish and maintain cell lines for vaccine production
4. Apply knowledge on waste management and recycling for environmental protection

BTH 405 d	Practical related to Immunology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Core 3: PRACTICAL RELATED TO IMMUNOLOGY

1. Raising of antibodies to soluble antigen in rabbits.
2. Immunodiffusion.
3. Single Radial Immunodiffusion.
4. Rocket immunoelectrophoresis.
5. Cross over Immunoelectrophoresis.
6. Graber and Williams Immunoelectrophoresis.
7. Detection of HCG by latex agglutination inhibition test.
8. Haemeagglutination tests for identification of human blood groups.
9. Detection by viral fever by slide agglutination tests.

Recommended Books:

6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann, London, 1988).

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 406 a	Tools in Biotechnology	04	4
Sessional Marks: 20		End Semester Examination	
Marks: 80			

Course Objectives:

1. To improve understanding on replication initiation point mapping.
2. To gain knowledge on use of DNA microarrays to analyze origin activation patterns
3. To build knowledge on Electron microscopic methods for identifying DNA replication intermediates.
4. To give insight on replication dynamics of gene

OPEN ELECTIVE a: TOOLS IN BIOTECHNOLOGY

Unit I: Methods of Analysis of Replication of Single locus

Replication initiation point mapping: Approach and implications, purification of restriction fragments containing replication intermediates, Topological analysis of plasmid DNA replication intermediates, Analysis of telomeric DNA replication using neutral alkaline 2D gel electrophoresis, chromatin immunoprecipitation of replication factors moving with replication fork, density transfer as a method to analyze the progression of DNA replication fork, High resolution mapping of points of site specific replication, DNA replication in nucleus

Unit II Genome wise analysis methods

Chip-chip to analyze the binding of replication proteins to chromatin using oligonucleotides DNA microarrays, analyzing origin activation patterns by changing experiments. Detection of replication origins using comparative genomics and recombination ARS assay. Isolation of restriction fragments containing origin of replication from complex genomes. Application of alkaline sucrose degradation and analysis of DNA replication after DNA damage.

Unit III Biochemistry and Biophysics Methods

Isolation of recombinant DNA elongation proteins In vitro assays for studying helicase activities, the use of two amino fluorescence to study DNA polymerase function, Single molecule observation of prokaryotic DNA replication, The FAST-HALO assay for the assessment of DNA damage for the single cell level. Electron microscopic methods for studying In vivo DNA replication intermediates.

Unit IV Cell biology and Genetics methods

Visualization of DNA replication sites in mammalian nuclei, measuring of DNA content by Flow cytometry in Fission Yeast. Assays used to study replication check point in Fission Yeast. Use of DNA combining to study SNA replication in genus and in human cell free systems. Determining the replication dynamics of specific gene loci by single molecule analysis of replicated DNA.

References

1. DNA replication methods and protocols in Methods in Molecular Biology Edited by John N walker co edited by Soniya and Jacob Gelgard 2009. Humana press, New York.
2. General biochemistry and biophysics methods books.

Course outcomes:

The student will be able to

1. Acquire the knowledge on analysis of DNA replication to map site specific points of replication
2. Learn to apply DNA microarrays to detect replication origins
3. Understand the functions of helicase and polymerase in DNA replication
4. Acquire knowledge on sophisticated programmed of genome replication

CO ₄	2	2	3	2	-	-	1	-	1	-	-	-

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 406 b	Immunology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide knowledge on the types of immunity and the immune organs
2. To demonstrate the structure of antibody types and their interaction with antigen
3. To acquaint them with the hybridoma technique and its clinical applications
4. Explain the concept of hypersensitivity, auto immunity and tumor immunology

OPEN ELECTIVE b: IMMUNOLOGY

UNIT - I: Architecture and types of immune system:

Immunity- innate and acquired, innate immune mechanisms, acute phase reactants, properties of acquired immunity, Toll-like receptors. Immunogens and antigens – Properties, factors governing immunogenicity, haptens, epitopes-size and identification. Adjuvants-properties and mechanism of action. Cells involved in the immune response- T cells, B cells, CD antigens, neutrophils, eosinophils and natural killer cells. Macrophages, dendrites, Phagocytosis Lymphoid tissues- Primary and secondary lymphoid organs, structure and cellular organization. Lymphocyte traffic.

Unit II Humoral Immunity

Functions of antibody in relation to structure. Antigen-antibody interactions- affinity of antibody, avidity, bonus effect, classical precipitin reaction, antigen-binding site of antibody, forces involved in antigen-antibody complex formation

Generation of antibodies, Theories of antibody formation. Monoclonal and polyclonal antibodies.

Complement - nature, physicochemical properties, complement cascade pathway, complement fixation.

Antibody response-primary and secondary antibody response, antibody response to haptens, enumeration of antibody-forming cells, T-dependent and T-independent antigens, MHC, Interleukins, cytokines

UNIT - III: *In vitro* serological tests

Principles and applications of serological tests used in identification of pathogenic agents and initial sources of inoculum-precipitation tests in liquid media, single and double diffusion tests using agar gel media, Immunoelectrophoresis, rocket immunoelectrophoresis, hemagglutination, bentonite and later flocculation tests, complement fixation test, labeled antibody techniques (tests with fluorescent antibody, test with radioisotope-labeled antibody and enzyme-labeled immunoassays ELISA)

Immunosorbent electron-microscopy, infectivity neutralization test, and western blotting and immunodetection of viral antigens, relative merits and demerits of the above tests.

Blood groups and isohaemagglutination.

UNIT - IV:

Antigen Presentation- pathways of antigen processing and presentation of intracellular and extracellular antigens. Cell mediated immunity (CMI): Induction and mechanism

Hypersensitivity reactions – Classification, Type I – IV reactions. Immunity to bacterial, fungal, viral and parasitic diseases. Allergy: classification and details. Immune tolerance, immune suppression. Transplantation and G.V.H. reactions. Immunopathology -Autoimmune diseases; immune complex diseases; immunodeficiency diseases; immunity to infection. Production of vaccines and sera - conventional and biotechnological.

Course outcomes:

The student will be able to

1. Out line, compare and contrast the key mechanism of innate and adaptive immunity
2. Apply knowledge in disease diagnosis through serological tests
3. Develop skill in production of monoclonal antibodies
4. Gain knowledge on undesirable immunological reactions and their complications in health management

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 406 d	Genomics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To understand about differences between prokaryotic and eukaryotic genomes as well as forward and reverse genetics.
2. To learn about techniques used in genomics, genome sequencing, annotation, database development as well as their applications.
3. To impart knowledge about the advances in structural and functional aspect of newly sequenced genome
4. To understand the use of genomics in the crop improvement, drug discovery, value added crops as well as development of recombinant protein.

Unit I: Genomic Evolution & Organization: RNA world hypothesis, Genetics to Genomics, Forward and reverse genetics. Eukaryotic and prokaryotic genomes, Chromosome structure and function, Chromatin re-modeling/organization, DNA as genetic material, Central dogma of molecular biology.

Unit II: Genome Sequencing: Overview of conventional and new sequencing technologies, Strategies used in whole genome sequencing, NGS technologies, RNAseq, Genome annotation, Candidate gene discovery and data mining, Transcription factor, Development of databases and their uses, Genome mapping by genetic and physical techniques, Comparative genomics and SNP analysis.

Unit III: Techniques for Genomics: Restriction and modifying enzymes, Various blotting techniques, PCR techniques, RT-PCR, qPCR, Digital PCR, Site directed mutagenesis, Genomic and cDNA libraries, Screening of libraries, DNA microarray, Antisense RNA, RNA interference, TALEN, CRISPR-Cas9.

Unit IV: Genome Initiatives: Structural and functional genomics, Advances in human genome, Advances in buffalo genome, Advances in Arabidopsis genome, Advances in rice genome, Advances in wheat genome, Advances in tomato genome, Advances in sorghum genome, Advances in peanut genome etc. **Application of Genomics:** Genomics in gene function analysis, Genomics in plant and animal breeding and improvement, Genomics in drug discovery, Genomics in value added crops, Genomics in recombinant protein etc. animal breeding and improvement, Genomics in drug discovery, Genomics in value added crops, Genomics in recombinant protein etc.

4. Genome Analysis: Current Procedures and Applications by Maria S. Poptsova. Caister Academic Press (2014) ISBN: 978-1-908230-29-4.

Course Outcomes:

At the end of the course, a student should be able to:

1. Explain the detailed characteristics of prokaryotes and eukaryotes genome as well as application of forward and reverse genetics.
2. Get knowledge and design the experiments using various techniques of genome sequencing as well proper organization of generated biological data
3. Apply structural and functional genomics approaches on newly sequenced genome for functional characterization of genes.
4. Develop capacity to pin point the strategies used for crop improvement and development of drug, recombinant proteins or value added crop.

MSc Biotechnology :: Model Question paper

Semester I/II/III/IV

Paper BTH: 101 etc

Time 3 Hrs

Max marks 80

Attempt any five from part A (5 x 4=20 marks) and all from part B (4 x 15=60 marks)

PART A (5 x 4=20 marks)

1. Unit 1

2. Unit 1

3. Unit 2

4. Unit 2

5. Unit 3

6. Unit 3

7. Unit 4

8. Unit 4

PART A (4 x 15=60 marks)

9. Unit 1 A or B

10. Unit 2 A or B

11. Unit 3 A or B

12. Unit 4 A or B
