Impacts Of Climate Change: Impacts of Climate Change on various sectors – Agriculture, Forestry and Ecosystem – Water Resources – Human Health – Industry, Settlement and Society – Methods and Scenarios – Projected Impacts for Different Regions– Uncertainties in the Projected Impacts of Climate Change – Risk of Irreversible Changes.

UNIT-IV

Climate Change Adaptation And Mitigation Measures: Adaptation Strategy/Options in various sectors – Water – Agriculture –- Infrastructure and Settlement including coastal zones – Human Health – Tourism – Transport – Energy – Key Mitigation Technologies and Practices – Energy Supply – Transport – Buildings – Industry – Agriculture – Forestry - Carbon sequestration – Carbon capture and storage (CCS)- Waste (MSW & Bio waste, Biomedical, Industrial waste – International and Regional cooperation.

UNIT-V

Clean Technology And Energy: Clean Development Mechanism –Carbon Trading- examples of future Clean Technology – Biodiesel – Natural Compost – Eco- Friendly Plastic – Alternate Energy – Hydrogen – Bio-fuels – Solar Energy – Wind – Hydroelectric Power – Mitigation Efforts in India and Adaptation funding.

Readings:

1. Anil Markandya , Climate Change and Sustainable Development: Prospects for Developing Countries, Routledge, 2002

2. Heal, G. M., Interpreting Sustainability, in Sustainability: Dynamics and Uncertainty, Kluwer Academic Publ., 1998

3. Jepma, C.J., and Munasinghe, M., Climate Change Policy – Facts, Issues and Analysis, Cambridge University Press, 1998

4. Munasinghe, M., Sustainable Energy Development: Issues and Policy in Energy, Environment and Economy: Asian Perspective, Kleindorfor P. R. et. al (ed.), Edward Elgar, 1996

5. Dash Sushil Kumar, "Climate Change – An Indian Perspective", Cambridge University Press India Pvt. Ltd, 2007

Course outcomes:

After completion of course student can able to

1. Identify factors influencing the global climate systems
2. Assess impacts of climate change on global, regional and local scales
3. Describe impacts of climate change on different sectors
4. Develop strategies for adaptation and mitigation measures
5. Identify clean technologies for sustainable development.

EE15C NOISE POLLUTION AND CONTROL

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

ACOUSTICAL CONCEPTS : Nature of Sound - Sound propagation characteristics - Propagation of sound in air - Absorption of sound in air - Hearing mechanics - Measurement scale - Equal loudness contours.

NOISE CHARACTERISTICS AND SOURCES OF NOISE: Noise characterization - Sources of noise.

UNIT – II

MEASURING INSTRUMENT AND TECHNIQUES: Methodology of noise measurements - Sound level meter - Noise dose meter - Audiometer - Noise survey techniques - Vehicular noise measurement techniques - Aircraft noise measurement techniques - Sound power determination techniques - Techniques for characterization of acoustical materials.

UNIT – III

HEALTH EFFECT OF NOISE: Annoyance - Sleep disturbance - Effect of noise on task performance and cardio-vascular system - Effect of noise on speech communication - Noise induced hearing loss (NIHL) : Effect of continuous sounds - Hearing damage due to impulse sounds.

ENVIRONMENTAL NOISE MEASUREMENTS : Introduction - Traffic noise survey - Vehicular noise level - Domesticappliances noise - Industrial noise - Aircraft noise - Community noise - Shipboard noise - Impulse noise.

UNIT – IV

NOISE STANDARDS AND LIMITS : Introduction - Legal position in India - Environmental standards - Occupational / Industrial noise standards - Road vehicles noise standards - Noise vehicles noise standards - noise standards for construction equipment and domesticappliances - Impulse noise (Fireworks) exposure standards.

NOISE IMPACT ASSESSMENT STUDIES: Definition of the problem - Elements of environmental noise - Assessment - Fractionalization approach to impact assessment - Impact of vibration environments - Case study.

UNIT – V

NOISE CONTROL TECHNIQUES: Mechanism of noise generation - Control methodology - Noise control at source - Noise control along the path - Control on the receiver end.

NOISE STRATEGY: FUTURE GUIDELINES: Current trend - Noise control measures - Environmental noise management - Noise labeling - Diagnostics - Noise strategy - Problems for future investigations.

Reference Books:

1. S.P.Singal, (1999) Noise Pollution and Control, Narosa Publishing House, New Delhi.
2. Cunniff, P.F. (1977), Environmental Noise Pollution, Wiley, New York.
3. Thumann, A., and R.K.Miller (1986). Fundamentals of Noise Control Engineering, Prentice Hall, Englewood Cliffs, N.J.

Course Outcomes

After completion of course student can

1. Able to describe about the sound propagation and noise characteristics
2. Able to assess noise levels
3. Able to classify different types of noise and its effect on environment and human beings
4. Able to apply the noise standards and limits and carry noise impact assessment.
5. Able to plan suitable noise control technologies.

EE15C GROUND WATER CONTAMINATION

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

INTRODUCTION- The Hydrological cycle, Ground water Hydrology, Ground water contamination and Transport, Evolution of Ground water Information, Ground Water Remediation. Confined aquifer and unconfined aquifers.

UNIT-II

SOURCES AND TYPES OF GROUNDWATER CONTAMINATION

Introduction, Underground storage tanks, Landfills, surface Impoundments, waste Disposal Injection Wells, septic systems, Agricultural wastes, Land application and Minning, Radioactive Contaminants, Military sources of contamination, classification of organic compounds, Inorganic compounds in ground water.

UNIT-III

CONTAMINANT TRANSPORT MECHANICS

Introduction, Advection process, Diffusion and Dispersion processes, Mass Transport equations, one–Dimensional Models, Governing Flow and Transport Equations, Analytical Methods, Multi dimensional Methods, Tests for Dispersivity, Natural Gradient Field Tests for Dispersion.

UNIT-IV

CONTAMINATION FATE PROCESSES

Sorption and Desorption, Abiotic Fate process, Volatilization, Biodegradation, Evaluation of Fate processes.

MODELLING BIODEGRADATION AND NATURAL ATTENUATION

Kinetics and Rates of Biodegradation, Modeling Biodegradation, Biodegradation Models, Analytical Natural Attenuation Models, Numerical Natural Attenuation Models, Field Applications.

UNIT-V

GROUND WATER REMEDIATION ALTERNATIVES

Remediation Methods, Remedial Alternatives, Containment Methods for source control, Hydraulic controls and pump and treat systems, Bioremediation, soil vapour Extraction systems, Remediating NAPL sites, Emerging Remediation Technologies.

Reference Books :

1.PhilipB.Bedient, Hanadi.s, J.charles (1994).Ground water contamination transport and remediation, PTR Prentice Hall.

2.Geo Environmental Engineering(2004),HariD.Sharma and Krishna Reddy, John wiley and sons.

Course Outcomes

After completion of course student can

1. Able to describe the fundamentals of ground water hydrology
2. Able to understand the sources and types of ground water contamination
3. Able to use models for contaminant transport
4. Able to understand contamination fate process and carry modeling of biodegradation rates
5. Able to apply different remediation methods for ground water.

EE15C TRANSPORT OF WATER AND WASTE WATER

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

TRANSPORT OF WATER: Water Storage and Transmission- Storage requirements, impounding reservoirs, intakes, pressure conduits, hydraulics, pumps and pumping units, capacity and selection of water pumps, economic design of pumps and economic design of gravity and pumping mains.

UNIT-II

MATERIALS FOR PIPES: Specification for pipes, pipe appurtenances, types of loads and stresses, water hammer, causes and prevention, control devices.

DISTRIBUTION SYSTEMS : Principles of design, analysis of distribution networks, Hardy Cross, equivalent pipe and Newton Raphson methods, computer applications in distributions network analysis, optimal design of networks, maintenance of distribution systems, methods of control and prevention of corrosion, storage, distribution and balancing reservoirs.

UNIT-III

TRANSPORT OF WASTEWATER

Sanitary Sewerage: Sanitation technology selection - sanitary sewage flow estimation - sanitary sewer materials - hydraulics of flow in sanitary sewers - partial flows - sewer design - sewer layouts, Concept of model based design - hydraulic fundamentals of design models - Basic properties and model formulations for the design of wastewater of collection system - transitions in flow of sewage.

UNIT-IV

STORM DRAINAGE-Basic philosophy in storm drainage - drainage layouts - storm runoff estimation - rainfall data analysis - hydraulics of flow in storm water drains - storm water drain materials and sections - design of storm drains - storm water inlets.

UNIT-V

OPERATION & MAINTENANCE: Maintenance requirements of sanitary sewerage and storm drainage systems - manpower requirement - equipment requirement; preventive maintenance - monitoring safety requirements-corrosion in sewers - prevention and control - Specific problems related to waste water pumping.

Text Books :

1. Hazard S. Peavy, Donald R. Rowe and George Tchobanoglous, (1985). Environmental Engineering, McGraw-Hill Book Company, New York.
2. Warren Viessman, Jr. and Mark J. Hammer (1985). Water Supply and Pollution Control, Harper and Row, Publishers, New York.
3. Sincero and Sincero (1996), Environmental Engineering, Prentice hall, Michigan university.

Course Outcomes (COs)

After completion of course student is

1. Capable of understanding the fundamentals of fluid flow
2. Able to analyze distribution system and design balancing reservoirs.
3. Capable of designing waste water collection system
4. Can able to design the storm drainage system
5. Can able to carry out maintenance of storm and sewerage drainage systems.

EE11L ENVIRONMENTAL ENGINEERING LAB - I

P / week : 3 Hrs | Sessional Marks : 40

University Exam : 3 Hrs | End Exam Marks : 60

Water and Air Analysis

1. (a) Determination of Colour
   (b) Determination of Turbidity
   (c) Determination of pH
   (d) Determination of Temperature and Odour

2. (a) Determination of Total Solids, Dissolved Solids, Suspended Solids.
   (b) Determination of Total Volatile and Fixed Solids.
   (c) Determination of Electrical Conductivity
3. (a) Determination of Total Acidity
   (b) Determination of Total Alkalinity
   (c) Determination of Dissolved oxygen
4. (a) Determination of Total Hardness
   (b) Determination of Chlorides
   (c) Determination of Sulphates
5. Determination of Residual chlorine content
6. Determination of MPN Index:

Presumptive Test, Confirmation Test, Completed Test, Grams Staining Technique

7. Demonstration of Ambient air quality measurement using High Volume Sampler.

   Analysis – SPM, NO_x, RSPM, SO_x.

Course Outcomes (COs)

After completion of the course the student will :

- Use standard methods for assessment for water quality
- Use statistical principles to analyze and interpret laboratory results
- Communicate effectively either through written or oral

EE12L ENVIRONMENTAL ENGINEERING Lab – II (Practical)

P / week : 3 Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

Wastewater and Solid waste Analysis

1. Determination of Total solids,Total suspended solids and Total Dissolved solids
2. Determination of settleable solids
3. Determination of BOD - Evaluation of Kinematic constants.
4. Determination of COD – Open Reflux Method, Block digester method, Colorimetric method and Titrimetric analysis.
5. Determination of Nitrates, TotalKjeldal Nitrogen, Ammonia and Nitrites.
6. Determination of Phosphates
5. Determination of Sulphates.
6. Demonstration of Rotating Biological Contactor
7. Analysis of Municipal Solid Waste – Component, Physical and Chemical Analysis.

Course Outcomes (COs)

After completion of the course the student will :

- Able to use standard methods to assess wastewater and municipal solid waste characteristics.
- Use effluent standards to analyze and interpret laboratory results
- Communicate effectively either through written or oral

EE21C ADVANCED WASTEWATER TREATMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

GENERAL:

CONSTITUENTS IN DOMESTIC WASTEWATER -BOD, COD, TOC, N AND P – biodegradability, nonbiodegradable organics and other inorganic. **TREATMENT PROCESS AND EFFLUENT DISPOSAL STANDARDS**. **PRIMARY TREATMENT**- Design of Screens, Grit chamber, Sedimentation tanks. **SUSPENDED GROWTH PROCESS:** Activated Sludge Process-ASP and its modifications,process design considerations, evaluation of Biokinetic parameter, Aeration, diffused aeration system.

UNIT – II

ATTACHED GROWTH PROCESS: Substrate removal in attached growth process-design of Trickling filter, rotating biological contactors.

PHOSPHOROUS REMOVAL: Biological phosphorus removal, chemical processes-chemical coagulation,precipitation and oxidation.Tracing phosphorous through treatment processes.

NITROGEN REMOVAL: Biological nitrification and denitrification, ammonia stripping, break point chlorination, and ion–exchange for ammonium (NH^{+}_{4}); Combined removal of nitrogen and phosphorus.Tracing nitrogen through treatment processes.

UNIT – III

ADVANCED PROCESSES:

Granular media filtration, micro screening, MSP like Reverse Osmosis, Electrodialysis, Ultra Filtration, Disinfection of waste water.

REMOVAL OF TOXIC COMPOUNDS AND REFRACTORY ORGANICS : Toxic and refractory organics – Detergents, PCB, phenol, Hydrogenated hydrocarbons, Pesticides and Aromatics. Removal by adsorption, chemical coagulation, Advanced Oxidation Process(AOP).

UNIT – IV

WASTE WATER RECYCLE, REUSE AND RECLAMATION

Ponds,Ditches,Lagoons,UASB,MBR,Constructed wetlands.Waste water Reuse Applications, Waste water Reclamation Technologies- Constituent Removal Technologies-Conventional waste water Treatment process flow diagrams for water Reclamation-Advanced waste water treatment process flow diagrams.

EMERGING CONTAMINANTS IN WASTE WATER- organic compounds and microorganism, Priority pollutants.

UNIT – V
WASTEWATER TREATMENT PLANT RESIDUE MANAGEMENT

Solids sources, characteristics and quantities-solid processing flow diagram-preliminary operations-Thickening-Digestion-condition-dewatering-Heat drying and composting-Thermal reduction-Reuse.

ENVIROMENTAL AND HYDRAULIC DESIGN OF WASTE WATER TREATMENT PLANTS

Stages of Design- data collection-site layout-Environmental and Hydraulic design.

Reference Books :

1. Metcalf and Eddy, Wastewater Engineering, Tata McGraw Hill Pub. Co.
2. M.J. Hammer, Water and Wastewater Technology, John Wiley and Sons.
3. Sincero Sr., A.P., and G.A.Sincero (1999), Environmental Engineering. A Design Approach Prentice-Hall of India Pvt. Ltd., New Delhi.

Course Outcomes (COs)

After completion of course student can able to

1. Identify and assess the characteristics of wastewater and hence impacts
2. Plan and design components of wastewater treatment plants
3. Understand the advanced process of wastewater treatment
4. Understand principles of wastewater reclamation and reuse
5. To manage sludge and do hydraulic design of wastewater treatment plant.

EE22C MUNICIPAL SOLID WASTE MANAGEMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

GENERATION AND CHARACTERISTICS OF SOLID WASTE:

Goals and objectives of solid waste management; Impacts of solid waste generation in a technological society, quantities of solid wastes, elements of solid waste management system, conservation of resources.

Solid waste generation sources; classification of solid waste; data on Indian City wastes; factors influencing generation of solid wastes; components characterization and analysis of solid wastes.

UNIT – II

ONSITE HANDLING, STORAGE AND PROCESSING OF SOLID WASTE:

Public health and aesthetics, onsite handling, methods used at residential and commercial sources; onsite storage dust bins; community containers, container locations; onsite processing methods.

COLLECTION, TRANSFER AND TRANSPORT OF SOLIDWASTE

Collection services, Point collection; frequency of collection, equipment and labour requirements; collection routes, transport means and methods and location of transfer stations.

Design of transfer stations.

UNIT – III

PROCESSING OF SOLID WASTE

Purpose of processing; processing techniques-Mechanical and chemical volume reduction, size reduction, component separation, drying and dewatering.

PROCESSING AND RECOVERY: Thermalrecovery of products – Incineration,pyrolysis and recovery of by-products,Air requirements for combustion-Incineration types-Refuse derived fuels (RDF), biological process and recovery ofconversion products-Composting – static pile, windrow,Vermi composting.

UNIT – IV

DISPOSAL OF SOLID WASTES: Open dumping – problems associated with open dumping sanitary landfills - site selection –design of landfills - Gas and leachate collection and control, ocean disposal of solid wastes. Application of GIS in landfill.

MUNICIPAL SOLID WASTE MANAGEMENT HANDLING RULES (2010).

UNIT – V

HAZARDOUS WASTE MANAGEMENT: Identification and classification of Hazardous wastes, storage, collection and treatment of Hazardous wastes, hazardous waste management rules, Management of Hospital wastes, introduction to e-waste management.

Reference Books:

1. WHO publication SWM for developing countries by frank flintoff**.**

2. Bhide, A.D, and Sundaresan, B.B. (1983) Solid Waste Management in Developing Countries, INSDOC, New Delhi.

3. Tchobanglous, G., Theisen, H. and Ehasin, R. (1996). Solid Waste Engineering Principles and Management Issues - McGraw Hill, Tokyo.

Course Outcomes (COs)

After completion of course students are

1.Able to assess the physical and chemical characteristics of municipal solid waste

2. capable of understanding the elements of solid waste management system.

3. Able to apply different processing methods in the management of municipal solid waste

4. Able to plan and design sanitary landfills for municipal solid waste disposal.

5. Able to apply hazardous waste management rules in handling hazardous waste.

EE23C INDUSTRIAL WASTEWATER TREATMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

INDUSTRIAL WASTE REGULATIONS

Industrial activity in India, Guidelines for siting of industries and industrial estates.Characteristics of industrial Wastewater.Differences between industrial wastes and domestic sewage.

IMPACT OF INDUSTRIAL WASTES ON ENVIRONMENT : Impact of acids and alkalies, suspended matter, organic matter (BOD), refractory organics, coloured matter, inorganic solids, heavy metals, foaming agents (detergents), nutrients, oil and greases, biological (pathogenic) wastes, thermal waters and nuclear wastes on the environment.

DISPOSAL STANDARDS OF DISTILLERY, TANNERY, PULP AND PAPER INDUSTRIES

UNIT – II

TREATMENT METHODOLOGY

Neutralization, Equalization, Proportioning, Sedimentation, Flotation , Screening, coagulation, Evaporation, Ion Exchange, Reverse Osmosis, Lagooning, High –rate aerobic treatment, Trickling filtration ,Rotating biological contactors,Anaerobic digestion system.

UNIT-III

OUTLINES OF MANUFACTURING PROCESSES, SOURCES, VOLUMES, CHARCTERISTICS, AND TREATMENT PROCESSES OF MAJOR INDUSTRIES:Sugarcane, distillery, tannery, pulp and paper mills, textile millindustry,fruit processing industry, steel plant industry

UNIT – IV

INDUSTRIAL WASTE MINIMIZATION PRACTICES:Volume reduction, strength reduction, process changes, equipment modifications, chemical substitution, segregation of wastes, equalization of wastes, by product recovery, proportioning wastes.

MANAGEMENT OF INDUSTRIAL SLUDGES: Sources of production of industrial sludges,anaerobic and aerobic digestion, vacuum filtration, elutriation, drying beds, Sludge Lagooning, wet combustion process, drying and incineration, centrifuging, sanitary landfill.

UNIT – V

CLEAN MANUFACTURE PROCESS-Basic concepts of clean technologies, Zero pollution industrial complexes, Introduction to ISO 14000,Life cycle Analysis, pollution pays policy, common effluent treatment plants.

Reference Books :

1. Nemerow, N.L. (1977). Liquid waste of Industry, Theories, Practices and Treatment, Addision-Wesly Publishing Company, London.
2. Mahajan, S.P. (1990). Pollution Control Processing Industries. Tata Mc–Graw – Hill Publishing Company Limited, New Delhi.
3. Rao, M.N.andA.K.Datta. (1979). Wastewater Treatment. Rational Methods of Design and Industrial Practices. Oxford and IBH Publishing Co., New Delhi.

Course Outcomes (COs)

1. Able to describe the concepts of industrial waste regulations.
2. Capable of applying the different preliminary, physical, chemical and biological treatment methods to the industrial waste water
3. Able to describe the characteristics of different types of industrial waste water,its manufacturing process and design units of treatment plant.
4. Capable of reducing the industrial waste and manage industrial sludge
5. Able to apply concepts of clean manufacturing process.

EE23C URBAN WATER MANAGEMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

General introduction to urbanization and its effect on water cycle – urban hydrological cycle – trends in urbanisation – Effect of urbanisation on hydrology.

Urban Hydrological cycle – time of concentration – importance of short duration of rainfall and runoff data – methods of estimation of time of concentration for design of urban drainage systems.

UNIT-II

Master drainage plans – issues to be concentrated upon – typical content of an urban drainage master plan – interrelation between water resources investigation and urban planning processes – planning objectives – comprehensive planning – use of models in planning.

Basic approaches to urban drainage – runoff quantity and quality – wastewater and storm water reuse – major and minor systems.

UNIT-III

Elements of drainage systems – open channel – underground drains – appurtenances – pumping – source control. Storm water Analysis Calculation of runoff and peak – Design of storm water network systems.

UNIT-IV

Best Management Practices – Detention and retention facilities – Swales-constructed wetlands.

UNIT-V

Operation and maintenance of urban drainage system – interaction between storm water management and solid waste management, various model available for storm water management. Legal aspects

Readings:

1. Geiger W. F., J Marsalek, W. J. Rawls and F. C. Zuidema, Manual on Drainage in Urbanised area – 2 volumes, UNESCO, 1987

2. Hall M J , Urban Hydrology, Elsevier Applied Science Publisher, 1984

3. Stahre P and Urbonas B , Stormwater Detention for Drainage, Water Quality and CSO Management, Prentice Hall, 1990

4. Wanielista M P and Eaglin ,Hydrology – Quantity and Quality Analysis, Wiley and Sons, 1997

Course outcomes

After completion of course student can able to

1.Identify factors affecting urban hydrological cycle

2.Estimate urban water demand and urban storm water quantity

3. plan and design storm water control and disposal systems

4. develop integrated urban water management system

EE23C HAZARDOUS WASTE MANAGEMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT- I

SOURCES, CLASSIFICATION AND REGULATORY FRAMEWORK

Types and Sources of hazardous wastes - Need for hazardous waste management ,Hazardous Wastes (Management and Handling) Rules, 1989

POLLUTION PREVENTION

Management strategies, TCLP, Life cycle analysis, volume reduction, toxicity reduction and recycling.

UNIT -II

PHYSICO CHEMICAL TREATMENT OF HAZARDOUS WASTE

Physico-chemical processes-air stripping, soil vapor extraction, carbon absorption, steam stripping, chemicaloxidation, supercritical fluids, membrane processes.

UNIT- III

BIOLOGICAL TREATMENT OF HAZARDOUS WASTE

Biological methods-Basic microbiology, engineeringfactors,growth kinetics, treatment systems ,conventional treatment, in situ bioremediation, slurry-phase treatment, solid-phase treatment, emerging technologies.

UNIT- IV

DISPOSAL METHODS

Thermal methods-regulations, combustion,liquid injection incinerators,solid waste incineration,storage and feed systems

Land disposal –landfill operation,siteselection,liner and leachate collection systems, cover systems,containment transport through landfill barriers,landfillstability,other types of land disposal facilities.

UNIT- V

CONTAINMENT

Objectives,passive contaminant control systems,surface water control technologies,ground water control,ground water control technologies,activesystems,other remedial measures.

REFERENCES:

1. George Tchobanoglous, Hilary Theisen and Samuel A, Vigil, "Integrated Solid Waste Management, Mc-Graw Hill International edition, New York, 1993.
2. Michael D. LaGrega, Philip L Buckingham, Jeffrey C. E vans and Environmental Resources Management, Hazardous waste Management, Mc-Graw Hill International edition, New York, 2001.
3. CPHEEO, "Manual on Municipal Solid waste management, Central Public Health and Environmental Engineering Organisation , Government of India, New Delhi, 2000.
4. Vesilind P.A., Worrell W and Reinhart, Solid waste Engineering, Thomson Learning Inc., Singapore, 2002.
5. Paul T Williams, Waste Treatment and Disposal, Wiley, 2005

OUTCOMES:

On completion of the course, the student is expected to be able to

1. Understand the characteristics of different types of hazardous wastes and the factors affecting variation
2. To plan suitable management strategies to handle hazardous waste
3. Apply different treatment methods in the management of hazardous waste
4. Apply concepts of thermal techniques for hazardous disposal and design landfill
5. Understand different surface and ground water control technologies

EE23C WASTE **WATER RECLAMATION AND REUSE**

L / week : 3Hrs	**Sessional Marks : 40**
University Exam : 3 Hrs	**End Exam Marks : 60**

UNIT - I

INTRODUCTION –The Role of Water Recycling in the Hydrological cycle, Wastewater Reuse Applications, Need for Water Reuse.

PUBLIC HEALTH AND ENVIRONMENTAL ISSUES IN WATER REUSE- Constituents in Reclaimed Water ,Public Health Issues, Environmental Issues, Environmental Issues.

UNIT - II

WASTEWATER RECLAMATION TECHNOLOGIES-Conventional wastewater Treatment process -Flow Diagrams for water Reclamation, Advanced Wastewater Treatment process flow diagrams, Performance expectations for water reclamation processes, Predicting the performance of Treatment process Combinations .

UNIT - III

STORAGE OF RECLAIMED WATER – Need for Storage, Meeting water quality discharge Requirements, Operations of Storage reservoirs, Problems involved with storage of Reclaimed Water.

AGRICULTURAL AND LANDSCAPE IRRIGATION EVALUATION OF IRRIGATION WATER QUALITY.

UNIT - IV

INDUSTRIAL WATER REUSE- Industrial water use, Cooling Tower Makeup water, water and salt balances in cooling Tower, Common water quality problems in cooling towers.

GROUND WATER RECHARGE WITH RECLAIMED WATER-Groundwater Recharge Methods, pretreatment Requirements for Groundwater Recharge ,Fate of Contaminants in Groundwater.

UNIT- V

PLANNED INDIRECT AND DIRECT POTABLE WATER REUSE-Planned Indirect Potable Water Reuse, Planned Direct Potable Water Reuse, Planned Potable Water Reuse Criteria.

CASE STUDIES IN WASTE WATER REUSE.

Reference:-

Metcalf and Eddy(2003), Wastewater Engineering Treatment and Reuse,Fourth Edition, Mc-Graw hill education.

Course Outcomes (COs)

After completion of course students are

1. Able to describe the applications of wastewater reuse and constituents in reclaimed water and its implications
2. Capable of planning and designing the advanced wastewater treatment processes.
3. Able to understand aspects of reclaimed water storage.
4. Capable of reusing industrial waste water to suitable applications
5. Capable of applying direct and Indirect Potable Water Reuse methods in the field

EE24C ENVIRONMENTAL IMPACT ASSESSMENTS

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

INTRODUCTION:

Impact of Development on Environment and Environmental Impact Assessment (EIA) and Environmental Impact Statement (EIS) – Objectives – Historical development – EIA Types – EIA in Project cycle- capability and limitations- Legal provisions on EIA.

UNIT-II

METHODOLOGIES:

Elements of EIA – Process screening, Methods of EIA- Strengths, weaknesses and applicability – appropriate methodology.

UNIT-III

PREDICTION AND ASSESSMENT

Socio Economic Impact – Prediction and Assessment of Impact on land, water, air and noise energy impact; Impact on flora and fauna; Mathematical models for prediction; Public participation – Reports – Exchange of Information – Post Audit – rapid EIA.

UNIT-IV

ENVIRONMENTAL MANAGEMENT PLAN:

Plan for mitigation of adverse impact on environment - options for mitigation of impact on water, air and land, flora and fauna; Addressing the issues related to the Project Affected People – Environment management Plan

UNIT-V

LIFE CYCLE ANALYSIS

Elements of Life Cycle Assessment **(**LCA) – Life Cycle Costing – Eco Labelling – Design for the Environment – International Environmental Standards – ISO 14001.

ENVIRONMENTAL AUDIT:

Environmental Audit and Environmental legislation objectives of Environmental Audit,Types of environmental Audit, Audit protocol, stages of Environmental audit, onsite activities,evaluation of Audit data and preparation of Audit report.

TEXT BOOKS

1. Anjaneyulu, Y. Environmental Impact Assessmentmethodologies B.S. Publications, Hyderabad 2002.
2. Canter, R.L. Environmental Impact Assessment, McGraw Hill Inc., NewDelhi,1996.
3. S.K. Shukla and P.R. Srinivastava, Concepts in Environmental Impact Analysis, Common Wealth Publishers, New Delhi, 1992.
4. Environmental science and Engineering by j. Glynn and Gary W. Hein Ke-Prentice Hall Publishers.

REFERENCE BOOKS

1. John G.Rau and David C Hooten (Ed)**.,**Environmental Impact Analysis Hand book, McGraw Hill Book Company, 1990.
2. Environmental Assessment Source book, Vol. II and III. The World Bank, Washington, D.C., 1991.
3. Judith Petts, Handbook of Environmental Impact Assessment Vol.I and II. Blackwell Sciencce, New York, 1999.
4. Environmental science and Engineering, by Suresh K.Dhaneja-S.K., Katania and sons Publication., New Delhi.

6. P. Modak, C. Visvanathan and M. Parasnis, Cleaner Production Audit, Environmental System Reviews, Asian Institute of Technology, Bangkok, 1995.

Course Outcomes

After completion of course student can able to

1. Understand various aspects of EIA
2. Identify suitable methodologies for EIA study
3. Predict and assess the impact on environment
4. Prepare EMP
5. Understand LCA methodology and Environmental audit.

EE24C SUSTAINABLE ENGINEERING AND TECHNOLOGY

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

Unit I

ENERGY SOURCES

Introduction to energy, Environment and SustainableDevelopment; Energy transformation from source to services; Energy sources, sun as the sourceof energy; biological processes; photosynthesis; food chains, classification of energy sources,quality and concentration of energy sources; fossil fuel reserves - estimates, duration; theory of renewability, renewable resources; overview of global/ India's energy scenario.Non-renewable energy sources.

Unit II

ECOLOGICAL PRINCIPLES

Ecological principles, concept of ecosystems, ecosystem theories, energy resources and their inter-linkages, energy flow, the impacts of human activities on energy flow in major man-made ecosystems- agricultural, industrial and urban ecosystems.

Unit III

ENERGY SYSTEMS AND ENVIRONMENT

Environmental effects of energy extraction, conversion and use; sources of pollution from energy technologies (both renewable and non renewable); primary and secondary pollutants; consequence of pollution and population growth; air, water, soil, thermal, noise pollution -cause and effect; pollution control methods, sources and impacts; environmental laws on pollution control. Montrosal Protocol, Kyoto Protocol; Conference of Parties (COP); Clean Development Mechanism (CDM); Reducing Emissions from Deforestation and Degradation (REDD).

Unit IV

GREEN INNOVATION & SUSTAINABILITY

Criteria for choosing appropriate green energyTechnologies, life cycle cost; the emerging trends – process/product innovation-, technological/Environmental leap-frogging; Eco/green technologies for addressing the problems of Water,Energy, Health, Agriculture and Biodiversity- WEHAB (eco-restoration/ phyto-remediation,Ecological sanitation, renewable energy technologies,

industrial ecology, agro ecology and other Appropriate green technologies); design for sustainability (D4S).

Unit V

GREEN ENERGY AND SUSTAINABLE DEVELOPMENT

The inseparable linkages of life supporting systems, biodiversity and ecosystem services and their implications for sustainable development; global warming; greenhouse gas emissions, impacts, mitigation and adaptation ; future energy Systems- clean/green energy technologies; International agreements/conventions on energy and sustainability - United Nations Framework Convention on Climate Change (UNFCC); sustainable development.

[15] http://cdm.unfccc.int/

Course outcomes

After completion of course student can

1. Able to explain about the energy sources and sustainability
2. Able to understand the ecological principles
3. Capable of understanding consequences of pollution and its control methods.
4. Able to apply suitable the green energy systems
5. Capable of developing green sustainability

EE24C BIOREMEDIATION

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

Fundamental Aspects Of Environmental Microbiology:

Structure and Functions of Procaryotic Cells -Structure and Functions of Eucaryotic Cells

Taxonomy of Microorganisms: Bacteria- Algae, Fungi and Protozoa -Study of Microbial Structure -Light Microscopy -Dark-field and Phase-contrast Microscopy -Electron Microscopy - Environmental Significance of Bacteria, Fungi, and Algae -Microbial Metabolism, Growth and Biokinetics - Microbial Nutrition and Metabolism - Microbial Growth and Energy - Enzymes and Their structures - Biokinetic Models - Batch and Continuous Chemostat Studies - Determination of Biokinetic Parameters

UNIT-II

Microbiology Reactions:

Suspended Growth Reactors - Biofilm Reactors - Batch Reactors - Completely Stirred Tank Reactors - Plug Flow Reactors - Reactors in Series - Engineering Design of Reactors

UNIT-III

Bioflim Processes:

Trickling Filters and Biological Towers -Rotating Biological Contactors - Granular Media Filters - Fluidized-bed Reactors -Hybrid Biofllm Processes

UNIT-IV

Bioremediation For Soil Environment:

Environment of Soil Microorganisms -Soil Organic Matter and Characteristics -Soil Microorganisms Association with Plants - Pesticides and Microorganisms -Petroleum Hydrocarbons and Microorganisms -Industrial solvents and Microorganisms -Biotechnologies for Ex-Situ Remediation of Soil - Biotechnologies for in-Situ Remediation of Soil - Phytoremediation Technology for Soil Decontamination

UNIT-V

Biotreatment of Metals:

Microbial Transformation of Metals -Biological Treatment Technologies for Metals Remediation -Bioleaching and Biobenificiation -Bioaccumulation -Oxidation/Reduction Processes -Biological Methylation -Case studies

Emerging Environmental Biotechnologies:

Phytoremediation -Sequestering Carbon Dioxide -Biomonitoring -Application of Microbial Enzymes -Biomembrane Reactors

References:

1. Ergas, S.J., Chang, D.P.Y., Schreoder, E.D., and Eweis J.B., Bioremediation Principles , WCB/McGraw-Hill, 1998

2. Rittmann, B.E., and McCarty, P.L., Environmental Biotechnology : Principles and Applications, McGraw Hill, 2001

Course outcomes:

After completion of course student can able to

1.understand the fundamentals of environmental microbiology

2.design process for enhancing biodegradation

3.apply principles of bioremediation of soil environment

4.describe biotreatment of metals

5.identify ethical, environmental,societal and safety issues related to bioremediation.

EE24C ENVIRONMENTAL LEGISLATION AUDIT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT I

INTRODUCTION

Common environmental laws-Role of judiciary in environmental protection-criminal law,common law-criminal procedure code-Indian penal code-fundamental rights and fundamental duties-international and national efforts at environmental protection –green funding and taxes-national environmental policies

UNIT II

WATER (P&CP) ACT, 1974 Power & functions of regulatory agencies - responsibilities of Occupier Provision relating to prevention and control Scheme of Consent to establish, Consent to operate – Conditions of the consents – Outlet – Legal sampling procedures, State Water Laboratory – Appellate Authority – Penalties for violation of consent conditions etc. Provisions for closure/directions in apprehended pollution situation.

UNIT III

AIR (P&CP) ACT, 1981 Power & functions of regulatory agencies - responsibilities of Occupier Provision relating to prevention and control Scheme of Consent to establish, Consent to operate – Conditions of the consents – Outlet – Legal sampling procedures, State Air Laboratory – Appellate Authority – Penalties for violation of consent conditions etc. Provisions for closure/directions in apprehended pollution situation.

UNIT IV

ENVIRONMENT (PROTECTION) ACT 1986 Genesis of the Act – delegation of powers – Role of Central Government - EIA Notification – Sitting of Industries – Coastal Zone Regulation - Responsibilities of local bodies mitigation scheme etc., for Municipal Solid Waste Management - Responsibilities of Pollution Control Boards under Hazardous Waste rules and that of occupier, authorisation – Biomedical waste rules – responsibilities of generators and role of Pollution Control Boards

UNIT V

OTHER TOPICS

Relevant Provisions of Indian Forest Act, Public Liability Insurance Act, CrPC, IPC -Public Interest Litigation - Writ petitions - Supreme Court Judgments in Landmark cases.

ENVIRONMENTAL AUDIT:

Environmental Audit and Environmental legislation objectives of Environmental Audit,Types of environmental Audit, Audit protocol, stages of Environmental audit, onsite activities,evaluation of Audit data and preparation of Audit report.

REFERENCES

3. GregerI.Megregor "Environmental law and enforcement", Lewis Publishers, London.

4. A. Singh and O.P. Ward Biodegradation and bioremediation, Springer-Verlag Berlin Heidelberg New York, 2004.

5. K.H. Baker and D.S. Herson, Bioremediation, McGraw-Hill, Inc., New York, 1994.

6. M. Alexander, Biodegradation and Bioremediation, Academic Press, 1999.

Course Outcomes:

After completion of course students are able to

1. Apply the different environmental laws and penal codes for environmental protection.
2. To take steps for the control of water pollution
3. Understand the salient features of air act
4. Describe the salient features of environmental act
5. Understand the salient features of Indian forest act, public liability act , public interest litigations and audit.

EE21L ENVIRONMENTAL MODELLING LABORATORY

P / week : 3 Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

Design of water supply pipe sections and networks using Software packages like EPANET – Design of Wastewater collection systems, integrated design of water and wastewater treatment plants by using appropriate free domain software packages. Modeling of Air pollutant dispersion using softwares.

Course Outcomes (COs)

1.Able to apply the application of computing techniques in the environmental engineering field.

2. capable of designing the water supply pipe sections and treatment plants using software packages

3. Able to do Modeling of air pollutant dispersion using software packages.

EE22L UNIT OPERATIONS AND PROCESSES LABORATORY

P / week : 3 Hrs	**Sessional Marks : 40**
University Exam : 3 Hrs	**End Exam Marks : 60**

LIST OF EXPERIMENTS

1. Jar test
2. Sedimentation column analysis
3. Studies on Filtration
4. Adsorption Studies
5. Adsorption studies/Kinetics
6. Activated sludge process
7. Trickling filter
8. Anaerobic Reactor systems (Demonstration)
9. Disinfection for Drinking water

REFERENCES:

1. Metcalf and Eddy. Inc. „Wastewater Engineering, Treatment, Disposal and Reuse, Third Edition, Tata McGraw Hill Publishing Company Limited, New Delhi, 2003.

4. David W.Hendricks, „Water Treatment Unit Processes: Physical and Chemical", CRC Press, Boca Raton, 2006.

Course Outcome:

1. Able to conduct Treatability studies of water and wastewater treatment by various Unit Operations and Processes using laboratory scale models

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING DEPARTMENT OF CIVIL ENGINEERING

M.Tech Degree Program (CBCS)

Curriculum & Syllabi for Geotechnical Engineering

(w.e.f 2023-24)

MAY, 2023

PROGRAMME OBJECTIVES

1. To make students learn the principles of soil and rock mechanics. Understand different problems associated with geotechnical engineering. Explain how to select design soil/rock parameters for Design purpose based on the subsurface exploration. Develop Analysis and Design procedure for various geotechnical structures.
2. Students should gain competency in the design of shallow/deep foundations, earth retaining Structures, embankment and earthen dams, underground structures. Can assess stability of slopes and apply preventive measures for stability.

PROGRAMME OUTCOMES (POs)

1. Students will learn soil and rock behaviour. Students will be able to perform various laboratory and in-situ tests on soil/rock to find out design parameters.
2. Students can design shallow/deep foundations, earth retaining structures, embankment and earthen dams, tunnel support systems for given site conditions.
3. Student can compute factor of safety to assess stability of slopes and apply preventive measures for stability.
4. Student can develop numerical models to estimate response of various geotechnical structures under different loadings.

GE11C ADVANCED SOIL MECHANICS

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

UNIT I

COMPRESSIBILITY OF SOILS: Consolidation theory (one, two, and three dimensional consolidation theories), consolidation in layered soil and consolidation for time dependent loading, determination of coefficient of consolidation (Casagrande method and Taylors method)

UNIT II

STRENGTH BEHAVIOUR OF SOILS: Mohr Circle of Stress; UU, CU, CD tests, drained and undrained behaviour of sand and clay, significance of pore pressure parameters; determination of shear strength of soil; Interpretation of triaxial test results.

UNIT III

STRESS PATH: Drained and undrained stress path; Stress path with respect to different initial state of the soil; Stress path for different practical situations.

UNIT IV

CRITICAL STATE SOIL MECHANICS: Critical state parameters; Critical state for normally consolidated and over consolidated soil; Significance of Roscoe and Hvorslev state boundary surface; drained and undrained plane. Critical void ratio; effect of dilation in sands; different dilation models.

UNIT V

ELASTIC AND PLASTIC DEFORMATIONS: Elastic wall; introduction to yielding and hardening; yield curve and yield surface, associated and non-associated flow rule.

References

7. Lambe, T.W. and Whitman, R.V., Soil Mechanics, John Wiley & Sons, 1979.

Course Outcomes

The Students will be able to:

1. Aquire complete knowledge on Strength and Compressibility of soil mass
2. Aquire complete knowledge on Strength behaviour of soils
3. Understand importance of stress paths with respect to state of soils.
4. Understand mathematical models for solving different problems in soil mechanics using critical state frame work.
5. Visualize the concept of elastic and plastic deformation in soils.

GE12C ADVANCED FOUNDATION ENGINEERING

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

UNIT I

SHALLOW FOUNDATIONS: Requirements for Satisfactory Performance of Foundations, Methods of Estimating Bearing Capacity, Settlements of Footings and Rafts, Proportioning of individual and combined footings using IS code.

UNIT II

PILE FOUNDATIONS: Methods of Estimating Load Transfer of Piles, Settlements of Pile Foundations, Pile Group Capacity and Settlement, Negative Skin Friction of Piles, Pile Load Tests, Analytical Estimation of Load- Settlement Behaviour of Piles, Proportioning of Pile Foundations, Uplift Capacity of Piles.

UNIT III

WELL FOUNDATION: IS and IRC codal provisions, elastic theory and ultimate resistance methods

UNIT IV

FOUNDATIONS ON PROBLEMATIC SOILS: Foundations for collapsible and expansive soils

UNIT V

COFFER DAMS: Various Types, Analysis and Design of Foundations.

References

1. Bowles. J.E., Foundation Analysis and Design, Tata McGraw-Hill International Edition, 5th Edn, 1997.
2. Das B.M., Shallow Foundations: Bearing capacity and settlement, CRC Press, 1999.
3. Tomlinson M.J., Pile design and construction Practice, Chapman and Hall Publication, 1994.
4. Poulos, H. G. and Davis, F. H., "Pile Foundation Analysis and Design", Wiley and Sons. 1980

Course Outcomes

The Students will be able to:

1. Estimate bearing capacity of soil and proportion shallow foundations.
2. Estimate the load in piles and design the pile foundation.
3. Design well foundation as per codal provisions.
4. Design foundations on problematic soils
5. Analyze and design coffer dams.

GE13C EARTH RETAINING STRUCTURES

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks: 60**

UNIT I

EARTH PRESSURE: Rankine and Coulomb theories, active, passive and pressure at rest; concentrated surcharge above the back fill, earth pressure due to uniform surcharge, earth pressure of stratified backfills, saturated and partially saturated backfill.

UNIT II

RETAINING WALLS: Proportioning of retaining walls, stability of retaining walls, mechanically stabilized retaining walls/reinforced earth retaining walls

UNIT III

SHEET PILE WALL: Free earth system, fixed earth system

BULKHEADS: Bulkheads with free and fixed earth supports, equivalent beam method, Anchorage of bulkheads and resistance of anchor walls, spacing between bulkheads and anchor walls, resistance of anchor plates.

UNIT IV

BRACED EXCAVATIONS: Earth pressure against bracings in cuts, Heave of the bottom of cut in soft clays.

UNIT V

TUNNEL AND CONDUIT: Stress distribution around tunnels, Types of conduits, Load on projecting conduits; Arching and Open Cuts: Arching in soils.

References

1. Das, Braja M., "Principles of Foundation Engineering", PWS Publishing. 1998
2. Bowles. J.E., Foundation Analysis and Design, Tata McGraw-Hill International Edition, 5th Edn, 1997.

Course Outcomes (COs)

The students will be able to:

1. Develop ability to compute different conditions for soil and loading.
2. Design Retaining wall
3. Analyze sheet piles Bulkheads
4. Compute earth pressure and heaving in braced excavations
5. Compute the stresses in Tunnels, Conduits and Arching in open cuts.

GE14C SOIL STRUCTURE INTERACTIONS

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

.

UNIT I: Soil-Foundation Interaction: Introduction to soil-foundation interaction problems, Soil behaviour, Foundation behaviour, Interface behaviour, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, Two parameter elastic models, Elastic plastic behaviour, Time dependent behavior.

UNIT II: Beam on Elastic Foundation- Soil Models: Infinite beam, Two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness.

UNIT III: Plate on Elastic Medium: Thin and thick plates, Analysis of finite plates, Numerical analysis of finite plates, simple solutions.

UNIT IV: Elastic Analysis of Pile: Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, Analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

UNIT V: Laterally Loaded Pile: Load deflection prediction for laterally loaded piles, Subgrade reaction and elastic analysis.

References

1. Selvadurai, A.P.S, Elastic Analysis of Soil-Foundation Interaction, Elsevier, 1979.
2. Poulos, H.G.,and Davis, E.H.,Pile Foundation Analysis and Design, John Wiley, 1980.

4. Structure Soil Interaction-State of Art Report, Institution of Structural Engineers,
5. ACI 336. (1988), Suggested Analysis and Design Procedures for combined footings and Mats, American Concrete Institute.

Course Outcomes

The students will be able to:

1. Comprehend soil foundation interaction concepts

2. Analyze soil models with beam on elastic foundation
3. Analyze soil models with plates on elastic medium
4. Analyze load distribution and settlement in piles using elastic analysis
5. Predict the deflections in laterally loaded piles using elastic analysis.

GE14C GROUND IMPROVEMENT TECHNIQUES

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT I

INTRODUCTION: situations where Ground Improvement becomes necessary

MECHANICAL MODIFICATION: Dynamic Compaction, Impact Loading, Compaction by Blasting, Vibro-Compaction; Pre-Compression, Stone Columns; Hydraulic Modification: Dewatering Systems, Preloading and Vertical Drains, Electro-Kinetic Dewatering

UNIT II

CHEMICAL MODIFICATION; Modification by admixtures, Stabilization Using Industrial Wastes, Grouting

UNIT III

THERMAL MODIFICATION: Ground Freezing And Thawing.

UNIT IV

SOIL REINFORCEMENT: Reinforced Earth, Basic Mechanism, Type of Reinforcements, Selection of Stabilization/Improvement of Ground using Geotextiles, Goegrid, Geomembranes, Geocells, Geonets, and Soil Nails.

UNIT V

APPLICATION OF SOIL REINFORCEMENT: Shallow foundations on reinforced earth, design of reinforced earth retaining walls, reinforced earth embankments structures, wall with reinforced backfill, analysis and design of shallow foundations on reinforced earth, road designs with geosynthetics.

References

1. Hausmann, M.R., Engineering Principles of Ground Modification, McGraw-Hill
2. International Editions, 1990.
3. Yonekura, R., Terashi, M. and Shibazaki, M. (Eds.), Grouting and Deep Mixing, A.A. Balkema, 1966.
4. Moseley, M.P., Ground Improvement, Blackie Academic & Professional, 1993.
5. Xanthakos, P.P., Abramson, L.W. and Bruce, D.A., Ground Control and Improvement, John Wiley & Sons, 1994.
6. Koerner, R. M., Designing with Geosynthetics, Prentice Hall Inc. 1998.
7. Shukla, S.K., Yin, Jian-Hua, “Fundamentals of Geosynthetic Engineering”, Taylor & Francis.

Course Outcomes

The students will be able to:

1. Assess the site or ground conditions and judge for adopting ground improvement techniques for a particular structure and site conditions.
2. Select suitable improvement techniques or stabilization methods for improving engineering properties of soils in shallow layers.
3. Select suitable reinforced earth methods for stabilizing soils in different applications.
4. Select suitable reinforced earth methods for stabilizing soils in deep layers.

GE14C PAVEMENT ANALYSIS AND DESIGN

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks: 60**

UNIT I

Philosophy of design of flexible and rigid pavements,

UNIT II

Analysis of pavements using different analytical methods,

UNIT III

Selection of pavement design input parameters – traffic loading and volume,

UNIT IV

Material characterization, drainage, failure criteria, reliability,

UNIT V

Design of flexible and rigid pavements using different methods, Comparison of different pavement design approaches, design of overlays and drainage system.

References:

1. Yang and H. Huang, Pavement Analysis and Design, Pearson Prentice Hall, 2004.
2. Yoder and Witzech, Pavement Design, McGraw-Hill, 1982.
3. Sharma and Sharma, Principles and Practice of Highway Engg., Asia Publishing House, 1980.
4. Teng, Functional Designing of Pavements, McGraw- Hill, 1980.

Course Outcomes (COs)

The students will be able to

1. Assess the factors affecting the performance of pavements.
2. Identify failure criteria and design flexible and rigid pavements.
3. Compare and select suitable pavement design approach, overlays, and design aspects.

GE14C PHYSICAL AND CONSTITUTIVE MODELLING IN GEOMECHANICS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks: 60**

UNIT I

ROLE OF CONSTITUTIVE MODELING: Importance of laboratory testing with relation to constitutive modeling; Elasticity: linear, quasi linear, anisotropic;

UNIT II

PLASTICITY BASICS: yield criteria, flow rule, plastic potential, hardening/softening; Rate Independent Plasticity: mohr-coulomb, nonlinear failure criteria, Drucker Prager, and cap models;

UNIT III

CRITICAL STATE SOIL MECHANICS: critical state concept, cam clay models, simulation of single element test using cam clay,

UNIT IV

CONSOLIDATION: drained and undrained triaxial test; Stress dilatancy theory;

UNIT V

WORK HARDENING PLASTICITY THEORY: formulation and implementation; Applications of elasto-plastic models; Special Topics: hypoelasticity-plasticity, disturbed state concept.

References

1. Hicher and Shao, “Constitutive Modeling of Soils and Rocks”, John Wiley. 2008
2. C.S. Desai and H. J. Siriwardane, “Constitutive Laws for Engineering Materials with
3. Emphasis on Geologic Materials”, Prentice-Hall, Inc., New Jersey. 1984

5. C.S. Desai, “Mechanics of Materials and Interfaces: The Disturbed State Concept”, CRC Press LLC. 2000

6. A.P.S. Selvadurai, M.J. Boulon, “Mechanics of Geomaterial Interfaces, Elsevier.

Course Outcomes

The students will be able to

1. Understand Stress strain models of elasticity of isotropic and anisotropic models.
2. Understand theory of plasticity and various yield criteria and flow rule.
3. Apply critical state concept to consolidation and triaxial soil behaviour.
4. Understand the application aspects of elasto plastic models.

GE15C EARTH AND ROCKFILL DAMS

L + T / week : 3Hrs | Sessional Marks : 40

University Exam: 3 Hrs | End Exam Marks: 60

UNIT – I
EMBANKMENT DAMS – BASIC CONSIDERATIONS
Selection of dam site – Choice of type of dam – Classification of embankment dams – Types of failures – Criteria for safe design – Foundation investigation – laboratory tests – Construction of earth dams – Quality control and instrumentation.

UNIT – II
SEEPAGE THEORY
Fundamentals of seepage flow – Kozney's solution – Anisotropic seepage – Top flow line – Flownet for earth dams – Seepage force and its effects – Control of seepage through embankment dams – Filter design – Drainage measures.

UNIT – III
FOUNDATION TREATMENT
Rock foundations – Alluvial foundations – Primary foundation – Clayey soils – Seepage containment – Upstream impervious blanket – Dam stream drainage.

UNIT – IV
STABILITY ANALYSIS
Critical stage & port pressures in earth dams – Stability analysis – Effective and total stress approach – Method of slices – Location of critical circle – Earthquake considerations.

UNIT – V
ROCKFILL DAMS
General characteristics – Materials – Foundations – Design of dam section – Drainage – Construction.

References

1. Earth and Earth Rock Dams by J.L. Sherard et al.
2. Earth and Rockfill Dams by Bharat Sigh and H.D. Sharma.
3. Development in Soil Mechanics – I edited by C.R. Scoott.

Course Outcomes:

The students will be able to

1. Understand the choice aspects for embankment construction.

2. Compete the seepage and suggest control measure seepage through embankment dams.
3. Suggest suitable embankment foundation treatment technique
4. Analyze stability of embankment for different considerations
5. Design an earthfill rock dam

GE15C ENVIRONMENTAL GEOTECHNOLOGY

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

UNIT I

SOIL AS A MULTIPHASE SYSTEM: Soil-environment interaction; Properties of water in relation to the porous media; Water cycle with special reference to soil medium.

UNIT II

SOIL MINERALOGY: significance of mineralogy in determining soil behavior; Mineralogical characterization.

UNIT III

MECHANISMS OF SOIL-WATER INTERACTION: Diffuse double layer models; Force of attraction and repulsion; Soil-water-contaminant interaction; Theories of ion exchange; Influence of organic and inorganic chemical interaction.

UNIT IV

CONCEPTS OF WASTE CONTAINMENT: Sources, production and classification of wastes, Environmental laws and regulations, physico-chemical properties of soil, ground water flow and contaminant transport, desirable properties of soil; contaminant transport and retention; contaminated site remediation.

UNIT V

SOIL CHARACTERIZATION TECHNIQUES: volumetric water content; gas permeation in soil; electrical and thermal properties; pore-size distribution; contaminant analysis. contaminated site characterization, estimation of landfill quantities, landfill site location, design of various landfill components such as liners, covers, leachate collection and removal, gas generation and management, ground water monitoring, end uses of landfill sites,

8. Sharma, H.D. and Lewis, S.P, Waste Containment Systems, Waste Stabilization and Landfills: Design and Evaluation, John Wiley & Sons Inc., 1994.

Course Outcomes

The students will be able to

1. Understand Soil-environment interaction, Soil mineralogy and
2. Understand Mechanisms of soil-water interaction
3. Can assess ground water flow and predict contaminant transport phenomenon.
4. Can apply remediation techniques for contaminated site.

GE15C CRITICAL STATE SOIL MECHANICS

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks:**	**60**

UNIT I

SOIL BEHAVIOUR: State of stress and strain in soils, Stress and strain paths and invariants, behavior of soils under different laboratory experiments.

UNIT II

THE CRITICAL STATE LINE AND THE ROSCOE SURFACE: Families of undrained tests, Families of drained tests, the critical state line, drained and undrained surfaces, The Roscoe surface.

UNIT III

BEHAVIOUR OF OVER CONSOLIDATED SAMPLES: The Hvorslev surface: Behavior of Over consolidated samples, drained and undrained tests, The Hvorslev surface, complete State Boundary Surface, Volume changes and pore water pressure changes.

UNIT IV

BEHAVIOUR OF SANDS: The critical state line for sands, Normalized plots, the effect of dilation, Consequences of Taylor's model.

UNIT V

BEHAVIOUR OF SOILS BEFORE FAILURE: Elastic and plastic deformations, Plasticity theory, Development of elastic-plastic model based on critical state soil mechanics, The Cam-clay model, The modified Cam-clay model.

References:

1. J. H. Atkinson and P. L. Bransby, “The mechanics of soils: An introduction to
2. critical state soil mechanics”, McGraw Hill, 1978.
3. D. M. Wood, “Soil behaviour and critical state soil mechanics”, Cambridge University Press, 1990
4. B. M. Das, “Fundamental of geotechnical engineering”, Cengage Learning, 2013

Course Outcomes

The students will be able to:

1. Acquire fundamentals concept of Stresses and Strains and their states in soils.
2. Comprehend the critical state line and the Roscoe surface.
3. Gain knowledge on Cam-Clay model for analyzing the plastic behaviour of soils before failure.
4. Familiarize with the Development of constitutive laws for geotechnical materials including linear or nonlinear elastic (hyperbolic), linear elastic perfectly plastic, and non-linear elastic-plastic models based on the Critical State Soil Mechanics theory.

GE15C DEEP FOUNDATIONS

L + T / week : 3 Hrs | Sessional Marks : 40

University Exam: 3 Hrs | End Exam Marks : 60

UNIT - I

INTRODUCTION

Pile foundation – Necessity – Classification of piles – Methods of installation – Axially Loaded Piles - Single pile in cohesive and cohesionless soils – Piles in layered soils – Compressive and uplift loads – Negative skin friction – Settlement analysis.

UNIT – II

Laterally Loaded Piles : The occurence of lateral loading - Rigid and flexible piles - Ultimate lateral resistance and deflection of vertical piles carrying lateral loads by I.S. Code method, Brom's method and Reese and Matlock method.

UNIT – III

PILE GROUPS: Necessity – Spacing – Group efficiency – Pile groups in cohesive and cohesionless soils – Individual pile failure – Block failure – Negative skin friction – Free standing pile groups and piled rafts – Settlement analysis.

UNIT - IV

Well Foundations: Types of wells - Depth of well foundation - Bearing capacity and stability considerations - Terzaghi's analysis - IRC method.

UNIT - V

Computer Aided Design

Pile Foundations – Axially Loaded Piles – Laterally Loaded Piles and Pile Groups.

Reference Books :

1. Bowles : Foundation Analysis and Design.
2. V.N.S.Murthy : Soil Mechanics & Foundation Engineering.
3. Bowles : Analytical and Computer Methods in Foundation Engineering.
4. Zeevaret : Foundations for difficult subsoil conditions.
5. Chellis : Pile foundations.
6. Tschebotarioff : Soil Mechanics, Foundations and earth structure.

7. C.Venkatramaiah (1995), Geotechnical Engineering, Wiley Eastern Ltd. (New Age International Ltd.), New Delhi.

8. AV Narasimha Rao and C.Venkatramaiah, (2000), Numerical Problems, Examples and Objective Questions in Geotechnical Engg., Universities Press (India) Ltd., Hyderabad.

9.M.J.Tomlinson, Pile Design and Construction Practice, A View Point Publication, London.

10. H.G. Poules, Pile Foundation Analysis and Design, Ed. Davis, John Wiley & Sons, New York.
11. IS 2911 Part 1-1979 - Code of Practice for design and construction of pile foundations.

Course Outcomes

The students will be able to:

1. Analyze the loads and suggest methods of installation of piles in different soils.
2. Use different methods for competing the lateral resistance and deflection in laterally loaded piles.
3. Evaluate the capacity of pile groups and their efficiency consisting different failure conditions.
4. Analyze and design well foundations.
5. Develop a program for estimating the capacity of axially loaded, laterally loaded and pile groups.

GE11L GEOTECHNICAL ENGINEERING LAB - 1

Practicals / week	**:**	**4Hrs**	**Sessional Marks : 40**
University Exam	**:**	**3 Hrs**	**End Exam Marks : 60**

LIST OF PRACTICAL'S:

1. Determination of Moisture Content and Specific gravity of soil

2. Grain Size Distribution Analysis and Hydrometer Analysis

3. Atterberg Limits (Liquid Limit, Plastic limit, Shrinkage limit)

4. Visual Classification Tests

5. Vibration test for relative density of sand inclusive of in-situ density test.

6. Standard and modified proctor compaction test

7. Falling head permeability test and Constant head permeability test

8. Consolidation test.

Course Outcomes (COs):

The students will be able to:

1. Determine all Index Properties for cohesive and cohesionless soils
2. Determine Density Index for cohesionless soils.
3. Determine Compaction Characteristics for cohesive soils
4. Determine Permeability of cohesive and cohesionless soils.
5. Determine Consolidation Characteristics for cohesive soils.

GE12L GEOTECHNICAL ENGINEERING LAB - 2

Practicals / week :	**4Hrs**	**Sessional Marks**	**: 40**
University Exam :	**3 Hrs**	**End Exam Marks**	**: 60**

LIST OF PRACTICALS

1. Unconfined compression test
2. Direct shear test
3. Tri-axial compression test – UU, CU, CD tests
4. Laboratory vane shear test
5. Swelling Characteristics (Swell Pressure, Swell Potential and swelling Index) by Free-Swell Oedo-Meter method.
6. Swelling Characteristics by Constant Volume Method.

Course Outcomes (COs):

The students will be able to:

1. Determine Unconfined Compressive Stress for cohesive soils.
2. Determine shear parameters for cohesive and cohesionless soils.
3. Determine Swelling Characteristics of cohesive soils by different methods.

GE21C DYNAMICS OF SOILS AND FOUNDATIONS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks: 60**

UNIT I

FUNDAMENTALS OF VIBRATIONS: Single, two and multiple degree of freedom systems, vibration absorbers, vibration measuring instruments.

UNIT II

WAVE PROPAGATION: Elastic continuum medium, semi-infinite elastic continuum medium, soil behavior under dynamic loading.

UNIT III

DYNAMIC ELASTIC CONSTANTS OF SOIL: Determination of dynamic elastic constants, various methods including block resonance tests, cyclic plate load tests, wave propagation tests, oscillatory shear box test.

UNIT IV

MACHINE FOUNDATIONS: Design criteria for machine foundations; Elastic homogeneous half space and lumped parameter solutions, analysis and design of foundations for reciprocating and impact type machines, turbines, effect of machine foundation on adjoining structures.

UNIT V

BEARING CAPACITY OF FOUNDATIONS: Introduction to bearing capacity of dynamically loaded foundations, such as those of water towers, chimneys and high rise buildings.

VIBRATION ISOLATION: Active and passive types of isolation – Screening of vibrations – Isolation in existing machine foundations.

6. Prakash, S. and Puri, V.K., Foundation for machines: Analysis and Design, John Wiley & Sons, 1998.

Course Outcomes

The students will be able to:

1. Students understands theory of vibration and resonance phenomenon, dynamic amplification
2. Students understand propagation of body waves and surface waves through soil.
3. Students get exposed to different methods for estimation of dynamic soil properties required for design purpose.
4. Students can apply theory of vibrations to design machine foundation based on dynamic soil properties and bearing capacity.
5. Students can predict dynamic bearing capacity and methods of vibration isolation.

GE22C SUBSURFACE INVESTIGATION AND INSTRUMENTATION

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT - I GENERAL

Purpose of soil exploration – Planning a sub-surface exploration – Stages in sub-surface exploration – Depth of exploration – Lateral extent of exploration.

UNIT - II OPEN EXCAVATION AND BORINGS OF EXPLORATION

Pits and Trenches – Drifts and shafts – Auger Borings – Wash borings – Rotary drilling – Percussion drilling – Core drilling.

UNIT - III SOIL SAMPLES AND SAMPLERS

Types of soil samples – Disturbed samples – Undisturbed samples – Design features affecting the Sample Disturbance – Split Spoon Samplers – Scraper Bucket Samplers – Shellby Tubes and Thin walled Samplers – Piston Samlers – Denison Samplers – Hand-curved Samplers.

UNIT – IV IN-SITU TESTING

Standard Penetration Tests – Cone Penetration Tests – In-situ Vane Shear Test – Plate Load Test – Field Permeability Tests – In-situ Tests Using Pressure meter – Observation of Ground Water Table.

UNIT – V GEOPHYSICAL METHODS

Seismic Methods – Electrical Resistivity Methods – Electrical Profiling Method – Electrical Sounding Method – Common Soil Tests – Sub-soil Investigation Report.

1. Subsurface exploration and sampling of soils for Civil Engineering purposes by Hvorslev, M.J., Waterways Experiment Station, Vicksburg, Mississipi, 1949.
2. Foundation Engineering by S.P.Brahma Tata Mc Graw-Hill Publishing Company Limited, New Delhi, 1985.
3. Analysis and Design of Foundations and Retaining Structures by Shamsher Prakash, Gopal Ranjan and Swami Saran, Sarita Prakasham, Meerut, 1979.
4. Soil Mechanics & Foundation Engineering, Vol.2 by V.N.S. Murthy, Sai Kripa Technical Consultants, Bangalore.
5. Geotechnical Engineering by C.Venkatramaiah, Wiley Eastern Ltd., New Delhi. Relevant I.S. Codes.

Course Outcomes

The students will be able to:

1. Plan subsurface investigations based on the requirement of civil engineering project and site condition and finalize depth and number of boreholes required.
2. Select methods of exploration.
3. Suggest types of samples to be collected and samplers.
4. Execute different insitu tests for arriving properties of soil and Ground Water Table.
5. Suggest indirect methods for soil exploration and can propose a soil investigation report.

GE23C MARINE GEOTECHNIQUES

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

MARINE SOIL DEPOSITS: Offshore environment, Offshore structures and foundations, Specific problems related to marine soil deposits, Physical and engineering properties of marine soils

UNIT II

BEHAVIOUR OF SOILS SUBJECTED TO REPEATED LOADING: Effect of wave loading on offshore foundations, Behavior of sands and clays under cyclic loading, Laboratory experiments including repeated loading, Cyclic behavior of soils based on fundamental theory of mechanics, Approximate engineering methods which can be used for practical cases

UNIT III

SITE INVESTIGATION IN THE CASE OF MARINE SOIL DEPOSITS: Challenges of site investigation in marine environment, Different site investigation techniques, sampling techniques, Geophysical methods, Recent advancements in site investigation and sampling used for marine soil deposits

UNIT IV

FOUNDATIONS IN MARINE SOIL DEPOSITS: Different offshore and near shore foundations, Gravity platforms, Jack-up rigs.

UNIT V

DEEP FOUNDATIONS AND ANCHORS: Pile foundation – Axial capacity – Lateral capacity – Deflections – Construction – Anchored foundations.

References

3. D. Thomson and D. J. Beasley, “Handbook of Marine Geotechnical Engineering”, US Navy, 2012

Course Outcomes

The students will be able to:

1. Understand the Physical and Engineering properties of marine soils and problems specific to marine soil deposits.
2. Gain knowledge on Behaviour of sands and clays under cyclic loading
3. Can plan Site investigation in marine environment including Geophysical methods.
4. Can assess the factors governing the choice of the most suitable type of foundation for a given marine Structure.
5. Can Select Suitable type of foundation for a given marine structure.

GE23C COMPUTATIONAL GEOMECHANICS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

SOLUTION OF LINEAR EQUATIONS Jacobi's method, Gauss Seidal method, Successive over relaxation method.

UNIT II

FINITE DIFFERENCE METHOD Two point Boundary value problems – Disichlet conditions, Neumann conditions; ordinary and partial differential equations.

UNIT III

CORRELATION AND REGRESSION ANALYSIS Correlation - Scatter diagram, Karl Pearson coefficient of correlation, Limits of correlation coefficient; Regression –Lines of regression, Regression curves, Regression coefficient, Differences between correlation and regression analysis.

UNIT IV

ONE-DIMENSIONAL CONSOLIDATION - Theory of consolidation, Analytical procedures, Finite difference solution procedure for multilayered systems.

UNIT V

FLOW THROUGH POROUS MEDIA - Geotechnical aspects, Numerical methods, Applications and Design analysis.

3. D.J. Naylor and G.N. Pande, "Finite Elements in Geotechnical Engineering", Pineridge.

Course Outcomes

The students will be able to:

1. Solve linear equations
2. Apply Finite difference form of ordinary and partial differential equations
3. Understand Difference between correlation and regression analysis.
4. Apply finite difference technique to solve complex consolidation and seepage problems in Geotechnical Engineering.

GE23C ENGINEERING ROCK MECHANICS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

ROCK Formation of rocks, Physical properties, Classification of rocks and rock masses, Elastic constants of rock; Insitu stresses in rock. Application of Rock mechanics in Civil Engineering

UNIT II

ROCK TESTING: Laboratory and Field tests including field sampling

UNIT III

DISCONTINUITIES IN ROCK MASSES: Discontinuity orientation, Effect of discontinuities on strength of rock

UNIT IV

STRENGTH BEHAVIOUR: Compression, Tension and Shear, Stress-Strain relationships, Rheological behaviour

UNIT V

STRENGTH/ FAILURE CRITERION: Mohr-Coulomb, Griffith theory, Hoek and Brown, strength and other strength criteria. Stresses in rock near underground openings;

References

1. Hudson J.A. and J.P. Harrison. Engineering Rock Mechanics: an Introduction to the Principles, 1997. Elsevier, Oxford
2. Goodman, R.E. Introduction to Rock Mechanics, John Wiley & Sons.

4. Jaeger, J.C. and Cook, N.G.W, Fundamentals of Rock Mechanics, Chapman and Hall, 1976.
5. Wyllie, D.C., Foundations on Rock, E & FN Spon. 2nd Edition, 1992.

Course Outcomes

The students will be able to:

1. Assess the Physical and Mechanical properties of rocks.
2. Adopt direct & indirect methods of rock exploration.
3. Conduct different laboratory tests on rocks and analyse the results for rock properties
4. Asses Stress Strain behavior under Compressive, tension and Shear
5. Apply Strength criteria functions to analyze stresses in rocks.

GE23C GEOTECHNICAL EARTHQUAKE ENGINEERING

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

EARTHQUAKE SEISMOLOGY: Causes of earthquake, Plate tectonics, Earthquake fault sources, Seismic waves, Elastic rebound theory, Quantification of earthquake, Intensity and magnitudes, Earthquake source models.

UNIT II

EARTHQUAKE GROUND MOTION: Seismograph, Characteristics of ground motion, Effect of local site conditions on ground motions, Design earthquake, Design spectra, Development of site specification and code-based design.

UNIT III

GROUND RESPONSE ANALYSIS: One-dimensional ground response analysis: Linear approaches, Equivalent linear approximation of non-linear approaches.

UNIT IV

LIQUEFACTION AND LATERAL SPREADING: Liquefaction related phenomena, Liquefaction susceptibility: Historical, Geological, Compositional and State criteria. Evaluation of liquefaction by cyclic stress and cyclic strain approaches, Lateral deformation and spreading, Criteria for mapping liquefaction hazard zones.

UNIT V

Seismic design of foundations, Seismic slope stability analysis: Internal stability and weakening instability and Seismic design of retaining walls.

References

1. Steven Kramer, “Geotechnical Earthquake Engineering”, Pearson,2008.

2. Seco e Pinto, P., Seismic behaviour of ground and Geotechnical structure, A. A.
3. Naeim, F., The Seismic Design Handbook, Kluwer Academic Publication, 2ndEdition, 2001.
4. Ferrito, J.M, Seismic design criteria for soil liquefaction, Tech. Report of Naval Facilities service centre, Port Hueneme, 1997.

Course Outcomes

The students will be able to:

1. Know the causes and quantification of earthquake.
2. Get exposed to the effect of earthquake and ground motion.
3. Understand Ground response Analysis and Liquefaction effects.
4. Understand the seismic design of foundation

GE24C DESIGN OF UNDERGROUND EXCAVATIONS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Introduction, planning of and exploration for various underground construction projects, stereographic projection method, principle and its application in underground excavation design.

UNIT II

Elastic stress distribution around tunnels, stress distribution for different shapes and under different in-situ stress conditions, Greenspan method, design principles, multiple openings, openings in laminated rocks, elasto-plastic analysis of tunnels, Daemen's theory

UNIT III

Application of rock mass classification systems, ground conditions in tunneling, analysis of underground openings in squeezing and swelling ground, empirical methods, estimation of elastic modulus and modulus of deformation of rocks; uniaxial jacking / plate jacking tests, radial jacking and Goodman jacking tests, long term behavior of tunnels and caverns, New Austrian Tunneling Method (NATM), Norwegian Tunneling Method (NTM), construction dewatering.

UNIT IV

Rock mass-tunnel support interaction analysis, ground response and support reaction curves, Ladanyi'selasto-plastic analysis of tunnels, design of various support systems including concrete and shotcrete linings, steel sets, rock bolting and rock anchoring, combined support systems, estimation of load carrying capacity of rock bolts

UNIT V

In-situ stress, flat jack, hydraulic fracturing and over coring techniques and USBM type drill hole deformation gauge, single and multi-point bore hole extensometers, load cells, pressure cells, etc.

Instrumentation and monitoring of underground excavations, during and after construction, various case studies.

References

1. Hoek, E and and Brown, E. T.," Underground Excavations in Rocks", Institute of Mining Engineering.
2. Obert, L. and Duvall, W.I., "Rock Mechanics and Design of Structures in Rocks", John Wiley.
3. Singh, B. and Goel, R.K.,"Rock Mass Classification- A Practical Engineering Approach", Elsevier.
4. Singh, B. and Goel, R.K., "Tunnelling in Weak Rocks", Elsevier

Course Outcomes

The students will be able to:

1. Plan exploration for various underground projects.
2. Understand the use of elastic and plastic analysis in the design of underground support system.
3. Classify rock masses and select suitable method for advising tunnels.
4. Design various tunnel support system.
5. Gain awareness on the field tests generally conducted during and after construction of under structures.

GE24C FOUNDATION ON EXPANSIVE SOILS

L + T / week : 3Hrs Sessional Marks : 40

University Exam: 3 Hrs End Exam Marks : 60

UNIT – I
GENERAL PRINCIPLES:

Origin of expansive soils - Physical properties of expansive soils – Mineralogical composition - Identification of expansive soils - Field conditions that favour swelling - Consequences of swelling.

UNIT – II
SWELLING CHARACTERISTICS:
Swelling characteristics – Laboratory tests – Prediction of swelling characteristics – Evaluation of heave.

UNIT – III
TECHNIQUES FOR CONTROLLING SWELLING
Horizontal moisture barriers – Vertical moisture barriers – Surface and subsurface drainage – Prewetting – Soil replacement – Sand cushion techniques – CNS layer technique.

UNIT – IV
FOUNDATIONS ON EXPANSIVE SOILS :

Belled piers - Bearing capacity and skin friction - Advantages and disadvantages - Design of belled piers - Underreamed piles - Design and construction.

UNIT – V
MODIFICATION OF SWELLING CHARACTERISTICS

Lime stabilization – Mechanisms – Limitations – Lime injection – Lime columns – Mixing – Chemical stabilization – Construction.

Reference Books:

1. FU HUA CHEN, Foundations on Expansive Soils, Elsevier Scientific Publishing Company, New York.

2. Gopal Ranjan & A.S.R.Rao, Basic and Applied Soil Mechanics, New Age International Publishers - New Delhi.

3. Hand Book on Underreamed and Bored Compaction Pile Foundation, CBRI, Roorkee.

4. IS : 2720 (Part XLI) - 1977 - Measurement of Swelling Pressure of Soils.

5. R.K.Katti, Search for Solutions in Expansive Soils.

6. Alam Singh, Modern Geotechnical Engineering, Geo-Environ Academia, Jodhapur.

7. Swami Saran, Analysis and Design of Substructures, Oxford & IBH, New Delhi.

Course Outcomes

The students will be able to:

1. Identify expansive soil and the factors forming swelling with their consequences.
2. Evaluate the swelling characteristics from laboratory test results
3. Suggest appropriate technique for controlling swelling in expansive soil
4. Design appropriate foundation on expansive soils.
5. Infer the methods for modification of swelling characteristics

GE24C STABILITY ANALYSIS OF SLOPES

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

SLOPES: Types and causes of slope failures, mechanics of slope failure, failure modes.

UNIT II

STABILITY ANALYSIS: Infinite and finite slopes with or without water pressures; concept of factor of safety, pore pressure coefficients, Mass analysis, Wedge methods, friction circle method ; Method of slices, Bishop's method, Janbu's method, Morgenstern and Price, Spencer's method.

UNIT III

STABILITY ANALYSIS IN THE PRESENCE OF SEEPAGE: Two dimensional flow – Laplace equation and it's solution, graphical method, determination of phreatic line, flow nets in homogeneous and zoned earth dams under steady seepage and draw-down conditions, seepage control in earth dams, influence of seepage on slope stability stability analysis of dam body during steady seepage.

UNIT IV

STRENGTHENING MEASURES: stabilization of slopes by drainage methods, surface and subsurface drainage, use of synthetic filters, retaining walls, stabilization and strengthening of slopes, shotcreting, rock bolting and rock anchoring.

UNIT V

Instrumentation and monitoring of slopes, slope movements, warning devices, maintenance of slopes

References:

1. Chowdhary R and Chowdhary I , "Geotechnical Slope Analysis", CRC Press.
2. Harr M.E.," Ground Water and Seepage", McGraw Hill. 1962

Course Outcomes

The students will be able to:

1. Identify types and causes of slope failures.
2. Check the stability of earthen dams
3. Analyze stability of slopes in pressure of seepage
4. Suggest safety measures to be undertaken to prevent the instability of slopes, earthen dams and embankments.
5. Understand the aspects of maintenance and monitoring of slopes.

GE24C FOUNDATIONS ON WEAK ROCKS

L / week	**: 3Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Engineering properties of weak rocks, different rock mass classification systems, relative merits and demerits. Failure criteria for weak rocks, bi-linear Mohr-Coulomb failure criterion, Hoek and Brown criterion and modified Hoek and Brown failure criterion etc.

UNIT II

Effect of structural planes on rock foundations, possible modes of failure of foundations on rocks/ rock masses, determination of in-situ shear strength of rocks and rock masses

UNIT III

Requirements for satisfactory performance of foundations, bearing capacity of foundations on rocks and rock masses, allowable bearing pressure of rock foundations using a nonlinear failure criterion, monotonic and cyclic plate load tests. Pressure-settlement characteristics, effect of layering, anisotropy, heterogeneity andinelasticity

UNIT IV

Shallow foundations, shallow foundations on sloping ground, raft foundations, stilt foundations, foundations for suspension bridges, transmission line towers, framed buildings etc, treatment of foundations - open joints, solution cavities, weak seams

UNIT V

Piles in weak rocks, bearing capacity and settlement of piles, piles in stratified rock masses, field load tests on piles in weak rocks, behaviour of bored / driven piles in soft / weathered rocks.

References

1. Wyllie Duncan C.," Foundations on Rock: Engineering Practice", E&FN Spon, Taylor and Francis.
2. Hudson J.A. and J.P. Harrison. Engineering Rock Mechanics: an Introduction to the Principles, 1997. Elsevier, Oxford
3. Singh, B. and Goel, R.K.,"Rock Mass Classification- A Practical Engineering Approach", Elsevier.
4. Ramamurthy, T., "Engineering in Rocks", PHI Learning Pvt. Ltd.
5. Hoek, E., "Practical Rock Engineering", Rock science.

Course Outcome

The students will be able to:

1. Understand Rock mass classification and its Engineering properties.
2. Determine engineering properties of in-situ rocks and modes of failure associated.
3. Assess allowable Bearing pressure.
4. Design different types of foundations planned over rock mass.

GE21L SUB SOIL EXPLORATION LAB

L / week	**: 4Hrs**	**Sessional Marks 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

LIST OF PRACTICALS

1. Field vist
2. Field sampling and transports
3. Determination of Identification tests.
4. Determination of Engineering properties
5. Assessment of Allowable Bearing Pressure of foundations.

Course Outcomes (COs)

The students will be able to:

1. Evaluate vertical and lateral extent of exploration; identify, select, and plan different stages of subsurface exploration for various civil engineering projects.
2. Discriminate, Classify and analyse different techniques of exploration to be adopted in rocks and soils.
3. Discriminate different types of soil samples, samplers and judge the appropriateness of a sample or sampler for practical cases accounting for the safety and economy.
4. Evaluate different in-situ methods of tests to determine engineering properties of soils and locate Ground water table required for safe and economic design of foundations.
5. Asses the safe bearing capacity/Allowable Bearing Pressure of soils.

GE22L NUMERICAL ANALYSIS LAB

P/ week	**: 4Hrs**	**Sessional Marks :40**
University Exam	**: 3 Hrs**	**End Exam Marks: 60**

SYLLABUS CONTENTS

1. Development of spread sheets for Analysis of laboratory tests results.
2. Development of Spread sheets for stress distribution, Bearing Capacity and settlements
3. Curve fitting

Course Outcomes (COs)

The students will be able to:

1. Develop and Analyze laboratory tests results using Spread sheets
2. Develop and analyze Spread sheets for stress distribution for different loading conditions.
3. Determine Bearing Capacity of given soil sample.
4. Determine settlements of foundation in soils.

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING

Curriculum & Syllabi for Hydraulics & Water Resource Engineering

(w.e.f 2023-24)

MAY, 2023

PROGRAM OBJECTIVES

1. To learn the principles, processes and design of pressurized and free surface system.

2. To achieve competency in the pipe network design, analysis of channel networks, pressure rise in pipes due to sudden closure of valves, etc.

3. To assess the impact of climate change detection, Land use/Land cover changes on water availability

4. Efficient use of water in irrigation under varying climate change.

5. Impact of climate change on glaciers, consumptive use of surface and ground water, and optimum allocation of water.

6. Evaluation of various hydrologic processes including flow forecasting and the related practical applications.

WE11C ADVANCED FLUID MECHANICS

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks:**	**60**

UNIT I: Kinematics of Flow: Equation of continuity in cartesian, polar and cylindrical coordinates, Standard 2D Flow Patterns: Source, sink, doublet and their combinations, construction of flows by superposition, D'Alembert's paradox

UNIT II: Ideal fluid flow

Simple patterns of 2-dimensional flow - Uniform flow, Source, sink, vortex flow, Superposition of elementary flows – Doublet – Rankine-half body - Rankine oval, flow about a circular cylinder and flow about a rotating cylinder.

UNIT III:. Laminar Flow: Derivation of Navier-Stokes equations – exact solutions for flow between parallel plates, Couette flow, flow near a suddenly accelerated plate and an oscillating plate.

UNIT IV: Boundary Layers: Similarity solutions of boundary layer equations, Falkner-Skan Wedge flows, Karman's momentum integral equations, Karman-Puhlhausen approximate solution, separation in boundary layer under adverse pressure gradient, turbulent boundary layer.

UNIT V: Turbulent Flows: Reynolds equations of motion, semi-empirical theories of turbulence, velocity profiles for inner, outer and overlap layers, equilibrium boundary layers.

References:

1. White, F.M., "Fluid Mechanics", McGraw-Hill. 1979
2. Schlichting, H., "Boundary Layer Theory", McGraw-Hill. 1979 Garde, R.J., "Turbulent Flow", Wiley Eastern Limited. 1994
3. Pope, S. B., "Turbulent Flows", Cambridge University Press. 2000
4. Rouse, H., "Advanced Mechanics of Fluids", John Wiley and Sons. 1959
5. Ojha, C.S.P., Berndtsson, R. and Chandaramouli, P.N., "Fluid Mechanics", Oxford University Press. 2010

Course Outcomes (CO's)

After completion of the course the student will have:

1. Able to analyze the fluids in motion condition
2. Able to apply the principles of ideal fluid flow and real fluid flow
3. Able to apply the principles of viscous flow of fluids
4. Able to find out different layer of boundary layer and identifying the separation and control
5. Able to analyze the fluids in turbulent flow conditions.

WE12C FREE SURFACE FLOWS

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT I

INTRODUCTION: Free surface flows, velocity distribution, resistance relationships, specific energy and specific force, normal and critical depths computations, governing equation and computation of gradually varied flows.

UNIT II

HYDRAULIC JUMP: Elements of hydraulic jump, hydraulic jump in variety of situations including contracting and expanding geometries and rise in floor levels, control of hydraulic jump using baffle walls and cross jets.

UNIT III

SUPERCRITICAL FLOWS: Flow past deflecting boundaries, oblique shock waves.

Spatially Varied Flows: Flows past side weirs, De Marchi equations, design of side weirs, flow past bottom racks, trench weirs and waste water gutters.

UNIT IV

AERATED FLOWS: Bulking of flow, mechanism of air entrainments, modelling of aerated flows, development of self-aerated flows, uniform aerated region, aeration over spillway.
Stratified Flows: Thermal stratification in water bodies including reservoirs, modelling of stratified flows.

UNIT V

UNSTEADY FLOWS: St. Venant's equations and their solution using method of characteristics and finite difference schemes; dam break problem, hydraulic flood routing. Channel Transitions: Sub-critical and supercritical.

References:

1. Chow, V.T., "Open Channel Hydraulics", McGraw Hill. 1959

2. Choudhary, M.H., "Open-Channel Flows", Prentice-Hall.
1994
3. Ranga Raju, K.G., “Flow Through Open Channels, Tata McGraw Hill. 2003
4. Chanson, H., “The Hydraulics of Open Channel Flow: An Introduction”, Elsevier.
2004 French, R.H., "Open-Channel Hydraulics", McGraw-Hill. 1994
5. Wood, I.R., “Air entrainment in free-surface flows”, A.A. balkema. 1991

Course Outcomes

1. Able to compute flow profile in channel transition

2. Able to apply various principles in unsteady flow conditions

3. Able to formulate and solve the hydraulic flood routing

4. able to apply concepts on aerated flows.

WE13C WATERSHED MANAGEMENT AND MODELLING

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT -I

WATERSHEDMANAGEMENT-I:

Basin characteristics - Classification of effective watershed management methods - Factors affecting integrated watershed management - Watershed inventory.

UNIT -II

WATERSHED MANAGEMENT II :

Problem definition and scope - Consultation process - Developing workable management options - Evaluation of constraints and criteria - Simple assessment methods.

WATERSHED MODELLING I :

Runoff components- correlation coefficient, linear regression- least square's method, coefficient of determination, t-and F-test; Types of model- black box, parametric and physically based;cuvillinear relations, multi-linear regression model.

UNIT -III

WATERSHED MODELLING II :API & wetness performance, calibration, validation, errors, coefficient of efficiency and other tests, graphical methods. Simple parametric models- Curve Number Method, its modification, variable source area models; quasi- physically based models; a simple physically based model.

UNIT -1V

SOIL CONSERVATION:

Soil loss estimation - Universal soil loss equation; soil erosion principles - Gulley erosion - Design of permanent gully control structures - Stream bank erosion - Erosivity and erodability, Engineering measures to control erosion - Terracing, bunding, vegitated waterways. Wind erosion and control practices.

UNIT –V

ARTIFICIAL GROUNDWATER RECHARGE TECHNIQUES AND WATER HARVESTING TECHNIQUES:

Artificial recharge - Considerations - Methods - Induced Infiltration - Water Spreading - Flooding - Artificial recharge basins and distches - Natural channel modifications - Recharge pits and shafts - Recharge wells. Farm ponds- Percolation tanks.

Reference Books :

1. Prof. R.Suresh, "Watershed Hydrology" Standard Publishers.
2. Isobel W. Heathiote."Integrated Watershed Management - Principles & Practices".
3. Schwab, G.O. & Others, "Soil and Water Conservation Engg."
4. Prof.R.Suresh, "Soil and Water Conservation Engg.",

   (Standard Publishers).
5. Wayne A. Pettyjohu, "Introduction to Artificial Ground Water Recahrge" Scientific

   Publishers, Jodhpur.
6. Murthy J.V.S., "Wastershed Management".

Course outcomes:

1. Able to use watershed management methods and optimization techniques

3. Able to apply soil conservation equation and principles

4. Able to use water harvesting techniques and artificial recharge techniques

WE14C FLUVIAL HYDRAULICS

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT I

The sediment problems, properties of sediments, incipient motion of uniform and non-uniform sediments. Bed forms- mechanics of bed forms, classifications and channel resistance.

UNIT II

Bed load equation, Bed layer characteristics, sediment sampling, measurement and suspended load – sediment concentration, Advection-diffusion equation, suspended sediment concentration profile, Hyper concentration, Field measurements of suspended sediments.

UNIT III

Stable channel design and sediment control – Introduction- variable in channel design and conditions – secondary factors influencing stable channel design- stable channel carrying clear water- Non cohesive material-stable channel carrying sediments-sediment control .

UNIT IV

Bed level variations- continuity equation for sediment – equilibrium depth of scour in long channel contractions- stream bed changes during floods- degradation – aggradations

UNIT V

General mathematical models –silting of reservoirs –local scour- Design of guide bunds and other river training banks.

References:

1. Garde, R.J., "River Morphology", New International Publishers. 2006

2. Julien, P.Y., "Erosion and Sedimentation", Cambridge University Press. 1998 3. Jansen, P.P.H., "Principals of River Engineering", VSSD Publications. 1994

4. Garde, R.J. and Ranga Raju, K.G., "Mechanics of Sediment Transportation and Alluvial Stream Problems", Wiley Eastern Limited. 2006

Course Outcomes

After completion of the course the student will able to

1. Exposure to resistance laws in mobile bed channels/rivers. Scour around bridge piers
2. Design of river protection works

WE14C HYDRAULIC STRUCTURES

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

HYDRAULIC STRUCTURES – INTRODUCTION- Types of Hydraulic structures – water retaining structures – water conveying structures. Embankment Dams: Types, design considerations, seepage analysis and control, stability analysis, construction techniques.

UNIT II

GRAVITY DAMS: Forces acting on failure of a gravity dam, stress analysis, elementary profile, design of gravity dam, other functional features of a gravity dam.

UNIT III

DAM OUTLET WORKS: Types of outlet structures, ogee spillway, chute spillway, siphon spillway, side channel spillway,.

UNIT IV

TERMINAL STRUCTURES: Hydraulic jump types, stilling basin, roller bucket, ski jump b**asi**n, baffled spillway, drop structure

UNIT V

HYDRAULIC MODELING: Basic principles, dimensional analysis, design of physical models of hydraulic structures.

References:

1. Peterka, A.J, “Hydraulic Design of Stilling Basins and Energy Dissipators”, USBR Engineering Monographs No. 25”. 1984
2. Design of Small Dams", Third Edition, Water Resources Technical Publication – US Bureau of Reclamation. 1987
3. Singh, B., and Varshney, R.S., "Embankment Dam and Engineering", Nem Chand and Brothers. 2004
4. Novak, P. and Nalluri, C., “Hydraulic Structures”, Edition 4, Taylor & Francis. 2007 Creager, Justin and Hinds, “Engineering for Dams”, Vol. I and II, John Wiley.

Course Outcome

1. After completion of the course the student will have the ability toAnalysis and design of various types of hydraulic structures

WE14C SYSTEMS ENGINEERING

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Definitions and components of a system, system control, systems modelling and model development. System synthesis. Economic analysis, conflicts and role of optimization in their resolution.

UNIT II:

Unconstrained optimization – classification – univariate method – Hook-Jeeves pattern search method –powell's search method – Indirect search method – Cauchy's steepest descent method – newton' method.Constrained optimization – elimination method, penality and barrier function method, sequential quadratic programming, mixed integer programming.

UNIT III

Integer programming: Introduction – Integer Linear programming – Graphical Representation – Gomory's cutting plane method (mixed integer programming- sequential discreat programming. Geometric programming: unconstraind geometric programming using differential calculus-arithmetic-geometric inequality

UNIT IV

Linear programming: Geometry of linear programming- Linear simultaneous equation – simplex method- revised simplex method- Duality in linear programming. Dynamic programming-Multistage decision process- concept of sub-optimization and principle and optimality-computational procedure in dynamic programming.

UNIT V

Stochastic programming- Introduction – concept or probability theory – stochastic non-linear programming- geometric programming.

4. Rao, S.S., "Engineering Optimization – Theory and Practice", New Age International (P) Ltd. 1999
5. Hamdy, A.T., "Operations Research – An Introduction", Prentice Hall. 1997

Course Outcome

1. At the completion of the course the students will be able to understand the system behaviors and know how to apply the various simulation and optimization techniques to achieve optimum utilisation of water resources

WE14C HYDRAULIC MODELLING AND EXPERIMENTAL TECHNIQUES

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

HYDRAULIC MODELLING

Hydraulic models - Scale effects - Distorted models - movable bed models - Analogy methods - Design and analysis of experiments - errors in experiments.

UNIT - II

EXPERIMENTAL TECHNIQUES AND MEASUREMENTS

Velocity and pressure measuring Instruments - Pitot cylinder, Pitot sphere, - Anaemometers- Pressure transducers.

UNIT - III

Discharge measuring techniques - Classification of methods - Constriction methods, rotometer - Area-velocity method - Dilution methods and techniques - Special techniques and measuring structures.

UNIT - IV

Measurement of two phase flows - measurement of sediment content in water flows - air-water mixture. Test rigs - Wind and water tunnels - Drag balances.

UNIT - V

Flow visualization techniques- Smoke or dye- Line tracers – oil films – china clay – shadowgraph – direct-shadow method – schlieren method – Interferometer – Examples.

Reference Books :

1. Huntley, H.E. Dover (1967),"Dimensional Analysis"
2. B.B.Sharp (1982), "Hydraulic Modeling" Published by Butter Worths.

4. Addison, H. Chapman and Hall (1940), "Hydraulic Measurements".
5. Bradshaw, P.(1964), "Experimental Fluid Mechanics", Pergamon Press,
6. Ed. Richard, J. Goldstein, "Fluid Mechanics Measurements" published by

   Hemisphere Publishing Corporation (Distributed by Springer-Verlag).

Course Outcomes (Cos)

Learners should be able to

1. Able to design the prototype by analyzing the models and applying latest techniques for good
   efficiency
2. Able to measure the flow in all channels by using latest measurement devices.
3. Able to measure the sediment transport rate in regime flows.

WE15C WATER RESOURCES SYSTEMS PLANNING

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

INTRODUCTION: Water resources planning process, multi-objective planning.Evaluation of Water Plans: Basic concepts of engineering economics, welfare economics, economic comparison of alternatives.

UNIT II

WATER PLAN OPTIMIZATION: Plan formulation, objective functions and constraint, analytical optimization, numerical optimization, linear programming, dynamic programming, simulation, planning under uncertainty.

UNIT III

DETERMINISTIC RIVER BASIN MODELING: Stream flow modeling, estimation of reservoir storage requirements – dead storage, active storage for water supply/ irrigation / power generation, flood storage, optimal allocation.

UNIT IV

CONJUNCTIVE USE/GROUNDWATER MANAGEMENT MODELS: LP based conjunctive use modeling, aquifer response models, link - simulation, embedded, matrix response based models, soft modeling.

UNIT V

WATER QUALITY MANAGEMENT MODELS: Basic water quality modeling, objectives of management, control alternatives, optimal plans.

References:

1. Hall, W.A. and Dracup, J.A., "Water Resources Systems Engineering", McGraw Hill Book Company. 1970

2. Loucks, D.P., "Water Resource Systems Planning and Analysis", Prentice Hall. 1981

3. Maass et al., "Design of Water-Resource Systems", Harvard University Press. 1962

4. Vedula S. and Mujumdar, P.P., "Water Resources Systems", Tata McGraw Hill. 2005

Course Outcome

1. Able to use optimum utilisation of surface and subsurface water
2. Able to Rational allocation of reservoir water
3. Able to Exposure to various algorithms to solve linear as well as non-linear problems.

WE15C IRRIGATION AND DRAINAGE

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Introduction, objectives of irrigation, type of irrigation and suitability; selection of irrigation method. Irrigation requirement, water balance, soil water relationships, water storage zone, infiltration.

Unit II

Flow of moisture through root zone, soil physical and chemical properties, crop evaporative and drainage requirements, irrigation efficiency and uniformity.

UNIT III

Surface irrigation systems, types of surface systems, basin irrigation, border irrigation, furrow irrigation, field measurement techniques, flow measurement, flumes, weirs, irrigation events, advance, wetting, depletion and recession phases.

UNIT IV

Infiltration, infiltrometer, ponding methods, soil water, tensiometers, neutron probe, time domain reflectometer, evapotranspiration, crop coefficient, leaf area index, FAO guide lines on evapotranspiration estimation.

UNIT V

Drainage principles, need for drainage, steady state equations, Hooghoudt, Kirkham, Dagan and Ernst equations. Salt balance, water and salt balance of the root zone, salt equilibrium equation and leaching requirement, leaching efficiency.

References:

1. Walker, W.R., and Skogerboe, G.V., "Surface Irrigation Theory and Practice", Prentice Hall, INC. 1987
2. Drainage Principles and Applications, "International Institute for Land Reclamation and Improvement", Wageningen. 1973
3. Michael, A.M., "Irrigation: Theory and Practice", Vikas Publishing House.
4. Asawa, G.L., "Irrigation Engineering", New Age International Publishers.

   6.Luthin, J.N., "Drainage Engineering", John Wiley. 1966
6. Richard H. Cuenea (1989), “Irrigation System Design (An Engineering Approach)” Published by Prentice Hall Inc

Course Outcomes (CO’s)

After completion of course work the students able to

1. Assessment of various soil properties, soil water relationships

2. Measurement of crop water requirements and infiltration
3. Management of salinity problems and leaching process.

WE15C WATER POWER ENGINEERING

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT -1
INTRODUCTION
Sources of energy - Development of water power in India - Advantages and disadvantages of hydropower - Estimation of water power potential- Power house components.

UNIT II

ELECTRICAL LOAD CHARACTERISTICS:

Load curve - Load factor - Capacity factor - Utilization factor - Diversity factor - Load duration curves - Firm power and secondary power load prediction.

UNIT -III

HYDROPOWER PLANTS :

Classification of hydel plants - Runoff river, valley dam, and diversion canal plants - Flow duration curves - Storage and pondage - pumped storage plants - Types - Two unit and three unit arrangements - Efficiency of pumped storage plants - Tidal power plants - Basic principle - Components - Modes of generation - Estimation of energy.

UNIT -IV

WATER CONVEYANCE SYSTEM

Intakes - Types - Hydraulic design of intakes and accessories - power canals - Penstocks - Classification - Design criteria - diameter - Anchor blocks - Design criteria - Water hammer - Surge tanks - Channel surges.

UNIT -V

HYDRAULIC TURBINES:

Selection - Setting of turbines - Cavitation in turbines – Design of Francis turbine- Design of Kaplan turbine – Design of pelton wheel – specific speed of turbine – characteristics curves of turbine.

Reference Books :

1. M.M. Dandekar and K.N.Sharma - Water Power Engineering.
2. Emmil Mosonye - Water Power Development, Vol. I & II.

Course Outcomes (Cos)

1. Able to have knowledge about different sources of energy and electrical load on hydro turbines.
2. Able to understand the concepts of low head, high head and head diversion plants
3. Able to design pumped storage power plants
4. Able to use the concepts of water conveyance
5. Able to plan a power house

WE15C URBAN HYDROLOGY

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

INTRODUCTION

Urban Hydrology - Need - Highway drainage - Rainfall Characteristics - Point rainfall for Standard Duration - Rainfall and its variability in time and space.

UNIT II

DESIGN STORM PROFILES :

Differences between urban and rural storm profiles - Recommended design procedure - Sensitivity - Storm movement.

UNIT III

FLOOD ESTIMATION :

Planning of field investigations - Measurements; Methods of flood estimation - Regional runoff rainfall model - ORSTOM model - TRRL method - Generalized tropical flood model - Effect of land use - Examples.

UNIT IV

URBAN STORM WATER DRAINAGE:

Design Criteria - Rational method - TRRL hydrograph method - HYDRAON - ILLUDAS (Illinois Urban Drainage Area Simulator) - The Walkingford procedure - The Hydrograph volume method (HVM) - Environmental Protection Agency for Storm Water Management model (SWMM).

UNIT V

PLANNING AND CONTROL MEASURES :

Urban water resources planning - Surface and subsurface drainage - Design of subsurface drains - Erosion Control - Control of Gully erosion - Control of sheet erosion.

REFERENCE BOOK :

"Highway and Urban Hydrology in Tropics" by L.H.Watkins and D. Fiddes, Pentech Publishers (London - plymouth).

Course Outcomes (COs)

After completion of the course the student will have :

1. Able to know about urban rainfall and storm water management in urban areas .
2. Able to design storm water management in urban areas
3. Able to determine the design flood for storm water drainage system.
4. Able to develop urban storm water management models and to suggest suitable erosion control measures.

WE11L ADVANCED FLUID MECHANICS LAB

P / week : 4Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

List of Practicals:

1. To study the flow behavior in a pipe bend and to calibrate the pipe bend (i.e., bend or elbow meter) for discharge measurement.
2. To study the boundary layer velocity profile, and to determine the exponent in the power law of velocity distribution, boundary layer thickness and displacement thickness.
3. To study the velocity distribution in a pipe flow and to estimate the energy and momentum correction factors.
4. To study velocity distribution and Reynolds stresses in turbulent flow

Course Outcomes (Cos)

After the completion of course the student must

1. Able to find out surface profiles in forced vortex flow
2. Able to find discharge in elbow meters
3. Able to find energy correction factor , momentum correction factor and hydraulic jump in horizontal and sloping channels.

WE12L ADVANCED HYDROLOGY LAB

P / week : 4Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

List of Practicals:

1. Downloading and processing of remote sensing products
2. The hands on experiments in the image processing, GIS platforms
3. Georeferencing of toposheet and creating vector layers(MapInfo/ArcGIS)
4. Creation of attribute tables and layout preparation (MapInfo/ArcGIS)
5. Creation of Digital Elevation Model using Vertical Mapper.
6. GPS Survey and its data transformation into GIS environment.
7. Converting *.tab file to *.shp& vice versa using Universal Translator.
8. Use of D8 pointer algorithm for deriving flow direction, flow accumulation and watershed delineation.

Course Outcomes (Cos)

After the completion of course the student must

1. Able to download the satellite data and it is imported into GIS environment
2. Able to analyse the raster data ,vector data and development of DEM
3. Able to convert GPS data into point data in GIS

WE21C ADVANCED HYDROLOGY

L / week	**: 3 Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

INTRODUCTION: Hydrologic system and hydrologic budget, fundamental laws of hydrology; atmospheric water vapour. Hydrologic Inputs: Precipitation and its forms, snowfall and rainfall; measurement techniques and space-time characteristics

UNIT II

HYDROLOGIC ABSTRACTIONS: Infiltration, depression storage, evapotranspiration; measurement techniques, space time characteristics and their modelling.

UNIT III

STREAM FLOW: Measurement techniques, space-time characteristics, rating curves System Approach: Unit Hydrograph IUH, Clark and Nash model.

UNIT IV

MATHEMATICAL MODELLING: Linear and Nonlinear models, Physically based models Hydrological routing, Flood forecasting

UNIT V

ADVANCED METHOD OF FREQUENCY ANALYSIS: Outliers, Time series analysis. Impact of climate change and Land use/Land cover on basin response

References:

1. Chow, V.T., Maidment, D.R. and Mays, W.L., "Applied Hydrology", McGraw Hill. 1988
2. Ojha, C.S.P., Berndtsson, R. and Bhunya, P., "Engineering Hydrology", Oxford University Press. 2008
3. Wanielista, M., Kersten, R. and Eaglin, R., "Hydrology", John Wiley. 1997

Course Outcomes (Cos)

After the completion of course the student must

1. To develop basic tools for analysis of hydrologic processes
2. To apply the knowledge of time series models for hydrologic data generation and forecasting.
3. To be familiar with the hydrologic design concepts and methods including estimation of the design flows
4. To assess impact of climate change and Land use/Land cover on water availability

WE22C GROUNDWATER ENGINEERING

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

INTRODUCTION

Definition of groundwater, role of groundwater in hydrological cycle, groundwater bearing formations, classification of aquifers, flow and storage characteristics of aquifers, Darcy's law, anisotropy and heterogeneity. Governing Equations for Groundwater Flow: Dupuit-Forchheimer assumptions, general differential equations governing groundwater flows, analytical solutions.

UNIT II

WELLS AND WELL HYDRAULICS

Different types of wells, construction of wells, steady and unsteady state solutions for confined, unconfined and leaky aquifers, effect of boundaries, method of images, pumping test analysis. Groundwater Conservation: Regional groundwater budget; resource assessment; estimation of recharge, Indian practice for artificial recharge

UNIT III

GROUNDWATER QUALITY

General problem of contamination of groundwater, sources, remedial and preventive measures, seawater intrusion in coastal aquifers.

UNIT IV MANAGEMENT OF GROUNDWATER

Concept of basin management – Equation of Hydrologic Equilibrium – Groundwater basin investigations – Data collection and field work – Alternative basin yields – Evaluation of perennial yield – salt balance – basin management by conjunctive use

UNIT IV

GROUNDWATER FLOW MODELLING

Role of groundwater flow models, reference to hydraulic, Hele-Shaw and analog models, introduction to numerical modeling.

References:

1. Todd, D.K., "Groundwater Hydrology", John Wiley. 1959
2. Bear, J., "Hydraulics of Groundwater", McGraw. 1979
3. Bouwer, H., "Groundwater Hydrology", McGraw Hill. 1978

5. Driscoll, F.G., "Ground Water and Wells", Johnson Division. 1986
6. Raghunath, H. M., "Ground Water", New Age International (P) Limited.

Course Outcomes (Cos)

After the completion of course the student must able to

1. To understand aquifer properties and movement of ground water flow after the completion of the course.
2. Able to exposure towards well design and practical problems of ground water aquifers.
3. Able to find out groundwater quality parameters
4. Able to manage the groundwater resources

WE23C COMPUTATIONAL METHODS IN FLUID MECHANICS

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Review of numerical techniques like method of characteristics, finite difference method.

Finite element method- Finite element formulation – interpolation function – one dimensional element – two dimensional elements – three dimensional elements.

UNIT II

Causes of transients in pipes, water hammer, rigid water column theory, elastic water column theory, equivalent bulk modulus of elasticity.

UNIT III

Transient open channel flow: Introduction- Examples of transient flow – Governing equation – methods of solution – method of characteristics –Explicit and implicit Finite difference method.

UNIT IV

Numerical solutions for Navier-Stokes, boundary layer and Reynolds equations.

UNIT V

Groundwater modeling, formulation of anisotropic and non homogenous flow of groundwater, finite difference methods for solving groundwater flow problems, regional groundwater flow modelling.

References:

1.Anderson, "Computational Fluid Mechanics and Heat Transfer", McGraw Hill. 1984
2. Chung, T. J., "Finite Element Analysis in Fluid Dynamics", McGraw Hill. 1978
3.Anderson, &Weessner, "Applied Groundwater Modelling", Academic Press. 1992

4.Chaudhary, H. M., "Applied Hydraulic Transient", McGraw Hill. 1976

5. Streeter and Wylie, "Fluid Transients", McGraw Hill. 1976

6. Smith, G.D., "Numerical Solution of Partial Differential Equations-FDM". 1985
7. M. Hanif Chaudhry " Applied Hydraulic transients" third edition, springer publications

Course Outcomes

1. Able to compute the various flow parameters using FDM

2. able to analyse the flow field in a variety of practical situation without going for physical model setup

3. Able to solve the groundwater flow modelling conditions.

WE23C THEORY AND APPLICATIONS OF GIS

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

INTRODUCTION, Geographical concepts and Terminology, Difference between Image Processing system and GIS, Utility of GIS. Various GIS packages and their salient features, Essentials components of GIS, Data acquisition through scanners and digitizers.

UNIT II

RASTER AND VECTOR DATA: Introduction, Descriptions: Raster and Vector data, Raster Versus Vector, Raster to Vector conversion, Remote Sensing Data in GIS, Topology and Spatial Relationships, Data storage verification and editing.

UNIT III

DATA PRE-PROCESSING, Georeferencing, Data compression and reduction techniques, Run length encoding, Interpolation of data, Database Construction, GIS and the GPS, Data Output Database structure, Hierarchical data, Network systems, Relational database, Database management, Data manipulation and analysis

UNIT IV

SPATIAL AND MATHEMATICAL OPERATIONS IN GIS, Overlay, Query based, Measurement and statistical modelling, Buffers, Spatial Analysis, Statistical Reporting and Graphing Programming languauges in GIS, Virtual GIS, Web GIS

UNIT V

APPLICATION OF GIS IN WATER RESOURCES : Land use/Land cover, Rainfall – Runoff relations and runoff potential indices of watersheds, Flood and Drought impact assessment and monitoring. Watershed management for sustainable development and Watershed characteristics – Reservoir sedimentation, Identification of suitable sites for Ground water & identification of sites for artificial recharge structures, Drainage morphometry, water depth estimation

5. Lo, C.P. and Young, A.K.W., “Concepts and Techniques of Geographical Information System”, Prentice Hall India. 2002

6. Longley, Paul A, Goodchild, Michael F., Maguire, David J. and Rhind, David W., “Geographic Information Systems and Science”, Wiley. 2001.

Course Outcomes

1. Able to analyse the data both in raster format and vector format

2. Able to evaluate the performance of irrigation systems

3. Able to evaluate groundwater potential using GIS and various applications in water resources engineering.

WE23C HYDROGEOLOGY AND GEOPHYSICAL EXPLORATION OF GROUNDWATER

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

INTRODUCTION :

Definitions of Hydrogeology – Interdisciplinary subject - Exploration of ground water – Aquifer properties - Porosity, permeability and hydraulic head- Direction and speed of movement of groundwater.

UNIT-II

GROUNDWATER IN DIFFERENT ROCK FORMATIONS

Rock types – Yield of groundwater from Igneous, metamorphic, sedimentary rocks, coastal deposits and glacial deposits - Groundwater indicators – Reservoir indicators – Surface indicators – Boundary indicators

UNIT – III

METHODS OF EXPLORATION- 1

Theory of electrical resistivity - Sounding and profiling - Four electrode system – Wenner and Sclumberger configuration-Cumulative resistivity method – Tagg's master curves. Electrical logging - Spontaneous potential logging - Interpretation from logs.

UNIT – IV

METHODS OF EXPLORATION - 2

Types of waves- elastic constants – Refraction method of measurement – its interpretation - Reflection method of measurement – its interpretation.Soil temperature survey – Magnetic survey – Gravity survey.

UNIT – V

METHODS OF EXPLORATION- 3

Application of Remote sensing method to delineate groundwater potential zones- thematic maps – Assessment of status of groundwater development.Radioactive logging , Induction logging, sonic logging- interpretation from logs.Drilling time, factors influencing and use of drilling time, applications of drill stem test data, wire line formation test.

Reference Books:

1. Raghunath H M (1998) "Groundwater" New Age International Publishers

2. Davis S.N. and Dewiest R.I.M. (1967) "Hydrogeology" – John Wiley sons.

3. Griffith,D.H and King R.F (1966) "Applied geophysics for Engineers and geologists" Pergamen Press.

4. Todd,D.K. (1980) "Groundwater Hydrology" John Wiley and sons, New York.

5. R.Kirsch (edited by) " Groundwater Geophysics- A tool for hydrogeology" 2nd edition, Springer Publications.

Course Outcomes (COs)

After completion of the course the student will have :

1. Able to identify different types of aquifers
2. Able to find out yield of well in different aquifers
3. Able to conduct geophysical exploration studies on groundwater identification studies
4. Applying different logging techniques in groundwater and remote sensing and gis

WE23C COASTAL ENGINEERING

L / week : 3Hrs **Sessional Marks : 40**
University Exam : 3 Hrs **End Exam Marks : 60**

UNIT -I

COASTAL ZONE PROCESS:

General, Sediment properties; measurement and sampling techniques - fundamental principles of movement - bad load and suspended load transport.

UNIT -II

Role of coastal sedimentation process - Long shore drift - Beach Evaluation Models - General sediment transport models - On-shore and off-shore sediment transport.

UNIT -III

Beach nourishment - Coast and Bed Morphology - Regime of the Coast and Sea Beach - Sand features - Features of Estuaries - Coastal and Beach features.

UNIT –IV

COASTAL PROTECTION

Identification of the problem - Restoration of the Beach - Groynes and Rivetments - Off-shore Breakwaters, Bays and Artificial Headlands - Beach replenishment.

UNIT -V

DESIGN PRINCIPLES OF COASTAL AND HARBOUR STRUCTURES :

Break water - types - Waves, Jelties and Piers; Docks - different types.

Reference Books :

1. "Coastal Hydraulics" (2nd Edn) By A.M. Muir Wood and CA Fleming, John Wiley and Sons (Newyork).
2. "Coastal Engineering" (Vol. 1 & 2) by Richard L. Silvister, Elsvier Scientific Publishing Company.

Course Outcomes (Cos)

1. Able to know Explain the properties, measurement and principles of sediment transport.
2. Able to evaluate the different sediment transport models
3. Able to describe the different features of coast and beach
4. Able to apply the knowledge of design principles of coastal and harbor structures

WE24C ENVIRONMENTAL HYDRAULICS

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

Introduction and scope, review of basic principles of engineering fluid mechanics, continuity, momentum, and energy equations, steady flow through pipes- hydraulic gradient and total energy line, basics of open channel flow; Ground water, well hydraulics, well design and constructions,

UNIT II

Parallel, compound and equivalent pipes, head losses in pipes, design of pressurized conduits,

UNIT III

Various forms of mixing in the environment, modeling of the mixing process:

advection dispersion equation, Various forms of advection dispersion eq. and its solution.

UNIT IV

Special cases of mixing, density stratified flow, tide, etc.

UNIT V

Mass transfer in gas-liquid and liquid -liquid system with special emphasis on aeration, Project presentation

References:

1. Roberson, J.A., Cassidy, J.J., Chaudhry, M.H. “Hydraulic Engineering”, 2nd Edition, Wiley. 1998
2. Chadwick, A., Morfett, J., Borthwick, M. “Hydraulics in Civil and Environmental Engineering”, 5th Edition, CRC Press. 2004
3. Lee, C. C., Lin, S.D. “Handbook of Environmental Engineering Calculations”, McGraw Hill. 2007
4. Schnoor, J.L., Environmental Modeling: Fate of Chemicals in Water, Air and Soil, John Wiley & Sons, New York. 1996.

Course Outcome

1. The students will be able to gain a basic knowledge of advection-dispersion processes in the environment.

2. Able to gain the skills to take up research activities in solving environmental problems involving fluid motions.

WE24C ADVANCED NUMERICAL ANALYSIS

L / week	**: 3Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

UNIT I

Introduction to digital computers & Programming an overview; Errors-Polynomial approximations and interpolations-Numerical differentiation & Integration.

UNIT II

Evaluation of single and multiple integrals, Newton's method, variational and weightened residual methods.

UNIT III

Matrices –Linear equations, Eigenvalues and Eigenvectors-nonlinear equations,

UNIT IV

Harmonic and biharmonic equations - solutions, convergence, completeness & stability.

UNIT V

Initial and boundary value problems of finite difference method, Implicit & Explicit scheme.

References

1.Jain M.K, SRK Iyenge and RK Jain."Numerical Methods for Scientific & Engg. Computation".

2.Mathews J. H “Numerical Methods for Mathematics, Science and Engineering”.

3.Gerld C.F and PO Wheatley “Applied Numerical Analysis”.

4. Gupta S.C and V. K. Kapoor “Fundamentals of Applied Statistic”, Sultan Chand & Sons.

5. Johnson R.A “ Probability and Statistics for Mngineers.

Course outcomes:

1.able to determine different variables using different numerical techniques.

WE24C RIVER WATER MANAGEMENT

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT -1

INTRODUCTION

Planning and analysis of Water Resources Systems –Probability concepts and methods.

UNIT -II

WATER RESOURCES PLANNING UNDER UNCERTAINITY

Distributions of random events - Stochastic process and time series - Planning with uncertainity - analysing systems with dynamic uncertainty.

UNIT -111

DETERMINISTIC RIVER BASIN MODELLING:

Food control alternatives - Hydro power production - Withdrawals and Diversions - Model synthesis -Expansion of water resources systems.

UNIT -IV

SYNTHETIC STREAM FLOW GENERATION:

Statistical streamflow generation models - Multisite models - Multiseasonal models - Model selection and parameter estimation - Stream flow generation from precipitation data.

UNIT -V

STOCHASTIC RIVER BASIN PLANNING MODELS

Reservoir operation - Single reservoir design and operation - Multiple - Site River Basin Planning Models.

Reference Books :

1. "Water Resources System Planning and Analysis" by Daniel P.Loucks, Jerry R. Stedinger and Douglass A. Haith (Published by Prentice - Hall Inc.)

Course outcomes:

1. Able to plane water resources projects with different uncertainties
2. Able to design the river basing modelling
3. Able to design the stochastic river basin planning models

WE24C THEORY OF SEEPAGE AND GROUNDWATER MOVEMENT

L / week	**: 3Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

UNIT I

MOVEMENT OF GROUNDWATER

Darcy's flow - Range of validity of Darcy's law - permeability coefficient – laboratory and field methods of measurement - General hydrodynamic equation.

UNIT II

STEADY STATE FLOWS

Bboundary conditions – flow nets – construction and analysis of flow nets – flow nets for anisotropic soils.

UNIT III

UNCONFINED FLOWS

Dupuit's theory of unconfined flow – basic considerations- Two-dimensional flow on a horizontal impervious boundary - Free surface subjected Infiltration and Evaporation - groundwater flow with an inclined lower impervious boundary – Pavlosky's solutions.

UNIT IV
CONFORMAL TRANSFORMATIONS AND MAPPING TECHNIQUES

Geometrical representation of $w = f(z)$ and $z = f(w)$, application of the mapping function $z = w^2$ - Reciprocal function $w = 1/z$ - Velocity hodograph – impervious boundary – boundary of reservoir – surface of seepage –free surface– flow characteristics at singular points of flow domain – example of velocity hodograph.

UNIT V
RECHARGE OF GROUNDWATER

Concept of recharge – methods- waste water recharge for reuse – Artificial recharge for energy purposes.

References :

1. Groundwater and Seepage : M.E. Harr ,Mc Graw Hill pubs.

2. Ground water Hydrology : D.K. Todd, John Wiley & Sons

Course Outcomes (Cos)

1. Able to know about movement of groundwater
2. Able to apply the boundary conditions and flow net analysis of groundwater
3. Able to apply the principles of unconfined flow and infiltration flow of groundwater
4. Able to apply conformation transformation of mapping of groundwater
5. Able to analyze different subsurface investigations and artificial recharge techniques

WE21L Computational Fluid Dynamics

P / week	**: 4Hrs**	**Sessional Marks : 40**
University Exam	**: 3 Hrs**	**End Exam Marks : 60**

List of Practicals

Exposure to software's such as ANSYS, FLUENT, creation of Geometry, Mesh, description of boundary condition and solution of flow problems in 1D, 2D and 3D. typical examples should include flow around sphere, cylinders, bridge piers etc.

Course Outcomes:

1. Able to find out boundary flow condition solution flow in 1D, 2D and 3D flows using software ANSYS, FLUENT

WE22L OPEN CHANNEL FLOW

P / week	**: 4 Hrs**	**Sessional Marks**	**: 40**
University Exam	**: 3 Hrs**	**End Exam Marks**	**: 60**

List of Practicals:

1. To calibrate a broad-crested weir and study the pressure distribution at the upstream end of the weir.
2. To study the characteristics of a hydraulic jump.
3. To study the velocity distribution downstream of an expansion (with and without splitter plates) in a channel.
4. To obtain pressure distribution over spillway profile
5. To study energy dissipation using baffle blocks
6. To study air entrainment in open channel flow
7. To study the velocity distribution in an open channel and to estimate the energy and momentum correction factors.

Course outcomes:

1. Able to find out pressure distributions of the weir

2. Able to determine velocity distribution and pressure distribution in channels

3. Able to find out kinetic energy correction factor , momentum correction factor on horizontal and sloping channels.

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING
DEPARTMENT OF CIVIL ENGINEERING

Curriculum & Syllabi for Structural Engineering

(w.e.f 2023-24)

MAY, 2023

PROGRAMME OBJECTIVES

1. To make students learn and Understand different problems Associated with Structural, geotechnical and hydraulics structures.
2. To develop analysis and design procedure for various types of structures.

PROGRAM OUTCOMES (POS):

After completion of the program graduates will be able to

1. Apply the knowledge of science, mathematics, and engineering principles for developing problem solving attitude.
2. Identify, formulate and solve engineering problems in the domain of structural engineering field.
3. Use different software tools for Analysis and Design structural engineering domain.
   Design and conduct experiments, analyse and interpret data, for development of simulation experiments.
4. Function as a member of a multidisciplinary team with sense of ethics, integrity and social responsibility.

SE11C ADVANCED STRUCTURAL ANALYSIS

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

UNIT-I

Introduction to matrix methods of analysis - statical indeterminacy and kinematical indeterminacy - degree of freedom - coordinate system - structure idealization stiffness and flexibility matrices - suitability element stiffness equations - elements flexibility equations - mixed force - displacement equations - for truss element, beam element and torsional element. Transformation of coordinates - element stiffness matrix - and load vector - local and global coordinates.

UNIT-II

Assembly of stiffness matrix from element stiffness matrix - direct stiffness method - general procedure - banded matrix - semi bandwidth - assembly by direct stiffness matrix method.

UNIT-III

Analysis of plane truss - continuous beams with and without settlement - plane frame including side sway single storey, single – bay and gable frame by flexibility method using system approach.

UNIT-IV

Analysis of plane truss - continuous beams with and without settlement - plane frame including sides sway, grids and gable frames by stiffness methods, single bay – two storey, two bay single – storey

UNIT-V

Special analysis procedures - static condensation and sub structuring - initial and thermal stresses.

References:

1. Matrix Structural Analysis by Madhu B. Kanchi.
2. Matrix Methods of Structural Analysis by J.Meek.
3. Structural Analysis by Ghali and Neyveli.
4. Structural Analysis by Devdas Menon, Narosa Publishing Housing Pvt Ltd

Course outcomes:

At the end of the course, students will be able to

1. Distinguish determinate and indeterminate structures.
2. Identify the method of analysis for indeterminate structures.
3. Apply matrix methods of analysis for continuous beams.
4. Apply matrix methods of analysis for rigid and pin jointed frames

SE12C ADVANCED SOLID MECHANICS

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

UNIT-I

INTRODUCTION TO ELASTICITY: Displacement, Strain and Stress Fields, Constitutive Relations, Cartesian Tensors and Equations of Elasticity.

STRAIN AND STRESS FIELD: Elementary Concept of Strain, Stain at a Point, Principal Strains and Principal Axes, Compatibility Conditions, Stress at a Point, Stress Components on an Arbitrary Plane, Differential Equations of Equilibrium, Hydrostatic and Deviatoric Components.

UNIT-II

EQUATIONS OF ELASTICITY: Equations of Equilibrium, Stress- Strain relations, Strain Displacement and Compatibility Relations, Boundary Value Problems, Co-axiality of the Principal Directions.

UNIT-III

TWO-DIMENSIONAL PROBLEMS OF ELASTICITY: Plane Stress and Plane Strain Problems, Airy's stress Function, Two-Dimensional Problems in Polar Coordinates.

UNIT-IV

TORSION OF PRISMATIC BARS: Saint Venant's Method, Prandtl's Membrane Analogy, Torsion of Rectangular Bar, Torsion of Thin Tubes.

UNIT-V

PLASTIC DEFORMATION: Strain Hardening, Idealized Stress- Strain curve, Yield Criteria, von Mises Yield Criterion, Tresca Yield Criterion, Plastic Stress-Strain Relations, Principle of Normality and Plastic Potential, Isotropic Hardening.

References:

1. Theory of Elasticity, Timoshenko S. andGoodierJ. N., McGraw Hill, 1961.
2. Elasticity,SaddM.H.,Elsevier,2005.
3. Engineering Solid Mechanics, RagabA.R., BayoumiS.E., CRC Press,1999.
4. Computational Elasticity, AmeenM., Narosa,2005.
5. Solid Mechanics, KazimiS. M. A., Tata McGraw Hill,1994.
6. Advanced Mechanics of Solids, SrinathL.S., Tata McGraw Hill,2000.

Course outcomes: At the end of the course, students will be able to

1. Solve simple problems of elasticity and plasticity understanding the basic concepts.
2. Apply numerical methods to solve continuum problems.

3. Study the two-dimensional problems of Elasticity.

4. Solving the tensional problem of prismatic beam.

5. Solve the problems of plasticity understanding the basic concepts.

SE13C DESIGN OF PRESTRESSED CONCRETE STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents

UNIT-I

INTRODUCTION TO PRESTRESSED CONCRETE: types of prestressing, systems and devices, materials, losses in prestress. Analysis of PSC flexural members: basic concepts, stresses at transfer and service loads, ultimate strength in flexure, code provision.

UNIT-II

TRANSMISSION OF PRESTRESS: Pretensioned members; Anchorage zone stresses for post tensioned members, Short term and Long term PSC beams

UNIT-III

STATICALLY DETERMINATE PSC BEAMS: Analysis and Design for ultimate and serviceability limit states for flexure, shear and torsion, code provisions.

UNIT-IV

STATICALLY INDETERMINATE STRUCTURES - Analysis and design - continuous beams and frames, choice of cable profile, linear transformation and concordancy.

UNIT-V

COMPOSITE CONSTRUCTION with precast PSC beams and cast in-situ RC slab - Analysis and design, creep and shrinkage effects. Partial prestressing - principles, analysis and design concepts, crack-width calculations. Analysis and design of pre stressed concrete pipes

References:

1. Design of Prestressed Concrete Structures, Lin T.Y., Asia Publishing House, 1955.
2. Prestressed Concrete, Krishnaraju N., Tata McGraw Hill, New Delhi, 1981.
3. Limited State Design of Prestressed Concrete, GuyanY., Applied Science Publishers, 1972.
4. IS: 1343- Code of Practice for Prestressed Concrete
5. IRC: 112

Course outcomes: At the end of the course, students will be able to

1. Find out losses in the prestressed concrete. Understand the basic aspects of prestressed concrete fundamentals, including pre and post-tensioning processes.
2. Analyse prestressed concrete deck slab and beam/ girders.
3. Design prestressed concrete deck slab and beam/ girders.
4. Design of end blocks for prestressed members.

.

SE14C ADVANCED STEEL DESIGN

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

PROPERTIES OF STEEL: Mechanical Properties, Hysteresis, Ductility.

HOT ROLLED SECTIONS: compactness and non-compactness, slenderness, residual stresses.

UNIT-II

DESIGN OF STEEL STRUCTURES: Inelastic Bending Curvature, Plastic Moments, Design Criteria Stability, Strength, Drift.

STABILITY OF BEAMS: Local Buckling of Compression Flange &Web, Lateral Torsional Buckling.

UNIT-III

STABILITY OF COLUMNS: Slenderness Ratio, Local Buckling of Flanges and Web, Bracing of Column about Weak Axis.

METHOD OF DESIGNS: Allowable Stress Design, Plastic Design, Load and Resistance Factor Design;

UNIT-IV

STRENGTH CRITERIA: Beams - Flexure, Shear, Torsion, Columns - Moment Magnification Factor, Effective Length, PM Interaction, Biaxial Bending, Joint Panel Zones.

DRIFT CRITERIA: P Effect, Deformation Based Design;

UNIT-V

CONNECTIONS: Welded, Bolted, Location Beam Column, Column Foundation, Splices.

Reference Books

1. Design of Steel Structures - Vol. II, Ramchandra. Standard Book House, Delhi.

2. Design of Steel Structures - Arya A. S., Ajmani J. L., Nemchand and Bros., Roorkee.

3. The Steel Skeleton- Vol. II, Plastic Behaviour and Design - Baker J. F., Horne M. R., Heyman J., ELBS.

4. Plastic Methods of Structural Analysis, Neal B. G., Chapman and Hall London. IS 800: 2007 – General Construction in Steel - Code of Practice, BIS, 2007.

5. SP – 6 - Handbook ofStructural Steel Detailing, BIS,198

Course Outcomes: At the end of the course, students will be able to

1. Design steel structures/ components by different design processes.

2. Analyze and design beams and columns for stability and strength, and drift.

3. Design welded and bolted connections

SE14C THEORY AND APPLICATIONS OF CEMENT COMPOSITES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT-I

INTRODUCTION: Classification and Characteristics of Composite Materials- Basic Terminology, Advantages. Stress-Strain Relations- Orthotropic and Anisotropic Materials, Engineering Constants for Orthotropic Materials, Restrictions on Elastic Constants, Plane Stress Problem, Biaxial Strength, Theories for an Orthotropic Lamina.

UNIT-II

MECHANICAL BEHAVIOUR: Mechanics of Materials Approach to Stiffness- Determination of Relations between Elastic Constants, Elasticity Approach to Stiffness- Bounding Techniques of Elasticity, Exact Solutions - Elasticity Solutions with Continuity, Halpin, Tsai Equations, Comparison of approaches to Stiffness.

UNIT-III

CEMENT COMPOSITES: Types of Cement Composites, Terminology, Constituent Materials and their Properties, Construction Techniques for Fibre Reinforced Concrete - Ferro cement, SIFCON, Polymer Concretes, Preparation of Reinforcement, Casting and Curing.

MECHANICAL PROPERTIES OF CEMENT COMPOSITES: Behaviour of Ferro cement, Fibre Reinforced Concrete in Tension, Compression, Flexure, Shear, Fatigue and Impact, Durability and Corrosion.

UNIT-IV

APPLICATION OF CEMENT COMPOSITES: FRC and Ferro cement- Housing, Water Storage, Boats and Miscellaneous Structures. Composite Materials- Orthotropic and Anisotropic behaviour, Constitutive relationship, Elastic Constants.

UNIT-V

ANALYSIS AND DESIGN OF CEMENT COMPOSITE STRUCTURAL ELEMENTS - Ferro cement, SIFCON and Fibre Reinforced Concrete.

Reference Books:

1. Mechanics of Composite Materials, Jones R. M,, 2nd Ed., Taylor and Francis,BSP Books, 1998. Ferro cement – Theory and Applications, Pama R. P., IFIC, 1980.
2. New Concrete Materials, Swamy R.N., 1stEd., Blackie, Academic and Professional, Chapman & Hall, 1983.

Course Outcomes: At the end of the course, students will be able to

1. Formulate constitutive behaviour of composite materials – Ferrocement, SIFCON and Fibre Reinforced Concrete - by understanding their strain- stress behaviour.
2. Classify the materials as per orthotropic and anisotropic behaviour.
3. Estimate strain constants using theories applicable to composite materials.
4. Analyse and design structural elements made of cement composites.

SE14C THEORY OF STRUCTURAL STABILITY

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

CRITERIA FOR DESIGN OF STRUCTURES: Stability, Strength, and Stiffness, Classical Concept of Stability of Discrete and Continuous Systems, Linear and nonlinear behaviour.

UNIT-II

STABILITY OF COLUMNS: Axial and Flexural Buckling, Lateral Bracing of Columns, Combined Axial, Flexural and Torsion Buckling.

UNIT-III

STABILITY OF FRAMES: Member Buckling versus Global Buckling, Slenderness Ratio of Frame Members.

UNIT-IV

STABILITY OF BEAMS: lateral torsion buckling.

UNIT-V

STABILITY OF PLATES: Axial, flexural, buckling, shear, flexural, buckling, buckling under combined loads. Introduction to Inelastic Buckling and Dynamic Stability.

Reference Books:

1. Theory of elastic stability, Timoshenko and Gere, Tata Mc Graw Hill,1981
2. Principles of Structural Stability Theory, Alexander Chajes, Prentice Hall, New Jersey.
3. Structural Stability of columns and plates, Iyengar, N. G. R., Eastern west press Pvt. Ltd. Strength of Metal Structures,Bleich F. Bucking, Tata McGraw Hill, New York.

Course Outcomes: At the end of the course, students will be able to

1. Use stability criteria and concepts for analysing discrete and continuous systems,

2. Determine stability of beams and plates
3. Determine stability of columns and frames
4. Determine stability of plates.

SE14C ANALYTICAL AND NUMERICAL METHODS FOR STRUCTURAL ENGINEERING

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

FUNDAMENTALS OF NUMERICAL METHODS: Error Analysis, Polynomial Approximations and Interpolations, **Curve Fitting;** Interpolation and extrapolation. Solution of nonlinear algebraic and transcendental equations

UNIT-II

ELEMENTS OF MATRIX ALGEBRA: Solution of Systems of Linear Equations, Eigen Value Problems.

UNIT-III

NUMERICAL DIFFERENTIATION & INTEGRATION: Solution of Ordinary and Partial Differential Equations.

UNIT-IV

INITE DIFFERENCE SCHEME: Implicit & Explicit scheme.

UNIT-V

COMPUTER ALGORITHMS: Numerical Solutions for Different Structural Problems, Fuzzy Logic and Neural Network.

Reference Books:

1. An Introduction to Numerical Analysis, AtkinsonK.E., J. Wiley and Sons, 1989.

2. Theory and Problems of Numerical Analysis, Scheid F, McGraw Hill Book Company, (Shaum Series), 1988.

3. Introductory Methods of Numerical Analysis, Sastry S. S, Prentice Hall of India, 1998.

Course Outcomes: At the end of the course, students will be able to

1. Analyse the error analysis, polynomial approximations & curve fittings.
2. Write solutions of systems of linear equations & given value problems.
3. Solve ordinary and partial differential equations in structural mechanics using numerical methods.

4. Write a program to solve a mathematical problem.

SE15C STRUCTURAL HEALTH MONITORING

L / L / week : 3Hrs Sessional Marks : 40

University Exam : 3 Hrs End Exam Marks : 60

Syllabus Contents:

UNIT-I

STRUCTURAL HEALTH: Factors affecting Health of Structures, Causes of Distress, Regular Maintenance.

UNIT-II

STRUCTURAL HEALTH MONITORING: Concepts, Various Measures, Structural Safety in Alteration.

STRUCTURAL AUDIT: Assessment of Health of Structure, Collapse and Investigation, Investigation Management, SHM Procedures.

UNIT-III

STATIC FIELD TESTING: Types of Static Tests, Simulation and Loading Methods, sensor systems and hardware requirements, Static Response Measurement.

UNIT-IV

DYNAMIC FIELD TESTING: Types of Dynamic Field Test, Stress History Data, Dynamic Response Methods, Hardware for Remote Data Acquisition Systems, Remote Structural Health Monitoring.

UNIT-V

INTRODUCTION TO REPAIRS AND REHABILITATIONS OF STRUCTURES: Case Studies (Site Visits), piezo– electric materials and other smart materials, electro–mechanical impedance (EMI) technique, adaptations of EMI technique.

Reference Books:

1. Structural Health Monitoring, Daniel Balageas, Claus Peter Fritzen, Alfredo Güemes, John Wiley and Sons, 2006.
2. Health Monitoring of Structural Materials and Components Methods with Applications, Douglas E Adams, John Wiley and Sons, 2007.
3. Structural Health Monitoring and Intelligent Infrastructure, Vol1, J. P. Ou, H. Li and Z. D. Duan, Taylor and Francis Group, London, UK, 2006.
4. Structural Health Monitoring with Wafer Active Sensors, Victor Giurglutiu, Academic Press Inc, 2007.

Course Outcomes: At the end of the course, students will be able to

1. Diagnosis the distress in the structure understanding the causes and factors.
2. Assess the health of structure using static field methods.
3. Assess the health of structure using dynamic field tests.
4. Suggest repairs and rehabilitation measures of the structure.

SE15C QUALITY CONTROL AND SAFETY MANAGEMENT

L / L / week : 3Hrs Sessional Marks : 40

University Exam : 3 Hrs End Exam Marks : 60

Syllabus Contents:

UNIT-I

Types Of Organizations: Inspection. Control And Enforcement -Quality Management Systems And Method - Responsibilities And Authorities In Quality Assurances And Quality ControlArchitects, Engineers, Contractors, And Special Consultants, Quality Circle. Quality Systems : Introduction - Quality System Standard – ISO 9000 Family Of Standards – Requirements – Preparing Quality System Documents – Quality Related Training – Implementing A Quality System – Third Party Certification

UNIT-II

Quality Policy: Objectives And Methods In Construction Industry -Consumers Satisfaction, Economics- Time Of Completion -Statistical Tolerance -Taguchi's Concept Of Quality. Codes And Standards -Documents -Contract And Construction Programming -Inspection Procedures - Processes And Products -Total QA I QC Programme And Cost Implication.

UNIT-III

Regularity Agent, Owner, Design, Contract And Construction Oriented Objectives, Methods - Techniques And Needs Of QA/QC -Different Aspects Of Quality - Appraisals, Factors Influencing Construction Quality.

UNIT-IV

Critical, Major Failure Aspects And Failure Mode Analysis -Stability Methods And Tools, Optimum Design -Reliability Testing- Reliability Coefficient And Reliability Prediction – Selection Of New Materials -Influence Of Drawings Detailing, Specification, Standardization-Bid PreparationReliability Based Design.

UNIT-V

Construction Activity And Environmental Safety: Social And Environmental Factors- Natural Causes And Speed Of Construction -Life Cycle Costing- Reliability And Probabilistic MethodsValue Engineering And Value Analysis

Reference Books:

1. Structural Health Monitoring, Daniel Balageas, Claus Peter Fritzen, Alfredo Güemes, John Wiley and Sons, 2006.
2. Health Monitoring of Structural Materials and Components Methods with Applications, Douglas E Adams, John Wiley and Sons, 2007.
3. Structural Health Monitoring and Intelligent Infrastructure, Vol1, J. P. Ou, H. Li and Z. D. Duan, Taylor and Francis Group, London, UK, 2006.
4. Structural Health Monitoring with Wafer Active Sensors, Victor Giurglutiu, Academic Press Inc, 2007.

Course Outcomes: At the end of the course, students will be able to

1. Diagnosis the distress in the structure understanding the causes and factors.
2. Assess the health of structure using static field methods.
3. Assess the health of structure using dynamic field tests.
4. Suggest repairs and rehabilitation measures of the structure.

SE15C MAINTENANCE AND REHABILITATION OF STRUCTURES

L / L / week : 3Hrs Sessional Marks : 40

University Exam : 3 Hrs End Exam Marks : 60

Syllabus Contents:

UNIT-I

Influence On Serviceability And Durability: General : Quality Assurance For Concrete Construction, As Built Concrete Properties, Strength, Permeability, Volume Changes, Thermal Properties, Cracking. Effects Due To Climate, Temperature, Chemicals, Wear And Erosion, Design And Construction Errors, Corrosion Mechanism, Effects Of Cover Thickness And Cracking Methods Of Corrosion Protection, Inhibitors, Resistant Steels, Coatings Cathodic Protection.

UNIT-II

Maintenance And Repair Strategies: Inspection, Structural Appraisal, Economic Appraisal, Components Of Equality Assurance, Conceptual Bases For Quality Assurance Schemes..

UNIT-III

Materials For Repair: Special Concretes And Mortar, Concrete Chemicals, Special Elements For Accelerated Strength Gain, Expansive Cement, Polymer Concrete, Sulphur Infiltrated Concrete, Ferro Cement, Fibre Reinforced Concrete.

UNIT-IV

Techniques For Repair : Rust Eliminators And Polymers Coating For Rebars During Repair, Foamed Concrete, Mortar And Dry Pack, Vacuum Concrete, Gunite And Shotcrete Epoxy Injection, Mortar Repair For Cracks, Shoring And Underpinning.

UNIT-V

Case Studies : Repairs To Overcome Low Member Strength, Deflection, Cracking, Chemical Disruption, Weathering, Wear, Fire, Leakage, Marine Exposure.

Reference Books:

1. Structural Health Monitoring, Daniel Balageas, Claus Peter Fritzen, Alfredo Güemes, John Wiley and Sons, 2006.
2. Health Monitoring of Structural Materials and Components Methods with Applications, Douglas E Adams, John Wiley and Sons, 2007.
3. Structural Health Monitoring and Intelligent Infrastructure, Vol1, J. P. Ou, H. Li and Z. D. Duan, Taylor and Francis Group, London, UK, 2006.
4. Structural Health Monitoring with Wafer Active Sensors, Victor Giurglutiu, Academic Press Inc, 2007.

Course Outcomes: At the end of the course, students will be able to

1. Diagnosis the distress in the structure understanding the causes and factors.
2. Assess the health of structure using static field methods.
3. Assess the health of structure using dynamic field tests.
4. Suggest repairs and rehabilitation measures of the structure.

SE15C FRACTURE MECHANICS OF CONCRETE STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

INTRODUCTION: Basic Fracture Mechanics, Crack in a Structure, Mechanisms of Fracture and Crack Growth, Cleavage Fracture, Ductile Fracture, Fatigue Cracking.

UNIT-II

FRACTURE MECHANISM:

UNIT-III

STRESS AT CRACK TIP: Stress at Crack Tip, Linear Elastic Fracture Mechanics, Griffith's Criteria, Stress Intensity Factors, Crack Tip Plastic Zone, Erwin's Plastic Zone Correction, R curves, Compliance, J Integral, Concept of CTOD and CMD.

UNIT-IV

MATERIAL MODELS: General Concepts, Crack Models, Band Models, Models based on Continuum Damage Mechanics, Applications to High Strength Concrete, Fibre Reinforced Concrete.

UNIT-V

Environment assisted Cracking, Service Failure Analysis, Crack Concepts and Numerical Modelling.

Reference Books:

1. Fracture Mechanics, Suri C. T. and Jin Z.H., 1st Edition, Elsevier Academic Press, 2012.
2. Elementary Engineering Fracture Mechanics, BroekDavid, 3rd Rev. Ed. Springer, 1982.
3. Fracture Mechanics of Concrete Structures – Theory and Applications, Elfgreen L., RILEM Report, Chapman and Hall, 1989.
4. Fracture Mechanics – Applications to Concrete, Victor, Li C., Bazant Z. P., ACI SP 118, ACI Detroit, 1989.

.

Course outcomes: At the end of the course, students will be able to

1. Identify and classify cracking of concrete structures based on fracture mechanics.
2. Implement stress intensity factor for notched members
3. Apply fracture mechanics models to high strength concrete and FRC structures.
4. Compute J-integral for various sections understanding the concepts of LEFM.

SE21C FINITE ELEMENT METHOD IN STRUCTURAL ENGINEERING

L / week : 3Hrs Sessional Marks : 40
University Exam : 3 Hrs End Exam Marks : 60

Syllabus Contents:

UNIT-I

Introduction: Concepts of FEM –Steps Involved –Merits &Demerits –Energy Principles – Discretization –Rayleigh –Ritz Method of Functional Approximation.

Elastic Formulations: Stress Equations-Strain Displacement Relationships in Matrix Form-Plane Stress, Plane Strain and AxiSymmetric Bodies of Revolution With Axi Symmetric Loading

UNIT-II

One Dimensional -FEM-Stiffness Matrix for Beam and Bar Elements Shape Functions for ID Elements –Static Condensation of Global Stiffness Matrix-Solution –Initial Strain and Temperature Effects.

UNIT-III

Two Dimensional FEM: Different Types of Elements for Plane Stress and Plane Strain Analysis – Displacement Models –Generalized Coordinates-Shape Functions-Convergent and Compatibility Requirements –Geometric Invariance –Natural Coordinate System-Area and Volume CoordinatesGeneration of Element Stiffness and Nodal Load Matrices –Static Condensationalerkin Finite Element Method, Application to Structural Elements, Interpolation Functions, Compatibility and Completeness Requirements, Polynomial Forms, Applications.

UNIT-IV

Isoparametric Formulation-Concept, Different Isoparametric Elements for 2D AnalysisFormulation of 4-Noded and 8-Noded Isoparametric Quadrilateral Elements – Lagrangian ElementsSerendipity Elements. Axi Symmetric Analysis –Bodies of Revolution-Axi Symmetric Modelling – Strain Displacement Relationship-Formulation of Axi Symmetric Elements.

UNIT-V

Three Dimensional FEM-Different 3-D Elements, 3D Strain –Displacement RelationshipFormulation of Hexahedral and Isoparametric Solid Element

Reference Books:

1. Finite Element Analysis, Seshu P., Prentice-Hall of India,2005.
2. Concepts and Applications of Finite Element Analysis, Cook R. D., Wiley J., New York, 1995. Fundamentals of Finite Element Analysis, Hutton David, Mc-Graw Hill, 2004.
3. Finite Element Analysis, Buchanan G.R., McGraw Hill Publications, New York, 1995. Finite Element Method, Zienkiewicz O.C. & Taylor R.L. Vol. I, II & III, Elsevier, 2000.
4. Finite Element Methods in Engineering, Belegundu A.D., Chandrupatla, T.R., Prentice Hall India, 1991.

Course Outcomes: At the end of the course, students will be able to

1. Use Finite Element Method for structural analysis.
2. Execute the Finite Element Program/ Software.
3. Solve continuum problems using finite element analysis.
4. Develop the FEM software.

SE22C STRUCTURAL DYNAMICS

L/week : 3Hrs Sessional Marks : 40

University Exam : 3 Hrs End Exam Marks: 60

UNIT - I

RESPONSE OF SIMPLE – SINGLE DEGREE OF FREEDOM SYSTEM - Definition of DOF – Idealization of structure as SDOF system – Formulation of equations of motion for various SDOF systems – Free vibration of un-damped systems – Determination of natural frequency - Free vibration of viscously damped systems – Determination of Damping in structures.

UNIT - II

RESPONSE OF SINGLE DEGREE OF FREEDOM SYSTEMS- FORCED VIBRATIONS -

Forced vibration of systems – Steady state response to harmonic forces – Duhamel's integral-Numerical Evaluation – Response to support motion – Transmissibility – Construction of response Spectrum.

UNIT - III

ANALYSIS OF MULTI-DEGREE OF FREEDOM SYSTEMS - Formal Derivations — Formulation of equation of motion - Evaluation of natural frequencies and modes — Free vibration of undamped systems — Forced vibration of damped systems.

UNIT — IV

APPROXIMATE METHODS OF COMPUTING NATURAL FREQUENCIES - Rayleigh's method – Dunkerley's method – Methods of iteration – Stodola – Vainello Method –Rayleigh – Ritz method.

UNIT — V

DYNAMIC ANALYSIS OF CONTNUOUS SYSTEM - Vibration of flexural beams — Equation of motion — Free vibrations of Uniform Beams - Natural frequencies and Mode Shapes of Beams with different Support Conditions - Orthogonality Condition between Normal Modes.

References :

1. Dynamics of Structures, Clough R.W, and Penzien J, McGraw Hill.
2. Structural Dynamics and Introduction to Earthquake Engineering, Chopra A K, Prentice Hall.
3. Vibrations of Structures – Application in Civil Engg Design, Smith J. W.Chapman and Hall.
4. Dynamics of Structures, Humar J L, Prentice Hall.
5. Structural Dynamics - Theory and Computation, Paz Mario, CBS Publication.

Course Outcomes: At the end of the course, students will be able to

1. Analyze the dynamic response of single degree freedom system usinging fundamental theory and equation of motion.
2. Analyze dynamic response of Multi-degree of freedom system with lumped parameters.
3. Apply approximate methods to obtain fundamental natural frequency of structures.
4. Analyze dynamics response of Multi degree of freedom system with distributed mass.

SE23C THEORY OF THIN PLATES AND SHELLS

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

INTRODUCTION: Space Curves, Surfaces, Shell Co-ordinates, Strain Displacement Relations, Assumptions in Shell Theory, Displacement Field Approximations, Stress Resultants, Equation of Equilibrium using Principle of Virtual Work, Boundary Conditions.

UNIT-II

STATIC ANALYSIS OF PLATES: Governing Equation for a Rectangular Plate, Navier Solution for Simply- Supported Rectangular Plate under Various Loadings, Levy solution for Rectangular Plate with other Boundary Conditions.

UNIT-III

CIRCULAR PLATES: Analysis under Axi- Symmetric Loading, Governing Differential Equation in Polar Co-ordinates. Approximate Methods of Analysis- Rayleigh-Ritz approach for Simple Cases in Rectangular Plates.

UNIT-IV

STATIC ANALYSIS OF SHELLS: MEMBRANE THEORY OF SHELLS - Cylindrical, Conical and Spherical Shells,

UNIT-V

SHELLS OF REVOLUTION: WITH BENDING R**ESISTANCE** - Cylindrical and Conical Shells, Application to Pipes and Pressure Vessels.

References:

1. Theory of Plates and Shells, Timoshenko S. and KriegerW., McGraw Hill.
2. Stresses in Plates and Shells, UguralAnsel C., McGraw Hill.
3. Thin Elastic Shells, KrausH., John Wiley and Sons.
4. Theory of Plates, Chandra shekhar K., Universities Press.
5. Design and Construction of Concrete Shells, Ramaswamy G.S.

Course Outcomes: At the end of the course, students will be able to

1. Use analytical methods for the solution of thin plates and shells.
2. Use analytical methods for the solution of shells.
3. Apply the numerical techniques and tools for the complex problems in thin plates.
4. Apply the numerical techniques and tools for the complex problems in shells.

SE23C DESIGN OF BRIDGES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

Introduction – Classification, Investigations and Planning, Choice of Type – Economic Span Length – IRC Specifications for Road Bridges, Standard Live Loads, Other Forces Acting on Bridges, General Design Considerations.

UNIT-II

Design of Box Culverts – General Aspects – Design Loads – Design Moments, Shears and Thrusts – Design of Critical Section.

Design of Slab Bridges – Effective Width of Analysis – Workings Stress Design and Detailing of Slab Bridges for IRC Loading.

UNIT-III

T-Beam Bridges – Introduction – Wheel Load Analysis – B.M. in Slab – Pigaud's Theory –

Analysis of Longitudinal Girders by Courbon's Theory Working Stress Design and Detailing of Reinforced Concrete T-Beam Bridges for IRC Loading.

UNIT-IV

Prestressed Concrete Bridges – General Features – Advantages of Prestressed Concrete Bridges – Pre-tensioned Prestressed Concrete Bridges – Post Tensioned Prestressed Concrete Bridge Decks. Design of Post Tensioned Prestressed Concrete Slab Bridge Deck. Bridge Bearings – General Features – Types of Bearings – Forces on Bearings Basis for Selection of Bearings – Design Principles of Steel Rocker and Roller Bearings and Its Design – Design of Elastometric Pad Bearing Detailing of Elastomeric Pot Bearings.

UNIT-V

Piers and Abutments – General Features – Bed Block – Materials for Piers and Abutments – Types of Piers – Forces Acting on Piers – Design of Pier – Stability Analysis of Piers – General Features of Abutments – Forces Acting on Abutments – Stability Analysis of Abutments

References:

- Concrete Bridge Design, Browe, R.E., C.R.Books Ltd., London, 1962.
- Reinforced Concrete Bridges, Taylor F.W., Thomson, S.E., and Smulski E., John Wiley and Sons, New York, 1955.
- An Introduction To Structural Design of Concrete Bridges, Derrick Beckett, Surrey University; Press, Henlely – Thomes, Oxford Shire, 1973
- Bridge Analysis Simplified, Bakht.B.And Jaegar, L.G. Mc Graw Hill, 1985.
- Design of Bridges – N.Krishna Raju – Oxford & IBH 6. Design of Bridge Structures – FR Jagadeesh, M.A. Jaya Ram – Eastern Economy Edition.

Course Outcomes: At the end of the course, students will be able to

- Finalize with the usage of codal provisions in the design of bridges
- Analyze and design substructure elements of bridges
- Analyze and design various types of bridges like t-beam bridge,slab bridge ,box culvert.
- To analyze and design of T beam bridge

SE23C DESIGN OF HIGH RISE STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT-I

DESIGN OF TRANSMISSION/ TV TOWER, MAST AND TRESTLES: Configuration, bracing system, analysis and design for vertical transverse and longitudinal loads.

UNIT-II

ANALYSIS AND DESIGN OF RC AND STEEL CHIMNEY, Foundation design for varied soil strata.

UNIT-III

TALL BUILDINGS: Structural Concept, Configurations, various systems, Wind and Seismic loads,

UNIT-IV

Dynamic approach, structural design considerations and IS code provisions. Firefighting design provisions.

UNIT-V

APPLICATION of software in analysis and design.

Reference Books:

1. Structural Design of Multi-storeyed Buildings, Varyani U. H., 2nd Ed., SouthAsian Publishers, New Delhi, 2002.
2. Structural Analysis and Design of Tall Buildings, Taranath B. S., Mc Graw Hill, 1988.
3. Illustrated Design of Reinforced ConcreteBuildings(GF+3storeyed), Shah V. L. &Karve S. R., Structures Publications, Pune, 2013.
4. Design of Multi Storeyed Buildings, Vol. 1 & 2, CPWD Publications, 1976. Tall Building Structures, Smith Byran S. and Coull Alex, Wiley India. 1991. High Rise Building Structures, Wolfgang Schueller, Wiley., 1971.
5. Tall Chimneys, Manohar S. N., Tata Mc Graw Hill Publishing Company, New Delhi

Course Outcomes: At the end of the course, students will be able to

1. Analyse, design and detail Transmission/ TV tower, Mast and Trestles with different loading conditions.
2. Analyse, design and detail the RC and Steel Chimney.
3. Analyse. design and detail the tall buildings subjected to different loading conditions using relevant codes.

4. Analysis and design of dynamic approach OF STRUCTURAL DESIGN USING is Code provisions.

SE23C DESIGN OF EARTHQUAKE RESISTANT STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT-I

Engineering Seismology : Earthquake – Causes of Earthquake – Earthquakes and Seismic Waves – Scale and Intensity of Earthquakes – Seismic Activity – Measurements of Earth Quakes – Seismometer- Strong Motion Accelerograph / Field Observation of Ground Motion – Analysis of Earthquakes Waves – Earth Quake Motion – Amplification of Characteristics of Surface Layers – Earthquake Motion on The Ground.

UNIT-II

Vibration of Structures Under Ground Motion: Elastic Vibration of Simple Structures – Modelling of Structures and Equations of Motion – Free vibrations of Simple Structures – Steady State Forced Vibrations – Non Steady State Forced Vibrations – Response Spectrum Representations; Relation Between The Nature of The Ground Motion and Structural Damage.

UNIT-III

Lateral Force Procedure Seismic Base Shear – Seismic Design Co-Efficient - Vertical Distribution of Seismic Forces and Horizontal Shear – Twisting Moment - Over Turning Moment – Vertical Characteristics Effect – SoilΔSeismic Load and Orthogonal Effects Lateral Deflection – P- Structure Interaction. Seismic – Graphs Study, Earthquake Records for Design – Factors Affecting Accelerogram Characteristics - Artificial Accelerogram – Zoning Map. Dynamic – Analysis Procedure: Model Analysis – Inelastic – Time History Analysis Evaluation of the Results.

UNIT-IV

Earthquake – Resistant Design of Structural Components and Systems: Introduction – Monolithic Reinforced – Concrete Structures – Precast Concrete Structures – Prestressed Concrete Structures – Steel Structures – Composite – Structures, Masonry Structures – Timber Structures

UNIT-V

Fundamentals of Seismic Planning: Selection of Materials and Types of Construction Form of Superstructure – Framing Systems and Seismic Units – Devices for Reducing. Earthquake Loads.

Reference Books:

1. Design of Earthquake Resistant Structures by Minoru Wakabayashi.
2. Strucutural Dynamics for Earthquake Engineering", A.K.Chopra,Pearson Pubilications.
3. Dynamics of Structures. R.W.Clough, Mc Graw – Hill, 2nd Edition,

Course Outcomes: At the end of the course, students will be able to

- Illustrate the measurement of earthquakes and their effect on engineering structures
- Analyse the free and forced vibration response of single degree and multi degree of freedom and continuous systems
- Apply the basic principles of conceptual design of Earthquake Resistant buildings
- Learn the various seismic control methods

SE24C DESIGN OF ADVANCED CONCRETE STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT – I ESTIMATION OF CRACK WIDTH AND REDISTRIBUTION OF MOMENTS IN REINFORCED CONCRETE BEAMS :

Factors affecting crack width in beams - Calculation of crack width - Empirical Method - Estimation of crack width in beams by IS 456 - Shrinkage and thermal cracking - Redistribution of moments in a fixed beam and a two-span continuous beam - Advantage and disadvantages of moment redistribution.

UNIT – II DESIGN OF RIBBED (VOIDED) SLABS & GRID FLOORS :

Analysis of the ribbed slabs for moment and shears - Design for shear - Deflections - Arrangement of reinforcements.

Analysis of grid floors by Timoshenko's plate theory, stiffness matrix method - Equating joint deflections - Detailing of steel.

UNIT – III DESIGN OF PLAIN CONCRETE WALLS :

Braced and unbraced walls - Eccentricities of vertical loads - Empirical design method (walls carrying axial load) - Design of wall for In-plane horizontal forces.

DESIGN OF DEEEP BEAMS :

Steps of designing deep beams by IS 456 - Detailing of deep beams.

UNIT – IV EARTH QUAKE FORCES AND STRUCTURAL RESPONSE :

Earthquake magnitude and intensity - Determination of design forces - Torsion in buildings - Ductile detailing of beams - Columns and frame members with axial force and moment.

UNIT – IV DESIGN OF SHEAR WALLS :

Classification of shear walls - Loads in shear walls - Design of rectangular and flanged shear walls - Moment of resistance of rectangular shear walls

Reference Books:

1) P.C.Varghese, "Advanced Reinforced Concrete Design", Prentice-Hall of India, Private Ltd., New Delhi.

2) P.C.Varghese, "Limit State Design of Reinforce Concrete", Prentice-Hall of India Private Ltd., New Delhi.

3) Krishna Raju, "Advanced Reinforced Concrete Design - SI Units" CBS, New Delhi, 1986.

4) Blume, J.A., Newmark, N.M. and Corning, L.M. "Design of Multi-Storey Reinforced Concrete Buildings for Earth Quake Motion", Portland Cement Association, Chicogo, 1961.

5) Pankaj Agarwal, "Earthquake Resistant Structures", Prentice-Hall of India, Private Ltd. New Delhi.

Course Outcomes: At the end of the course, students will be able to

1. Model the loads and findings the material properties.
2. Design deep beams and corbels
3. Design of shear walls using IS, ACI & Errocode.
4. Analyse the special structures by understanding their behaviour in torsional buckling.
5. Design and prepare detail structural drawings for execution citing relevant IS codes.

SE24C ADVANCED CONSTRUCTION TECHNIQUES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT – I

Construction Techniques: Box Jacking -Pipe Jacking - Under Water Construction Of Diaphragm Walls And Basement. Tunneling Techniques. Piling Techniques - Driving Well And Caisson - Sinking Cofferdam - Cable Anchoring And Grouting. Driving Diaphragm Walls Sheet Piles - Laying Operations For Built Up Offshore System - Shoring For Deep - Well Points - Dewatering And Stand By Plant Equipment For Underground Open Excavation - Trenchless Technology.

UNIT – II

Techniques For Concreting: Techniques Of Construction For Continuous Concreting Operation In Tall Buildings Of Various Shapes And Varying Sections Launching Techniques - Slipform Techniques- Suspended Form Work-. Erection Techniques Of Tall Structures - Launching Techniques For Heavy Decks -In Situ Prestressing In High Rise Structures, Aerial Transporting Handling Erecting Lightweight Components On Tall Structures - Erection Of Lattice Towers And Rigging Of Transmission Line Structures.

UNIT – III

Construction Sequence And Methods: Bow String Bridges, Cable Stayed Bridges. Launching And Pushing Of Box Decks. Construction Sequence And Methods In Domes And Prestressed Domes. Vacuum Dewatering Of Concrete Flooring - Concrete Paving Technology- Erection Of Articulated Structures.

UNIT – IV

Construction Techniques For Foundation: Mud Jacking Grout Through Slab Foundation - Micro Piling For Strengthening Floor And Shallow Profile Pipeline Laying - Protecting Sheet Plies, Screw Anchors - Sub Grade Water Proofing Under Pinning Advanced Techniques And Sequence In Demolition And Dismantling.

UNIT – V

Fundamentals Of Energy: Energy Production Systems -Heating. Ventilating And Air.

Conditioning -Solar Energy And Conservation -Energy Economic Analysis -Energy Conservation And Audits Domestic Energy Consumption -Savings- Challenges -Primary Energy Use In Buildings - Residential. Commercial -Institutional And Public Buildings

Reference Books:

1. Practical Foundation Engineering Hand Book, Robertwade Brown, Mcgraw Hill Publications, 1995
2. Construction Dewatering: New Methods And Applications, Patrick Powers .J, John Wiley & Sons, 1992

Course Outcomes: At the end of the course, students will be able to

- Gain an experience in the implementation of new construction technology on engineering concepts which are applied in field Advanced construction technology.
- Get a diverse knowledge of Advanced technology practices applied to real life problems.
- Understand the theoretical and practical aspects of new technology in civil engineering along with the design and management applications.
- Study of construction equipments, and temporary works required to facilitate the construction process

SE24C LOW COST HOUSING TECHNIQUES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Content:

UNIT – I

Housing Scenario Introduction - Status of Urban Housing - Status of Rural Housing Housing Finance: Introducing - Existing Finance System in India - Government Role As Facilitator - Status At Rural

Housing Finance - Impedimently in Housing Finance and Related Issues

Land Use and Physical Planning for Housing Introduction - Planning of Urban Land - Urban Land Ceiling and Regulation Act - Efficiency of Building Bye Lass - Residential Densities

Housing The Urban Poor Introduction - Living Conditions in Slums - Approaches and Strategies for Housing Urban Poor

UNIT – II

Development and Adoption of Low Cost Housing Technology

Introduction - Adoption of Innovative Cost Effective Construction Techniques - Adoption of Precast Elements in Partial Prefatroices - Adopting of Total Prefactcation of Mass Housing in India- General Remarks on Pre Cast Rooting/Flooring Systems -Economical Wall System - Single Brick Thick Loading Bearing Wall - 19cm Thick Load Bearing Masonery Walls - Half Brick Thick Load Bearing Wall - Flyash Grypsym Thick for Masonry - Stone Block Masonery - Adoption of Precast R.C. Plank and Join System for Roof/Floor in The Building

UNIT – III

Alternative Building Materials for Low Cost Housing Introduction - Substitute for Scarce Materials – Ferrocement - Gypsum Boards - Timber Substitutions - Industrial Wastes - Agricultural Wastes - Fitire Starateru; for ,P,Topm of Alternative Building Maintenance

Low Cost Infrastructure Services: Introduce - Present Status - Technological Options - Low Cost Sanitation - Domestic Wall - Water Supply, Energy

UNIT – IV

Rural Housing: Introduction Traditional Practice of Rural Housing Continuous - Mud Housing Technology Mud Roofs - Characteristics of Mud - Fire Treatment for Thatch Roof - Soil Stabilization - Rural Housing Programs

UNIT – V

Housing in Disaster Prone Areas: Introduction – Earthquake - Damages To Houses -

Traditional Prone Areas - Type of Damages and Railways of Non-Engineered Buildings - Repair and Restore Action of Earthquake Damaged NonEngineered Buildings Recommendations for Future Constructions. Requirement's of Structural Safety of Thin Precast Roofing Units Against Earthquake Forces, Status of R&D in Earthquake Strengthening Measures - Floods, Cyclone, Future Safety

Reference Books:

3. Properties of Concrete – Neville A.M. Pitman Publishing Limited, London.
4. Light Weight Concrete, Academic Kiado, Rudhai.G – Publishing Home of Hungarian Academy of Sciences 1963.
5. Low Cost Housing – G.C. Mathur

Course Outcomes: At the end of the course, students will be able to

- Development of construction technology and innovative techniques as tools to address demand mass construction
- Knowledge of eco friendly material with their application
- Learn the use of locally available material according to their availability and maintenance

SE24C DESIGN OF INDUSTRIAL STRUCTURES

L / week	: 3Hrs	Sessional Marks : 40
University Exam	: 3 Hrs	End Exam Marks : 60

Syllabus Contents:

UNIT-I

Chimneys – Introduction, dimensions of steel stacks, chimney lining, breech openings and access ladder, loading and load combinations, design considerations, stability consideration, design of base plate, design of foundation bolts, design of foundation.

UNIT-II

Water Tanks – Design of rectangular riveted steel water tank – Tee covers – Plates – Stays –

Longitudinal and transverse beams –Design of staging – Base plates – Foundation and anchor bolts.

UNIT-III

Design of pressed steel water tank – Design of stays – Joints – Design of hemispherical bottom water tank – side plates – Bottom plates – joints – Ring girder –Design of staging and foundation.

Reference Books:

1. Design of Steel Structure, Punmia B. C., Jain Ashok Kr., Jain Arun Kr., 2nd Ed., Lakshmi Publishers, 1998.
2. Design of Steel Structures, Ram Chandra, 12th Ed., Standard Publishers, 2009. Design of Steel Structures, Subramaniyam.

Course Outcomes: At the end of the course, the student will be able to:

- Design Steel Gantry Girders.
- Design Steel Portal, Gable Frames.
- Design Steel Bunkers and Silos.
- Design Chimneys and Water Tanks

.

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING: TIRUPATI – 517 502
Department of Chemical Engineering-Scheme of Instruction- (CBCS) effective from the Academic Year 2023-2024

M.Tech (PG) Specialization: Chemical Engineering -- I Semester

TIRUPATI- 517502

CH11C ADVANCES IN TRANSPORT PHENOMENA

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. To familiarize the student with basic concepts of transport phenomena and brief review of mathematics.
2. To enable students to understand the equations of change for isothermal flow and for non-isothermal flow.
3. To introduce them details of equations of change for multi component systems.
4. To give them insight into properties of two-dimensional flows and aspects of dimensional analysis

Unit-1: Equations of Change for Isothermal Systems: Equation of Continuity, Equation of Motion, Equation of Mechanical Energy, Equations of Change in terms of the Substantial Derivative, Use of the Equations to solve Flow Problems, Dimensional Analysis of the Equations of Change. Velocity Distributions with more than one Independent Variable: Time Dependent Flow of Newtonian Fluids. Velocity Distributions in Turbulent Flow - Comparisons of Laminar and Turbulent Flows, Time Smoothed Equations of Change for Incompressible Fluids, Time Smoothed Velocity Profile near a wall, Empirical Expressions for the Turbulent Momentum Flux, Turbulent Flow in Ducts, Turbulent Flow in Jets.

Unit-2: Macroscopic Balances for Isothermal Systems: The Macroscopic Mass Balance, The Macroscopic Momentum Balance, The Macroscopic Mechanical Energy Balance, Estimation of the Viscous loss, Use of the Macroscopic Balances for Steady-State Problems, Derivation of the Macroscopic Mechanical Energy Balance.
Equations of Change for Non-Isothermal Systems: The Energy Equation, Special forms of the Energy Equation, The Boussine sq Equation of Motion for Forced and Free Convection, Use of the Equations of change to Solve Steady-State Problems, Dimensional Analysis of the Equations of Change for Non-Isothermal Systems.

Unit-3: Temperature Distributions in Solids and in Laminar Flow: Heat Conduction with an Electrical Heat Source, Heat Conduction with a Viscous Heat Source. Temperature Distributions with more than One Independent Variable - Unsteady Heat Conduction in Solids, Steady Heat Conduction in Laminar, Incompressible Flow. Temperature Distributions in Turbulent Flow - Time-Smoothed Equations of Change for Incompressible Non-Isothermal Flow, Time-Smoothed Temperature Profile near a Wall, Empirical Expressions for the Turbulent Heat Flux Temperature Distribution for Turbulent Flow in Tubes.

Unit-4: Macroscopic Balances For Non-Isothermal Systems: Macroscopic Energy Balance, Macroscopic Mechanical Energy Balance, Use Of The Macroscopic Balances To Solve Steady State Problems With Flat Velocity Profiles, Concentration Distributions in Solids and in Laminar Flow: Shell Mass Balances Boundary Conditions, Diffusion through a Stagnant Gas Film, Diffusion with a Heterogeneous Chemical Reaction. Concentration Distributions with more than One Independent Variable: Time-Dependent Diffusion, Steady-State Transport in Binary Boundary Layers, Concentration Distributions in Turbulent Flow -

Concentration Fluctuations and the Time-Smoothed Concentration, Time-Smoothing of the Equation of Continuity of A, Semi-Empirical Expressions for the Turbulent Mass Flux, Enhancement of Mass Transfer by a First-Order Reaction in Turbulent Flow.

Unit -5: Interphase Transport in Multi-Component Systems: Definition of Transfer Coefficients inOne Phase, Analytical Expressions for Mass Transfer Coefficients, Correlation of Binary Transfer Coefficients in One Phase, Definition of Transfer Coefficients in Two Phases, Mass Transfer and Chemical Reactions. Macroscopic Balances For Multi-Component Systems: Macroscopic Mass Balances, Macroscopic Momentum, Use of the Macroscopic Balances to solve Steady-State Problems.

3) Bird R. B., Stewart W. E. and Light Foot E. N., Transport Phenomena, Revised 2nd Edition, John Wiley & Sons, 2007.

Outcomes: At the end of the course, the student will be able to:

1. Understand the mechanism of momentum, heat and mass transport for steady and unsteady flow.
2. Perform momentum, energy and mass balances for a given system at macroscopic and microscopic scale.
3. Solve the governing equations to obtain velocity, temperature and concentration profiles.
4. Model the momentum, heat and mass transport under turbulent conditions.
5. Develop analogies among momentum, energy and mass transport.

CH12C SEPARATION PROCESSES

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1) Understand the classification of separation processes
2) To learn the fundamental concepts of rate governed processes
3) To impart the basic concepts of multistage separation processes
4) Understand the design of distillation column using different methods
5) Understand the energy requirements of different separation processes

UNIT I

Use and Characteristics of Separation Processes – Importance and variety of Separations – Characteristics of separation Processes- Inherent separation factors for equilibrium and rate Governed Processes

Simple equilibrium processes: Equilibrium calculations- Checking phase conditions for a mixture- Analysis of simple equilibrium separation-processes for binary and multi component systems - Computational and Graphical Approaches.

Unit II

Additional Factors Influencing Product Purities – Incomplete Mechanical Separation of Product Phases – Flow Configuration and Mixing Effects – Batch Operations – Methods of Regeneration – Mass and Heat Transfer Limitations – Stage Efficiencies

Multistage Separation Processes: Increasing product purity - Reducing consumption of separating agent - co-current, crosscurrent and countercurrent flow - Other separation processes - Fixed bed processes.

Unit-III:

Binary Multistage Separations - Distillation: Binary Systems - Equilibrium stages and McCabe-Thiele Diagram - design and other problems – Multistage batch distillation - Straight operating lines and curved operating lines.

UNIT IV

Patterns of Change: Binary and Multi component multistage separations

Group Methods - Linear stage-exit relationships and constant flow rates- non linear stage – Exit Relationships and varying flow rates.

Capacity of contacting devices: factors limiting capacity and factors influencing efficiency.

UNIT V

Energy Requirements of separations processes:

Thermodynamic efficiency - single stage and multistage separation processes - reduction of energy consumption**.**

Selection of Separation processes: Factors influencing the choice of separation Process - solvent extraction and Illustrative examples

TEXT BOOKS:

1. Separation Processes - C.Judson King,, McGraw – Hill, 1982

REFERENCE BOOKS

1. Separation Process Principles - J.D.Seader and E.J.Henley, , John Wiley, 1998.
2. Mass Transfer Operation - R.E. Treybal, , 3rd edition - McGraw – Hill 1980
3. Transport Processes and Unit Operations – Geankoplis C.J. 4th ed – PHI Pvt. Ltd

Course Outcomes: Student will be able to

1) Applies the concepts of diffusion mass transfer, mass transfer coefficients, convective mass transfer, inter-phase mass transfer, equipment for gas-liquid operations
2) Suggest and design equipment for various mass transfer operations
3) Study of the stage wise mass transfer operations, principles of various stage wise contact processes like distillation
4) Student will be able to select a separation process for a particular system.
5) Able to understand the energy requirements of separation processes

CH13C CHEMICAL REACTOR THEORY

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Course Educational Objectives:

1) The emphasis of this course is on the fundamentals of chemical reaction kinetics and chemical reactor operation.
2) The overall goal of this course is to develop a critical approach toward understanding complex reaction systems and elucidating chemical reactor design.
3) Integrate concepts from science & engineering to constitute a basis for the design of chemical reactor, a key element in the design of chemical process.
4) Provide a foundation on Non-ideal reactors and RTD
5) Impart knowledge about heterogeneous catalytic reactors

UNIT I

Isothermal Reactor design: Design structure for isothermal reactors - Scale-up of liquid phase batch reactor data to the design of a CSTR - Tubular reactors - Pressure drop in Reactors - Reversible reactions - unsteady state operation of reactors -Simultaneous reaction and Separation.

UNIT-II

Analysis of Non ideal Reactors - RTD - Measurement and characteristics of RTD- RTD in ideal reactors - Reactor modeling with the RTD - Zero and One parameter models - Two-Parameter model - Modeling real reactors with combinations of ideal reactors - Testing a model and determining it's parameters - Other models of non ideal reactors using CSTRs and PFRs

UNIT-III

External diffusion Effect on Heterogeneous Reactions - Binary diffusion - External resistance to mass transfer - the shrinking core model.

Diffusion and reaction in Porous Catalyst – Diffusion and reaction in spherical pellets - Internal Effectiveness factor - Falsified Kinetics - Overall effectiveness factor - Estimation of diffusion and reaction limited regimes - Mass transfer and reaction in a packed bed

UNIT-IV

Internal Transport Processes-Reaction and Diffusion in porous catalysts:

Intra pellet mass transfer and intra pellet heat transfer, Mass transfer with reaction, Mass and Heat transfer with reaction, effect of internal transport on selectivity and poisoning.

UNIT-V

Design of heterogeneous Catalytic Reactors: Fixed bed reactors and isothermal and adiabatic fixed-bed reactors, non isothermal, non adiabatic fixed bed reactors, Two phase model, Fluidized-Bed reactors, Operating characteristics of FBRs. Mass Transfer in Fluidized Beds: Gas-Solid Mass Transfer, Mass Transfer between the Fluidized-Bed Phases, Reaction in Fluidized Bed. Trickle bed reactor Models, Slurry reactor models.

Text Books

1. J.M.Smith "Chemical Engineering Kinetics" 3rd ED., Mc Graw Hill, New York 1980
2. Fogler H. S., Elements of Chemical Reaction Eng.", 3rd Ed., Prentice Hall, 1999
3. Levenspiel, O., "Chemical Reaction Eng." John Wiley & Sons 1972.

Course Outcomes : Student will be able to

1) learn the importance of RTD and Non-ideal flow in reacting vessels.
2) Calculate the conversions based on segregated flow model, dispersion model and tanks-in-series models.
3) Understand the diffusion and reaction in a porous catalyst.
4) Learn the factors influencing catalyst decay, the role of pore diffusion on catalyst activity rate.
5) Understand the design of heterogeneous catalytic reactors.

CH16L COMPUTATIONAL TECHNIQUES LABORATORY

Instruction , hours/week : 4 Credits : 2 Assessment : 40 + 60

Objectives:

1. To learn Numerical methods for interpolation, extrapolation, graphical differentiation and integration, curve fitting….Process Modeling and Simulation of Chemical operations and processes.
2. To implement the above on MAT Lab

List of experiments:

1.Euler Method

2. Runge Kutta 4th Order Method

3. Jacobi Iteration Method

4. Gauss-Siedel Iteration Method

5. Lagrange's Iteration Method

6. Newton Forward Interpolation Method

7. Newton Backward Interpolation Method

8, Bisection Method

9. Newton Raphson Method

10. Regula Falsi Method

Outcomes: At the end of the course, the student will be able to:

1. Use numerical methods for various manipulations and be capable of implementing them on a computing system.

CH17L ADVANCED CHEMICAL ENGINEERING LABORATORY

Instruction , hours/week : 4 Credits : 2 Assessment : 40 + 60

PGPC01 Research methodology and IPR

Instruction Hours/Week : 3 Credits : 3
Sessional Marks : 40 End Semester Examination Marks : 60

DESCRIPTION OF THE COURSE:

This subjects gives how to proceed systematically for research, present research findings. This course consists of basics of research methods, paper writing , patenting methods and requirements..

COURSE EDUCATIONAL OBJECTIVES (CEOs):

1. To understand the importance of research objectives and procedures
2. To know the procedures of data collection and report writing of research.
3. To have the knowledge of filing and obtaining a patent on research findings.

UNIT I

Meaning, Objective and Motivation in Research: Types of Research, Research Approaches, Research Process, Validity and Reliability in Research, Research Design: Features of Good Design, Types of Research Design, Basic Principles of Experimental Design

UNIT II

Sampling Design: Steps in Sampling Design, Characteristics of a Good Sample Design, Random Samples and Random Sampling Design Measurement and Scaling Techniques: Errors in Measurement, , Scaling and Scale Construction techniques, Forecasting Techniques, Time Series Analysis, Interpolation and Extrapolation

UNIT III

Methods of Data Collection: Primary Data, Questionnaire and Interviews, Collection of Secondary Data, Cases and Schedules. Professional Attitude and Goals, Concept of Excellence, Ethics in Science and Engineering, Correlation and Regression Analysis, Method of Least Squares, Regression Vs. Correlation, Correlation Vs. Determination.

UNIT IV

Interpretation of Data and Report Writing, Layout of a Research Paper, Techniques o f Interpretation. Making Scientific Presentation at Conferences and Popular Lectures to Semi Technical Audience, Participating in Pubic Debates on Scientific Issues

UNIT V

Nature of Intellectual property rights, Patents, designs, trademarks and copyrights, History of patenting, process of patenting, patent development, international cooperation on IPR, procedure of granting patent, patent rights, licensing and transferring technology, Geographical Indications ,IPR in biological and systems and software.

Text/Reference Books:

1. Research Methodology: Methods And Techniques - C. R. Kothari,2nd Edition, New Age International Publishers.
2. Statistical Methods - S P. Gupta. S. chand & Sons, New Derhi.
3. Intellectual ProPerty-the law of trademarks, copyrights, Patents, and trade Secrets-Deborah E. Bouchoux, Esq.Georgetown University, Fourth edition

Course Outcomes (COs):

1.Able to know research importance and requirements and procedure
2. Able to apply sampling techniques for analysis and forecasting.
3. Able to use methods for data collection and analyze the data using different mathematical techniques.
4. Able to write report on research done and present the research findings in systematic manner.
5. Able to have the knowledge to file and obtain patent on research finding.

CH14C PROCESS DESIGN AND SYNTHESIS

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. To understand the systematic approaches for the development of conceptual chemical process designs

2. To learn the advances in problem formulation and software capabilities which offer the promise of a new generation of practical process synthesis techniques based directly on structural optimization.

3. Learning chemical process synthesis, analysis, and optimization principles

4. Product design and development procedure and Process life cycle assessment.

Unit I : Introduction

Introduction to fundamental concepts and principles of process synthesis and design and use of flow sheet simulators to assist process design. Process Flow sheet Models: An Introduction to Design, Chemical process synthesis, analysis and optimization. Introduction to commercial process design software such as HYSYS, Aspen plus etc., Chemical Process (reactor, heat exchanger, distillation etc) analysis using commercial software

Unit II : Product design and developments

Process engineering economics and project evaluation Life Cycle Assessments of process: From design to product development, Engineering Economic Analysis of Chemical Processes, Project costing and performance analysis, Environmental concerns, Green engineering, Engineering ethics, Health and safety.

Unit III : Reactor Networks

Geometry of mixing and basic reactor types, The Attainable Region (AR) approach, AR in higher dimensions & for other processes, Reactive Separation processes, Fundamental behavior and problems, Separation through reactions. Reactive Residue Curve Maps

Unit IV : Synthesis of Separation Trains

Criteria for selection of separation methods, select ion of equipment**:** Absorption, Liquid-liquid extraction Membrane separation, adsorption, leaching, drying, crystallization, Ideal distillation - Column and sequence fundamentals, Sharp splits & sequencing Phase diagrams for 2, 3 and 4 components, Feasibility and vapor ow rates for single columns, Residue curve basics, Non-ideal Distillation - Azeotropic systems; detecting binary azeotropes, Residue curve maps for azeotropic systems, Topological analysis, Feasibility for single azeotropic columns ,Binary VLLE and pressure-swing separation, Non-ideal distillation synthesis. Equipment sequencing: VLE + VLLE, Detailed Residue Curve Maps, Residue curve maps: Interior structure

Unit V : Heat Exchanger Network Synthesis

Minimum heating and cooling requirements, Minimum Energy Heat Exchanger Network, Loops and Paths, Reducing Number of Exchangers, HENS basics & graphics, The pinch point approach, Stream Splitting, Performance targets, trade-off & utilities, Heat & power integration, HENS as mathematical programming

Outcomes: At the end of the course, the student will be able to

1. Analyze alternative processes and equipment
2. Synthesize a chemical process flow sheet that would approximate the real process
3. Design best process flow sheet for a given product
4. Perform economic analysis related to process design and evaluate project profitability
5. Heat Exchanger Network Synthesis

CH14C FLUIDIZATION ENGINEERING

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To study the phenomenon of fluidization with industrial processing objective
2. To study the various regimes of fluidization and their mapping.
3. To study the design of equipments based on fluidization technique

Unit I : Introduction to fluidization and applications

Phenomenon of fluidization, behavior of fluidized bed, contacting modes, advantages and disadvantages of fluidization, fluidization quality, selection of contacting mode, Beds for Industrial applications, coal gasification, synthesis reactions, physical operations, cracking of hydrocarbons

Unit II : Mapping of fluidization regimes

Characterization of particles, mechanics of flow around single particles, minimum fluidization velocity, pressure drop versus velocity diagram, The Geldart classification of solids, fluidization with carryover of particles, terminal velocity of particles, distributor types, gas entry region of bed, pressure drop requirements, design of gas distributor, power consumption

Unit III : Bubbling fluidized beds

Davidson model for bubble in a fluidized bed, and its implications, the wake region and movement of solids at bubbles, coalescence and splitting of bubbles, bubble formation above a distributor, slug flow, Turbulent and fast fluidization - mechanics, flow regimes and design equations, Emulsion movement, estimation of bed properties, bubble rise velocity, scale up aspects, flow models, two phase model, K-L model

Unit IV : Solids movement and Gas dispersion

Vertical and horizontal movement of solids, Dispersion model, large solids in beds of smaller particles, staging of fluidized beds

Gas dispersion in beds, gas interchange between bubble and emulsion, estimation of gas interchange coefficient, Heat and mass transfer in fluidized systems, Mixing in fluidized systems - measurements and models.

Unit V : Fluidized bed reactors

Entrainment and elutriation, Freeboard behavior, gas outlet, entrainment from tall vessel, freeboard entrainment model, high velocity fluidization, pressure drop in turbulent and fast fluidization, Slugging, Spouted beds, Circulating Fluidized Beds.

Mathematical model of a homogeneous fluidized bed, Design of catalytic reactors, pilot plant reactors, information for design, bench scale reactors, design decisions, deactivating catalysts, Design of non catalytic reactors, kinetic models for conversion of solids, models for shrinking particles, conversion of solids of unchanging size]

References

2. Liang-Shih Fan, “Gas-Liquid-Solid Fluidization Engineering”, Butterworths, 1989

Course Outcomes: At the end of the course, the student will be able to:

1. Performing and understanding the behavior fluidization in fluidized bed
2. Evaluate the characterization of particles and power consumption in fluidization regimes
3. Understanding the applicability of the fluidized beds in chemical industries
4. Dispersion model, large solids in beds of smaller particles, staging of fluidized beds,Gas dispersion in beds.
5. Entrainment and elutriation,Mathematical model of a homogeneous fluidized bed.

CH14C **PROCESS PLANT SIMULATION**

Instruction : 3 hr/week Credits : 3 Evaluation : 40 + 60

Course Objectives ; Students will have to learn the following

1) Learn the Chemical Systems Modeling and Artificial Neural Networks
2) Understand how to design Steady State Extraction and Heat Conduction through Hollow Cylindrical, Unsteady State Mass Balance for CSTR and Heat Transfer in a Tubular Gas Pre Heater
3) Understand how to design models from Fluid Flow and Reaction Engineering
4) Develop Errors of Measurement, Problems in Data Regression and Solving Equation Solving and Modular Approach
5) Develop Algorithms based on Signal Flow Graph, Tearing Algorithms and Physical and Thermodynamic Properties of Convergence Promotion

UNIT I

Modeling Aspects: Deterministic vs. Stochastic Processes, Physical modeling, Mathematical modeling, Chemical Systems Modeling, Cybernetics, Controlled System, Principles of Similarity

Classification of Mathematical Modeling: Independent and Dependent variables, Classification based on variation of independent variables, Classification based on state of the process, Classification based on type of the process, Boundary Conditions, The black Box Principle, Artificial Neural Networks

UNIT II - Process Modeling - I

Models from mass transfer: steady state single stage solvent extraction, steady state two stage solvent extraction, steady state two stage cross current solvent extraction, , steady state N-stage solvent counter current extraction, unsteady state single stage solvent extraction, unsteady state mass balance in a stirred tank and in a mixing tank.

Models from Heat Transfer : steady state heat conduction through a hollow cylindrical pipe, unsteady state steam heating of a liquid, unsteady state heat loss through a measuring tank, heat transfer through extended surfaces, unsteady state heat transfer in a tubular gas pre heater

UNIT III – Process Modeling -II

Models from fluid flow: flow through a packed bed column, flow of a film on the outside of a circular tube, annular flow with inner cylinder moving axially, flow between coaxial cylinders and concentric spheres

Models from Reaction Engineering : chemical reaction with diffusion in a tubular reactor, chemical reactor with heat transfer in a packed bed reactor, gas absorption accompanied by chemical reaction

UNIT IV

Error Propagation & Data Regression :Propagation of errors through addition, subtraction, multiplication and division, Errors of measurement, Precision errors, errors method

Data Regression : Theoretical properties, data regression methods, Problems in data regression

Process Simulation : Modular Approach, The equation solving approach

UNIT V

Decomposition of Networks : Tearing Algorithms, Algorithms based on signal flow graph and reduced digraph

Convergence Promotion: Newton's method, direct substitution method, Wegstein's method, dominant Eigen value method, quasi Newton method, Criterion for acceleration, Physical and Thermodynamic Properties

TEXTBOOKS:

2. Process Modeling, Simulation and Control for Chemical Engineers, 2nd ed., W. L. Luyben, McGraw-Hill, New York, 1990

REFERENCE:

1. Introduction to Numerical Methods in Chemical Engineering, P. Ahuja, PHI , New Delhi, 2010
2. Process Modeling and Simulation, Amiya K. Jana, 2012.

Course Objectives : Students will be trained in

1) Modelling Aspects and Classification of Mathematical Modelling
2) How to Prepare Models from Mass Transfer and Models on Heat Transfer
3) How to Prepare Models from Fluid Flow and Models on Reaction Engineering
4) The analysis through Propagation of Errors, Error Methods, Data Regression Methods and Process Simulation
5) Decomposition of Networks and Convergence Promotion

CH14C COMPUTATIONAL FLUID DYNAMICS

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To make students understand the governing equations of fluid dynamics and their derivation from laws of conservation
2. To develop a good understanding in computational skills, including discretisation, accuracy and stability.
3. To acquaint the students with a process of developing a mathematical and geometrical model of flow, applying appropriate boundary conditions and solving system of equations

Unit I : Introduction to Fluid Dynamics

Concepts of Fluid Flow, Pressure distribution in fluids, Reynolds transport theorem, Integral form of conservation equations, Differential form of conservation equations, Different Types of Flows, Euler and Navier Stokes equations, Properties of supersonic and subsonic flows, Flow characteristics over various bodies. Philosophy of CFD, Governing equations of fluid dynamics and there physical meaning, Mathematical behavior of governing equations and the impact on CFD simulations, Simple CFD techniques and CFL condition. Numerical Methods in CFD: Finite Difference, Finite Volume, and Finite Element, Upwind and downwind schemes, Simple and Simpler schemes, Higher order methods, Implicit and explicit methods, Study and transient solutions

Unit II : Grid Generation

Basic theory of structured grid generation, Surface grid generation, Mono block, multi block, hierarchical multi block, Moving and sliding multiblock, Grid clustering and grid enhancement. Basic theory of unstructured grid generation, advancing front, Delaunay triangulation and various point insertion methods, Unstructured quad and hex generation, grid based methods, various elements in unstructured grids, Surface mesh generation, Surface mesh repair, Volume grid generation, Volume mesh improvement, mesh smoothing algorithms, grid clustering and quality checks for volume mesh. Adaptive, Moving and Hybrid Grids, Need for adaptive and, moving grids, Tet, pyramid, prism, and hex grids, using various elements in combination

Unit III : Turbulence and its Modeling

Transition from laminar to turbulent flow, Effect of turbulence on time-averaged Navier-Stokes equations, Characteristics of simple turbulent flows, Free turbulent flows, Flat plate boundary layer and pipe flow, Turbulence models, Mixing length model,The k-e model, Reynolds stress equation models, Algebraic stress equation models

Unit IV : Chemical Fluid Mixing Simulation

Stirred tank modeling using the actual impeller geometry, Rotating frame model, The MRF Model Sliding mesh model, Snapshot model, Evaluating Mixing from Flow Field Results, Industrial Examples

Unit IV : Post-Processing of CFD results

Contour plots, vector plots, and scatter plots, Shaded and transparent surfaces, Particle trajectories and path line trajectories, Animations and movies, Exploration and analysis of data.

Outcomes: At the end of the course, the students will be able to:

1. Understand the basic principles of mathematics and numerical concepts of fluid dynamics.
2. Develop governing equations for a given fluid flow system.
3. Adapt finite difference techniques for fluid flow models.
4. Apply finite difference method for heat transfer problems.
5. Solve computational fluid flow problems using finite volume techniques. Get familiarized to modern CFD software used for the analysis of complex fluid-flow systems

CH15C **INDUSTRIAL POLLUTION CONTROL**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To understand the importance of industrial pollution and its abatement
2. To study the underlying principles of industrial pollution control
3. To acquaint the students with case studies
4. Student should be able to design complete treatment system

Unit I : Industries & Environment

Industrial scenario in India - Industrial activity and Environment - Uses of Water by industry - Sources and types of industrial wastewater - Industrial wastewater and environmental impacts - Regulatory requirements for treatment of industrial wastewater - Industrial waste survey - Industrial wastewater generation rates, characterization and variables - Population equivalent - Toxicity of industrial effluents and Bioassay tests.

Unit II : Industrial Noise pollution

Sources of noise pollution, characterization of noise pollution prevention& control of noise pollution, Factories Act 1948 for regulatory aspects of noise pollution.

Unit III : Air Pollutant Abatement

Air pollutants scales of concentration, lapse rate and stability, plume behavior, dispersion of air pollutants, atmospheric dispersion equation and its solutions, Gaussian plume models.Air pollution control methods, Source correction methods, Design concepts for pollution abatement systems for particulates and gases. Such as gravity chambers, cyclone separators, filters, electrostatic precipitators, condensation, adsorption and absorption, thermal oxidation and biological processes.

Unit IV : Waste water treatment processes

Design concepts for primary treatment, grid chambers and primary sedimentation basins, selection of treatment process flow diagram, elements of conceptual process design, design of thickner, biological treatment Bacterial population dynamics, kinetics of biological growth and its applications to biological treatment, process design relationships and analysis, determination of kinetic coefficients, activated sludge process. Design, trickling filter design considerations, advanced treatment processes, Study of environment pollution from process industries and their abatement: Fertilizer, paper and pulp, inorganic acids, petroleum and petrochemicals, recovery of materials from process effluents.

Unit V : Solid waste and Hazardous waste management

xSources and classification, properties, public health aspects, Sanitary land fill design, Hazardous waste classification and rules, management strategies, Nuclear waste disposal Treatment methods – component separation, chemical and biological treatment, incineration, solidification and stabilization, and disposal methods, Latest Trends in solid waste management.

Course Outcomes: At the end of the course, the student will be able to:

1. Recognize the causes and effects of environmental pollution
2. Analyze the mechanism of proliferation of pollution
3. Develop methods for pollution abatement and waste minimization
4. Design treatment methods for gas, liquid and solid wastes
5. Nuclear waste disposal Treatment methods

CH15C **TRANSPORT IN POROUS MEDIA**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. Introduce the physics and governing mechanisms controlling flow and transport processes in porous media.
2. Learning Liquid and solute transport in porous media.

Unit-I: Fundamentals: Mass, momentum and energy transport, Darcy and Non-Darcy equations, equilibrium and non-equilibrium conditions, species transport, radioactive decay.

Unit-II: Effective medium approximation: equivalent thermal conductivity, viscosity, dispersion.

Unit-III: Exact solutions: Flow over a flat plate, flow past a cylinder, boundary-layers, reservoir problems.

Unit-IV: Special topics: Field scale and stochastic modeling, Turbulent flow, compressible flow, multiphase flow, numerical techniques, hierarchical porous media, nano scale porous media, multiscale modeling.

Unit-V: Engineering applications: Groundwater, waste disposal, oil and gas recovery, regenerators ,energy storage systems. Experimental techniques: Flow visualization, quantitative methods, inverse parameter estimation.

7. Stochastic Methods for Flow in Porous Media: Coping with Uncertainties, Zhang, D., Academic Press, California (2002).
8. The Method of Volume Averaging, S. Whitaker, Springer, New York (1999).

Outcomes: At the end of this course, students are able to:

1. Students will understand the mechanisms involved in transport processes in porous media and will be able to work with the equations that govern the fate and transport of gas, water and solutes in porous media.

CH15C CHEMOINFORMATICS

Instruction, hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To give students a concept of Chemo-informatics related to chemical structure databases and database search methods
2. To understand the quantum methods and models involved in drug discovery and targeted drug delivery
3. To study the application of Chemical Libraries, Virtual Screening, Prediction of Pharmacological Properties

Unit I : Chemo-informatics

Introduction, scope and application, Basics of Chemo-informatics, Current Chemo-informatics resources for synthetic polymers, pigments. Primary, secondary and tertiary sources of chemical information, Databases: Chemical Structure Databases (PubChem, Binding database, Drugbank), Database search methods:chemical indexing, proximity searching, 2D and 3D structure and substructure searching. Drawing the Chemical Structure: 2D & 3D drawing tools (ACD Chemsketch) Structure optimization.

Unit II : Introduction to quantum methods

Combinatorial chemistry (library design, synthesis and deconvolution), spectroscopic methods and analytical techniques, Representation of Molecules and Chemical Reactions: Different types of Notations, SMILES Coding, Structure of Mol files and Sd files (Molecular converter, SMILES Translator).

Unit III : Analysis and use of chemical reaction information

Chemical property information, spectroscopic information, analytical chemistry information, chemical safety information, Drug Designing: Prediction of Properties of Compounds, QSAR Data Analysis, Structure-Activity Relationships, Electronic properties, Lead Identification, Molecular Descriptor Analysis.

Unit IV : Target Identification

Molecular Modeling and Structure Elucidation: Homology Modelling (Modeller 9v7, PROCHECK), Visualization and validation of the Molecule (Rasmol, Pymol Discovery studio), Applications of Chemoinformatics in Drug Research - Chemical Libraries, Virtual Screening, Prediction of Pharmacological Properties.

Unit V : Drug Discovery

Structure based drug designing, Docking Studies (Target Selection, Active site analysis, Ligand preparation and conformational analysis, Rigid and flexible docking, Structure based design of lead compounds, Library docking), Pharmacophore - Based Drug Design, Pharmacophore Modeling (Identification of pharmacophore features, Building 2D/3D pharmacophore hypothesis), Toxicity Analysis-Pharmacological Properties (Absorption,

Distribution and Toxicity), Global Properties (Oral Bioavailability and Drug-Likeness) (ADME, OSIRIS, and MOLINSPIRATION)

9. Gasteiger Johann, Handbook of Chemoinformatics: From Data to Knowledge (4 Volumes),

   2003. Publisher: Wiley-VCH.

Course Outcomes: At the end of the course, the student will be able to:

1. The course will introduce the students preparing for professional work in chemistry must learn how to retrieve specific information from the enormous and rapidly expanding chemical literature.

2. The course will provide a broad overview of the computer technology to chemistry in all of its manifestations.

3. The course will expose the student to current and relevant applications in QSAR and Drug Design.

CH15C ADVANCED CONTROL SYSTEMS

Instruction : 3 hr/week Credits : 3 Evaluation : 40 + 60

Course Educational Objectives ; Students will have to learn the following

1) Learn the Concepts of Advanced Control Strategies
2) Understand the Multi Input and Multi Output controlling
3) Understand the Purpose of Digital Data Acquisition and Control
4) Develop Discrete Time Models & Their Dynamic Response
5) Design the Digital Controllers

Unit I :

Feed Forward and Ratio Control – Introduction, Feed forward controller design based on steady state and dynamic models, tuning and configuration of feed forward control

Advanced Control Strategies – Cascade control, time delay compensation and inferential control, selective and override systems, adaptive control, statistical process control

Unit II :

Control of Multi Input, Multi-Output Systems – Process interactions and control loop interactions, pairing of controlled and manipulated variables, strategy for reducing interactions, decoupling, multivariable control techniques

Supervisory Control – Basic requirements, applications, formulation and solution of optimization problems, unconstrained and constrained optimization

Unit III :

Digital Computer Control – Digital control systems in process control, distributed instrumentation and control systems, general purpose digital data acquisition, digital control hardware and software, table driven PID controller, Programmable logic controllers and batch process control

Sampling and Filtering of Continuous Measurements – Sampling and signal reconstruction, selection of sampling period, signal processing and data filtering, comparison of analog and digital filters, effect of filter selection on control system performance

Unit IV :

Development of Discrete Time Models – Finite difference models, exact discretization for linear systems, higher order systems, fitting discrete time equations to process data

Dynamic Response of Discrete –Time Systems – The z-Transform, inversion, pulse transfer function, relating pulse transfer functions to difference equations, effect of pole and zero locations, conversion between laplace and z- transforms

Unit V :

Analysis of Sampled – Data Control Systems – Open loop block diagram analysis, development of closed loop transfer functions, stability of sampled data control systems

Design of Digital Controllers – Digital PID controller, selection of controller parameters, direct synthesis methods, digital feed forward control, combined load estimation and time delay compensation

Text Books:

1. Process Dynamics and Control – D.E.Seborg, T.F.Edgar and D.A.Mellichamp, John Wiley &
Sons
2. Chemical Process control – An Introduction to Theory and Practice - George Stephanopoulos,
Prentice hall 1990.

Course Objectives : Students will be able to understand and analyze

1) Feed Forward, Ratio Controls and Advanced Controllers
2) Control Loop Interactions & Optimization
3) Digital Computer Control, selection of sampling period, comparison of analog and digital filters
4) Finite Difference Models, Z-Transforms, Pulse Transfer Functions
5) Samples and Data Control Systems

CH21C MEMBRANE SEPARATIONS

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Course Educational Objectives ; Students will have to learn the following

1) Learn the Properties of Membrane and Types of Membrane
2) Learn the Types of Filtrations used
3) Design Reverse Osmosis Module
4) Learn Gas Separation and Pervaporation
5) Understand different Membrane Processes

UNIT I :

OverView of Membrane Separations

Membrane Types, Materials, Preparation and Characterization - Types of Synthetic Membranes – Membrane Modules – Typical Flow patterns – Membrane materials – Pore Characteristics – Membrane Manufacture – Measurement of Pore size and Solute rejection Properties – surface Properties measurement and interpretation

UNIT II :

Nano Filtration – principles – nano-filtration membranes – Mass Transfer – Process Limitations – Industrial application

Ultrafiltration - Basic Principles – Membranes – Configuration – Types of Devices – Factors affecting performance – Flux – Models for Solvent Flux – Fouling and Flux decline – Methods to reduce Concentration Polarization – Energy Considerations – Micellar enhanced UF – Affinity UF – Applications

Microfiltration – Basic Principles – Membranes – Transport Mechanism – retention characteristics – Flow Characteristics – Membrane Plugging and Throughput – Fouling – energy Considerations – Applications

UNIT III :

Reverse Osmosis - Concepts – Phenomenon of RO – Models for RO transport – Design and Operating parameters – Concentration Polarization – Membrane plugging – Equivalent work requirement – Design of an RO module – RO of non-aqueous systems – Osmotic pinch effect – Forward osmosis – Applications

Dialysis – Principles – Dialysis systems – Membranes – Mass transfer – Applications – Diffusion dialysis

UNIT IV :

Gas Separation - Basic Principles – Membranes – Membrane Modules – Fundamental Mechanisms of Gas Transport - Factors affecting Gas Permeation – Complete Mixing Model – Cross and Countercurrent models – Applications

Pervaporation - Basic Principles – Advantages – Membrane characteristics – Thermodynamic Considerations – Mass transfer – Thermodynamic Considerations – Design of a Module – Concentration Polarization – factors affecting pervaporation – Temperature drop at the interface – Applications

UNIT V :

Ion Exchange Membrane Process - Basic Principles – Ion exchange Membranes – Energy requirement, Efficiency- Concentration Polarization and limiting current density – Other operating parameters – applications

Liquid Membranes - Types of liquid membranes – Mechanism of Mass transfer – Applications

Other Membrane Processes – Membrane contactor and applications – Membrane distillation – Membrane reactors – PEM Hydrogen Fuel Cell

Text Book

1. Membrane Separation Processes – Kaushik nath – Prentice Hall, 2008

5. Membrane Processes, Rautenbatch, R., and Albrecht, R John Wiley & Sons, New York.
6. Membrane Separation Processes, Baum,B., Halley, W. and White, R.A, Elsevier Scientific Publication

Course Objectives : Students gain

1) Knowledge on Preparation and Characterization of Materials and Types of Membrane
2) Knowledge on Nano-Filtration, Ultra-Filtration and Micro-Filtration
3) Knowledge on Designing Reverse Osmosis and Dialysis
4) Concepts of Gas Separation and Pervaporation and Design of Pervaporation Module
5) Knowledge on Ion Exchange Membrane Process, Liquid Membranes and Other Membrane Processes

CH22C **OPTIMIZATION THEORY & PRACTICE**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Course Educational Objectives :

1) To learn problem formulation and basic concepts of optimization.
2) To study the numerical methods to solve single variable un-constrained problems
3) To understand and apply numerical methods to solve un-constrained multi-variable problems
4) To learn linear& non-linear programming methods
5) To know the applications of optimization through different examples

Unit-I: Introduction

Basic concepts of optimization, applications of optimization, general procedure for solving optimization problem, formulation of the objective function, fitting models to data, classification of functions.

Unit-II: Single Variable unconstrained optimization methods

Direct search methods-Interval halving method, Fibonacci method, Golden section method;
Direct root methods-Newton method and Quasi Newton method;
Polynomial approximation methods - Quadratic interpolation and cubic interpolation.

Unit-III: Optimization of unconstrained multivariable functions

Direct search methods-random search, grid search, uni-variate search and pattern search methods. ; Indirect search methods - steepest descent, conjugate gradient methods, Newton's method and secant method.

Unit-IV: Linear and non-linear programming

Linear programming: Basic concepts in linear programming, Standard LP from, Graphical solution and Simplex method.

Non-linear programming: Lagrange multiplier method, Quadratic programming, Penalty function and augmented Lagrangian methods.

Unit –V: Applications of optimization

Optimizing recovery of waste heat, optimal design and operation of a conventional staged-distillation column, optimal pipe diameter, optimal residence time for maximum yield in chemostat and optimization of a thermal cracker using linear programming.

Text Book:

2. Joshi, M. C. and Moudgalya, K. M., “Optimization, Theory and Practice”, Narosa, New Delhi, 2004.
3. Rao, S. S., Engineering Optimization: Theory and Practice, New Age Publishers.

Course Outcomes: Student will be able to

1) formulate and analyse the optimization of the given physical situation.
2) Apply different methods of optimization and to suggest a technique for specific problem
3) Understand the difference between constrained and unconstrained optimization
4) Understand the importance of linear programming problems
5) Realize the importance of optimization by understanding different examples

CH25L **STEADY STATE SIMULATION LAB II Semester**

Instruction , hours/week : 3 Assessment : 40 + 60

To introduce students to use of software packages for simulation and also analyzing flow sheets

1. Introduction of Software packages.
2. Setting up models for simulation.
3. Flow sheeting concepts.
4. Steady state simulation for generation of VLE data.
5. Steady state simulation for conversion calculation for single and multiple reactions
6. Steady state simulation for heat and cooling duty of heat exchangers.
7. Simulation of flash column.

CH26L **ADVANCED INSTRUMENTATION LAB**

Instruction , hours/week : 3 Assessment : 40 + 60

To introduce students to use of new Analytical Instruments for analysis like UV Spectro Photo meter, HPLC, Atomic Adsorption Spectro Photometer etc.

INDUSTRIAL SAFETY

Unit-I: Industrial safety: Accident, causes, types, results and control, mechanical and electricalhazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

Unit-II: Fundamentals of maintenance engineering: Definition and aim of maintenance engineering,Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit-III: Wear and Corrosion and their prevention: Wear- types, causes, effects, wear reductionmethods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

Unit-IV: Fault tracing: Fault tracing-concept and importance, decision tree concept, need andapplications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Unit-V: Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing,cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

CH23C MODERN CONCEPTS IN CATALYSIS AND SURFACE PHENOMENON

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To give the students insight into advances in catalytic reaction engineering
2. To understand the mechanisms involved in catalytic reactions
3. To study the catalyst characterization techniques
4. To study the advanced industrial applications in catalysis
5. To understand the principles behind catalyst deactivation and study their models

Unit I : Introduction to Catalysis

Definition of Catalytic activity, Magnitude of Turnover Frequencies and Active Site Concentrations, Evolution of Important Concepts and Techniques in Heterogeneous Catalysis, Classification of Catalysts – Homogeneous, Heterogeneous, Biocatalysts, Dual Functional Catalysts, Enzymes, Solid Catalysts, Powder Catalysts, Pellets, Composition, Active Ingredients, Supportive materials, Catalysts Activation, Catalyst Deactivation.

Unit II : Adsorption in Catalysis

Adsorption and its importance in Catalysis, Adsorption and potential energy curves, Surface Reconstruction, Adsorption Isotherms and Isobars, Dynamical Considerations, Types of Adsorption Isotherms and their Derivation from Kinetic Principles, Mobility at Surfaces, Kinetics of surface Reactions, Photochemistry on oxide and metallic surfaces, Characterization of the adsorbed molecules

Unit III : Catalyst Characterization

Catalyst Characterization Methods – Their Working Principle and Applications – XRF, XRD, IR Spectroscopy, XPS, UPS, ESR, NMR; Infrared, Raman, NMR, Mossbauer and X-Ray Absorption spectroscopy, Surface Acidity and Toxicity, Activity, Life time, Bulk density, Thermal stability Crystal Defects, Peroviskites, Spinels, Clays, Pillared Clays, Zeolites

Unit IV : Significance of Pore Structure and Surface Area

Importance of Surface Area and Pore Structure, Experimental Methods for Estimating Surface Area– Volumetric, Gravimetric, Dynamic Methods, Experimental Methods for Estimating Pore Volume and Diameter – Gas Adsorption and Mercury Porosimeter Method, Models of the Pore Structure – Hysteresis Loops, Geometric Models, Wheeler's Model, Dusty Gas Model, Random Pore Model, Diffusion in Porous Catalysts – Effective Diffusivity, Knudsen Diffusion, Effect of Intraparticle Diffusion, Non-isothermal Reactions in Pores, Diffusion Control.

Unit V : Industrial applications– Case Studies

Industrial processes involving heterogeneous solid catalyst: Synthesis of Methanol, Fiscer-Tropsch Catalysis, Synthesis of Ammonia, Automobile Exhaust Catalysts and Catalyst Monolith, Photocatalytic Breakdown of Water and the Harnessing of Solar Energy.

Contribution of homogeneous catalytic process in chemical industry:Oxidations of Alkenes such as production of acetaldehyde, propylene oxide etc., Polymerization such as production of polyethylene, polypropylene or polyester production

5. Piet W.N.M. van Leeuwen, and John C. Chadwick, Homogeneous catalysis: Activity-stability –deactivation, Wiley, VCH, 2011.

Course Outcomes: At the end of the course, the student will be able to:

1. To understand the concepts of homogenous and heterogeneous catalysis, with specific examples.
2. To study reaction mechanisms and kinetics of homogenous and heterogeneous catalytic reactions.
3. To familiarize with the characterization of catalysts
4. To understand the application and mechanisms of several types of catalysts in chemical industry.

CH22C ADVANCED DOWNSTREAM PROCESSING

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives

1. To understand the unit processes involved in downstream processing.
2. To study advanced treatment methods.
3. To study the energy conservation in different separation processes
4. To understand the underlying design principles

Unit I : Introduction]

Introduction to Downstream processes theory, applications in chemical separation for Gas-Liquid system, Gas-Solid system. Super critical fluids extraction in food, pharmaceutical, environmental and petroleum applications, water treatment, desalination, Bio separation, dialysis, industrial dialysis.

Unit II : Downstream Processes in Petrochemical Industry

Cryogenic distillation for refinery, petrochemical off gases, natural gases, gas recovery-Olefin, Helium, Nitrogen, Desulfurization - coal, flue gases

Unit III :Advanced Distillation Processes

Azeotropic & extractive distillation - residue curve maps, homogeneous azeotropic distillation, pressure swing distillation, Column sequences, heterogeneous azeotropic distillation.

Unit IV : Energy conservation in separation processes

Energy balance, molecular sieves - zeolights, adsorption, catalytic properties, manufacturing processes, hydrogel process, application, New trends.

Unit IV : Non-Ideal Mixtures and Ion Exchange

Separations process synthesis for nonazeotropic mixtures, non ideal liquid mixtures, separation synthesis algorithm, Ion exchange - manufacture of resins, physical & chemical properties, capacity, selectivity, application, regeneration, equipment, catalysis use.

4. Timmerhaus K.D., "Cryogenic Process Engg.", Plenum Press
5. Othmer Kirk "Encyclopedia of Separation Technology, Vol I & II", Wiley Interscience

Course Outcomes: At the end of the course, the student will be able to:

1. To learn effective strategies of downstream processing in chemical industry.
2. Understand the role of downstream processing.
3. Analyze reactors, upstream and downstream processes in production

CH23C **PROCESS SYNTHESIS & ANALYSIS**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Course Objectives:

1) To familiarize the students about various economic aspects of chemical processes
2) To Learn basics of Cost estimation and to understand the time value of money
3) To Learn the importance of Cash flow diagrams and Break-even analysis.
4) To Study depreciation methods and methods of estimation of profitability of an industry
5) To Study about heat exchanger networks.

UNIT-I :

Nature of Process Synthesis & Analysis : Creative aspects – A hierarchial approach

Enginering Economics : Cost Information – Estimation of Capital and Operating Costs – Total Capital Investment- Total Product Cost - Time Value of Money – Measures of Process Profitability – Simplifying the Economic Analysis for Conceptual Design

UNIT II :

Economic Decision Making : Solvent Recovery System – Problem Definition & General Considerations – Design of a Gas Absorber – Equipment Design Consideration – Rules of Thumb

Input Information & Batch- Continuous: Input Information – Level 1 Decision – Batch Vs. Continuous

UNIT III :

Input-Output Structure of the Flow Sheet : Decisions for the I/O structure – Design Variables – Over all Material Balances – Stream Costs – Process Alternatives

Recycle Structure of the Flow Sheet : Decisions determining the recycle Structure – Recycle Material balances – reactor Heat Effects – Equilibrium Limitations – Compress Design & Costs – Reactor Design – recycle Economic Evaluation

Unit IV :

Heat Exchanger Networks – Minimum Heating & Cooling Requirements – Minimum Number of Exchangers – Area Estimates – Design of Minimum Energy Heat Exchanger Networks – Loops and Paths – Reducing the Number of Exchanger – Stream Splitting – Heat and Power Integration – Heat Distillation – HAD Process

UNIT V :

Separation System : General Structure – Vapor Recovery System – Liquid Separation System – Azeotropic Systems – Rigorous Material Balances

Cost Diagrams and Quick Screening of Process Alternatives - Cost Diagrams for simple and complex process – Quick Screening of Process Alternatives – HAD Process

Text Book :

1. Conceptual Design of Chemical Processes, Douglas, J.M., McGraw Hill,

Reference Books :

1. Chemical Process Design, Robin Smith, McGraw Hill,
2. Chemical Process Design, Dimian A.C, & Bidea,C.S., Wiley – VCH,2008

4. Systematic Methods of Chemical Process Design, Bieglar, L.T., Grossman, E.I and Westerberg, A.W. Prentice Hall Inc.
5. Product and Process Design Principles, Seider, W.D., Seider,J.D & Lewin, D.R. Wiley,2005

Course Outcomes: Student will be able to

1) understand the concepts of Engineering economics
2) Able to estimate various costs involved in a process industry and evaluate the tax burden of an establishment
3) Able to estimate profitability of a company
4) Understand the heat exchanger networks and their importance in industry
5) Compute break even period for an investment and rate of return

CH23C **MICRO AND NANO FLUIDICS**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. To introduce to the students, the various opportunities in the emerging field of micro and nano fluids.
2. To the make students familiar with the important concepts applicable to small micro and nano fluidic devices, their fabrication, characterization and application
3. To get familiarize with the new concepts of real-time nano manipulation &

Unit-1: Introduction: Fundamentals of kinetic theory-molecular models, micro and macroscopic properties, binary collisions, distribution functions, Boltzmann equation and Maxwellian distribution functions-Wall slip effects and accommodation coefficients, flow and heat transfer analysis of micro scale Couette flows, Pressure driven gas micro-flows with wall slip effects, heat transfer in micro-Poiseuille flows, effects of compressibility. Pressure Driven Liquid Micro flow: apparent slip effects, physics of near-wall micro scale liquid flows, capillary flows, electro-kinetically driven liquid micro - flows and electric double layer (EDL) effects, concepts of electro osmosis, electrophoresis and dielectro-phoresis.

Unit- 2: Laminar flow: Hagen-Poiseullie eqn, basic fluid ideas, Special considerations of flow insmall channels, mixing, microvalves & micropumps, Approaches toward combining living cells, microfluidics and 'the body' on a chip, Chemotaxis, cell motility. Case Studies in Microfluidic Devices. Ionic transport: Polymer transport – microtubule transport in nanotuble channels driven by Electric Fields and by Kinesin Biomolecular Motors - Electrophoresis of individual nanotubules in microfluidic channels.

Unit-3: Fabrication techniques for Nanofluidic channels – Bio molecules separation using Nanochannels - Biomolecules Concentration using Nano channels – Confinement of Bio molecules using Nano channels. Hydrodynamics: Particle moving in flow fields – Potential Functions in Low Renoyld's Number Flow – Arrays of Obstacles and how particles Move in them: Puzzles and Paradoxes in Low Re Flow.

Unit-4: Micro fluidics and Lab-on-a-chip: Microfluidic Devices - Microchannels, Micro filters, Microvalves, Micropumps, Microneedles, Microreserviors, Micro-reaction chambers. Concepts and Advantages of Microfluidic Devices - Fluidic Transport - Stacking and Scaling – Materials for The Manufacture (Silicon, Glass, Polymers) - Fluidic Structures - Fabrication Methods - Surface Modifications - Spotting - Detection Mechanisms. Microcontact printing of ProteinsStrategies-printing types- methods and characterization-Cell nanostructure interactions-networks for neuronal cells. Applications in Automatic DNA sequencing, DNA and Protein microarrays.

Unit-5: BioMEMS (Micro-Electro-Mechanical Systems): Introduction and Overview, BiosignalTransduction Mechanisms: Electromagnetic Transducers Mechanical Transducers, Chemical Transducers, Optical Transducers – Sensing and Actuating mechanisms (for all types). Case Studies in Biomagnetic Sensors, Applications of optical and chemical transducers. Ultimate Limits of Fabrication and Measurement, Recent Developments in BioMEMS and BioNEMS - An alternative approach to traditional surgery, Specific targeting of tumors and other organs for drug delivery, Micro-visualization and manipulation,

Implantation of microsensors, microactuators and other components of a larger implanted device or external system (synthetic organs).

Text Books

1. Joshua Edel "Nanofluidics" RCS publishing, 2009.

2. Patric Tabeling "Introduction to Microfluids" Oxford U. Press, New York 2005.
3. K. Sarit "Nano Fluids; Science and Technology", RCS Publishing, 2007.

References

2. G. Kovacs, Micromachined Transducers, McGraw-Hill, 1998

3. Steven S Saliterman, Fundamentals of BioMEMS and Medical Microdevices, 2006

Outcomes: At the end of this course, students are able to:

1. Introduce students to the physical principles to analyze fluid flow in micro and nano-size devices. It unifies the thermal sciences with electrostatics, electrokinetics, colloid science; electrochemistry; and molecular biology.

CH24C PHASE TRANSITIONS IN PROCESS EQUIPMENT

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. Basic laws in thermodynamics.
2. Basic statistical concepts and methods: heat, work, energy, temperature and the kinetic theory of matter; entropy, ensemble, partition function, etc
3. Learning phase transition catalysis
4. Have a good grasp of the basic thermodynamic interactions and process: adiabatic, isothermal, etc

Unit-I: Thermodynamic aspects of phase transitions: Concept of phase, First-order phase transition,conditions for phase coexistence lines, free energy barrier of nucleation, and crystal-melt interfacial free energy, Ehrenfest classification of phase transitions, Van der Waals equation of state, Critical point

Unit-II: Single phase and multiphase catalytic reactions, Acid--base catalysis, Transition metal catalysis, Phase transfer catalysis, Micellar catalysis, Microemulsion catalysis, Electron transfer catalysis, Heteropoly acid catalysis, Homogeneous polymer catalysis, Heterogenisation of homogeneous catalysts.

Unit-III: Applications to Multi-phase Systems Stability conditions for a homogeneous system, equilibrium between phases, phase transformations, general relations for a system with several components, general conditions for chemical equilibrium, chemical equilibrium between ideal gases, and the equilibrium constants in terms of partition functions.

Unit -IV: Phase diagrams and transformations Phase rule- single and binary phase diagrams, lever rule, micro structural changes during cooling, Al_2O_3, Cr_2O_3, Pb-Sn, Ag-Pt and Fe-Fe_3C Systems phase diagrams, phase transformations, corrosion- theories of corrosion, control and prevention of corrosion

UNIT-V: Energy balance - heat capacity and calculation of enthalpy changes, Enthalpy changes for phase transitions, evaporation, clausius - clapeyron equation,

4. A.Hougen, K.M. Watson and K.A.Ragatz, “Chemical Process Principles”, Vol 1, John Wiley, 1960.

Outcomes: At the end of this course, students are able to:

1. The student is expected to obtain considerable insight into various types of phase transitions, and how these can be described theoretically in different ways

2. Predict relationships between physical quantities using the laws and methods of thermodynamics.

3. Find probabilities and thermal quantities (free energy, entropy, etc) given the energy eigen values of a system.
4. The student is expected to obtain considerable insight into various types of phase transitions, and how these can be described theoretically in different ways

5. Predict relationships between physical quantities using the laws and methods of thermodynamics.

6. Find probabilities and thermal quantities (free energy, entropy, etc) given the energy eigen values of a system.

CH24C **PROCESS INTENSIFICATION**

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. Understand the concept of Process Intensification.
2. Know the limitations of intensification of the chemical processes.
3. Apply the techniques of intensification to a range of chemical processes.
4. Develop various process equipment used for intensifying the processes.
5. Infer alternative solutions keeping in view point, the environmental protection, economic viability and social acceptance.

Unit-I: Introduction: Techniques of Process Intensification (PI) Applications, The philosophy andopportunities of Process Intensification, Main benefits from process intensification, ProcessIntensifying Equipment, Process intensification toolbox, Techniques for PI application.

Unit-II: Process Intensification through micro reaction technology: Effect of miniaturization on unitoperations and reactions, Implementation of Microreaction Technology, From basic Properties To Technical Design Rules, Inherent Process Restrictions in Miniaturized Devices and Their Potential Solutions, Microfabrication of Reaction and unit operation Devices - Wet and Dry Etching Processes.

Unit-III: Scales of mixing, Flow patterns in reactors, Mixing in stirred tanks: Scale up of mixing, Heat transfer. Mixing in intensified equipment, Chemical Processing in High-Gravity Fields Atomizer Ultrasound Atomization, Nebulizers, High intensity inline MIXERS reactors Static mixers, Ejectors, Tee mixers, Impinging jets, Rotor stator mixers, Design Principles of static Mixers Applications of static mixers, Higee reactors.

Unit-IV: Combined chemical reactor heat exchangers and reactor separators: Principles of operation;Applications, Reactive absorption, Reactive distillation, Applications of RD Processes, Fundamentals of Process Modelling, Reactive Extraction Case Studies: Absorption of NOx Coke Gas Purification. Compact heat exchangers: Classification of compact heat exchangers, Plate heat exchangers, Spiral heat exchangers, Flow pattern, Heat transfer and pressure drop, Flat tube-and-fin heat exchangers, Microchannel heat exchangers, Phase-change heat transfer, Selection of heat exchanger technology, Feed/effluent heat exchangers, Integrated heat exchangers in separation processes, Design of compact heat exchanger - example.

Unit-V: Enhanced fields: Energy based intensifications, Sono-chemistry, Basics of cavitation,Cavitation Reactors, Flow over a rotating surface, Hydrodynamic cavitation applications, Cavitation reactor design, Nusselt-flow model and mass transfer, The Rotating Electrolytic Cell, Microwaves, Electrostatic fields, Sonocrystallization, Reactive separations, Superctrical fluids

5. Reay, Ramshaw, Harvey, Process Intensification, Engineering for Efficiency, Sustainability and Flexibility, Butterworth-Heinemann, 2013.

Outcomes: At the end of this course, students are able to:

1. Assess the values and limitations of process intensification, cleaner technologies and waste minimization options.
2. Measure and monitor the usage of raw materials and wastes generating from production and frame the strategies for reduction, reuse and recycle.
3. Obtain alternative solutions ensuring a more sustainable future based on environmental protection, economic viability and social acceptance.
4. Analyze data, observe trends and relate this to other variables.
5. Plan for research in new energy systems, materials and process intensification.

CH24C MICRO FLOW CHEMISTRY AND PROCESS TECHNOLOGY

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. Introduce the students to micro flow chemistry and process technology.
2. Learning Micromixers, Mixing Principles.
3. Learning micro reactor based chemicals production

Unit-I: State of the Art of Micro reaction Technology, Structural Hierarchy of Micro reactors, Functional Classification of Micro reactors, Fundamental Advantages of Micro reactors, Advantages of Micro reactors Due to Decrease of Physical Size, Advantages of Micro reactors Due to Increase of Number of Units, Potential Benefits of Micro reactors

Unit-II: Modern Micro fabrication Techniques for Micro reactors, Evaluation of Suitability of a Technique, Anisotropic Wet Etching of Silicon, Dry Etching of Silicon, LIGA Process, Injection Molding, Wet Chemical Etching of Glass, Advanced Mechanical Techniques

Unit-III: Micro mixers, Mixing Principles and Classes of Macroscopic Mixing Equipment, Mixing Principles and Classes of Miniaturized Mixers, Mixing Tee-Type Configuration

Unit-IV: Microsystems for Gas Phase Reactions, Catalyst Supply for Micro reactors , Types of Gas Phase Micro reactors, Micro channel Catalyst Structures, H_2/O_2 Reaction, Selective Partial Hydrogenation of Benzene, Selective Oxidation of 1-Butene to Maleic Anhydride, Selective Oxidation of Ethylene to Ethylene Oxide, Oxidative Dehydrogenation of Alcohols, Synthesis of Methyl Isocyanate and Various Other Hazardous Gases, Synthesis of Ethylene Oxide, Oxidation of Ammonia

Unit-V: Microsystems for Energy Generation, Micro devices for Vaporization of Liquid Fuels, Micro devices for Conversion of Gaseous Fuels to Syngas by Means of Partial Oxidations, Hydrogen Generation by Partial Oxidations, Micro devices for Conversion of Gaseous Fuels to Syngas by Means of Steam Reforming

4. Hessel, V., Renken, A., Schouten, J.C., Yoshida, Micro Process Engineering" A Comprehensive Handbook 2009, ISBN 978-3-527-31550-5.

Outcomes: At the end of this course, students are able to:

1. Students will understand the role of micro flow chemistry and process technology in chemical engineering.
2. The student is expected to obtain considerable insight into various types of micro reactors.

CH24C PROCESS PLANT DESIGN & FLOW SHEETING TOOLS

Instruction , hours/week : 3 Credits : 3 Assessment : 40 + 60

Objectives:

1. Understanding of the scope, principles, norms, accountabilities and bounds of contemporary engineering practice in the specific discipline.
2. Application of established engineering methods to complex engineering problem solving.
3. Application of systematic engineering synthesis and design processes.

Unit-I: Introduction: Basic concepts: General design considerations, Process design development, Layout of plant items, Flow sheets and PI diagrams, Economic aspects and Optimum design, Practical considerations in design and engineering ethics, Degrees of freedom analysis in interconnected systems, Network analysis, PERT/CPM, Direct and Indirect costs, Optimum scheduling and crashing of activities.

Unit-II: Hierarchy of chemical process design; Nature of process synthesis and analysis; Developing a conceptual design and flow sheet synthesis. Synthesis of reaction-separation systems; Distillation sequencing; Energy targets. Heat integration of reactors, distillation columns, evaporators and driers; Process change for improved heat integration. Heat and mass exchange networks and network design.

Unit-III: Flow-sheeting: Synthesis of flow sheet: Propositional logic and semantic equations, Deduction theorem, Algorithmic flow sheet generation using P-graph theory, Sequencing of operating units, Feasibility and optimization of flow sheet using various algorithms viz, Solution Structure Generation (SSG), Maximal Structure Generation (MSG), Simplex, Branch-and-bound etc.

Unit-IV: Analysis of Cost estimation: Factors affecting Investment and production costs, Estimation of capital investment and total product costs, Interest, Time value of money, Taxes and Fixed charges, Salvage value, Methods of calculating depreciation, Profitability, Alternative investments and replacements.

Unit- V: Optimum Design and Design Strategy: Break-even analysis, Optimum production rates in plant operation, Optimum batch cycle time applied to evaporator and filter press, Economic pipe diameter, Optimum insulation thickness, Optimum cooling water flow rate and optimum distillation reflux ratio.

4. Perry, R.H. and Green, D., Chemical Engineer's Handbook, McGraw-Hill (1997).

Outcomes: At the end of this course, students are able to:

1. Analyze, synthesize and design processes for manufacturing products commercially
2. Integrate and apply techniques and knowledge acquired in other courses such as thermodynamics, heat and mass transfer, fluid mechanics, instrumentation and control to design heat exchangers, plate and packed columns and engineering flow diagrams
3. Use commercial flow sheeting software to simulate processes and design process equipment
4. Recognize economic, construction, safety, operability and other design constraints
5. Estimate fixed and working capitals and operating costs for process plants

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING:

TIRUPATI-517502

R-23– Scheme of Instructions effective from the academic year 2023 – 2024

Programme Scheme

Specialization: Communication systems (CM)

Vision of The Institute

The Vision of Sri Venkateswara University College of Engineering is to be the leader in the creation and development of globally competitive human capital in Engineering Education for Technological, Economical and Social Enrichment of the Society, through its open and flexible Academic Programs.

Mission of The Institute

- To be recognized as a premier institution offering Engineering Education programs, training human resources oriented to problem solving and system development.
- To carry out research in Engineering and Technology relevant to all segments of society.
- To assume leadership in sustainable technological growth of the Indian society.
- To be a natural destination for excellence and diversity in thought and practice.

Department of Electronics & Communication Engineering

Vision

To be a lead department imparting quality and value embedded higher education and research emphasizing freedom of learning andpractice.

Mission

1. Transforming students into full-fledged professionals and to become leaders in dynamic global environment.
2. Augmenting knowledge and technologies in rapidly advancing fields of Electronics and Communication Engineering.
3. Promoting in depth research and create Centre of excellence in thrust areas.

Program Outcomes (POs) for PG programs

POs are statements that describe what students are expected to know and be able to do upon graduating from the program. These relate to the skills, knowledge, analytical ability attitude and behaviour that students acquire through the program.

The POs essentially indicate what the students can do from subject-wise knowledge acquired by them during the program. As such, POs define the professional profile of a graduate of PG Engineering Program.

NBA has defined the following three POs for a graduate of PG Engineering Program:

1. **PO1**: An ability to independently carry out research/investigation and development work to solve practical problems.
2. **PO2**: An ability to write and present a substantial technical report/document.
3. **PO3**: Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

Program Specific Outcomes (PSOs):

M. Tech. in Communication Systems graduates will be able to:

1. **PSO 1**. Integrate knowledge to identify, formulate, solve complex problems and meet the challenges in the domain of communication and networking.
2. **PSO 2.** Use the concepts of communications, networking and signal processing to simulate algorithms in virtual platforms and implement them in real time environment.

Program Educational Objectives (PEOs):

M. Tech. in Communication Systems Program, graduates will be able to:

. **PEO 1.** Apply the concepts of mathematics and engineering principles in the domain of communication and networking and analyze advantages and disadvantages of using the various communication technologies.
. **PEO 2.** Solve numerical problems and write algorithms using communication and networking platforms and different software tools to evolve viable communication systems.
. **PEO 3.** Inculcate professional ethics, integrity and social responsibility, enhance communication skills, and practice effective teamwork to pursue research or attain a career in the domain of Communication Engineering.

CM11C: Advanced Digital Signal Processing
(Common to signal processing)

Instruction Hours/week: (L-T-P-C): 3-1-0-4 **Credits : 4**
Sessional Marks : 40 **Semester-End Examination : 60**

Course Description: This course will provide rigorous foundations in Digital filter structures, Multirate signal processing, Linear prediction, Adaptive filters and Spectral estimation. This course emphasizes the use of digital signal processing techniques for designing digital systems used in Communications, Control, Media Applications etc.

Prerequisites: Signals and Systems, Digital Signal Processing.

Course Objectives: To enable the student to

1. Understand to develop FIR & IIR filter structures depending upon the given applications.
2. Understand theory of Multirate DSP, solve numerical problems and write algorithms.
3. Understand theory of prediction and solution of normal equations.
4. Understand the different types of adaptive filters used in signal processing applications.
5. Discuss different methods of spectrum estimation and analysis.

Course Outcomes: After completion of the course, student will be able to

1. Learn and implement the digital filters to computational complexity problems.
2. Analyze multirate DSP systems and Design a decimator and integrator including multi-stages.
3. Apply theory of prediction and find solution of normal equations
4. Design different types of filters such as Adaptive filters, poly phase filters, Wiener filters, ARMA lattice-ladder filters, etc.
5. Estimate the power spectrum by using different methods.

Contents:

Unit 1

Digital filter structures: Basic FIR/IIR filter structures, FIR/IIR Cascaded lattice structures, Parallel structures, all pass realization of IIR transfer functions, Sine- cosine generator, Computational complexity of filter structures.

Unit 2

Multirate Digital Signal Processing: Decimators and Interpolators, Sampling rate conversion, multistage decimator & interpolator, poly phase filters, Quadrature mirror filter (QMF) banks, Conditions for perfect reconstruction, digital filter banks, Applications in sub-band coding.

Unit 3

Linear Prediction and Optimum Linear Filters: Innovations Representation of a Stationary Random Process, Forward and Backward linear prediction, Solution of the Normal Equations, Properties of linear prediction-Error Filter, AR Lattice and ARMA Lattice-Ladder Filters, Wiener Filters for Filtering and Prediction.

Unit 4

Adaptive Filters, Applications, Gradient Adaptive Lattice, Minimum mean square criterion, The Least-Mean-Square (LMS) algorithm, Normalized LMS (NLMS), The Leaky LMS, Recursive Least Square (RLS) algorithm.

Unit 5

Power Spectral Estimation: Estimation of Spectra from Finite Duration Observations of a Signal, Periodogram, Use DFT in power Spectral Estimation, Bartlett, Welch and Blackman, Tukey methods, Comparison of performance of Non-Parametric Power Spectrum Estimation Methods.

Parametric Methods of Power Spectrum Estimation: Relationship between Auto-Correlation and Model Parameters, Yule-Walker, Burg and Unconstructrained Least Squares Methods, Moving Average (MA) and ARMA Models Minimum Variance Method, Eigen analysis Algorithms for Spectrum Estimation.

CM12C: Wireless and Mobile Communication

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination : 60**

Course Description: This course provides a comprehensive overview and advanced knowledge of modern mobile and wireless communication systems. Building on the prior knowledge on digital communications, students develop further understanding on the challenges and opportunities brought by the wireless medium in designing current and future wireless communication systems and networks

Course Objectives:

1. To provide the students with an understanding of the cellular concepts, frequency reuse, handoff strategies.
2. To enable the students to analyze and understand wireless and mobile cellular communication systems over stochastic fading channels.
3. To provide the students with an understanding of Co-channel and Non-Co channel Interference.
4. To give students an understanding of cell coverage for signal and traffic diversity techniques and mobile antennas.
5. To give the students an understanding of frequency management, channel assignment and types of handoff.

Contents

UNIT 1

Cellular Communication Fundamentals: Cellular system design, Frequency reuse, cell splitting, handover concepts, Co channel and adjacent channel interference, interference reduction techniques and methods to improve cell coverage, frequency management and channel assignment.GSM architecture and interfaces, GSM architecture details, GSM subsystems, GSM Logical Channels, Data Encryption in GSM, GPRS, IS 95, Forward Link and Reverse links.

UNIT 2

Spectral efficiency analysis based on calculations for Multiple access technologies: TDMA, FDMA and CDMA, Comparison of these technologies based on their signal separation techniques, advantages, disadvantages and application areas. Wireless network planning (Link budget and power spectrum calculations)

UNIT 3

Mobile Radio Propagation: Large Scale Path Loss, Free Space Propagation Model, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering, Practical Link Budget Design using Path Loss Models, Outdoor Propagation Models, Indoor Propagation Models, Signal Penetration into Buildings. Small Scale Fading and Multipath Propagation, Impulse Response Model, Multipath Measurements, Parameters of Multipath channels, Types of Small-Scale Fading: Time Delay Spread; Flat, Frequency selective, Doppler Spread; Fast and Slow fading.

UNIT 4

Equalization, Diversity: Equalizers in a communications receiver, Algorithms for adaptive equalization, diversity techniques, space, polarization, frequency diversity, Interleaving.

UNIT 5

5G Architecture Add Network, 5G Radio, Access Technologies, Security for 5G Communications, 5G challenges and future scope.

Course Outcomes: Upon completion of the course, students will be able to

1. Design appropriate mobile communication systems by applying frequency-reuse concept, and analyze its effects on interference, system capacity, handoff techniques.
2. Distinguish various multiple-access techniques e.g. FDMA, TDMA, CDMA, and their advantages and disadvantages.
3. Analyze path loss and interference for wireless telephony and their influences on a mobile communication system's performance.
4. Analyze and design CDMA system with the knowledge of forward and reverse channel details, advantages and disadvantages of it.
5. Understand technologies like 2G, 3G, 4G, 5G, etc.

TEXT BOOKS:

1. T.S.Rappaport, "Wireless Communications Principles and Practice", 2nd edition, PHI, 2002.

CM13C: DSP Architecture
(Common To Signal Processing)

Instruction Hours/week : (L-T-P-C): 3-1-0-4 Credits : 4
Sessional Marks : 40 Semester-End Examination : 60

Course Description: This course explains fundamental concepts of Digital Signal Processing and implementation of various applications on Advanced Processor. Helps students to understand architecture of advanced Digital Signal Processor and how to program it for signal processing applications.

Course Objectives:

1. To describe features and architectural improvements of DSP processors.
2. Introduce addressing modes and instruction description of TMS320C6x processors.
3. To demonstrate data representation in DSP Processors and FIR filters.
4. To demonstrate the usefulness of the adaptive filters and learn techniques of code optimization.

Course Outcomes:

1. At the end of this course, students will be able to
2. Identify and formalize architectural level characterization of P-DSP hardware
3. Ability to design, programming (assembly and C), and testing code using Code Composer Studio environment
4. Deployment of DSP hardware for Control, Audio and Video Signal processing applications
5. Understanding of major areas and challenges in DSP based embedded systems

Syllabus Contents:

Unit 1

Programmable DSP Hardware: Processing Architectures (von Neumann, Harvard), DSP core algorithms (FIR, IIR, Convolution, Correlation, FFT), IEEE standard for Fixed and Floating Point Computations, Special

Architectures Modules used in Digital Signal Processors (like MAC unit, Barrel shifters), On-Chip peripherals, DSP benchmarking.

Unit 2

Structural and Architectural Considerations: Parallelism in DSP processing, Texas Instruments.TMS320 Digital Signal Processor Families, Fixed Point TI DSP Processors: TMS320C1X and TMS320C2X Family,TMS320C25 – Internal Architecture, Arithmetic and Logic Unit, Auxiliary Registers, Addressing Modes (Immediate, Direct and Indirect, Bit-reverse Addressing), Basics of TMS320C54x and C55x Families in respect of Architecture improvements and new applications fields, TMS320C5416 DSP Architecture, Memory Map, Interrupt System, Peripheral Devices, Illustrative Examples for assembly coding.

Unit 3

VLIW Architecture: Current DSP Architectures, GPUs as an alternative to DSP Processors, TMS320C6X Family, Addressing Modes, Replacement of MAC unit by ILP, Detailed study of ISA, Assembly Language Programming, Code Composer Studio, Mixed Cand Assembly Language programming, On-chip peripherals, Simple applications developments as an embedded environment.

Unit 4

Multi-core DSPs: Introduction to Multi-core computing and applicability for DSP hardware, Concept of threads, introduction to P-thread, mutex and similar concepts, heterogeneous and homogenous multi-core systems, Shared Memory parallel programming –OpenMP approach of parallel programming, PRAGMA directives, OpenMP Constructs for work sharing like for loop, sections, TI TMS320C6678 (Eight Core subsystem).

Unit 5

FPGA based DSP Systems: Limitations of P-DSPs, Requirements of Signal processing for Cognitive Radio (SDR), FPGA based signal processing design-case study of a complete design of DSP processor,High Performance Computing using P-DSP: Preliminaries of HPC, MPI, OpenMP, multicore DSP as HPC infrastructure.

CM14C: Program Elective-I
1. Optical Networks

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: Optical fibers have several advantages over conventional copper cables. Optical communication enjoys high bandwidth and thus useful for transmitting huge information securely and with less repeaters to longer distances. The performance of optical system is superior to conventional communication and thus has widespread use in industry.

Course Objectives: Optical Communication has got greater applicability and students of Communication discipline should master the subject. This course will enable the students:
1. To understand deeply the fundamental aspects of optical communication
2. To analyze the types of fibers and understand the performance by comparison
3. To design optical receivers of optical systems
4. To simulate the performance through parameters like BER and S/N Ratio
5. To apply the principles of optical communication to networks.

Course Outcomes:
At the end of this course, students will be able to
1. Contribute in the areas of optical network and WDM network design.
2. Implement simple optical network and understand further technology developments for future enhanced network.

Syllabus Contents:

Unit 1
SONET/SDH: optical transport network, IP, routing and forwarding, multiprotocol label switching.
WDM network elements: optical line terminals and amplifiers, optical add/dropmultiplexers, OADM architectures, reconfigurable OADM, optical cross connects.

Unit 2

Control and management: network management functions, optical layer services and interfacing, performance and fault management, configuration management, optical safety.

Unit 3

Network Survivability: protection in SONET/SDH & client layer, optical layer protection schemes

Unit 4

WDM network design: LTD and RWA problems, dimensioning wavelength routingnetworks, statistical dimensioning models.

Unit 5

Access networks: Optical time division multiplexing, synchronization, header processing,buffering, burst switching, test beds, Introduction to PON, GPON, AON.

CM14C: Program Elective-I
2. Statistical Information Processing

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Characterize and apply probabilistic techniques in modern decision systems, such as information systems, receivers, filtering and statistical operations.
2. Demonstrate mathematical modelling and problem solving using such models.
3. Comparatively evolve key results developed in this course for applications to signal processing, communications systems.
4. Develop frameworks based in probabilistic and stochastic themes for modelling and analysis of various systems involving functionalities in decision making, statistical inference, estimation and detection.

Syllabus Contents:

Unit 1

Review of random variables: Probability Concepts, distribution and density functions, moments, independent, uncorrelated and orthogonal random variables; Vector-space representation of Random variables, Vector quantization, Tchebay chef inequality theorem, Central Limit theorem, Discrete &Continuous Random Variables.

Random process: Expectations, Moments, Ergodicity, Discrete-Time Random Processes Stationary process, autocorrelation and auto covariance functions, Spectral representation of random signals, Properties of power spectral density, Gaussian Process and White noise process.

Unit 2

Random signal modelling: MA(q), AR(p), ARMA(p,q) models, Hidden Markov Model &its applications ,Linear System with random input , Forward and Backward Predictions, Levinson Durbin Algorithm.

Unit 3

Statistical Decision Theory: Bayes' Criterion, Binary Hypothesis Testing, M-aryHypothesis Testing, Minimax Criterion, Neyman-Pearson Criterion, Composite Hypothesis Testing.

Parameter Estimation Theory: Maximum Likelihood Estimation, Generalized Likelihood Ratio Test ,Some Criteria for Good Estimators, Bayes' Estimation Minimum Mean-Square Error Estimate, Minimum, Mean Absolute Value of Error Estimate Maximum A Posteriori Estimate , Multiple Parameter Estimation Best Linear Unbiased Estimator ,Least-Square Estimation Recursive Least-Square Estimator.

Unit 4

Spectral analysis: Estimated autocorrelation function, Periodogram, Averaging the periodogram (Bartlett Method), Welch modification, Parametric method, AR(p) spectral estimation and detection of Harmonic signals.

Information Theory and Source Coding: Introduction, Uncertainty, Information and Entropy, Source coding theorem, Huffman, ShanonFano , Arithmetic , Adaptive coding , RLE , LZW Data compaction, , LZ-77, LZ-78. Discrete Memory less channels, Mutual information, channel capacity, Channel coding theorem, Differential entropy and mutual information for continuous ensembles.

Unit 5

Application of Information Theory: Group, Ring & Field, Vector, GF

addition,multiplication rules. Introduction to BCH codes, Primitive elements ,Minimal polynomials, Generator polynomials in terms of Minimal polynomials, Some examples of BCH codes,& Decoder, Reed- Solomon codes & Decoder, Implementation of Reed Solomon encoders and decoders.

CSPE13: Program Elective-I
3. Wireless Sensor Networks

Instruction Hours/week: 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course offers an insight into the concepts of mobile and wireless data communication technologies. The objective of this course is to enable the student to understand the emerging technologies of wireless and mobile communications and simulate them.

Course Objectives:

1. To understand the new trends in mobile/wireless communications networks.
2. To understand multiple radio access techniques.
3. To analyze various routing algorithms used in mobile/wireless networks.
4. To identify the issues in transport and application layers.

Course Outcomes:

At the end of this course, students will be able to

1. Design wireless sensor network system for different applications under consideration.
2. Understand the hardware details of different types of sensors and select right type of sensor for various applications.
3. Understand radio standards and communication protocols to be used for wireless sensor network based systems and application.

4. Use operating systems and programming languages for wireless sensor nodes, performance of wireless sensor networks systems and platforms.
5. Handle special issues related to sensors like energy conservation and security challenges.

Syllabus Contents:

Unit 1

Introduction and overview of sensor network architecture and its applications, sensornetwork comparison with Ad Hoc Networks, Sensor node architecture with hardware and software details.

Hardware: Examples like mica2, micaZ, telosB, cricket, Imote2, tmote, btnode, and Sun

SPOT, Software (Operating Systems): tinyOS, MANTIS, Contiki, and RetOS.

Unit 2

Programming tools: C, nesC. Performance comparison of wireless sensor networks simulation and experimental platforms like open source (ns-2) and commercial (QualNet, Opnet)

Unit 3

Overview of sensor network protocols (details of atleast 2 important protocol per layer):Physical, MAC and routing/ Network layer protocols, node discovery protocols, multi-hop and cluster based protocols, Fundamentals of 802.15.4, Bluetooth, BLE (Bluetooth low energy), UWB.

Unit 4

Data dissemination and processing; differences compared with other database management systems, data storage; query processing.

Unit 5

Specialized features: Energy preservation and efficiency; security challenges; fault-tolerance, Issues related to Localization, connectivity and topology, Sensor deployment mechanisms; coverage issues; sensor Web; sensor Grid, Open issues for future research, and Enabling technologies in wireless sensor network.

CM14C: Program Elective-I
4. High Performance Networks

Instruction Hours/week: 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Description: This course provides an introduction to voice and data networking technologies, including public and private voice services, Ethernet and Internet data technologies, network security, business applications and net work management. The structure, regulation, andhistory of the telecom and data network industry will be discussed as well.

Course Objectives:
1. To protocol, algorithms, trade-offs rationale.
2. To routing, transport, DNS resolutions
3. To network extensions and next generation architecture.

Course Outcomes:

At the end of this course, students will be able to
1. Apply knowledge of mathematics, probability, and statistics to model and analyze some networking protocols.
2. Design, implement, and analyze computer networks.
3. Identify, formulate, and solve network engineering problems.
4. Show knowledge of contemporary issues in high performance computer networks. Use techniques, skills, and modern networking tools necessary for engineering practice.

Syllabus Contents:

Unit 1
Types of Networks, Network design issues, Data in support of network design. Networkdesign tools, protocols and architecture. Streaming stored Audio and Video, Best effort service, protocols for real time interactive applications, Beyond best effort, scheduling and policing mechanism, integrated services, and RSVP-differentiated services.

Unit 2
VoIP system architecture, protocol hierarchy, Structure of a voice endpoint, Protocols forthe transport of voice media over IP networks. Providing IP quality of service for voice, signaling protocols for VoIP, PSTN gateways, VoIP applications.

Unit 3

VPN-Remote-Access VPN, site-to-site VPN, Tunneling to PPP, Security in VPN. MPLS-operation, Routing, Tunneling and use of FEC, Traffic Engineering, MPLS based VPN, overlay networks-P2P connections.

Unit 4

Traffic Modeling: Little's theorem, Need for modeling, Poisson modeling, Non-poissonmodels, Network performance evaluation.

Unit 5

Network Security and Management: Principles of cryptography, Authentication, integrity,key distribution and certification, Access control and fire walls, attacks and counter measures, security in many layers.Infrastructure for network management, The internet standard management framework –SMI, MIB, SNMP, Security and administration, ASN.1.

CM15C: Program Elective-II
1.Cognitive Radio

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: To understand the fundamental concepts of cognitive radios networks and develop the cognitive radio, as well as techniques for spectrum holes detection that cognitive radio takes advantages in order to exploit it. Technologies to allow an efficient use of TVWS for radio communications based on two spectrum sharing business models.

Course Objectives:

1. To understand the fundamental concepts of cognitive radio networks and develop the cognitive radio, as well as techniques for spectrum holes detection that cognitive radio takes advantages in order to exploit it.
2. Understand technologies to allow an efficient use of TVWS for radio communications based on two spectrum sharing business models/policies

Course Outcomes:

At the end of this course, students will be able to

1. Understand the fundamental concepts of cognitive radio networks.
2. Develop the cognitive radio, as well as techniques for spectrum holes detection that cognitive radio takes advantages in order to exploit it.
3. Understand technologies to allow an efficient use of TVWS for radio communications based on two spectrum sharing business models/policies
4. Understand fundamental issues regarding dynamic spectrum access, the radio-resource management and trading, as well as a number of optimisation techniques for better spectrum exploitation.

Syllabus Contents:

Unit 1

Introduction to Cognitive Radios: Digital dividend, cognitive radio (CR) architecture, functions of cognitive radio, dynamic spectrum access (DSA), components of cognitive radio, spectrum sensing, spectrum analysis and decision, potential applications of cognitive radio.

Unit 2

Spectrum Sensing: Spectrum sensing, detection of spectrum holes (TVWS), collaborative sensing, geo-location database and spectrum sharing business models (spectrum of commons, real time secondary spectrum market).

Unit 3

Optimization Techniques of Dynamic Spectrum Allocation: Linear programming, convex programming, non-linear programming, integer programming, dynamic programming, stochastic programming.

Unit 4

Dynamic Spectrum Access and Management: Spectrum broker, cognitive radio architectures, centralized dynamic spectrum access, distributed dynamic spectrum access, learning algorithms and protocols.

Unit 5

Spectrum Trading: Introduction to spectrum trading, classification to spectrum trading, radio resource pricing, brief discussion on economics theories in DSA (utility, auction theory), classification of auctions (single auctions, double auctions, concurrent, sequential).

Research Challenges in Cognitive Radio: Network layer and transport layer issues, cross-layer design for cognitive radio networks.

CM15C :Program Elective-II
2. Voice and Data Networks
(Common to signal processing)

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course provides an introduction to voice and data networking technologies, including design and performance issues. And also focus is on layered & cross layer communication along with Packet and circuit switching communication. Provides Link layer error and flow control mechanisms, also know about queuing models of networks and its applications. Finally have idea about different internet protocols and packet scheduling algorithm.

Course Objectives:

1. Know different design and performance issues of communications networks.
2. Understand the concepts of layered & cross layer communication, along with circuit & packet switching technologies and their deployments in public networks
3. Understand the role of data link layer and various queuing models for

communication.
4. Understand the functions of internetworking devices and importance of different internet protocols.

Course Outcomes:

1. An ability to apply knowledge of networking. network topologies in designing of a network.
2. An ability to model systems using concept of layered/cross layered and TCP/IP architecture.
3. An ability apply the link layer functionalities and queuing models during communication.
4. An ability to use modern engineering techniques for analysis and design of a network with the knowledge of internet concepts and protocols.

Syllabus Contents:

Unit 1

Network Design Issues, Network Performance Issues, Network Terminology, centralized and distributed approaches for networks design, Issues in design of voice and data networks.

Unit 2

Layered and Layer less Communication, Cross layer design of Networks, Voice Networks (wired and wireless) and Switching, Circuit Switching and Packet Switching, Statistical Multiplexing.

Unit 3

Data Networks and their Design, Link layer design- Link adaptation, Link Layer Protocols, Retransmission. Mechanisms (ARQ), Hybrid ARQ (HARQ), Go Back N, Selective Repeat protocols and their analysis.

Unit 4

Queuing Models of Networks , Traffic Models , Little's Theorem, Markov chains, M/M/1 and other Markov systems, Multiple Access Protocols , Aloha System , Carrier Sensing , Examples of Local area networks,

Unit 5

Inter-networking, Bridging, Global Internet, IP protocol and addressing, Sub netting, Classless Inter domain Routing (CIDR) , IP address lookup , Routing in Internet. End to End Protocols, TCP and UDP. Congestion Control, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery, Congestion avoidance, RED TCP Throughput Analysis, Quality of Service in Packet Networks, Network Calculus, Packet Scheduling Algorithms.

CM15C: Program Elective-II
3. Secured Communication

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: The principles are tempered with their practical significance to cope up with the interest to both researchers and system designers. Learning is facilitated by streamlined derivations and assignments.

Course Objectives:

1. To introduce the basic concept encryption techniques
2. To familiarize with the concept of private key and public key cryptosystems.
3. To introduce the concept of Elliptic curves

Course Outcomes: After completing this course, students will be able to:

1. To Understand Cryptography attacks, Integer arithmetic, linear congruence
2. To Understand encryption techniques
3. To Understand Private key and public cryptosystem
4. To Understand Elliptic Curves
5. Discrete logarithm problem on Elliptic Curves

UNIT 1

Introduction: Security Goals, Cryptographic Attacks, Services and Mechanisms, Integer Arithmetic, Modular Arithmetic, Linear Congruence.

UNIT 2

Basic Encryption Techniques: Concept of cryptanalysis ,Symmetric key ,Block ciphers, Cryptographic algorithms , Features of DES, Stream ciphers, Pseudo random sequence generators, linear complexity, Non-linear combination of LFSRs ,Boolean functions.

UNIT 3

Private Key and Public Key Cryptosystems: Asymmetic Key, One way functions, Primality Testing, Factorization problem, Chinese Remainder Theorem , RSA encryption, Diffie Hellmann key exchange , Message authentication and hash functions, Digital signatures, Secret sharing, features of visual cryptography , other applications of cryptography.

UNIT 4

Elliptic Curves: Basic theory, Weirstrass equation, Group law, Point at Infinity, Elliptic curves over finite fields.

UNIT 5

Discrete logarithm problem on Elliptic curve: Elliptic curve cryptography, Diffie Hellmann key exchange over EC, Elgamal encryption over EC, ECDSA.

Text Books:

1. Douglas R. Stinson, Maura B. Paterson "Cryptography, Theory and Practice", 4th Edition, CRC Press, Taylor & Francis Group, 2019.
2. Lawrence C. Washington, " Elliptic Curves", **2nd Edition** , Chapman & Hall/ CRC Press Publishers, April 2008, ISBN: 9781420071474.
3. David S. Dummit, Richard M. Foote, " Abstract Algebra", Third Edition John Wiley & Sons, Inc., 2004.

CM15C: Program Elective-II
4. Electromagnetic Interference And Compatibility

Instruction Hours/Week:3L **Credits: 3**

Sessional Marks :40 **End Semester Examination Marks: 60**

Course objective:

1. The course Electromagnetic interference and compatibility gives the in-depth expose of unintentional generation, propagation and reception of electromagnetic energy which may cause unwanted effects such as

electromagnetic interference or even physical damage to the operational or impaired function of equipment.

2. The goal of EMC is to inbuilt the withstanding capability of operation of different equipment in a common electromagnetic environment. This course will equip the learner's in-depth understanding of Sources and victim of EMI. The course gives the insight of the suppression techniques like Shielding, bonding Grounding, Earthing.
3. Learners should be able to explore and apply EMI/EMC measurement technique, evaluation methods and various EMI/EMC standards.
4. A Prerequisite knowledge of Antennas and Microwave Engineering is required for the course.

Syllabus Contents:

UNIT I

BASIC THEORY (10): Introduction to EMI and EMC, Intra and inter system EMI, Elements of Interference, Sources and Victims of EMI, Conducted and Radiated EMI emission and susceptibility, Case Histories, Radiation hazards to humans, Various issues of EMC, EMC Testing categories, EMC Engineering Application. Importance of EMI emission in communications.

UNIT II

EMI from Apparatus and circuits (10): Electromagnetic emissions, noise from relays and switches, non-linearities in circuits, passive inter-modulation, cross-talk in transmission lines, transients in power supply lines, electromagnetic interference(EMI), Overview on Open area test sites and measurements

UNIT III

Radiated and Conducted Interference Measurements (10): Anechoic chamber, TEM cell, GH TEM cell, characterization of conduction Currents/voltages, conducted EM noise on power lines, conducted EMI from Equipment, immunity to conducted EMI detectors and Measurements.

UNIT IV

STANDARDS AND REGULATION (10): Need for Standards, Generic/General Standards for Residential and Industrial environment, Basic Standards, Product Standards, National and International EMI Standardizing Organizations; IEC, ANSI, FCC, CISPR, CENELEC, Electro Magnetic Emission and susceptibility standards and specifications, MIL461E Standards.

UNIT V

EMI TEST METHODS AND INSTRUMENTATION (10): Fundamental

considerations, Basic principles of RE, CE, RS and CS measurements, EMI Shielding effectiveness tests, TEM cell for immunity test, Shielded chamber , Shielded anechoic chamber, EMI test receivers, Spectrum analyzer, EMI test wave simulators, EMI coupling networks, Line impedance stabilization networks, Feed through capacitors, Antennas, Current probes, MIL -STD test methods, Civilian STD test methods.

TEXT BOOK

1. Clayton Paul, "Introduction to Electromagnetic Compatibility", Wiley Interscience, 2006.
2. V Prasad Kodali, "Engineering Electromagnetic Compatibility", IEEE Press, Newyork, 2001.

REFERENCES

1. Henry W. Ott, "Electromagnetic Compatibility Engineering", John Wiley & Sons Inc, Newyork, 2009.
2. Daryl Gerke and William Kimmel, "EDN's Designer's Guide to Electromagnetic Compatibility", Elsevier Science & Technology Books, 2002.
3. W Scott Bennett, "Control and Measurement of Unintentional Electromagnetic Radiation", John Wiley & Sons Inc., (Wiley Interscience Series) 1997.
4. Dr Kenneth L Kaiser, "The Electromagnetic Compatibility Handbook", CRC Press 2005.

COURSE OUTCOMES:

1. Identify the various types and mechanisms of Electromagnetic Interference
2. Identify the various types and mechanisms of Electromagnetic Interference Analyze various sources of EMI and various possibilities to provide EMC.
3. Analyze possible EMI prevention techniques such as grounding, shielding, filtering and use of proper coupling mechanisms to improve compatibility of electronic circuits and systems in a given electromagnetic environment.
4. To measure emission immunity level from different systems to couple with the prescribed EMC standards
5. Understand the different types of EMI/EMC measurement techniques and measuring equipment

CM16L: Advanced Digital Signal Processing Lab
(Common to signal Processing)

Instruction Hours/week : 3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Overview: This practical course enables students to apply skills learned in Advanced Digital Signal Processing algorithms and will help to teach implementation of them. MATLAB is used to apply theoretical concepts and to demonstrate signal processing techniques by means of hands-on application examples. Recognize estimation problems and design, implement and analyze algorithms for solving them. Implement signal processing systems with DSP based development platforms.

Pre-requisites: Signals & Systems, Digital Signal Processing, Digital Signal Processing Lab, MATLAB, and Code Composer Studio.

Course Learning Objectives: The student after studying this courseis able to:

1. Understand how to analyze and manipulate digital signals and have the programming knowledge to do so.
2. Understand the trade-offs in the practical design and implement of various structures of FIR and IIR digital filters, for example which can be reduces noise or realizes various applications.
3. Understand theory of prediction and solution of normal equations.
4. Acquaint knowledge of the concepts, algorithms and applications of adaptive signal processing in digital communication systems.
5. Understand the implementation of adaptive filters used in signal processing applications.
6. Understand different methods for estimation of power spectra and its analysis.

Course Outcomes: After completion of this coursethe student is:

1. Able to design, analyze, and implement digital filters using MATLAB.
2. Able to implement various structures of digital filters.
3. Able to implement up-sampling and down-sampling of a given Sequences.
4. Apply the Lattice filter architecture and implement the Wiener filter, Least Squares, LMS and RLS algorithms, and apply to selected applications.
5. Deduce and apply correlation functions and power spectra for various signal classes, in particular for stochastic signals.

Course Contents:

Note: (i) Minimum of 10 Experiments have to be done invariably.
(ii) All Experiments may be Simulated using MATLAB and to be

verified theoretically.

List of Experiments:

1. Introduction to DSP with MATLAB Programming Environment and Familiarization to Code Composer Studio.
2. Basic Operations on Signals, Generation of Various Signals and finding its FFT.
3. Simple Digital Filters (LPF, HPF, BPF, BSF and Comb Filters).
4. Realization of Structures (Cascade / Parallel/ Lattice Structure's) of a system transfer function.
5. Implement Program to verify Decimation and Interpolation of a given Sequences.
6. Implement Program to Convert CD data into DVD data (sampling rate converters).
7. Estimation of data series using Nth order Forward Predictor and comparing to the Original Signal.
8. Design of linear prediction coding (LPC) filter using Levinson-Durbin Algorithm.
9. Apply the Lattice filter architecture from the Levinson-Durbin algorithm.
10. Computation of Reflection Coefficients using Schur Algorithm.
11. To implement the Wiener filter, and Least Squares algorithms, and apply to selected applications.
12. To implement the LMS and RLS algorithms, and apply to selected applications.
13. Design and verification of a Matched filter.
14. Adaptive Noise Cancellation / Linear Equalizer.
15. Computing Power Spectrum of a Square Signal and chirp signal.
16. Design and Simulation of Notch Filter to remove 50Hz Hum / any unwanted frequency component of given Signal (Speech / ECG).
17. Plot the Periodogram of a Noisy Signal and estimate PSD using Periodogram and Modified Periodogram methods.
18. Estimation of Power Spectrum using Bartlett and Welch methods.
19. Parametric methods (Yule-Walker and Burg) of Power Spectrum Estimation.

For Motivated Learners Extra experiments can be done:

Applications: Adaptive filter and experiments on communication such as generation of a N-tuple PN sequence, generation of a white noise sequence using the PN sequence, restoration of a sinusoidal signal embedded in white noise by Wiener Filtering; speech and multi-media applications.

CM17L: Wireless and Mobile Communication Lab

Instruction Hours/week : 3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Objectives:

1. To enable the students to understand and investigate Wireless channels, Fading environment and analyze their behaviour.
2. To study various radio propagation models.
3. To describe different algorithms of adaptive filtering.
4. To facilitate students with hands on 4G LTE network to establish communication between user equipment.

List of Experiments

1. Radio propagation models: Okumura and Hata models.
2. Calculation of frequency reuse factor and cluster size.
3. Improving channel capacity of wireless network using cell sectoring.
4. Selection diversity for wireless communication.
5. Power spectral density of GMSK.
6. RLS and LMS algorithms for adaptive filtering.
7. Configuration of processor and IP address for 4G LTE operation.
8. Configuration of eNodeB Radio parameters and Bandwidth.
9. Configuration of EPC and user database.
10. Configuration of IMS and users, complete LTE run and UE application setup.
11. Virtual lab experiments on understanding of pathloss, beam patterns, calculation of boundary coverage probability and SINR.
12. Virtual lab experiments on handoff, frequency reuse, flat and frequency selective fading.

Course Outcomes:

Upon completion of the course, students will be able to

1. Understand Cellular concepts and radio propagation models.
2. Perform 4G LTE wireless network through experimentation
3. Analyze configuration parameters of Software Defined Radio in real time environment.
4. Demonstrate various concepts of wireless and mobile communication like handoff, cell sectoring, frequency reuse, etc., using virtual labs.

Resources:

1. Software Tools: Matlab
2. Amitec 4G LTE Network Setup
3. Virtual Labs: Fading Channels and Mobile Communications, http://vlabs.iitkgp.ernet.in/fcmc

CM18C: Research Methodology and IPR

Instruction Hours/week : 3L **Credits:3**
Sessional Marks : 40 **Semester-end Examination : 60**

Description of the Course: This subject gives how to proceed systematically for research, present research findings. This course consists of basics of research methods, paper writing, patenting methods and requirements.

Course Educational Objectives (CEOs):

1. To understand the importance of research objectives and procedures.
2. To know the procedures of data collection and report writing of research.
3. To have the knowledge of filing and obtaining a patent on research findings.

UNIT I

Meaning, Objective and Motivation in Research: Types of Research, Research Approaches, Research Process, Validity and Reliability in Research, Research Design: Features of Good Design, Types of Research Design, Basic Principles of Experimental Design

UNIT II

Sampling Design: Steps in Sampling Design, Characteristics of a Good Sample Design, Random Samples and Random Sampling Design Measurement and Scaling Techniques: Errors in Measurement, , Scaling and Scale Construction techniques, Forecasting Techniques, Time Series

Analysis, Interpolation and Extrapolation

UNIT III

Methods of Data Collection: Primary Data, Questionnaire and Interviews, Collection of Secondary Data, Cases and Schedules. Professional Attitude and Goals, Concept of Excellence, Ethics in Science and Engineering, Correlation and Regression Analysis, Method of Least Squares, Regression Vs. Correlation, Correlation Vs. Determination.

UNIT IV

Interpretation of Data and Report Writing, Layout of a Research Paper, Techniques o f Interpretation. Making Scientific Presentation at Conferences and Popular Lectures to Semi Technical Audience, Participating in Pubic Debates on Scientific Issues

UNIT V

Nature of Intellectual property rights, Patents, designs, trademarks and copyrights, History of patenting, process of patenting, patent development, international cooperation on IPR, procedure of granting patent, patent rights, licensing and transferring technology, Geographical Indications ,IPR in biological and systems and software.

Text/Reference Books:

1. Research Methodology: Methods And Techniques - C. R. Kothari,2nd Edition, New Age Intemational Publishers.
2. Statistical Methods - S P. Gupta. S. chand& Sons, New Derhi.
3. Intellectual ProPerty-the law of trademarks, copyrights, Patents, and trade Secrets- Deborah E. Bouchoux, Esq.Georgetown University, Fourth edition

Course Outcomes (COs):

1. 1.Able to know research importance and requirements and procedure
2. Able to apply sampling techniques for analysis and forecasting.
3. Able to use methods for data collection and analyze the data using different mathematical techniques.
4. Able to write report on research done and present the research findings in systematic manner.
5. Able to have the knowledge to file and obtain patent on research finding.

Semester II

CM21C: Antennas and Radiating Systems

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-end Examination :60**

Course Description: To understand the fundamental principles of antenna theory and to apply them to analysis and design. Because there are so many methods of analysis and design and different antenna structures, applications are made to some of the most basic and practical configurations such as linear dipoles, loops, arrays, aperture antennas, horn antennas, microstrip antennas and reflector antennas.

Course Objectives:

1. To fundamental antenna parameters and numerical methods to analyze and differentiate the antennas.
2. To concept of radiation mechanism of various antennas.
3. To mechanism and models for radio-wave propagation.

Course Outcomes:

At the end of this course, students will be able to

1. Compute the far field distance, radiation pattern and gain of an antenna for given current distribution.
2. Estimate the input impedance, efficiency and ease of match for antennas.
3. Compute the array factor for an array of identical antennas.
4. Design antennas and antenna arrays for various desired radiation pattern characteristics.

Syllabus Contents:

Unit 1

Types of Antennas: Wire antennas, Aperture antennas, Micro strip antennas, Arrayantennas Reflector antennas, Lens antennas, Radiation Mechanism, Current distribution on thin wire antenna.

Fundamental Parameters of Antennas: Radiation Pattern, Radiation Power Density, Radiation Intensity, Directivity, Gain, Antenna efficiency, Beam efficiency, Bandwidth, Polarization, Input Impedance, radiation efficiency, Antenna Vector effective length, Friis Transmission equation, Antenna Temperature.

Unit 2

Linear Wire Antennas: Infinitesimal dipole, Small dipole, Region separation, Finite lengthdipole, half wave dipole, Ground effects.

Loop Antennas: Small Circular loop, Circular Loop of constant current, Circular loop with non uniform current.

Unit 3

LinearArrays: Two element array, N Element array: Uniform Amplitude and spacing,Broadside and End fire array, Super directivity, Planar array, Design consideration.

Unit 4

Aperture Antennas: Huygen's Field Equivalence principle, radiation equations,Rectangular Aperture, Circular Aperture.

Horn Antennas: E-Plane, H-plane Sectoral horns, Pyramidal and Conical horns.

Unit 5

Micro strip Antennas: Basic Characteristics, Feeding mechanisms, Method of analysis, Rectangular Patch, Circular Patch, Reflector Antennas: Plane reflector, parabolic reflector, Cassegrain reflectors, Introductionto MIMO.

CM22C: Advanced Communication Networks

Instruction Hours/week : (L-T-P-C): 3-1-0-4 Credits :4
Sessional Marks : 40 Semester-end Examination :60

Description of the Course: Basic techniques for modeling and analyzing communication networks. Fairness and utility functions, routing, congestion control, pricing, queuing models, loss networks, multi-class queues and scheduling.

Course Objectives:

1. To fairness and network utility maximization
2. To optimization based routing and congestion control
3. To basic queuing models and their application to switching and scheduling in networks.

Course Outcomes:

At the end of this course, students will be able to

1. Understand advanced concepts in Communication Networking.
2. Design and develop protocols for Communication Networks.
3. Understand the mechanisms in Quality of Service in networking.
4. Optimise the Network Design

Syllabus Contents:

Unit 1

Overview of Internet-Concepts, challenges and history. Overview of -ATM. TCP/IPCongestion and Flow Control in Internet-Throughput analysis of TCP congestion control. TCP for high bandwidth delay networks. Fairness issues in TCP.

Unit 2

Real Time Communications over Internet. Adaptive applications. Latency and throughputissues. Integrated Services Model (intServ). Resource reservation in Internet. RSVP.

Characterization of Traffic by Linearly Bounded Arrival Processes (LBAP). Leaky bucketalgorithm and its properties.

Unit 3

Packet Scheduling Algorithms-requirements and choices. Scheduling guaranteed serviceconnections. GPS, WFQ and Rate proportional algorithms. High speed scheduler design. Theory of Latency Rate servers and delay bounds in packet switched networks for LBAP traffic.

Active Queue Management - RED, WRED and Virtual clock. Control theoretic analysis of active queue management.

Unit 4

IP address lookup-challenges. Packet classification algorithms and Flow Identification-Grid of Tries, Cross producting and controlled prefix expansion algorithms.Admission control in Internet. Concept of Effective bandwidth. Measurement basedadmission control. Differentiated Services in Internet (DiffServ). DiffServ architecture and framework.

Unit 5

IPV4, IPV6, IP tunnelling, IPswitching and MPLS, Overview of IP over ATM and itsevolution to IP switching. MPLS architecture and framework. MPLS Protocols. Traffic engineering issues in MPLS.

CM23C: Program Elective-III
1. Satellite Communication

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Description of the Course: Antennas and propagation effects play a crucial role in RF systems. In practice, the design of a working system such as mobile phone networks, WiFi, RFID, Satellite communication and GPS requires a good understanding of these components. This course teaches the fundamentals of antenna and propagation and shows the application in practical examples. The course covers the theory of radiation, fundamental antenna parameters and concepts, wire antennas such as dipoles and loop antennas, antenna arrays, aperture antennas, microstrip antennas, numerical analysis, communication & radar systems and propagation effects.

Course Objectives:

1. To fairness and network utility maximization
2. To optimization based routing and congestion control
3. To basic queuing models and their application to switching and scheduling in networks.

Course Outcomes:
At the end of this course, students will be able to
1. Visualize the architecture of satellite systems as a means of high speed, high range communication system.
2. State various aspects related to satellite systems such as orbital equations, sub-systems in a satellite, link budget, modulation and multiple access schemes.
3. Solve numerical problems related to orbital motion and design of link budget for the given parameters and conditions.

Syllabus Contents:

Unit 1:
Architecture of Satellite Communication System: Principles and architecture

of satellite Communication, Brief history of Satellite systems, advantages, disadvantages, applications, and frequency bands used for satellite communication and their advantages/drawbacks.

Unit 2:
Orbital Analysis: Orbital equations, Kepler's laws of planetary motion, Apogee and Perigee for an elliptical orbit, evaluation of velocity, orbital period, angular velocity etc of a satellite, concepts of Solar day and Sidereal day.

Unit 3:
Satellite sub-systems: Architecture and Roles of various sub-systems of a satellite system such as Telemetry, tracking, command and monitoring (TTC & M), Attitude and orbit control system (AOCS), Communication sub-system, power sub-systems, antenna sub-system.

Unit 4:
Typical Phenomena in Satellite Communication: Solar Eclipse on satellite, its effects, remedies for Eclipse, Sun Transit Outage phenomena, its effects and remedies, Doppler frequency shift phenomena and expression for Doppler shift.

Unit 5:
Satellite link budget: Flux density and received signal power equations, Calculation of System noise temperature for satellite receiver, noise power calculation, Drafting of satellite link budget and C/N ratio calculations in clear air and rainy conditions, Case study of Personal Communication system (satellite telephony) using LEO. Modulation and Multiple Access Schemes used in satellite communication. Typical case studies of VSAT, DBS-TV satellites and few recent communication satellites launched by NASA/ ISRO. GPS.

CM23C: Program Elective-III
2. IOT and Applications
(Common to Signal processing)

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Description of the Course: Internet of Things (IoT) cuts across different application domain verticals ranging from civilian to defense sectors. These domains include agriculture, space, healthcare, manufacturing, construction, water, and mining, which are presently transitioning their legacy infrastructure to support a lot. Today it is possible to envision pervasive connectivity, storage, and computation, which, in turn, gives rise to building different lot solutions. IoT-based applications such as innovative shopping systems, infrastructure management in both urban and rural areas, remote health monitoring and emergency notification systems, and transportation systems, are gradually relying on IoT-based systems. Therefore, it is very important to learn the fundamentals of this emerging technology.

Course Objectives:

1. To apprise students with basic knowledge of IoT that paves a platform to understand physical and logical design of IOT
2. To teach a student how to analyse requirements of various communication models and protocols for cost-effective design of IoT applications on different IoT platforms.
3. To introduce the technologies behind Internet of Things (IoT).
4. To explain the students how to code for an IoT application using Arduino/Raspberry Pi open platform.

Syllabus Contents:

UNIT I

THE INTERNET OF THINGS TODAY, TIME FOR CONVERGENCE

M2M to IoT – A Basic Perspective– Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

UNIT II

COMPONENTS IN INTERNET OF THINGS

Functional Blocks of an IoT Ecosystem – Sensors, Actuators, and Smart Objects – Control Units - Communication modules (Bluetooth, Zigbee,Wi-Fi, GPS, GSM Modules)

UNIT III

PROTOCOLS AND TECHNOLOGIES BEHIND IOT

IOT Protocols - IPv6, 6LoWPAN, MQTT, CoAP - RFID, Wireless Sensor Networks, BigData Analytics, Cloud Computing, Embedded Systems.

UNIT IV

OPEN PLATFORMS AND PROGRAMMING

IOT deployment for Raspberry Pi /Arduino platform-Architecture – Programming – Interfacing – Accessing GPIO Pins – Sending and Receiving Signals Using GPIO Pins – Connecting to the Cloud.

UNIT V

IOT APPLICATIONS

Business models for the internet of things, Smart city, Smart mobility and transport, Industrial IoT, Smart health, Environment monitoring and surveillance – Home Automation – Smart Agriculture

COURSE OUTCOMES:

Upon completion of the course, students will be able to

1. Explain the concept of IoT.
2. Understand the communication models and various protocols for IoT.
3. Design portable IoT using Arduino/Raspberry Pi/open platform.
4. Apply data analytics and use cloud offerings related to IoT.
5. Analyze applications of IoT in real time scenario.

CM23C: Program Elective-III
3. RF and Microwave Circuit Design

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To understand the behaviour of RF passive components model active components and Perform transmission line analysis.
2. To know the use of Smith Chart for high frequency circuit design.
3. To Justify the choice/selection of components from the design aspects and contribute in the areas of RF circuit design

Course Outcomes: At the end of this course, students will be able to

1. Understand the behaviour of RF passive components and model active components.
2. Perform transmission line analysis.
3. Demonstrate use of Smith Chart for high frequency circuit design.
4. Justify the choice/selection of components from the design aspects.
5. Contribute in the areas of RF circuit design.

Syllabus Contents:

Unit 1

Transmission Line Theory: Lumped element circuit model for transmission line, field analysis, Smith chart, quarter wave transformer, generator and load mismatch, impedance matching and tuning.

Microwave Network Analysis: Impedance and equivalent voltage and current, Impedance and admittance matrix, The scattering matrix, transmission matrix, Signal flow graph.

Unit 2

Microwave Components: Microwave resonators, Microwave filters, power dividers and directional couplers, Ferromagnetic devices and components.

Unit 3

Nonlinearity And Time Variance Inter-symbol interference, random process & noise, definition of sensitivity and dynamic range, conversion gain and distortion.

Unit 4

Microwave Semiconductor Devices and Modeling: PIN diode, Tunnel diodes, Varactor diode, Schottky diode, IMPATT and TRAPATT devices, transferred electron devices, Microwave BJTs, GaAs FETs, low noise and power GaAs FETs, MESFET, MOSFET, HEMT.

Unit 5

Amplifiers Design: Power gain equations, stability, impedance matching, constant gain and noise figure circles, small signal, low noise, high power and broadband amplifier, oscillators, Mixers design.

CM23C: Program Elective-III
4. MIMO Systems

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To understand channel modelling and propagation, MIMO Capacity, space-time coding MIMO receivers, MIMO for multi-carrier
2. systems (e.g. MIMO-OFDM), multi-user communications, multi-user MIMO.
3. To gain knowledge understand cooperative and coordinated multi-cell MIMO, introduction to MIMO in 4G (LTE, LTE-Advanced, WiMAX).
4. To perform Mathematical modelling and analysis of MIMO systems. To build a small low-cost embedded system using Arduino / Raspberry Pi or

equivalent boards.

Course Outcomes:

At the end of this course, students will be able to

1. Understand channel modelling and propagation, MIMO Capacity, space-time coding.
2. MIMO receivers, MIMO for multi-carrier systems (e.g. MIMO-OFDM), multi-user communications, multi-user MIMO.
3. Understand cooperative and coordinated multi-cell MIMO, introduction to MIMO in 4G (LTE, LTE-Advanced, WiMAX).
4. Perform Mathematical modelling and analysis of MIMO systems.

Syllabus Contents:

Unit 1:

Introduction to Multi-antenna Systems, Motivation, Types of multi-antenna systems,MIMO vs. multi-antenna systems.Diversity, Exploiting multipath diversity, Transmit diversity, Space-time codes, TheAlamouti scheme, Delay diversity, Cyclic delay diversity, Space-frequency codes, Receive diversity, The rake receiver, Combining techniques, Spatial Multiplexing, Spectral efficiency and capacity, Transmitting independent streams in parallel, Mathematical notation

Unit 2:

The generic MIMO problem, Singular Value Decomposition, Eigenvalues andeigenvectors, Equalising MIMO systems, Disadvantages of equalising MIMO systems, Pre-distortion in MIMO systems, Disadvantages of pre-distortion in MIMO systems, Pre-coding and combining in MIMO systems, Advantages of pre-coding and combining, Disadvantages of pre-coding and combining, Channel state information.

Unit 3

Codebooks for MIMO, Beamforming, Beamforming principles, Increased spectrumefficiency, Interference cancellation, Switched beamformer, Adaptive beamformer, Narrowband beamformer, Wideband beamformer

Unit 4:

Case study: MIMO in LTE, Codewords to layers mapping, Pre-coding for spatialmultiplexing, Pre-coding for transmit diversity, Beamforming in LTE, Cyclic delay diversity based pre-coding, Pre-coding codebooks, Propagation Channels, Time & frequency channel dispersion, AWGN and multipath propagation channels, Delay spread values and time variations, Fast and slow fading environments, Complex baseband multipath channels, Narrowband and wideband channels, MIMO channel models

Unit 5:
Channel Estimation, Channel estimation techniques, Estimation and tracking, Trainingbased channel estimation, Blind channel estimation, Channel estimation architectures, Iterative channel estimation, MMSE channel estimation, Correlative channel sounding, Channel estimation in single carrier systems, Channel estimation for CDMA, Channel estimation for OFDM.

CM24C: Program Elective-IV
1. Random Processes and Queuing Models
(Common to Signal Processing)

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Prerequisites: Probability Theory and Stochastic Processes

Preamble: This course is designed to provide necessary basic concepts in random processes which are widely applied in random signals, linear systems in communication engineering and IT fields. The objective of this course is to familiarize the understanding of stochastic processes and queuing models. The syllabus also covers the concepts of Markovian and advanced queueing models which are essential to design and analyze communication networks.

Course Learning Objectives: The objectives of this course is to enable the student to

1. Characterize stochastic processes with an emphasis on stationary random processes.
2. Use the properties of random processes with LTI systems in real world situations.
3. Understand Markov chains and their transient behavior.
4. Differentiate between different models of queuing theory and their performance measures.
5. Understand network of queues with Poisson external arrivals, exponential service requirements and independent routing.

Course Outcomes:

At the end of the course, the students will be able to

1. Analyze the various classifications of Random Processes and characterize phenomena which evolve with respect to time in a probabilistic manner.
2. Apply the ideas of Random Processes to the LTI Systems for Spectral analysis.
3. Understand Markov Chains and regenerative processes used in modeling a wide variety of systems.
4. Understand the basic characteristic features of a queuing system and acquire skills in analyzing queuing models.
5. Analyze the performance of the queuing networks.

UNIT I

REVIEW OF RANDOM PROCESSES: Classification of General Random Processes, Binomial Processes, Poisson Processes, Ergodic Process, Gaussian Random Processes, Stationary and Wide Sense Stationary Random Processes, Random walks and gambler's ruin, Processes with independent increments and martingales, Brownian motion, Counting processes and the Poisson process, Stationarity, Joint properties of random processes.

UNIT II

RANDOM PROCESSES IN LINEAR SYSTEMS AND SPECTRAL ANALYSIS: Basic definitions, Spectral Density Function, transfer functions and power spectral densities, Discrete-time processes in linear systems, Low Pass and Band Pass Processes, Baseband random processes, Narrowband random processes.

UNIT III

MARKOV PROCESSES: Markov Chains, Probability Distribution of a Markov Chain, Transition Probability Matrices of a Markov Chain, Classification of States and Chains, Chapman-Kolmogorov Theorem, Stationary Distribution for a Markov Chains, Classification of States of a Markov Chain, Birth and Death Processes, Renewal Process, The Transition Probability Function, Limiting Probabilities, Exponential Distribution & Poison Process.

UNIT IV

QUEUING THEORY: Basic Characteristics of Queueing Models, Introduction to Markovian queueing models, Steady state distribution, Little's Theorem, Cost equations, steady state probabilities, Queuing Models: **(M/M/1) : (∞/FIFO)** Single server with infinite system capacity, **(M/M/1) : (k/FIFO)**

Single Server with Finite Capacity, **(M/M/s) : (∞/FIFO)** Multiple Server with Infinite Capacity, **(M/M/s) : (k/FIFO)** Multiple Server with Finite Capacity, models balance equations, Erlang's B and C formulae, M/G/1 Queuing system characteristics, Queues with finite waiting rooms – Queues with impatient customers: Balking and reneging.

Unit V

QUEUEING NETWORKS: Network of queues basic concepts, Tandem Queues, Channels in Series or Jackson Networks, Queues in series with multiple channels at each phase, Closed Jackson Networks, Approximating Closed Networks, Open Networks with General Customer Routes, Symmetric Queues.

CM24C: Program Elective-IV
2. Pattern Recognition and Machine Learning
(Common to Signal Processing)

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To study the parametric and linear models for classification and design neural network and SVM for classification
2. To develop machine independent and unsupervised learning techniques.

Course Outcomes:

At the end of this course, students will be able to

1. Study the parametric and linear models for classification
2. Design neural network and SVM for classification

3. Develop machine independent and unsupervised learning techniques.

Syllabus Contents:

Unit 1

Introduction to Pattern Recognition: Problems, applications, design cycle, learning andadaptation, examples, Probability Distributions, Parametric Learning - Maximum likelihood and Bayesian Decision Theory- Bayes rule, discriminant functions, loss functions and Bayesian error analysis

Unit 2

Linear models: Linear Models for Regression, linear regression, logistic regression LinearModels for Classification

Unit 3

Neural Network: perceptron, multi-layer perceptron, back propagation algorithm, error surfaces,practical techniques for improving back propagation, additional networks and training methods, Adaboost, Deep Learning

Unit 4

Linear discriminant functions - decision surfaces, two-category, multi-category, minimum-squared error procedures, the Ho-Kashyap procedures, linear programming algorithms, Support vector machine

Unit 5

Algorithm independent machine learning – lack of inherent superiority of any classifier, biasand variance, re-sampling for classifier design, combining classifiers

Unsupervised learning and clustering – k-means clustering, fuzzy k-means clustering,hierarchical clustering

CM24C: Program Elective-IV
3. Programmable Networks - SDN, NFV

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To understand advanced concepts in Programmable Networks, Software Defined Networking, an emerging Internet architectural framework.
2. To know the main concepts, architectures, algorithms, protocols and applications in SDN and NFV.

Course Outcomes:

At the end of this course, students will be able to

1. Understand advanced concepts in Programmable Networks.
2. Understand Software Defined Networking, an emerging Internet architectural framework.
3. Implement the main concepts, architectures, algorithms, protocols and applications in SDN and NFV.

Syllabus Contents:

Unit 1

Introduction to Programmable Networks, History and Evolution of Software Defined Networking (SDN), Fundamental Characteristics of SDN, Separation of Control Plane and Data Plane, Active Networking.

Unit 2

Control and Data Plane Separation: Concepts, Advantages and Disadvantages, the basics of Open Flow protocol.

Network Virtualization: Concepts, Applications, Existing Network Virtualization Framework, Mininet A simulation environment for SDN.

Unit 3

Control Plane: Overview, Existing SDN Controllers including Floodlight and Open Day light projects. Customization of Control Plane: Switching and Firewall Implementation using SDN Concepts. Data Plane: Software-based and Hadrware-based; Programmable Network Hardware.

Unit 4

Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs. Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications.

Unit 5

Data Center Networks: Packet, Optical and Wireless Architectures, Network Topologies. Use Cases of SDNs: Data Centers, Internet Exchange Points, Backbone Networks, Home Networks, Traffic Engineering.

CM24C: Program Elective-IV
4. Remote Sensing
(Common to Signal Processing)

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To understand basic concepts, principles and applications of remote sensing, particularly the geometric and radiometric principles
2. To know the applications of principles to a variety of topics in remote sensing, particularly related to data collection, radiation, resolution, and sampling.

Course Outcomes:

At the end of this course, students shall be able to

1. Understand basic concepts, principles and applications of remote sensing, particularly the geometric and radiometric principles
2. Provide examples of applications of principles to a variety of topics in remote sensing, particularly related to data collection, radiation, resolution, and sampling.

Syllabus Contents:

Unit 1

Physics Of Remote Sensing: Electro Magnetic Spectrum, Physics of Remote Sensing-Effects of Atmosphere-Scattering–Different types–Absorption-Atmospheric window-Energy interaction with surface features –Spectral reflectance of vegetation, soil and water atmospheric influence on spectral response patterns-multi concept in Remote sensing.

Data Acquisition: Types of Platforms–different types of aircrafts-Manned and Unmanned space crafts–sun synchronous and geo synchronous satellites – Types and characteristics of different platforms –LANDSAT, SPOT, IRS, INSAT, IKONOS, QUICKBIRDetc.

Unit 2

Photographic products, B/W,color, color IR film and their characteristics – resolving power of lens and film - Optomechanical electro optical sensors – across track and along track scanners-multispectral scanners and thermal scanners–geometric characteristics of scanner imagery - calibration of thermal scanners.

Unit 3

Scattering System: Microwave scatterometry, types of RADAR –SLAR – resolution –range and azimuth –real aperture and synthetic aperture RADAR. Characteristics of Microwave images topographic effect-different types of Remote Sensing platforms –airborne and space borne sensors -ERS, JERS, RADARSAT, RISAT -Scatterometer, Altimeter-LiDAR remote sensing, principles, applications.

Unit 4

Thermal And Hyper Spectral Remote Sensing: Sensors characteristics-principle of spectroscopy-imaging spectroscopy–field conditions, compound spectral curve, Spectral library, radiative models, processing procedures, derivative spectrometry, thermal remote sensing –thermal sensors, principles, thermal data processing, applications.

Unit 5

Data Analysis: Resolution–Spatial, Spectral, Radiometric and temporal resolution-signal to noise ratio-data products and their characteristics-visual and digital interpretation–Basic principles of data processing – Radiometric correction–Image enhancement–Image classification–Principles of LiDAR, Aerial Laser Terrain Mapping.

CM25L: Antennas and Radiating Systems Lab

Instruction Hours/week : 3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To determine specifications, design, construct and test antenna.
2. To explore and use tools for designing, analyzing and testing antennas. These tools include Antenna design and analysis software, network analyzers, spectrum analyzers, and antenna pattern measurement techniques.

Course Outcomes:

At the end of this course, students will be able to

1. Determine specifications, design, construct and test antenna.
2. Explore and use tools for designing, analyzing and testing antennas. These tools include Antenna design and analysis software, network analyzers, spectrum analyzers, and antenna pattern measurement techniques.

List of Assignments:

1. Simulation of half wave dipole antenna.
2. Simulation of change of the radius and length of dipole wire on frequency of resonance of antenna.
3. Simulation of quarter wave, full wave antenna and comparison of their parameters.
4. Simulation of monopole antenna with and without ground plane.
5. Study the effect of the height of the monopole antenna on the radiation characteristics of the antenna.

6. Simulation of a half wave dipole antenna array.
7. Study the effect of change in distance between elements of array on radiation pattern of dipole array.
8. Study the effect of the variation of phase difference 'beta' between the elements of the array on the radiation pattern of the dipole array.
9. Case study.

CM26L: Advanced Communication Networks Lab

Instruction Hours/week : 3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination :60**

Course Objectives:

1. To identify the different types of network devices and their functions within a network.
2. To understand the skills of sub-netting and routing mechanisms, basic protocols of computer networks, and how they can be used to assist in network design and implementation.

Course Outcomes:

At the end of this course, students will be able to

1. Identify the different types of network devices and their functions within a network.
2. Understand and build the skills of sub-netting and routing mechanisms.
3. Understand basic protocols of computer networks, and how they can be used to assist in network design and implementation.

List of Assignments:

1. Study of Networking Commands (Ping, Tracert, TELNET, nslookup, netstat, ARP, RARP) and Network Configuration Files.
2. Linux Network Configuration.
   a. Configuring NIC's IP Address.
   b. Determining IP Address and MAC Address using if-config command.
   c. Changing IP Address using if-config.
   d. Static IP Address and Configuration by Editing.
   e. Determining IP Address using DHCP.
   f. Configuring Hostname in /etc/hosts file.
3. Design TCP iterative Client and Server application to reverse the given input sentence.
4. Design a TCP concurrent Server to convert a given text into upper case using multiplexing system call "select".
5. Design UDP Client Server to transfer a file.
6. Configure a DHCP Server to serve contiguous IP addresses to a pool of

four IP devices with a default gateway and a default DNS address. Integrate the DHCP server with a BOOTP demon to automatically serve Windows and Linux OS Binaries based on client MAC address.

   a. Configure DNS: Make a caching DNS client, and a DNS Proxy; implement reverse DNS and forward DNS, using TCP dump/Wireshark characterise traffic when the DNS server is up and when it is down.

7. Configure a mail server for IMAP/POP protocols and write a simple SMTP client in C/C++/Java client to send and receive mails.
8. Configure FTP Server on a Linux/Windows machine using a FTP client/SFTP client characterise file transfer rate for a cluster of small files 100k each and a video file of 700mb.Use a TFTP client and repeat the experiment.
9. Signaling and QoS of labeled paths using RSVP in MPLS.
10. Find shortest paths through provider network for RSVP and BGP.
11. Understand configuration, forwarding tables, and debugging of MPLS.

CM27C:Cyber Security

Course Type:	**Value Added**	**Semester:**	**II Sem**	**Credits :**	**3**
Course Code:	**CM27C**	**Theory :**	**2 Hrs/ Week**	**Practical :**	**2Hrs/ Week**
		Assessment:	**Lab reports and written exams**	**Internal Continuous Assessment:**	**100 M**

Course Overview / Description: Cyber security is perhaps the most important topic in today environment. Demand for cyber security professionals has exploded, in the private and public sectors alike. Student can learn how to defend information systems from cyber attacks, how to recover compromised systems, how to architect secure systems and so much more. This course is focuses on the models, tools, and techniques for enforcement of security with some emphasis on the use of cryptography. Students will learn security from multiple perspectives.

Course Learning Objectives:

1. To prepare students with the technical knowledge and skills needed to protect and defend computer systems and networks from cyber security attacks.
2. To develop graduates that can plan, implement, and monitor cyber security mechanisms to help ensure the protection of information

technology assets.
3. To develop graduates that can identify, analyze, and remediate computer security breaches.

Course Outcomes: After completing this course student will be:

1. Be able to understand the basic terminologies related to cyber security and current cyber security threat landscape. They will also develop understanding about the Cyber warfare and necessity to strengthen the cyber security of end user machine, critical IT and national critical infrastructure.
2. Have complete understanding of the cyber attacks that target computers, mobiles and persons. They will also develop understanding about the type and nature of cyber crimes and as to how report these crimes through the prescribed legal and Government channels.
3. Be able to understand the legal framework that exist in India for cyber crimes and penalties and punishments for such crimes, It will also expose students to limitations of existing IT Act, 2000 legal framework that is followed in other countries and legal and ethical aspects related to new technologies.
4. Understand the aspects related to personal data privacy and security. They will also get insight into the Data Protection Bill, 2019 and data privacy and security issues related to Social media platforms.
5. Understand the main components of cyber security plan. They will also get insights into risk-based assessment, requirement of security controls and need for cyber security audit and compliance.

Unit- I Overview of Cyber security

Cyber security increasing threat landscape, Cyber security terminologies- Cyberspace, attack, attack vector, attack surface, threat, risk, vulnerability, exploit, exploitation, hacker., Non-state actors, Cyber terrorism, Protection of end user machine, Critical IT and National Critical Infrastructure, Cyber warfare, Case Studies.

Unit-II Cyber Crimes

Cyber crimes targeting Computer systems and Mobiles- data diddling attacks, spyware, logic bombs, DoS, DDoS, APTs, virus, Trojans, ransomware, data breach., Online scams and frauds- email scams, Phishing, Vishing, Smishing, Online job fraud, Online sextortion, Debit/ credit card fraud, Online payment fraud, Cyber bullying, website defacement, Cyber squatting, Pharming, Cyber espionage, Cryptojacking, Darknet- illegal trades, drug trafficking, human trafficking., Social Media Scams & Frauds- impersonation, identity theft, job scams, misinformation, fake news cyber crime against persons - cyber grooming, child pornography, cyber stalking., Social Engineering attacks, Cyber Police stations, Crime reporting procedure, Case studies.

Unit-III Cyber Law

Cyber crime and legal landscape around the world, IT Act, 2000 and its amendments, Limitations of IT Act, 2000,Cyber crime and punishments, Cyber Laws and Legal and ethical aspects related to new technologies-

AI/ML, IoT, Blockchain, Darknet and Social media, Cyber Laws of other countries, Case Studies.

Unit-IV Data Privacy and Data Security

Defining data, meta-data, big data, non-personal data. Data protection, Data privacy and data security, Personal Data Protection Bill and its compliance, Data protection principles, Big data security issues and challenges, Data protection regulations of other countries- General Data Protection Regulations(GDPR), 2016 Personal Information Protection and Electronic Documents Act (PIPEDA), Social media- data privacy and security issues.

Unit-V Cyber security Management, Compliance and Governance:

Cyber security Plan- cyber security policy, cyber crises management plan, Business continuity, Risk assessment, Types of security controls and their goals, Cyber security audit and compliance, National cyber security policy and strategy.

Practical Work

The practical list has been suggested for the applicable modules; however, the faculty may expand the list as per the syllabus content duly taking into consideration the emerging nature of cyber threats and incumbent protective measures to guard against such threats.

Practical list of Experiments:

1. Platforms for reporting cyber crimes.
2. Checklist for reporting cyber crimes online.
3. Setting privacy settings on social media platforms.
4. Do's and Don'ts for posting content on Social media platforms.
5. Registering complaints on a Social media platform.
6. Prepare password policy for computer and mobile device.
7. List out security controls for computer and implement technical security controls in the personal computer.
8. List out security controls for mobile phone and implement technical security controls in the personal mobile phone.
9. Log into computer system as an administrator and check the security policies in the system.

Text Books/ References:

1. Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives by Sumit Belapure and Nina Godbole, Wiley India Pvt. Ltd.
2. Information Warfare and Security by Dorothy F. Denning, Addison Wesley.
3. Security in the Digital Age: Social Media Security Threats and Vulnerabilities by Henry A. Oliver, Create Space Independent Publishing Platform.
4. Data Privacy Principles and Practice by Natraj Venkataramanan and Ashwin Shriram, CRC Press.

5. Information Security Governance, Guidance for Information Security Managers by W. KragBrothy, 1st Edition, Wiley Publication.
6. Auditing IT Infrastructures for Compliance By Martin Weiss, Michael G. Solomon, 2nd Edition, Jones Bartlett Learning.

CM28M:Mini Project With Seminar

Instruction Hours/week : 4(P) **Credits : 2**
Sessional Marks : 100 **Semester-end Examination :-**

Course Outcomes:

At the end of this course, students will be able to

1. Understand of contemporary / emerging technology for various processes and systems.
2. Share knowledge effectively in oral and written form and formulate documents.

Syllabus Contents:

The students are required to search / gather the material / information on a specific a topic comprehend it and present / discuss in the class.

Semester III & IV
(Dissertation) Dissertation Phase – I, Phase – II and Viva-Voce

Instruction Hours/week : 24+20(P) **Credits : 12+16**
Sessional Marks : 40+40 **Semester-end Examination : 60+60**

Course Outcomes:

At the end of this course, students will be able to

1. Ability to synthesize knowledge and skills previously gained and applied to an in-depth study and execution of new technical problem.
2. Capable to select from different methodologies, methods and forms of analysis to produce a suitable research design, and justify their design.
3. Ability to present the findings of their technical solution in a written report.
4. Presenting the work in International/ National conference or reputed journals.

Syllabus Contents:

The dissertation / project topic should be selected / chosen to ensure the satisfaction of the urgent need to establish a direct link between education, national development and productivity and thus reduce the gap between the world of work and the world of study. The dissertation should have the

following

- Relevance to social needs of society
- Relevance to value addition to existing facilities in the institute
- Relevance to industry need
- Problems of national importance
- Research and development in various domain

The student should complete the following:

- Literature survey Problem Definition
- Motivation for study and Objectives
- Preliminary design / feasibility / modular approaches
- Implementation and Verification
- Report and presentation

The dissertation stage II is based on a report prepared by the students on dissertation allotted to them. It may be based on:

- Experimental verification / Proof of concept.
- Design, fabrication, testing of Communication System.
- The viva-voce examination will be based on the above report and work.

Guidelines for Dissertation Phase – I and II at M. Tech. (Electronics):

- As per the AICTE directives, the dissertation is a yearlong activity, to be carried out and evaluated in two phases i.e. Phase – I: July to December and Phase – II: January to June.
- The dissertation may be carried out preferably in-house i.e. department's laboratories and centers OR in industry allotted through department's T & P coordinator.
- After multiple interactions with guide and based on comprehensive literature survey, the student shall identify the domain and define dissertation objectives. The referred literature should preferably include IEEE/IET/IETE/Springer/Science Direct/ACM journals in the areas of Computing and Processing (Hardware and Software), Circuits-Devices and Systems, Communication-Networking and Security, Robotics and Control Systems, Signal Processing and Analysis and any other related domain. In case of Industry sponsored projects, the relevant application notes, while papers, product catalogues should be referred and reported.
- Student is expected to detail out specifications, methodology, resources required, critical issues involved in design and implementation and phase wise work distribution, and submit the proposal within a month from the date of registration.
- Phase – I deliverables: A document report comprising of summary of

literature survey, detailed objectives, project specifications, paper and/or computer aided design, proof of concept/functionality, part results, A record of continuous progress.

- Phase – I evaluation: A committee comprising of guides of respective specialization shall assess the progress/performance of the student based on report, presentation and Q & A. In case of unsatisfactory performance, committee may recommend repeating the Phase-I work.
- During phase – II, student is expected to exert on design, development and testing of the proposed work as per the schedule. Accomplished results/contributions/innovations should be published in terms of research papers in reputed journals and reviewed focused conferences OR IP/Patents.
- Phase – II deliverables: A dissertation report as per the specified format, developed system in the form of hardware and/or software, a record of continuous progress.
- Phase – II evaluation: Guide along with appointed external examiner shall assess the
- progress/performance of the student based on report, presentation and Q & A. In case of unsatisfactory performance, committee may recommend for extension or repeating the work.

M. Tech.(Electronics and Communication Engineering)
Curriculum Structure
Specialization: Signal processing

Vision of The Institute

The Vision of Sri Venkateswara University College of Engineering is to be the leader in the creation and development of globally competitive human capital in Engineering Education for Technological, Economical and Social Enrichment of the Society, through its open and flexible Academic Programs.

Mission of The Institute

1. To be recognized as a premier institution offering Engineering Education programs, training human resources oriented to problem solving and system development.
2. To carry out research in Engineering and Technology relevant to all segments of society.
3. To assume leadership in sustainable technological growth of the Indian society.
4. To be a natural destination for excellence and diversity in thought and practice.

Department of Electronics &Communication Engineering

Vision

To be a lead department imparting quality and value embedded higher education and research emphasizing freedom of learning andpractice.

Mission

1. Transforming students into full-fledged professionals and to become leaders in dynamic global environment.
2. Augmenting knowledge and technologies in rapidly advancing fields of Electronics and Communication Engineering.
3. Promoting in depth research and create Centre of excellence in thrust areas.

Program Outcomes (POs) for PG programs

POs are statements that describe what students are expected to know and

be able to do upon graduating from the program. These relate to the skills, knowledge, analytical ability attitude and behaviour that students acquire through the program.
The POs essentially indicate what the students can do from subject-wise knowledge acquired by them during the program. As such, POs define the professional profile of a graduate of PG Engineering Program.

NBA has defined the following three POs for a graduate of PG Engineering Program:

1. **PO1**: An ability to independently carry out research/investigation and development work to solve practical problems.
2. **PO2**: An ability to write and present a substantial technical report/document.
3. **PO3**: Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

Program Specific Outcomes (PSOs):

M. Tech. in Signal Processing graduates will be able to:

1. **PSO 1**. Integrate knowledge to identify, formulate, solve complex problems and apply in Signal Processing, Machine Vision and Communication Networks.
2. **PSO 2.** Use the concepts and software tools of signal processing to design the systems to meet the specific needs within economic, social and environmental constraints.

Program Educational Objectives (PEOs):

M. Tech. in Signal Processing Program, graduates will be able to:

1. **PEO 1.**Providetechnical competency to identify, analyze and solve engineering problems pertaining to design, development, and deployment of signal processing systems.
2. **PEO 2.**Possess suitable knowledge for analyzing, modelling, and evaluating the research problems in signal processing to pursue research and enhance the employability.
3. **PEO 3.**Inculcate professionalism, ethical attitude, communication skills, social values and ability to relate engineering solutions to real life and practical applications.

SP11C Advanced Digital Signal Processing
(Common to Communication Systems)

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination: 60**

Course Description: This course will provide rigorous foundations in Digital filter structures, Multirate signal processing, Linear prediction, Adaptive filters and Spectral estimation. This course emphasizes the use of digital signal processing techniques for designing digital systems used in Communications, Control, Media Applications etc.

Prerequisites: Signals and Systems, Digital Signal Processing.

Course Objectives: To enable the student to

1. Understand to develop FIR & IIR filter structures depending upon the given applications.
2. Understand theory of Multirate DSP, solve numerical problems and write algorithms.
3. Understand theory of prediction and solution of normal equations.
4. Understand the different types of adaptive filters used in signal processing applications.
5. Discuss different methods of spectrum estimation and analysis.

Course Outcomes: After completion of the course, student will be able to

1. Learn and implement the digital filters to computational complexity problems.
2. Analyze multirate DSP systems and Design a decimator and integrator including multi-stages.
3. Apply theory of prediction and find solution of normal equations
4. Design different types of filters such as Adaptive filters, poly phase filters, Wiener filters, ARMA lattice-ladder filters, etc.
5. Estimate the power spectrum by using different methods.

Contents:

Unit 1

Digital filter structures: Basic FIR/IIR filter structures, FIR/IIR Cascaded lattice structures, Parallel structures, all pass realization of IIR transfer functions, Sine- cosine generator, Computational complexity of filter structures.

Unit 2

Multirate Digital Signal Processing: Decimators and Interpolators, Sampling rate conversion, multistage decimator & interpolator, poly phase

filters, Quadrature mirror filter (QMF) banks, Conditions for perfect reconstruction, digital filter banks, Applications in sub-band coding.

Unit 3

Linear Prediction and Optimum Linear Filters: Innovations Representation of a Stationary Random Process, Forward and Backward linear prediction, Solution of the Normal Equations, Properties of linear prediction-Error Filter, AR Lattice and ARMA Lattice-Ladder Filters, Wiener Filters for Filtering and Prediction.

Unit 4

Adaptive Filters, Applications, Gradient Adaptive Lattice, Minimum mean square criterion, The Least-Mean-Square (LMS) algorithm, Normalized LMS (NLMS), The Leaky LMS, Recursive Least Square (RLS) algorithm.

Unit 5

Power Spectral Estimation: Estimation of Spectra from Finite Duration Observations of a Signal, Periodogram, Use DFT in power Spectral Estimation, Bartlett, Welch and Blackman, Tukey methods, Comparison of performance of Non-Parametric Power Spectrum Estimation Methods.

Parametric Methods of Power Spectrum Estimation: Relationship between Auto-Correlation and Model Parameters, Yule-Walker, Burg and Unconstructrained Least Squares Methods, Moving Average (MA) and ARMA Models Minimum Variance Method, Eigen analysis Algorithms for Spectrum Estimation.

SP12C Digital Image and Video Processing

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination: 60**

Course Description:n this course you will learn the basic principles and tools used to process images and videos, and how to apply them in solving practical problems. Digital images and videos are everywhere these days – in thousands of scientific, consumer, industrial, and creative applications. Which are obtained from a wide range of the electromagnetic spectrum - from visible light and infrared to gamma rays and beyond. The ability to process image and video signals is therefore an incredibly important skill to master for engineering/science students, software developers, and practicing scientists. Digital image and video processing continues to enable the multimedia technology revolution we are experiencing today. This course will strengthen fundamental knowledge about digital image and video processing techniques along with mathematical framework to describe and analyze images and videos. Digital image and video processing is used in almost all engineering fields and wide range of applications in industrial automation, medical, agriculture, security, entertainment, education and many more.

Course Objectives: The student should be made to:

1. To know the concept of image fundamentals and mathematical transforms necessary for image Processing
2. To study the image enhancement and segmentation techniques
3. To learn about different color models and image compression procedures
4. To understand fundamentals of Video Coding

Course Outcomes:

At the end of this course, students will be able to

1. Learn different techniques for image enhancement, video and image recovery
2. Understand techniques for image and video segmentation
3. Study techniques for image and video compression and object recognition

Syllabus Contents:

Unit 1

Digital Image and Video Fundamentals: Digital image and video fundamentals and formats, 2-D and 3-D sampling and aliasing, 2-D/3-D filtering, image decimation/interpolation, video sampling and interpolation, Basic image processing operations, Image Transforms,Need for image

transforms, DFT, DCT, Walsh, Hadamard transform, Haar transform, Wavelet transform

Unit 2

Image and Video Enhancement and Restoration: Histogram, Point processing, filtering, image restoration, algorithms for 2-D motion estimation, change detection, motion-compensated filtering, frame rate conversion, deinterlacing, video resolution enhancement, Image and Video restoration (recovery).

Colour image Processing: Colour fundamentals, Colour models, Conversion of colour models, Pseudo colour image processing, Full colour processing

Unit 3

Image and Video Segmentation: Discontinuity based segmentation- Line detection, edge detection, thresholding, Region based segmentation, Scene Change Detection, Spatiotemporal Change Detection, Motion Segmentation, Simultaneous Motion Estimation and Segmentation Semantic Video Object Segmentation, Morphological image processing.

Unit 4

Image and Video Compression: Lossless image compression including entropy coding, lossy image compression, video compression techniques, and international standards for image and video compression (JPEG, JPEG 2000, MPEG-2/4, H.264, SVC), Video Quality Assessment

Unit 5

Object recognition: Image Feature representation and description-boundary representation, boundary descriptors, regional descriptors, feature selection techniques, introduction to classification, supervised and unsupervised learning, Template matching, Bayes classifier

SP13C DSP Architecture
(Common to Communication Systems)

Instruction Hours/week :(L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination: 60**

Course Description: This course explains fundamental concepts of Digital Signal Processing and implementation of various applications on Advanced Processor. Helps students to understand architecture of advanced Digital Signal Processor and how to program it for signal processing applications.

Course Objectives:

1. To describe features and architectural improvements of DSP processors.
2. Introduce addressing modes and instruction description of TMS320C6x processors.
3. To demonstrate data representation in DSP Processors and FIR filters.
4. To demonstrate the usefulness of the adaptive filters and learn techniques of code optimization.

Course Outcomes:

1. At the end of this course, students will be able to
2. Identify and formalize architectural level characterization of P-DSP hardware
3. Ability to design, programming (assembly and C), and testing code using Code Composer Studio environment
4. Deployment of DSP hardware for Control, Audio and Video Signal processing applications
5. Understanding of major areas and challenges in DSP based embedded systems.

Syllabus Contents:

Unit 1

Programmable DSP Hardware: Processing Architectures (von Neumann, Harvard), DSP core algorithms (FIR, IIR, Convolution, Correlation, FFT), IEEE standard for Fixed and Floating Point Computations, Special Architectures Modules used in Digital Signal Processors (like MAC unit, Barrel shifters), On-Chip peripherals, DSP benchmarking.

Unit 2

Structural and Architectural Considerations: Parallelism in DSP processing, Texas Instruments, TMS320 Digital Signal Processor Families, Fixed Point TI DSP Processors: TMS320C1X and TMS320C2X Family,TMS320C25 – Internal Architecture, Arithmetic and Logic Unit, Auxiliary Registers,

Addressing Modes (Immediate, Direct and Indirect, Bit-reverse Addressing), Basics of TMS320C54x and C55x Families in respect of Architecture improvements and new applications fields, TMS320C5416 DSP Architecture, Memory Map, Interrupt System, Peripheral Devices, Illustrative Examples for assembly coding.

Unit 3

VLIW Architecture: Current DSP Architectures, GPUs as an alternative to DSP Processors, TMS320C6X Family, Addressing Modes, Replacement of MAC unit by ILP, Detailed study of ISA, Assembly Language Programming, Code Composer Studio, Mixed Cand Assembly Language programming, On-chip peripherals, Simple applications developments as an embedded environment.

Unit 4

Multi-core DSPs: Introduction to Multi-core computing and applicability for DSP hardware, Concept of threads, introduction to P-thread, mutex and similar concepts, heterogeneous and homogenous multi-core systems, Shared Memory parallel programming –OpenMP approach of parallel programming, PRAGMA directives, OpenMP Constructs for work sharing like for loop, sections, TI TMS320C6678 (Eight Core subsystem).

Unit 5

FPGA based DSP Systems: Limitations of P-DSPs, Requirements of Signal processing for Cognitive Radio (SDR), FPGA based signal processing design-case study of a complete design of DSP processor,High Performance Computing using P-DSP: Preliminaries of HPC, MPI, OpenMP, multicore DSP as HPC infrastructure.

SP14C :Program Elective-I

1. Computer Vision

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course introduces fundamental concepts, theories, and algorithms for pattern recognition and machine learning, which are used in computer vision, speech recognition, data mining, statistics, information retrieval, and bioinformatics. Topics include: Bayesian decision theory, parametric and non-parametric learning, data clustering, component analysis, boosting techniques, support vector machine, and deep learning with neural networks.

Course Objectives:

1. To understand, describe and critique pattern recognition, machine learning and deep learning techniques.
2. To identify and select suitable modeling, learning and prediction techniques to solve a problem.
3. To design and implement a machine learning solution.
4. To appraise ethical and privacy issues of artificial intelligence techniques.

Course Outcomes:

At the end of this course, students will be able to

1. Study the image formation models and feature extraction for computer vision
2. Identify the segmentation and motion detection and estimation techniques
3. Develop small applications and detect the objects in various applications

Syllabus Contents:

Unit 1

Image Formation Models: Monocular imaging system • Orthographic & Perspective Projection • Camera model and Camera calibration • Binocular imaging systems, Perspective, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration. Apparel, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration. Apparel, Stereo vision

Unit 2

Feature Extraction

Image representations (continuous and discrete) • Edge detection, Edge

linking, corner detection, texture, binary shape analysis, boundary pattern analysis, circle and ellipse detection, Light at Surfaces; Phong Model; Reflectance Map; Albedo estimation; Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, color, motion and edges.

Unit 3

Shape Representation and Segmentation • Deformable curves and surfaces • Snakes and activecontours • Level set representations • Fourier and wavelet descriptors • Medial representations • Multi-resolution analysis, Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation

Unit 4

Motion Detection and Estimation • Regularization theory • Optical computation • Stereo Vision

Motion estimation, Background Subtraction and Modelling, Optical Flow, KLT, Spatio-Temporal Analysis, Dynamic Stereo; Motion parameter estimation • Structure from motion, Motion Tracking in Video

Unit 5

Object recognition • Hough transforms and other simple object recognition methods, Shapecorrespondence and shape matching, Principal component analysis, Shape priors for recognition.

Applications of Computer Vision: Automated Visual Inspection, Inspection of Cereal Grains, Surveillance, In-Vehicle Vision Systems, CBIR, CBVR, Activity Recognition, computational photography, Biometrics, stitching and document processing

SP14C : Program Elective-I

2. Artificial Intelligence

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course introduces fundamental concepts, theories, and algorithms for pattern recognition and machine learning, which are used in computer vision, speech recognition, data mining, statistics, information retrieval, and bioinformatics. Topics include: Bayesian decision theory, parametric and non-parametric learning, data clustering, component analysis, boosting techniques, support vector machine, and deep learning with neural networks.

Course Objectives:

1. To understand, describe and critique pattern recognition, machine learning and deep learning techniques.
2. To identify and select suitable modeling, learning and prediction techniques to solve a problem.
3. To design and implement a machine learning solution.
4. To appraise ethical and privacy issues of artificial intelligence techniques.

Syllabus Contents:

Unit 1

What is AI (Artificial Intelligence)? : The AI Problems, The Underlying Assumption, What are AI Techniques, The Level Of The Model, Criteria For Success, Some General References, One Final WordProblems, State Space Search & Heuristic Search Techniques: Defining The Problems As A State Space Search, Production Systems, Production Characteristics, Production System Characteristics, And Issues In The Design Of Search Programs, Additional Problems. Generate-And-Test, Hill Climbing, Best-First Search, Problem Reduction, Constraint Satisfaction, Means-Ends Analysis.

Unit 2

Knowledge Representation Issues: Representations And Mappings, Approaches To Knowledge
Representation. Using Predicate Logic: Representation Simple Facts In Logic, Representing Instance And Isa Relationships, Computable Functions And Predicates, Resolution. Representing Knowledge Using Rules: Procedural Versus Declarative Knowledge, Logic Programming, Forward Versus Backward Reasoning.

Unit 3

Symbolic Reasoning Under Uncertainty: Introduction To No monotonic Reasoning, Logics For Non-monotonic Reasoning. Statistical Reasoning: Probability And Bays' Theorem, Certainty.Factors And Rule-Base Systems, Bayesian Networks, Dempster Shafer Theory.

Fuzzy Logic. Weak Slot-and-Filler Structures: Semantic Nets, Frames. Strong Slot-and-Filler

Structures: Conceptual Dependency, Scripts, CYC

Unit 4`

Game Playing: Overview, And Example Domain: Overview, MiniMax, Alpha-Beta Cut-off, Refinements, Iterative deepening, The Blocks World, Components Of A Planning System, Goal Stack Planning, Nonlinear Planning Using Constraint Posting, Hierarchical Planning, Reactive Systems, Other Planning Techniques. Understanding: What is understanding? What makes it hard? As constraint satisfaction

Unit 5

Natural Language Processing: Introduction, Syntactic Processing, Semantic Analysis, Semantic Analysis, Discourse And Pragmatic Processing, Spell Checking Connectionist Models: Introduction: Hopfield Network, Learning In Neural Network, Application of Neural Networks, Recurrent Networks, Distributed Representations, Connectionist AI And Symbolic AI.

SP14C : Program Elective-I
3. Wireless Sensor Networks
(Common to Communication Systems)

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course offers an insight into the concepts of mobile and wireless data communication technologies. The objective of this course is to enable the student to understand the emerging technologies of wireless and mobile communications and simulate them.

Course Objectives:

1. To understand the new trends in mobile/wireless communications networks.

2. To understand multiple radio access techniques.
3. To analyze various routing algorithms used in mobile/wireless networks.
4. To identify the issues in transport and application layers.

Course Outcomes:

At the end of this course, students will be able to

1. Design wireless sensor network system for different applications under consideration.
2. Understand the hardware details of different types of sensors and select right type of sensor for various applications.
3. Understand radio standards and communication protocols to be used for wireless sensor network based systems and application.
4. Use operating systems and programming languages for wireless sensor nodes, performance of wireless sensor networks systems and platforms.
5. Handle special issues related to sensors like energy conservation and security challenges.

Syllabus Contents:

Unit 1

Introduction and overview of sensor network architecture and its applications, sensornetwork comparison with Ad Hoc Networks, Sensor node architecture with hardware and software details.

Hardware: Examples like mica2, micaZ, telosB, cricket, Imote2, tmote, btnode, and Sun

SPOT, Software (Operating Systems): tinyOS, MANTIS, Contiki, and RetOS.

Unit 2

Programming tools: C, nesC. Performance comparison of wireless sensor networkssimulation and experimental platforms like open source (ns-2) and commercial (QualNet, Opnet)

Unit 3

Overview of sensor network protocols (details of atleast 2 important protocol per layer):Physical, MAC and routing/ Network layer protocols, node discovery protocols, multi-hop and cluster based protocols, Fundamentals of 802.15.4, Bluetooth, BLE (Bluetooth low energy), UWB.

Unit 4

Data dissemination and processing; differences compared with other database managementsystems, data storage; query processing.

Unit 5

Specialized features: Energy preservation and efficiency; security challenges; fault-tolerance, Issues related to Localization, connectivity and

topology, Sensor deployment mechanisms; coverage issues; sensor Web; sensor Grid, Open issues for future research, and Enabling technologies in wireless sensor network.

SP14C : Program Elective-I

4. Optimization Techniques

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Description: The students will try to learn the operation research models using optimization techniques based upon the fundamentals of engineering mathematics (minimization and Maximization of objective function). The problem formulation by using linear, dynamic programming, game theory and queuing models.

Course Objectives:

1. Operation research models using optimization techniques based upon the fundamentals of engineering mathematics (minimization and Maximization of objective function).
2. The problem formulation by using linear, dynamic programming, game theory and queuing models.
3. The stochastic models for discrete and continuous variables to control inventory and simulation of manufacturing models for the production decision making.
4. Formulation of mathematical models for quantitative analysis of managerial problems in industry.

Course Outcomes:

At the end of this course, students will be able to

1. Understand importance of optimization
2. Apply basic concepts of mathematics to formulate an optimization problem
3. Analyze and appreciate variety of performance measures for various optimization problems

Syllabus Contents:

Unit 1

Introduction to ClassicalMethods & Linear Programming ProblemsTerminology, Design Variables, Constraints, Objective Function, Problem Formulation. Calculus method, Kuhn Tucker conditions, Method of Multipliers.

Unit 2

Linear Programming Problem,Simplex method, Two-phase method, Big-M method, duality, Integer linear Programming, Dynamic Programming, Sensitivity analysis.

Unit 3

Single Variable Optimization Problems: Optimality Criterion, Bracketing Methods, Region Elimination Methods, Interval Halving Method, Fibonacci Search Method, Golden Section Method. Gradient Based Methods: Newton-Raphson Method, Bisection Method, Secant Method, Cubic search method.

Unit 4

Multi Variable and Constrained Optimization Technique, Optimality criteria, Direct search Method, Simplex search methods, Hooke-Jeeve‘s pattern search method, Powell‘s conjugate direction method,Gradient based method, Cauchy‘s Steepest descent method, Newton‘s method , Conjugate gradient method. Kuhn - Tucker conditions, Penalty Function, Concept of Lagrangian multiplier, Complex search method, Random search method.

Unit 5

Intelligent Optimization Techniques:Introduction to Intelligent Optimization, Soft Computing, Genetic Algorithm: Types of reproduction operators, crossover & mutation, Simulated Annealing Algorithm, Particle Swarm Optimization (PSO) - Graph Grammer Approach - Example Problems

Genetic Programming (GP): Principles of genetic programming, terminal sets, functional sets, differences between GA & GP, random population generation, solving differential equations using GP.

SP15C : Program Elective-II

1. Joint Time Frequency Analysis & Multi Resolution Analysis

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Introduction to Transforms in signal processing
2. To understand Time -Frequency Analysis & Multiresolution
3. Analysis Study of Wavelets and its Applications

Syllabus Contents:

Unit 1

Introduction Review of Fourier Transform, Parseval Theorem and need for joint time-frequency Analysis. Concept of non-stationary signals, Short-time Fourier transforms (STFT), Uncertainty Principle, and Localization/Isolation in time and frequency, Hilbert Spaces, Banach Spaces, and Fundamentals of Hilbert Transform.

Unit 2

Bases for Time-Frequency Analysis: Wavelet Bases and filter Banks, Tilings of Wavelet Packet and Local Cosine Bases, Wavelet Transform, Real Wavelets, Analytic Wavelets, Discrete Wavelets, Instantaneous Frequency, Quadratic time-frequency energy, Wavelet Frames, Dyadic wavelet Transform, Construction of Haar and Roof scaling function using dilation equation and graphical method.

Unit 3

Multiresolution Analysis: Haar Multiresolution Analysis, MRA Axioms, Spanning Linear Subspaces, nested subspaces, Orthogonal Wavelets Bases, Scaling Functions, Conjugate Mirror Filters, Haar 2-band filter Banks, Study of up samplers and down samplers, Conditions for alias cancellation and perfect reconstruction, Discrete wavelet transform and relationship with filter Banks, Frequency analysis of Haar 2-band filter banks, scaling and wavelet dilation equations in time and frequency domains, case study of decomposition and reconstruction of given signal using orthogonal framework of Haar 2band filter bank.

Unit 4

Wavelets: Daubechies Wavelet Bases, Daubechies compactly supported family of wavelets; Daubechies filter coefficient calculations, Case study of Daub-4 filter design, Connection between Haar and Daub-4, Concept of Regularity, Vanishing moments. Other classes of wavelets like Shannon, Meyer, and Battle-Lamarie.

Unit 5

Bi-orthogonal wavelets and Applications: Construction and design. Case studies of biorthogonal 5/3 tap design and its use in JPEG 2000. Wavelet Packet Trees, Time-frequency localization, compactly supported wavelet packets, case study of Walsh wavelet packet bases generated using Haar conjugate mirror filters till depth level 3. Lifting schemes for generating orthogonal bases of second generation wavelets.

JTFA Applications: Riesz Bases, Scalograms, Time-Frequency distributions: fundamental ideas, Applications: Speech,audio, image and video compression; signal denoising, feature extraction, inverse problem.

SP15C : Program Elective-II
2. Voice and Data Networks
(Common to Communication Systems)

Teaching Scheme

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Description: This course provides an introduction to voice and data networking technologies, including design and performance issues. And also focus is on layered & cross layer communication along with

Packet and circuit switching communication. Provides Link layer error and flow control mechanisms, also know about queuing models of networks and its applications. Finally have idea about different internet protocols and packet scheduling algorithm.

Course Objectives:

1. Know different design and performance issues of communications networks.
2. Understand the concepts of layered & cross layer communication, along with circuit & packet switching technologies and their deployments in public networks
3. Understand the role of data link layer and various queuing models for communication.
4. Understand the functions of internetworking devices and importance of different internet protocols.

Outcomes:

1. An ability to apply knowledge of networking. network topologies in designing of a network.
2. An ability to model systems using concept of layered/cross layered and TCP/IP architecture.
3. An ability apply the link layer functionalities and queuing models during communication.
4. An ability to use modern engineering techniques for analysis and design of a network with the knowledge of internet concepts and protocols.

Syllabus Contents:

Unit 1

Network Design Issues, Network Performance Issues, Network Terminology, centralized and distributed approaches for networks design, Issues in design of voice and data networks.

Unit 2

Layered and Layer less Communication, Cross layer design of Networks, Voice Networks (wired and wireless) and Switching, Circuit Switching and Packet Switching, Statistical Multiplexing.

Unit 3

Data Networks and their Design, Link layer design- Link adaptation, Link Layer Protocols, Retransmission. Mechanisms (ARQ), Hybrid ARQ (HARQ), Go Back N, Selective Repeat protocols and their analysis.

Unit 4

Queuing Models of Networks , Traffic Models , Little's Theorem, Markov chains, M/M/1 and other Markov systems, Multiple Access Protocols , Aloha System , Carrier Sensing , Examples of Local area networks,

Unit 5

Inter-networking, Bridging, Global Internet, IP protocol and addressing , Sub netting , Classless Inter domain Routing (CIDR) , IP address lookup , Routing in Internet. End to End Protocols, TCP and UDP. Congestion Control, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery,

Congestion avoidance, RED TCP Throughput Analysis, Quality of Service in Packet Networks,Network Calculus, Packet Scheduling Algorithms.

SP15C : Program Elective-II

3. Audio Video Coding & Compression

Teaching Scheme

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Familiarity to lossy and lossless compression systems.
2. Study of Video coding techniques and standards.
3. Understand audio coding and multimedia synchronization techniques.

Syllabus Contents:

Unit 1

Introduction to Multimedia Systems and Processing, Lossless Image Compression Systems Image Compression Systems, Huffman Coding, Arithmetic and Lempel-Ziv Coding, Other Coding Techniques

Unit 2

Lossy Image Compression Systems, Theory of Quantization, Delta Modulation and DPCM, Transform Coding & K-L Transforms, Discrete Cosine Transforms, Multi-Resolution Analysis, Theory of Wavelets, Discrete Wavelet Transforms, Still Image Compression Standards: JBIG and JPEG

Unit 3

Video Coding and Motion Estimation: Basic Building Blocks & Temporal Redundancy, Block based motion estimation algorithms, Other fast search motion estimation algorithms

Video Coding Standards MPEG-1 standards, MPEG-2 Standard, MPEG-4 Standard, H.261, H.263 Standards, H.264 standard

Unit 4

Audio Coding, Basic of Audio Coding, Audio Coding, Transform and Filter banks, Polyphase filter implementation, Audio Coding, Format and encoding, Psychoacoustic Models

Unit 5

Multimedia Synchronization, Basic definitions and requirements, References Model and Specification, Time stamping and pack architecture, Packet architectures and audio-video interleaving, Multimedia Synchronization, Playback continuity, Video Indexing And Retrieval: Basics of content based image retrieval, Video Content Representation, Video Sequence Query Processing

SP15C : Program Elective-II

4. Modelling and Simulation Techniques

Teaching Scheme

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination :60**

Course Outcomes:

At the end of this course, students will be able to

1. Identify and model discrete systems (deterministic and random)
2. Identify and model discrete signals (deterministic and random)
3. Understand modelling and simulation techniques to characterize systems/processes.

Syllabus Contents:

Unit 1

Introduction Circuitsas dynamicsystems, Transfer functions, poles and zeroes, State space, Deterministic Systems, Difference and Differential Equations, Solution of Linear Difference and Differential Equations, Numerical Simulation Methods for ODEs, System Identification, Stability and Sensitivity Analysis.

Unit 2

Statistical methods, Description of data, Data-fitting methods, Regression analysis, Least Squares Method, Analysis of Variance, Goodness of fit.

Unit 3

Probability and Random Processes, Discrete and Continuous Distribution, Central Limit theorem, Measure of Randomness, MonteCarlo Methods.
Stochastic Processes and Markov Chains, Time Series Models.

Unit 4

Modeling and simulation concepts, Discrete-event simulation, Event scheduling/Time advance algorithms, Verification and validation of simulation models.

Unit 5

Continuous simulation: Modeling with differential equations, Example models, Bond Graph Modeling, Population Dynamics Modeling, System dynamics.

SP16L: Advanced Digital Signal Processing Lab (Common to Communication Systems)

Instruction Hours/week :3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Overview: This practical course enables students to apply skills learned in Advanced Digital Signal Processing algorithms and will help to teach implementation of them. MATLAB is used to apply theoretical concepts and to demonstrate signal processing techniques by means of hands-on application examples. Recognize estimation problems and design, implement and analyze algorithms for solving them. Implement signal processing systems with DSP based development platforms.

Pre-requisites: Signals & Systems, Digital Signal Processing, Digital Signal Processing Lab, MATLAB, and Code Composer Studio.

Course Learning Objectives: The student after studying this courseis able to:

1. Understand how to analyze and manipulate digital signals and have the programming knowledge to do so.
2. Understand the trade-offs in the practical design and implement of various structures of FIR and IIR digital filters, for example which can be reduces noise or realizes various applications.
3. Understand theory of prediction and solution of normal equations.
4. Acquaint knowledge of the concepts, algorithms and applications of adaptive signal processing in digital communication systems.
5. Understand the implementation of adaptive filters used in signal processing applications.
6. Understand different methods for estimation of power spectra and its analysis.

Course Outcomes: After completion of this coursethe student is:

1. Able to design, analyze, and implement digital filters using MATLAB.
2. Able to implement various structures of digital filters.

3. Able to implement up-sampling and down-sampling of a given Sequences.
4. Apply the Lattice filter architecture and implement the Wiener filter, Least Squares, LMS and RLS algorithms, and apply to selected applications.
5. Deduce and apply correlation functions and power spectra for various signal classes, in particular for stochastic signals.

Course Contents:

Note: (i) Minimum of 10 Experiments have to be done invariably.
(ii) All Experiments may be Simulated using MATLAB and to be verified theoretically.

List of Experiments:

1. Introduction to DSP with MATLAB Programming Environment and Familiarization to Code Composer Studio.
2. Basic Operations on Signals, Generation of Various Signals and finding its FFT.
3. Simple Digital Filters (LPF, HPF, BPF, BSF and Comb Filters).
4. Realization of Structures (Cascade / Parallel/ Lattice Structure's) of a system transfer function.
5. Implement Program to verify Decimation and Interpolation of a given Sequences.
6. Implement Program to Convert CD data into DVD data (sampling rate converters).
7. Estimation of data series using Nth order Forward Predictor and comparing to the Original Signal.
8. Design of linear prediction coding (LPC) filter using Levinson-Durbin Algorithm.
9. Apply the Lattice filter architecture from the Levinson-Durbin algorithm.
10. Computation of Reflection Coefficients using Schur Algorithm.
11. To implement the Wiener filter, and Least Squares algorithms, and apply to selected applications.
12. To implement the LMS and RLS algorithms, and apply to selected applications.
13. Design and verification of a Matched filter.
14. Adaptive Noise Cancellation / Linear Equalizer.
15. Computing Power Spectrum of a Square Signal and chirp signal.
16. Design and Simulation of Notch Filter to remove 50Hz Hum / any unwanted frequency component of given Signal (Speech / ECG).
17. Plot the Periodogram of a Noisy Signal and estimate PSD using

Periodogram and Modified Periodogram methods.

18. Estimation of Power Spectrum using Bartlett and Welch methods.
19. Parametric methods (Yule-Walker and Burg) of Power Spectrum Estimation.

For Motivated Learners Extra experiments can be done:

Applications: Adaptive filter and experiments on communication such as generation of a N-tuple PN sequence, generation of a white noise sequence using the PN sequence, restoration of a sinusoidal signal embedded in white noise by Wiener Filtering; speech and multi-media applications.

SP17L: Digital Image and Video Processing Lab

Teaching Scheme

Instruction Hours/week :3(P) **Credits : 1.5**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Perform image and video enhancement.
2. Perform image and video segmentation
3. Detect an object in an image/video

List of Assignments:

1. Perform basic operations on images like addition, subtraction etc.
2. Plot the histogram of an image and perform histogram equalization
3. Implement segmentation algorithms

4. Perform video enhancement
5. Perform video segmentation
6. Perform image compression using lossy technique
7. Perform image compression using lossless technique
8. Perform image restoration
9. Convert a colour model into another
10. Calculate boundary features of an image
11. Calculate regional features of an image
12. Detect an object in an image/video using template matching/Bayes classifier

SP18C: Research Methodology and IPR

Instruction Hours/week : 3L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Description of the Course:
This subjects gives how to proceed systematically for research, present research findings. This course consists of basics of research methods, paper writing , patenting methods and requirements..

Course Educational Objectives (Ceos):

1. To understand the importance of research objectives and procedures.

2. To know the procedures of data collection and report writing of research.

3. To have the knowledge of filing and obtaining a patent on research findings.

UNIT I
Meaning, Objective and Motivation in Research: Types of Research, Research Approaches, Research Process, Validity and Reliability in Research, Research Design: Features of Good Design, Types of Research Design, Basic Principles of Experimental Design

UNIT II
Sampling Design: Steps in Sampling Design, Characteristics of a Good Sample Design, Random Samples and Random Sampling Design Measurement and Scaling Techniques: Errors in Measurement, , Scaling and Scale Construction techniques, Forecasting Techniques, Time Series Analysis, Interpolation and Extrapolation

UNIT III
Methods of Data Collection: Primary Data, Questionnaire and Interviews, Collection of Secondary Data, Cases and Schedules. Professional

Attitude and Goals, Concept of Excellence, Ethics in Science and Engineering, Correlation and Regression Analysis, Method of Least Squares, Regression Vs. Correlation, Correlation Vs. Determination.

UNIT IV

Interpretation of Data and Report Writing, Layout of a Research Paper, Techniques o f Interpretation. Making Scientific Presentation at Conferences and Popular Lectures to Semi Technical Audience, Participating in Pubic Debates on Scientific Issues

UNIT V

Nature of Intellectual property rights, Patents, designs, trademarks and copyrights, History of patenting, process of patenting, patent development, international cooperation on IPR, procedure of granting patent, patent rights, licensing and transferring technology, Geographical Indications ,IPR in biological and systems and software.

Text/Reference Books:

1. Research Methodology: Methods And Techniques - C. R. Kothari,2nd Edition, New Age Intemational Publishers.
2. Statistical Methods - S P. Gupta. S. chand& Sons, New Derhi.
3. Intellectual ProPerty-the law of trademarks, copyrights, Patents, and trade Secrets- Deborah E. Bouchoux, Esq.Georgetown University, Fourth edition

Course Outcomes (COs):

1.Able to know research importance and requirements and procedure

2. Able to apply sampling techniques for analysis and forecasting.

3. Able to use methods for data collection and analyze the data using different mathematical techniques.

4. Able to write report on research done and present the research findings in systematic manner.

5. Able to have the knowledge to file and obtain patent on research finding

Semester - II

SP21C: Pattern Recognition and Machine Learning (Common to Communication Systems)

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination: 60**

Course Outcomes:

At the end of this course, students will be able to

1. Study the parametric and linear models for classification
2. Design neural network and SVM for classification
3. Develop machine independent and unsupervised learning techniques.

Syllabus Contents:

Unit 1

Introduction to Pattern Recognition: Problems, applications, design cycle, learning andadaptation, examples, Probability Distributions, Parametric Learning - Maximum likelihood and Bayesian Decision Theory-Bayes rule, discriminant functions, loss functions and Bayesian error analysis

Unit 2

Linear models: Linear Models for Regression, linear regression, logistic regression LinearModels for Classification

Unit 3

Neural Network: perceptron, multi-layer perceptron, back propagation algorithm, error surfaces,practical techniques for improving back propagation, additional networks and training methods, Adaboost, Deep Learning

Unit 4

Linear discriminant functions - decision surfaces, two-category, multi-category, minimum-squared error procedures, the Ho-Kashyap procedures, linear programming algorithms, Support vector machine

Unit 5

Algorithm independent machine learning – lack of inherent superiority of any classifier, biasand variance, re-sampling for classifier design, combining classifiers

Unsupervised learning and clustering – k-means clustering, fuzzy k-means clustering,hierarchical clustering

SP22C: Detection and Estimation Theory

Instruction Hours/week : (L-T-P-C): 3-1-0-4 **Credits : 4**

Sessional Marks : 40 **Semester-End Examination: 60**

Course Outcomes:

At the end of this course, students will be able to

1. Understand the mathematical background of signal detection and estimation
2. Use classical and Bayesian approaches to formulate and solve problems for signal detection and parameter estimation from noisy signals.
3. Derive and apply filtering methods for parameter estimation.

Syllabus Contents:

Unit I

Review of Vector Spaces: Vectors and matrices: notation andproperties, orthogonality and linear independence, bases, distance properties, matrix operations, Eigen values and eigenvectors.

Properties of Symmetric Matrices: Diagonalization of symmetric matrices, symmetric positive, definite and semi definite matrices, principal component analysis (PCA), singular value decomposition.

Unit II

Review of Gaussian variables and processes; problem formulation and objective of signal detection and signal parameter estimation in discrete-time domain.

Unit III

Statistical Decision Theory:

Bayesian, minimax, and Neyman-Pearson decision rules, likelihood ratio, receiver operating characteristics, composite hypothesis testing, locally optimum tests, detector comparison techniques, asymptotic relative efficiency.

Unit IV

Detection of Random Signals:

Estimator-correlator, linear model, general Gaussian detection, detection of Gaussian random signal with unknown parameters, weak signal detection.

Unit V

Estimation of Signal Parameters:

Minimum variance unbiased estimation, Fisher information matrix,

Cramer-Rao bound, sufficient statistics, minimum statistics, complete statistics; linear models; best linear unbiased estimation; maximum likelihood estimation, invariance principle; estimation efficiency; Bayesian estimation: philosophy, nuisance parameters, risk functions, minimum mean square error estimation, maximum a posteriori estimation.

SP23C:Program Elective-III

1. Advanced Computer Architecture

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Understand parallelism and pipelining concepts, the design aspects and challenges.
2. Evaluate the issues in vector and array processors.
3. Study and analyze the high performance scalable multithreaded and multiprocessor systems.

Syllabus Contents:

Unit 1

Parallel Processing and Pipelining Processing- Architectural Classification, Applications ofparallel processing, Instruction level Parallelism and Thread Level Parallelism, Explicitly Parallel Instruction Computing (EPIC) Architecture

Unit 2

Pipeline Architecture-Principles and implementation of Pipelining, Classification of pipeliningprocessors, Design aspect of Arithmetic and

Instruction pipelining, Pipelining hazards and resolving techniques, Data buffering techniques, Advanced pipelining techniques, Software pipelining, VLIW (Very Long Instruction Word) processor.

Unit 3

Vector and Array Processor- Issues in Vector Processing, Vector performance modeling, SIMD Computer Organization, Static Vs Dynamic network, Parallel Algorithms for Array Processors: Matrix Multiplication.

Unit 4

Multiprocessor Architecture - Loosely and Tightly coupled multiprocessors, Inter Processorcommunication network, Time shared bus, Multiport Memory Model, Memory contention and arbitration techniques, Cache coherency and bus snooping, Massively Parallel Processors (MPP).

Unit 5

Multithreaded Architecture- Multithreaded processors, Latency hiding techniques, Principles ofmultithreading, Issues and solutions, Parallel Programming Techniques: Message passing program development.

Parallel algorithms for multiprocessors- Classification and performance of parallel algorithms,operating systems for multiprocessors systems, Message passing libraries for parallel programming interface, PVM (in distributed memory system), Message Passing Interfaces (MPI).

SP23C:Program Elective-III

2. IOT and Applications

(Common to Communication Systems)

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Objectives:

1. To apprise students with basic knowledge of IoT that paves a platform to understand physical and logical design of IOT
2. To teach a student how to analyse requirements of various communication models and protocols for cost-effective design of IoT

applications on different IoT platforms.
3. To introduce the technologies behind Internet of Things (IoT).
4. To explain the students how to code for an IoT application using Arduino/Raspberry Pi open platform.

Syllabus Contents:

UNIT I
THE INTERNET OF THINGS TODAY, TIME FOR CONVERGENCE
M2M to IoT – A Basic Perspective– Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structurefor IoT, The international driven global valuechain and global information monopolies. M2M to IoT-An Architectural Overview– Building anarchitecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

UNIT II
COMPONENTS IN INTERNET OF THINGS
Functional Blocks of an IoT Ecosystem – Sensors, Actuators, and Smart Objects – Control Units - Communication modules (Bluetooth, Zigbee,Wi-Fi, GPS, GSM Modules)

UNIT III
PROTOCOLS AND TECHNOLOGIES BEHIND IOT
IOT Protocols - IPv6, 6LoWPAN, MQTT, CoAP - RFID, Wireless Sensor Networks, BigData Analytics, Cloud Computing, Embedded Systems.

UNIT IV
OPEN PLATFORMS AND PROGRAMMING
IOT deployment for Raspberry Pi /Arduino platform-Architecture – Programming – Interfacing – Accessing GPIO Pins – Sending and Receiving Signals Using GPIO Pins – Connecting to the Cloud.

UNIT V
IOT APPLICATIONS
Business models for the internet of things, Smart city, Smart mobility and transport, Industrial IoT, Smart health, Environment monitoring and surveillance – Home Automation – Smart Agriculture

COURSE OUTCOMES:
Upon completion of the course, students will be able to
1. Explain the concept of IoT.
2. Understand the communication models and various protocols for IoT.
3. Design portable IoT using Arduino/Raspberry Pi/open platform.

4. Apply data analytics and use cloud offerings related to IoT.
5. Analyze applications of IoT in real time scenario.

SP23C:Program Elective-III
3. Digital Design and Verification

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Familiarity of Front end design and verification techniques and create reusable test environments.
2. Verify increasingly complex designs more efficiently and effectively.
3. Use EDA tools like Cadence, Mentor Graphics.

Syllabus Contents:

Unit 1

Revision of basic Digital systems: Combinational Circuits, Sequential Circuits, Logic families, Synchronous FSM and asynchronous design,

Metastability, Clock distribution and issues, basic building blocks like PWM module, pre-fetch unit, programmable counter, FIFO, Booth's multiplier, ALU, Barrel shifter etc.

Unit 2

Verilog/VHDL Comparisons and Guidelines, Verilog: HDL fundamentals, simulation, and test-bench design, Examples of Verilog codes for combinational and sequential logic, Verilog AMS

Unit 3

System Verilog and Verification: Verification guidelines, Data types, procedural statements and routines, connecting the test bench and design, Assertions, Basic OOP concepts, Randomization, Introduction to basic scripting language: Perl, Tcl/Tk

Unit 4

Current challenges in physical design: Roots of challenges, Delays: Wire load models Generic PD flow, Challenges in PD flow at different steps, SI Challenge - Noise & Crosstalk, IR Drop, Process effects: Process Antenna Effect &Electromigration

Unit 5

Programmable Logic Devices: Introduction, Evolution: PROM, PLA, PAL, Architecture of PAL's,

Applications, Programming PLD's, FPGA with technology: Antifuse, SRAM, EPROM, MUX, FPGA structures, and ASIC Design Flows, Programmable Interconnections, Coarse grained reconfigurable devices

IP and Prototyping: IP in various forms: RTL Source code, Encrypted Source code, Soft IP, Netlist, Physical IP, and Use of external hard IP during prototyping, Case studies, and Speed issues. Testing of logic circuits: Fault models, BIST, JTAG interface

SP23C:Program Elective-III
4. Audio Processing

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:
At the end of this course, students will be able to
1. Understand different characteristics of Speech.
2. Identify and analyze different speech analysis system.
3. Write algorithms for Recognition of speech.

Syllabus Contents:

Unit 1
Principle Characteristics of Speech: Linguistic information, Speech and Hearing, Speech production mechanism, Acoustic characteristic of speech Statistical Characteristics of speech. Speech production models, Linear Separable equivalent circuit model, Vocal Tract and Vocal Cord Model.

Unit 2
Speech Analysis and Synthesis Systems: Digitization, Sampling, Quantization and coding, Spectral Analysis, Spectral structure of speech, Autocorrelation and Short Time Fourier transform, Window function, Sound Spectrogram, Mel frequency Cepstral Coefficients, Filter bank and Zero Crossing Analysis, Analysis –by-Synthesis, Pitch Extraction.

Unit 3
Linear Predictive Coding Analysis: Principle of LPC analysis, Maximum likelihood spectral estimation, Source parameter estimation from residual signals, LPC Encoder and Decoder, PARCOR analysis and Synthesis, Line Spectral Pairs, LSP analysis and Synthesis.

Unit 4
Speech Coding: Reversible coding, Irreversible coding and Information rate distortion theory,
coding in time domain: PCM, ADPCM, Adaptive Predictive coding, coding in Frequency domain: Sub band coding, Adaptive transform coding, Vector Quantization, Code Excited Linear Predictive Coding (CELP).

Unit 5
Speech Recognition: Principles of speech recognition, Speech period detection, Spectral distance measure, Structure of word recognition system, Dynamic Time Warping (DTW), Theory and implementation of Hidden

Markov Model (HMM).
Speaker recognition: Human and Computer speaker recognition Principles Text dependent and Text Independent speaker recognition systems. Applications of speech Processing.

SP24C:Program Elective-IV
1. Random Processes and Queuing Models
(Common to Communication Systems)

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Prerequisites: Probability Theory and Stochastic Processes

Preamble: This course is designed to provide necessary basic concepts in random processes which are widely applied in random signals, linear systems in communication engineering and IT fields. The objective of this course is to familiarize the understanding of stochastic processes and queuing models. The syllabus also covers the concepts of Markovian and advanced queueing models which are essential to design and analyze communication networks.

Course Learning Objectives: The objectives of this course is to enable the student to

1. Characterize stochastic processes with an emphasis on stationary random processes.
2. Use the properties of random processes with LTI systems in real world situations.
3. Understand Markov chains and their transient behavior.
4. Differentiate between different models of queuing theory and their performance measures.
5. Understand network of queues with Poisson external arrivals, exponential service requirements and independent routing.

Course Outcomes: At the end of the course, the students will be able to

1. Analyze the various classifications of Random Processes and characterize. phenomena which evolve with respect to time in a probabilistic manner.
2. Apply the ideas of Random Processes to the LTI Systems for Spectral analysis.
3. Understand Markov Chains and regenerative processes used in modeling a

wide variety of systems.
4. Understand the basic characteristic features of a queuing system and acquire skills in analyzing queuing models.
5. Analyze the performance of the queuing networks.

UNIT I

REVIEW OF RANDOM PROCESSES: Classification of General Random Processes, Binomial Processes, Poisson Processes, Ergodic Process, Gaussian Random Processes, Stationary and Wide Sense Stationary Random Processes, Random walks and gambler's ruin, Processes with independent increments and martingales, Brownian motion, Counting processes and the Poisson process, Stationarity, Joint properties of random processes.

UNIT II

RANDOM PROCESSES IN LINEAR SYSTEMS AND SPECTRAL ANALYSIS: Basic definitions, Spectral Density Function, transfer functions and power spectral densities, Discrete-time processes in linear systems, Low Pass and Band Pass Processes, Baseband random processes, Narrowband random processes.

UNIT III

MARKOV PROCESSES: Markov Chains, Probability Distribution of a Markov Chain, Transition Probability Matrices of a Markov Chain, Classification of States and Chains, Chapman-Kolmogorov Theorem, Stationary Distribution for a Markov Chains, Classification of States of a Markov Chain, Birth and Death Processes, Renewal Process, The Transition Probability Function, Limiting Probabilities, Exponential Distribution & Poison Process.

UNIT IV

QUEUING THEORY: Basic Characteristics of Queueing Models, Introduction to Markovian queueing models, Steady state distribution, Little's Theorem, Cost equations, steady state probabilities, Queuing Models: **(M/M/1) : (∞/FIFO)** Single server with infinite system capacity, **(M/M/1) : (k/FIFO)** Single Server with Finite Capacity, **(M/M/s) : (∞/FIFO)** Multiple Server with Infinite Capacity, **(M/M/s) : (k/FIFO)** Multiple Server with Finite Capacity, models balance equations, Erlang's B and C formulae, M/G/1 Queuing system characteristics, Queues with finite waiting rooms – Queues with impatient customers: Balking and reneging.

Unit V

QUEUEING NETWORKS: Network of queues basic concepts, Tandem Queues, Channels in Series or Jackson Networks, Queues in series with multiple channels at each phase, Closed Jackson Networks, Approximating

Closed Networks, Open Networks with General Customer Routes, Symmetric Queues.

SP24C:Program Elective-IV
2. Multispectral Signal Analysis

Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Select appropriate hyperspectral data for a particular application.
2. Understand basic concepts of data acquisition and image processing tasks required for multi and hyperspectral data analysis
3. Learn techniques for classification and analysis of multi and hyperspectral data.

Syllabus Contents:

Unit 1

Hyperspectral Sensors and Applications: Introduction, Multi-spectral Scanning Systems (MSS), Hyperspectral Systems, Airborne sensors, Spaceborne sensors, Ground Spectroscopy, Software for Hyperspectral Processing, Applications, Atmosphere and Hydrosphere, Vegetation, Soils and Geology, Environmental Hazards and Anthropogenic Activity

Unit 2

Overview of Image Processing: Introduction, Image File Formats, Image Distortion and Rectification, Radiometric Distortion, Geometric Distortion

and Rectification, Image Registration, Image Enhancement, Point Operations, Geometric Operation, Image Classification, Supervised Classification, Unsupervised Classification, Crisp Classification Algorithms, Fuzzy Classification Algorithms, Classification Accuracy Assessment, Image Change Detection, Image Fusion, Automatic Target Recognition

Unit 3

Mutual Information: A Similarity Measure for Intensity Based Image Registration: Introduction, Mutual Information Similarity Measure, Joint Histogram Estimation Methods, Two-Step Joint Histogram Estimation, One-Step Joint Histogram Estimation, Interpolation Induced Artifacts, Generalized Partial Volume Estimation of Joint Histograms, Optimization Issues in the Maximization of MI

Unit 4

Independent Component Analysis: Introduction, Concept of ICA, ICA Algorithms, Preprocessing using PCA, Information Minimization Solution for ICA, ICA Solution through Non-Gaussianity Maximization, Application of ICA to Hyperspectral Imagery, Feature Extraction Based Model, Linear Mixture Model Based Model, An ICA algorithm for Hyperspectral Image Processing, Applications using ICA.

Unit 5

Support Vector Machines : Introduction, Statistical Learning Theory, Empirical Risk Minimization, Structural Risk Minimization, Design of Support Vector Machines, Linearly Separable Case, Linearly Non-Separable Case, Non-Linear Support Vector Machines, SVMs for Multiclass Classification, One Against the Rest Classification, Pair wise Classification, Classification based on Decision Directed Acyclic Graph and Decision Tree Structure, Multiclass Objective Function, optimization Methods , Applications using SVM.

Markov Random Field Models: Introduction, MRF and Gibbs Distribution, Random Field and Neighborhood ,Cliques, Potential and Gibbs Distributions, MRF Modeling in Remote Sensing Applications, Optimization Algorithms, Simulated Annealing, Metropolis Algorithm, Iterated Conditional Modes Algorithm

SP24C:Program Elective-IV
3. Biomedical Signal Processing

Teaching Scheme
Instruction Hours/week : 3(L) **Credits : 3**
Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Understand different types of biomedical signal.
2. Identify and analyze different biomedical signals
3. Find applications related to biomedical signal processing

Syllabus Contents:

Unit 1

Acquisition, Generation of Bio-signals,Origin of bio-signals, Types of bio-signals,Study of diagnostically significant bio-signal parameters

Unit 2

Electrodes for bio-physiological sensing and conditioning, Electrode-electrolyte interface, polarization, electrode skin interface and motion artefact, biomaterial used for electrode, Types of electrodes (body surface, internal, array of electrodes,microelectrodes), Practical aspects of using electrodes, Acquisition of bio-signals (signal conditioning) and Signal conversion (ADC's DAC's) Processing, Digital filtering

Unit 3

Biomedical signal processing by Fourier analysis, Biomedical signal processing by wavelet (time-frequency) analysis, Analysis (Computation of signal parameters that are diagnostically significant),Classification of signals and noise, Spectral analysis of deterministic, stationary random signals and non-stationary signals.

Unit 4

Coherent treatment of various biomedical signal processing methods and applications.

Principal component analysis, Correlation and regression, Analysis of chaotic signals Application areas of Bio–Signals analysis Multiresolution analysis(MRA) and wavelets, Principal component analysis(PCA), Independent component analysis(ICA)

Unit 5

Pattern classification–supervised and unsupervised classification, Neural networks, Support vector Machines, Hidden Markov models. Examples of

biomedical signal classification examples.

SP24C:Program Elective-IV

4. Remote Sensing

(Common to Communication Systems)

Instruction Hours/week : 3(L) **Credits : 3**

Sessional Marks : 40 **Semester-end Examination :60**

Course Outcomes:

At the end of this course, students shall be able to

1. Understand basic concepts, principles and applications of remote sensing, particularly the geometric and radiometric principles
2. Provide examples of applications of principles to a variety of topics in remote sensing, particularly related to data collection, radiation, resolution, and sampling.

Syllabus Contents:

Unit 1

Physics Of Remote Sensing: Electro Magnetic Spectrum, Physics of Remote Sensing-Effects of Atmosphere-Scattering–Different types–Absorption-Atmospheric window-Energy interaction with surface features –Spectral reflectance of vegetation, soil and water atmospheric influence on spectral response patterns-multi concept in Remote sensing.

Data Acquisition: Types of Platforms–different types of aircrafts-Manned and Unmanned space crafts–sun synchronous and geo synchronous satellites –Types and characteristics of different platforms –LANDSAT, SPOT, IRS, INSAT, IKONOS, QUICKBIRDetc.

Unit 2

Photographic products, B/W,color, color IR film and their characteristics – resolving power of lens and film - Optomechanical electro optical sensors – across track and along track scanners-multispectral scanners and thermal scanners–geometric characteristics of scanner imagery - calibration of

thermal scanners.

Unit 3

Scattering System: Microwave scatterometry, types of RADAR –SLAR – resolution –range and azimuth –real aperture and synthetic aperture RADAR. Characteristics of Microwave images topographic effect-different types of Remote Sensing platforms –airborne and space borne sensors - ERS, JERS, RADARSAT, RISAT -Scatterometer, Altimeter-LiDAR remote sensing, principles, applications.

Unit 4

Thermal And Hyper Spectral Remote Sensing: Sensors characteristics-principle of spectroscopy-imaging spectroscopy–field conditions, compound spectral curve, Spectral library, radiative models, processing procedures, derivative spectrometry, thermal remote sensing –thermal sensors, principles, thermal data processing, applications.

Unit 5

Data Analysis: Resolution–Spatial, Spectral, Radiometric and temporal resolution-signal to noise ratio-data products and their characteristics-visual and digital interpretation–Basic principles of data processing – Radiometric correction–Image enhancement–Image classification–Principles of LiDAR, Aerial Laser Terrain Mapping.

SP25C: Pattern Recognition & Machine Learning Lab

Teaching Scheme

Instruction Hours/week :3(P) **Credits : 1.5**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

At the end of this course, students will be able to

1. Perform image and video enhancement
2. Perform image and video segmentation
3. Detect an object in an image/video

List of Assignments:

1. Implement maximum likelihood algorithm
2. Implement Bayes classifier
3. Implement linear regression
4. Design a classifier using perceptron rule
5. Design a classifier using feedforward back-propagation and delta rule algorithms
6. Implement deep learning algorithm
7. Implement linear discriminant algorithm
8. Design a two class classifier using SVM
9. Design a multiclass classifier using SVM
10. Perform unsupervised learning

SP26C: Detection and Estimation Theory Lab

Teaching Scheme

Instruction Hours/week :3(L) **Credits : 1.5**

Sessional Marks : 40 **Semester-end Examination : 60**

Course Outcomes:

Syllabus Contents:

At the end of this course, students will be able to

1. Simulate signals and noise
2. Detect signals in the presence of noise
3. Compare various estimation techniques

List of Assignments:

1. Simulate signal and noise models models.
2. Simulate spatially separated target Signal in the presence of Additive Correlated White Noise
3. Simulate spatially separated target Signal in the presence of Additive Uncorrelated White Noise
4. Simulate spatially separated target Signal in the presence of Additive Correlated Colored Noise
5. Detect Constant amplitude Signal in AWGN

6. Detect Time varying Known Signals in AWGN
7. Detect Unknown Signals in AWGN
8. Compare performance comparison of the Estimation techniques - MLE, MMSE, Bayes Estimator, MAP Estimator, Expectation Maximization (EM) algorithm
9. Performance comparison of conventional Energy Detectors and Coherent Matched Filter Techniques

CM27C:Cyber Security

Course Type:	**Value Added**	**Semester:**	**II Sem**	**Credits :**	**3**
Course Code:	**CM27C**	**Theory :**	**2 Hrs/Week**	**Practical :**	**2Hrs/ Week**
		Assessment:	**Lab reports and written exams**	**Internal Continuous Assessment:**	**100 M**

Course Overview / Description: Cyber security is perhaps the most important topic in today environment. Demand for cyber security professionals has exploded, in the private and public sectors alike. Student can learn how to defend information systems from cyber attacks, how to recover compromised systems, how to architect secure systems and so much more. This course is focuses on the models, tools, and techniques for enforcement of security with some emphasis on the use of cryptography. Students will learn security from multiple perspectives.

Course Learning Objectives:

1. To prepare students with the technical knowledge and skills needed to protect and defend computer systems and networks from cyber security attacks.
2. To develop graduates that can plan, implement, and monitor cyber security mechanisms to help ensure the protection of information technology assets.
3. To develop graduates that can identify, analyze, and remediate computer security breaches.

Course Outcomes: After completing this course student will be:

1. Be able to understand the basic terminologies related to cyber security and current cyber security threat landscape. They will also develop understanding about the Cyber warfare and necessity to strengthen the cyber security of end user machine, critical IT and national critical infrastructure.
2. Have complete understanding of the cyber attacks that target computers, mobiles and persons. They will also develop understanding about the type and nature of cyber crimes and as to how report these crimes through the prescribed legal and Government channels.

3. Be able to understand the legal framework that exist in India for cyber crimes and penalties and punishments for such crimes, It will also expose students to limitations of existing IT Act, 2000 legal framework that is followed in other countries and legal and ethical aspects related to new technologies.
4. Understand the aspects related to personal data privacy and security. They will also get insight into the Data Protection Bill, 2019 and data privacy and security issues related to Social media platforms.
5. Understand the main components of cyber security plan. They will also get insights into risk-based assessment, requirement of security controls and need for cyber security audit and compliance.

Unit- I Overview of Cyber security

Cyber security increasing threat landscape, Cyber security terminologies- Cyberspace, attack, attack vector, attack surface, threat, risk, vulnerability, exploit, exploitation, hacker., Non-state actors, Cyber terrorism, Protection of end user machine, Critical IT and National Critical Infrastructure, Cyber warfare, Case Studies.

Unit-II Cyber Crimes

Cyber crimes targeting Computer systems and Mobiles- data diddling attacks, spyware, logic bombs, DoS, DDoS, APTs, virus, Trojans, ransomware, data breach., Online scams and frauds- email scams, Phishing, Vishing, Smishing, Online job fraud, Online sextortion, Debit/ credit card fraud, Online payment fraud, Cyber bullying, website defacement, Cyber squatting, Pharming, Cyber espionage, Cryptojacking, Darknet- illegal trades, drug trafficking, human trafficking., Social Media Scams & Frauds- impersonation, identity theft, job scams, misinformation, fake news cyber crime against persons - cyber grooming, child pornography, cyber stalking., Social Engineering attacks, Cyber Police stations, Crime reporting procedure, Case studies.

Unit-III Cyber Law

Cyber crime and legal landscape around the world, IT Act, 2000 and its amendments, Limitations of IT Act, 2000,Cyber crime and punishments, Cyber Laws and Legal and ethical aspects related to new technologies- AI/ML, IoT, Blockchain, Darknet and Social media, Cyber Laws of other countries, Case Studies.

Unit-IV Data Privacy and Data Security

Defining data, meta-data, big data, non-personal data. Data protection, Data privacy and data security, Personal Data Protection Bill and its compliance, Data protection principles, Big data security issues and challenges, Data protection regulations of other countries- General Data Protection Regulations(GDPR), 2016 Personal Information Protection and Electronic Documents Act (PIPEDA), Social media- data privacy and security issues.

Unit-V Cyber security Management, Compliance and Governance:

Cyber security Plan- cyber security policy, cyber crises management plan, Business continuity, Risk assessment, Types of security controls and their goals, Cyber security audit and compliance, National cyber security policy and strategy.

Practical Work

The practical list has been suggested for the applicable modules; however, the faculty may expand the list as per the syllabus content duly taking into consideration the emerging nature

of cyber threats and incumbent protective measures to guard against such threats.

Practical list of Experiments:

1. Platforms for reporting cyber crimes.
2. Checklist for reporting cyber crimes online.
3. Setting privacy settings on social media platforms.
4. Do's and Don'ts for posting content on Social media platforms.
5. Registering complaints on a Social media platform.
6. Prepare password policy for computer and mobile device.
7. List out security controls for computer and implement technical security controls in the personal computer.
8. List out security controls for mobile phone and implement technical security controls in the personal mobile phone.
9. Log into computer system as an administrator and check the security policies in the system.

Text Books/ References:

2. Information Warfare and Security by Dorothy F. Denning, Addison Wesley.
3. Security in the Digital Age: Social Media Security Threats and Vulnerabilities by Henry A. Oliver, Create Space Independent Publishing Platform.
4. Data Privacy Principles and Practice by Natraj Venkataramanan and Ashwin Shriram, CRC Press.
5. Information Security Governance, Guidance for Information Security Managers by W. KragBrothy, 1st Edition, Wiley Publication.
6. Auditing IT Infrastructures for Compliance By Martin Weiss, Michael G. Solomon, 2nd Edition, Jones Bartlett Learning.

SP28M: Mini Project with Seminar

Instruction Hours/week : 4(P) **Credits : 2**
Sessional Marks :100 **Semester-end Examination :-**

Course Outcomes:

At the end of this course, students will be able to

1. Understand of contemporary / emerging technology for various processes and systems.
2. Share knowledge effectively in oral and written form and formulate documents.

Syllabus Contents:

The students are required to search / gather the material / information on a specific a topic comprehend it and present / discuss in the class.

Semester III & IV
SP33D& SP41D (Dissertation) Dissertation Work Phase – I, Phase – II and Viva-Voce

Instruction Hours/week : 24+20(P) **Credits : 12+16**
Sessional Marks : 40+40 **Semester-end Examination :60+60**

Course Outcomes:

At the end of this course, students will be able to

1. Ability to synthesize knowledge and skills previously gained and applied to an in-depth study and execution of new technical problem.
2. Capable to select from different methodologies, methods and forms of analysis to produce a suitable research design, and justify their design.
3. Ability to present the findings of their technical solution in a written report.
4. Presenting the work in International/ National conference or reputed journals.

Syllabus Contents:

The dissertation / project topic should be selected / chosen to ensure the satisfaction of the urgent need to establish a direct link between education, national development and productivity and thus reduce the gap between the world of work and the world of study. The dissertation should have the following

- Relevance to social needs of society
- Relevance to value addition to existing facilities in the institute
- Relevance to industry need
- Problems of national importance
- Research and development in various domain

The student should complete the following:

- Literature survey Problem Definition
- Motivation for study and Objectives
- Preliminary design / feasibility / modular approaches
- Implementation and Verification
- Report and presentation

The dissertation stage II is based on a report prepared by the students on dissertation allotted to them. It may be based on:

- Experimental verification / Proof of concept.
- Design, fabrication, testing of Communication System.
- The viva-voce examination will be based on the above report and

work.

Guidelines for Dissertation Phase – I and II at M. Tech. (Electronics):

- As per the AICTE directives, the dissertation is a yearlong activity, to be carried out and evaluated in two phases i.e. Phase – I: July to December and Phase – II: January to June.
- The dissertation may be carried out preferably in-house i.e. department's laboratories and centers OR in industry allotted through department's T & P coordinator.
- After multiple interactions with guide and based on comprehensive literature survey, the student shall identify the domain and define dissertation objectives. The referred literature should preferably include IEEE/IET/IETE/Springer/Science Direct/ACM journals in the areas of Computing and Processing (Hardware and Software), Circuits-Devices and Systems, Communication-Networking and Security, Robotics and Control Systems, Signal Processing and Analysis and any other related domain. In case of Industry sponsored projects, the relevant application notes, while papers, product catalogues should be referred and reported.
- Student is expected to detail out specifications, methodology, resources required, critical issues involve*d in design and implementation and phase wise work distribution, and submit the proposal within a month from the date of registration.
- Phase – I deliverables: A document report comprising of summary of literature survey, detailed objectives, project specifications, paper and/or computer aided design, proof of concept/functionality, part results, A record of continuous progress.
- Phase – I evaluation: A committee comprising of guides of respective specialization shall assess the progress/performance of the student based on report, presentation and Q & A. In case of unsatisfactory performance, committee may recommend repeating the Phase-I work.
- During phase – II, student is expected to exert on design, development and testing of the proposed work as per the schedule. Accomplished results/contributions/innovations should be published in terms of research papers in reputed journals and reviewed focused conferences OR IP/Patents.
- Phase – II deliverables: A dissertation report as per the specified format, developed system in the form of hardware and/or software, a record of continuous progress.
- Phase – II evaluation: Guide along with appointed external examiner shall assess the
- progress/performance of the student based on report, presentation and Q & A. In case of unsatisfactory performance, committee may

recommend for extension or repeating the work.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U. COLLEGE OF ARTS

DEPARTMENT OF CENTRE FOR WOMENS STUDIES

Course

M.A. CENTRE FOR WOMENS STUDIES

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Centre

The Centre for Extension Studies of Sri Venkateswara University, Tirupati took initiative to establish the Centre for Women's Studies in Sri Venkateswara University. The Centre was established in the year 2007 on self–supporting basis with focus on Women's Development, Gender Equality and justice. In 2009, the UGC approved the Centre and sanctioned financial assistance to the Centre and thus the Centre for Women's Studies was established in S.V. University as a Regular Department. The Centre aims to sensitize the students on various women's issues and trains them in enterprise and Management of innovative technologies specifically to increase women's visibility in teaching, research & management. It also aims at enhancing their competencies, build a platform for Women's Equality and Rights, and establish Gender Justice in the Civil Society. At present the Centre is headed by one Director i/c, Prof. D. Krishnamoorthy supported by five Academic Consultants and one non-teaching Staff.

The Centre has been offering PG Programme in M.A. Women's Studies and Management (Two-year Regular Programme) since 2007 with an intake of 30 students. The Masters' Programme has 96 mandatory credits under the Choice Based Credit System. The Course is open to both boys and girls. Besides, PG programme, the Centre is also offering Research Degree leading to Ph.D.

In the beginning, the Centre also offered P. G. Diploma in Research Methodology. The Centre for Women's Studies is an Interdisciplinary and collaborate entity with sister departments in the University Viz., Dept. of Economics, Home Science, Adult Education, Population Studies, Sociology, Law and Human Rights The Centre has established linkages with several NGOs like WINS, STEPS, RISE, RASS, PASS and Universities/Colleges like Sri Padmavati Mahila Visvavidyalayam, S.P.W. College, S.V. Medical College, S.V. Agricultural University, and S.V. Veterinary University, Bharathiyar University, Bharathidasan University, University of Hyderabad and Institutes of Reputations like TISS, NIRD and NIMSME. The staff and the students of the Centre are actively involved in Teaching, Research, Projects, Workshops, Seminars, Training Programmes, Preparation of Learning material, Library and Documentation, Extension and Outreach Programmes, Clustering, Advocacy and Networking.

Vision of the Centre:

- To foster the visibility of women's issues, combine scholarship with socially relevant theories, open genuine interdisciplinary dialogues, eradicate biased gender perspectives, develop gender sensitive management systems and structures systematically.

Mission:

- To sensitize the students on various women's issues and train them in enterprise and Management of innovative technologies, to increase women's visibility in teaching, research & management by enhancing their competencies, build a platform for Women's Equality and Rights, and establish Gender Justice in the Civil Society.

Programme Specific Outcomes (PSOs):

On successful completion of M. A. Women's Studies and Management Programme, the students will be able to

PO 1: Understand the Gender roles and actively participate in the debates and discussions on feminist approach to development;

PO 2: Explain the Gender and power relations and their impact on the Family, Society and other Institutions;

PO 3: Use the range of analytical and field-based skills, leadership skills with gender perspective which will equip them with professional careers as Entrepreneurs, Social Activists and Technocrats;

PO 4: Apply their managerial skills to work independently, in groups so that they could transform themselves into job-ready candidates and achieve their career goals in an Egalitarian society.

PO 5: Utilize their knowledge to join in reputed National and International NGOs to serve the Women and Children and the downtrodden people

Programme Objectives:

This Programme is designed to educate the learner with gender concepts and perspectives.

- To Analyse the issues related to women in the context of individual, inter-personal, societal and institutional relationships;
- To explain Gender and Power relations and their impact on the Family and Society;
- To provide insight on gender disparities in education, health, income, wealth political and legal systems;
- To examine the relationship between women studies and other areas of study;
- To analyse the existing policies and programmes to achieve Gender Equality;
- To make gender analysis to undertake effective steps for achieving gender equality, gender empowerment and social justice.

Programme Out comes

PO- 1. Creative Thinking:

Development of creative thinking is a prime outcome of any P.G. Programme.

Creative thinking enables students to think Creatively, Economically and Social.

PO- 2. Multiple Thinking:

It enables students to think in Multiple dimensions such as Logically, Rationally, Scientifically, Politically and Economically.

PO- 3. Self and Long life Learning: Post Graduation course promotes Self and Long-life learning I n the broadest context of Socio, Economical changes.

PO- 4. Self-Learning: It improves the ability to engage in independent learning technics.

PO- 5. Effective Communication: Speak, Read, Write and listen clearly in person and through electronic media in English and in one Indian language and make meaning of the world by connective people, ideas, books media and technology.

PO- 6. Social Interaction: Elicit views of others, mediate disagreements and help reach conclusions in group settings.

PO- 7. Effective Citizenship: Demonstrate empathetic social concern and equity-cantered national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

PO- 8. Ethics: Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

PO- 9. Environment and Sustainability: Understand the issues of environmental contexts and sustainable development.

PO- 10. Self-directed and Life-Long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

Programme Educational Objectives

- Analyze the ways in which gender, race, ethnicity, class, and sexuality construct the social, cultural, and biological experience of both men and women in all societies
- Function as a Team Member and step up for social change and support womenfolk by Emulating leadership skills
- To offer courses that document women's lives, the lives of people across gender spectrums, and critically examine gender ideologies\

Course Code	Course Title	No of Hours Per week	No of Credits
SVUWS-104 (Core)	**Computer Applications**	06	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives of the Course:

1. 1. To impart the basic computer knowledge to the students;
2. To train the students to do their works such as document processing, data entry, data analysis, database Management and accessing Internet by themselves;
3. To equip students to get necessary computer knowledge to go for self-employment or get wage employment in the age of information revolution.

Unit– I :

An overview of Computer Systems : Parts of Computer–The Processor, Memory,Input/ Output devices, Storageand Software.

Types of Computers: Super Computers, MiniComputers, Work Stations, MicroComputers,Desktop Models,Laptop computers,HandledComputers.

Input Devices : The Keyboard, the Mouse, the Track ball, Scanner, Digital Camera,Keyboard,Mouse, Track Ball, Joystick, Touch Screen.

Output Devices: Monitors CRt Monitors, Flat Panel, Monitors, P.C. Projectors,SoundSystems,HardCopy,DotMatrixPrinters,InkjetPrinters,LaserPrinters,Plotters.

Unit– II :StoringInformationinacomputer:MagneticDisks– Harddisk,Floppydisk,OpticalStoragedevices–CDROM,DVD ROM,CD-Recordable, Cd-Rewritable.

Operating system: Basics, Introduction, the functions of an operating system– TheUserinterface, Runningprograms, Managingfiles, Managinghardware.
PCOperatingSystems:MS-DOS,MicroSoftWindows,UNIX/LINUX.

Unit– III : MS Office

Introduction to M.S. Office application: Starting an application–creating–opening–savingdocuments–printingan officedocuments.

M.S. Word : Introduction–entering–editing text–formatting text and pages–creating.Special word techniques– printing envelops using mail merge – object link andembeddingfeatures.

M.S. Excel : Introduction–Excel for data analysis, worksheet and its structure–dataentryediting–sorting, filteringandcopying.

M.S. PowerPoint: Introduction–building presentations–creating the presentation–creatingthetestandchartslides.Preparingcharts–customizingpresentation.Drawingslideandcreatingslideshows.

M.S. Access : Introduction–creating databases–tables and working with records–usingqueries–creatingForms– CreatingReports.

Unit–IV:**OfficeAutomation**:**Organizationofanoffice:**natureofoffice,natureofofficework,thedefinitionandneed forofficeautomation.

DocumentPreparation:

Word-processing, various office equipment that help in documentpreparation.Introductionto document storageandretrieval.

Communication System: Telephone–intercom–data Communication–LAN andWANs.

DecisionSupportSystems: Introduction– spreadsheetandGraphics.AutomationOrganization and management, how to manage innovations in the office, Benefits ofoffice automation.

Unit–V:Internet

Definition – History – Inter working – WWW – E-mail Basics – Advantages andDisadvantages – Creation of E-Mail – User IDs., Passwords and E-mail Address – MessageComponents–Mailerinnerworking–E-mailmanagement–SearchEngine –Mailinglists–News GroupComputerViruses.

Practicals:

- M.S.OfficePackage
- PowerPointPresentation
- MailMerge
- DOSCommands

SEMESTER-II

Course Code	Course Title	No of Hours Per week	No of Credits
SVUWS- 201 (Core)	**Women and Development**	06	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objective of the Course:

1. To familiarize the students with Women Development from the Gender perspective;
2. To emphasize the need for collecting, incorporating and analyzing data on women development from gender perspective;
3. To educate the students on the need for gender planning and gender budgeting

Unit– I

i) ConceptsandDevelopment–Definition,meaningandscope–womenandDevelopment– Womenin Development–Genderand Development

ii) HumanDevelopmentIndex–GenderDevelopmentIndex

Unit–II

Socio Economic Development of women's Development – Education, Employment, Health,PoliticalParticipation,andMassMedia Housing.

Unit – III

Women'sDevelopmentunderFiveYearPlans–WelfarePerspective(I-V)–Development Perspective (VI – VII Plan) – Empowerment Perspective (VIII plan onwards)GenderMainstreaming

Unit– IV

Policies of Government of India for the Development of Women – National Policy for theEmpowerment of women – 2001, New Economic Policyand its impact on women – 1991,GenderBudgeting.

Unit – V:Policies andProgrammesforWomen's Development:

Programs of State Government: Mother and Child Tracking System (MCTS 2009), IndiraGandhiMatritvaSahyogYojana(IGMSY2010),(RGSEAG)RajivGandhiSchemeforEmpowermentofAdolescentGirls2010,Swayamsiddha2001,NationalMissionforEmpowermentofWomen(NMEW-2011),SwarnaJayantiShahariRozgar Yojana(SJRY),Indira KrantiPathakam (Velugu)Girl Child Protection Scheme,AndhraPradesh(GCPS-2015)BangarThalli-MaaintiMaha LakshmiPathakam2013

ProgramsofCentralGovernment:,ICDS,PMAY(PradhanaMantriAwaasYojanajun25th

-2015),NutritionProgrammesforAdolescentGirls(NPAG)2002-

03,NationalRuralLivelihood Mission (NRLM-2011), Mahatma Gandhi National RuralEmployment GuaranteeScheme(MNEREGA2005),BetiBachaoBetiPadhaoSceme2015,DWCRA1984, KishoriShakti Yojna

National Organizations: National/State Commission for Women (NCW), National Instituteof Public Cooperation and Child Development (NIPCCD), RashtriyaMahilaKosh (RMK),Role and functions of the Dept. of Women & Child Development – Central Social WelfareBoard– State SocialWelfare Board

Course Code	Course Title	No of Hours Per week	No of Credits
SVUWS-202(Core)	RESEARCH METHODS & SPSS	06	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives of the Course:

1. To provide the theoretical and conceptual knowledge to carry out the research in social sciences;
2. To impart the knowledge of Feminism research concepts, Feminist Epistemology, Feminist stand point, Research Design and Types of Research Design.
3. To provide the knowledge in applying the simple Statistical Tools for analysis of data.

Unit – I : Introduction Research with special reference to Women's Studies: Definition – Meaning – Objectives and uses of Social Science Research.definition–Meaning–ScopeandsignificanceofResearchinWomen'sStudies. Definition – Meaning and Functions of Research Design – Steps in Research Design – Problemformulation– Conceptualization–Hypothesis–TypesofResearchDesign:Exploratory,Diagnosticand Experimental

Unit– II:Sampling

Definition–meritsanddemeritsofsampling–TypesofSampling–ProbabilitySampling–RandomSampling–MultistageSampling– ClusterSampling –StratifiedSampling –SystematicSampling.

NonProbabilitysampling–PurposiveSampling–ConvenienceSampling–QuotaSampling–SnowballSampling.

Unit–III:QuantitativeandQualitativeTechniques

CharacteristicsofQuantitative andQualitativeresearchQuantitativemethods:Interview–

questionnaires(Schedule).

Quantitative Methods – Observation – Participatory research – Case Studies – Focus Group – OralHistory.OtherMethods:ActionResearch.

Techniques– Scaling(Thurstoneandlikertscales). **Unit–IV:Statistics**

MeasuresofCentralTendencies– MeasuresofDispersion –SD– SP– SimpleCorrelation.

't'Test(Students't'distribution with simplemean)chi-squaretest(2 x2,3 x3).

Unit–V:ReportWritingandPresentation Research Project Proposal – Report Writing and Presentation – Bibliography – References – Footnotesand Citation.

Practicals:

- SPSSPackageand usage.
- Preparationofvariouscharts

SVUWS-203 (Core)	**Sales & Marketing Management with focus on GenderPerception**	06	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives of the Course:

1. To provide the theoretical and conceptual knowledge on Sales & Marketing;
2. ToexplainthestrategicOrganizationalandMarketingPlanningProcess;
3. To provide the knowledge about the procedures involved in promotion of Sales & Marketing of new and existing enterprises;
4. To create interest and to train students in Sales & Marketing field.

UNIT– I Marketing:Meaning&Significance–MarketingPhilosophies–ImplementingMarketingConcept–ConceptualframeworkofMarketing,MarketingMix– Marketing Environment – Green Marketing – Organizing Marketing – Women andMarketingManagement.

UNIT– II

Marketing Planning–Marketing Research&InformationSystem–Demand andSalesForecasting– Segmentation– Targetingand Positioning

UNIT– III

Product Strategy – Product Classification – Product Mix – Product Line – Branding &Packaging – Product Life Cycle Strategies – New Product Development – InnovationDiffusion– PricingStrategy–Objectives of Pricing
– Factors Influencing the Price – Methods of Pricing Cost Based – Demand Based – Competition Based – New Product Pricing – Role played by Women in Product studyand ProductMix.

UNIT– IV SalesManagement–GoalsandFunctions–Salesmanship–SellingSkills–Buyer– SellerDyads –TheoriesofSelling–Conceptualframe workofSales–SellingProcess SalesTerritories–RoutingandSettingSalesQuotas–SalesContests,WomenandSalesManagement– Women and Sales SellingSkills inWomen.

UNIT– V

Compensating Sales Personnel – Developing and Administering Sales Personnel – MotivatingSalesPeople–SalesEvaluation–SalesAnalysis–SalesExpensesControl– Sales Audit– Women in Sales andSales and Women.

PRACTICALS

- A Studyreport onSellingSkills of Women
- Casestudyanalysis ofMarketing&Sales Management

SVUWS-204 (Core)	**Skill DevelopmentTraining- C Language,DBMS, Communication&Softskills**	06	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives of the Course:

1. To provide the theoretical and conceptual knowledge of Channelsofcommunication;
2. ToexplaintheSignificance of presentationskills;
3. To provide the knowledge about C Programme basics;

Unit– I:

Communication: Meaning–Process–Barriers–principles–interpersonalcommunication–formalVs. informal Communication – Critical and Lateral Channelsofcommunication–oralcommunication:PublicSpeaking–Listeninganditsimportance – interview – Art of Conducting Good Interview and fairing in interview – writtencommunication:Essentialsofeffectivewrittencommunication,Letterwriting,memos, circulars, minutes, proposals, reports

Unit– II : Soft Skills SoftSkills: Concept&Significance–presentationskills–influencingskills–negotiatingskills–culturetraining–time management–teambuildingskills–motivationskills–leadershipskills:Definition–scope–functionsandcharacteristics of leader – Gender issues in Leadership – Methodology adopted forCapacitybuildingof women

Unit– III: 'C'Language

Introduction: History of C language – Features of C – Programme Development steps-SimpleCProgramme–Variables–Constants–Data Types–ArithmeticExpressions :Workingwithvariables–understandingdatatypesandconstants—theprintfunction– the scan ffunction.

Arthimetic,Relational&LogicalOperators,Increment&DecrementOperators,ConditionalOperators,BitwiseOperators,AssignmentOperators,ControlFlowStatements:If,If-else, nested if else

Decision making : the for statement – nested for loop – the while statement – the doWhile

Unit-IV

Arrays-Concepts,declaration,definition,accessingelements,twodimensionalarray,string-concepts, declaration, definition, stringfunctions.

Workingwithfunctions–Definingafunction–arguments–localvariables–returningfunctionresults –globalvariables.
Pointers-Concepts,declaration,definition,useof pointers,pointerstofunctions

Unit-

VDBMS :

File Processing System- Disadvantages of File Processing system- Introduction toDBMS – file system Vs. DBMS why the database is important – Advantages ofDBMS– Introduction to SQL : Data definition commands (DDL) – Data manipulationcommands(DML) – DataControl Commands (DCL)–Select Queries.

	programmes &Advocacy,with focus		
Sessional Marks: 20		End Semester Examination Marks:	

Objectives of the Course:

1. To understand the changing concept of extension, objectives and functions of Extension; a

2. To expose the students to outreach programmes to interact with the community;

3. To impart the techniques of planning, implementation, monitoring and assessment of extension activities.

Unit–I: ChangingConceptofExtension

Extensionwork – Meaning– Scopeneedsand methods.
Changing concept of Extension – Philosophy – Objectives – Principles functions.Extensioneducationcomponentsanddimensions– Characteristicsof ExtensionWork
:Buildinguprapport–Mobilizationofruralpeople–Interactionwithpeople,Government and NGOs.– Extension and Communication– Motivation and skilldevelopment specific to extension work – professional- Women and Extension forCommunityDevelopment.

Unit–II:SupportStructuresandtheirFunctions

Panchayats, DRDA, CAPART, NIRD, Extension as a third dimension of

UniversityEducation–
Areaspecificproblems.

UNIT – III: Participatory Extension: Introduction to concepts and approaches– importance,keyfeatures,principles andprocessofparticipatoryapproaches–different participatory approaches (RRA, PRA, PLA, AEA, PALM, PAR, PAME,ESRE, FPR)and successful models.

Unit-IV:

Participatorytoolsandtechniques–Space-relatedMethods: Villagemap(Social& resource)–Time related methods: Time line, trend analysis, seasonal diagram – Dailyactivities schedule,dream map.

UNIT– V:

Preparation of participatory action plans– concept and action plan preparation – participatory technology development and dissemination – participatory planning andmanagement - phases and steps in planning and implementation – process monitoring,participatoryevalustion.

Course Leaning Outcomes (CLOs)

S.No.	Course Number:	CO's Description
1.	CO1	Understand the concept of Human Rights and their evolution across the globe;
2.	CO2	Describe the outcomes of various international declarations, covenants on Human Rights, Women and Child Rights;
3.	CO3	Analyze theConstitutional, legal and judicial provisions and the role of Human Rights Commissions in the enforcement and protection of Human Rights;
4.	CO4	Critically analyze various types of violations of Human Rights in the country focusing on women and children;
5.	CO5	Evaluate the functioning of different government and non-governmental agencies in the enforcement of human rights of women and children.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U. COLLEGE OF ARTS

DEPARTMENT OF ECONOMETRICS

Course

M.A. ECONOMETRICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

- The Department of Econometrics was started as an interdisciplinary course in 1976 and the department attained the status of an independent full-fledged department in March 1985. There is increasing application of quantitative techniques to various branches of economics in recent times. The use of quantitative tools in economics makes the traditional economic theory more precise and abstract. Hence, a comprehensive course with economics as the core subject and subjects like mathematics, computers as the supporting subjects, which strengthen the quantitative base of the economic theory, is necessary for the present day student.

Vision

- The vision is to promote the publication of high-quality research works in the fields of Economic Theory, Econometrics, and Quantitative Economics more generally. Publications may range from more or less extensive accounts of the state of the art in a field to which the authors have made significant contributions, to shorter monographs representing important advances on more specific issues. In addition to the usual promotion by the Publisher in their advertising and displays at conferences, it also arranges for members of the Econometric Society to receive monographs at a special discount.
- In the same way as for papers submitted to Econometrics. Our experience shows that this procedure generates quite valuable services to the authors. Referee reports are usually very professional, and contain detailed and specific suggestions on how to improve the manuscript. Such services, which are not normally offered by private publishing companies, are among the features that distinguish the Monograph Series of the Society from others.

Mission

- The department mission is to The Master of Arts programme in Econometrics has been designed with the objective to develop in-depth knowledge of students in frontier areas of economic theory and quantitative methods, so that they are able to use the knowledge to study real world economic problems.
- The course has a strong focus on theoretical and quantitative skills and train students in the collection and analysis of the data using their software skills. The programme offers specialized optional courses,

which allow student to pursue their studies in their area of interest. The students are required to submit report and present their findings of field-study. Besides, to hone the student's writing and analytical skills they are required to submit a term paper on current economic problem. Thus, the Masters in Econometrics programme seek to: Supportive environment for all students.

Choice Based Credit System (CBCS):

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

Students of this course would be expected to :

- To provide the basic knowledge of decision making, production of products, different market structure and pricing structure of the firms.
- To analyze the concepts and measurement of National Income, factors determining national income and problems in Estimation of National Income.
- To learn basic mathematical methods those are essential for learning and working with economic theories and models.
- To promote the analytical skills of the practical knowledge of calculating descriptive statistics.
- To learn Statistical Methods describing the dynamics of economic systems such as production function analysis and solve econometric analysis of underlying data use with knowledge advanced econometric tools and techniques can solve easily.

- To aware the analytical skills that can be used to solve complex analytical tasks based on a non-trivial statistical analysis of the underlying data and to solve the tasks of formulating and estimating economic models using statistical methods.
- The student will be enriched with several aspects pertaining to Human values and performing of Professional Ethics in day today life.
- Gain the knowledge of Decision about the statistical significance of individual explanatory variable and also over all models. Impacts for the violation of one of the important assumptions for application of OLS regression.
- To know the knowledge of Different types of data, and analyse relationship of economic variables using simple and multiple regression models which are covered in basic Econometrics.
- To learn Mathematical calculation of static optimization, Application of Lagrange's method and also student can evaluate Differential Equations and with Economic Applications.
- Gain knowledge on Web based Information Retrieval Systems
- To aware the Insurance is one of the main and important fields of the economy. The main aim of the insurance is to protect people from risks and from dangers.

Department Objectives:

The Department is having the following objectives:

- Exposure of students to practical and theory and to provide them systematic tools of qualitative and quantitative data analysis to acquire this knowledge and skill.
- To update the syllabus essential for appearing in NET, SLET, RRB, Bank and other competitive exams of UPSC and APPSC.
- To make aware the students to know the Econometric Techniques, to study by relative methods and research areas.
- To develop trained and Practical knowledgeable for educational and Research Institutions and NGO's.
- To develop self employable ability and to apply knowledge for several Companies like Data analyst, Business Managers and other Researchers; it will also provide employment to other dependents.

Program Specific Outcomes:

- The students will acquire additional specialisation through optional courses.
- They will be able to use common software for analysis of economic data.
- Besides, students will be able to execute in-depth analysis of economic issues based on their understanding of economic theory, which will not only widen their opportunities for employment, but also help them to pursue their doctoral studies.

Program Objectives:

The basic objectives of our M.A Econometrics degree program. The department's research mission is to develop an environment conducive to promoting high-quality applied research. Applied research is work that informs policy at the global, national or local level, or that is useful in the conduct of business, or the administration of government or non-profit activities.

- to provide our students with appropriate analytical skills to lay the groundwork for lifelong learning;
- to enable our students to become policy-literate and thus be more informed as citizens;
- to encourage the use of experiential learning, including cooperative education, as a means to introduce students to the world of work, reinforce classroom teaching, and assist in the development and advancement of career goals;
- to prepare our students for successful careers as applied economists; and
- Prepare students to develop own thinking /opinion regarding current national or international policies and issues
- Create awareness to become a rational and an enlightened citizen so that they can take the responsibility to spread the governments' initiatives/schemes to the rural areas for the upliftment of the poor or vulnerable section of the society for inclusive growth
- Motivating the learners to conduct investigations of multifaceted problems by applying research-based knowledge and different types of research methods including conducting of user studies and case studies in libraries, analysis and interpretation of data and synthesis of the information to get right solutions to the problems
- Inspiring the learners to learn ICT skills, Retrieval of various Electronic Resources

Programme Outcomes:

- The Master of Arts programme in Econometrics has been designed with the objective to develop in-depth knowledge of students in frontier areas of economic theory and quantitative methods, so that they are able to use the knowledge to study real world economic problems.
- The students will acquire additional specialisation through optional courses.
- They will be able to use common software for analysis of economic data.
- Besides, students will be able to execute in-depth analysis of economic issues based on their understanding of economic theory, which will not only widen their opportunities for employment, but also help them to pursue their doctoral studies.
- Understanding the basic assumptions in various econometric analysis, economic theories and enhance capabilities of developing ideas based on them Prepare and motivate students for research studies in Econometrics models especially by developing questionnaire, collecting primary data through field surveys.
- Provide knowledge of a wide range of econometric techniques using excel or other statistical software.
- To gained and evaluate Econometric Methods such as OLS, LPM, Logistic regression analyses and conclude using SPSS Package and Students will be able to write programme for Simple statistical analyse and interpret through R-programming.
- Motivate students to extract or utilize different websites for secondary data collection, generating concepts for various facets of econometrics studies and gather latest information provided by various Universities, UGC, ICSSR and other websites.
- Motivate students in preparing for various competitive examinations, NET, SLET, Indian Economic Service etc., by developing or gaining value addition day by day by giving assignments, by following a routine or developing discipline / concentration etc.
- The Department assesses the knowledge and competence levels of the students at the time of their entry into the post graduate programme so that the instruction could be geared to their needs and capabilities, and necessary remedial measures are adopted for the benefit of the slow learners.
- The student should acquired the knowledge with facts and figures related to various aspects in day- to-day life.
- When you graduate with a Master of Arts (Econometrics) you will have learned how to work at a high level of academic achievement

Program Educational Objectives

- To gained and evaluate Econometric Methods such as OLS, LPM, Logistic regression analyses and conclude using SPSS Package and Students will be able to write programme for Simple statistical analyse and interpret through R-programming.
- To aware and how to reduce global poverty and improve people's living conditions and standards; structure of financial system and economic development.
- To aware the knowledge and practical implementation of relevant economic theory in understanding and addressing an environmental or natural resource issue.
- To aware of Life Table and its Relation with Survival Function, Deterministic Survivorship group, Recursion formulas, Assumptions for traditional ages, Analytical Laws of Mortality and to explore Life Insurance models; Level benefit insurance, Endowment insurance, deferred insurance and varying benefit insurance.

Syllabus

EMT101	**MICROECONOMIC THEORY-I**		**4Credits**
Course Objectives: The objective of this course is to provide the basic knowledge of decision making, production of products, different market structure and pricing structure of the firms with the study of the subject in a Master's programme.			
Course Out comes: At the end of the course, the student will be able to			
CO1	The microeconomic theory is to analyze how individual decision-makers, both consumers and producers, behave in a variety of economic environments.		
CO2	The common goal in all of these issues is to identify the incentives of the various participating agents and the trade-offs that they face.		
CO3	Microeconomics is a branch of economics that studies the behavior of individuals and firms in making decisions regarding the allocation of scarce resources and the interactions among these individuals and firms.		
CO4	Microeconomics shows conditions under which free markets lead to desirable allocations.		
CO5	The fundamental concepts of supply and demand, rational choice, efficiency, opportunity costs, incentives, production, profits, competition, monopoly, externalities, and public goods will help you to understand the world around you.		

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1:Theory of Individual Decision Making

Theory of Demand - Consumer equilibrium under Indifference Curve Analysis – Applications of Indifference Curves - Slutsky Theorem – Revealed Preference Hypothesis - Choice under Uncertainty- Recent Developments in the Theory of Market Demand.

Unit 2: Theory of Production and Cost

Concepts of Production Function – Homogeneous Production Function - Least Cost Combinations of Factors – Cobb-Douglas and CES Production Functions – Frontier Production Function - Properties - Laws of Returns to Scale - Theory of Cost – Traditional and Modern theories of Cost.

Unit 3:Traditional Market Structures

Perfect Competition - Equilibrium, Short Run and Long Run considerations, Efficiency and Welfare – Monopoly – Price and output determination - Price Discrimination - Welfare and Output.

Unit 4: Modern Theories of Market

Monopolistic competition – Collusive and Non- Collusive Oligopoly: Cournot, Bertrand Stackelberg models - Nash equilibrium - Kinked Demand curve and Price Leadership models.

Unit 5: Limit Pricing and Managerial Theories of Firm

Bain's Limit Pricing: Recent developments – Sylos-Labini and Franco Modigliani Models - Baumol's Sales Maximisation: Static single product model with and without advertisements – Marris' model of Managerial Enterprise.

TEXT AND REFERENCE BOOKS:

3) A. Deaton and J. Muellbauer (1987) Economics and Consumer Behaviour, Cambridge University Press.
4) A. Koutsoyiannis, (1979), Modern Micro-economics, London: Macmillan.

EMT102	MACROECONOMIC THEORY-I		4Credits

Course Objectives:

The objective of this course is to provide the basic knowledge of the study of the aggregate economy. The primary goals of macroeconomics are to achieve stable economic growth and maximize the standard of living. The basic concepts in macroeconomics and the concepts of National Income, measurement of National Income and factors determining national income and problems in Estimation of National Income. The theory of Employment, consumption Function, investment Multiplier and Accelerator, IS-LM model with Government sector, Monetary and Fiscal Policies and effect of IS and LM curves; Kinds of investment and determinations of investment; the monetary policy and fiscal policy are tools used by the government to control economic performance and reach macroeconomic goals.

Course Out comes: At the end of the course, the student will be able to

CO1	Define and explain the process of calculating national income, identify its components, demonstrate circular flow of income, analyse the various income identities with government and international trade, define the concept of green accounting.
CO2	Understand Say's law of market, classical theory of employment and Keynes objection to the classical theory, demonstrate the principle of effective demand and income determination.
CO3	Explain the meaning of consumption function, relationship between APC and MPC, consumption and income, concept of multiplier and analyse the theories of absolute and relative income hypotheses.
CO4	Understand the relationship between investment and savings, demonstrate investment multiplier, and understand the meaning of MEC and MEI. CO5. Illustrate the meaning of interest, analyse the various theories of interest

CO5	The goals are supported by objectives such as minimizing unemployment, increasing productivity, controlling inflation, and more. The macro economy of a country is affected by many forces, and as such, economic indicators are invaluable to assessing different aspects of performance.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Macro-Economics

Micro and Macroeconomics - Basic Concepts in Macroeconomics – Stocks and Flows - Statics, Comparative statistics and Dynamics – Micro Foundations of Macroeconomics -– Circular flow of National income.

Unit 2: National Income

Definition – Concepts of National Income – Measurement of National Income – Factors determining National income – National Income and Social Accounting - Methods of Estimation – Problems in Estimation of National Income – National Income and Economic Welfare.

Unit 3: Classical and Keynesian Economics

Classical Theory of Employment – Critique of Classical Theory – Basic Keynesian Model – Consumption Function – Investment Multiplier – Accelerator – Interaction between Multiplier and Accelerator - Integration of Monetary theory and Value theory – Don Patinkin theory – The Real Balance Effect – Pigou Effect.

Unit 4: Neo-Classical and Keynesian Synthesis

The IS-LM model – Extension of IS & LM model with government sector – Relative effectiveness of Monetary and Fiscal Policies –Shifts in IS and LM curves.

Unit 5: Savings &Investment

Kinds of investment – Determinations of investment - Investment demand and Output growth – Marginal Efficiency of Capital – Tobin's 'Q' Theory – Lags in Investment demand.

TEXT AND REFERENCE BOOKS:

1) Edward Shapiro, Macroeconomic Analysis, Galgotia Publications, New Delhi.
2) Keynes, J.M. 1936, General theory of Employment, Interest and Money.
3) Gardener Ackley, 1978, Macro-economic Theory - Theory and policy, Macmillan, New Delhi.

EMT103	MATHEMATICAL METHODS		4Credits

Course Objectives: The course is designed to build the mathematical foundations of the students by equipping them with basic mathematical methods that are essential for learning and working with economic theories and models.This course also introduces the Mathematical tools such as Basic Algebra, Sets operations, functions which is more important in economic functional relations, differential equations and Matrices and Determinants.

CO1	Formulate mathematical models describing the dynamics of economic systems.Demonstrate the role of quantitative techniques in the field of business/industry, illustrate different types of equations, solve equations and system of equations, understand the concept of sets, illustrate and apply basic set operations.
CO2	Explain the rules for calculating derivatives, uses and application in calculating inter-relationship among total, marginal and average cost and revenue, calculate maxima, minima, elasticity, decide the optimal level of production for a firm.
CO3	Demonstrate the rules for calculating integration, describe the importance and application of integration in consumers' and producers' surpluses, total revenue and cost.
CO4	Illustrate matrix operation, minors, cofactors, use cofactor method to find inverse of a matrix, use Cramer's rule to solve systems of equations.
CO5	Students will get to learn applications of mathematical tools to economy.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Basic Concepts and Set Theory

Exponents – Polynomials – Factorization of Equations — Sets - Meaning, Definition, Types of sets, set operations – Ordered Sets – Linear Point Sets - Cartesian product – Relation – Functions.

Unit 2: Functions and Limits

Functions - Type of Functions – Increasing and Decreasing – Implicit and Explicit – Constant, Linear, Quadratic, Logarithmic and Exponential functions – Graphical Representations of Functions – **Economic Applications of Functions - Limits:** Concepts of a Limit of a Function –Theorems on Limits of Functions – Evaluations of Limits in Simple Cases – Limits and Continuity of Functions.

Unit 3: Differential Calculus and Economic Applications (One Variable)

Differential Calculus: Meaning – Process of Differentiation – Rules of Differentiation – Differentiation of Logarithmic and Exponential Functions – Higher Order Derivatives – Maximum and Minimum Points – Points of Inflection - **Economic Applications:** Marginal concepts, Price and cross Elasticity of demand – Relationship among Total, Marginal, Average concepts – Optimizing Economic functions.

Unit 4: Integration and Economic Applications

Concept of an Indefinite Integral – Standard Integral Formula – Rules of Integration – Methods of integration – Concept of a Definite Integral – Area under a Curve – Fundamental theorem of Calculus – Properties of Definite Integral – Area between Curves; **Economic Applications:** Total Functions from Marginal Function – Consumer's and Producer's Surplus.

Unit 5: Matrices and Determinants

Matrices: Concept of a Matrix – Types of Matrices – Matrix Operations – **Determinants:** Properties of Determinants – Minors and Co-Factors – Evaluation of Determinants of Second and Third Order - Inverse of a Matrix – Solutions of Simultaneous Linear Equations involving two or three Variables by Matrix Inverse Method and Cramer's Rule – Characteristic roots and equations – Concept of a Quadratic form – Rank of a Matrix – Concept of g-inverse and c- inverse.

MAPPING

EMT104	PRACTICAL-I		4Credits

Course Objectives: The main objective of this study programme is thus to promote the analytical skills of the practical knowledge of calculating descriptive statistics. These knowledge scan be used to solve complex analytical tasks based on statistical analysis of the underlying socio-economic data.To solve the tasks of formulating and estimating economic models using statistical methods such as Correlation and Regression.This course an underlying of practical knowledge of Probability, and Testing of Hypothesis.

CO1	Able to find Mean, Median, Mode, Range, Quartile Deviation and Standard Deviation and Coefficient of Variation.
CO2	Able to apply Binomial, Poisson, Normal and Log-Normal Distribution Correlation and Regression Analysis
CO3	Able to test small sample tests based on t, F and Chi-square distributions
CO4	Able to find Inverse of a Matrix, System of Simultaneous Linear Equations and Cramer's Rule method.
CO5	Student can identify the relationship between the economic variables and test their significance which is key factor for economic analysis and policy making or business decisions.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Functions and Limits

Functions - Type of Functions – Increasing and Decreasing – Implicit and Explicit – Constant, Linear, Quadratic, Logarithmic and Exponential functions – Graphical Representations of Functions – **Economic Applications of Functions - Limits:** Concepts of a Limit of a Function –Theorems on Limits of Functions – Evaluations of Limits in Simple Cases – Limits and Continuity of Functions.

Unit 2: Differential Calculus and Economic Applications (One Variable)

Differential Calculus: Meaning – Process of Differentiation – Rules of Differentiation – Differentiation of Logarithmic and Exponential Functions – Higher Order Derivatives – Maximum and Minimum Points – Points of Inflection - **Economic Applications:** Marginal concepts, Price and cross Elasticity of demand – Relationship among Total, Marginal, Average concepts – Optimizing Economic functions.

Unit 3: Estimation and Testing of Hypothesis:

Estimation: Introduction – Point and Interval Estimation - Estimators and their Properties: Consistency, Unbiasedness, Efficiency and Sufficiency - Method of estimation – Method of Least Squares and Method of Maximum Likelihood. **Tests of Hypothesis:** Statistical Hypothesis – Critical Region – Best Critical region – The Most Powerful Test - Types of errors - Large sample tests for means and proportions - Small sample tests based on t, F and Chi-square distributions.

Unit 4: Sampling Theory:

Need for sampling – Census Vs. Sampling - Types of sampling – Simple random sampling – Stratified random sampling – Systematic sampling – Two Stage sampling.

Unit 5: Correlation and Regression:

Simple Correlation – Computation – Properties - Rank Correlation - Regression Lines - Numerical problems – Concept of Partial and Multiple Correlations.

MAPPING

EMT105(a)	STATISTICAL METHODS		4Credits

Course Objectives: The main objective of this study programme is thus to cultivate the analytical skills that can be used to solve complex analytical tasks based on a non-trivial statistical analysis of the underlying data.To solve the tasks of formulating and estimating economic models using statistical methods.This course an underlying of descriptive statistics, Probability, Sampling methods, Correlation and Regression Analysis and Testing of Hypothesis.

CO1	Able to find Mean, Median, Mode, Range, Quartile Deviation and Standard Deviation and Coefficient of Variation.
CO2	Able to apply Binomial, Poisson, Normal and Log-Normal Distribution Correlation and Regression Analysis.
CO3	Able to test small sample tests based on t, F and Chi-square distributions
CO4	formulate Statistical Methods describing the dynamics of economic systems such as production function analysis and solve econometric analysis of underlying data use with knowledge advanced econometric tools and techniques can solve easily.
CO5	Student can identify the relationship between the economic variables and test their significance which is key factor for economic analysis and policy making or business decisions.

CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Basics:

Measures of Central Tendency – Measures of Dispersion – Coefficient of Variation, Skewness and Kurtosis – Numerical problems.

Unit 2: Probability and Distributions:

Probability: Concept of Probability – Axioms of Probability – Addition and Multiplication theorems – Bayes's Theorem - **Distributions:** Random Variables – Distribution Function – Probability Density Function - Mathematical Expectation – Binomial, Poisson, Normal and Lognormal distributions – Mean and Variance - Chief characteristics of Normal Distribution.

Unit 3: Estimation and Testing of Hypothesis:

Estimation: Introduction – Point and Interval Estimation - Estimators and their Properties: Consistency, Unbiasedness, Efficiency and Sufficiency - Method of estimation – Method of Least Squares and Method of Maximum Likelihood. **Tests of Hypothesis:** Statistical Hypothesis – Critical Region – Best Critical region – The Most Powerful Test - Types of errors - Large sample tests for means and proportions - Small sample tests based on t, F and Chi-square distributions.

Unit 4: Sampling Theory:

Need for sampling – Census Vs. Sampling - Types of sampling – Simple random sampling – Stratified random sampling – Systematic sampling – Two Stage sampling.

Unit 5: Correlation and Regression:

Simple Correlation – Computation – Properties - Rank Correlation - Regression Lines - Numerical problems – Concept of Partial and Multiple Correlations.

EMT 105(b)	INTRODUCTION TO ECONOMETRICS		4Credits

Course Objectives: The objective of the course is to provide knowledge on Econometric applications of Economic theory.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	students will have adequate competency in the frontier areas of economic theory and methods
CO2	Use basic econometric estimation techniques such as Ordinary Least Squares to estimate bivariate and multivariate regression models.
CO3	Decision about the statistical significance of individual explanatory variable and also over all model.
CO4	Impacts for the violation of one of the important assumptions for application of OLS regression.
CO5	Students will acquire additional specialization topics are estimation of system of equations, estimation of panel data models, generalized method of moments, discrete response models, censored regression models and estimation of average treatment effects.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Nature of Econometrics and Economic Data

Definition of Econometrics – Steps in Empirical Economic Analysis - Econometric Model – The Role of Measurement in Economics – The Structure of Economic Data: Cross-Sectional data, Time Series data, Pooled Cross Section data, Panel Data.

Unit 2: Simple Regression Model

Two Variable Linear Regression Model: Assumptions, Estimation of Parameters, Tests of Significance and Properties of Estimators – Functional forms of Regression models – Log-linear models, Semi log-models and Reciprocal models – Choice of Functional Form.

Unit 3: The General Linear Model

Review of Assumptions, Estimation and Properties of Estimators: Un-biasness, BLUEs and Tests of significance of estimates – Analysis of Variance - **Dummay variables -** Nature of Dummy variables – Use of Dummy Variables – Errors in Variables and its consequences.

Unit 4: Auto-regressive and Distributed Lag Models

Introduction – Types of Lag schemes - Koyck's lag model, Almon's Lag scheme, Partial Adjustment and Expectations models - Causality in Economics – The Granger Causality Test.

Unit 5: Simultaneous Equation Models

Specification – Simultaneous Bias – Inconsistency of OLS Estimators - The concept of Identification, Rank and Order conditions for Identification – Indirect Least Squares - Two stage Least Squares (without proof), Problems.

EMT 105 (c)	AGRICULTURAL ECONOMICS		4Credits

Course Objectives: To import knowledge on role of agriculture sector in Economic development and structural changes and contribution of Agriculture sector to the country economy. Understanding the need for improvement in Agricultural Productivity – various programmes adopted by the Government for the improvement of Agricultural productivity

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Understanding scope of Agriculture Economics – Role of Agriculture in Economic Development- changes and contribution of Agriculture sector and Role of Women in Agricultural Development
CO2	Understanding the development of Agriculture Sector Post independence period – trends in area production and productivity and India's position in World Agriculture.
CO3	Agriculture Sector Post independence period – trends in area production and productivity and India's position in World Agriculture.
CO4	Understanding the disbursement of institutional finance to primary sector, credit management and risk management.
CO5	Other agencies – reasons for indebtedness in Agricultural Households.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit –I: Agriculture and Economic Development

Definition, Nature and Scope of Agricultural Economics – Role of Agriculture sector in Economic Development – Structural changes and Contribution of Agriculture Sector — Modernisation of Agricultural Production Systems – Global Hunger Index – Achieving Zero Hunger – Re-orientation of Agricultural Development- Sustainable Agriculture- Role of Women in Agricultural Development.

Unit –II: Agriculture Sector in India

Development of Agriculture sector during Post-Independence Period –Green Revolution - Trends in Growth of Gross Cropped Area and Gross Irrigated Area – Decreasing Size of Average Land Holdings – Area, Production and Yields of Principal Crops- Targets and Achievements during Five Year Plans – India's Position in World Agriculture.

Unit –III. Investments in Agriculture Sector in India

Factors Determining Gross Capital Formation in Agriculture Sector – Trends during Five Year Plans – Share of Public and Private Sectors – Budgetary expenditure on Agriculture sector – Inflow of FDI into Agriculture sector- Sources and Trends in flow of Credit to Agriculture – Kisan Credit Cards – Credit for Rain fed Areas – Indebtedness of Agricultural Households .

Unit – IV: Government Initiatives and Development of Agriculture

Need for Improvement in Agricultural Productivity- Government Initiatives – National Food Security Mission (NFSM)- National Mission for Sustainable Agriculture (NMSA) and Agricultural Extension and Technology – National Crop Insurance Programme – PradhanMantriFasalBimaYojana-RashtriyaKrishiVikasYojana – Rain fed Area Development Programme.

Unit- V: Agricultural Marketing and Trade in India

Determinants of Marketable and Marketed Surplus – Structure of Agricultural Markets – Primary and Secondary Wholesale Markets- Terminal Markets – Retail Markets – Fairs – Nature of Markets – Group Marketing- Cooperative Marketing – Direct Marketing – Warehousing in Rural areas – Physical and Financial Performance of GrameenBhandaranYojana – Role of AGMARK and AGMARKNET- Exports and Imports of Agricultural Commodities

EMT 106 (a)	ENTREPRENEURSHIP AND SKILL DEVELOPMENT		4Credits

Course Objectives: To make students develop and can systematically apply an entrepreneurial way of thinkingTo import knowledge on organisations for Skill Development.Development of communication skills and skill development.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Entrepreneurship and skill development course outcome study of concepts, functions and types of entrepreneurship.
CO2	To familiar the student with the basic concepts function and type of entrepreneurs.
CO3	Women entrepreneurship and economic development. Role of national and state level organizations in the development of entrepreneurship.
CO4	Provide orientation on identification and to assess the feasibility of the project.
CO5	To make students develop and can systematically apply an entrepreneurial way of thinking.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit I: Entrepreneurship

Concepts of Entrepreneurship - Functions and Types of Entrepreneurs - Motivation and Competency –Entrepreneurship - Women Entrepreneurship and Economic Development.

Unit Ii: OrganizationsFor Entrepreneurship Development

Programmes for the Development of Entrepreneurship - National and State Level Organizations - Entrepreneurship Development Institute of India (EDII) - National Institute for Entrepreneurship and Small Business Development (NIESBUD) - National Science and Technology Entrepreneurship Development Board (NSTEDB) - National Institute of Small Industry Extension and Training (NISIET).

Unit Iii:Identification And Preparation Of Project Report

Identification of Project – Objectives of Project – Methods and Contents of Project Report – Formulation and Appraisal of Project Report.

Unit Iv: Development Of Skills

Need for the Development of Skills –Communication Skills – Verbal and Non-Verbal Communication – Barriers to Communication – Individual Interaction Skills – Basic Interaction Skills - Leadership Skills - Working Individually and as a Team - Personality Development – Intra and Inter-personal Communication Skills.

Unit V: Organizations For Skill Development

Skill Development Mission – PM's National Council on Skill Development – National Skill Development Coordination Board – National Skill Development Corporation – SIKSHAM-National Skill Foundation of India(NSFI) – Skill Development Initiative (SDI) - KaushalVikasYojana (KVY) – AP State Skill Development Board.

EMT 106(b)	ENVIRONMENTAL ECONOMICS		4Credits

Course Objectives: The main objective of environmental economics is to maintain a balance between economic development and environmental quality. In order to achieve it, environmental economists have to explore the various socio-economic possibilities to reduce pollution and uplift the standard of living of the people.Environmental economics is a distinct branch of economics that acknowledges the value of both the environment and economic activity and makes choices based on those values. The goal is to balance the economic activity and the environmental impacts by taking into account all the costs and benefits.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Realize the importance and influence of environment on the economy including the quality of manpower. Arouse their feelings to make cleaner environment so as to achieve harmonious development.
CO2	Understand that environmental problem is not the problem of a single country or region but a global problem/issue. Hence, policy formulation may be for all countries.
CO3	Demonstrate the scientific management of waste materials; realize the role and importance of individuals to keep the environment clean.
CO4	Understand the causes and victims of environmental pollution like poverty, population explosion, and over-use of resources, careless or unscientific dump/management of wastes.
CO5	Suggest appropriate measures to correct environmental degradation, aware of those ingredients such as healthy climate, quality of human beings, domestic and other natural habitats and biodiversity levels, productivity and productions, sustainability, etcare all influenced by environment.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Nature and Scope of Environmental Economics

Nature and Scope of Environmental Economics – Economic Growth and Environmental degradation – Environmental Kuznets Curve - Limits to Economic Growth - Sustainable Development – Environmental Quality and Economic Development.

Unit 2: Environmental Degradation and Resource Depletion

Natural Resources – Renewable and Non-renewable Resources – Approaches to the use of Natural Resources – Theories of Natural Resources - Depletion of Natural Resources – Tragedy of Commons – Causes of Environmental Degradation.

Unit 3: Sources and Effects of Pollution

Sources and Types of Pollution – Soil, Air, Water Pollution - Industrialization and Environmental Pollution – Urban Solid-waste and other sources of Pollution – Aqua Culture, Coastal and Marine Pollution - Economic Effects of Pollution.

Unit 4: Environmental Principles and Policies

Environmental Regulation and Control of Pollution – Polluter Pays Principle - Hedonic Pricing Principle – Pigovian Analysis of taxes and Subsidies - Pollution Permits – Environmental Institutions - Environmental Policy – Objectives – National Environmental Policy of 2006 - Pollution Control Policies in India.

Unit 5: Environmental Laws and Management Strategies

Environmental Laws and Regulations – The Air Act, The Water Act, The Environmental Protection Act, The Wildlife Protection Act in India - Environment Management Strategies – Development of Clean Production

Technologies - Forest Conservation, Management and Conservation of Common Property Resources and Environmental Education – Social Forestry – Community Participation.

EMT 107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

Human values are the virtues that guide us to take into account the human element when we interact with other human beings. It is with those human values that one becomes truly able to put into practice his/her ethical values, such as justice, integrity, and refusal of violence and ban to kill – even in a crisis situation.To create an awareness on Management Ethics and Human Values.To inspire Moral and Social Values and Loyalty.To appreciate the rights of others. The prime objective of the Professional Ethics is to develop ability to deal effectively with moral complexity in students.To understand the moral values that ought to guide the Engineering profession, (b) To resolve the moral issues in the profession, and (c) To justify the moral judgment concerning the profession.

Course Objectives

This is a course on human values and professional ethics. The main objectives of the course is nature of ethics, relation to Religion, Politics, Business, Legal, Medical and Environment; Nature of Values- Good and Bad, analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom; the Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires). Moksha(Liberation); **t**he Four Noble Truths and Gandhian Ethics; and lastly **c**rime and Theories of punishments are reformative, retributive and Deterrent.

Learning Outcomes

After successfully completing the course the graduate is able to:

Honesty, open disclosure and sincerity are all characteristics of ethical behavior. Many organizations include a commitment to ethical behavior in their code of conduct. The professionals can adopt a personal code of conduct and make the same commitment on an individual basis. Professional ethics are accepted standards of personal and business behavior, values and guiding principles. The codes of professional ethics are established by professional organizations to help to guide members in performing their job functions according to sound and consistent ethical principles. The principles are beneficence, non-malfeasance, autonomy, justice; truth-telling and promise-keeping.

EMT201	MICRO ECONOMIC THERORY II		4Credits

Course Objectives: The microeconomic theory is to analyze how individual decision-makers, both consumers and producers, behave in a variety of economic environments. The factor prices are land, labour, capital and organization, determination of factor prices, pricing of factors; Ricardian theory of Rent, wage determination under perfect competition, classical theory of interest, theories of Profit; static and dynamic equilibrium, Walrasian System of General Equilibrium, Existence and Stability of General Equilibrium, externalities and Allocative Efficiency; Adam Smith, Bentham, Pigou, Kaldor-Hicks Compensation Criteria.The Fundamental concepts of supply and demand, rational choice, efficiency, opportunity costs, incentives, production, profits, competition, monopoly, externalities, and public goods will help you to understand the world around you.

CO1	Demonstrate the meaning and function of money, high powered money, monetary and paper system, illustrate various version of quantity theory of money.
CO2	Identify types of banks, explain the meaning and function of commercial banks, illustrate how banks create credit, and suggest the instruments to control credit.
CO3	Analyze different phases of trade cycle, demonstrate various trade cycle theories, understand the impact of cyclical fluctuation on the growth of business, and lay policies to control trade cycle.
CO4	Illustrate the meaning of inflation, deflation, stagflation and reflation, identify different kinds of inflation, causes and effects of inflation on different sectors of the economy, describe different measures to control inflation.
CO5	Criteria of Social Welfare – Adam Smith, Bentham, Pigou, and Cardinal school – Pareto Optimality in Consumption, Production and Distribution – Kaldor-Hicks Compensation Criteria- Bergson Social Welfare Function - Social Choice Theory, Coase and Sen.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO1

												2
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Factor Markets

Factor Pricing: Marginal Productivity Theory of determination of Factor prices - Factor shares and the 'Adding up' problem - Euler's theorem - Pricing of factors under Imperfect Competition.

Unit 2: Functional Distribution

Theories of Rent: Concept of Rent – Ricardian theory of Rent – Quasi Rent, Theories of Wages: Wage determination under Perfect competition, Monopsony and Collective bargaining Bilateral Monopoly), Theories of Interest: Classical theory of interest – Loanable fund theory – Keynes liquidity preference theory of interest, Theories of Profit: Profit as dynamic surplus – innovations and profits – risk uncertainty and profits

Unit 3:Economics of Information

Basic Concepts of Economics of Information - Economic Value of information - Role of information in Economic theory – Information, a measure of risk - Bayes' Rule - Classical Paradoxes - Choice under Risk - Risk Allocation in Exchange Economies Model - Monopolist Insurer - Perfect Competition - Adverse Selection - Monopolistic Screening, Competition and Market Breakdown - Public Intervention - Brief introduction to Game theoretic approach to information use.

Unit 4: General Equilibrium

Meaning of Partial and General Equilibrium – Static and Dynamic Equilibrium – Stable and Unstable Equilibrium –Walrasian System of General Equilibrium - Existence and Stability of General Equilibrium - Externalities and Allocative Efficiency.

Unit 5: Welfare Economics

Welfare Economics – Criteria of Social Welfare – Adam Smith, Bentham, Pigou, and Cardinal school – Pareto Optimality in Consumption, Production and Distribution – Kaldor-Hicks Compensation Criteria- Bergson Social Welfare Function - Social Choice Theory, Coase and Sen.

EMT202	MACRO ECONOMIC THERORY II		4Credits

Course Objectives: Macroeconomics refers to the study of the overall performance of the economy. While microeconomics studies how individual people make decisions, macroeconomics deals with the overall aggregate effect of microeconomics. Macroeconomics is crucial for the government to understand and predict the long-term consequences of their decisions. The overarching goals of macroeconomics are to maximize the standard of living and achieve stable economic growth. The goals are supported by objectives such as minimizing unemployment, increasing productivity, controlling inflation, and more. The objectives are Full employment. Price stability. A high, but sustainable, rate of economic growth. Keeping the balance of payments in equilibrium.

CO1	The overarching goals of macroeconomics are to maximize the standard of living and achieve stable economic growth
CO2	The goals are supported by objectives such as minimizing unemployment, increasing productivity, controlling inflation, and more.
CO3	The macro economy of a country is affected by many forces, and as such, economic indicators are invaluable to assessing different aspects of performance.
CO4	Meaning and Types of Inflation – Demand-Pull inflation – Cost-Push Inflation – The Phillips curve – The Inflation – Unemployment trade-off.
CO5	Objectives of Macroeconomic policies – Objectives of Monetary policy.New-classical and Real Business cycles Theorem – Post-Keynesians - Implications for Stabilization Policies.

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Demand for and Supply of Money

The Classical View- Neo-classical view-Quantity Theory of Money – Keynes and the Demand for Money - Post Keynesian theories of demand for money - Baumol , James Tobin and Friedman – Concept of Money Supply – Components of Money Supply – RBI approach to Money supply – High Power Money and Money Multiplier – Determinants of Supply of Money.

Unit – 2: Macro Theories of Distribution

Functional Versus Personal Distribution of Income - MicroversusMacro-theories of Distribution **-** Marxian, Ricardian, Kelecki Theories of Distribution **-** Alternate theories of distribution – Kaldor.

Unit 3: Trade Cycles

Meaning and Types of Trade Cycles – Different theories of Trade Cycles – Samuelson`s Model of Trade Cycle – Hicks' Theory Cycle – Kaldor`s Model of Trade Cycle – Control of Business Cycle – Monetary and Fiscal Policies.

Unit 4: Theories of Inflation

Meaning and Types of Inflation – Demand-Pull inflation – Cost-Push Inflation – The Phillips curve – The Inflation – Unemployment trade-off - The Monetarists Accelerationists' Hypothesis – Rational Expectations Hypothesis – New-classical and Real Business cycles Theorem – Post-Keynesians - Implications for Stabilization Policies.

Unit 5: Macroeconomic policies

Objectives of Macroeconomic policies – Objectives of Monetary policy – The policy of Activists arguments – The policy of Non-activists arguments - Fiscal policy – objectives and tools - Automatic stabilizers – Problems of using of Fiscal policies – Effectiveness of Monetary and Fiscal policies –The concept of Open Economy macroeconomics.

EMT203	BASIC ECONOMETRICS		4Credits

Course Objectives: This course is designed to define Econometrics, Steps in Empirical Economic Analysis, Different types of data involved in econometric Analysis.The courses involved Simple and Multiple Linear regression model and Functional forms of Non-Linear Regression models.Basic concept of Auto regressive distributed lag model (ARDL) developed which will be helpful for future research work with time series data.

CO1	Adequate competency in the frontier areas of economic theory and methods.
CO2	Formulation and estimation of a multiple regression model.
CO3	Decision about the statistical significance of individual explanatory variable and also over all models
CO4	Impacts for the violation of one of the important assumptions for application of OLS regression.
CO5	Estimation of system of equations, estimation of panel data models, generalized method of moments, discrete response models, censored regression models and estimation of average treatment effects.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Nature of Econometrics and Economic Data

Definition of Econometrics – Steps in Empirical Economic Analysis - Econometric Model – The Role of Measurement in Economics – The Structure of Economic Data: Cross-Sectional data, Time Series data, Pooled Cross Section data, Panel Data.

Unit 2: Simple Regression Model

Two Variable Linear Regression Model: Assumptions, Estimation of Parameters, Tests of Significance and Properties of Estimators – Functional forms of Regression models – Log-linear models, Semi log- models and Reciprocal models – Choice of Functional Form.

Unit 3: The General Linear Model

Review of Assumptions, Estimation and Properties of Estimators: Un-biasness, BLUEs and Tests of significance of estimates – Analysis of Variance - **Dummay variables -** Nature of Dummy variables – Use of Dummy Variables – Errors in Variables and its consequences.

Unit 4: Auto-regressive and Distributed Lag Models

Introduction – Types of Lag schemes - Koyck's lag model, Almon's Lag scheme, Partial Adjustment and Expectations models - Causality in Economics – The Granger Causality Test.

Unit 5: Simultaneous Equation Models

Specification – Simultaneous Bias – Inconsistency of OLS Estimators - The concept of Identification, Rank and Order conditions for Identification – Indirect Least Squares - Two stage Least Squares (without proof), Problems.

Text and reference books:

1) Johnston,J: Econometric Methods, McGraw-Hill Book Co., New York.
2) Maddala, G.S: Econometrics, McGraw-Hill Book Co., New York, 3rd Rd.
3) Gujarathi, D.N: Basic Econometrics, Fourth Edition, Tata McGraw-Hill, New Delhi.

EMT204	PRACTICAL-II		4Credits

Course Objectives: The course designed about Practical knowledge of mathematical concepts specially related to Input-output analysis and Linear Programming which are most important in economic decisions.This course covered Practical knowledge of OLS Method.The course involved practical approach of Multiple Linear Regression Model.Identify, Inconsistency of OLS Estimators.This course is extension of practical practices of Basic Econometrics and Mathematical Economics what we mentioned in the courses of EMT 203 and EMT 205.

CO1	Students can Identify Inter industrial relationships using Input-output analysis,
CO2	analyse maximization of profits and minimization of costs can evaluate using Linear Programming,
CO3	Analyse relationship of economic variables using simple and multiple regression models which are covered in basic Econometrics
CO4	Able to estimate and interpret linear regression models and be able to distinguish between economic and statistical importance
CO5	They should be able to critique reported regression results in applied academic papers and interpret the results for someone who is not trained as an economist.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Input-Output Analysis

Assumptions - Technological Co-efficient Matrix – Closed and open Model – Solution of Open Model – Hawkins-Simon Conditions – Dynamic Input-Output Model – Production Function Approach to Input Output Model.

Unit 2: Linear Programming

Basic Concepts – Formulation of LPP – Basic and Feasible Solutions – Graphical Solution - Simplex Method – Duality in Linear Programming – Elements of Data envelop Analysis and its Applications.

Unit 3: The General Linear Model

Review of Assumptions, Estimation and Properties of Estimators: Un-biasness, BLUEs and Tests of significance of estimates – Analysis of Variance - **Dummay variables -** Nature of Dummy variables – Use of Dummy Variables – Errors in Variables and its consequences.

Unit 4: Auto-regressive and Distributed Lag Models

Introduction – Types of Lag schemes - Koyck's lag model, Almon's Lag scheme, Partial Adjustment and Expectations models - Causality in Economics – The Granger Causality Test.

Unit 5: Simultaneous Equation Models

Specification – Simultaneous Bias – Inconsistency of OLS Estimators - The concept of Identification, Rank and Order conditions for Identification – Indirect Least Squares - Two stage Least Squares (without proof), Problems.

EMT205(a)	MATHEMATICAL ECONOMICS		4Credits

Course Objectives: This course also introduces the Mathematical tools such as Differential Calculus and Economic Applications (Two or More Variables), Differential Equations and Economic Applications.This course explores Input-output analysis and Linear programming which is most important in the area of Inter industrial dependency and maximization of the profits and minimization of the cost of the firms.

CO1	Students can deal Mathematical calculation of static optimization, Application of Lagrange's method and also student can evaluate Differential Equations and with Economic Applications.
CO2	Able to estimate and interpret Inter industrial relationships using Input-output analysis, also analyse maximization of profits and minimization of costs of the firms using Linear Programming method
CO3	Economic Applications of Differential Equations – Dynamic Multiplier – Harrod-Domar Model.
CO4	Homogeneous Linear Difference Equations with Constant Coefficients – Particular Solution of Non-homogeneous Linear Equations – Linear First Order and Second Order Difference Equations with constant coefficients – Cobweb Model –Market model with Stocks
CO5	Formulation of LPP – Basic and Feasible Solutions – Graphical Solution - Simplex Method – Duality in Linear Programming – Elements of Data envelop Analysis and its Applications.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Differential Calculus and Economic Applications (Two or More Variables)

Differential Calculus: Functions of two or more variables and Partial Derivatives – Rules of Partial Differentiation – Second-Order Partial Derivatives – Optimization of Multivariable Functions – Constrained Optimization with Lagrange Multipliers – Significance of Lagrange Multiplier – Differentials – Total and Partial Differentials – Homogeneous Functions – Euler's Theorem – Partial Elasticities; **Economic Applications:** Maximization of Utility – Minimization of Cost – Maximization of Cost, Profit – Elasticity of Substitution

Unit 2:Differential Equations and Economic Applications

Definitions and Concepts – Linear Differential Equations of the First and Second Order with constant coefficient – Non-linear Differential equations of First-Order and First Degree – Variable Separable Case, Differential Equations with homogeneous equations - Economic Applications of Differential Equations – Dynamic Multiplier – Harrod-Domar Model.

Unit 3: Difference Equations and Economic Applications

Definitions and Concepts – Homogeneous Linear Difference Equations with Constant Coefficients – Particular Solution of Non-homogeneous Linear Equations – Linear First Order and Second Order Difference Equations with constant coefficients – Cobweb Model –Market model with Stocks – Dynamic Multiplier – Multiplier Acceleration Model : HarrodDomar Model – Multiplier's Accelerator Interaction Model of Samuelson.

Unit 4: Input-Output Analysis

Assumptions - Technological Co-efficient Matrix – Closed and open Model – Solution of Open Model – Hawkins-Simon Conditions – Dynamic Input-Output Model – Production Function Approach to Input Output Model.

Unit 5: Linear Programming

Basic Concepts – Formulation of LPP – Basic and Feasible Solutions – Graphical Solution - Simplex Method – Duality in Linear Programming – Elements of Data envelop Analysis and its Applications.

Text and reference books

7) Bose, D: An Introduction to Mathematical Economics, Himalaya Publishing Company, Delhi.

EMT 205(b)	ACTUARIAL STATISTICS		4Credits

Course Objectives: The objective of the course is to provide knowledge on Actuarial Statistics. Actuarial analysis is an essential task performed by insurance companies to analyze data and estimate the probability of an insurance claim being filed for a given event. This work allows insurance companies to predict with areas on able degree of accuracy the amount of claims they will pay out, which helps them determine what premiums they must charge to remain profitable.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	To learn and gain the knowledge about the impact of economic and social conditions in the financial sector.
CO2	To create awareness about the financial terminology and calculations in the policy designing
CO3	To skill development and honed by successful actuaries include an excellent business communications in sense with knowledge of finance, accounting, and economics.
CO4	Actuaries often required keen analytical and problem solving skills using mathematics and statistics.
CO5	Actuaries can ability to work with reliability and relevance by using the analytical and scientific reports generated by the researchers

CO5	3	2	1	-	1	2	-	1	1	2	-	1

➢

Unit -1 Theory of Interest rates, Rate of Interest, Nominal rate of interest. Accumulation factors. Force of interest, present values, Stoodley formula for the force of interest, Present value of cash flows, Valuing cash flows - Basic Annuities Certain, Present values and accumulation, Concepts of different annuities, Continuously payable annuities, Varying annuities.

Unit- 2 Utility Theory, Insurance and Utility Theory, Models for individual claims and their sums, Approximations for the distribution of the sum - Application to Insurance - Survival function, time until death for a person age X, Accurate future Life time, Force of Mortality.

Unit-3 Life Table and its Relation with Survival Function – Examples - The Deterministic Survivorship group, Recursion formulas, Assumptions for traditional ages, Analytical Laws of Mortality, Select and Ultimate tables.

Unit – 4 Life Insurance: Insurance payable at the moment of death and at the end of the year of death – Level benefit insurance, Endowment insurance, Deferred insurance and Varying benefit insurance. Life Annuities. Single payment, Continuous Life annuities, Discrete life Annuities - life annuities with monthly payments, Complete annuities – Immediate and Apportionable annuities – due.

Unit 5: Multiple life functions, Joint life and Last Survivor status, Insurance and Annuity benefits through multiple life function, Evolution for Special Mortality laws - Multiple decrement models, associated single decrement tables, Central of multiple decrement, Central force assumptions for multiple decrements. Uniform distribution assumption for multiple decrements.

EMT 205(c)	WOMEN AND ECONOMIC DEVELOPMENT		4Credits

Course Objectives: To make the students to understand the role of Women in India's Economic Development To assess the status of women in India in terms of such key indicators as literacy rates, education, work participation rates, income, wealth and political power.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Understand and explain the key concepts like fertility rates, work participation rates and the role of women in economic development of the country.
CO2	Explain the vast gender gaps existing in India in literacy, life expectancy, health care and income levels between men and women.
CO3	Illustrate the flaw in the existing gender division of labor and the reasons for the low levels of work participation rates among women in India
CO4	Analyze the status of women in politics and administration and the role of various institutional agencies in the development of women
CO5	Critically evaluate impact of various poverty alleviation and development programmes implemented in ameliorating the conditions of women in India.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

UNIT- I: Women and Economic Developmentin India

Women Population in India - Rural and Urban Women Population – Fertility Rates – Women Labour Force and Work Force Participation Rates – Role of Women in Economic Development.

UNIT – II: Women and Human Development

Human Development – Gender Gap – Gender Inequality Index - Gender Development Index – Gender Empowerment – Measures – Women and Literacy, Life Expectancy –Access to Health Care – Income Inequalities.

UNIT – III: Women and Labour Markets

Gender division of labour –Participation rates in rural and urban employment markets in India - Factors affecting women entry into labour markets in Agriculture, Industry and Service sectors - Women in Organized and Unorganized Sectors

UNIT – IV: Governance for Women Development

Role and functions of Ministry of Women and Child Development - Social Welfare Boards: National and State level Commissions of Women. Women's Development Corporation. National Institute of Entrepreneurship and Small Business Development (NIESBUD) – NABARD -Small Industries Development Bank of India (SIDBI).

UNIT – V: Welfare Programmes and Women Development

Role of Non-Government Organizations in Women's welfare - Kasturba Gandhi BalikaVidyalayas (KGBV) – National Programme for Adolescent Girls (NPAG) – National Mission for Empowerment of Women – STEP – Micro Credit Groups – SWADHAR – DHANALAKSHMI – RashtriyaMahilaKhosh (RMK) – Indira Gandhi MatrutvaSahayogYojana – MGENREGA – Hostels for Working Women – KishoriBalikaPathakam – Indira KranthiPatham – JananiSurakshaYojana - BangaruTalliProgramme – Jana DhanYojana – SuknyaSamrudhiYojana.

EMT 206(a)	PUBLIC FINANCE		4Credits

Course Objectives: The objectives of public finance are achieved by managing and drafting policies pertaining to key areas such as taxation, management of public revenue and expenditure, raising and servicing public debt, fiscal administration at various levels.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Understand the sources of finance both public and private, demonstrate the role of government to correct market failures and possible advantage of public financing
CO2	Attain the advantages and knowledge of public investments and other government expenditures. Understand the causes of growing public expenditures for various programmes and policies within and outside the country.
CO3	Understand the possible burden, benefits and distribution of various types of taxes among various classes of people, know the general trend and impact on general welfare and arouse them to suggest good and bad tax system.
CO4	Understand the needs of public borrowing from all possible sources to meet necessary public investment/expenditures. Also be alerted to find sources for repayment
CO5	Deliver effectively the preparation of budget and how they are passed in the house. Understand the changes in size and flexibility of state and central budget along with the role played by Finance Commission.

CO5												

Unit 1: Scope and Structure of Public Finance

Nature, Scope and Importance of Public Finance - Public Finance and relationship with other Sciences - Distinction between Public and Private Finance - Principles of Public Finance-Principle of Opportunity Cost in Public Finance - Theory of Public Goods and Merit Goods - Role of Public Finance in Developing Economies and Underdeveloped Countries.

Unit 2: Public Expenditure

Introduction - Difference between Public and Private Expenditure - Reasons for growth of Public Expenditure - Classification and Canons of Public Expenditure - Effects of Public Expenditure - Wagner's Law of Increasing State Activities - Peacock and Wiseman Hypothesis - Controls and Accountability of Public expenditure in India

Unit 3: Public Revenue and Taxation

Sources of Public Revenue - Classification of Public Revenue - Principle of Public Revenue - Effects and significance of Public Revenue - Characteristics of Good Tax system in India - Canon of Taxation - Classification of Taxation - Benefit (Modern) theories of Taxation - Ability to Pay Theory - Taxable Capacity - Value Added Taxation**(VAT)**and GST Principle and Issues – Indian Tax Structure – Incidence and Effects of Taxation.

Unit 4: Public Debt

Classification of Public Debt - Causes of Public Debt - Objectives of Public Debt - Effects of Public Debt - Burden of Public Debt - Public debt Management - Public Debt in India.

Unit 5:Budget and Federal Fiscal Systems

Introduction –Definitions of Primary deficit, Revenue deficit, Budgetary deficit and Fiscal deficit - Budget classification - Zero Base Budgeting - Fiscal Deficit and Budgetary Deficit in India – FRBM -Centre-State Financial relations in India –Functions of Finance Commission - Recommendations of 13^{th}and14^{th} Finance Commissions.

EMT 206(b)	INDUSTRIAL ECONOMICS		4Credits

Course Objectives: To make students understand the theory of firm and forms of Industrial organization. To familiarise students with industrial location importance and theories of industrial location To make students understand the native and investment decision. To help students to understand industrial management and role of Science and Technology in Industrial Development.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Understanding industrialization and economic development strategies of industrialization in developing countries.
CO2	Study the theory of the firm – optimum firm – factors determine optimum firm
CO3	Understanding factor influencing Industrial location and theories of Industrial location Study the nature and types of investment decisions.
CO4	Profile for project, project evaluation and cost benefit analysis
CO5	Understanding Industrial Management, role of Science and Technology in Industrial Development and Industrial Policies

EMT 207: HUMAN VALUES AND PROFESSIONAL ETHICS – II

Human values are the virtues that guide us to take into account the human element when we interact with other human beings. ... It is with those human values that one becomes truly able to put into practice his/her ethical values, such as justice, integrity, and refusal of violence and ban to kill – even in a crisis situation. To create awareness on Management Ethics and Human Values. To inspire Moral and Social Values and Loyalty. To appreciate the rights of others. The prime objective of the Professional Ethics is to develop ability to deal effectively with moral complexity in students.To understand the moral values that ought to guide the Engineering profession, (b) To resolve the moral issues in the profession, and (c) To justify the moral judgment concerning the profession.

Course Objectives

This course explores of the Human values and professional ethics for economics. The main objectives of the course is the value Education, concept of human values, self-introspection, self-esteem, family valuesand responsibilities of family, threats of family life - status of women in familyandsociety; The medical ethics, responsibility of medicalpractitioners. ethical issues; business ethics immoral and illegal practices, ethical abuses and work ethics; **e**nvironmental ethics, ecological crisis; social ethics and ethics of media.

Unit-I: Value Education- Definition - relevance to present day - Concept of Human Values - self introspection – Self-esteem - Family values-Components, structure and responsibilities of family- Neutralization of anger - Adjustability - Threats of family life - Status of women in familyandsociety - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

Unit-II: Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medicalpractitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit-III: Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions.Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit-IV: Environmental ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollutionand waste, CI imate change, Energy and population, Justice and env iron mental health.

Unit-V: Social ethics- Organ trade.Humantrafficking.Human rights violation and social disparities, Feminist ethics.Surrogacy/pregnancy. Ethics of media- Impact of Newspapers, Television, Movies and Internet.

Learning Outcomes

After successfully completing the Human values and professional ethics the graduate is able to:

The value Education, concept of human values, self-introspection, self-esteem, family valuesand responsibilities of family, threats of family life - status of women in familyandsociety; The medical ethics, responsibility of medicalpractitioners. ethical issues; business ethics immoral and illegal practices, ethical abuses and work ethics; **e**nvironmental ethics, ecological crisis; and social ethics, ethics of media. Honesty, open disclosure and sincerity are all characteristics of ethical behaviour. Many organizations include a commitment to ethical behaviour in their code of conduct. Professionals can adopt a personal code of conduct and make the same commitment on an individual basis. Professional ethics are accepted standards of personal and business behaviour, values and guiding principles. Codes of professional ethics are established by professional organizations to help to guide members in performing their job functions according to sound and consistent ethical principles. The principles are beneficence, non-malfeasance, autonomy, justice; truth-telling and promise-keeping.

****

EMT 301	ADVANCED ECONOMETRICS		4Credits

Course Objectives: The objective of this course to provide students with a knowledge of the core techniques of econometric analysis which forms the basis for the understanding and critical assessment of published work in empirical econometrics.

To develop the analytical skills required to demonstrate theoretical asymptotic properties of different econometric estimation and testing procedures under weakened modelling assumptions..

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Concepts of Heteroscedasticity &Multicollinearity Possible reasons behind the presence of Heteroscedasticity&Multicollinearity. Skill to judge the reliability of estimation in case of violation of basic assumptions for the application of ordinary linear regression method.
CO2	Concepts of Autocorrlation reasons behind the presence of Heteroscedasticity&Multicollinearity. Describe the variance/covariance matrix for the regression errors under the assumption that the errors are correlated
CO3	Apply modern econometric methods covering time series analysis, financial econometrics, microeconometrics, macroeconometrics and structural econometric modelling;
CO4	Interpret and critically evaluate applied economics research literature; demonstrate programming skills and numerical methods; and
CO5	Apply methods learned to address policy and business decision questions.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Multicollinearity and Heteroscadasticity

Multicollinearity: Source and Consequences, Tests for Multicollinearity and solutions for Multicollinearity. Heteroscadasticity**:** Sources and Consequences, Tests for Heteroscadasticity, Generalized Least Squares Method of Estimation.

Unit 2: Autocorrelation

Sources of Autocorrelation - first order Autoregressive scheme - Consequences of Autocorrelation - Tests for Autocorrelation – Durbin-Watson test - Methods of estimation of Autocorrelation coefficient -Estimation from d- statistic and Cochran-Orcutt iterative method.

Unit 3: Qualitative and Limited Dependent Variables Models

Binary Choice Models: Linear Probability Model, Probit Model and Logit Models – Censored and Truncated regression models.

Unit 4: Simultaneous Equation Models: Estimation Methods

Two stage Least Squares, Limited Information Maximum Likelihood, K-class Estimators, Three Stage Least Squares and Full Information Maximum Likelihood Methods – Numerical Problems.

Unit 5: Panel Data Regression Models and Time Series Econometrics

Panel Data – Estimation of Panel Data Regression Models - Fixed and Random Effects – Estimation – Introduction to Time Series Econometrics - Stationary and Non-Stationary Stochastic Process – Integrated Stochastic Process – Unit roots – Co-integration – Test for co-integration, Co-integration and error correction mechanism.

4. Maddala, G.S: Limited-Dependent and Qualitative Variables in Econometrics, Cambridge University Press.

EMT 302	COMPUTER APPLICATIONS AND DATA ANALYSIS		4Credits

Course Objectives: The objective of the course is to provide knowledge on Econometric tools and their applications on Economic theory and practice using statistical packages like STATA, SPSS, R, e-views etc.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Students will get basic knowledge of computers i.e., block diagram, evolution of computer, input/output devices, storing information in computer etc.
CO2	At the end of this course student will gain Examine spreadsheet concepts and explore the Microsoft Office Excel environment. Import and export data.
CO3	Work with pivot tables and charts. Create and edit charts. Learn to use functions and formulas. Perform analysis tasks using Data analysis pack
CO4	Student gained and evaluate Econometric Methods such as OLS, LPM, Logistic regression analyses and conclude using SPSS Package
CO5	Finally, student will be able to write programme for Simple statistical analyse and interpret through R-programming.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Computer Fundamentals

Definition - Components of a computer-block diagram – Evolution of computer – Generations – input/output devices – storing information in computer – types of computers – Hardware and Software – Compilers and Assemblers – Low level and high-level languages – Operating systems and the graphic user interface – Microsoft Windows operating system.

Unit 2: MS-WORD

Creating, opening and saving files - editing and formatting text - spell and grammar check – auto correct-hyphenation – creating of tables and columns - mail merge - equation editor – concept of a macro - print preview.

Unit 3: MS-EXCEL

Work sheet – entering data – creation of worksheets and workbooks – opening and saving workbooks - editing and formatting - sorting, filtering and pivot tables - Creating graphs and charts - mathematical and statistical functions -Data analysis pack in Excel - Descriptive statistics, tests of hypothesis, ANOVA, Correlation and Regression, Random Number Generation.

Unit 4:Data Handling Using SPSS

Opening Excel files in SPSS - Variables, labels and values, Analysis tools - Descriptive statistics - Selection of variables in multiple linear regression - Stepwise, forward and backward procedures - Factor analysis and Discriminant analysis (Stress on procedures and syntax only).

Unit 5: Data Analysis using R

R environment – Workspace, Getting help, Packages and Built-in data - Assigning values, performing vectorized arithmetic - Creating objects, vectors, lists, matrices, arrays and data frames - Conditional selection, sorting and indexing data frames, implicit looping - Importing data - Branching and looping statements - plotting data – Bar plots, Pie charts, Histogram, Box plots - Summary statistics - Generating samples from discrete and continuous distributions - Simple correlation and regression - Testing hypothesis of mean and variance, Analysis of variance.

EMT 303(a): PRACTCAL-III	ADVANCED ECONOMETRICS, AND COMPUTER APPLICATIONS AND DATA ANALYSIS		4Credits

Course Objectives: The objective of this course is to provide knowledge of data analysis through the domains of MS-Excel, SPSS and R-programming. In today's business world, data analysis plays a role in making decisions more scientific and helping businesses operate more effectively.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Student will gain Examine spreadsheet. Work with pivot tables and charts. Create and edit charts. Learn to use functions and formulas.
CO2	Perform analysis tasks using Data analysis pack using MS-Excel.
CO3	Student gained and evaluate Econometric Methods such as OLS, LPM, Logistic regression analyse and conclude using SPSS Package
CO4	Student will able to test of Multicollinearity, Heteroscedasticity and Autocorrelation.
CO5	Student will be able to write programme for Simple statistical analyse and interpret through R-programming.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Concepts are covered in this Practical Approach follows;

- **MS-Excel;**Pivot tables, Charts-Histogram, Bar, Pie, Scatter diagrams, Data Analysis Pack-Descriptive Statistics, Correlation Matrix, Simple and Multiple Regression analysis and Testing of Hypothesis.
- **SPSS;**Descriptive Statistics, Correlation Matrix, Simple and Multiple Regression analysis and Testing of Hypothesis.

  Using SPSS Testing of Multicollinearity, Heteroscedasticity and Autocorrelation, LPM and Logistic regression models

  R-programme;Descriptive Statistics, Correlation Matrix, Simple and Multiple Regression analysis and Testing of Hypothesis, LPM and Logistic Regression Models.

EMT 303(b)	APPLIED ECONOMETRICS		4Credits

Course Objectives: The objective of this course is to provide the basic knowledge of an advanced theoretical understanding of consumer behaviour and decision-making. To develop a theoretical understanding of strategic behaviour of economic agents.

.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Student will be able to develop a sound understanding of the core microeconomic concepts that economists use to understand the process of decision-making by an economic agent(s).
CO2	The student should be able to apply mathematical tools and techniques to study behaviour of economic agents.
CO3	Students will be able to identify strategic behaviour of economic agents and formulate them in a game theoretic framework.
CO4	Student can explore Macro econometric models; Klein-Goldberger Model for USA, Agarwal, K. Krishna Murthy and N.V. A. Narasimhan Models.
CO5	To gain knowledge in Applications of Single and Simultaneous Equation Models for macroeconomic variables.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Demand Analysis

Demand functions – Restrictions to be satisfied by Demand functions - Single Equation models, Engel Functions and Curves, Specification of Functional forms and Estimation – Linear Expenditure System - Review of Empirical Studies.

Unit 2: Consumption Function

Theories of Consumption Function – Alternative specifications – Absolute Income Hypothesis, Relative Income Hypothesis, Life Cycle Hypothesis, Permanent Income Hypothesis – Problems of Estimating the Consumption Function – Review of some empirical studies.

Unit 3: Production Functions

Single Equation Estimation of production functions - Cobb-Douglas, CES, Translog – Specifications and Estimation issues – Review of Empirical studies – Functional forms and Estimation of Cost Functions - Estimation of Factor demand Equations - Empirical Studies.

Unit 4: Macro Econometric Models

Nature ofSimultaneous Macro Econometric Models – Klein-Goldberger Model for USA - Brookings Model – Macro Econometric models for India – Agarwal, K. Krishna Murthy and N.V. A. Narasimhan Models.

Unit 5: Other Applications of Single and Simultaneous Equation Models

Models of Money Demand and Supply – Estimation of Demand for Money Function – Application in Industrial Organization, Labour Economics and Health Systems – Review of Empirical Studies.

EMT 303(c)	ECONOMICS OF DEVELOPMENT AND PLANNING		4Credits

Course Objectives: The paper provides fundamental foundation of basic growth and development issues, approaches and models. The paper attempts to discuss the structure and change in variables. It helps understand the overall static and dynamic perspectives of the economy in a purely theoretical perspective.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	The economic development plan provides a comprehensive overview of the economy, sets policy direction for economic growth, and identifies strategies, programs, and projects to improve the economy.
CO2	The aim of economic development is to improve the material standards of living by raising the absolute level of per capita incomes. Raising per capita incomes is also a stated objective of policy of the governments of all developing countries.
CO3	One of the most important functions of economic planning is to achieve consistency among different economic objectives. Some desirable goals are likely to conflict with others.
CO4	One of the most important functions of economic planning is to achieve consistency among different economic objectives.
CO5	Five basic stages are traditional society, preconditions for take-off, take-off, drive to maturity, and age of high mass consumption), there exists no clear definition for the stages of economic development.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Concepts and Measurement of Economic Growth and Development

Economics of Development and Growth - Problems and Causes of Underdevelopment and Development - Factors of Economic Growth - Obstacles to Economic Development - Vicious Circle of Poverty - Characteristics of Modern Economic Growth - Measures of Economic Growth and Economic Development, HDI and PQLI.

Unit 2: Theories of Growth and Development

Classical, Karl Marx and Schumpeter - Joan Robinson Golden Age model, Harrod-Domar model, Rostow Stages of Growth - Lewis theory of Surplus Labour - Rodan's Big Push theory - Nurkse Balanced Growth theory - Hirschman's Unbalanced theory – Ranis - Fei Model – Dependency Theory of Development.

Unit 3: Domestic Factors in Economic Development

Capital Formation and Economic Development- Role of Agriculture and Industry in Economic Development – Population Growth and Economic Development - Human Capital Formation and Man Power Planning – Entrepreneurship in Economic Development – Role of Technology in Economic Development.

Unit 4: Trade and Development

Role of Foreign Trade in Economic Development – Trade as an Engine of Economic Growth - Two Gap Model – Objectives and Role of Monetary and Fiscal Policies in Economic Development - Commercial Policy and Economic Development - Price Policy and Economic Development.

Unit 5: Planning Techniques and Planning in India

Capital-Output Ratio - The Choice of Techniques and Appropriate Technology - Investment Criteria – Elements of Cost-Benefit Analysis - Poverty, Unemployment and Economic Inequalities in India – Role of Public Sector in India - Role of Foreign Aid and Foreign Capital in India.

Text and reference books:

EMT 303(d)	FINANICIAL INSTITUTIONS AND MARKETS		4Credits

Course Objectives: To introduce students to the world of financial services to enrich student's understanding of the fundamental concepts and working of financial service institutions. Further, to equip students with the knowledge and skills necessary to become employable in the financial service industry.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Explain the broad features of Indian financial institutions with its apex banks' objectives and purview. Also understand the instruments to control credit in the country.
CO2	Effectively narrate the kinds and components of money with its regulatory system, be aware of the functions, objectives and limitations of commercial banks.
CO3	Identify the existence and development of non-banking financial institutions, know the important role of Mutual funds, LIC, investment companies etc., utilize and effectively participate in the development process.
CO4	Understand the conditions of financial markets and its impact in the economy
CO5	Demonstrate the role and significance of foreign exchange rate and its markets with its impact on various sectors in the economy.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Financial System

Evolution of Financial System – Structure of Financial System – Functions of Financial System – Financial System and Economic Development.

Unit 2: Money Market

Features of Money Market – Instruments of Money Market: Call Money Market – Treasury Bills Market – Commercial Bills – Market for Commercial Papers – Certificate of Deposits – Discount and Finance House of India (DFHI) – Securities Trading Corporation of India (STCI) – Deficiencies and Recent Developments in Indian Money Market.

Unit 3: Capital Market

Industrial Securities Market: Primary and Secondary Markets – Government Securities Market and Long Market – Objectives, Functions and performance of Securities and Exchange Board of India (SEBI) – Over the Counter Exchange of India (OCTCEI) – Functions of Stock Exchanges – Bombay Stock Exchange (BSE) – National Stock Exchange (NSE) – Reforms in Capital Market.

Unit 4: Banking and Financial Institutions

Banking: Central Banking: Objectives and Functions - Commercial Banks, Functions and Growth - Process of Credit Creation – Growth and Control of Non-banking Financial Institutions - Functions and Performance of Industrial Finance Corporation of India (IFCI) – Industrial Development Bank of India (IDBI) – Industrial Credit and Investment Corporation of India (ICICI) – Small Industrial Development Bank of India (SIDBI) – State Financial Corporations (SFCs) – Mutual Funds.

Unit 5: Investment Institutions and Foreign Capital

Functions and Performance of Life Insurance Corporation (LIC) – General Insurance Corporation (GIC) and Unit Trust of India (UTI) – Forms of Foreign Capital – International Financial Instruments – Trends in Foreign Capital Inflows to India – Advantages and Disadvantages of Foreign Capital.

Econometrics (R) III Semester

EMT 304	PERSONALITY DEVELOPMENT AND SOFT SKILLS		4Credits

Course Objectives: Develop effective presentation skills. Conduct effective business correspondence and prepare business reports which produce results. Become self-confident individuals by mastering inter-personal skills, team management skills, and leadership skills.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Soft skills provide students with a strong conceptual and practical framework to build Develop and manage teams.
CO2	They play an important role in the development of the Students' overall personality, thereby enhancing their career prospects
CO3	This paper provides strong practical orientation to the students and helps them in building andimproving their skills in communication, the effective use of English, business correspondence, presentations, team building, leadership, time management, group discussions, interviews, and inter-personal skills.
CO4	This paper also helps students in career visioning and planning, effective resume writing and dealing with placement consultants and headhunters and also to create interesting, and interactive manner,
CO5	Which gives ample scope for the students to interact with each other and face a wide variety of issues, topics, and situations that they are likely to come across as entry-level.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit – I Foundations of personality development: Concept of Personality – Dynamics - Trait theory of personality: Personality Determinants: Physical, social, educational, family, intellectual and emotional determinants; Causes for sick personality and healthy Personality. (Theory only)

Unit-II Self-awareness skills: self-awareness and management- Communicating: Sending inter personal messages – Listening and reading non-verbal messages - Providing feedback. (Theory only)

Unit- III Motivating: Goal setting – Coaching, Counseling and Mentoring – Empowering people through delegation - Leading: Politicking – Persuading - Applying leadership styles – Managing Change. (Theory only)

Unit- IV Teaming: Working with teams – Running meetings – Valuing diversity: Problem solving: Ethical decision making - Creative problem solving – Resolving conflicts – Negotiation. (Theory only)

Unit- V Self-esteem: Characteristics – Causes of low self-esteem – Steps to build Positive self-esteem; Attitude: Steps in building positive attitude; Interpersonal skills; Steps in developing a positive Personality. (Theory only)

EMT 305(a)	INDIAN ECONOMY		4Credits

Course Objectives: The objective of this course is to provide the basic knowledge of Indian economyStructure of the Indian Economy, Agricultural Sector, Industrial Sector, Tertiary and Foreign Sectors and Planning and Development of the Indian economy that is with the study of the subject in a Master's programme.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Students will develop ideas of the basic characteristics of Indian economy, its potential on natural resources.Understand the importance, causes and impact of population growth and its distribution, translate and relate them with economic development.
CO2	Understand agriculture as the foundation of economic growth and development, analyse the progress and changing nature of agricultural sector and its contribution to the economy as a whole. Students will obtain information regarding various agricultural issues in India and remedies for it
CO3	Students will aware about recent economic affairs such as demonetization, universal basic income, cashless economy, skill and training development schemes, make in India etc
CO4	Students will get benefit about various economic issues at local, national and global level.
CO5	Grasp the importance of planning undertaken by the government of India, have knowledge on the various objectives, failures and achievements as the foundation of the ongoing planning and economic reforms taken by the government.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Structure of the Indian Economy

Indian Economy on the Eve of Independence- Basic Characteristics of the Indian Economy as Developing Economy- Major issues of Development in Indian Economy- Growth and Structural Changes in the Indian Economy- Population-Poverty –Measurement of Poverty, Anti PovertyProgrammes - Inequality- Natural Resources-Infrastructure- Human Development in India-Prices, Price Policy and Economic Growth- Balanced Regional Development-Unemployment in India.

Unit 2: Agricultural Sector

Role Agriculture in Indian Economy- Share of Agriculture - Interrelationship between Agriculture and Industry –Land Tenure System - Farm Size and Productivity -Institutional and Technological Aspects- New Agricultural Policy-Food Security in India-Rural Credit- Agricultural Marketing- Regional Disparities in Indian Agriculture- Irrigation and other Agricultural Inputs.

Unit 3: Industrial Sector

Industrial Structure and Economic Growth- Large and MSMEs - Industrial Labour Problems and Labour Policy -Industrial Sickness Causes and Remedial Measures- Economic Reforms and Industrial Growth-Pattern of Industrialization-Public and Private Industrial Finance in India- Unorganized Sector and Informalisation of the Indian Economy.

Unit 4: Tertiary and Foreign Sectors

Service Sector - Role, Growth and Structure of Service Sector in India –Growth, Composition and Direction of India's Foreign Trade – Trade Policy and its Reforms in India – India's Balance of Payments - WTO and Indian Economy.

Unit 5: Planning and Development

Objectives and Strategy of Planning- Public Sector and Indian Planning- Re-Organization of Planning Commission (NITI Aayog) - Privatization and Globalization and its impact on India-Government Subsides in India - Problems of Capital Formation- Foreign Capital, Foreign aid and Economic Development in India.

EMT 305(b)	ECONOMICS OF INSURANCE		4Credits

Course Objectives: The objective of this course is to provide the basic knowledge of Economics of Insurance, Element of Risk and Risk Management, Life and Health Insurance, Risk and Insurance, General and Other Types of Insurance and Regulation of Insurance are explained.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Demonstrate knowledge of insurance contracts and provisions, and the features of property-liability insurance, life and health insurance, and employee benefit plans.
CO2	Demonstrate knowledge of the operation and management of insurance entities, and the economic implications of organizational design and structure.
CO3	Develop skills to facilitate insurance product cost and pricing, marketing, and distribution.
CO4	Develop practical skills through professional development seminars, internships, and/or a practicums in insurance and risk management.
CO5	Examine the role of public policy including social insurance in personal financial planning and risk management.

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Element of Risk and Risk Management

Fundamental of Risk and Uncertainty – Classification of Risk – Risk Pooling and Risk Transfer - Concept of Risk Management – Essentials and Elements of Risk Management – Risk Assessment and Risk Control.

Unit 2: Risk and Insurance

Definition of Insurance – Role and Functions of Insurance – General and Specific Principles of Insurance Contract – Insurance and Economic Development – Insurance as Financial Intermediaries and Investment Institutions – Classification of Insurance - The Concept of Re-insurance.

Unit 3: Life and Health Insurance

Fundamental Principles of Life and Health Insurances – Functions of Life and Health Insurances – Plans of Life and Health Insurance – The Process of Underwriting Life and Health Insurance- Group Insurance

Unit 4: General and Other Types of Insurance

Definition of General Insurance – Marine, Motor Vehicular, Fire and other types of Insurances –Physical and Moral Hazards in General Insurance – The General Insurance Corporation (GIC Re) and General Insurance Companies, NOUN – Growth of General Insurance business in India.

Unit 5:Regulation of Insurance

Organization and Growth of LIC - Monopoly of LIC - Need for Insurance Regulation in India - Functions and Duties of Insurance Regulation and Development Authority (IRDA) of India — Entry of Private and Foreign Insurance Companies – Implications – Prospects of Insurance Companies.

EMT 401	TIME SERIES ECONOMETRICS		4Credits

Course Objectives: The objective of the course is to provide knowledge on Econometric applications of Economic theory, especially time series econometrics.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Students will acquire additional specialization through the Time series Econometrics Analysis.
CO2	Skill to judge the reliability of estimation in case of Stationarity and Non-Stationarity test, Co-integration test.
CO3	Forecasting with a single-equation linear regression model, and Forecasting with a multi-equation econometric model
CO4	Student can evaluate Univariate Time Series Models like MA, AR, ARMA and ARIMA models.
CO5	Student will be able to calculate VAR model which most important in macro-economic models.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Basic concepts

Introduction – Stationary Stochastic Process – Non-stationary Stochastic Process; Unit root Stochastic Process, Integrated Stochastic Process, tests of Stationarity.

Unit 2: Co-integration

Integrated Variables, Unit root tests - Dickey-Fuller tests; Co-integration and error correction mechanism – Engle–Granger, Johansen and Juselius Co-integration tests – ARDL Co-integration Tests.

Unit 3: Forecasting

Nature and uses of Forecasts – Forecasting with a single-equation linear regression model -Forecasting with a multi-equation econometric model - Evaluation of the forecasting power of a model – Conditional and Unconditional Forecasting – Single and Double exponential smoothing – Box-Jenkins Model.

Unit 4: Linear Time Series Models

Univariate Time Series Models - Moving Average Models - Auto Regressive Models - Mixed Auto Regressive Moving Average Models – ARIMA models.

Unit 5: Vector Auto-regressions and Models for Volatility

Estimation and Forecasting with VAR, VAR and Causality, Some problems with VAR Modeling, Measuring Volatility - The ARCH (p) models – ARCH tests – GARCH (p, q) model – Asymmetric GARCH models.

4. Francis Diebold, Elements of Forecasting, South Western College Publishing, 1998.
5. Newbold and Bos, Introductory Business and Economic forecasting (second edition), South Western College Publishing, 1994.

6. William H. Green, Econometric Analysis, Pearson's Education, fifth Edition, 2003.
7. Hamilton, J.D, Time Series Analysis, Princeton, N.J., Princeton University Press, 1994.

Learning Objectives

After successfully completing the course Time Series Econometrics the graduate is able to:

At the end of the course the students will acquire additional specialization through the Time series Econometrics Analysis. Skill to judge the reliability of estimation in case of Stationarity and Non-Stationarity test, Co-integration test. Students will be able to execute in-depth analysis of VECM model and Granger Causality test. Student can perform the Forecasting with a single-equation linear regression model, and Forecasting with a multi-equation econometric model. Student can evaluate Univariate Time Series Models like MA, AR, ARMA and ARIMA models. Finally, student will be able to calculate VAR model which most important in macro-economic models.

EMT 402	OPTIMIZATION IN ECONOMICS		4Credits

Course Objectives: The objective of the course is to provide knowledge on Optimization in Economic. Optimization techniques are very crucial activities in managerial decision-making process. Expressing relationships through equations is very useful in economics as it allows the usage of powerful differential technique, in order to determine the optimal solution of the problem.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Knowledge of several models will enhance the applicability of the knowledge to actual data solving and getting appropriate conclusions.
CO2	Be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
CO3	This course will sharpen the quantitative skills of a student and help them understand applications of Operations research in varied fields like manufacturing, Finance, purchasing and procurement, assigning and allocation of resources for optimum result.
CO4	Be able to design new simple models, like: CPM, PERT to improve decision –making and develop critical thinking and objective analysis of decision problems.
CO5	Students will be able to identify and develop operational research models from verbal description of real system.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Transportation Problem

Nature and Matrix form of TP – Transportation Table – Types of Transportation Problem – Balanced Transportation Problem, Unbalanced Transportation Problem – Methods to solve Transportation Problem - The Initial Basic Feasible solution: North-West Corner Rule and Vogel's Approximation method – Moving towards optimality, the Transportation Algorithm.

Unit 2: Assignment Problem: Assignment problem, Transportation problemand Linear Programming – Types of Assignment problem – Properties of Optimal Solution – Solving the Assignment Problem by Hungarian Algorithm – The Auction Algorithm for Assignment Problem – Branch and Bond Techniques for Assignment Problem.

Unit 3 : Game Theory: Basic concepts -Two–person Zero Sum Games - The Maximum Minimax Principle – Games without Saddle Points – Mixed Strategies – Graphical solution of 2 x n and m x 2 Games – Dominance property – The Modified Dominance Property – Reducing the Game Problem as a Linear Programming Problem.

Unit 4 : Inventory Management

Introduction - Inventory control - Techniques of Inventory control with known demand - Economic Lot Size Problems –The fundamental Problem of Economic Order Quantity (EOQ), The Problem of EOQ with Uniform Demand, and The Problem of EOQ with Finite Rate of Replenishment - Problem of EOQ with Shortage.

Unit 5: Simulation

Introduction – Elements of a Simulation Model – Event – Types of Simulation – Generation of Random Phenomena – Monte Carlo Technique – Generation of Uniform (0,1) Random Observations – Simulation languages.

Text and reference books:

1. KantiSwarup, P.K.Gupta and Man Mohan: Operations Research, Sultan Chand and sons, New Delhi.
2. Panneerselvam, R: Operations Research, Eastern Economy Edition, Prentice Hall of India, New Delhi, 2007.

5. Gupta, P.M. and D.S.Hira: Operations Research, Sultan Chand and Sons, New Delhi.

6 Harven, Wagner: Operations Research.

7 Starr and Miller: Inventory Control.

EMT 403(a): PRACTICAL-IV	TIME SERIES ECONOMETRICS AND OPTIMIZATION IN ECONOMICS		4Credits

Course Objectives: The course has a strong focus on Practical skills and train students in the collection and analysis of the data using their software skills Especially, EViews for Time series analysis.The entire Practical course divided into two parts first part can made Time series analysis through EViews software and second part will be covered Optimization technique in Economics.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Able to get application knowledge of tatistical packages like SPSS, E-Views to apply economic data.
CO2	At the end of this course student will gain practical knowledge of Time Series Analysis by using EViews.
CO3	Student gained and evaluate Stationarity test by using ADF Test.
CO4	fter complete this course student will able to test of Spurious Regression, Co-integration test and Granger Causality test.
CO5	Finally, student will be able to made feasible solution in optimization.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	2	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Concepts are covered in this Practical Approach follows;

- Unit root test [ADF-Augmented Dicky-Fuller test].
- Spurious Regression.
- Co-integration Test.
- Vector Error Correction Mechanism [VECM].
- Granger Causality test.
- VAR Model.
- ARMA and ARIMA Model.
- Optimization-Transportation problem; Balanced Transportation Problem, Unbalanced Transportation Problem North-West Corner Rule.
- Assignment problem; Hungarian Algorithm Branch and Bond Techniques for Assignment Problem.

MT 403(b)	INTERNATIONAL TRADE AND FINANCE		4Credits

Course Objectives: The course has a strong focus on International trade and the accompanying financial transactions are generally conducted for the purpose of providing a nation with commodities it lacks in exchange for those that it produces in abundance; such transactions, functioning with other economic policies, tend to improve a nation's standard of living.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Identify the basic difference between inter-regional and international trade, understand how international trade has helped countries to acquire goods at cheaper cost and explain it through the various international trade theories.
CO2	Show the benefits of international trade in a way how nations with strong international trade have become prosperous and have the power to control world economy and how global trade can be one of the major contributors of reducing poverty.
CO3	Explain how restrictions to international trade would limit a nation in the services and goods produced within its territories and at the same time explain that a rise in international trade is essential for the growth of globalization.
CO4	Show the importance of maintaining equilibrium in the balance of payments and suggests suitable measures to correct disequilibrium as well.
CO5	Be aware of the changes in the composition as well as direction of foreign trade after international trade and know the causes and effects of deficits in the balance of payments, measures adopted to correct the deficits and identify the need for having trade reforms.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Old and New Theories of International Trade

Comparative advantage in Ricardian, Haberler and Heckscher–Ohlin Theories – Factor Price Equalization Theorem - Intra Industry Trade – Neo-Chamberlin and Neo-Heckscher-Ohlin Theorems - Product Cycle and Technology Gap and Strategic Trade theories.

Unit 2: Free Trade and Protection

Free Trade vs. Protection – Theory of Tariffs –The Political Economy of Non-tariff Barriers - Terms of Trade – Secular Deterioration (Singer-Prebisch) Thesis -Immiserizing Growth- The Concept of Customs Union - Regional Trade Agreements - EU and SAARC.

Unit -3: Balance of Payments and adjustment Mechanism

Balance of Payments Accounts –Adjustment of Deficit in Balance of Payments – Traditional Elasticity and Absorption Approaches - Theories of policy mix - BOP adjustments with capital mobility – Foreign Trade Multiplier.

Unit 4: Theories of Exchange rate determination

Exchange rate under free market – Spot and Forward Rates -Exchange rate adjustments under capital mobility - Floating Rates and their implications for developing countries - Currency Boards - Import and Exchange Controls and Multiple Exchange Rates.

Unit 5: **Global Institutions**

The Bretton Woods System - IMF and World Bank – Collapse of Bretton Woods System – New International Monetary Order – WTO – Issues at the recent WTO ministerial Conferences-Multinational Corporations - Implications for Developing countries.

EMT 403(c)	INDIAN ECONOMY		4Credits

Course Objectives: The objective of this course is to provide the basic knowledge of Indian economyStructure of the Indian Economy, Agricultural Sector, Industrial Sector, Tertiary and Foreign Sectors and Planning and Development of the Indian economy that is with the study of the subject in a Master's programme.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Students will develop ideas of the basic characteristics of Indian economy, its potential on natural resources.Understand the importance, causes and impact of population growth and its distribution, translate and relate them with economic development.
CO2	Understand agriculture as the foundation of economic growth and development, analyse the progress and changing nature of agricultural sector and its contribution to the economy as a whole. Students will obtain information regarding various agricultural issues in India and remedies for it
CO3	Students will aware about recent economic affairs such as demonetization, universal basic income, cashless economy, skill and training development schemes, make in India etc
CO4	Students will get benefit about various economic issues at local, national and global level.
CO5	Grasp the importance of planning undertaken by the government of India, have knowledge on the various objectives, failures and achievements as the foundation of the ongoing planning and economic reforms taken by the government.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1

CO3	3	3	2	-	2	1	1	-	2	2	-	-

CO4	3	2	3	2	-	1	1	-	2	2	1	-
CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit 1: Structure of the Indian Economy

Indian Economy on the Eve of Independence- Basic Characteristics of the Indian Economy as Developing Economy- Major issues of Development in Indian Economy- Growth and Structural Changes in the Indian Economy- Population-Poverty –Measurement of Poverty, Anti PovertyProgrammes - Inequality- Natural Resources-Infrastructure- Human Development in India-Prices, Price Policy and Economic Growth- Balanced Regional Development-Unemployment in India.

Unit 2: Agricultural Sector

Role Agriculture in Indian Economy- Share of Agriculture - Interrelationship between Agriculture and Industry –Land Tenure System - Farm Size and Productivity -Institutional and Technological Aspects- New Agricultural Policy-Food Security in India-Rural Credit- Agricultural Marketing- Regional Disparities in Indian Agriculture- Irrigation and other Agricultural Inputs.

Unit 3: Industrial Sector

Industrial Structure and Economic Growth- Large and MSMEs - Industrial Labour Problems and Labour Policy -Industrial Sickness Causes and Remedial Measures- Economic Reforms and Industrial Growth-Pattern of Industrialization-Public and Private Industrial Finance in India- Unorganized Sector and Informalisation of the Indian Economy.

Unit 4: Tertiary and Foreign Sectors

Service Sector - Role, Growth and Structure of Service Sector in India –Growth, Composition and Direction of India's Foreign Trade – Trade Policy and its Reforms in India – India's Balance of Payments - WTO and Indian Economy.

Unit 5: Planning and Development

Objectives and Strategy of Planning- Public Sector and Indian Planning- Re-Organization of Planning Commission (NITI Aayog) - Privatization and Globalization and its impact on India-Government Subsides in India - Problems of Capital Formation- Foreign Capital, Foreign aid and Economic Development in India.

EMT 403(d):PROJECT

A project objective describes the desired results of a project, which often includes a tangible item. An objective is specific and measurable, and must meet time, budget, and quality constraints. ... A project may have one objective, many parallel objectives, or several objectives that must be achieved sequentially.

Project objectives are what you plan to achieve by the end of your project. This might include deliverables and assets, or more intangible objectives like increasing productivity or motivation. Your project objectives should be attainable, time-bound, specific goals you can measure at the end of your project.

Goals and objectives are statements that describe what the project will accomplish, or the business value the project will achieve. Goals are high level statements that provide overall context for what the project is trying to achieve, and should align to business goals. In brief, project management objectives are the successful development of the project's procedures of initiation, planning, execution, regulation and closure as well as the guidance of the project team's operations towards achieving all the agreed upon goals within the set scope, time, quality and budget standards.

Learning Outcomes

The use effectively oral, written and visual communication. identify, analyze, and solve problems creatively through sustained critical investigation. integrate information from multiple sources. Demonstrate an awareness and application of appropriate personal, societal, and professional ethical standards.The value of any project cannot be measured without defining success. It requires focus on outcomes. Outcomes are the events, occurrences, or changes in conditions, behavior, or attitudes that indicate progress toward a project's goals. Outcomes are specific, measurable, and meaningful.Good outcome statements are specific, measurable, and realistic." Think carefully about what you can realistically accomplish given the groups you want to reach and the scope of your resources. Develop outcomes as follows: Outcomes should describe what you want to happen after your activity is completed.

EMT 404	FREEDOM MOVEMENT IN INDIA, 1857-1947		4Credits

Course Objectives: The Indian national movement was undoubtedly one of the biggest mass movements modern Society has ever seen, It was a movement which galvanized millions of People of all classes and ideologies into political action and brought to its knees a mighty colonial empire. Consequently, along with the British, French, Russian, Chine, Cuban and Vietnam revolutions, it is of great relevance to those wishing to alter the existing political and social structure

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	This paper helped to **strengthen Indian nationalism**, as it led to a sense of patriotism among people across India..
CO2	Supporters of the Indian Independence Movement began to argue that India's role in World War.
CO3	The revolt of 1857 was an unprecedented event in the history of British rule in India.
CO4	It united, though in a limited way, many sections of Indian society for a common cause
CO5	Though the revolt failed to achieve the desired goal, it sowed the seeds of Indian nationalism.

CO5	3	2	1	-	1	2	-	1	1	2	-	1

Unit I Nationalism : Its meaning and different interpretations – Factors leading to growth of

Nationalism- Emergence of Indian National Congress- Moderates and Militant Nationalists- Swadeshi and Home Rule Movements

Unit II Emergence of Gandhiji : Non- Violence and Satyagraha- Rowlat and Khilafat issues- Non- cooperation Movement- Swarajists - Civil disobedience Movement- Ministries at Provincial level and Second World War

Unit III Revolutionary Nationalists: Bhagath Singh- Growth of Capitalist class and its role – Growth of left Ideology and peasant and Working class movement.KisanMahasabha

Unit IV Growth of Communal Ideology and politics: Factors leading to Communalism- Formation of Muslim League and Hindu Mahasabha- National issues, Role of Congress and Muslim League, Cripps proposals and Quit India Movement, Cabinet Mission, the Partition and attainment of Independence

Unit V Freedom Struggle in Princely states: Socio, Political and Administrative conditions- Origin of Nationalism- Impact of Freedom Struggle of British India over Native States, Haripura Resolution, 1938- Growth of Popular Movements- Lapse of Paramountacy- Join India Movement- Vallabhai Patel and Integration.

EMT 405(b)	DATA BASE FOR THE INDIAN ECONOMY		4Credits

Course Objectives: The main objective of this course is data warehouse of the Department of Statistics and Information Management (DSIM), under the Reserve Bank of India. The entire statistics have been presented in seven subject areas - Real Sector, Corporate Sector, Financial Sector, Financial Market, External Sector, Public Finance, Socio-Economic Indicators.

CourseOutcomes: Attheendofthecourse, thestudentwillbeableto

CO1	Develop ideas of the basic characteristics of Indian economy, its potential on natural resources
CO2	Understand the importance, causes and impact of population growth and its distribution, translate and relate them with economic development.
CO3	Students can able to describe the knowledge or skills students should acquire by the end of a particular assignment, class, course, or program, and help students understand why that knowledge and those skills will be useful to them
CO4	Creating new knowledge (Cognitive) Developing feelings and emotions (Affective) Enhancing physical and manual skills (Psychomotor).
CO5	Students can also be scaffolded so that they continue to push student learning to new levels in any of these three categories.

Unit 1: Census – Demographic Indicators – Definitions – schedules – Dissemination – Database – Tpes – Other data sets from Census – Economic census – Education census – Agricultural census – Major Results of Recent Census Data in India.

Unit 2: National Income Accounting – Base year – Methods of Estimation – Types of Reporting – Balance of Payments (BOP) and National Income) (NI) – State Domestic Product – District Domestic Product - District Census Handbooks.

Unit 3: NSSO – Large and Small samples – NSSO Rounds on Consumption Expenditure, Employment and Unemployment Status in India – Major Findings of Recent NSS reports on Poverty,Inequality and Unemployment – Annual Survey of Industries (ASI) – Coverage – Definition of Terms – price and wage statistics Major Findings of Recent reports – Socio-economic statistics – National Family Health Survey (NFHS) – Health and Morbidity Data.

Unit 4: RBI – Balance sheet approach – Financial and Banking statistics – Money supply Indicators and Statistics on Money Supply in India – Foreign Exchange Reserves – Exchange rate – Stock Market Statistics – Non-banking Financial Institutions data.

Unit 5: Govt. and International data – Ministry of Commerce Data on Exports and Imports – Data in Annual Economic Surveys from the Ministry of Finance - Data from World bank, IMF, ILO, WTO, UNCTAD, UN and other international agencies – Specific data bases such as World Value Surveys – Penn World Tables - Gallop Poll.

Books for Reference:

1. Websites and reports of respective ministries and organizations, like Directorate of Census Operations, CSO, NSSO, GOI, SEBI, RBI.
2. Reports of Statistics Departments in State Governments.
3. Reports of UN Organisations.
4. Annual Economic Surveys, Minstry of Finance, Government of India.

Model Paper

M.A DEGREE EXAMINATION

First Semester

Branch: ECONOMETRICS

Paper 101 – MICROECONOMIC THEORY – I

(UNDER CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks(5X4=20)

1. Explain the properties of Indifference curves.
2. Explain the statement 'Choice Reveals Preference'.
3. State any four properties of the Cobb-Douglas Production Function.
4. Explain the relatinship between average cost and marginal cost in the Modern Theory of Cost.
5. State the characteristics of perfect competition.
6. State the conditions for Price discrimination.
7. Explain the Cournot's model of Duopoly.
8. Explain the reason for kink in the Demand Curve of an Oligopolist firm.
9. What are the weaknesses of the Bain's theory of Limit Pricing?
10. State the assumptions of Marris' model of Managerial Enterprise.

PART –B

Answer ALL the questions

Each question carries 12 marks

11. (a) Discuss consumer's equilibrium under Indifference Curve analysis.

Or

(b) Explain how the price effect can be decomposed into substitution and income effects.

12. (a) Explain the relationship among various cost components in the traditional theory of cost.

Or

(b) Discuss the properties of CES Production Function.

13. (a) Discuss the price and output determination of a firm under perfect competition.

Or

(b) Explain the short – run and long run equilibrium of the firm under Monopoly.

14. (a) Critically examine Chamberlin's model of Monopolistic Competition.

Or

(b) Explain the Price Leadership model of the Dominant firm.

15. (a) Discuss Baumol's theory of Sales Maximisation.

Or

(b) Elucidate the Franco Modigliani model of Limit Pricing.

MODEL QUESTION PAPER

M.A DEGREE EXAMINTION

FIRST SEMESTER

BRANCH: ECONOMETRICS

Paper-102: MACROECONOMIC THEORY-I

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks

(5X4=20)

1. Expliain the basic concepts in Macroeconomics.
2. Write a note on Comparative Statics and Dynamics.
3. List out the problems in the measurement of National Income.
4. Is national income an adequate measure of welfare?
5. Explain the concept of Investment Multiplier.
6. Write a note on the consumption function.
7. Explain the concepts of Classical Range and Keynesian Range.
8. Explain the efects of shifts in Savings and Investments on the IS curve.
9. What are the determinants of investment?
10. Write a short note on Tobin's Q theory.

Section- B

Answer ALL the questions

Each question carries 12 marks

(5X12=60)

11. (a) Explain the Circular Flow of National Income in an economy.

Or

(b) Examine the Micro Foundations of Macroeconomics.

12. (a) Discuss the methods of estimation of National Income.

Or

(b) Explain different concepts of National Income and their usefulness.

13. (a) Critically examine the Classical Theory of Employment

Or

(b) Discuss the practical implications of the basic Keynesian model.

14. (a) Discuss the IS-LM model with government sector.

Or

(b) Elucidate the relative effectiveness of Monetary and Fiscal Policies.

15. (a) Explain the determinants of Marginal Efficiency of Capital

Or

(b) Distinguish between Autonomous and Induced investments and discuss the lags in investment demand.

Model Paper

M.A DEGREE EXAMINTION

FIRST SEMESTER

BRANCH: ECONOMETRICS

Paper-103: MATHEMATICAL METHODS

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks

(5X4=20)

1. What is an exponent? State the properties of exponents.
2. Distinguish between a Relation and a Function with an example.
3. What is an Algebraic Function? Explain different types of algebraic functions with examples.
4. State any two theorems of Limit.
5. Define the derivative of a function and write down the Product and Quotient Rules of differentiation.
6. Given the demand function, $Q_d = 100 - 2P$, find the point elasticity of demand at $P = 25$.
7. Discuss the properties of definite integral.
8. Given the marginal cost curve $MC = 3-2x-x^2$, find the total cost curve.
9. Explain the concepts of Upper Triangular Matrix and Lower Triangular Matrix.
10. Explain the concepts of g-inverse and c-inverse.

Section- B

Answer ALL the questions

Each question carries 12 marks

(5X12=60)

11. (a) Simplify: $\frac{4^3 \times 27^2}{9^3 \times 4^2}$

Or

(b) Define a Set and discuss different types of Sets.

PTO

12. (a) Explain the conepts of Logarithmic and Exponential fucntions and their applications in economics.

Or

(b) Find the limits of the following functions:

i) $Y = \frac{(x^2+1)}{(x^2-1)}$ $as\ x \to \infty$

ii) $Y = \frac{(x^2-4)}{(x-2)}$ $as\ x \to 2$

13. (a) State the conditions for maxima and minima of the function y = f(x) and find them for the function $y = 3x^2-x+1$.

Or

(b) The total revenue and total cost functions of a firm are $R = 20Q-Q^2$ and $C = Q^2+8Q+12$ respectively. Find the profit maximizing levels of output and the maximum profits.

.

14. (a) Distinguish between the concepts of 'Definite and Indefinite Integrals' and find the integral of the following function:

$$\int_0^1 x(\mathrm{x}+6)dx$$

Or

(b) Define the concepts of Consumers' Surplus and Producers' Surplus. If the demand function is $p = 25-3x-3x^2$, find the consumers' surplus when the quantity demanded, $x_0 = 2$.

15. (a) Define the concept of Determinant of a Matrix and discuss the properties detrminants with illustrations.

Or

(b) Solve the following system of equations by Cramer's Rule:

$$2x-4y+3z=3$$

$$4x-6y+5z=2$$

$$-2x+y-z=1$$

Model Paper

M.A DEGREE EXAMINATION 2021-22

First Semester

Branch: ECONOMETICS

DEPARTMENT OF ECONOMETRICS

1ST SEMESTER –PRACTICAL EXAMINATION

PAPER CODE: EMT-104

TIME: 3 HOURS **Maximum: 80 Marks**

Answer any **four**questions, All Questions Carry equal Marks (4*20=80 Marks)

1.Calculate Mean, Median and Mode for the following data.

Marks	0-10	10-20	20-30	30-40	40-50	50-60	60-70
No. of Students	6	16	35	55	45	31	8

2.Following are the Marks obtained by two students A and B in 10 papers in an examination.

Who will get the prize, if the consistency of performance is the criterion for awarding the prize?

Student/sets	1	2	3	4	5	6	7	8	9	10
Marks obtained by A	42	82	80	47	51	70	68	53	62	65
Marks obtained by B	41	69	53	64	66	58	71	49	54	45

3. The distribution of typing mistakes committed by a typist

Mistake for Page	0	1	2	3	4	5
No. of Mistakes	142	156	69	27	5	1

(i) Fit a Poisson distribution (ii) To find expected frequencies

(iii) Test for goodness of fit.(X^2table value is 9.488)

4. The scores for nine students in Physics and Chemistry are as follows:

Physics	35	23	47	17	10	43	9	6	28

Chemistry	30	33	45	23	8	49	12	4	31

Compute the Spearman rank correlation.

5. Fit two Regression Lines for the following data, Y on X and X on Y

X	46	31	29	32	51	24	16	23	28
Y	34	42	57	40	54	50	28	47	38

6. Use Cramer's Rule to solve $3x+5y-7z=13$,

$4x+y-12z=6$,

$2x+9y-3z=20$.

Model Paper

M.A DEGREE EXAMINTIONFIRST SEMESTER

BRANCH: ECONOMETRICS

Paper-105(a): STATISTICAL METHODS

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks(5X4=20)

1. Define Arithmetic Mean and discuss its properties.
2. Define Skewness and discuss different methods of measuring Skewness.
3. Define Probability and discuss any three concepts associated with Probability.
4. Expalin the concepts of Distribution Function and Probability Density Function.
5. Distinguish between Point Estimation and Interval Estimation with an example.
6. Explain the concept of Type – I Error and Type – II Error.

7. Explain the concept of Probability Sampling with an example.
8. What are the advantages of Stratified Sampling over the Simple Random Sampling?
9. State various uses of Correlation and Regression analysis in economics.
10. Distinguish between Partial and Multiple Correlations.

Section- B

Answer ALL the questions

Each question carries 12 marks

(5X12=60)

11. (a) Compute Mean, Median and Mode for the following data:

Class Interval	40-50	50-50	60-70	70-80	80-90	90-100
Frequency	35	24	21	18	6	3

Or

(b) Compute the Coefficeint of Variation for the following data:

Class Interval	5-10	11-15	16-20	21-25	26-30	31-35
Frequency	3	4	7	3	2	1

PTO

12. (a) Derive the Mean and Variance of the Binomial Distribution.

Or

(b) Fit Poisson distribution for the following data:

x-value	0	1	2	3	4
Frequency-f	123	59	14	3	1

13. (a) Discuss the desirable properties of a Good Estimator.

Or

(b) Out of a sample of 120 persons in a village, 76 were administered a new drug for preventing influenza and out of them, 24 were attacked by influenza. Out of those who were not adminstered the new drug, 12 persons were not affected by influenza. Prepare

(a) The 2x2 table showing actual and expected frequencies.

(b) Use Chi-square test for finding out whether the new drug is effective or not.

(The table Chi-square value at 5% level of significance for one degree of freedom is 3.84)

14. (a) Define Sampling and discuss the relative merits and demerits of Sample and Census methods of data collection.

Or

(b) (b) Distinguish between Random and Non-random sampling and discuss different types of Random Sampling.

15. (a) Compute the Correlation Coefficient for the following data and interpret your result:

Class Interval	3	5	6	7	9	10	11	12	13	15
Frequency	4	5	7	8	9	11	12	13	14	16

Or

(b) (b) What are Regression Lines? Explain the method of deriving two regression lines of Y on X and X on Y.

MODEL PAPER

M.A. DEGREE EXAMINATION

SECOND SEMESTER

Branch: Econometrics

PAPER: 105(b) – INTRODUCTION TO ECONOMETRICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max. Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Discuss the role of measurement in Economics.
2. Explain the method of Pooling of Cross Section and Time Series Data.
3. State the properties of OLS Estimators.
4. State the assumptions of the two variable linear model.
5. Derive the mean and variance of OLS estimator in general linear model.
6. What is Error in Variables linear model? What are its consequences?
7. What is a distributed lag model? Explain different lag schemes in lagged variable linear models.
8. Explain the method of Koyck's lag scheme.
9. Show that the OLS estimators are inconsistent in simultaneous equation models.
10. State the Rank and Order conditions for Identification.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain the interrelationship among economics, mathematics and statistics in econometric approach.

(OR)

What are the basic principles of Econometric model building?

12. Formulate the classical linear regression model and discuss the properties of least squares estimators of a linear regression model.

(OR)

Explain the different Functional Forms of regression models

13. Show that the OLS estimators are BLUEs.

(OR)

What is multiple correlation coefficient? What are its uses and explain the difference between R^2 and adjusted R^2?

PTO

14. Explain Almon's method of estimation of parameters in lagged variables

(OR)

Explain the Partial Adjustment and Cagan's Adaptive Expectations models in distributed

lag models

15. Explain the method of Indirect Least Squares.

(OR)

Explain the model specification, assumptions and procedure of 2SLS method of estimation without proof.

Model Paper

M. A. DEGREE EXAMINATION – 2021-22

FOURTH SEMESTER

Branch: Econometrics

Paper: EMT 105(c) – AGRICULTURAL ECONOMICS ECONOMICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. What is Nature and Scope of Agricultural Economics.
2. Explain the concerpt of Sustainable Development.
3. Distinguish between Renewable and non-renewable resources.
4. Explain the concept of 'Tragedy of Commons'.
5. What are the different sources of Air pollution?
6. what is Kisan Credit Cards.
7. Explain the National Food Security Mission (NFSM).
8. What is National Crop Insurance Programme?
9. State the Exports and Imports of Agricultural Commodities
10. What is Physical and Financial Performance of GrameenBhandaranYojana?

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Discuss the Role of Women in Agricultural Development.

Or

Elucidate the Modernisation of Agricultural Production Systems

12. Discuss the Development of Agriculture sector during Post-Independence Period

Or

Explain the Targets and Achievements during Five Year Plans

13. What are theFactors Determining Gross Capital Formation in Agriculture Sector explain.

Or

Explain methods of managing urban solid waste in India.

14. Explain the Sources and Trends in flow of Credit to Agriculture?

Or

Discuss the objectivesof National Crop Insurance Programme.

15 Examine the National Mission for Sustainable Agriculture (NMSA) and Agricultural Extension and Technology

Or

Examine thePrimary and Secondary Wholesale Markets

Model Paper

M.A DEGREE EXAMINATION – 2021-2022

Branch: ECONOMETRICS

EMT 107, Human Values and Professional Ethics-I

Model Paper

M.A DEGREE EXAMINATION

Second Semester

Branch: ECONOMETRICS

EMT 201 – MICROECONOMIC THEORY – II

(UNDER CBCS Revised Syllabus from 2021-22)

Time: 3 hours Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks(5X4=20)

13. Distinguish between the Value of Marginal Product (VMP) and Marginal Revenue Product.
14. Explain the concept of 'Monopolistic Exploitation' of a Factor.
15. What is 'Quasi Rent'?

16. Explain the concept of 'Liquidity Trap'.
17. State the meaning of risk and distinguish it from uncertainity.
18. What is 'Zero Sum' game?
19. Explain the concepts of stable and unstable equilibrium.
20. What are externalities?
21. Distinguish between Pareto Optimality and Pareto improvement.
22. State the concept of Kaldor-Hicks' Compensation Criterion.

Section –B

Answer ALL the questions

Each question carries 12 marks

5x12=60

23. Critically examine Marginal Productivity Theory of Distribution

Or

State and prove Euler's Theorem and explain its significance.

24. Discuss the Ricardian Theory of Rent.

Or

Evaluate the Loanable Funds theory of interest.

13. Elucidate the role of information in economic theory.

Or

Explain the short – run and long run equilibrium of the firm under Monopoly.

15. Critically examine Chamberlin's model of Monopolistic Competition.

Or

Explain the Price Leadership model of the Dominant firm.

15. Discuss Baumol's theory of Sales Maximisation.

Or

Elucidate the Franco Modigliani model of Limit Pricing.

Model Paper

M.A DEGREE EXAMINATION Second Semester

Branch: ECONOMETRICS

EMT 202: MACROECONOMIC THEORY II

(UNDER CBCS Revised Syllabus from 2021-22

Time: 3 Hrs Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks(5X4=20)

1. State and explain Fisher's Quantity theory of money.
2. What are the components of money supply according to RBI in India?
3. Distinguish between Fucntional and Personal distribtuion of Income.
4. Explain the Ricardian concept of Stationary State'.
5. Briefly explain different phases of Trade Cycle.
6. What are the lags in monetary policy?
7. Distinguish between 'Demand Pull and Cost Push Inflations".
8. State the implications of Rational Expectation Hypothesis.
9. What are the objectives of the Monetary Policy?
10. What are the uses of Automatic Stabilizers?

Section –B

Answer ALL the questions

Each question carries 12 marks 5x12=60

11. Discuss Tobin's Portfolio Approach to demand for money.

Or

What is 'High Powered' Money? Explain the process of Money Multiplier in an economy.

12. ElucidiateKelecki Theory of Distribution.

Or

Give an account of Kaldor's theory of Distribution.

13. Examine Hicks' Thoery of Trade Cycle.

Or

Explain the methods of controlling Trade Cycles in a free market economy.

14. Discuss the 'Trade – off' between Inflation and unemployment in the short run.

Or

Critcally examine the 'Real Business Cycle Theorem' profounded by the New Classical School.

15. What are the instruments of Monetary policy? Explain their role in stabilisation of the economy.

Or

Expalin the relative effectiveness of Fiscal and monetary policies in promoting economic growth in an economy.

MODEL PAPER

M.A. DEGREE EXAMINATION

SECOND SEMESTER

Branch: Econometrics

PAPER: 203 – BASIC ECONOMETRICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max. Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Discuss the role of measurement in Economics.
2. Explain the method of Pooling of Cross Section and Time Series Data.
3. State the properties of OLS Estimators.
4. State the assumptions of the two variable linear model.
5. Derive the mean and variance of OLS estimator in general linear model.
6. What is Error in Variables linear model? What are its consequences?
7. What is a distributed lag model? Explain different lag schemes in lagged variable linear models.
8. Explain the method of Koyck's lag scheme.
9. Show that the OLS estimators are inconsistent in simultaneous equation models.

10. State the Rank and Order conditions for Identification.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain the interrelationship among economics, mathematics and statistics in econometric approach.

(OR)

What are the basic principles of Econometric model building?

12. Formulate the classical linear regression model and discuss the properties of least squares estimators of a linear regression model.

(OR)

Explain the different Functional Forms of regression models

PTO

13. Show that the OLS estimators are BLUEs.

(OR)

What is multiple correlation coefficient? What are its uses and explain the difference between R^2 and adjusted R^2?

14. Explain Almon's method of estimation of parameters in lagged variables

(OR)

Explain the Partial Adjustment and Cagan's Adaptive Expectations models in distributed lag models

15. Explain the method of Indirect Least Squares.

(OR)

Explain the model specification, assumptions and procedure of 2SLS method of estimation without proof.

MODEL PAPER

M.A. DEGREE EXAMINATION

SECOND SEMESTER

Branch: Econometrics

PAPER: 204 – practical II

(Revised Regulations CBSC from 2021-22)

Answer any THREE Questions. All Questions carry equal marks

[3x20=60]

1. The following data we get to all the Indian Agriculture production, area and a yield index numbers from 2000-01 to 2014-15 are furnished below.

ear	2000-01	2001-02	2002-03	2003-04	2004-05	2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13	2013-14	201 14
regate nption(Y)	107.1	113.7	118.7	122.2	121.8	127.5	129.6	138.5	142.4	145.5	145.9	150.6	148.2	144.4	14
osable me (X)	105.6	109.1	112.1	113.8	114.6	116.1	117.7	119.7	121.2	122.4	123.4	123.7	122.4	121.8	12

Calculate the following objectives based on the above data

(i). estimate the parameters and fit the two-variable linear model.

$$Y_t = \alpha + \beta X_t + u_t$$

(ii). to predict the value of 'Y' when 'X=130.5.

(iii). to determine the R^2

2. The following data relates to the corn production with the inputs of fertilizers and insecticides used.

Production (Y)	40	44	46	48	52	58	60	68	74	80
Fertilizers (X_1)	6	10	12	14	16	18	22	24	26	32
Insecticides (X_2)	4	4	5	7	9	12	14	20	21	24

(i). Estimate the parameters and fit the three variable linear model

(ii). Test the significance of individual parameters

(iii) Calculate the Analysis of variance (ANOVA).

3. From the following matrix find out the final output goals of each industry, assuming that consumer output targets are USD $ 80 millions in Steel, USD $ 30 millions in Coal and USD $ 50 millions in Railway transport industry. The technological coefficient matrix and final consumer requirements of theCoal (A), Steel (B), and Railway transport (C) are;

	Coal	**Steel**	**Railway's**	**Final consumer requirements**
Coal (A)		0.3	0.2	0.2 Rs. 80 million
Steel (B)	0.2	0.1	0.5	Rs. 30 million
Railway's (C)		0.2	0.4	0.2 Rs. 50 million
Labour		0.3	0.3	0.1

(i). Determine the gross levels of output of three industries and

(ii). To find what will be the total labour requirements.

4. Solve the following LPP using the Simplex method.

$$\textit{Maximize} \qquad Z = 12x_1 + 16x_2$$

$$\textit{Subject to} \qquad 10x_1 + 20x_2 \leq 120$$

$$8x_1 + 8x_2 \leq 80$$

$$x_1 \text{ and } x_2 \geq 0$$

5. The following problems solved byUsing Lagrange multiplier method.

(i). Maximization: what combination of (output) mixed should be profit maximizing produced when its total profit function is $\pi = 80x - 2x^2 - xy + 3y^2 + 100y$, and maximum output capacity is $x + y = 12$, and also estimate the effect of profit when its output capacity extended by one unit.

(ii). Minimization: what combination of goods x and y should produced to the minimum cost when joint cost function $C = 6x^2 + 10y^2 - xy + 30$, and firm as a production quota is $x + y = 34$. Estimate the effect on cost if the production quota is reduced by one unit.

MODEL PAPER

M.A. DEGREE EXAMINATION

Second Semester

Branch: Econometrics

PAPER: 205(a) – MATHEMATICAL ECONOMICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max. Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Explain the rules of partial differentiation.
2. Discuss the concept of partial elasticities.
3. Distinguish between first order and second order differential equations.
4. What is partial integration
5. Explain the concept of Non-homogeneous linear equation.
6. State the importance of Dynamic Multiplier.
7. Discuss the features of Technological Coefficient of Matrix.
8. State the assumptions of Dynamic Input Model.
9. How do you formulate Linear Programming Problem?
10. Explain the importance of Linear Programming Technique.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain constrained optimization with Lagrange multipliers with an example.

OR

Maximise the utility function $U= 6xy-x^2$, subject to the budget constraint $4x+2y=30$.

12. Explain the general formula for solution of first order differential equation with an example.

OR

Find the solution Y(t) of the following differential equation, given that Y(0)= -2

$$\frac{dy}{dt} = \frac{ty^2}{\sqrt{1+t^2}}$$

13. Explain the procedure for solving non homogeneous difference equations and solve the following system.

$\frac{1}{t} = 4^{1}/_{t-1^{-9}}$ and $Y_0 = 5$.

OR

Describe the Multiplier – Accelerator interaction model of Samuelson.

PTO

14. Given an econometrician's explanation for Input – Output technique and appraise the assumptions of input – output model.

OR

Given the matrix

$$X=\begin{bmatrix}50 & 30 & 40\\ 20 & 60 & 25\\ 10 & 15 & 24\end{bmatrix} \text{ and } F=\begin{bmatrix}50\\ 40\\ 60\end{bmatrix}$$

Where X represent the intersectoral flow of goods and F represent the final demand vector, time the total requirement table by inviting Leontief Matrix.

15. Explain the graphical solution of linear programming problem given below:

Maximize $Z= 20x+10y$

Subject to $4x+3y \leq 48$

$3x+5y \leq 60$

$x \leq 9$

$x,y \geq 0$

OR

Using the Simplex method solve the following:

Maximize $Z= 6x_1+4x_2$

Subject to $-2x_1+x_2 \leq 2$

$x_1- x_2 \leq 2$

$3x_1+2x_2 \leq 9$

$x_1, x_2 \geq 0$

Model Paper

M.A DEGREE EXAMINTION

SECOND SEMESTER

BRANCH: ECONOMETRICS

Paper-205(b): ACTUARIAL STATISTICS

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks

(5X4=20)

1. What is Life Insurance
2. Explain the Theory of Interest rates
3. State any four Assumptions for traditional ages.
4. What is Special Mortality laws.
5. Define theUtility Theory

6. Explain the Endowment insurance
7. What are the causes of Endowment insurance
8. Explain the Analytical Laws of Mortality
9. What isEndowment insurance
10. Write a short note on Level benefit insurance

Section- B

Answer ALL the questions

Each question carries 12 marks

(5X12=60)

11. (a) Explain the Survival function, time until death for a person age X, Accurate future Life time,Force of Mortality

Or

(b) Elucidate the Assumptions for traditional ages, Analytical Laws of Mortality, Select and Ultimate tables.

12. (a) Critically examine the Central of multiple decrements, Central force assumptions for multiple decrements.

Or

(b) Explain the Multiple life functions, Joint life and Last Survivor status, Insurance

13. (a) critically Analyse the Insurance and Utility Theory

Or

(b) Discuss the 'Evolution for Special Mortality laws

14. (a) Define Present values and accumulation, Concepts of different annuities,

Or

(b) Explain the Models for individual claims and their sums.

15. (a) Critically examine the Evolution for Special Mortality laws - Multiple decrement models

Or

(b) Discuss the major Concepts of different annuities, Continuously payable annuities, Varying annuities.

Model Paper

M.A DEGREE EXAMINTION- 2021-22

SECOND SEMESTER

BRANCH: ECONOMETRICS

Paper-205(c):WOMEN AND ECONOMIC DEVELOPMENT

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks

(5X4=20)

1. What is Fertility Rates
2. Explain the Micro Credit Groups
3. Explain about Women and Literacy,.
4. What is Special Mortality laws.
5. Describe the Income Inequalities.

6. Explain the Gender division of labour
7. Explain Kasturba Gandhi BalikaVidyalayas (KGBV)
8. Explain the National Programme for Adolescent Girls (NPAG)
9. What isRashtriyaMahilaKhosh (RMK)
10. Write a short note on Indira Gandhi MatrutvaSahayogYojana

Section- B

Answer ALL the questions

Each question carries 12 marks(5X12=60)

11. (a)explain the Factors affecting women entry into labour markets

Or

(b) Elucidate the Role of Women in Economic Development.

12. (a) Critically examine the Role of Non-Government Organizations in Women's

welfare.

Or

(b) Explain the National Institute of Entrepreneurship and Small Business Development (NIESBUD)

13. (a) critically Analyse the KishoriBalikaPathakam – Indira KranthiPatham – JananiSurakshaYojana - BangaruTalliProgramme

Or

(b) Discuss the Role and functions of Ministry of Women and Child Development

14. (a)critically examine the Women Development

Or

(b) Explain the Welfare Programmes

15. (a) Critically examine the Factors affecting women entry in Agriculture, Industry and Service sectors

Or

(b) Discuss the NABARD -Small Industries Development Bank of India (SIDBI).

****

Model Paper

M.A DEGREE EXAMINTION-

SECOND SEMESTER

BRANCH: ECONOMETRICS

Paper-206(A): PUBLIC FINANCE

(Under CBCS Revised Syllabus from 2021-22)

Time: 3 Hours Max. Marks: 80

Section-A

Answer any FIVE questions

Each question carries 4 marks (5x4=20)

16. Distinguish between Private Finance and Public Finance.
17. Explain the concepts of Public Goods and Merit Goods.
18. State any four Cannons of public expenditure.
19. List out the effects of public expenditure.
20. Define Tax and discuss any three cannons of tax.
21. Explain the concept of Taxable capacity.
22. What are the causes of public debt?
23. Do you agree with the statement that internal debt is not a burden?
24. Distinguish between Primary deficit and Revenue deficit.

25. Write a short note on FRBM.

Section- B

Answer ALL the questions

Each question carries 12 marks (5X12=60)

26. (a) Discuss the nature, scope and importance of Public Finance.

Or

(b) Elucidate the principles of Public Finance.

27. (a) Critically examine the Wagner's Law of Increasing State Activities.

Or

(b) Explain the need for controls on and accoutability of Public expenditure in India.

PTO

28. (a) Analyse the characteristics of good tax system. Are they found in the Indian tax system?

Or

(b) Discuss the 'Ability to Pay' Theory of Taxation.

29. (a) Define Public Debt and discuss different types of classification of Public Debt.

Or

(b) Explain the principles governing the management of Public Debt.

30. (a) Critically examine the present system of Centre-State financial relations in India.

Or

(c) Discuss the major recommendations of 14th Finance Commission in India.

****

MODEL QUESTION PAPER

M.A. DEGREE EXAMINATION

SECOND SEMESTER

Branch : ECONOMETRICS

EMT 206(b) :INDUSTRIAL ECONOMICS

(Revised syllabus CBCSw.e.f.2021-2022)

Time:3 Hours Max. Marks :80

SECTION –A

Answer any **FIVE** of the following. Each question carries**4** Marks.

(Short notes) **(5X4=20)**

1. What is the Strategies of Industrialization in Developing Countries?
2. What is the difference between the Firmand Industrie
3. How many Types of Investment.
4. What is Cost-Benefit Analysis
5. What is Pay Back Method
6. What is the meaning of Break-Even Analysis? .
7. What is the Net Present Value Method
8. Importance of Accounting Rate of Return Method .
9. What is the Project Evaluationexplain .
10. What is the Role of Science and Technology in Industrial Development

SECTION –B

Answer any **ALL** question. Eachquestion carries**10** Marks. **5X10=50**

11. a) Write a note on Development-Factors to Promoting Industrialization-Strategies of Industrialization in Developing Countries.

OR

b) What is Industrialization and Economic Development explain.

12. a)Examine the main objectives of the Firm-Optimum Firm-Factors

OR

b)Explain theAlfred WeberTheories of Industrial Location .

13. a) what is the difference between Pay Back Method and Accounting Rate of Return Method

OR

b) Explain Alfred Weber, Sargeant Florence, August Losch, Walter Isard–Melvin Greenhut theory's.

14. a) Explain the - Net Present Value Method and Internal Rate of Return Method.

OR

b) Explain the Cost-Benefit Analysis-Different Rates of Return Methods

15. a) Write a note on Role of Science and Technology in Industrial Development-Industrial Policies of 1956 and 1991.

OR

b) Examine the Importance ofBreak-Even Analysis.

Model Paper

M.A DEGREE EXAMINATION – 2021-2022

Second Semester

Branch: ECONOMETICS

EMT 207, Human Values and Professional Ethics-I

(UNDER CBCS Revised Syllabus from 2021-22

Time : 3 Hrs Marks: 70

Section-A

Answer any FIVE questions. Each question carries 4 marks (5X4=20)

Section – B

Answer ALL the questions

Each question carries 12 marks 5 x 12m = 60 Marks

Five questions with internal choice

MODEL PAPER

M.A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

PAPER: EMT 301 – ADVANCED ECONOMETRICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max. Marks:80

PART- A

Answer any FIVE questions (Marks: 5 x 4 = 20 Marks)

1. Explain any one of the tests for detecting the Multicollinearity.

2. Explain the Bartlett Test for detecting the Heteroscadasticity.

3. Explain Cochran-Orcutt two-stage method.

4. Discuss the sources and consequences of Auto-Correlated disturbances.

5. Explain the Linear Probability Model.

6. Discuss the Censored Regression Model.

7. Write a note on K-Class estimators.

8. Discuss the LIML method of estimation.

9. What is meant by a fixed effects model (FEM)? Explain.

10. What is meant by an error components model (ECM)? Explain.

PART- B

Answer ALL questions (Marks: 5 x 12= 60 Marks)

11. Explain the concept of Multicollinearity. How does the presence of Multicollinearity affect prediction of the dependent variable?

(OR)

What is Heteroscadasticity? What are its consequences? Discuss a procedure for estimating the parameters of the model in the presence of Heteroscadasticity.

12. Explain Durbin-Watson test for testing the positive and negative Autocorrelation of first order.

(OR)

Explain the procedure for estimation of parameters of the model in the presence of Auto-correlation.

13. Explain the method of Probit Model in Limited Dependent Variables.

(OR)

Explain the Logit Method of Estimation.

14. Discuss the method of Two Stage Least Squares (2SLS).

(OR)

Explain the method of Full Information Maximum Likelihood (FIML).

15. When is panel data regression model inappropriate? Give an example.

(OR)

What is meant by an integrated time series? Explain.

****

Model Paper

M. A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

EMT 302 – COMPUTER APPLICATIONS AND DATA ANALYSIS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Explain the characteristics of a computer.

2. Distinguish between Hardware and Software.

3. Describe the concept of 'macro' in MS Word.

4. Explain the importance of Spell and Grammar check in MS Word.

5. How do you create Worksheets and label them in MS Excel?

6. Distinguish between Absolute cell referencing and Relative cell referencing.

7. Describe the procedure for opening Excel files in SPSS.

8. Explain the Descriptive Statistics for data analysis in SPSS.

9. Explain the method of sorting and indexing data frames using R- software.

10. How do you draw Bar chart using R-software?

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks

11. Describe the input-output devices of a computer and show them in a Block-diagram.

Or

What is an Operating System? Explain its features.

12. Discuss the procedure for creation of a Table, inserting columns and rows and editing them in MS Word.

Or

Describe the procedure for inserting Microsoft Equation in MS Word and explain the uses of equation editor in MS Word.

13. Explain the procedure for creating a scatter diagram and editing it in MS Excel by using Hypothetical statistical data.

Or

Discuss the steps involved in the estimation of descriptive statistics by using statistical functions in MS Excel. PTO

14. Explain the procedure for estimating a linear regression equation for statistical data using SPSS.

Or

Discuss the procedure for estimating the Chi-square test statistic using SPSS.

15. Explain the procedure of generating samples from discrete and continuous distributions using R-software.

Or

Using R-software, compute the mean, variance and ANOVA table with an example of your own.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

BRANCH IV (B) - ECONOMETRICS

Semester-303(a): PRACTICAL EXAMINATION

COMPUTER APPLICATIONS AND DATA ANALYSIS

Time: 3 Hours **Max. Marks: 80**

==========

==

Answer any Four Questions. All Questions Carry Equal Marks [4x20 = 80]

1. The following data refers to the distribution of body length of 120 fish observed in a lake.

Class	8-10	10 - 12	12 - 14	14 -16	16 - 18	18 - 20
Frequency	4	24	41	31	16	4

Prepare i) Histogram, ii) Frequency Polygon iii) Ogives

2. The following data refers to the intake of various dietary components consumed by 20 experimental subjects. Calculate all possible correlations among them using Excel Data Analysis and interpret the findings.

SNO	PRO	FAT	CHO	CAL	IRON	VITA
1	54.0	37.0	518.0	360	21	2321
2	58.0	34.0	524.0	363	22	2481
3	61.0	36.0	534.0	388	23	2436
4	54.0	42.0	526.0	372	26	2151
5	56.0	39.0	521.0	381	24	2122
6	57.0	41.0	542.0	379	23	2238
7	58.0	42.0	524.0	386	24	2408

8	52.0	43.0	512.0	381	28	2326
9	59.0	46.0	544.0	372	21	2129
10	53.0	45.0	538.0	389	20	2189
11	58.0	39.0	526.0	376	18	2326
12	52.0	48.0	556.0	388	17	2289
13	61.0	42.0	551.0	361	16	2186
14	58.0	47.0	548.0	373	22	2381
15	51.0	46.0	532.0	389	19	2286
16	42.0	41.0	489.0	348	21	2132
17	49.0	40.0	512.0	347	23	2412
18	51.0	42.0	551.0	386	26	2638
19	59.0	46.0	552.0	346	25	2132
20	42.0	41.0	489.0	389	20	2189

3. Fit the Multiple Linear Regressions for the following data using R-Programme and comment on results.

Y	40	44	46	48	52	58	60	68	74	80
X1	6	10	12	14	16	18	22	24	26	32
X2	4	4	5	7	9	12	14	20	21	24

4. The weights of a calf taken at weekly intervals are given below. Plot the scatter diagram and fit a Straight Line using the method of least squares. Display the Straight Line Equation and r^2 Value on chart. What is the average rate of growth per week?

Age (X)	1	2	3	4	5	6	7	8	9	10
Weight(Y) (in Kgs)	52.5	58.7	65.0	70.2	75.4	81.1	87.2	95.5	102.2	108.4

5. The below table gives Y is Dependent variable and X_1, X_2, X_3, X_4, X_5 are independent variables. Our model is $Y = \alpha_0 + \alpha_1 X_1 + \alpha_2 X_2 + \alpha_3 X_3 + \alpha_4 X_4 + \alpha_5 X_5 + \varepsilon$

Y	**X1**	**X2**	**X3**	**X4**	**X5**
60323	830	234289	2356	1590	107608
61122	885	259426	2325	1456	108632
60171	882	258054	3682	1616	109773
61187	895	284599	3351	1650	110929
63221	962	328975	2099	3099	112075
63639	981	346999	1932	3594	113270
64989	990	365385	1870	3547	115094
63761	1000	363112	3578	3350	116219
66019	1012	397469	2904	3048	117388
67857	1046	419180	2822	2857	118734
68169	1084	442769	2936	2798	120445
66513	1108	444546	4681	2637	121950
68655	1126	482704	3813	2552	123366

69564	1142	502601	3931	2514	125368
69331	1157	518173	4806	2572	127852
70551	1169	554894	4007	2827	130081

Detect Multicollinearity using VIF test. If there Multicollinearityproblem exist what solution you are suggest [using SPSS].

6. Create an Excel worksheet with the following data

SNO	TC	TR	HDL	VLD	LDL
1	187.1	210.1	33.6	42	111.5
2	194.2	211.4	30.8	42.3	121.2
3	203.6	215.4	31	43	129.6
4	200	228.1	32.4	45.6	122
5	201	211.4	32	42.3	126.7
6	187.2	194.1	32.4	38.8	116
7	209.1	218.8	29.1	43.8	136.2
8	167.4	239.1	29.8	47.8	89.7
9	171.1	222	30.4	44.4	96.3
10	210.2	225.1	30	45	135.2
11	220.1	200.1	31	40	149.1
12	216.4	194.9	31.9	38.9	145.6
13	259.4	209.1	30.8	41.8	186.8

14	209	231	30	46.2	132.8
15	200	221	30	44.2	125.8

Using this data find the Descriptive Statistics using Data Analysis in Excel. Comment on results

Model Paper

M. A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

Paper: EMT 303(b): APPLIED ECONOMETRICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Distinguish between Cross Section and Time series data.
2. What is an Engel function? How do you derive it from the Household's utility function?
3. Explain the concept of Absolute Income Hypothesis.
4. State briefly the problems involved in estimating the Consumption Function.
5. List out different methods of estimating Cobb-Douglas Production Function.
6. What is Elasticity of Cost? What are its uses?
7. Discuss the nature of Simultaneous Equations Model.
8. State the essence of the Agarwal's Macro-econometric Model for India.
9. Explain the uses of Simultaneous Equations in Health System.
10. Construct a Simultaneous Equations Model relating to Labour economics.

PART- B

Answer ALL questions. Each question carries 10 Marks

(Marks: 5 x 12 = 60 Marks)

11. Examine the restrictions to be satisfied by Demand Function such as $x_j = x_j (p_1, p_2, I), j = 1, 2.$

Or

Describe the nature of different Engel forms utilized by researchers to analyse family budget studies with special reference to some of the empirical studies.

12. Elucidate various functional forms used in the estimation of Consumption Function.

Or

Review the empirical studies on Consumption Function in India.

13. Enumerate the problems of estimating Aggregate Production Function.

Or

Explain the properties of CES Production Function and its applications in Industrial sector.

14. Examine the trends in Macro-econometric model building and illustrate the problems involved in macro-econometric model building.

Or

Make a comparison of K. Krishna Murthy's Macro-econometric Model with that of N. V. A. Narasimham.

15. Examine the applications of Simultaneous Equations in the models of Demand for and Supply of Money.

Or

Describe the application of Simultaneous equations in Industrial Organizations.

****

Model Paper

M.A DEGREE EXAMINATION

Third Semester

Branch: ECONOMETRICS

EMT 303(c): ECONOMICS OF DEVELOPMENT AND PLANNING

(UNDER CBCS Revised Syllabus from 2021-22)

Time : 3 Hrs Marks: 80

Section-A

Answer any FIVE questions. Each question carries 4 marks(5X4=20)

1. Distinguish between Growth and Development.
2. Explain the concept of Vicious Circle of Poverty.
3. Explain the Marxian concept of Industrial Reserve Army.

4. State the meaning of the concept of Directly Productive Activity.
5. Explain the concept of Demographic Dividend.
6. State the need for Manpower planning.
7. State the benefits of international trade.
8. State the need for export promotion measures in a developing economy.
9. What is Choice of Technique?
10. State the importance of Cost-benefit analysis in project planning.

Section –B

Answer ALL the questions

Each question carries 12 marks 5x12=60

11. Discuss the obstacles to economic development.

OR

Elucidate the need for introduction of HDI and PQLI as measures of economic development.

12. Critically examine the Marxian Theory of economic growth.

OR

Make an assessement of Lewis' model of unlimited supplies of labour.

13. Discuss the need for industrialization to promote economic growth in a developing economy.

OR

Elucidate the role of Technology in promoting economic development.

14. 'Trade is an Engine of Economic Growth'- Robertson.Elucidate.

OR

Discuss the objectives and intstruments of Fiscal policy.

15. Explain the need for the introduction of 'appropriate technology' in a labour abundant country like India.

OR

Examine the role of foreign capital in developing countries.

Model Paper

M. A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

Paper: EMT: 303(d)- FINANCIAL INSTITUTIONS AND MARKETS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks(Marks: 5 x 4 = 20 Marks)

1. Write a note on evolution of financial system.
2. State the structure of financial system.
3. What is the feature of Money market?
4. Give an account of discount and finance houses in India.
5. Explain briefly the functions of stock exchange.
6. Mention the features of primary Market.
7. What are the uses of mutual funds?
8. What are the functions of Industrial Finance Corporation of India (IFCI)?
9. Explain the advantages of foreign capital.
10. State briefly the Role of UTI in mobilizing financial resources.

PART- B

Answer ALL questions. Each question carries 12 Marks (Marks: 5 x 12 = 60 Marks)

11.Discuss the role of financial system in economic development.

Or

Explain the functions of financial system.

12. Elucidate the recent developments in Indian money market and their limitations.

Or

Explain the instruments of money market and their limitations.

13. Explain the reforms introduced by the Govt.to improve the performance of capital market.

Or

State the objectives and functions of and Securities and Exchange Board India (SEBI).

14.Discus the functions and achievement of I.C.I.C.I

Or

Explain the role of Industrial Development Bank of India in Industrial Development.

15. Mention the functions and problems of Life Insurance Corporation.

Or

Discuss the advantages and disadvantages of foreign capital.

MODEL QUESTION PAPER

M.A.DEGREE EXAMINATION

THIRD SEMESTER

Branch : ECONOMETRICS

EMT 304 :PERSONALITY DEVELOPMENT AND SOFT SKILLS

(Revised syllabus CBCSw.e.f. 2021-2022)

Time:3 Hours Max. Marks :80

SECTION –A

Answer any **FIVE** of the following. Each question carries**4** Marks.

(Short notes) **(5X4=20)**

1. What is the Concept of Personality.
2. What are the Causes for sick personality and healthy Personality
3. Explain Self-awareness skills.
4. What is Goal setting explain
5. What is the meaning of diversity Problem
6. Explain Ethical decision making.
7. What are the Causes of low self-esteem.
8. What is the meaning of positive attitude
9. Importance ofEthical decision making.
10. Explain the Interpersonal skills.

SECTION –B

Answer any **ALL** question. Eachquestion carries**12** Marks. **5X12=60**

11. a) Write a note on Physical, social, educational, family, intellectual and emotional determinants.

OR

b)Briefly explain the Foundations of personality development.

12. a)examine the Causes for sick personality and healthy Personality

OR

b)Explain the self-awareness and management skill.

13. a) What are the reasons for the Valuing diversity: Problem

OR

b) briefly examinethe positive attitude and negative attitude.

14. a) Explain the Steps in developing a positive Personality.

OR

b) Write an essay onEthical decision making

15. a) write a note on Counseling and Mentoring – Empowering

OR

b)Importance ofEthical decision making and interpersonal skills

Model Paper

M. A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

Paper: EMT 305(a): INDIAN ECONOMY

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. State the major structural changes in Indian economy since its independence.

2. What are the basic characteristics of a developing economy?

3. Write a short note on new agricultural policy.

4. Explain the concept of food security.

5. Write a short note on the source of industrial finance in India.

6. What are the major problems of industrial labour in India.

7. Write a short note on GATT.

8. Describe broad structure of India's foreign trade in recent years.

9. What are the major objectives of planning in India?

10. What are the problems of capital formation in India?

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. What do you mean by anti-poverty Programmes? Briefly describe about anti-Poverty programmesimplemented in India after 1970s.

Or

Critically examine the Indian economic development during five-year plans.

12. Explain inter relationship between agriculture and industry.

Or

Examine the controversy in India between the farm size and productivity.

13. What are the causes of industrial Sickness in India? Suggest some remedial measures.

Or

Evaluate the importance of Micro, Small and Medium Scale Enterprises (MSMEs) in the Indian economy.

14. Examine methods of correcting disequilibrium in India's BOP.

Or

Evaluate the impact of WTO on agriculture in India.

15. Explain the concepts of Privatization and Globalization and their impact on India.

Or

Discuss the role of foreign capital and foreign aid in India's Economic development.

Model Paper

M. A. DEGREE EXAMINATION

THIRD SEMESTER

Branch: Econometrics

Paper: EMT 305(b): ECONOMICS OF INSURANCE

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Define the concept of Risk and distinguish it from the Concept of Uncertainty.

2. What is Risk Pooling?

3. Define Insurance.

4. Explain the concept of Reinsurance.

5. State the functions life insurance.

6. Give a brief account of any two life insurance products available in India.

7. Mention various types of General Insurance.

8. Explain the concept of Utmost Good faith.

9. Give a brief account on LIC of India.

10. What is IRDA? State its functions briefly.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain the concept of Risk Management and examine the essentials of Risk Management.

Or

Explain the concepts of Risk Assessment and Risk Control. Examine different methods of effective Risk Management.

12. Is Insurance a contract? If so, discuss General and Specific Principles of Insurance Contract.

Or

Elucidate the relationship between Insurance and Economic Development.

13. Critically examine various life insurance products being marketed in India.

Or

What are the functions of Health Insurance? State the relevance of various Health Insurance policies in the Indian Context.

14. Enumerate the problems faced in the marketing of General Insurance policies in India.

Or

Examine the principles of Physical and Moral Hazards in General Insurance with special reference to India.

15. Do you think that there was a need for the entry of private and foreign insurance companies in Insurance business in India? Justify your answer.

Or

Critically examine the functioning of Insurance Regulatory and Development Authority in India.

MODEL PAPER

M.A. DEGREE EXAMINATION

FOURTH SEMESTER

Branch: Econometrics

PAPER: EMT 401 – TIME SERIES ECONOMETRICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max. Marks:80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Explain the concept of stationary stochastic process.
2. Explain the concept of unit root stochastic process.
3. Discuss the concept of Co-integration.
4. Explain the Johansen test for Co-integration.
5. Explain the nature and uses of forecast.
6. Explain the concept of Unconditional Forecasting.
7. State the properties of Moving Average models.
8. State the properties of Auto Regressive models.
9. Explain the ARCH model.
10. What is a VAR model? How do you measure the volatility in VAR models?

PART- B

Answer ALL questions. Each question carries 60 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain Trend stationary and Difference stationary stochastic processes with an example.

(OR)

Explain any two tests for stationarity of the stochastic process.

12. Describe the Engle-Granger and Augmented Engle-Granger tests used in testing for Co-integration in the econometric estimation of regression equation.

(OR)

Explain the ARDL Co-integrating test.

13. Explain the procedure for 'Forecasting' with serially correlated errors.

(OR)

Explain Conditional forecasting.

14. State the properties of ARMA process in econometric analysis.

(OR)

State the properties of homogeneous non-stationary Processes of order‘d’.

15. Describe the DF and ADF tests used in testing for unit roots in the econometric estimation of regression equation.

(OR)

Explain the VAR and GARCH models in econometric analysis.

Model Paper

M. A. DEGR

EE EXAMINATION

FOURTH SEMESTER

Branch: Econometrics

Paper EMT 402 – OPTIMIZATION IN ECONOMICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Explain the mathematical formulation of the Transportation Problem with an example.
2. Distinguish between Balanced and Unbalanced Transportation Problem.
3. What is a Game Theory? List out the assumptions made in the theory of Games.
4. Explain the Maxi-min principle used in Game theory.
5. Define Inventory. What are the advantages and disadvantages of having inventories?
6. Explain the different costs that are involved in inventory problems.

7. Explain the concepts of Network: (i) Activities and (ii) Nodes.
8. Explain the rules for constructing the Networks.
9. Explain the concept of Simulation.
10. Explain the Event-type Simulation with the help of an illustration.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain how the initial basic feasible solution to the Transportation Problem is determined using Vogel's approximation method.

Or

Determine an initial basic feasible solution to the following Transportation Problem using North West Corner Rule:

	D1	D2	D3	D4	Availability
O1	6	4	1	5	14
O2	8	9	2	7	16
O3	4	3	6	2	5
Requirement	6	10	15	4	35

12. Define Saddle point and value of the Game. Determine the value of the game whose pay-off is given by:

	Player B	
Player A	-5	2
	-7	-4

Or

Explain the Dominance property and use the dominance property to solve the game theory whose pay off matrix is given by:

		Player B	
		I	II
	I	9	2
Player A	II	8	6
	III	6	4

13. Explain the fundamental problem of EOQ.

Or

Explain the problem of EOQ with finite rate of replenishment.

14. What is a Network? Explain the constraints in Network.

Or

Explain the Critical Path Method (CPM).

15. Explain the different methods to generate Uniform (0, 1) Random observations.

Or

Explain the procedure involved in the generation of a sequence of random observations from any specified probability distribution.

***

SRI VENKATESWARA UNIVERSITY: TIRUPATI

BRANCH IV (B) - ECONOMETRICS (2021-22)

Semester-IV: 403(a)-PRACTICAL EXAMINATION

Time: 3 Hours **Max. Marks: 80**

==========

Answer any Four Questions. All Questions carry equal marks [4x20=80]

6. The following time series data relates to capital, revenue receipts and expenditure of the union Govt. of India data and also GDP at market prices time series data have the base year 2011-12 (in crores of rupees) during the period from 1988-89 to 2014-15.

Year	GDP Base year (2011-12)	Total Receipts	Total Expenditure	Year	GDP Base year (2011-12)	Total Receipts	Total Expenditure
1988-89	2063458	73469	79111	2002-03	4319293	411365	413248
1989-90	2186180	82316	92908	2003-04	4662417	475146	471203
1990-91	2307151	93951	105298	2004-05	5028361	506382	498252
1991-92	2331534	104559	111414	2005-06	5495238	526626	505738
1992-93	2459357	110306	122618	2006-07	6004315	578869	583387

1997-98	3307769	232963	232053	2011-12	8736329	1320355	1304365
1998-99	3512335	279549	279340	2012-13	9213017	1461384	1410372
1999-00	3809588	297189	298053	2013-14	9801370	1578618	1559447
2000-01	3961020	324414	325592	2014-15	10536984	1663673	1663673
2001-02	4156862	363806	362310				

Check the given time series data is a stationary series or not by using **Augmented Dickey-Fuller** test (unit root test) by using Eviews.

7. The following quarterly time series data shows USA people **Personal Disposable Income (PDI),** and **Personal Consumption Expenditure (PCE)** in terms of billions of dollars 1987, during the 1970-I to 1981-iv.

Year	Q	PDI	PCE	Year	Q	PDI	PCE	Year	Q	PDI	PCE

1970	I	1990.60	1800.50	1974	I	2334.70	2050.80	1978	I	2587.30	2347.10
	II	2020.10	1807.50		II	2304.50	2059.00		II	2631.90	2394.00
	III	2045.30	1824.70		III	2315.00	2065.50		III	2653.20	2404.50
	iv	2045.20	1821.20		iv	2313.70	2039.90		iv	2680.90	2421.60
1971	I	2073.90	1849.90	1975	I	2282.50	2051.80	1979	I	2699.20	2437.90
	II	2098.00	1863.50		II	2390.30	2086.90		II	2697.60	2435.40
	III	2106.60	1876.90		III	2354.40	2114.40		III	2715.30	2454.70
	iv	2121.10	1904.60		iv	2389.40	2137.00		iv	2728.10	2465.40
1972	I	2129.70	1929.30	1976	I	2424.50	2179.30	1980	I	2742.90	2464.60
	II	2149.10	1963.30		II	2434.90	2194.70		II	2692.00	2414.20
	III	2193.90	1989.10		III	2444.70	2213.00		III	2722.50	2440.30
	iv	2272.00	2032.10		iv	2459.50	2242.00		iv	2777.00	2469.20
1973	I	2300.70	2063.90	1977	I	2463.00	2271.30	1981	I	2783.70	2475.50
	II	2315.20	2062.00		II	2490.30	2280.80		II	2776.70	2476.10
	III	2337.90	2073.70		III	2541.00	2302.60		III	2814.10	2487.40
	iv	2382.70	2067.40		iv	2556.20	2331.60		iv	2808.80	2468.60

Find the following objectivesby using Eviews

I. Calculate stationarity test by using ADF

II. If the data has non-stationary series then find out whether the functional relationship between PDI and PCE has spurious regression (Non-sense regression) or not.

8. The following quarterly time series data shows USA people ***Personal Disposable Income (PDI),Personal Consumption Expenditure (PCE)***and***Gross Domestic Product (GDP)*** in terms of billions of dollars 1987, during the 1970-I to 1981-iv.

Year	Q	GDP	PDI	PCE	Year	Q	GDP	PDI	PCE	Year	Q	GDP	PDI	PCE
1970	I	2872.8	1990.6	1800.5	1974	I	3259.4	2334.7	2050.8	1978	I	3591.8	2587.3	2347.1
	II	2860.3	2020.1	1807.5		II	3267.6	2304.5	2059		II	3707	2631.9	2394
	III	2896.6	2045.3	1824.7		III	3239.1	2315	2065.5		III	3735.6	2653.2	2404.5
	iv	2873.7	2045.2	1821.2		iv	3226.4	2313.7	2039.9		iv	3779.6	2680.9	2421.6
1971	I	2942.9	2073.9	1849.9	1975	I	3154	2282.5	2051.8	1979	I	3780.8	2699.2	2437.9
	II	2947.4	2098	1863.5		II	3190.4	2390.3	2086.9		II	3784.3	2697.6	2435.4
	III	2966	2106.6	1876.9		III	3249.9	2354.4	2114.4		III	3807.5	2715.3	2454.7
	iv	2980.8	2121.1	1904.6		iv	3292.5	2389.4	2137		iv	3814.6	2728.1	2465.4
1972	I	3037.3	2129.7	1929.3	1976	I	3356.7	2424.5	2179.3	1980	I	3830.8	2742.9	2464.6
	II	3089.	2149.	1963.		II	3369.	2434.	2194.		II	3732.	2692	2414.

		7	1	3			2	9	7			6		2
	II I	3125.8	2193.9	1989.1		II I	3381	2444.7	2213		II I	3733.5	2722.5	2440.3
	iv	3175.5	2272	2032.1		iv	3416.3	2459.5	2242		iv	3808.5	2777	2469.2
1973	I	3253.3	2300.7	2063.9	1977	I	3466.4	2463	2271.3	1981	I	3860.5	2783.7	2475.5
	II	3267.6	2315.2	2062		II	3525	2490.3	2280.8		II	3844.4	2776.7	2476.1
	II I	3264.3	2337.9	2073.7		II I	3574.4	2541	2302.6		II I	3864.5	2814.1	2487.4
	iv	3289.1	2382.7	2067.4		iv	3567.2	2556.2	2331.6		iv	3803.1	2808.8	2468.6

Using the above time series data, examine **Johansen Cointegration** test to study the co-integration between PCE,PDI and GDP by using Eviews.

9. Consider the problem of assigning four sales persons to four different sales regions as shown in below table such that the total sales are maximized.

	Sales Region-I	**Sales Region-II**	**Sales Region-III**	**Sales Region-IV**
Salesman-I	10	22	2	14
Salesman-II	16	18	22	10
Salesman-III	24	20	12	18

Salesman-IV	16	14	24	20

The cell entries represent annual sales figures in lakhs of rupees. Find the optimal allocation of the sales persons to different regions by using Hungarian Method.

Model Paper

M. A. DEGREE EXAMINATION

FOURTH SEMESTER

Branch: Econometrics

Paper: EMT 403(b): INTERNATIONAL TRADE AND FINANCE

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

16. Define the concept of Comparative Advantage and explain how comparative advantage is proved in the Ricardian Theory of Comparative Advantage.
17. Explain the Concept of intra-industry Trade. How do you measure it?
18. Explain the concept of Immiserizing Growth.
19. Distinguish between the concepts of Trade Creation and Trade Diversion.
20. State the Marshall – Lerner Condition for Devaluation.
21. What do you mean by Policy Mix?
22. What is Spot rate of Exchange? How is it different from the Forward Rate of Exchange?
23. What do you understand by Multiple Exchange Rates?
24. Write a Short note on Bretton Woods Twins.
25. What is Multilateralism?

PART- B

Answer ALL questions. Each question carries 60 Marks

(Marks: 5 x 12 = 60 Marks)

11. Critically examine the Heckscher-Ohlin Theory of International Trade.

Or

Explain Neo-Chamberlin Model of International Trade.

12. Discuss the relative merits and demerits of Free Trade.

Or

Analyse the effects of Tariff with partial and general equilibrium approaches.

13. Explain the Absorption Approach to Devaluation.

Or

Explain how adjustment in balance of payments takes place under fixed exchange rates.

14. Discuss the exchange rate adjustments with free mobility of capital.

Or

Discuss the relative merits and demerits of Fixed and Flexible Exchange Rates.

15. Critically examine the role of IMF in ensuring adequate international liquidity under Bretton Woods' system.

Or

Assess the role of World Trade Organization in liberalizing international trade since 1995.

Model Paper

M. A. DEGREE EXAMINATION

FOURTH SEMESTER

Branch: Econometrics

Paper: EMT 403(c): INDIAN ECONOMY

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. State the major structural changes in Indian economy since its independence.

2. What are the basic characteristics of a developing economy?

3. Write a short note on new agricultural policy.

4. Explain the concept of food security.

5. Write a short note on the source of industrial finance in India.

6. What are the major problems of industrial labour in India.

7. Write a short note on GATT.

8. Describe broad structure of India's foreign trade in recent years.

9. What are the major objectives of planning in India?

10. What are the problems of capital formation in India?

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. What do you mean by anti-poverty Programmes? Briefly describe about anti-Poverty programmesimplemented in India after 1970s.

Or

Critically examine the Indian economic development during five-year plans.

12. Explain inter relationship between agriculture and industry.

Or

Examine the controversy in India between the farm size and productivity.

13. What are the causes of industrial Sickness in India? Suggest some remedial measures.

Or

Evaluate the importance of Micro, Small and Medium Scale Enterprises (MSMEs) in the Indian economy.

14. Examine methods of correcting disequilibrium in India's BOP.

Or

Evaluate the impact of WTO on agriculture in India.

15. Explain the concepts of Privatization and Globalization and their impact on India.

Or

Discuss the role of foreign capital and foreign aid in India's Economic development.

MODEL QUESTION PAPER

M.A.DEGREE EXAMINATION,-2021-22

FOURTH SEMESTER

Branch IV : ECONOMETRICS

EMT 404 :FREEDOM MOVEMENT IN INDIA, 1857 - 1947

(Revised syllabus CBCSw.e.f.2021-2022)

Time:3 Hours Max. Marks :70

SECTION –A

Answer any **FIVE** of the following. Each question carries**4** Marks.

(Short notes) **(5X4=20)**

1. Factors for the growth of Nationalism.
2. Militant Nationalists.
3. Rowlatt Act.
4. Swaraj Party.
5. Growth of capitalist class in India.
6. Significance of KisanMahasabha.
7. Importance of Muslim League.
8. Significance of Cripps proposals.
9. Importance of growth of popular movements.
10. Lapse of paramountacy.

SECTION –B

Answer any **ALL** question. Eachquestion carries**10** Marks. **5X10=50**

11. a)Write a note on Nationalism, its meaning and different interpretations.

OR

b)What was Home Rule Movement in India? Discuss.

12. a)Write about non - violance and satyagraha and their significance during freedom movement in India?

OR

b)Explain the powers and functions of Ministries at provincial government in India.

13. a) Describe critically on the role played by revolutionary Nationalist Bhagath Singh durinBrish rule in Indi.

OR

b)Give a critical account of Peasant Movements between 1921 -1942 in India.

14. a) What are the reasons for the growth of communalism between 1937 -1947 in India.

OR

b)Write a detailed note on cabinet Mission in India.

15. a) Explain the political conditions in Princely States in India.

OR

b)Write an essay on Join India Movement and its significance

Model Paper

M. A. DEGREE EXAMINATION

FOURTH SEMESTER

Branch: Econometrics

Paper EMT 405(a) – OPTIMIZATION IN ECONOMICS

(Revised Regulations CBSC from 2021-22)

Time: 3 Hours Max: Marks: 80

PART- A

Answer any FIVE questions. Each question carries 4 Marks

(Marks: 5 x 4 = 20 Marks)

1. Explain the mathematical formulation of the Transportation Problem with an example.
2. Distinguish between Balanced and Unbalanced Transportation Problem.
3. What is a Game Theory? List out the assumptions made in the theory of Games.
4. Explain the Maxi-min principle used in Game theory.
5. Define Inventory. What are the advantages and disadvantages of having inventories?
6. Explain the different costs that are involved in inventory problems.
7. Explain the concepts of Network: (i) Activities and (ii) Nodes.
8. Explain the rules for constructing the Networks.
9. Explain the concept of Simulation.
10. Explain the Event-type Simulation with the help of an illustration.

PART- B

Answer ALL questions. Each question carries 12 Marks

(Marks: 5 x 12 = 60 Marks)

11. Explain how the initial basic feasible solution to the Transportation Problem is determined using Vogel's approximation method.

Or

Determine an initial basic feasible solution to the following Transportation Problem using North West Corner Rule:

	D1	D2	D3	D4	Availability
	O1	6	4	1	5	14
	O2	8	9	2	7	16
	O3	4	3	6	2	5
Requirement	6	10	15	4	35	

12. Define Saddle point and value of the Game. Determine the value of the game whose pay-off is given by:

		Player B	
		-5	2
Player A			
		-7	-4

Or

Explain the Dominance property and use the dominance property to solve the game theory whose pay off matrix is given by:

		Player B	
		I	II
	I	9	2
Player A	II	8	6

III 6 4

13. Explain the fundamental problem of EOQ.

Or

Explain the problem of EOQ with finite rate of replenishment.

14. What is a Network? Explain the constraints in Network.

Or

Explain the Critical Path Method (CPM).

15. Explain the different methods to generate Uniform (0, 1) Random observations.

Or

Explain the procedure involved in the generation of a sequence of random observations from any specified probability distribution.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U. COLLEGE OF ARTS

DEPARTMENT OF ECONOMICS

Course

M.A. ECONOMICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

DEPARTMENT OF ECONOMICS

SRI VENKATESWARA UNIVERSITY :; TIRUPATI

About the Department:

The Department of Economics, established in 1954, is one of the premiere departments of Sri Venketeswara University. The department was instrumental for the establishment of the interdisciplinary departments like Commerce, Political Science, Population Studies, Adult Education and Econometrics in the university. The Department, founded by Prof. E.K. Warrior, a product of Oxford University, U. K., was further nurtured and developed by Prof. D.L. Narayana, the former President of IEA. The department made pioneering contributions to the teaching and research in several areas of Economics in general and in the areas of Labour Economics, Agricultural Economics and Public Finance in particular. The department has been admitted to the UGC Special Assistance Programme (SAP) right from 1975, for three successive phases. The Department of Economics is also the first one toget UGC SAP in the entire South India. Having successfully completed UGC-SAP (DRS:Phase - I) from 2009-14, the Department has been admitted to DRS:Phase-II for the period 2016-22.

With committed, competent and experienced faculty members, the Department has, to its credit. a commendable record of teaching, research and training programmes. Over 315 Pb.D and 70 M. Phil scholars have been trained since the inception of the Department. During 2021-22, 35 Ph.Ds were in the pipeline. The Department trains 180 Post-Graduate students in Economics every year. (Vide Table -1 & 2). Apart from teaching and research guidance, the Department has a creditable record of completing research projects funded by different agencies. About IJS major research projects, funded by UGC/ICSSR/Planning Commission/State Government have been completed and a good number of projects are in progress. [It is gratifying to note that some of the students trained in the Department are well placed in Government, Private and academic institutions all over the country.

The Department of Economics has been a pioneer in the organisation of Conferences, Seminars, Workshops, Refresher Courses, etc., and during the 1.,,(8 years the Department has organized one International and nine national level seminars. The notable among them were, "The 6' International Seminar of Regional Network on Poverty Eradication" organized in collaboration with Universiti of Malaysia, Kelantan,

Malaysia during 13-15th November 2015 and the 99th Annual Conference of the Indian Economic Association during 27-29 December 2016. Besides, the Department has been instrumental in the formation of A.P. Economic Association, Tirupati Chapter of the Indian Institute of Public Administration and Rayalaseema Economic Association. The Department also organized seven Refresher courses in Research Methodology and Summer Institutes for the benefit of the in-service teachers and research scholars under the auspices of the Academic Staff College of the University.

➢ Vision:

To promote the department as an institute for Advanced studies in Economics, Applied Economics / School of Economics.

➢ Mission:

To undertake qualitative teaching, ethics based research and capacitate extension – programme to facilitate research and training in-frontier areas of Economics in tune with the changing man power requirement of the economy.

➢ Programme specific outcomes (pso's) of pg programme:

PSO-1.	To understand the basic principles of Economics.
	To understand the distribution of income and wealth of the country.
	To understand the trade relations among the countries
PSO-2.	To analyse the economic doctrines of India.
	To understand the various economic policies of the country.
	To understand the efficiency and equity implications of Markets interference including government policy.

Programme outcomes of pg programmes:

PO- 1.	**Creative Thinking:**
	• Development of creative thinking is a prime outcome of any P.G. Programme.
	• Creative thinking enables students to think methodically with Economic and Social background.
PO- 2.	**Multiple Thinking:** it enables students to think in Multiple dimensions such as Logically, Rationally, Scientifically, Politically and Economically.
PO- 3.	**Self and Long life Learning:** Post Graduation course promotes Self and Long-life learning in the broad context of Socio, Economical changes.
PO- 4.	**Self-Learning:** It improves the ability to engage in independent learning technics.
PO- 5.	**Effective Communication:** Speak, Read, Write and listen clearly in person and through electronic media in English and in one Indian language and make meaning of the world by connective people, ideas, books media and technology.
PO- 6.	**Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings.
PO- 7.	**Effective Citizenship:** Demonstrate empathetic social concern and equity-cantered national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.
PO- 8.	**Ethics:** Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.
PO- 9.	**Environment and Sustainability:** Understand the issues of economics in the context of environmental and sustainable development.
PO- 10.	**Self-directed and Life-Long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.

DEPARTMENT OF ECONOMICS

SVU COLLEGE OF ARTS :: TIRUPATI

Paper Titles of Revised Syllabus with effect from 2021-2022

Sl. No.	Components of Study	Title of the Course		Credit Hrs/ Week	No. of Credits	Internal Marks	Sem End Exam Marks	Total	Page No.
First Semester									
1.	Core	101	Micro-Economic Analysis – I	06	04	20	80	100	01
2.		102	Macro-Economic Analysis - I	06	04	20	80	100	03
3.		103	Public Economics	06	04	20	80	100	05
4.		104	Mathematical Methods in Economics	06	04	20	80	100	07

Note: * Theory – 60, Internal Assessment – 20 and Practicals -20 paper 105(a) - First Sem

SEMESTER – I		
Paper – 101	Micro Economics Analysis – I	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives:		

i. To identify and explain economics concepts and theories related to the behaviour of economic agents, markets, industry and firm structures, legal institutions, social norms and government policies.

ii. To integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future ones.

iii. To evaluate the consequences of economic activities and institutions for individual and social welfare.

iv. To identify the basic feature of alternative representation of human behaviour in economics.

Syllabus : ECO 101: MICRO ECONOMICS - I

Unit 1: Demand Analysis

Demand Analysis : Marshalian, Hicksian, Slutsky and Samuelson's Revealed Preference Approaches – Pragmatic Approach – Linear Expenditure System – Constant Elasticity of Demand Function – Von Neumann – Morgenstern Utility Index.

Unit 2: Theory of Production and Cost

Production Function : Cobb – Douglas Production Function – CES Production Function – Law of Variable Proportions – Returns to Scale – Isoquants-Iso – Cost Curves – Equilibrium of the Firm: Choice of Optimum Combination of Inputs – Elasticity of Substitution.

Unit3: Cost of Production, Revenue and Equilibrium of the Firm

Cost of Production: Traditional and Modern Approaches – Short run and - Long run Cost Curves – Concept of Revenue – Revenue Curves under Different Market Conditions – Equilibrium of the Firm and Industry.

Unit 4: Price And Output Determination under Perfect Competition, Monopoly and monopolistic competition. Perfect Competition: Price and Output Determination - Market Period-Short run and Long-run Analysis – Monopoly: Short run and Long run Equilibrium – Price Discrimination – Monopolistic Competition: Equilibrium of the Firm and the Group – Product Differentiation and Selling Cost – Chamberlin Concept of Excess Capacity.

Unit5: Price and Output Determination: Duopoly and Oligopoly

Duopoly: The Models of Cournot, Bertrand and Stackelberg – Oligopoly: Chamberlin Model and Kinked Demand Curve Model – Collusive Oligopoly: Cartels and Price Leadership.

Economy, Second Edition, Prentice Hall of India, New Delhi.
12. Kreps David, M., 1990, A course in Micro Economic Theory, Princeton University, Princeton.

Course Outcomes:	
CO1.	Students will be able to evaluate the consequences of economics activities for individual and social welfare.
CO2.	Able to understand various Methodologies of studying Economics.
CO3.	Able to understand and analyse utility analysis and apply the same in his life.
CO4.	Make the students to understand about the demand and its responses and how it will be measured.
CO5.	Able to understand about the consumer behaviour.

SEMESTER – I		
Paper – 102	**Macro Economics Analysis – I**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i. To know macroeconomic concepts and theories by explaining them using appropriate terminology.

ii. To understand macroeconomic models by describing relationship among macroeconomic variables.

iii. To tract down economic data and data sources.

iv. To interpret existing knowledge by explaining what macroeconomic principles are used in economic analyses.

v. To argue based on acquired knowledge in terms of attitudes.

Syllabus : ECO 101: MICRO ECONOMICS - I

Unit 1: Nature and Scope of Macro Economics

Nature of Macro Economics – Scope and Importance of Macro Economics – Limitations of Macro Economics –Macro Statics – Macro Dynamics and Comparative statics – Micro Foundation of Macro Economics.

Unit 2: National Income

Meaning of National Income – Concepts of National Income; Gross National Product, Net National Product, NMP at Market Price, NNP at Factor cost, NDP at Factor cost, Personal income, Disposal Income, Real Income and Per Capita Income – Methods of measuring National Income and Difficulties in the Measurement of National Income – Circular flow of income and expenditure: In two sector, three sector closed economy and four sector open economy.

Unit 3: Classical and Keynesian Macroeconomics

Classical Theory of Employment – Critique of Classical Theory – Basic Keynesian Models – Consumption Function – Investment Multiplier – Types of

Investment – Marginal Efficiency of Capital and Investment – Accelerator – Interaction between Multiplier and Accelerator.

Unit 4: Consumption Function; Alternative Hypotheses

Consumption Function – Theories of Consumption Function – Alternative Hypotheses – Absolute Income Hypothesis, Relative Income Hypothesis, Life Cycle Hypothesis, Permanent Income Hypothesis.

Unit 5: Neo Classical And Keynesian Synthesis

The Goods market and Money market - Goods market equilibrium: the derivation of IS curve –Shift in IS curve – Money Market Equilibrium: The derivation of LM curve – Shift in LM curve – Interaction of IS-LM curve: The simultaneous equilibrium of goods market and Money market – The Elasticity of LM curve – The effectiveness of Monetary and Fiscal Policies.

10. Seth, M.L. 2006, Macro-economic theory, Lakshmi Narai Agarwal Publications, Agra.

Course Outcomes:	
CO1.	Able to understand different concepts of National Income and methods to measure national income.
CO2.	Able to acquire the knowledge about the classical and Keynes theories of employment.
CO3.	Able to understand Keynes theory of consumption function and working of multiplier and acceleration principle.
CO4.	To understand the function of money, different theories of money.

SEMESTER – I		
Paper – 103	**PUBLIC FINANCE**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . Students can able to define, understand scope and various theories of public finance.

ii. They can be able to study reasons for growth of public expenditure and effect of public expenditure.

iii. Students main objective is to understand various sources of public revenue and taxable capacity of the people.

iv. Students can be able to know the tax structure of the government and various modern reforms in taxation.

v. They can understand the various classical, modern view on public debt, objectives, principles of debt management.

Syllabus: ECO 103: PUBLIC FINANCE

Unit 1: Public Finance And Public Authority

Economic Systems – Need for Government Intervention – Major Fiscal Functions of the Government – Definition and Scope of Public Finance – Public and Private Finance – Positive and Normative approaches to Public Finance – Maximum Social Advantage and Optimum Allocation of Resources.

Unit 2: Public Expenditure

Wagner's Law of Increasing State Activities – Peacock and Wiseman Hypothesis – Rostow's Theory – Reasons for Growth of Public Expenditure in Modern times – Determinants and Classification of Public Expenditure –

Growth of Public Expenditure – Effects of Public Expenditure – Regulation of Public Expenditure in India.

Unit 3: Public Revenue

Sources of Public revenue – Tax Revenue and Non-tax Revenue – Characteristics of Good Tax System – Benefit Theory and Ability to Pay theory – Taxable Capacity – Factors Determining Taxable Capacity, Measurement of Taxable Capacity and Taxable Capacity in India.

Unit 4: Incidence Of Taxation

Incidence of Taxation – Classical Approach – The Concentration, Diffusion and Modern Theories of Incidence and Musgrave's Concept of Incidence – Study of Indian Tax Structure – Direct and Indirect Taxes – Review of Tax Proposals of Raja. J. Chellaiah Committee – Reforms in Taxation.

Unit 5: Public Debt

Classical and Modern Views on Public Debt – Classification of Public Debt – Debt Burden Controversy – Classical Keynesian and Modern Views – Objectives and Principles of Public debt Management – Methods of Public Debt Redemption – Public Debt and Economic Development in India.

11. Government of India, Economic Survey (various reports).
12. Government of India, 1992, Report of the Tax Reforms Committee, Part I & II, New Delhi.
13. RBI Monthly Bulletins.

Course Outcomes:

CO1. Students come to know about the Role of Government in Public-Revenue, Public-Expenditure, Public Debt and Public Administration.

CO2. They come to know the Modern taxable capacity effects of taxation under different market conditions.

CO3. Students come to know about the Role of Public Debt in a developing country like India.

SEMESTER – I		
Paper – 104	**MATHEMATICAL METHODS IN ECONOMICS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . The objective of this course is to help the students develop precise understanding of mathematical reasoning; the majority of the course will be devoted to teaching the concepts of functions, matrices and Input, Output analysis and incorporating these concepts into economic theory. At the end of the course students will be able to solve rather complex economics problems using a fairly high level mathematics.

Syllabus : ECO 104: MATHEMATICAL METHODS IN ECONOMICS

Unit-I: Sets and Operations on Sets

Sets and Operations on Sets - Concepts of Cartesian Product Relation and function - Types of Functions - Polynomial Function. Homogenous Function – Logarithmic and Exponential Functions – Limit and Continuity of Function - Standard Limits - Evaluation of Limits in Simple Cases - Demand and Supply Functions and Determination of Equilibrium Price and Quantity.

Unit-II: Differentiation of Functions of One or Two Variables

Concept of Derivative–Rules of Differentiation, Power Rule, Product Sum, Difference-Quotient, Chain, Logarithmic and Exponential Rules–Higher Order Derivatives–Rules of Differentiation of Multi - variable Function - Interpretation of Partial Derivatives- Higher Order and Cross Partial derivatives–Interpretation of Revenue, Cost, Demand and Supply Functions and Elasticities.

Unit-III: Maximum and Minimum Functions and Integration

Conditions for Maxima and Minima of Functions of One or Two Variables - Simple examples from Economics, Maximization of Output,

Revenue and Profit-Minimization of Cost under Perfect Competition and Monopoly Concepts of integration – Definite and Indefinite Integrals – Simple Rules of Integration – Application of Integration to Consumer's Surplus and Producer's Surplus.

Unit-IV: Matrices and Determinant

Concept of Matrix – Types of Matrix – Concept of Vector and its Properties – Addition and Multiplication of Matrices – Determinants and Their Properties - Inverse and Rank of a Matrix Solution of Two and Three Simultaneous Equations through Cramer's Rule.

Unit-V: Linear Programming and Input-Output Analysis

Linear Programming–Formulation of a Linear Programming Problems – Solution of Linear Programming through Graphical Method – Formulation of a Dual Programme and its Interpretation – Input-Output Analysis – Assumptions – Formulation of Model - Finding Solution – Closed and Input-output Models.

7. Yamane, Taro, 1975, Mathematics for Economists, Prentice Hall of India, New Delhi.
8. Vygodsky, G.S., 1971, Mathematical Hand book (Higher Mathematics) Meir Publishers, Moscow.

Course Outcomes:	
CO1.	Understanding different types of functions and standard limit. By using demand and supply function determination of equilibrium price and quantity.

CO2.	Study of different rules of differentiation application of different rule of differentiation in economics.
CO3.	Understanding the concepts of maxima and minima functions and application of these functions in economics for selection of optimum return. Study different concepts of integration and application of integration to consumer's and producer's surplus.
CO4.	Understanding concepts of matrices and determinants and their relationship. Solving minor and higher order matrices with the help of determinants.
CO5.	Impact knowledge of linear programming techniques and application of linear programming for decision making understanding the concepts structure and work with input-output models.

SEMESTER – I		
Paper – 105	**FUNDAMENTALS OF COMPUTERS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to familiarize with fundamentals of computers that are used in day to day life;

Ii To create interest in the students in the use of simple office tools such as MS Word and MS Power Points so as enable him to present their research papers/talks to the audience more effectively;

iii To equip the economics students with the simple tools for data analysis such as MS Excel and MS Access;

Syllabus : ECO 105: FUNDAMENTALS OF COMPUTERS

Unit 1: Computer Fundamentals

Definition – Components of a Computer – Block Diagram–Evolution of Computer Generations– Input–Output Devices–Hardware and Software – Compilers and Assemblers –Low level and High level Languages – Operating Systems and the User Interface – Microsoft Operating Systems.

Unit 2: MS Word

Creating, Opening and Saving Files–Editing and Formatting Text–Spell and Grammar Check– Creation of Tables and Columns – Mail-merge – Word Art – Concept of Macro – Print Preview and Operations.

Unit 3: MS Excel

Work Sheet – Creating a Data File in MS Excel – Calculations in Excel Sheet – Creating Graphs and Charts with Excel–Data Analysis Pack–Statistical Functions – Printing Operations.

Unit 4: Power Point

Components of MS Power Point – Parts of a Power Point Screen - Creating a New Presentation – Opening – Saving – Closing a Presentation.

Unit 5: MS Access

The Concept of Database Management System - Creating New Database Files – Fields – Records – Files - Viewing forms, Query and Reports.

PRACTICALS : Time: 3 hrs Max Marks:20

1. Each candidate has to perform two practicals
2. Practical record is to be maintained
3. Practical examination is based on practical record, demonstration and Viva-Voce.

8. Sanjay Sexena, 2000, A First Course in Computers, Vikas Publishing House, New Delhi.
9. Shelly and Hunt Computers and Common Sense, Prentice Hall of India, New Delhi.

Course Outcomes:

CO1.	Know the basic information regarding computers such as hardware, software, Operating Systems as well as basic computer languages;
CO2.	Open a MS Word document to type, format, edit, save and print the documents;
CO3.	Apply their knowledge in MS Excel to create file, enter the data, edit the data, analyse the data and to draw conclusions therefrom;
CO4.	Design an attractive Power point presentation (PPT) to deliver the speech or lecture in an appealing way to the audience;
CO5.	Create a data base file, enter a sufficiently large data set, analyse the data and able to generate useful reports through queries.

SEMESTER – I		
Paper – 106	**Human Values and Professional Ethics – I**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . The student's major objective is to study the Nature of Ethics and its relation to Religion, Political, Business, Legal, Medical and Environmental issues.

ii. The second objective is to know the basic moral concepts – rights, duties, responsibilities and freedom to build good character and conduct.

iii. The third objective is to follow Non-violence, truth, Non-possession, Non-stealing, cardinal virtues rightcomness, wealth and liberation etc.

iv. The fourth one is to learn the values embedded in various religions, religional tolerance and Gandhian ethics.

v. The last objective is to study crime and various theories i.e reformation and retribution etc.

Syllabus : ECO 106: Human Values and Professional Ethics – I

UNIT-I: Definition and Nature of Ethics-Its relation to Religion ,Politics, Business, Legal , Medical And Environment ,Need And Implementation Ethics-Goals-Ethical Values in Various Professions.

UNIT-II: Nature Of Values-Good and Bad, Ends and Means, Actual and Potential Values, Objectives and Subjective Values ,Analysis Of Basic Moral Concepts-rights, Ought, Duty, Obligation, Justice. Responsibility and Freedom. Good Behavior and Respect for Elders, Character and Conduct.

UNIT-III: Ahimsa (Non-Violence), Satya (Truth),Brahmacharya (Celibacy),Asteya (Non-possession) and APARIGRAHA (Non-stealing).Purusharthas (Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment bodily desires).Moksha (Liberation)

UNIT-IV: Bhagavad Gita-(a) Niskama karma.(b).Buddhism-The four noble truths-Arya Astanga marga, (c) Jainisam- mahavratas and anuvratas. Values embedded in various religions, Religious tolerance, Gandhian ethics.

UNIT-V: Crime and Theories or punishment-(a) Reformative, Retributive and Deterrent ,(b) Views on manu and Yajnavalkya.

14. Analyzing moral.issues,Judith A.Boss.May Field Publishing Company-1999.
15. An introduction to applied ethics(ed.)John H.Piet and Ayodhya Prasad.cosmo publications.
16. Text book for intermediate first year ethics and human values. Board of intermediate education-Telugu-academy, Hyderabad.
17. I.C.Sharma ethics philosophy of india. Nagin & co julundhar.

Course Outcomes:	
CO1.	Students mould themselves into systematic citizens.
CO2.	Student improves their Human Values and Ethics.
CO3.	Students learn the Moral Values, Self Control etc.
CO4.	Students develop their character and conduct.
CO5.	Students learn the importance of physical and mental health.
CO6.	Students come to know the adverse effects of usage of Alcoholic and other Narcotic drugs.

SEMESTER – II		
Paper – 201	**MICRO ECONOMIC ANALYSIS – II**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i. To identify and explain economic concepts and theories related to the behaviour of economic agents, markets, industry and firm structures, legal institutions, social norms, and government policies.

ii. To integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future one.

iii. To evaluate the consequences of economics activities and institutions for individual and social welfare.

iv. To identify the basic features of alternative representations of human behaviour in economics.

Syllabus : ECO 201: MICRO ECONOMIC ANALYSIS – II

Unit 1: Modern Theories of the Firm

Baumol's Sales Revenue Maximization Model–Marris' Model of the Managerial Enterprise–Williamson's Model of Managerial Discretion–Bain's Limit Pricing Theory –Recent Developments in the Theory of Limit Pricing: The Models of Sylos-Labini–Franco Modigliani and Bhagawati.

Unit 2: Theories of Distribution

Theories of Distribution:- Ricardo, Karl Marx, Neo-Classical Theory(Marginal Productivity Theory) Kaldor-Factor Pricing in Perfect and Imperfect Competitive Markets–Adding up Problem and Euler's Theorem.

Unit 3: General Equilibrium

Meaning of Equilibrium–Static and Dynamic Equilibrium–Stable and Unstable Equilibrium – Partial and General Equilibrium – General Equilibrium of Exchange and Consumption–General Equilibrium of Production and Exchange–General Equilibrium and Relative Prices.

Unit 4: Welfare Economics

Pigovian Welfare Economics–Pareto-Optimal Conditions–Kaldor - Hicks Compensation Principle – Social Welfare Function – The Theory of Second Best.

Unit 5: Advanced Topics in Modern Micro Economics

Game Theory–Two Person Constant and Zero Sum Game–Linear Programming Graphical Solution - Input–Output Analysis–Static and Dynamic Models.

Course Outcomes:
CO1. Make the students to have complete knowledge regarding theory of firm and

	pricing theories.
CO2.	Able to acquire knowledge regarding different types of cost and revenue, and about the interest and profits.
CO3.	Ability to understand and working of different kinds of factor and market equilibriums.
CO4.	To make students understand how the welfare and optimality in social welfare theories.
CO5.	To make the students in understanding of quantitative tools in microeconomics.

SEMESTER – II		
Paper – 202	**MACRO ECONOMIC ANALYSIS – II**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i. To identify the determinants of various macroeconomic aggregates such as output, unemployment, inflation, productivity and the major challenges associated with the measurement of these aggregates.

ii. To discuss the linkage between financial markets and the real economy, and how these linkages influence the impact of economic policies over differing time horizons.

iii. To describe the main macroeconomic theories of short term fluctuations and long term growth in the economy.

iv. To critically evaluate the consequence of basic macroeconomic policy options under differing economic conditions within a business cycle.

Syllabus : ECO 201: MACRO ECONOMIC ANALYSIS – II

Unit 1: Demand for Money

The Classical View–Quantity Theory of Money–Keynes' Theory of Demand for Money–Post Keynesian Theories of Demand for Money: Tobin, Friedman and Baumol–Integration of Monetary Theory and Value Theory: Keynes and Don Patinkin.

Unit 2: Supply of Money

Concept of Money Supply–Components of Money Supply–RBI Approach to Money Supply–High Power Money and Money Multiplier–Changes in the Supply of Money.

Unit 3: Business Cycles

Types of Trade Cycles–Different Theories of Trade Cycles: Samuelson–Hicks and Kaldor–Control of Business Cycles: Monetary and Fiscal Policies.

Unit 4: Theories of Inflation

Types of Inflation: Demand–Pull Inflation–Cost-Push Inflation-The Phillips Curve–The Inflation and Unemployment Trade off–The Monetarists Accelerationists' Hypothesis– Rational Expectations Hypothesis.

Unit 5: Macroeconomics Policies

Objectives of Macro-Economic Policies–Objectives and Tools of Monetary Policy–Evaluating Monetary Policy: The Policy of Activists and Non-Activists Arguments–Fiscal Policy: Objectives and Tools–Automatic Stabilizers–Problems in the Implementation of Fiscal Policies–Relative Effectiveness of Monetary and Fiscal Policies.

12. Rogar L.Miller and Robert Pulsinelli, Macroeconomics.

Course Outcomes:
CO1. Acquire knowledge and understand the classical and Keynes theories and functions of money and demand for and supply of money.

CO2.	Able to acquire the knowledge about government's intervention in money supply.
CO3.	Able to understand meaning and definitions of trade cycle its phases, consequences and controlling measures.
CO4.	Acquire knowledge regarding macroeconomic concept of inflation, deflations and how it can be controlled.
CO5.	Able to know the particular solutions to the economic functions like Monetary and Fiscal policies.

CO5		1	2	2						2	2	2

SEMESTER – II		
Paper – 203	**FEDERAL FINANCE**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . The first objective is study the role of state in economic performance, objectives and role of fiscal policy.

ii. The second one is to study the principles of Multi-unit finance and problem of Federal Finance.

iii. Third objective is to know a comparative analysis with the Indian scenario and various functions of finance commission and recommendations.

iv. The fourth one is to analyse the theories of Government budgetary ie. classical and modern view on Government budget in India.

v. The last objective is to study the significance of local finance, sources of local revenue and expenditure of local bodies.

Syllabus : 203: FEDERAL FINANCE

Unit 1: Fiscal Policy

Role of State in Economic Performance: Classical and Modern Views-Objectives of Fiscal Policy –Role of Fiscal Policy in Developed and Developing Economies– Balanced and Unbalanced Budget Multipliers–Built-in Stabilisers-Long–Term Fiscal Policy in India.

Unit 2: The Theory of Federal Finance

Principles of Multi-Unit Finance and Problems of Federal Finance-Theory of Fiscal Federalism-Vertical and Horizontal Imbalances-Theory of Grants-Conditional and Unconditional Grants – Matching Vs. Non-Matching Grants–Income and Substitution Effects of Grants–Grants and Subsidies– Allocative and Equity Effects.

Unit 3: Federal Fiscal Systems

Federal Fiscal Relations in Australia, Canada and USA – A Comparative Analysis with the Indian Scenario. Functions of Finance Commission-Recommendations and Approaches of the Thirteenth and Fourteenth Finance Commissions-Reforms of Federal Finance.

Unit 4: Government Budget

Theory of Government Budgeting: Classical and Modern Views-Budget Classification: Functional and Economic Classification-Programme and Performance Budgeting-Zero-Based Budgeting-Budget Reforms – Fiscal Crisis in India – Reforms to Control Revenue Deficit-Fiscal Deficit and Budgetary Deficit in India.

Unit 5: Local Finance

Significance of Local Finance–Revenue and Expenditure of Local Bodies-Financial Strengthening of Urban and Rural Local Bodies through Devolution of Funds from Central and State Governments.

SEMESTER – II		
Paper – 204	STATISTICAL METHODS IN ECONOMICS	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives::		

i . To develop the students to deal with numerical and quantitative issue in Economics.

ii. To enable the use of statistical graphical and algebraic techniques wherever relevant.

iii. To have proper understanding of statistical applications in economics.

Syllabus : 205: STATISTICAL METHODS IN ECONOMICS

Unit-I: Correlation and Regression

Meaning - Assumptions and Limitations of Simple Correlation, Karl Pearson Coefficient of Correlation and Spearman's Rank Correlation-Coefficient– Simple Regression – Lines of Regression and Properties of Regression Coefficient.

Unit-II: Probability and Theoretical Distributions

Concept of Probability – Various Types of Events: Classical and Empirical Definitions of Probability – Laws of Addition and Multiplication of Probability (statements only) – Conditional Probability – Theoretical Distributions – Binomial – Poisson and Normal Distributions.

Unit-III: Sampling Theory

Basic Concept of Sampling-Random and Non-Random Sampling–Simple Random – Stratified Random – Systematic and P.P.S. Sampling Techniques.

Unit-IV: Hypothesis Testing

Formulation of Statistical Hypotheses – Null and Alternative – Goodness of Fit – Confidence Intervals and Level of Significance – Hypothesis Testing based on t, X^2 (Chi-Square) and F-tests.

Unit-V: Index Numbers and Time Series

Concept of Index Numbers–Uses and Construction of Index Numbers–Simple and Weighted Index Numbers – Laspeyer's, Paasche's and Fisher's Methods - Tests for Ideal Index – Time Series Analysis – Components of Time Series – Determination of Trend – Least Square Method.

8. Nagar, A.L. and Das R.K., 1993, Basic Statistics, Oxford University Press Ltd., New Delhi.

Course Outcomes:	
After successful completion of this course, the students will be able to	
CO1.	Understanding concepts of different types of correlation and Regression. By using correlation to identify the strength and direction of relationship between variables and using regression to predict how much a dependant variable changes based on adjustment to an independent variable.

CO2.	Understanding the concepts of probability, various types of Events, Definitions, Laws and its applications.
CO3.	Understanding the concepts of sampling –various types of sampling and its application in the field of research and daily life.
CO4	Understanding the concepts of statistical hypothesis null and alternative – goodness of fit; goodness fit and hypothesis testing based on t, x^2 and f Tests.
CO5	Understanding various components of Time Series fitting different time series models –predicting future values of time series. Understanding various methods of indexes and apply them to solve practical problems.

CO4	1	2	2	3		2				2	3	
CO5		3		2						3	3	1

SEMESTER – II		
Paper – 205 (a)	**International Trade: Theory and Policy**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To apply the concepts, tools and techniques of microeconomics to understand the issues in international economics;

ii. To expose the students to the pure, modern and alternative theories of international trade which form the basis for the current wave of globalization;

iii. To understand the emerging trends in the proliferation of Regional Free Organizations and their effect on the Multilateralism being advocated by WTO

SYLLABUS : 204: INTERNATIONAL TRADE: THEORY AND POLICY

Unit-I: Theories of International Trade

The Pure Theory of International Trade –Theories of Absolute Advantage and Comparative Advantage – Empirical Testing of Theories – Heckscher – Ohlin Theory of Trade – Leontief Paradox – Factor Price Equalization Theorem.

Unit-II: Imperfect Competition and International Trade Intra – Industry Trade – Neo-Heckscher – Ohlin Model – Neo–Chamberlin Model –Kravis and Linder Theory of Trade–Role of Dynamic factors in Trade (Alternative Theories of Trade) Vent for Surplus – Availability, Changes in Tastes, Technology.

Unit-III: Terms of Trade and Gains from Trade

Concepts of Terms of Trade – Terms of Trade and Economic Growth–Model of Economic Growth and International Trade–Singer–Prebisch Theory and Terms of Trade–Rybenzynski Theorem – Immiserizing Growth.

Unit-IV: Theory of Trade Policy

Free Trade Vs. Protectionism –Trade Restrictions – The Theory of Tariffs – The Stopler-Samuelson Theorem - Tariffs and Income Distribution – Tariffs - The Terms of Trade and Domestic Prices – Political Economy of Non-Tariff Barriers – Effects of Quotas – FERA and FEMA – Import Substitution Vs. Export Promotion.

Unit-V: International Economic Integration

Forms of Economic Co-operation – Free-Trade Area – Customs Union – Common Market – Economic Unions – European Union – SAARC – ASEAN – International Monetary Fund – Regionalism – Multilateralism – World Trade Organization – Recent Issues at WTO Ministerial Conferences - Gains and Problems of Developing Countries from WTO.

12. W.T.O., Regionalism and the World Trade Systems.

Course Outcomes:
After successful completion of this course, the students will be able to
CO1. Explain the gains from international trade according to the Classical and Modern theories of international trade;
CO2. Apply the knowledge on imperfect competition to determine the current structure of international trade;
CO3. Evaluate the relevance of free international trade to suit the special conditions of the developing countries;
CO4. Analyse the impact of restrictive trade policies on the terms of trade, income distribution and welfare levels of the countries;
CO5. Assess, compare and contrast the emerging trends in the growth of RTOs (Regionalism) and the policies of IMF and WTO on Multilateralism.

Mapping of Course Outcomes with Programme Outcome

SEMESTER – II		
Paper – 206	**HUMAN VALUES AND PROFESSIONAL ETHICS - II**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . Students can learn value of education, structure and responsibilities of family, status of women in family and society.

ii. To analyse the medical ethics, moral responsibility of medical practitioners and Social Justice in health care.

iii. To know the environmental ethics, ecological crisis, self-control, pollution, climate change and environmental health.

To study the business ethics, characteristic of ethical problem in business.

iv. The fith objective is to study the social ethics such as social disparities, Human trafficking, ethics of media i.e impact of Newspaper, Television etc.

Syllabus : 206: HUMAN VALUES AND PROFESSIONAL ETHICS - II

UNIT-I: Value Education –Definition-Relevance to present day-Concept of Human Values-self introduction-self-esteem-family values-Components , Structure and responsibilities of family-Neutralization of anger-Adjustability-Threats of family life –Status of women in family and society –Caring for need elderly –Time allotment for sharing ideas and concerns.

UNIT-II: Medical ethics-Views if charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia ,ethical obligation to animals, ethical issues

in relation to health care professional patients. Social justice in health care , human cloning , problems of abortion .Ethical issues ingenetic engineering and ethics issues raised by new biological technology of knowledge.

UNIT-III: Business ethics – Ethical standards of business-immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories causes of unethical behavior , ethical abuses and work ethics.

UNIT-IV: Environmental Ethics- Ethical Theory , man And Nature- Ecological Crisis , Pest Control , Pollution and Waste , Climate Change, Energy and Population, Justice and Environmental Health.

UNIT-V: Social ethics – Organ trade. Human trafficking, Human rights violation and social disparities, Feminist ethics. Surrogacy / pregnancy, Ethics of media-Impact of newspapers, Television , Movies and Internet.

Course Outcomes:												
After successful completion of this course, the students will be able to												
CO1.	Students can be able to improve their efficiency and capabilities and get the employment opportunities.											
CO2.	They will improve their skills and talents in various fields.											
CO3.	Students will strive to achieve the self-driven and work ethics in jobs in various sectors.

SEMESTER – III		
Paper–301	**ECONOMICS OF GROWTH AND DEVELOPMENT**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To familiarize the students with the key concepts such as economic growth, economic development, Human Development, Inclusive Development and Sustainable Development;

ii. To make the students to understand the basic determinants of economic growth, economic development and other related processes;

iii. To expose the students to the Classical and Modern theories of economic growth especially those relevant to the conditions of the developing countries.

Syllabus : ECO 301: ECONOMICS OF GROWTH AND DEVELOPMENT

Unit-I: Economics of Growth and Development

Concepts of Economic Growth, Development and Under development – Measurement of Economic Growth and Development – Traditional, Welfare and Modern Approaches –Characteristics of Developing Economies.

Unit-II: Factors in Economic Development

Population and Economic Development – Optimum Theory of Population – The Theory of Demographic Transition – Role of Capital in Economic Development – Capital -Output Ratio - Technology in Economic Development - Choice of Techniques and Appropriate Technology.

Unit-III: Theories of Growth

Adam Smith, Ricardo, Karl Marx and Schumpeter – Joan Robinson's Golden Age Model-Harrod-Domar Models, Solow and Meade's Models.

Unit-IV: Strategies of Economic Development

Rostow's Stages Theory – Lewis Surplus Labour Theory – Rodan's Big Push Theory – Nurkse's Balanced Growth Theory – Hirschman's Unbalanced Theory – Leibenstein's Critical Minimum Effort Theory – Nelson's Low Level Equilibrium Trap.

Unit-V: Theories of Dualism

Dualism and Dualistic Economy – Dualistic Theories - Boeke Theory of Sociological Dualism – Higgins Theory of Technological Dualism - Fei and Rani's Dualistic Model.

11. Behrman.S and T.N. Sreenivasan, 1995, Hand book of Development Economics, vol.3 Elsevier Amsterdam.

Course Outcomes:	
After successful completion of this course, the students will be able to	
CO1.	Distinguish between economic growth and economic development and the evolution of the measurement of Development over the period of time;
CO2.	Identify the determinants of Economic Development and the choice of techniques to be opted to achieve economic development in developing countries;
CO3.	Analyse the factors that could promote economic growth in a country according to Classical and Neo-Classical economists;
CO4.	Evaluate the suitability of different Strategies of Economic development to achieve economic development in developing countries;
CO5.	Assess how the sociological and technological dualisms have retarded the growth process in developing countries.

SEMESTER – III		
Paper – 302	INDIAN ECONOMY	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives:		

i . To explain and apply key development economic growth theories, economic development theories.

ii. To analyse and describe the features of less developed economics.

iii. To analyse and describe significant policy options available to government and international organization to address economics development challenges.

iv. To develop analytical and critical thinking sills and use them to judge the appropriateness of economic development policy options.

v. To identify and appraise economic development policy failures, and suggest adjustments or alternatives.

Syllabus : ECO 302: INDIAN ECONOMY

Unit-I: Basic Structure of Indian Economy

Characteristics of Indian Economy – Structure of National Income - Human Resources – Occupational Structure – Economic Sectors and Contribution to Employment Generation and GDP – Recent Trends in Poverty and Unemployment.

Unit-II: Agricultural Sector

Role of Agriculture in Economic Development – Green Revolution – Concept of Food Security – Farm Size and Productivity – Irrigation and Agricultural Development – Livestock Resources – Need for Credit for Indian Farmers – Performance of Indian Agriculture in Five Year Plans.

Unit-III: Industrial Sector

Role of Industrial sector in Economic Development–Industrial Policy–1991 – Role of Public and Private Sectors – Micro, Small Medium Enterprises (MSMEs) - Growth of Large Scale Industries and Economic Development - Disinvestment Programe – Liberalization, Privatization and Globalization (LPG) and Industrial Development.

Unit-IV: Service Sector

Service Sector in Indian Economy–Performance of Trade – Tourism–Shipping and Port Services–Telecom and Related Services–IT and IT-enabled Services– R & D Services– Construction Services – Social Services – Performance of Service Sector during Five Year Plans.

Unit-V: Economic Reforms

Rationale of Internal and External Reforms – Globalization of Indian Economy - W.T.O. and Impact on the Different Sectors of Indian Economy – Need for and Issues in Good Governance – Issues in Competition and Safety Nets in Indian Economy.

SEMESTER – III		
Paper – 303	**ECONOMICS OF ENVIRONMENT**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To familiarize the students with nature and scope of Environmental Economics;

ii. To create awareness on Non-renewable and renewable resources and the need for effective utilization of resources;

iii. To analyse the causes, effects of environmental pollution and strategies for effective management of environmental resources to ensure sustainable development.

Syllabus : ECO 303: ECONOMICS OF ENVIRONMENT

Unit-I: Nature and Scope of Environmental Economics

Environmental Economics – Nature and Scope of Environmental Economics- Economic Growth and Environmental Degradation-Environmental Kuznets Curve - Limits to Growth-Sustainable Development - Environmental Quality and Economic Development.

Unit-II: Environmental Degradation and Resource Depletion

Natural Resources – Renewable and Non-renewable Resources - Approaches to Natural Resources – Theories of Natural Resources–Depletion of Resources – Tragedy of Commons - Causes for Environmental Degradation.

Unit-III: Sources and Effects of Pollution

Sources and Types of Pollution: Air, Water, Noise and Solid Waste Pollution – Industrial Pollution – Marine Pollution – Thermal Pollution – Nuclear Pollution – Urban Pollution – Effects of Environmental Pollution on Health, Economic and Social Aspects.

Unit-IV: Environmental Policy and Principles

Objectives of Environmental Policy – National Environment Policy, 2006 – Policy Measures to Control Environment Pollution – Polluter-Pays-Principle– Pigovian Analysis of Externalities – Taxes and Subsidies – Pollution Permits – Hedonic Pricing Principle.

Unit-V: Environmental Laws and Management Strategies

Environmental Laws and Regulations – Air Act, Water Act, Environment Protection Act and Wildlife Protection Act in India – Global Environmental Policies – International Conferences on Environment-Environmental Strategies: Development of Clean Production Technologies, Forest Conservation, Conservation and Management of Common Property Resources and Environmental Education – Social Forestry–Community Participation.

Course Outcomes:	
After successful completion of this course, the students will be able to	
CO1.	Define Environmental Economics and explain the relationship between per capita income and environmental quality in terms of Kuznets curve;
CO2.	Discuss the theories of Natural Resources and causes of depletion of natural resources;
CO3.	Analyse the causes and consequences of environmental pollution;
CO4.	Evaluate the relative desirability of different principles and policies suggested by the economists to mitigate the ill-effects of environmental pollution.;
CO5.	Assess the effectiveness of different International and National Laws and Acts in controlling the environmental pollution.

SEMESTER – III		
Paper– 304(a)	INTERNATIONAL FINANCE	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to understand the key issues of deficit, causes deficit and methods of adjustment in balance of payments;

ii. To inculcate the knowledge on the concept of foreign exchange, determination of foreign exchange rates and causes of fluctuations in foreign exchange rates;

Syllabus : ECO 304(a): INTERNATIONAL FINANCE

Unit-I: Balance of Payments

Balance of Payments – Measurements of Balance of Payments – Measuring Deficit or Surplus in Balance of Payments - Causes of Deficit in Balance of Payments.

Unit-II: Adjustment Mechanisms in Balance of Payments

Automatic Price Adjustment under Gold Standard – Classical Theory of Balance of Payments – The Elasticity Approach – The General Theory of Balance of Payments - The Monetary approach of Balance of Payments and Foreign Trade Multiplier.

Unit-III: Foreign Exchange Market

Meaning and Determination of Foreign Exchange Rate – The Mint Parity Theory – The Purchasing Power Parity Theory – The Balance of Payments Theory – Causes of Changes in the Exchange Rate-Exchange Rate Adjustment Policies**:** Fixed Exchange Rate – Flexible Exchange Rate–Adjustable Peg System – Crawling Peg System – Multiple Exchange Rate System – Spot and Forward Exchange Equilibrium.

Unit-IV: International Capital Movements

Types of International Capital Movements–International Development Agencies; International Finance Corporation (IFC) - International Development Association (IDA) - The Multinational Investment Guarantee Agency (MIGA) - Euro-Dollar Market – The International Debt Management and Developing Countries.

Unit-V: The International Monetary Problem

The International Liquidity Problem – Establishment of IMF – Role of IMF – India and IMF – SDRs –The World Bank – Breakdown of Bretton woods System – Present Monetary System.

Course Outcomes:	
After successful completion of this course, the students will be able to	
CO1.	Define various concepts and accounts associated with the Balance of payments;
CO2.	Describe various automatic and policy induced adjustment methods available to bring about equilibrium in the balance of payments;
CO3.	Explain various terms associated with the foreign exchange rates and analyse the relative merits and demerits of the systems of Fixed and Flexible Exchange rates systems;
CO4.	Analyse the trends in the international capital movements and the functioning of different international financial institutions;
CO5.	Critically evaluate the working of the International Monetary System and the functioning of World Bank and IMF.

SEMESTER – III		
Paper– 304(b)	**AGRICULTURAL ECONOMICS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To import knowledge on role of agriculture sector in Economic development and structural changes and contribution of Agriculture sector to the country economy.

ii. Provide orientation to the students regarding Development of Agriculture sector during post-independence period, Targets and achievement during five year plans and India's position in World Agriculture.

iii. Expose the students to the factors determine Growth Capital formation in Agricultural Sector and inflow of credit to Agricultural Sector.

iv. To import knowledge on Government initiation and development of Agriculture.

v. Enhancing expertise in improving the performance of the marketing institutions and layers in marketing of Agricultural commodities.

Syllabus : ECO 304(b): AGRICULTURAL ECONOMICS

Unit –I: Agriculture and Economic Development

Definition, Nature and Scope of Agricultural Economics – Role of Agriculture sector in Economic Development – Structural changes and Contribution of Agriculture Sector — Modernisation of Agricultural Production Systems – Global Hunger Index – Achieving Zero Hunger – Re-orientation of Agricultural Development- Sustainable Agriculture- Role of Women in Agricultural Development.

Unit –II: Agriculture Sector in India

Development of Agriculture sector during Post-Independence Period –Green Revolution - Trends in Growth of Gross Cropped Area and Gross Irrigated Area – Decreasing Size of Average Land Holdings – Area, Production and Yields of Principal

Crops- Targets and Achievements during Five Year Plans – India's Position in World Agriculture.

Unit –III. Investments in Agriculture Sector in India

Factors Determining Gross Capital Formation in Agriculture Sector – Trends during Five Year Plans – Share of Public and Private Sectors – Budgetary expenditure on Agriculture sector – Inflow of FDI into Agriculture sector- Sources and Trends in flow of Credit to Agriculture – Kisan Credit Cards – Credit for Rain fed Areas – Indebtedness of Agricultural Households .

Unit – IV: Government Initiatives and Development of Agriculture

Need for Improvement in Agricultural Productivity- Government Initiatives – National Food Security Mission (NFSM)- National Mission for Sustainable Agriculture (NMSA) and Agricultural Extension and Technology – National Crop Insurance Programme – Pradhan Mantri Fasal Bima Yojana- Rashtriya Krishi Vikas Yojana – Rain fed Area Development Programme.

Unit- V: Agricultural Marketing and Trade in India

Determinants of Marketable and Marketed Surplus – Structure of Agricultural Markets – Primary and Secondary Wholesale Markets- Terminal Markets – Retail Markets – Fairs – Nature of Markets – Group Marketing- Cooperative Marketing – Direct Marketing – Warehousing in Rural areas – Physical and Financial Performance of Grameen Bhandaran Yojana – Role of AGMARK and AGMARKNET- Exports and Imports of Agricultural Commodities

Course Outcomes:

After successful completion of this course, the students will be able to

CO1.	Understanding scope of Agriculture Economics – Role of Agriculture in Economic Development- changes and contribution of Agriculture sector and Role of Women in Agricultural Development.
CO2.	Understanding the development of Agriculture Sector Post independence period – trends in area production and productivity and India's position in World Agriculture.
CO3.	Understanding the disbursement of institutional finance to primary sector, credit management and risk management. Other agencies – reasons for indebtedness in Agricultural Households.
CO4.	Understanding the need for improvement in Agricultural Productivity – various programmes adopted by the Government for the improvement of Agricultural productivity.
CO5.	Understanding the role, mechanism and value of commodity future markets for price risk management and price discovery in Indian Commodity Markets.

SEMESTER – III		
Paper– 304(c)	DEMOGRAPHY	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives:		

i . The first objective to know the Nature and scope of Demography theories of population such as Adem Smith J.S. Mill Mattur, Max and Keynes.

ii. To study the composition and distribution of population in India and Urban-Rural population growth.

iii. To analyse the Facility, Mortality, Nasality, and Migration in India.

iv. The fourth objective is to learn determinants of quality of population in India and to know the structural changes in population.

v. The last objective is to study the Government inittatives and population policies in India.

Syllabus : ECO 304(c) – DEMOGRAPHY

Unit-I: Nature and Scope of Demography

Definition, Nature and Scope of Demography – Demographic Thoughts – Demographic Analysis – Direct and Indirect methods of data collection – Theories of Population – Adam Smith, J.S. Mill, Malthus, Marx, Meade and Keynes – Optimum Population.

Unit –II: Composition and Distribution of Population in India

Decennial growth of Population and Stages of Demographic Transition in India- Crude Birth Rate and Death Rates – Migration, industrialization and Urbanization as determinants of population growth – sex and age-wise distribution of population – Rural and Urban population growth – Religion and Caste-wise growth of Population – Trends in population density.

Unit-III: Fertility, Mortality and Migration in India

Size of the family- Urban and Rural differentials- Social, cultural and psychological factors affecting fertility – Achievements in Total Fertility Rates - Causes and Indicators of Mortality – Relation between age, sex, marital status, education and migration in India.

Unit – IV: Quality of Population in India

Determinants of Quality of Population in India – Structural changes in Population – Demographic dividend - Trends in Life Expectancy at Birth and Gender differentials – Trends in Achieving Literacy Rates- Gender dimension of Literacy rates – Trends in Workforce and Labour force Participation Rates- Sectoral Employment of workers – Formal and Informal Sectors - Need for Skill Development.

Unit-V: Government Initiatives and Population Policies in India

Need for Population Control and Stabilization – Strategies to achieve Population stabilization – Role and progress of Family Planning Programme – Two-child Policy — Highlights of National Population Policy- 2000 – Janani Suraksha Yojana -2005 – Role of Accredited Social Health Activists (ASHA) – SANTUSHTI AND PRERANA Strategies – Rashtriya Kishore Swasthya Karyakram -2014- Population Projections-2016 and 2026.

SEMESTER – III

Paper– 304(d)	**HUMAN RESOURCE DEVELOPMENT**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To study the nature and scope of HRD in developed and developing countries.

ii. To analyse the role of education in HRD and Economics Development.

iii. To know the Health and Economic development.

iv. The fourth objective is to know the nutritional status in India, Nutritinal status and to prevent Malnutrition in India.

Syllabus : ECO 304(d): HUMAN RESOURCE DEVELOPMENT

Unit-I: Nature and Scope of HRD

Nature and Scope of Human Resource Development – Factors influencing HRD – HRD in Developed and Developing Countries - Human Resource Development in India – HRD and Development Strategy.

Unit-II: Education and HRD

Role of Education in Human Resource Development – Education as Consumption and Investment – HRD and Economic Development.

Unit-III: Health and Human Resource Development

Health and Economic Development – Measurement of Health Status –Trends in Mortality and Morbidity - Population Growth and Health Status – Growth of Corporate Health in India.

Unit-IV: Nutritional Status, and Human Resource Development

Nutritional Status in India – Measurement of Nutritional Status – Nutritional Development - Food Security - Programmes to Prevent Malnutrition in India.

Unit-V: HRD and Human Values:

HRD and Human Values – Human Development and Pre and Post Gandhian Thought – Right to Work and Public Participation.

SEMESTER – III		
Paper– 305(a)	**URBAN ECONOMICS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to understand the emerging trends in urbanization at global and national levels;

ii. To create awareness among the students on the teething problems of urbanization and the challenged posed by the urbanization;

iii. To develop creativity among the students to find solutions to the problems of environmental pollution, paucity of economic and social infrastructure in urban areas.

Syllabus : ECO 305(a): URBAN ECONOMICS

Unit-I: Urbanisation : A Global View

Definition, Nature and Scope Urban Economics – Sources of Urban Growth – Natural Increase – Net Migration – Urban Reclassification –Industrialisation - International Migration - Push and Pull Factors for Urban Growth – Trends in Growth of Urban Population in the world – The Challenges for Urban Growth – Social Equity – Environmental Sustainability – Governance – Sustainable Urban Development.

Unit –II: Urbanisation in India

Census Definition of Urban areas – Classification of Urban areas – Growth and Characteristics of of Urban Population – Size and Growth of Major Urban Agglomerations – Urban Poverty and Inequaality – Slums, Pollution and sanitation.

Unit –III: Urbanisation and Labour Market

Pull and Push Factors for Urbanisation in India – High Wages – Improved Infrastructure – Employment Opportunities – Educational facilities – Growth of formal and Informal economic activities – Labour Force Participation and Distribution of Workers – Street Children and Street Vendors.

Unit-IV: Urbanisation and Environmental Challenges

Rate of Urban Population Growth – Over Population – Problem of Urban Transportation – Pollutants to air and water – Solid Wastes and Noise Pollution

– Burden of Diseases – Need for Improvement in Quality of Living and Environment.

Unit-V: Urban Development and Government Policy

Urban Poverty Alleviation Approaches – SJSRY – Employment through Skills, Training and Placement – National Urban Livelihood Mission (NULM)- Basic Services to Poor (BSUP)- National Policy on Street Vendors -2009- Housing and Slum Development Strategies- Integrated Housing and Slum Development Programme – JNNURM-2005 – JNNURM and Role of National Building Organisation – Inflow of FDI and Construction Sector – Rajiv Awas Yojana – Sab Keliye Awas – Basti Sudhar – Rajiv Rinn Yojana – Need Reforms in Government Policy .

SEMESTER – III		
Paper– 305(b)	ECONOMICS OF INFRASTRUCTURE	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives:		

i . To provide students with a thorough grounding in the key conepts of infrastructure economics.

ii. To illustrate how these concepts and standard economic tools can be used to analyse infrastructure related theory and policy issues.

iii. To be able to apply this knowledge to the analysis of specific infrastructure economic issues in India.

Syllabus : ECO 305(b): ECONOMICS OF INFRASTRUCTURE

Unit 1: Infrastructure and Economic Development

Meaning and Definition of Infrastructure–Types of Infrastructure–Economic and Social Infrastructure–Approaches to Infrastructure–Traditional and Modern Approaches – Infrastructure and Economic Development.

Unit 2: Infrastructure and Public Utilities

Infrastructure as a Public Good–Special Characteristics of Public Utilities– Performance of Education, Health and Housing in India-Marginal Cost Pricing in Public Utilities–Cost Subsidization– Free Prices, Equity and Efficiency.

Unit 3: Economics of Transportation and Communications

Sources and Importance of Transportation and Location of Economic Activities– Performance of Railways in India–Importance of Communications– New Telecom Policy-1999 – Telephone Regulatory Authority of India (TRAI) Telecommunications in Rural India.

Unit 4: Economics of Energy

Energy Needs of India–Importance of Energy in Economic Development– Factors Determining the Demand for Energy–Sources of Energy-Renewable and Non-Renewable Sources–Trends in the Production and Consumption of Commercial Energy– Energy Crisis – Measures to Tackle the Energy Problem in India.

Unit 5: Electricity, Gas and Water Supply

Sources of Electricity–Thermal–Hydel–Nuclear–Growing Importance of Wind and Solar Energy–Production and Consumption of Natural Gas–Rural Drinking Water– Measures to improve Electricity, Gas and Water Supply.

SEMESTER – III		
Paper – 305(c)	ECONOMICS OF INSURANCE	Credits -04
Sessional / Internal Marks : 20	End Semester Exam Marks : 80	
Objectives:		

i . To make the students to understand the basic concepts related to risk and insurance;

ii. To create awareness among the students about the importance of insurance in the lives of individuals as well as in the economic development of a country;

iii. To impart knowledge among the students about the role played by the LIC and the GICs in securing the lives of the people;

iv. To induce students to undertake insurance business as insurance agents or development officers.

Syllabus : ECO 305(c): ECONOMICS OF INSURANCE

Unit-I: Introduction

Economic Security, Exposure to Losses - Definition of Insurance - Risk pooling and Risk Transfer, Social Vs. Private Insurance - Life Vs. Non- Life Insurance - Classification of Life, Health and General Insurance Policies

Unit-II: Risk and Risk Management

Fundamentals of Uncertainty and Risk, Classification of Risk - Concepts of Risk Management - Essentials of Risk Management, Elements of Risk Management - Risk Assessment - Risk Control - Risk Financing - Concepts of Re-insurance - Types of Re-insurance - Re-insurance Markets

Unit- III: Insurance and Economic Development

Risk Management and Insurance in Economic Development- Insurance Institutions as Financial Intermediaries, Insurance Institutions as Investment Institutions - Regulations governing Investments of Insurance Institutions in India

Unit-IV: Types of Insurance

Life and Health Insurance - Fundamentals of Life and Health Insurance - Functions of Life and Health Insurance - Plans of Life Insurance - Selection of Risks - Underwriting of Life and Health Insurance - Group Insurance - General Insurance - Definition of General Insurance - Types of General Insurance - Fundamentals of the Following Concepts - Common Law Equity Proposal - Indemnity, Insurable interest, Contribution, Subrogation - Utmost good faith, Physical and Moral Hazards - Marketing of General Insurance.

Unit-V: Insurance for Retirement Needs and Regulations

Retirement Planning Strategies - Investment for Retirement - Pension Plans - Pension Plans in India - Regulation of Insurance - Insurance Regulation in India - Insurance Regulation and Development Authority (IRDA).

SEMESTER – IV		
Paper – 401	**RURAL DEVELOPMENT**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To understand the basic elements of Rural Development.

ii. To know the people's participatory approach target group approach and integrated approach of Rural Development.-

iii. To analyse the trends of poverty and unemployment in Rural Economy.

iv. To interpret the Community Development Programme.

v. To judge the role of NGO's in Rural Development.

vi. To understand the functions and implementation of project management.

Syllabus : ECO 401: RURAL DEVELOPMENT

Unit-I: Approaches To Rural Development

Rural Development – Basic Elements of Rural Development – Approaches to Rural Development: Marxian and Gandhian Approaches – People's Participatory Approach – Target Group Approach – Integrated Approach.

Unit-II: Issues of Rural Development

Size and Structure of Rural Economy – Poverty – Rural Unemployment Scenario – Role of Agricultural Sector and Non-Farm Sector – Food Security– Rural Industrialization – Rural Migration.

Unit-III: Rural Development Programmes

Community Development Programme (CDP) – Mahatma Gandhi National Rural Employment Guarantee Scheme (MGNREGS) – Swarna Jayanthi Gram Swarozgor Yojana (SGSY) - Rural Housing Schemes-Provision of Urban Amenities in Rural Areas (PURA).

Unit-IV: Institutional Support to Rural Development

Panchayat Raj and Rural Development – Role of N.G.Os in Rural Development – Financing of Rural Development–NABARD – Commercial Banks – Regional Rural Banks and Cooperatives.

Unit-V: Project Management and Rural Development

Functions of Project Management – Project Implementation – Planning for Implementation Project Control–Integration and Coordination – People's Participation–Project Monitoring and Evaluation.

SEMESTER – IV		
Paper – 402	**FINANCIAL INSTITUTIONS AND MARKETS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To study the Nature and role of Financial System in Economic Development and structure of Financial system.

ii. To study the structure, composition and instruments of money market.

iii. To analyse the structure and composition of capital market.

iv. To create awareness on money and capital markets in India, recent development and defects of Indian capital market.

v. To learn the objective and various functions of RBI, Commercial Banks and other non-banking financial companies in India.

Syllabus : ECO 402: FINANCIAL INSTITUTIONS AND MARKETS

Unit 1: Nature and Role of Financial System

Meaning, Definition and Structure of Financial System – Functions of Financial Systems – Promotional Role of Financial System in Developing Countries.

Unit 2: Structure, Composition and Instruments of Money Market

Definition of Money Market – Composition of Money Market: Call Money Market – Discount Market (Commercial Bill Market) – Acceptance Market – Treasury Bill Market – Instruments of Money Market – Commercial Papers – Certificate of Deposit–Repo and Reverse -Repo Transactions.

Unit 3: Structure and Composition of Capital Market

Definition of Capital Market – New Issues Market–Functions of New Issues Market – Players in the New Issues Market–Recent Trends in New Issues

Market–Secondary Market – Functions of Stock Exchanges–Issue and Listing of Securities – Method of Trading in a Stock Exchange.

Unit 4: Money and Capital Markets in India

Structure, Objectives and Features of Money Market in India – Discount and Finance House of India (DFHI) - Recent Developments and Deficiencies in Indian Money Market - SEBI: Objectives, Functions and Performance – Securities Trading Corporation of India (STCI) – Features of NSE and BSE – Over the Counter Exchange of India (OTCEI) – Recent Developments and Defects of Indian Capital Market.

Unit 5: Financial Institutions in India

Objectives and Development Functions of Reserve Bank of India – 3Commercial Banks – Non-Banking Finance Companies – Development and Investment Institutions in India – IFCI, IFBI, UTI, LIC and GIC–Recent Reforms in Indian Capital Market.

SEMESTER – IV		
Paper – 403	**INDUSTRIAL ECONOMICS**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . Familiarise the students with basic concepts of Industriliztion and Economic Development.

ii. To make students understand the theory of firm and forms of Industrial organization.

iii. To familiarise students with industrial location importance and theories of industrial location.

iv. To make students understand the native and investment decision.

v. To help students to understand industrial management and role of Science and Technology in Industrial Development.

Syllabus : ECO 403: INDUSTRIAL ECONOMICS

Unit 1: Industry and Economic Development

Industrialization and Economic Development - Factors Promoting Industrialization - Strategies of Industrialization in Developing Countries.

Unit 2: Firm and Forms of Industrial Organization

The Theory of the Firm – Objectives – Size - Growth of the Firm - Optimum Firm -Factors Determining Optimum Firm - Forms of Industrial Organization.

Unit 3: Theories of Industrial Location

Factor Influencing Industrial Location –Theories of Industrial Location: Alfred Weber, Sargeant Florence, August Losch, Walter Isard – Melvin Greenhut.

Unit 4: Investment Decisions

Nature and Types of Investment Decisions – Time Preparation–Profile of Project –Project Evaluation/Appraisal – Cost-Benefit Analysis - Different Rates of Return Methods - Pay Back Method - Accounting Rate of Return Method - Net Present Value Method and Internal Rate of Return Method - Break-Even Analysis.

Unit 5: Industrial Management

Industrial Productivity – Rationalization – Automation – Industrial Efficiency – Role of Science and Technology in Industrial Development-Industrial Policies of 1956 and 1991.

SEMESTER – IV		
Paper– 404(a)	INDIA'S ECONOMIC REFORMS	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to understand the need for and the rationale behind the Economic reforms initiated in India from 1991 onwards;

ii. To appraise the students on reforms initiated in the banking and financial sector, agricultural sector, industrial sector, foreign trade sector as a part of LPG;

iii. To evaluate the impact of economic reforms on the performance of different sectors of the economy in general and on poverty, unemployment and inequality in India.

Syllabus : ECO 404(a): INDIA'S ECONOMIC REFORMS

Unit 1: Economic Reforms -1991

Economic Reforms–Need for Economic Reforms in India–Reforms of 1991–Apprisal of Economic Reforms in the Market Economy–Future Directions of Economic Reforms

Unit 2: Reforms In Banking Sector

Economics of Liberalization and Privatization–Banking and Financial Sector Reforms in India–Liberalizing Interest Rates–Narasimham Committee Report on the Financial System– Non-Banking Financial Companies : RBI Directions–Disinvestment in Public Sector Units.

Unit 3: Reforms In Agricultural Sector

Structural Reforms–Macroeconomic Stability–Fiscal Policy and Economic Reforms in India–Economic Reforms in Agricultural and Rural Development.

Unit 4: Industrial Reforms

Industrial Reforms–Impact of Reforms on Poverty and Employment-New Economic Policy and Sustainable Development–Strengthening Social Sectors and Safety nets.

Unit 5: Reforms in Trade

Globalization of Indian Economy–Trade Reforms–Impact on Trade–Foreign Direct Investment–Multinationals– WTO–Problem of Foreign Debt.

SEMESTER – IV		
Paper– 404(b)	ANDHRA PRADESH ECONOMY	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to understand the structure, major problems and prospects of development in Andhra Pradesh;

ii. To appraise the current levels and prospects for the development of agriculture, industrial and services sectors in Andhra Pradesh;

iii. To evaluate the how the planning process and the budget operations in Andhra Pradesh have impacted the lives of the people in Andhra Pradesh.

Syllabus : ECO 404(b): ANDHRA PRADESH ECONOMY

Unit 1:Structure of Andhra Pradesh Economy

State GDP – Per Capita Income – Human Development Index – Income and Employment Pattern in Andhra Pradesh – Magnitude of Poverty – Demographic Features – Social, Political and Economic Empowerment of Women.

Unit 2: Role of Agriculture Sector

Importance of Agriculture –Production and Productivity of Agriculture – Change in Cropping pattern – Sources of Agricultural Finance – Land Reforms in Andhra Pradesh – Recommendations of Koneru Ranga Rao Committee.

Unit 3: Industrial Sector Growth and Structure of Industries – Large Industries and Micro, Small and Medium Enterprises – Weaknesses and Problems of Industries – Sources of Industrial Finance – Role of Cooperatives in Andhra Pradesh.

Unit 4: Role of Service Sector

Service Sector in Andhra Pradesh – Importance, Composition and Growth with Special reference to Transport, Electricity, Communication, Tourism and Information.

Unit 5: Planning in Andhra Pradesh

Five Year Plans of Andhra Pradesh – Aims, Objectives, Targets and Achievements – Sources of State Revenue – Trends in Public Expenditure and Public Debt of Andhra Pradesh.

SEMESTER – IV		
Paper–404(c)	ENTREPRENEURSHIP AND SKILL DEVELOPMENT	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . Entrepreneurship and skill development course outcome study of concepts, functions and types of entrepreneurship. Women entrepreneurship and economic development. Role of national and state level organizations in the development of entrepreneurship. Objectives, methods and content of project report. Development of communication skills and skill development.

Syllabus : ECO 404(c): ENTREPRENEURSHIP AND SKILL DEVELOPMENT

Unit I: Entrepreneurship

Concepts of Entrepreneurship - Functions and Types of Entrepreneurs - Motivation and Competency – Entrepreneurship - Women Entrepreneurship and Economic Development.

Unit II: Organizations for Entrepreneurship Development

Programmes for the Development of Entrepreneurship - National and State Level Organizations - Entrepreneurship Development Institute of India (EDII) - National Institute for Entrepreneurship and Small Business Development (NIESBUD) - National Science and Technology Entrepreneurship Development Board (NSTEDB) - National Institute of Small Industry Extension and Training (NISIET).

Unit III: Identification and Preparation of Project Report

Identification of Project – Objectives of Project – Methods and Contents of Project Report – Formulation and Appraisal of Project Report.

Unit IV: Development of Skills

Need for the Development of Skills – Communication Skills – Verbal and Non-Verbal Communication – Barriers to Communication – Individual Interaction Skills – Basic Interaction Skills - Leadership Skills - Working Individually and as a Team - Personality Development – Intra and Inter-personal Communication Skills.

Unit V: Organizations for Skill Development

Skill Development Mission – PM's National Council on Skill Development – National Skill Development Coordination Board – National Skill Development Corporation – SIKSHAM- National Skill Foundation of India(NSFI) – Skill Development Initiative (SDI) - Kaushal Vikas Yojana (KVY) – AP State Skill Development Board.

SEMESTER – IV		
Paper– 404(d)	LABOUR ECONOMICS	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To identify the characteristic of Labour

ii. To describe the Industrial Disputes

iii. To understand the factors affecting real wages

iv. To write down the Social Security

v. To understand the Trade Union.

Syllabus : ECO 404(d): LABOUR ECONOMICS

Unit 1: Labour Markets

Nature and Characteristics of Labour Markets in India-Types of Labour Markets- Concept and Types of Labour–Composition of Labour in Different Sectors-Lewis Surplus Model-Demand for Labour in the Long Run–Labour Supply Analysis.

Unit 2: Wage Determination

Wage Theories of Ricardo, J.S. Mill and Karl Marx-Marginal Productivity Theory of Wages-Bargaining Theory of Wages-Principles of Wage Determination-Wage Determination in Various Sectors - Organized-Unorganized and Informal Sectors.

Unit 3: The Wage Policy in India

National Wage Policy and Economic Development-Concepts of Minimum, Fair and Living Wages-Minimum Wages Act-1948-Role of Wage Boards in Wage Fixation-Profit Sharing Schemes and Payment of Bonus.

Unit 4: Employment

Concept and Types of Unemployment in India–Various programmes to solve the problem of unemployment during plan Era – Philip's curve – relationship between employment and unemployment.

Unit 5: State and Labour

Features of Industrial Labour–Trade Union Movement-its Defects and Measures to Strengthen the Movement in India–Social Security and Welfare Measures in India–Second National Commission on Labour.

SEMESTER – IV		
Paper–405 (a)	WOMEN AND ECONOMIC DEVELOPMENT	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To make the students to understand the role of Women in India's Economic Development;

ii. To assess the status of women in India in terms of such key indicators as literacy rates, education, work participation rates, income, wealth and political power;

iii. To evaluate the impact of various development and welfare programmes implemented in India on women development and women empowerment.

Syllabus : ECO 405 (a): WOMEN AND ECONOMIC DEVELOPMENT

UNIT - I: Women and Economic Development in India

Women Population in India - Rural and Urban Women Population – Fertility Rates – Women Labour Force and Work Force Participation Rates – Role of Women in Economic Development.

UNIT – II: Women and Human Development

Human Development – Gender Gap – Gender Inequality Index - Gender Development Index – Gender Empowerment – Measures – Women and Literacy, Life Expectancy –Access to Health Care – Income Inequalities.

UNIT – III: Women and Labour Markets

Gender division of labour – Participation rates in rural and urban employment markets in India - Factors affecting women entry into labour markets in Agriculture, Industry and Service sectors - Women in Organized and Unorganized Sectors

UNIT – IV: Governance for Women Development

Role and functions of Ministry of Women and Child Development - Social Welfare Boards: National and State level Commissions of Women. Women's Development Corporation. National Institute of Entrepreneurship and Small Business Development (NIESBUD) – NABARD - Small Industries Development Bank of India (SIDBI).

UNIT – V: Welfare Programmes and Women Development

Role of Non-Government Organizations in Women's welfare - Kasturba Gandhi Balika Vidyalayas (KGBV) – National Programme for Adolescent Girls (NPAG) – National Mission for Empowerment of Women – STEP – Micro Credit Groups – SWADHAR – DHANALAKSHMI – Rashtriya Mahila Khosh (RMK) – Indira Gandhi Matrutva Sahayog Yojana – MGENREGA – Hostels for Working Women – Kishori Balika Pathakam – Indira Kranthi Patham – Janani Suraksha Yojana - Bangaru Talli Programme – Jana Dhan Yojana – Suknya Samrudhi Yojana.

Course Outcomes:	
After successful completion of this course, the students will be able to	
CO1.	Understand and explain the key concepts like fertility rates, work participation rates and the role of women in economic development of the country;
CO2.	Explain the vast gender gaps existing in India in literacy, life expectancy, health care and income levels between men and women;
CO3.	Illustrate the flaw in the existing gender division of labour and the reasons for the low levels of work participation rates among women in India;
CO4.	Analyse the status of women in politics and administration and the role of various institutional agencies in the development of women;
CO5.	Critically evaluate impact of various poverty alleviation and development programmes implemented in ameliorating the conditions of women in India.

SEMESTER – IV		
Paper–405 (b)	**ECONOMICS OF TOURISM**	**Credits -04**
Sessional / Internal Marks : 20	**End Semester Exam Marks : 80**	
Objectives:		

i. Economics of tourism course content study of the definition, nature and scope of tourism. Elements of tourism. Role of travel agents and tour operators in the promotion of tourism. Economic impacts of tourism. Income and employment generation. Tourism policy in India. Domestic and international tourism. Contribution of tourism to GDP. Incentives for hotels and tour operators. Role of publicity in the promotion of tourism.

Syllabus : ECO 405 (b): ECONOMICS OF TOURISM

Unit I: Nature, Scope And Composition Of Tourism: Meaning And Definition Of Tourist and Tourism- Historical Perspective of Tourism in India- Types and Forms of Tourism in India –Individual, Group and Mass Tourism – Domestic, National and International Tourism – Inbound and Outbound Tourism - Composition of Tourism Industry –Accommodation, Hospitality and Catering – Transportation – Travel Agents and Tour Operators – Emerging Forms of Tourism

Unit II: Economic Dimensions of Tourism: Interaction Between Economic Development and Tourism- Tourism: a Consumption Industry – Economic Impacts of Tourism – Multiplier effect- Income and Employment Generation – Impact on Balance of Payments – Regional Development – Impact of Tourism on Environment - Sustainable Tourism – Pro-Poor Tourism (STEP) – Tourism and Women Empowerment.

Unit III: Development of Tourism In India: Domestic And International Tourism In India – Mode and Purpose of Tourism –Tourism Policies in India – Tourism Policy-2015-20 – Incredible India – New Schemes – Swadeshi Darshan – National Mission on Pilgrimage Rejuvenation and Spiritual Augmentation (PRASAD) –Swachh Bharat Mission – Swachh Paryatan - Fiscal Incentives to

Tourism and Inflows of FDI – e-Tourism – Publicity and Marketing of Tourism – International Cooperation.

Unit IV: Economics of Tourism: Schemes And Programmes For The Development Of Tourism – Trends in Contribution of Tourism to GDP - Tourism Products and Mega-destinations in India – Trends in Domestic and Foreign Tourist Arrivals – Source countries for Foreign Tourist Arrivals – Tourism Receipts – Trends in Foreign Exchange Earnings – Share of India – Future Potential of Tourism Industry.

Unit V: Sub-Segments of Tourism Industry in India: Allied Components Of Tourism – Types of Accommodation – Hotels and Restaurants – Major Players – Classification of Hotels – Incentives for the Hotels – Tour Operators – Major Players – Guides and Travel Trade Service Providers – Travel Agents – FDI and Development of Hotels – Transportation and Tourist arrivals – Air, Rail and Road Transportation – Package Tours – India Convention Promotion Bureau (ICPB) – Publicity and Market Development for Promotion of Travel and Accommodation.

SEMESTER – IV		
Paper– 405 (c)	**TRIBAL ECONOMY**	**Credits -04**
Sessional / Internal Marks: 20	**End Semester Exam Marks : 80**	
Objectives:		

i . To study the characteristics of Tribal People and growth of tribal population in Andhra Pradesh and India.

ii. To create awareness on Socio-economic conditions of Tribes, status of tribals in the society.

iii. To analyse the development of tribal women in India.

iv. To know the government policies on Tribals such as shifting cultivation, deforestation and distribution of forest land in India etc..

Syllabus : ECO 405 (c): TRIBAL ECONOMY

Unit – 1: Characteristics of Tribal Population

Definition of Scheduled Tribes – Primitive Tribes – Characteristics of Tribal Population – Different Tribal Groups in India – Growth of Tribal Population in India.

Unit – 2: Socio-Economic conditions of Tribes

Need for Tribal Development – Socio –Economic Conditions of Tribal – Tribal Health, Food and Nutrition – Tribal Culture – Status of Tribal Women Development.

Unit – 3: Development of Tribal Woman in India

Approaches for Tribal Development in India – Pre-Independence period and post – Independence period – Integrated Tribal Development Agency in India – Tribal Development Plans – Community Development Plans – Approach and Tribal Development.

Unit – 4: Government Policy and Tribal

Educational Development of Tribals – Economic status – Shifting Cultivation - Deforestation and Tribals – Legal Status and Distribution of Forest Lands – Social Intervention Policy – Political status in India.

Unit – 5: Status of Tribals in Andhra Pradesh

Tribal Economy in Andhra Pradesh – Literacy level – Asset Holding - Distribution of Schedule Population in Andhra Pradesh Districts – Growth of Scheduled Tribes Population - Predominate tribes in Andhra Pradesh – Tribal welfare in Andhra Pradesh.

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 101: Micro Economics Analysis - I

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define demand and mention its influencing factors?
2. What is "Substitution Effect"?
3. What is Average Variable Cost?
4. Explain the relationship between marginal cost and average cost curves?
5. What are Isoquant Curves?
6. Explain the choice of optimum combination of inputs?
7. Explain the concept of Elasticity of Substitution?
8. Discuss average revenue under perfect competition?
9. Discuss the features of perfect competition?
10. Explain Chamberlin's concept of 'Excess Capacity?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Discuss Marshal's Theory of Demand?

(a).

OR

Discuss Samuelson's Revealed Preference Theory?

(b).

12 Critically examine Crbb-Douglas production function?

(a).

OR

Critically examine the Law of Variable proportions?

(b).

13 Explain Average Revenue under perfect competition and Monopoly Markets?

(a).

OR

Illustrate 'Price Discrimination' with suitable examples?

(b).

14 Analyse price and concept determination under monopolistic completion.

(a).

OR

Which market is ideal from social welfare point of view?

(b).

15 Explain the Cournot's model of duoply?

(a).

OR

Describe the concept of Kinked Demand Curve.

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 102: Macro Economics Analysis -I

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Nature and Scope of Macro Economics
2. Macro Statics
3. Gross National Product
4. Types of Investments
5. Marginal Efficiency of Capital
6. Consumption Function
7. Absolute Income Hypothesis
8. The Derivation of LM Curve
9. Accelerator
10. Relative Income Hypothesis

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Explain the micro foundation of macro economics

OR

(b). Explain the concepts of National Income and methods of measuring National Income

12 (a). Discuss about circular flow of Income and expenditure in two and three sector economy ?

OR

Explain the classical theory of employment

(b).

13 Explain Keynesian Theory of Employment

(a).

OR

Diagrammatically discuss about marginal efficiency of investment

(b).

14 Explain the theory of Multiplier

(a).

OR

Discuss about life cycle and permanent income hypothesis

(b).

15 Discuss the interaction between multiplier and accelerator

(a).

OR

Explain the Shifts in IS and LM curves

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 103: Public Economics

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Nature and Scope of Public Finance.
2. Public Finance and Private Finance.
3. Wagner's law of increasing state activities.
4. Important heads of public expenditure.
5. Tax Revenue and Non-Tax Revenue.
6. What is incidence of taxation.
7. Principals of public debt management.
8. Objective of public debt.
9. What is fiscal deficit.
10. Recommendation of Rsja.J. Challain Committee.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Discuss the principles of Maximum Social Advantage?

(a).

OR

Briefly analyse the reasons for growth of public expenditure in India.

(b).

12 Describe the Peacock and Wiseman Hypothesis?

(a).

OR

(b). Explain the effect of increasing public expenditure on production, distribution and economic growth.

13 Write the characteristic of Goods Tax System?

(a).

OR

Ability to pay theory – Explain?

(b).

14 What are the merits and demerits of Direct and Indirect Taxes?

(a).

OR

Analyse the Musgrave's Concept of Incidence.

(b).

15 Public debt burden – Discuss?

(a).

OR

Discuss about the various methods of Public Debt Redemptions?

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 104: Mathematical Methods of Economics

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define function – Give examples of function.

2. Find $\lim_{x \to 2} \frac{x^2-4}{\quad}$

3. Find the derivate of $y=x^2+3x+2$.

4. Find AC and MC if $TC= Q^3-3Q^2+15Q+27$.

5. Find the maximum and minimum values of $y = 2x^2-x^3$.

6. Evaluate $\int_3^2 (2x^2+5x+1)dx$.

7. State the properties of determinants.

8. Evaluate $\begin{vmatrix} 1 & 2 & 3 \\ 2 & 3 & 5 \\ 1 & 5 & 12 \end{vmatrix}$

9. Explain basic assumptions of linear programming.

10. State the assumptions of Input-Output analysis.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Find the limit of the functions

(a). i). $\lim_{x \to 3} \frac{x^2-x-6}{x-3}$ ii). $\lim_{x \to 1} \frac{x^3-3x+2}{x^3+x^2-5x+3}$

OR

i). Prove the associative Law for the union of sets.

(b). ii). State Logarithmic and exponential function.

12 Differentiate the following :

(a). i). $y = \frac{x - 1}{3x+2}$ ii). $Y = x^2e^x$ iii). $Y = x^3 \log x$

OR

Find the second order partial derivative of $Z = x^2y^3 - 4xy^2+3x^2y+y^3-5x4$.

(b).

13 Find the maximum and minimum values of the function $y =8x^5 - 15x^4 +10x^2$.

(a).

OR

Given $Pd = \frac{8}{x+1} - 2$; $Ps = \frac{x+3}{2}$. Determine.

(b).

14 Solve the gen system of equations by Cramer's rule.

(a). $x - 2y + 3z = 6$

$2x + 3y + 7z = 29$

$3x - 5y - 2z = 13$

OR

(b).

15 Solve the following liner programming problem graphically.

(a). Maximise $Z = 2x+Zy$ subject to

a) $x+4y \leq 24$, $3x+y \leq 21$, $x+y \leq y$ and b) x and $y \geq 0$

OR

Explain the basic features of Input Output analysis and examine its usefulness.

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 105 (a): Fundamentals of Computer

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Explain Block Diagram of Computer.
2. What is the difference between RAM and ROM?
3. Explain the components of File in MS-Word?
4. State the options for ending a word documents.
5. Explain the procedure to enter the time series data in an excel sheet.
6. How do you create pie chart in an excel sheet?
7. State the advantages of Power Point Presentation.
8. State the options available for slide show.
9. How do you retrieve the data from excel sheet to SPSS data sheet?
10. What are the search Engines?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Explain the different types of computers.

(a).

OR

Explain in detail about various input devices in computer.

(b).

12 Explain creating, editing and printing a word document.

(a).

OR

Explain the procedure for mail merge in MS-Word.

(b).

13 Discuss the architecture of an Excel Sheet and its advantages.

(a).

OR

Explain the procedure involved in getting descriptive statistics through Excel.

(b).

14 What are the essential components of a good power point presentation.

(a).

OR

Discuss the procedure involved in creating a good power point presentation.

(b).

15 Explain the procedure involved in creating and E-Mail and sending it.

(a).

OR

Elucidate the advantages and disadvantage of email.

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 105 (b): Urban Economics

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. What are the Classifications of Urban Areas?
2. Explain Nature and Scope of Urban Economics.
3. Write note on Problem of Urban Transportation.
4. Write about Street Children and Street Vendors.
5. Explain Urban Poverty and Inequality.
6. Briefly write on Solid Wastes and Noise Pollution.
7. Role of National Building Organisation.
8. Sustainable Urban Development.
9. What are the need for Improvement in Quality of Living and Environment?
10. Explain the Burden of Diseases.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Describe about Growth and Characteristics of Urban Population.

OR

(b). Explain the Growth of Formal and Informal Economic Activities.

12 (a). Write about pull and push Factors for Urbanization in India.

OR

what are the Challenges for Urban Growth?

(b).

13 Urban Poverty Alleviation Programmes.

(a).

OR

JNNURM and role of National Building Organisation.

(b).

14 What are the Growth of Formal and Informal Economic Activities?

(a).

OR

Integrated Housing and Slum Development Programme.

(b).

15 Explain the Size and Growth of major Urban Agglomerations.

(a).

OR

Describe about SJSRY.

(b).

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 105 (c): Welfare Economics

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define the concepts of welfare and wellbeing.
2. Explain the concept of 'Rationality' with an example.
3. State the reasons for divergence between private costs and the social costs.
4. Explain the concept of externalities in consumption with an example.
5. List out the conditions for majority rule.
6. What is the need for interpersonal comparisons in welfare economics?
7. Briefly state the contributions of Barone to Welfare Economics.
8. Write a short note on Bergson's social welfare function.
9. State the criticisms leveled against the classical assumption of rational behavior.
10. Write a short note on Cognitive economics.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss the nature, scope and limitations of welfare economics as a breach of study.

OR

(b). Illustrate the similarities and differences between "Positive Economics and Normative Economics" with examples.

12 (a). Explain the importance and limitations of Pigovian welfare economics.

OR

(b). Discuss the First Fundamental Theorem of Welfare Economics.

13 (a). Elucidate the optimality conditions of Pareto for the maximization of Social Welfare

OR

(b). Examine the contributions of Arrow-Debreu to Welfare Economics.

14 (a). State Scitovsky double criterion. How is it an improvement over Kaldor-Hicks' Compensation criterion?

OR

(b). Critically examine Samuelson's Utility Possibility Frontier.

15 (a). Discuss W. Kahneman and Tversky's Prospect theory on Optimal Decisions.

OR

(b). Elucidate Richad Thaler and Sunstein's Nudge theory.

M.A. ECONOMICS

SEMESTER – I

PAPER – ECO- 106 (a): Economics of Environment

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Nature and Scope of Environmental Economics
2. Sustainable Development
3. Natural Resources
4. Renewable and Non-Renewable Resources
5. Types of Pollution
6. Industrial Pollution
7. Air and Water Pollution
8. Urban Pollution
9. Pigouvian Analysis of Externalities
10. Environmental Education

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss about Economic growth and Environmental Degradation

OR

(b). Explain about Environmental Kuznets Curve

12 (a). Explain the relation between environmental quality and economic growth

OR

Briefly explain the causes of environmental degradation

(b).

13 Discuss about the objectives of environmental policy

(a).

OR

Describe the National Environmental Policy 2006

(b).

14 Explain the Environmental Protection Act

(a).

OR

Explain the global environmental Policies

(b).

15 Discuss about the environmental conferences on environment

(a).

OR

Describe about the Conservation and management of Common Property Resources

(b).

M.A. ECONOMICS

SEMESTER –I

PAPER – ECO- 106 (b): Demography

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks (5 x 4 = 20)

1. Briefly explain the direct and indirect methods of data collection.
2. Briefly write about demographic thoughts.
3. What are the trends of population in India.
4. Explain the caste wise growth of population in India.
5. Briefly analyse the mortality rate between rural and urban areas in India.
6. Explain the role of education in rural development of India.
7. Explain the structural changes in population?
8. Explain the need for skill development in India.
9. Bring out the main elementary of population policy 2000?
10. Briefly write about the Janani suraksha Yojana scheme in India.

SECTION – B

Answer all Questions. Each question carries equal marks (5 x 12 = 60)

11 Explain the nature and scope of demography

(a).

OR

Describe the Adam Smith population theory.

(b).

12 Explain the theory of demographic transition in India..

(a).

OR

What are the causes for growth of population in India

(b).

13 Explain the size of family between rural and urban areas?.

(a).

OR

What are the causes and indicators of mortality in India

(b).

14 Explain the determination of quality of population in India..

(a).

OR

Describe the employment level in formal and informal sector in India.

(b).

15 What are the Measures to control of population explain.

(a).

OR

Explain the role and progress of family planning programmes in India

(b).

SEMESTER – I

M.A. ECONOMICS

PAPER – ECO- 107 : Human Values and Professional Ethics-I

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define the nature and scope of Ethics?
2. Explain Ethics and its relation to Religion and Environment?
3. Examine Actual and Potential Values?
4. Responsibility and Freedom?
5. Aparigraha and Asteya.
6. Niskama karma.
7. Religious tolerance.
8. Gandhian Ethics.
9. Explain crime and punishment?
10. Views on Manu.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 What are the Needs and Implementation of Ethics?.

(a).

OR

Explain the Goals and Ethical Values in Various Professions?

(b).

12 Examine the Basic moral conceps/

(a).

OR

(b). Explain the Nature of Values, Good and Bad, End and Means, Character and Conduct?

13 What are the purusharthas? Explain it?

(a).

OR

Explain the Ahimsa, Satya, Bramhacharya?

(b).

14 Examine the Buddism Four Noble truths?

(a).

OR

Briefly explain the Jainism?

(b).

15 Explain the Crime and theories of Punishment?

(a).

OR

Examine the reformative and retributive?

(b).

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 201: Micro Economics Analysis - II

(Revised Syllabus with effect from 2021-2022)

Time:3Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 (5 x 4 = 20) marks

1. Explain the concept of Limit Pricing?
2. Expound Sylos-Labine models of Limit Pricing?
3. Discuss the concept of Eulers Thereon?
4. What is Marginal Physical Product?
5. Illustrate Ricardo's Theory of Distribution?
6. Critically examine Karl Mark's theory of distribution?
7. Explain 'General Equilibrium'?
8. Explain the concepts of Social Welfare Function?
9. Distinguish between Static and Dynamic Equilibrium?
10. Decribe the 'Zero Seem Game'?

SECTION – B

Answer all Questions. Each question carries equal marks (5 x 12 = 60)

11 Discuss Baumol's Revenue Maximisation Model of the Firm?

(a).

OR

Elucidate Maris' model of the managerial enterprise?

(b).

12 Elucidate Williamson's model of managerial discretion?

(a).

OR

Expound the Neo-Classical theory of distribution?

(b).

13 Discuss exchange and consumption under general equilibrium?

(a).

OR

Describe production and exchange under general equilibrium

(b).

14 Discuss the Pigovian Principles of Welfare Economics?

(a).

OR

Illustrate Pareto Optimal Conditions?

(b).

15 Explain linear programming with graphic examples?

(a).

OR

Examine the significance of input-output analysis?

(b).

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 202: Macro Economics Analysis - II

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Nature and Scope of Environmental Economics
2. Sustainable Development
3. Natural Resources
4. Renewable and Non-Renewable Resources
5. Types of Pollution
6. Industrial Pollution
7. Air and Water Pollution
8. Urban Pollution
9. Pigouvian Analysis of Externalities
10. Environmental Education

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss about Economic growth and Environmental Degradation

OR

(b). Explain about Environmental Kuznets Curve

12 (a). Explain the relation between environmental quality and economic growth

OR

Briefly explain the causes of environmental degradation

(b).

13 Discuss about the objectives of environmental policy

(a).

OR

Describe the National Environmental Policy 2006

(b).

14 Explain the Environmental Protection Act

(a).

OR

Explain the global environmental Policies

(b).

15 Discuss about the environmental conferences on environment

(a).

OR

Describe about the Conservation and management of Common Property Resources

(b).

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 203: Federal Finance

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Objectives of Fiscal Policy?
2. What are the main causes for Low Deficit Finance in India?
3. Matching Vs. Non-Matching Grants.
4. Balanced and Unbalanced Budget?
5. What are the various problems of Federal Finance?
6. Principles of Multi-Unit Finance?
7. The Reforms of federal finance in India?
8. Fiscal federalism?
9. Zero based Budgeting
10. Significance of Local Finance

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Explain the Role of Fiscal Policy in India

(a).

OR

What are the functions and performance of finance commission?

(b).

12 Describe about Grants and Subsides

(a).

OR

Fiscal crisis in India-Discuses?

(b).

13 Discuss about Balanced and Unbalanced Budget Growth?

(a).

OR

What is classical and modern views on Fiscal policy?

(b).

14 Briefly write on budget classification?

(a).

OR

Explain the Revenue and Expenditure of local bodies?

(b).

15 What are the functions of 14th Finance Commission in India?

(a).

OR

Explain the reforms of federal finance in India?

(b).

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 204: Statistical Methods in Economics

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 (5 x 4 = 20) marks

1. State different types of correlation.
2. Distinguish between Correlation and Regression.
3. Define probability. Explain the conditional probability.
4. State the properties of Normal Distribution.
5. Explain the advantages of sampling over the census method.
6. Why stratified random sampling method is better than the simple random sampling?
7. Discuss the test for the consistency of Index Numbers.
8. Review the components of time series.
9. Explain the large sample tests and small sample tests.
10. Explain the terms null hypothesis, level of significance.

SECTION – B

Answer all Questions. Each question carries equal marks (5 x 12 = 60)

11 (a). What do you mean by correlation? What is its significance? Does the existence of correlation always signify causal relationship between the two variables.

OR

(b). For the given data, calculate two regression equations:

	Advertisement Cost (In Rs.)	Sales (In Rs.)
	X	Y
Mean	20	120
S.D	5	25

The correlation coefficient h=0.08.

12 (a). A back contain 12 blue balls, 7 green balls and 4 red balls. Find the probability of drawing:

i). One blue ball ii). Three Green Balls and iii). Three balls one each color.

OR

Explain a normal distribution and state the properties of normal distribution.

(b).

13 Explain the terms random sample, stratified sample and purposive sample. Explain the

(a). importance of normal theory in Economics.

OR

Distinguish between Random and Non-Random Sampling designs.

(b).

14 Fit a straight line trend to the following data and hence estimate the production for the

(a). year 2024.

Year	2017	2018	2019	2020	2021
Production (in tons)	80	90	92	83	94

OR

Fishers Index number is an Ideal Index number – Justify.

(b).

15 What is student t-distribution? How is it used a test of significance.

(a).

OR

A die is thrown 180 times with the following results.

(b).

Number turned up	1	2	3	4	5	6
Frequency	25	35	40	22	32	26

TSest the hypothesis that the die is unbiased (use χ^2 – test)

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 205 (a) : International Trade : Theory and Policy

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. **(5 x 4 = 20)**

Each Question carries 4 marks

1. Explain the Concept of "Absolute Advantage" with a simple numerical example.
2. Distinguish between gains from exchange and gains from specialization.
3. State Linder's Preference Similarity theory of international trade.
4. Give an account of Kravis' Availability theory.
5. Distinguish between Gross Barter and Net Barter Terms of Trade.
6. What is Immiserizing Growth?
7. How do you measure the deadweight cost of protection?
8. Write a short note on FEMA.
9. Distinguish between Trade Creation and Trade Diversion with numerical example.
10. What are the major provisions of India's New Patent Act of 2005?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Analyse the gains from international trade according to Ricardo's Comparative Advantage.

OR

(b). State and prove Factor Price Equalization Theorem.

12 (a). How did Felvey incorporate the intra-industry trade within the framework of Heckscher-Ohlin Theorem?

OR

(b). "Comparative Advantage is not a permanent one; it can change over the lifecycle of a product". Elucidate the statement.

13 (a). Critically examine the Secular Deterioration thesis.

OR

(b). Discuss the Hicksian theory of Terms of Trade and Economic Growth due to technical progress.

14 (a). Illustrate the effects of Tariff using partial equilibrium approach.

OR

(b). State and prove Stolpher –Samuelson theorem.

15 (a). Analyse the different stages of economic integration with examples.

OR

(b). Evaluate the functioning of WTO with special reference to the developing countries.

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 205 (b): Economics of Infrastructure

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. What is infrastructure meaning and Definition?
2. What do you mean by non-conventional sources of energy?
3. New Telecom Policy 1999?
4. What is morbidity?
5. What are the sources of Energy?
6. What is the cost subsidization?
7. Which type of performance of Health?
8. Consumption of Natural Gas?
9. Explain the performance of railway's
10. What are the infrastructure public Utilities?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Explain the two categories into which infrastructure are divided. How are both interdependent?

OR

(b). Write few lines about power distribution supply in national capital of India?

12 Why infrastructure is called the support system on which depends the efficient

(a). working of a modern industrial economy?

OR

Write the difference between commercial and non-commercial sources of energy?

(b).

13 What are the challenges faced by power and Tele communication sectors in India?

(a).

OR

What do you mean by the term 'AYUSH'?

(b).

14 How has women's health become a matter of great concern?

(a).

OR

What is the state of rural infrastructure in India?

(b).

15 What are the indicators of health status of a country?

(a).

OR

How can we increase the effectiveness of health care programmes?

(b).

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 205 (c) : Introduction of Information Technology

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any Five Questions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Distinguish between LAN and WAN.
2. State the importance of https in internet browsing.
3. State the uses of e-mail.
4. Write short note on binary files.
5. State the need for compressing files video files.
6. Write short note on web –TV.
7. What is data mining?
8. Explain the concept of CAM.
9. What are the harmful effects of Electromagnetic Radiation?
10. What do you mean by Phishing?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss the evolution of internet during the last 20 years in terms of quantity and quality.

OR

(b). What is internet? What are its features? How is a website designed?

12 (a). What is electronic mail? How is it used for group communications? What are its merits and demerits?

OR

12 (b). Discuss the methods of uploading and downloading attachments with email.

13 (a). What is content development? How is it uploaded and shared with the stakeholders?

OR

13 (b). Elucidate the methods of reducing the size of video files without compromising their quality.

14 (a). "Information technology is a tool for effective management". Substantiate the statement.

OR

14 (b). Analyse the growing importance of online trading and e-commerce in recent years.

15 (a). Write an essay on the growing menace of viruses as a threat to information technology.

OR

15 (b). Discuss the need for ethical values in the use of online resources.

Model Question Paper

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO 206(A): BASIC ECONOMETRICS

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define Econometrics. How is it different from Mathematical Economics?
2. What is Time Series Data? Give examples.
3. State the Assumptions of Classical Simple Linear Regression Model.
4. Explain the meaning and significance of R^2.
5. State the assumptions of General Linear Regression model.
6. What are the limitations of Regression Analysis with Dummy variables?
7. Outline the consequences of the problem of Multicollinearity on the OLS estimators.
8. Briefly explain the White Test for Heteroskedasticity.
9. What is Simultaneous Equation bias?
10. Explain the method of Indirect Least Squares.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss the nature, scope and limitations of Econometrics

OR

(b). Distinguish between Time Series data and Cross section data and discuss the relative merits and demerits.

12 Explain the method of estimation of simple linear regression model through

(a). OLS method.

OR

(b). Discuss different functional forms used in regression analysis and their applications in economics.

13 (a). Discuss the properties of OLS estimators of a General Linear Model and prove that they are BLUE.

OR

(b). Explain the method of fitting Regression equation with dummy variables.

14 (a). What is Heteroskedasticity? What are its consequences? How do you overcome them?

OR

(b). Explain the Durbin-Watson test to detect the auto-correlation.

15 (a). What is Simultaneous bias? What are its consequences?

OR

(b). Explain the order and Rank conditions for the identification of equations.

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 206 (b) : Economics or Tourism

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks

1. What are they differentiation of Tourist and Tourism?
2. Explain the Travel agents and Tour Operators
3. Define impact of Balance of Payments
4. Explain the Tourism and Women Empowerment
5. What are the Tourism Policies in India?
6. Meaning of E-Tourism?
7. What are they international cooperation in tourism sector?
8. what is the FDI and Development of Hotels
9. What is the Multiplier effect?
10. Meaning of Sustainable Tourism?

SECTION – B

Answer all Questions. Each question carries equal marks

11 (a). Explain the different categories into Schemes and Programmes for the Development of Tourism sector in India?

OR

(b). Analyse the Trends in Exchange Earnings for Tourism in International levels?

12 (a). Explain the historical perspective of tourism in India?

OR

(b). Determine the Share of India's future potential of Tourism Industry?

13 (a). Explain the interaction between economic development and tourism sector in India?

OR

(b). What economic dimensions of Tourism consumption industry income and employment generation level in India?

14 (a). Describe the publicity and Market Development for Promotion of Travel and Accomn

OR

(b). Explain the Sub-segment of Allied components of Tourism industry in India?

15 (a). Discussed Central Government Scheme of National Mission on Pilgrimage Rejuvenat

OR

(b). How can great domestic and International tourism development in India?

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 206 (b) : Economics or Tourism

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks **(5 x 4 = 20)**

1. What are they differentiation of Tourist and Tourism?
2. Explain the Travel agents and Tour Operators
3. Define impact of Balance of Payments
4. Explain the Tourism and Women Empowerment
5. What are the Tourism Policies in India?
6. Meaning of E-Tourism?
7. What are they international cooperation in tourism sector?
8. what is the FDI and Development of Hotels
9. What is the Multiplier effect?
10. Meaning of Sustainable Tourism?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Explain the different categories into Schemes and Programmes for the Development of Tourism sector in India?

OR

(b). Analyse the Trends in Exchange Earnings for Tourism in International levels?

12 (a). Explain the historical perspective of tourism in India?

OR

(b). Determine the Share of India's future potential of Tourism Industry?

13 (a). Explain the interaction between economic development and tourism sector in India?

OR

(b). What economic dimensions of Tourism consumption industry income and employment generation level in India?

14 (a). Describe the publicity and Market Development for Promotion of Travel and Accommodation in Tourism Sector?

OR

(b). Explain the Sub-segment of Allied components of Tourism industry in India?

15 (a). Discussed Central Government Scheme of National Mission on Pilgrimage Rejuvenation and Spiritual Augmentation (PRASAD)?

OR

(b). How can great domestic and International tourism development in India?

M.A. ECONOMICS

SEMESTER – II

PAPER – ECO- 207 : Human Values and Professional Ethics-II

(Revised Syllabus with effect from 2021-2022)

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks **(5 x 4 = 20)**

1. What is value education?
2. Explain structure and responsibilities of family?
3. Human Cloning.
4. Euthanasia.
5. Business ethics.
6. Medical ethics.
7. Environmental Ethics.
8. Social ethics.
9. Human Trafficking.
10. Surrogacy / Pregnancy?

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 Explain the family values in value education?

(a).

OR

Examine the status of women in family and society?

(b).

12 (a). Briefly explain the views of charaka and sushruta on moral responsibility of medical practitioners?

OR

(b). Ethical issues in relation to health care professional patients?

13 (a). Examine the ethical standards of business immoral and illegal practices and their solutions?

OR

(b). Explain the characteristics of ethical problems in management?

14 (a). Examine the environmental ethical theory?

OR

(b). How to control ecological cisis?

15 (a). Explain the organtrade and Human trafficking in society?

OR

(b). What is the media – Impact of Newspapers, Televison?

M.A. ECONOMICS

SEMESTER – III

PAPER – ECO- 301 : Economics of Growth and Development

Time: 3 Hours **Max. Marks = 80**

SECTION – A

Answer any FiveQuestions. Each Question carries 4 marks **(5 x 4 = 20)**

1. Define Economic Growth and distinguish it from Economic Development.
2. Briefly explain the problems in the use of Percapita income as a measure of welfare.
3. Explain the concepts of Positive Checks and preventive Checks.
4. Define the capital – output ratio and state its determinants.
5. What are the assumptions of Adam Smith's model of growth?
6. Write a short note on 'Stationary State'.
7. What are the pre-conditions for take-off?
8. Explain the concept of 'Vicious Circle of Poverty'.
9. What is Dualism?
10. Write a short-note on Sociological Dualism.

SECTION – B

Answer all Questions. Each question carries equal marks **(5 x 12 = 60)**

11 (a). Discuss the evolution of measures of Economic Development.

OR

(b). What is Physical Quality of Life Index? How is it constructed? What are its limitations?
