SRI VENKATESWARA UNIVERSITY:: TIRUPATI

SVU COLLEGE OF SCIENCES

M.Sc., STATISTICS

Syllabus for M.Sc. Statistics

Choice Based Credit System (CBCS)

Amended as per NEP 2020

(w.e.f. the Academic Year 2021-2022)

VISION: To en-corporate certain specific objectives and scale to prepare the students to take up challenges in any one or more functional domain

- 1. ACADEMICS
- 2. BASIC AND APPLIED RESEARCH
- 3. RESEARCH AND DEVELOPMENT
- 4. SOFTWARE SKILLS
- 5. INDURSTRY
- 6. STATISTICAL ANALYSIS

MISSION: To bring out professional having knowledge of basic laws of nature together with strong fundamentals of in core areas of statistics viz. linear algebra, probability and distributions, statistical inference, multivariate analysis, econometric methods, operations research-i, time series analysis and forecasting methods, operations research-ii. Specializations subjects like....Sampling techniques, stochastic process, linear models and applied regression analysis, computer programming and data analysis, demography and official statistics, bio-statistics, statistical process and quality control, advanced econometric models. Technical subjects like... statistical analysis using excel and spss, python, design and analysis of experiments, industrial statistics and quality control, statistical analysis using R + R practical's

Program Educational Objectives: At the end program the student will be able to

- **PEO1:** Apply principals of basic scientific concepts in understanding and predictions of statistical sciences
- PEO2: Develop human resources with specializations in theoretical and experimental techniques required for carrier in academic, research and industry
- o **PEO3:** Engage in lifelong learning and adopt changing in professional and society needs

PROGRAM EDUCATIONAL OBJECTIVES: at the program the student will be able to

- o **P01:** Apply the scientific knowledge to solve the statistical data analysis problems
- o **PO2:** Identify, formulate and analyze advanced scientific problems reading substantiated conclusions for all kind of disciplines like medical, biological series and so on.
- o **PO3:** Creative design solutions for advanced scientific problems `and design system components using statistical analysis that meet the specified need with appropriate attention to health and safety risks.
- o **PO4:** Using statistical analysis understanding the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge and need for sustainable development.
- PO5: Create, select and apply appropriate techniques, resources and modern statistical tools to complex statistical problems with understanding of the limitations.
- o **PO6:** analyzing the impact of marketing sales into the society using data science techniques.
- PO7: By statistical methods demonstrating the knowledge and understanding the scientific principles and applying the statistical tools to manage projects and in multidisciplinary environments.
- PO8: apply ethical principles and norms of scientific practices
- PO9: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings by statistical approach.
- o **PO10:** Understanding the working of various analog communication techniques by using data science methods
- PO11: Project management of finance in collaboration with various firms by data science techniques
- o **PO12:** Recognize the need and have the preparation and ability to engage independent and life-long learning in the broadest context of scientific and technological change by statistical approach.

Program Specific Outcomes: At the end of the program the student will be able to

- o **PSO1:** Understand the basic and advanced concepts of probability, distributions.
- o **PSO2:** Perform and design experiments in the area of Biostatistics, advanced Biostatistics, Time series
- o **PSO3:** Apply knowledge on software like Excel, SPSS and R software

S.V. UNIVERSITY, TIRUPATI

<u>Multidisciplinary Subjects:</u> M.Sc., Mathematics and M.Sc., Computer Science

ST 101: LINEAR ALGEBRA

Unit-I: Algebra of matrices; Elementary transformations; Rank and Inverse of a matrix; Nullity; Partitioned matrices; Kronecker product; Generalized inverse of matrix; Moore-Penrose generalized inverse; Solutions of simultaneous equations.

Unit-II: Finite dimensional Vector Spaces; Vector Spaces and Subspaces; Linear dependence and independence; Basis and dimension of a vector space; Completion theorem; Inner product Spaces; Orthonormal basis and Gram-Schmidt orthogonalization process; Orthogonal projection of a vector.

Unit-III: Linear transformations and properties; Orthogonal and unitary transformations; Real quadratic forms; Reduction and classification of quadratic forms; Hermitian forms; Sylvesters law of inertia; Canonical reduction of quadratic form.

Unit-IV: Characteristic roots and vectors; Cayley – Hamilton theorem; Minimal polynomial; Similar matrices; Spectral decomposition of a real symmetric matrix; Reduction of a pair of real symmetric matrices; Hermitian matrices.

Subject Code	Subject Name	Credits A	Allotted	Total				
ST-101	Lincon Algohua	Theory Practical		1				
51-101	Linear Algebra	4		4				
	1. To Prepare Students about algebra of matrices and vector spaces.							
Course	2. To explain	2. To explain about roots vectors and linear transformations with an						
Objective	Examples.							
	3. To Prepare	e the students on	the concept of the	he orthonogonality and				

	quadratic forms.4. To Make the students to understand the concept of the spectral decomposition of the matrices.
Course Out comes	 Students understood for estimation of elementary transformations in matrix and their solutions. Students learnt about characteristic roots and vectors with numerical examples. They also know theoretical proofs of theorems. Discriminate between diagonalizable and non-diagonalizable matrices; orthogonally diagonalizable symmetric matrices and quadratic forms Combine methods of matrix algebra to compose the change-of-basis matrix with respect to two bases of a vector space, identify linear transformations of finite dimensional vector spaces and compose their matrices in specific bases

B-248-01-01

M.Sc. DEGREE EXAMINATIONS, AUGUST - 2021 FIRST SEMESTER BRANCH - STATISTICS

ST - 101 : Paper - I : LINEAR ALGEBRA (COMMON TO M.Sc. APPLIED STATISTICS)

(Under CBCS w.e.f. 2016-2017)

(Common to Supplementary candidates also i.e., who appeared in 2015 and earlier with 70 marks)

Time: 3 Hours

Max. Marks: 80

SECTION - A

Answer any Four questions. All questions carry equal marks.

 $(4 \times 5 = 20)$

- 1. Find inverse of the matrix $\begin{pmatrix}
 1 & 0 & 0 \\
 0 & 0 & 1 \\
 0 & 1 & 0
 \end{pmatrix}$
- Define a non singular linear transformation. State its properties and prove one of them.
- Let V be a vector space over the filed F. Prove that the intersection of any collection of subspaces of V is a subspace of V.
- Show that the vectors (3,0,-3), (-1,1,2),(4,2,-2) are linearly independent.
- 5. Using Cayley Hamilton theorem obtain A²-6A, when $A = \begin{pmatrix} 3 & 1 \\ 1 & 3 \end{pmatrix}$.
- Define linear transformation. Is there a linear transformation T from R³ into R² such that T(1,-1,1) = (1,0) and T (1,1,1) = (0,1).
- Similar matrices have the same characteristic polynomial.
- Define Gram matrix and show that a quadratic form in a Gram matrix is either positive definite (or) positive semi definite.

Answer all Four questions.

(4×15=60)

9. a) Define Kronecker product and prove that

(15)

(7)

- A⊗B may not equal B⊗A.
- A⊗(B+C) (A⊗B) + (A⊗C).
- iii. $(A \otimes B)^T = A^T \otimes B^T$.

(OR)

- b) If $\varphi_{e_{\mathcal{D}}}(A)$ is defined, then prove that $\varphi_{\mathcal{D}^{e}}(A') = ((\varphi_{e_{\mathcal{D}}}(A))^{r})$. (15)
- 10. a) Let S₁,S₂,....,S_k be subspaces of a vector space, then the following are equivalent
 - i. $S_1 + S_2 + \dots + S_k$ is direct ii. $(S_1 + S_2 + \dots + S_i) \cap S_{i+1} = \{0\}, 1 \le i \le k-1$.
 - $\text{iii.} \quad 0 = x_1 + x_2 + \ldots + r_t, \, r_i \in S_t, \ 1 \leq t \leq k \ \Rightarrow \pi_i = 0 \ \text{for} \ i = 1, 2, \ldots, k \ .$
 - iv. $d(S_1 + S_2 + + S_k) = d(S_1) + d(S_2) + + d(S_k)$ (15)

(OR)

- b) Find the orthogonal projector into the column space of $A = \begin{pmatrix} 3 & 2 & 1 \\ 1 & 3 & -2 \\ -2 & 1 & -3 \end{pmatrix}$. (15)
- a) Discuss the procedure to classify a quadratic form.
 - b) Write the matrices of 3 ary quadratic form $x_1^2 + x_2^2 3x_1^2 + 2x_1x_2 6x_1x_2$. (8)
 - (OR)
 - State and prove Sylvester's law of inertia.
 - Reduce the 3-ary quadratic form 2x₁x₂+x₂x₃ to diagonal form using lagrange's method.
- a) i. State and prove Caylev Hamilton theorem.
 - ii. Find the characteristic roots of $\begin{pmatrix} 3 & 5 \\ 1 & 4 \end{pmatrix}$. (8)

(OR)

b) Find a spectral Decomposition of the matrix $A = \begin{bmatrix} 7 & -6 & 6 \\ 2 & 0 & 4 \\ 1 & -2 & 6 \end{bmatrix}$. (15)

ST 102: PROBABILITY AND DISTRIBUTIONS

Unit-I: Classes of sets, fields, σ -fields, minimal σ -field, Borel σ - field in R^K , sequence of sets, limsup and liminf of a sequence of sets. Measure, Probability measure, properties of a measure, Lebesgue and Lebesgue-Stieltjes measures, Measurable functions, Random variables, sequence of random variables, almost sure convergence, convergence in probability (and in measure). Monotone convergence theorem, Fatou's lemma, Dominated convergence theorem.

Unit-II: Expectation of a random variable, inequalities on expectations, Markov, Holder, Jensen and Liapiunov inequalities. Borel- Cantelli - Lemma, Independence, Weak law and strong law of large numbers for iid sequences, Chebyshev's theorem, khinchine's theorem, Kolmogorov theorems (statements only), convergence in distribution.

Unit-III: Laplace and Weibull distributions. Functions of random variables and their distributions, sampling distributions: central Chi Square, t and F distributions and its properties, applications, relation between t and F, F and χ^2 ; Fisher's Z-distribution, fisher's Z-transformation. Non-central chi-square, t and F distributions and their properties.

Unit-IV: Multiple and partial correlation coefficients, multiple linear regression, inter relationship among partial and multiple correlation and regression coefficients. Null distributions of simple, partial and multiple correlation coefficients. Order statistics and their

distributions, joint and marginal distributions of order statistics, distribution of range. Extreme values and their asymptotic distributions.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

FIRST SEMESTER

Branch: STATISTICS

ST-102: Paper II – PROBABILITY AND DISTRIBUTIONS

(Common to M.Sc. Applied Statistics)

(Under NEP 2021)

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions
All questions carry equal marks

(Marks: $4 \times 5 = 20$)

- 1. Define Field and minimal sigma field.
- 2. State and prove nominated convergence theorem.
- 3. State and prove markov inequality.
- 4. Write down the statement of Borel Cantelli Chebyshev's theorems.
- 5. Write down the distribution function of weibull distribution and derive its M.G.F.
- 6. Derive C.F. of chi-square distribution.
- 7. Define partial and multiple correlations and explain their inter relationship.
- 8. Explain order statistics and its mean and variance with example.

SECTION - B

Answer any FOUR questions. Each question carries 15 marls.

(Marks: $4 \times 15 = 60$)

9. (a) State and prove monotone convergence theorem.

(or)

- (b) Explain about Lebesgue-Stieltjes measure.
- 10. (a) State and prove Khinchine's weak law of large numbers.

(or)

- (b) State and prove holder inequality.
- 11. (a) Derive the MGF of Laplace distribution of second kind and its moments.

(or)

- (b) Derive non-central F distribution also find its mean and variance.
- 12. (a) Write a note on multiple linear regression. Explain its null distribution.

(or)

(b) Derive distribution of order statistics Y(α) of the sample. Also derive the joint distribution of Y(α) Y(β).

ST 103 (a): SAMPLING TECHNIQUES

Unit-I: Review of basic concepts of sampling theory such as sampling design, sampling scheme, sampling strategy etc., Sampling with varying probability with and without replacement, PPS WR/WOR methods – Lahiri's sample scheme, Hansen – Hurwitz, Des Raj estimators for a general sample size and Murthy estimator for a sample of size 2, Symmentrized Des Raj estimator.

Unit-II: Hurwitz – Thompson estimator (HTE) of a finite population total / mean, expression for V(HTE) and its unbiased estimator. IPPS scheme of a sampling due to Midzuno – Sen and JNK Rao (sample size 2 only). Rao – Hartley-Cochran sampling scheme for a sample of size n with random grouping.

Unit-III: Ratio and Regression methods of estimation, Two stage sampling, Multi stage sampling, Cluster sampling. Resampling methods and its applications.

Unit-IV: Double sampling for difference, ratio, regression and PPS estimators; Large scale sample surveys, Errors in surveys, A mathematical model for errors of measurement, Sampling and Non-sampling errors, Sources and types of non-sampling errors, Remedies for non-sampling errors.

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021 SECOND SEMESTER

Branch: STATISTICS/APPLIED STATISTICS

ST-103: Pares-IIIa: Sampling Techniques
(Under CBCS w.c.f. 2016-2017)

(Common to Supplementary candidates also who appeared in 2015 and 2016 only with 70 marks)

Time: 3 Hours

Max. Marks: 80

SECTION - A

Answer any Four questions. Each question carry equal marks,

(4×5=20)

- Explain the basic concepts of sampling theory.
- Explain the procedure for PPS sampling.
- Define Hurwitz-Thompson estimator and its variance.
- Explain the un-biased estimator for HTE (Hurwitz-Thomson estimator) and its applications with suitable example.
- 5. Explain about Re-Sampling methods and its applications.
- -6: Explain about cluster sampling with an examples.
- -7. Explain briefly about sampling and Non sampling errors.
- 8. Explain about sources and types of Non-sampling Error.

SECTION - B

Answer All questions. Each question carries 15 marks.

(4×15=60)

9. a) Explain about Hansen-Hurwitz and Des Raj estimators for a general sample size.

(OR)

 Explain about PPS with replacement and without replacement and also explain about Lahiri's sample scheme.

[P.T.O.]

- a) Explain about a IPPS scheme of a sampling due to Midzuno-sen and INK Ran.
 (OR)
 - Define about Rao-Hartley-cochran sampling scheme for a sample of size n with random, grouping.
- a) Discuss the relative efficiences of ratio and regression estimator.

(OR

- Explain about Multi-Stage sampling with suitable example and also explain its applications.
- a) Describe about double sampling and what are its advantages with its applications
 (OR)
 - What are the Remedies of Non-sampling errors and also construct mathematical model for errors of measurement.

ST 103 (b): STOCHASTIC PROCESSES

Unit-I: Introduction to stochastic processes (sp's): classification of sp's according to state apace and time domain. Countable state Markov chains (MC's), Chapman – Kolmogorov equations, calculation of n – step transition probability and its limit. Stationary distribution, classification of states,, transient MC, random walk and gambler's ruin problem.

Unit-II: Discrete state space continuous time MC: Kolmogorov – Feller differential equations, Poisson process, birth and death process; Applications to queues and storage problems. Wiener process as a limit of random walk, first – passage time and other problems.

Unit-III: Renewal theory: Elementary renewal theorem and applications. Statement and uses of key renewal theorem, study of residual life time process: weakly stationary and strongly stationary process; Moving averages and auto regressive process.

Unit-IV: Branching process: Galton – Watson branching process, probability of ultimate extinction, distribution of population size. Martingale in discrete time, inequality, convergence and smoothing properties. Statistical inference in MC and Markov process.

M.Sc. DEGREE EXAMINATION, MAY 2014

SECOND SEMESTER

Branch - Statistics with Computer Applications Time: 3 Hours ST-103 Paper- III STOCHASTIC PROCESSES

Answer any FOUR questions, each question carries 5 marks.

- (Marks : 4 × 6 marks = 20 marks) Define Markov Chain and represent M.C. as a graph.
- Explain random walk
- Define Poisson process and explain the postulates. 31
- Show that the difference between two Poisson processes is not a Poisson process.
- Define renewal process with an example.
- Show that :
 - (a) $p_n(t) = P[N(t) = n] = F_n(t) F_{n+1}(t)$ and
 - (b) $M(t) = \sum_{n=1}^{\infty} F_n(t)$.
- Explain branching process.
- Write a note on statistical inference in Markov process.

PART - B

Answer ONE question from each Unit. (Marks : 4 × 12.5 marks = 50 marks)

Define state space, parametric space and hence explain stochastic process with classification. Give examples in each case.

Or

10. Show that if state K is persistent null, then for every $\underset{s\to s}{Lt} p_{jk}^{(s)} = 0$ and if stat K is aperiodic persistent non-null then Lt $p_{jk}^{(n)} = F_{jk} / \mu_{kk}$

13 Explain the problem of classification and discrimination. Explain the problem into two multivariate normal populations. 14. Define Wishart distribution and obtain its distribution function. 15. Explain in detail about multiple linear regression model. Also explain about least spansion procedure for obtaining the parameters in multiple linear regression model. (12) Define principal components and discuss their use in statistical analysis. Obtain the estimates of principal components.

ST 104 (A): STATISTICAL ANALYSIS USING EXCEL AND SPSS

Unit-I: Review of Excel, sorting, filtering and construction of charts. Curve fitting and interpretation of the output. Statistical functions in Excel - Calculating theoretical probability using Binomial, Poisson and Normal distributions. Matrix operations- Transpose, Product and Inverse operations using Excel. Pivot tables and look up functions.

Unit-II: Data Analysis Pak in Excel, descriptive statistics, tests of hypothesis, ANOVA, Correlation and Regression, Random Number Generation from different distributions, Binomial, Poisson, Uniform, Normal and from discrete distributions with given mean and variance. Forecasting Using Excel – Moving Averages and Exponential Smoothing, Use of functions, Linest, Logest, Forecast, Growth, Trend for trend analysis. The use of solver for optimization – Application to LPP.

Unit-III: Introduction to SPSS, Different Menu's in SPSS, creating a data file, opening excel files, variables and labels, selecting cases by filtering, recoding of data, merging of files, Sorting of Cases and Variable, SPSS Output and its transfer to excel and word. Analysis categorical data- Scales of Measurements, Data reliability-test rest method, Cronbach's alpha.

Unit-IV: Using SPSS Analysis tools, descriptive statistics, cross tabs (with stress on procedures and syntax). Post-hoc analysis for multiple comparisons using Tukey's test, Duncan's Multiple Range Test, Dunnet's test and Scheffe's test with interpretation. Selection of variables in Multiple Linear Regression – stepwise procedures and analysis of residuals. Procedure for Binary Logistic regression, Factor analysis, Linear Discriminant analysis and Cluster analysis.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

FIRST SEMESTER

Branch: STATISTICS / APPLIED STATISTICS

APST-104(A): STATISTICAL ANAYSIS USING EXCEL AND SPSS

(Under NEP 2021).

Time: 3 Hours Max.

Marks:80

SECTION – A

All questions carry equal marks Answer any FOUR questions (Marks : $4 \times 5 =$

20)

- 1. Explain sorting in Excel using an example.
- 2. List out steps for Binomial distribution in Excel.
- 3. Describe steps for fitting linest.
- 4. Explain moving averages of order(4) using Excel.
- 5. Describe with illustration.
- 6. Write about cronbach's alpha.
- 7. Explain Schefle's test in SPSS.
- 8. Explain T- test using SPSS.

SECTION - B

Each question carries 15 marks. Answer any FOUR questions. (Marks : $4 \times 15 =$

60)

- 9. (a) Explain Matrix operations with illustrations using Excel (or)
 - (b) Describe curve fitting using Excel.
- 10. (a) Explain ANOVA using Excel.

(or)

- (b) Describe Trend analysis using Excel.
- 11. (a) Write about reliability test rest method

(or)

- (b) Explain descriptive statistics using Excel functions.
- 12. (a) Describe Two way ANOVA with replications using SPSS.

(or)

(b) Explain cluster analysis and their interpretation using SPSS.

ST 104 (B) : PYTHON

UNIT – I: Introduction to Python Programming Language:

Introduction to Python Language, Strengths and Weaknesses, IDLE, Dynamic Types, Naming Conventions, String Values, String Operations, String Slices, String Operators,

Numeric Data Types, Conversions, Control Flow and Syntax, Indenting, The if Statement, Relational Operators, Logical Operators, True or False, Bit Wise Operators, The while Loop, break and continue, The for Loop, Lists, Tuples, Sets, Dictionaries, Sorting Dictionaries, Copying Collections, In Functions.

UNIT -II: Object and Classes:

Classes in Python, Principles of Object Orientation, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes.

UNIT -III: Functions and Modules:

Introduction, Defining Your Own Functions, Parameters, Function Documentation, Keyword and Optional Parameters, Passing Collections to a Function, Variable Number of Arguments, Scope, Functions - "First Class Citizens", Passing Functions to a Function, Mapping Functions in a Dictionary, Lambda, Modules, Standard Modules − sys, □ Standard Modules − math, Standard Modules − time, The dir Function.

UNIT -IV: I/O and Error Handling In Python:

Introduction, Data Streams, Creating Your Own Data Streams, Access Modes, Writing Data to a File, Reading Data From a File, Additional File Methods, Using Pipes as Data Streams, Handling IO Exceptions, Working with Directories, Metadata, Errors, Run Time Errors, The Exception Model, Exception Hierarchy, Handling Multiple Exceptions.

Books for Study:

- 1. Dive into Python, Mike
- 2. Learning Python, 4th Edition by Mark Lutz
- 3. Programming Python, 4th Edition by Mark Lutz

Subject Code	Subject Name	Credits A	Allotted	Total

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

FIRST SEMESTER

Branch: STATISTICS / APPLIED STATISTICS

ST-104(B) :: PYTHON

(Under NEP 2021).

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any four questions. Each question carries 5 marks. (Marks: $4 \times 5 = 20$)

- 1. Write down the Strengths and Weaknesses of Python Language.
- 2. Explain Control Flow and Syntax.
- 3. What are the Classes in Python?
- 4. Write a note on Inheritance.
- 5. Explain the Optional Parameters in Python.
- 6. Write a short note on the dir Function in Python.
- 7. Explain about Data Streams.
- 8. What are Run Time Errors?

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Explain Relational, Logical, True or False and Bit Wise Operators in "Python".

(Or)

- (b) Write about Dynamic Types, Naming Conventions, String Values and String Operations.
- 10. (a) What are the Principles of Object Orientation? Discuss.

(Or)

- (b) Write about File Organization in Python.
- (c) Discuss on Custom Exception Classes.
- 11. (a) Discuss on Variable Number of Arguments.
 - (b) Write about Passing Collections to a Function.

(Or)

- (c) What are the Modules in Python ? Discuss on Standard Modules sys, math, and time.
- 12. (a) Write about Access Modes in Python.
 - (b) Discuss the Additional File Methods in Python.

(Or)

- (c) What are the Handling IO Exceptions? Explain.
- (d) Explain about Exception Model in Python.

ST 105: PRACTICAL-I

At least 24 practicals covering papers relating to the subjects Linear Algebra, Sampling Techniques in this semester must be carried out. (75 marks for practical examination + 25 marks for record in the semester)

Subject Code	Subject Name	Credits A	Allotted	Total
ST-105	PRACTICALS	Theory	Practical	4

SEMESTER – II

ST 201: STATISTICAL INFERENCE

Unit-I: Point estimation – Un biased ness, Consistency, Efficiency and Sufficiency; Fisher-Neyman factorization theorem, complete sufficient statistics, minimum variance unbiased estimator (MVUE), Cramer - Rao inequality, Battacharayas inequality, Rao – Blackwell theorem. Exponential family, Maximum Likelihood estimation method, method of moments, method of minimum chi-squares and interval estimation.

Unit-II: Tests of hypothesis: Basic concepts, Most Powerful (MP) test, Neyman – Pearson Lemma, Consistency and Unbiased tests, Uniformly Most Powerful (UMP) test, UMP Unbiased tests, similar critical regions, Lehmann – Scheffe theorem, Likelihood Ratio Tests, Asymptotic Distribution of LR test, Bartlett's test for homogeneity of variances and Wald Test.

Unit-III: Non – Parametric tests of significance; Sign Test, Wilcoxon-Mann-Whitney U-test, Run test, Kolmogorov - Simrnov one and two sample tests, Median test, Kendall's τ test. Concept of asymptotic relative efficiency, CAN, BAN, CAUN and BEST CAUN estimators, MLE in Pitman family and Double Exponential distribution, MLE in Censored Truncated distribution.

Unit-IV: Statistical decision theory – decision problems and two person games, problems of inference viewed as decision problems, non-randomized and randomized decision rules, Loss and Risk functions, admissibility, complete and essentially complete class, complete class theorem. Bayes principle, determination of Bayes rule Minimax principle, determination of minimax rule, minimax theorem. Minimax estimates of parameters of Binomial, Poisson and Normal distributions.

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021 SECOND SEMESTER

Branch: STATISTICS/APPLIED STATISTICS

ST-201 Paper: I - STATISTICAL INFERENCE

(Under CBCS w.e.f. 2016-2017)

Time: 3 Hours

Max. Marks: 80

SECTION - A

Answer any FOUR questions. Each question carry Equal marks.

(4×5=20)

- Define point estimation with an example.
- Explain moment method of estimation.
- 3. Define Consistency.
- Explain uniformly most powerful test.
- 5. Explain the concept of median test.
- 6. Define CAN and CAVN estimators.
- Explain the complete class theorem.
- 8. Explain the loss and risk functions.

SECTION - B

Answer ALL questions. All question carries Equal marks.

 $(4 \times 15 = 60)$

- 9. a) State and prove Fisher-Neyman Factorization theorem.
 - (OR)
 - b) State and prove cramer-Rao inequality with regularity conditions.
- a) State and prove Neyman-Pearson Lemma.

(OR)

b) Write about wald test with their importance.

B-248-02-01

(1)

(P.T.O.

- 11. .a) Explain in detail about Kolmogorov–Smirnov one and two sample tests.
 (OR)
 - B) Explain in detail about :
 - i. Sign Test
 - ii. Wilcoxon-Mann Whitney U-test
- a) Obtain the minimax estimates of the parameters of Poisson and normal distributions.
 (OR)
 - b) Explain minimax principle, determination of minimax rule and minimax theorem.

B-248-02-01

ST 202: MULTIVARIATE ANALYSIS

Unit-I: Multivariate normal distribution, marginal and conditional distributions, characteristics functions, Maximum likelihood estimators of parameters, distribution of sample mean vector and dispersion matrix, distribution of quadratic form in the exponent of the multivariate normal density.

Unit-II: Hotelling's T^2 and its applications $-T^2$ distribution, application of T^2 to single sample, two sample and multiple sample problems, optimum properties of T^2 test. Mahalobis D^2 statistic and its distribution, Multivariate Analysis of Variance (MANOVA) of one and two-way classified data.

Unit-III: Classification and discrimination: procedures for classification into two multivariate normal populations, Fisher's Discriminant function, classification into more than two multivariate normal populations, Wishart distribution and its properties, concept of sample generalized variance and its distribution.

Unit-IV: Principal Component Analysis – properties, method of extraction of principal components; Canonical variables and canonical correlations; Factor Analysis – mathematical model, estimation of factor loading, concept of factor rotation; Cluster Analysis – similarities and dissimilarities, Hierarchical clustering: single and complete linkage method.

Branch - STATISTICS /APPLIED STATISTICS

ST - 202 Paper - II : MULTIVARIATE ANALYSIS

(Under CBCS w.e.f. 2016-17)

(Common to Supplementary candidates also who appeared in 2015 and 2016 only with 70 marks)

Time: 3 Hours Max. Marks: 80

SECTION-A

Answer any FOUR questions. Each questions carry 5 marks.

 $(4 \times 5 = 20)$

- Suppose a multivariate normal vector is partitioned into two sub vectors and if they are uncorrelated, then show that the two sub vectors are independently distributed.
- Obtain characteristic function of multivariate normal (MVN) distribution.
- State and prove the invariance property of Hotelling's T² statistic.
- Define Mahalnobi's D² statistic and obtain it's distribution.
- Define Wishart distribution and establish it's additive property.
- Distinguish between classification and discrimination with suitable examples.
- Define the first k principle components and show that the sum of the variances of all principal
 components is equal to the sum of the variances of all original variables.
- 8. Distinguish between single linkage (SLINK) and complete linkage (CLINK) methods.

SECTION-B

Answer AL, L questions, All questions carries 15 marks,

(4×15-60)

 Show that the sample mean vector and sample dispersion matrix of the multivariate normal distribution are independently distributed.

(OR)

 Prove that the marginal distribution obtained from the multivariate normal distribution is normal.

B-248-02-02

(1)

P.T.O.

 Discuss a test procedure for testing the equality of mean vectors of two multivariate normal populations having equal dispersion matrix.

(OR)

- b) Describe two way MANOVA.
- a) Derive the distribution of the sample generalized variance in case of multivariate normal distribution.

(OR)

- Explain Fisher's method of classification into one of the several known multivariate populations.
- a) Briefly explain factor analysis and discuss the principal component estimation method of factor loadings.

(OR)

b) What are canonical variates and canonical correlations? How do you compute them?

B-248-02-02

ST 203 (A): LINEAR MODELS AND APPLIED REGRESSION ANALYSIS

Unit-I: Two and Three variable Linear Regression models; General linear model: Assumptions; OLS estimation; BLUE; Tests of significance of individual regression coefficients; Testing the equality between two regressions coefficients; Test of significance of complete regression.

Unit-II: Criteria for model selection; Goodness of fit measures; R^2 and adjusted R^2 Criteria; C_p criterion; testing the general linear hypothesis; Chow test for Equality between sets of regression coefficients in two linear models; test for structural change; restricted least squares estimation; Generalized Mean Squared error criterion.

Unit-III: Non-normal disturbances and their consequences; test for normality; Jarque-Bera test; Shapiro-Wilk test, Minimum Absolute Deviation (MAD) estimation; Box-Cox transformations.

Statistical analysis of residuals, OLS residuals, BLUS residual, Studentised residual, Predicted residual, tests against heteroscadasticity.

Unit-IV: Non-Linear regression; Non linear least squares estimation; Maximum Likehoodestimation; Idea of computational methods; Gradient methods, Steepest descent method and Newton-raphson method; testing general Nonlinear hypothesis; Wald test, Lagrange multiplier test and likelihood ratio Test. Robust, probit, binomial logistic, multiple logistic regression.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

SECOND SEMESTER

Branch: STATISTICS/ APPLIED STATISTICS

203 (B): COMPUTER PRORAMMING-C++

(Under NEP 2021)

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions All questions carry equal marks (Marks : $4 \times 5 =$

20)

PART-1

- 1. Explain Arrays
- 2. Describe Pointers
- 3. Write Abount Friend Functions
- 4. Explain Ambiguity In Inheritance.
- 5. Write About Binary Operators.
- 6. Write About Uniary Operators.
- 7. Describe Polymorphism.
- 8. Virtual Destructors.

SECTION - B

Answer any FOUR questions. Each question carries 15 marls. (Marks : $4 \times 15 = 60$)

9. Write About Object Oriented Programming.

Or

- 10. Write About The Copy Constructor And Destructor.
- 11. Explain Multiple Inheritances.

Or

- 12. Explain Protected Inheritance.
- 13. Write Briefly About The Function Overloading.

Or

- 14. Explain The Operator Overloading And Assignment.
- 15. Describe Destructor Under Inheritance.

OR

16. Explain Late Binding.

ST 204 (A): DESIGN AND ANALYSIS OF EXPERIMENTS

Unit-I: Linear Model; Estimability of linear parametric functions; BLUE, Gauss-Markoff theorem; Generalized Gauss-Markoff theorem, ANOVA model, ANOVA for Two way and three way classifications, ANCOVA technique for one way and two-way classifications. Multiple comparisons tests using Tukey's, Duncans, Sheffe's and Dunnet's tests.

Unit-II: Latin squares and their construction, Mutually orthogonal Latin squares; Missing plot technique in Latin square Design, Graeco-Latin square Design; Analysis of Factorial Experiments involving factors with two and three levels in randomized blocks.

Unit-III: Necessity of confounding, Types of confounding, complete and partial confounding in 2ⁿ, 3² and 3³ factorial designs, Analysis of confounded factorial designs; Fractional Replication, Split Plot design.

Unit-IV: Incomplete Block Designs; B I B D, Inter and Intra Block analysis of a BIBD, Types of BIBD, construction of BIBD's using Mutually orthogonal Latin squares; Concepts of Youden square and lattice Design, Two-Associate PBIB design, Analysis of P B I B design.

ST-204: Paper DESIGN AND ANALYSIS OF EXPERIMENTS

(Under CBCS to e.f. 2017-2018)

Time : 3 hours

Max Marks 80

SECTION A

(Short Type Answer)

Answer any FOUR questions. Each question mieries 5 marks.

Marks (. 5 = 20)

- Define a linear model. Distinguish setween linear and are linear models.
- Explain the need for multiple companions with soliable example.
- Explain the advantages of factorial experiments over single factor experiments. 3
- Define mutually arthugunal forms of men with an illustration.
- Distinguish between complete and partial confining
- What is fractional replication and give its importance?
- Write a short note in accomplete block design
- Distinguish between inter and intra block of unalysis of a RIBD.

SECTION - B

(Essay Type Answer)

Answer Ald, questions Each question carries 15 marks

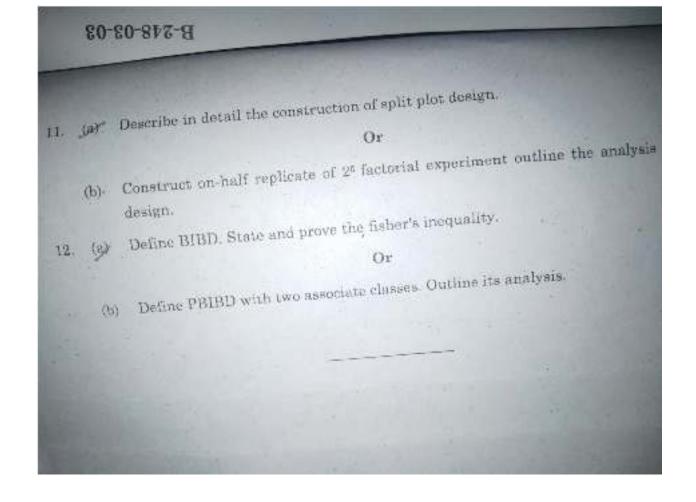

(Marks 4 - 15 - 60)

State and prove Gauss Markoff theorem. (4)

- Describe in detail about two-way classification ANCOVA technique with single concomitant variable
- Explain the construction of 32 factorial design in randomized blocks.

Or

Describe the procedure of estimating single mossing plot in Gracco Latin square (b) design

ST 204 (B): INDUSTRIAL STATISTICS AND QUALITY CONTROL

UNIT-I: General Theory of Control Charts: Control charts for attribute and variables: O.C. and A.R.L. of control charts; control by gauging; Moving average and exponentially weighted moving average charts; Cu-sum charts using V-masks and decision intervals. Capability indices: Cp, Cpk and Cpm.

UNIT-II: Acceptance sampling plans for attribute inspection: Single, double and sequential sampling plans; Plans for inspection by variables for one-sided and two-sided specifications;

UNIT-III: Mil Std and ISI plans; Continuous sampling plans of Dodge type and Wald-Wolfwitz type and their properties.

UNIT-IV: Industrial Experimentation, Fractional factorial experiments, Response surface methodology, Six sigma in process improvement and product development, Lean thinking, Value stream analysis, 5 s.

Branch: STATISTICS

ST 204 (B) INDUSTRIAL STATISTICS AND QUALITY CONTROL

(Under NEP 2021)

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions All questions carry equal marks (Marks : $4 \times 5 =$

20)

- 1. Explain Shewart Control Chart.
- 2. Describe V-Mask.
- 3. Write About The Single Sampling Plan.
- 4. Write Briefly About The Double Sampling Plan.
- 5. Explain Nil Std Plan.
- 6. Write About Wald-Wolfwitx Type.
- 7. Explain Fractional Factorial Experiments.
- 8. Write About The Lean Thinking.

SECTION - B

Answer any FOUR questions. Each question carries 15 marks. (Marks : 4 x 15 =

60)

PART-2

9. Write About The Exponentially Weights Moving Average Chart.

Oı

- 10. Explain Cp, Cpk And Cpm.
- 11. Write Briefly About Sequential Sampling Plan.

Or

- 12. Explain Two Sided Specification With An Example.
- 13. Write About Continues Sampling Plan.

Oı

- 14. Write About Nil Std And Lss Plan.
- 15. Write About The Six Sigma Process.

Or

16. Explain Response Surface Methodology.

ST 205: PRACTICAL-III

At least 24 practicals covering all papers relating to the subject in this semester must be carried out. (75 marks for practical examination + 15 marks for viva-voce + 10 marks for record in the semester)

SEMESTER – III

ST 301: ECONOMETRIC METHODS

Unit-I: Quick review of Inference in general linear model; multi collinearity; Sources and consequences; detection, Farrar-Glauber Test; remedies, Ridge family of estimators and its properties; Heteroscedasticity; sources and consequences; Tests for Heteroscedasticity; Glejser's test Goldfeld-Quandt test; remedies, estimation under Heteroscedasticity.

Unit-II: Autocorrelation; sources and consequences; first order auto regressive Scheme; Durbin-Watson test; Remedies; Estimation under autocorrelation; Stochastic Regressors; Errors-in-Variables linear model; IV and ML estimation methods.

Unit-III: Finite Distributed lag models; Arithmetic lag; Inverted V-lag; Almon's Polynomial lag and Shiller's lag models; Infinite distributed lag models; Geometric lag model; OLS and IV methods of estimation; Koyek's two step and Wallis three step procedures; Pascal lag model.

Unit-IV: Simultanious linear equations models; identification; rank and order conditions; indirect least squares, IV and LIML methods; two stage least squares; k-class estimators; three stage least squares and FIML methods of estimation.

Statistics

Paper I — ECONOMETRIC METHODS

(Under CBCS w.s.f. 2017-2018)

Time: 3 hours

Max Marks: 80

SECTION-A

(Short type answer)

Answer any POUR questions. Each question carries 5 marks.

(Marks: 4 = 5 = 20)

- Write about (a) VIV and (b) Eigen system analysis.
- 3. Give an account on Heterospeciation and give its consequences.
- B: Define Stochastic Regressors with an example.
- 4. Briefly explain ML method of estimation
- Write a short notes on Shillor's lag model.
- What do you mean by finds distributed lag medols?
- 7. Give an account of indirect least squares.
- A Briefly describe about identification and early of simultaneous linear equation.

SECTION - B

Answer any FOUR questions. Each question carries 15 mayles.

(Markov: $4 \times 15 = 60$)

b. (a) Define Multicollinearity. Explain in detail about Ridge regression.

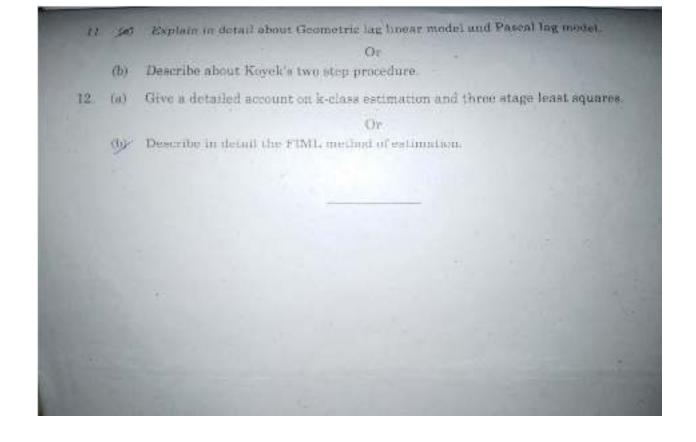

(O)

- (b) Describe Farrar-Glauber test and Glauser a test.
- 10 What do you mean by Errors in model? Describe in detail about IV method of estimation.

Dr

(M) Explain in detail about Durbin-Watson test. Describe the consequences of Autocorrelation.

DOT:OU

ST 302: OPERATIONS RESEARCH - I

Unit-I: Definition and scope of Operations research; phases in Operations Research; models and their solutions (Review of Linear Programming). Definition of Dual-Primal, Relationships- Dual Simplex Sensitivity or Post Optimal Analysis, Revised Simplex method.

Unit-II: Non-linear programming - Kuhn Tucker conditions. Wolfe's algorithm for solving quadratic programming problems. Integer programming – Branch and bound algorithm and cutting plane algorithm.

Unit-III: Flows in networks max-flow-min-cut theorem. Project Management; PERT and CPM probability of project completion, PERT – crashing.

Unit-IV: Decision making in the face of competition, two-person games, pure and mixed strategies, existence of solution and uniqueness of value in zero- sum games, finding solution in 2x2, and 2xm, and mxn games. Non – zero sum games, co-operative and competitive games, equilibrium solutions and their existence in bi- matrix games. Nash equilibrium solution.

THIRD SEMESTER

Branch - Statistics

Paper -H: ST-30Z - OPERATIONS RESEARCH - I

(Under CBCS & Non-CBCS w.c.f. 2017-2018)

Time: 3 hours

Max. Marks: 80

SECTION - A

(Short Type Answer)

Answer any FOUR questions Each question carries 5 marks

(Marks: $4 \times 5 = 20$)

Describe the phases involved in constructing LP problem.

Define Duality with an example. Show that the dual of the dual LP problem is primal.

What is meant by quadratic programming? How does a quadratic programming problem differ from a linear programming problem?

Write down the steps involved in Wolfe's algorithm for solving a quadratic programming problem.

5 Write a short notes on Forward and Backward pass methods in critical path analysis.

6 Draw an arrow diagram of activities of the project :

Activity:

ABCDE F G H I J K

Predecessor activity: - A A C B, C D, E E G D, F I, H K

7. For the M/M/1: (FIFO) model, derive the steady state equations and solve them.

8. Define the following terms

- (z) Queue discipline
- (b) Arrival and service pattern with example.

SECTION - B

(Essay Type Answer)

Answer ALL questions. Each question carries 15 marks.

(Marks: $4 \times 15 = 60$)

9 (a) Solve the following LP problem using an appropriate method:

Maximize $z = 2x_1 + x_2 + x_3$

Subject to

 $x_1 + x_2 + 2x_3 \le 5$

 $2x_1 + 3x_2 + 4x_3 = 12$ and

 $x_1, x_2, x_3 \ge 0.$

Or

Use the revised simplex method to solve the following LP problem
$$\begin{aligned} &\text{Maximize} \quad x = x_1 + x_2 + 2x_3 \\ &\text{Subject to} \\ &3x_1 + 2x_2 + x_3 \leq 3 \\ &2x_1 + x_2 + 2x_3 = 2 \quad \text{and} \\ &x_1, x_2, x_3 \geq 0, \end{aligned}$$

- 10. (a) What are Kuhn-Tucker conditions associated with inn-linear programming. problem? Prove the sufficiency theorem of Kuhn-Turior conditions.
 - Describe the steps involved on
 - Gomory's cutting plane algorithm and
 - Branch and Bound algorithm.
- A project is represented by the network shown below and has the following data.

 Task The Car ABCDRFOHL 7 7 3 Optimistic time: 0 18 26 16 1.0 44 25 12 12 9 5 Pessimistic time: 10 22 40 20

Most likely time: 8 20 33 18 20 9 10 4 4

Determine the following:

- Expected task time and their variance
- The earliest and latest expected time to reach each ovent. (iii)

Or

Two food manufacturers, ABC and XYZ are competing for an increased market.

Share. The payoff matrix shows to the increase in abare. The payoff matrix, shown in the following table, shows the increase in market share for ABC and deserve

murket share for ABC and decrease in market share for XYZ. Increase Decrease | Maintain advertising Give present ABC price Coupons atrategy 1 4 -2 2 3 Give Coupons 12 6 6 Decrease price 2 Maintain present -3 1 strategy 7 -3

Simplify the problem by the rule of dominance and find the optimal strategies for both the manufactures and the value of the game.

ST 303 (A): DEMOGRAPHY AND OFFICIAL STATISTICS

Unit-I: Nature, Scope and limitations of demography; Sources of Demographic data in India; Measures of Mortality; life-tables; construction of abridged life table; Measures of fertility Stochastic models for reproduction, Reproduction rates: GRR and NRR; Concepts of Migration and Urbanization.

Unit-II: Population Projections: Stable and Stationary populations, Lotka's model; Use of Leslie matrix. Population estimates; Chandrasekhar and Deming's method, component method, Stochastic models of population growth, Exponential and logistic population growth models: Birth and death model, Birth-death and migration model.

Unit-III: Population Genetics: Concepts of Genotypes and Phenotypes; Basic Mating from Single gene cross, Punnet Square method, Mendal's laws of heredity; Random mating; Hardy-Weinberg Equilibrium law; Calculation of Gene frequencies, Estimation of Gene frequencies in ABO blood group system.

Unit-IV: Statistical systems in India; CSO, NSSO and their functions; scope and content of population Census in India; Methods of conducting population census, Economic census and Agricultural census in India and defects; Sources of forest statistics.

Branch: Statistics

DEMOGRAPHY AND OFFICIAL STATISTICS

(Under CBCS w.e.f. 2017-2018)

Time: 3 hours

Max. Marks: 80

SECTION - A

Answer any FOUR questions. Each question carries 5 marks (Marks: 4 × 5 = 20)

- 1. Write a short notes on Neonatal Mortality rate
- 2 Explain Gross reproduction rate (G. R. R.).
- 3 Distinguish between stationary and stable population.
- 4. Explain the logistic population growth models.
- 5. Write a short notes on Punnet square method.
- 6- Explain the Mendal's laws of heredity
- 7. Explain the functions of CSO
- 8. Write the short notes on source of forest statistics

SECTION - B

Answer ALL questions. Each question carries 15 marks

(Marks: 4 × 15 = 60)

9. (a) Explain the construction of Abridged life table

Or

Explain the various measures of fortility rates.

PTOL

(s) Explain the component method by use of the Leslie matrix Or Explain the generalized birth and death process models (b) State and prove the Hardy — Weinberg equilibrium law 11. (0) OF Explain the calculation of Gene frequencies with an example Explain various methods of conducting population census. Or Explain the economics census and agriculture census in India.

ST 303 (B): BIO-STATISTICS

Unit-I: Structure of Biological assay, Types of Biological assays: Direct assays, Potency ratio, Fieller's theorem, Behren's distribution, Two generalizations of Fieller's theorem.

Unit-II: Quantitative dose-response relationships, Linear dose-response regression, Parallel line bioassay, Slope Ratio Bioassay, Quantal responses, Estimation of median effective dose, Transformations: Probit and Logit transformations.

Unit-III: Basic Biological concepts: Gene, Chromosomes, Alleles, Concepts of Geno types and Phenotypes, Family studies, Basic mating from single gene cross, Matrix approach to basic matings of single gene cross, Checker board method, Mendal's law of heredity: Geneotypes and Pheno type ratios, Branching system method.

Unit-IV: Types of matings, Random Mating, Concept of Gene pool, Gene frequency, Hardy—Weinberg law of equilibrium, Calculation of Gene frequencies, Genotypic frequency, Generation matrix approach to inbreeding, Estimation of Gene frequencies in ABO blood group system, Maximum Likelihood Method, Minimum Chi-Square method, Genetic parameters; Heritability Coefficients, Genetic Correlations, Repeatability, selection index; Inbreeding coefficient.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

FIRST SEMESTER
Branch: STATISTICS

ST 303 (B) BIO STATISTICS (Under NEP 2021)

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions All questions carry equal marks (Marks : $4 \times 5 =$

20)

- 1. Explain Types Of Biological Allays.
- 2. Write About Potential Ratio.
- 3. Explain About Quantal Responses.
- 4. Write About Profit Transformations.
- 5. Explain Branching System Method.
- 6. Explain Checker Board Method.
- 7. Write About Random Mating.
- 8. Write About Heritability Coefficients.

60)

PART-2

9. State And Prove Fieller's Theorem.

Or

- 10. Explain Behren's Theorm.
- 11. Describe Slope Ratio Bioassay.

Or

- 12. Write About Linear Desc Response Regression.
- 13. Write About Matrix Approach To Basic Mactings Of Single Gene Cross.

Or

- 14. Write About Mendal's Law Of Heredity.
- 15. Explain Hardy-Weinberg Law Of Equilibrium.

Ot

16. Write About Minimun Chi Square Method.

ST 304: PRACTICAL-V

At least 20 practicals covering all papers relating to the subject in this semester must be carried out. (75 marks for practical examination + 25 marks for Record in the semester)

Subject Code	Subject Name	Credits Allotted		Total			
ST-304	PRACTICAL	Theory	Practical	4			
51-304			4	7			
Course Objective	 To solve the different practical problems manually through calculators and computers. To do the Practical problems related to semester - III papers. To construct the life tables. To solve the numerical problems relating to Operations Research. 						
Course Out comes	2. Students solve research.3. Students Under	ed the Numerical erstand the Life T	problems relaterables in Demo	•

CO4	3	3	2	3	3				2	2	3	1

ST 305: STATISTICAL ANALYSIS USING R + R PRACTRICALS

PRACTRICALS - VI

R PROGRAMMING

- **UNIT-I**: Familiarizing with R environment, Using R console as a calculator, R atomic types, methods of creating vectors, combining vectors and repeating vectors, different ways of subsetting vectors using indexing, names and logicals. Arithmetic and logical operations. Using character vectors for text data, manipulating text using strsplit(), paste(), cat(), grep(), gsub() functions; handling factor data. Working with dates.
- **UNIT II**: Creating Matrices, getting values in and out of matrices, performing matrix calculations; Working with multidimensional Arrays; creating data frames, getting values in and out of data frames, adding rows to data frame, adding variables to data frame; creating lists, extracting components from a list, changing values of components of lists. Getting data into and out of R reading data in CSV files, EXCEL files, SPSS files and working with other data types. Getting data out of R working with write.csv() and write.table() functions.
- **UNIT III:**Writing Scripts and functions in R. writing functions with named, default and optional arguments. functions using as arguments. Debugging your code. Control statements in R conditional control using if, if-else, ifelse; looping control using for, while, repeat; transfer of control using break and next. Manipulating and processing data creating subsets of data, use of merge() function, sorting and ordering of data. Group manipulation using apply family of functions apply, sapply, lapply, tapply.
- **UNIT IV**: Base graphics. Use of high-level plotting functions for creating histograms, scatter plots, box-whiskers plot, bar plot, dot plot, Q-Q plot and curves. Controlling plot options using low-level plotting functions Adding lines, segments, points, polygon, grid to the plotting region; Add text using legend, text, mtext; and Modify/add axes, Putting multiple plots on a single page.
- **UNIT V** Working with probability distributions normal, binomial, Poisson and other distributions. Summary statistics, hypothesis testing one and two-sample Student's t-tests, Wilcoxon U-test, paired t-test, paired U-test, correlation and covariance, correlation tests, tests for association- Chi-squared test and goodness-of- fit tests. Formula notation, one-way and two-way ANOVA and post-hoc testing, graphical summary of ANOVA and post-hoc testing, extracting means and summary statistics; linear regression.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

THIRD SEMESTER

Branch: STATISTICS

ST-305: STATISTICAL ANAYSIS USING R

(Under NEP 2021).

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions All questions carry equal marks (Marks : $4 \times 2^{1/2}$ = 10)

- 1. Explain logical operations using R.
- 2. Write about vectors, addition, subtraction and multiplication using R.
- 3. Explain creating lists and changing values of components of lists.
- 4. Write about data frames and adding rows to data frames with example.
- 5. Describe while, repeat with examples.
- 6. Explain functions sorting and ordering data.
- 7. Describe students t-test.
- 8. Explain ANOVA using R.

SECTION - B

Answer any FOUR questions. Each question carries $7^{1}/_{2}$ marls. (Marks : 4 x $7^{1}/_{2}$ = 60)

- 9. (a) Write about Arithmetic operations in Excel using R
 - (or)
 - (b) Explain matrix calculations, Add, Subtraction and multiplication in R
- 10. (a) Explain control statements in R with example.
 - (or)
 - (b) Write about family of functions in R.
- 11. (a) Explain a Q-Q-plot, histogram, bar plot with illustrations.
 - (or)
 - (b) Write about putting multiple plots on a single page.
- 12. (a) Explain Students t-tests using R.
 - (or)
 - (b) Describe two way ANOVA using R.

ST 306 (A): STATISTICS FOR BIOLOGICAL AND EARTH SCIENCES

Unit - I: Statistical measures: Statistical diagrams and graphs; Frequency distributions; Measures of central tendency: Arithmetic mean, Median and Mode; Measures of variation:

Range, Quartile Deviation, Mean Deviation, Standard deviation, Coefficient of variation; Karl Pearson's coefficient of Skewness.

Unit- II: Random Variable and Probability Distributions: Definition of Probability, Additive and Multiplicative laws of probability (statements only), Random variable, Binomial, Poisson, Normal and Exponential distributions (properties and applications), Curve Fitting: Principle of least squares; Fitting of a straight line, Exponential curve and Power curve; Correlation and Regression Analysis: Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient; Simple linear regression; Multiple and Partial correlation coefficients; Multiple linear regression; Yules coefficient of Association.

Unit –**III:** Tests of Significance: Basic concepts; Z- test for proportions and means; Applications of t, χ^2 and F tests; Paired t-test; Analysis of Variance (ANOVA) and Analysis of Covariance (ANCOVA) techniques for one way and two way classifications (single observation per cell), Confidence limits.

Unit- IV: Special Statistical Tools: Experimental designs CRD, RBD and LSD and their analysis; concept of critical difference; Duncan's Multiple range test; Elements of Principal components Analysis, Factor Analysis; Cluster Analysis and Discriminant analysis; Hotelling's T² and Mahalanobis D² statistics; Multivariate Analysis of Variance (MANOVA); Canonical correlations; Concept of Probit analysis.

Subject Code	Subject Name	Credits A	Allotted	Total	
	Statistics for	Theory	Practical		
ST 306 (a)	Biological and	4		4	
()	Earth sciences	4			

Course Objective	 To learn basic statistics and their worked out examples. To discuss about different tests like t, F, χ² and Z fro means, proportions, variances, standard deviation etc. with illustrations. To explain ANOVA and ANCOVA for one way and two way classification and their importance in analysis. To discuss Special statistical tools and multivariate analysis.
Course Out comes	 Students learnt about Graphs, measures of averages, measures of dispersion etc. Students understood about Basic probability and important distributions with workout examples. Students used t, F, \(\chi^2\), ANOVA and ANCOVA and nonparametric tests with examples. Students used Advanced statistics tools with working illustrations.

SEMESTER – IV

ST 401: TIME SERIES ANALYSIS AND FORECASTING METHODS

Unit-I: Review of Time Series Analysis. Growth models: Modified Exponential Curve, Gompertz curve, Logistic curve and their Fitting; Measurement of cyclical component: Harmonic analysis, auto regression series: Markoff and Yule's series, Periodogram and correlogram analysis, measurement of irregular component: variate difference method.

Unit-II: Need and uses of forecasting, classification and characteristics of forecasts, forecasting based on regression techniques: simple and multiple linear regression and non-linear regression techniques, moving averages smoothing methods: simple and double, multi average methods; explanatory version time series forecasting, test for trend seasonality.

Unit-III: Exponential smoothing methods: trend adjusted exponential smoothing, double and triple exponential smoothing, win ten's method, chow's adaptive control methods, brown's one parameter adaptive method: Box-Jenkins three parameter smoothing, Harrison's Harmonic smoothing methods, tracking signal.

Unit-IV: Box-Jenkin's time series methods: 1. Moving average 2. Autoregressive (AR) 3. ARMA and 4. AR integrated MA (ARIMA) models, estimation of ARIMA model parameters, forecasting with ARIMA models, Diagnostic checking of the model: Analysis of residuals, forecasting using transfer function model, concept of Kalmon's Filters.

FOURTH SEMESTER

Branch : Statistics

Paper I ST-401: TIME SERIES ANALYSIS AND FORECASTING METHODS

(Under CBCS w.e.f. 2017-2018)

Time: 3 hours

Max Marks 80

SECTION - A

Answer any FOUR question.

All questions carry equal marks.

1784161

(Marks: 4 × 5 = 20)

Define Time series and explain its mathematical models

Explain fitting of Gompertz curve for a time series.

Write the need and uses of forecasting

Explain non-linear regression model for forecasting

- Explain Winten's and Chow's adaptive control methods

Explain Box-Jenkins three parameter exponential smoothing method.

Discuss diagnostic checking of the ARIMA model.

Discuss the concept of Kalmon's filters.

SECTION - B

Answer Ald, question,

Each question carry equal marks

(Marks: 4 × 15 = 60)

(a) Explain fitting of logistic curve

Oi

(b) Discuss in detail about the different models of time series

TPOLC.

10. (a) - Explain simple, double and multi average amouthing methods.

- (b) Explain regression technique for forecasting.
- 11 (a) Explain trend adjusted exponential smoothing.

Or

- (h) Explain Box-Jenkin's three parameter smoothing
- 12 (a) Explain ARMA and ARIMA models for estimation.

Explain moving average and Autoregressive methods.

ST 402: OPERATIONS RESEARCH – II

Unit-I: Bellman's principle of optimality, general formulation, computational methods and application of Dynamic programming. Multi-stage decision processes and Dynamic programming. Goal Programming and stochastic programming.

Unit-I1: Queuing models-specifications and effectiveness measures. Steady state solutions of M/M/1 and M/M/c models with associated distributions of queue length and waiting time. M/G/1 Queue and Pollazcek Khinchine result. Steady-state solutions of M/Ek/1 and Ek/M/1 queues. Bulk queues.

Unit-I1I: Analytical structure of inventory problems; EOQ formula of Harris, its sensitivity analysis and extensions allowing quantity discounts and shortages. Multi-item inventory, subject to constraints. Models with random demand, the static risk model.(s-S) policy for inventory and its derivation in the case of exponential demand; multi-echelon inventory models. Models with variable supply and models for perishable items; estimation of EOQ in some simple cases.

Unit-IV: Replacement problems; block and age replacement polices; dynamic programming approach for maintenance problems; replacement of items with long life. Group and individual replacement policies.

M.Se DEGREE EXAMINATION - APRIL/MAY 2019

FOURTH SEMESTER

Branch - Statistics

Paper II - ST 402 - OPERATIONS RESEARCH - II

(Under CBCS w.c.f. 2017-2018)

Time: 3 hours

Max, Marks 80

SECTION - A

Answer any FOUR questions. All questions carry equal marks.

(Marks: $4 \times 5 = 20$)

- Explain multi-state Decision Processes 1
- Explain Goal programming problem
- Discuss (M/G/I) Queue and Polisyack Khinchane result. 3
- Find steady state solutions of (M/M/C) (a) FIFO) queues
- Discuss analytical structure of inventory problems and it uses
- Explain EOQ problem when the demand is not uniform and variable supply 6.
- Explain the need of replacement policies.
- Explain Block replacement policy

SECTION - B

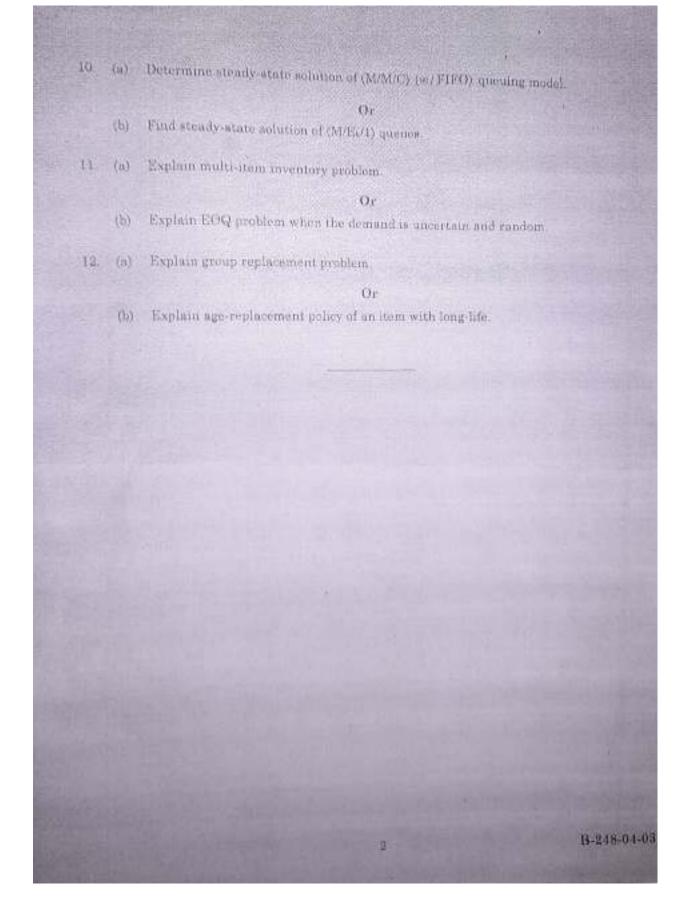

Answer ALL questions. Each question carries equal marks.

(Marks $4 \times 16 = 60$)

9. (a) Explain Bellman's principles of optimality

Explain Dynamic programming problem.

IPTO.

Unit-I: Generalized linear Model; Aitken's theorem; GLS estimator, Asymptotic distribution of GLS estimator; Analysis of residuals, OLS, BLUEs and Recursive residuals; Sudentized and predicted residuals; Granger's test of causality; nested and non nested statistical models; Cox and J tests.

Unit-II: Specificiation error; Consequences; specification bias; Ramsey's RESET test; Lagrange Multiplier test for adding variables; comparing two linear regression models; Dummy variable approach; Stepwise and Piecewise linear regression; Switching Regression Model.

Unit-III: Qualitative and limited dependent variable models; the linear probability model; probit model; Logit model and their estimation; concept of limited dependent variables; specification of Tobit model; concepts of censored and Truncated samples; estimation in censored and Truncated Samples.

Unit-IV: Sets of linear regression models; specification of the Seemingly Unrelated Regression Equations (SURE) model; OLS and GLS estimation of SURE model; Zellner's Feasible GLS estimator; Seemingly Unrelated Unrestricted Residuals (SUUR) estimator; Seemingly Unrelated Restricted Residuals (SURR) estimator; Reduction of the Zeller's Feasible GLS estimator to the OLS estimator.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATION - NOVEMBER/DECEMBER, 2021

FORTH SEMESTER

Branch: STATISTICS

ST403 (B): TOTAL QUALITY MANAGEMENT AND SIX SIGMA

(Under NEP 2021)

Time: 3 Hours Max.

Marks:80

SECTION - A

Answer any FOUR questions

All questions carry equal marks

(Marks: $4 \times 5 = 20$)

- 1. Explain Tqm And Its Needs.
- 2. Explain Quality And Its Importance.
- 3. Describe Analysis Of Quality Costs.
- 4. Explain About Quality Policy Deployment.
- 5. Write About Supply Quality Management.
- 6. Write About Customer Focus.
- 7. Explain 6 Sigma Methodology
- 8. Write About 5s.

SECTION - B

Answer any FOUR questions. Each question carries 15 marks. (Marks : $4 \times 15 =$

60)

9. Write Briefly About Tqm Philopy Of Contributions Of Design.

(Or)

- 10. Explain Taguchia And Shikawa Contributions.
- 11. Explain Quality Planning And Organization For Quality. (Or)
- 12. Write About Analysis Of Quality Costs.
- 13. Explain Top Management Commitment. (Or)
- 14. Write About Empowerment And Team Work.
- 15. Explan New Seven Management Tools.
- 16. Describe Qulaty Cricles.

ST 404: PRACTICAL -VII

At least 20 practicals covering all papers relating to the subject in this semester must be carried out. (75 marks for practical examination + 15 marks for viva-voce + 10 marks for record in the semester)

Subject Code	Subject Name	Credits A	Allotted	Total					
	PRACTICAL	Theory	Practical						
ST- 404	VII		4	4					
Course Objective	 To perform different practical problems manually through calculator and computers. To solve Practical problems related to semester - IV papers. To Predict the future values based on the present data. To Know the importance of real life situations in business. 								
Course Out comes	 Students solved Numerical problems related to semester –IV theory papers. Students can understand how the statistics can play the role in the prediction of the future data. Students can do the future predictions by using the existing data. Students can do the research on the statistical data. 								

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	2			3	2	3	2
CO2	3	3	3	3	3	2			3	2	3	2
CO3	3	3	3	3	3	2			3	2	3	2
CO4	3	3	3	3	3	2			3	2	3	2

ST 405: STUDENT PROJECT Data Centre / Institutions / Companies and etc.,

Subject Code	Subject Name	Credits Allotted	Total	
		Theory	Practical	
ST 405	STUDENT	STUDENT Dissertation submission 60 Marks		4
	PROJECT	Presentation 30 Marks +Viva-voce		4
		10 Marks		
Course Objective		ct primary data from industry, institut	•	

	3. To analyze the collected data and submit a report in the form a dissertation.
	4. To understand the usage of statistical analysis using different Statistical tools.
Course Out comes	 Students collected data in different ways. Students can prepare different questioner for collection of the data. Students can learn data entry in particular software, analysis and interpretation. Students learn and prepare the details reports on the projects.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	2			3	2	3	2
CO2	3	3	3	3	3	2			3	2	3	2
CO3	3	3	3	3	3	2			3	2	3	2
CO4	3	3	3	3	3	2			3	2	3	2

ST 403 (A): STATISTICAL PROCESS AND QUALITY CONTROL

Unit-I: Basic concepts of quality, causes of variation, principle of Shewart's control chart, control charts for attributes and variables. Control limits and probability limits. Process monitoring and control, process capability, modified control chart. Capability indices C_p , C_{pk} , and C_{pm} . Concept of Six sigma and its relationship with process capability.

Unit-II: The OC and ARL of Shewart's control charts. Control by gauging, Moving Average and Exponentially Weighted Moving Average charts. CUSUM charts using V-mask and decision interval methods. Multivariate control charts – Control Ellipsoid, Hotelling's T² chart.

Unit-III: Acceptance sampling plans for attribute inspection – Type-A and Type-B OC curves. Single, double and sequential sampling plans and their properties. Sampling plans with rectifying inspection-concept of AOQ, AOQL. Design of Single sampling plan with given ATI. Plans for inspection by variables with one-sided and two-sided specifications.

Unit-IV: Sampling plans for continuous inspection-construction of Dodge CSP-1, CSP-2 and Multi level plans and their properties. Chain sampling and its applications. Design of Skip lot

sampling plan and its ASN. Sampling plans with inspection error- derivation of AOQ and ATI in presence of errors.

M.Sc. DEGREE EXAMINATION - APRIL/MAY 2019

FOURTH SEMESTER

Branch - Statistics

Paper IV (A) ST-404 - STATISTICAL PROCESS AND QUALITY CONTROL

(Under CBCS w.c.f. 2017-18)

Time 3 hours

Max Marks 80

SECTION - A

Answer any FOUR questions All questions carry equal marks.

(Marks: 4 x 5 = 20)

- Explain the role of Normal distribution in SQC
- 2 What are the types of control limits and explain their uses with examples?
- 9 Briefly write about MA charts for means
- Explain CUSUM chart. 4.
- Write a short note on single sequential sampling plan-53
- Explain (a) AOQ (b) AOQ1. 6:

(46)

10

- Describe Multilevel plans and their properties 70
- Explain chain sampling and state its applications

SECTION - B

Answer ALL questions. Each question carry equal marks Mucks to 15 = 60)

Derive ARL for X - chart with an example ((1)

- Explain the concept of six sigma and its relationship with process capability Index. (b)
- What is V mark? How are the parameter related to each?

Explain about control Ellipsoid chart and Hotelbug's To - chart (b)

PTO1

11. (a) Explain Type - A and Type B OC curves

Or

- (b) Explain plans for inspection by variables with one sided and two sided
- 12 (a) Describe the design and operation of a Skiplot Sampling plan.

Or.

(b) Write a short note on continuous sampling plans. Distinguish between continuous sampling plans and acceptance sampling plans.

ST 406 (A) BUSINESS ANALYTICS

UNIT-I: BUSINESS MATHEMATICS: Matrix Algebra: Addition, Multiplication, Transpose and Inverse of Matrices; Determinants, Solution of Linear Equations; Limits of Algebraic functions; Rules for Differentiation; Linear programming problem-Graphical Method; Applications.

UNIT-II: BUSINESS ANALYSIS: Statistical Measures: Mean, Median and Mode; Standard Deviation and Coefficient of Variation; Correlation and Regression analysis; Linear and Compound growth rates; Measures of Association; concepts of \mathbb{R}^2 and \mathbb{R}^2 .

UNIT-III: BUSINESS STATISTICAL INFERENCE: Elements of Probability; Concepts of Binomial, Poisson and Normal Distributions; Sampling Techniques: Simple Random Sampling and Stratified Random Sampling; Determination of sample size; Tests of Significance: z, t, χ^2 and t tests, ANOVA Technique.

UNIT-IV: BUSINESS INFORMATICS: Time series Analysis; Determination of Trend and seasonal components, Basic Forecasting Methods; computer Applications to Business Analysis; Statistical Quality Control: control charts \overline{X} , R, p, npand c-charts.

Subject Code	Subject Name	Credits A	Allotted	Total				
ST 406 - (a)	Business Analytics	Theory	Practical	4				
51 100 (u)		4		4				
Course Objective	2. To discuss of proportions, illustrations.3. To study AN classification a	 To learn basic statistics and their worked out examples. To discuss different tests like t, F, χ² and Z fro mean proportions, variances, standard deviation etc. with illustrations. To study ANOVA and ANCOVA for one way and two variances in analysis. To use special statistical tools and multivariate analysis. 						
Course Out comes	 Students learnt Graphs, measures of averages, medispersion etc. Students studied basic probability and important diwith workout examples. Students used t, F, χ², ANOVA and ANCOVA parametric tests and discussed with examples. Students performed advanced statistics tools for seconds. 							

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	3	3	3	3				1	1	3	2
CO4	3	3	3	3	3				1	1	3	2

ST406 (B): SURVIVAL ANALYSIS

UNIT – **I:**Functions of Survival Time – Definition, Relationship of Survival Functions; Nonparametric Methods of Estimating Survival Functions: Product-Limit Estimate of Survival Function – Kaplan-Meier Estimator of Survival Function.

UNIT – II:Nonparametric Methods for Comparing Two Survival Distributions – Gehan's Generalized Wilcoxon Test, Cox - Mantel test, Logrank Test, Peto and Peto's Generalized Wilcoxon Test, Cox's F-test and Mantel-Haenszel Test.

UNIT – III:Parametric Methods for Comparing Two Survival Distributions: Exponential, Weibull and Gamma distributions only. Nonparametric and Parametric Methods for

Identifications of Prognostic Factor Relating to Survival Time, Cox Proportional Hazard (PH) Model for Survival Data.

UNIT – **IV:** Analytical Estimation Procedures for Survival Distributions: Exponential, Weibull, Log-Normal and Gamma distributions only. Graphical Methods for Survival Distributions Fitting: Probability Plotting, Hazard Plotting Methods, Tests of Goodness-of-Fit, A Regression Method for Fitting Survival Distribution.
