Definitions & Characteristics of IoT, IoTArchitectures,Physical & Logical Design of IoT, Enabling Technologies in IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT frameworks, IoT and M2M.

IoT Development Boards: Arduino IDE and Board Types, RaspberriPi Development Kit, RFID Principles and components, WirelessSensorsNetworks : The node, Connecting nodes, Networking Nodes, WSN and IoT.

UNIT- II

Wireless Technologies For IoT : WPAN Technologies for Iot : IEEE 802.15.4 , Zigbee , HART , NFC,Z –Wave, BLE , Bacnet, Modbus. IP Based Protocols For Iot : IPv6,6LowPAN,RPL,REST,AMPQ,CoAP, MQTT.Edge connectivity and protocols.

UNIT- III

Date Handling & Analytics: Introduction, Bigdata, Types of data, Characteristics of Big data, Data handling Technologies, Flow of data, Data acquisition, Data Storage, Introduction to Hadoop. Introduction to data Analytics, Types of Data analytics, Local Analytics, Cloud analytics and applications, Edge/Fog Computing

UNIT- IV

Applications of IoT:Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.

Books for Study

1. Olivier Hersent, David Boswarthick, and Omar Elloumi, “The Internet of Things:Key Applications and Protocols” WileyPublications.
2. VijayaMadisetti and ArshdeepBahga, “Internet of Things (A Hands – on Approach)” 1st Edition, VPT,2014.
3. Daniel Minoli, “Building the Internet of Things with IPV6 and MIPv6: The Evolving World of M2M Communications” ISBN: 978 -1 -118 -47347 -4, Willy Publications.
4. Pethuru Raj and Anupama C. Raman, “Internet of Things: Enabling Technologies, Platforms, and Use Cases” CRC Press.

ELE-406(a)	Embedded Systems with PIC Microcontrollers	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevel microprocessors.

Course Objectives: The aim and objective of the course on **Embedded Systems with PIC Microcontrollers**is thestudentsofM.Sc.toequipthemwiththeknowledgeof microcontrollers and other processors used in the industry.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	understand about the basic functions and structure of embedded systems
CO2	Get familiarized with Embedded system Design Tools and Hardware
CO3	understand about the basic programming concepts of embedded systems
CO4	know about the applications of PIC microcontrollers

Mappingof courseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	2	1	-	-	2	1	1	-

CO4	3	2	3	3	2	1	2	-	2	1	1	-

ELE-406(a): EMBEDDED SYSTEMS WITH PIC MICROCONTROLLERS

Unit - I: Introduction to Embedded Systems

Embedded systems in today's world – examples of Embedded systems – Microprocessors and Microcontrollers – Microchip and PIC microcontroller – Introduction to PIC microcontrollers using the 12 series.

Architecture of 16F84A – Memory organization – in 16F84A – Timing generation – Power-up and Reset functions in 16F84A.

Unit - II: Hardware Details of 16F84A

Parallel ports: Basic idea – Technical challenge – connecting to the parallel port – Parallel ports of PIC16F84A – Clock oscillator – Power supply – Interrupts – Timers and counters – watch dog timer – Sleep mode.

Unit - III: Assembler and Assembler Programs

Basic idea – PIC 16 series instruction set and ALU – Assemblers and Assembler format – creating simple programs – Adopting a development environment – Building structured programs – Flow control: Branching and Subroutines – Generating time delays and intervals – Logical instruction – Arithmetic instructions.

Unit - IV: PIC Microcontroller PIC 16F873A

Block diagram and CPU – Memory and memory maps – Interrupts – Oscillator, Reset and Power supply – Parallel ports.

PIC 16F87XA Timer 0 and Timer 1 – 16F87XA Timer 2, Comparator and PR2 register – capture/Compare/PWM (CCP) Module – Pulse width modulation – ADC module.

Interface: LED displays – Liquid crystal displays –Sensors –Actuators.

Books for Study

1. Tim Wilmshurst, Designing Embedded Systems with PIC Microcontrollers: Principles and Applications, First Edition, Newnes – Elsevier Publishers, 2007.

2. Ramesh Gaonkar, Fundamentals of Microcontrollers and applications in Embedded Systems, Penram International Publishing (India) Pvt. Ltd., 2007.

3. Ajay V. Deshmukh, Microcontrollers: Theory and Applications, Tata Mc Graw- Hill, New Delhi, 2005.

4. John B. Peatman,Designing with PIC Microcontrollers , Pearson EducationInc.,1998.

5. Mahammad Ali Mazidi and Janice GillispieMazidi, The 8051 Microcontroller and Embedded systems, Pearson Education Asia, Pvt. Ltd., 2000.

ELE-406 (b)	Microwaves	L-3,T-1,P-2	4Credits

Pre-requisite Graduate level coursein Electronics/Physics

Course Objectives: The main objective of the course on **Microwaves** is to introduce the basics of Electromagnetic Theory, Transmission Line theory, waveguides and Antennas.The students also exposed to various industrial applications of Microwaves.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understanding of Electromagnetic Theory
CO2	Understanding of Transmission line theory
CO3	Know different types of Waveguides.
CO4	Use of various types of antennas.

Mappingofcourseoutcomeswiththeprogramoutcomes

ELE-406(b): MICROWAVES

UNIT – I: Electromagnetic Theory

Maxwell's equations, Fields in media and boundary conditions, the wave equation and the basic plane wave solutions, General plane wave solutions, Energy and power, Plane wave reflection from media interface, Oblique incidence at a dielectric interface, The reciprocity theorem, Image theory, Uniqueness theorem.

UNIT – II: Transmission Line theory

The lumped element circuit model for a transmission line, Field analysis of transmission lines, Terminated lossless line, Smith chart, Quarter wave transformer, Generator and load mismatches, Lossy transmission lines.

UNIT –III: Transmission lines and waveguides

General solutions for TEM, TE and TM waves, Parallel plate waveguide, Rectangular waveguide, circular waveguide, Co-axial line, Surface waves on a grounded dielectric slab, Strip line, Microstrip. Matching with lumped elements, Single stub tuning, Double stub tuning, The quarter wave transformer, Theory of small reflections, Binomial multisection matching transformers.

UNIT – IV: Antennas

Types of antennas, Hertz and Marconi antennas, Yagi-Uda antenna, Rhombus antenna, Reflector antenna, Lens antenna, Horn antenna, Helical antenna, Log periodic antenna, Phased array antenna, Microstrip antenna.

Books for Study:

1. David M. Pozar, "Microwave Engineering", 2/e, John Wiley & Sons (Asia) Pte. Ltd, 1999.
2. A.K. Maini, "Microwaves and Radar: Principles and Applications", 2/e, Khanna Publishers, 2001.
3. M. Kulkarni, "Microwave and Radar Engineering", Umesh Publications, 3/e, 2003.
4. Samuel Y. Liao, "Microwave Devices and Circuits", 3/e, PHI, 1998.
5. Wayne Tomasi, "Electronic Communication Systems: Fundamentals through Advanced", 4/e, Pearson Education, Inc., 2001.
6. Gary M. Miller and Jeffrey S. Beasley, "Modern Electronic Communication", 7/e, PHI, 2003.

Model Question Paper

M.Sc. DEGREE EXAMINATION – APRIL/DECEMBER

First SEMESTER

Branch - Electronics

Paper 1- ELE-101: ANALOG INTEGRATED CIRCUITS AND APPLICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is linear regulator? Mention its application.
2. Draw the circuit of voltage to frequency converter (V – F) and explain it s working.
3. Explain any one of the application of comparator with neat sketch.
4. Explain the principle of PLL with neat sketch.
5. Discuss the various performance specifications of DAC.
6. Explain how ADC can be realized using DAC.
7. What is an Oscillator ? Explain its Principle.
8. Explain the working of the Differentiator.

SECTION -B

Answer ALL questions. Each question carries 15 marks.

(Marks: 4 x 15 =60)

9. (a) Explain the working of sine wave generator with the help of relevant circuit and derive its frequency of oscillations.

(Or)

(b) Explain the working of a monolithic timer 555 IC with the help of its functional diagram.

10. (a) Construct and explain the working of logarithmic and antilogarithmic amplifiers.

(Or)

(b) Write about the working of peak detector and sample and hold amplifier.

11. (a) Discuss the working of successive approximation ADC.

(Or)

(b) Discuss the working of R -2R ladder DAC . Find the output voltage from a 50 bit ladder that had a digital input of 11011. Assume 0 = 0V and 1 = +10V.

12. (a) What is Instrumentation Amplifier ? Discuss the working.

(Or)

(b) What are the Active Filters? Explain the working of Higher order Filter.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

First SEMESTER

Branch - Electronics

Paper 2 –ELE-102: DIGITAL INTEGRATED CIRCUITS AND APPLICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is combinational logic circuit? Explain the sum of product from simplification.
2. Construct a -4- bit parallel binary adder and explain its working.
3. Explain the working of JK –FF with relevant sketch.
4. Write about 4 – bit shift register counter.
5. Explain the working of Bilateral switch with a neat sketch.
6. Write down the characteristics of TTL series and ECL family.
7. Draw the structure of dynamic RAM and explain.
8. Write about PAL.

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Design and construct a 3 –bit full – adder and explain its working.

(Or)

(b) What is Karnaugh map? Explain looping pairs quads octets in a K- map with suitable examples.

10. (a) Construct a 4 –bit ripple counter and explain its working with neat sketch.

(Or)

(b) Mention the differences between synchronous and asynchronous counters.

(c) Construct mod -10 counter and explain its working with neat sketch.

11. (a) Write down the characteristics of CMOS.

(b) Discuss how TTL can drive the CMOS and Vice –Versa with relevant sketches.

(Or)

(c) Discuss THE COMPARATIVE STUDY AMONG TTL,ECL and CMOS.

(d) Explain the loading and fan – out in TTL.

12. (a) Discuss the architecture of PLD.

(Or)

(b) Distinguish between SRAM and DRAM.

(c) Explain the applications of PLDs.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

First SEMESTER

Branch - Electronics

Paper 3- ELE-103(a): PROGRAMMING IN "C" WITH DATA STRUCTURES

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. Write down the examples for identifiers and keywords.
2. Explain Go To statement.
3. What is the concept of Recursion?
4. Explain the pointer variables.
5. Explain stacks used in C – language.
6. Write a C – program for 2X2 matrix addition.
7. Explain Binary tree.
8. Give some applications of trees.

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Explain arithmetic, relational, logical and assignment operators in "C".

(Or)

(b) Write a C –program to find the average of a set of 15 numbers by using while statement.

(C) Write a "C" program TO CONVERT Fahrenheit temperature to Celsius temperature.

10. (a) Write a program using pointers to compute the sum of 8 elements stored in an array.

(b) Write a program using pointers to determine the length of the character string.

(Or)

(C) Write a program for matrix multiplication.

(d) Writea programfor matrix Subtraction.

11. (a) What is meant by arrays of structures? And explain it.

(b) Write a program to store elements in a stack.

(Or)

(c)Write a program to read information for one person from the keyboard and print the same on the screen (struct person contain person name, date of joining and salary).

(d) Explain how structures defined.

12. (a) State and explain Huffman algorithm.

(b) With a suitable example, explain how lists are represented as Binary Trees .

(Or)

(c) Explain linked lists, Lists in C.

(d) Explain circular queue with suitable examples.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

First SEMESTER

Branch - Electronics

Paper 3- ELE-103(b): Python PROGRAMMING

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. Write down theStrengths and Weaknesses of Python Language.
2. Explain Control Flow and Syntax.
3. What are the Classes in Python ?
4. Write a note on Inheritance.
5. Explain the Optional Parameters in Python.
6. Write a short note on the dirFunction in Python.
7. Explain about Data Streams.
8. What are Run Time Errors ?

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Explain Relational, Logical, True or False and Bit Wise Operators in "Python".

(Or)

(b) Write about Dynamic Types, Naming Conventions, String Values and String Operations.

10. (a) What are the Principles of Object Orientation ? Discuss.

(Or)

(b) Writeabout File Organizationin Python.

(c) Discuss on Custom Exception Classes.

11. (a) Discuss on Variable Number of Arguments.

(b) Write about Passing Collections to a Function.

(Or)

(c)What are the Modulesin Python ? Discuss on Standard Modules – sys, – math, and –time.

12. (a) Write about Access Modes in Python.

(b) Discuss the Additional File Methods in Python.

(Or)

(c) What are the Handling IO Exceptions ? Explain.

(d) Explain about Exception Model in Python.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

First SEMESTER

Branch - Electronics

Paper 3- ELE-103(c): PROGRAMMING IN MATLAB

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. Define a variable in MATLAB.
2. Explain Mat Lab Script File.
3. What is the concept of Recursive Function?
4. Explain thenargin and nargout variables.
5. Explainuse of Arrays in Matlab.
6. Write a note on structures in Matlab.
7. Explain how Placing Text on a Plot in Matlab ?
8. Write a note on basic two-dimensional plots.

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Explain Functions, Display Formats, and Predefined Variables in Matlab.

(Or)

(b) Write a program to plot the functions in Matlab using PLOT function

(i) sin(x) for $-10 \leq x \leq 10$ (ii) sin(x) cos(x) for $-10 \leq x \leq 10$

(iii) cos(x)sin(x) exp(x/10) for $-1 \leq x \leq 1$.

10. (a) Study the different methods for control flow available in MATLAB.

(Or)

(b) Write a MATLAB program that finds all perfect numbers 2 and n, where n is an integer entered by a user. A perfect number is one whose prime factors add to the number.

11. (a) Design Mat lab Functions to handle input parameters that are scalars or arrays.

(Or)

(b)Write a program that reads a text file and generates a histogram of lengths of the words contained in the file.

12. (a) Discuss how to handle Graphics for Manipulating Plots.

(Or)

(b) Explain how to Obtain Numerical values from a plot in Matlab.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FIRST SEMESTER

Branch - Electronics

Paper 4- ELE -104(a): SIGNALS & SYSTEM ANALYSIS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is the difference between continuous – Time signal and Discrete – Time signal and how to obtain a discrete signal from continuous signal.
2. Explain the impulse response of an LTI system.
3. Write down the two properties of LTI system to represent signals and what is the output when the input X (t) is applied to an LTI system with impulse response of h (t).
4. What is the significance of parseval 's relation and give its relation for continuous – Time periodic signals.
5. Find the Laplace transforms of the given function.
   f(t) =4 cos (4t) – 9 sin (4t) + 2 cos (4t)
6. Find the inverse Laplace transform of the given function.
   F (s) = 6/S – 1 /S – 8 +4/S -2
7. Find the Z – transform of the sequence.
   x(n) = {2, -1,3,2,1,0,2,3, -1}
8. Write down the important properties of region of convergence for the –z transform.

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Explain the transformations of the independent variables with proper diagrams.

   (Or)

   (b) Describe the basic system properties.

10. (a) Explain the properties of the continuous Time Fourier Series.

(Or)

(b) Explain the properties of the continuous Time Fourier transform.

11 (a) Explain the properties of the Laplace Transform.

(Or)

(b) Find the inverse Laplace transform of

i) F (S) = 2s -5/s2 + 4s +8

ii) F (S) = 4s + 2/s2 + 6s +34

12 (a) Discuss the properties of the Z –Transforms.

(Or)

(b) Explain the relationship between the Z –Domain and the frequency domain withproper equation and diagrams.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 4- ELE -104(b): OPTICAL COMMUNICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is Channel Capacity ? Explain.
2. State the Advantage of Optical Communication System.
3. What are Very Low Loss Materials?
4. Explain the effect of Polarization in wave propagation.
5. What are the optical sources ?
6. Explain the working Avalanche Photodiode.
7. What are the Computer Networks ? Discuss.
8. What are the Mac Protocols ?

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) Discuss the Communication System Architecture.

   (b) Explain the Basic Optical Communication System.

   (Or)

   (c) Distinguish between Step-index Fibers and Graded Index Fibers.

   (d) Explain the working ofStab Wave guide.

10. (a)Discuss the attenuation effects in Plastic and Polymer-Clad-Silica Fibers.

    (Or)

    (b) Explain the Wave propagation in Step-Index Fiber.

    (c) Discuss the wave propagation in Multimode Fibers.

11. (a) Distinguish between LEDs and Semiconductor Lasers.

(b) Design the Semiconductor Lasers for Optical Fiber Communication System.

(Or)

(c) What are the Semiconductor Photodiode Detectors ? Explain the working of Photo multiplier Tube.

12. (a) Discuss in detail about Digital Optical Fiber Communication System.

(Or)

(b) What are the Network Topologies ? Discuss the working of Optical TDM system.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FIRST SEMESTER

Branch - Electronics

Paper 4: ELE-104 (c): WIRELESS COMMUNICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. Explain the QPSK modulation technique.
2. Give a note on error probability.
3. What are linear block codes?
4. Write a note on convolution interleaving technique.
5. Explain spread spectrum modulation.
6. Explain in brief the traffic routing.
7. Draw the block diagram of a communication satellite system.
8. What is G/T ratio? Explain.

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 = 60)

9. (a) Explain the principle of PSK generation and detection .Distinguish between PSK and DPSK.

(Or)

(b) State and explain Nyquist pulse shaping criteria

10. (a) Discuss the decoding of convolution codes with examples.

(Or)

(b) Draw the Trellis diagram for a convolution order. What are different types of ARO?

11. (a) With a neat block diagram explain the principle and working of a mobile communication system.

(Or)

(b) Explain 2g wireless network system what is wireless data services.

12. (a) Explain the multiple access format of satellite systems in India.

(Or)

(b) Give a detailed note on optical fibers.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 1- ELE-201: ADVANCED MICROPROCESSORS AND MICROCOMPUTERS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Explain the program memory addressing modes of Microprocessor.
2. Write a brief note on assembler.
3. Distinguish between minimum mode and maximum modes of 8086 microprocessor.
4. Write about modular programming.
5. Format the control word of 8255 to make all ports are output ports.
6. Interface the DAC with 8086 up and explain its working.
7. Explain the concept of DMA date transfer technique.
8. Write a brief note on interrupts available in 8086 microprocessor.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9.(a) Draw the internal architecture of a microprocessor and explain each block in detail.

(Or)

(b)Explain data movement and logical instructions of microprocessor with suitable examples.

(c) Describe the memory paging.

10. (a)Write a brief note on 8284 A clock generator.

(b) Explain in detail bus buffering, Latching and timing.

(Or)

(c) Explain the pin functions of 8086 microprocessor.

(d) Write about data conversions with suitable examples.

11.(a) Draw the block diagram of 8254 and explain each block in detail.

(Or)

(b) Explain the interfacing of 8 –bit A/D converter to a μP with help of relevant sketch.

12. (a) Draw the block diagram of 8237 DMA controller and explain each block in detail.

(Or)

(b) Write about Advanced microprocessors

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 2- ELE -202: DIGITAL COMMUNICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is a sampling function? Where is it used?
2. State and explain the central limit theorem.
3. What is meant by quantization error? Explain.
4. Explain the M – ary FSK.
5. What is a discrete message? Explain with an example.
6. What are convolution codes? Explain them.
7. Explain what is meant by spread spectrum.
8. What is meant by encryption? Why is it used?

SECTION -B

Answer ALL questions. Each question carries 15 marks. (Marks: 4 x 15 =60)

9. (a) What is power spectral density? Explain its significance.

(b) Obtain an equation for auto correlation of a periodic function.

(Or)

(c) Obtain an equation for probability density.

(d) Explain how to obtain a correlation between random variables.

10. (a) Explain the method of multiplexing the PCM signals.

(b) With suitable diagrams, explain Adaptive Delta modulation.

(Or)

(c) Distinguish between BPSK and QPSK methods.

(d) What is a matched filter? Explain its working.

11. (a) Define the terms: i) Average information, ii) Entropy

(b) State and explain the Shannon, s theorem.

(Or)

(c) Explain the efficiency of orthogonal signal transmission.

(d) What are block codes? How are they coded and decoded?

12. (a) Write the equation for Pseudo – Noise and explain the terms.

(b) Explain with diagrams what is meant by frequency Hopping?

(Or)

(c) What is meant by early cipher system? Explain

(d) Write a note on public key cryptosystems.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 3 ELE- 203(a): SEMICONDUCTOR MATERIALS AND DEVICES

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What is Photovoltaic effect ? Explain.
2. What is LED ? Explain it's structure.
3. What is tunnel diode ? Explain it's Characteristics.
4. What is PIN diode ? Explainit's I-V characteristics.
5. What is Light Activated Silicon Controlled Rectifier ?
6. Write a note on Schockley diode.
7. What are the regions of operation of a Transistor ?
8. Explain the Current-Voltage characteristics of MOSFET.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Distinguish between Photo diodeand Avalanche photo diode. Explain their working.

(Or)

(b)What are the Laser diode materials ? Explain the fabrication and structures.

10. (a) What is IMPATT diode ? Explain it's principle of operation.

(Or)

(b) What areTransferred Electron Devices (TEDs)? Explain thePrinciple of working of GUNN diode.

11. (a) What is TRIAC ? Explain it's operation.

(Or)

(b)What is GTO ? Explain it’s structure and working.

12. (a) Discuss the Analysis of the ideal diffusion transistor

(Or)

(b)What is JFET ? Explain it’s principle of operation.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 2- ELE- 203(b): SENSORS AND TRANSDUCERS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks

(Marks: 4 x 5 = 20)

1. What is a sensor ? Explain it's role.
2. Write the Significant parameters of a transducer.
3. Distinguish between displacement and strain gauge transducers.
4. What is a gauge factor ? Explain.
5. What are the different types Pressure transducers ?
6. Write a note on Electrical pressure transducers .
7. What is Photoconductive cell ?
8. Write a brief note on laser diode.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9.(a) Discuss the Classification of transducers. Explain Characteristics of transducers.

(Or)

(b)What is a temperature sensor ? Explain the working of Optical pyrometer.

10.(a) What are the types of strain gauges ? Discuss the materials used for strain gauges.

(Or)

(b) What is LVDT ? Explain thePrinciple of working of LVDT.

11.(a) What are the Elastic pressure transducers ? How to measure the pressure using helical tubes with a neat sketch.

(Or)

(b)Describe the working of Piezoelectric pressure transducer.

12. (a) Distinguish between Photoemission tube and Photomultiplier tube.
Explain their working.

(Or)

(b) Describe the working of Photo-transistor andPhoto FET. What are their advantages ?

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 3: ELE-203 (c) ATMOSPHERIC AND SPACE INSTRUMENTATION TECHNIQUES

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Write a note onplanetary Atmosphere**.**
2. Briefly discuss on structure of Atmosphere.
3. What are the trace gases in the atmosphere ?
4. What are the atmospheric parameters ?
5. What is a Lidar ? Mention it's uses.
6. What are the applications of Sodar ?
7. What is Radar? Explain it's principle.
8. Write a short not on Propagation of Microwaves in the lower Atmosphere.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9.(a) **Discus** on Dynamics of the earth's atmosphere.

(Or)

(b) Explain theComposition of the earth's atmosphere.

10.(a) Discuss the working of Automatic weather station.

(Or)

(b) What is Flame ionization Detector ? Discuss the measurement of CH_4 using Flame ionisation detector.

11. (a) Explain the working of Radiosonde. Discuss its applications.

(Or)

(b) Explain the working of Rocket Sonde ? Explain it's uses.

12. (a) Discuss working of Operational Weather Radar.

(Or)

(b) Discuss on Weather Radar Signal Processing system.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 4- ELE-204 (a): CONTROL SYSTEMS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Give certain examples for control systems.
2. Explain the significance of signal flow graphs.
3. Compare the transient and steady – state responses.
4. Explain the sources of steady – state responses.
5. Explain the method of sketching the root locus graph.
6. How is that Bode diagram different from polar plot?
7. What is meant by compensation in control system?
8. What are the methods for improving response characteristics?

SECTION -B

Answer ALL questions. Each question carries 15 marks.(Marks: 4 x 15 =60)

9. (a) Compare the features of closed – loop and open - loop control systems.

   (b) with a neat diagram explain a closed – loop control system.

   (Or)

   (c) What is impulse response ? Explain with an example.

   (d) What is a dynamic system? Explain with an example the state – space representation of a dynamic system.

10. (a) Explain the transient response in a first – order system.

    (b) Explain with example the effect of integral on a considered system performance.

    (Or)

    (C) State and explain Routhe'S Stability criterion.

(d) Assume a unity feedback system and explain the steady – State errors.

11. (a) Explain the general rules for constructing Root Ioci

(b) Discuss the theory behind lag compensation techniques based on the Root – Locus approach.

(Or)

(c) Compare the log – Magnitude with phase – plots.

(d) State Nyquist stability criterion. Explain relative stability with example.

12. (a) Explain Lead – Lag compensation in the light of frequency response.

(b)Discuss the Ziegler – Nicholas rules for tuning PID controllers.

(Or)

(c) Explain what is meant by set – point kick?

(d) With an example, explain the Zero – placement approach to improve response characteristics.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 4: ELE-204(b) MEDICAL INSTRUMENTATION

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What are Bioelectric Potentials ?
2. WriteCharacteristics of Recording System.
3. Write a short note on Pacemakers.
4. What is purpose of Blood Cell Counter?
5. What are the elements of Biotelemetry Systems ?
6. Write a note on Oxymeter.
7. Distinguish between Micro Shock and Macro Shock.
8. What are the applications of Computer Tomography Scanner (CT) ?

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Discuss on Biomedical Instrumentation System.

(Or)

(b)Discuss on Electrocardiography (ECG)and Electromyography (EMG).

10. (a) Explain the working of Heart Lung Machine.

(Or)

(b) Discuss on Radiography and Angiography.

11. (a) Design of aBiotelemetry System.

(Or)

(b)Discuss the working of Pulmonary Function Analyzer.

12. (a) What is Magnetic Resonance Imaging (MRI) ? Explain its functioning and uses.

(Or)

(b) Describe the Hospital Architecture.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

SECOND SEMESTER

Branch - Electronics

Paper 4:ELE-204(c): DATA MINING AND INFORMATION SECURITY

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What is Data Mining? Explain.
2. Explain clustering.
3. Distinguish between Data mining and knowledge discovery in data bases.
4. What are the social implications of data mining ?
5. Write a short note on the OSI architecture.
6. Write a note onHash Functions.
7. Briefly discuss on Public Key Infrastructure
8. Explain the RSA Algorithm.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Discuss Data warehousing Components.

(Or)

(b)ExplainClassical Techniques. Discuss on Tree Network and Rules.

10. (a) Discuss the development of data mining issues.

(Or)

(b) Discuss on Exploratory Data Analysis.

11. (a)Discuss on Model for Network Security Classical Encryption Techniques.

(Or)

(b)Explain Fermat's and Euler's Theorems.

12. (a) Discuss the Principles of Public-Key Cryptosystems.

(Or)

(b)Write about Digital Signature Standard Authentication Applications.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper-1: ELE-301: DIGITAL SIGNAL PROCESSING

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Explain the Digital Processing of analog signals with the help of relevant sketch.
2. What is sampling? Describe the sampling theorem.
3. Compare FIR and IIR filters.
4. Describe the block diagram representation of linear constant – coefficient difference equations.
5. Write about Goertzed Algorithm.
6. Compute the 4 – point DFT of a given sequence x (n) = {1,1,0,0}.
7. Explain the addressing modes of TMS320C5X DSP with suitable examples.
8. Write about assembly language syntax of TMS320C5X DSP.

SECTION –B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) What is multirate signal processing?

   (b) Explain the interpolation and decimation process of sampling rate of conversion with an example.

   (Or)

   (c) Write about reconstruction of a band limited signal from its samples.

   (d) Explain the discrete time processing of continuous time signal and vice –versa with the help of relevant sketches.

10. (a) Explain the steps to design FIR Filter using windows.

    (b) Discuss the design procedure of FIR Filter using Kaiser window method.

    (Or)

(c) Write about the Basic structure of IIR system.

(d) Discuss the design procedure of IIR Filter by using Bilinear Transformation (BLT).

11. (a) Determine the DFT of the following sequence using DIF –FFT algorithm. X(n) = {1, 1, 1, 0, 0, 1, 1, 1}.

(Or)

(b) Write about practical considerations in FFT implementation.

(c) Explain the linear convolution using DFT with suitable example.

12. (a) Draw the architecture of TMS320C5X DSP and explain briefly each block in it.

(Or)

(b) Discuss the following instructions with suitable examples:

(i) Load/store instructions. (ii) Move instructions and

(iii) Multiplication instructions

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper 2-ELE-302: DIGITAL SYSTEM DESIGN -VHDL

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Define Entity declaration with suitable example.
2. Explain the concept of simulation.
3. Explain If statement with suitable example.
4. Explain Delta delay revisited.
5. Explain default binding rules.
6. Write a VHDL code for logic AND gate.
7. Write VHDL code for half adder.
8. Explain the concept of Shared variables.

SECTION -B

Answer ALL questions. Each question carries 15 Marks

(Marks: 4 x 15 =60)

9. (a) Explain configuration declaration, package declaration, and package body with proper examples.

   (Or)

   (b) Explain the basic language elements Identifiers, data objects, data types and Operators.

10. (a) Describe process statement in VHDL with suitable example.

(b) Explain sequential statement with suitable example.

(Or)

(c) Describe loop statement, exit statement, next statement with proper examples.

11. (a) Write a VHDL code for D – flip flop and J.K. flip flop.

(Or)

(b)Write a VHDL code for S –R flip flop

(c) Explain design file and orders of analysis.

12. (a) Describe generate statements, Aliases and qualified expressions with examples.

(Or)

(b) Write a VHDL code for 4- bit shift register.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper 3- ELE -303(a): MICROCONTROLLERS AND APPLICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What is meant by a processor? Draw the functional block diagram of a microprocessor and explain.
2. What is meant by n – bit processor? Draw the block diagram of a microprocessor and explain each functional block.
3. What are the different development software tools required for the designing of any application?
4. Discuss the addressing modes of 8051 microcontroller with examples?
5. Explain the Pin description of 89C51?
6. Explain sine wave generation mechanism using AT89C51 Microcontroller?
7. Explain the I/O Ports of PICI6F877 With their corresponding port configuration registers?
8. Explain the Interfacing of key board with PICI6F8XX microcontroller?

SECTION -B

Answer ALL questions. Each question carries 15 marks.(Marks: 4 x 15 =60)

9. (a) Explain the Architecture of the 8051 microcontroller and explain each of its functional units ?

(b) Explain the memory organization of the 8051 microcontroller?

(Or)

(c) Enumerate the differences between micro controller and microprocessors V.r.t embedded versus external memory devices.

(d) Explain the CISC and RISC processors characteristics with examples?

10. (a)What is meant by the serial communication? What are the different modes of serial Communication? What are the advantages of serial communication?

(b) Explain the RS -232 Protocol Standard ?

(Or)

(c) Explain the concepts of Timers and Counters in microcontroller?

(d) Explain in detail the TMOD and TCON registers of 8051 microcontrollers?

11. (a) Explain the Architecture of ATMEL 89C2051 microcontroller ?

(b) Explain selecting criteria of a microcontroller for designing of any application?

(Or)

(c) What is meant by the PWM? How a PWM can be generated by microcontrollers? Give its applications?

(d) Construct and explain the working of Ramp and Stair case wave from generators in detail?

12. (a) Draw and explain the pin diagram of PIC 16F8XX microcontrollers?

(b) Explain the STATUS REGISTER and OPTION REGISTER of PIC 16 F8XX microcontrollers?

(Or)

(c) Draw and explain the interfacing of LCD with PICI16F8XX microcontrollers?

(d) Differentiate between the LCD and Graphical LCD and write their applications?

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper 3-ELE-303(b): COMPUTER ORGANISATION

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 marks. (Marks: 4 x 5 = 20)

1. What are computer types ?
2. What are Basic operational concepts ?
3. Write a note on Register Transfer Bus.
4. What are the logic micro operations?
5. Explain the concept of address sequencing .
6. Explain the Decimal Arithmetic operations.
7. What are the Peripheral Devices ?
8. Explain the concept of pipelining.

SECTION -B

Answer ALL questions. Each question carries 15 marks.(Marks: 4 x 15 =60)

9. (a) Discuss on Data Representation.

(b) Explain the functions of system software.

(Or)

(c) Explain the performance of multiprocessors.

(d) What is a subroutine? How is it serviced?

10. (a) What are the addressing modes ? Explain.

(b) Discuss on Reduced Instruction set computer.

(Or)

(c) Describe the Stack Organization in computer systems.

(d) With the help of neat sketch, Discuss the Arithmetic logic shift unit.

11. (a) Explain the design of control unit.

(b) Distinguish betweenHard wired control and Microprogrammed control.

(Or)

(c) Discuss the basic concepts of memory system.

(d) Discuss on Read-only memories.

12. (a) Explain the peripheral component Interconnect (PCI) bus.

(b) Distinguish between RS232 and IEEE1394communication protocols.

(Or)

(c) Distinguish between pipelineprocessing and vector processing.

(d) Write about Array Processors.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper-1: ELE-303 (c): DIGITAL IMAGE PROCESSING

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any four questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Write the file format in image Processing.
2. What are Pixel relationships ?
3. Distinguish between DFT and DCT.
4. Write a short note on Homomorphic filtering.
5. What are the Edge operators ?
6. What are the differences between Region based segmentation and motion segmentation ?
7. What are the Image Pyramids ?
8. Write a note on Image Classification.

SECTION –B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) What are the steps in image processing system? Explain.

(Or)

(b) Explain the image operations.

.

10. (a) Explain the Gray level Transformations.

(Or)

(b) Explain the function of smoothing and sharpening.

11. (a) Discuss on Edge linking and Boundary detection.

(Or)

(b) Discuss on Morphological water sheds.

12. (a) What are the applications of image processing? Explain.

(Or)

(b) Discuss the elements of information Theory.

Model Question Paper

M.Sc DEGREE EXAMINATION APRIL/DECEMBER

Branch-ELECTRONICS

Paper 4-ELE-305: Peripheral interface controllers

(Under NEP w.e.f.2021-2022)

Time: 3 Hours Max. Marks :40

SECTION – A

Answer any Two questions. Each question carries 5 marks. (Marks: 2 × **5=10**)

1. What is an assembler? Discuss the assembler format.
2. What are the main ideas of computer programming?
3. Write about the registers file structure of a PIC16F873 A microcontroller.
4. List various I/O ports available in 16F873 A and Explain briefly.

SECTION – B

Answer any **TWO** questions. Each question carries 15 marks. (Marks: **2 × 15=30**)

5. (a) Draw the block diagram of PIC 16 series ALU. Explain.

(or)

(b) Explain how building structured programs can be constructed.

6. (a) Draw and explain the architecture of PIC 16F873 A microcontroller.

(or)

(b) Write a detailed note on the memory organization of PIC 16F873 A.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper 6: ELE-306(a) MICROPROCESSORS, PC HARDWARE AND INTERFACING

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Write a note on Bus cycles.
2. What are the modes of operation of 8254 IC ?
3. List the different types of connectors found on modern motherboards.
4. Write a note on IDE Interface.
5. What are the video display standards ?
6. What are the functions of a keyboard controller in a PC ?
7. What is IEEE1824 standard ?
8. List the important features of USB .

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) What is a stepper motor ? Explain the interfacing of stepper motor with 8086 Microprocessor.

(Or)

(b) Discuss on Parallel I/O methods.

10. (a) Discuss the functions of mother board components.

(Or)

(b) Explain the working of Floppy Disk Drive.

11. (a) Discuss on CRT display systems and CRT interfacing.

(Or)

(b) What is an EISA bus ? List it's features, Pins and signals.

12. (a) Describe the Intel 8x931 USB peripheral Controller.

(Or)

(b) Discuss on Standard Parallel Port.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

THIRD SEMESTER

Branch - Electronics

Paper 2-ELE-306(b):SATELLITE COMMUNICATIONS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks (Marks: 4 x 5 = 20)

1. What are the advantages of Satellite Communication ?
2. What are the satellite earth station parameters ?
3. Write a short note on Hybrid Systems.
4. Distinguish between TDMA and DATDMA.
5. What is Synchronous Orbit ?
6. Write a note on Frequency Coordination.
7. What are the Types of satellite systems
8. Write a note on IRS satellite program.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) What are synchronous satellites ? Discuss on Frequency Allocations and Band Spectrum .

(Or)

(b) Derive General Link Design Equations. Explain.

10. (a) What are Multiple Access Techniques ? Explain Code Division Multiple Access (CDMA).

(Or)

(b) What isSynchronization ? Discuss the application of SpreadSpectrumTechniques.

11. (a) What are Orbital Parameters ? How to find the Satellite Location with Respect to the Earth.

(Or)

(b)Discuss on Satellite Placement in Geostationary Orbit.

12. (a) Discuss the Characteristics of satellite systems. What are the INSAT satellites.

(Or)

(b) Discuss Satellite Applications in different Areas.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 1 –ELE -401: ADVANCED COMMUNICATIONS SYSTEMS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4x5 =20)

1. Write a brief note on history of cellular system.
2. Explain the cell splitting and sectoring
3. Describe the slow and fast fading. What is Doppler effect? Write briefly.
4. Explain the ARQ techniques.
5. Write about contention based protocols.
6. Describe the modelling for handoff calls.
7. Write about Electromagnetic spectrum.
8. Explain the satellite applications.

SECTION -B

Answer ALL questions. Each question carries 15 Marks.(Marks: 4 x 15 =60)

9. (a) Describe the characteristics and fundamentals of cellular systems and cellular system Infrastructure.

(Or)

(b) Write about

(i) Capacity of a cell (ii) Frequency reuse

(iii) Co – channel interference

10. (a) Derive an expression for the free space propagation loss. What is inter Symbol Interference? Explain.

(Or)

(b) Describe the convolution codes used in date transmission with suitable diagrams.

11. (a) Describe the models of FDMA, TDMA and CDMA modulation techniques.

(Or)

(b) Describe the fixed channel allocation schemes and dynamic and other channel allocation scheme.

12. (a) Describe the propagation of light through an optical fiber and optical fiber configurations.

(Or)

(b) Describe the characteristics of satellite systems and satellite system infrastructure.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 2 –ELE -402: INTRODUCTION TO VLSI CIRCUITS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Explain the overview of Design steps involved in the fabrication of VLSI circuits.
2. Explain the Design and applications of Transmission Gate circuits.
3. What is a MOSFET? Explain the working of MOSFET?
4. Explain the concept of Lithography.
5. Write a note on FET sizing and unit Transistors.
6. Explain in detail the FET RC model.
7. Write a brief note on power dissipation.
8. Give the over view of Bi – CMOS drivers.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Explain MOSFETs as switches with a neat diagram.

(Or)

(b) Draw a neat sketch and explain basic logic gates in CMOS.

10. (a) Discuss briefly the concept of CMOS layers in detail.

(Or)

(b) Explain the overview of materials growth and their deposition in VLSI Technology.

11. (a) Write briefly on layout basic structured sequences.

(Or)

(b) Explain briefly the n – FET current and voltage equation with a neat diagram.

12. (a) Draw a neat diagram and explain briefly the DC characteristics of the CMOS inverter.

(Or)

(b) Discuss briefly the Designing of High Speed CMOS logic Networks.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 3 – ELE -403(a): DATA COMMUNICATIONS AND NETWORKING

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Write about categories of networks.
2. Explain the working of 56K modem.
3. Write about FDM and TDM.
4. Explain the link access procedure.
5. Explain the FDDI working.
6. Discuss about NCP.
7. Explain the other protocols related to X.25.
8. Explain the ATM design goals.

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Describe OSI model and explain the functions of the each layer.

(Or)

(b) Discuss about digital data transmission concepts and explain the DTE –DCE Interface.

10. (a) Discuss about the data link control procedures. Write about.
    (i) Flow control.
    (ii) Line control and error control schemes.

(Or)

(b) Describe the asynchronous and synchronous data link protocols.

11. (a) Discuss about circuit switching, packet switching and message switching.

(Or)

(b) Describe point to point protocol in computer networking . What is the use of link control protocol.

12. (a) Describe the operator of frame relay and its layers and congestion control.

(Or)

(b) Describe the physical configuration of SONET/SDH and its layers.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 3- ELE-403(b): INDUSTRIAL ELECTRONICS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What is generic Programmable logic controller?
2. Mention the Classification of PLCS.
3. Explain how an SCR is turned on by its gate?
4. Write a note on high Voltage bipolar Transistor.
5. What is a sensor? Discuss its function.
6. Mention the applications of Flow seniors.
7. What are the types of Robots?
8. What are the types of network Topologies?

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Describe the four basic parts of any Programmable controller.

(or)

(b) Explain the counter Operation in PLC.

10. (a) Explain the operation of a TRAIC and its characteristics.

(Or)

(b)What is inverter? Explain The Operation of PWM Inverter.

11. (a) What are the different types of Pressure sensors ? Explain the working of Bourdon tube Pressure sensor?

(Or)

(b) What is a Motion sensor ? Discuss the working of ac accelerometer?

12. (a) Discuss the basic parts of a Robot system.?

(Or)

(b) Explain the parts and media of the Physical layer?

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 3- ELE-403(c): EMI & EMC

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What are the sources of EMI ?
2. Write a short note on near field cable to cable coupling.
3. What are the Military Standards of EMI ?
4. Write a short note on Reverberating Chamber.
5. What are the grounding principles ?
6. Write a short note on material bond strap.
7. What are the basic filter component Characteristics?
8. What are the filtering guidelines ?

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Discuss on EMI Coupling Principles.

(or)

(b) Explain the radiated common mode and radiated differential mode couplings.

10. (a) Discuss the open area test site (OATS) measurements.

(Or)

(b)What is Antenna ? Explain the measurement precautions.

11. (a) Discuss the measurement og ground resistance.

(Or)

(b) Explain the guidelines for good bonds.

12. (a) Explain the Transmission line theory of Shielding.

(Or)

(b) What is the importance of Gaskets ?Explain the properties and characteristics of RF Gaskets.

Model Question Paper

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Electronics

Paper 3- ELE-405: INTERNET OF THINGS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. What are the characteristics of IOT?
2. Write a short note on Arduino IDE.
3. What is Zigbee ? Explain.
4. Write a note on Edge protocols.
5. What are the characteristics of Big data ?
6. Write a Short note on Edge/Fog Computing
7. What is the IOT design Ethics ?
8. Write a short note on Industrial IOT.

SECTION –B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Describe the IOT Architecture.

(or)

(b) Discuss RFID Principles and Components.

10. (a) Discuss on WPAN Technologies for IOT.

(or)

(b) Explain the IP based protocols for IOT.

11. (a) Discuss on Data Handling Technologies.

(or)

(b) What are the types of data analytics? Discuss.

12. (a) What are the applications of IOT? Explain.

(or)

(b) Discuss on IOT in Environmental Protection.

Model Question Paper

M.Sc DEGREE EXAMINATION APRIL/DECEMBER

Branch-ELECTRONICS

Paper 4-ELE-406(a): EMBEDDED SYSTEMS WITH PIC MICROCONTROLLERS

(Under NEP w.e.f.2021-2022)

Time: 3 Hours Max. Marks : 80

SECTION – A

Answer any four questions. Each question carries 5 marks. (Marks: **4 × 5=20**)

1. Mention the difference between Microcontrollers and Microprocessors.
2. Write a note on concept of PIPELINED in instructions execution of PIC 16F84A.
3. Discuss the Option Register in 16F84A PIC microcontroller.
4. Discuss the concept of Sleep Mode in 16F84A PIC microcontroller
5. What is an assembler? Discuss the assembler format.
6. What are the main ideas of computer programming?
7. Write about the registers file structure of a PIC16F873 A microcontroller.
8. List various I/O ports available in 16F873 A and Explain briefly.

SECTION – B

Answer any **FOUR** questions. Each question carries 15 marks. (Marks: **4 × 15=60**)

9. (a) Draw the internal architecture of PIC 16F84A microcontroller and explain its working briefly.

(or)

(b) Discuss the memory organization in PIC 16F84A microcontroller.

10. (a) Discuss the Parallel Ports in PIC 16F84A microcontroller.

(or)

(b) Discuss the Timer 0 module of PIC 16F84A microcontroller.

11. (a) Draw the block diagram of PIC 16 series ALU. Explain.

(or)

(b) Explain how building structured programs can be constructed.

12. (a) Draw and explain the architecture of PIC 16F873 A microcontroller.

(or)

(b) Write a detailed note on the memory organization of PIC 16F873 A.

Model Question Paper

M.Sc DEGREE EXAMINATION APRIL/DECEMBER

Branch-ELECTRONICS

Paper 4- ELE-406(b): MICROWAVES

(Under NEP w.e.f.2021-2022)

Time: 3 Hours **Max. Marks : 80**

SECTION – A

Answer any four questions. Each question carries 5 marks. (Marks: **4 × 5=20**)

1. What are the Maxwell's equations ?
2. Write a note on Image theory.
3. What is Smith chart ?
4. What are Lossy transmission lines ?
5. What is Microstrip ?
6. Distinguish between Rectangular waveguideand circular waveguide.
7. Write about quarter wave transformer.
8. What are the Types of antennas ?

SECTION – B

Answer any **FOUR** questions. Each question carries 15 marks. (Marks: **4 × 15=60**)

9. (a) Write the wave equation and discuss the basic plane wave solutions.

(or)

(b) Discuss on (i)The reciprocity theorem (ii) Uniqueness theorem.

10. (a) Explain the lumped element circuit model for a transmission line.

(or)

(b) What is Generator ?Discusson load mismatches.

11. (a) Discuss the Surface waves on a grounded dielectric slab.

(or)

(b) Discuss the General solutions for TEM and TM waves.

12. (a) Discuss the working of Traveling Wave Tubes (TWT) and write it's applications.

(or)

(b) What is antenna ? Describe the Helical antenna and it's working.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF PSYCHOLOGY

Course

M.Sc. PSYCHOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

- The post graduate Department of Psychology was established in 1959 with Major S. Parthasarathy as its founder head. Even before starting the department, since the inception of University College in 1954, psychology was taught at B.A. (Hons) and M.A. (Philosophy) level. The Department of Psychology offering the specializations like Health Psychology, Organizational behavior, Rehabilitation Psychology, Aging and Counseling Psychology. Students are exposed to practical and project work in addition to field studies. The department earned UGC-SAP (1990-1995) in the thrust area of life span developmental psychology with an emphasis on aging & DRS-I 2011-2016 & II 2017-2022) with special emphasis on Health and Aging. The department successfully completed 33 projects funded by UGC, ICSSR, ICMR and in collaboration with foreign agencies like ESRC, UK. The department conducted 4 exhibitions in 1961, 1967, 1977 and 1986 to popularize the strength and importance of the Psychology Department. The department successfully organized many international and national conferences. The Department has a Counseling Center to cater the needs of the students and public in general. 187 students have obtained their Ph.D., Degree and the department has published 598 articles in national and international journals

Vision

- To develop skillful and qualified psychologists by providing theoretical and experimental learning in all applied areas of Psychology to disseminate the knowledge to the community for a healthy society.

Mission

- To help the students' masters and keep abreast the knowledge in all fields of psychology.
- To equip the students with different techniques to apply in the field essentially and develop their career accordingly
- To support research and areas of research necessary for the advancement of knowledge in all discipline
- To analyze their strength and promote self-esteem confidence and well-being through education and support services.

Programme Specific Outcomes

- Students acquire enhanced knowledge of the fundamental concepts of Psychology and its applications from each other.
- Understand the principles and practices of advanced psychology and gain expertise in the field of behavioural sciences
- Students will be able to relate the physical and psychological determinants relevance to the human behaviour
- Understand the advanced aspects of new trends in Psychology such as evolution & biological psychology

Programme Objectives

- Students will gain necessary knowledge and develop specialized skills in the different areas of psychology .
- Students will think, predict, evaluate critically and analyse the human behaviour with the help of psychological applications to cater the needs of Local al and global problems.
- Students will be able to implement the scientific skills for development of educational, vocational , adolescent , family , different organisations etc.,

Programme Outcomes

Upon completion of the M.Sc. Psychology programme, the candidate should be able to:

No.	Programme Outcomes
PO1	**Scientific knowledge**: To apply the knowledge of Psychology, management , education sociology social work and linguistics.
PO2	**Problem analysis**: To identify, formulate, review literature, and analyze scientific problems in reaching conclusions using first principles of behavioral sciences and related other sciences
PO3	**Investigation**: To apply the knowledge based on research and related methods, including design of experiments, data collection, analysis and interpretation to provide valid conclusions
PO4	**Design & Development**: To plan, design and develop experiments to measure the experimental/survey/ observation data taking the safety and environmental considerations
PO5	**Modern tool usage**: To select standardized/ updated psychological testing material for investigating the identified problem with an understanding of its limitations.
PO6	**Psychologist & Society**: To asses and solve the problems related to societal, health and safety issues using the professional skills learned.
PO7	**Environment and sustainability**: To demonstrate the knowledge acquired for understanding the environmental issues and evolve methods for sustainable development.
PO8	**Ethics**: To understand ethical principles, professional ethics and responsibilities, and apply to solve Psychological/societal problems.
PO9	**Individual & Team work**: To function effectively as an individual / member of a team / team leader to solving different issues,
PO10	**Communication**: To effectively communicate on various issues particularly with

	psychosocial problems /community problems with in society, writing of reports and design of presentations.
PO11	**Project Management and Finance:** Acquire basic and advanced skills in various fields of psychology for self-employment and entrepreneurship
PO12	**Lifelong learning**: To recognize the importance of learning process throughout the life in view of psychological changes that occur from time-to-time.

Program Educational Objectives

1. Exposure of students to theory & practical knowledge and to provide them systematic tools of traditional and modern types to acquire this knowledge and skill.
2. To update the syllabus essential for appearing in NET, SET and other competitive exams of UPSC and APPSC.
3. To make aware the students to know the psychological resources of country, to utilize by sustainable methods and conservation of living resources.
4. To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self reliant India.
5. To develop self employable ability and to apply knowledge for several sectors such as schools, industries, clinical setting; it will also provide employment to other dependents.

Semester-I

Sl. No.	Course Code	Title of the Course	Core / Foundation / Elective	Hours of Teaching	No. of Credits	Marks		Total
				Theory Practical		IA	SEE	
1.	PSY 101	General Psychology-I (CC)	Core	6	4	20	80	100
2.	PSY 102	Social Psychology (CC)		6	4	20	80	100
3.	PSY 103	a. Psychopathology-I (CF) b. Psychological Measurement-I(CF) c. Positive Psychology (CF)	Compulsory Foundation	6	4	20	80	100
4.	PSY 104	a. Child Development Psychology b. Psychological Measurement & Statistics c. Forensic Psychology		6	4	20	80	100
5.	PSY 105	Paper 1 & 3	Practical-I	6	4	--	--	100
6.	PSY 106	Paper 3 & 4	Practical-II	6	4	--	--	100
			Total	36	24	120	480	600

Semester-II

Sl. No.	Course Code	Title of the Course	Core / Foundation / Elective	Hours of Teaching	No. of Credits	Marks		Total
				Theory Practical		IT	SEE	
1.	PSY 201	General Psychology -II (CC)	Core	6	4	20	80	100
2.	PSY 202	Applied Social Psychology-(CC)		6	4	20	80	100
3.	PSY 203	a. Psychopathology-II(CF) b. Psycho-Diagnosis (CF) c. Computer Application in Psychological Research-(CF)	Compulsory Foundation	6	4	20	80	100
4.	PSY 204	a. Life Span Development Psychology : Infancy to Adolescence (Prenatal to Adolescents) b. Consumer Behavior c. Industrial & Organizational Psychology	Elective Foundation	6	4	20	80	100
5.	PSY 205	Paper 1 & 3	Practical-I	6	4	--	--	100
6.	PSY 206	Paper 3 & 4	Practical-II	6	4	--	--	100
			Total	36	24	120	480	600

Semester-III

Sl. No.	Course Code	Title of the Course	Core / Foundation / Elective	Hours of Teaching	No. of Credits	Marks		Total
				Theory Practical		IT	SEE	
1.	PSY 301	Counseling Psychology (CC)	Core	6	4	20	80	100
2.	PSY 302	Psychology of Personality (CC)		6	4	20	80	100
3.	PSY 303	a. Organizational Behavior & HRM (GE) b. Therapeutic Approaches in Counseling-I c. Health Psychology(GE)	Generic Elective	6	4	20	80	100
4.	PSY 304	Core & Generic Elective	Practicals	6	4	--	--	100
5.	PSY 305	Stress Management Theory & Practical	Skill Oriented	6	4	10	90 (40+50)	100
6.	PSY 306	Personality Development (OE)	Open Elective	6	4	20	80	100
			Total	36	24	120	480	600

Semester-IV

Sl. No.	Course Code	Title of the Course	Core / Foundation / Elective	Hours of Teaching	No. of Credits	Marks		Total
				Theory Practical		IT	SEE	
1.	PSY 401	Therapeutic Approaches in Counseling-II(CC)	Core	6	4	20	80	100

3.	PSY 403	a. Research Methodology-(GE)	Generic Elective	6	4	20	80	100
		b. Organizational Development (GE)						
		c. Rehabilitation Psychology (GE)						
4.	PSY 404	Core & Generic Elective	Practicals	6	4	--	--	100
5.	PSY 405	As per allotment (Theory and Practice)	Project work	6	4	--	--	100
6.	PSY 406	Life Skills (OE)	Open Elective	6	4	20	80	100
			Total	36	24	80	320	600

Semester – I

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-101	**GENERAL PSYCHOLOGY-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the concepts and scope of psychology
b. To comprehend the biological basis of behavior
c. To study the perception and sensation
d. To understand the concepts and learning theories

Unit – I: Psychology as Science

a. Definition, Nature, Scope and Aims of Psychology
   Historical Origins -The rise of Experimental Psychology.
b. The Emergence, development and decline of the Schools of Psychology.
   Basic and Applied Fields of Psychology.
   Methods of Study – Observation method, Experimental method,
   Survey and Case study method.

Unit – II: Biological Basis of Behaviour

a. Genetic perspective – Chromosomes, DNA, Genes Dominant – Recessive Genes Principle.

   The Evolutionary Perspective – Natural Selection
   The Environmental perspective – Principle of learning - Nature and Nurture controversy.

b. Nervous System: Basic unit and divisions of Nervous system – Localization of brain functions. Endocrine System: Pituitary, Adrenaline, Thyroid, Parathyroid, Gonads and Pancreas. Receptors, Connectors, Effects and Adjuster mechanisms.
Sensory process – Senses and sensory organs, general characteristics of Senses and Sensory thresholds, Subliminal Perception, Signal Detection Theory.

Unit – III: Perceptual Process

a. Relationship between sensation and perception, Approaches to perception – Gestalt, information Processing approach, the Cognitive approach, Integrative approach. .

b. Perceptual experiences – Visual space perception, Perceptual constancies; Perceptual movement. Errors in perception, Perceptual Defence and Vigilance,
Factors influencing perception – Learning, motivation, values and socio economic status, culture and perception.

Unit – IV: Learning:

a. Nature and definition of Learning
Experimental approaches to learning – Connectionist and Cognitive

b. Brief discussion of learning theories, Pavlov, Thorndike, Skinner, Hull, Tolman and Miller.

Measurement in learning and learning curves
Transfer of training of education and transfer, experimental analysis of transfer of training, stimulus and response similarly.

Motor and verbal learning - Motor skills, distribution of practice, warm up, patterns of movement & knowledge of results.

Outcomes:

1. Understood the concepts and scope of psychology
2. Comprehended the biological basis of behavior
3. Studied the perception and sensation
4. Understood the concepts and learning theories

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}
CO_1	3	3	2	1	2	3	-	3	3	2	-	2
CO_2	3	3	2	1	1	3	-	2	3	2	-	2
CO_3	3	3	3	1	2	3	-	3	3	2	-	3
CO_4	3	2	3	2	1	2	-	2	3	3	-	2

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-102	**SOCIAL PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the concepts of social psychology
b. To comprehend the social perception and cognition.
c. To study the socialization
d. To understand the meaning and theories of attitudes

Unit – I: Introduction

a. Definition, understanding social behaviour

   Historical origins; relationship with other social sciences
b. Research methods in social psychology: Field, Observation, Experimental, Survey.

Unit – II: Social Perception and Social Cognition

a. Person perception and object perception; Bem's theory of self perception. Social perception; communication; social interaction.

b. The process of attribution; Kelley's theory of causal attribution: Major sources of bias; practical applications of attribution theory.

   Social Cognition – Major cognitive strategies: affect and cognition, self awareness, applications of self awareness.

Unit – III: Socialization

a. Definition and goals of socialization, socialization process; the context of socialization

b. Social motives: Sex role identity, agencies of socialization, the development of self concept, self evaluation.

Theories of Moral development (Piaget & Kohlberg).

Unit – IV: Attitudes

a. Formation of attitudes, Components of attitudes, functions of attitudes, the link between attitudes and behaviour.

b. Attitude scales: Likert, Thurston, Bogardas scales; Measurement: Self report and other techniques.

Theories of Attitude formation and change: Balance theory, congruity theory, and cognitive dissonance theory.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-103a	**PSYCHOPATHOLOGY-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the meaning abnormal behavior and historical and current trends
b. To comprehend the models of abnormal behaviour and approaches to therapies
c. To know the classification and assessment of abnormal behaviour
d. To evaluated different approaches to therapies for abnormal behaviour

Unit – I: Abnormal Psychology

a. Meaning and Definitions of Psychological abnormality.
   Criteria of normality and abnormality.
b. Historical - How abnormality viewed and treated in the past: Current trends.

Unit – II: Models of Abnormality

a. Biological model; Psychodynamic model
b. Behaviouristic model; Cognitive model
   Humanistic – Existential and Socio-cultural model

Unit – III: Classification and Assessment

a. Clinical Assessment and Diagnosis
   Classification of Psychological Disorders – DSM V; ICD.10.
b. Causes of abnormal behaviour; Biological, Psych-social and Socio Cultural factors.

Unit – IV: Approaches to Therapies

a. Biological therapy: Chemo therapy, Electro therapy, Brain –wave therapy
b. Psychosocial Approaches to therapy; Psychoanalytic therapy, Behaviour therapy, Humanistic – Existential therapies, Interpersonal therapy, Transactional Analysis and

Group Therapy, Socio-cultural approaches to therapy; Current issues and trends in Treatment.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-103b	**PSYCHOLOGICAL MEASUREMENT-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the assessment and psychological measurements
b. To comprehend the development of psychological tests and principles of test construction.
c. To know the Principles of Test Construction
d. To understand the test Development and test Standardization Procedures

Unit – I: Psychological Measurement

a. Introduction – Psychological Assessment and Psychometrics – Nature, Psychophysical Measurements – Psychophysical Theory-Psychophysics and Sensory limens, Psychophysical laws.

b. Modern Psychophysics – Psychological Scaling methods – Rating scales – Attitude Scales

Unit –II: Developments in Psychological Measurement

a. Early History of Psychological Measurement – Psychophysics – Mental Testing – Contributions of Galton and Binet; Interest in the mentally deficiency; Later Developments; Contemporary Status of Psychological Measurement.

b. The Psychological Test: Definition, Types – Factors influencing test performance – Test administrative procedures – Testing conditions – rapport, examiner effects, situational variables – test anxiety.

Ethical and Professional Concerns in Testing – Control in the use of Psychological tests; Sources of Psychological tests.

Unit – III: Principles of Test Construction

a. Test Formulation – Content selection - Item writing – Item analysis – Objectives and use of Item analysis; Item Difficulty; Item validity, Item discrimination – Item reliability – Internal consistency.

b. Reliability – basic concepts, methods of test reliability – reliability of speed & power tests – Special problems in reliability.

   Validity – basic concepts, methods of test validity – general problems.

Unit – IV: Test Development and Test Standardization Procedures

a. Basic steps in Test development: Instructions in Test Administration

b. Development of Norms – Types of norms – Interpretation of Test scores – Statistical Indices – Computers usage in Testing.

Psy-103c	**POSITIVE PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

1. To understand the human strength of positive psychology
2. To acquaint students with positive subjective states and processes
3. To enable students to appreciate importance of positive Individual Traits
4. To understand the Positive behaviour in Institutions

Unit-1: Introduction to Positive Psychology

a. Need for a science of human strengths and virtues
b. Deconstruction of illness ideology and inclusion of human strengths
c. Positive Psychology: Assumptions, Goals and Definitions
d. History of positive psychology; three pillars of positive psychology

Unit-2: Positive Subjective States

a. Model of well-being
b. Subjective well-being and positive emotions
c. The flow experience
d. Positive Emotions; Optimism and Hope

Unit-3: Positive Individual Traits

a. Love and self-compassion; self-efficacy
b. Creativity &Wisdom
c. Purpose, courage and resiliency

d. Empathy and Altruism

Unit-4: Positive Institutions

a. Positive schooling

b. Health and wellness; aging well and role of family

c. Psychology of forgiveness for healthy society

d. The Me/We balance: Building better communities

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-104a	**CHILD DEVELOPMENT PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To expose the student to the basics of Child Development
b. To help student understand research in child development
c. To understand the biological development of a child
d. To evaluate personality development of a child

Unit-I: Child development

Nature of child development: the field of child development , Domains of child development, Periods of child development , The psychoanalytic perspective ,Behaviorism and social learning theory, Piaget's cognitive-developmental theory

Unit-II: research in child development

Research strategies in child development, Systematic observation, Self-Reports interviews and questionnaires, Psycho-physiological methods, The clinical or case study method, Methods for studying culture

Unit-III: biological development

Foundations of Development, The genetic code, the sex cell, Patterns of Genetic inheritance, Child birth, Approaches to children, Birth complications, Oxygen deprivation, Preterm and low-birth weight infants Motor and perceptual development in infancy, the course of physical development, factors affecting physical growth

Unit-IV: personality development

Personality and social development , Emotional development, Functions of emotions, Emotions and cognitive processing, Development of emotional expression Happiness, anger and sadness, fear, self-conscious emotions, Emergence of self and development of self concept, Self-esteem, structure, changes if level of self–esteem , Social problem solving, Training social problem solving

Psy-104b	**PSYCHOLOGICAL MEASUREMENTS AND STATISTICS**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives :

a. To become acquaint with intelligence and achievement tests
b. To learn the measurement of personality tests
c. To understand the Statistics for Psychological Measurement
d. To know the Distribution of Scores on Variables

Unit- I: Intelligence and Achievement Tests

a. Intelligence Tests – Definition, Binet's Scales; Wechsler Scales (WISC, WAIS); Individual Vs. Group tests; Verbal Vs. performance Scales of intelligence; Intelligence tests as clinical instruments; Multifactor Test Batteries

   Tests of Intellectual Impairment

   Achievement Test – Definition; Characteristics of Achievement Tests; Achievement Tests for Special Areas.

b. Special Abilities – Definition of Aptitude, Motor and Manual tests; DAT Battrey, Multiple Aptitude Test Battery, Special Aptitude tests; Evaluation of Aptitude test.

   Tests of interests, Values and Attitudes.

Unit – II: Personality Tests

a. Self Report Measures - Personality Inventories - 16 PF, MMPI, CPI; EPI (Eysenck).

b. Projective Tests – Thematic Apperception test, Children Apperception test, Rorschach Ink Blot test, Picture Arrangement test, Rosenzweig Picture Frustration test, CAT.

Situation Tests: Semantic Differential, Socio-metric methods, Psychodrama.
Neuropsychological Tests as diagnostic tools.

Unit – III: Statistics for Psychological Measurement

a. Introduction to statistics – Importance in Psychological Measurement.

b. Measures of Central Tendency of scores, Measures of Variation of scores, Measures of Associations, Multi Variate statistical methods.

Unit – IV: Distribution of Scores on Variables

a. Graphic Representation of test data
b. Frequency distribution – Normal Probability Curve (NPC)
Tests of significance of Some Statistics
Use of Statistical Packages – SPSS in psychological research.

Outcomes :

1. The students acquainted with intelligence and achievement tests
2. The students learned the measurement of personality tests
3. They are clear in understanding the Statistics for Psychological Measurement
4. They have knowledge on Distribution of Scores on Variables.

(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives :

a. To expose the student to the basics of forensic Psychology
b. To help student understand the concept of psychology of Crime
c. To acquaint the students on psychological investigation of Crime
d. To understand psychology of violence

Unit-I : Introduction to Forensic Psychology:

Historical overview, Functions of Forensic Psychologists, Psychology and law.

Unit-II : Psychology of Crime:

Developmental Theories and Psychobiological bases of crime, Risk Assessment & Violence Prediction, Eyewitness Testimony and Expert Testimony.

Unit-III : Psychological Investigation of Crime:

Scientific Lie Detection: Polygraph, Verbal & NonVerbal Cues, Hypnosis and Narcoanalysis, Behavioural Analysis; Understanding the criminal personality- antisocial personality, psychopath & sociopath; Personality Profiling

Unit-IV: Psychology of Violence:

Workplace and domestic violence, Child Abuse, Victim Psychology, Correctional Psychology: Recognizing the suffering: Rape Trauma Syndrome and Post traumatic Stress Disorder, Coping with criminal victimization, rehabilitation of victim and offender

Semester - II

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-201	**GENERAL PSYCHOLOGY – II**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

1. To understand fundamentals of motivation and emotion
2. To understand basic concepts of memory and forgetting
3. To comprehend the thinking and intelligence
4. To evaluate the personality of individuals

Unit – I: Motivation and Emotion

a. Historical antecedents of motivation from mechanism to cognition. Motivation sequence and motivational concepts – instinct, drive, motive and incentive. Physical and Psycho - social motives – A brief study of motivational theories – Freud, Mc Dougall, Maslow, S-R and Cognitive. Measurement of Motivation – Issues and techniques – cross cultural perspective of motivation.

b. Emotions – nature, development, differentiation and expression of emotions, physiological basis of emotion. Brief review of theories of emotion – Physiological – James – Lange theory, Cannon Bard theory, Behavioural facial feedback theory and Schachter two factory theory and cognitive appraisal theory of emotion. Measurement of emotions – Physiological, expressive and cognitive measures.

Unit – II: Memory and Forgetting

a. Models of memory – information processing model – sensory memory, short – term memory, long –term memory, encoding, storage and retrieval.

b. Factors influencing memory – Repetition, meaningful learning, whole Vs part learning, massed and spaced practicing, Motivation, feed back and passage time Measurement of Memory – study habits, mnemonic devices, Nature of forgetting, theories of forgetting: Interference theory, motivation theory, Decay theory, Trace-change theory.

Unit – III: Thinking

a. Nature and tools of thinking, Tools of thinking – images and types of image
   Concepts – development and process of concept formation and types of concepts. Language – Structure of language, acquisition of language and the relationship between language and thinking.

b. Varieties of thinking: Reasoning – inductive and deductive reasoning. Problem solving – types of problem solving – trial and error, insight, algorithms. Heuristics steps and impediments in problem solving. Critical thinking, Inference and pittals. Piaget model of cognitive development.

Unit – IV: Intelligence and personality

a. Nature and distribution of intelligence
   Differences in intelligence – individual, gender and racial factors, Influence of heredity and environment – Assessment, Theories of Intelligence – Spearman, Thurston, Stenberg and Gardner.
b. Personality: Definition, Nature & Development, determinants of personality. Classification of personality (type & trait) and measurement.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-202	**APPLIED SOCIAL PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the Social Influence
b. To acquaint with social exchange process in social behaviour.
c. To comprehend the prejudice and discrimination
d. To understand what is psychological groups and individuals.

Unit – I: Social Influence

a. Forms of Social influence: Conformity, compliance and obedience Asch's experiments on conformity; factors affecting conformity; the bases of conformity.

b. Compliance: Tactics used in compliance; Ingratiation, reciprocity and multiple requests, guilt and compliance. Obedience: Milgram's Studies on destructive obedience, resisting the effects of destructive obedience, modeling as a basis for unintentional social influence.

Unit – II: Social Exchange Process

a. The nature of co-operation and competition, bargaining and negotiation, resolving interpersonal conflicts through bargaining; perceived fairness in social exchange; equity and inequity, factors for restoring fairness in social exchange.

b. Prosocial behaviour: altruism: Characteristics influencing altruism, theories of altruism: reinforcement theory, cognitive theory: Bystander effect, explanations, the characteristics of the helper and the helpee; Interpersonal attraction and love: Types of love. Determinants of attraction: physical attractiveness, attitude, similarity and reciprocity.

Unit – III: Prejudice and Discrimination:

a. Sources of prejudice. Combating prejudice, sex & gender prejudice: nature and origin, discrimination against women.

b. Aggression and Violence. Theoretical perspectives, social and cultural determinants of aggression; individual determinants, prevention and control of human aggression.

Unit –IV: Groups and Individuals

a. Groups: Nature and functions: group formation, how groups function: roles, Status, norms and cohesiveness; groups and task performance: Social Facilitation, Theories of Social Facilitation; Social Loafing, Decision making by groups.

b. Leadership: Definition, types of leaders, characteristics of a leader, functions of a leader, theories of leadership.

Objectives :

a. To understand anxiety and mood disorders
b. To acquaint with somatic disorders.
c. To study Psychosis and Cognitive Disorders
d. To understand Psychological Disorders Across the Life Span

Unit – I: Anxiety and Mood Disorders

a. Generalized Anxiety disorders and phobias - Panic, Obsessive - compulsive disorders
b. Mood disorders – Suicide - Etiology and treatment

Unit – II: Psycho - Somatic Disorders

a. Stress-Coping and maladaptive behaviour, psychosomatic disorders, Eating disorders
b. Substance - related disorders, sexual disorders, Etiology and treatment

Unit – III: Psychosis and Cognitive Disorders

a. Schizophrenia and sub types, Cognitive disorders : Amnesic disorders
b. Dementia: Delirium, etiology and treatment

Unit – IV: Psychological Disorders Across the Life Span

a. Personality disorders
b. Disorders of childhood, adulthood and old age, etiology and treatment

Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives

1. To get knowledge of psychological tests and their use in diagnosis.
2. To make students able to diagnose patients with the help of projective tests.
3. To get understanding of different diagnostic systems.
4. To Learn how to take case history of patients and to make differential diagnosis.

Unit -I : Psycho-diagnosis:

Introduction and rationale, factors influencing psychological testing pits all of psychological testing, Case-history and Mental status examination, Tests of Primary Mental Abilities: a) Attention and Concentration b) Perception c) Memory d) Thinking and Reasoning e) Intelligence

Unit-II : Tests of Differential Diagnosis

a) Tests of Thought Disorder b) Questionnaire for Differential Diagnosis c) Rating Scales

Unit-III : Personality Tests:

Rorschach Test, Interview and Adjustment Test.

Unit-IV : Neuropsychological Assessment:

Psycho-physiological Assessment: Assessment of psycho- physiological indices of arousal/anxiety (e.g. GSR, EMG and ECG) and to correlate with those of subjective reports of the same.

Psy-203c	**COMPUTER APPLICATIONS IN PSYCHOLOGICAL RESEARCH**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives

a. To understand the basic components of computer
b. To know and working in Ms Office, power point and internet services.
c. To comprehend the application of computer knowledge through creating emails, scientific journals and data scoring
d. To be able to understand **Statistical Packages**

Unit – I: Introduction to Computers

a. Definitions – Basic components of computer –block diagram – Input / Output devices – Key board- Mouse and scanner – directories and sub-directories.
b. Evolution of Computer generations – Fundamentals in Computers

Unit – II: MS Office-I

a. MS word: Creating, Opening and saving files- Editing and formatting text- spell and grammar check- auto correct- creating of tables and columns- mail merge- word art- concept of a macro print preview.
b. MS PowerPoint: Creating power point slide- editing and formatting the presentation etc.,

Unit – III: MS Office-II & Internet Services

a. MS Excel: Work sheet- entering data and creating work sheets and work books- opening and saving workbooks- editing and formatting-sorting, filtering and pivot tables- creating graphs and charts- mathematical and statistical functions. MS accesses; opening and saving, features and data entry and usage.

b. Use of Internet Services – Creating e-mail- sending mails- browsing websites of Psychology, browsing scientific journals- search engines- data storing

Unit – IV: Statistical Packages

a. Use of Statistical Packages in Psychological Researches - Introduction to SPSS - What is SPSS – Purposes – Using the Windows in SPSS
b. SPSS Windows – SPSS file types – Creating and modifying Data Files – Data Modification – Descriptive Statistics – Inferential Statistics.

Psy-204a	**LIFE SPAN DEVELOPMENTAL PSYCHOLOGY: INFANCY TO ADOLESCENCE**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand human development
b. To become aware of infancy and babyhood
c. To comprehend the Early and Late Childhood and Adolescence.
d. To know the development of Adolescence

Unit – I: Human Development

a. Principles and factors of development; scope of life span development; periods of the human life span, Perspectives on human development; the mechanistic perspective, the organismic perspective, the psychoanalytic perspective and the humanistic perspective.

b. Fertilization; the mechanisms of heredity; heredity and environment; chromosomal abnormalities; prenatal diagnosis of birth defects; Prenatal influences, maternal nutrition, maternal drug intake and other maternal-factors; prenatal stages and characteristics.

Unit – II: Infancy and Babyhood

a. Infancy and babyhood: The birth process, birth complications, infancy; sub divisions, physical characteristics; major adjustments; physical and psychological development of infants, growth and motor development, environmental influences on motor development, mortality in infancy; early learning, classical conditioning, operant conditioning, habituation.

b. Intellectual development: The psychometric approach, Piagetian approach, Information processing approach, language and speech development.

Social and Personality Development: the psychosexual (Freud) and psychosocial (Erilkson) theories, emotions, the family's role in personality and social development; socialization developmental tasks; physical and psychological hazards

Unit – III: - Early and Late Childhood

a. Early childhood: Physical growth and motor development; childhood health and illness; sleep pattern and problems. Intellectual development: Piaget's pre-operational stage; language' early childhood; the development of social speech; schooling: preschool, benefits. Social and personality development: Theoretical perspectives on personality: Sigmund Freud, Erikson, effect of child-rearing practices on personality development. Play: social play and cognitive play, implications, Hazards of early childhood.

b. Late childhood:

Physical development, growth, motor development, intellectual development, Piaget's stage of concrete operations, moral development, Piaget's theory, Kohlberg's studies. Language development: Communication ability, measuring intelligence in school children, creativity in children. Children in School: the teachers influence, educating handicapped children, learning disability. Social and personality development, theoretical perspectives; Freud, Erikson; social groups, influences, self-concept in school children; the child in the family; emotional disturbances; Hazards of late childhood.

Unit – IV: - Adolescence

a. Physical development: physiological changes of adolescence, psychological impact of physical changes; health problems. Intellectual development: Piaget's stages of concept development, moral development: Kohlberg's stage of normal development;

b. Social and personality development: theoretical perspectives on personality development Hall, Freud, Erikson; the search for identity; Relationship with parents, peers, friends, sexual identity.

Psy-204b	**CONSUMER BEHAVIOR**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives :

a. To understand concept of consumer behaviour and market research
b. To comprehend the economic theory of buyer behaviour
c. To study the effect of psychological theories of motives
d. Advertisement - advertisement purposes-role of communication

Unit-I :

a. Motivation - Definition of motivation – motivation process – motivational implication and themes of motivation.

b. Consumer behavior and market research; definition of marketing - Types of markets.

Unit-II :

a. Economic theory of buyer behavior, psychological model – perception, learning attitudes, personality, psychographics (lifestyles) market research-approaches.

b. survey technique ; questionnaire survey method – experimental methods.

Unit-III :

a. Consumer buying motives – primary versus selective; product versus patronage

b. Motives Positive versus negative motives; emotional versus rational motives.

Unit-IV:

a. Advertisement - advertisement purposes-role of communication. Theme or appeal sale promotions; the objectives of sales promotion.

b. Features of salesmanship building the sales force, packaging & branding.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-403a	**RESEARCH METHODOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives :

a. To understand basic research and applied research including experimental research.
b. To comprehend the problem & hypothesis
c. To know Sampling & Data Collection
d. To understand about research designs.

Unit – I: Introduction to Research Methodology

a. Types of Research: Basic Research, Expost facto, Applied Research and other Researches: Formation of Experimental Research.
b. Research Variables and their Control: Independent variables – dependent variables and extraneous variables, and experimental control.

Unit – II: Problem & Hypothesis

a. Problem : Selection of problem – statement of the problem and ways in which a problem is manifested, Types of Problems.
b. Hypothesis : The nature of hypothesis, the manner of stating a hypothesis, Criteria of hypothesis and formulation of hypothesis

Unit – III: Sampling & Data Collection

a. Sampling: Procedures of sampling – randomization – purposive sampling – Stratified and Random sampling, Probabilistic and Non – Probabilistic Methods.
b. Methods of Data collection: Interview method, survey method, questionnaires and rating scales.

Unit – IV: Research Designs

a. Research Designs: Two Randomized group design, two matched group design, more than two group design, Factorial Design – 2x2, 2x2x2 design – Concept of ANOVA, MANOVA AND MANCOVA.

   Role of Computers in the analysis of data – Statistical Packages – Ethics in Human Research

b. Presenting research results: Writing a research project report: Publishing an article and making an oral presentation.

Psy-403b	**ORGANIZATIONAL DEVELOPMENT**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives

a. To understand Needs Assessment, Specification of Instructional Objectives, Learning outcomes
b. To apply the knowledge of Training and development phase Incorporating the findings of Learning Research
c. To know about transfer and maintenance of training Alternative training media
d. To know the application of Evaluating training Effectiveness

Unit-I : Needs assessment

a. Organization Analysis, Task analysis, Person analysis, An Example of Needs.

b. Assessment, Specification of Instructional Objectives, Learning outcomes, Stating instructional objectives

Unit-II : Training and development phase Incorporating the findings of Learning Research

a. Practice and Recite, Use Distributed Practice, Use Whole-Task learning for tasks High on complexity and organization, Give knowledge of results, Set goals, Give positive reinforcement.

b. Provide models, Make learning a Team Effort, Gagne's model of instructional design

Unit-III : Transfer and maintenance of training Alternative training media

a. On-the-job Techniques, Off-the-job Techniques

b. Choosing among alternative methods

Unit-IV: Evaluating training Effectiveness

a. Criteria for evaluation, Summative versus formative evaluations, Research design in training evaluation, Individual differences among trainees
b. **Special Training Needs** Retraining, Training for work force diversity, Training the chronically unemployed

References :

1. Robert L. Dipboye, Carlla, S Smith, William C Howell: Understanding Industrial and Organizational Psychology: An Integrated Approach: Harcourt Brace College Publishers(1994)

Outcome:

1. Learned the assessment, instructional objectives.
2. Applied the knowledge of training and development incorporating the findings of research
3. Studied the transfer and maintenance of training and alternative training media
4. Gained the evaluating training effectiveness

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-403c	**REHABILITATION PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives:

a. To understand historical development – Models of disabilities in the past and present scenario
b. To comprehend Assessment of Disability, Psychological Aspects
c. To know Behavioral Management
d. To acquaint with Organizational services

Unit-I: Introduction

a. Rehabilitation Psychology - Field and Scope - Foundations- historical development – Models of disabilities – Disability in Indian setting the past and present scenario.

b. Individuals with Disabilities – Disabilities in early and middle childhood, adolescence and early & late adulthood, Sensory and physical disabilities, Learning and behavioral disability, Needs and concerns of disabled in all groups

Unit – II: Assessment of Disability, Psychological Aspects

a. Diagnostics and assessment – Learning and behavioural disability – Research methods
b. Psychosocial aspects of disability: Attitudes, stereotypes prejudices and discrimination towards the disabled Minority and under privileged status.

Unit – III: Behavioural Management

a. Behavioural analysis – Principles and Techniques
b. Common Techniques of Management of problems of the disabled

Unit – IV: Organization of Services

a. Organization and management of rehabilitation services – Collaboration with families of disabled persons – Special education strategies for learning and behavioural disability – Assistive technologies and quality of life in the disabled.

b. Statutory provisions and policy on disability rehabilitation – Areas of governmental focus – Financial and social security – Constitutional and policy provisions – Role of NGOs in rehabilitation of disabled – Professional standards, ethical concerns

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-406	**LIFE SKILLS**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives:

a. To learn the concept of life skills and its importance in relation to personality development of an individual.
b. To know the different types of life skills relevance to individual and social situations.
c. To adapt the good interpersonal and communicative skills.
d. To become aware of the components of life skills and the method of imparting knowledge of life skills.

Unit – I: Introduction

a. Introduction to life skills, the performance of life skills, the relationship between life skills and individual personality development.

b. Life skills development and its effects on relationship patterns.

Unit – II: Types of Life Skills

a. Types of life skills: Thinking skills – Decision making, Goal Setting and Motivation, Positive Thinking.

b. Overcoming doubt, fear, procrastination and perfectionism. Problem solving, Creativity.

Unit – III: Life Skills in Specific

a. Interpersonal Skills – Coping Skills – Communication skills, Negotiation skills.

b. Leadership, Team Building- Presentation Skills.

Unit – IV: Management

a. Self-management skills: Self-awareness, building confidence and self-esteem anger management, stress management, relaxation techniques.

b. Designing life skills intervention – assessment of life skills – designing modules.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF PSYCHOLOGY

Course

M.Sc. COUNSELING PSYCHOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per

NEP-2020

About the Department

- The post graduate Department of Psychology was established in 1959 with Major S. Parthasarathy as its founder head. Even before starting the department, since the inception of University College in 1954, psychology was taught at B.A. (Hons) and M.A. (Philosophy) level. The Department of Psychology offering the specializations like Health Psychology, Organizational behavior, Rehabilitation Psychology, Aging and Counseling Psychology. Students are exposed to practical and project work in addition to field studies. The department earned UGC-SAP (1990-1995) in the thrust area of life span developmental psychology with an emphasis on aging & DRS-I 2011-2016 & II 2017-2022) with special emphasis on Health and Aging. The department successfully completed 33 projects funded by UGC, ICSSR, ICMR and in collaboration with foreign agencies like ESRC, UK. The department conducted 4 exhibitions in 1961, 1967, 1977 and 1986 to popularize the strength and importance of the Psychology Department. The department successfully organized many international and national conferences. The Department has a Counseling Center to cater the needs of the students and public in general. 187 students have obtained their Ph.D., Degree and the department has published 598 articles in national and international journals

Vision

- To develop skillful and qualified psychologists by providing theoretical and experimental learning in all applied areas of Psychology to disseminate the knowledge to the community for a healthy society.

Mission

- To help the students' masters and keep abreast the knowledge in all fields of psychology.
- To equip the students with different techniques to apply in the field essentially and develop their career accordingly
- To support research and areas of research necessary for the advancement of knowledge in all discipline
- To analyze their strength and promote self-esteem confidence and well-being through education and support services.

Programme Specific Outcomes

- Students acquire enhanced knowledge of the fundamental concepts of Psychology and its applications from each other.
- Understand the principles and practices of advanced psychology and gain expertise in the field of behavioural sciences
- Students will be able to relate the physical and psychological determinants relevance to the human behaviour
- Understand the advanced aspects of new trends in Psychology such as evolution & biological psychology

Programme Objectives

- Students will gain necessary knowledge and develop specialized skills in the different areas of psychology .
- Students will think, predict, evaluate critically and analyse the human behaviour with the help of psychological applications to cater the needs of Local al and global problems.
- Students will be able to implement the scientific skills for development of educational, vocational , adolescent , family , different organisations etc.,

Programme Outcomes

Upon completion of the M.Sc. Psychology programme, the candidate should be able to:

No.	**Programme Outcomes**
PO1	**Scientific knowledge**: To apply the knowledge of Psychology, management , education sociology social work and linguistics.
PO2	**Problem analysis**: To identify, formulate, review literature, and analyze scientific problems in reaching conclusions using first principles of behavioral sciences and related other sciences
PO3	**Investigation**: To apply the knowledge based on research and related methods, including design of experiments, data collection, analysis and interpretation to provide valid conclusions

PO4	**Design & Development**: To plan, design and develop experiments to measure the experimental/survey/ observation data taking the safety and environmental considerations
PO5	**Modern tool usage**: To select standardized/ updated psychological testing material for investigating the identified problem with an understanding of its limitations.
PO6	**Psychologist & Society**: To asses and solve the problems related to societal, health and safety issues using the professional skills learned.
PO7	**Environment and sustainability**: To demonstrate the knowledge acquired for understanding the environmental issues and evolve methods for sustainable development.
PO8	**Ethics**: To understand ethical principles, professional ethics and responsibilities, and apply to solve Psychological/societal problems.
PO9	**Individual & Team work**: To function effectively as an individual / member of a team / team leader to solving different issues,
PO10	**Communication**: To effectively communicate on various issues particularly with psychosocial problems /community problems with in society, writing of reports and design of presentations.
PO11	**Project Management and Finance:** Acquire basic and advanced skills in various fields of psychology for self-employment and entrepreneurship
PO12	**Lifelong learning**: To recognize the importance of learning process throughout the life in view of psychological changes that occur from time-to-time.

Program Educational Objectives

- Exposure of students to theory & practical knowledge and to provide them systematic tools of traditional and modern types to acquire this knowledge and skill.
- To update the syllabus essential for appearing in NET, SET and other competitive exams of UPSC and APPSC.

- To make aware the students to know the psychological resources of country, to utilize by sustainable methods and conservation of living resources.
- To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self reliant India.
- To develop self employable ability and to apply knowledge for several sectors such as schools, industries, clinical setting; it will also provide employment to other dependents.

Semester – I

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-101	**GENERAL PSYCHOLOGY-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the concepts and scope of psychology
b. To comprehend the biological basis of behavior
c. To study the perception and sensation
d. To understand the concepts and learning theories

Unit – I: Psychology as Science

a. Definition, Nature, Scope and Aims of Psychology
   Historical Origins -The rise of Experimental Psychology.
b. The Emergence, development and decline of the Schools of Psychology.
   Basic and Applied Fields of Psychology.
   Methods of Study – Observation method, Experimental method,
   Survey and Case study method.

Unit – II: Biological Basis of Behaviour

a. Genetic perspective – Chromosomes, DNA, Genes Dominant – Recessive Genes Principle.

   The Evolutionary Perspective – Natural Selection
   The Environmental perspective – Principle of learning - Nature and Nurture controversy.

b. Nervous System: Basic unit and divisions of Nervous system – Localization of brain functions. Endocrine System: Pituitary, Adrenaline, Thyroid, Parathyroid, Gonads and Pancreas. Receptors, Connectors, Effects and Adjuster mechanisms.
Sensory process – Senses and sensory organs, general characteristics of Senses and Sensory thresholds, Subliminal Perception, Signal Detection Theory.

Unit – III: Perceptual Process

a. Relationship between sensation and perception, Approaches to perception – Gestalt, information Processing approach, the Cognitive approach, Integrative approach. .

b. Perceptual experiences – Visual space perception, Perceptual constancies; Perceptual movement. Errors in perception, Perceptual Defence and Vigilance,
Factors influencing perception – Learning, motivation, values and socio economic status, culture and perception.

Unit – IV: Learning:

a. Nature and definition of Learning
Experimental approaches to learning – Connectionist and Cognitive

b. Brief discussion of learning theories, Pavlov, Thorndike, Skinner, Hull, Tolman and Miller.

Measurement in learning and learning curves
Transfer of training of education and transfer, experimental analysis of transfer of training, stimulus and response similarly.

Motor and verbal learning - Motor skills, distribution of practice, warm up, patterns of movement & knowledge of results.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-102	**SOCIAL PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the concepts of social psychology
b. To comprehend the social perception and cognition.
c. To study the socialization
d. To understand the meaning and theories of attitudes

Unit – I: Introduction

a. Definition, understanding social behaviour

   Historical origins; relationship with other social sciences
b. Research methods in social psychology: Field, Observation, Experimental, Survey.

Unit – II: Social Perception and Social Cognition

a. Person perception and object perception; Bem's theory of self perception. Social perception; communication; social interaction.

b. The process of attribution; Kelley's theory of causal attribution: Major sources of bias; practical applications of attribution theory.

   Social Cognition – Major cognitive strategies: affect and cognition, self awareness, applications of self awareness.

Unit – III: Socialization

a. Definition and goals of socialization, socialization process; the context of socialization

b. Social motives: Sex role identity, agencies of socialization, the development of self concept, self evaluation.

   Theories of Moral development (Piaget & Kohlberg).

Unit – IV: Attitudes

a. Formation of attitudes, Components of attitudes, functions of attitudes, the link between attitudes and behaviour.

b. Attitude scales: Likert, Thurston, Bogardas scales; Measurement: Self report and other techniques.

   Theories of Attitude formation and change: Balance theory, congruity theory, and cognitive dissonance theory.

CO_4	3	2	2	2	1	3	-	3	3	3	-	3

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-103a	**PSYCHOPATHOLOGY-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the meaning abnormal behavior and historical and current trends
b. To comprehend the models of abnormal behaviour and approaches to therapies
c. To know the classification and assessment of abnormal behaviour
d. To evaluated different approaches to therapies for abnormal behaviour

Unit – I: Abnormal Psychology

a. Meaning and Definitions of Psychological abnormality.
   Criteria of normality and abnormality.
b. Historical - How abnormality viewed and treated in the past: Current trends.

Unit – II: Models of Abnormality

a. Biological model; Psychodynamic model
b. Behaviouristic model; Cognitive model
   Humanistic – Existential and Socio-cultural model

Unit – III: Classification and Assessment

a. Clinical Assessment and Diagnosis
   Classification of Psychological Disorders – DSM V; ICD.10.
b. Causes of abnormal behaviour; Biological, Psych-social and Socio Cultural factors.

Unit – IV: Approaches to Therapies

a. Biological therapy: Chemo therapy, Electro therapy, Brain –wave therapy
b. Psychosocial Approaches to therapy; Psychoanalytic therapy, Behaviour therapy, Humanistic – Existential therapies, Interpersonal therapy, Transactional Analysis and Group Therapy, Socio-cultural approaches to therapy; Current issues and trends in Treatment.

Psy-103b	**PSYCHOLOGICAL MEASUREMENT-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the assessment and psychological measurements
b. To comprehend the development of psychological tests and principles of test construction.
c. To know the Principles of Test Construction
d. To understand the test Development and test Standardization Procedures

Unit – I: Psychological Measurement

a. Introduction – Psychological Assessment and Psychometrics – Nature, Psychophysical Measurements – Psychophysical Theory-Psychophysics and Sensory limens, Psychophysical laws.

b. Modern Psychophysics – Psychological Scaling methods – Rating scales – Attitude Scales

Unit –II: Developments in Psychological Measurement

a. Early History of Psychological Measurement – Psychophysics – Mental Testing – Contributions of Galton and Binet; Interest in the mentally deficiency; Later Developments; Contemporary Status of Psychological Measurement.

b. The Psychological Test: Definition, Types – Factors influencing test performance – Test administrative procedures – Testing conditions – rapport, examiner effects, situational variables – test anxiety.

Ethical and Professional Concerns in Testing – Control in the use of Psychological tests; Sources of Psychological tests.

Unit – III: Principles of Test Construction

a. Test Formulation – Content selection - Item writing – Item analysis – Objectives and use of Item analysis; Item Difficulty; Item validity, Item discrimination – Item reliability – Internal consistency.

b. Reliability – basic concepts, methods of test reliability – reliability of speed & power tests – Special problems in reliability.

   Validity – basic concepts, methods of test validity – general problems.

Unit – IV: Test Development and Test Standardization Procedures

a. Basic steps in Test development: Instructions in Test Administration

b. Development of Norms – Types of norms – Interpretation of Test scores – Statistical Indices – Computers usage in Testing.

Psy-103c	**POSITIVE PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

1. To understand the human strength of positive psychology
2. To acquaint students with positive subjective states and processes
3. To enable students to appreciate importance of positive Individual Traits
4. To understand the Positive behaviour in Institutions

Unit-1: Introduction to Positive Psychology

a. Need for a science of human strengths and virtues
b. Deconstruction of illness ideology and inclusion of human strengths
c. Positive Psychology: Assumptions, Goals and Definitions
d. History of positive psychology; three pillars of positive psychology

Unit-2: Positive Subjective States

a. Model of well-being
b. Subjective well-being and positive emotions
c. The flow experience
d. Positive Emotions; Optimism and Hope

Unit-3: Positive Individual Traits

a. Love and self-compassion; self-efficacy
b. Creativity &Wisdom
c. Purpose, courage and resiliency

d. Empathy and Altruism

Unit-4: Positive Institutions

a. Positive schooling

b. Health and wellness; aging well and role of family

c. Psychology of forgiveness for healthy society

d. The Me/We balance: Building better communities

Psy-104a	**CHILD DEVELOPMENT PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To expose the student to the basics of Child Development
b. To help student understand research in child development
c. To understand the biological development of a child
d. To evaluate personality development of a child

Unit-I: Child development

Nature of child development: the field of child development , Domains of child development, Periods of child development , The psychoanalytic perspective ,Behaviorism and social learning theory, Piaget's cognitive-developmental theory

Unit-II: research in child development

Research strategies in child development, Systematic observation, Self-Reports interviews and questionnaires, Psycho-physiological methods, The clinical or case study method, Methods for studying culture

Unit-III: biological development

Foundations of Development, The genetic code, the sex cell, Patterns of Genetic inheritance, Child birth, Approaches to children, Birth complications, Oxygen deprivation, Preterm and low-birth weight infants Motor and perceptual development in infancy, the course of physical development, factors affecting physical growth

Unit-IV: personality development

Personality and social development , Emotional development, Functions of emotions, Emotions and cognitive processing, Development of emotional expression Happiness, anger and sadness, fear, self-conscious emotions, Emergence of self and development of self concept, Self-esteem, structure, changes if level of self–esteem , Social problem solving, Training social problem solving

Psy-104b	**PSYCHOLOGICAL MEASUREMENTS AND STATISTICS**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives :

a. To become acquaint with intelligence and achievement tests
b. To learn the measurement of personality tests
c. To understand the Statistics for Psychological Measurement
d. To know the Distribution of Scores on Variables

Unit- I: Intelligence and Achievement Tests

a. Intelligence Tests – Definition, Binet's Scales; Wechsler Scales (WISC, WAIS); Individual Vs. Group tests; Verbal Vs. performance Scales of intelligence; Intelligence tests as clinical instruments; Multifactor Test Batteries

   Tests of Intellectual Impairment

   Achievement Test – Definition; Characteristics of Achievement Tests; Achievement Tests for Special Areas.

b. Special Abilities – Definition of Aptitude, Motor and Manual tests; DAT Battrey, Multiple Aptitude Test Battery, Special Aptitude tests; Evaluation of Aptitude test.

   Tests of interests, Values and Attitudes.

Unit – II: Personality Tests

a. Self Report Measures - Personality Inventories - 16 PF, MMPI, CPI; EPI (Eysenck).

b. Projective Tests – Thematic Apperception test, Children Apperception test, Rorschach Ink Blot test, Picture Arrangement test, Rosenzweig Picture Frustration test, CAT.

Situation Tests: Semantic Differential, Socio-metric methods, Psychodrama.

Neuropsychological Tests as diagnostic tools.

Unit – III: Statistics for Psychological Measurement

a. Introduction to statistics – Importance in Psychological Measurement.

b. Measures of Central Tendency of scores, Measures of Variation of scores, Measures of Associations, Multi Variate statistical methods.

Unit – IV: Distribution of Scores on Variables

a. Graphic Representation of test data
b. Frequency distribution – Normal Probability Curve (NPC)

Tests of significance of Some Statistics

Use of Statistical Packages – SPSS in psychological research.

Semester - II

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-201	**GENERAL PSYCHOLOGY – II**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

1. To understand fundamentals of motivation and emotion
2. To understand basic concepts of memory and forgetting
3. To comprehend the thinking and intelligence
4. To evaluate the personality of individuals

Unit – I: Motivation and Emotion

a. Historical antecedents of motivation from mechanism to cognition. Motivation sequence and motivational concepts – instinct, drive, motive and incentive. Physical and Psycho - social motives – A brief study of motivational theories – Freud, Mc Dougall, Maslow, S-R and Cognitive. Measurement of Motivation – Issues and techniques – cross cultural perspective of motivation.

b. Emotions – nature, development, differentiation and expression of emotions, physiological basis of emotion. Brief review of theories of emotion – Physiological – James – Lange theory, Cannon Bard theory, Behavioural facial feedback theory and Schachter two factory theory and cognitive appraisal theory of emotion. Measurement of emotions – Physiological, expressive and cognitive measures.

Unit – II: Memory and Forgetting

a. Models of memory – information processing model – sensory memory, short – term memory, long –term memory, encoding, storage and retrieval.

b. Factors influencing memory – Repetition, meaningful learning, whole Vs part learning, massed and spaced practicing, Motivation, feed back and passage time Measurement of Memory – study habits, mnemonic devices, Nature of forgetting, theories of forgetting: Interference theory, motivation theory, Decay theory, Trace-change theory.

Unit – III: Thinking

a. Nature and tools of thinking, Tools of thinking – images and types of image
   Concepts – development and process of concept formation and types of concepts. Language – Structure of language, acquisition of language and the relationship between language and thinking.

b. Varieties of thinking: Reasoning – inductive and deductive reasoning. Problem solving – types of problem solving – trial and error, insight, algorithms. Heuristics steps and impediments in problem solving. Critical thinking, Inference and pittals. Piaget model of cognitive development.

Unit – IV: Intelligence and personality

a. Nature and distribution of intelligence
   Differences in intelligence – individual, gender and racial factors, Influence of heredity and environment – Assessment, Theories of Intelligence – Spearman, Thurston, Stenberg and Gardner.
b. Personality: Definition, Nature & Development, determinants of personality. Classification of personality (type & trait) and measurement.

Psy-202	**APPLIED SOCIAL PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand the Social Influence
b. To acquaint with social exchange process in social behaviour.
c. To comprehend the prejudice and discrimination
d. To understand what is psychological groups and individuals.

Unit – I: Social Influence

a. Forms of Social influence: Conformity, compliance and obedience Asch's experiments on conformity; factors affecting conformity; the bases of conformity.

b. Compliance: Tactics used in compliance; Ingratiation, reciprocity and multiple requests, guilt and compliance. Obedience: Milgram's Studies on destructive obedience, resisting the effects of destructive obedience, modeling as a basis for unintentional social influence.

Unit – II: Social Exchange Process

a. The nature of co-operation and competition, bargaining and negotiation, resolving interpersonal conflicts through bargaining; perceived fairness in social exchange; equity and inequity, factors for restoring fairness in social exchange.

b. Prosocial behaviour: altruism: Characteristics influencing altruism, theories of altruism: reinforcement theory, cognitive theory: Bystander effect, explanations, the characteristics of the helper and the helpee; Interpersonal attraction and love: Types of love. Determinants of attraction: physical attractiveness, attitude, similarity and reciprocity.

Unit – III: Prejudice and Discrimination:

a. Sources of prejudice. Combating prejudice, sex & gender prejudice: nature and origin, discrimination against women.

b. Aggression and Violence. Theoretical perspectives, social and cultural determinants of aggression; individual determinants, prevention and control of human aggression.

Unit –IV: Groups and Individuals

a. Groups: Nature and functions: group formation, how groups function: roles, Status, norms and cohesiveness; groups and task performance: Social Facilitation, Theories of Social Facilitation; Social Loafing, Decision making by groups.

b. Leadership: Definition, types of leaders, characteristics of a leader, functions of a leader, theories of leadership.

Objectives

1. To get knowledge of psychological tests and their use in diagnosis.
2. To make students able to diagnose patients with the help of projective tests.
3. To get understanding of different diagnostic systems.
4. To Learn how to take case history of patients and to make differential diagnosis.

Unit -I : Psycho-diagnosis:

Introduction and rationale, factors influencing psychological testing pits all of psychological testing, Case-history and Mental status examination, Tests of Primary Mental Abilities: a) Attention and Concentration b) Perception c) Memory d) Thinking and Reasoning e) Intelligence

Unit-II : Tests of Differential Diagnosis

a) Tests of Thought Disorder b) Questionnaire for Differential Diagnosis c) Rating Scales

Unit-III : Personality Tests:

Rorschach Test, Interview and Adjustment Test.

Unit-IV : Neuropsychological Assessment:

Psycho-physiological Assessment: Assessment of psycho- physiological indices of arousal/anxiety (e.g. GSR, EMG and ECG) and to correlate with those of subjective reports of the same.

Course Code	Course Title	No of Hours Per week	No of Credits
Psy-203c	**COMPUTER APPLICATIONS IN PSYCHOLOGICAL RESEARCH**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives

a. To understand the basic components of computer
b. To know and working in Ms Office, power point and internet services.
c. To comprehend the application of computer knowledge through creating emails, scientific journals and data scoring
d. To be able to understand **Statistical Packages**

Unit – I: Introduction to Computers

a. Definitions – Basic components of computer –block diagram – Input / Output devices – Key board- Mouse and scanner – directories and sub-directories.
b. Evolution of Computer generations – Fundamentals in Computers

Unit – II: MS Office-I

a. MS word: Creating, Opening and saving files- Editing and formatting text- spell and grammar check- auto correct- creating of tables and columns- mail merge- word art- concept of a macro print preview.
b. MS PowerPoint: Creating power point slide- editing and formatting the presentation etc.,

Unit – III: MS Office-II & Internet Services

a. MS Excel: Work sheet- entering data and creating work sheets and work books- opening and saving workbooks- editing and formatting-sorting, filtering and pivot tables- creating

graphs and charts- mathematical and statistical functions. MS accesses; opening and saving, features and data entry and usage.

b. Use of Internet Services – Creating e-mail- sending mails- browsing websites of Psychology, browsing scientific journals- search engines- data storing

Unit – IV: Statistical Packages

a. Use of Statistical Packages in Psychological Researches - Introduction to SPSS - What is SPSS – Purposes – Using the Windows in SPSS
b. SPSS Windows – SPSS file types – Creating and modifying Data Files – Data Modification – Descriptive Statistics – Inferential Statistics.

Psy-204a	**LIFE SPAN DEVELOPMENTAL PSYCHOLOGY: INFANCY TO ADOLESCENCE**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	
(Common for both M.Sc. Psychology and M.Sc. Counseling Psychology)			

Objectives:

a. To understand human development
b. To become aware of infancy and babyhood
c. To comprehend the Early and Late Childhood and Adolescence.
d. To know the development of Adolescence

Unit – I: Human Development

a. Principles and factors of development; scope of life span development; periods of the human life span, Perspectives on human development; the mechanistic perspective, the organismic perspective, the psychoanalytic perspective and the humanistic perspective.

b. Fertilization; the mechanisms of heredity; heredity and environment; chromosomal abnormalities; prenatal diagnosis of birth defects; Prenatal influences, maternal nutrition, maternal drug intake and other maternal-factors; prenatal stages and characteristics.

Unit – II: Infancy and Babyhood

a. Infancy and babyhood: The birth process, birth complications, infancy; sub divisions, physical characteristics; major adjustments; physical and psychological development of infants, growth and motor development, environmental influences on motor development, mortality in infancy; early learning, classical conditioning, operant conditioning, habituation.

b. Intellectual development: The psychometric approach, Piagetian approach, Information processing approach, language and speech development.

Social and Personality Development: the psychosexual (Freud) and psychosocial (Erilkson) theories, emotions, the family's role in personality and social development; socialization developmental tasks; physical and psychological hazards

Unit – III: - Early and Late Childhood

a. Early childhood: Physical growth and motor development; childhood health and illness; sleep pattern and problems. Intellectual development: Piaget's pre-operational stage; language' early childhood; the development of social speech; schooling: preschool, benefits. Social and personality development: Theoretical perspectives on personality: Sigmund Freud, Erikson, effect of child-rearing practices on personality development. Play: social play and cognitive play, implications, Hazards of early childhood.

b. Late childhood:

Physical development, growth, motor development, intellectual development, Piaget's stage of concrete operations, moral development, Piaget's theory, Kohlberg's studies. Language development: Communication ability, measuring intelligence in school children, creativity in children. Children in School: the teachers influence, educating handicapped children, learning disability. Social and personality development, theoretical perspectives; Freud, Erikson; social groups, influences, self-concept in school children; the child in the family; emotional disturbances; Hazards of late childhood.

Unit – IV: - Adolescence

a. Physical development: physiological changes of adolescence, psychological impact of physical changes; health problems. Intellectual development: Piaget's stages of concept development, moral development: Kohlberg's stage of normal development;

b. Social and personality development: theoretical perspectives on personality development Hall, Freud, Erikson; the search for identity; Relationship with parents, peers, friends, sexual identity.

COUNSELING PSYCHOLOGY (SELF-SUPPORTING)

THIRD SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
CPsy-301	**COUNSELLING PROCESS**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives:

a. Understand the meaning and definition of counseling and counselling as helping profession.

b. Counselling and its relation with guidance psychotherapy, Clinical psychology and social work.

c. Legal. Professional and ethical considerations in counselling.

d. The communications skills involving verbal and non verbal methods and effectively managing transference and resistance in the process of counseling.

Unit I:

a) The concept of counselling – Definition of counselling – counselling as helping profession- helping relationship – counselling and related fields – guidance, Psychotherapy, clinical psychology and social work.

b) Factors contributing to the emergence of counselling- Counselling movements in modern times – History of counselling movement- Present status of counselling in India

Unit II:

a) Goals and expectations of counselling – The characteristics an effective counselor- The roles and functions of counselor- counselor skills

b) Legal. Professional and ethical considerations in counselling – Conflicting responsibility – Confidentiality – Competence and representation and ethics in research – legal

considerations – the legal recognition of counselors – Privileged communications – Expert Testimony and liability for negligence or malpractice.

Unit III:

a) The counselling setup – Influence of external conditions.
b) Phases of counselling – Phase I – Establishment of purpose
Phase – II Definitions of the counselling process

Phase – III Clarification and understanding of the clients needs

Phase – IV Progress towards the goal

Phase – V Consolidation and planning

Unit IV:

a. Structuring the relationship – Verbal and non verbal techniques – Handling transference and resistance - value orientation in counseling process

b. Types of counselling – Essentials of individual, family and group counselling – Evaluation of counselling.

Course Code	Course Title	No of Hours Per week	No of Credits
CPsy-303a	**THERAPEUTIC APPROACHES IN COUNSELING-I**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives:

a. To enable the student to have an insight into the Therapeutic Approaches of counseling.
b. To enable the student to understand the major Therapeutic techniques
c. To understand the procedures involved in the Therapeutic Approaches of counseling.
d. To understand the human behavior and insight of the client.

Unit - I: Psychoanalytic Therapy

a. Psychoanalytic Therapy (Sigmund Freud)- Introduction – Key concepts –view of human nature, structure of personality – conscious and unconscious – anxiety- ego- Defense mechanisms – development of personality .

b. The therapeutic process – therapeutic goals – Therapist's function and role – clients experience in therapy – relationship between therapist and client – application – therapeutic techniques and procedures.

Unit – II: Behaviour Therapy

a. Behavior Therapy (Arnold Lazarus) – Introduction – Historical background – Four areas of development (Classical Conditioning- Operant Conditioning –Social learning approach – Cognitive Behavior therapy) Key concepts – View of human nature - therapeutic goals – Therapist's function and role – clients experience in therapy – Relationship between therapist and clients.
b. Applications of therapeutic techniques Relaxation training and related methods - Systematic desensitization Exposure Therapies - Eye movement, desensitization and reprocessing - Assertion training - Self management and self directed behavior.

Unit III: Person Centered Therapy (Carl Rogers)

a. Introduction – Historical background – Existentialism and Humanism. Key Concepts: View of human nature- Basic characteristics – Therapeutic Process: Therapeutic goals – Therapist's function and role - Client's experience in therapy – relationship between therapist and client.
b. Applications – Therapeutic techniques and procedures: Evolution of person- centered methods. The role of assessment – Areas of application.

Unit IV: Existential Therapy (Viktor Frankl and Rollo May)

a) Introduction – Historical background - Key concepts – View of human nature –The capacity for Self-awareness – Freedom and responsibility– Striving for identity and relationship to others – The search for meaning. Anxiety as condition for leaving – Awareness of death and non being.
b) The Therapeutic Process: Therapeutic goals – Therapist's function and role – clients experience in therapy – relationship between therapists and client – application – Therapeutic Techniques and procedures.

Course Code	Course Title	No of Hours Per week	No of Credits
CPsy-303c	**HEALTH PSYCHOLOGY**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Objectives :

a. To understand the concept of the Health psychology
b. To acquaint with and health behaviour.
c. To comprehend the health behaviour enhancement and management.
d. To know the future of the health psychology

Unit – I: Introduction

a. Introduction, definition - need for health psychology - relating health psychology to other fields - maintaining a healthy state and coping with illness – Biomedical and Bio-medico-social model.

b. Environmental psychology - environmental effects on Human Behaviour - the effect of human behaviour environment, urban life - health care, Socio-cultural perspective - cross cultural studies - epidemiological studies - social pathology - divorce - communal violence.

Unit –II: Health Behaviour - Enhancement

a. Health Behaviour and Primary prevention Health behaviours - changing health habits through cognitive behavioural approaches – Trans-theoretical model and Social engineering – Health enhancing behaviours - Health compromising behaviours.

b. Stress and Coping – Sources of stress and moderators of stress experience - coping resources and coping styles - Social support - Management of stress.

Unit-III: Management

a. Management of chronic illness - quality of life - emotional responses to chronic illness - personal issues - coping and rehabilitation - psychological intervention - heart disease, Hypertension, Stroke and diabetes.

b. Psychological issues in advancing to hospital care - problems of survivors. Psycho-neuro-immunology, AIDS, Cancer and Arthritis.

Unit – IV: Future

a. Challenges for the future Health promotion - Stress and Management - Health services - Management of serious illness - Trends for the future - Becoming a health Psychologist.

b. Organized efforts to mental health - governmental and voluntary organisations; international efforts for mental health - limitations in mental health efforts.

DEPARTMENT OF STATISTICS

Course

M.Sc. STATISTICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The department of Statistics was established in the year 1958 as a part of Mathematics Department then separated as an independent department in the year 1962. The department offers three post graduate courses (i) M.Sc., Statistics (ii) M.Sc., Applied Statistics and (iii) M.Sc., Applied Statistics (Self Finance Course). The department is active in organizing various academic programmes like conferences and workshop apart from teaching, research and consultancy. During the last five years department has organized about 20 events covering wide areas like Operations Research, Time Series, Stochastic modeling, Geo-Statistics, Bio-Statistics, Data Envelopment Analysis, Statistical computing.

The thrust areas of ongoing research in the department are time Series, Econometrics, Regression Models, Biostatistics, Operations Research, Stochastic modeling, Data Envelopment Analysis and etc. The UGC has identified the department for special assistance sanctioned 44 Lakhs plus 2 project fellows at SAP- DRS-I and 40 Lakhs plus 10 research fellows under BSR and DST FIST 16.5 lakhs.

VISION: To en-corporate certain specific objectives and scale to prepare the students to take up challenges in any one or more functional domain

1. ACADEMICS

2. BASIC AND APPLIED RESEARCH

3. RESEARCH AND DEVELOPMENT

4. SOFTWARE SKILLS

5. INDURSTRY

6. STATISTICAL ANALYSIS

MISSION: To bring out professional having knowledge of basic laws of nature together with strong fundamentals of in core areas of statistics viz. linear algebra, probability and distributions, statistical inference, multivariate analysis, econometric methods, operations research-i, time series analysis and forecasting methods , operations research-ii. Specializations subjects like….Sampling techniques, stochastic process, linear models and applied regression analysis, computer programming and data analysis, demography and official statistics, bio-statistics, statistical process and quality control, advanced econometric models. Technical subjects like… statistical analysis using excel and spss, python, design and analysis of experiments, industrial statistics and quality control, statistical analysis using R + R practical's

PROGRAM SPECIFIC OUTCOMES:

- **PSO 1:** To obtain sound statistical knowledge for data analysis and developing inferences.
- **PSO 2:** To design and develop models for various phenomenon and obtaining optimal strategies.
- **PSO 3:** To become a good data scientist.
- **PSO 4:** To become competent to pursue research or a career in Statistics.
- **PSO 5:** To inculcate scientific attitude and enriched with interdisciplinary and transdisciplinary applications of Statistics for developing sound decisions.

PROGRAM OBJECTIVES:

At the program the student will be able to

- **P01:** Apply the scientific knowledge to solve the statistical data analysis problems
- **PO2:** Identify, formulate and analyze advanced scientific problems reading substantiated conclusions for all kind of disciplines like medical, biological series and so on.
- **PO3:** Creative design solutions for advanced scientific problems `and design system components using statistical analysis that meet the specified need with appropriate attention to health and safety risks.
- **PO4:** Using statistical analysis understanding the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge and need for sustainable development.
- **PO5:** Create, select and apply appropriate techniques, resources and modern statistical tools to complex statistical problems with understanding of the limitations.
- **PO6:** analyzing the impact of marketing sales into the society using data science techniques.
- **PO7:** By statistical methods demonstrating the knowledge and understanding the scientific principles and applying the statistical tools to manage projects and in multidisciplinary environments.
- **PO8:** apply ethical principles and norms of scientific practices
- **PO9:** Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings by statistical approach.

- **PO10:** Understanding the working of various analog communication techniques by using data science methods
- **PO11:** Project management of finance in collaboration with various firms by data science techniques
- **PO12:** Recognize the need and have the preparation and ability to engage independent and life-long learning in the broadest context of scientific and technological change by statistical approach.

PROGRAM EDUCATIONAL OBJECTIVES

At the end program the student will be able to

- **PEO1:** Apply principals of basic scientific concepts in understanding and predictions of statistical sciences
- **PEO2:** Develop human resources with specializations in theoretical and experimental techniques required for carrier in academic, research and industry
- **PEO3:** Engage in lifelong learning and adopt changing in professional and society needs

PROGRAM OUTCOMES

- **PO 1:** To obtain sound scientific knowledge in Statistical and applied aspects of Statistics.
- **PO 2:** To describe the phenomenon of various systems and processes.
- **PO 3:** To handle and analyse data bases with sound computer skills and develop interpretations.
- **PO 4:** To model the random phenomenon of various systems and processes using Statistical analysis.
- **PO 5:** To become a data scientist for assessing in decision making.
- **PO 6:** To get a wide range of opportunities and private, corporate and government sector organisations.
- **PO 7:** To analyse and develop strategies for industrial and service organisations.
- **PO 8:** To be able to train non statisticians to handle Statistical and data analytics.
- **PO 9:** To get knowledge about various Statistical packages like SPSS, Python, R etc.,
- **PO10:** To expertize in theoretical and applied principles of Statistics needed to enter the job force.

- **PO11:** To perform Statistical inference in several circumstances and interpret the result applied contest.
- **PO12:** To Communicate concepts in Probability and Statistics using Technical and Non-Technical Language.

S.V. UNIVERSITY, TIRUPATI

DEPARTMENT OF STATISTICS

M.Sc., STATISTICS

CBCS Pattern (With effect from January, 2021)

The course of Study and Scheme of Examinations

NEP 2021

SEMESTER-I

Sl. No	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	ST - 101	Core	Linear Algebra	6	4	20	80	100
2	ST - 102	Core	Probability and Distributions	6	4	20	80	100
3	ST - 103	Generic Elective	a. Sampling Techniques b. Stochastic Process	6	4	20	80	100
4	ST - 104	Compulsory Foundation **(Related to Subject)**	a. Statistical Analysis using Excel and SPSS b. Python	6	4	20	80	100
5	ST - 105	Core	Practical-I (75 Practical + 25 Record)	9	4	-	-	100
6	ST - 106	Elective Foundation	Practical-II (75 Practical + 25 Record)	9	4	-	-	100
7	ST - 107	Audit Course	Human Values and Professional Ethics-I	--	--	100	--	--
	Total			**42**	**24**			**600**

*** Among the Generic Electives the student shall choose <u>ONE</u>**

****Among** Compulsory Foundation **student shall choose <u>ONE</u>**

SEMESTER-II

Sl. No.	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	ST - 201	Core	Statistical Inference	6	4	20	80	100
2	ST - 202	Core	Multivariate Analysis	6	4	20	80	100
3	ST - 203	Optional-I	(a) Linear Models and Applied Regression Analysis (b) Computer Programming – C^{++}	6	4	20	80	100
4	ST - 204	Optional-II	a. Design and Analysis of Experiments b. Industrial Statistics and Quality Control	6	4	20	80	100
5	ST - 205	Core	Practical-III (75 Practical + 15 Viva- voce + 10 Record)	9	4	-	-	100
6	ST - 206	Elective Foundation	Practical-IV (75 Practical + 15 Viva- voce + 10 Record)	9	4	-	-	100
7	ST - 207	Audit Course	Human Values and Professional Ethics-II	--	--	100	--	--
	Total			**42**	**24**			**600**

- **Student have to choose one paper from Optional-1**
- **Student have to choose one paper from Optional-II**

SEMESTER-III

Sl. No.	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	ST - 301	Core	Econometric Methods	6	4	20	80	100
2	ST - 302	Core	Operations Research-I	6	4	20	80	100
3	ST - 303	Core	Practical-V (75 Practical + 25 Record)	9	4	-	-	100
4	ST - 304	Generic Elective * **(Related to Subject)**	(a) Demography and Official Statistics (b) Bio-Statistics	6	4	20	80	100
5	ST-305 Skill Oriented Course	Mandatory (Theory + Practical-VI)	Statistical Analysis Using R + R Practicals	9 (3T+ 6P)	4	10	90 (40T+50 P)	100
6	ST - 306	Open Elective **(For other Department)**	(a) Statistics for Biological and Earth Sciences (b) Statistics for Social and Behavioral Sciences	6	4	20	80	100
	Total			**42**	**24**			**600**

*** Among the Generic Electives the student shall choose <u>ONE</u>**

****Open Elective papers is for other department**

SEMESTER-IV

Sl. No.	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	ST - 401	Core	Time Series Analysis and Forecasting Methods	6	4	20	80	100
2	ST - 402	Core	Operations Research-II	6	4	20	80	100
3	ST - 403	Generic Elective * **(Related to Subject)**	(a) Advanced Econometric Models (b) Total Quality Management and Six - Sigma	6	4	20	80	100
4	ST - 404	Core	Practical-VII (75 Practical + 15 Viva-voce + 10 Record)	9	4	-	-	100
5	ST - 405	Project Work / Multidisciplinary (Theory + Practical-VIII)	**Student Project:** Data Centre / Institutions / Companies and etc., (or) Statistical Process and Quality Control (Theory + Practical)	9 (3T+ 6P)	4	10	90 (40T+ 50P)	100
6	ST - 406	Open Elective **(For other Dept.)**	(a) Business Analytics (b) Survival Analysis	6	4	20	80	100
	Total			**42**	**24**			**600**

*** Among the Generic Electives the student shall choose <u>ONE</u>**

**** Open Elective papers is for other department**

** Primary or Secondary data collected from banks, fields or any other relevant areas are analyzed and submitted

<u>Student Project</u> : Dissertation - 60 Marks

Viva Voce - 10 Marks

Presentation - 30 Marks

Total - 100Marks

ST 101: LINEAR ALGEBRA

Unit-I: Algebra of matrices; Elementary transformations; Rank and Inverse of a matrix; Nullity; Partitioned matrices; Kronecker product; Generalized inverse of matrix; Moore-Penrose generalized inverse; Solutions of simultaneous equations.

Unit-II: Finite dimensional Vector Spaces; VectorSpaces and Subspaces; Linear dependence and independence; Basis and dimension of a vector space; Completion theorem; Inner product Spaces; Orthonormal basis and Gram-Schmidt orthogonalization process; Orthogonal projection of a vector.

Unit-III: Linear transformationsand properties; Orthogonal and unitary transformations; Real quadratic forms; Reduction and classification of quadratic forms; Hermitian forms; Sylvesters law of inertia; Canonical reduction of quadratic form.

Unit-IV: Characteristic roots and vectors; Cayley – Hamilton theorem; Minimal polynomial; Similar matrices; Spectral decomposition of a real symmetric matrix; Reduction of a pair of real symmetric matrices; Hermitian matrices.

Subject Code	Subject Name	Credits Allotted		Total
ST-101	**Linear Algebra**	Theory	Practical	4
		4	---	
Course Objective	1. To Prepare Students about algebra of matrices and vector spaces. 2. To explain about roots vectors and linear transformations with an			

	examples
Course Out comes	Students understood for estimation of elementary transformations in matrix and their solutions. Students learnt about characteristic roots and vectors with numerical examples. They also know theoretical proofs of theorems.

ST 102: PROBABILITY AND DISTRIBUTIONS

Unit-I: Classes of sets, fields, σ -fields, minimal σ -field, Borel σ – field in R^K, sequence of sets, limsup and liminf of a sequence of sets. Measure, Probability measure, properties of a measure, Lebesgue and Lebesgue-Stieltjes measures, Measurable functions, Random variables, sequence of random variables, almost sure convergence, convergence in probability (and in measure). Monotone convergence theorem, Fatou's lemma, Dominated convergence theorem.

Unit-II: Expectation of a random variable, inequalities on expectations, Markov, Holder, Jensen and Liapiunov inequalities. Borel- Cantelli - Lemma, Independence, Weak law and strong law of large numbers for iid sequences, Chebyshev's theorem, khinchine's theorem, Kolmogorov theorems (statements only), convergence in distribution.

Unit-III: Laplace and Weibull distributions.Functions of random variables and their distributions, sampling distributions: central Chi Square, t and F distributions and its properties, applications, relation between t and F, F and χ^2; Fisher's Z-distribution, fisher's Z-transformation. Non-central chi-square, t and F distributions and their properties.

Unit-IV: Multiple and partial correlation coefficients, multiple linear regression, inter relationship among partial and multiple correlation and regression coefficients. Null distributions of simple, partial and multiple correlation coefficients.Order statistics and their distributions, joint and marginal distributions of order statistics, distribution of range. Extreme values and their asymptotic distributions.

Subject Code	Subject Name	Credits Allotted		Total
ST-102	**Probability and Distributions**	Theory	Practical	4
		4	---	
Course Objective	1. To Explain about classes of sets and Probability measures 2. To discuss on random variables and convergence in probability and the important theorems with proofs. 3. To discuss about inequalities on expectations with their derivations and laws of numbers. 4. To explain about different discrete and continuous distributions and their Properties. 5. To learn about derivations and properties of various sampling distributions. 6. To explain order Statistics and their properties			
Course Out comes	1. Students must have knowledge about random variables, expectations, sets and their properties and inequalities where ever necessary. 2. Students also know the weak law, strong law and central limit theorem and their importance 3. Students know about different continuous and discrete distributions and their properties. 4. They have awareness about central and non central sampling distributions and order Statistics. Idea about simple, partial and multiple correlation coefficients.

ST 103 (a) : SAMPLING TECHNIQUES

Unit-I: Review of basic concepts of sampling theory such as sampling design, sampling scheme, sampling strategy etc., Sampling with varying probability with and without replacement, PPS WR/WOR methods – Lahiri's sample scheme, Hansen – Hurwitz, Des Raj estimators for a general sample size and Murthy estimator for a sample of size 2, Symmentrized Des Raj estimator.

Unit-II: Hurwitz – Thompson estimator (HTE) of a finite population total / mean, expression for V(HTE) and its unbiased estimator. IPPS scheme of a sampling due to Midzuno – Sen and JNK Rao (sample size 2 only). Rao – Hartley-Cochran sampling scheme for a sample of size n with random grouping.

Unit-III: Ratio and Regression methods of estimation, Two stage sampling, Multi stage sampling, Cluster sampling. Resampling methods and its applications.

Unit-IV: Double sampling for difference, ratio, regression and PPS estimators; Large scale sample surveys, Errors in surveys, A mathematical model for errors of measurement, Sampling and Non-sampling errors, Sources and types of non-sampling errors, Remedies for non-sampling errors.

ST 103 (b) : STOCHASTIC PROCESSES

Unit-I: Introduction to stochastic processes (sp's): classification of sp's according to state apace and time domain. Countable state Markov chains (MC's), Chapman – Kolmogorov equations, calculation of n – step transition probability and its limit. Stationary distribution, classification of states,, transient MC, random walk and gambler's ruin problem.

Unit-II: Discrete state space continuous time MC: Kolmogorov – Feller differential equations, Poisson process, birth and death process; Applications to queues and storage problems. Wiener process as a limit of random walk, first – passage time and other problems.

Unit-III: Renewal theory: Elementary renewal theorem and applications. Statement and uses of key renewal theorem, study of residual life time process: weakly stationary and strongly stationary process; Moving averages and auto regressive process.

Unit-IV: Branching process: Galton – Watson branching process, probability of ultimate extinction, distribution of population size. Martingale in discrete time, inequality, convergence and smoothing properties.Statistical inference in MC and Markov process.

ST 104 (A) :STATISTICAL ANALYSIS USING EXCEL AND SPSS

Unit-I: Review of Excel, sorting, filtering and construction of charts. Curve fitting and interpretation of the output. Statistical functions in Excel - Calculating theoretical probability using Binomial, Poisson and Normal distributions. Matrix operations- Transpose, Product and Inverse operations using Excel. Pivot tables and look up functions.

Unit-II: Data Analysis Pak in Excel, descriptive statistics, tests of hypothesis, ANOVA, Correlation and Regression, Random Number Generation from different distributions, Binomial, Poisson, Uniform, Normal and from discrete distributions with given mean and variance. Forecasting Using Excel – Moving Averages and Exponential Smoothing, Use of functions, Linest, Logest, Forecast, Growth, Trend for trend analysis. The use of solver for optimization – Application to LPP.

Unit-III: Introduction to SPSS, Different Menu's in SPSS, creating a data file, opening excel files,variables and labels,selecting casesby filtering,recoding of data, merging of files, Sorting of Cases and Variable, SPSS Output and its transfer to excel and word. Analysis categorical data- Scales of Measurements, Data reliability-test rest method, Cronbach's alpha.

Unit-IV: Using SPSS Analysis tools, descriptive statistics, cross tabs (with stress on procedures and syntax). Post-hoc analysis for multiple comparisons using Tukey's test, Duncan's Multiple Range Test, Dunnet's test and Scheffe's test with interpretation. Selection of variables in Multiple Linear Regression – stepwise procedures and analysis of residuals. Procedure for Binary Logistic regression, Factor analysis, Linear Discriminant analysis and Cluster analysis.

ST 104 (B) :PYTHON

UNIT – I:Introduction to Python Programming Language:

Introduction to Python Language,Strengths and Weaknesses, IDLE, Dynamic Types, Naming Conventions, String Values, String Operations, String Slices, String Operators, Numeric Data Types, Conversions, Control Flow and Syntax, Indenting, The if Statement, Relational Operators, Logical Operators, True or False, Bit Wise Operators, The while Loop, break and continue, The for Loop, Lists, Tuples, Sets, Dictionaries, Sorting Dictionaries, Copying Collections, In Functions.

UNIT –II :Object and Classes :

Classes in Python, Principles of Object Orientation, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes.

UNIT –III : Functions and Modules :
Introduction, Defining Your Own Functions, Parameters, Function Documentation, Keyword and Optional Parameters, Passing Collections to a Function, Variable Number of Arguments, Scope, Functions - "First Class Citizens", Passing Functions to a Function, Mapping Functions in a Dictionary, Lambda, Modules, Standard Modules – sys,□Standard Modules – math,Standard Modules – time,The dir Function**.**

UNIT –IV : I/O and Error Handling In Python :

Introduction, Data Streams,□Creating Your Own Data Streams, Access Modes, Writing Data to a File, Reading Data From a File, Additional File Methods, Using Pipes as Data Streams, Handling IO Exceptions, Working with Directories, Metadata, Errors, Run Time Errors, The Exception Model, Exception Hierarchy, Handling Multiple Exceptions.

Books for Study:

1. Dive into Python, Mike
2. Learning Python, 4th Edition by Mark Lutz
3. Programming Python, 4th Edition by Mark Lutz

Course Outcomes:

1: Able to understand the concept of Python Programming.
2: Expertise in Object and Classes.
3: To be able to explore Functions and Modules learning.
4: Able to understand the concept of I/O and Error Handling In Python.

Course Out comes:

1. Students have done Python Programming and their Object and Classes.
2. Students have understandI/O and Error Handling In Python

ST 107 : HUMAN VALUES AND PROFESSIONAL ETHICS-1

UNIT-I: Definition and Nature of Ethics-Its relation to Religion ,Politics, Business, Legal ,Medical And Environment,Need And Implementation Ethics-Goals-Ethical Values in Various Professions.

UNIT-II: Nature Of Values-Good and Bad, Ends and Means, Actual and Potential Values, Objectives and Subjective Values ,Analysis Of Basic Moral Concepts-rights, Ought, Duty, Obligation, Justice. Responsibility and Freedom .Good Behavior and Respect for Elders, Character and Conduct.

UNIT-III: Ahimsa (Non-Violence), Satya (Truth),Brahmacharya (Celibacy),Asteya (Non-possession) and APARIGRAHA (Non-stealing).Purusharthas (Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment bodily desires).Moksha (Liberation)

UNIT-IV: Bhagavad Gita-(a) Niskama karma.(b).Buddhism-The four noble truths-Arya Astanga marga, (c) Jainisam- mahavratas and anuvratas. Values embedded in various religions, Religious tolerance, Gandhian ethics.

UNIT-V: Crime and Theories or punishment-(a) Reformative , Retributive and Deterrent ,(b) Views on manu and Yajnavalkya.

ST 201: STATISTICAL INFERENCE

Unit-I: Point estimation –Unbiasedness, Consistency, Efficiency and Sufficiency; Fisher-Neyman factorization theorem, complete sufficient statistics, minimum variance unbiased estimator (MVUE), Cramer - Rao inequality, Battacharayas inequality, Rao – Blackwell theorem. Exponential family, Maximum Likelihood estimation method, method of moments, method of minimum chi-squares and interval estimation.

Unit-II: Tests of hypothesis: Basic concepts, Most Powerful (MP) test, Neyman – Pearson Lemma, Consistency and Unbiased tests, Uniformly Most Powerful (UMP) test, UMP Unbiased tests, similar critical regions, Lehmann –Scheffe theorem, Likelihood Ratio Tests, Asymptotic Distribution of LR test, Bartlett's test for homogeneity of variances and Wald Test.

Unit-III: Non – Parametric tests of significance; Sign Test, Wilcoxon-Mann-Whitney U-test, Run test, Kolmogorov-Simrnov one and two sample tests, Median test, Kendall's τ test. Concept of asymptotic relative efficiency, CAN, BAN, CAUN and BEST CAUN estimators, MLE in Pitman family and Double Exponential distribution, MLE in Censored Truncated distribution.

Unit-IV: Statistical decision theory – decision problems and two person games, problems of inference viewed as decision problems, non-randomized and randomized decision rules, Loss and Risk functions, admissibility, complete and essentially complete class, complete class theorem.Bayes principle, determination of Bayes rule Minimax principle, determination of minimax rule, minimax theorem. Minimax estimates of parameters of Binomial, Poisson and Normal distributions.

Subject Code	Subject Name	Credits Allotted		Total
ST 201	**STATISTICAL INFERENCE**	Theory	Practical	4
		4	----	
Course Objective	1. To study the Estimation methods of point and their different measures and theorems, inequality. 2. To discuss about Testing of hypothesis that contains NP Lemma, UHP test, Bartlett's, Wald test, LR test and some theorems relates to hypothesis testing. 3. To discuss different Non-parametric tests with examples. Asymptotic relative efficiency and truncated distributions. 4. To study the Game theory and their problems, minimax rule, minimax theorem and minimum estimates of parameters using different distributions.			
Course Out comes	Students know about point estimation, testing of hypothesis, Non parametric models, Game theory, theorems and Proofs where ever necessary.

ST 202: MULTIVARIATE ANALYSIS

Unit-I: Multivariate normal distribution, marginal and conditional distributions, characteristics functions, Maximum likelihood estimators of parameters, distribution of sample mean vector and dispersion matrix, distribution of quadratic form in the exponent of the multivariate normal density.

Unit-II: Hotelling's T^2 and its applications – T^2 distribution, application of T^2 to single sample, two sample and multiple sample problems, optimum properties of T^2 test. Mahalobis D^2 statistic and its distribution, Multivariate Analysis of Variance (MANOVA) of one and two-way classified data.

Unit-III: Classification and discrimination: procedures for classification into two multivariate normal populations, Fisher's Discriminant function, classification into more than two multivariate normal populations, Wishart distribution and its properties, concept of sample generalized variance and its distribution.

Unit-IV: Principal Component Analysis – properties, method of extraction of principal components; Canonical variables and canonical correlations; Factor Analysis – mathematical model, estimation of factor loading, concept of factor rotation; Cluster Analysis – similarities and dissimilarities, Hierarchical clustering: single and complete linkage method.

Subject Code	Subject Name	Credits Allotted		Total
ST 202	**Multivariate analysis**	Theory	Practical	4
		4	----	
Course Objective	1. To study about Multivariate normal distributions and their properties, it's importance. 2. To discuss Hotelling's T^2, Mahalanobis D^2 statistic and its applications and properties. 3. To explain MANOVA with one and two way classified data. 4. To discuss about Principal Component Analysis, Factor Analysis and Cluster Analysis with appropriate methods.			
Course Out comes	1. Students learnt about importance of multivariate variables and their distributions 2. T^2, D^2, MANOVA models are understood and know it's			

	importance. 3. Classification analysis methods explained according to their classification algorithm.

ST 203 (A) :LINEAR MODELS AND APPLIED REGRESSION ANALYSIS

Unit-I: Two and Three variable Linear Regression models; General linear model: Assumptions; OLS estimation; BLUE; Tests of significance of individual regression coefficients; Testing the equality between two regressions coefficients; Test of significance of complete regression.

Unit-II: Criteria for model selection; Goodness of fit measures; R^2 and adjusted R^2 Criteria; C_p criterion; testing the general linear hypothesis; Chow test for Equality between sets of regression coefficients in two linear models; test for structural change; restricted least squares estimation; Generalized Mean Squared error criterion.

Unit-III: Non-normal disturbances and their consequences; test for normality; Jarque-Bera test; Shapiro-Wilk test, Minimum Absolute Deviation (MAD) estimation; Box-Cox transformations.
Statistical analysis of residuals, OLS residuals, BLUS residual, Studentised residual, Predicted residual, tests against heteroscadasticity.

Unit-IV: Non-Linear regression; Non linear least squares estimation; Maximum Likehoodestimation; Idea of computational methods; Gradient methods, Steepest descent method and Newton-raphson method; testing general Nonlinear hypothesis; Wald test, Lagrange multiplier test and likelihood ratio Test. Robust , probit, binomial logistic ,multiple logistic regression.

ST 203 (B) :COMPUTER PROGRAMMING – C^{++}

UNIT-I: Object oriented programming principles, Declaration of classes, array of classes, Pointer to classes, constructors such as void constructor, copy constructor, Destructor,

UNIT-II: Friend functions, inline functions, static class members, this pointer, Single, Multiple inheritances: Types of derivation such as public, private, protected inheritance and member access controls, ambiguity in inheritance,

UNIT-III: Virtual base class, container classes. Function overloading, Operator Overloading, Overloading of assignment, binary, unary operators.

UNIT-IV: Polymorphism, Early binding, virtual functions, Late binding, pure virtual functions, abstract base classes, constructor under inheritance, destructor under inheritance, virtual destructors.Templates and Exception Handling. Data File operations, structures and file operations, classes and file operations.

ST 204 (A) : DESIGN AND ANALYSIS OF EXPERIMENTS

Unit-I: Linear Model; Estimability of linear parametric functions; BLUE, Gauss-Markoff theorem; Generalized Gauss-Markoff theorem, ANOVA model, ANOVA for Two way and three way classifications, ANCOVA technique for one way and two-way classifications. Multiple comparisons tests using Tukey's, Duncans, Sheffe's and Dunnet's tests.

Unit-II: Latin squares and their construction, Mutually orthogonal Latin squares; Missing plot technique in Latin square Design, Graeco-Latin square Design; Analysis of Factorial Experiments involving factors with two and three levels in randomized blocks.

Unit-III: Necessity of confounding, Types of confounding, complete and partial confounding in 2^n, 3^2 and 3^3 factorial designs, Analysis of confounded factorial designs; Fractional Replication, Split Plot design.

Unit-IV: Incomplete Block Designs; B I B D, Inter and Intra Block analysis of a BIBD, Types of BIBD, construction of BIBD's using Mutually orthogonal Latin squares; Concepts of Youden square and lattice Design, Two-Associate PBIB design, Analysis of P B I B design.

ST 204 (B) :INDUSTRIAL STATISTICS AND QUALITY CONTROL

UNIT-I: General Theory of Control Charts: Control charts for attribute and variables: O.C. and A.R.L. of control charts; control by gauging; Moving average and exponentially weighted moving average charts;Cu-sum charts using V-masks and decision intervals. Capability indices: Cp, Cpk and Cpm.

UNIT-II: Acceptance sampling plans for attribute inspection: Single, double and sequential sampling plans; Plans for inspection by variables for one-sided and two-sided specifications;

UNIT-III: Mil Std and ISI plans; Continuous sampling plans of Dodge type and Wald-Wolfwitz type and their properties.

UNIT-IV: Industrial Experimentation, Fractional factorial experiments, Response surface methodology, Six sigma in process improvement and product development, Lean thinking, Value stream analysis, 5 s.

ST 204 (B)	**Industrial Statistics and Quality Control**	Theory	Practical	4
		4	----	
Course Objective	1: Can identify the cause of defects using statistical quality management techniques. 2: Able to apply statistical quality control techniques to minimise the variability in manufacturing and business process. 3: Acquainted with Six Sigma and lean thinking in industrial experimentation. 4: Expertise in the most import field of applied statistics that contributes to quality control in all most all industries.			
Course Out comes	1: Able to understand basics of production process monitoring and apply concept of control charts to it.			

	2: Apply acceptance and continuous sampling plan in production process. 3: Able to construct sampling inspection plans for attributes and variables. 4: Able to learn some advanced control charts and capability indices. 5: Able to construct Six Sigma limits.

ST 206: HUMAN VALUES AND PROFESSIONAL ETHICS-II

UNIT-I: Value Education –Definition-Relevance to present day-Concept of Human Values-self introduction-self-esteem-family values-Components , Structure and responsibilities of family-Neutralization of anger-Adjustability-Threats of family life –Status of women in family and society –Caring for need elderly –Time allotment for sharing ideas and concerns.

UNIT-II: Medical ethics-Views if charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners.Code of ethics for medical and healthcare professionals.Euthanasia ,ethical obligation to animals,ethical issues in relation to health care professional patients. Social justice in health care , human cloning , problems of abortion .Ethical issues ingenetic engineering and ethics issues raised by new biological technology of knowledge.

UNIT-III: Business ethics – Ethical standards of business-immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories causes of unethical behavior , ethical abuses and work ethics.

UNIT-IV: Environmental Ethics- Ethical Theory , man And Nature- Ecological Crisis , Pest Control , Pollution and Waste , Climate Change, Energy and Population, Justice and Environmental Health.

UNIT-V: Social ethics – Organ trade. Human trafficking, Human rights violation and social disparities, Feminist ethics. Surrogacy / pregnancy, Ethics of media-Impact of newspapers, Television , Movies and Internet.

ST 301: ECONOMETRIC METHODS

Unit-I: Quick review of Inference in general linear model; multi collinearity; Sources and consequences; detection, Farrar-Glauber Test; remedies, Ridge family of estimators and its properties; Heteroscedasticity; sources and consequences; Tests for Heteroscedasticity; Glejser's test Goldfeld-Quandt test; remedies, estimation under Heteroscedasticity.

Unit-II: Autocorrelation; sources and consequences; first order auto regressive Scheme; Durbin-Watson test; Remedies; Estimation under autocorrelation; Stochastic Regressors; Errors-in-Variables linear model; IV and ML estimation methods.

Unit-III: Finite Distributed lag models; Arithmetic lag; Inverted V-lag; Almon's Polynomial lag and Shiller's lag models; Infinite distributed lag models; Geometric lag model; OLS and IV methods of estimation; Koyek's two step and Wallis three step procedures; Pascal lag model.

Unit-IV: Simultanious linear equations models; identification; rank and order conditions; indirect least squares, IV and LIML methods; two stage least squares; k-class estimators; three stage least squares and FIML methods of estimation.

Subject Code	Subject Name	Credits Allotted		Total
ST-301	**ECONOMETRIC METHODS**	Theory	Practical	4
		4	----	
Course Objective	1. To explain about heteroscedasticity, multicollinearity and their sources, consequences and tests. 2. To discuss about Autocorrelation, different orders of Autocorrelation and their estimation procedures. 3. To explain different lag models and their estimate procedures.			

	4. To discuss about simultaneous linear equations model and their different methods and estimation.
Course Out comes	1. Students learnt heteroscedasticity, multicollinearity and autocorrelation and their estimation procedures. 2. Students understood about different lag models and simultaneous linear equations model with their estimation methods.

ST 302: OPERATIONS RESEARCH – I

Unit-I: Definition and scope of Operations research; phases in Operations Research; models and their solutions (Review of Linear Programming). Definition of Dual-Primal, Relationships- Dual Simplex Sensitivity or Post Optimal Analysis, Revised Simplex method.

Unit-II: Non-linear programming - Kuhn Tucker conditions. Wolfe's algorithm for solving quadratic programming problems. Integer programming – Branch and bound algorithm and cutting plane algorithm.

Unit-III: Flows in networks max-flow-min-cut theorem. Project Management; PERT and CPM probability of project completion, PERT – crashing.

Unit-IV: Decision making in the face of competition, two-person games, pure and mixed strategies, existence of solution and uniqueness of value in zero- sum games, finding solution in 2x2, and 2xm, and mxn games. Non – zero sum games, co-operative and competitive games, equilibrium solutions and their existence in bi- matrix games. Nash equilibrium solution.

ST 303 (A) :DEMOGRAPHY AND OFFICIAL STATISTICS

Unit-I: Nature, Scope and limitations of demography; Sources of Demographic data in India; Measures of Mortality; life-tables; construction of abridged life table; Measures of fertility Stochastic models for reproduction, Reproduction rates: GRR and NRR; Concepts of Migration and Urbanization.

Unit-II: Population Projections: Stable and Stationary populations, Lotka's model; Use of Leslie matrix. Population estimates; Chandrasekhar and Deming's method, component method, Stochastic models of population growth, Exponential and logistic population growth models: Birth and death model, Birth-death and migration model.

Unit-III: Population Genetics: Concepts of Genotypes and Phenotypes; Basic Mating from Single gene cross, Punnet Square method, Mendal's laws of heredity; Random mating; Hardy-Weinberg Equilibrium law; Calculation of Gene frequencies, Estimation of Gene frequencies in ABO blood group system.

Unit-IV: Statistical systems in India; CSO, NSSO and their functions; scope and content of population Census in India; Methods of conducting population census, Economic census and Agricultural census in India and defects; Sources of forest statistics.

ST 303 (B) : BIO-STATISTICS

Unit-I: Structure of Biological assay , Types of Biological assays: Direct assays, Potency ratio, Fieller's theorem, Behren's distribution, Two generalizations of Fieller's theorem.

Unit-II: Quantitative dose-response relationships, Linear dose-response regression, Parallel line bioassay, Slope Ratio Bioassay, Quantal responses, Estimation of median effective dose, Transformations: Probit and Logit transformations.

Unit-III:: Basic Biological concepts: Gene, Chromosomes, Alleles, Concepts of Geno types and Phenotypes, Family studies, Basic mating from single gene cross, Matrix approach to basic matings of single gene cross, Checker board method, Mendal's law of heredity: Geneotypes and Pheno type ratios, Branching system method.

Unit-IV: Types of matings, Random Mating, Concept of Gene pool, Gene frequency, Hardy–Weinberg law of equilibrium, Calculation of Gene frequencies, Genotypic frequency, Generation matrix approach to inbreeding, Estimation of Gene frequencies in ABO blood group system, Maximum Likelihood Method, Minimum Chi-Square method, Genetic parameters; Heritability Coefficients, Genetic Correlations, Repeatability, selection index; Inbreeding coefficient.

ST 305 :STATISTICAL ANALYSIS USING R + R PRACTRICALS

PRACTRICALS - VI

R PROGRAMMING

UNIT-I: Familiarizing with R environment, Using R console as a calculator, R atomic types, methods of creating vectors, combining vectors and repeating vectors, different ways of subsetting vectors using indexing, names and logicals. Arithmetic and logical operations. Using character vectors for text data, manipulating text using strsplit(), paste(), cat(), grep(), gsub() functions; handling factor data. Working with dates.

UNIT – II: Creating Matrices, getting values in and out of matrices, performing matrix calculations; Working with multidimensional Arrays; creating data frames, getting values in and out of data frames, adding rows to data frame, adding variables to data frame; creating lists, extracting components from a list, changing values of components of lists. Getting data into and out of R - reading data in CSV files, EXCEL files, SPSS files and working with other data types. Getting data out of R – working with write.csv() and write.table() functions.

UNIT – III: Writing Scripts and functions in R. writing functions with named, default and optional arguments. functions using as arguments. Debugging your code. Control statements in R – conditional control using if, if-else, ifelse; looping control using for, while, repeat; transfer of control using break and next. Manipulating and processing data - creating subsets of data, use of merge() function, sorting and ordering of data. Group manipulation using apply family of functions - apply, sapply, lapply, tapply.Base graphics. Use of high-level plotting functions for creating histograms, scatter plots, box-whiskers plot, bar plot, dot plot, Q-Q plot and curves. Controlling plot options using low-level plotting functions - Adding lines, segments, points, polygon, grid to the plotting region; Add text using legend, text, mtext; and Modify/add axes, Putting multiple plots on a single page

UNIT – IV:Working with probability distributions - normal, binomial, Poisson and other distributions. Summary statistics, hypothesis testing - one and two-sample Student's t-tests, Wilcoxon U-test, paired t-test, paired U-test, correlation and covariance, correlation tests, tests for association- Chi-squared test and goodness-of- fit tests. Formula notation, one-way and two-way ANOVA and post-hoc testing, graphical summary of ANOVA and post-hoc testing, extracting means and summary statistics; linear regression.

ST 306 (A): STATISTICS FOR BIOLOGICAL AND EARTH SCIENCES

Unit - I: Statistical measures: Statistical diagrams and graphs; Frequency distributions; Measures of central tendency: Arithmetic mean, Median and Mode; Measures of variation: Range, Quartile Deviation, Mean Deviation, Standard deviation, Coefficient of variation; Karl Pearson's coefficient of Skewness.

Unit- II : Random Variable and Probability Distributions: Definition of Probability, Additive and Multiplicative laws of probability (statements only), Random variable, Binomial, Poisson, Normal and Exponential distributions (properties and applications), CurveFitting: Principle of least squares; Fitting of a straight line, Exponential curve and Power curve; Correlation and Regression Analysis: Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient; Simple linear regression; Multiple and Partial correlation coefficients; Multiple linear regression; Yules coefficient of Association.

Unit –III: Tests of Significance: Basic concepts; Z- test for proportions and means; Applications of t, χ^2 and F tests; Paired t-test; Analysis of Variance (ANOVA) and Analysis of Covariance (ANCOVA) techniques for one way and two way classifications (single observation per cell), Confidence limits.

Unit- IV: Special Statistical Tools: Experimental designs CRD, RBD and LSD and their analysis; concept of critical difference; Duncan's Multiple range test; Elements of Principal components Analysis, Factor Analysis; Cluster Analysis and Discriminant analysis; Hotelling's T^2 and Mahalanobis D^2 statistics; Multivariate Analysis of Variance (MANOVA); Canonical correlations; Concept of Probit analysis.

ST 401: TIME SERIES ANALYSIS AND FORECASTING METHODS

Unit-I: Review of Time Series Analysis. Growth models: Modified Exponential Curve, Gompertz curve, Logistic curve and their Fitting; Measurement of cyclical component: Harmonic analysis, auto regression series: Markoff and Yule's series, Periodogram and correlogram analysis, measurement of irregular component: variate difference method.

Unit-II: Need and uses of forecasting, classification and characteristics of forecasts, forecasting based on regression techniques: simple and multiple linear regression and non-linear regression techniques, moving averages smoothing methods: simple and double, multi average methods; explanatory version time series forecasting, test for trend seasonality.

Unit-III: Exponential smoothing methods: trend adjusted exponential smoothing, double and triple exponential smoothing, win ten's method, chow's adaptive control methods, brown's one parameter adaptive method: Box-Jenkins three parameter smoothing, Harrison's Harmonic smoothing methods, tracking signal.

Unit-IV: Box-Jenkin's time series methods: 1. Moving average 2. Autoregressive (AR) 3. ARMA and 4. AR integrated MA (ARIMA) models, estimation of ARIMA model parameters, forecasting with ARIMA models, Diagnostic checking of the model: Analysis of residuals, forecasting using transfer function model, concept of Kalmon's Filters.

ST401	**Time series Analysis and forecasting methods**	Theory	Practical	4
		4	----	
Course Objective	1. To fit growth curves, measurement of cyclical and irregular component with simple examples. 2. To discuss Forecasting and their techniques like regression, non-linear regression, exponential smoothing, etc. 3. To explain Box Jenkins time series models and their estimation of parameters, fitting and diagnostic checking.			
Course Out comes	1. Students understood about Time series analysis with some important growth models and their fitting. 2. Students learnt Forecasting using regression, non-linear regression techniques, single, double, triple and adoptive exponential smoothing models. 3. Students have experience in AR, MA, ARMA, ARIMA models fitting, diagnostic checking etc.

ST 402: OPERATIONS RESEARCH – II

Unit-I: Bellman's principle of optimality, general formulation, computational methods and application of Dynamic programming. Multi-stage decision processes and Dynamic programming. Goal Programming and stochastic programming.

Unit-I1: Queuing models-specifications and effectiveness measures.Steady state solutions of M/M/1 and M/M/c models with associated distributions of queue length and waiting time. M/G/1 Queue and Pollazcek Khinchine result. Steady-state solutions of M/Ek/1 and Ek/M/1 queues. Bulk queues.

Unit-I1I: Analytical structure of inventory problems; EOQ formula of Harris, its sensitivity analysis and extensions allowing quantity discounts and shortages. Multi-item inventory, subject to constraints.Models with random demand, the static risk model.(s-S) policy for inventory and its derivation in the case of exponential demand; multi-echelon inventory models.Models witlh variable supply and models for perishable items; estimation of EOQ in some simple cases.

Unit-IV: Replacement problems; block and age replacement polices; dynamic programming approach for maintenance problems; replacement of items with long life. Group and individual replacement policies.

ST 403 (A): ADVANCED ECONOMETRIC MODELS

Unit-I: Generalized linear Model; Aitken's theorem; GLS estimator, Asymptotic distribution of GLS estimator; Analysis of residuals, OLS, BLUEs and Recursive residuals; Sudentized and predicted residuals; Granger's test of causality; nested and non nested statistical models; Cox and J tests.

Unit-II: Specificiation error; Consequences; specification bias; Ramsey's RESET test; Lagrange Multiplier test for adding variables; comparing two linear regression models; Dummy variable approach; Stepwise and Piecewise linear regression; Switching Regression Model.

Unit-III: Qualitative and limited dependent variable models; the linear probability model; probit model; Logit model and their estimation; concept of limited dependent variables; specification of Tobit model; concepts of censored and Truncated samples; estimation in censored and Truncated Samples.

Unit-IV: Sets of linear regression models; specification of the Seemingly Unrelated Regression Equations (SURE) model; OLS and GLS estimation of SURE model; Zellner's Feasible GLS estimator; Seemingly Unrelated Unrestricted Residuals (SUUR) estimator; Seemingly Unrelated Restricted Residuals (SURR) estimator; Reduction of the Zeller's Feasible GLS estimator to the OLS estimator.

ST403 (B): TOTAL QUALITY MANAGEMENT AND SIX SIGMA

Unit I: Need for TQM, evolution of quality, Definition of quality, TQM philosophy – Contributions of Deming, Juran, Crosby, Taguchi and Ishikawa.

Unit II: Vision, Mission, Quality policy and objective, Planning and Organization for quality, Quality policy Deployment, Quality function deployment, Analysis of Quality Costs.

Unit III: Customer focus, Leadership and Top management commitment, Employee involvement – Empowerment and Team work, Supplier Quality Management, Continuous process improvement, Training, performance Measurement and customer satisfaction.

Unit IV : SIX SIGMA AND PDSA: An overview of six sigma methodology, DMAIC,DFSS and lean six sigma; product / process understanding : SIPOC, VSM, FMEA ; The Seven QC Tools of Quality, New Seven management tools, Bench Marking, JIT, POKA YOKE, 5S, KAIZEN, Quality circles.

ST 403 (A): STATISTICAL PROCESS AND QUALITY CONTROL

Unit-I: Basic concepts of quality, causes of variation, principle of Shewart's control chart, control charts for attributes and variables. Control limits and probability limits. Process monitoring and control, process capability, modified control chart. Capability indices C_p, C_{pk}, and C_{pm}. Concept of Six sigma and its relationship with process capability.

Unit-II: The OC and ARL of Shewart's control charts. Control by gauging, Moving Average and Exponentially Weighted Moving Average charts. CUSUM charts using V-mask and decision interval methods. Multivariate control charts – Control Ellipsoid, Hotelling's T^2 chart.

Unit-III: Acceptance sampling plans for attribute inspection – Type-A and Type-B OC curves. Single, double and sequential sampling plans and their properties. Sampling plans with rectifying inspection-concept of AOQ, AOQL. Design of Single sampling plan with given ATI.Plans for inspection by variables with one-sided and two-sided specifications.

Unit-IV: Sampling plans for continuous inspection-construction of Dodge CSP-1, CSP-2 and Multi level plans and their properties.Chain sampling and its applications.Design of Skip lot sampling plan and its ASN. Sampling plans with inspection error- derivation of AOQ and ATI in presence of errors.

ST 406 (A) BUSINESS ANALYTICS

UNIT-I: BUSINESS MATHEMATICS**:** Matrix Algebra: Addition, Multiplication, Transpose and Inverse of Matrices; Determinants, Solution of Linear Equations; Limits of Algebraic functions; Rules for Differentiation; Linear programming problem-Graphical Method; Applications.

UNIT-II: BUSINESS ANALYSIS**:** Statistical Measures: Mean, Median and Mode; Standard Deviation and Coefficient of Variation; Correlation and Regression analysis; Linear and Compound growth rates; Measures of Association; concepts of R^2 and $\bar{R}^2$.

UNIT-III: BUSINESS STATISTICAL INFERENCE**:** Elements of Probability; Concepts of Binomial, Poisson and Normal Distributions; Sampling Techniques: Simple Random Sampling and Stratified Random Sampling; Determination of sample size; Tests of Significance: z, t, χ^2 and F tests, ANOVA Technique.

UNIT-IV: BUSINESS INFORMATICS**:** Time series Analysis; Determination of Trend and seasonal components, Basic Forecasting Methods; computer Applications to Business Analysis; Statistical Quality Control: control charts $\bar{X}$,R, p, npand c-charts.

ST406 (B) : SURVIVAL ANALYSIS

UNIT – I: Functions of Survival Time – Definition, Relationship of Survival Functions; Nonparametric Methods of Estimating Survival Functions: Product-Limit Estimate of Survival Function – Kaplan-Meier Estimator of Survival Function.

UNIT – II: Nonparametric Methods for Comparing Two Survival Distributions – Gehan's Generalized Wilcoxon Test, Cox - Mantel test, Logrank Test, Peto and Peto's Generalized Wilcoxon Test, Cox's F-test and Mantel-Haenszel Test.

UNIT – III: Parametric Methods for Comparing Two Survival Distributions: Exponential, Weibull and Gamma distributions only. Nonparametric and Parametric Methods for Identifications of Prognostic Factor Relating to Survival Time, Cox Proportional Hazard (PH) Model for Survival Data.

UNIT – IV: Analytical Estimation Procedures for Survival Distributions: Exponential, Weibull, Log-Normal and Gamma distributions only.Graphical Methods for Survival Distributions Fitting: Probability Plotting, Hazard Plotting Methods, Tests of Goodness-of-Fit, A Regression Method for Fitting Survival Distribution.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF STATISTICS

Course

M.Sc., APPLIED STATISTICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The department of Statistics was established in the year 1958 as a part of Mathematics Department then separated as an independent department in the year 1962. The department offers three post graduate courses (i) M.Sc., Statistics (ii) M.Sc., Applied Statistics and (iii) M.Sc., Applied Statistics (Self Finance Course). The department is active in organizing various academic programmes like conferences and workshop apart from teaching, research and consultancy. During the last five years department has organized about 20 events covering wide areas like Operations Research, Time Series, Stochastic modeling, Geo-Statistics, Bio-Statistics, Data Envelopment Analysis, Statistical computing.

The thrust areas of ongoing research in the department are time Series, Econometrics, Regression Models, Biostatistics, Operations Research, Stochastic modeling, Data Envelopment Analysis and etc. The UGC has identified the department for special assistance sanctioned 44 Lakhs plus 2 project fellows at SAP- DRS-I and 40 Lakhs plus 10 research fellows under BSR and DST FIST 16.5 lakhs.

VISION: To en-corporate certain specific objectives and scale to prepare the students to take up challenges in any one or more functional domain

1. ACADEMICS

2. BASIC AND APPLIED RESEARCH

3. RESEARCH AND DEVELOPMENT

4. SOFTWARE SKILLS

5. INDURSTRY

6. STATISTICAL ANALYSIS

MISSION: To bring out professional having knowledge of basic laws of nature together with strong fundamentals of in core areas of statistics viz. linear algebra, probability and distributions, statistical inference, multivariate analysis, econometric methods, operations research-i, time series analysis and forecasting methods , operations research-ii. Specializations subjects like….Sampling techniques, stochastic process, linear models and applied regression analysis, computer programming and data analysis, demography and official statistics, bio-statistics, statistical process and quality control, advanced econometric models. Technical subjects like… statistical analysis using excel and spss, python, design and analysis of experiments, industrial statistics and quality control, statistical analysis using R + R practical's

Program Specific Outcomes: At the end of the program the student will be able to

- **PSO1:** Understand the basic and advanced concepts of probability, distributions.
- **PSO2:** Perform and design experiments in the area of Bio-statistics, advanced Bio-statistics, Time series
- **PSO3:** Apply knowledge on software like Excel, SPSS and R software

Program Objectives: at the program the student will be able to

- **P01:** Apply the scientific knowledge to solve the statistical data analysis problems
- **PO2:** Identify, formulate and analyze advanced scientific problems reading substantiated conclusions for all kind of disciplines like medical, biological series and so on.
- **PO3:** Creative design solutions for advanced scientific problems `and design system components using statistical analysis that meet the specified need with appropriate attention to health and safety risks.
- **PO4:** Using statistical analysis understanding the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge and need for sustainable development.

- **PO5:** Create, select and apply appropriate techniques, resources and modern statistical tools to complex statistical problems with understanding of the limitations.
- **PO6:** analyzing the impact of marketing sales into the society using data science techniques.
- **PO7:** By statistical methods demonstrating the knowledge and understanding the scientific principles and applying the statistical tools to manage projects and in multidisciplinary environments.
- **PO8:** apply ethical principles and norms of scientific practices
- **PO9:** Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings by statistical approach.
- **PO10:** Understanding the working of various analog communication techniques by using data science methods
- **PO11:** Project management of finance in collaboration with various firms by data science techniques
- **PO12:** Recognize the need and have the preparation and ability to engage independent and life-long learning in the broadest context of scientific and technological change by statistical approach.

Program Outcomes

- **PO 1:** To get a wide range of opportunities and private, corporate and government sector organisations.
- **PO 2:** To get knowledge about various Statistical packages like SPSS, Python, R etc.,
- **PO 3:** To analyse and develop strategies for industrial and service organisations.
- **PO 4:** To handle and analyse data bases with sound computer skills and develop interpretations.
- **PO 5:** To expertize in theoretical and applied principles of Statistics needed to enter the job force.
- **PO 6:** To obtain sound scientific knowledge in Statistical and applied aspects of Statistics.
- **PO 7:** To perform Statistical inference in several circumstances and interper the result inan applied contest.
- **PO 8:** To be able to train non statisticians to handle Statistical and data analytics.
- **PO 9:** To model the random phenomenon of various systems and processes using Statistical analysis.
- **PO10:** To describe the phenomenon of various systems and processes.
- **PO11:** To become a data scientist for assessing in decision making.
- **PO12:** To Communicate concepts in Probability and Statistics using Technical and Non-Technical Language.

Program Educational Objectives

At the end program the student will be able to

- **PEO1:** Apply principals of basic scientific concepts in understanding and predictions of statistical sciences
- **PEO2:** Develop human resources with specializations in theoretical and experimental techniques required for carrier in academic, research and industry
- **PEO3:** Engage in lifelong learning and adopt changing in professional and society needs

SEMESTER-III

Sl. No.	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	APST - 301	Core	Applied Econometrics	6	4	20	80	100
2	APST - 302	Core	Applied Operations Research	6	4	20	80	100
3	APST - 303	Core	Practical- V (75 Practical +25 Record)	6	4	-	-	100
4	APST - 304	Generic Elective * **(Related to Subject)**	(a) Applied Demography and Official Statistics (b) Advanced Bio-Statistics	6	4	20	80	100
5	APST - 305	Mandatory (Theory + Practical VI)	Statistical Analysis Using R + R Practicals	9 (3T +6P)	4	10	90 (40T+50P)	100
6	APST - 306	Open Elective **(For other Department)**	(a) Statistics for Biological and Earth Sciences (b) Statistics for Social and Behavioral Sciences	6	4	20	80	100
	Total			**39**	**24**			**600**

*** Among the Generic Electives the student shall choose <u>ONE</u>**

SEMESTER-IV

Sl. No.	Course Code	Components of Study	Title of the Course	Contact Hours	No. of Credits	IA Marks	End SEM Exam Marks	Total Marks
1	APST - 401	Core	Applied Forecasting Methods	6	4	20	80	100
2	APST - 402	Core	Reliability and Survival Analysis	6	4	20	80	100
3	APST - 403	Generic Elective * **(Related to Subject)**	(a) Statistics for Research, industry and Community Development (b) Advanced Econometric Models	6	4	20	80	100
4	APST - 404	Core	Practical-VII (75 Practical + 15 Viva-voce + 10 Record)	9	4	-	-	100
5	APST - 405	Project Work /Multidisciplinary (Theory + Practical-VIII)	**Student Project:** Data Centre / Institutions / Companies and etc., (OR) Statistical Process and Quality Control (Theory + Practical)	9 (3T+ 6P)	4	10	90 (40T+50P)	100
6	APST - 406	Open Elective **(For other Department)**	(a) Statistics for Marketing Research (b) Statistical Analysis Using SPSS	6	4	20	80	100
	Total			**39**	**24**			**600**

*** Among the Generic Electives the student shall choose <u>ONE</u>**

**** Open Elective papers is for other department**

****** Primary or Secondary data collected from banks, fields or any other relevant areas are analyzed and submitted

<u>Student Project</u> : Dissertation - 60 Marks
Viva Voce - 10 Marks
Presentation - 30 Marks
Total - 100Marks

APST 101: LINEAR ALGEBRA

Unit-I: Algebra of matrices; Elementary transformations; Rank and Inverse of a matrix; Nullity; Partitioned matrices; Kronecker product; Generalized inverse of matrix; Moore-Penrose generalized inverse; Solutions of simultaneous equations.

Unit-II: Finite dimensional Vector Spaces; VectorSpaces and Subspaces; Linear dependence and independence; Basis and dimension of a vector space; Completion theorem; Inner product Spaces; Orthonormal basis and Gram-Schmidt orthogonalization process; Orthogonal projection of a vector.

Unit-III: Linear transformationsand properties; Orthogonal and unitary transformations; Real quadratic forms; Reduction and classification of quadratic forms; Hermitian forms; Sylvesters law of inertia; Canonical reduction of quadratic form.

Unit-IV: Characteristic roots and vectors; Cayley – Hamilton theorem; Minimal polynomial; Similar matrices; Spectral decomposition of a real symmetric matrix; Reduction of a pair of real symmetric matrices; Hermitian matrices.

Subject Code	Subject Name	Credits Allotted		Total
APST-101	**Linear Algebra**	Theory	Practical	4
		4	---	
Course Objective	1. To Prepare Students about algebra of matrices and vector spaces. 2. To explain about roots vectors and linear transformations with an examples			
Course Out comes	Students understood for estimation of elementary transformations in matrix and their solutions. Students learnt about characteristic roots and vectors with numerical examples. They also know theoretical proofs of theorems.			

Mapping of course outcomes with the program outcomes

CO4	**3**	**2**	**3**	**2**	**1**				**3**	**2**	**2**	**2**

APST 102: PROBABILITY AND DISTRIBUTIONS

Unit-I: Classes of sets, fields, σ -fields, minimal σ -field, Borel σ – field in R^K, sequence of sets, limsup and liminf of a sequence of sets. Measure, Probability measure, properties of a measure, Lebesgue and Lebesgue-Stieltjes measures, Measurable functions, Random variables, sequence of random variables, almost sure convergence, convergence in probability (and in measure). Monotone convergence theorem, Fatou's lemma, Dominated convergence theorem.

Unit-II: Expectation of a random variable, inequalities on expectations, Markov, Holder, Jensen and Liapiunov inequalities. Borel- Cantelli - Lemma, Independence, Weak law and strong law of large numbers for iid sequences, Chebyshev's theorem, khinchine's theorem, Kolmogorov theorems (statements only), convergence in distribution.

Unit-III: Laplace and Weibull distributions.Functions of random variables and their distributions, sampling distributions: central Chi Square, t and F distributions and its properties, applications, relation between t and F, F and χ^2; Fisher's Z-distribution, fisher's Z-transformation. Non-central chi-square, t and F distributions and their properties.

Unit-IV: Multiple and partial correlation coefficients, multiple linear regression, inter relationship among partial and multiple correlation and regression coefficients. Null distributions of simple, partial and multiple correlation coefficients.Order statistics and their distributions, joint and marginal distributions of order statistics, distribution of range. Extreme values and their asymptotic distributions.

Subject Code	Subject Name	Credits Allotted		Total
APST-102	**Probability and Distributions**	Theory	Practical	4
		4	---	
Course Objective	1. To Explain about classes of sets and Probability measures 2. To discuss on random variables and convergence in probability and the important theorems with proofs. 3. To discuss about inequalities on expectations with their derivations and laws of numbers. 4. To explain about different discrete and continuous distributions and their Properties. 5. To learn about derivations and properties of various sampling distributions. 6. To explain order Statistics and their properties			
Course Out comes	1. Students must have knowledge about random variables, expectations, sets and their properties and inequalities where ever necessary. 2. Students also know the weak law, strong law and central limit theorem and their importance 3. Students know about different continuous and discrete distributions and their properties. 4. They have awareness about central and non central sampling distributions and order Statistics. Idea about simple, partial and multiple correlation coefficients.

APST 103 (A) : SAMPLING TECHNIQUES

Unit-I: Review of basic concepts of sampling theory such as sampling design, sampling scheme, sampling strategy etc., Sampling with varying probability with and without replacement, PPS WR/WOR methods – Lahiri's sample scheme, Hansen – Hurwitz, Des Raj estimators for a general sample size and Murthy estimator for a sample of size 2, Symmentrized Des Raj estimator.

Unit-II: Hurwitz – Thompson estimator (HTE) of a finite population total / mean, expression for V(HTE) and its unbiased estimator. IPPS scheme of a sampling due to Midzuno – Sen and JNK Rao (sample size 2 only). Rao – Hartley-Cochran sampling scheme for a sample of size n with random grouping.

Unit-III: Ratio and Regression methods of estimation, Two stage sampling, Multi stage sampling, Cluster sampling. Resampling methods and its applications.

Unit-IV: Double sampling for difference, ratio, regression and PPS estimators; Large scale sample surveys, Errors in surveys, A mathematical model for errors of measurement, Sampling and Non-sampling errors, Sources and types of non-sampling errors, Remedies for non-sampling errors.

APST 103 (B) : STOCHASTIC PROCESSES

Unit-I: Introduction to stochastic processes (sp's): classification of sp's according to state apace and time domain. Countable state Markov chains (MC's), Chapman – Kolmogorov equations, calculation of n – step transition probability and its limit. Stationary distribution, classification of states,, transient MC, random walk and gambler's ruin problem.

Unit-II: Discrete state space continuous time MC: Kolmogorov – Feller differential equations, Poisson process, birth and death process; Applications to queues and storage problems. Wiener process as a limit of random walk, first – passage time and other problems.

Unit-III: Renewal theory: Elementary renewal theorem and applications. Statement and uses of key renewal theorem, study of residual life time process: weakly stationary and strongly stationary process; Moving averages and auto regressive process.

Unit-IV: Branching process: Galton – Watson branching process, probability of ultimate extinction, distribution of population size. Martingale in discrete time, inequality, convergence and smoothing properties.Statistical inference in MC and Markov process.

APST 104 (A) :STATISTICAL ANALYSIS USING EXCEL AND SPSS

Unit-I: Review of Excel, sorting, filtering and construction of charts. Curve fitting and interpretation of the output. Statistical functions in Excel - Calculating theoretical probability using Binomial, Poisson and Normal distributions. Matrix operations- Transpose, Product and Inverse operations using Excel. Pivot tables and look up functions.

Unit-II: Data Analysis Pak in Excel, descriptive statistics, tests of hypothesis, ANOVA, Correlation and Regression, Random Number Generation from different distributions, Binomial, Poisson, Uniform, Normal and from discrete distributions with given mean and variance. Forecasting Using Excel – Moving Averages and Exponential Smoothing, Use of functions, Linest, Logest, Forecast , Growth, Trend for trend analysis. The use of solver for optimization – Application to LPP.

Unit-III: Introduction to SPSS, Different Menu's in SPSS, creating a data file, opening excel files,variables and labels,selecting casesby filtering,recoding of data, merging of files, Sorting of Cases and Variable, SPSS Output and its transfer to excel and word. Analysis categorical data- Scales of Measurements, Data reliability-test rest method, Cronbach's alpha.

Unit-IV: Using SPSS Analysis tools, descriptive statistics, cross tabs (with stress on procedures and syntax). Post-hoc analysis for multiple comparisons using Tukey's test, Duncan's Multiple Range Test, Dunnet's test and Scheffe's test with interpretation. Selection of variables in Multiple Linear Regression – stepwise procedures and analysis of residuals. Procedure for Binary Logistic regression, Factor analysis, Linear Discriminant analysis and Cluster analysis.

Subject Code	Subject Name	Credits Allotted		Total
APST-103 (b)	**Statistical Analysis Using Excel and SPSS**	Theory 4	Practical ----	4
Course Objective	1. To Learn the students about the Statistical functions in Excel. 2. To teach the students the concept of Data Analysis Pak in Excel. 3. To give the introduction of SPSS and its concepts to the students. 4. To teach the students concepts like multiple comparision tests, Regression analysis etc.			
Course Out comes	1. Students can learn how to enter the data MS-Excel. 2. Students can analyze the data in Excel and SPSS. 3. Students can learn how to transfer the data in one data Analysis application to Another. 4. Students can predict the future data using SPSS Procedures.

APST 104 (B) :PYTHON

UNIT – I:Introduction to Python Programming Language:

Introduction to Python Language,Strengths and Weaknesses, IDLE, Dynamic Types, Naming Conventions, String Values, String Operations, String Slices, String Operators, Numeric Data Types, Conversions, Control Flow and Syntax, Indenting, The if Statement, Relational Operators, Logical Operators, True or False, Bit Wise Operators, The while Loop, break and continue, The for Loop, Lists, Tuples, Sets, Dictionaries, Sorting Dictionaries, Copying Collections, In Functions.

UNIT –II :Object and Classes :

Classes in Python, Principles of Object Orientation, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes.

UNIT –III : Functions and Modules :
Introduction, Defining Your Own Functions, Parameters, Function Documentation, Keyword and Optional Parameters, Passing Collections to a Function, Variable Number of Arguments, Scope, Functions - "First Class Citizens", Passing Functions to a Function, Mapping Functions in a Dictionary, Lambda, Modules, Standard Modules – sys,□Standard Modules – math,Standard Modules – time,The dir Function**.**

UNIT –IV : I/O and Error Handling In Python :

Introduction, Data Streams,□Creating Your Own Data Streams, Access Modes, Writing Data to a File, Reading Data From a File, Additional File Methods, Using Pipes as Data Streams, Handling IO Exceptions, Working with Directories, Metadata, Errors, Run Time Errors, The Exception Model, Exception Hierarchy, Handling Multiple Exceptions.

Books for Study:

1. Dive into Python, Mike
2. Learning Python, 4th Edition by Mark Lutz
3. Programming Python, 4th Edition by Mark Lutz

Subject Code	Subject Name	Credits Allotted		Total
APST-104 (B)	**Python**	Theory	Practical	4
		4	----	
Course Objective	1: Able to understand the concept of Python Programming. 2: Expertise in Object and Classes. 3: To be able to explore Functions and Modules learning. 4: Able to understand the concept of I/O and Error Handling In Python.			
Course Out comes	1. Students have done Python Programming and their Object and Classes. 2. Students have understandI/O and Error Handling In Python			

Mapping of course outcomes with the program outcomes

APST 107 : HUMAN VALUES AND PROFESSIONAL ETHICS-1

UNIT-I: Definition and Nature of Ethics-Its relation to Religion ,Politics, Business, Legal ,Medical And Environment,Need And Implementation Ethics-Goals-Ethical Values in Various Professions.

UNIT-II: Nature Of Values-Good and Bad, Ends and Means, Actual and Potential Values, Objectives and Subjective Values ,Analysis Of Basic Moral Concepts-rights, Ought, Duty, Obligation, Justice. Responsibility and Freedom .Good Behavior and Respect for Elders, Character and Conduct.

UNIT-III: Ahimsa (Non-Violence), Satya (Truth),Brahmacharya (Celibacy),Asteya (Non-possession) and APARIGRAHA (Non-stealing).Purusharthas (Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment bodily desires).Moksha (Liberation)

UNIT-IV: Bhagavad Gita-(a) Niskama karma.(b).Buddhism-The four noble truths-Arya Astanga marga, (c) Jainisam- mahavratas and anuvratas. Values embedded in various religions, Religious tolerance, Gandhian ethics.

UNIT-V: Crime and Theories or punishment-(a) Reformative , Retributive and Deterrent ,(b) Views on manu and Yajnavalkya.

APST 201: STATISTICAL INFERENCE

Unit-I: Point estimation –Unbiasedness, Consistency, Efficiency and Sufficiency; Fisher-Neyman factorization theorem, complete sufficient statistics, minimum variance unbiased estimator (MVUE), Cramer - Rao inequality, Battacharayas inequality, Rao – Blackwell theorem. Exponential family, Maximum Likelihood estimation method, method of moments, method of minimum chi-squares and interval estimation.

Unit-II: Tests of hypothesis: Basic concepts, Most Powerful (MP) test, Neyman – Pearson Lemma, Consistency and Unbiased tests, Uniformly Most Powerful (UMP) test, UMP Unbiased tests, similar critical regions, Lehmann –Scheffe theorem, Likelihood Ratio Tests, Asymptotic Distribution of LR test, Bartlett's test for homogeneity of variances and Wald Test.

Unit-III: Non – Parametric tests of significance; Sign Test, Wilcoxon-Mann-Whitney U-test, Run test, Kolmogorov-Simrnov one and two sample tests, Median test, Kendall's τ test. Concept of asymptotic relative efficiency, CAN, BAN, CAUN and BEST CAUN estimators, MLE in Pitman family and Double Exponential distribution, MLE in Censored Truncated distribution.

Unit-IV: Statistical decision theory – decision problems and two person games, problems of inference viewed as decision problems, non-randomized and randomized decision rules, Loss and Risk functions, admissibility, complete and essentially complete class, complete class theorem.Bayes principle, determination of Bayes rule Minimax principle, determination of minimax rule, minimax theorem. Minimax estimates of parameters of Binomial, Poisson and Normal distributions.

Subject Code	Subject Name	Credits Allotted		Total
APST 201	**STATISTICAL INFERENCE**	Theory	Practical	4
		4	----	
Course Objective	1. To study the Estimation methods of point and their different measures and theorems, inequality. 2. To discuss about Testing of hypothesis that contains NP Lemma, UHP test, Bartlett's, Wald test, LR test and some theorems relates to hypothesis testing. 3. To discuss different Non-parametric tests with examples. Asymptotic relative efficiency and truncated distributions. 4. To study the Game theory and their problems, minimax rule, minimax theorem and minimum estimates of parameters using different distributions.			
Course Out comes	Students know about point estimation, testing of hypothesis, Non parametric models, Game theory, theorems and Proofs where ever necessary.

APST 202: MULTIVARIATE ANALYSIS

Unit-I: Multivariate normal distribution, marginal and conditional distributions, characteristics functions, Maximum likelihood estimators of parameters, distribution of sample mean vector and dispersion matrix, distribution of quadratic form in the exponent of the multivariate normal density.

Unit-II: Hotelling's T^2 and its applications – T^2 distribution, application of T^2 to single sample, two sample and multiple sample problems, optimum properties of T^2 test. Mahalobis D^2 statistic and its distribution, Multivariate Analysis of Variance (MANOVA) of one and two-way classified data.

Unit-III: Classification and discrimination: procedures for classification into two multivariate normal populations, Fisher's Discriminant function, classification into more than two multivariate normal populations, Wishart distribution and its properties, concept of sample generalized variance and its distribution.

Unit-IV: Principal Component Analysis – properties, method of extraction of principal components; Canonical variables and canonical correlations; Factor Analysis – mathematical model, estimation of factor loading, concept of factor rotation; Cluster Analysis – similarities and dissimilarities, Hierarchical clustering: single and complete linkage method.

APST 203(A): LINEAR MODELS AND APPLIED REGRESSION ANALYSIS

Unit-I: Two and Three variable Linear Regression models; General linear model: Assumptions; OLS estimation; BLUE; Tests of significance of individual regression coefficients; Testing the equality between two regressions coefficients; Test of significance of complete regression.

Unit-II: Criteria for model selection; Goodness of fit measures; R^2 and adjusted R^2 Criteria; C_p criterion; testing the general linear hypothesis; Chow test for Equality between sets of regression coefficients in two linear models; test for structural change; restricted least squares estimation; Generalized Mean Squared error criterion.

Unit-III: Non-normal disturbances and their consequences; test for normality; Jarque-Bera test; Shapiro-Wilk test, Minimum Absolute Deviation (MAD) estimation; Box-Cox transformations.
Statistical analysis of residuals, OLS residuals, BLUS residual, Studentised residual, Predicted residual, tests against heteroscadasticity.

Unit-IV: Non-Linear regression; Non linear least squares estimation; Maximum Likehoodestimation; Idea of computational methods; Gradient methods, Steepest descent method and Newton-raphson method; testing general Nonlinear hypothesis; Wald test, Lagrange multiplier test and likelihood ratio Test. Robust , probit, binomial logistic ,multiple logistic regression.

APST 203(B): COMPUTER PROGRAMMING – C^{++}

UNIT-I: Object oriented programming principles, Declaration of classes, array of classes, Pointer to classes, constructors such as void constructor, copy constructor, Destructor,

UNIT-II: Friend functions, inline functions, static class members, this pointer, Single, Multiple inheritances: Types of derivation such as public, private, protected inheritance and member access controls, ambiguity in inheritance,

UNIT-III: Virtual base class, container classes. Function overloading, Operator Overloading, Overloading of assignment, binary, unary operators.

UNIT-IV: Polymorphism, Early binding, virtual functions, Late binding, pure virtual functions, abstract base classes, constructor under inheritance, destructor under inheritance, virtual destructors.Templates and Exception Handling. Data File operations, structures and file operations, classes and file operations.

APST 204 (A) : DESIGN AND ANALYSIS OF EXPERIMENTS

Unit-I: Linear Model; Estimability of linear parametric functions; BLUE, Gauss-Markoff theorem; Generalized Gauss-Markoff theorem, ANOVA model, ANOVA for Two way and three way classifications, ANCOVA technique for one way and two-way classifications. Multiple comparisons tests using Tukey's, Duncans, Sheffe's and Dunnet's tests.

Unit-II: Latin squares and their construction, Mutually orthogonal Latin squares; Missing plot technique in Latin square Design, Graeco-Latin square Design; Analysis of Factorial Experiments involving factors with two and three levels in randomized blocks.

Unit-III: Necessity of confounding, Types of confounding, complete and partial confounding in 2^n, 3^2 and 3^3 factorial designs, Analysis of confounded factorial designs; Fractional Replication, Split Plot design.

Unit-IV: Incomplete Block Designs; B I B D, Inter and Intra Block analysis of a BIBD, Types of BIBD, construction of BIBD's using Mutually orthogonal Latin squares; Concepts of Youden square and lattice Design, Two-Associate PBIB design, Analysis of P B I B design.

APST 204 (B) : INDUSTRIAL STATISTICS AND QUALITY CONTROL

UNIT-I: General Theory of Control Charts: Control charts for attribute and variables: O.C. and A.R.L. of control charts; control by gauging; Moving average and exponentially weighted moving average charts;Cu-sum charts using V-masks and decision intervals. Capability indices: Cp, Cpk and Cpm.

UNIT-II: Acceptance sampling plans for attribute inspection: Single, double and sequential sampling plans; Plans for inspection by variables for one-sided and two-sided specifications;

UNIT-III: Mil Std and ISI plans; Continuous sampling plans of Dodge type and Wald-Wolfwitz type and their properties.

UNIT-IV: Industrial Experimentation, Fractional factorial experiments, Response surface methodology, Six sigma in process improvement and product development, Lean thinking, Value stream analysis, 5 s.

APST 207: HUMAN VALUES AND PROFESSIONAL ETHICS-II

UNIT-I: Value Education –Definition-Relevance to present day-Concept of Human Values-self introduction-self-esteem-family values-Components , Structure and responsibilities of family-Neutralization of anger-Adjustability-Threats of family life –Status of women in family and society –Caring for need elderly –Time allotment for sharing ideas and concerns.

UNIT-II: Medical ethics-Views if charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners.Code of ethics for medical and healthcare professionals.Euthanasia ,ethical obligation to animals,ethical issues in relation to health care professional patients. Social justice in health care , human cloning , problems of abortion .Ethical issues ingenetic engineering and ethics issues raised by new biological technology of knowledge.

UNIT-III: Business ethics – Ethical standards of business-immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories causes of unethical behavior , ethical abuses and work ethics.

UNIT-IV: Environmental Ethics- Ethical Theory , man And Nature- Ecological Crisis , Pest Control , Pollution and Waste , Climate Change, Energy and Population, Justice and Environmental Health.

UNIT-V: Social ethics – Organ trade. Human trafficking, Human rights violation and social disparities, Feminist ethics. Surrogacy / pregnancy, Ethics of media-Impact of newspapers, Television , Movies and Internet.

APST 301: APPLIED ECONOMETRICS

Unit-I: Quick review of inference in classical linear regression model; Estimation and tests of significance of linear and compound growth rates; Incremental analysis; Testing the function form of regression; choosing between linear and log-linear regression models; Likelihood Ratio, Wald and Lagrange Multiplier tests.

Unit-II: Multicollinearity; Sources, consequences and detection of Multicollinearityl Farrar-Glauber test; remedial measures; Heteroscedasticity: Sources and consequences; Tests for Heteroscedasticity; Glejser's test, Goldfield-Quandt test and Breusch-Pagan-Godfrey test; Estimation of parameters under Heteroscedasticity;

Unit-III: Autocorrelation; sources and consequences; first order autoregressive scheme; tests for autocorrelation Durbin-Watson test; Remedies; Estimation of parameters under Autocorrelation; Stochastic Regressors; Errors in variables linear model, IV and ML methods of estimation.

Unit-IV: Finite distributed lag models; Almon's Polynomial approach; Infinite distributed lag models; Geometric lag model; Koyck's approach; IV method; simultaneous linear equations models; Problem of identification; Indirect least squares, LIML, Two stage least squares; three stage least squares and FIML estimation methods.

APST 302: APPLIED OPERATIONS RESEARCH

Unit-I: Definition and scope of Operations research; phases in Operations Research; models and their solutions (Review of Linear Programming). Definition of Dual-Primal, Relationships- Dual Simplex Sensitivity or Post Optimal Analysis, Revised Simplex method.

Unit-I1: Non-linear programming - Kuhn Tucker conditions. Wolfe's algorithm for solving quadratic programming problems. Integer programming – Branch and bound algorithm and cutting plane algorithm.

Unit-III: Flows in networks max-flow-min-cut theorem. Project Management; PERT and CPM probability of project completion, PERT – crashing. Decision making in the face of competition, two-person games, pure and mixed strategies, existence of solution and uniqueness of value in zero- sum games, finding solution in 2x2, and 2xm, and mxn games.

Unit-IV: Queuing models-specifications and effectiveness measures. Steady state solutions of M/M/1 and M/M/c models with associated distributions of queue length and waiting time. M/G/1 Queue and Pollazcek Khinchine result. Steady-state solutions of M/Ek/1 and Ek/M/1 queues. Bulk queues.

		4	----	
Course Objective	1. To explain different queuing models like M/M/I, M/M/C, M/G/I and bulk queues etc. 2. To learn about Non-linear programming and integer programming and their related problems. 3. To discuss about Network flow charts, CPM and PERT, project management models. 4. To study about Game theory of 2×2, 2×m, m×n and non-zero sum games with their illustrations.			
Course Out comes	1. Students understood about Dual primal, Revised simplex methods. 2. Students gains the knowledge related to non-linear programming, integer programming, CPM, PERT and different models of games.

APST 303 : PRACTICAL - V

At least 20 practicals covering all papers relating to the subject in this semester must be carried out. (75 marks for practical examination + 15 marks for Viva-voce + 10 marks for record in the semester)

Subject Code	Subject Name	Credits Allotted		Total
APST-303	**PRACTICAL-V**	Theory	Practical	4
		----	4	
Course Objective	1. To perform different practical problems manually through calculators and computers. 2. To solve Practical problems related to semester - III papers.			
Course Out comes	Students obtained the solutions related to Numerical problems and also to semester -III theory papers.			

Mapping of course outcomes with the program outcomes

APST 304(A): ADVANCED BIOSTATISTICS

Unit-I: Structure of Biological assay, Direct assays, Potency ratio, Feller's theorem and its generalization. Quantitative dose-response relationships, Linear dose-response regression, Parallel line bioassay, Slope Ratio Bioassay, Quantal responses, estimation of median effective dose, Transformations: Probit and Logit transformations.

Unit-II:: Basic Biological concepts: Gene, Chromosomes, Alleles, Concepts of Geno types and Phenotypes, Family studies, Basic mating from single gene cross, Matrix approach to basic matings of single gene cross, Checker board method, Mendal's law of heredity: Geneotypes and Pheno type ratios, Branching system method.

Unit-III: Types of matings, Random Mating, Concept of Gene pool, Gene frequency, Hardy–Weinberg law of equilibrium, Calculation of Gene frequencies, Genotypic frequency, Generation matrix approach to inbreeding, Estimation of Gene frequencies in ABO blood group system, Maximum Likelihood Method, Minimum Chi-Square method, Genetic parameters; Heritability Coefficients, Genetic Correlations, Repeatability, selection index; Inbreeding coefficient.

Unit-IV: Statistical Methods in Clinical Trials- phase I, II, III and IV trails. Statistical design for clinical trials- fixed sample trials. Simple randomized design, stratified randomized design, crossover and sequential designs – open and close sequential design. Dynamic randomization, Permuted block randomization; Single, double and triple blinding methods.

APST 304(B): APPLIED DEMOGRAPHY AND OFFICIAL STATISTICS

Unit-I: Indian and International Statistical Systems, Functions of CSO and NSSO; Organization of large scale sample surveys; Data dissemination systems. Non-Governmental statistical organizations, Methods of conducting population census and Economic census in India.Indian population census.

Unit-II: Official Statistics and their limitations; Methods of collection of official statistics; System of collection of Agricultural Statistics, Crop forecasting and estimation; Agricultural census in India defects; Statistics related to Forests, Fisheries; Trade, Labour, Finance, Price and Industries; CMI, SSMI and ASI publications.

Unit-III: Definition, Scope and limitations of demographic analysis; Sources of Demographic data in India; Mortality measures, Construction of life tables; Abridged life tables; Measures of fertility and Reproduction.

Unit-IV: Methods for population projection, Use of Leslie matrix, Stable and Stationary populations; Lokta's model; Models for population growth and their fitting; Stochastic models for population growth; Concept of Migration and Urbanization, Chandrasekhar nand Demings method, Stochastic model for Birth and Deaths.

APST 305 : STATISTICAL ANALYSIS USING R + R PRACTRICALS

PRACTRICALS - VI

R PROGRAMMING

UNIT-I: Familiarizing with R environment, Using R console as a calculator, R atomic types, methods of creating vectors, combining vectors and repeating vectors, different ways of subsetting vectors using indexing, names and logicals. Arithmetic and logical operations. Using character vectors for text data, manipulating text using strsplit(), paste(), cat(), grep(), gsub() functions; handling factor data. Working with dates.

UNIT – II: Creating Matrices, getting values in and out of matrices, performing matrix calculations; Working with multidimensional Arrays; creating data frames, getting values in and out of data frames, adding rows to data frame, adding variables to data frame; creating lists, extracting components from a list, changing values of components of lists. Getting data into and out of R - reading data in CSV files, EXCEL files, SPSS files and working with other data types. Getting data out of R – working with write.csv() and write.table() functions.

UNIT – III: Writing Scripts and functions in R. writing functions with named, default and optional arguments. functions using as arguments. Debugging your code. Control statements in R – conditional control using if, if-else, ifelse; looping control using for, while, repeat; transfer of control using break and next. Manipulating and processing data - creating subsets of data, use of merge() function, sorting and ordering of data. Group manipulation using apply family of functions - apply, sapply, lapply, tapply.Base graphics. Use of high-level plotting functions for creating histograms, scatter plots, box-whiskers plot, bar plot, dot plot, Q-Q plot and curves.

UNIT – IV: Controlling plot options using low-level plotting functions - Adding lines, segments, points, polygon, grid to the plotting region; Add text using legend, text, mtext; and Modify/add axes, Putting multiple plots on a single page.Working with probability distributions - normal, binomial, Poisson and other distributions. Summary statistics, hypothesis testing - one and two-sample Student's t-tests, Wilcoxon U-test, paired t-test, paired U-test, correlation and covariance, correlation tests, tests for association- Chi-squared test and goodness-of- fit tests. Formula notation, one-way and two-way ANOVA and post-hoc testing, graphical summary of ANOVA and post-hoc testing, extracting means and summary statistics; linear regression.

APST 306 (A): STATISTICS FOR BIOLOGICAL AND EARTH SCIENCES

Unit - I: Statistical measures: Statistical diagrams and graphs; Frequency distributions; Measures of central tendency: Arithmetic mean, Median and Mode; Measures of variation: Range, Quartile Deviation, Mean Deviation, Standard deviation, Coefficient of variation; Karl Pearson's coefficient of Skewness.

Unit- II : Random Variable and Probability Distributions: Definition of Probability, Additive and Multiplicative laws of probability (statements only), Random variable, Binomial, Poisson, Normal and Exponential distributions (properties and applications), CurveFitting: Principle of least squares; Fitting of a straight line, Exponential curve and Power curve; Correlation and Regression Analysis: Karl Pearson's coefficient of correlation, Spearman's Rank correlation coefficient; Simple linear regression; Multiple and Partial correlation coefficients; Multiple linear regression; Yules coefficient of Association.

Unit –III: Tests of Significance: Basic concepts; Z- test for proportions and means; Applications of t, χ^2 and F tests; Paired t-test; Analysis of Variance (ANOVA) and Analysis of Covariance (ANCOVA) techniques for one way and two way classifications (single observation per cell), Confidence limits.

Unit- IV: Special Statistical Tools: Experimental designs CRD, RBD and LSD and their analysis; concept of critical difference; Duncan's Multiple range test; Elements of Principal components Analysis, Factor Analysis; Cluster Analysis and Discriminant analysis; Hotelling's T^2 and Mahalanobis D^2 statistics; Multivariate Analysis of Variance (MANOVA); Canonical correlations; Concept of Probit analysis.

APST 401: APPLIED FORECASTING METHODS

Unit-I: Need and uses of forecasting, classification and characteristics of forecasts, forecasting based on regression techniques: simple and multiple linear regression and non-linear regression techniques, moving averages smoothing methods: simple and double, multi average methods; explanatory version time series forecasting, test for trend seasonality.

Unit-II: Exponential smoothing methods: trend adjusted exponential smoothing, double and triple exponential smoothing, winten's method, Chow's adaptive control methods, brown's one parameter adaptive method: Box-Jenkins three parameter smoothing, Harrison's Harmonic smoothing methods, tracking signal.

Unit-III: Auto regressive series, yules series, markoff series, deseasonalisting and detrending an observed time series, auto-covariance, Auto Correlation Function(ACF),Partial Auto Correlation Function(PACF) and their properties, conditions for stationary and invertibility. Period gram and correlogram analysis.

Unit-IV: Box-Jenkin's time series methods: Moving average , Autoregressive , ARMA and AR integrated MA (ARIMA) models, estimation of ARIMA model parameters, forecasting with ARIMA models, Diagnostic checking of the model: Analysis of residuals, forecasting using transfer function model, concept of Kalmon's Filters relation for outline.

APST 402: RELIABILITY AND SURVIVAL ANALYSIS

Unit-I: Reliability: Concept and Measures of Reliability, bath tub curve, Reliability and failure density in terms of hazard rate; Hazard models, System Reliability Models: Reliability of Series and parallel systems, Mixed configuration models, Non-series-parallel systems; r-out of n- systems, Fault tree analysis.

Unit-II: Reliability improvement methods: Redundancy, element, unit and stand by redundancies; Maintainability and availability; Reliability allocation; Life testing and Reliability estimation; Exponential failure model, Normal, Gamma and weibull distributions and their applications in reliability estimation.

Unit-III: Functions of Survival time: Definitions, Relationships of Survival Functions; Non-parametric Methods of Estimating Survival Functions: Kaplan Meier Product limit Estimate; Non-parametric methods for comparing two survival distributions: Gehan's generalized wilcoxon test, Cox-Mantel test, log rank test, Peto and peto's generalized wilcoxon test, Cox's F test and Mantel-Haenszel test.

Unit-IV: Graphical Methods for survival distributions fitting: Probability plotting, hazard plotting methods, testing of goodness of fit; Analytical Estimation Procedures for Survival distributions: Exponential, Weibull, Lognormal and Gamma Distributions only; Regression method for fitting Survival distributions; Parametric methods for comparing two survival distributions: Exponential, Weibull and Gamma Distributions only; Non-parametric and Parametric methods for identification of Prognostic factor relating survival time

APST 403(A): STATISTICS FOR RESEARCH, INDUSTRY AND COMMUNITYDEVELOPMENT

UNIT- I: Response Surface Designs: First and Second order Response Surface models; Rotatable designs; concept of connected design; outliers and Winsorized t - statistic; Stepwise regression; Specification of Random coefficients Regression model; Specification of variance components model; MINQUE Theory; Non parametric regression, the partially linear regression model.

UNIT-II: Simulation: Scope and limitations; Simulation models; Generation of RandomNumbers; Monte-Carlo simulation; Simulation of Queueing, Inventory Systems; Networks and Job sequencing.Data Envelopment Analysis (DEA): Non parametric approach to productive efficiency; Input, output correspondences for Frontier production function; Mathematical Programming for productive efficiency: Farrell and Timmer approaches with reference to Cobb-Douglas production function.

UNIT-III: Demand Analysis: Laws of Demand and Supply; price and partial elasticities of demand; Pigous method for Time Series and Family Budget data; Engel's curve; Pareto law of Income distribution;Production Functions: Basic concepts; Isoquants; Cobb-Douglas, CES and Translog Production functions and their properties and estimation; Tools for Data Mining.

UNIT-IV: Social Surveys for Community Development: Objects, Types of Social Survey; Steps in social survey; Gallop polls; Prephology, Data collection; Kinds of measurement; Scaling methods: Thurstone, Likert and Guttman methods; Concepts of Validity and Reliability; Methods of calculating reliability coefficients; Test Reliability; ANOVA for Ranked data: Kruskal-Wallis and Friedman tests; Elements of cluster analysis, Factor analysis., path coefficient analysis and Discriminant analysis.

APST 403 (B): ADVANCED ECONOMETRIC MODELS

Unit-I: Generalized linear Model; Aitken's theorem; GLS estimator, Asymptotic distribution of GLS estimator; Analysis of residuals, OLS, BLUEs and Recursive residuals; Sudentized and predicted residuals; Granger's test of causality; nested and non nested statistical models; Cox and J tests.

Unit-II: Specificiation error; Consequences; specification bias; Ramsey's RESET test; Lagrange Multiplier test for adding variables; comparing two linear regression models; Dummy variable approach; Stepwise and Piecewise linear regression; Switching Regression Model.

Unit-III: Qualitative and limited dependent variable models; the linear probability model; probit model; Logit model and their estimation; concept of limited dependent variables; specification of Tobit model; concepts of censored and Truncated samples; estimation in censored and Truncated Samples.

Unit-IV: Sets of linear regression models; specification of the Seemingly Unrelated Regression Equations (SURE) model; OLS and GLS estimation of SURE model; Zellner's Feasible GLS estimator; Seemingly Unrelated Unrestricted Residuals (SUUR) estimator; Seemingly Unrelated Restricted Residuals (SURR) estimator; Reduction of the Zeller's Feasible GLS estimator to the OLS estimator.

APST 405 : STATISTICAL QUALITY CONTROL

Unit-I: Basic concepts of quality, causes of variation, principle of Shewart's control chart, control charts for attributes and variables. Control limits and probability limits. Process monitoring and control, process capability, modified control chart. Capability indices C_p, C_{pk}, and C_{pm}. Concept of Six sigma and its relationship with process capability.

Unit-II: The OC and ARL of Shewart's control charts. Control by gauging, Moving Average and Exponentially Weighted Moving Average charts. CUSUM charts using V-mask and decision interval methods. Multivariate control charts – Control Ellipsoid, Hotelling's T^2 chart.

Unit-III: Acceptance sampling plans for attribute inspection – Type-A and Type-B OC curves. Single, double and sequential sampling plans and their properties. Sampling plans with rectifying inspection-concept of AOQ, AOQL. Construction of Dodge CSP-1, CSP-2 and Multi level plans and their properties. Chain sampling and its applications. Design of Skip lot sampling plan and its ASN.

Unit-IV: Total Quality Management - Quality as a corporate strategy, six magnificent tools of process control, quality planning, costs of quality, analysis of quality costs, Zero Defects programme, quality circles, ISO 9000 and its modifications. Taguchi's contributions to Quality Engineering.

APST 406 (A) : STATISTICS FOR MARKETING RESEARCH

UNIT-I: RESEARCH METHODOLOGY: Types of Research;Hypotheses;Research Design; Collection of Data; Marketing Surveys; Sampling Techniques; Research Tools: Scaling Techniques; Problems in Marketing Research; Case study Method; Preparation of Research Report.

UNIT-II: STATISTICS FOR MARKETING: Statistical Measures: Mean, Median and Mode; Standard Deviation and Coefficient of Variation; Correlation and Regression analysis; Multiple correlation and Regression; Coefficient of Association; Linear and Compound growth rates.

UNIT-III: MARKETING INFERENTIAL TECHNIQUES: Elements of probability; Concepts of Binomial, Poisson and Normal distributions; Tests of Significance: z, t, χ^2 and F tests, ANOVA Technique; Non parametric Tests; Components of Experimental Designs: CRD, RBD and LSD.

UNIT-IV: ADVANCED STATISTICS FOR MARKETING: Basic Time Series and Forecasting Methods; Determination of Trend; Process and Product control; control charts$\overline{X}$,R, p, npand c-charts; Operation Research Techniques: Linear Programming Problem-Graphical Method, concept of PERT, CPM; Concepts of Multivariate Statistical Techniques: Factor Analysis, Discriminant Analysis, Cluster Analysis, Computer Applications to Marketing Research.

SRI VENKATESWARA UNIVERSITY COLLEGE OF SCIENCES

TIRUPATI - 517 502

DEPARTMENT OF VIROLOGY

Two-Year M.Sc., Virology Program

Semester Pattern Syllabus

[Choice Based Credit System (CBCS)]

Academic year 2023 – 24 onwards

Department of Virology

Sri Venkateswara University College of Sciences

Sri Venkateswara University

Program code	Program Name	Name of the Department
VIR-272	M. Sc. Virology	Dept. of Virology

About the Department

- The M.Sc. Virology program offered by the Department of Virology at Sri Venkateswara University College of Sciences (SVUCS), SV University, Tirupati, was started in 1987 with the UGC approval by the great initiative and incredible efforts taken by (Late) Prof. M.V. Nayudu, Founder of M. Sc Virology program and the Virology Department at SV University). (Late) Prof. P. Sreenivasulu and Prof. D.V.R. Sai Gopal has worked along with Prof. M. V. Nayudu in laying the strong foundation to the M. Sc Virology program through their extraordinary strategies and research contributions. From the inception, Dept. of Virology is committed to achieve excellence in education, research, and extension through systematic and focused teaching and hands-on-practical training in contemporary areas of Virology. The M. Sc Virology program brings together a variety of researchers as faculty members, who made significant contributions in their specializations and are working together for a common goal of identification, characterization, diagnosis, and management of viruses. Faculty members are not only working on basic aspects; they are also looking at translational approaches through their research interests. The M. Sc Virology program is strengthened by various research projects, sophisticated instrumentation to conduct advanced research and periodical update of the curriculum. The platform aims at equipping the students with necessary scientific skills for Virology related careers in research, industry and higher education sectors. The students in this program acquire wide knowledge, critical thinking skills and experience in conducting advanced strategic research and entrepreneurship in core Virology and other major interdisciplinary areas. The curriculum of M.Sc. Virology program is developed keeping in view of the student centric learning practices, which are entirely outcome-oriented and curiosity-driven. Emphasis will be given to train students in theoretical concepts and practical hands-on experience to face the challenges that are recurrent in the field of Virology and to foster employability, responsibility, and lifelong learning, which is the

need of the hour to make India's emergence as a global leader where Virology students can contribute for the innovation and manufacturing of viral vaccines and therapeutics through pharma and biotech industries.

The M.Sc. Virology program curriculum framework focuses on pragmatist approach whereby application of theoretical concepts is taught with substantial coverage of practical and field-based studies. The curriculum is designed to educate the students with the basic and advanced concepts of Virology and other major interdisciplinary disciplines by using modern pedagogical tools and concepts such as e-learning platforms, as well as to promote and develop skills and competencies that have enduring value beyond the classroom. While designing these frameworks, emphasis is given on the objectively measurable teaching-learning outcomes to ensure employability of the students. The Program has two academic years with four semesters. The first semester of the program covers the fundamental theory and practical concepts of Biological Chemistry, Analytical Techniques and General Microbiology and Virology with a foundation add-on course on Human and Professional Ethics-I. In the second semester, the students will explore the basic and advanced theory and practical orientation of towards the concepts of Cell biology, Molecular Genetics, Molecular Biology, Recombinant DNA Technology, Immunology and Human and Professional Ethics-II is included as a foundation add-on course. The theoretical and practical knowledge acquired in the basic and advanced aspects of interdisciplinary courses in the first and second semesters will help the students to understand the various aspects of viruses in the third and fourth semesters, where third semester covers core courses such as Plant Virology, Plant Viruses and Diseases and Molecular Virology or Tumor Virology (Generic Elective), Molecular Techniques as a skill oriented course and Communicative English and Fundamentals of Computers as an skill enhancement add on course. In the forth semester students will explore the core courses such as Animal and Human Virology, Animal and Human Viruses and Diseases and Applied Virology or Virus-based Biotechnology (Generic Elective), Industrial Biotechnology as a multidisciplinary course and Research Aptitude and Entrepreneurship as skill enhancement add-on course. Apart from these courses, students will get an opportunity to select one of the open elective courses of other programs offered by different Departments in the University in the third and fourth semesters and the Dept. of Virology offers open electives courses such as Basic Virology and Agricultural, Animal and Human Viruses in the third semester and Clinical Virology and Emerging and Reemerging Viruses in the fourth semester for the students of other departments in the campus. The curriculum is strengthened by adding topics such as laboratory bio-safety, GMP measures

and IPR, and this knowledge will make the students to take safety measures while working with viruses and to protect their ideas/discoveries. The pragmatic core of the framework has been designed such a way to enable the learners implementing the concepts to address the real-world problems. The educational tours to the adjacent Universities/institutes/research stations and involving the students in extension activities such as vaccination programs, awareness camps and rallies will make them competent to think about base level problems and motivate them to find the solutions for the same. Above all, this framework is aimed to mold master graduates to acquire critical thinking, scientific reasoning, moral ethical reasoning and qualification descriptors that are specific outcomes pertinent to the discipline and as responsible Indian citizens who have adequate knowledge and skills in reflective thinking, rational skepticism, scientific temper, digital literacy to contribute for betterment of the society and mankind.

VISION
➢ To serve as a "centre for academic excellence" by assuring systematic and focussed teaching and research in the frontier areas of Virology and to provide a conducive environment to the students for learning and quality training to promote professional development and individual well-being.

MISSION
➢ Providing quality post graduate education of high standards in Virology and achieving excellence in teaching and research. ➢ Introducing students to basic and advanced concepts/technologies/methods related to identification, characterization, detection and management of economically important, emerging and reemerging viruses infecting microbes, plants, animals and humans along with wide practical frameworks that can provide quality training of international standards and employability opportunities. ➢ Pursuing cutting edge research in the key areas of Virology and Microbiological Sciences through sponsored research projects. ➢ Establishing national/international collaborations with premier research institutes/universities for advancing scientific knowledge in contemporary areas of Virology and interdisciplinary areas of microbial sciences. ➢ Preparing students to have qualities such as honesty, integrity, carefulness, courage, resilience, self-discipline, openness, innovative thinking and determination to keep going forward, which make them ethically strong and to cotribute to the betterment of society and human kind.

Program Specific Outcomes (PSOs)

After completion of M.Sc. program in Virology, the students will be able to

S. No	Program Specific Outcomes (PSOs)
1	Demonstrate comprehensive knowledge and practical skills in the area of Virology starting from General Virology, Plant, Animal and Human Virology, Plant, Animal and Human Virus Diseases to advanced Molecular Virology, Applied Virology, Tumor Virology, Clinical Virology, Bio-safety and IPR, Virus Epidemiology and Disease management, Virus-Host-Vector interactions, Viral Vaccines, Emerging and reemerging Viruses, Virus-based Bio-nanotechnology that are relevant and required to create employment opportunities in academia and Pharmaceuticals and Biotech-based industries.
2	Develop knowledge and transferable skills in the fields of Biological Chemistry, Analytical Techniques, General Microbiology, Cell and Molecular Biology, Recombinant DNA Technology, Immunology, Molecular Techniques and Industrial Biotechnology with an introduction to Biostatistics and Bioinformatics to facilitate interdisciplinary research and for the participation and qualification in competitive examinations like GATE, UGC-CSIR-NET, APSET, GRE, Civil services and others.
3	Use knowledge and skills required for identifying problems and issues, collection of relevant quantitative and/or qualitative data, designing strategies for identification, characterization of important, emerging, and reemerging virus pathogens infecting microbes, plants, animals, and humans and for promoting national and international collaborative linkages with academic institutions, industries and research organizations for knowledge exchange and possible process/product development.
4	Gain in depth knowledge on the overall virus world and their characteristics such as history, origin, classification, nomenclature, etiology, structure, genome organization, transmission, multiplication, pathogenesis, epidemiology, strains, diagnosis and management of pathogenic viruses, which will help to design and develop affordable point-of-care diagnostics, novel prophylactic (vaccines) and

	therapeutic interventions to combat the infectious diseases caused by harmful viruses of microbes, plants, animals and humans.
5	Get exposure to open elective courses such as Tissue Culture, Mushroom Cultivation, Industrial Microbiology, Psychology, Aquaculture and Fishery Sciences, Medicinal and Ethno Botany, Hydroponics, Herbal drugs, Food and Nutrition etc., which will open new avenues and employment opportunities.
6	Acquire knowledge on foundation courses such as human and professional ethics, communicative English and basic computers and laboratory bio-safety measures, good microbiological practices (GMPs), IPR, human and professional ethical practices and principles, responsibilities and norms that need to be followed in personal and professional life to contribute to the welfare of the society and mankind.

Program Objectives

S. No.	Program Objectives
1	To update, extend and deepen students 'knowledge on Virology concepts thorough a flexible, research-intensive cafeteria program akin to academia and industry requirements.
2	To enhance career opportunities in industry, clinical settings both locally and globally or as a preparation for further higher education through in–house state of the art laboratory exposures and outbound dissertation activities fostering global competencies among students.
3	To impart in-depth practical oriented knowledge to students in various thrust areas of Virology, so as to meet the demands of industry and academia.
4	To empower the students to acquire technological knowhow by connecting disciplinary and interdisciplinary aspects of Virology.
5	To enrich the innovative thinking among students with right mixes of intellectual ability, existing policies at generating and safeguarding the product of their intellect, equipped with entrepreneurship abilities contributing to self and national

	development.
6	To inculcate the capability to work as independent scientists and entrepreneurs with sound subject knowledge, strong ethics and communication skills.

Program Outcomes (POs)

After completion of M.Sc. program in Virology, the students will be able to

S. No	Program Outcomes (POs)
PO-1 Disciplinary Knowledge	Develop the ability to demonstrate understanding, comprehensive knowledge and skills in various methodological and analytical approaches that are used in contemporary areas of Virology, which will make them to be eligible for higher studies, jobs in various academic and pharma/industrial sectors.
PO-2 Communication Skills	Demonstrate the ability to express, communicate and share thoughts, scientific concepts and ideas and experimental results clearly, concisely, and effectively, both in writing and orally.
PO-3 Critical thinking and problem solving	Develop the capability to evaluate basic concepts, theories and mechanisms related to Virology based on empirical evidence by following strategic scientific approach to acquire knowledge to find solutions to virus problems related to microbes, plants, animals, and humans.
PO-4 Analytical reasoning	Demonstrate the ability to evaluate the reliability and relevance of evidence, identify logical flaws in others argument, analyse and synthesize data from a variety of sources; draw valid conclusions with supporting evidences and examples and address opposing viewpoints.
PO-5 Scientific reasoning and research-related Skills	Develop the ability to review of scientific literature, independently carry out a complete scientific work process, including the understanding of theoretical background, defining, and formulating problems, hypothesis generation, collection, analysis and evaluation of data, and interpretation and presentation of

	results of an experiment or investigation in the field of Virology.
PO-6 Collaboration/ Cooperation /Teamwork:	Demonstrate high competence and multidisciplinary subject experience within selected topics related to Virology as a team member and ability to facilitate cooperative or coordinated effort and to contribute to a multidisciplinary team in the interest of common cause; ability to promote national and international collaborative linkages for knowledge exchange and possible process/product development in the field of Virology.
PO-7 Information/Digital literacy	Acquire the ability to use ICT (Information and communication Technology) in a variety of learning situations, demonstrate the ability to access, evaluate and use a variety of relevant information sources and to use appropriate software for the analysis of data.
PO-8 Self-directed learning	Develop the ability to work independently and to identify appropriate resources required for a project and manage a project through to completion.
PO-9 Usage of modern tools and techniques	Acquire the ability to demonstrate the practical skills in use of appropriate modern tools, advanced technologies and methods and skills necessary for designing and conducting experiment or investigation with an understanding of limitations.
PO-10 Moral and ethical awareness/reasoning:	Demonstrate the ability to assess and predict the technological, ethical, and social effects of one's own work /disciplines and of Virology, use bio-safety measures, ethical practices and avoid unethical behavior such as fabrication, misrepresentation of data or committing plagiarism, not adhering to intellectual property rights, and adopt objective, unbiased and truthful actions in all aspects of work.
PO-11 Leadership readiness/qualities	Acquire teamwork abilities and leadership qualities through various activities during their course work and demonstrate capability to map out the tasks of a team or an organization, and set direction, formulate an inspiring vision, build a team who can help achieve the vision; motivate, and inspire team members to engage with that vision, and use management skills to guide the

	team to the right destination in a smooth and efficient way.
PO-12 **Lifelong learning**	Acquire the knowledge and skills that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development and adopt to meet the demands of workplace through knowledge/skill development/re-skilling.

Program Educational Objectives (PEOs)

S. No.	Program Educational Objectives (PEOs)
1	To make the students competent in the field of Virology and its allied areas.
2	To equip the students to pursue higher education and research in reputed academic institutions/ institutes at national and international level.
3	To provide students with the concepts and research approaches for their higher career in the field of Virology and develop their scientific interest.
4	To develop a working knowledge of plant, animal and human viruses with respect to the development of product and processes for virus management
5	To impart knowledge on the importance of Laboratory Biosafety, Bioethics, IPR, entrepreneurship, Communication and management skills so as to become next generation of Indian Virologists
6	To involve the students in virus extension activities, vaccination programs and public awareness campaigns of emerging and re-emerging virus diseases.

****Individual student can choose either project work or multidisciplinary course based on their interest.**

*****Open Elective: Courses offered to students of others disciplines. Minimum strength to offer the open elective course is 10 students.**

******39 h T (Theory) and 30 h P (Practicals) for two batches.**

*******The marks of Add-on courses are not included for overall grade**

M.Sc. VIROLOGY

CBCS Pattern (With effect from the Academic year 2021-2022)

SEMESTER-I

VIR-101: BIOLOGICAL CHEMISTRY (Mandatory)

(Core Theory-I)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1. To impart analytical knowledge in Biochemistry, to learn the basic concepts of chemical processes of living organisms and the classification, structure, properties and functions of biomolecules of life (carbohydratesand lipids),
2. To learn, the classification, structure, properties and functions of , proteins classification and mechanism of action of enzymes andenzyme kinetics.
3. To learn, the classification, structure, properties and functions of nucleic acids, hormones, growth regulators and importance of vitamins and
4. To learn about the principles of thermodynamics and metabolism of nucleic acids, lipids, proteins and carbohydrates.

UNIT-I

An overview on basic concepts of Chemistry of life: The major elements and biomolecules of life and their primary characteristics; bonding properties of carbon, stabilizing forces of biomolecules-atomic bonds, covalent and non-covalent bonds, Van der Waals forces; polarity, hydrophilic and hydrophobic interactions; electron transfer and oxidation/reduction; functional groups of organic compounds; hydrogen ion concentration of biological systems, concept of buffers, normal, molar solutions and physiological buffer systems.

Carbohydrates: Classification of carbohydrates; outline structure and properties of important mono-, di-, and oligosaccharides and their identification and functions; structure, occurrence and biological importance of structural polysaccharides (cellulose, chitin, agar, pectins, proteoglycans, sialic acids).

Lipids: Building blocks of lipids; classification of lipids; fatty acids - physicochemical properties, separation, distribution in nature, characterization and saponification and iodine number. Nomenclature, outline structures, properties and functions of glycerides, neutral lipids (waxes, fats, oils), phospholipids, sphingolipids and glycolipids; steroids- plant sterol, ergosterol, cholesterol; lipoproteins- classification, composition and importance.

UNIT-II

Amino acids: Classification, structure and physicochemical properties.

Peptides: Characteristics of peptide bond, properties and functions of peptides, determination of amino acid composition and sequence in peptides.

Proteins: structural organization of proteins - primary, secondary, tertiary and quaternary with examples; classification, properties and biological functions of proteins; Ramachandran's plot; chaperones.

Catalytic proteins (enzymes): Classification, nomenclature, composition and structures, enzymes as biocatalysts, outlines of purification and assay of enzymes; Enzyme kinetics-Michaelis-Menten equation, factors influencing enzyme catalyzed reactions, regulation of enzyme activity, activators and inhibitors;mechanism of action of enzymes (e.g., chymotrypsin); regulatory enzymes, allosteric enzymes, isoenzymes, coenzymes, ribozymes, abzymes, immobilized enzymes.

UNIT- III

Nucleic acids: Types and composition of nucleic acids, structure, properties and functions of nitrogenous bases, nucleosides, nucleotides and polynucleotides; functions of nucleotides; denaturation and renaturation of nucleic acids, factors influencing hybridization, cot values.

Hormones and Growth regulators: Introduction to hormones and growth regulators and their functions.

Vitamins: Classification (fat soluble and water soluble), sources and importance of vitamins.

Bioenergetics: Thermodynamic principles in biology, free energy, ATP cycle, pH and buffers, acids and bases, energy transducers, redox potentials, free energy changes in redox reactions.

UNIT- IV

Carbohydrate metabolism: ATP biosynthesis (Glycolysis, TCA and ETC).

Lipid metabolism: Overview of lipid metabolism (synthesis and degradation of triacylglycerides); oxidation of saturated and unsaturated fatty acids.

Protein metabolism: Hydrolysis of proteins-exo- and endo-proteinases, outlines of biosynthesis and catabolism of amino acids in microbes (deamination, decarboxylation and transamination reactions); urea cycle.

Nucleotide metabolism: Biosynthesis of bases, nucleosides and nucleotides including deoxyribonucleotides, regulation of nucleotide synthesis; break down of nucleic acids-exo- and endo-nucleases (RNases and DNases) and phosphodiesterases, salvage pathways.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire knowledge on major elements and biomolecules of life and their characteristics.

CO2: Learn the classification, structure, properties and functions of carbohydrates, lipids, proteins, classification and properties of enzymes and enzyme kinetics

CO3: Explain the types, structure and functions of nucleic acids, hormones, growth regulators and vitamins.

CO4: Learn the concepts of bioenergetics and biosynthesis of carbohydrate, lipid, carbohydrates, and proteins. and learn the concepts of bioenergetics and biosynthesis of carbohydrate, lipid, carbohydrates, and proteinsanduse this knowledge to compete for UGC-CSIR-NET, GATE, APSET and other scientific examinations

VIR-102: ANALYTICAL TECHNIQUES (Mandatory)

(Core Theory-II)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand the approaches involved in characterization and concentration of biomolecules and to train students in adopting various techniques involved in biological research such as microscopic,
2. To understand the approaches involved in chromatographic, centrifugal, and electrophoretic techniques.
3. To learn about various radioisotopes, spectroscopy and cell countingtechniques that are used for characterization of biomolecules and
4. To learn about basic concepts of biostatistics such as measures of central tendency and dispersion, correlation and regression analysis, probability distribution and tests of significance.

UNIT-I

Characterization of Biomolecules: Introduction and various approaches for characterization of biomolecules.

Concentration of Biomolecules: Salting out with ammonium sulfate, flash evaporation, lyophilization, dialysis and diafiltration (tangential flow filtration using membrane cut-offs), membrane filtration and their applications.

Microscopy- Principles, methods and applications of light, bright-field, dark-field, phase-contrast, fluorescent microscopes; Principles, methods and applications of scanning electron microscope (SEM) and transmission electron microscope (TEM); Specimen preparation, fixation and staining techniques for bright field and electron microscopes and microtomy.

UNIT-II

Chromatography: Principle, theoryand applications of partition (paper chromatography), adsorption (TLC), column (ion-exchange, gel permeation, affinity); Principle and applications of GLC, HPLC, FPLC, GC/LC-MS and MALDI-TOF.

Centrifugation: Theory and applications of preparative and analytical centrifugation and rotors (differential, rate zonal and equilibrium density gradient), sedimentation analysis; isolation of cells, sub-cellular organelles, viruses and macromolecules.

Electrophoresis: Principle,theory and applications of electrophoresis- paper, gel (starch, acrylamide and agarose), vertical, horizontal submarine, gradient, 2D-PAGE, pulse-field, capillary and isoelectric focusing; isolation, blotting techniques (southern, northern and western blotting) and their applications.

UNIT- III

Radioisotope techniques: Nature andtypes of radioactivity,half-life of radioisotopes, detection and measurement of different types of radioisotopes normally used in biology, incorporation of radioisotopes in biological tissues and cells, autoradiography, molecular imaging of radioactive material, biological effects and applications of radioisotopes, safety guidelines in handling isotopes.

Spectroscopy: Properties of light (absorption, transmission, refraction, reflection, phase formation, scattering, interference), Beers- Lambert law; Principle, instrumentation and theory and applications of UV-visible, IR, ESR, mass, MALDI, NMR spectrophotometry; fluorimetry, CD; X-ray diffraction, X-ray crystallography and surface plasmon resonance.

Cell counting: Detection of molecules in living cells, in situ localization (FISH), hemocytometer, cell viability and cytotoxicity; immunofluorescence, flow cytometry and MTT based assays.

UNIT-IV

Introduction: Definition and scope of Biostatistics, statistical diagrams and graphs.

Measures of central tendency: arithmetic mean, median and mode**.**

Vital statistics: Death rate and ratio, measures of morbidity measures of mortality.

Measures of dispersion: standard deviation, variance and coefficient of variation.

Analysis: Introduction to correlation analysis and regression analysis.

Probability and probability distribution: Binomial, Poisson and normal distributions.

Tests of significance: Applications of t-test, F-test, analysis of variance (ANOVA), X^2 test.

Course Outcomes: At the end of the course the student will be able to

CO1: Define the list of approaches used for characterization and concentration of biomolecules and understand the types, principle and instrumentation of microscopy and its applications.

CO2: Define the types, working principles and methodology of chromatography, spectroscopy and cell counting techniques.

CO3: Understand the properties of radioisotopes and their applications, learn the types, principles and applications of spectroscopic and centrifugation techniques.

CO4: Define basic concepts of statistics and apply basic statistical methods to Virology related research experiments involving statistical data.

VIR-103A: GENERAL MICROBIOLOGY (Optional)

(Compulsory Foundation -Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn about fundamentals aspects of microbiology including origin, evolution of microorganisms, different groups of microorganisms and their importance, microscopy principles and applications, morphology, and structure of bacteria,
2. To learn about Microbiological media, isolation, cultivation and enumeration methods of microorganisms, microbial growth characteristics, maintenance, and preservation of microbial cultures.
3. To develop knowledge on microbial taxonomy, transport of nutrients in microbes, control strategies of microorganism,
4. To develop knowledge on general characteristics, structure and reproduction of fungi, algae, and protozoan parasites.

UNIT – I

Fundamentals of microbiology: Origin and evolution of microorganisms, Pioneers in microbiology, different groups of microorganisms, Importance of microorganisms in plants, animal and human welfare;recent trends and development in modern microbiology.

Microbial taxonomy: General criteria for microbial classification- Hackel's three kingdom concept - Whittaker's five kingdom concept - three domain concept of Carl Woese, Outline of Bergey's manual and its importance in systematic bacteriology;

General characteristics of Archaea, evolutionary significance; general characteristics of Spirochetes, Rickettsias.

Morphology and structure of bacteria - Morphological types - cell walls of Gram negative - Gram positive bacteria - cell wall, antigenic properties - capsule - cell membranes - structure - composition – properties; Structure and function of flagella, cilia, pili; nucleoid, endospores, bacterial cell division.

UNIT-II

Microbiological media and isolation of microorganisms: Types of media- natural and synthetic; basal, defined, complex, enrichment, selective, differential, maintenance and transport media; Isolation /enumeration methods from different natural samples (streak plate, pour plate, spread plate, stab culture, slant culture and hanging drop methods); pure cultures techniques for microorganisms.

Microbial growth: Definition, microbial growth curve, batch culturing, continuous, synchronous, biphasic culturing, generation time, factors influencing the growth-physical chemical and biological; microbial growth measurement methods.

Maintenance and preservation of microbial cultures: Short term and long term preservation methods; repeated sub-culturing, oil overlay, sterile soil/sand, glycerol-deep freezing, drying methods, freeze-drying (lyophilization), and revival of microbial cultures.

UNIT-III

Microbial nutrition: Microbial nutrient requirements – macro-nutrients, micro-elements, growth factors, sources of nutrients, nutritional classification of bacteria - Phototroph, Chemotroph, Autotroph (lithotroph), Heterotroph (organotroph), Photoautotroph, Photoheterotroph, Chemoautotroph, Chemoheterotroph, nutritional patterns of pathogens – Saprophytes, Auxotroph.

Control of Microorganisms: Sterilization by physical and chemical agents-heat, radiation, pH, surface tension, osmotic pressure, filters, acids, bases, alcohols, aldehydes, ketones, phenols, soaps, antimicrobial agents, antibiotics-classification, mode of action and resistance.

UNIT-IV

Fungi: General characteristics structure and importance of fungi-*Saccharomyces*, *Pichia,Pencillium*, *Rhizopus*, *Trichoderma*.

Actinomycetes: General characteristics, structure and economic importance of actinomycetes.

Algae: General characteristics, structure and economic importance of algae -*Chlorella,* Cyanobacteriaand *Gracellaria*.

Protozoan parasites: General characteristics, structure of pathogenic protozoan parasites-*Entamoeba* and *Leishmania.*

Microbial Diseases and Host pathogen interaction: Normal microbiota, reservoirs of infections; Nosocomial infections, emerging infectious diseases, human diseases caused by bacteria, fungi, protozoa, parasitic helminths of clinical importance (e.g., TB, Aspergillosis, Malaria, filariasis).

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the origin, evolution, different groups and importance of microorganisms and learn the types, principles and applications of microscopy, morphology, and structure of bacteria.

CO2: Learn the basic concepts of media preparation, isolation, cultivation, enumeration, growth measurement, maintenance, and preservation methods of microorganisms.

CO3: Explain the general criteria for microbial classification, general characteristics of microorganisms, mechanism of nutrient transport in microbes and strategies used for control of microorganisms.

CO4: Describe the general characteristics, structure, reproduction of important fungi, algae and protozoan parasites.

Learning Resources and Suggested Books:

1. Brock Biology of Microorganisms 16th Edition (2020) Madigan MT, Martinko JM, Dunlap PV, Clark DP Prentice Hall publisher USA.
2. *Foundations in Microbiology*, (10th Edition) (2018)Kathleen Park Talaro and Barry Chess, Tata McGraw, India.

(Or)

VIR-103B: MICROBIAL PHYSIOLOGY AND METABOLISM (Optional)

(Compulsory Foundation - Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn about fundamental aspects of nutrition and growth requirements and the mechanism of transport of nutrients in different groups of microorganisms and their importance
2. To learn about microbial growth characteristics metabolism of growth and microbial photosynthesis
3. To develop knowledge on microbial metabolism of Carbohydrates, Aerobic and Anaerobic respiration
4. To develop knowledge on lipid, protein, nucieotide metabolismof microorganisms.

Unit I

Nutrition and growth: Elemental nutrient requirements of microbes; nutritional groups of bacteria; autotrophy-photoautotrophy and bacterial photosynthesis; chemoautotrophy and autotrophic metabolism; heterotrophy- photoheterotrophy and chemoheterotrophy, heterotrophic metabolism in bacteria; nutritional mutants and their use in metabolic studies.

Transport of nutrients in microbes: Structural organization of plasma membrane in relation to transport, types and mechanisms of transport (passive, simple, facilitated, active, chemical modification) with reference to sugars, amino acids and ions; methods for studying of transport, coupling of transport of ions and metabolites to ATP/proton gradient.

Unit II

Microbial Growth: Definition; salient features of growth curve; generation time; specific growth rate; batch and continuous culture; synchronous growth; diauxic growth curve.; factors influencing the microbial growth; measurement of cell numbers; cell mass and metabolic activity; environment and microbial growth.

Microbial metabolism: The concepts of microbial metabolism, primary and secondary metabolism and their significance.

Photosynthesis: Oxygenic, anoxygenic photosynthesis; fixation of CO_2, Calvin cycle - C3 and C4 pathway;chemolithotrophic electron transport systems;methanogenesis;Biolumenescence.

Unit III

Carbohydrate metabolism: Pathways underlying the utilization of different sugars (EMP, ED, HMP and phosphoketolase) in microorganisms, gluconeogenesis; synthesis of peptidoglycans and glycoproteins.

Aerobic respiration: TCA cycle- intracellular location and reactions of the cycle, amphibolic nature of the cycle, energetics of the cycle; the glyoxalate cycle; mechanisms of substrate-level phosphorylation; respiratory electron transport in mitochondria; mechanism of oxidative phosphorylation.

Anaerobic respiration: Nature of fermentation, the relationship of oxygen to growth and fermentation, biochemical mechanisms of lactic acid, ethanol and acetone fermentations, study of fermentations, relationships between fermentation and energy production; nitrate and sulphate respiration.

UNIT-IV

Lipid metabolism: Biosynthesis of triacyl glycerols, phospholipids and glycolipids; oxidation of saturated and unsaturated fatty acids; microbial metabolism of aromatic and aliphotic hydrocarbons.

Protein and nitrogen metabolism: Metabolism of amino acids-amino acid biosynthesis and utilization; catabolism of amino acid, transamination, decarboxylation and oxidative deamination; Urea cycle.

Metabolism of nucleotides: Purine and pyrimidine biosynthesis, regulation of purine and pyrimidine biosynthesis,inhibitors of nucleotide synthesis.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the fundamental aspects of nutrition and growth requirements and the mechanism of transport of nutrients in different groups of microorganisms and their importance

CO2: Learn the basic concepts ofmicrobial growth characteristics metabolism of growth and microbial photosynthesis

CO3: Explain the general criteria for microbial metabolism of Carbohydrates, Aerobic and Anaerobic respiration

CO4: Describe the lipid, protein, nucieotide metabolismof microorganisms

VIR-104A: GENERAL VIROLOGY (Optional)

(Elective Foundation-Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1.To understand the history, properties, nomenclature and classification of viruses and development of virology and

2. To learn about methods used for isolation, cultivation, and purification of viruses.

3. To acquire knowledge about the methods used for quantitation of viruses and major characteristics of important plant and animal virus families and biology and applications of major RNA and DNA viruses of insects,

4. To acquire knowledge about bacteriophages, algal and fungal viruses, subviral agents, importance of viruses in human welfare.

UNIT-I

History: History, origin and evolution of viruses, pioneers of Virology and properties of viruses.

Nomenclature and classification of viruses: Criteria used for naming and classification, Current ICTV classification of viruses of bacteria, plants and animals and humans.

Morphology and properties of viruses: Physical- morphology and structure, sedimentation, electrophoretic mobility, buoyant density; Biochemical- chemical composition, nucleic acids, proteins, enzymes, lipids, carbohydrates, polyamines, cations, virus stability; Biological- Host range, inclusion bodies and transmission.

Transmission of viruses: Non-vector and vector mode of transmission of viruses**.**

UNIT-II

Laboratory Bio-safety: Principles of bio-safety, biosafety levels, containment facilities, maintenance and handling of laboratory animals and requirements of virology laboratory.

Isolation, cultivation and maintenance of viruses: Isolation and cultivation of plant and animal viruses (experimental plants and tissue culture, experimental animals, embryonated eggs, organ cultures, primary and secondary cell cultures, suspension and monolayer cell cultures, cell strains, cell lines).

Purification of viruses: Extraction of viruses from tissues, clarification, and concentration of viruses in clarified extracts by physical and chemical methods, further purification of viruses by rate zonal / equilibrium density gradient centrifugation, Criteria of virus purity, Quantitation and preservation of purified virus preparations.

UNIT-III

Assay of viruses: Infectivity assay methods (plaque, pock, end point, local / systemic assay of plant viruses), physical (EM), serological (HA, HI, immunofluorescence, ELISA) and molecular (viral protein and nucleic acid based) approaches.

Replication: Introduction to virus replication, steps involved in virus replication and general strategies.

Management of viruses: Cultural practices, Sanitation, control of vectors,vaccines, antiviral drugs and chemotherapy.

UNIT-IV

Bacteriophages: Biology of major RNA (MS_2, Qβ) and DNA (T4, lambda, Øx174, M_{13}) bacteriophages, replication of M13, T4 and lambda phages; biology of cyanophages.

Algal and fungal viruses: Biology of viruses of *Phycodnaviridae*, *Partitiviridae* and *Totiviridae*.

Biology of sub-viral agents: Satellite viruses, sat-RNAs, DI particles, viroids, virusoids and prions.

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the discovery, nature, origin and evolution of viruses and the physical, biochemical, and biological properties of viruses, criteria used for nomenclature and classification of bacteria, plant and animal viruses.

CO2: Describe the methods used for isolation, cultivation, and purification of viruses and criteria of purity.

CO3: Define biological, physical, biochemical, and serological methods used for quantitation of viruses, major characteristics of important plant and animal virus families and biology and applications of major RNA and DNA viruses of insects.

CO4: Understand the biology of major bacteriophages, algal and fungal viruses, subviral agents and importance of viruses in human welfare with suitable examples.

Learning Resources and Suggested Books:

1. Evidence-Based Diagnosis: An Introduction to Clinical Epidemiology 2nd Edition, by Thomas B. Newman, Michael A. Kohn (2020).2 edition, Publisher: Cambridge University Press.
2. Virusphere: From Common Colds to Ebola Epidemics--Why We Need the Viruses That Plague Us (2020). 1st edition, Frank Ryan (Author), Publisher: Prometheus.
3. Guide to Clinical and Diagnostic Virology (2019), (ASM Books) 1st Edition, by ReetiKhare, Publisher: ASM Press.
4. Virology (2019), P. Saravanan.

VIR-104B: ENZYME TECHNOLOGY (Optional)

(Elective Foundation-Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1.To impart knowledge in Nomenclature and classification; general types properties and Kinetics of Enzymes

2.To learn, the properties and functions of viral enzymes, and mechanism of action of enzymes.

3. To learn, about enzyme immobilization and Biosensors

4.To learn about the Applications of Enzymesin food processing, textile and pharmaceutical industries; Catalytic enzymes

Unit-I

Enzymes: Nomenclature and classification; general types and properties of enzymes.

Kinetics of Enzymes: Enzyme specificity- stereospecificity, reaction specificity, substrate specificity; factors affecting enzyme activity- temperature, pH, time; Michaelis-Menten equation - Analyses of kinetic data-Lineweaver-burk plot; kinetics of single substrate reactions, multisubstrate reactions – mechanisms and kinetics; turnover number; types of inhibition and models -substrate, product; allosteric regulation of enzymes; deactivation kinetics.

Unit-II

Viral enzymes: DNA dependent DNA polymerase, RNA dependent RNA polymerase, protease, ligase, integrase, helicase, primase, reverse transcriptase, Hemagglutinin esterase, Thymidine kinase, neuraminidase, Lysins, polyadenylate polymerase, SARS-CoV replicase complex, vaccinia virus G4 disulfide oxidoreductase; **Proteinases:** 2A proteinase ($2A^{pro}$), 3C proteinase ($3C^{pro}$), 3C-like proteinases, (M^{pro} /$3CL^{pro}$), papain-like proteinases (PL^{pro}: $PL1^{pro}$ and $PL2^{pro}$); Chymotrypsin-like serine proteases, Glycosyltransferases.

Unit-III

Enzyme Immobilization and Biosensors: Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding – examples, advantages and disadvantages, design of enzyme electrodes and their application as biosensors in industry, healthcare and environment.

Unit-IV

Applications of Enzymes: Enzymes in industrial processing- Role of cellulases, hemicellulases, lipases, proteases, laccases and pectinases; Enzymes in organic synthesis – esters, amide, peptide; modified and artificial enzymes; enzymes in food processing, textile and pharmaceutical industries; Catalytic enzymes.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire knowledge on Nomenclature and classification; general types properties and Kinetics of Enzymes

CO2: Learn the the properties and functions of viral enzymes, and mechanism of action of enzymes.

CO3: Learn the enzyme immobilization and Biosensors and their applicationsin industry, healthcare and environment.

CO4: Learn the Applications of Enzymesin food processing, textile and pharmaceutical industries; Catalytic enzymes

PRACTICAL: VIR-105A: BIOLOGICAL CHEMISTRY &GENERAL MICROBIOLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Lab manuals, E-learning resources, textbooks and study materials	
Semester: I	**Credits: 4 Credits**

Course Educational Objectives:

1.To estimate carbohydrates, nucleic acids, amino acids, proteins, glucose, bilirubin, and inorganic phosphorus using qualitative and quantitative tests and to determine the activity of enzymes.

2 To learn the safety measures in handling different types of microorganisms and to practice various methods used for isolation, cultivation, and identification of the microorganisms from different sources and checking growth parameters at various conditions.

List of Experiments:

1. Preparation of reagents and buffers
2. Calculation of percentage, molarity and normality of solutions
3. Qualitative tests for identification of carbohydrates
4. Qualitative tests for identification of amino acids
5. Qualitative tests for identification of nucleic acids
6. Estimation of proteins (Lowry method)
7. Estimation of glucose (Anthrone method)
8. Estimation of glycine
9. Estimation of bilirubin
10. Estimation of cholesterol
11. Estimation of inorganic phosphorous
12. Determination of activity of peroxidase and polyphenol oxidase from leaves
13. Isolation and assay of an enzyme (amylase or phosphorylase) from potato extract
14. Sterilization, disinfection, safety in microbiological laboratory(theory)
15. Orientation of instruments - Compound microscope, Autoclave, Incubator cum

shaker, Laminar Airflow.

16. Sterilization methods (dry, wet, UV, chemical agents).
17. Preparation of media for cultivation of microorganisms.
18. Enumeration of microorganisms from soil.
19. Enumeration of microorganisms from water
20. Plating techniques- streak plate, pour and spread plate methods
21. Bacterial staining techniques: Simple, Gram and spore staining
22. Lactophenol-cotton blue staining for fungi.
23. Hanging drop method for bacterial motility.
24. Determination of bacterial growth curve.
25. Effect of pH on bacterial growth.
26. Effect of temperature on bacterial growth.
27. Effect of salt concentration on bacterial growth
28. Antibiotic sensitivity assay – Disc and Well diffusion method
29. Isolation of bacteriophages from sewage water

Course Outcomes: At the end of the course the student will be able to

CO1: Learn to calculate normality, molarity, molecular weight and percentage of chemical substances and qualitative and quantitative estimation of major biomolecules such as proteins, carbohydrates, lipids and nucleic acids.

CO2: Know how to isolate and check the activity of enzymes from various sources.

CO1: Define laboratory safety measures that needs to be followed in Virology and Microbiology laboratories and know how to use different sterilization methods and preparation of media.

CO2: Acquire the practical skills to use cultivation, staining and characterization methods for different microorganisms and to check their stability under various conditions.

PRACTICAL: VIR-106A: ANALYTICAL TECHNIQUES & GENERAL VIROLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Lab manuals, E-learning resources, textbooks and study materials	
Semester: I	**Credits: 4 Credits**

1. To acquire hands-on experience in using various analytical tools such as ultrafiltration, electrophoresis, spectroscopy, chromatography and centrifugation techniques for the isolation and characterization of biomolecules isolated from various sources.

2. To demonstrate the practical skills in isolation of bacteriophages, cultivation of viruses in embryonated eggs and plants, transmission of plant viruses and checking the stability of plant viruses.

List of Experiments:

1. Laboratory equipment and their maintenance (Theory excercise)
2. Measurement of pH
3. Cell counting by Hemocytometer
4. Determination of λ max for colored solutions
5. Determination of λ max of DNA & RNA by UV spectrophotometry
6. Separation of lipids by TLC
7. Separation of amino acids by paper chromatography
8. Separation of leaf or virus proteins by SDS-PAGE
9. Separation of DNA by submarine agarose gel electrophoresis
10. Isolation of chloroplasts by sucrose density gradient centrifugation (demo)
11. Cultivation of viruses in embryonated eggs: different routes of inoculation.
12. Mechanical transmission of plant virus
13. Aphid transmission of plant virus (demo)
14. Graft transmission of plant virus
15. Determination of thermal inactivation point (TIP) of plant virus
16. Determination of dilution end point (DEP) of plant virus
17. Determination of longevity in vitro (LIV) of plant virus
18. Determination of chlorophylls in healthy and virus infected leaves.

Course Outcomes: At the end of the course the student will be able to

CO1:Learn to useultrafiltration, chromatography, and electrophoresis techniquesfor isolation and characterization of biomolecules.

CO2:Acquire the skills to usespectroscopic and centrifugal methods for characterization of biomolecules.

CO3:Learn to isolate bacteriophages from different sources and cultivate viruses in embryonated eggs and plants.

CO4: Demonstrate the mechanical, aphid and graft transmission of plant viruses and methods used to check the stability of viruses and determine the effect of virus infection on plants through chlorophyll estimation.

PRACTICAL: VIR-106B: ANALYTICAL TECHNIQUES &ENZYME TECHNOLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Lab manuals, E-learning resources, textbooks and study materials	
Semester: I	**Credits: 4 Credits**

1. To acquire hands-on experience in using various analytical tools such as ultrafiltration, electrophoresis, spectroscopy, chromatography and centrifugation techniques for the isolation and characterization of biomolecules isolated from various sources.

2.To demonstrate the practical skills on quantitative anad qualitative assay of enzymes and their kinetics

List of Experiments:

1. Laboratory equipment and their maintenance (Theory excercise)
2. Measurement of pH
3. Cell counting by Hemocytometer
4. Determination of λ max for colored solutions
5. Determination of λ max of DNA & RNA by UV spectrophotometry

6. Separation of lipids by TLC
7. Separation of amino acids by paper chromatography
8. Separation of leaf or virus proteins by SDS-PAGE
9. Separation of DNA by submarine agarose gel electrophoresis
10. Isolation of chloroplasts by sucrose density gradient centrifugation (demo)
11. Enzyme Kinetics – determination of rate constant
12. Estimation of glucose by Benedict's method
13. Estimation of urea by Diacetyl monoxime method
14. Estimation of urease enzyme in horse gram
15. Estimation of blood sugar
16. Amylase activity from saliva
17. Effect of temperature, pH, time on Enzyme (alkaline phosphatase) activity
18. Determination of acid phosphatase activity

Course Outcomes: At the end of the course the student will be able to

CO1: Learn to use ultrafiltration, chromatography, and electrophoresis techniques for isolation and characterization of biomolecules.

CO2: Acquire the skills to use spectroscopic and centrifugal methods for characterization of biomolecules.

CO3: Learn to estimate the blood sugar, urea. quantitative and qualitative assay of enzymes and their kinetics

CO4: Know how to isolate and check the activity of enzymes from various source

VIR-107: HUMAN VALUES AND PROFESSIONAL ETHICS– I

(Audit Theory Course-Self Study)

Self-Study	**Internal test Assessment: 100 marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures by experts	**Assignments, quizzes and seminars**
Semester: I	**Non credited course**

Course Educational Objectives:

1.To enable the students to imbibe and internalize the moral values and ethical principles

2. To learn ethics moral and social values and ethical behavior in the personal and Professional lives.

3.To learn the rights and responsibilities and to appreciate the rights of others and to create awareness on religious values and other good acts and facts of life.

4. To acquire knowledge about the important facts of Bhagavad Gita, values hidden in religions, religious tolerance and aware of crime, and punishment theories

UNIT-I

Definition and nature of Ethics, its relation to religion, politics, business, legal, medical and environment; need and importance of professional ethics - goals - ethical values in various professions.

UNIT-II

Nature of Values - good and bad, ends and means, actual and potential values, objective and subjective values, analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, good behavior and respect for elders.

UNIT-III

Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha(Non- stealing); Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama (Fulfillment Bodily Desires), Moksha(Liberation).

UNIT-IV

Bhagavad Gita - (a) Niskama karma (b) Buddhism- The Four Noble Truths - Arya astangamarga, (c) Jainism- mahavratas and anuvratas; Values embedded in various religions, religious tolerance, Gandhian ethics.

Crime and Theories of punishment: (a) Reformative, Retributive and Deterrent (b) Views on manu and Yajnavalkya.

Course Outcomes: At the end of the course the student will be able

CO1: Aware of the moral values and ethical principles ethics for successful personaland professional life.

CO2: Learn the moral values and good behavioral concepts that need to be followed for a better life, learn to respect others, and develop civil sense to act as responsible citizen by developing sufficient knowledge and skills in critical thinking, scientific reasoning, moral ethical reasoning that are pertinent to the discipline

CO3: Acquire the knowledge about the importance of non-violence, truth, righteousness, and other good acts of life and develop commitment.

CO4: Learn to live peacefully by having knowledge about the important facts of Bhagavad Gita, values hidden in religions, religious tolerance and aware ofcrime, and punishment theories.

Learning Resources and Suggested Books:

1. John S Mackenjie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Management Ethics - integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
4. "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil(ed.) G.C.Haughton.
10. Susruta Samhita: Tr.KavirajKunjanlal, KunjalalBrishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. CarakaSamhita:Tr. Dr.Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues., Barbara Mackinnon, Wadsworth/Thomson Learning, (2001).
13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, (1999).
14. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Textbook for Intermediate logic, Ethics and Human Values, board of Intermediate Education&Telugu Academic Hyderabad
16. Sharma I.C Ethical Philosophy of India. Nagin&co Jalandhar.

SEMESTER-II

VIR-201: CELL BIOLOGY AND TISSUE CULTURE (Mandatory)
(Core Theory-1)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1.To understand the structure and contents of prokaryotic and eukaryotic cells,

2.To understand general principles and pathways of cell communication and cell signaling.

2. To describe the concepts and methodologies of plant tissue cultures.

4.To describe the concepts and methodologies of and animal tissue and organ cultures, cell counting and introduction to stem cell cultures

UNIT – I

Prokaryotic and eukaryotic cells: Discovery of cell, cell theory, prokaryotic and eukaryotic cell structure; structural organization and functions of intracellular organelles-cell wall, cell membranes, nucleolus, nucleus (chromosomes, ploidy, chromatin and nucleosomes), mitochondria, golgi bodies, lysosomes, endoplasmic reticulum, peroxisomes, plastids, vacuoles, chloroplasts; Sub-cellular fractionation and criteria of functional integrity; Cytoskeleton - Microtubules, microfilaments and their dynamics; centrosome, cilia.

Cell cycle: Mitosis and meiosis, molecular events and regulation of cell cycle in eukaryotes, check points (role of Rb and p53), cyclins and protein kinases, MPF (maturation promoting factor).

Apoptosis: Neurotrophic factors, caspases, pathways of apoptosis; Cancer–Cellular, molecular and genetic basis of cancer.

UNIT – II

Membrane transport: Structural organization of plasma membrane in relation to transport of nutrients; Diffusion (simple and facilitated) and active transport (primary and secondary), carrier proteins (uni, sym and antiporters), channel proteins (voltage and ligand gated); Bulk transport-pino, phago and exocytosis; receptor mediated endocytosis, coupling of transport of ions and metabolites to ATP/proton gradient.

Cell Signaling and cell-cell interactions: Cell surface receptors -ion channel-linked, G-protein-linked and enzyme-linked receptors and intracellular receptors; Types of intracellular signaling – autocrine, paracrine, contact-dependent, synaptic and endocrine signaling; Intracellular signaling proteins- Types and their role; cAMP pathway of signal transduction; cGMP, phospholipids and calcium ions, MAP kinase pathway, JAK – STAT pathway; Cell junctions - tight junction, desmosome, hemidesmosome and gap junctions; Cell adhesion molecules - cadherins, integrins and selectins;Bacterial chemotaxis and quorum sensing.

UNIT – III

Introduction to tissue culture: Principles and types of tissue culture, Culture media - balanced salt solutions; Composition and metabolic functions of media; Defined media and their applications; role of serum and supplements, serum-free media; maintenance of sterility, use of antibiotics, mycoplasma and other contaminations**.**

Animal tissue culture:*In vitro* cultures**-**Primary culture – Mechanical and enzymatic mode of disaggregation, establishment of primary culture; Subculture - Passage number, split ratio, seeding efficiency, criteria for subculture; Cell lines – Definite and continuous cell lines, characterization, authentication, maintenance and preservation of cell lines; Normal*vs*. transformed cells, growth characteristics of transformed cells

Cell counting: Hemocytometer, coulter counter; Cell viability and cytotoxicity; Dye exclusion and inclusion tests, clonogenic assay, MTT based assay.

Three dimensional cultures: Organoids and Histotypic cultures.

UNIT – IV

Plant tissue culture: Introduction to totipotency of plant cell; Tissue cell culture- Initiation and maintenance of callus and suspension culture, single cell clones, organogenesis, somatic embryogenesis, synthetic seeds, shoot tip culture, rapid clonal propagation and production of virus-free plants; Cryopreservation and germplasm conservation.

Somatic hybridization: Protoplast isolation, culture and fusion, selection of hybrid cells & regeneration of hybrid plants, cybrids; Embryo culture, anther, pollen and ovary culture for production of haploid plants and its significance.

Course Outcomes: At the end of the course the student will be able to

CO1: Discuss the structure and contents of prokaryotic and eukaryotic cells,
CO2: Discuss general principles and pathways of cell communication and cell signaling.
CO2: Understand the concepts and methodologies of plant tissue cultures

CO4: Understand the concepts and methodologies of plant and animal tissue and organ cultures, cell counting and introduction to stem cell cultures.

VIR-202: MICROBIAL GENETICS AND MOLECULAR BIOLOGY(Mandatory)
(Core Theory-1I)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1. To gain understanding ofprokaryotic and eukaryotic genome organization, modern concept of genes, plasmids, mobile genetic elements
2. To learn gene transfer and mapping mechanisms in bacteria, genetics of viruses and requirements and mechanism of DNA replication.
3. To attain knowledge about the mechanism of DNA damage and repair, concept of mutations and their importance, processes involved in transcription,
4. To attain knowledge about the mechanism of translation, regulation of gene expression and gene silencing mechanisms.

UNIT-I

Genetic notations, conventions and terminology

Evidences for nucleic acids as information carriers: Genomes- types, diversity in size, structure and organization in viruses, prokaryotes (nucleoid) and eukaryotes (chromosomes, ploidy, chromatin and nucleosomes); Chloroplast and mitochondrial genomes; **Genes -** The modern concept of the genes, gene structure and architecture, types of genes.

Plasmids: Detection, types, properties, purification, transfer, replication and curing, significance / importance.

Mobile genetic elements: Prokaryotes - types and structure of bacterial transposons, and molecular mechanism of transposition; Eukaryotes – types and their structure, and molecular mechanism of transposition; Exploitation of transposable elements in genetics.

UNIT-II

Gene transfer mechanisms and gene mapping in bacteria: Natural and artificial transformation; Conjugation; Transduction (generalized, abortive, specialized and cotransduction).

Genetic recombination: Requirements for recombination; Molecular models of recombination.

Genetics of viruses: Recombination in bacteriophages-T2 and fine structure of rII locus of T4 phage.

Replication of nucleic acids: Concepts and strategies / models of replication, molecular mechanisms of DNA replication in prokaryotes and eukaryotes; rolling circle replication, inhibitors of DNA replication.

UNIT-III

DNA damage and repair: Types of damage, repair mechanisms – mismatch repair, short patch repair, nucleotide / base excision repair, recombination repair and SOS system.

Transcription (RNA biosynthesis): Transcription factors (transcription activators and repressors), and machinery,types of RNA polymerases, steps involved in transcription, RNA processing, RNA editing, splicing and polyadenylation,inhibitors of transcription, RNA transport.

Translation (Protein biosynthesis) : Genetic code and its elucidation, structure and composition of prokaryotic and eukaryotic ribosomes, structural features of rRNA, mRNA and tRNAs in relation to function, steps in protein biosynthesis in prokaryotes and eukaryotes; post-translational modification of proteins and their sorting and targeting; inhibitors of protein biosynthesis.

UNIT-IV

Regulation of gene expression: An overview on levels of regulation, terminology and operon concepts, enzyme induction and repression; positive and negative regulation in *E. coli*- lac and ara operons; regulation by attenuation- trp operon; antitermination- N protein in lambda phage;Global regulatory responses- heat shock response.

Mutations: Types, causes and consequences of mutations; Mutagens and their mode of action; Isolation and analysis of bacterial / phage mutants; Importance of mutants in genetic analysis.

Gene silencing mechanisms: Transcriptional and post-transcriptional gene silencing;RNA silencing (RNA interference).

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the terminology of molecular genetics, distinguish the prokaryotic and eukaryotic genome organization and describe modern concept of genes, plasmids, and mobile genetic elements.

CO2: Understand the gene transfer and mapping mechanisms in bacteria, genetics of viruses and learn about requirements and mechanism of DNA replication.

CO3: Acquire the knowledge about mechanism of DNA damage and repair, concept of mutations and their importance, requirements, and mechanism of transcription.

CO4: Understand the requirements and processes of translation, compare the levels of regulation of gene expression in prokaryotes and eukaryotesandlearn about gene silencing mechanisms.

VIR-203A: RECOMBINANT DNA TECHNOLOGY (Optional)

(Compulsory Foundation-Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and Assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1.To learn the scope, importance of genetic engineering, basic steps of gene cloning and the role of enzymes, vectors, oligonucleotides, and hosts in gene manipulation.

2.To learn basic and advanced tools and techniques, approaches and strategies used in gene manipulation in prokaryotic and eukaryotic systems

3. To learnthe gene cloning strategies and learn the concepts and applications of genomics, proteomics, transcriptomics, and introduction to metagenomics,viromics.

4. To understand the strategies used for gene expression in heterologous hosts and applications/implications of genetic engineering in agriculture, medicine, industry and biology.

UNIT-1

Scope and importance of recombinant DNA technology

Tools for Recombinant DNA Technology:Gene vectors-Plasmids, bacteriophage vectors, cosmids, yeast vectors, artificial chromosomes (YACs, BACs), Ti plasmid-based vectors, baculovirus-based vectors, plant and animal virus vectors, shuttle vectors, expression vectors (prokaryotic-e.g., *E. coli* and eukaryotic-e.g., yeast)

Enzymes: DNA and RNA polymerases, Restriction endonucleases, DNA joining enzymes, nucleases and other nucleic acid modifying enzymes.

Oligonucleotides: Linkers, adaptors, homopolymer tails, primers, promoters, Ori, marker genes

Source DNA: Genomic DNA, cDNA, PCR products and chemically synthesized oligonucleotides

Cloning and expression host systems: Bacteria, yeast, insect cells, plants and animal cells.

UNIT-II

Techniques for gene manipulation: DNA sequencing-Chemical, dideoxy chain termination, primer walking, automated DNA sequencing and pyrosequencing methods.

PCR: Principle, factors affecting PCR, different types of PCR and their applications.

DNA profiling: RFLP, AFLP, RAPD and DNA finger printing and their applications.

Nucleic acid blotting and hybridization: Preparation of DNA and RNA probes, hybridization formats and applications of hybridization-based tests.

Microarray Technology:DNA microarrays and chips- principles and applications;protein microarrays and antibody microarrays.

Site directed mutagenesis and protein engineering: Different types of site-directed mutagenesis approaches for changing genes and introduction to protein engineering;Yeast two hybrid systems (protein-protein interactions)

UNIT-III

Gene cloning strategies: Construction of genomic DNA and cDNA libraries; construction of cell specific recombinant vectors, introduction of recombinant vectors into targeted cells by different approaches, screening and identification of recombinant clones.

Omics: Genomics-Mapping and sequencing genomes, functional genomics-transcriptome and gene expression profiling; **Proteomics**- proteome, tools for proteomicsand analysis of protein expression;Introduction to metagenomics, metabolomics, viromics.

Bioinformatics tools: Glossary,Biological databases-GenBank, Swiss-Prot, UniProt, EMBL, NCBI and PDB; database searching using BLAST and FASTA; Protein structure prediction

approaches, sequence analysis using multiple sequence alignment and phylogenic tree construction, primer designing for PCR.

UNIT-IV

Production of recombinant molecules in heterologous expression systems: ***Bacterial cell system***- optimization of cloned gene expression, affinity tags, fusion proteins and purification of recombinant proteins (e.g., *E. coli*-Insulin); **Yeast cellsystem** – Expression of cloned genes (e.g., *Pichia*: hepatitis B surface antigen (induction with methanol) using AOX promoter); **Insect cell system** - Overexpression of cloned genes using baculovirus based vectors (e.g., bacmid).

Plant cell system: High level expression of cloned genes using agrobacterium mediated transformation and plant virus-based vectors (e.g., CaMV),genetic modification of plants to improve agronomic traits like resistance to herbicides, pests, pathogens, drought, salt; control of fruit ripening and to improve nutritional quality and crop yields, transgenic plants as bioreactors;

Animal cell system-High level expression of cloned genes in CHO cells (Mab production) and using virus-based vectors (e.g., Adenovirus-based vector-Covishield),genetic modification of animals like mice, sheepand cow for new /improved traits like body size and milk quantity, transgenic animals as bioreactors, gene editing (CRISPER-CAS), gene knock out.

Impact of recombinant DNA technology: Applications and implications of recombinant DNA technology in biology, agriculture, medicine and industry.

Course Outcomes: At the end of the course the student will be able to

CO1: Explain the scope, importance of genetic engineering, basic steps of gene cloning and the role of enzymes, vectors, oligonucleotides, and hosts in gene manipulation.

CO2: Describe the methods used for construction of genomic and cDNA libraries, major techniques (e.g., DNA sequencing, PCR, DNA profiling, nucleic acid hybridization, microarrays, site directed mutagenesis) used in gene manipulations and their applications.

CO3: Discuss the gene cloning strategies and learn the concepts and applications of genomics, proteomics, transcriptomics, and introduction to metagenomics, viromics.

CO4: Understand the basic and advanced concepts of gene expression in prokaryotic and eukaryotic systems, analyze the applications and implications of genetic engineering.

Learning Resources and Suggested books:

1. Recombinant DNA technology (2019) Siddra Ijaz and Imran UlHaq, Cambridge Scholar publishing, UK.
2. Application of Recombinant DNA technology (2018). Vance Hunter and Franky Stickland, ED-Tech Press, UK.
3. Wilson and Walkers Principles and Techniques of Biochemistry and Molecular Biology. (2018).
   Andreas Hofmann, Samuel Clokie, Kindle Edition.
4. Basic concepts of Recombinant DNA technology (2016) by Somnath De. Edu Pedia Publications, New Delhi.
5. Genetic Engineering: Principles and Methods (2012) Jane K. Setlow (Editor)

(Or)

VIR-203B: BIOSTATISTICS AND BIOINFORMATICS (Optional)

(Compulsory Foundation-Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and Assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand basic concepts of statistics, construction of histogram, normal distribution, mean, median and standard deviation, comparison of means and variances, examples of proportion and count data
2. To learn about analysis of variance, correlation and regression and statistical parameters for biological assays.
3. To learn basics of personal computer and its components, windows operating system, Microsoft office-2000, basics of internet browsing of biological data, computer networking and information networks.

To learn basics of databases and tools, sequence analysis, phylogenetic analysis using bioinformatics tools and predictive methods using nucleotide and protein databases

UNIT-I

Introduction: Definition and applications of statistics in biology: population and universe, the sample and population, statistical inference; parameter and statistics; Construction of a histogram; Interpretation of histogram, the normal distribution; Variables, Random Variables, discrete and Continuous variables, Population sample and random sample; Mean, Mode, Quartiles, Geometric and Harmonic means; Frequency, Frequency distribution; Frequency curve, frequency polygon and histogram.

UNIT-II

Measures of dispersion: Range, Variance, coefficient of variance, SD,SE

Probability distribution: Normal, binomial and poison.

Tests of hypothesis: Students t –test,x2(chi-square)-distribution; Correlation coefficient and analysis of variance ANOVA.

Statistical basis of biological assays: Response-Dose metameter; Delusion Assays, Direct and indirect assays. Quantal Responses,Probit, logit, LD_{50}, ED_{50}, PD_{50} - Standard line interpolation assay, parallel assay (4 point, 6 point assays), slope ratio assay.

UNIT-III

Introduction of Genomic Data and Data Organization: Sequence Data Bank – Introduction to sequence data banks – protein sequence data bank,NBRF-PIR, SWISSPROT, Signal peptide data bank, Nucleic acid sequencedata bank-GenBank, EMBL, nucleotide sequence data bank, AIDS Virus sequence data bank, rRNA data bank. Structural data banks – protein Data Bank (PDB), The Cambridge Structural Database (CSD); Genome data bank – Metabolic pathway data; Microbial and Cellular Data Banks, Introduction to MSDN (Microbial Strain Data Network), Numerical Coding Systems of microbes, Hybridoma Data bank structure, Virus Information System, Cell line information system; other important Data banks in the area of Biotechnology/life sciences/ biodiversity.

Sequence analysis: Wisconsin GCG, DNASIS, DNASTAR, CLONE MANAGER packages for nucleotide sequence analysis; sequence alignment and database searching; practical aspects of multiple sequence alignment.

UNIT-IV

Phylogenetic analysis: Phylogenetic models; multiple alignment procedures (CLUSTAL, ALIGN, PHYLIP); tree building methods and trees evaluation; rooting trees, phylogenetic software.

Predictive methods for analyzing nucleic acid and protein structure and function: Detecting regulatory elements in the DNA; physical properties of proteins based on sequences, different protein structural motifs, RNA binding domains and folding classes; Transcription factors and their DNA binding; Protein structure predictions.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand basic concepts of statistics, construction of histogram, normal distribution, mean, median and standard deviation, comparison of means and variances, examples of proportion and count data.

CO2:Learn the concepts of analysis of variance, correlation and regression and applications of statistical parameters for biological assays.

CO3:Learn basics of personal computer and its components, windows operating system, Microsoft office-2000, basics of internet browsing of biological data, computer networking and information networks.

CO4:Acquire knowledge about databases and tools, sequence analysis, phylogenetic analysis using bioinformatics tools and predictive methods using nucleotide and protein databases

Learning Resources and Suggested books:

1. Biostatistics by Daniel.
2. Campbell R.C. (1974: Statistics for Biologists, Cambridge University Press, Cambridge.
3. Statistics made simple-Do it yourself on PC. 2001. By K.V.S. Sarma. Printice Hall of India Publ.

VIR-204A: IMMUNOLOGY (Optional)

(Elective Foundation-Theory)

Course Educational Objectives:

1. To compare innate and adaptive immunity and to learn about various components of immune system,
2. To learn about antigens, antibodies, *in vitro* and *in vivo* antigen and antibody interactions and immune effector mechanisms.
3. To elucidate the mechanism of humoral and cell mediated immune responses, MHCs, hypersensitivity reactions.
4. To acquire knowledge on autoimmune and immunodeficiency disorders, transplantation and transfusion immunology and concepts and applications of conventional and modern vaccines.

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

UNIT-I

History: Historical perspectives and milestones in immunology.

Cells and Organs of the Immune system: Basic features of stem cells, Hematopoiesis, Cells of the immune system-Lymphoid cells, stem cells, Mononuclear cells, Granulocytes, Mast cells, Dendritic cells; Lymphoid organs- primary and secondary lymphoid organs.

Types of immunity: Innate and adaptive immunity.

Antigens: Types, properties, immunogenicity versus antigenicity, factors influencing immunogenicity; epitopes, haptens, mitogens, super antigens.

UNIT-II

Antibodies: Types, structures and biological activities of Immunoglobulins, antigenic determinants; principle, production and applications of polyclonal and monoclonal antibodies; Introduction to recombinant antibodies and their advantages.

Antigen and antibody interactions: Affinity, Avidity, Cross reactivity; *In vivo* serological reactions- Phagocytosis, Opsonization, Neutralization; *In vitro* serological tests- Precipitation tests, Immunoelectrophoresis (AGDD, rocket), Agglutinations tests- HA & HI, latex agglutination, Enzyme linked immunosorbent assays (ELISAs), Radio immunoassay (RIA), Immunofluorescent and Immunosorbent electron microscopy.

Immune effector mechanisms: Cytokines- properties and functions; Toll-like receptors (TLRs); Complement cascade system- complement components, functions, activation pathways.

UNIT-III

Major histocompatability complex (MHC): Organization and cellular distribution of MHC molecules, HLA antigens- Class I, II, III and their functions.

Humoral immune response: Primary and secondary humoral immune responses; induction and mechanism.

Cell mediated immune response: Antigen processing and presentation, Induction and mechanism, antibody-dependent cell mediated cytotoxicity (ADCC).

Immune response: Immune mechanisms against viral, bacterial and parasitic infections.

Hypersensitivity: Type I, II, III and IV hypersensitivity reactions.

UNIT-IV

Immunopathology: Immunodeficiency disorders (congenital and acquired).

Autoimmunity: Induction, mechanisms of tissue damage in autoimmunity; Autoimmune diseases- thyroid diseases, Diabetes mellitus, Multiple sclerosis, Rheumatoid arthritis and their therapy.

Transfusion Immunology: Blood cell components, blood group systems in human, Rh typing, transfusion reactions, and diseases associated with blood transfusion – Hemolytic anemia.

Transplantation Immunology: Transplantation antigens, types of transplants, Graft versus host reactions; Immunosuppressive therapy of allograft response.

Vaccines: Conventional and modern vaccines and their applications.

Course Outcomes: At the end of the course the student will be able to

CO1: Discuss the history of immunology, types of immunity, cells and organs of immune system and types and properties of antigens.

CO2: Understand the types, structure and biological activities of antibodies, concepts of *in vivo* and *in vitro* antigen-antibody interactions and discuss the properties and functions of cytokines, Toll-like receptors and complement components and activation pathways

CO3: Describe the induction and mechanism of humoral and cell mediated immune responses, interaction between innate and adaptive immune responses through MHCs and antigen presentations and hypersensitivity reactions.

CO4: Learn about the basis of autoimmune and immunodeficiency disorders, basic of transplantation and cancer immunology, concepts, and applications of conventional and modern vaccines.

Learning Resources and Suggested books:

(OR)

VIR-204B: FOOD AND ENVIRONMENTAL BIOTECHNOLOGY (Optional)

(Elective Foundation-Theory)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1. To acquire the knowledge on the role of microbes in food, neutraceuticals organic foods and functional foods
2. To learn the types of fermentation processes and to learn about Importance of microorganisms in food production; Probiotics and prebiotics Food quality assurance and food laws
3. To understand the Food quality assurance and use of biosensors, biofilters, biofuel cells
4. To learn Biosorption of heavy metals, GEMs and their products, Concept of biosafety

UNIT-I

Microbes in Food industry: Industrial production and preservation of fermented foods; Dairy products – cheeses, yogurt and acidophilus milk; yeast and yeast products: brewer's yeast, baker's yeast, bread making, enzymes used in food industry; edible mushrooms and their cultivation: oyester, Button and Paddy straw mushrooms; medical importance of mushroom products, nutraceuticals, organic foods and functional foods.

UNIT-II

Food technology: Starter culture technology- Importance of microorganisms in food production; Probiotics and prebiotics- Impact on Human health by using milk, milk products and other antiobesitymolecules from microbes, plants and animals; Food additives, food colors and

sweeteners- Quality material used in food processing (example organic acid, cellulose and cellulose derivatives); Food quality assurance and food laws- food spoiled by different microorganisms and their control measures, food quality maintained by EFSA (European food safety authority) and FDA (Food and Drug authority).

UNIT-III

Food quality assurance and food laws - Commercial blends of microorganisms and enzymes, immobilized cells and enzymes, biotechnological approaches for recovery of useful products; Microbial techniques for treatment of industrial effluents in pulp and paper, tanning and leather, distillery and dye industries – primary treatment, secondary treatment, aerobic process, treatment by bacteria and fungi and enzymatic treatment; treatment of industrial and other wastes; bio-mining and bioleaching of ores; bioremediation of oil spills; waste water treatment; removal of heavy metals, microbial degradation of pesticides and aromatic compounds; use of biosensors, biofilters, biofuel cells and biochips in industry, healthcare and environment.

UNIT-IV

Biosorption of heavy metals: Metal binding targets and organisms, metal-microbial interactions, biomethylation of elements, commercial biosorbents, metal precipitation, phytoremediation; bio-medical waste management – waste category, waste class and description,treatment and disposal systems,cost of biomedical waste management;

GEMs and their products: Construction and release of GEMs and their applications; GEMs impact on the environment.

Concept of bio-safety: Bio-safety levels, good microbiological practices, biosafety guidelines, biohazards, biological weapons, bioethical issues, general approval procedures.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the the role of microbes in food ,neutraceuticals organic foods and functional foods

CO2: Learn the Importance of microorganisms in food production; Probiotics and prebiotics Food quality assurance and food laws

CO3: Describe the Food quality assurance and use of biosensors, biofilters, biofuel cells

CO4: Learn the Biosorption of heavy metals, GEMs and their products, Concept of biosafety

Learning Resources and Suggested books / manuals:

PRACTICAL: VIR-205A: CELL BIOLOGY AND TISSUE CULTURE&RECOMBINANT DNA TECHNOLOGY

Course Educational Objectives:

1. To learn laboratory safety practices to be followed to set up molecular biology laboratory and to set up ribonuclease free environment in the laboratory and to acquire the practical skills in conducting various experiments related to cell biology such as identification of stages of mitosis, isolation of cells, DNA and RNA from plant and animal tissues and to practice plasmid curing, replica plate and gradient plate techniques.

2. To acquire practical skills in conducting plasmid isolation, PCR, recovery of DNA, restriction enzyme digestion of DNA, transformation of bacteria with recombinant plasmid DNA, preparation of southern blots and dot-blots and to discuss the problems related to molecular biology and recombinant DNA technology and to learn the basic bioinformatics tools for DNA analysis.

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, Lab manuals	
Semester: II	**Credits: 4 Credits**

List of Practicals:

1. Preparation of cytological studies for identification of stages of mitosis using onion root tips
2. Examination of cells isolated from sheep kidney.
3. Demonstration of chromosomal (structural and numerical) aberrations (theory exercise).
4. Study of polytene chromosomes (theory exercise).
5. Preparation of sucrose density gradients (step and linear).
6. Safety practices and precautions to be followed to set up Molecular Biology lab with ribonuclease free environment (theory exercise)
7. Preparation of phenol for nucleic acid isolation (theory exercise).
8. Concentration of nucleic acids (theory exercise).
9. Isolation of plasmids from bacteria through alkaline lysis method.

10. Restriction enzyme analysis of plasmids.
11. Recovery of DNA from gels – low melting point agarose extraction of DNA
12. Transformation of bacteria with recombinant plasmid DNA
13. Southern blotting (demo).
14. Preparation of dot-blots for hybridization (demo).
15. Problems related to recombinant DNA technology.
16. Bioinformatics tools: NCBI, PDB search, BLAST-n, BLAST-p, multiple sequence alignment, phylogenetic tree construction, Bioedit, expasy tools (demo and learning exercises).

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the safety practices and precautions to be followed in setting up molecular biology laboratory with ribonuclease free environment.
CO2: Isolate cells, DNA and RNA from plant and animal tissues, demonstrate mitosis, plasmid curing, replica plate and gradient plate methods.
CO3:Acquire practical skills to isolate plasmids, restriction enzyme digestion of DNA, recovey of DNA from gels, transformation of bacteria and demonstrate the southern and dot blot preparation for hybridization.
CO4: Solve the problems related to molecular biology and recombinant DNA technology and learn the basic bioinformatic tools that are important for DNA analysis.

Learning Resources and Suggested books / manuals:

PRACTICAL: VIR-205B: CELL BIOLOGY AND TISSUE CULTURE & BIOSTATISTICS AND BIOINFORMATICS

Lecture: 6 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, study materials	
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To acquire the practical skills in conducting various experiments related to Cell Biology such as isolation of cells, preparation of cell and tissue cultures, isolation of mitochondria, study of chromosomes and identification of stages of mitosis in onion root tips.

2. To learn using MS Office, creating tables in MS-Word, creating database, spreadsheet and statistical graphs, sample statistics with Excel.internet, worldwide web and searching for databases, searching for research material in PubMed, use of bioinformatics tools for the analysis of DNA and to analyze the virus genome using Bio Edit.

List of Practicals:

1. Preparation of cytological studies for identification of stages of mitosis using o root tips
2. Examination of cells isolated from sheep kidney.
3. Demonstration of chromosomal (structural and numerical) aberrations (th exercise).
4. Study of polytene chromosomes (theory exercise).
5. Preparation of sucrose density gradients (step and linear).
6. Creating database & Statistical graphs in EXCEL
7. Histogram, pie, line diagram, scatter diagram, error bars
8. Simple Statistics with Excel
9. Creating and use of spread sheet to biological applications
10. Problems on mean, median and mode
11. Problems on variance, coefficient of variance, standard deviation (SD) and stan error (SE)

12. Probability distribution: Normal, binomial and poison
13. Test of hypotheses: Students t-test, X2 distribution (Chi square), correl coefficient and analysis of variance (ANOVA).
14. Use of internet, worldwide web, searching for data bases
15. Locating research material on Medline
16. Learning to use NCBI and EMBL.
17. Analysis of Viral genome sequences using programmes like Bioedit, DNAstar.
18. Searching DNA databases with FASTA and BLAST
19. Pairwise sequence alignments
20. Phylogeny & tree building
21. Protein structure prediction.

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the safety practices and precautions to be followed in setting up molecular biology laboratory with ribonuclease free environment.
CO2: Isolate cells, DNA and RNA from plant and animal tissues, demonstrate mitosis, plasmid curing, replica plate and gradient plate methods.
CO3: Learn how to use MS office and create, edit tables in MS word and to develop knowledge to do simple statistics with Excel, to create statistical graphs and spread sheets in Excel for biological applications

CO4:Use internet, web tools, databases, and search engines for designing, planning, and executing biological research experiments or investigations. Analyze viral genome sequences using programs like Bio Edit and learn to use NCBI, EMBL for nucleic acid/protein analysis and phylogenetic tree construction.

Learning Resources and Suggested books / manuals:

1. Molecular biology of the cell 5th Edition (2008) Alberts A et al. Garland Publishers, New York
2. Cell and Molecular Biology (2006) De Robertis, E. D. P and E.M.F. De Robertis.Lippincott Williams and Wilkins.

3. Molecular Cell Biology.6th edition (2006) Lodish, H., A. Berk, C. A. Kaiser, M. P.Scott. 6thEdn. Ploegh and Paul Matsudaria.
4. Culture of Animal Cells: A Manual of Basic Technique. (1987). R.I. Freshney. Alan R. Liss Inc.
5. Plant tissue culture: Theory and Practice, (1996). S.S. Bhojwani and M.K. Razdan, Elsevier Pub.
6. Statistical Methods, S.P. Gupta 2. Fundamentals of mathematical statistics.
7. S.C. Gupta &Kapoor 3. Statistical methods in biological and Health Science, J.S. Milton & J.O. Tsokan
8. Primrose SB. Principles of Genome Analysis, A guide mapping and sequencing DNA from different organisms. 2nd/Edn. 1998. Blackwell Science, Oxford ISBN 0-632-04983-9.
9. Bioinformatics: Sequence and Genome Analysis by David W. Mount, Cold Spring Harbor Laboratory Press.
10. Biological Sequence Analysis : Probabilistic Models of Proteins and Nucleic Acids by Richard Durbin, Sean R. Eddy, Anders Krogh, Graeme Mitchison, Cambridge University Press.
11. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, Second Edition by Andreas D. Baxevanis, B. F. Francis Ouellette, Wiley-Interscience
12. Foundations to bioinformatics – Evolution, similar macromolecular components, constancy of gene number and core proteome in closely related organisms.
13. Bioinformatics data – nucleic acid sequence, protein sequence, protein structure, genomic, proteomic and metabolomics information.
14. Bioinformatics databases – types, design, file formats, access tools with examples.
15. Bioinformatics tools and Resources – free online tools, downloadable free tools, software packages, internet.
16. Bioinformatics - From Nucleic Acids and Proteins to Cell Metabolism. 1995, by Schomburg and Label VCH Publ.
17. Bioinformatics: Sequence and Genome Analysis. By D.W. Mount. CSHL Press.
18. Bioinformatics: Methods and Protocols,. Ed by S.Misener and S.A. Krawetz. Humana Press, 2000.

PRACTICAL: VIR-206A: MICROBIAL GENETICS AND MOLECULAR BIOLOGY & IMMUNOLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, Lab manuals	
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn laboratory safety practices to be followed to set up Cell and Molecular Biology laboratories and to set up ribonuclease free environment in the laboratories and to acquire the practical skills in conducting various experiments related to Cell Biology such as isolation and estimation of DNA and RNA from microbial, plant and animal sources and to practice Ames test, plasmid curing, replica plate and gradient plate techniques.

2.To determine the number of WBC and RBC, estimation of hemoglobin, blood group and Rh typing and to conduct theory exercises on production, purification and analysis of polyclonal antibodies and identification of primary and secondary lymphoid organsvirtuallyand to perform *in vitro* serological tests such as immune diffusion, immune-electrophoresis, ELISA and western blotting.

List of Practicals:

1. Isolation of microbial DNA.
2. Analysis of DNA by spectroscopy and AGE.
3. Isolation of microbial RNA.
4. Analysis of RNA by spectroscopy and formaldehyde denaturing gel electrophoresis.
5. Curing of plasmids.
6. Isolation of microbial mutants by gradient plate method.
7. Induction of mutations in bacteria by physical / chemical agents by replica plate method.
8. Problems related to microbial genetics and molecular biology

9. Primary and secondary lymphoid organs (Theory exercise)
10. Total counting of RBC & WBC
11. Differential count of W.B.C.
12. Hemoglobin estimation.
13. Blood typing & Rh determination.
14. Production of polyclonal antibodies- demonstration of different routes of antigen administration into rabbit (demo)
15. Single & double immunodiffusion tests
16. Radial immunodiffusion assay
17. Rocket immunoelectrophoresis
18. DAC- ELISA (indirect)
19. Dot immunobinding assay (DIBA)
20. Electroblot immunoassay (EBIA)

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the safety practices and precautions to be followed in setting up Cell and Molecular Biology laboratory with ribonuclease free environment.

CO2: Isolate and estimate DNA and RNA from microbial, plant and animal tissues and demonstrate curing of plasmids, replica plating techniques, conjugation in bacteria, Ames test, induction of mutations in bacteria by physical/chemical agents, isolation of microbial mutants by gradient plate method.

CO3: Identify of primary and secondary lymphoid organs in virtual animal model and illustrate basic immunology techniques such as counting of RBC and WBC, estimation of hemoglobin, identification of the blood groups and Rh.

CO4: Demonstrate antigen-antibody interactions by conducting *in vitro* serological tests such as immunodiffusion and immune-electrophoresis, DAC-ELISA, Dot-ELISA and western blotting and apply this practical oriented knowledge in Cell Biology and

Immunology to foster employability in private industries, higher education in premier institutes

Learning Resources and Suggested books/manuals:

PRACTICAL: VIR-206B:MICROBIAL GENETICS AND MOLECULAR BIOLOGY & FOOD AND ENVIRONMENTAL BIOTECHNOLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, Lab manuals	
Semester: II	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn laboratory safety practices to be followed to set up Cell and Molecular Biology laboratories and to set up ribonuclease free environment in the laboratories and to acquire the practical skills in conducting various experiments related to Cell Biology such as isolation and estimation of DNA and RNA from microbial, plant and animal sources and to practice Ames test, plasmid curing, replica plate and gradient plate techniques.
2. To analyse the quality of water, milk and food and production of bofertilisers and biopesticides and biodegradation of pesticides

List of Practicals:

1. Isolation of microbial DNA
2. Isolation of microbial RNA
3. Curing of plasmids.
4. Isolation of microbial mutants by gradient plate method.
5. Induction of mutations in bacteria by physical / chemical agents by replica plate method.
6. Problems related to microbial genetics and molecular biology.
7. Qualitative and quantitative analysis of carbohydrates and proteins in food.
8. Preparation and evaluation of cheese or fermented product.
9. Determination of fat content in milk

10. Estimation of vitamins- vitamin A, C and riboflavin.
11. Determination of aflatoxin in food.
12. Tests for pesticidal residues in food
13. Biomass estimation by different methods
14. Isolation of microbes involved in preparation of biofertilizersby biological enrichment method.
15. Production of microbial biofertilizers and biopesticides.
16. Efficacy testing for biofertilizers (nodulation test for rhizobia) and biopesticides.
17. Qualitative and quantitative estimation of biodegradation of pesticide/ insecticide/fungicide.
18. Estimation of BOD & COD
19. Testing for microbiological quality of potable water (Coli form test)
20. Microbial degradation of organic matter.
21. Testing for effect of chemical pesticides on soil microbial respiration 9. Testing for microbial biodegradation of pesticides.
22. Visiting agricultural research stations and forms.

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the safety practices and precautions to be followed in setting up Cell and Molecular Biology laboratory with ribonuclease free environment.
CO2: Isolate and estimate DNA and RNA from microbial, plant and animal tissues and demonstrate curing of plasmids.replica plating techniques, conjugation in bacteria, Ames test, induction of mutations in bacteria by physical/chemical agents, isolation of microbial mutants by gradient plate method.
CO3:Learn preparation of fermented food products, analyse the quality of water, milk and food ,vitamins
CO4:Acquire the practical skills in the production of bofertilisers and biopesticides and biodegradation of pesticides

Learning Resources and Suggested books/manuals:

1. Culture of Animal Cells: A Manual of Basic Technique. (1987). R.I. Freshney. Alan R. Liss Inc.

2. Plant tissue culture: Theory and Practice, (1996). S.S. Bhojwani and M.K. Razdan, Elsevier Pub.
3. Swaminathan M.S. Dr. Hand Book of Food and Nutrition
4. Sumati R. Mudambi and M.V, Rajgopal. Fundamentals of Food and Nutrition.
5. Nutrient Requirements and Recommended Dietary Allowances for Indians. National Instituteof Nutrition, Indian Council of Medical Research, 2010

VIR 207 - HUMAN VALUES AND PROFESSIONAL ETHICS-II

(Audit Theory Course-Self Study)

Self-Study	**Internal test Assessment: 100 Marks** **Seminars, quizzes and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures by experts	
Semester: II	**Non-credited course**

Course Educational Objectives:

1. To learn the concepts of value education, professional ethics and human values, structure and responsibilities of family system, research ethics, codes of ethics
2. To inculcate knowledge and exposure on safety and risk and to expose student to right attitudinal and behavioral aspects,
3. To enable the students to understand the moral values and ethics followed by medical and health care professionals and businesspeople.
4. To increase the awareness among students about environment and create attitude towards sustainable lifestyle and discuss the social ethics and ethics of media.

UNIT-I

Value Education: Definition, relevance to present day, Concept of Human Values - self introspection,Self-esteem; Family values-Components, structure and responsibilities of family, Neutralization of anger, Adjustability, Threats of family life, Status of women in family and society, Caring for needy and elderly, Time allotment for sharing ideas and concerns.

UNIT-II

Medical ethics: Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners; Code of ethics for medical and healthcare professionals; Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and

patients; Social justice in health care, human cloning, problems of abortion; Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

UNIT-III

Business ethics: Ethical standards of business-Immoral and illegal practices and their solutions; Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

UNIT-IV

Environmental ethics- Ethical theory, man and nature: Ecological crisis, pest control, Pollution and waste, Climate change, Energy and population, Justice and environmental health.

Social ethics: Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy; Ethics of media- Impact of Newspapers, Television, Movies and Internet.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the definition of value education, concept of human and family values, components, structure, and responsibilities of family system and acquire reflective thinking, rational skepticism.

CO2: Describe the moral responsibilities and ethical issues of medical and health care professionals, avoid unethical things, learn ethical issues raised in genetic engineering and new biological technologies.

CO3: Learn to practice ethical standards in business by understanding ethical theories and maintain work ethics to build trust between businessman and consumer and avoid unethical behavior and ethical abuse and develop scientific temper, digital literacy.

CO4: Learn to practice environmental ethics by taking responsibility to protect environment and ecosystem and understand the importance of maintenance of social ethics and ethics of media.

Learning resources and suggested books:

1. John S Mackenzie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Management Ethics - integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books:NewDelhi.
4. "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed.) G.C.Haughton.
10. Susruta Samhita: Tr.KavirajKunjanlal, KunjalalBrishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. CarakaSamhita:Tr. Dr.Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues., Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, (1999).
14. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.

SEMESTER-III

VIR-301: PLANT VIROLOGY (Mandatory)

(Core Theory -I)

Lecture: 6 hours/week	**Internal test Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives: epidemiological concepts of plant viruses and plant virus management strategies to conduct biological research as well as to get employability in agricultural research stations and biotechnology industries.

1. To define/explain the various concepts related to Plant Virology such as plant virus-host interactions with respect to induction of disease and virus movement strategies,
2. To Learn the vector and non-vector modes of plant virus transmission, virus-vector relationships and molecular mechanisms involved in virus vector interactions
3. To understand the plant virus ecological and epidemiological concepts, approaches used for detection
4. To understand the plant virus control practices and to know about concepts related to conventional and transgenic virus resistance mechanisms.

UNIT-I

Virus-host interactions: Effects of virus infection on host metabolism; molecular mechanisms of plant viral pathogenesis-role of viral genes in disease induction, host proteins induced by virus infection, processes involved in disease induction, local and systemic symptoms.

Movement/transport of viruses: Cell to cell and long-distance movement, virus distribution in plants.

UNIT-II

Transmission of viruses: Non-vector – sap/mechanical, seed and pollen, graft, dodder, contact; Vector- virus vector relationships, Molecular mechanisms of virus-vector interactions, arthropods-aphids, leaf and plant hoppers, whiteflies, beetles, thrips, mealy bugs; mites, fungi, nematodes; effects of viruses on vectors, agroinfection.

Characterization and identification of viruses and virus strains: Biological, physical, molecular and immunological approaches.

UNIT-III

Virus ecology and epidemiology of virus diseases: Biological and physical factors influencing survival and spread of viruses and virus diseases; Cropping practices and virus spread; Disease gradients, disease progress curves, mono- and polycyclic diseases; Forecasting of virus diseases.

Assessment of disease incidence and yield losses: Field surveys for determination of incidence of virus diseases, Impact of viruses on crop yield, approaches for assessment of yield losses.

Detection of plant viruses: Biological, physical, chemical, immunological and molecular approaches for identification and diagnosis of plant viruses.

UNIT-IV

Management of virus diseases: Direct and indirect approaches-antiviral agents, crop cultural practices, elimination / avoidance of sources of infection, use of virus-free seeds and planting materials, production of virus-free plants by tissue culture technology, avoidance/control of vectors (chemical and non-chemical approaches),cross- protection,suppression of disease symptoms by chemicals / botanicals.

Production of virus resistant plants:Genetic resistance of plants against viruses; generation of transgenic and non-transgenic-mediated virus resistance in plants; plant quarantine and its role in virus disease control.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the induction of plant virus diseases, virus-host interactions and movement strategies.

CO2: Learn the vector and non-vector modes of plant virus transmission, virus-vector relationships and molecular mechanisms involved in virus vector interactions and the approaches used for identification and characterization of the viruses and virus strains.

CO3: Acquire the knowledge on plant virus spread and survival in nature and approaches used to detect plant viruses and diseases.

Learning resources and suggested books:

1. Molecular Plant Virology, Volume 1 (2017) Davis, Taylor & Francis Group.
2. Applied Plant Virology (2014), Calum Rae Wilson.

VIR-302: PLANT VIRUS DISEASES(Mandatory)

(Core Theory-2)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand the distribution, incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the virus diseases associated with cereals and millets, oil seed vegetable and tuber crops.

2. To understand the distribution, incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the virus diseases associated with vegetable and tuber crops

3.To acquire knowledge on the distribution, incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the virus diseases associated with food legume, fruit crops.

4.To acquire knowledge on the distribution, incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the virus diseases associated with cash, spice and beverage crops and flowering and foliage ornamentals

UNIT-I

Cereals and millets: **Rice**- Tungro, dwarf, grassy stunt, stripe, and yellow mottle;**Wheat**- soil-borne wheat mosaic, streak mosaic, spindle streak mosaic and mosaic caused by BYDV;**Barley**

and Oat – yellow dwarf, stripe mosaic and yellow mosaic;**Maize andSorghum** – sugarcane mosaic, maize streak, dwarf mosaic, stripe virus diseases.

Oil seed crops: **Groundnut** – bud necrosis, stem necrosis, mottle, stripe, rosette and clump;**Sunflower** – necrosis and mosaic;**Sesamum** – leaf curl; **Rape seed and mustard** – mosaic;**Coconut** – cadangcadangviriod disease.

UNIT – II

Vegetables: **Tomato** – leaf curl, spotted wilt, mosaic (tobamo), yellow mosaic/golden yellow mosaic, fern leaf / shoestring;**Chilli** – leaf curl, vein banding and mosaic caused by TMV, CMVandChilliveinal mottle virus (ChiVMV);**Brinjal** – mosaic caused by CMV / TMV/ PVY;**Okra** – yellow vein mosaic and leaf curl;**Onion andgarlic**– yellow dwarf mosaic, latent and iris yellow spot;**Cucurbits** – CMV, squash mosaic, leaf curl, watermelon mosaic, bud necrosis and cucumber green mottle mosaic;**Radish** – mosaic;**Carrot** – red leaf, mottley dwarf and thin leaf;**Cabbage andCauliflower**- turnip mosaic, cauliflower mosaic and turnip yellow mosaic.

Tuber crops:Potato- leaf roll, rugose mosaic, mild mosaic / latent caused PVX, PVM and PVS and potato spindle tuber viriod diseases; **Sweet potato** – chlorotic stunt and feathery mottle;**Cassava** – common, African and Indian mosaic virus diseases;**Colocasia and Cocoyam** – Feathery mottle, Babone and Alomae diseases;**Greater yam** – mosaic.

UNIT-III

Food legumes: French bean- Common mosaic, yellow/golden mosaic, leaf roll and CMV infection;**Soybean** – mosaic, dwarf and TRSV infections;**Pea** - seed-borne mosaic, enation mosaic, BYMV;**Cowpea** – yellow and severe mosaic, golden yellow mosaic, SBMV and CMV;**Chickpea** – stunt, chlorotic dwarf, CMV and AMV infections;**Pigeonpea**– sterility mosaic;**Lentil** –bean leaf roll and yellow mosaic;**Black gram / Green gram** - yellow mosaic and leaf crinkle; **Horse gram** - yellow mosaic.

Fruit crops: Banana / Plantain - bunchy top, streak, infectious chlorosis (CMV) and bract mosaic;**Citrus -** tristeza, yellow mosaic, psorosis and exocortis; **Papaya**- ring spot, leaf curl and mosaic;**Grapevine** -fern leaf and leaf roll; **Apple**– mosaic;**Pineapple -** wilt.

UNIT-IV

Cash crops: Sugarcane- mosaic, streak mosaic, Fiji disease, yellow leaf virus; **Sugarbeet -**curly top yellows, western yellows, beet mosaic, beet necrotic yellow vein;**Cotton -**yellow mosaic,leaf curl;**Kenaf**- yellow vein mosaic;**Tobacco -** mosaic and leaf curl.

Spice and beverage crops: Small cardamom – mosaic;**Large cardamom -** foorkey and chirke diseases;**Black Pepper -** stunt and yellow mottle;**Zinger** – chlorotic fleck;**Vanilla-**mosaic;**Cocoa -** swollen shoot.

Flowering and foliage ornamentals:Tulips– Flower breaking;**Rose –** mosaic;**Gladiolus–**bean yellow mosaic;**Orchids –** cymbidium mosaic and odontoglassum ring spot viruses;**Carnations -** mottle, ring spot and etched ringspot;**Chrysanthimum –**aspermy, ring mottle and stunt viroid;**Aroids –** dasheen mosaicand Konjac mosaic viruses.

Course Outcomes: At the end of the course the student will be able to

CO1: Describe the incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the major virus diseases of cereals, millets and oil seed crops.

CO2: Learn the incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the major virus diseases of vegetable and tuber crops.

CO3: Acquire the knowledge of incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the major virus diseases of food legume and fruit crops.

CO4: Discuss the incidence and impact, symptoms, causal virus characteristics, diagnosis, disease cycle and management of the major virus diseases of cash, spice, beverage, flowering and foliage ornamental crops

Learning resources and suggested books:

VIR-303A: MOLECULAR VIROLOGY (Optional)

(GenericElective-Theory)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand molecular architecture of viruses and molecular mode of inactivating agents on viruses .
2. To learn about types of viral genomes and steps involved in virus replication and expression and replication of DNA viruses.
3. To acquire knowledge about expression and replication of RNA viruses and subviral agents
4. To discuss about the regulation of viral genome expression and molecular mechanisms involved in tumor virology.

UNIT-I

Molecular architecture of viruses: Principles of virus structure- Icosahedral and helical tubes (TMV), cubic symmetry, virus structure designs and their characteristics- simple icosahedral symmetric capsids with Jelly-Roll Beta barrel sub-units (Polio, TBSV, SeMV), ds DNA (Pox virus, Adeno), dsRNA viruses (Reovirus), enveloped positive-stranded RNA viruses (tospo), T4 phage; principles of disassembly.

Molecular mode of inactivating agents on viruses: Physical agents – ionizing radiation, non-ionizing radiation, temperature (heat), ultrasonic vibration; Chemical agents – inorganic, organic solvents, ions, chelating agents, hydroxylamines, dyes.

UNIT-II

Viral genomes: Structure and diversity of viral genomes- DNA genomes- linear and circular, double and single stranded. RNA genomes- positive and negative, linear, circular, double and single stranded, mono, bi, tri and multipartite genomes.

Replication of viruses: An overview of virus replication cycles, Baltimore classification of viruses based on viral genome expression;Replication strategies, host cell functions required in virus replication, sites of replication and assembly; importance of mutants in assembly studies.

Replication of DNA viruses: Replication of dsDNA (pox, lambda), ssDNA (phi x 174, parvo).

UNIT-III

Replication of RNA Viruses: Viruses with positive sense ssRNA - Qβ, Picorna-, Toga-, Tobamo-, Poty-, and Bromoviruses; Negative and Ambisense ss RNA viruses- Orthomyxo-, Bunya- and Rhabdoviruses; dsRNA viruses- Reo- and Birnaviruses. ssRNA viruses with DNA intermediate - RSV and HIV; dsDNA viruses with RNA intermediate- CaMV, HBV.

Replication of sub-viral agents: Viroids, Hepatitis D, Sat-viruses, Sat-RNAs, DI particles, Prions.

UNIT-IV

Regulation of viral genome expression:T4, lambda phage, influenza, HIV and adenovirus;functions of virus encoded products;assembly of viruses- self-assembly from mature virion components, assembly of virus with helical structure (TMV), isometric structure (Picorna) and with complex structure (T4), enveloped viruses (Retroviruses);maturation of virus particles; Eukaryotic viruses - recombination and re-assortment, cross- and multiplicity reactivation, complementation, phenotypic mixing, ploidy, transduction of genes by retroviruses.

Tumor Virology: Genetic rearrangements in progenitor cells, oncogenes, tumor suppressor genes, cancer and the cell cycle, virus-induced cancers, metastasis, interaction of cancer cells with normal

cells, apoptosis, molecular mechanisms of tissue transformation and tumorigenesis by viruses; therapeutic interventions of uncontrolled cell growth, oncolytic viruses and mechanism.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire knowledge about principles of virus architecture and effect of physical and chemical agents on viruses.

CO2: Learn about structure and diversity of viral genomes, general concepts of replication of viruses and expression and replication of DNA viruses

CO3: Learn about expression and replication of different RNA viruses and subviral agents such as viroids, Satellite viruses, defective interfering particles and prions.

CO4: Describe the regulation of viral genome expression and concepts/molecular mechanisms of transformation of cells by tumor viruses and therapeutic interventions and oncolytic viruses.

VIR-303B: TUMOR VIROLOGY(Optional)

(Generic Elective-Theory)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand basic concepts and mechanism of tumors, oncogenes, tumor suppressor genes
2. To acquire knowledge on basic aspects and molecular mechanisms of carcinogenesis and viruses associated with tumors.
3. To learn about different RNA viruses causing tumors, cell transformation mechanisms, immune responses to tumors and tumor therapy strategies.
4. To learn about different DNA viruses causing tumors, cell transformation mechanisms, immune responses to tumors and tumor therapy strategies

UNIT-I

Tumor: Terminology, types of tumors, transformation andtumorogenesis, angiogenesis, differences between normal and transformed cells.

Oncogenes: Cellular/proto oncogenes, viral oncogenes; gene products and their role in cell cycle and growth regulation.

Tumor suppressor genes/antioncogenes: Discovery, characterization and their role in tumor suppression.

UNIT-II

Carcinogens and carcinogenesis: Physical, chemical and biological carcinogens and their mechanism and screening.

Chromosome abnormalities in neoplasms: Molecularmechanisms in carcinogenesis-Translocation, amplification, deletion of oncogenes and consequences.

Viruses associated with tumors: Molecular mechanisms of tissue transformation and tumorogenesis by viruses.

UNIT-III

RNA Viruses: Retroviruses causing tumors in animals and humans; viral oncogene products and their role in tumorogenesis;activation of expression of cellular genes by retroviruses; viral genetic information in transformed cells; HepatitisC virus associated with hepato cellular carcinoma.

DNA Viruses: Tumors caused by*Adeno-, Hepadna-, Herpes-, Papilloma-, Polyoma- and Poxviridae* members.

UNIT-IV

Transformation: Transformation by activation of cellular signal transduction pathways;transformation via cell cycle control pathways;other mechanisms of transformation and oncogenesis.

Tumor immunology: Cancer and Immune system, tumor specific antigens, tumors of the immune system, immune responses to tumors.

Tumor therapy: Physical (radiation), chemical and immunotherapy; inhibitors of angiogenesis; oncolytic viruses and their mechanism.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire knowledge about the basic aspects of tumors, distinguish normal and transformed cells and describe the role of oncogenes and tumor suppressor genes in causing cancers.

CO2: Understand the role and mechanism of carcinogens in inducing carcinogenesis and molecular viral mechanisms of transformation and tumorigenesis.

CO3: Describe the types of RNA and DNA viruses that are causing tumors and viral mechanisms for cell transformation.

CO4: Learn the concepts and mechanisms of transformation, tumor response to tumors and prophylactic and therapeutic interventions used for management of tumors.

Learning resources and suggested books:

PRACTICAL: VIR-304A: PLANT VIROLOGY &VIRUS DISEASES AND MOLECULAR VIROLOGY

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, study materials	
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1. To acquire practical knowledge on identification of symptoms of major viruses on economically important local crop plants, weeds and to determine effect of viruses on plant metabolism and health. To develop practical skills in identification of plant viruses using serological and molecular tests, to learn modes of plant virus transmission, and to explore local field survey for estimation of plant virus disease incidence and progress.

2. To acquire skills and technologies related to purification of viruses such as culture of viruses on propagation harvesting virus infected leaves, homogenization, clarification, concentration, further purification, final pelleting and to check the quality and quantity of the viruses. To isolate and analyze virus nucleic acids and proteins using agarose gel and polyacrylamide gel electrophoresis, respectively and to determine the effect of physical and chemical agents on inactivation of viruses.

List of Practicals:

1. Study of symptoms of local virus diseased plants through field v slides/photographs
2. Determination of virus effect on chloroplast number.
3. Determination of virus effect on cell size.
4. Observation of inclusions by light microscopy
5. Effect of virus on total carbohydrates in healthy and virus infected seeds
6. Effect of virus on total proteins in healthy and virus infected seeds
7. Effect of virus on total lipids in healthy and virus infected seeds.

8. Identification of unknown plant virus by ELISA.
9. Local field surveys and visit to local research stations.
10. Diagnosis of virus diseases (theoretical exercise).
11. Collection and identification of local insect vectors.
12. Determination of disease progress curves (field study).
13. Study of seed transmission of viruses
14. Demonstration of transmission of viruses through vegetative propagules.
15. Visiting local fields and agricultural research stations.
16. Purification of viruses by differential centrifugation.
17. Analysis of virus proteins (SDS-PAGE molecular weight determination)
18. Analysis of viral nucleic acids (AGE-molecular weight determination)
19. Isolation and analysis of dsRNA from virus infected tissues
20. Study of inactivation of viruses by various physical and chemical agents

Course Outcomes: At the end of the course the student will be able to

CO1: Identify major virus diseases of local economically important crop plants and weeds through theory exercises, local field surveys, agricultural research station visits. Determine and compare the effect of virus on cell size, chloroplast number, total carbohydrates, proteins, and lipids with healthy counterparts.

CO2: Detect unknown viruses through ELISA and PCR (theory exercise and practical) and demonstrate plant virus transmission by seed and vegetative propagules. Identify local plant virus vectors, determine virus disease incidence and progress curves through local field visits.

CO2: Acquire the skills to use the techniques involving purification of viruses such as maintenance of virus cultures on propagation hosts, check the quality and quantity of viruses using spectroscopy or transmission electron microscopy. Isolate virus coat proteins and determine its size and molecular weight through SDS-PAGE.

CO4: Isolate virus nucleic acids (dsRNA, RNA and DNA) and determine its size

and molecular weight through agarose gel electrophoresis. Determine the stability of virus by studying effect of physical and chemical agents on virus inactivation.

PRACTICAL: VIR-304B: PLANT VIROLOGY & VIRUS DISEASES AND TUMOR VIROLOGY

Course Educational Objectives:

1. To acquire practical knowledge on identification of symptoms of major viruses on economically important local crop plants, weeds and to determine effect of viruses on plant metabolism and health. To develop practical skills in identification of plant viruses using serological and molecular tests, to learn modes of plant virus transmission, and to explore local field survey for estimation of plant virus disease incidence and progress.

2. To detect carcinogens and mutagens using standard tests, to observe histopathology of animal viruses associated with tumors and to detect tumor viruses by PCR. To cultivate poultry tumor viruses in cell cultures, to determine the effect of antiviral compounds on transformed cell lines, cell viability assays and to diagnose HCV and HPV using commercial point-of care kit-based tests.

Practicals: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, study materials	
Semester: III	**Credits: 4 Credits**

List of practicals:

1. Study of symptoms of local virus diseased plants and through field v slides/photographs
2. Determination of virus effect on chloroplast number.
3. Determination of virus effect on cell size.
4. Observation of inclusions by light microscopy
5. Effect of virus on total carbohydrates in healthy and virus infected seeds
6. Effect of virus on total proteins in healthy and virus infected seeds
7. Effect of virus on total lipids in healthy and virus infected seeds.
8. Identification of unknown plant virus by ELISA.
9. Local field surveys and visit to local research stations.
10. Diagnosis of virus diseases (theoretical exercise).
11. Collection and identification of local insect vectors.

12. Determination of disease progress curves (field study).
13. Study of seed transmission of viruses
14. Demonstration of transmission of viruses through vegetative propagules.
15. Detection of carcinogens and mutagens using Ames test.
16. Histopathology of animal tumor viruses (specimens and slides)
17. Detection of tumor viruses using PCR
18. Observation of specimens (visiting Veterinary University and SVIMS).
19. Cell viability test
20. Cell culture and cultivation of Chicken/bird tumor viruses
21. MTT assay
22. Preventive and control measures of tumor viruses (theory exercises)

Course Outcomes: At the end of the course the student will be able to

CO1: Identify major virus diseases of local economically important crop plants and weeds through theoryexercises, local field surveys, agricultural research station visits. Determine and compare the effect of virus on cell size, chloroplast number, total carbohydrates, proteins, and lipids with healthy counterparts.

CO2:Detect unknown viruses through ELISA and PCR (theory exercise and practical) and demonstrate plant virus transmission by seed and vegetative propagules. Identify local plant virus vectors, determine virus disease incidence and progress curves through local field visits.

CO3: Acquire skills to detect carcinogens and mutagens using standard tests such as Ames test. Distinguish transformed and normal cell lines and determine the anticancer property of biologically active compounds.

CO4: Design and execute PCR and other point of care methods using commercial kits for detection of tumor viruses (HCV, HIV). Perform cultivation of poultry tumor viruses in cell cultures and acquiring the knowledge on histopathology of animal tumor viruses.

THEORY-VIR-305A: MOLECULAR TECHNIQUES (Mandatory)

(Skill Development Course)

Lecture: 3 hours/week	**Internal Marks; 10 Marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Theory Examination : 40 Marks**
Semester: III	**Credits: 2 Credits**

Course Educational Objectives:

1.To learn the scope, importance of virology laboratory, lab equipment and laboratory biosafety

2.To learn basic and advanced tools and techniques, approaches and strategies used in virology.

3. To learnthe advanced moleculartools used in virology and to learn the concepts and applications of genomics, proteomics, transcriptomics, and introduction to metagenomics,viromics.

4. To understand the strategies used for drug design, artificial intelegence and modern vaccinology and applications in medicine.

UNIT-I

Requirements of Virology Laboratory: GCP, GLP GCLP and GDP; Knowledge of lab organization, reporting and recording procedures; Ethics of laboratory practice, confidentiality of reports, Maintenance &Equipments of Virology Lab; Preparation of Reagents; Concept of universal precautions, biohazard, disinfection, sanitation, waste management (Handling of waste, waste segregation and management including disposal).

Laboratory bio-safety: Risk assessment and risk management, laboratory accidents, prevention, first aid; principles and methods of ensuring of quality assistance in the

laboratory; types of specimens, method of specimen collection, transport, packing and storing of samples (Blood, serum, urine and others); health education and health communication.

UNIT –II

Basic tools used in Virology: Principles and applications of microscopy, ultrafiltration, dialysis, spectroscopy, electrophoresis, ultracentrifugation, chromatography, autoradiography, western blotting, northern blotting and southern blotting and hybridization, DNA sequencing and PCR; Serological techniques -Principles and applications of virus neutralization, HA and HI tests, Dot immunobinding assay, ISEM,immunofluorescence, immunohistochemistry and ELISA.

UNIT –III

Advanced Molecular tools used in Virology: Principles and applications of real time PCR, IC-RT-PCR (Immunocapture reverse transcription PCR), LAMP (Loop-mediated isothermal amplification), fluorescence and confocal microscopy, FACS, NMR, CD, 2D and mass spectroscopy, DNA bar coding, microarrays, proteomics,Viromics; Generation of infectious clones using novel methods (e.g., potyvirus-Gibson assembly), Next generation sequencing (NGS); point of care immunodiagnostics; IoT; Artificial Intelligence; biosensors, drug design; modern vaccinology and therapeutics (drugs, interferons, antibody-based therapy); Antivirals-metal nanoparticles and antiviral compounds.

Course Outcomes: At the end of the course the student will be able to

CO1: Explain the scope, importance of virology laboratory, lab equipment and laboratory biosafety health education and health communication.

CO2: Describe the basic methods and advanced tools and techniques, approaches and strategies used in virology, and their principles and applications.

CO3: Describe the advanced molecular tools used in virology and to learn the concepts and applications of genomics, proteomics, transcriptomics, and introduction to metagenomics, viromics.

CO4: Understand the strategies used for drug design, artificial intelegence and modern vaccinology and applications in medicin

PRACTICAL: VIR-305B: MOLECULAR TECHNIQUES

(Skill Development Course)

Practicals: 6 hours/week	**Semester End Examination: 50 Marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	
Semester: III	**Credits: 2 Credits**

Course Educational Objectives:

1. To classify laboratories based on biosafety levels, to understand biosafety, biosecurity, and ethical guidelines to handle viruses in the laboratory and to develop skills to maintain, isolate and quantitate viruses in cell lines and to study their cytopathic effects.

2. To acquire the knowledge on detection ofanimal, human and plant viruses using kit-based point of care tests, preparation, and characterization of virus-based nanoparticles

List of Practicals:

1. Good laboratory practice (GLP), Good clinical practice (GCP), good clinical laboratory practice (GCLP) and good document practices (GDP) (Theory exercises).
2. Universal safety precaution, importance of personal hygiene, disposal of organic waste, washing and cleaning of glass ware, sterilization of glassware and lab ware (Theory exercises).
3. Methods of collection of clinical material for culture-urine, blood, throat swab, faeces, body fluids.
4. Preparation of virus sample for coating onto TEM grids(demo).
5. Transmission electron microscopy (theory exercise, slides, photographs).
6. Diagnosis of SARS-CoV-2 using physical, serological and molecular tests (Theory exercise).
7. Isolation of genomic DNA/RNA from virus infected leaf sample or purified virus

8. PCR amplification of coat protein gene and analysis by agarose gel electrophoresis.
9. Preparation of plasmid, pRSET-A from *E. coli* DH5α and gel analysis.
10. Restriction digestion of vector (gel analysis) and insert with appropriate restriction enzymes
11. Vector and insert ligation.
12. Transformation in *E. coli* DH5α.
13. Plasmid isolation and confirming recombinant by PCR and RE digestion.
14. Transformation of recombinant plasmid in *E.coli* BL21 (DE3)pLys strain.
15. Induction of coat protein with IPTG and analysis on SDS-PAGE.
16. Purification of coat protein on Ni-NTA column and analysis by SDS-PAGE
17. Immunochromatographic tests (ICT) based point-of-care (PoC) tests
18. Immunoblotting/ Western blot assay.
19. Isolation of metal nanoparticles and antiviral compounds from a plant.
20. Purification and characterization of nanoparticles using ultracentrifugation, chromatography, FTIR, SEM, XRD and NMR.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the biosafety, biosecurity, and ethical guidelines to be followed in the Molecular Virology laboratory.

CO2: Learn the Methods related to collection of clinical material for culture-urine, blood, throat swab, faeces, body fluids

CO3:Acquire practical skills to isolate plasmids from bacteria, restriction enzyme digestion of recombinant plasmid DNA, recovery of DNA from gels, transformation of bacteria and demonstrate the preparation of southern and dot blots for hybridization.

CO4: PCR amplification of coat protein gene and analysis by agarose gel electrophoresis Isolation of metal nanoparticles and antiviral compounds from a plant. Purification and characterization of nanoparticles using ultracentrifugation, chromatography, FTIR, SEM, XRD and NMR.

VIR-306A: BAISC VIROLOGY (Optional)

(Open Elective-Theory- Offered to students of other disciplines)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1.To understand the history, properties, nomenclature and classification of viruses and development of virology and

2. To learn about methods used for isolation, cultivation, and purification of viruses.

3.To acquire knowledge about the methods used for quantitation of viruses and sub viral agents

4. To acquire knowledge about Laboratory Biosafety Management of plant, animal and human viruses

UNIT-I

Introduction to Virology: Origin, evolution and classification of viruses.

Morphology and properties of viruses: Physical- morphology and structure, Biochemical- chemical composition, nucleic acids, proteins, enzymes, lipids, carbohydrates, polyamines, cations.

Cultivation of viruses: Experimental plants and experimental animals, embryonated eggs and cell cultures.

Transmission of viruses: Vector and non-vector transmission.

UNIT-II

Replication: introduction to virus replication, steps involved in replication and general strategies.

Isolation, cultivation and maintenance of viruses: Isolation and cultivation of plant and animal viruses (experimental plants and tissue culture, experimental animals, embryonated eggs, primary and continuous cell cultures, transformed cell lines,suspension cell cultures, organ cultures).

Purification of viruses: Extraction of viruses from tissues, clarification, and concentration of viruses in clarified extracts by physical and chemical methods, further purification of viruses by rate zonal / equilibrium density gradient centrifugation, Criteria of virus purity, Quantitation and preservation of purified virus preparations.

UNIT-III

Characterization of viruses: Biological, physical, serological and molecular criteria

Virological laboratory methods: Principles and applications of electrophoresis, spectroscopy, ultracentrifugation, chromatography, microscopy, hybridization, DNA Sequencing and PCR.

Subviral agents: Biology of bacteriophages, satellite viruses, sat-RNAs, viroids and prions.

UNIT-IV

Laboratory Biosafety: Principles of laboratory bio-safety, differentiation of pathogens and containment facilities (BSL), Equipment and requirements of virological laboratory.

Virus detection methods: Biological, physical, serological and molecular methods.

Management of plant viruses: Cultural practices, control of vectors, production of virus free plants, production of transgenic plants, plant quarantine.

Management of animal and human viruses: Sanitation, vector control, vaccines, antiviral drugs and chemotherapy.

Course Outcomes: At the end of the course the student will be able to

CO1: Learn the discovery, nature, origin and evolution of viruses and the physical, biochemical, and biological properties of viruses, criteria used for nomenclature and classification of bacteria, plant and animal viruses.

CO2:Describe the methods used for isolation, cultivation, and purification of viruses and criteria of purity.

CO3: Define biological, physical, biochemical, and serological methods used for quantitation of viruses, major characteristics bacteriophages, algal and fungal viruses, subviral agents.

CO4: Understand the **Laboratory Biosafety Management of plant animal and human viruses**.

VIR-306B: AGRICULTURAL, ANIMAL AND HUMAN VIRUSES

(Open Elective-Theory-Offered to students of other disciplines)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To acquire knowledge about the origin and evolution of the viruses and properties and cultivation of viruses
2. To learn about important animal viruses and veterinary epidemiology.
3. To learn about important plant and human viruses

To learn about important plant and human virus diagnostic and management methods

UNIT-I

Introduction to Virology: Introduction to Virology, characteristics, taxonomy of animal and human viruses, morphology of viruses, transmission of viruses, replication of viruses, isolation and cultivation of viruses, CPE, virus characterization by various methods.

UNIT-II

Important plant viruses: Tobacco mosaic virus, peanut bud necrosis virus, Tomato spotted wilt virus, Tomato yellow leaf curl virus, Cucumber mosaic virus, Potato virus Y, Cauliflower mosaic virus, African cassava mosaic virus, Plum pox virus, Brome mosaic virus, Potato virus X, Chilli leaf curl virus, rice tungrovirus, Banana bunchytop virus, sugarcane mosaic virus.

UNIT-III

Veterinary epidemiology: Significance of epidemiology and risk factors, clinical presentation and diagnosis, Pathogenesis, importance of zoonosis.

Important animal viruses: Foot and Mouth Disease virus, Bluetongue virus, sheep pox virus, Peste des Petits virus of ruminants, swine fever virus, Infectious Canine distemper virus, infectious bursal disease virus, Sheep pox virus, Newcastle disease virus, Avian influenza virus.

UNIT-III

Important human viruses: Emerging and Zoonotic infections – Zika virus, Chikungunya virus, Nipah virus, Kyasanur forest disease virus, Marburg virus, Ebola virus; Gastrointestinal infections – Rotavirus, Noravirus; Respiratory infections – Influenza virus, coronaviruses, Respiratory syncytial virus; Blood borne viruses – Human Immunodeficiency virus, Hepatitis C virus; Neurological infections – Herpes Simplex virus, Japanese encephalitis virus.

UNIT-IV

Virus detection methods: Biological, physical, serological and molecular methods.

Management of plant viruses: Cultural practices, control of vectors, production of virus free plants, plant quarantine, production of transgenic plants.

Management of animal and human viruses: Sanitation, vector control, vaccines, antiviral drugs and chemotherapy.

Course Outcomes: At the end of the course the student will be able to

CO1: Describe the origin, evolution, morphology and properties of viruses, cultivation, and transmission of viruses.

CO2: Understand the history, structure, transmission, epidemiology, detection and control of important animal viruses and concepts of veterinary epidemiology.

CO3: Learn about history, structure, transmission, epidemiology, detection, and control of major viruses infecting plants and humans.

CO4: Acquire knowledge about biological, physical, serological, and molecular methodsused for detection of viruses and describe strategies followed for management of plant and animal viruses.

Learning resources and suggested books:

1. Fields Virology, 4th Ed., Vol 2 Ed by David M Knipe, and Peter M Howley Chapters: 24, 28,34, 54, 55, 67 and 68.
2. Gastroenteritis Viruses, Vol. 238. Novartis Foundation Symposium, Mary Estes, Latestedition(2001).
3. Viral Infections of the Gastrointestinal Tract, Vol. 10. Albert Z. Kapikian, Z. Kapikian A. 2nded., rev. and expanded. Latest edition / Pub.(1994).
4. Human Enterovirus Infections, Harley A. Rotbart (Editor), American Society Microbiology, (1995).
5. Viral Gastroenteritis, Edited By U. Desselberger, J. Gray. Elsevier Perspectives InMedicalVirology. Series Editor: Arie J. Zuckerman, Uk Isa K. Mushahwar. (2003).
6. Viruses and Liver Cancer. Edited by E. Tabor. Elsevier Perspectives In Medical Virology.Series Editor: Arie J. Zuckerman, Uk Isa K. Mushahwar. (2002).
7. Viruses, Cell Transformation, and Cancer. Edited by J.A. Grand. Elsevier Perspectives I
10. Medical Virology. Series Editor: Arie J. Zuckerman, Uk Isa K. Mushahwar. (2001).

VIR-307: COMMUNICATIVE ENGLISH AND FUNDAMENTALS OF COMPUTERS

(Skill Enhancement Add-on Theory Course-Self Study)

Self-Study	**Internal Assessment: 100 Marks** **Seminars, quizzes and assignments**
Tutorial: Textbooks, E-learning resources, study materials, guest lectures by experts.	**Semester: IV** **Non-credited course**

Course Educational Objectives:

1. To learn **Oral and Aural Skills**,**Writing Skills**,**Job Skills**and **Soft Skills**
2. To enable the students to understand the **Basics of personal computer and its componentsWindows Operating System-2010 Microsoft Office-**
3. To Learn to practice **MS-Word, MS-Excel, MS-PowerPoint**
4. To increase the awareness **Introduction to InternetE-mailNetworking of Computers and overview of International and Indian networksInformation Networks**

UNIT I

Oral and Aural Skills: Sounds of English -vowels sounds and constant sounds; Word Accent and connected speech- contractions, questions tags; Listening for information; taking notes while listening to lectures (use of Dictionary, CD- ROM, audio, video for phonetics sounds, pronunciation and listening practice).

Writing Skills: Sentence writing and paragraph writing; use of linkers and appropriate vocabulary; Businessletters and E-mail (writing & etiquette); Descriptive writing (describing a person, product and process).

Job Skills: Group discussions and debates; Presentation skills –kinesis. 3. Interview skills.

Soft Skills: Interpersonal communication-verbal and nonverbal etiquette; Critical thinking; Teamwork.

UNIT II

Basics of personal computer and its components: Components of computer, Concept of programming languages; Hardware and software; Operating systems.

Windows Operating System-2010: System configuration, Simple commands to create directories and handle files.

Microsoft Office- 2017: Introduction and facilities available, shortcut bar, customizing toolbars; using common office techniques- starting an office application, Microsoft Word, Microsoft Excel, Microsoft PowerPoint; Conversion of word file to PDF, merging PDFs and editing PDF

UNIT III

MS-Word: Features of MS-Word - MS-Word Window Components - Creating, Editing, Formatting and Printing of Documents – Headers and Footers – Insert/Draw Tables, Table Auto format – Page Borders and Shading – Inserting Symbols, Shapes, Word Art, Page Numbers, Mail Merge.

MS-Excel: Overview of Excel features – Creating a new worksheet, Selecting cells, Entering and editing Text, Numbers, Inserting Rows/Columns –Changing column widths and row heights, Formulae, Referencing cells , Changing font sizes and colors, Insertion of Charts, Auto fill, Sort.

MS-PowerPoint: Features of PowerPoint – Creating a Presentation - Inserting and Deleting Slides in a Presentation – Adding Clip Art/Pictures -Inserting Other Objects, Audio, Video - Resizing and scaling of an Object – Slide Transition – Custom Animation.

UNIT IV

Introduction to Internet: Internet basics, getting onto the internet, e-mail, google drive management (Google documents, Google spread sheets, Google Slides and Google forms), drop box, file transfer protocols, gopher, the world-wide web, types of browsers (Google Chrome, Internet Explorer, Mozilla Firefox), browsing and down loading from sites; Introduction to Social Networking: Twitter, Tumblr, LinkedIn, Facebook, flickr, Skype, yahoo, YouTube, WhatsApp;Learning management systems (Microsoft teams, zoom, webEx, G-meet).

E-mail: Definition of E-mail -advantages and disadvantages –User Ids, passwords,Email addresses, domain names, mailers, message components, message composition, mail Management.

Networking of Computers and overview of International and Indian networks: Virtual Library-I: Searching MEDLINE; NCBI/PubMed; Virtual Library II: Science Citation Index, h-index, impact factor and current awareness services; Virtual Library III: Electronic Journal; International and Indian Networks- NICNET, INFLIBNET, AGRIS.

Information Networks: WWW, HTTP, HTML, URLs, EMB net, NCBI net, Virtual tourism.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire the **Oral and Aural Skills**, **Writing Skills**, **Job Skills** and **Soft Skills**
CO2: Understand the **Basics of personal computer and its components Windows Operating System-2010 Microsoft Office-**.

CO3: Learn to practice **MS-Word, MS-Excel, MS-PowerPoint**

CO4: Increase the awareness **Introduction to Internet E-mail Networking of Computers and overview of International and Indian networks Information Networks** WWW, HTTP, HTML, URLs, EMB net, NCBI net, Virtual tourism

Learning resources and suggested books:

1. English for Success Suresh Kumar, Cambridge University Press IndiaPvt.Ltd.2010.
2. Communication Skills & Soft Skills - An Integrated Approach, Dorling Kindersley, India Pvt. Ltd. 2013.
3. A. Goel, Computer Fundamentals, Pearson Education, 2010.
4. P. Aksoy, L. DeNardis, Introduction to Information Technology, Cengage Learning, 2006
5. P. K.Sinha, P. Sinha, Fundamentals of Computers, BPB Publishers, 2007.
6. Elements of Computer Science, 1998. S.K. Sarkar, A.K. Gupta. S. Chand & Company (Chapters- 1,2,9,12,14).
7. Microsoft Office. 1997. Stultz. Office 2000 -The Basics and Beyond, 2000. A Lan Neibauer. Tata Mc Graw-Hill Publishing Comp. Part I, II, III, IV, V.

8. Bioinformatics : Methods and Protocols, Edited by Stephem Misener and Stephen A. Krawetz. 2000. Methods in Molecular Biology Series. Humana Press.
9. Bioinformatics : A Practical guide to the analysis of genes and proteins. 1998. Edited by A.D. Baxevanis and B.F.
10. Francis Ouellette. Wiley -Interscience. Computational Methods in Molecular Biology by S.L. Saizberg.
11. Computer Applications in Biotechnology. 1998. by T. Yosida. Introduction to Bioinformatics by Atwood.

SEMESTER-IV

VIR-401: ANIMAL AND HUMAN VIROLOGY (Mandatory)

(Core Theory-I)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To acquire knowledge on virus-host interactions, host innate and adaptive immune response to viruses, molecular mechanisms of viral pathogenesis,
2. To acquire knowledge on transmission of viruses, mechanism of virus, persistence, infection and spread in the body.
3. To learn the epidemiological concepts and methods of virus diseases, measures of disease occurrence, disease determinants, ecology, epidemiology
4. To learn the surveillance of virus diseases, strategies of virus maintenance in communities, basic concepts, types and patterns of disease survey, prevention, and control methods of viruses.

UNIT-I

Virus-host interactions: Definition and structure of viral receptors (polio, HIV); Cellular interactions—clathrin coated pits, lipid rafts, caveolae, endocytosis and virus uncoating mechanisms; Nuclear localization signals and nuclear pore transit, virus –cytoskeletal interactions, chaperons; Replication sites and their characterization, IRES, replicons, transport of viral proteins; Host cell 'shut off', apoptosis, necrosis, stress response, alteration of signaling pathways, cellular basis of transformation.

Influence of virus on host cells: Host specificity, resistance, interference, cytopathic effects, inclusion bodies, cellular injury associated markers, mechanism of viral persistence and latency—*in vivo* and *in vitro* models (JE, measles and HIV).

UNIT-II

Mechanism of infection and viral spread in the body (Pathogenesis): Routes of entry- skin, respiratory tract, oro-pharynx and intestinal tract, conjunctiva, genital; host specificity and tissue tropism- receptors and viral enhancers; Mechanism of virus spread in the body- epithelial, subepithelial, lymphatic, blood stream, central nervous system, respiratory and intestinal tracts, other organs.

Virus offense meets host defense: Host defense against viral infections, innate and adaptive immune response to viruses.

UNIT-III

Transmission of viruses: Vertical (Direct) transmission- contact, transplacental, transovarial, sexual, fecal-oral, respiratory; Horizontal (Indirect) transmission- aerosols, fomites, water, food; Vector- arthropod, non-arthropods; Multiple host infections- viral zoonosis.

Epidemiological concepts of Virus diseases: Definition of terms, types of epidemiological investigations; Disease occurrence **-** Measures of disease occurrence, prevalence, incidence and mapping; disease determinants; host, virus and environmental interactions; Factors affecting virus ecology and epidemiology**.**

UNIT-IV

Virus disease surveillance: Types and methods of public health and infectious virus disease surveillance, establishing surveillance system; Quarantine of viral diseases- International and national; **Surveys:** Basic concepts, types of sampling, vector monitoring.

Detection of animal and human viruses: Biological, serological and molecular approaches.

Prevention and Control of viruses: The infection control policy- aseptic techniques, cleaning and disinfection, protective clothing, isolation; Prevention- sanitation, vector control-Various control

strategies and environmental management. Control in urban settings, control at aquatic stages, adult population, personal protection, insecticide resistance mechanism and control dynamics;vaccines and immunization; Control- chemoprophylaxis, chemotherapy (antiviral drugs, Interferon therapy), efficacy of infection control.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the virus host interactions, host defense mechanisms against viruses and innate and adaptive immune responses to viruses, molecular mechanisms of viral pathogenesis with respect to polio, rotavirus, and cytomegalovirus.

CO2: Describe the various modes of vertical and horizontal transmission of animal and human viruses, zoonotic virus infections, mechanism of virus persistence, routes of entry and mechanism of virus spread in the body.

CO3: Learn about the epidemiological concepts of virus diseases, measures of disease occurrence, prevalence, and mapping, determinants of disease, factors affecting virus ecology and epidemiology of animal and human viruses.

CO4: Acquire knowledge on virus disease surveillance, strategies of virus maintenance in communities, principles of virus disease survey, methods of prevention and control of animal and human viruses.

Learning resources and suggested books:

1. Epidemiology, diagnosis and Management of Zoonoses. (2004). K.G. Narayana Sri Kuldeep Sharma Pub.
2. Medical Mirobiology.(1997). Fifteenth edition. Edited by D.Green wood, R.C.Slack and J.F.Peutherer. Churchill Lingstone.
3. Veterinary Virology. F.A. Murphy *et al.* (1999). 3rd Edition. Academic Press.
4. Medical Virology. (1994). 4th ed. D.O. White and F.Fenner. Academic Press. (chapters– 12,13 to 29).

5. Veterinary Virology. (1993). 4th ed. F. Fenner. Academic Press (Part-II).
6. Textbook of Human Virology, 2nd Edition. (1991). R.W. Belshe. Mosby yearbook.
7. Viruses of vertebrates. (1989). J.S. Porter field, Bailliere Tindals.
8.Veterinary Epidemiology. (1986). M. Thrusfield. Butter Worth Publications.
9.Methods in Environmental Virology. (1982). C.P. Gerba and S.M. Goyal. Marcel Dekker Inc.

VIR-402: ANIMAL AND HUMAN VIRUS DISEASES (Mandatory)

(Core Theory-II)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To describe the etiology, transmission, clinical manifestations, diagnosis, prevention and control of important (+) sense ssRNA viruses infecting animals and humans.
2. To describe the etiology, transmission, clinical manifestations, diagnosis, prevention and control of important (-) sense ssRNA viruses infecting animals and humans
3. To understand the etiology, transmission, clinical manifestations, diagnosis, prevention, and control of important DNA viruses infecting animals and human
4. To learn about the prion diseases, biology, prevention, and management of major viruses of silkworm, poultry, fish and prawn, emerging and reemerging virus diseases.

Note: Emphasis should be on etiology, transmission, clinical manifestations, diagnosis, prevention and control.Virus Diseases based on genome and family.

UNIT-I

RNA Viruses:

Picornaviridae*-**Human Polio, Foot and Mouth disease;Caliciviridae*-** Norwalk virus, Swine Vesicular exanthema; ***Coronaviridae*-**Human corona virus, Avian infectious bronchitis viruses; ***Astroviridae*-**Human astroviruses; ***Matonaviridae*-**Rubella; ***Togaviridae*-** chikungunya ;***Flaviviridae*-**Yellow fever, Hepatitis C virus, Kyasanur forest disease, Dengue and Japanese

encephalitis, Bovine viral diarrhea, Hog cholera;***Reoviridae-*** Human rotavirus, Blue tongue virus, Orthoreovirus; ***Birnaviridae***-Infectious bursal disease virus.

UNIT-II

RNA Viruses:

Orthomyxoviridae-Human influenza, birdflu; ***Paramyxoviridae-*** Measles, Mumps, Canine distemper, rinderpest, peste des petits ruminants virus and Newcastle disease; ***Rhabdoviridae-*** Rabies, Vesicular stomatitis viruses; ***Filoviridae-***Marburg, Zaire and Ebola viruses; ***Bunyaviridae-*** Hantaan, Riftvalley fever; ***Arenaviridae-***Lymphocytic choriomeningitis virus; ***Retroviridae*** –Rous sarcoma virus, HIV.

UNIT-III

DNA Viruses:

Circoviridae-Chicken anemia virus; ***Parvoviridae-***Human B19 virus, Feline panleukopenia, Canine and Porcine parvoviruses; ***Poxviridae-*** Smallpox, Vaccinia, Sheeppox and Fowlpox viruses; ***Herpesviridae-*** Human herpes viruses, Varicella-Zoster, Cytomegalo, Epstein-Barr and herpes simplex viruses, Infectious Bovine rhinotrachitis; ***Papillomaviridae-***Bovine and Human papilloma viruses; ***Adenoviridae-*** Human adenoviruses causing respiratory, ocular, genitourinary and enteric infections, infectious canine hepatitis virus.

UNIT-IV

DNA Viruses:

Hepadnaviridae **-** Hepatitis-B virus; ***Asfaviridae-*** African swine fever virus; ***Iridoviridae-*** Invertebrate iridescent, Frog iridoviruses; ***Polydnaviridae-***Ichnovirus, Bracovirus; ***Polyomaviridae-*** Simian virus 40.

Prion diseases: Scrapie of sheep and goat, Bovine spongiform encephalopathy (Mad cow disease), Kuru and CJD of humans.

Major viruses of insects: Biology, prevention and management.

Major viruses of silkworm, poultry, fish and prawn: Biology, prevention and management.

Emerging and Re-emerging virus diseases: Zika, Nipha, Chikungunya, SARS Coronaviruses, Swineflu, Kyasanur forest disease virus, Marburg virus, WestNilevirus.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire the knowledge about etiology, transmission, clinical manifestations, diagnosis, prevention, and control of major RNA viruses of *Picornaviridae, Caliciviridae, Coronaviridae, Astroviridae, Matonaviridae, Togaviridae, Flaviridae, Reoviridae*and*Birnaviridae*.

CO2: Learn the etiology, transmission, clinical manifestations, diagnosis, prevention, and control of important RNA viruses of *Orthomyxoviridae, Paramyxoviridae, Rhabdoviridae, Filoviridae, Bunyaviridae, Arenaviridae* and *Retroviridae.*

CO3: Describe the etiology, transmission, clinical manifestations, diagnosis, prevention, and control of important DNA viruses of *Circoviridae, Parvoviridae, Poxviridae, Herpesviridae, Papillomaviridae* and *Adenoviridae*.

CO4: Develop the knowledge about etiology, transmission, clinical manifestations, diagnosis, prevention, and control of important DNA viruses belonging to *Hepadnaviridae, Asfaviridae, Iridoviridae, Polydnaviridae and polyomaviridae* and understand the prion diseases, biology, prevention, and management of major viruses of silkworm, poultry, fish and prawn, emerging and reemerging virus diseases.

Learning resources and suggested books:

1. Emerging and Reemerging Viral Pathogens Volume 2: Applied Virology Approaches Relatedto Human, Animal and Environmental Pathogens, Moulay Mustapha Ennaji, (2019). AcademicPress.
2. Environmental Virology and Virus Ecology, Carolyn M. Malmstrom, (2018), Academic Press.
3. Infectious Diseases, Microbiology and Virology, Luke S. P. Moore, James C. Hatcher, Cambridge Medicine, (2019).
4. Clinical Veterinary Microbiology, 2e 2nd Edition, Markey, Bryan, Leonard, Bryan Markey, Finola Leonard, Marie Archambault, Ann Cullinane, Mosby publication, (2019).

VIR-403A: APPLIED VIROLOGY (Optional)

(Generic Elective-Theory)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn about the basic concepts, requirements and methods of plant and animal cell and tissuecultures

2.To acquire knowledge about the production and applications of recombinant DNA technology-based antibodies and vaccines to viruses, production of virus-resistant crops and virus-based biopesticides.

2. To acquire knowledge about common virus infections caused to human beings through vector and non-vector borne modes and basic principles of biosafety, biosecurity, and ethical/regulatory issues in Virology

4.To understand the concepts of using virus based genetic resources and model systems in molecular biology, phage display and therapy technologies and viruses as biological weapons.

UNIT – I

Viruses as model systems in Molecular Biology: Exploitation of viruses as model systems in understanding the replication of nucleic acids and regulation of gene expression strategies and cancer biology (SV-40, adenoviruses).

Viruses as unique genetic resources: Exploitation of viral genes / sequences in the construction of varied types of gene vectors (cloning, shuttle, expression and transcription) and their applications; virus genes as a source of novel enzymes, gene expression activators and silencers.

Exploitation of viruses as functional gene delivery/therapy systems: Retro-, adeno- and parvoviruses; Display of foreign peptides on virion surface and applications.

Viruses as biocontrol agents (viral biopesticides): Bacterial, algal, fungal and insect viruses – mass production and their application as biocontrol agents against bacterial and fungal pathogens of plants, algae and insect pests.

UNIT-II

Phage display and phage therapy: Exploitation of bacteriophages for peptide display and therapy.

Recombinant antibodies: *In vitro*production of rDNA technology-based antibodies (monoclonal antibodies and scFv) to viruses and their applications.

Modern vaccines to viruses: Designing of modern vaccines, modern vaccines—recombinant proteins, subunit vaccines, mRNA-based vaccines, VLP vaccines, DNA vaccines, peptides, immune modulators (cytokines), vaccine delivery & adjuvants, large scale manufacturing-QA/QC issues, Animal models and vaccine potency testing;extraction ofantiviral compounds from natural resources and their characterization.

UNIT-III

Public health Virology: Biology, prevention and control of common nosocomial, enteric (food and water-borne, hepatitis A & E, polio, rotaviruses), blood-borne (hepatitis B & C, HIV), contact transmitted (common cold, flu, corona) and insect-borne (Japanese encephalitis, dengue, chikungunya) viruses.

Virus resistant crops: Production of virus resistant/tolerant crops through transgenic technology by exploiting genes derived from viruses, guidelines for testing and releasing the transgenic lines in India.

Virus-based nanotechnology: Viral nanoparticles (VNPs), virus-like particles (VLPs), plant virus-derived nanoparticles (PVNs), biodistribution and pharmacokinetics, application of plant viruses as biotechnological tools in medicine, industry and agriculture.

UNIT-IV

Viruses as biological warfare, bio-crime and bioterrorism agents: Small poxvirus (variola), viral encephalitis and viral hemorrhagic fevers; HIV, viral hemorrhagic fevers (Ebola), corona virus and yellow fever virus.

Biosafety and Biosecurity: Laboratory bio-safety, Classification of bio-safety levels and risk groups, containment, Good microbiological practices, Good Laboratory practices (GLP), Disinfection, Decontamination and Sterilization procedures, solid versus liquid waste, safety rules, preparedness and response for the emergency conditions in the laboratory.

Ethics in Virology: Ethics in Virus-related research, ethical and regulatory issues in animal experiments, issues related to Good Manufacturing Practices (GMP), Importance of Intellectual Property Rights and Indian patent system.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the basic concepts, types, requirements and methodologies of plant/animal cell and tissue cultures used for cultivation of plant and animal viruses.

CO2: Learn the production of recombinant DNA technology-based antibodies and vaccines to viruses and the concepts and methods of production of virus resistant/tolerant crops and virus-based biopesticides.

CO3: Acquire knowledge about common virus infections caused to human beings through vector and non-vector borne modes and basic principles of biosafety, biosecurity, and ethical/regulatory issues in Virology and basics in Intellectual Property Rights (IPR).

CO4: Understand the utilization of viruses as viral genes/sequences as unique genetic resources, novel enzymes, gene expression activators and silencers, gene delivery systems, epitope display platforms and model systems in understanding the replication of nucleic acids and regulation of gene expression strategies and cancer biology, phage display and therapy technologies and viruses as biological weapons.

Learning resources and suggested books:

1. Techniques in diagnoses of Plant Viruses (Plant Pathogens -6)-(2008). Govind.Rao, Rodrigo A. Valverde & C.I. Dovas, Stadium Press.
2. Epidemiology, diagnosis and Management of Zoonses. (2004). K.G. Narayana Sri Kuldeep Sharma Pub.
3. Field's Virology. (2002). Vol. I, II.
4. Bailey and Scotts' Diagnostic Microbiology. 11th Edition. (2002). By B.A. Forbes et al., Mosby publisher.
5. Clinical Virology. (2002). 2nd edition. D.D.Richmanet al., ASM
6. Principles of gene manipulation. 6th edition. (2002). By S. Primrose, R. Twyman and B. Old. Blackwell Science.
7. Matthews' Plant Virology. (2001). By R. Hull. Academic Press.
8. Principles of Virology- Molecular biology, pathogenesis and control. (2000). S.J.Flint, L.W.Enquist, R.M.Krug, V.R.Racaniello and A.M. Skalka. ASM press.
9. Control of Plant Virus Diseases. By Hadidi*et al.*(Eds). APS. USA.

(OR)

VIR-403B:VIRUS-BASED BIOTECHNOLOGY (Optional)

(Generic Elective-Theory)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand the concepts and methods of plant and animal cell and tissue cultures, virus based genetic resources and model systems in molecular biology,
2. To learn about phage display and phage therapy technologies, virus-based biopesticides and viruses as biological weapons.
3. To describe the production and applications of recombinant DNA technology-based antibodies to viruses, modern vaccines to viruses, concepts, and applications of virus-based nanotechnologies

4.To acquire knowledge about the principles and methodologies of virus resistant cropsand basic principles of biosafety, biosecurity and ethics in Virology

UNIT-I

Viruses as model systems in Molecular Biology: Exploitation of viruses as model systems in understanding the replication of nucleic acids and regulation of gene expression strategies and cancer biology (SV-40, adenoviruses).

Viruses as unique genetic resources: Exploitation of viral genes / sequences in the construction of varied types of gene vectors (cloning, shuttle, expression and transcription) and their applications; virus genes as a source of novel enzymes, gene expression activators and silencers.

Exploitation of viruses as functional gene delivery/therapy systems: Retro-, adeno- and parvoviruses for gene delivery and gene therapy; Display of foreign peptides on virion surface and applications.

UNIT-II

Phage display and phage therapy: Exploitation of bacteriophages for peptide display and therapy.

Viral biopesticides: Mass production and applications of bacterial, fungal and insect viruses and their application as biocontrol agents.

Virus resistant crops: Production of virus resistant/tolerant crops through transgenic technology by exploiting virus or non-viral genes, guidelines for testing and releasing the transgenic lines in India.

Recombinant antibodies: *In vitro*production of rDNA technology-based antibodies (monoclonal antibodies, scFv) to viruses and their applications.

UNIT-III

Public health Virology: Biology, prevention and control of common nosocomial, enteric (food and water-borne, hepatitis A & E, polio, rotaviruses), blood-borne (hepatitis B & HIV), contact transmitted (common cold & corona) and insect-borne (dengue & chikungunya) viruses.

Modern vaccines to viruses: Designing of modern vaccines, modern vaccines—recombinant proteins, subunit vaccines, mRNA-based vaccines, VLP vaccines, DNA vaccines, peptides, immunomodulators (cytokines), vaccine delivery & adjuvants, large scale manufacturing-QA/QC issues, Animal models and vaccine potency testing.

Virus-based nanotechnology: Viral nanoparticles (VNPs), virus-like particles (VLPs), plant virus-derived nanoparticles (PVNs), biodistribution and pharmacokinetics, application of plant viruses as biotechnological tools in medicine, industry and agriculture.

UNIT-IV

Viruses as biological warfare, bio-crime and bioterrorism agents:Small poxvirus (Variola), viral encephalitis and viral hemorrhagic fevers, HIV, viral hemorrhagic fevers, corona, Ebola and yellow fever virus.

Biosafety and Biosecurity: Laboratory bio-safety, Classification of bio-safety levels and risk groups, containment, Good microbiological practices, Good Laboratory practices (GLP), Disinfection, Decontamination and Sterilization procedures, solid versus liquid waste, safety rules, preparedness and response for the emergency conditions in the laboratory.

Ethics in Virology: Ethics in virus-related research, ethical and regulatory issues in animal experiments, issues related to good manufacturing practices (GMP), basics in Intellectual Property Rights, Indian patenting system.

Course Outcomes: At the end of the course the student will be able

CO1: Understand the basic concepts, types and methodologies of plant / animalcell and tissue cultures and exploitation of viruses as viral genes/sequences as unique genetic resources, novel enzymes, gene expression activators and silencers, gene delivery systems, epitope display platforms and model systems in understanding the replication of nucleic acids and regulation of gene expression strategies and cancer biology.

CO2: Describe the exploitation of bacteriophages for peptide display and therapy, discuss the virus-based biopesticides and viruses as biological warfare, bio-crime and bioterrorism agents.

CO3:Learn the concepts and methods of production of recombinant DNA technology-based antibodies and vaccines to viruses and understand the principles and applications of virus-based nanoparticles (virus nanoparticles and virus-like particles, VNPs and VLPs) in biotechnology.

CO4: Describe the concepts and methods of production of virus resistant/tolerant crops and guidelines of testing and releasing the transgenic lines in India and learn about biosafety, biosecurity guidelines to be followed to conduct virus-related research and discuss the ethical and regulatory issues in virus-related research and basic concepts of IPR and Indian patenting system.

PRACTICAL:VIR-404A: ANIMAL AND HUMAN VIROLOGY & VIRUS DISEASES AND APPLIED VIROLOGY

Practical: 9 hours/week	**Semester End Examination: 100 Marks**
Tutorial: Textbooks, E-learning resources, study materials	
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand biosafety, biosecurity and ethical guidelines to handle viruses in the laboratory and to develop skills to maintain, isolate and quantitate viruses in cell lines and to study their cytopathic effects. To acquire the knowledge on detection of animal, human and plant viruses using kit-based point of care tests, preparation and characterization of virus-based nanoparticles and to participate in extension activities and field, poultry, agriculture research station and aqua form visits.

2.To acquire skills in cultivation of plant, animal and human viruses in plant/animal cell/tissue cultures/embryonated eggs, their isolation, quantification and to understand the role of NPV as biopesticide, purification of virus-based nanoparticles using differential centrifugation. To develop skills to detect the plant, animal and human viruses using serological and molecular detection tests and to participate in extension and field activities to understand the virus epidemiology.

List of Experiments:

1. Classification of laboratories
2. Preparation of glassware for cell cultures
3. Preparation of buffers and media
4. Collection, filtration and preservation of calf serum.
5. Culturing of Sheep kidney cells
6. Culturing of Chicken embryo fibroblast cells.
7. Sub-culturing of Sheep kidney cells.
8. Inoculation of virus into sheep kidney cell cultures.
9. Chicken embryo inoculation techniques.
10. Study of pathogenic lesions of animal virus diseases through slides.

11. Serodiagnosis of virus infections (HBV and HCV)of humans using kits.
12. Participation in vaccination programs (extension activity).
13. Application of NPV and its role as biopesticide.
14. Isolation and analysis of human rotavirus genome
15. Participation in vaccination programs (extension activity).
16. Diagnosis of PRSV using ELISA.
17. Visits to local sericulture, poultry, fish and prawn farms.
18. Biosafety guidelines (Theory exercise)

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the biosafety, biosecurity and ethical guidelines to be followed in the molecular virology laboratory.

CO2: Learn the technologies related to preparation of media for cell/tissue cultures, preparation of cell cultures/embryonated eggs for virus cultivation and isolation and quantitation of viruses using differential centrifugation and symptomatology/spectroscopy, respectively.

CO3: Develop skills to test the animal, human and plant viruses using serological and molecular tests and kit-based methods.

CO4:Acquire knowledge on virus-based nanotechnology protocols, virus epidemiology by doing extension activities and visiting field, poultry, agriculture research station and aqua forms.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire the skills to prepare the cell cultures and embryonated eggs for cultivation of plant, animal and human viruses and to isolate and quantitate viruses.

CO2: Learn the methods to detect plant and animal viruses and able toanalyze various types of results obtained from serological and molecular viral diagnostic methods.

CO3: Apply the skills acquired to prepare NPV as biopesticides and virus-based nanoparticles and their isolation using analytical methods.

CO4: Participate in extension activities and field, poultry, agriculture research station and aqua form visits.

THEORY-VIR-405A: INDUSTRIAL BIOTECHNOLOGY

(Multidisciplinary Course)

Lecture: 6 hours/week	**Internal Assessment: 10 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint presentations by guest lecturers.	**Semester End Examination: 40 Marks**
Semester: IV	**Credits: 2 Credits**

Course Educational Objectives:

1. To acquire the knowledge on cultivation of industrially important organisms **Strain improvement methods**and bioreactors
2. To learn the types of fermentation processes and to learn about important **Bioprocess control measurements**
3. To understand the Downstream processing and its industrial applications
4. To learn industrial production of enzymes, beverages, alchol and single cell proteins

Unit-I

Selection of Microorganisms: Isolation, screening, Preservation and maintenance of industrially important microorganisms; types and source of media for industrial fermentation; buffers-precursors and metabolic regulators and oxygen requirement; Air and Media Sterilization.

Strain improvement methods: Conventional and rDNA methods**.**

Bioreactors: Basic principles of design and construction of Bioreactor; Types and working principles of specialized bioreactors.

Unit-II

Fermentation and its types: Solid state and submerged fermentations; Analysis of batch, fed-batch and continuous fermentations, aerobic and anaerobic fermentation, chemostat fermentation.

Bioprocess control measurements: Physical and chemical measurements and control of bioprocess parameters; Methods for off-line and on-line monitoring of bioreactors; Bioprocess modeling and simulation.

UNIT – III

Down Stream Processing: Cell disruption methods; biomass separation, extraction and purification methods; Quality assurance techniques and its importance in marketing.

UNIT – IV

Applications of Industrial Biotechnology: Industrial production of alcohol (ethanol), alcohol beverages (beer), acids (citric acid), solvents (glycerol), antibiotics (penicillin,), amino acids (lysine), enzymes (amylases), vitamins($B_{12.}$) and their applications; Role of enzymes; Single cell protein.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the cultivation of industrially important organisms **Strain improvement methods** and bioreactors

CO2: Learn the basic concepts of the types of fermentation processes and to learn about important **Bioprocess control measurements**

CO3: Describe the Downstream processing and its industrial applications, Quality assurance techniques and its importance in marketing.

CO4: Learn the industrial production of enzymes, beverages, alchol and single cell proteins

Learning resources and suggested Books:

PRACTICAL-VIR-405B: INDUSTRIAL BIOTECHNOLOGY

(Multidisciplinary course)

Practical: 6 hours/week	**Semester End Theory Examination : 40 Marks**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	
Semester: IV	**Credits: 2 Credits**

Course Educational Objectives:

1. To learn and to practice variousmethods used for isolation, cultivation, and screening of the industrially important microorganisms from different sources for the production of enzymes and organic acids.

2. To demonstrate the practical skills in Quality testing of milk, qualntitative analysis of lactic acid and visit to small scale industries

List of Practicals

1. Isolation of microorganism from soil and industrial effluents

2. Screening of industrially important Microorganisms (Bacteria and fungi)

3. Production of Citric acid from *Aspergillus niger*

4. Screening of amylase producing microorganisms

5. Screening of cellulase producing fungi from soil

6. Cellulase production from fungi through submerged fermentation

7. Assay of Cellulase (FPase) by DNS method

8. Production of wine from grapes

9. Production of alcohol by fermentation and Estimation by colorimetry method

10. Quality testing of milk by methyline Blue Reduction Test (MBRT)

11. Effect of heavy metals on bacteria

12. Estimation of lactic acid from curd

13. Visit to small scale Bioprocessing industries

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire the practical skills to use in cultivation, and screening of the industrially important microorganisms from different sources for the production of enzymes and organic acids.

CO2: Acquire the practical skills to use cultivation, and screening of the industrially important microorganisms from different sources for the production of wine and alcohol.

CO3: the Quality testing of milk, qualntitative analysis of lactic acid and Effect of heavy metals on bacteria.

CO4: visit to small scale industries to learn the processes in in the production of industrially important products

Learning resources and suggested Books:

VIR-405C: PROJECT WORK

Project:6 hours/week	**Dissertation: 60 Marks** **Presentation: 20 Marks** **Viva:20 marks**
Tutorial: Textbooks, E-learning resources, study materials	
Semester: IV	**Credits: 4 Credits**

- Students intended to do project; they need to undertake a project work related to Virology. The project report will be submitted in the form of dissertation duly certified by the supervisor and Head of the Dept. The project will be presented by the student for evaluation at the end of the semester by external expert.

VIR-406A: CLINICAL VIRIOLOGY

(Open Elective-Theory- Offered to students of other disciplines)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: IV	**Credits: 4 Credits**

Course Educational Objectives:

1. To learn about basic concepts of taxonomy, morphology, transmission, cultivation and replication of viruses and methods used for characterization of viruses,
2. To understand methods used for sample collection, preservation, and detection of viruses and GMP and biosafety practices used in the clinical laboratories.
3. To acquire knowledge about clinically important food-borne, blood borne, vector borne and contact borne and zoonotic diseases and

To learn about the strategies used for their prevention and control

UNIT-I

Introduction to Virology: Introduction to Virology, characteristics, taxonomy of animal and human viruses, morphology of viruses, mode of transmission of viruses, replication of viruses, isolation and cultivation of viruses, CPE, virus characterization by various methods.

UNIT-II

Collection and diagnosis: Viral specimen collection, transport and processing, methods used for preservation of virus samples, diagnosis and detection of viruses by using biological, immunological and molecular methods; biosafety levels and risk groups, containment, good microbiological practices, good laboratory practices (GLP), disinfection, decontamination and sterilization procedures, safety rules.

UNIT-III

Clinically important viral diseases: Importance of common nosocomial, enteric (food and water-borne, hepatitis A & E, polio, rotaviruses), blood-borne (hepatitis B & C, HIV), contact transmitted (common cold, flu, corona) and insect-borne (Japanese encephalitis, dengue, chikungunya) viruses; Zoonotic diseases and their role in the society.

UNIT-IV

Prevention and Control of viruses: The infection control policy- aseptic techniques, cleaning and disinfection, protective clothing, isolation; Prevention- sanitation, vector control, vaccines and immunization; Control- chemoprophylaxis, chemotherapy (antiviral drugs, Interferon therapy), efficacy of infection control.

Course Outcomes: At the end of the course the student will be able to

CO1: Acquire basic understanding of virus taxonomy and virus properties and learn the concept of transmission, replication, cultivation andcharacterization of viruses.

CO2: Learn to collect, preserve the virus samples and detect the viruses by using biological, serological and molecular methods, good microbiological and laboratory practices used in the clinical laboratories.

CO3: Understand the properties, transmission, pathogenesis, epidemiology, diagnosis and detection of clinically important virus diseases.

CO4: Learn about the approaches used for prevention and control of clinically important infectious virus diseases.

Learning resources and suggested books:

(OR)

VIR-406B: EMERGING AND REEMERGING VIRUSES(Optional)

(Open Elective-Theory- Offered to students of other disciplines)

Lecture: 6 hours/week	**Internal Assessment: 20 Marks** **Seminars and assignments**
Tutorial: Textbooks, E-learning resources, study materials, PowerPoint lectures	**Semester End Examination: 80 Marks**
Semester: III	**Credits: 4 Credits**

Course Educational Objectives:

1. To understand the evolution, epidemiology, emergence of infectious and emerging virus diseases, viral zoonotic infections
2. To learn about HIV, SARS, and host defence mechanisms against infectious diseases.
3. To learn about the biology, diagnosis and management of vector-borne emerging infectious viral diseases
4. To understand the impact of environment on virus emergence, control strategies followed for emerging virus diseases and bioterrorism.

Note:With respect to emerging infectious virus diseases, emphasis should be on etiology, transmission, clinical manifestations, diagnosis, prevention and control.

UNIT-I

Introduction to Virology: Origin, evolution and classification of viruses.

Morphology and properties of viruses: Physical- morphology and structure, Biochemical- chemical composition, nucleic acids, proteins, enzymes, lipids, carbohydrates, polyamines, cations.

Cultivation of viruses: Experimental plants and experimental animals, embryonated eggs and cell cultures.

Transmission of viruses: vector and non-vector transmission.

UNIT-II

Epidemiology and emergence of infectious viral diseases: Significance and terminology of virus epidemiology, Biology of emerging infectious diseases, factors influencing for virus epidemics, host defence against infectious diseases, zoonotic infections, Impact of social and environmental change on emergence, Controversies.

Emerging virus disease surveillance: Surveillance methods, evaluation and application of virus surveillance; Quarantine of viral diseases- International and national.

UNIT-III

Emerging and Re-emerging Infectious Viruses: Non-vector borne emerging virus diseases; Human Immunodeficiency virus, SARS, and Influenza.

Vector-borne emerging infectious virus diseases- Dengue & Haemorrhagic fever viruses, Japanese encephalitis virus, Chikungunya virus, West Nile virus, Ebola virus, Nipah, Marburg, Kyasanur forest disease virus, Zika virus.

UNIT-IV

Strategies of virus maintenance in communities: Wild and domestic animals, rural and urban populations.

Surveys: Basic concepts, types of sampling, surveys, collecting information, monitoring vectors, Patterns of disease progress.

Prevention and control of emerging viruses: The infection control policy- aseptic techniques, cleaning and disinfection, protective clothing, isolation; Prevention- sanitation, vector control, vaccines and immunization; Control- chemoprophylaxis, chemotherapy (antiviral drugs, Interferon therapy), efficacy of infection control, vector control, and anti-virulence therapies, vaccines, public health measures, Bioterrorism.

Course Outcomes: At the end of the course the student will be able to

CO1: Understand the evolution, biology, epidemiology, and emergence of infectious virus diseases, biology of emerging infectious diseases, zoonotic infections

CO2: Learn about the biology, clinical symptoms, epidemiology, diagnosis, and control of viruses causing AIDS and SARS and host defense mechanisms against infectious virus diseases.

CO3:Describe the biology, clinical symptoms, epidemiology, diagnosis, and control of vector borne emerging infectious viral diseases.

CO4:Acquire knowledge on impact of social and environmental change on emergence of viruses, vector control and antiviral therapies, vaccines, public health measures and bioterrorism.

Learning resources and suggested books:

1. Epidemiology, diagnosis and Management of Zoonoses. (2004). K.G. Narayana Sri Kuldeep Sharma Pub.
2. Clinical Virology. D.D. Richman *et al.,* 2nd Edition. (2002). ASM Press.
3. Principles of Virology- Molecular biology, pathogenesis and control. (2000). S.J. Flint, L.W. Enquist, R.M. Krug, V.R. Racaniello and A.M. Skalka. ASM press.
4. Veterinary Virology. F.A. Murphy *et al. (*1999). 3rd Edition. Academic Press.

VIR-407: RESEARCH APRTITUDE AND ENTERPRENUERSHIP

(Skill Enhancement Add-onTheoryCourse-Self-Study)

Self-Study	**Internal Assessment: 100 Marks** **Seminars, quizzes and assignments**
Tutorial: Textbooks, E-learning resources, study materials	**Semester: IV** **Non-credited course**

Course Educational Objectives:

1.To enable the students to imbibeSteps of Research; Methods of Research and communication skills .

2. To learn the **Data Interpretation**Ethical Issues of Data Reporting and for Authenticity.Preparation of research proposal

3.To learn **Information and Communication Technology** (ICT) and Role of Entrepreneurship in Economic Development; Start-ups.

4.To aquireknowledge about the **Idea Generation and Project FormulationInstitutions Supporting and Taxation Benefits**

UNIT-I

Research Aptitude: Research - Meaning, Motivation in Research; Characteristics and Types; Steps of Research; Methods of Research; Identifying research problem, framing objectives, setting hypothesis& research design, testing hypothesis, reviewing literature; Importance of reasoning in research;Thesis and article writing, their characteristics and format; Workshop, Seminar, Conference and Symposium; Research Ethics; Ethics of Scientific Writing.

Comprehension and communication: Communication, effective communication; Barriers to effective communication.

UNIT-II

Data Interpretation: Sources, Acquisition and Interpretation of Data; Quantitative and Qualitative Data; Representing and Interpreting Data; Data and governance; Graphical Representation and Mapping of Data; Locating ethics in scientific data; Conflict of interest; Ethical Issues of Data Reporting and for Authenticity.

Report Writing: Components, Types of reports, Layout of research report, Principles of writing, References, Appendices, Format of publication in research, Journals, Paper Presentations- Planning, Preparation, Visual aids; Preparation of research proposalUNIT-III

UNIT-III

Information and Communication Technology (ICT): ICT-Meaning, Advantages, Disadvantages and Uses; General Abbreviation and Terminology; Basics of Internet, intranet, and E-mail, audio and video conferencing; Digital initiatives in higher education; ICT and governance.

Entrepreneurship: Definition and Concept of entrepreneurship; Entrepreneur Characteristics; Classification of Entrepreneurs; Role of Entrepreneurship in Economic Development; Start-ups.

UNIT-IV

Idea Generation and Project Formulation: Ideas in Entrepreneurships; Sources of New Ideas; Techniques for Generating Ideas; Preparation of Project Report; Contents; Guidelines for Report preparation; Project Appraisal Techniques; Economic Analysis-Financial Analysis; Market Analysis.

Institutions Supporting and Taxation Benefits: Central level Institutions: NABARD; SIDBI, State Level Institutions; DICs; SFC; Government Policy for MSMEs; Tax Incentives and Concessions.

Course Outcomes: At the end of the course the student will be able

CO1: Aware of the Steps of Research; Methods of Research and communication skills .

CO2: Learn the **Data Interpretation** Ethical Issues of Data Reporting and for Authenticity. Preparation of research proposal

CO3: Acquire the knowledge about the importance **Information and Communication Technology** (ICT) and Role of Entrepreneurship in Economic Development; Start-ups.

CO4: Acquire knowledge about the **Idea Generation and Project Formulation, Institutions Supporting and Taxation Benefits**

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF ZOOLOGY

Course

M.Sc. ZOOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

Department of Zoology was established in 1954 from the inception of the University to produce high quality Zoologists to cater the needs of the newly Independent India. Since the Institute is a State University, the Department has increasingly focused on post graduate education and research with a vision to promote the discovery and broad communication of knowledge about the physiology of animals.

Zoology Department has been recognized at National and International levels for its outstanding contributions in various disciplines of Animal Physiology. The University Grants Commission has recognized this Department as a Research Centre for the thrust areas “Environmental Biology” and “Ethnopharmacology”.

All the faculty have received advanced overseas training in their respective research areas and established active research collaborations across the Globe. In due recognition of the research potential and academic accomplishments of the faculty, the Department is being constantly supported with huge grants by several funding agencies namely UGC (DRS, COSIST, BSR), DST-FIST with a total outlay of Rs.280 lakhs. In addition to the above, the faculty members have received individual major research projects to the tune of Rs.196 lakhs from various funding agencies such as UGC, CSIR, DST and ICMR during the last five year period.

Since its inception, 520 Ph.D., and 393 M.Phil Degrees were awarded and 2200 research papers were published in journals of national and international repute with high impact factor.

The Department is the Head-quarters for “Indian Society for Comparative Animal Physiology” and publishing a biannual journal “Indian Journal of Comparative Animal Physiology”. Recently, the department has established “District Environmental Center (DEC)” under the auspices of “National Environmental Science Academy, New Delhi” to create awareness on Management strategies of environment among the public and ‘Research Centre for Neurological Disorders’ to promote research related to neurological disorders and to take up community out-reach welfare programmes. The Department has also a “Forum for Research Scholars” and “Zoological Society” to organize invited lectures, debates, competitions, quiz programmes etc. to enrich the academic environment in the

Department besides participating in community activities such as ‘Swachabharath’, Blood donation camps and Tree plantation activities etc.

The M.Sc. degree in Zoology being offered by this University provides its students with a course of study that integrates a range of learning and teaching techniques relevant to their educational development and career ambitions. This Masters programme covers the latest developments in Zoology and its specializations, viz., Applied Parasitology, Animal Physiology, Fishery Science and Entomology. It provides theoretical knowledge as well as training in the practical and intellectual skills to enable students to better understand and then solve some of the problems in this subject. Graduates in this programme will be induced into critical thinking, and would be able to solve complex problems in Zoology. The students would also be inculcated with personal and problem-solving skills that will enhance their employability prospects. Enhanced competence of students has been the key concern in designing and developing this syllabus. Careful thought has gone into selection of topics and setting their scope. Major areas of Zoology like Genetics, Evolution, Physiology, Biochemistry, Ecology, Immunology, Cytology, Developmental Biology, and Taxonomy have been included in the syllabus only after multiple rounds of thorough discussions and intensive study. Special attention has been paid to subjects like Bioinformatics, Molecular Biology and Genetics to incorporate the latest developments in these fields.

Vision

- Provide a sound education in basic science
- Transform society through the empowerment of women
- Provide inexpensive educational services to the weaker sections of society
- Inculcate respect for nature and concern for ethical values among students through good and scientific educational practices.
- Recognizing the essential roles of science and biology in the lives of citizens today and tomorrow, we emphasize biological literacy in our teaching and outreach programs.

Mission

- To impart to the students the contemporary advancements in life sciences.
- To impart a global perspective and such skills among students that benefit humanity.
- To promote the discovery and broad communication of knowledge about the biology of animals including their Taxonomy, Evolution, Physiology, Cell, Molecular and Biochemical make up, interaction with their environments and its Zoogeographical realms.
- To develop research aptitude and a scientific advancement.
- Reinvent ourselves in response to the changing demands of society with high moral values as a good citizen

CHOICE BASED CREDIT SYSTEM (CBCS):

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

Students of this course would be expected to :

- Be able to play leading role in industry, research and the public services;
- Understand and appreciate major public concerns and issues associated with Zoology
- Have an understanding and grasp of international research environment where the frontiers of knowledge in Zoology are under research
- Be able to adapt and respond positively and flexibly to changing circumstances
- Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively
- Have the capacity for individual work and teamwork;
- Be lifelong learners with intellectual and practical skills.

➢ Department Objectives

- The Department is having the following objectives:
- To expose students to updated curricula and to recent advances in the subject and enable the students to face NET, SET and other competitive examinations successfully.
- To create awareness among students about the latest streams of Zoology including advanced subjects like Biotechnology, Tissue culture, Genetic Engineering and Bioinformatics.
- To improve the quality of laboratory and field work for which zoological study tours and excursions have been made compulsory so that the students can become familiar with field status of ecosystem and surrounding study.
- To prepare students to attract and develop interest in applied Parasitology, Animal Physiology, Genetics, Cell Biology, Fisheries science, Toxicology so that the students can select Zoology as their career.
- The BOS in Zoology expects that this new framework of curriculum caters the need of enabling students of subject to accept new challenges of dynamically changing modern era.

Programme Specific Outcomes (PSOs)

The zoology subject helps students to know the animal behavior, the way they live, their needs, the environment of the animals, how they adapt to the changing environment and their needs like nutrition, genetics, characteristics, evolution, physiology, reproduction etc.

Zoology is a recognized field today and is regarded as the top career choice in India. With the imbalance in the ecosystem today, acute need has been felt to preserve nature and even animals that are on the brink of extinction. Zoologists are in great demand today as many countries feel the need to preserve the wildlife and the nature.

- Develop deeper understanding of key concepts of zoology at molecular, cellular level, physiology and reproduction at organism level.
- Describe the role of taxonomy and systematics in animal studies and gain in-depth knowledge of animals including invertebrates and vertebrates.
- Learn the skills of handling various scientific equipment, designing and performing the laboratory experiments.
- Communicate the importance of ecological factors, biodiversity, environmental conservation processes, pollution control and protection of threatened species to the society
- Enhance their scientific temper and scientific thinking and exhibit creativity in designing, planning, problem solving, model making for various scientific concepts

Programme Objectives

The primary objective of the program is to impart quality education in the subject of Zoology as a basic science and its applied branches to the students

- To meet the academic to applied aspects in Zoology suited to real problems of regional and National needs
- To expose learners to frontier and thrust areas of Zoology
- To train learners for better performance in various competitive examination and in research careers.
- To enable the learners to acquire and develop self- study habits

- To facilitate Higher education & research in Zoology.
- To provide quality education offering skill based programs and motivate the students for self employment in applied branches of Zoology.
- To Inculcate the spirit of resource conservation and love for nature
- To conduct field studies and different projects of local and global interests.
- To provides opportunities for professional and personal development through curricular and co- curricular activities.
- Provide consultancy and organize extension activities.
- To shape the learners to become worthy citizens of the Nation in the field of Zoology and interrelated fields.

Programme Outcomes

- The student should acquired the knowledge with facts and figures related to various aspects in life sciences
- When you graduate with a Master of Science (Zoology) you will have learned how to work at a high level of academic achievement.
- The student to understanding the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life and the applications of Zoology in Aquaculture, Vermiculture, Sericulture, Poultry Science and Fundamentals of Clinical Science and Immunology and to create new industry in their relevant area.
- The student could apply the skills to handling scientific instruments, planning and performing in laboratory experiments and also drawing logical inferences from the scientific experiments.
- The students analyzed and realized how developments in any science subject helps in the development of other science subjects and vice-versa and how interdisciplinary approach helps in providing better solutions and new ideas for the sustainable developments.
- Understand the applications of Biological techniques to various fields of biology.
- Attained the knowledge relating to invertebrate & chordate, developmental biology, animal physiology, Cell & Molecular biology, genetics and clinical

science, Progression to PG education in Zoology, Aquaculture, Environmental science, Biotechnology, Bioinformatics, Biochemistry, Microbiology and Human genetics, The Students get employment by industries/self employment in Poultry, Veterinary and Aquaculture industries.

- Perform, Assess and implement practical techniques and procedure to solve biological problems and analyse and quantify data collected during any project.

Program Educational Objectives

- Exposure of students to animal diversity and to provide them systematic tools of traditional and modern types to acquire this knowledge and skill.
- To update the syllabus essential for appearing in NET, SET, GATE, ASRB and other competitive exams of UPSC and APPSC.
- To make aware the students to know the natural resources of country, to utilize by sustainable methods and conservation of living resources.
- To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self reliant India.
- To develop self employable ability and to apply knowledge for several agro-based industries like Sericulture, Goat farming and Apiculture; it will also provide employment to other dependents.

Semester - I

S.No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	ZOO-101	Mandatory	Invertebrata & Chordata	6	4	20	80	100
2		ZOO-102	Mandatory	Metabolic Regulation & Cell Function	6	4	20	80	100
3	Compulsory Foundation	ZOO-103A	Optional -1	Genetics & Evolution	6	4	20	80	100

	Total				36	24	120	480	600

***All CORE Papers are Mandatory**

- **Generic Elective - Choose two**
- **Core papers and Generic elective opted paper held Practical-II**
- **Project Work – Collaboration with various firms/companies/societies.**
- **Multi-disciplinary course is Mandatory. Circle formation with other subjects/Dept. of Arts/Commerce**
- **Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**
- **Interested students may register for MOOC with the approval of the concerned DDC**

CORE ZOO-101: INVERTEBRATA & CHORDATA

General Course Objectives:

While studying the Comparative anatomy of Invertebrates and Chordates i.e. Vertebrata Course, the Student shall be able to:

1. This Course develops concepts in animal Taxonomy and systematic modern methods of Taxonomy and systematics and their application General organization, affinities and systematic position of Minor phyla and molecular basis of animal taxonomy.
2. Develops concepts regarding various Invertebrate and vertebrate morphology.
3. Describe the relationships among animals with their internal developments.
4. Analysis the relationships among animals with internal structure.
5. Learners gain Knowledge and develop skill over the comparative anatomy of Chordates and Vertebrata.
6. Enumerate the origin and classification of Vertebrates.

Invertebrates:

Course Objectives:

1. To describe and explain the basic principles of Animal classification, from and function among Invertebrate Phyla
2. Make students to understand how life evolved from simple to complex organization by division of labor & enhancing efficiency in Invertebrates.
3. To understand the importance of biodiversity, habitat, adaptations, body organization and taxonomic status of non-chordates.
4. To study the fundamental knowledge about pattern of feeding and digestion among Invertebrates.
5. To describe the larval forms of Invertebrates and their Phylogenetic significance.

Vertebrates:

Course Objectives :

1. To describe the Comparative and Evolutionary trends in structure and functions of organ systems among vertebrate Phyla.
2. To study the basic structure and function of Chordates. To determine the progress and complexity in the development and evolution of different chordate groups for their habitat selection, adaptation and regulation of the life processes.

3. Imparts conceptual knowledge of Vertebrates, their adaptations and associations in relation to their environment.
4. To describe the characteristic features of larval forms of Crustaceans and Echinodermata relationship among Invertebrates.

UNIT-1.

1.1. Evolutionary time scale, Eras, Periods & Epoch - major events.

1.2. Species concept, International code of Zoological nomenclature, Taxonomical procedures, New Trends in taxonomy.

1.3. Patterns of feeding and digestion in lower metazoans: Holozoic nutrition, Pinocytosis, Saprozoic Nutrition, Myxotrophic nutrition, Nutrition of parasites.

1.4. Feeding in Polychaeta, Mollusca,Echinodermata.

UNIT-2.

2.1 Acoelomata, Pseudocoelomata, Coelomata,Proterostomia and Dueterostomia.

2.2. Structure of Gill, lungs, trachea and Mechanism of Respiration.Circulatory system in Annelids, Arthropods & Molluscs.

2.3. Advanced nervous system- Annelida, Arthropoda and Mollusca.

2.4. Larval forms of Crustaceans: Larval forms: Nauplius, Metanauplius, Protozoea, Zoaea, Cypris, Mysis, Megalopa, Phyllosoma, Alima, Significance of larval forms; Larval forms of Echinodermata: Asteroidea Bipinnaria Larva, Ophiuroidea, Echinoidea, Holothuroidea, Crinoidea Doliolaria Larva, Significance of Echinoderm larval forms.

UNIT- 3.

3.1 Vertebrate integument and derivatives: - Skin structure and functions - glands, scales, horns, claws, nails, hoofs, feathers and hair.

3.2 Comparative anatomy of heart: - Types - structure- blood circulation-aortic arches and portal system.

3.3 Comparative anatomy of reproductive system: - Organs of male reproductive system – organs of female reproductive system –functions.

3.4 Comparative account of excretory system.

UNIT- 4.

4.1 Comparative anatomy of respiratory organs: - Gills, trachea and lungs – types Structure-mechanism of respiration.

4.2. Comparative anatomy of brain and spinal cord: - structure, composition and functions

4.3. Organs of vision: structure of eye in different phyla - mechanism of vision, Photoreceptors-fishes, Amphibians, Reptiles, Birds and Mammals.

4.4. Organs of Gustatory hearing and tactile responses: - Structure of hearing organs in different Phyla - mechanism of hearing - tactile organs.

Invertebrates

Course Outcomes:

1. Understanding the General Characteristics, Principles of classification, general biology of Invertebrate Communities.
2. To understand the various biological functions, the evolutions of life from most primitive to most advanced form with respective to their habit and habitat.
3. To understand the various physiological mechanisms among Invertebrates and their significance among Invertebrate Phyla.

Vertebrates

Course Outcomes:

1. Understanding the comparative aspects of different organs systems among chordate Phyla.
2. Explain the similarity and differences in structure and function of organs in different groups of Chordates.
3. In depth understanding of Anatomical features of Integumentary, Circulatory, Reproductive, Respiratory, Receptor, Nervous systems among Chordate groups.
4. The students may apply this knowledge in taxonomy related research and job opportunities.

SUGGESTED READING MATERIAL:

1. Alexander, R.M. The Chordata. Cambridge University Press, London.
2. Barnes, R.D. Invertebrate Zoology, III edition. W.b. Saunders Co., Philadelphia,1980.

CORE ZOO-102: METABOLIC REGULATION AND CELL FUNCTION

Course Objectives:

While studying the **Metabolic Regulation & Cell Function** (MRCF) course, the student shall be able to:

1. This course is designed to introduce the organic structure of living systems mainly dealing with biomolecules like carbohydrates, lipids, proteins and nucleic acids laying foundation for other advanced courses like Physiology, Cell Biology, Molecular Biology and Immunology.
2. To develop understanding of chemistry used in biological processes and to perform wide range of analytical techniques to explore biological activities.
3. Physiological and biochemical understanding through scientific enquiry into the nature of mechanical, physical, and biochemical functions of humans, their organs, and the cells of which they are composed
4. To understand the Interactions and interdependence of physiological and biochemical processes and thus to help the student to navigate the discipline of Biochemistry that explains how the collection of inanimate molecules.
5. Provide a concise and unifying approach of knowledge-sharing of the structure, function and interaction of biomolecules & bioprocesses at molecular and metabolic levels thus pave way for understanding the biochemical integrity of various life processes and the metabolic Pathways
6. The Intermediary Metabolism: Concept and Regulation is designed as an advance course for understanding the interaction, network and regulation of certain important metabolic pathways and their roles in health and diseases.
7. The course also explains the interplay and energetics, catalysis and design of living systems. It is designed for students who have already taken up the courses and elementary biochemistry and macromolecular structures at the undergraduate level.

UNIT-1.

1.1 Chemical Bonds (Covalent, Ionic and Hydrogen Bonds) and Thermodynamic principles in Biology (Enthalpy, Entropy, Free energy, First law and Second law of thermo-dynamics in relation to Biological system).

1.2 Carbohydrates: Definition and Classification- Structure and function of important Mono, Oligo and Polysaccharides.

1.3 Intermediary Metabolism-I: Glycolysis, TCA Cycle and their Bio-medical importance.

1.4 Intermediary Metabolism-II: Gluconeogenesis, HMP Shunt, Metabolism of Galactose and Fructose and their Bio-medical importance.

UNIT-2.

2.1 Proteins: Definition and Classification- Structure (Primary, Secondary and Tertiary structures, Protein folding and denaturation) and function of important Proteins-Haemoglobin, Myosin and Actin.

2.2 Bio-synthesis of nutritionally non-essential amino acids and their Bio-medical importance.

2.3 Catabolism of Proteins and Amino acids-I: Biosynthesis of Urea- Detoxification of Ammonia-Metabolic disorders of Urea cycle.

2.4 Catabolism of Proteins and Amino acids-II: Phenylalanine, Tryptophan, Biosynthesis and degradation of Polyamines and their Bio-medical importance.

UNIT-3.

3.1 Chemistry of purines, pyrimidines, Nucleosides, Nucleotides, Synthetic derivatives.

3.2 Biosynthesis of purine nucleotides, Catabolism of purines.

3.3 Biosynthesis of pyrimidine nucleotides, Catabolism of Pyrimidines,

3.4 Clinical disorders of purine and pyrimidine metabolism; Hyperurecemia or gout; Hypo- urocemia, Orotic aciduria.

UNIT-4.

4.1 Biomedical importance, Classification of lipids; Saturated and unsaturated fatty acids; Triacylglycerols (tri-glycerides), Phospholipids, Glycolipids, Steroids, Lipid peroxidation.

4.2 β- oxidation of fatty acids, Oxidation of unsaturated fatty acids, Ketogenesis.

4.3 Biosynthesis of long chain fatty acids (Palmitic acid), Clinical aspects.

4.4 Overview of Metabolism (Carbohydrate, Protein and Lipid): Integrated metabolism at tissue and organ level(Kidney, Liver, Muscle, Adipose tissue and Small intestine);Metabolic interrelationships among Adipose tissue, Liver and Extra hepatic tissues

Course Outcomes :

After the completion of the course, a student will be able to achieve these outcomes:

1. The students will learn about chemical bonding patterns, chemical structures and classification of carbohydrates and their structural and metabolic role in cellular system i.e. different pathways associated with carbohydrate metabolism.
2. The students will learn about definition and classification of Proteins, Carbohydrates, Lipids etc and their importance in metabolism
3. Students would gain expertise to develop understanding of biological processes at chemical, biochemical and molecular level to perform vide range of analytical techniques to explore biological activities.
4. The student will be able to learn carbohydrate metabolism i.e. catabolism and its association with cellular energy production and carbohydrate anabolism in animal cells.
5. The student will learn and understand about the Biosynthesis of Purines and Pyrimidine Nucleotides, degradation of Nucleotides, salvage pathways, biosynthesis and biodegradation of Amino acids, inborn errors of metabolism.

SUGGESTED READING MATERIAL:

1. D. Voet and J.G Voet, Biochemistry, 1. Wiley & Sons.
2. David L. Nelson and Michael M. Cox, Lehninger; Principles of Biochemistry, McMillan Lange Medical
3. Robert K.Murrey, D.K. Granner, P.A. Mayes and V.W. Rodwell; Harper's Biochemistry, Worth Publishers.

CF ZOO-103A: GENETICS AND EVOLUTION

Course Objectives :

While studying the **Genetics** course, the student shall be able to understand :

1. To provide fundamental knowledge about different concepts of Genetics includes Concepts of Gene, Mendelian Principles, Gene mapping methods and Mutation types etc.
2. To study the basic tools and techniques involved in Cytogenetics, Microbial Genetics, Human Genetics and Quantitative Genetics etc.
3. To provide strong foundation in Genetics, Cytogenetics and Molecular biology enables the students to familiarize themselves with Genetic Engineering concepts.
4. To provide and introduce some of the most incisive analytical across the spectrum of the biological applications.
5. Analysis of structure and functions of human chromosomes and to provide insight in to the human metabolic disorders and diseases

Course Objectives :

While studying the **Evolution** course, the student shall be able to:

1. This course aim to provide scientific foundation to support the sustainable management of diverse ecosystem services and a deep understanding of interaction of different ecosystem. It will also in depth understanding of inorganic and organic evolution.
2. Imparts knowledge to the learner regarding various concepts of evolution i.e Molecular and Gene evolution, fundamentals of Micro & Macro evolution.
3. Understand the concepts of Darwinism, Neo-Darwinism, Mechanisms of Isolation, Speciation model, Factors of evolution and their role.
4. Acquiring knowledge on Molecular events of Evolution at cellular level.
5. Gaining of knowledge about Theories of Evolution and its implications.

UNIT-1.

1.1. Concept of gene: Alleles, Multiple alleles and Pseudoallelesn(ABO blood grouping, Bombay phenotype and Rh factor).

1.2. Extensions of Mendelian Principles: Pleiotropy, genomic imprinting, Penetrance and expressivity, phenocopy, sex linked (color blindness; Haemophilia), sex limited and sex influenced characters.

1.3. Gene mapping methods: Linkage maps, tetrad analysis, mapping with molecular markers, mapping with somatic cell hybrids.

1.4. Mutation: Types (Spontaneous, Induced, lethal, conditional, biochemical) causes, loss of function, gain of function, Frame shift mutations, insertional mutagenesis.

UNIT-2.

2.1 Microbial genetics: Methods of genetic transfers -Conjugation, Transduction and sexduction, mapping genes by interrupted mating,

2.2 Recombination: homologous and non homologous recombination including Transposition.

2.3 Human genetics: Pedigree analysis, genetic disorders (Brachydactyly, Huntington's chorea).

2.4 Quantitative genetics: Polygenic inheritance, Types of quantitative traits (continous, meristic and threshold); examples (skin color and height in humans), Mapping of Quantitative trait loci (QTL mapping).

UNIT-3.

3.1 Critical reviews of Darwinism.

3.2 Neo-Darwinism.

3.3 Isolation and role of isolating mechanisms in evolution.

3.4 Speciation and models of speciation (Allopatric, sympatric and parapatric).

UNIT- 4.

4.1. Factors of evolution (i) Mutations (ii) Natural Selection (iii) Genetic Drift.

4.2. Basic patterns of evolution; Micro and Macro evolution.

4.3.Species categories: (i) Morphological species (ii) Biological species (iii) Sibling species (iv) Sub species

4.4.Evolution of Proteins- Examples of protein evolution (Hb, insulin, growth hormone).

Course Outcomes :

After the completion of the **Genetics** course, the student will be able to :

1. Students will learn how genetic information is passed on in eukaryotes and prokaryotes, how genes work together in a complex manner in biological system and any alteration can lead to major phenotypic change
2. Students will appreciate the concept of epigenetics as a key mechanism of regulation of gene expression steering development and cell fate that can ultimately be affected in disease condition
3. Explain the ideas about Mendelian, non-Mendelian inheritance, genetic disorder, gene mutations and sex determination.
4. Understood about several concepts pertaining to Microbial, Human and Quantitative genetics, Gene mapping, methods and their applications.

Course Outcomes :

After completion of the **Evolution**, the student will be able to:

1. Understood that the four propositions underlying Darwin's theory of evolution through natural selection are:
   (1) more individuals are produced than can survive;
   (2) There is therefore, a struggle for existence
   (3) Individuals within a species show variation
   (4) Offspring tend to inherit their parental characters
2. Gained knowledge on the factors influencing the pattern of Evolution including Mutations, Natural Selection, genetic drift.
3. Acquired information on the Isolating, Speciation mechanisms and their impact on Speciation.
4. Understood the concepts of Micro, Macro evolution speciation categories, Protein evolution etc. to fortify the existing knowledge on Evolutionary patterns.

SUGGESTED READING MATERIAL:

1. An introduction to Modern genetics by Ch. Waddinsgton
2. Basic Human Genetics- EJ. Mange, Arthur P. Mange. Indian Print, 1997.
3. Genetic disorders of Man by M.R. Goodman.
4. Genetics - Monrve W. Strickberger. 3rd Ed., May, 2000.

5. Genetics-K.B.Allluwallia-1985.
6. Molecular Biology of genes- Watson, J.D., N.H. Hopkins, J.W. Roberts, J.A. Steitz &A.M. Weiner. The Benjamin Cummings publishing company. Inc. Tokyo.
7. Principles of Genetics - EJ. Gardner. MJ. Simmons & D.P. Snustad.
8. Genetics-P.S.Verma and V.K.Agarwal-2009, S.Chand Publication.
9. An introduction to genetic analysis. Griffiths, A.J .F., J.B. Miller, D.T. Suzuki, R.C. Lewontin & W.M. Gelbark, W.H. Freeman and Company, New York.
10. Dobzhansky, Th. Genetics and origin of species, Columbia University press.
11. Dobzhansky, Th., F.J. Ayala, GL. Stebbins and J .M. Valentine Evolution: Surjeet publications, New Delhi latest edition.
12. Gould, J.L. The mechanisms and evolution of behavior.
13. Hartl, D.L. A primer of population genetics, sinauer Associatesm Inc., Massachusetts.
14. P.A. Moody Introduction to Evolution II ed/latest: Kalyani publishers, New Delhi.

CF ZOO-103B - ENDOCRINOLOGY

Course Objectives :

1. To study the concepts of Classification of Hormones, Structural features of Endocrine Glands
2. Compare the structure, functions and regulation of the endocrine organs of vertebrates
3. Identification of Endocrines glands of the body and their secretions
4. To study the Steroid and Peptide hormones and their role
5. To study the evolution of Pancreatic and Adrenal gland hormones
6. To study the evolution of Thyroid and Parathyroid hormones and their role in the regulation of metabolism
7. To study the role of hormones in the growth, development and reproduction.
8. To study the aspects concerning Hormones – Human health

Unit 1:

1.1 Classification of hormones. Brief account of structural features of endocrine glands. Hormonal effects and regulation – basic concepts and methods

1.2 Biosynthesis and secretion of pituitary. Factors influencing secretion. Endocrine disorders - brief description

1.3 Biosynthesis and secretion of pancreas, adrenal, and thyroid hormones. Factors influencing secretion.

1.4 Biosynthesis and secretion of sex steroid hormones. Factors influencing secretion.

Unit 2:

2.1 Peptide hormones, Steroid hormones. Hormones as messengers. Cell surface receptors. Cascade of reaction linked to signal transduction.

2.2 Evolution of pituitary gland; Physiological actions of pituitary hormones. Urophysis and action of its hormone(s). Pancreatic hormones and glucose homeostasis.

2.3 Evolution of discrete adrenal gland; Synthesis of corticosteroid, structural diversity of glucocorticoids among vertebrates.

2.4 Sex steroids. Cytoplasmic and nuclear receptors. Mechanism of action of steroid hormones. Prostaglandins. Calcium-magnesium-protein Kinase. Hormones and eukaryotic metabolic regulation

Unit 3:

3.1 Evolution of thyroid gland.

3.2 Thyroid hormone synthesis and its regulation, paradigms of thyroid hormone action in poikilotherms and homeotherms.

3.3 A comparative account of parathyroid gland and ultimobranchial body/C cells, synthesis of parathyroid hormone, calcitonin and of vitamin D3;

3.4 Hormonal regulation of calcium and phosphate homeostasis.

Unit 4:

4.1 Hormones, growth and development and reproduction

4.2 Hormones regulating reproduction

4.3 Hormones and human health

4.4 Production of hormones as Pharmaceuticals-Insulin, GH and Prolactin.

Course Outcomes :

1. Understand the structure, function and regulation of endocrine & neuroendocrine glands,
2. Develop a deep knowledge of the role of endocrine secretion in regulation of reproductive Cycle
3. Understand the pathways associated with Biosynthesis and secretion of Endocrine hormones and their role in the control of metabolism
4. Acquring the knowledge of signal transduction mechanisms
5. Through understanding of several endocrines including Peptide hormones, Steroid hormones, Pituitary hormones, Sex hormones, Thyroid hormones etc in the control of metabolic pathways
6. Understanding the influence of hormones on Growth, Development and Reproduction and their regulatory pattern

SUGGESTED READING MATERIAL:

1. Barrington. EJ.W. General and comparative Endocrinology Cambridge Press, Oxford.
2. Bentley, PJ. Comparative Vertebrate Endocrinology, Cambridge Press, Oxford.
3. Martin, C.R. Endocrine Physiology. Oxford Univ. Press, Oxford.
4. Prakash S. Lohar. Endocrionology-Hormones and human health-2005. MJP Publishers-Chennai.
5. Williams, R.H. Text Book of Endocrinology, W.B. Saunders Co., Philadelphia.

EF ZOO-104A : TOOLS & TECHNIQUES

Course Objectives:

While studying the **Tools & Techniques**, the student shall be able to:

1. To study the different tools used in biology and research.
2. To learn about the operational handling and maintenance of laboratory instruments and glassware.
3. To study different types of microscopy used in biology.
4. To learn about different molecular and cellular separation techniques and their application in biological research.
5. To study principles and methods of microtechnique.

UNIT-1.

1.1 Chromatography: Molecular sieve chromatography: Principle, Determination of void volume and molecular mass of native molecules. Ion exchange chromatography: Ion exchange materials – Cation and anion exchange materials. Principle and separation of charged molecules. Principle and application of TLC and HPLC.

1.2 Centrifugation. Techniques-Density gradient., ultra centrifugation.

1.3. Electrophoresis: principle, Matrices used in electrophoresis – PAGE for separation of proteins, molecular mass determination. Separation of nucleic acids using agarose gel- electrophoresis. Pulse field electrophoresis and isoelectric focusing.

1.4. Blotting techniques: western, southern and northern blotting techniques.

UNIT-2.

2.1 Introduction to cell and tissue culture: Preparatory techniques – cleaning, sterilization, sterile handling tissue culture laboratory requirements, Design of tissue culture laboratory: Equipments and purpose.

2.2 Cell types (Primary and secondary) and cell lines, Cell proliferation measurements, Cell viability testing: Dye inclusion and dye exclusion tests.

2.3 Culture media: composition, preparation and sterilization, macro and micro nutrients, Importance of serum and limitation with serum media, cell harvesting methods.

2.4 The biology of stem cell: overview; different types of stem cells – embryonic stem cells, fetal tissue stem cells, adult stem cells, stem cell nuclear transfer; somatic cell nuclear transfer, Animal cloning.

UNIT-3.

3.1. Electromagnetic spectrum of light- Simple theories of absorption of light by molecules. Beer-Lambert law.

3.2. Types of detectors: UV-Visible spectrophotometry, Infra red spectrophotometry, Fluorescent spectroscopy. Flame photometry, AAS.

3.3. Electrophysiological methods: Single neuron recording, patch-clamp recording, ECG

3.4. Brain activity recording, lesion and stimulation of brain, pharmacological testing, PET, MRI, CAT.

UNIT-4.

4.1 Microscopic techniques: Principles of microscopy Scanning and transmission microscopes. Image processing methods in microscopy.

4.2 Different fixation and staining techniques for Light microscope and Electron microscope.

4.3 Microtomy and processing of tissues for Light microscope and Electron microscope. Cryopreservation and cryotechniques for microscopy

4.4 Freeze-etch and freeze-fracture methods for EM.

Course Outcomes:

1. Students would be trained in various tools and techniques used to gain insight into biological processes.
2. Students would be expertise techniques used for imaging, isolation, purification and characterization of various biological substances.
3. Students would gain basic knowledge of the underlying principles and practical strategy of the analytical and preparative techniques that are fundamental to study and understanding of life processes.
4. Identify and describe the different equipment and tools used in a biology laboratory.
5. Correctly operate different laboratory instruments.
6. Correctly operate different types of microscopes.
7. Prepare tissue for section cutting and correctly operate a microtome.

8. Choose and perform correct staining technique for any given tissue sections.
9. Describe cellular separation techniques.
10. Properly handle and maintain glassware.
11. Properly operate laboratory equipment.

SUGGESTED READING MATERIAL:

1. A Biologists Guide to Principles and Techniques of Practical Biochemistry, K. Wilson & K.W. Goulding, ELBS Edn.
2. Animal Cell Culture – A practical approach, Ed.John. R. W.Masters IRL Press.
3. General Zoological Microtechniques - P.M. Weesner.
4. Principles and techniques of Biochemistry and molecular biology by Kein Wilson and John Walker, VII volume, Cambridge press Edition.
5. Neuro anatomical Techniques, N.J. Stransfed and T.A. Miller Springer Verlag, New York Heidelberg, Berlin.
6. Principles of Neuro Phychopharmacology- Robert S. Feldman, Jerrold S. Meyer and Lind F. Quenzer. Sinauer Associates, Inc. Publishers. Sunderland. Massachusetts.
7. Biophysical chemisty by Upadhyay – Upadhyay - Nath.
8. Analytical Biochemistry (Biochemical techniques) by Dr P. Asokan. Chinnaa publications.
9. Introduction to Instrumental analysis, Robert Braun. McGraw Hill International Edition.
10. Vogel's Qantitative Chemical Analysis by Vogel, ArthurI.

CO5	3	1	2	-	-	1	-	1	-	2	2	2

EF ZOO-104B : GENETIC ENGINEERING

Course Objectives :

1. To demonstrate the innovative utilization of manipulating enzymes, various cloning and expression vectors and analysis of genomic sequences.
2. To interpret the applications of genetic engineering in biotechnological research.
3. To educate the students in strategizing research methodologies employing recombinant DNA techniques

UNIT-1.

1.1 Enzymes used for the synthesis of DNA: DNA Polymerase I, Klenow fragment, Sequenase, Taq Polymerase, Reverse transcriptase, Terminal Transferase

1.2 Enzymes used for the synthesis of RNA: T3 and T7 RNA polymerases, SP6 RNA polymerase

1.3 Restriction enzymes - Outlines of bacterial restriction and modification systems – Classification of restriction enzymes - Type II restriction enzyme: Nomenclature, Production of DNA fragments with 3' protruding ends and blunt ends and their significance in molecular cloning - RFLP and its significance.

1.4 Enzymes used for ligation and modification of DNA: DNA ligase, Methylases, Kinase, Phosphatase

UNIT-2.

2.1 Vectors for construction of genomic libraries - cosmids, bacterial artificial chromosomes (BACs), yeast artificial chromosomes (YACs) - vectors for construction of cDNA libraries - lamda ZAP. Multipurpose vectors - pUC 18/19, Blue script vectors

2.2 Expression vectors – structure - promoters used in expression vectors - lac, tac, λpL, T7 promoters and their significance in constructing expression vectors.

2.3 Promoter-probe vectors – Structure promoter probe vector - Reporter genes (lacZ, gfp, gus, luciferase) and strategies used to assay promoter activity.

2.4 Vectors used for cloning in to mammalian cells - SV40 Vectors

UNIT-3.

3.1 Isolation of gene/DNA fragments. Mechanical shearing, restriction digestion, cDNA synthesis, PCR amplification and chemical synthesis of gene.

3.2 cDNA synthesis - Mechanism of cDNA synthesis, Strategies used to obtain full length cDNA. 5' and 3' RACE.

3.3 PCR - Concept and technology- Properties of primers - Inverse, multiplex PCR, RAPD and its significance. Real time PCR.

3.4 Chemical synthesis - Designing gene from amino acid sequence, solid phase synthesis of oligonulceotides - In vitro synthesis of gene.

UNIT-4.

4.1 Ligation between cohesive and blunt end DNA fragments - T4 DNA ligase - Conversion of blunt end DNA fragment into cohesive ended DNA - linkers, adapters, homopolymer tailing.

4.2 Introduction of cloned genes into host - Transformation, conjugation, transduction, electroporation, particle bombardment, microinjection, liposome mediated DNA delivery.

4.3 Identification and characterization of cloned genes - Screening of genomic/cDNA libraries - genetic, molecular hybridization - immunochemical techniques

4.4 Expression of cloned genes – detection of expressed proteins – biological and molecular methods

Course Outcomes :

1.Students will become familiar with the tools and techniques of genetic engineering DNA manipulation enzymes, genome and transcriptome analysis and manipulation tools, gene expression regulation, production and characterization of recombinant proteins.

2. This course exposes students to the applications of genetic engineering in biological research.

3. Students will be able to perform basic genetic engineering experiments at the end of course.

4. Students will acquire knowledge of advances in biotechnology- healthcare, agriculture and environment cleanup via recombinant DNA technology.

SUGGESTED READING MATERIAL:

1. Biotech's Dictionary of Genetic Engineering by Dinesh Arora.
2. D. Green; Philip Hilter Richard M. Myers Sue. Klapholz; Harold Riethman Jane Roskams.
3. DNA cloning: Mammalian systems - A Practical Approach by D.M. Glover, B. D. Hames.
4. From Genes to clones Introduction to Gene technology by Ernst-L- Winnacker.

5. Genetic disorders of Man by M.R. Goodman.
6. Genetic Engineering and its Applications by P. Joshi
7. Genetics - Monrve W. Strickberger. 3rd Ed., May, 2000.
8. Genetics-K.B.Allluwallia-1985.
9. Genome Alalysis - A laboratory Manual Volume-2 Detecting Genes by Bruce. Birren; Eric D.

ZOO 105P : ZOO-101 (Core) & ZOO-103A or ZOO-103B (CF)

ZOO 106P : ZOO-102 (Core) & ZOO-104A or ZOO-104B (EF)

AUDIT COURSE

ZOO-107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

Course Objectives :

1. To provide fundamentals on Human values and professional Ethics on varied aspects.
2. To probe into proving definition and Nature Ethics in depth through suitable illustrations and examples.
3. To provide suitable interactive phenomenon of individuals with society in relation to Ahimsa, Satya, Brahmacharya, Purusharthas etc.
4. Providing sum and substance of Bhagavad Gita and its application to Human lives for better living.

I. Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics- Goals – Ethical Values in various Professions.

II. Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders, Character and Conduct.

III. Individual and society:

Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

IV. Bhagavad Gita – (a) Niskama karma. (b) Buddhism – The Four Noble Truths – Arya astanga marga, (c) Jainism – mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.

V. Crime and Theories of punishment – (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Course Outcomes :

1. The student will be enriched with several aspects pertaining to Human values and performing of Professional Ethics in day today life.
2. Introduction of several Nature of values to be performed by Humans to lead a good and Peaceful life by extending and imparting good behavior, character and conduct towards people of the society.
3. Introducing different concepts of Bhagavad Gita and its applications in uplifting of Religious values in the present society.

SUGGESTED READING MATERIAL:

1. John S Mackenjie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Management Ethics – integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books: New Delhi.
4. "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil(ed.) G.C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol. I, II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. Caraka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I,II,III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues, Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
14. An Introduction to Applied Ethics (Ed.) John H. Piet and Ayodhya Prasad, Cosmo Publications.
15. Text book for Intermediate logic, Ethics and Human Values, board of Intermediate Education & Telugu Academic Hyderabad.
16. I.C. Sharma Ethical Philosophy of India. Nagin & co Julundhar.

CORE ZOO-201: MOLECULAR BIOLOGY

Course Objectives:

While studying the **Molecular Biology** Course, the student shall be able to:

1. This course provides concept in molecular understanding of structural and functional properties of cell and various processes associated which have potential applications in Molecular, Biochemical and Biomedical research.
2. To provide Knowledge about the complex organization in the Eukaryotics Cell and the molecular mechanisms of the cellular processes that exist in all the cell types.
3. To gain knowledge on DNA models, structure and functions of mitochondrial DNA, DNA repair mechanisms, Transcription, translation, Replication, Gene regulation mechanisms with emphasis on Eukaryotics.

UNIT-1.

1.1 Watson and Crick Model: Types of DNA; Properties of DNA(C-value paradox, Cot value)

1.2 Nuclear and mitochondrial genome, mitochondrial and maternal Inheritance

1.3 Structure of gene (Cistron, Muton, Recon, Cis-trans test)

1.4 DNA damage and repair: Biological indication of repair, photo reactivation, Excision repair, Recombination repair, SOS repair, and Mismatch repair.

UNIT-2.

2.1 Replication in Prokaryotes: Geometry of DNA replication, semi conservative replication.

2.2 Enzymology of DNA replication: DNA polymerase I, II and III; Replication of Eukaryotic Chromosomes; Eukaryotic DNA polymerases; Multiple fork; Replication of Chromatin.

2.3 Discontinuous Replication: Fragments in Replication fork and detection of fragments; Events in the Replication fork; De novo initiation and covalent extension.

2.4 Bidirectional replication, Termination of replication.

UNIT-3. Transcription and Translation:

3.1 Synthesis of RNA:- RNA Polymerase, Promoter, Auxiliary Proteins, RNA chain initiation, elongation, termination and Splicing mechanism

3.2 Types of RNA, Processing of mRNA, rRNA and tRNA, Ribozyme.

3.3 Genetic code, Identification of start and stop codon, Universality of genetic code Degeneracy, Wobbles Hypothesis. Codon usage, Genetic code of Mitochondria.

3.4 Ribosome structure (Prokaryotic and Eukaryotic), Protein synthesis: Initiation, Elongation and Termination of polypeptide chain, Signal peptide hypothesis, Post translational modification, Polyproteins, Inhibitors of translation.

UNIT-4.

4.1 Temporal response, Induction, Repression, Lac Operon, Galactose Operon

4.2 Lambda Operon, Tryptophan Operon

4.3 Gene regulation in Eukaryotes- I: Gene families, Gene alteration (Gene loss, Gene amplification, gene rearrangement), Regulation of synthesis of primary transcripts (gene organization that affects regulation-Activator gene; Transcriptional control by hormones, Methylation).

4.4 Gene regulation in Eukaryotes-II: Brief description of Chromatin remodeling, Enhanceosome, Reporter or Chimeric genes, Role of binding motifs in gene expression (Helix-Turn-Helix motif, Zinc finger and Leucine Zipper), miRNA.

Course Outcomes:

After Completion of the **Molecular Biology** course the student will be able to:

1. The study of molecular biology provides the necessary information about the Chemistry of life to allow the students to understand the basis of life.
2. The study of Molecular Biology stands as a tribute to human curiosity for seeking to discover, and to human creative intelligence for devising the complex instruments and elaborate techniques by which these discoveries can be made.
3. Comparative analysis of Prokaryotic and Eukaryotic cells.
4. Gain insight into the most significant Molecular and cell- based methods used today to expand our understanding of Biology.
5. Students world gain expertise in understanding the complex molecular mechanisms occurring in cell and the applications of molecular technologies for betterment of life.
6. Understand and our apply the Principles and techniques of Molecular Biology which prepares students for further education employment in teaching, basic research or the health Professions.
7. Students will acquire knowledge about replication, transcription, translation, post transcriptional and post translational modifications, gene regulation, DNA repair mechanisms and various molecular tools and techniques like PCR, southern and western blotting, recombinant DNA

technology etc. they will also know the various tools and techniques related to bacterial microbiology.

SUGGESTED READING MATERIAL:

1. Biochemistry by A.L. Lehniger
2. Cell and Molecular Biology-E.D.P. De Robertis and E.M.F.
3. Concepts in Molecular Biology-S.C. Rastogi, VN. Sharma and Ananda Tandon (1993) Genes VII by Benjamin Lewin.
4. Harper's review of Biochemistry by D.W. Martin et al1990
5. Molecular Biology by David Freifelder, 1993

CORE ZOO-202: CELL BIOLOGY AND IMMUNOLOGY

While studying the **Cell Biology and Immunology** course, the student shall be able to:

Cell Biology Objectives :

While studying the **Cell Biology** course, the student shall be able to:

1. Develop deeper understanding of what life is and how it functions at cellular level.
2. To study the structure and function of the basic unit of living organisms
3. Describe cellular membrane structure and function, fine structure and function of cell organelles.
4. To study stages in cell cycle (including cell death and cancer), cell differentiation, and organelles and other cellular structures in the growth and functioning of the cell (including membrane transport and signaling).
5. Perform a variety of molecular and cellular biology techniques Students will understand the structures, positions and functions of plasma membrane and all cellular organelles in details. Examine the structure and functions of cellular organelles.
6. Gather basic concepts of Cell Biology along with various cellular functions. Comparative analysis of cellular organelles.

Immunology Course Objectives :

While studying the **Immunology** course, the student shall be able to:

1. The students will have to understand how the immune system can fight with infection and other diseases, the strategies to improve existing vaccines and how to approach these, Cellular and molecular basis of inflammatory response, mechanisms involved in control of immune response
2. The objective of the course is to apprise the students about components associated with immune system and molecular mechanism of their working.
3. The course also deals with implications of deregulation of basic regulatory networks that lead to immune system related disorders.
4. The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
5. To provide knowledge of fundamentals of immune system and immunological basis for treatment of some common diseases.
6. Study the organs of immune system and the innate and adaptive immunity

7. To gain knowledge on antigens, antibodies and their production mechanism
8. To study the antigen antibody reactions and immunological disorders

CELL BIOLOGY

UNIT-1.

1.1.Organization of Prokaryotic and Eukaryotic cell.

1.2.Membrane structure – Lipid bi layer and two dimensional structure – Fluidity of lipid bilayer – Assembly of lipid bi layer – Membrane proteins.

1.3. Membrane transport: Active transport – Passive transport – Diffusion – Osmosis – Ion channels - Membrane pumps.

1.4.Vesicular traffic and Protein sorting: Translocation of proteins in to mitochondria – Endoplasmic reticulum and Golgi - Endocytosis – exocytosis.

UNIT-2.

2.1 Models of cell-cell signaling (steroid receptors, Nitric oxide and Carbon monoxide).

2.2 Functions of cell surface receptors (G-protein coupled receptors, Tyrosine kinases, cytokine receptors, receptors liked to other enzymatic activities).

2.3 Pathways of intracellular signaling transduction (c-AMP pathways, cyclic c-GMP, phospholipids and Ca2+, Ras, Raf and MAP kinases).

2.4 Signaling in development and differentiation (the receptors tyrosine kinase, Ras, MAP kinase pathway in Drosophila, notch signaling).

IMMUNOLOGY

UNIT-3.

3.1. Cells of the immune system: Lymphoid cells, Mononuclear cells, granulocytic cells, Mast Cells

3.2.Organs of the immune system- primary and secondary lymphoid organs, lymphatic system

3.3.Antigens: Antigenic determinants or Epitopes, Immunogenicity, Haptens, Adjuvants

3.4.Innate (Non-specific): Anatomical barriers, Phagocytosis, Physiological barriers, inflammatory barriers.

UNIT-4.

4.1 Humoral immunity: Immunoglobulins (fine structure of immunoglobulins and Classes); the complement system, Classical and alternate pathway, Inflammation.

4.2 Cell mediated immunity: Mechanism of cell mediated immunity; brief account on Antigen Presentation, Major Histocompatability complex

4.3 Antigen-antibody interactions: Affinity, Avidity, Cross-reactivity, precipitation reactions and Agglutination reactions and ELISA.

4.4 Brief account on immunological disorders:

a) Tolerance to autoimmunity

b) Transplantation

c) Immunodeficiency diseases

d) Immunization (active and passive immunity)

Cell Biology - Course Outcomes :

1. This course develops concepts in molecular understanding of structural and functional properties of cells and various processes associated which have potential applications in molecular and biochemical research
2. Students will understand the structures, positions and functions of plasma membrane and all cellular organelles in details. They will acquire knowledge about chromosomes and cell divisions, both mitosis and meiosis. They will also know about cell signaling and cancers. They will know how to measure and stain different cell types.
3. Students would gain expertise in the ultra structural information of animal cell besides the detailed views of the cell interior revealing the various events and actions of cell at the molecular level.
4. The study will help the students to understand the new discoveries about the structure and internal functioning of the cell due to technological improvements.
5. The study will help the students to increase powerful means of visualization in the field of cell biology.

Immunology - Outcomes :

After completion of the course, a student will be able to achieve these outcomes.

1. Learn the fundamental principles of immune response including molecular, biochemical and cellular basis of immune homeostasis.
2. The course will aid in understanding various aspects of immunological response and how its triggered and regulated.

3. The student will learn and understand the rationale behind various assays used in immunodiagnosis of diseases and will be able to transfer knowledge of immunology in clinical perspective.
4. The course will aid in understanding the principles of Graft rejection, Auto immunity and Antibody based therapy.

SUGGESTED READING MATERIAL:

1. An introduction to Immunology by C.Y. Rao, Narosa publishing house, 2002.
2. Cell and Molecular Biology by EDR De Robertis and EMR De Robertis Jr, Indian Edition, B.I. Publicaitons, Pvt. Ltd.
3. Cell Biology (Fundamentals and Applications) By Gupta/ Jangir, 2001; Agrobios, India.
4. Harpers Review of Biochemistry, Murray, Granier, Mayes and Rodwell, Lange Medical Publications, 25th Ed.
5. Human Physiology by Stuart Era Fox, W.M.C. Brown Publishers, USA 1984 or Recent Edition.
6. Immunology introductory textbook by Nandini Shetty, Wiley Eastern Ltd.
7. Kuby, J. (1998) Immunology, W.H. Freeman and Company, New York.
8. Roitt, I.,Brostoff, J. Male, D. (1999/2000) Immunology, 4th Edition. Harcourt Brace and Company Asia, Pvt. Ltd., Singapore.
9. The Cell (A Molecular Approach) by Geoffrey M. Cooper, 2nd Edn. 2000, ISBN.

CF : ZOO-203A : NEUROBIOLOGY AND ANIMAL BEHAVIOUR

Neurobiology :

Course Objectives :

While studying the **Neurobiology** course, the student shall be able to:

1. To study the microanatomical structure of neuron
2. To describe the different types of Neurons and their organization
3. To understand the Molecular mechanism of transmission
4. To study the chemical composition of Nervous system
5. To understand the principles of different types of neurotransmitters

Animal Behavior:

Course Objectives :

While studying the **Animal Behavior** course, the student shall be able to:

1. To study the types of perception in animal behaviour
2. To study the patterns of social organization of Primates and Insects
3. To know about the Animal aggressive behaviour and homing teritoriality
4. To study in depth the patterns of Learning and Memory

UNIT-1.

1.1 Micro anatomy of neurons and types of nerve cells.

1.2 Autonomic nervous system – Sympathetic Division, Parasympathetic Division.

1.3 Bioelectrical properties of neurons (Resting membrane potential- Nearnst equation; Sodium and potassium pump; Propagation of nerve impulse.

1.4 Synapses: Structure and Integration (Types of synapses; Ultra structure of synapse Chemical transmission; Electrical transmission)

UNIT-2.

2.1 Chemical composition of the nervous system-cerebrospinal fluid-CNS barriers

2.2 Synthesis –storage-release and inactivation mechanisms and functions of the following neurotransmitters; Acetylcholine & Catecholamines (Norepinephrine,Epinephrine, Dopamine)

2.3 Amino acid Neurotransmitters-Glutamate and GABA

2.4 Neuropeptides (Oxytocin and Vasopressin)

UNIT-3.

3.1 General introduction: An over view of concept of Animal behaviour

3.2 Visual Perception, Auditory perceptionand Olfactory Perception

3.3 Animal aggression and Homing territoriality

3.4 Social organization, Advantages, Social organization in insects, primates

UNIT-4.

4.1 Conditioning Learning (Classical and Operant conditioning and, Multiple-responselearning)

4.2 Cognitive Learning (Insight Learning, Sign Learning, Latent Learning)

4.3 Kinds of remembering (Redintegrative memory –Recall – Recognition-Relearning- Retrieval process-Theories of Memory).

4.4 The nature of forgetting (Decay through disuse- Interference effects, motivated forgetting, improving memory)

Neurobiology :

Course Outcomes :

1. Learnt about structure, function and organization of Neurons in the Central nervous system
2. Understanding Electrophysiological techniques and Molecular mechanisms associated with action potentials
3. Students leant and gain knowledge on structure and function of different types of Synapses
4. Gained information on different types of Neurotransmitters i.e. Amino acids and Peptides.

Animal Behavior:

Course Outcomes :

1. Acquired knowledge on types of perception in different Animals and their importance
2. Understand the overview of Animal Behavior and prominence of social organization in insects and primates
3. Gained lot of information on different types of Learning phenomenon and their mechanisms.

SUGGESTED READING MATERIAL:

1. Basic Neurochemistry-G.J. Siegal, RW. Albers, B.W. Agranoff, R Katzman (1981) Little, Brown and company. Boston.
2. Introduction to Nervous system- T.H. Bullock, R Cork, A. Granner (1977); W.H Free-man&Co.
3. Mechanism of Drug Action on the Nervous SystemM.A.B. Brazil, RW. Ryall. (1979), Cambridge University Press. Cambridge, London and New York.
4. Neuro anatomical Techniques, N.J. Stransfed and T.A. Miller Springer Verlag, New
5. Neurobiology. Shepherd, G.M. Oxford University press, London.
6. Principles of Neural Science -E.R Kandel and J.H. Schwertz. (1981); Elsevierl North Holland. NY. Oxford.
7. Principles of Neuro Phychopharmacology- Robert S. Feldman, Jerrold S. Meyer and Lind F. Quenzer. Sinauer Associates, Inc. Publishers. Sunderland. Massachusetts.
8. The Bio Chemical basis of Neuropharmacology-J.R Cooper, F.E. Bloom, &RH. Roth. (1982); Oxford University Press, NY and London. York Heidelberg, Berlin, 1980.
9. Alcock, J. Animal behaviour: An evolutionary approach. Sinauer Assoc., Sunderland, Mass. USA.
10. An introduction to genetic analysis. Griffiths, A.J .F., J.B. Miller, D.T. Suzuki, R.C. Lewontin & W.M. Gelbark, W.H. Freeman and Company, New York.
11. Bradbury, lW. and S.L.Vehrencamp. Principles of animal communication. Sinauer Assoc. Sunderland, Mass. USA.

CF : ZOO-203B : BIOINFORMATICS AND BIO STATISTICS

Bioinformatics:

Course objectives:

While studying the **Bioinformatics** course, the student shall be able to:

1. The main objective of the course is learning and understanding the detailed developments and applications of the field of Bioinformatics in varied area of biological research.
2. This course generally focuses on Genomics, Proteomics and Computational biology studies and their relevance on research platform.
3. To learn the fundamentals of Computational Biology.
4. The course is designed in such a way that the students get the confidence to use computer programs for the daily design of experiments, data collection and analysis of results.
5. It involves the integration of Computers, Software tools and Databases in an effort to address biological questions. It involves different tools to unwrap different biological functions arise during study.
6. To study different methods of data processing.
7. To develop skills of data handling using computer.
8. To study the different outline databases of biological information.
9. To learn about different data representation methods.
10. To study the different DNA and Protein analysis software.

Biostatistics:

Course objectives:

1. This course will be helpful in the learning and understanding the applications of various biostatistical methods and tools in research.
2. Students studying this course will be able to perform the data analysis using Statistical tools available on any computer such as Excel as well as the programmes for big and complex data.
3. Students gain knowledge on scope and importance of biostatistics.
4. Students learn and practice various statistical methods used in Zoological studies and research.

UNIT-1.

1.1 Scope, importance and status of Bioinformatics.

1.2 Internet basics, Tools for web search, Data retrieval tools,.

1.3 Sources of websites.

1.4 Data base types-primary, secondary and specific annotation databases

UNIT-2.

2.1 Database types, Prediction of protein structure and protein folding, Protein sequence databases.

2.2 Prediction of gene structure, Functional genomics, Genomic databases

2.3 Submission of sequence to the database, Homology, BLAST- Types of BLAST

2.4 Phylogenetic analysis, Human genome project

UNIT-3.

3.1 Definition of statistics: Biostatistics, classification, variables and attributes, Diagramatic distribution of biological data.

3.2 Measures of location and dispersion: Arithmetic mean, median and mode. Mean deviation, quartile deviation, Standard deviation and co-efficient of variation.

3.3 Curve fitting: Fitting strait line, parabola exponential curve and geometric curve to the data. Fitting of straight line using Ms-Excel.

3.4 Correlation and regression: Scatter diagram, types of relationship. Positive and negative correlation, computation of correlation coefficient, Interpretation of correlation coefficient. Simple regression lines and its interpretation.

UNIT-4.

4.1 Normal probability distribution & its applications.

4.2 Tests of significance: level of significance, null and alternative hypothesis, power of test and p-value of a test.

4.3 Student t- test for one a sample and two samples means-paired t-tests.

4.4 F-test, chi square test and their application, concept of ANOVA.

Bioinformatics :

Course Outcomes:

1. It provides information to the students about database and Computer science into the area of Biology for the purpose of studying and processing genomic information as well as other forms of biological information.
2. Familiar with various Applications of Bioinformatics by exploring the fundamentals of computer applications in Biology.
3. Describe different methods of data handling using computers.
4. Feed and tabulate raw data using computer.
5. Explain and perform data representation using digital methods.
6. Access and download relevant information from different online databases of biological information.
7. Perform basic operations of gene sequence retrieval and compare them using different software.
8. Perform basic operations of protein structure retrieval and comparison using different software.
9. The student will learn about the Computer basics like Operating systems, Programming, Data Access, Internet and Nucleic acid Sequence and Protein Data Banks.
10. The course will help to understand the Database similarity searches like BLAST, FASTA etc. Multiple sequencing alignments, Primer designing, Homology modeling, Phylogenetic analysis & Drug designing and Determination of Secondary and Tertiary structure of proteins.

Biostatistics :

Course Outcomes:

1. Came to know the data collection, tabulation and presentation.
2. Described the mean, median, mode and SD.
3. Understood the Analysis of Variance.
4. Described student ‘t’ test and probability.
5. Understood the Correlation and Regression.
6. The student will learn the basics of handling of data, measures of Central tendency like Mean, Median and Mode, Measures of dispersion like Mean deviation and Standard deviation and Co-efficient of Variation.
7. The course will aid in learning Test of significance like Null hypothesis and Alternative hypothesis, t-test, F-test, Chi-square test, Correlation and Regression analysis.

SUGGESTED READING MATERIAL:

1. Basic Bioinformatics by S. Ignacimuthu, s. j. Narosa publications, 2005.
2. Bioinformatics by Andreas D. Baxevanis and B.P. Francis Ouellette, 2nd Ed., 2002.
3. Bioinformatics, Methods and Applications, Genomics proteomics and drug discovery, S.C. Rastogi, N. Mendiratla and P. Rastogi, prentice-Hall ofIndia, 2004.

EF ZOO-204A: ENZYMOLOGY

Course Objectives:

While studying the **Enzymology**, the student shall be able to:

1. To study the Nomenclature and Classification, Enzyme specificity, Enzyme Catalysis and Enzyme purification mechanisms
2. To study the Enzyme Kinetics mechanisms and impact of several parameters
3. To study the different mechanisms of Inhibitions and their implications at cellular level
4. To study the Enzyme Regulatory mechanisms
5. To study the Clinical aspects of Enzymology and diagnosis
6. To study the Enzyme Engineering Principles
7. To understand the Enzymes in industrial use – Biotechnological implications

UNIT-1.

1.1 Historical Background, overview and specific examples, nomenclature and classification of enzymes–IUB system, chemical nature and properties of enzymes.

1.2 Enzyme specificity (Absolute specificity, Group specificity, Broad specificity).

1.3 Enzyme catalysis, Quantitative measurement of enzyme activity, Assay of enzyme activity-units of enzyme activity.

1.4 Isolation and purification of enzymes, intracellular distribution of enzymes.

UNIT-2.

2.1 Theories of enzyme kinetics - kinetic theory and collision theory.

2.2 Enzyme kinetics and its importance, derivation of Michaelis-Menton equation, Methods of Vmax and Km determination, construction of Line weaver burk plots.

2.3 Effect of reactant concentrations (Rate constant, First order, Second order and Zero order kinetic reactions, Ramachandran plot, determination of slope).

2.4 Effect of Temperature, pH and enzyme concentration on reaction rate.

UNIT-3.

3.1 Inhibition of enzyme activity (competitive, non-competitive, uncompetitive and mixed inhibition).

3.2 Kinetics of allosteric enzymes.

3.3 Regulation of enzyme activity (Metabolic regulation), Catalytic efficiency of enzymes (feed back inhibition, covalent modification).

3.4 Mechanism of enzyme action (Lock and Key, Induced fit model), catalytic site, role of metal ions.

UNIT-4.

4.1 Clinical Aspects of enzymology, Medical and Therapeutic applications of enzymes; Enzymes-Clinical diagnosis.

4.2 Immobilized enzymes, various methods of immobilization-ionic bonding, absorption, covalent bonding (based on R groups of amino acids).

4.3 Iso enzymes and multiple forms of enzymes.

4.4 Enzyme engineering–economic importance of enzyme production. Enzymes in industries- food, biotechnology and other industries.

Enzymology:

Course Outcomes :

1. Students learn about enzymes. Their classification and nomenclature
2. Students learn about specificity of enzymes
3. Students learn about measurement of enzymatic activity
4. Students learn about isolation, purification of enzymes and intercellular distribution enzymes
5. Students learn about kinetic and collision theories
6. Students learn about mechanisms of enzyme action
7. Students learn about effect of reactant concentration
8. Students learn about effect of enzyme concentration, pH and temperature
9. Students learn about kinetic constant and determination of kinetic constants
10. Students learn about types of inhibitory mechanisms of enzymes
11. Students learn about kinetics of Allosteric enzymes
12. Students gain knowledge about regulation of enzyme activity with respective mechanisms
13. Students learn about mechanism of enzymes in clinical diagnosis and their applications

14. Students gain knowledge about immobilization of enzymes, applications of immobilized enzymes
15. Students gain knowledge about isoenzymes and their applications
16. Students learn about enzyme engineering, process of enzyme engineering and their applications

SUGGESTED READING MATERIAL:

1. Biochemical calculations. I.H. Segel, 2nd Ed., John Wiley & Sons.
2. Biochemistry. D. Voet & J.G. Voet, J.Wiley & Sons.
3. Enzyme Kinetics. I.W. Segil.
4. Enzyme Kinetics. D.V. Roberties, Cambridge University Press.
5. Harper's Biochemistry. Robert K. Murrey, Peter A. Mayer, D.K. Granner, V.W. Rodwell, Lange Medical.

EF ZOO-204 B: PATHOBIOLOGY

Course Objectives:

While studying the **Pathobiology** course, the student shall be able to:

1. To learn about communicable and non-communicable diseases in humans.
2. To learn about pathological agents causing disease in man.
3. To study parasitic diseases in man and farm animals.
4. To understand biology of disease carrying vectors and their mode of transmission of pathogens.
5. To learn about changes taking place in human body upon infection by pathogens.
6. To study the major types of parasites of medical & veterinary importance.
7. To understand the basics of identification of common parasites of humans and animals.
8. To design and evaluate an intervention to control food and waterborne diseases.
9. To understand and evaluate epidemiological studies in different disease.

UNIT-1.

1.1 Disease and injury (communicable and non-communicable)

1.2 Local and systematic reactions of injury

1.3 Cellular reactions to injury

1.4 Inflammation and Immunological reactions

UNIT-2.

2.1 Important human and veterinary parasites (Protozoan and helminthes)

2.2 Life cycle and biology of plasmodium, Trypanosoma, Ascaris, Schistosoma and Leishmania

2.3 Symptoms of the disease caused parasites

2.4 Host - Parasite interactions

UNIT-3.

3.1 Biology of house flies (Musca domastica) and mosquitoes (Culex, Anaphiles)

3.2 Arthropods as vectors of human diseases (Mosquitoes, Lice, Flies and Ticks)

3.3 Mode of transmission of pathogens by vectors

3.4 Vector Control methods- Chemical-, Physical-, Biological and Environmental control.

UNIT-4.

4.1 Biochemical and micro chemicals studies.

4.2 Changes in the blood during infection & disease

4.3 Types of anaemia, Biochemical and Microscopic changes.

4.4 Molecular basis of Hemophilia.

Course Outcomes:

1. Explain about the different pathogens causing disease in man.
2. Describe the different parasites causing disease and disability in man and animals.
3. Ability to elaborate about the life cycle and biology of disease carrying vectors; suggest preventive and control measures for the said diseases.
4. An understanding of the relationship between changes in physiology of host and Progress of pathogenesis in human beings and animals.
5. The students after completion of the course based on the Expertise he/she may join as Parasitological Scientist.
6. May join as Parasitologist in the State and Central Government Public Health Programmes as Officer

SUGGESTED READING MATERIAL:

1. Animal parasites, their life cycles and ecology - O. W. Oslsen.
2. Clinical Haematology - Dy. L. Aksencu &A. Dranaikota, 1972.
3. Principles of Pathobiology - Lavia, Mariano F.Hill, Rolla B. Oxford University Press, London, 1975.
4. Text book of Pathology - an introduction to medicine 6th edition Philadelphia. Lea & Febiger, 1953.
5. Veterinary clinical pathology, E.H. Coles D 1967.

ZOO- 205P : ZOO-201 (Core) & ZOO-203A or ZOO-203B (CF)

ZOO- 206P: ZOO-202 (Core) & ZOO-204A or ZOO-204B (EF)

AUDIT COURSE

ZOO-207: HUMAN VALUES AND PROFESSIONAL ETHICS – II

Course Objectives :

1. To afford fundamentals on Human values and professional Ethics in day to day life.
2. To know the Value Education and concept of human values in depth through suitable examples.
3. To provide knowledge on the Medical and Business ethics
4. Application of Human values and professional Ethics in lives for better living.
5. To know the role of ethical values in Environment.

I Value Education- Definition – relevance to present day - Concept of Human Values – Self introspection – Self esteem. Family values - Components, structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

II. Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

III. Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions. Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

IV. Environmental ethics- Ethical theory, man and nature – Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justice and environmental health.

V. Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities Feminist ethics, surrogacy/pregnancy. Ethics of media- Impact of Newspapers, Television Movies and Internet.

Course Outcomes :

1. Student will know the values of ethics in various fields including medical, social and business ethics.
2. The student will be enriched with several aspects pertaining to Human values and performing of Professional Ethics in day today life.
3. Introduction of several Natural values to be performed by Humans to lead a good and Peaceful life.

SUGGESTED READING MATERIAL:

1. John S Mackenjie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Management Ethics – integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books: New Delhi.
4. "Ethics in management" by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian system of Duties: Religious and Civil(ed.) G.C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol. I, II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. Caraka Samhita: Tr. Dr. Ram Kraran Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I,II,III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues, Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
14. An Introduction to Applied Ethics (Ed.) John H. Piet and Ayodhya Prasad, Cosmo Publications.
15. Text book for Intermediate logic, Ethics and Human Values, board of Intermediate Education & Telugu Academic Hyderabad. I.C. Sharma Ethical Philosophy of India. Nagin & co Julundhar

CORE ZOO-301: DEVELOPMENTAL BIOLOGY

Course Objectives:

While studying the **Developmental Biology** course, the student shall be able to:

1. The main objective of Developmental Biology course is to provide four-dimensional thinking of students to truly understand the patterns and process of embryonic development, body plan, fate map, induction, competence, regulative and mosaic development, molecular and genetic approach for the study of developing embryo which is not necessarily shared with any other disciplines in the biological sciences. The relevance of Developmental Biology to the study of human disease will be exemplified throughout using different model organisms.
2. Acquire knowledge on the fertilization and morphogenetic movements in the developing embryo.
3. To understand the embryo organizer, inductions and differentiation.
4. To study gametogenesis, fertilization, cleavage and gastrulation, stages in developing embryo.
5. To acquaint students with basic knowledge of experimental embryology.

UNIT-1.

1.1 Potency, commitment, specification, Induction, Competence, Determination and differentiation of embryonic cells.

1.2 Embryonic stem cells, origin and mechanism of Cell lineage, Fate maps.

1.3 Imprinting; Mutants and transgenics in analysis of development.

1.4 Genomic equivalence, cytoplasmic determinants and Nuclear transplantation experiments.

UNIT-2.

2.1 Origin and migration of germ cells; production of gametes and establishment of polarity.

2.2 Fertilization; Cell surface molecules in sperm egg recognition in animals; Molecular events of post fertilization.

2.3 Cleavage types, Blastula formation, Gastrulation and Molecular mechanism in germ layers formation.

2.4 Environmental regulation of normal development.

UNIT-3.

3.1 Axis and pattern formation in Drosophila, Amphibia and Chick.

3.2 Cell aggeregation and differentiation in dictyostelium.

3.3 Organogenesis- vulva formation in caenorhabditis elegans, eye lens induction.

3.4 Development in tetrapod Limb (Amphibians) and Neural fold formation.

UNIT-4.

4.1 Sex determination in animals (mechanism of primary and secondary sex determination) Hormonal regulation of sexual phenotypes.

4.2 Regeneration - types of Regeneration; Axial patterning during Regeneration. Metamorphosis- hormonal regulation of metamorphosis in insects and amphibians.

4.3 Ageing and senescence- Reactive oxygen species and cell senescence; dietary restriction and anti aging action: genetic control of longevity; Age related diseases.

4.4 Programmed cell death- Incidence of Apoptosis; Apoptosis during animal development; Apoptosis in metamorphosis and morphogenesis; Apoptosis during limb development: Biochemical and molecular mechanisms involved in Apoptosis.

Course Outcomes:

1. Developmental Biology displays a rich array of material and conceptual practices that can be analyzed to better understand the scientific reasoning exhibited in experimental life sciences. Based on learning contents of embryology, students can have a systematic and organized learning about the knowledge and concepts of growth and development.
2. Students would gain expertise in explaining how a variety of interacting processes generate an organism's heterogenous shapes, size and structural features that arise on the trajectory from embryo to adult or more generally throughout a life cycle.
3. Gains knowledge about gametogenesis, cleavage mechanisms, gastrulation and role of hormones in metamorphosis and regeneration.
4. After learning the development of life from cell to multicellularity complex and coordinated systems in organisms the students can apply this knowledge for research, and education, to solve the problems related to development in animals through research.

5. Developmental Biology enquires about the fundamental processes that underpin the fertilization of an egg cell and its step-by-step transformation into the fascinating complexity of a whole organism.
6. Students will also understand that cells only express a proportion of their genome, and that differential gene expression underlies cell differentiation and any alteration in the entire process of development leads to devastating diseases.
7. Students would have a systematic and organized learning about the knowledge and concepts of growth and development of organisms. Developmental Biology displays a rich array of material and conceptual practices that could be analysed to better understand the scientific reasoning exhibited in experimental life sciences.
8. To understand the overall chronology of the development and the role of various morphogens (protein/mRNA) in specification and determination of various organs and body axis formation.

SUGGESTED READING MATERIAL:

1. Austen, C.R. and Short, R.V. Reproduction in Animals
2. Ethan Bier The Coiled Spring Harlsor Laboratory Press, NewYork
3. F.T. Longo, Fertilization, Chapman & Hall
4. Molecular Developmental Biology – 2008, T. Subramonian, Narosa Publishing House
5. R.G. Edwards, Human Reproduction
6. S.F. Gillbert, Developmental Biology, Sinauer Associates Inc., Massachusetts
7. Schatten and Schatten. Molecular Biology of Fertilization.

CORE ZOO-302: ENVIRONMENTAL BIOLOGY

Course Objectives:

While studying the **Environmental Biology**, the student shall be able to:

1. The objectives of the course are to develop the ability to solve the problems related to the environment, to make them aware of various eco-friendly techniques and modern techniques to solve various environment-related problems.
2. The objective of this course is to make awareness among the young students about the surrounding environment, the impact of climate change and its mitigation and biodiversity.
3. The aim of the contents of this course is to introduce and explain about various conservation issues of the ecosystem and animals.
4. Man himself is a part of ecosystem. The ecosystems in the world are continuously under the pressure of anthropogenic activities and human mediated ecological changes. Several animal species are under the survival threats. To introduce the students about wildlife and wild habitats, about depleting wild life and human wildlife conflict.
5. Generate an interest in Ethology in order to understand the complexities of both animal and human behavior.
6. To understand the basic theories and Principles of Ecology.
7. To learn about current environmental issues based on Ecological principles.
8. To study Environmental pollution and their management.

UNIT-1.

1.1 A general account on Biomes and their environments.

1.2 Fresh Water: Classification and Characteristics, eutrophication, seasonal changes.

1.3 Marine: Classification and Characteristics.

1.4 Terrestrial: Forests – Grass lands – Tundra – Desert.

UNIT-2.

2.1 Trophic dynamic view of ecosystem and energy flow.

2.2 Ecological Energetics and productivity of ecosystems.

2.3 Impact of environmental factors on Energy flow.

2.4 Bioaccumulation and Biological magnification.

UNIT-3.

3.1 Air Pollution: Criteria and standards in India, health hazards and Toxicology – Green house gases and Green House Effect.

3.2 Water Pollution: Criteria and standards in India, health hazards and toxicology.

3.3 Role of environmental epidemiological studies and health indices in evaluation of environmental health hazards: environmental epidemiological episodes in India and Abroad.

3.4 Environmental Laws; Environmental Laws in India – legislation and Execution.

UNIT-4.

4.1 Biomonitoring,.

4.2 Bio indicators and environmental monitoring, Environmental impact assessment.

4.3 Bioremediation: Need and scope of bioremediation, Environmental applications of bioremediation. Future outlook of Bioremediation: Phytoremediation, Biotechnological cleaning up of the environment by plants.

4.4 Natural calamities and disaster management.

Course Outcomes:

1. The student will get idea about the ecological process in its surrounding and at National and Global level and the use of student knowledge on Ecology, Behaviour can be applied to Education, Research and Extension programmes in his further career.
2. Students will be understanding the various features and aspects of population ecology, community ecology and ecosystem ecology. They might have the knowledge about environmental biology in details. They will acquire knowledge about various tools and techniques of field ecology.
3. Students will be able to apply the scientific method and quantitative techniques to describe, monitor and understand environmental systems.
4. Students will be able to use interdisciplinary approaches such as ecology, economics, ethics and policy to devise solutions to environmental problems.
5. Students will be able to be proficient in ecological field methods such as wildlife survey, biodiversity assessment, mathematical modeling and monitoring of ecological systems.

6. Students will be able to use technology, such as geographical information systems and computer programming, to assist in problem solving.
7. This paper will help in creating skilled personnel in the field of environment protection and research.
8. Demonstrated an understanding of Ecological relationships between organisms and their environment.

SUGGESTED READING MATERIAL:

1. Animal Physiology - Adaptation & Environment. 4th EditionKnut Schmidt - Nielsen - Cambridge University Press.
2. Biochemical ecology and water pollution - PR Dugan, plenum press, London, 1972.
3. Biodegradation & Bioremediation - 2nd editon, Martein Alexander - Academic Press, 1999 USA.
4. Chemical and biological methods for water pollution studiesR.K. Trivedy and P.K. Goel, 1984.
5. Current pollution researches in India - RK. Trivedy and P.K. Goel. Karad.
6. Ecology & Environment - P.D. Sharma, 1991.
7. Ecotechnology for pollution control and environmental management, enviromedia, Karad, RK. Trivedi.
8. Encyclopedia of environmental pollution and control, enviromedia, Karad, Vol. 1 &2, R.K Trivedi.

GENERIC ELECTIVE ZOO-303A ANIMAL BIOTECHNOLOGY

Course objectives:

While studying the **Animal Biotechnology** course, the student shall be able to:

1. To introduce a detailed achievements of Biotechnology, Genetic Engineering and r-DNA technology principles.
2. To gain knowledge on cloning vectors and their uses in gene cloning technologies.
3. Principles of Cloning strategies and screening analysis of Re-combinations.
4. To apply principles of Biotechnology concepts in veterinary sciences i.e. production of Transgenic animals, Artificial insemination, Invitro fertilization, Embryo transfer technology.
5. Application of Biotechnological principles in Medicine and Gene transfer techniques.
6. To understand the uses of Fresh and marine pearl culture technology, IPR, Patents and Copyrights.

UNIT-1.

1.1 General Introduction and Achievements of Biotechnology

1.2 Enzymes used in gene cloning - Restriction endonucleases, DNA ligases, Kinase, Phosphatase, Nucleases, Polymerases, Reverse transciptase

1.3 Cloning vectors (Plasmids, Phages, cosmids, yeasts Shuttle vectors), viral vectors (SV40, Adenovirus and Baculovirus) used in Gene cloning.

1.4 Cloning and selection strategies of recombinants (antibiotic selection, blue white screening, colony hybridization, Fluorescence in-Situ Hybridization (FISH) and immunological test.

UNIT-2.

2.1 Preparation of cell lines, types of cell lines. Types of Stem Cells, Stem Cell Therapy

2.2 Applications of cell culture in Veterinary– Disease diagnosis, virus vaccines,hormones

2.3 Application of Biotechnology in Medicine- Production of monoclonal antibodies (Hybridoma technology), Production of vaccines and Production of Growth Hormone

2.4 Gene therapy: Introduction, principle of gene transfer and examples (Adenosine deaminase deficiency disease, Duchenne Muscular dystrophy disease and Cystic fibrosis)

UNIT-3.

3.1 Livestock improvement: Manipulation of reproduction in animals (Artificial insemination, multiple ovulations, *in vitro* fertilization, Embryo transfer technology)

3.2 Methods of gene transfer – Microinjection, electroporation, lipofection and viral mediated gene transfer techniques

3.3 Generation of chimeric, transgenic and knockout mice and other animals and their characterization. Gene editing- Gene silencing-CRISPR-associated protein-9 nuclease (Cas9) technology

3.4 Potential application of transgenic animals: models for various diseases/disorders, production of peptides and proteins of biopharmaceutical interest (molecular farming)

UNIT-4.

4.1 Growth hormone transgenics and stem cell technology for betterment of aquaculture. Sex reversal in fishes and their applications, Production of monosex populations. Aquaculture and fish seed production: Hypophysiation, hCG injections

4.2 Marine bio/fish resources and its applications in pharmaceutical and Nutraceutical Industries

4.3 Fresh water and marine (oyster) pearl culture technology, pearl culture in India, uses of pearl culture

4.4 Intellectual Property Rights: Introduction; Types of IP; Patents and its types, Trademark Copyright & Related Rights, Protection of GMOs; ethical and legalissues in biotechnology.

Course Outcomes:

1. Imparts the knowledge to cells lines and stem cells in culture media.
2. It gives insight into various cell/ tissues culture techniques and their applications
3. Understanding of in vitro culturing of organisms and production of transgenic animals.
4. Understanding of cloning of mammals, large scale culture and production from recombinant microorganisms and cloning vectors.
5. This insight allows students to take into consideration about ethical issues involved in production of transgenic animals and BT products.
6. Use in gene transfer technology, genetic manipulations and in a variety of Industrial processes and prominence of IVF, Artificial insemination and embryo transfer techniques.

7. Gives knowledge to culture of animal cells and its culture medium.
8. Learn basic concepts and principles of recombinant DNA technology, Gene manipulation for transgenic animal production and therapeutics/ vaccine production.
9. Provides knowledge on Livestock, improvement aquaculture and pearl culture
10. Provides knowledge on Intellectual property rights and genetically modified organisms

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand & Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.
3. Animal Biotechnology-M.M. Ranga, Agrobios (India), 2000.
4. Biotechnology-Fundamentals & Applications-S.S .Purohit & S.K. Mathur, Agro Botonics-1999.
5. Biotechnology-V. Kumaresan. Saras Publication-1994.

CO5	3	1	2	-	-	1	-	1	-	2	2	2

GENERIC ELECTIVE ZOO-303B: MICROBIOLOGY

Course Objectives:

This course enables the students to:

1. Establish an understanding of the basic techniques (concept of aseptic work, cultivation and identification) in microbiology
2. Describe different aspects of microbial nutrition and growth
3. Describe microbial interactions and their significance in environment
4. Describe microbial interactions and their significance in agriculture, food and pharmaceuticals
5. Describe nonspecific body defenses and the immune responses and apply this understanding to the infectious disease process as well as the prevention and control of infectious diseases
6. Develop and execute oral and writing skills necessary for effective communication of the course, the ability to think critically regarding a topic and the delivery of scientific principles to both scientists and non-scientists community

UNIT-1.

Techniques in Microbiology & Microbial Diversity: Microscopy, Staining in Microbiology, sterilization, Pure culture Methods, Culture Media and its types, Micrometry, Air Sampling, Waste water analysis, Measurement of Microbial Growth, Types of microorganisms, Methods of identification of microorganisms

UNIT-2.

Microbial Nutrition and Growth: Nutritional and Growth Factors requirement of microorganisms, Nutritional Types of Microorganisms, Uptake of Nutrition, Microbial Growth, Influence of Environmental Factors of Growth, Batch Culture, Continuous Culture, Synchronous Growth, Fed-batch Culture. Control of microbial growth by physical and chemical agents

UNIT-3.

Environmental Microbiology: Distribution of Microbes in Air and water, Allergic disorders by air microflora, air sampling, Water treatment, Bacteriological analysis of water, Bioleaching, Bioremediation, Agricultural Microbiology and Industrial Microbiology: Plant-microbes interactions,

Microbial Biodeterioration of agricultural products, control of microbes and safe storage of agricultural products, Biofertilizers, industrially important micro-organisms, secondary metabolites from micro-organisms, Microbiology of foods, Single cell Protein

UNIT-4.

Medical Microbiology: Diseases caused bacteria, virus, fungi, and protozoans; Fungal diseases, Host parasite interaction-recognition and entry process of different pathogens in plants and animals, Toxins produced, Vaccines, Anti-microbial agents, Antibiotics and disinfectants, National Immunization Programme.

Course Outcomes: At the end of the course, a student should be able to:

1. Identify microbiological techniques, the defining characteristics of the major groups of microorganisms and apply to study microbial phylogeny
2. Classify the nutritional types of microorganisms and measure microbial growth
3. Evaluate how microorganisms interact with the environment in beneficial or detrimental ways
4. Assess impact of plant- microbe interaction on agriculture in both beneficial and detrimental ways. Identify industrially important microbes
5. Determine ways in which microorganisms play an integral role in disease, and the microbial and immunological methodologies are used in disease treatment and prevention
6. Apply the scientific method by stating a question; researching the topic; determining appropriate tests; performing tests; collecting, analyzing, and presenting data and effective communicate with both specialist and non-specialist audiences/community

SKILL ORIENTED COURSE ZOO-305: ECONOMIC ZOOLOGY

Course objectives:

While studying the **Economic Zoology** course, the student shall be able to:

1. To identify various Methodologies and Perspectives of applied branches of Zoology for the possibilities of Self-employment.
2. To study the economic importance of Animal husbandries, Vermicompost technology, Sericulture, Apiculture etc.
3. To know the technical practices of Aquaculture, Sericulture, Apiculture, Animal husbandries, Vermicompost technologies.
4. To gain disease management technologies their adaptation in the Fisheries, Apiculture, Sericulture, Poultry etc.

UNIT-1.

1.1. Introduction to Aquarium Fish Keeping The potential scope of Aquarium Fish Industry as a Cottage Industry, Exotic and Endemic species of Aquarium Fishes

1.2. Biology of Aquarium Fishes Common characters and sexual dimorphism of Fresh water and Marine Aquarium fishes such as Guppy, Molly, Sword tail, Gold fish, Angel fish, Blue morph, Anemone fish and Butterfly fish, Use of live fish feed organisms. Preparation and composition of formulated fish feeds

1.3. Fish Transportation and Aquarium Maintenance Live fish transport - Fish handling, packing and forwarding techniques.

1.4. General Aquarium maintenance–budget for setting up an Aquarium Fish Farm as a Cottage Industry

UNIT-2.

2.1 History, scope and status of Sericulture Industry in India.

2.2 Species of silkworm, life history of mulberry silkworm and tasar silkworm(Eri0.

2.3 Silk worm diseases-.

2.4 Brief idea of cocoon processing for silk fabric - cocoon boiling, reeling, rereeling, winding, doubling, twisting and weaving

UNIT-3.

3.1 Types of honey bees.

3.2 Life cycle, culture of honey bees using movable frame hive.

3.3 Methods of bee keeping, enemies of bees.

3.4 Bye products of Honey bees and its economic importance.

UNIT-4.

4.1 Lac culture – Lac insect, Laccifera lacca - Life cycle, Lac processing, Lac products and Economic Importance.

4.2 Pearl culture and Pearl Industry. Vermiculture and Composting technologies

4.3 Economics of Poultry keeping: Morphology of different breeds of Chicken-Brooding and Rearing of Chicks-Processing of Egg, Meat and By-Products of Poultry.

4.4 Dairy farm management, Milch breeds. Draught breeds, Dual purpose breeds and New Cross breeds of Cows and Buffaloes in India.

Course Outcomes:

After the completion of the **Economic Zoology**, the student will be able to:

1. Exploring of various concepts and the importance of Economic Zoology.
2. Creating the self-employment opportunities to rural students through Animal husbandry, Aquaculture, Vermiculture and Sericulture.
3. To understand the significance of Economically important animals including cultivable Fishes, Prawns and their culture practices.
4. Identification of Animal pathogenic diseases in Fisheries, Sericulture, Apiculture, Aquaculture and their management strategies.
5. Introducing technologies pertaining to Pearl culture, Vermicomposting, Poultry keeping, Dairy farm management.

SUGGESTED READING MATERIAL:

1. Sukla, G.S. and Upadhyay, V.B., 2000 Economic Zoology – ISBN – 81-7133-137-8 Rastogi Publications, Meerut, India.

OPEN ELECTIVE ZOO-306A ENVIRONMENTAL IMPACT ASSESSMENT AND GREEN AUDITING

Course Objectives:

While studying the **Environmental Impact Assessment and Green Auditing** course, the student shall be able to:

1. Introduce students to the concept of Environmental Management
2. Develop skills in identifying and solving environmental problems
3. Teach the principles and practices of effective environmental management system audits

Unit-1.

EIA Objectives: Basis for Environmental Impact Assessment– Screening of Projects – Environmental Assessment Procedures –Significant Impact–Project Alternatives. Environmental Impact Statement Process – Environmental Management Plan (EMP).Guidelines for environmental audit, EIA Notification – 2006 and amendments. Public Participation, Regional and Sectoral Impact Assessment, Major limitations of Environmental Impact Assessment. Status of EIA in India -Current trends and strategies.

Unit-2.

EIA Methodologies: Adhoc Method – Checklist Methods – Matrix Methods – Network Methods, Uniqueness ratio, habitat evaluation system. Prediction and Assessment of Impacts on Natural Resources – Biota,Surface Waters, Ground Water, Air, Noise, Hazards, Historic and Cultural Resources, Transportation, Socio-economic relationships.

Unit-3.

EIA Case Studies: Land Clearing Projects – Dam sites –Aquaculture– Mines–Steel–Hydel–Thermal–Nuclear–Oil and Gas based Power Plants – Highways projects – Industrial Projects. Inter linking of Rivers and River Basin Management.

Unit-4.

Green Auditing: Introduction, Necessity, Procedure for Environmental Auditing, Case Study. Environmental Management System- ISO 14000 series of standards. Green Entrepreneurship- Green

Consumerism, Green Technology. Certification Process – Different Phases of Audit, Certification Audit. Various Certifying Agencies in Operation. **Carbon Sequestration:** Sources and Sinks, Biological Processes, Physical Processes, Chemical Processes. Greenhouse Gas Emissions, Kyoto Protocol, Carbon Footprint, Carbon Trading, Carbon Diet, Carbon Credits, Role of Trees and Forest in Reducing Atmospheric Carbon.

Course Outcomes:

1. Explain the concepts about Environmental Impact Assessment, develop skills in identifying and solving problems
2. Locate, analyse and evaluate informations from various environmental matrices Systematically
3. Be able to access and analyse different case studies/examples of EIA in practice for evaluation/assessment
4. Explain the importance of environmental audits and other management tools in business for social benefit by improving environmental performance
5. Calculate the carbon footprint of any organization and identify suitable mitigation strategies for carbon reduction solutions.

SUGGESTED READING MATERIAL:

1. Environmental Impact Statements, Bregman, J. I. (1999), Lewis Publishers, London
2. Environmental Assessment, Singleton R, Castle, P and Sort, D. (1999), Thomas Telford Publishing, London.
3. Effective Environmental Assessment, Eccleston, C. H. (2000), Lewis Publishers, London.
4. Environmental Auditing, Humphery, N. and Hadley. M. (2000), Boca Raton, USA.
5. Green Accounting, Bartelmus, P. and Seifert, E. K. (2017), Taylor & Francis Limited.
6. Perspectives in Environmental Studies, Kaushik, A. and Kaushik C. P. (2014). 4th Edition, New Age International Publishers, New Delhi.
7. Carbon Sequestration for Climate Change Mitigation and Adaptation, Ussiri, D. A. N. Lal, R. (2017), Springer International Publishing.

OPEN ELECTIVE: ZOO-306B: HUMAN HEALTH AND INFECTIOUS DISEASES

Course objectives:

While studying the **Human Health and Infectious Diseases** course, the student shall be able to:

1. To introduce the basic concepts of pathophysiology of infectious diseases
2. To study the major infectious diseases transmission to humans and response of immunity
3. To understand the Pathogenesis, mechanisms of pathogenesis; transmission and epidemiology of various bacterial, viral, fungal and protozoan diseases.
4. To study the Sexually transmitted diseases.
5. To study the prevention and control measures of infectious diseases

Unit-1.

Introduction to Infectious Diseases: Basic concepts in pathophysiology of infectious diseases, Outline of physiological mechanisms leading to diseased state, Infectious disease transmission, Infection and immunity, Acute and Chronic Infections, Major infectious diseases of humans.

Unit-2.

Bacterial Infections: Pathogenesis, mechanisms of pathogenesis; transmission, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major human infections (Tuberculosis, Cholera, Typhoid).

Unit-3.

Viral Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and anti-retroviral therapy of Human immunodeficiency virus (HIV/AIDS); Sexually transmitted diseases.

Unit-4.

Fungal and Protozoan Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major Fungal human pathogens: (Dermatophytes, Candida, Aspergillus); Protozoal human pathogens (Plasmodia and Trypanosoma).

Course Outcomes:

1. Learn the basic concepts of Infectious diseases and the role of immunity to control infections
2. Provides knowledge on the physiological mechanisms leading to diseased conditions.
3. Students gains knowledge on the pathogenesis and transmission of infectious diseases.
4. This insight allows the students to learn the treatment methods to control the growth and control of microbes.

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand & Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.
3. Biotechnology-V. Kumaresan. Saras Publication-1994.
4. Environmental Microbiology, Pepper, I. L., Gerba, C. P. and Gentry, T. J. (2015), 3rd edition, Academia Press, Elsevier
5. Textbook of Environmental Microbiology, Mohapatra, P. K. (2008), I.K. International (P)Ltd.
6. Basic Biotechnology, Ratledge, C. and Kristiansen, B. (2003), 2nd edition, Cambridge University Press
7. Pocket Guide to Bacterial Infections – K. Balamurugan and Prithika Udayakumar (2019). CRC Press.
8. Infections and Infectious diseases (2001). WHO & International Federation of Red Cross and Red Crescent Societies

ZOO 304 P : ZOO-301 (Core), ZOO-302 (Core) & ZOO-303 A& B (GE)

ZOO Lab 2: ZOO-305 (Skill Oriented course)

CORE ZOO-401: TOXICOLOGY

Course objectives:

While studying the **Toxicology** course, the student shall be able to:

1. Provides broad theoretical knowledge within toxicology and development of a general working knowledge of the principles and practice of clinical toxicology.
2. Basic toxicology concepts including: mechanisms of toxicology, absorption, distribution and excretion of toxicants, xenobiotic metabolism, toxicokinetics, chemical carcinogenesis, hepatotoxicology. Based on student interest some of the following areas may be included: genetic toxicology, developmental toxicology, renal toxicology, toxic effects of pesticides, toxic effects of metals, toxic effects of radiation, venoms and animal poisons, air pollution, ecotoxicology, food toxicology, forensic toxicology, occupational toxicology, regulatory toxicology, other.
3. This course includes the study of Pesticides that are agrochemicals and used for preventing, repelling, mitigating or destroying any pests. It includes insecticides, fungicides, rodenticides and herbicides etc. These insecticides are of chemical or biological origin that control the insect. The course indicates the mechanism of Pest control that may result in the form of killing the insects or otherwise preventing it from its destructive behaviors. Insecticides are either natural or man-made synthesized and are applied to target pests in a myriad of formulations (EC, WP, SP, FP, G etc.) and delivery systems (sprays, baits, slow-release diffusion, dust, etc.). In recent years, the bacterial genes coding for insecticidal proteins have been incorporated into various crops that deal with the mortality of the pests feeding on them.
4. The course highlights various categories of insecticides and their relative efficacy in relation to other control methods in a particular ecosystem. Use of bio-pesticides and other plant derived pesticides form an important part of IPM (Integrated Pest Management).
5. The course indicates the biodiversity of insects in different ecosystems and the impact of global climatic changes on insects diversity and their behaviour. Insects are important for the survival of different biota on the earth. Effect of various anthropogenic activities and pollutants on insects is correlated with maintenance of different ecosystems.
6. To apprise the students about the toxicants along with their application and their effects on biosphere as well as human health.

Unit-1.

1.1 Introduction and scope of toxicology and classification of xenobiotics.

1.2 Principles of toxicology- Dose response relationship- Toxicity tests {acute ($LD_{50,}$ $LC_{50,}$ ED_{50}) and chronic toxicity tests on aquatic and terrestrial animals}, Variations in toxic response.

1.3 Mechanism of toxic action of pesticides (Receptor concept, nature of receptors, Theory of toxicants- receptors interactions and mechanism of action of some pesticides)

1.4. Toxicokinetics-

i) Classic toxicokinetics

ii) Physiologic toxicokinetics

Unit-2.

2.1 Translocation of toxicants; Absorption of Toxicants, Distribution of Toxicants, Excretion of Toxicants

2.2 Biotransformation of Xenobiotics; Biotransformation sites, Biotransformation enzymes, Biotransformation reaction and bioactivation

2.3 Bioaccumulation of Xenobiotics; Bioconcentration, Bioaccumulation and Biomagnification; Biomagnification of lipophilic and recalcitrant substances

2.4 Toxic effect of metals - Mercury, Lead, Cadmium and Arsenic

Unit-3.

3.1 Toxic Response of Blood: Toxicology of erythron, leukon, platelets and homeostasis

3.2 Toxic Response of Liver; Mechanism and types of toxin – induced liver injury; critical factors in toxicant induced liver injury; detoxification mechanisms by liver.

3.3 Toxic Response of Kidney; Susceptibility of the kidney to toxic injury; Biochemical mechanisms / mediators of renal cell injury.

3.4 Toxic Response of Reproductive system; Endocrine disruption (including screening and puberty) in humans and mammals. Testicular and ovarian dysfunction. Deterioration in fertility by toxicants.

Unit-4.

4.1 Xenobiotic effect on basic metabolism (Carbohydrates, Proteins, Lipids)

4.2 Teratogens and Teratology (Relationships between maternal and developmental

toxicity)

4.3 Antidotal therapy; Types of antidotes and antidotal procedures.

4.4 Risk assessment-Hazard identification; Risk characterization and Safety evaluation of Chemicals.

Course outcomes:

1. The awareness about toxic agents, their effects and knowledge about mode of transformation of toxicants will help in creating skilled personnel in the field of environment protection and research.
2. It is a discipline overlapping with biology, chemistry, medicine that involves the study of toxicants, their mechanism of action.
3. It involves the study of the adverse effects of chemical substances on living organisms.
4. Skill development in environmental and occupational Toxicology.
5. It provides opportunities for students research projects, internships in assessing the effects of toxic pollutants on the environment and in the food chain.
6. Identification of different routes of exposure of environmental toxins.
7. Understanding of the physiological and genotoxic effects of drugs and environmental toxins.
8. Knowledge of various techniques for Toxicity evaluation.
9. The students having this course will study various types of insecticides and understand their mode of action to kill/control the insects. Also, the students will learn about novel categories of insecticides that may be compatible with other control strategies.
10. The students will learn handling of the pesticides in crop protection and understand the therapy and antidotes at the time of poisoning.
11. Further, Insects being the important component of various food chains/ food webs, the students will be understand their crucial role in homeostatic maintenance of ecosystems and their biota.
12. The students will learn about the impact of anthropogenic pollutants and climatic changes on the survival and propagation of insects, and may appreciate the insects as bio-indicators of ecological changes/disturbances.

SUGGESTED READING MATERIAL

CORE ZOO-402: COMPARATIVE ANIMAL PHYSIOLOGY

Course Objectives :

While studying the **Comparative Animal Physiology** course, the student shall be able to:

1. Comparative Animal Physiology is a comprehensive subject that gives in depth knowledge of various physiological processes in the animal kingdom.
2. This course provides knowledge of animal body system functions across levels of organization, from subcellular through organismal, in order to reveal physiological homologies, patterns of physiological adaptation to various environments and general physiological principles in a wide range of organisms to understand how organisms evolved their functional characteristics and how they stay alive in the face of constantly changing internal and external environments.
3. Course provides students comprehensive understanding of about Feeding mechanisms & Nutrition, Digestion in comparative basis, Respiration & Metabolism, Circulation of Body fluids, Patterns of Nitrogen excretion, Osmoregulation, Thermoregulation etc.
4. To provide Structure and Functional components of Muscle
5. To provide Physiological and Biochemical basis of Bioluminiscence in animal world.
6. To provide information on Biological Rhythms and their occurrence in Animals.

UNIT-1.

1.1. Aim and scope of physiology; General physiological functions and principles. Validity of comparative approach of physiology.

1.2. Feeding mechanisms and regulation: Nutrition, Autotrophs, Heterotrophs, Feeding Mechanisms, Digestion, Digestion in mouth, swallowing, Peristalsis, Digestion in the Stomach, Gastric secretion, Gastric juice, Regulation of Gastric secretion, Activities of Gastric Secretion, Digestion in small intestine.

1.3. Comparative physiology of digestion: Mechanical treatment, Movement of gut contents, Chemical Action: intracellular digestion, extracellular digestion, The digestive tract and its Enzyme chain; Digestive enzymes: Carbohydrases, Lipases and Esterases, Proteinases, Other Digestive enzymes, Absorption.

1.4. Coordination of Digestive activities: Visceral Autonomic system, Gastro intestinal Hormones.

UNIT-2.

2.1 Respiration and Metabolism: Types of respiration, Respiratory organs, Mechanism of Respiration.

2.2 Circulation of body fluids: Major types of body fluids, Blood, General properties of blood, Composition of blood, Blood groups and Transfusions.

2.3 Patterns on nitrogen excretion among different animal groups: Introduction, Nitrogenous Waste Products, Morphology of the excretory system in different groups of animals, Mechanism of urine formation.

2.4 Osmoregulation in different animal groups: Biological significance of water, Body compartmentation, Nature of the problem of osmoregulations in different environments, Invertebrate body fluid regulation, Vertebrate body fluid regulation.

UNIT-3.

3.1 Thermoregulation: Temperature as an environmental factor, Thermoregulation in Invertebrates, Thermoregulation in vertebrates.

3.2 Poikilothermic animals: Temperature relation in poikilotherms, Aquatic poikilotherms, Terrestrial poikilotherms, Homoeothermic animals: Temperature relations of homeotherms, Physical heat regulation, Chemical heat regulation.

3.3 Hibernation & Aestivation.

3.4 Biological Rhythms.

UNIT-4.

4.1 Bioluminescence: Occurrence of bioluminescence among different animals, Mechanism of light production, Control of bioluminescence, Functions of luminescence.

4.2 Chromatophores and regulation of their function: Colour production, Chromatophore pigments, Mechanism of action of chromatophore, Movement of pigment, Control of Chromatophores, Factors influencing on chromatophore system.

4.3 Contractile elements in animals.

4.4 Muscle structure and function-correlation.

Course Outcomes:

After going through this course of **Comparative Animal Physiology**, the students have a good understanding of:

1. How Invertebrates and Vertebrate animals work and how these animals biology is influenced by the different environments of their niches.
2. The students will be able to explore an original query in Animal Physiology. The students will appreciate evolutionary changes and environmental adaptations in different taxa of Invertebrates and Vertebrates.
3. An appropriate understanding of functioning of each system of different groups of animals with their comparison will be acquainted.
4. Understanding of the basic concepts of Physiological regulation, from cellular to organ to organismal.
5. Understanding of how different groups of animals have different Physiological adaptations appropriate to carry out the required function to the fullet.
6. Appreciation of the gorgeous diversity of Physiological possibilities that animals have developed through natural selection.

SUGGESTED READING MATERIAL:

GENERIC ELECTIVE ZOO: 403A - BIODIVERSITY AND CONSERVATION

Course Objectives :

The main objectives of this course are to: To impart understanding on the occurrence and distribution of various flora and fauna, their existence, interaction, Importance of biodiversity conservation and understand about Legislation related to conservation.

UNIT-1.

Scope and Constraints of Biodiversity Science

1.1 Biological Diversity: Species – Origin of new species, Description of new species, Community and ecosystem diversity, Genetic diversity- The Hardy-Weinberg law; genetically effective populations size, Gene flow-Genetic pollution and gene erosion, Systematics in Diversity – Environment and Genetic Variations – Biological Classification – Phylogenetic Relationship – Ecological Biodiversity

1.2 Species Concept – Biological and Phylogenic Concepts; Species Inventory – Biodiversity hot spots. IUCN categories– Red data book. Case Studies – Deciduous Forests - Desert Lizard communities – Marine and Coral Reef - Fish Communities -Island species — Western and Eastern Ghats – Himalayas.

1.3 Species Diversity: Global Distribution of Species - Tropical species diversity – Diversity in terrestrial, marine and freshwater –Micro-organisms-lower and higher plants – lower and higher invertebrates and vertebrates; Species extinction and Endangered species;

1.4 Monitoring indicator species and habitats; Threats to biodiversity: Extinction – Past rate of Extinction – Human Caused Extinctions – Endemic species - Extinction rates - Man and animal conflicts.

UNIT-2.

2.1 Habitats and Ecosystem:

History of ecosystem ecology, Human induced Ecosystem change, Urban Ecosystem Classification – Ecosystem mapping, tropical forests, grasslands, wetlands, coral reefs, mangroves

2.2 Habitat lass: Habitat destruction – Fragmentation and degradation – desertification – Habitat restoration;

2.3 Invasive Species: their introduction pathways, biological impacts of invasive species on terrestrial and aquatic systems;

2.4 Pollution: Impacts of Pesticide pollution, Water pollution and Air Pollution on biodiversity; Overexploitation: Impacts of Exploitation on Target and Non-target Terrestrial and Aquatic species and Ecosystems.

UNIT-3.

3.1 Values of Biodiversity: Instrumental/Utilitarian value and their categories, Direct use value; Indirect/ Non-consumptive use value

3.2 Introduction to Ecological Economics; Monetizing the value of Biodiversity

3.3 Intrinsic Value; Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions; Intellectual Value

3.4 Economics of Ecosystem, Green Revolution, Food Plants, medicinal and ornamental plants, animal uses – livestock and fisheries

UNIT-4.

4.1 Conservation and Management: National Legislation – Protection of Wild flora and Fauna - Protection of National Habitats - National and International Protected Areas

4.2 Current Practices in Conservation - in situ Conservation and ex situ Conservation of Threatened Species

4.3 Biodiversity Act 2002 – Patent Act – Agenda 21 – Forest protection Act-Forest conservation Act 1980-Multilateral Treaties – Biodiversity Conventions.

4.4 Environmental ethics – Biodiversity – a Socio – Political Perspective; Community conserved Areas (CCAs) - Range sand significance of CCAs.

Course Outcomes:

1. Student will gain knowledge about the diversity distribution pattern of the enormous number of species and different kind of ecosystems in the natural world.
2. The interaction between the various species and environment and the impact of social development on biodiversity
3. The importance of conservation of biodiversity which serving to the mankind and the ecosystem, and the major threats to biodiversity due to human developmental activities. The loss of biodiversity and the impact to the humankind.

4. Will gain knowledge about legislations regarding the conservation of biodiversity.
5. Will gain knowledge on Conservation and Management of biodiversity.

SUGGESTED READING MATERIAL:

1. Global Biodiversity – Status of the Earths Living Resources, Groombridge, B. (1992), Chapman & Hall, London.

2. Ecology of Natural Resources, Ramade, F. (1991), John Wiley and Sons Ltd.

GENERIC ELECTIVE: ZOO-403B: ANIMAL HUSBANDRY AND POULTRY FARMING

Course Objectives :

1. To acquire the knowledge related to animal husbandry importance and applications to the farmers and industries
2. To learn primary construction of dairy and poultry form establishment.
3. To gain knowledge in how to maintain the cattle and poultry forms.
4. To become proficient in disease management strategies and control measures of cattle and poultry forms.

Unit-1.

1.1. Breeds of Dairy Cattle and Buffaloes – Definition of breed; Classification of Indian Cattle breeds, exotic breeds and Indian buffalo breeds. Systems of inbreeding and crossbreeding.

1.2. Housing of dairy animals – Selection of site for dairy farm; systems of housing – loose, housing system.

1.3. Conventional dairy barn. Cleaning and sanitation of dairy farm. Weaning of calf. Castration and dehorning.

1.4. Deworming and Vaccination programme. Records to be maintained in a dairy farm.

Unit-2.

2.1. Livestock census; Breeds of Dairy cattle, Buffaloes and Goats. Indigenous, Exotic and Crossbred Cattle breeds.

2.2. Anatomy of Udder; Development of udder; Lacto genesis and Galactopoises; Letdown of milk.

2.3. Artificial insemination; Oestrous cycle; Symptoms of heat in cows and buffaloes. Conception, Pregnancy diagnosis in cattle. Multi ovulation and embryo transfer technique. Cloning. Economic traits of Dairy cattle. Methods of selection of dairy animals.

2.4. Systems of Dairy cattle breeding. Inbreeding, out breeding, Cross breeding, Grading up. Breeding systems (Cross breeding of cattle and Grading up of buffaloes).

Unit-3.

3.1. General introduction to poultry farming. Principles of poultry housing. Poultry houses. Systems of poultry farming.

3.2. Management of chicks, growers and layers. Management of Broilers. Poultry feed management – Principles of feeding.

3.3. Nutrient requirements for different stages of layers and broilers. Methods of feeding.

3.4. Egg testing. Methods of hatching. Brooding and rearing. Sexing of chicks.

Unit-4.

4.1. Poultry diseases- Viral, Bacterial, Fungal and Protozoan- their prevention and control.

4.2. Management of egg layers and Broilers in large scale farms.

4.3. Poultry feed. Importance and adverse effects on excessive use of Antibiotics and Growth promoters.

4.4. Progressive plans to promote poultry as a self-employment venture.

Course Outcomes :

1. Students at the successful completion of the course will be able to
2. Select the suitable breeds of livestock for rearing
3. Relate the anatomy of udder with letdown of milk
4. Identify and manipulate the reproductive behavior of cattle
5. Inspect the economics of dairy farming
6. Apprise the various breeding techniques employed in live stock

SUGGESTED READING MATERIAL:

1. Banerjee, G.C. A text book of Animal Husbandry.
2. Jagdish Prasad, Animal Husbandry & dairy science.
3. Panda, A. K. Rural Poultry production.
4. Ibne Ali & Singh, D. K. Handbook of poultry husbandry.
5. Anand, B. Handbook of poultry disease diagnosis & treatment.
6. Viyas, M. K. Glimpse of Indian Poultry Industry

MULTI DISCIPLINARY COURSE / PROJECT WORK

ZOO: 405 PRINCIPLES AND PRACTICES OF AQUACULTURE

Course Objectives:

The course explains the basic concepts about the principles and practices of aquaculture. The objective of this course is to impart knowledge among the students about the culture practices of various aquatic organisms from different aquatic habitats such as freshwater, brackish water and marine water, and to help develop skills in students necessary for contemporary advanced culture techniques for higher and profitable yields in aquaculture. This course will open up several avenues for students in terms of research and employability in hatcheries, culture farms and marketing in aquaculture.

UNIT -1.

1. Basics of Aquaculture: Definition, significance and classification; History of aquaculture; Cultivable species – freshwater, brackish water and marine; A knowledge of inland water bodies suitable for culture in India.
2. Criteria for the selection of a species for culture.
3. Culture practices of fish and shrimp: Traditional, extensive, modified extensive, semi-intensive and intensive cultures.
4. Concept of monoculture, polyculture and integrated fish farming.

UNIT-2.

1. Bundh breeding and Induced breeding of carp by hypophysation and use of synthetic hormones.
2. Culture of Indian major carps – nursery, rearing and production ponds.
3. Culture of air-breathing fishes in India.
4. Culture of giant fresh water prawn, *Macrobrachium rosenbergii*

UNIT-3.

1. Culture of milk fish, *Chanos chanos*.
2. Culture of Asian sea bass, *Lates calcarifer*.
3. Culture of shrimp, *Penaeus monodon.*
4. Culture of crab, *Scylla serrata.*

UNIT-4.

1. Sewage-fed fish culture.
2. Culture of ornamental fishes.
3. Culture of pearl oysters.
4. Culture of sea weeds: Major seaweed species of commercial importance; methods of culture.

Course outcomes:

Students would acquire the knowledge and understanding of the

1. Significance, classification, history and cultivable species of aquaculture, and the inland water bodies suitable for culture in India
2. Criteria for the selection of species for culture
3. Various practices followed for the culture of fish and shrimp, and
4. Concepts of different types of culture.
5. Feasibility of using sewage water for aquaculture
6. Maintenance of aquaria and breeding of ornamental fishes
7. Culture of marine organisms like pearl oysters and sea weeds.
8. Culture of brackish water species such as milk fish, seas bass, shrimp and crab.
9. conceptualize the induced breeding techniques of carp in bundhs and in hatcheries
10. get acquainted with the management of nursery, rearing and production ponds.
11. appreciate the culture of air-breathing fishes and freshwater prawn.

OE: ZOO-406A ENVIRONMENTAL MICROBIOLOGY

Course Objectives:

The main objective of this course are to:

1. Impart knowledge on microbial diversity and recent advancement methods in the analysis of microbial diversity.
2. Provide in-depth knowledge of role of beneficial and pathogenic microorganisms in environment.
3. Understand the application of microbes for production of different eco-friendly products
4. Impart knowledge in molecular biotechnology and its applications in Environmental management and conservation of biodiversity
5. Make students aware about Bioethics, Biosafety and IPR

UNIT-1.

Distribution / Diversity of Microorganisms: Microflora in different aquatic and terrestrial environment; Adaptation of microorganisms to the air environment; Extreme Environment – archae bacteria, acidophilic, alkalophilic, thermophilic, barophilic, osmophilic and radiodurant microbes. Role of Microorganism in Biogeochemical cycles - Nitrogen, Carbon, Phosphorus, Sulphur Cycle, Microbial corrosions.

UNIT-2.

Ecological Relationships Among the Microorganisms: Relationship among microbial population, microbial interactions in a biofilm, Host - Microbe interaction (Beneficial and pathogenic), Microbial pathogens and Parasites and their effects on Human, Animal and Plant health, Transmission of pathogens – Bacterial, Viral, Protozoan, and Helminths, Control of microorganisms. Indicator microorganisms in air, water and soil EnvironmentStandard criteria of indication; Bio-indication of water quality.

UNIT-3.

Microbes-Molecular Approaches and Applications: Understanding microbial diversity in the environment by culture-dependent approaches and their limitations, and by culture-independent molecular approaches (BIOLOG microtitre plates, analysis of FAME profiles, quantitative PCR (qPCR), and fluorescent in situ hybridization, pyro sequencing). Role of microbes in production of Biofuel, Biosurfactants, enzymes, biopolymers and biodegradable plastics.

UNIT-4.

Role of Biotechnology in Environmental Protection: Development of genetically engineered microorganisms (GEMs), Role of GMOs in bioremediation, Advantages of Genetically engineered plants; Bt insecticide; Conservation of bio-diversity by gene banks, Reforestation through micro-propagation. Microbial enhanced oil recovery (MEOR), Biomining, biosensors, Nano technology in pollution control.

Course Outcomes:

1. Understand and describe the type of microorganisms in the environment and the role of microorganisms in the cycling of nutrients in an ecosystem.
2. Relate the role of microorganisms in spread of human diseases and select the type of physical and chemical agents for microbial control.
3. Understand the importance of plants and microbs in environmental remediation
4. Know the ethical guidelines in the use of GMOs, different biosafety levels an IPR
5. Know the importance of microbs and biotechnology for the synthesis of eco-friendly products.

SUGGESTED READING MATERIAL:

1. Textbook of Environmental Microbiology, Mohapatra, P. K. (2008), I.K. International (P)Ltd.
2. Environmental Microbiology, Pepper, I. L., Gerba, C. P. and Gentry, T. J. (2015), 3rd edition, Academia Press, Elsevier

OE: ZOO-406B MEDICAL BIOTECHNOLOGY, IPR, BIO-SAFETY AND BIO-ETHICS

Course objectives:

While studying the **Medical Biotechnology, IPR, Bio-safety and Bio-ethics** course, the student shall be able to:

1. Study the types of Gene therapy and its uses in Medical Biotechnology
2. This course is designed to develop the knowledge on PCR, Immunological assays, cloning and animal cell culture techniques.
3. To study the fertilization, organogenesis, potency and differentiation, Morphogenesis in the developmental biology.
4. To gain knowledge on bacterial, plant and animal viruses.
5. This course helps to adhere to the ethical practices appropriate to the discipline at all times.
6. Adopt to the safe working practices, relevant to the bioindustries and research field.

UNIT-1.

Disease diagnosis-probe: PCR,LCR immunologicalassay. Detection of genetic, Neurogenetic disorders involving Metabolic and Movement disorders. Treatmentproducts from recombinant and non-recombinant organisms, Interferons, Antisense therapy, cell penetrating peptides, Gene therapy, Types of gene therapy, somatic virus germline gene therapy, mechanism of gene therapy, Immunotherapy, Detection of mutations in neoplastic diseases MCC, SSCP, DGGE, PTTC.

UNIT-2.

Animal Biotechnology: Development Biology; fertilization and organogenesis, Stem cells; potency and differentiation, different signaling for development, Morphogenesis in different model systems, Cloning; Transgenic and knockout systems. Animal cell Culture methods.

UNIT-3.

Virology: Classification and modes of propagation; bacterial, plant and animal viruses: morphology and ultrastructure; assay of viral particles, cell culture;viral enzymes, nucliec acids, DNA viruses: Herpes, Hepatitis B, Adeno virus; RNA viruses: Polio, VSV, Influenza, Retroviruses: Structure, life

cycle, transformation; TMV, Baculoviruses,; Response to viral infections: slow and persistent infections, Antiviral agents, Interferons.

Economics, Biosafety. Patent rights and Special Topics Biotechnology R & D and industry: Business aspects of biotechnology, research and market place, Finance and human resources: Intellectual property right: patents, R & D partnership, license agreement and joint venture.

UNIT-4.

Innovation Management: Technology transfer tools, Industry-Academia collaborations, Bio-incubators, Bio-accelerators, Finishing school; Bioethics: Role of bioethics in research. Prevention and management of plagiarism, fabrication/manipulation of data, conflict of interest, socio-cultural and behavioral conflicts during the conduct of research. Authorship & patenting/commercial rights and conflicts. Bioethical norms governing research related to animals and humans.

Biosafety: Prevention and management of chemical and biological hazards associated with research. Evaluation and interpretation of data sheets, labels etc. for pre-assessment of biological and chemical hazard.

Course Outcomes:

1. Student comes familiar with the Application of Biotechnological techniques in control of neurogenetic diseases and neoplastic diseases.
2. Students will gain awareness about Intellectual Property Rights (IPR) to take measures for protecting their ideas.
3. Gains knowledge on the Developmental stages of organism in Animal Biotechnology.
4. They will be able to devise business strategies by taking account of IPRs.
5. Students will develop awareness about bioethics and biosafety, Authorship and patenting / commercial rights and conflicts.
6. Students will develop the knowledge on bacterial, plant and animal viruses.

SUGGESTED READING MATERIAL:

1. Sasson A, Biotechnologies and Development, UNESCO Publications, 1988.

2. Mike Martin and Roland Schinzinger, “Ethics in Engineering”, Mc Graw-Hill, Newyork, 1996.

3. Sasson A. Biotechnologies in developing Countries present and future, UNESCO Publishers, 1993.

4. Biosafety: Principles and Practices (Biological safety: Principles and Practices) by Diane O., Ph.D. Fleming and Dbra Long Hunt (Aug 30, 2006).

5. S.F. Gillbert, Developmental Biology, Sinauer Associates Inc., Massachusetts

6. Schatten and Schatten. Molecular Biology of Fertilization.

7. Bioethics and Biosafety in Biotechnology, Sree Krishna.V. (2007), New Age International Publishers.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF ZOOLOGY

Course

M.Sc. ANIMAL BIOTECHNOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24 Amended as per NEP-2020

About the Department

The M.Sc. degree in Animal Biotechnology being offered by this University provides its students with a course of study that integrates a range of learning and teaching techniques relevant to their educational development and career ambitions. This Masters programme covers the latest developments in Animal Biotechnology and Drug Design. It provides theoretical knowledge as well as training in the practical and intellectual skills to enable students to better understand and then solve some of the problems in this subject. Graduates in this programme will be induced into critical thinking, and would be able to solve complex problems in Animal Biotechnology. The students would also be inculcated with personal and problem-solving skills that will enhance their employability prospects. Enhanced competence of students has been the key concern in designing and developing this syllabus. Careful thought has gone into selection of topics and setting their scope. Major areas of Animal Biotechnology like Molecular Biology, Animal Cell culture & Stem Cell Biology, Toxicology, Animal Reproduction, Breeding and Transgenic Technology, Genetic Engineering, Animal Biotechnology and Industrial Applications and Cancer Biology have been included in the syllabus only after multiple rounds of thorough discussions and intensive study. Special attention has been paid to subjects like Bioinformatics, Molecular Biology and Genetics to incorporate the latest developments in these fields.

Vision

- Provide a sound knowledge in development of biological therapeutic agents through stem cells, recombinant technology and monoclonal antibody production etc.,
- Provide inexpensive educational services to the weaker sections of society
- Inculcate respect for nature and concern for ethical values among students through good and scientific educational practices.
- Recognizing the essential roles of science and biology in the lives of citizens today and tomorrow, we emphasize biological literacy in our teaching and outreach programs.

Mission

- To promote knowledge about the Animal biotechnology including cell culture, gene transfer technology, use of stem cell in therapies and guidelines to conduct experiment on animals.
- To impart to the students the contemporary advancements in life sciences.
- To impart a global perspective and such skills among students that benefit humanity.
- To develop research aptitude and a scientific advancement.
- Reinvent ourselves in response to the changing demands of society with high moral values as a good citizen

Choice Based Credit System (CBCS)

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

Program Specific Outcomes

- To develop self-employable ability and to apply knowledge for pharmaceutical and Biotechnology industries; it will also provide employment to other dependents.

Programme Objectives

The programme is having the following objectives:

- To create awareness on advanced streams like Stem Cell Biology, Animal Cell Culture, Genomics and Proteomics, Drug Design, Genetic Engineering and Bioinformatics.
- To expose students to updated curricula and to recent advances in the subject and enable the students to face NET, SET and other competitive examinations successfully.
- To provide hands on experience related to Animal Cell Culture, Molecular Techniques, Drug Design and Instruments handling so that the students can become familiar with practical works which would help to get bright future in the field of Pharmaceuticals and Biotechnology industries.
- To prepare students to attract and develop interest in Drug Design, Cancer Biology, Animal breeding techniques, Fermentation technology and Downstream process so that the students can select Animal Biotechnology as their career.

- The BOS in Animal Biotechnology expects that this new framework of curriculum caters the need of enabling students of subject to accept new challenges of dynamically changing modern era.

Programme Outcomes

- Be able to play leading role in industry, research and the public services
- Understand and appreciate major public concerns and issues associated with Animal Biotechnology
- Have an understanding and grasp of international research environment where the frontiers of knowledge in Animal Biotechnology are under research
- Be able to adapt and respond positively and flexibly to changing circumstances
- Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively
- Have the capacity for individual work and teamwork
- Be lifelong learners with intellectual and practical skills.

Program Educational Objectives:

- Exposure of students to Animal Biotechnology and to provide them systematic tools of traditional and modern types to acquire this knowledge and skill.
- To update the syllabus essential for appearing in NET, SET, GATE, ASRB and other competitive exams of UPSC and APPSC.
- To make aware the students to know the natural resources of country, to utilize by sustainable methods and conservation of living resources.
- To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self reliant India.

- **Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**
- **Interested students may register for MOOC with the approval of the concerned DDC.**

CORE ABT-101:METABOLICREGULATIONAND CELLFUNCTION

Course Objectives:

1. To gain knowledge on chemicals bonds, thermodynamics principles and metabolisms of Glycolysis, TCA Cycle and their biomedical importance.
2. To understand metabolic discords of urea cycle and importance of proteins structure and functions.
3. To learn biosynthesis of purine and pyrimidine nucleotide and Clinical disorders of purine and pyrimidine metabolism
4. To become proficient in Biomedical importance of lipids and over view metabolism of carbohydrate, protein and lipids

UNIT-1.

1.1 Chemical Bonds (Covalent, Ionic and Hydrogen Bonds) and Thermodynamic principles in Biology (Enthalpy, Entropy, Free energy, First law and Second law of thermo-dynamics in relation to Biological system).

1.2 Carbohydrates: Definition and Classification- Structure and function of important Mono, Oligo and Polysaccharides.

1.3 Intermediary Metabolism-I: Glycolysis, TCA Cycle and their Bio-medical importance.

1.4 Intermediary Metabolism-II: Gluconeogenesis, HMP Shunt, Metabolism of Galactose andFructose and their Bio-medical importance.

UNIT-2.

2.1 Proteins: Definition and Classification- Structure (Primary, Secondary and Tertiary structures, Protein folding and denaturation) and function of important Proteins- Haemoglobin, Myosin and Actin.

2.2 Bio-synthesis of nutritionally non-essential amino acids and their Bio-medical importance.

2.3 Catabolism of Proteins and Amino acids-I: Biosynthesis of Urea- Detoxification ofAmmonia-Metabolic disorders of Urea cycle.

2.4 Catabolism of Proteins and Amino acids-II: Phenylalanine, Tryptophan, Biosynthesis and degradation of Polyamines and their Bio-medical importance.

UNIT-3.

3.1 Chemistry of purines, pyrimidines, Nucleosides, Nucleotides, Synthetic derivatives.

3.2 Biosynthesis of purine nucleotides, Catabolism of purines.

3.3 Biosynthesis of pyrimidine nucleotides, Catabolism of Pyrimidines,

3.4 Clinical disorders of purine and pyrimidine metabolism; Hyperurecemia or gout; Hypo-urocemia, Oroticaciduria.

UNIT-4.

4.1 Biomedical importance, Classification of lipids; Saturated and unsaturated fatty acids; Triacylglycerols (tri-glycerides), Phospholipids, Glycolipids, Steroids, Lipid peroxidation.

4.2β- oxidation of fatty acids, Oxidation of unsaturated fatty acids, Ketogenesis.

4.3 Biosynthesis of long chain fatty acids (Palmitic acid), Clinical aspects.

4.4 Overview of Metabolism(Carbohydrate, Protein and Lipid): Integrated metabolism at tissue and organ level(Kidney, Liver, Muscle, Adipose tissue and Small intestine);Metabolic interrelationships among Adipose tissue, Liver and Extra hepatic tissues

Course Output:

1. Thermodynamics principles and metabolisms of Glycolysis, TCA Cycle and their biomedical importance can be leant
2. Students can understand metabolic discords of urea cycle and importance of proteins structure and functions
3. Biosynthesis of purine and pyrimidine nucleotide and Clinical disorders of purine and pyrimidine metabolism; Biomedical importance of lipids and over view metabolism of carbohydrate, protein and lipids can be understood

SUGGESTEDREADINGMATERIAL:

CO3	3	2	2	1	3				1	1		
CO4	1	1	1	3	3				1	1		

CORE ABT-102:TOOLS&TECHNIQUES

Course Objectives:

1. To acquire skills in chromatography, centrifugation, electrophoresis and blotting techniques
2. To get knowledge on cell and tissue culture, cell types, culture media and overview of stem cell biology
3. To acquire skill on electrganetic spectrum, type of detectors, electophysiological methods and brain activity recording techniques
4. To learn microscopic techniques, different fixation and staining techniques, tissue processing for microtomy, cryotechiques

UNIT-1.

1.1 Chromatography: Molecular sieve chromatography: Principle, Determination of void volume and molecular mass of native molecules. Ion exchange chromatography: Ion exchange materials – Cation and anion exchange materials. Principle and separation of charged molecules.Principle and application of TLC and HPLC.

1.2 Centrifugation.Techniques-Density gradient, ultra centrifugation.

1.3 Electrophoresis: principle, Matrices used in electrophoresis – PAGE for separation of proteins, molecular mass determination. Separation of nucleic acids using agarosegel- electrophoresis. Pulse field electrophoresis and isoelectric focusing.

1.4 Blotting techniques: western, southern and northern blotting techniques.

UNIT-2.

2.1 Introduction to cell and tissue culture: Preparatory techniques – cleaning, sterilization, sterile handling tissue culture laboratory requirements, Design of tissue culture laboratory: Equipments and purpose.

3.1 Cell types (Primary and secondary) and cell lines, Cell proliferation measurements, Cell viability testing: Dye inclusion and dye exclusion tests.

2.2 Culture media: composition, preparation and sterilization, macro and micro nutrients, Importance of serum and limitation with serum media, cell harvesting methods.

2.3 The biology of stem cell: overview; different types of stem cells – embryonic stem cells, fetal tissue stem cells, adult stem cells, stem cell nuclear transfer; somatic cell nuclear transfer, Animal cloning.

UNIT-3.

3.1 Electromagnetic spectrum of light- Simple theories of absorption of light by molecules. Beer-Lambert law.

3.2 Types of detectors: UV-Visible spectrophotometry, Infra-red spectrophotometry, Fluorescent spectroscopy. Flame photometry, AAS.

3.3 Electrophysiological methods: Single neuron recording, patch-clamp recording, ECG

3.4 Brain activity recording, lesion and stimulation of brain, pharmacological testing, PET, MRI,CAT.

UNIT-4.

4.1Microscopictechniques:PrinciplesofmicroscopyScanningandtransmissionmicroscopes.Imageprocessingmethods in microscopy.

4.2 Differentfixationandstainingtechniques forLightmicroscopeandElectronmicroscope.

4.3MicrotomyandprocessingoftissuesforLightmicroscopeandElectronmicroscope.Cryopreservationand cryotechniques formicroscopy

4.4 Freeze-etchandfreeze-fracturemethodsforEM.

Course Output:

1. Technical skill can be gained on chromatography, centrifugation, and electrophoresis and blotting
2. Cell and tissue culture techniques can be learnt, knowledge on cell types can be gained
3. Skills can be acquired on electrganetic spectrum, type of detectors, electophysiological methods and brain activity recording techniques.
4. Microscopic techniques, different fixation and staining techniques, tissue processing for microtomy, cryotechiques can be understood

SUGGESTEDREADINGMATERIAL:

1. ABiologistsGuide toPrinciplesandTechniquesof PracticalBiochemistry,K.Wilson&K.W. Goulding, ELBSEdn.
2. AnimalCellCulture–Apracticalapproach,Ed.John.R.W.Masters IRLPress.
3. General ZoologicalMicrotechniques -P.M.Weesner.
4. PrinciplesandtechniquesofBiochemistryandmolecularbiologybyKeinWilsonandJohn Walker,VIIvolume, Cambridgepress Edition.
5. NeuroanatomicalTechniques,N.J.StransfedandT.A.MillerSpringerVerlag,NewYorkHeidelberg,Berlin.
6. PrinciplesofNeuroPhychopharmacology-RobertS.Feldman,JerroldS.MeyerandLind F.Quenzer.Sinauer Associates,Inc. Publishers. Sunderland.Massachusetts.
7. Biophysical chemistybyUpadhyay– Upadhyay-Nath.

CF ABT-103A:MICROBIOLOGYAND DISEASES

Course Objectives:

1. To understand microorganisms classification and structure of prokaryotic and eukaryotic micoorganism
2. To get knowledge on Nutritional requirements to microorganisms, growth of microorganism, control of microorganism and microbes of biotechnological importance
3. To become proficient in chemical nature of gene, plasmids incompatibility, horizontal transfer of genome among the microbial community and Benzer's classical studied on II locus
4. To learn diseases caused by micoorganisms

UNIT-1.IntroductiontoMicrobiology

1.1 Discoveringthemicrobialworld.Classificationofmicroorganismsuptoorderlevel-bacteria, algae,fungi, protozoa.

1.2 Structureofprokaryoticandeukaryoticmicroorganisms.Generalanddistinctivecharacteristics of the major groups of microorganism bacteria, mycoplasma, chalmidae,rickettsias,actinomycetes, fungi,algae, protozoa Prions and viruses.

1.3 Isolation, cultivation and enumeration of microorganisms - direct and indirect methods,Maintenanceof culture.

1.4 Outlinesofcharacterizationandidentificationofcommonbacteria,fungi,algaeandprotozoa.

UNIT–2.Microbialnutrition,growthandregulation

2.1 Nutritional requirements to microorganisms - Mode of nutrition - phototrophy, chemotrophy - methylotrophyorganotrophy, mixotrophy, saprophytic, symbiotic and parasitic, Interaction of microbes.

2.2 Growth of microorganism (bacteria) - normal and biphasic growth curve, batch and continuous cultures, chemostats, shift up and shift down. Growth determination, Microbial metabolism - energy yielding and energy requiring processes.

2.3 Control of microorganisms - principles, physical and chemical agents, Assay of antimicrobial action. Batch and continuous sterilization of media and air. Viruses - nature, cultivation and assay methods, structure, physico-chemical properties, classification, pathogenicity, Replication of viruses.

2.4 Microbes of biotechnological importance - examples of bacteria, yeast, algae and viruses.

UNIT-3.

MicrobialGenetics

3.1 Chemicalnatureof gene,Conceptofgene,operon,mosaicgenes/splitgenes.

3.2 Plasmids incompatibility. Classification: copy number, control and its significance.Structureandfunctionsofinsertionelements(IS)-transposableelements.Mechanismoftransposition.Catabolic transposons and theirsignificance.

3.3 Horizontal transfer of genome among the microbial community - transformation,conjugation transduction - generalized transduction, specialized transduction –cotransduction.

3.4 Benzer‟sclassicalstudiesonIIlocus.Cistroncomplementation-Elucidationofco-linearity between DNA and protein sequence. Genetics of viruses – bacteriophage,lambda,SV40,retroviralgenome(HIV),replication,lyticandlysogeniccascades.

Unit4.Diseasescausedbymicroorganisms

4.1 Viral diseases: Flu, Dengue fever, Hepatitis,

4.2 Bacterial diseases: Cholera, tuberculosis, anthrax,

4.3 Fungal diseases: Athlets foot, Dutch Elm disease, ergotism

4.4 Protozoadiseases(Protista):Malaria,Sleepingsickness,dysenteryAndPlantPathogens:TMV, Rust

Course Output:

1. Microorganisms classification and structure of prokaryotic and eukaryotic microorganism can be learnt
2. Nutritional requirements to microorganisms, growth of microorganism, control of microorganism and microbes of biotechnological importance can be understood
3. Chemical nature of gene, plasmids incompatibility, horizontal transfer of genome among the microbial community and Benzer's classical studied on II locus can be proficient
4. Diseases caused by microorganisms can be understood

SUGGESTEDREADINGMATERIAL:

1. Microbiology-M.J.Pelczar,E.C.S.Chan,NoelR.Krieg.TataMcGraw-HillEdition.
2. Prescott's Microbiology-Christopher J. Woolverton, Linda Sherwood, Joanne Willey. TataMcGraw-HillEdition.
3. TextbookofMicrobiology- AnanthanarayanandCJPaniker,7th Edition

CF ABT-103B: ENVIRONMENTAL BIOLOGY

Course Objectives:

While studying the **Environmental Biology**, the student shall be able to:

1. The objectives of the course are to develop the ability to solve the problems related to the environment, to make them aware of various eco-friendly techniques and modern techniques to solve various environment-related problems.
2. The objective of this course is to make awareness among the young students about the surrounding environment, the impact of climate change and its mitigation and biodiversity.
3. The aim of the contents of this course is to introduce and explain about various conservation issues of the ecosystem and animals.
4. Man himself is a part of ecosystem. The ecosystems in the world are continuously under the pressure of anthropogenic activities and human mediated ecological changes. Several animal species are under the survival threats. To introduce the students about wildlife and wild habitats, about depleting wild life and human wildlife conflict.
5. Generate an interest in Ethology in order to understand the complexities of both animal and human behavior.
6. To understand the basic theories and Principles of Ecology.
7. To learn about current environmental issues based on Ecological principles.
8. To study Environmental pollution and their management.

UNIT-1.

1.1 A general account on Biomes and their environments.

1.2 Fresh Water: Classification and Characteristics, eutrophication, seasonal changes.

1.3 Marine: Classification and Characteristics.

1.4 Terrestrial: Forests – Grass lands – Tundra – Desert.

UNIT-2.

2.1 Trophic dynamic view of ecosystem and energy flow.

2.2 Ecological Energetics and productivity of ecosystems.

2.3 Impact of environmental factors on Energy flow.

2.4 Bioaccumulation and Biological magnification.

UNIT-3.

3.1 Air Pollution: Criteria and standards in India, health hazards and Toxicology – Green house gases and Green House Effect.

3.2 Water Pollution: Criteria and standards in India, health hazards and toxicology.

3.3 Role of environmental epidemiological studies and health indices in evaluation of environmental health hazards: environmental epidemiological episodes in India and Abroad.

3.4 Environmental Laws; Environmental Laws in India – legislation and Execution.

UNIT-4.

4.1 Biomonitoring

4.2 Bio indicators and environmental monitoring, Environmental impact assessment.

4.3 Bioremediation: Need and scope of bioremediation, Environmental applications of bioremediation. Future outlook of Bioremediation: Phytoremediation, Biotechnological cleaning up of the environment by plants.

4.4 Natural calamities and disaster management.

Course Outcomes:

1. The student will get idea about the ecological process in its surrounding and at National and Global level and the use of student knowledge on Ecology, Behaviour can be applied to Education, Research and Extension programmes in his further career.
2. Students will be understanding the various features and aspects of population ecology, community ecology and ecosystem ecology. They might have the knowledge about environmental biology in details. They will acquire knowledge about various tools and techniques of field ecology.
3. Students will be able to apply the scientific method and quantitative techniques to describe, monitor and understand environmental systems.
4. Students will be able to use interdisciplinary approaches such as ecology, economics, ethics and policy to devise solutions to environmental problems.
5. Students will be able to be proficient in ecological field methods such as wildlife survey, biodiversity assessment, mathematical modeling and monitoring of ecological systems.
6. Students will be able to use technology, such as geographical information systems and computer programming, to assist in problem solving.
7. This paper will help in creating skilled personnel in the field of environment protection and research.

8. Demonstrated an understanding of Ecological relationships between organisms and their environment.

SUGGESTED READING MATERIAL:

EF ABT-104A:ENVIRONMENTALBIOTECHNOLOGY

Course Objectives:

1. To gain knowledge on waste and pollutants, hazards from wastes and pollutants and hazards from chemicals in wastes
2. To understand waste treatment, treatment of liquid wastes, treatment of solid waste and contributions of biotechnology to waste treatment
3. To become proficient in aerobic waste water treatment and measurement of pollution levels
4. To learn anaerobic treatment of waste water, biodegradation of xenobiotics compounds, hazards from xenobiotics and bioremediation

UNIT-1.

1.1 Introduction,

1.2 WasteandPollutants:Manufacturing,energyproduction,agricultureanddairy,transport,HouseBuildingand Domesticactivities.

1.3 Hazardsfromwastesandpollutants;biologicalagentspresentinwastes.

1.4 Hazardsfromchemicals inwastes,Hazardsfromphysicalpollutants.

UNIT-2.

2.1 Wastetreatment:Biofilters.

2.2 TreatmentofLiquidwastes

2.3 Treatmentofsolidwaste.

2.4 ContributionsofBiotechnologytowastetreatment.

UNIT-3.

3.1 Aerobicwastewatertreatment

3.2 Measurementsof thelevelof pollution.

3.3 Theprocessofwaste watertreatment.Aerobicreactorsordigesters,Microorganisms.

3.4 Anaerobictreatmentofwastewater:Microorganisms,SludgeTreatment

UNIT-4.

4.1 BiodegradationofXenobioticcompounds:Types ofRecalcitrantXenobioticcompounds.

4.2 HazardsfromXenobiotics,Generalfeaturesof BiodegradationofXenobiotics.

4.3 Biodegradationofhalogenatedcompounds.TheoriginofcapacitytodegradeXenobiotics.

4.4 Bioremediation:MicrobialBioremediation.

Course Output:

1. Knowledge will be gained on waste and pollutants, hazards from wastes and pollutants and hazards from chemicals in wastes
2. Waste treatment, treatment of liquid wastes, treatment of solid waste and contributions of biotechnology to waste treatment can be understood
3. Aerobic waste water treatment and measurement of pollution levels will be proficient
4. Anaerobic treatment of waste water, biodegradation of xenobiotics compounds, hazards from xenobiotics and bioremediation will be learnt

EF ABT-104B: HUMAN HEALTH AND INFECTIOUS DISEASES

Course objectives:

While studying the **Human Health and Infectious Diseases** course, the student shall be able to:

1. To introduce the basic concepts of pathophysiology of infectious diseases
2. To study the major infectious diseases transmission to humans and response of immunity
3. To understand the Pathogenesis, mechanisms of pathogenesis; transmission and epidemiology of various bacterial, viral, fungal and protozoan diseases.
4. To study the Sexually transmitted diseases.
5. To study the prevention and control measures of infectious diseases

Unit-1.

Introduction to Infectious Diseases: Basic concepts in pathophysiology of infectious diseases, Outline of physiological mechanisms leading to diseased state, Infectious disease transmission, Infection and immunity, Acute and Chronic Infections, Major infectious diseases of humans.

Unit-2.

Bacterial Infections: Pathogenesis, mechanisms of pathogenesis; transmission, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major human infections (Tuberculosis, Cholera, Typhoid).

Unit-3.

Viral Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and anti-retroviral therapy of Human immunodeficiency virus (HIV/AIDS); Sexually transmitted diseases.

Unit-4.

Fungal and Protozoan Diseases: Pathogenesis, mechanisms of pathogenesis; transmission, life cycle, epidemiology, public health implications, diagnosis, prophylaxis and treatment of major Fungal human pathogens: (Dermatophytes, Candida, Aspergillus); Protozoal human pathogens (Plasmodia and Trypanosoma).

Course Outcomes:

1. Learn the basic concepts of Infectious diseases and the role of immunity to control infections
2. Provides knowledge on the physiological mechanisms leading to diseased conditions.
3. Students gains knowledge on the pathogenesis and transmission of infectious diseases.
4. This insight allows the students to learn the treatment methods to control the growth and control of microbes.

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand& Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.
3. Biotechnology-V.Kumaresan.Saras Publication-1994.

ABT 105P : ABT -101 (Core) & ABT -103A or ABT -103B (CF)

ABT 106P : ABT -102 (Core) & ABT -104A or ABT -104B (EF)

AUDIT COURSE

ABT-107:HUMAN VALUESANDPROFESSIONALETHICS–I

Course Objectives:

1. To gain knowledge on nature of ethics its relation to religion. Politics, Business
2. To understand nature of values Good and Bad, end and means, analysis of basic moral concepts, good behavior and respect for elders, character and conduct
3. To become proficient on Bhagavad Githa
4. To learn crime and theories of punishment

I. DefinitionandNatureofEthics-ItsrelationtoReligion,Politics,Business,Law,MedicineandEnvironment.NeedandImportanceofProfessionalEthics-Goals–EthicalValues invariousProfessions.

II. NatureofValues-GoodandBad,EndsandMeans,ActualandpotentialValues,Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty,obligation, justice, responsibility and freedom, Good behavior and respect for elders,Characterand Conduct.

III. Individualand society:Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha (Non-stealing).Purusharthas (Cardinal virtues) Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

IV. BhagavadGita–(a)Niskamakarma.(b)Buddhism–TheFourNobleTruths–Aryaastangamarga,(c)Jainism–mahavratasandanuvratas.ValuesEmbeddedinVariousReligions, Relirious Tolerance, GandhianEthics.

V. Crime and Theories of punishment – (a) Reformative, Retributive and Deterrent. (b)Viewson manu and Yajnavalkya.

Course Output:

1. Knowledge on nature of ethics its relation to religion. Politics, Business will be gained
2. Nature of values Good and Bad, end and means, analysis of basic moral concepts, good behavior and respect for elders, character and conduct can be understood
3. Will be proficient on Bhagavad Githa
4. Crime and theories of punishment can be learnt

SUGGESTEDREADINGMATERIAL:

1. JohnSMackenjie:A manualofethics.
2. “TheEthicsofManagement”byLarueToneHosmer,RichardD.Irwin Inc.

CORE ABT-201:MOLECULARBIOLOGY

Course Objectives:

1. To gain knowledge on DNA structure, genome of Nuclear and mitochondrial and maternal Inheritance
2. To understand replication in prokaryotes, Enzymology of DNA replication, Discontinuous replication and Bidirectional replication
3. To understand synthesis of RNA, Types of RNA, Genetic code and Ribosome structure
4. To learn gene regulation I and II and Operon concepts

UNIT-1.

1.1 Watson and Crick Model: Types of DNA; Properties of DNA(C-value paradox, Cot value)

1.2 Nuclear and mitochondrialgenome, mitochondrialand maternalInheritance

1.3 Structureof gene(Cistron,Muton,Recon,Cis-transtest)

1.4 DNAdamageandrepair:Biologicalindicationofrepair,photoreactivation,Excisionrepair,Recombinationrepair, SOS repair, and Mismatchrepair.

UNIT-2.

2.1 Replication in Prokaryotes: Geometry of DNA replication, semi conservative replication.

2.2 EnzymologyofDNAreplication:DNApolymeraseI,IIandIII;ReplicationofEukaryotic Chromosomes;EukaryoticDNApolymerases;Multiplefork;ReplicationofChromatin.

2.3 .Discontinuous Replication: Fragments in Replication fork anddetection offragments; EventsintheReplication fork; Denovo initiation and covalentextension.

2.4 Bidirectionalreplication, Terminationofreplication.

UNIT-3.

3.1 Synthesis of RNA:- RNA Polymerase, Promoter, Auxiliary Proteins, RNA chain initiation,elongation,termination and Splicingmechanism

3.2 TypesofRNA,ProcessingofmRNA, rRNAandtRNA,Ribozyme.

3.3 Geneticcode,Identificationofstartandstopcodon,UniversalityofgeneticcodeDegeneracy,Wobbles Hypothesis. Codonusage, Geneticcodeof Mitochondria.

3.4 Ribosome structure (Prokaryotic and Eukaryotic), Protein synthesis: Initiation, Elongation and Termination of polypeptide chain, Signal peptide hypothesis, Post translational modification, Polyproteins, Inhibitors of translation.

UNIT-4:

4.1 Temporalresponse,Induction,Repression,LacOperon,GalactoseOperon.

4.2 LambdaOperon, Tryptophan Operon.

4.3 GeneregulationinEukaryotes-I:Genefamilies,Genealteration(Geneloss,Geneamplification, generearrangement), Regulation of synthesis of primary transcripts (geneorganization that affectsregulation-Activatorgene; Transcriptional control by hormones,Methylation).

4.4 GeneregulationinEukaryotes-II:BriefdescriptionoffundamentalsofChromatinremodeling, Enhanceosome, Reporter or Chimeric genes, Role of binding motifs in geneexpression(Helix-Turn-Helixmotif, ZincfingerandLeucine Zipper),miRNA.

Course Output:

1. DNA structure, genome of Nuclear and mitochondrial and maternal Inheritance will be understood
2. Knowledge will be gained on replication in prokaryotes, Enzymology of DNA replication, Discontinuous replication and Bidirectional replication
3. Synthesis of RNA, Types of RNA, Genetic code and Ribosome structure can be understood
4. Gene regulation I and II and Operon concepts can be learnt

SUGGESTEDREADINGMATERIAL:

1. BiochemistrybyA.L.Lehniger
2. CellandMolecularBiology-E.D.P.DeRobertisandE.M.F.

CORE ABT-202:ANIMALCELLCULTURE&STEMCELLBIOLOGY

Course Objectives:

1. To understand animal cell culture, biology of stemcells and embryonic stem cell
2. To learn propagation of embryonic stem cells, nuclear transfer technology, animal cloning and stem cell differentiation
3. To gain knowledge on stem cell plasticity, stem cell assay and protocols, stem cell separations and stem cell therapies
4. To learn stem cells and tissue engineering, human embryonic stem cells and society, intellectual property results

UNIT-1.

1.1 Introduction to animal cell and tissue culture: Components of cell culture, cell types and cell lines, different substrates, types of culture.

1.2 Animal cell culture: experimental works – Technological uses of Animal cell cultures - Prospects.

1.3 The biology of stem cells: Overview; different types of stem cells- embryonic Stem cells, fetal tissue stem cells, adult stem cells; nuclear transfer of stem cells; human & animal cloning. Animal stem cell protocols & research.

1.4 Embryonic stem cells: the blastocyst and inner cell mass cells primitive endoderm implantation; blastocyst development in vitro.

UNIT-2.

2.1 Isolation and propagation of embryonic stem cells; chimeras; generation of knockout mice.

2.2 Nuclear transfer technology: Transfer of nuclei into eggs; development potential of transplanted nuclei; reprogramming a nucleus.

2.3 Animal cloning: Overview; challenges in human therapeutic cloning; somatic cell nuclear transfer in humans: pronuclear early embryonic development.

2.4 Stem cell differentiation: Overview; adult stem cells; fetal stem cells; human embryonic stem cells; human parthenote stem cells.

UNIT-3.

3.1 Stem cell plasticity: Overview; self-renewal potential; differentiation versus stem cellrenewal; transdifferentiation; cellcycledynamicsofdifferentstem cells.

3.2 Stem cell assays and protocols: Isolation of defined stem cell populations; progenitor cellassays,sourcesofprogenitorcells,cytokineandchemotherapyapproachestomobilization of progenitor cells; flow cytometric techniques; methods of cell selectionusingmonoclonal antibodies.

3.3 Magnetic approaches to cell separation, Dyna beads, nano particle preparations; growthfactors and ex-vivo expansion of hematopoietic stem / progenitor cells bioreactors forexpansion.

3.4 Stemcelltherapies:Clinicalapplicationsofstemcelltherapy;neurodegenerativediseases- Parkinson's disease, Alzheimers, spinal cord injury, other brain syndromes;tissuesystemsfailures-diabetes,cardiomyopathy,kidneyfailure,liverfailurehemophilia,lymphomaand leukemicmalignancies requiringstem celltherapy.

UNIT-4.

4.1 Stem cells & tissue engineering: Role of nanoparticles; organ development; nanoparticles as scaffolds.

4.2 Human Embryonic Stem Cells and Society: The religious, legal, ethical and scientific debate; the future of the debate; the regulatory aspects of therapeutical use of stem cells.

4.3 Bioethical, Environmental and Health issues related to Biotechnology.

4.4 Intellectual property results – patents and protection of ideas – Risk and Reward.

Course Output:

1. Knowledge will be gained animal cell culture, biology of stemcells and embryonic stem cell
2. Propagation of embryonic stem cells, nuclear transfer technology, animal cloning and stem cell differentiation can be learnt
3. Stem cell plasticity, stem cell assay and protocols, stem cell separations and stem cell therapies can be understood
4. Stem cells and tissue engineering, human embryonic stem cells and society, intellectual property results can be proficient

SUGGESTEDREADINGMATERIAL:

CF-ABT-203A:CELLBIOLOGYANDIMMUNOLOGY

Course Objectives:

1. Able to learn organization of prokaryotic and eukaryotic cell, Nucleus structure, Eukaryotic chromosome and polytene and lamp brush chromosomes
2. To learn mechanism of cell division, regulation of eukaryotic cellcycle, chromosomal abnormalities and tumor biology
3. To understand types of immunity, types of cell involved in immune response, structure and function of antibody and complimentarily cascade
4. To gain knowledge on Antigen presentation, hypersensitivity reactions, immune tolerance and immunopathology

UNIT-1.

1.1 Organization of prokaryotic and eukaryotic cell.Structure and function of Plasmamembrane, mitochondria endoplasmic reticulum, Golgi apparatus, lysosomes,peroxisomes.

1.2 Nucleus-structureandfunctionofnuclearmembrane,nucleolus.

1.3 Eukaryoticchromosomeanditshighresolutionorganization.

1.4 Polyteneandlampbrushchromosomes.

UNIT–2.

2.1 Mechanism of cell division - mitiotic apparatus, cytokinesis, chromosome movement - presentconcept.

2.2 Regulation of eukaryotic cell cycle - Over view of cell cycle.Mutation causing cellcyclecontrol.Meiotic process - stages, chromosome pairing, chiasma formationMolecularmechanismsofrecombination,synaptonemalcomplex.Nondysjunction,

2.3 Chromosomalabnormalities-euploidy,haploidy-theirfundamentalandpracticalsignificance.Polypliody-induction -Aneuploidy-typeandgeneticsignificance.

2.4 Tumor biology - cell to cell interaction, cell adhesion, cell transformation mechanism andoncogenesis.

UNIT–3.

3.1 Immunity- innate and acquired, innate immune mechanisms, Immunogens and antigens –Properties, factors governing immunogenicity, haptens, epitopes-size and identification.Adjuvants-properties andmechanism of action.

3.2CellsinvolvedintheimmuneresponseTcells,Bcells,CDantigens,neutrophils,eosinophilsandnaturalkiller cells.Macrophages,dendrites,Phagocytosis,Lymphoidtissues.

3.3 Fuctions of antibody in relation to structure. Antigen-antibody interactions- affinity ofantibody,avidity,bonuseffect,classicalprecipitinreaction,antigen-bindingsiteofantibody,forcesinvolvedinantigen-antibodycomplexformation,Generationofantibodies,Theories ofantibodyformation. Monoclonaland polyclonal antibodies.

3.4 Complement-nature,physicochemicalproperties,complementcascadepathway,complementfixation.

UNIT–4.

4.1 AntigenPresentation-pathwaysofantigenprocessingandpresentationofintracellularandextracellularantigens. Cell mediatedimmunity(CMI):Inductionand mechanism

4.2 Hypersensitivityreactions–Classification,TypeI–IVreactions.Immunitytobacterial,fungal,viral andparasiticdiseases. Allergy:classification anddetails.

4.3 Immunetolerance,immunesuppression.TransplantationandG.V.H.reactions.

4.4 Immunopathology-Autoimmunediseases;immunecomplexdiseases;immunodeficiencydiseases;immunityto infection.

Course Output:

1. Organization of prokaryotic and eukaryotic cell, Nucleus structure, Eukaryotic chromosome and polytene and lamp brush chromosomes will be understood
2. Mechanism of cell division, regulation of eukaryotic cellcycle, chromosomal abnormalities and tumor biology can be learnt
3. Types of immunity, types of cell involved in immune response, structure and function of antibody and complimentarily cascade will be proficient

4. Knowledge will be gained on Antigen presentation, hypersensitivity reactions, immune tolerance and immunopathology

SUGGESTEDREADINGMATERIAL:

1. CellandMolecularbiologybyEDRDeRobertisandEMRDeRobertisJr,Indianedition, 3.1 B.I.Publications,Pvt. Ltd.
2. TheCell (A Molecular Approach)byGeoffreyM.Cooper,7th Edition.
3. Kuby,J.Immunology,7th edition,W.H.Freeman andCompany, NewYork.
4. Janeway‟sImmunobiology,9thedition,GarlandScience.

CF ABT-203B ANIMAL BIOTECHNOLOGY

Course objectives:

While studying the **Animal Biotechnology** course, the student shall be able to:

1. To introduce a detailed achievements of Biotechnology, Genetic Engineering and r-DNA technology principles.
2. To gain knowledge on cloning vectors and their uses in gene cloning technologies.
3. Principles of Cloning strategies and screening analysis of Re-combinations.
4. To apply principles of Biotechnology concepts in veterinary sciences i.e. production of Transgenic animals, Artificial insemination, Invitro fertilization, Embryo transfer technology.
5. Application of Biotechnological principles in Medicine and Gene transfer techniques.
6. To understand the uses of Fresh and marine pearl culture technology, IPR, Patents and Copyrights.

UNIT-1.

1.1 General IntroductionandAchievementsofBiotechnology

1.2 Enzymesusedingenecloning-Restrictionendonucleases,DNAligases,Kinase,Phosphatase,Nucleases, Polymerases, Reversetransciptase

1.3 Cloningvectors(Plasmids,Phages,cosmids,yeastsShuttlevectors),viralvectors(SV40,Adenovirus andBaculovirus) usedin Genecloning.

1.4 Cloningandselectionstrategiesofrecombinants(antibioticselection,bluewhitescreening,colonyhybridization,Fluorescencein-SituHybridization(FISH)andimmunologicaltest.

UNIT-2.

2.1 Preparationof celllines,typesofcelllines. TypesofStemCells,StemCellTherapy

2.2 ApplicationsofcellcultureinVeterinary–Diseasediagnosis,virusvaccines,hormones

2.3 Application of Biotechnology in Medicine- Production of monoclonal antibodies(Hybridomatechnology),ProductionofvaccinesandProductionofGrowthHormone

2.4 Genetherapy:Introduction,principleofgenetransferandexamples(Adenosinedeaminasedeficiencydisease,DuchenneMusculardystrophydiseaseandCysticfibrosis)

UNIT-3.

3.1 Livestockimprovement:Manipulationofreproductioninanimals(Artificialinsemination,multiple ovulations, *invitro*fertilization,Embryotransfertechnology)

3.2 Methodsofgenetransfer–Microinjection,electroporation,lipofectionandviralmediated genetransfer techniques

3.3 Generation of chimeric, transgenic and knockout mice and other animals and theircharacterization. Gene editing- Gene silencing-CRISPR-associated protein-9 nuclease(Cas9)technology

3.4 Potential application of transgenic animals: models for various diseases/disorders,productionofpeptidesandproteinsofbiopharmaceuticalinterest(molecularfar ming)

UNIT-4.

4.1 Growth hormone transgenics and sf.Sex reversal in fishes and their applications, Production of monosex populations.Aquaculture and fishseed production: Hypophysiation,hCG injections

4.2 Marinebio/fishresourcesanditsapplicationsinpharmaceuticalandNutraceuticalIndustries

4.3 Freshwaterandmarine(oyster)pearlculturetechnology,pearlculturein India,usesofpearlculture

4.4 Intellectual Property Rights: Introduction; Types of IP; Patents and its types,Trademark Copyright&RelatedRights,ProtectionofGMOs;ethicalandlegalissuesin biotechnology.

Course Outcomes:

1. Imparts the knowledge to cells lines and stem cells in culture media.
2. It gives insight into various cell/ tissues culture techniques and their applications
3. Understanding of in vitro culturing of organisms and production of transgenic animals.
4. Understanding of cloning of mammals, large scale culture and production from recombinant microorganisms and cloning vectors.
5. This insight allows students to take into consideration about ethical issues involved in production of transgenic animals and BT products.

6. Use in gene transfer technology, genetic manipulations and in a variety of Industrial processes and prominence of IVF, Artificial insemination and embryo transfer techniques.
7. Gives knowledge to culture of animal cells and its culture medium.
8. Learn basic concepts and principles of recombinant DNA technology, Gene manipulation for transgenic animal production and therapeutics/ vaccine production.
9. Provides knowledge on Livestock, improvement aquaculture and pearl culture
10. Provides knowledge on Intellectual property rights and genetically modified organisms

SUGGESTED READING MATERIAL:

1. A text book of Biotechnology-RC. Dubey.S.Chand& Company Ltd., New Delhi -1996.
2. A text book on Biotechnology-(n Ed.) H.D. Kumar. EWP - Private Ltd., New Delhi -1998.

EF ABT-204A: TOXICOLOGY

Course objectives:

While studying the **Toxicology** course, the student shall be able to:

1. Provides broad theoretical knowledge within toxicology and development of a general working knowledge of the principles and practice of clinical toxicology.
2. Basic toxicology concepts including: mechanisms of toxicology, absorption, distribution and excretion of toxicants, xenobiotic metabolism, toxicokinetics, chemical carcinogenesis, hepatotoxicology. Based on student interest some of the following areas may be included: genetic toxicology, developmental toxicology, renal toxicology, toxic effects of pesticides, toxic effects of metals, toxic effects of radiation, venoms and animal poisons, air pollution, ecotoxicology, food toxicology, forensic toxicology, occupational toxicology, regulatory toxicology, other.
3. This course includes the study of Pesticides that are agrochemicals and used for preventing, repelling, mitigating or destroying any pests. It includes insecticides, fungicides, rodenticides and herbicides etc. These insecticides are of chemical or biological origin that control the insect. The course indicates the mechanism of Pest control that may result in the form of killing the insects or otherwise preventing it from its destructive behaviors. Insecticides are either natural or man-made synthesized and are applied to target pests in a myriad of formulations (EC, WP, SP, FP, G etc.) and delivery systems (sprays, baits, slow-release diffusion, dust, etc.). In recent years, the bacterial genes coding for insecticidal proteins have been incorporated into various crops that deal with the mortality of the pests feeding on them.
4. The course highlights various categories of insecticides and their relative efficacy in relation to other control methods in a particular ecosystem. Use of bio-pesticides and other plant derived pesticides form an important part of IPM (Integrated Pest Management).
5. The course indicates the biodiversity of insects in different ecosystems and the impact of global climatic changes on insects diversity and their behaviour. Insects are important for the survival of different biota on the earth. Effect of various anthropogenic activities and pollutants on insects is correlated with maintenance of different ecosystems.
6. To apprise the students about the toxicants along with their application and their effects on biosphere as well as human health.

Unit-1.

1.1 Introduction and scope of toxicology and classification of xenobiotics.

1.2 Principles of toxicology- Dose response relationship- Toxicity tests {acute ($LD_{50,}$ $LC_{50,}$ ED_{50}) and chronic toxicity tests on aquatic and terrestrial animals}, Variations in toxic response.

1.3 Mechanism of toxic action of pesticides (Receptor concept, nature of receptors, Theory of toxicants-receptors interactions and mechanism of action of some pesticides)

1.4. Toxicokinetics-

i) Classic toxicokinetics

ii) Physiologic toxicokinetics

Unit-2.

2.1 Translocation of toxicants; Absorption of Toxicants, Distribution of Toxicants, Excretion of Toxicants

2.2 Biotransformation of Xenobiotics; Biotransformation sites, Biotransformation enzymes, Biotransformation reaction and bioactivation

2.3 Bioaccumulation of Xenobiotics; Bioconcentration, Bioaccumulation and Biomagnification; Biomagnification of lipophilic and recalcitrant substances

2.4 Toxic effect of metals - Mercury, Lead, Cadmium and Arsenic

Unit-3.

3.1 Toxic Response of Blood: Toxicology of erythron, leukon, platelets and homeostasis

3.2 Toxic Response of Liver; Mechanism and types of toxin – induced liver injury; critical factors in toxicant induced liver injury; detoxification mechanisms by liver.

3.3 Toxic Response of Kidney; Susceptibility of the kidney to toxic injury; Biochemical mechanisms / mediators of renal cell injury.

3.4 Toxic Response of Reproductive system; Endocrine disruption (including screening and puberty) in humans and mammals. Testicular and ovarian dysfunction.Deterioration in fertility by toxicants.

Unit-4.

4.1 Xenobiotic effect on basic metabolism (Carbohydrates, Proteins, Lipids)

4.2 Teratogens and Teratology (Relationships between maternal and developmental toxicity)

4.3 Antidotal therapy; Types of antidotes and antidotal procedures.

4.4 Risk assessment – Hazard identification; Risk characterization and Safety evaluation of Chemicals.

Course outcomes:

1. The awareness about toxic agents, their effects and knowledge about mode of transformation of toxicants will help in creating skilled personnel in the field of environment protection and research.
2. It is a discipline overlapping with biology, chemistry, medicine that involves the study of toxicants, their mechanism of action.
3. It involves the study of the adverse effects of chemical substances on living organisms.
4. Skill development in environmental and occupational Toxicology.
5. It provides opportunities for students research projects, internships in assessing the effects of toxic pollutants on the environment and in the food chain.
6. Identification of different routes of exposure of environmental toxins.
7. Understanding of the physiological and genotoxic effects of drugs and environmental toxins.
8. Knowledge of various techniques for Toxicity evaluation.
9. The students having this course will study various types of insecticides and understand their mode of action to kill/control the insects. Also, the students will learn about novel categories of insecticides that may be compatible with other control strategies.
10. The students will learn handling of the pesticides in crop protection and understand the therapy and antidotes at the time of poisoning.
11. Further, Insects being the important component of various food chains/ food webs, the students will be understand their crucial role in homeostatic maintenance of ecosystems and their biota.
12. The students will learn about the impact of anthropogenic pollutants and climatic changes on the survival and propagation of insects, and may appreciate the insects as bio-indicators of ecological changes/disturbances.

EF ABT: 204B ENDOCRINOLOGY

Course Objectives :

1. To study the concepts of Classification of Hormones, Structural features of Endocrine Glands
2. Compare the structure, functions and regulation of the endocrine organs of vertebrates
3. Identification of Endocrines glands of the body and their secretions
4. To study the Steroid and Peptide hormones and their role
5. To study the evolution of Pancreatic and Adrenal gland hormones
6. To study the evolution of Thyroid and Parathyroid hormones and their role in the regulation of metabolism
7. To study the role of hormones in the growth, development and reproduction.
8. to study the aspects concerning Hormones – Human health

Unit-1.

1.1 Classification of hormones. Brief account of structural features of endocrine glands. Hormonal effects and regulation – basic concepts and methods

1.2 Biosynthesis and secretion of pituitary. Factors influencing secretion. Endocrine disorders - brief description

1.3 Biosynthesis and secretion of pancreas, adrenal, and thyroid hormones. Factors influencing secretion.

1.4 Biosynthesis and secretion of sex steroid hormones. Factors influencing secretion.

Unit-2.

2.1 Peptide hormones, Steroid hormones. Hormones as messengers.Cell surface receptors. Cascade of reaction linked to signal transduction.

2.2 Evolution of pituitary gland; Physiological actions of pituitary hormones. Urophysis and action of its hormone(s).Pancreatic hormones and glucose homeostasis.

2.3 Evolution of discrete adrenal gland; Synthesis of corticosteroid, structural diversity of glucocorticoids among vertebrates.

2.4 Sex steroids. Cytoplasmic and nuclear receptors.Mechanism of action of steroid hormones.Prostaglandins.Calcium-magnesium-protein Kinase.Hormones and eukaryotic metabolic regulation.

Unit-3.

3.1 Evolution of thyroid gland.

3.2 Thyroid hormone synthesis and its regulation, paradigms of thyroid hormone action in poikilotherms and homeotherms.

3.3 A comparative account of parathyroid gland and ultimobranchial body/C cells, synthesis of parathyroid hormone, calcitonin and of vitamin D3;

3.4 Hormonal regulation of calcium and phosphate homeostasis.

Unit-4.

4.1 Hormones, growth and development and reproduction

4.2 Hormones regulating reproduction

4.3 Hormones and human health

4.4 Production of hormones as Pharmaceuticals-Insulin, GH and Prolactin.

Course Outcomes :

1.Understand the structure, function and regulation of endocrine & neuroendocrine glands,

2. Develop a deep knowledge of the role of endocrine secretion in regulation of reproductive Cycle

3.Understand the pathways associated with Biosynthesis and secretion of Endocrine hormones and their role in the control of metabolism

4.Acquring the knowledge of signal transduction mechanisms

5.Through understanding of several endocrines including Peptide hormones, Steroid hormones, Pituitary hormones, Sex hormones, Thyroid hormones etc in the control of metabolic pathways

6.Understanding the influence of hormones on Growth, Development and Reproduction and their regulatory pattern

AUDIT COURSE

ABT-207:HUMAN VALUESANDPROFESSIONALETHICS–II

Course Objectives:

1. To get knowledge on value education
2. To learn medical ethics
3. To become proficient on business ethics
4. To understand environmental ethics and social ethics

I. Value Education- Definition – relevance to present day -Concept of HumanValues –Selfintrospection–Self-esteem.Familyvalues-Components,structureandresponsibilitiesoffamilyNeutralizationofanger–Adjustability–Threatsoffamilylife
– Status of women in family and society – Caring for needy and elderly – Time allotmentforsharingideas andconcerns.

II. Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility ofmedicalpractitioners.Codeofethicsformedicalandhealthcareprofessionals.Euthanasia,Ethicalobligationtoanimals,Ethicalissuesinrelationtohealthcareprofessionals and patients. Social justice in health care, human cloning, problems ofabortion.EthicalissuesingeneticengineeringandEthicalissuesraisedbynewbiologicaltechnologyorknowledge.

III. Business ethics- Ethical standards of business-Immoral and illegal practices and theirsolutions. Characterics of ethical problems in management, ethical theories, causes ofunethicalbehavior,ethical abuses andwork ethics.

IV. Environmental ethics- Ethical theory, man and nature – Ecological crisis, Pest control,Pollution and waste, Climate change, Energy and population, Justice and environmentalhealth.

V. Socialethics-
Organtrade,Humantrafficking,Humanrightsviolationandsocialdisparities Feministethics,surrogacy/pregnancy.Ethicsofmedia-
ImpactofNewspapers,TelevisionMovies andInternet.

Course Output:

1. Value education can be understood
2. Medical ethics can be learnt
3. Knowledge will be gained on business ethics
4. Environmental ethics and social ethics can be learnt

SUGGESTEDREADINGMATERIAL:

CORE ABT-301:ENZYMOLOGY

Course Objectives:

1. To understand enzyme specificity, enzyme catalysis and isolation and purification of enzymes
2. To gain knowledge on theories of enzymes kinetics, enzyme kinetics and its importance, effect of reactant concentrations and effect of temperature of pH and enzyme concentration reaction rate
3. To learn inhibition of enzyme activity, kinetics of allosteric enzymes, regulation of enzyme activity and mechanism of enzyme action
4. To become proficient on clinical aspects of enzymology, immobilized enzymes, isoenzymes and enzyme enginnering

UNIT-1.

1.1 Historical Background, overview and specific examples, nomenclature and classification of enzymes–IUB system, chemical nature and properties of enzymes.

1.2 Enzyme specificity (Absolute specificity, Group specificity, Broad specificity).

1.3 Enzyme catalysis, Quantitative measurement of enzyme activity, Assay of enzyme activity-units of enzyme activity.

1.4 Isolation and purification of enzymes, intracellular distribution of enzymes.

UNIT-2.

2.1 Theoriesof enzymekinetics -kinetictheoryandcollisiontheory.

2.2 Enzymekineticsanditsimportance,derivationofMichaelis-Mentonequation,MethodsofVmaxand Km determination,construction ofLine weaver burk plots.

2.3 Effectofreactantconcentrations(Rateconstant,Firstorder,SecondorderandZeroorderkineticreactions, Ramachandran plot, determination ofslope).

2.4 EffectofTemperature,pHandenzymeconcentrationonreactionrate.

UNIT-3.

3.1 Inhibitionofenzymeactivity(competitive,non-competitive,uncompetitiveandmixedinhibition).

3.2 Kineticsofallostericenzymes.

3.3 Regulationofenzymeactivity(Metabolicregulation),Catalyticefficiencyofenzymes(feedbackinhibition, covalent modification).

3.4 Mechanismofenzymeaction(LockandKey,Inducedfitmodel),catalyticsite,roleofmetalions.

UNIT-4.

4.1 ClinicalAspectsofenzymology,MedicalandTherapeuticapplicationsofenzymes;Enzymes-Clinicaldiagnosis.

4.2 Immobilizedenzymes,variousmethodsofimmobilization-ionicbonding,absorption,covalentbonding(basedon R groups of amino acids).

4.3 Iso enzymesandmultipleformsofenzymes.

4.4 Enzymeengineering–economicimportanceofenzymeproduction.Enzymesinindustries-food,biotechnologyandotherindustries.

Course Output:

1. Enzyme specificity, enzyme catalysis and isolation and purification of enzymes can be understood
2. Knowledge will be gained on theories of enzymes kinetics, enzyme kinetics and its importance, effect of reactant concentrations and effect of temperature of pH and enzyme concentration reaction rate
3. Inhibition of enzyme activity, kinetics of allosteric enzymes, regulation of enzyme activity and mechanism of enzyme action will be learnt
4. Clinical aspects of enzymology, immobilized enzymes, isoenzymes and enzyme enginnering will be proficient

SUGGESTEDREADINGMATERIAL:

1. Biochemicalcalculations.I.H.Segel, 2nd Ed.,JohnWiley&Sons.
2. Biochemistry.D.Voet&J.G.Voet,J.Wiley&Sons.
3. EnzymeKinetics.I.W.Segil.

CORE ABT-302:ANIMALREPRODUCTION,BREEDINGANDTRANSGENICTECHNOLOGY

Course Objectives:

1. To become proficient on structure and function of male and female reproductive system; reproductive cycles and contraception in male and females
2. To gain skill on sex determination, selection for qualitative inherited characters, parental determination and verification and progeny testing
3. To understand artificial insemination techniques, in vitro fertilization, embryo transfer technology, microinjection and macroinjection
4. To learn transgenic technology development, generation of chimeric, transgenic and knockout mice

UNIT-1.

1.1 Structureandfunctionofmalereproductivesystem-hormonalregulationofspermatogenesisandspermeiogenesis;inhibinandandrogenbindingproteins;capacitationofspermatozoa.

1.2 Structureandfunctionoffemalereproductivesystem-influenceofhormonesondevelopmentof ovarian follicles andoogenesis;

1.3 Reproductive cycles: estrous and menstrual cycle; ovulation, atresia and corpus luteumformation;pregnancyand lactation; implantation and placentation.

1.4 Contraceptioninmalesandfemales:Hormonalandchemical;recentadvancesincontraceptionresearch .

UNIT-2.

2.1 Introduction - Sex determination; principles of animal breeding; structure of the livestockbreedingindustry: dairycattle, beef cattle, swine, sheep and poultry

2.2 Selectionforqualitatively inheritedcharacters-genefrequency andselectingagainstrecessive genes; detectingheterozygotesforrecessives.

2.3 Parental determination and verification; the use of markers and/or molecular probes,selectioncriteria: multiplerecords,pedigreeselection, familyselection.

2.4 Progenytesting:breedingvalue,transmittingabilityandheritability;correlatedcharacters; selection for maternal ability; factors affecting selection response; genotype-environmentinteractions

UNIT-3.

3.1 Artificialinsemination(AI)techniquesandtheirdevelopment:estrussynchronization;semencollection, evaluation, storage.

3.2 I*nvitro*fertilization, ICSIandpreservationofendangeredspecies.

3.3 Embryotransfertechnology,Superovulation,cryopreservationofembryos,Hormonesinvolvedin embryo transfer technology.

3.4 MicroinjectionandMacroinjection–introduction–procedure–applicationsadvantagesand limitations.

UNIT-4.

4.1 An overview of transgenic technology Development of transgenic mice and other animal models: by injection of foreign DNA/gene into zygote; optimization of construct for in vivo expression

4.2 Generation of chimeric, transgenic and knockout mice and other animals and their characterization.

4.3 Transgenic fishes, transgenic poultry and transgenic insects as bioreactors.

4.4 Potential application of transgenic animals: models for various diseases/disorders, production of peptides and proteins of biopharmaceutical interest (molecular farming).

Course Output:

1. Knowledge will be gained on structure and function of male and female reproductive system; reproductive cycles and contraception in male and females
2. Sex determination, selection for qualitative inherited characters, parental determination and verification and progeny testing will be understood
3. Artificial insemination techniques, in vitro fertilization, embryo transfer technology, microinjection and macroinjection can be learnt
4. Transgenic technology development, generation of chimeric, transgenic and knockout mice will be learnt

SUGGESTEDREADINGMATERIAL:

GE ABT-303A: BIOINFORMATICSANDBIOSTATISTICS

Course Objectives:

1. To know the importance of bioinformatics, internet basics, sources of websites and data base types
2. To understand prediction of protein structure and protein sequence database, prediction of gene structure, submission of sequence to database, phylogenetic analysis
3. To learn biostatistics, measures of location and dispersion, curve fitting and correlation and regression
4. To understand probability distribution, tests of significance, student t-test and F-test, chi square test and their application

UNIT-1.

1.1 Scope, importance and status of Bioinformatics.

1.2 Internetbasics,Toolsfor websearch,Dataretrievaltools.

1.3 Sourcesofwebsites.

1.4 Databasetypes-primary,secondaryandspecific annotationdatabases.

UNIT-2.

2.1 Database types, Prediction of protein structure and protein folding, Protein sequence databases.

2.2 Prediction of gene structure, Functional genomics, Genomic databases**.**

2.3 Submission of sequence to the database, Homology, BLAST- Types of BLAST

2.4 Phylogenetic analysis, Human genome project.

UNIT-3.

3.1 Definitionofstatistics:Biostatistics,classification,variablesandattributes,Diagramaticdistributionofbiological data.

3.2 Measures of location and dispersion: Arithmetic mean, median and mode.Mean deviation,quartiledeviation, Standard deviation andco-efficient ofvariation.

3.3 Curve fitting: Fitting strait line, parabola exponential curve and geometric curve to the data.Fittingof straight line usingMs-Excel.

3.4 Correlation andregression: Scatter diagram, types of relationship. Positive and negativecorrelation, computation of correlation coefficient, Interpretation of correlation coefficient.Simpleregression lines and its interpretation.

UNIT-4.

4.1 Normalprobabilitydistribution&itsapplications.

4.2 Testsofsignificance:levelofsignificance,nullandalternativehypothesis,poweroftestandp-valueof atest.

4.3 Studentt-testforoneasampleand two samplesmeans-paired t-tests.

4.4 F-test,chisquaretestandtheirapplication,conceptofANOVA.

Course Output:

1. Importance of bioinformatics, internet basics, sources of websites and data base types can be understood
2. Prediction of protein structure and protein sequence database, prediction of gene structure, submission of sequence to database, phylogenetic analysis can be learnt
3. Knowledge will be gained biostatistics, measures of location and dispersion, curve fitting and correlation and regression
4. Probability distribution, tests of significance, student t-test and F-test, chi square test and their application can be understood

GE ABT-303B:GENETIC ENGINEERING

Course Objectives:

1. To understand use of enzymes in DNA and RNA synthesis, restriction enzymes and ligation and modification o DNA
2. To learn vectors for constructions of genomic libraries, expression vectors, promoters and vectors used for cloning
3. To gain knowledge on DNA fragments, cDNA synthesis, PCR
4. To become proficient on ligation between cohesive and blunt end DNA fragments, introduction of cloned genes into host and expression of cloned genes

UNIT-1.

1.1 Enzymes used for the synthesis of DNA: DNA Polymerase I, Klenow fragment, Sequenase, Taq Polymerase, Reverse transcriptase, Terminal Transferase

1.2 Enzymes used for the synthesis of RNA: T3 and T7 RNA polymerases, SP6 RNA polymerase

1.3 Restriction enzymes - Outlines of bacterial restriction and modification systems – Classification of restriction enzymes - Type II restriction enzyme: Nomenclature, Production of DNA fragments with 3‟ protruding ends and blunt ends and their significance in molecular cloning - RFLP and its significance.

1.4 Enzymes used for ligation and modification of DNA: DNA ligase, Methylases, Kinase, Phosphatase.

UNIT-2.

2.1 Vectors for construction of genomic libraries - cosmids, bacterial artificial chromosomes(BACs),yeastartificialchromosomes(YACs)-vectorsforconstructionofcDNAlibraries-lamda ZAP. Multipurposevectors -pUC 18/19,Blue script vectors

2.2 Expression vectors – structure - promoters used in expression vectors - lac, tac, λpL, T7promotersand theirsignificancein constructingexpression vectors.

2.3 Promoter-probe vectors – Structure promoter probe vector - Reporter genes (lacZ, gfp,gus,luciferase) and strategies used toassaypromoteractivity.

2.4 Vectorsusedforcloninginto mammaliancells-SV40Vectors.

UNIT-3.

3.1 Isolationofgene/DNAfragments.Mechanicalshearing,restrictiondigestion,cDNAsynthesis,PCR amplification and chemicalsynthesis of gene.

3.2 cDNA synthesis - Mechanism of cDNA synthesis, Strategies used to obtain full lengthcDNA.5‟and 3‟RACE.

3.3 PCR - Concept and technology- Properties of primers - Inverse, multiplex PCR, RAPDandits significance. Real timePCR.

3.4 Chemical synthesis - Designing gene from amino acid sequence, solid phase synthesis ofoligonulceotides -In vitro synthesis of gene

UNIT-4.

4.1 Ligation between cohesive and blunt end DNA fragments - T4 DNA ligase - Conversionof blunt end DNA fragment into cohesive ended DNA - linkers, adapters, homopolymertailing.

4.2 Introductionofclonedgenesintohost-Transformation,conjugation,transduction,electroporation,particlebombardment,microinjection,liposomemediatedDNAdelivery.

4.3 Identificationandcharacterizationofclonedgenes-Screeningofgenomic/cDNAlibraries-genetic,molecularhybridization-immunochemical techniques

4.4 Expression of cloned genes – detection of expressed proteins – biological and molecularmethods.

Course Output:

1. Use of enzymes in DNA and RNA synthesis, restriction enzymes and ligation and modification o DNA can be understood
2. Vectors for constructions of genomic libraries, expression vectors, promoters and vectors used for cloning can be learnt
3. Knowledge will be gained on DNA fragments, cDNA synthesis, PCR
4. Will become proficient on ligation between cohesive and blunt end DNA fragments, introduction of cloned genes into host and expression of cloned genes

SUGGESTEDREADINGMATERIAL:

SKILL ORIENTED COURSE ABT-305: BIO RESOURCE TECHNOLOGY (APICULTURE,SERICULTURE,AQUACULTURE,VERMICULTURE)

Course Objectives:

1. To understand Types of honey bees, life history of honey bees, management of apiculture and by products of honey bees and economic importance disease and their control
2. To learn historical back ground of sericulture, economic importance of silk
3. To become proficient on fresh water fin fish culture, shell fish (prawn and Pearls) culture
4. To understand historical background of vermicompost, methods of vermiculture and problems involved in vermicompost

UNIT-1. APICULTURE

1.1 Typesof Honeybees.

1.2 LifeHistoryof Honeybees.

1.3 ManagementofApiculture.

1.4 Byproducts of honeybees andeconomic importanceDiseaseandtheircontrol.

UNIT-2.SERICULTURE

2.1 Historicalback groundofSericulture

2.2 TypesofSilkworms.Lifehistoryofmulberrysilkworm.

2.3 EconomicimportanceofSilk.

2.4 DiseasesofSilkworms.

UNIT-3.AQUACULTURE

3.1 Freshwaterfinfishculture.

3.2 Shellfish(Prawn&Pearls)culture.

3.3 Fishbreeding(Bund&induced breeding).

3.4 IntegratedfishfarmingandEconomicimportanceofAquaculture.

UNIT-4.VERMICULTURE

4.1 HistoricalbackgroundofVermicompost.

4.2 DifferentmethodsofVermiculture.

4.3 Advantages andeconomicimportanceof VermicultureVermicompost.

4.4 ProblemsinvolvedinVermicompost.

Course Output:

1. Types of honey bees, life history of honey bees, management of apiculture and by products of honey bees and economic importance disease and their control can be understood
2. Historical back ground of sericulture, economic importance of silk can be learnt
3. Fresh water fin fish culture, shell fish (prawn and Pearls) culture can be proficeint
4. Knowledge can be gained on historical background of vermicompost, methods of vermiculture and problems involved in vermicompost

SUGGESTEDREADINGMATERIAL:

1. ManualoffreshwaterAquaculture.R.Santhanan.Oxford,IBHPublicatons-1987.
2. Aquacultureprinciples.T.V.R.Pillay. Backwell scientificpublications-1993.
3. BiologyCultureandProductionofIndianMajorCarps,“Chakaraburthy”,N.M.Narendr apublishinghouse, NewDelhi-1999.
4. Silkwormrearing,Oxford&IBHPublishingCo.Pvt.Ltd.NewDelhi-1997.
5. SilkDying andFinishing,Oxford&IBHPublishingCo.Pvt.Ltd.NewDelhi-1997.

OE ABT-306A:ANIMALBIOTECHNOLOGYANDINDUSTRIAL APPLICATIONS

Course Objectives:

1. To gain knowledge on preservation animals engineered bacteria/yeast/ cell lines, metabolic engineering, fermentative production and glycolytic pathway
2. To understand monoclonal antibodies, DNA biotechnology and genetically engineered products
3. To learn transgenic, poultry, piggery, diary sciences and aquaculture applications
4. To know the DBT guidelines, Global scenario of transgenic micro organisms and ethical issues related to biotechnology products.

UNIT-1.

1.1 Preservation animal engineered bacteria/ yeast/ cell lines – reversal strategies – optimizesofexpression ofrestrictionprimer– mechanismof restriction, isolationdigestion.

1.2 Metabolicengineering:enzymaticcultivationofdomesticandagriculturalwastes–saccharification – large scale purification of cellulases – and their use in conservation ofagriculturewaste in to sugars.

1.3 FermentativeproductionofbioEthanol,PropanolandButanol.

1.4 Glycolyticpathway,manipulatingincreasedflux towardsalcohols.

UNIT-2.

2.1 Products from animal and plant cells, monoclonal antibodies, hormones etc. Geneticallyengineeredproducts,DNAbiotechnology,Modernmethodsforthedetectionofpathogens.

2.2 Bioinformatics and Biotechnology, Disease Processes, Extremophiles and the search fornewbiocatalysts.

2.3 Transgenics:Transgenicanimal:productionandapplication;transgenicanimalsasmodelsforhuman diseases.

2.4 Transgenicanimalsinlive-stockimprovement;expressionofthebovinegrowthhormone;transgenicsinindustry;chimeraproduction;Ethicalissuesinanimalbiotechnology.

UNIT-3.

3.1 Poultry.

3.2 Piggery.

3.3 DiarySciences.

3.4 Aquacultureapplications.

UNIT-4.

4.1 Safetyinthecontaineduseandreleaseoftransgenicanimals-Mechanismofimplementationofbiosafetyguidelines-atInstitutional,nationaland Internationallevel.

4.2 DBTGuidelines-ActusandtreatiesrelatedtobiosafetyofGMMandGMP"s-Publicawarenessperception and acceptanceof productsofbiotechnology.

4.3 Globalscenariooftransgenicmicroorganismsandplants-Intellectualpropertyrights-Patentlaws at national and international level.

4.4 Ethicalissuesrelatedtobiotechnologyproducts-Ecologicalrisksofengineeredmicroorganismsremedies.

Course Output:

1. Knowledge will be gained on preservation animals engineered bacteria/yeast/ cell lines, metabolic engineering, fermentative production and glycolytic pathway
2. Monoclonal antibodies, DNA biotechnology and genetically engineered products can be understood
3. Transgenic, poultry, piggery, diary sciences and aquaculture applications can be undertood
4. DBT guidelines, Global scenario of transgenic micro organisms and ethical issues related to biotechnology products can be learnt

SUGGESTEDREADINGMATERIAL:

1. Tzotzos,G.T.1995.Geneticallymodifiedorganisms-Aguidetobiosafety,CABInternational,Wallingford, U.K. 213p.
2. DBT1998Backgrounddocumentforworkshoponbiosafetyissuesemanatingfromuseofgen eticallymodified organisms(GMOs).Bangalore. September1998.289p.
3. Subbaram,N.R.1998.HandbookofIndianpatentlawandpractice.S.Viswanathan(Printers &Publishers) Pvt.Ltd. Chennai 628p.

OE ABT-306B:CANCERBIOLOGY

Course Objectives:

1. To gain knowledge on cancer types and tumor development
2. To learn oncogenes, mechanisms of onogene activation and chromosomal translocation
3. To understand cell cycle regulation and cancer, DNA Damage and repair
4. To learn tumor immunology, Vaccine development, tumor cell evasion of immune defenses

UNIT-1.

1.1 Introduction:Cancertypes,Characteristicsofcancercells.

1.2 Carcinogenesis:cancerinitiation, promotionandprogression,termination.

1.3 Factorsresponsibleforcarcinogenesis:Physical, chemicalandbiological.

1.4 TumorDevelopment:Models,Tumorangiogenesis.Overviewofinvasionandmetastasis.Cell-cell interactions in cancer.Invasion and the extracellular matrix.Specific cases ofProstate,Breast,Intestinal cancers.

UNIT-2.

2.1 Oncogenes andtheirroleinCancer:Introductiontooncogenes.

2.2 Mechanismsofoncogeneactivation(geneamplification.

2.3 Mechanismsofoncogene activation(chromosomaltranslocations).

2.4 Chromosomaltranslocationswithdominantnegativeeffects.Introductiontotumorsuppressor genes.

UNIT-3.

3.1 Cell-CycleRegulationandCancer:Mutationsaffectingmitogenicsignaltransductionpathways. Cell Cycle Regulation - Mutations affecting the cell cycle. Loss of checkpointcontrolandgeneticinstability. Replicativesenescence

3.2 DNA Damage, Repair failure and Carcinogen Mechanisms:Carcinogens, DNA damageandrepair.

3.3 Carcinogenesis:Chemicalandphysicalagents.

3.4 Carcinogenesis:Repairmechanisms.Aberrantrepairandgeneticinstability.Geneticpredispositionto cancer.

UNIT-4.

4.1 TumorImmunology:Tumorimmunology[tumorantigens, cytokines,

4.2 Vaccinedevelopment,Immunotherapyanditslimitations.

4.3 Tumorcellevasionofimmunedefenses.

4.4 Principles of chemotherapy and chemoprevention. Drug screens: High throughputScreening(HTS) approaches.

Course Output:

1. Cancer types and tumor development can be understood
2. Oncogenes, mechanisms of onogene activation and chromosomal translocation can be learnt
3. Cell cycle regulation and cancer, DNA Damage and repair can be understood
4. Tumor immunology, Vaccine development, tumor cell evasion of immune defenses can be leant

SUGGESTEDREADINGMATERIAL:

ABT 304 P : ABT-301 (Core), ABT-302 (Core) & ABT-303 A& B (GE)

ABT Lab 2: ABT-305 (Skill Oriented course)

CORE ABT-401:MEDICALBIOTECHNOLOGY

Course Objectives:

1. To understand disease diagnosis, monoclonal antibodies and detection of genetic disease
2. To learn Disease treatment, interferons, growth factor, and antisense nucleotide as therapeutic agent
3. To gain knowledge on gene therapy, types of gene therapy, augmentation therapy and targeted transfer
4. To become proficient on forensic medicine, preparation of DNA sample. Approaches for DNA analysis and applications of forensic medicine

UNIT-1.

1.1 Introduction,Diseaseprevention(Vaccines),Anidealvaccines.

1.2 Diseasediagnosis:Probes.

1.3 Monoclonalantibodies.

1.4 DetectionofGeneticDisease.

UNIT-2.

2.1 Diseasetreatment.

2.2 Interferons.

2.3 Growthfactor.

2.4 Antisensenucleotideastherapeuticagent.

UNIT-3.

3.1 GeneTherapy.

3.2 Typesofgenetherapy.

3.3 Augmentationtherapy.

3.4 Targetedtransfer.

UNIT-4.

4.1 Forensicmedicine.

4.2 Preparationofthe DNASample.

4.3 ApproachesforDNAAnalysis.

4.4 ApplicationsofForensic medicine.

Course Output:

1. Disease diagnosis, monoclonal antibodies and detection of genetic disease can be understood
2. Disease treatment, interferons, growth factor, and antisense nucleotide as therapeutic agent can be learnt
3. Knowledge will be gained on gene therapy, types of gene therapy, augmentation therapy and targeted transfer
4. Forensic medicine, preparation of DNA sample. Approaches for DNA analysis and applications of forensic medicine will be proficient

SUGGESTEDREADINGMATERIAL:

1. BiotechnologybyB. D. Singh. Kalyani Publishers, 2007.
2. TextBook ofBiotechnologyByH.K. Das (WileyPublications).
3. Strategies in Transgenic Animal Sciences - By Glemn M.M. and James M. Robl ASM.2000.

CORE ABT-402:FERMENTATIONTECHNOLOGYANDDOWNSTREAMING,PROCESS

Course Objectives:

1. To understand cell distribution methods, separation techniques, purification by chromatographic techniques and isolation and screening and maintenance of industrially importance microbs
2. To learn bioreactor design, fermentation economics, upstream processing, membrane based separations
3. To gain knowledge on importance of downstream processing economics of downstream processing
4. To become proficient in adsorptive chromatographic separations, electrophoretic process, hybrid separations technologies and gel permeation chromatography dialysis and crystallization

UNIT-1.

1.1 Cell distribution methods: Sonicatron – frush press – freeze than methods. Cell distribution for intracellular products, removal of insolubles, biomass (and particulate debris).

1.2 Separation techniques, flocculation and sedimentation, centrifugation and filtration methods.

1.3 Purification by chromatographic techniques; Reverse osmosis and ultra-filtration; Drying; Crystallization; Storage and packaging; Treatment of effluent and its disposal.

1.4 Isolation, screening and maintenance of industrially important microbes; Microbial growth and death kinetics (an example from each group, particularly with reference to industrially useful microorganisms).

UNIT-2.

2.1 Bioreactor designs; Types of fermentation and fermenters; Concepts of basic modes offermentation-Batch,fedbatchandcontinuous;Conventionalfermentationv/sbiotransformation;Solid substrate,surfaceand submergedfermentation.

2.2 Fermentation economics; Fermentation media; Fermenter design-mechanically agitated;Pneumatic and hydrodynamic fermenters;Large scale animal and plant cell cultivationandair sterilization.

2.3 Upstreamprocessing:Mediaformulation;Sterilization;Aerationandagitationinbioprocess; Measurement and control of bioprocess parameters; Scale up and scale downprocess.

2.4 Membrane-based separations(micro and ultrafiltration theory, design and configuration ofmembrane separation equipment, applications, precipitation methods(with salts, organicsolvents, and polymers, extactive separations, aqueous two phase extraction, supercriticalextraction)insitu product removal, integratedbioprocessing.

UNIT-3.

3.1 RoleandImportanceofdownstreamprocessinginbiotechnologicalprocesses.

3.2 Problemsandrequirementsofbioproductpurification.

3.3 EconomicsofdownstreamprocessinginBiotechnology,cost-cuttingstrategies.

3.4 Characteristicsofbiologicalmixtures,processdesigncriteriaforvariousclassesofbioproducts(high volume, low value products and low volume, high value products),physico-chemicalbasis of bioseparation processes.

UNIT-4.

4.1 Adsorptivechromatographicseparationsprocesses.

4.2 Electrophoreticprocesses (allelectrophoresistechniquesincludingcapillaryelectrophoresis)

4.3 Hybridseparationtechnologies(membranechromatography,electrochromatographyetc).

4.4 GelPermeationChromatography, dialysis,Crystallisation.

Course Output:

1. Cell distribution methods, separation techniques, purification by chromatographic techniques and isolation and screening and maintenance of industrially importance microbs can be understood
2. Bioreactor design, fermentation economics, upstream processing, membrane based separations can be learnt
3. Knowledge will be gainedon importance of downstream processing economics of downstream processing
4. Adsorptive chromatographic separations, electrophoretic process, hybrid separations technologies and gel permeation chromatography dialysis and crystallization will be proficient

GE ABT-403A: DRUGDESIGNANDDEVELOPMENT

Course Objectives:

1. To learn drug design, analog approach of drug designing
2. To understand SAR Vs QSAR, Partition coefficient, Hammets substituent constant and Tafts steric constant, Free Wilson mode, 3D-QSAR approach like COMFA and COMIA
3. To gain knowledge on pharmacological screening and assays, pharmacological screening models for therapeutic areas, cell based assay, biochemical assay, radiological binding assay, small molecule manufacturing
4. To learn Drug Laws, FDA, OECD, ICH, Schedule Y, drug registration, Regulations of human pharmaceuticals and biological products, and clinical trial design

UNIT-1.

1.1 Historyofdrugdesign,Current approachesandchallengesin drugdesign.

1.2 ConventionalMethods:Lead,Discoveryoflead,Leadoptimisation,Objectiveofleadoptimization.

1.3 Analogapproachofdrugdesigning:Bioisostericreplacement,rigidanalogs.

1.4 Alteration ofchain branching,changes in ring size, ring position isomers, design ofstereo isomers and geometric isomers, fragments of a lead molecule, variation in interatomicdistance.

UNIT-2.

2.1 SARversusQSAR, Historyand developmentofQSAR, ObjectivesofQSAR.

2.2 Types of physicochemical parameters, experimental and theoretical approaches for thedeterminationofphysicochemicalparameterssuchasPartitioncoefficient,Hammetssubstituentconstant and Tafts stericconstant.

2.3 Hansch approach, Free-Wilson model, statistical methods, Non-computer-assisted searchoperationslikeToplissdecisiontree,Simplexmethod,Fibonaccisearchtechnique.

2.4 3D-QSARapproacheslikeCOMFAandCOMSIA.

UNIT-3.

3.1 PharmacologicalScreeningandAssays:Generalprinciplesofscreening,correlationsbetweenvarious animalmodels and human situations.

3.2 Pharmacologicalscreening modelsfor therapeutic areas.Correlationbetweenin-vitroandin-vivoscreens.

3.3 Special emphasis on cell-based assay, biochemical assay, radiological binding assay, highthroughputscreening, specificuseofreferencedrugsandinterpretation of results.

3.4 Manufacturing&processdevelopment;smallmoleculemanufacturing;developmentofproteintherapeutics andvaccines.

UNIT-4.

4.1 Drug Laws, FDA, OECD, ICH, Schedule Y, Design non clinical toxicity studies andclinicaldevelopment, clinical risk/benefit analysis.

4.2 Drugregistration:Regulatoryaffairs,WTO,Patentregime,Accreditationandharmonizationprocess.

4.3 Regulations of human pharmaceuticals and biological products. Clinical Trials: Mainfeatures of clinical trials, including methodological and organizational considerations andtheprinciples oftrial conduct and reporting.

4.4 Keydesigns surrounding design, samplesize,deliveryand assessment of clinicaltrials.

Course Output:

1. Drug design, analog approach of drug designing can be understood
2. SAR Vs QSAR, Partition coefficient, Hammets substituent constant and Tafts steric constant, Free Wilson mode, 3D-QSAR approach like COMFA and COMIA can be learnt
3. Knowledge will be gained on pharmacological screening and assays, pharmacological screening models for therapeutic areas, cell based assay, biochemical assay, radiological binding assay, small molecule manufacturing
4. Drug Laws, FDA, OECD, ICH, Schedule Y, drug registration, Regulations of human pharmaceuticals and biological products, and clinical trial design can be learnt

GE ABT-403B:BIOSAFETY,BIOETHICS&INTELLECTUALPROPERTYRIGHTS

Course Objectives:

1. To understand socio-economic and legal impact of biotechnology, use of genetically modified organisms, moral and ethical issues in biotechnology and safety issues with GMO
2. To learn intellectual property right, evaluation of patenting, application of GATT and IPR and WTO Act and global and Indian biodiversity
3. To gain knowledge on Indian Patent Act 1970, role of country patent office, U.S. Patent trademark office and U.S. Paten system Vs Indian Patent system
4. To gain knowledge on Ethics and genetic engineering, patent of genes, human cloning, stem cel, regulatory requirements for drugs and biologics, GLP and GMP

UNIT-1.

1.1 Socio–economicandlegalimpactsofbiotechnology,rDNA guidelines,nationalandinternationalguidelines,experimentalprotocols approval,levelsof containment.

1.2 Useofgeneticallymodifiedorganisms, their releasein theenvironment.

1.3 Moralandethicalissuesinbiotechnology.

1.4 Safetyissues with GMO.

UNIT-2.

2.1 IntellectualpropertyRights:Definitionof IPR,Typesof IPR,PatentstoTradesecrets,copyrights,trademarks– legalImplications.

2.2 Evaluationofpatenting,IPrelevanceto Biotechnologyandfewcasestudies.

2.3 ApplicationGATT &IPR,WTOAct.

2.4 Global&Indian biodiversityact.

UNIT-3.

3.1 Indian Patent Act 1970, Recent Amendments filing of a patent application – Precautionsbeforepatenting-disclosure/non-disclosure.

3.2 Role ofacountrypatent office.

3.3 U.S.PatentTrademark Office.

3.4 U.S.PatentsystemVsIndianPatentSystem.

UNIT-4.

4.1 EthicsandGeneticEngineering,PatentofGenes.

4.2 Humancloning,Stemcells,

4.3 Regulatoryrequirements fordrugs andbiologics.

4.4 GLP,GMP.

Course Output:

1. Socio-economic and legal impact of biotechnology, use of genetically modified organisms, moral and ethical issues in biotechnology and safety issues with GMO can be understood
2. Intellectual property right, evaluation of patenting, application of GATT and IPR and WTO Act and global and Indian biodiversity can be leant
3. Knowledge will be gained on Indian Patent Act 1970, role of country patent office, U.S. Patent trademark office and U.S. Patent system Vs Indian Patent system
4. Ethics and genetic engineering, patent of genes, human cloning, stem cell, regulatory requirements for drugs and biologics, GLP and GMP can be proficient

OE ABT-406A:ADVANCEDGENOMICSANDPROTEOMICS

Course Objectives:

1. To learn structure of Prokaryotic and Eukaryotic genomes, Isolation and purification of genomic DNA, Construction of Physical maps and Whole genome sequence alignment
2. To understand genome annotation, methods for gene identification, functional genomics, transcript profiling
3. To learn protein structure, sample preparation and separation 2D-analysis, Multidimensional liquid chromatography, protein-protein interactions analysis
4. To gain knowledge on DNA /protein sequence homologies, Gene duplication and divergence, and evolution of novel genes and proteins, DNA quantities and non-coding sequences (transposons) in genome evolution

UNIT-1.

1.1 ThestructureofProkaryoticand Eukaryoticgenomes

1.2 Isolationand purificationofgenomicDNA.GenerationofBACandYAClibraries.

1.3 ConstructionofPhysicalmaps–Restrictionmaps,FISHandSTSmaps.Maxim&Gilbert,Sangerand Next generation DNAsequencingmethods.

1.4 Wholegenomesequencealignment;ClonebycloneandShotgumsequencing.Finishedsequencesand DNAsequencedata bases.

UNIT-2.

2.1 Genome annotation, methods for gene identification (location)

2.2 Assigning gene function by experimental analysis: gene inactivation by homologous recombination, RNA interference (RNAi) and gene knockout.

2.3 Functional genomics: Array fabrication, types, method and application of DNA Micro arrays.

2.4 Transcript profiling: Serial analysis of gene expression (SAGE) and Massively parallel signature sequencing (MPSS)

UNIT-3.

3.1 Proteinstructure:secondarystructures,domains,motifandfolds

3.2 Samplepreparationandseparation–2D-analysis,Multidimensionalliquidchromatography.

3.3 CharacterizationofproteinsbyMassspectrometryandproteinsequencing.Proteinmicroarrays.

3.4 Protein-proteininteractionanalysis;yeasthybridsystems,phagedisplayandproteincomplexes.

UNIT-4.

4.1 DNA/proteinsequencehomologies–Analogy, OrthologyandParalogy.

4.2 Geneduplicationanddivergence,andevolutionofnovelgenes andproteins

4.3 DNAquantities and non-codingsequences(transposons)in genomeevolution.

4.4 Molecularclocks,MolecularPhylogenetics andconstructionofphylogenetictrees.Applicationsofgenomicsinmedicine,agriculture and industry.

Course Output:

1. Structure of Prokaryotic and Eukaryotic genomes, Isolation and purification of genomic DNA, Construction of Physical maps and Whole genome sequence alignment can be learnt
2. Genome annotation, methods for gene identification, functional genomics, transcript profiling can be understood
3. Protein structure, sample preparation and separation 2D-analysis, Multidimensional liquid chromatography, protein-protein interactions analysis can be proficient.
4. Knowledge will be gained on DNA /protein sequence homologies, Gene duplication and divergence, and evolution of novel genes and proteins, DNA quantities and non-coding sequences (transposons) in genome evolution

OE ABT-406B: ANIMALCELL CULTURETECHNIQUES

Course Objectives:

1. To understand Animal cell culture, culture medium, characteristics of cell in culture
2. To learn primary culture, established cell line culture, Measurement of viability and cytotoxicity , cell types and apoptosis
3. To gain knowledge in scaling up of animal cell culture, cell transformation, tissue engineering, transgenic animals, animal cloning
4. To become proficient in improvement of biomass, pharming products, plasminogen activator and ethical issues related to biotechnology products

UNIT-1.

1.1 AnimalCellCulture:Equipmentandmaterialsfor animalcellculture technology.Varioussystemsoftissue culture,theirdistinguishingfeatures,advantages andlimitations.

1.2 Culturemedium:naturalmedia,syntheticmedia,sera.Introductiontobalancedsaltsolutionsandsimple growth medium.

1.3 Briefaccountonthechemical,physicalandmetabolicfunctionsofdifferentconstituentsofculturemedium, roleof carbondi oxide, serumand supplements.

1.4 Characteristicsofcellsinculture:Contactinhibition,anchoragedependence,cell-cellcommunicationetc.;Cell senescence;cell andtissue responseto trophic factors.

UNIT-2.

2.1 PrimaryCulture:Behaviourofcells,properties,utility.Explantculture;suspensionculture.

2.2 Established cell line cultures: Definition of cell lines, maintenance and management; celladaptation.

2.3 Measurement of viability and cytotoxicity: Cell cloning, cell synchronization and cellmanipulation.

2.4 Cell types and Apoptosis: Various methods of separation of cell types, advantages andlimitations; flow cytometry.Measurement of cell death, Apoptosis (death domain, role ofcytochromeC)

UNIT-3.

3.1 Stem cells:Scaling up of animal cell culture. Cell transformation. Scope, embryonic andadultstemcells,properties,identification,stemcellsculture,techniquesandtheirapplicationsin modern clinical sciences.

3.2 TissueEngineering:biomaterialsusedintissueengineering,threedimensionalcultureandtransplantation ofengineeredcells.-Skin, boneand neuronaltissues.

3.3 TransgenicAnimals:Methodsinvolvedintheproductionoftransgenicanimals,importance and applications of transgenic animals. Gene knock out and mice models fortacklinghuman diseases.

3.4 Animal cloning: methods of cloning and their importance with reference to domesticanimals.IVF-technologyforlivestock and humans.

UNIT-4.

4.1 Improvementofbiomass,diseaseresistant,recombinantvaccines forpoultry,livestock.

4.2 Pharmingproducts. Pharmaceutical products producedbymammalian cells.

4.3 Plasminogenactivator,erythropoietin,bloodclottingfactors,Glycoproteinhormones,interleukins,interferons,Cell culturebased vaccines.

4.4 Ethicalissuesrelatedtobiotechnologyproducts-Ecologicalrisksofengineeredmicroorganismsremedies.

Course Output:

1. Animal cell culture, culture medium, characteristics of cell in culture can be understood
2. Primary culture, established cell line culture, Measurement of viability and cytotoxicity , cell types and apoptosis can be learnt
3. Knowledge will be gained in scaling up of animal cell culture, cell transformation, tissue engineering, transgenic animals, animal cloning
4. Improvement of biomass, pharming products, plasminogen activator and ethical issues related to biotechnology products will be proficeint

DEPARTMENT OF MANAGEMENT STUDIES

Course

MASTER OF BUSINESS ADMINISTRATION (M.B.A)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-202

About the Department

Department of Management Studies which was started in 1983 has made its Vision, Mission and Objectives clear to primarily produce competent management professionals continuously over the years. These are:

Vision

To be a centre of excellence in the field of management education.

Mission

To produce globally competent and socially responsible managers, entrepreneurs, teachers and researchers.

MBA Program:

The MBA program is a student centric program with an objective of developing a career in diverse sectors of the industry domestically and globally. The MBA program not only facilitates learning in theory and practice of different functional areas of management but also equips the students with an integrated approach to various functions of management.

The curriculum is designed in a way that Faculty and Students will shift their focus from traditional methodology which excessively focuses on industry towards a broad based learning, encompassing the end to end processes involved in developing entrepreneurial skills looking at needs and demands of broader sections of the society.

Department Objectives

- To provide best learning experience in management education by extensive use of information and communication technology tools.
- To create management knowledge through path breaking research and disseminate it.
- To encourage entrepreneurial spirit and foster entrepreneurship.
- To infuse the basic values and transform people as good human beings.

CHOICE BASED CREDIT SYSTEM (CBCS)
REVISED REGULATIONS -2021-23

This new curriculum is based on the NEP, designed to prepare students for lifelong learning in both offline and online modes. This curriculum incorporates audit courses, functional courses, interdisciplinary electives, general electives, project works and skill oriented papers. The major aim of this programme is to prepare students as entrepreneurs and intrapreneurs, with startup culture.

1. GENERAL INFORMATION

- 'Credit' is concerned with the quantum of syllabus and workload assigned to a Particular course
- one credit = one lecture hour / week

Choice based credit system provides an opportunity to students to learn subject at their own pace registering for more or less than the desired number of courses to secure post graduation degree. It allows to experience inter disciplinary approach in learning.

(i) Programme – Course

- A programme consists of a number of courses
- A course is a paper of the programme
- A course may involve, Lectures / Tutorials / Lab Work / Seminars / Case Studies / Group Discussions / Role Playing / Project / Practical Training etc.
- The effort in the form of tutorials, lab work, seminar, case studies, group discussion, role playing, project and practical training, covering 100 marks is assigned with 4 credits.
- A course length is usually 15 lecture weeks
- Each course is given a code

(ii) Classification of courses:

The various courses offered to students are of three types:

(a) Core Course:

Core courses are those, knowledge of which is essential for students registered.
These courses are mandatory.
A core course may be a theory or practical paper.

(b) **Audit Course:**

The purpose of the audit course is to create awareness among students about some of the important topics which will enhance their life skills. The evaluation will only be internal without any external examination, and therefore no credits shall be awarded

for these courses. However, the students have to obtain pass marks (40%) in the internal evaluation. The grade sheet will show only pass / fail against these courses.

(c) **Online Course:**

The concerned department allows students to choose one or two online courses, during each semester, to acquire more knowledge. These credits are to be taken into account for awarding grades or class. Such courses should be in advanced areas of the subject, as specified in the course structure. The grading will be as per the procedure approved for the CBCS. For online courses only semester end examinations will be conducted, without any internal assessment. The courses marked as online in the course structure, shall be completed by the students by enrolling in approved online courses, and they shall submit the pass certificate(s) to forward them to the controller of examinations of the University. If the college / department with the competent teaching faculty, decides to offer the courses marked as "online" in offline mode, the students can opt to attend those classes. Such students should put in the minimum attendance, and need not enrol for online courses. However, the final exam will be for 100 marks, without internal assessment.

(d) **Elective**:

An elective allows students to gain knowledge in areas where the concerned subject has practical applications.

Internal Electives:

The department declares electives for its own students, out of which the desired electives are chosen by the students of parent department. These are called Internal Electives(IE).

External Electives / Open Electives:

A department declares electives for the students of other departments. These electives are taught out of college normal working hours. These are called External Electives / Open Electives.

The credits obtained are mandatory

Inter Disciplinary Electives:

The department declares some of the electives as Inter Disciplinary Electives which are offered to its own students together with students of other departments. This is in the light of NEP which envisages inter disciplinary learning from the students coming from different streams / programmes.

(iii) Semesters:

An academic year is constituted by two semesters.

- Odd semester covers the period August to December, fifteen weeks of which are lecture weeks.
- Even semester covers the period December to April, with fifteen lecture weeks.
- In each semester there are no preparatory holidays for semester end examinations, next semester follows immediately at the end of previous semester end examinations. Semester end examinations are on each working day without gap between two examinations.

2. Eligibility for admission into Two Year Degree of Master of Business Administration (M.B.A)

The candidates seeking admission into the MBA Programme should have Passed the Bachelor Degree Examination of a minimum of Three Years duration of this University or an examination recognized by this University as equivalent there to and besides to have passed in the prescribed entrance examination, and fulfil any other conditions as in vogue for admission into the M.B.A Degree programme.

3. For passing the MBA Degree examination, the candidate has to fulfill the conditions prescribed hereunder:

a) The Candidate has to undergo a course of study in the University College extending over a period of two academic years, each academic year consisting of two semesters and each semester consisting of 16 weeks duration including semester-end examinations.

b) The First Year comprises of two semesters and each semester contains eight common courses. The Second Year also has two semesters and each semester contains four common courses and four electives. Details of course structure and evaluation, are given in Annexure – I

4. Industrial Training and Project Work:

(i) Each student must undergo internship in any one of the reputed corporate industrial establishments for a period, not less than eight weeks but not more than 10 weeks in between II and III semesters.

(ii) Each student shall do the project work under the supervision of a faculty guide allotted to him/her. In the Organisation where the candidate undertakes project work, the student must have a supervising guide to look after the progress of work in the company. The student must maintain a diary during his/her stay in the company which will be submitted to the Head of the Department, after completion of the project.

(iii) The candidate must give joining report in the organization by producing a letter issued by the Head of the Department. On completion of the training, the candidate must take relieving certificate and a certificate for bona fide work, which are to be submitted to the Head of the Department.

(iv) The internship envisages submission of dissertation (Code No. 303 of III semester) which carries a maximum of 100 marks including 30 marks for sessionals. The dissertation shall be valued for 70 marks by an internal examiner and an external examiner separately. In the III semester, the candidate has to present one seminar on the topic for evaluation by the faculty.
(v) At the end of the third semester, Project VIVA-VOCE for 100 marks will be conducted by a panel of examiners consisting of an internal and external examiner respectively.

5. Medium of instruction is English Only.

6. Scheme of Examination:

There shall be four semester-end examinations spread over two academic years. Each course carries a maximum of 100 marks including 30 marks for sessionals. Duration of the semester-end examination is 3 hours for each paper of 70 or 100 marks. The sessional marks will be assigned on the basis of tests, quizzes, seminars, carry home assignments, etc., by the concerned teacher.

7. Attendance:

7.1 Regular course of study, in a semester, means a minimum average attendance of 75% in all the papers computed by totaling the number of periods of lectures, tutorials, practical and project as the case may be, held in every paper as the denominator and the total number of periods attended by the student in all papers, as the numerator.
7.2 However, a student has to put in a minimum attendance of 50% in each subject, in addition to the condition laid down in clause 7.1.
7.3 No consideration whatsoever in attendance will be shown to any student for late admission due to any reason.
7.4 Condonation of shortage of attendance may be recommended provided a student puts in at least 62.5% attendance, in all the papers put together as calculated in clause 7.1 above, along with a minimum of 50% attendance in each subject as stated in clause 7.2, and provided the Principal is satisfied with the reason for shortage of attendance.
7.5 A student who could not satisfy these requirements of attendance as given in clauses above, in any semester, shall have to repeat that semester.
7.6 A certificate of satisfactory attendance must be submitted by the student from the organization where he/she undertakes Project Work.
7.7 Further, a student is required to complete the course of study satisfying the attendance requirements in all the four Semesters, within a period of first Eight Semesters from the time of admission, failing which he/she shall forfeit his /her seat.
7.8 A student, who has satisfied the minimum attendance requirements in any semester, may repeat that semester after obtaining written permission from the Principal and cancelling the previous record of attendance and sessional marks of that semester. However, this facility may be availed by any student not more than twice during the entire course of study and the entire course of study shall be within the first Eight Semesters as stipulated in clause 7.7.

8. Promotion:

A candidate who has put in the required minimum attendance as stipulated in Clause No.7 and has registered for the semester-end University examination by paying the required examination fee is eligible for promotion to next semester. There shall be no detention of failed candidates or candidates who are absent for the semester-end University examination.

9. Evaluation:

There shall be both Internal and External evaluation for the semester-end examinations, including Project Report.

10. Qualifying Marks for Pass

a) i) A candidate appearing for the first time for the Examination of any Semester, has to register for the whole examinations of that Semester. A candidate shall be declared to have passed the whole or a part of the whole examination if he/she secures not less than 40% of marks in each theory paper/practical/project report in Semester-end University Examination and not less than 40% marks in Internal Assessment and Semester-end Examination put together.

ii) To pass, the candidate has to obtain a minimum of 40 marks out of 100 marks in Project VIVA-VOCE examination.

b) A candidate who fails to get pass marks for the Project report should submit the revised report along with the next batch of students.

c) A candidate, who fails and wish to appear for whole of theory examination of any semester may do so after cancelling the previous results of the theory examination of that semester. It is applicable only for semester -end examination.

(d) There shall be no supplementary examinations. The failed candidate shall be required to appear again for the examinations along with the regular candidates of next batch.

11. Classification of successful candidates:

The classification will be on the basis of the total grade points obtained by the candidate in all the semesters put together and will be classified as follows:

Marks and Grading:

(1) Weighted Average Marks:

$$WAM = \frac{\sum n_i m_i}{\sum n_i}$$

n_i : Number of credits for i^{th} course

m_i : Marks obtained in the ith course.

(2) Grade point average: GPA = 10^{-1} WAM

The percentage of marks obtained by a student in a course will be indicated by a grade point and a letter grade.

Marks	Grade Point	Letter	Class
70-100	7.0 – 10.0	O	Outstanding
65-69	6.5 – 6.9	A+	First
60-64	6.0 - 6.4	A	First
55-59	5.5 - 5.9	B+	Second
50-54	5.0 - 5.4	B	Second
40-49	4.0 - 4.9	C	Third
00-39	0.0 - 3.9	F	Fail

3) **Overall weighted percentage of Marks (OWPM):**

$$OWPM = \frac{\sum_i \sum_k n_{ik} m_{ik}}{\sum_i \sum_k n_{ik}}$$; m_{ik} = marks obtained in i^{th} course of kth semester

4) **Cumulative grade point average (CGPA) :CGPA = 10^{-1} OWPM**

i) A candidate who secures 70% and above in the total aggregate marks, will be placed in OUTSTANDING (O).

ii) A candidate who secures 65% and above but less than 70% of marks in the total aggregate, will be placed in FIRST (A^+).

iii) A candidate who secures 60% and above but less than 65% of total aggregate will be placed in FIRST (A).

iv) A candidate who secures 55% and above but less than 60% of total aggregate will be placed in SECOND (B^+).

v) A candidate who secures 50% and above but less than 55% of total aggregate will be placed in SECOND (B).

vi) A candidate who secures 40% of marks in each Course with an overall aggregate of 40% or above and above but less than 50% of total aggregate will be placed in THIRD (C).

NOTE: Marks and Gradation Certificates shall be issued by the Controller of Examinations as prescribed in this Regulations for each Semester.

12. Award of Ranks:

Candidates who passed the examinations of all the Four Semesters for the degree at the first appearance in all Four Semesters shall be ranked in order of merit. The candidates who have taken supplementary examinations shall also be eligible for classification but they shall not be considered for the award of rank. Ranks shall be awarded for the top three students or 10% of the total strength of the students appeared for the Four Semester end examinations.

13. Improvement:

The candidates are permitted to improve their marks/class by taking Semester-end examinations in one or more papers after two years of their regular study as per the existing regulations and syllabi.

Note: The candidates shall be permitted to improve their marks within a period of **four years** from the date of admission into First Semester.

14. Transitory Provision:

a). For candidates who studied the M.B.A. Degree Course under previous regulations and syllabus, and who could not pass some or all the courses (papers) shall be permitted to take examinations under old regulations and syllabus for three more times after the last regular examinations of the concerned subject (s).

b) Candidates who satisfied the minimum attendance requirements in any semester under Old Regulations, but who are yet to pass some papers even after three chances as stated in 14.(a), shall appear for the equivalent papers under Revised Regulations, as specified by the Chairman of the Board of Studies.

15. The university shall have the right to amend or modify or revise any of the above regulations whenever necessary.

PROGRAM SPECIFIC OUTCOMES (PSOs)

- To imbibe the students with requisite domain knowledge, skills & right attitude necessary to provide effective leadership in a global environment.
- To develop competent management professionals with strong ethical values, capable of assuming a pivotal role in various sectors of the Economy & Society.
- To inculcate proactive thinking to ensure effective performance in the dynamic socio-economic and business ecosystem.

PROGRAM OBJECTIVES (POs)

- To equip the students with requisite knowledge, skills & right attitude necessary to provide effective leadership in a global environment.
- To analyze and synthesize information across disciplines/functions in order to evaluate business opportunities and make sound business decisions.
- To evaluate business environment and opportunities and devise strategies for responding effectively to problems, threats, and opportunities.
- To summarize and apply theories of team composition, process, and motivation (including inclusivity and diversity) to effectively manage work teams.
- To lead themselves and others in the achievement of organizational goals, contributing effectively to a team environment.
- To foster analytical and critical thinking abilities for data-based decision making.
- To harness entrepreneurial approach and skill sets.
- To make them utilize qualitative and quantitative methods to investigate and solve critical business problems.
- To integrate tools and concepts from multiple functional areas (i.e. finance, marketing, operations, etc.) to solve business problems.
- To develop competent management professionals with strong ethical values, capable of assuming a pivotal role in various sectors of the Indian Economy & Society, aligned with the national priorities.
- To recognize the need and adopt the knowledge of contemporary issues, and also to engage in life-long learning.
- To help organizations adapt in the emerging business landscape.
- Ability to develop value based leadership approach

PROGRAMME OUTCOMES:

After successful completion of the two year Post –Graduate Programme in Management, the student would be able to:

- **PO.1 : Experiential Learning**

  Bring in the experiential learning acquired through Role Play, Business Games, Industrial Visits, Internships etc., to analyse a given situation and take right decisions.

- **PO.2 : Innovative Thinking**

  Use out of the box thinking to figure out different kind of solutions to either address problems or capitalise on the opportunities that exist from time to time.

- **PO.3 : Strategic Planning**

  Evaluate both macro and micro environment using different tools and techniques to make different strategic plans to achieve the organisational goals and objectives.

- **PO.4 : Professionalism**

  Display a great deal of professionalism in all their dealings with wide variety of stakeholders and also exhibit the same in their work planning and execution.

- **PO.5 : Research Competence**

  Carry out research in different situations to unearth the causes and solutions to pressing issues and challenges quite effectively.

- **PO.6 : Social Responsibility**

  Analyse the impact of the business decisions on various stakeholders and go for the right choices to protect the interests of each one of them.

- **PO.7 : Moral Responsibility**

  Demonstrate ethical and moral values acquired during the course of the study to good effect.

- **PO.8 : Soft Skills**

  Use different soft skills quite appropriately to strengthen the relations with people they interact with and build effective networks.

- **PO. 9 : Cross Cultural Outlook**

Blend well with people from different regions of the world by understanding their culture and acting accordingly to foster meaningful relationships.

- **PO.10: Leadership**

  Display the right leadership based on the situation to maximise the benefits for the organisations they work for.

- **PO.11: Teamwork**

  Mingle well with the other members of the team and work effectively for the accomplishment of the team goals.

- **PO.12: Management Knowledge**

  Use all the concepts learned in an appropriate manner in different situations to function well and create an impact.

PROGRAMME EDUCATIONAL OBJECTIVES:

The following are the basic educational objectives of the two year management programme.

- **PEO 01:** To prepare the students well with all the management related conceptual learning to have a good career.

- **PEO 02:** To provide the required exposure to understand different tools and techniques of management to find need based solutions.

- **PEO 03:** To allow them to organize both co-curricular and extracurricular activities to develop the holistic personality.

- **PEO 04:** To provide good number of opportunities to inculcate creativity and innovation in the work place.

- **PEO 05:** To produce graduates who are industry ready to serve the needs of the business from the beginning of their career.

- **PEO 06:** To ensure that the students have professional, personal and institutional integrity and set themselves as the shining examples.

- **PEO 07:** To make them good at social responsibility and continuous learning.

- **PEO 08:** To foster collaborations with industry, academic institutions and other organizations for the all round development of students.

- **PEO 09:** To develop an entrepreneurial mindset and hone the skills accordingly to come out with start ups and become an employer.

ANNEXURE – I
Semester – I

Code No.	Title of the Paper	Components of Study Core/ Elective	No of credits	Sessional Marks	Semester End Marks	Exam Duration	Maximum Marks

Semester – I

101 – Management and Organizational Behaviour

Objectives:

1. Provide conceptual understanding of management concepts
2. Familiarize the students with the contemporary issues in Organization Behaviour
3. Enable them to apply the concepts in the management organizations

Unit – I

Introduction to Management – Principles of Management – Functions of management – Decision making process - Social responsibility of Management – Fundamentals of Planning, Organising, Staffing, Leading, and Controlling.

Unit – II

Introduction to OB – Learning – Personality Theories– Perception – Learning Process, and Theories – Values & Attitudes.

Unit – III

Motivation Theories – Managing Motivation in Small and large organizations – Effective Groups & Teams – Leadership Theories, Styles – Group Dynamics – Power, Politics, and Conflict – Resolving Conflicts.

Unit – IV

Organization Culture & Climate– Organizational Ethos – Functionality of Culture – Process and implementation of Change – Managing Resistance to Change - Organization Structure and Communication

Unit – V

Organizational Development – Phases and Interventions of OD – Johari Window – Transactional Analysis- Managerial Interpersonal Styles - Managing Stress & Burnout.

Course Outcomes: The Student is able to

CO1 : Examine the Management concepts and functions.
CO2 : Apply the concepts of delegation of authority, decentralisation and departmentation in real life situations.
CO3 : Discuss the organizational behaviour and climate.
CO4 : Evaluate the basic concepts of organizational conflicts and climate

References:

1. Fred Luthans**: Organization Behaviour (**McGraw Hill)

2. Stephen P Robbins**: Organization Behaviour** (Pearson)
3. Weihrich, Cannice & Koontz**: Management** (Tata McGraw Hill)
4. Robin Finchan and Peter Rhodes**: Organizational Behaviour** (Oxford)
5. Nelson, Quick. **ORGB with MindTap** (Cengage MindTap)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

102 – Managerial Communication

Objectives:
1. To make the students aware of their communication skills and gaps.
2. To help students acquire needed skills to handle corporate communication.

Unit – I

Communication – Meaning – Communication cycle – Process – Theories and Models of communication – Characteristics of Successful Communication – Barriers to communication**.**

Unit – II

Oral communication, Importance – Business Presentations, and Public Speaking – Conducting Meetings – Group Discussions & team Presentations - Types of Interviews – Preparing for Interviews – Telephone Talks -.

Unit – III

Written Comunication – Importance – Reading & Writing Skills – Speed Reading- Business Letters, Reports, and Proposals – Circulars, Minutes, Memos & Notices – Email - – Memory – Resume Building – Employment Messages
.

Unit – IV

Non-Verbal Communication – Significance, Types – Effective Listening -Transactional Analysis - Time Management

Unit – V

Corporate communication – Ethics in Communication - Intercultural Communication -– Group communication – Business Etiquette – Communication styles - Communication technology

Course Outcomes: The Student is able to
CO1 : Apply the basic concepts of communication for business correspondence.
CO2 : Distinguish different forms of communication.
CO3: Adapt report writing skills of different types.
CO4: Acquire presentation skills along with the interview techniques.

References:
1. Shirley Taylor **:Communication for Business** (Pearson)
2. Piyush Dhar Chaturvedi and Mukesh Chaturvedi **: Business Communication** (Pearson)
3. Lehman, Dufrene. BCOM with MindTap (Cengage MindTap)
4. M. Ashraf Rizvi **: Effective Technical Communication** (McGraw Hill)

5. Courtland L. Bovee, John V. Hill, Roshan Lal Raina: **Business Communication Today** (Pearson)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

103 – Managerial Economics

Objectives:
1. Provide a basic foundation on concepts and principles of Macro Economics, Micro Economics and managerial economics.
2. Demonstrate the application of economic theory to business decision-making.

Unit – I

Nature and scope of Managerial economics-Objectives of the firm - profit maximisation - sales maximisation - satisfying and optimising firms.

Unit – II

Demand analysis: Theory of demand- demand function- Price, income, promotion, and cross elasticity of demand - Forecasting- sources of data-survey methods-statistical methods.

Unit – III

Cost analysis: Production function - returns to scale-cost concepts cost curves - break even analysis - profit forecasting-make or buy decisions. Cost behaviour in short and long terms. Learning curve. Supply function

Unit – IV

Pricing decisions: Objectives- Basic factors in Pricing-pricing under perfect, monopoly, oligopoly, and monopolistic competition-discriminatory pricing-multiple product pricing-price control by government - pricing of new products – pricing practices.

Unit – V

National Income – Estimation and projection of GDP – Sectors in Indian Economy - Business cycles – Response of firms to business cycles – Economic Policy of Government of India

Course Outcomes: The Student is able to
CO1 : Describe the importance of managerial economics and its contribution to decision making in different types of business organizations.
CO2 : Apply the basic principles of managerial economics.
CO3: Apply demand analysis concept in the real life business situations.
CO4: Discuss the meaning and usefulness of the production function and cost function in analysing the firm's production activity.

References:
1. H.Criag Peterson,W.Cris Lewis **:Managerial Economics** (Pearson)
2. Paul G.Keat and Philit Y.Yound**: Managerial Economics** (Pearson)
3. D.M.Mithani**: Managerial Economics** (Himalaya)

4. Suma Damodaran**: Managerial Economics** (Oxford)
5. D.N. Dwivedi**: Managerial Economics** (Vikas)
6. P.L.Mehta**: Managerial Economics** (Sultan Chand)
7. Samuel C. Wabb**: Managerial Economics** (Cengage)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

104 – Accounting for Managers

Objectives:
1. To acquaint the students with the fundamental principles of financial, cost and management accounting.
2. To enable the students to prepare, analyse and interpret financial statements.
3. To enable the students to take decisions using management accounting tools.

Unit – I

Accounting principles: Concepts functions, book keeping, Double entry system, accounting standards, functions of accounting standards, journal, ledger, posting, rules regarding posting, trail balance, final accounts – Trading accounts, profit and loss accounts, balance sheet, adjustments. (Problems & Cases)

Unit – II

Depreciation Accounting: concept of depreciation, causes of depreciation, depreciation accounting, fixation of depreciation amount, methods of depreciation – depletion method, machine hour-rate method, written down value method, accelerated method, sinking fund method. (Problems & Cases)

Unit – III

Budgets and Budgeting control: Objectives, characteristics and essentials of budgetary control, classification of budgets – production budget, sales budget, cash budget, flexible budget, and master budget. (Problems & Cases)

Unit – IV

Computer applications in business: Role of computer in accounting, accounting information systems, software package for accounting, tally. (Theory and Lab) (No Problem)

Unit – V

Emerging concepts in accounting: Human resource accounting, inflation accounting, responsibility accounting and government accounting. IFRS. (No Problem)

Course Outcomes: The Student is able to
CO1 : Outline the basic knowledge of accounting, book keeping and accounting Principles.
CO2 : Identify the nature of expenditure and revenue for preparation of financial statements of business.
CO3 : Examine the role of accounting policies like depreciation.
CO4 : Apply financial analysis techniques for the assessment of financial performance of companies.

4. T. Horngren Charles, L. Sundern Gary, A. Elliott John, R. Philbrick Danna "**Introduction to Financial Accounting**" (Pearson)
5. N Ramachandran, Ram Kumar Kakani "**Financial Accounting For Management**" (McGrawHill)
6. Jelsy Joseph Kuppapally, **"Accounting for Managers"** (PHI)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

105 – Quantitative Analysis for Management Decisions

Objectives:
1. To acquaint the students with important quantitative tools for business decisions.
2. To expose students to the concepts like game theory.

Unit – I

Introduction to Quantitative Techniques. Functions and its applications to business, limits of function and continuity.

Unit – II

Concept of derivative, Techniques of Differentiation, Maxima and Minima, Integration and its applications in managerial decisions.

Unit – III

Progressions: Arithmetic and Geometric progressions and their applications. Annuities and Present values.

Unit – IV

Vectors and Matrices,: Geometrical and physical interpretation of vectors, Introduction to Matrices Multiplication of Matrices, Inverse of a Matrix, Rank of a Matrix and Matrix applications in management.

Unit – V

Gamification: Games- Characteristics, theory and Rules, Game Elements- Two-person zero-sum games, Methods with and without saddle point, Dominance rule and mixed strategies.

Course Outcomes: The Student is able to
CO1 : decide using game theory
CO2 : understand the payoffs of available annuity products
CO3 : use Matrices for Managerial Decisions.

References:

1. C.R.kothari **: Quantitative Techniques,** (Vikas)
2. David R. Anderson **: Quantitative Methods for Business,** (Thomson learning)
3. N D Vohra **: Quantitative Techniques for Management,** (McGraw Hill)
4. Werbach : For the Win (Wharton Digital Press) E- Book
5. P K Gupata, D S Hira**, Operation research, S. Chand publishing.**

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

106 – Business Statistics

Objective:
To expose students to basic statistics and probability for effective decisions

Unit – I

Introduction to Statistics – Meaning, Application of Statistics in Business and Limitations of Statistics. Data – Data Sources, Data Classification and Data Presentation (Tables and Graphs). Data Analysis – Measures of Central Tendency, Measures of Dispersion.

Unit – II

Correlation analysis – Meaning, Types of Correlation, Scatter Diagram, Karl Pearson and Spearman Rank Correlation., Coefficient of Determination. Regression analysis – Meaning, Regression Coefficients and properties, Simple and Multiple Regression.

Unit – III

Time Series Analysis – Introduction to time series, Components of time series, Methods of Trend Analysis. Index Numbers - Meaning, Types of Index Numbers, Construction of price, quantity and volume index, consumer price index.

Unit – IV

Probability – Meaning and concept, Addition theorem, Multiplication theorem, Bayes' theorem. Probability theoretical distributions – Binomial, Poisson and Normal. Sampling Theory – Complete enumeration vs Sample survey, Determination of Sample size, Sampling techniques, Sampling distributions of statistics.

Unit – V

Testing of Hypothesis – Basic concepts, testing procedure. Parametric tests – z test, ttest, one way and two way ANOVA. Non Parametric tests – Chi square analysis, Sign test, Median test, Wilcoxon test, Kolmogorov Smirnov test, Mann – Whitney U test and Kruskal Wallis test.

Course Outcomes: The Student is able to
CO1 : understand the business problems.
CO2 : decide on appropriate statistical tools.
CO3 : interpret the statistical tests.

References:
1. Richard I. Levin & David S. Rubin: **STATISTICS FOR MANAGEMENT,**
(Pearson Education)

2. David R. Anderson, Dennis J. Sweeney, Thomas A. Williams, Jeffrey D. Camm, James J. Cochran "**Statistics for Business & Economics**" (Cengage)
3. S.P. Gupta & M.P. Gupta: **BUSINESS STATISTICS,** (Sultan Chand)
4. Beri, G.C: **BUSINESS STATISTICS, (**Tata McGraw Hill)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

107 – Modelling with Excel (Online)

Objectives:
1. Understand the basics of modelling for business decisions
2. Learn financial functions using Excel
3. Acquaint with Excel for business decisions

Unit – I

Introduction to Modelling – Types and purposes of business models – Rules for model design –Model layout flow charting – Steps to building a model – Best practice principles of modelling – Documentation – Preparing and presentation of Model results – Model review – Auditing a Model

Unit – II

Excel functions – Importing and exporting data – Financial functions (PV, FV Rate, NPER, IRR, NPV, MIRR, XNPV, XIRR, effect, nominal, Price) – Lookup and reference functions (Choose, Offset, Match, Indirect, Look up) – Statistical functions – Date and Time functions – Whatif functions Goal Seek, Solver - Pivot Table – Data Analysis – Conditional formatting – Array Formulas - Dynamic named ranges - Working with Charts – Creating dynamic charts

Unit – III

Financial Analysis Techniques - Ratio analysis, Du point Analysis – Cash budgeting – Master budgeting - Break-even analysis – Profit planning - Loan amortization - Capital Budgeting Decisions – Sensitivity analysis – Scenario Analysis with Scenario Manager – Computing rates of returns, averages and variances of financial data.

Unit – IV

Estimating demand curves – revenue management – Computing marketing metrics – Take rate, Churn, Customer satisfaction – customer life time value – cost per click – Transaction conversion rate – bounce rate

Unit – V

Forecasting – time series and exponential smoothing – purchase order processing – production order quantity model – acceptance sampling – material requirement planning – Quality control charts – Lot sizing methods – Project management

Course Outcomes: The Student is able to
CO1 : use excel for financial modelling.
CO2 : apply excel financial functions for analysis and decisions.
CO3 : use excel for production and marketing decisions.

References:
1. **Data-Driven Marketing: The 15 Metrics Everyone in Marketing Should Know** by Mark Jeffery
2. **Excel Models for Business and Operations Management** by John Barlow

3. **Using Excel for Business Analysis: A Guide to Financial Modelling Fundamentals** by Danielle Stein Fairhurst
4. **Analyzing Business Data with Excel: Forecasting, Statistics, and Data Management** by Gerald Knight
5. **Mastering Financial Modelling in Microsoft Excel: A Practitioner's Guide to Applied Corporate Finance** by Alistar Day

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

108 – Human Values and Professional Ethics

Objectives:
1. To provide a comprehensive understanding of the Nature and Importance of Ethical principles.
2. To enable the student in applying these Ethical principles in the Business practices.

Unit – I

Definition and Nature of Ethics- Its relation to Business, and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions-Ethical theories about right action

Unit – II

Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders- moral development theories

Unit – III

Value education-definition and its relevance to present days- Concept of human values- self introspection-self esteem–family values-components-structure-and responsibilities of family-neutralization of anger- adjustability-threats of family life-Time allotment for sharing ideas and concerns.

Unit – IV

Business ethics- Ethical standards of business- Immoral and illegal practices and their solutions- characteristics of ethical problems in management- causes of unethical behavior-ethical abuses and work ethics

Unit – V

Environmental and social ethics: ethical theory, man and nature, ecological crisis issues related pollution, waste, climate change, energy and population, social issues –human rights violation and social disparities

Course Outcomes: The Student is able to
CO1: find the need for Ethical practices in building a healthy Socio-economic Environment.
CO2: apply the Ethical principles in the Business practices.

References:
1. R. S. Naagarazan -**A TEXT BOOK ON PROFESSIONAL ETHICS AND HUMAN VALUES**- -New age International (p) Ltd.

3. R. R. Gran, R. Sangal, G. P. Bagania -**FOUNDATION COURSE IN HUMAN VALUES & PROFESSIONAL ETHICS**
4. Jayshree Suresh, B.S. Raghavan- **HUMAN VALUES AND PROFESSIONAL ETHICS**

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

Semester – II

201 – Marketing Management

Objectives:
1. To provide a basic understanding of the Marketing Concepts.
2. To understand the Marketing concepts and the Marketing Strategies.

Unit – I

Definition, importance and scope of Marketing - Company orientation towards Marketing - Core Concepts of marketing – Marketing Management Tasks – Indian Marketing Environment: Demographic, Economic, Socio-Cultural, Politico-Legal and Technological Environment – Marketing and Customer Value - Corporate Strategic Planning – Marketing Research Process – Forecasting and Demand Measurement – Consumer Behavior – Market Segmentation – Market Targeting – Brand Positioning.

Unit – II

Product strategy: - product concept – product characteristics and classifications – differentiation – Product and brand relationships – packaging, labelling, warranties and guarantees.- product life cycle and marketing strategies- new product development process– branding- brand equity - trademark.-significance of marketing of services.

Unit – III

Pricing strategy: - setting the price –adapting the price - initiating and responding to price changes. Distribution strategy: - designing and managing channels- managing retailing, wholesaling and logistics.

Unit – IV

Promotional strategy – designing and managing integrated marketing communications - managing mass communications and personal communications.

Unit – V

Introducing New Market Offerings - Managing a holistic marketing organization – marketing implementation, evaluation and control- marketing audit.

Course Outcomes: The Student is able to
CO1 : Create the segmentation, targeting and positioning in marketing.
CO2: Analyse various phases of product life cycle.
CO3: Evaluate various methods of pricing and identify the best pricing strategy.
CO4: Evaluate marketing communication strategies.

4. Mohr Slater "**Marketing of High-Technology Products and Innovations**" (Pearson)
5. Philip Kotler, Hermawan Kartajaya, Iwan Setiawan "**Marketing 4.0: Moving from Traditional to Digital**" (Wiley)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

202 – Human Resources Management

Objectives:
1. This subject provides the platform to the students of management to appreciate the critical managerial functions, processes and tasks of HRM in an organization.
2. To become sensitive to the HR Management Processes and to adopt conceptual learning to real-life situations.
3. To appreciate the methods and mechanics to bring out the best in people.

Unit – I

Human Resource Management – Significance and Scope – Objectives and Functions – Labour Codes – Employment Laws

Unit – II

Job Analysis: Job Description – Job Specification – Job Evaluation- Human Resource Planning - Human Resource Information System

Unit – III

Recruitment: Objectives – Sources - Selection: Objectives – Selection Procedure – Selection Tests -Induction and Placement – Performance Appraisal: Objectives – Methods – Constraints – Compensation & Retention Plans - Employee Benefits

Unit – IV

Training and Development: Objectives – Training Needs Assessment – Types of Training – Designing Training Programmes - Evaluation of Training - Career Planning and Development

Unit – V
Contemporary Issues in HRM: Knowledge Management – Work life balance – Ethics in HRM - Technology and HRM – Human Resource Audit – Quality Management and HRM

Course Outcomes: The Student is able to
CO1 : Apply different concepts of HR Planning, Recruitment, Selection, Training, Interviewing Techniques and Executive Development Programs.
CO2 : Apply job analysis, job description, job specification, ergonomics in industry and the methods of job evaluation.
CO3 : Utilize the various methods of performance appraisal.
CO4 : Develop a good compensation policy.
CO5 : Address Grievance Handling Procedures, Industrial Disputes Resolution Mechanisms and stress management at work place.

References:
1. Aswathappa. K – “Human Resource Management” (Tata McGraw Hill)

2. David A. Decenzo and Stephen P. Robbins – "Personnel: Human Resource Management" (Prentice Hall of India)
3. Garry Dessler – "Human Resource Management" (Pearson Education)
4. Uday Pareek, T.V. Rao – "Designing And Managing Human Resource Systems" (Oxford & IBH)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

203 – Financial Management

Objectives:
1. To know the various sources of finance.
2. To understand the objectives of firms and their influence on decisions.
3. To familiarize oneself with the techniques used in financial management.

Unit – I

Goal of Financial Management – Fundamental Principles – Time value of money – Discounting, compounding - Risk-return trade off- Finance Function-Financial Decisions. Financial markets -intermediaries.

Unit – II

Financial Statement Analysis: Analysis of Balance Sheet; Profit & Loss Account, Ratio analysis, common size analysis, cash flow statement, operating, financial, and combined leverage.

Unit – III

Cost of Capital - Cost of debt, cost of equity– dividend capitalization, CAPM - cost of preference shares -weighted average and multiple costs of capital – valuation of bonds and shares. Capital structure planning – EBIT – EPS analysis (Numerical Problems), risks of financial leverage – margin of safety, interest and debt service. Long term sources of Finance - venture capital.

Unit – IV

Capital Budgeting - Cash flows - traditional methods, discounted cash flow methods, risk analysis, real options – leasing – Hire Purchase

Unit – V
Dividend Decisions, influencing factors, forms and special dividends. Walter, Gordon and MM models (Numerical Problems) Linter's model dividend practices in India. Buy back of shares, taxation of dividends and capital gains. Working capital Management: Operating cycle estimation , cash, inventory and receivables management

Course Outcomes: The Student is able to
CO1 : apply various methods of Investment Analysis and techniques of capital budgeting.
CO2 : adapt the concepts of leverage, capital structure and its effect on the long term survival of the firm.
CO3 : appraise various methods to compute cost of capital.
CO4 : able to take dividend decisions.
CO5 : assess the working capital requirement of a firm.

6. Brealey Myers**: Principles of Corporate Finance** (Tata McGraw Hill)
7. Berk – "Financial Management" (Pearson)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

204 – Production Management

Objective:

To acquaint the students with the steps and working of production planning and control in manufacturing and service organisations.

Unit – I

Role and Relevance of Production Management – Concepts of Productivity – Production Systems – Work Study: Method study and Work Measurement.

Unit – II

Plant location. Plant layout- Classification and merits. Plant Maintenance methods – Break Down, Preventive and Predictive maintenance. Replacement Policies – Unit and Group replacement policies.

Unit – III

Production planning and control: Processes in PPC. Job shop and Flow shop scheduling- Johnson's Rule- Line Balancing. Quality Control: Control Charts and Acceptance Sampling.

Unit – IV

Materials Management – Concepts – Classification of Inventory, Inventory Control Methods, Stores Management and Deterministic Inventory Models.

Unit – V

Project Management: Concepts of project Management, CPM, PERT and Project Network Crashing and Cost analysis, Applications of Network techniques.

Course Outcomes: The Student is able to
CO1 : Apply the basic concepts of production and operations management and identify types of manufacturing processes.
CO2 : Define and explain concept of production planning and control.
CO3 : Evaluate purchasing function and inventory management function.
CO4 : Develop the quality control system and quality control strategies.

6. Kanishka Bedi: **Production and Operations Management (OXFORD)**
7. P K Gupata, D S Hira**, Operation research, S. Chand publishing.**

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

205 – Business Research Methods

Objectives:
1. To enable the students to know about the information needs of Management.
2. To introduce the concept of Scientific Research and the methods of conducting Scientific Enquiry.
3. To introduce the Statistical Tools of Data Analysis

Unit – I

Nature and Scope of business research- Research process- Defining the research Problem and setting the objectives- Preparing research proposal-Review of literature.

Unit – II

Research Designs: Exploratory Research Design and Qualitative Studies-Focus groups - Descriptive Research Design- Panel Research –Experimental Research Designs.

Unit – III

Data sources: Secondary Vs Primary – Secondary data collection procedures- Primary Data Collection methods: Survey methods-Observational Studies.

Unit – IV

Sampling Designs: Probability and Non-probability sampling methods and Sample Size determination-Attitude Measurement and Measurement Scales.

Unit – V
Preliminary steps of data analysis: editing, coding and tabulation- Hypothesis testing – Tests of Significance for small and large samples- t-test, z-test, chi-square test, ANOVA: one-way, two-way - Presenting Results: Written and Oral Reports

Course Outcomes: The Student is able to
CO1 : Adapt the fundamentals of Business research methodology.
CO2 : Identify research problem and design data collection techniques.
CO3: Apply sample and census survey and measuring techniques.
CO4: Develop data processing procedures, apply tools and draft report.

References:
1. Donald R.Cooper and Pamela S.Schindler**: Business Research Methods** (Tata McGraw Hill)
2. Zikmund, Babin, Carr, Griffin**: Business Research Methods .** (Cengage).
3. Naval Bajpai: **Business Research Methods** (Pearson).

NOTE TO THE PAPER SETTER:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

206 – Operations Research

Objectives:
1. Learn Linear Programming for optimisation problems.
2. Understand techniques for optimum transportation and queuing solution.

Unit – I

Introduction to OR: linear Programming – Model formulation, Graphical method, and Simplex method. Linear programming using the Excel Solver

Unit – II

Transportation problem Degeneracy – Transhipment model – Assignment model – Hungarian method, Salesmanship method, Maximization of Profit, Cost minimization.

Unit – III

Dynamic programming – Features, Structure and Applications. Dynamic programming approach, LPP by Dynamic programming.

UNIT –IV

Goal Programming: Concept, Application areas, model formulation. Modified simplex method.

Unit – V

Queuing model (M / M / I ONLY): Components, basic Structure Assumptions, waiting line decision problem – Simulation – Its application.

Course Outcomes: The Student is able to
1. use the methods to solve Linear Programming Problems
2. solve transportation problem with minimum cost of transportation of commodities
3. develop a realistic schedule and monitor the progress of the project.

4. Taha H.A**: Operations Research** (Pearson)
5. Anand Sharma **: Operations Research** (Himalaya)
6. P K Gupata, D S Hira**, Operation research, S. Chand publishing.**

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units

of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

207 – Management Information Systems (Online)

Objectives:
1. To introduce the concepts of different business systems.
2. To focus on different components of information systems and to plan, design and develop such systems.
3. To understand the various functional information systems.

Unit – I

Information and systems concepts. Types of Information systems on organizations. Decision making process – Individual vs. Organizational models. Managing Hardware, Software and Data Resources. I.T. Infrastructure for the organization and Digital Firm.

Unit – II

MIS Design: Importance of MIS Design, Approaches for the MIS design: Traditional and Modern Approaches. MIS Growth Model.

Unit – III

Management support systems: Decision support systems, Concepts of Data mining, Data warehousing and OLAP. Types, components - Data mining, Data warehousing and OLAP, Expert systems- components.

Unit – IV

Functional Information Systems: Marketing, Manufacturing, Financial and Human resource Information Systems- Characteristics, benefits and applications

Unit – V

Information Systems Security and Control: Vulnerability and Abuse, Security and Systems Audit. Cyber security.

Course Outcomes: The Student is able to
1. distinguish various types of information systems.
2. analyse functional information needs and systems.

References:
1. Kenneth C. Lauadon and Jane. P. Lauadon **: Management Information Systems** (Pearson Education)
2. James A O 'Brien **: Management Information Systems** (Tata McGraw Hill)
3. Murthy CSV **: Management Information Systems** (Himalaya)
   Giridhar Joshi**: Management Information Systems** (Oxford)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

208 – Leadership Values and Styles

Objectives:

1. To provide an understanding of the concepts of Leadership Values.
2. To apply these principles in Team building and Customer/Supplier Relationships Management.

Unit – I

Concept and Significance of Value based Leadership –Shared Vision – Value based Culture – Right and Wrong Values – Terminal and Instrumental Values.

Unit – II

The four principles of Value Based Leadership: i) Self Reflection- Understanding Self Reflection, ii) Balance and Perspective –Doing the Right Things Rather Than Being Right, iii) True Self Confidence – Building Confidence and Competence, iv) Genuine Humility – Recognizing the Value of Everyone.

Unit – III

Creating a Best Team from Scratch – Turning around at team – Making a right investment in the Talent – Communicating Clearly and Broadly – Motivation and Team Engagement.

Unit – IV

Leading Change – The Corporate Rushmoreans – Leading Change Effectively and Morally – The Fallacy of Tough Leadership – Democratic Leadership – Transformational Leadership.

Unit – V

Building a Holistic Relationship with Suppliers – Building Best Partner Relationship with Customers –Creating Value to Shareholders – Socially Responsible Leadership –Leaving the Global Footprint.

Course Outcomes: The Student is able to

CO1 : Identify the leadership qualities to run an organization successfully.
CO2 : Develop the organisational structures in decision making.
CO3 : Analyse the interpersonal behaviour and barriers of communication in leadership styles.
CO4 : identify team building resources.

References:

1. Peter G. Northhouse – “Leadership: Theory and Practice” (Sage)

3. John C. Maxwell – “The 21 Irrefutable Laws of Leadership” (Harper Collins)
4. Jocko Willink – “The Dichotomy of Leadership” (St. Martin’s Press)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

Semester – III

301 – Business Environment

Objectives:
1. To enable students understand the opportunities and challenges of prevailing and desirable global business environment in which business has to operate.
2. Provide an understanding of the role of business in society.
3. To enable students read, research and discuss the issues through written papers, presentations, industrial visits and role plays in class seminars.

Unit – I

Theoretical Framework of Business Environment: Concept, significance and nature of business environment. Elements of environment- Internal and External; Changing dimensions of business environment, Techniques of environmental scanning and monitoring.

Unit – II

Planning in India: Emergence of Planning, NITI Ayog, National Development Council. Economic Environment of Business: Significance and elements of economic environment, Economic Trends: Savings and Investment, Industry, Growth of Infrastructure Balance of Payment. Incentives for Make in India, PLI Scheme, Ease of doing business.

Unit – III

Problems of Growth: Unemployment, Inflation, Regional imbalances and Social Injustice. Government Policies- Industrial policy, Fiscal and Monetary policies, EXIM policy; SEZ policy, LPG 1991, Direct and Indirect Taxes with special reference to GST and VAT.

Unit – IV

Political and Legal Environment of Business: Changing dimensions of legal environment in India, Brief introduction to Competition Act, 2005, FEMA, Corporate Governance and Social Responsibility of Business

Unit – V

Foreign Investment: FDI, FII, Determinants of Foreign Investment, Multinational Corporations: Favourable and Harmful effect of the operations of MNCs on Indian economy, Liberalization and MNC's.International Business Environment: World bank, IMF, General agreement on Tariff and trade. : the WTO agreement, TRIPS, TRIMS, Non-tariff barriers and Dispute settlement mechanism, Kyoto Protocol, FTAs

Course Outcomes: The Student is able to
CO1 : analyze the structure of Indian economy.

CO2 : discuss the components of fiscal policy and balance of payments.
CO3 : evaluate different trade related policies.
CO4 : comply with acts like Competition Act, RTP and RTI.
CO5 : plan for ESG

2. Essentials of Strategic Management – Wheelen & Hunger, Pearson, 2018
3. Strategic Management and Business Policy: Globalization, Innovation and Sustainability. Wheelan, Hunger, Hoffman, Bamford. Pearson.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

302 – Entrepreneurship

Objectives:
1. Providing Entrepreneurial knowledge base
2. Sensitise about the basic functional knowledge needs for entrepreneurs.
3. Encourage and prepare the students to be entrepreneurs.

Unit – I

Entrepreneurship: meaning, importance of entrepreneurship, concepts, Characteristics, classifications of entrepreneurship, problems faced by entrepreneurs in India. Entrepreneur v/s intrapreneur, entrepreneurial models, Legal issues for Entrepreneur: Intellectual property rights: Copyrights, Trademarks, Trade secrets, Patents.

Unit – II

Women Entrepreneurs, working environment, challenges in the path of women entrepreneurs, empowerment, Grassroots entrepreneurs through self help groups (SHG). Building the business plan- Feasibility study: Setting up of Small business enterprises,

Unit – III

Financial Considerations: Basic financial statements, Managing Cash Flows, Preparation of projected financial statements, Applications of Business ratios, Sources of finance: Debt and Equity. Marketing: Marketing considerations- selecting the target market, market strategy. Pricing strategies and marketing of services, export marketing.

Unit – IV

Production management in Small business: production and material management, Break even analysis. HRM in Small business: Importance of HRM, HRD, Industrial relations, labour laws, pollution control laws.

Unit – V

Institutions supporting small business enterprises: Introduction, Central level institutions, state level institutions, other agencies. Sickness in small business enterprises: Definition and status of Sickness of SSI's in India, causes of sickness, Symptoms and cure of sickness. Business incubators. Social Entrepreneurship.

Course Outcomes: The Student is able to
CO1 : Appreciate the concept of entrepreneurship.
CO2 : Analyse entrepreneurship development programs in India and training for entrepreneurial competencies.
CO3 : Design the project reports, evaluate them and pitch for funding.
CO4 : Create awareness about the institutional support to small and medium enterprises.

4. Dhruv Nath, Sushanto Mitra: Funding your Startup and other Nightmares.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

303 – Industrial Project Course

Objectives:
1. To observe decisions in different functional areas of a firm.
2. To take up a decision area to conduct a detailed study in a standardised way.

Each candidate is expected to carry out project work in a particular organisation/industry for a period of 8/10 weeks. Candidate has to carry the project work under the guidance of a faculty member in the department and an executive guide in the concerned organisation. The candidate has to maintain a field dairy and present synopsis and IPC Seminars during the course of third semester. The project report should be submitted to the department before the commencement of the third semester – end examinations.

Course Outcomes: The Student is able to
1. gain comprehensive knowledge of decisions made in the firms.
2. study a decision area in a detailed way to come up with appropriate suggestions.

304 – Project Viva Voce

Objective:
A comprehensive Viva Voce Examination shall be conducted by a panel of internal and external experts as part of the semester end examinations covering all the courses with emphasis on project work completed by the students.

311 - Consumer Behaviour

Objectives:
1. To understand the conceptual foundations of consumer buying behavior.
2. To equip the learner to apply the principles and prepare for a career in Product and Brand Management in the FMCG, consumer durables, industry and services industry.

Unit – I

Consumer Behaviour and Marketing Action - An overview - Consumer involvement - Decision-making processes - Purchase Behaviour and Marketing Implications – Consumer Behaviour Models

Unit – II

Environmental influences on Consumer Behaviour - Cultural influences - Social class - Reference groups and family influences - Opinion leadership and the diffusion of innovations - Marketing implications of the above influences.

Unit – III

Consumer buying behaviour - Marketing implications - Consumer perceptions – Learning and attitudes - Motivation and personality – Psychographics - Values and Lifestyles, Click-o-graphic.

Unit – IV

Strategic marketing applications - Market segmentation strategies - Positioning strategies for existing and new products, Re-positioning, Perceptual Mapping - Marketing communication - Store choice and shopping behaviour - In-Store stimuli, store image and loyalty – Consumerism - Consumer rights and Marketers' responsibilities.

Unit – V

The Global Consumer Behaviour and Online buying behaviour - Consumer buying habits and perceptions of emerging non-store choices - Research and applications of consumer responses to direct marketing approaches - Issues of privacy and ethics.

Course Outcomes: The Student is able to
CO1 : Evaluate the consumer behaviour and business strategies.
CO2 : Apply the various consumer behaviour models for effective marketing strategies.
CO3 : Build the psychological process and develop the effective strategy in terms of impact on consumer behaviour.

References:
1. Schiffman, Wisenblit, Kumar. Consumer Behaviour. Pearson.
2. Sangeeta Sahney. Consumer Behaviour. OUP

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

312 - Customer Relationship Management

Objectives:
To understand the concepts and principles of CRM and appreciate the role and changing face of CRM as an IT enabled function.

Unit – I

CRM concepts - Acquiring customers, - Customer loyalty and optimizing customer relationships - CRM defined - success factors, the three levels of Service/ Sales Profiling - Service Level Agreements (SLAs), creating and managing effective SLAs.

Unit – II

CRM in Marketing - One-to-one Relationship Marketing - Cross Selling & Up Selling - Customer Retention, Behaviour Prediction - Customer Profitability & Value Modeling, - Channel Optimization - Event-based marketing. - CRM and Customer Service - The Call Centre, Call Scripting - Customer Satisfaction Measurement.

Unit – III

Sales Force Automation - Sales Process, Activity, Contact- Lead and Knowledge Management - Field Force Automation. - CRM links in e-Business - E-Commerce and Customer Relationships on the Internet - Enterprise Resource Planning (ERP), - Supply Chain Management (SCM), - Supplier Relationship Management (SRM), - Partner relationship Management (PRM).

Unit – IV

Analytical CRM - Managing and sharing customer data - Customer information databases - Ethics and legalities of data use - Data Warehousing and Data Mining concepts - Data analysis - Market Basket Analysis (MBA), Click stream Analysis, Personalization and Collaborative Filtering.

Unit – V

CRM Implementation - Defining success factors - Preparing business plan requirements, justification and processes. - Choosing CRM tools - Defining functionalities – Home grown versus out-sourced approaches - Managing customer relationships - conflict, complacency, Resetting the CRM strategy. Selling CRM. internally - CRM development Team - Scoping and prioritizing - Development and delivery - Measurement.

Course Outcomes: The Student is able to
CO1 : Develop the concepts of CRM and strategies in business.
CO2 : Appraise the customer profile and perception of customer behaviour in relationship perspectives.

CO3: Analyse strategies for customer loyalty.

References:

1. Jagdish Seth, et al, Customer Relationship Management, 2020
2. Mullick, Customer Relationship Managment, OUP

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

313 - Marketing Research

Objectives:
1. To introduce the basic concepts of research and methodology of conducting researches in marketing domain.
2. To provide a foundation to pursue a career in Marketing Research domain.

Unit – I

The Marketing Research System - Definition of MR - Basic and Applied Research – The Marketing Research Process - Types of Research - Steps in Marketing Research Process - Research Design - Data Sources - Marketing Information System – International Market Research.

Unit – II

Sampling Process in Marketing Research– Sampling Design and Procedure – Sampling Methods – Non probabilistic sampling Techniques – Probabilitic sampling Techniques - Sample Size determination - Sampling Errors.

Unit – III

Measurement & Scaling in Marketing Research: Measurement concept – Sources of variation in Measurement, Validity & reliability of Measurement - Attitude measurement – Scaling Procedure

Unit – IV

Data Instruments - Data Collection- Online data collection - Collection of Secondary Data – Collection of Primary Data Methods - Field Operations - Errors and Difficulties in Data Processing, Coding and Editing. Data Analysis - -Hypothesis Testing - Report Writing - Presentation of Data.

Unit – V

Application of Marketing Research: Product Research – Motivation research – Advertising Research – Sales Control Research –Rural Marketing research - Export Marketing research.

Course Outcomes: The Student is able to
CO1 : Apply the Research Methods to understand and analyse Marketing Problems.
CO2 : To use the appropriate Measurement scales for Customer Attitudes and Preferences.
CO3: Organize the Marketing Field Research to help in Marketing Decision-making.

References:
1. Naresh K. Malhotra and Satyabhusan Das, MARKETING RESEARCH: AN APPLIED ORIENTATION, Pearson Education, Asia. 2019

2. Beri, Kaushik, Rahman. Marketing Research. Mc Graw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

314 - Advertising & Sales Promotion Management

Objectives:
1. To equip students for a career in Sales Promotion Management and Advertising.
2. To understand the various types of advertising and their effectiveness.

Unit – I

Advertising - an introduction- Origin and Development - Definition and Classification – Planning Framework - Organising Framework - the Advertiser and the Advertising Agency interface - Strategic Advertising Decisions - Setting Advertising Objectives - The Budget Decision - Preparing the Product and Media Brief

Unit – II

Copy Decisions - Visualization of Ad Layout - Elements of Ad Copy and Creation Principles of verbal versus visual thinkers - Styles and Stages in advertising copy creation- Copy (Pre-) Testing methods and measurements.

Unit – III

Media Decisions - Media Planning and Selection - Concepts of Reach, Frequency, Continuity, and Selectivity - Measures of Media Cost Efficiency – Media (Readership / Viewership) Research - The Internet as an Advertising Medium - Tracking Website visits, page views, hits, and click-stream analysis - permission marketing and privacy - ethical concerns.

Unit – IV

Measuring Advertising Effectiveness - Control of Advertising by practitioners, media and the market - Advertising in the International Market-place - Advertising and Principles of Integrated Marketing Communication and Image Building.

Unit – V

Sales Promotion - Rationale, Types - Consumer and Trade Promotions - Sales Promotion Strategies and Practices, Cross Promotions, Surrogate Selling, Bait and Switch advertising issues. Brand Equity - Concepts and Criteria, Building, Measuring and Managing Brand Equity, Linking Advertising and sales promotion to achieve 'brand-standing' - Leveraging Brand Values for business and non-business contexts.

Course Outcomes: The Student is able to
CO1 : Discuss the basic concepts of advertising for better understanding the challenges and opportunities in advertising .
CO2 : Analyse the relations of advertising with segmentation and budget decision .
CO3 : Design better advertising strategies for the company .
CO4 : Identify media options which are suitable for the company for better promotion .

CO5 : Develop an effective advertising campaign for the company .
CO6 : Evaluate the role of AD agencies for the successful advertising management

References:

1. Belch, Purani. Advertising and Promotion. Mc Graw Hill
2. Kruti Shah. Advertising and Integrated Marketing Communications. Mc Graw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

315 – Product and Brand Management

Objectives:
1. To equip students for a career in Product and Brand Management,
2. To understand the various concepts of Brand creation, Brand building and Brand Value enhancement.

Objectives:
The objective of this course is to familiarise the students with the concepts and strategies involved in product management and branding for effective brand building.

Unit – I

Product Management - Product – Definition, Levels of Product; Definition of Product Management, Scope and Importance; Role of Product Manager; Product Mix and Product Line Strategies; Challenges in Product Management

Unit – II

Product Life Cycle and Marketing Strategies; Product Portfolio Models; Positioning & Perceptual Mapping; Product Management Audit; Future of Product Management

Unit – III

New Product – Categories of New Product; Adoption Process; Diffusion of Innovation; Stages in New Product Development; New Product Demand Forecasting Models; New Product Launch Strategies; New Product Success & Failures- Indian cases

Unit – IV

Brand Management - Concept & Significance of Brands, Types of Brands; Strategic Brand Management Process & Branding Strategies; Financial and Social Value of Brands; Brand Equity- Components of Brand Equity, Brand Equity Models, Measurement of Brand Equity; Developing and Managing Brands; Brand Extension Strategies; Brand Personality; Brand Essence; Brand Identity, Brand Identity Prism

Unit – V

Brand Elements; Sensory Branding; Emotional Branding, Brand Positioning- Brand Architecture, Brand Portfolio, Brand Communication; Brand Valuation Methods; Brand Revitalisation; Brand Audit; Global Brands; Successful Indian Brands

Course Outcomes: The Student is able to
CO1 : Discuss the importance of brand image in marketing .
CO2 : Formulate brand vision to communicate Brand Essence.
CO3 : Analyse brand promotion methods in brand communication .
CO4 : Analyse factors influencing brand extension decisions .

CO5 : Design brand marketing programmes.
CO6 : Evaluate emerging trends in brand management .

Reference:
Kevin Lane Keller, Strategic Brand Management, Pearson Education, India. 2020

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

316 - Digital Marketing (Online)

Objectives:
1. To rethink marketing in an Internet-enabled marketing environment.
2. To conceptualize marketing strategy formulation in the context of the Internet.
3. To understand the Online Marketing Mix.
4. To address the emerging issues of e-commerce.

Unit – I

Principles and Drivers of New Marketing Environment – Web 2.0- Digital Media Industry - Reaching Audience Through Digital Channels- Traditional and Digital Marketing - Introduction to Online Marketing Environment - Dotcom Evolution - Internet Relationships - Business in Modern Economy - Integrating E-Business to an Existing Business Model - Online Marketing Mix – SoLoMo (Social-Local- Mobile)- Social Media Sites & Monetisation- Careers in Social Media Marketing, Online content development & key word optimisation.

Unit – II

Purchase Behaviour of Consumers in Digital Marketing Format - Online Customer Expectations - Online B2C Buying Process - Online B2B Buying Behaviour –Social Media Marketing Segments- Forms of Search Engines – Working of Search Engines - Revenue Models in Search Engine Positioning – SEO - Display Advertising – Trends, Web Analytics.

Unit – III

Product Attributes and Web Marketing Implications - Augmented Product Concept - Customizing the Offering - Dimensions of Branding Online - Internet Pricing Influences - Price and Customer Value - Online Pricing Strategies and Tactics – Time-based Online Pricing - Personalized Pricing - Bundle Pricing- Internet Enabled Retailing - Turning Experience Goods into Search Goods

Unit – IV

Personalization through Mass Customization - Choice Assistance - Personalized Messaging - Selling through Online Intermediaries - Direct to Customer Interaction - Online Channel Design for B2C and B2B Marketing- Integrating Online Communication into IMC Process - Online Advertising – Email Marketing - Viral Marketing - Affiliate Marketing - Participatory Communication Networks – Social Media Communities - Consumer Engagement - Co-Created Content Management-Interactive Digital Networks - Customer Led Marketing Campaigns.

Unit – V

Role of Social Media- Social Community (Facebook, Linkedin, Twitter etc.)- Social Publishing (Blog, Tumblr, Instagram, Pinterest, Wikipedia, Stumble Upon etc.)- Social

Entertainment (YouTube, MySpace, Flickr etc.)- Social Commerce (Trip Advisor, 4 Squares, Banjo etc.) Social Media Measurement & Metrics- Data Mining and Social Media- Role of Social Media in Marketing Research- Big Data and Social Media- Crowd Sourcing- Legal and Ethical aspects related to Digital Marketing. Marketing in Metaverse.

Course Outcomes: The Student is able to
CO1 : Get knowledge regarding basic concepts of Digital Marketing.
CO2 : Analyse and Choose different channels of digital marketing according to the changing requirements of the markets.
CO3 : Construct different digital marketing plans on situational basis.
CO4 : Market different products through different avenues of social media.

3. Guy Kawasaki, Art and Social Media: Power Tips. Portfolio, 2015
4. Jonah Berger. Contagious : How to build Word of Mouth in the Digital Age. Simon & Schuster Publications, 2014.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

321 - Financial Services

Objectives:
1. To know about the Indian financial system and its players
2. To understand the security market regulations
3. To keep abreast of recent financial services

Unit – I

Overview of Financial Services: nature, scope and importance Financial System and Markets: Types, Constituents and functioning, SEBI Role and functions, Overview of Foreign Markets, Financial Sector Reforms in India.

Unit – II

Introduction to Banking and Insurance services; RBI – Role and functions. Primary and secondary markets and their intermediaries: Introduction of Primary & Secondary Markets (BSE, NSE & OTCEI), Money market, Merchant banking services - new issue management, Prospectus of Public Offering, Book Building, IPO and FPO. Green shoe Option, Underwriter, Registrar and Share Transfer Agent. Stock broking, Depositories, Custodial services, short selling. Securities lending and borrowing services

Unit – III

Lease financing, Different types of leases – Evaluating a financial lease. Hire purchase, Consumer credit, Credit card, debit card – Factoring, Bill discounting, Forfaiting, Reverse Mortgage, BNPL.

Unit – IV

Mutual Fund organization - Meaning, status, types. Venture capital financing. Credit Rating Services. Portfolio Management Services, Wealth Management.

Unit – V

Consumer Finance, Housing finance, Securitization in India: concept, nature, scope and their implications, Management of Non-Banking Financial Companies and Microfinance

Course Outcomes: The Student is able to
CO1 : comprehend the broad Financial Framework and its inter-relationships along with the awareness about the different financial services.
CO2 : acquire the knowledge of the techniques in Evaluation of Financing Alternatives.
CO3 : equip themselves with knowledge for Wealth Managment

References:
1. M Y Khan. Financial Services, McGraw Hill, 2017
2. L M Bhole, Jitendra Mahakud. Financial Institutions and Markets. McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

322 - Investment Management

Objectives:
1) To have understanding on different investments.
2) To have exposure on functioning of capital market
3) To understand various theories of portfolio management and evaluation.

Unit – I

Investment: Meaning, Features, Alternative Investments, Speculation and Gambling. Indian Capital Market – Primary Market and Secondary Markets – Processes of Buying and Selling Securities– Secondary Markets – Types – Stock Exchanges – Depository – Role of SEBI in security markets.

Unit – II

Fixed Income Securities: Real and Nominal Rates of Return – Components of Risk – Bond Characteristics, Prices, Yields, Ratings, Rating Procedure. Yield Curve – Determinants of interest Rates, Interest Rate Risk, Duration, and Bond Portfolio Immunisation.

Unit – III

Fundamental Analysis: Meaning, Importance, Objectives. Analysis of Economy, Industry, and Company, Financial and Non-Financial Parameters. Technical Analysis: Meaning – Difference between fundamental analysis and Technical analysis, The Dow Theory ,Technical indicators, Charting Techniques. Stock market indicators. Market Efficiency: Weak form, Semi-strong form, Strong form. Equity Valuation models.

Unit – IV

Portfolio Analysis: Risk – Return Framework - Security Returns, Measurement of Returns, Systematic and Unsystematic Risk. Index Models – Efficient Frontier, Dominance Principle, Optimum Portfolio, Utility Theory, Markowitz Portfolio Selection, Single Index Model,

Unit – V

Asset Pricing Model –Capital Market Theory, Capital Asset Pricing Model (CAPM), Assumptions, Inputs, Capital Market Line, Security Market Line, CAPM Anomalies. Evaluation of Portfolios – M2, Sharpe, Treynor, Jensen Measures, Morning Star Ratings, Style Analysis. Mutual Funds – Types, Fund of Funds, ETFs, Inverse Funds, Global Diversification. GDR, ADR, IDR

Course Outcomes: The Student is able to
CO1 : analyse various investment alternatives for effective investment decisions
CO2 : Discuss the importance of security analysis in investment decision process.
CO3 : Design bond management strategies.
CO4 : Apply different equity valuation methods for the valuation of securities.

CO5 : Construct optimal portfolio for optimum return.
CO6 : Analyse different schemes of mutual funds for better investment decision

References:

1. Bodie, Kane, Marcus, Mohanty. Investments. McGraw Hill, 2019
2. Kannadhasan. Fixed Income Securities, Valuation and Risk Management. 2022. Cengage.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

323 - Personal Finance

Objectives:
1. This course aims at enabling the student to comprehend the key issues governing the effective Planning of Personal Finance and Investment decisions.
2. To acquire the Competence to provide judicious Advice on these matters.

Unit – I

Personal Finance Environment: Nature and Goals of Personal Finance, Financial Planning Process - Time Value of Money, Macroeconomic Factors and Personal Finance, Preparation of Cash Budget, Annual Income Statement and Statement of Net-worth/Balance Sheet, Principles of Income Tax, Filing of Income Tax Returns and Basic Tax-planning.

Unit – II

Credit Planning and Management: Consumer Credit and Credit Cards, Financial Evaluation of Major Personal Purchase Decisions and the Alternative Credit Sources. Housing Loans, Repayment Schedules and Loan Amortisation Schedule, Personal Credit Rating.

Unit – III

Investment Planning Strategies: Diversification and Asset Allocation, Identifying the Individual's optimal Risk-Return trade-off, Fixed Income Securities and Equity Stocks, Buy-Sell Timings and optimal Holding period, Hedging Strategies using Futures and Options, Evaluation of Mutual Funds' Portfolios, Alternate Investment options – Art, Gold, Antiques, Commodities, REITS, Charity, Crypto Currencies, NFTs.

Unit – IV

Income and Asset Protection: Personal Risk Management Strategies – Risk Mitigation through Insurance, Types of Insurance, Elements of Life insurance, Health Insurance, Property Insurance and Liability Insurance, Selection of optimal Insurance Policies based on the Individual's circumstances and preferences, Settlement of Insurance Claims.

Unit – V

Retirement Planning: Steps in retirement planning, Types of Annuities, Identifying Optimal Annuities matching the post-retirement Income Goals, Reverse Mortgage as a post-retirement option. Estate Planning: Meaning, Objectives and Types, Will – Trust – Estate Tax Planning.

Course Outcomes: The Student is able to
CO1 : apply the Financial principles in Advising on Personal Finance decisions about investment alternatives and wealth management.
CO2 : provide professional advice on Personal Investment decisions, Risk Management and Retirement Planning.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

324 - Corporate Restructuring

Objectives:
1. To provide concrete understanding of Mergers & Acquisitions
2. To familiarize the concepts to the students with the current issues in M&A
3. To expose the students about the process and methods of M&A, measures to evaluate the performance of M&A

Unit – I

Meaning of corporate restructuring, need, scope and modes of restructuring, global scenario, national scenario. Value Drivers, Due Diligence Process. Motivations.

Unit – II

Mergers and Amalgamations, Concept, need and reasons, legal aspects, procedural aspects, economic aspects. Interest of small investors, accounting aspects, valuation of shares, stamp duty, filing of various forms.

Unit – III

Meaning and concept of takeover, types of takeovers, legal aspects - SEBI takeover regulations, Financing, bail out takeovers. Defensive Tactics. Employee Stock Ownership Plans, Creeping Acquisitions. Takeover of sick units. Revival and restructuring of sick companies.

Unit – IV

Funding of Mergers and Takeovers, Corporate Demergers/Splits and Divisions, Difference between demerger and reconstruction, modes of demerger.

Unit – V

Tax aspects, tax reliefs, Indian scenario, reverse mergers, Post Merger, Re-organization Financial Restructuring, Alliances, Legal Documentation and Due Diligence.

Course Outcomes: The Student is able to
CO1 : plan and execute the Corporate Restructuring strategies in accordance with the Laws governing them.
CO2 : handle the technical aspects of Mergers, Cross-border Acquisitions and their Valuation including the Tax implications.

References:
1. Weston, et al **: Takeovers Restructuring and Corporate Governance,** Prentice Hall
2. Patrick A Gaughan : Mergers, Acquisions and Corporate Restructuring. Wiley

NOTE TO THE PAPER SETTER:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

325 - Banking Management

Objectives:
1. To know the scope of bank financial management
2. To understand the various types of risks faced by banks
3. To evaluate the services offered by banks.

Unit – I

Introduction to Banking: Structure of Indian Banking System – Scheduled Commercial banks, foreign banks, commercial banks, payment banks, Small Finance Banks. Types of banking – Universal banking, wholesale banking, private banking, retail banking; RBI-Monetary Policy. Different types of accounts, Various services offered by banks, Sources of risk in banks, Analyzing bank's financial statements.

Unit – II

Uses of Bank Funds: Features of bank credit, Assessment of Credit Worthiness of borrowers, Different types of Loans, Priority Sector Lending, Sectoral Limits. Loan Pricing - Pricing of fixed & floating rate loans, cost – benefits. Securitisation, Syndication. NPAs: - Concept of gross and net NPAs, causes, recovery of NPAs. Asset Recovery Companies, Bad Bank.

Unit – III

Regulation and Innovations in Banking System: Regulation of Banks, Basel Accords I, II, and III. Banking Innovations - Core Banking Solution, Digital Banks, Plastic Money, NEFT, RTGS, Mobile Banking, M Wallets, Net Banking, E-Rupee, Central Bank Digital Currency.

Unit – IV

Non- Banking Finance Companies – Types, Operations, Microfinance Companies, Regulation.

Unit – V

Credit Information Bureaus, Credit Scores, Credit Repository of Large Clients. Account Aggregator. Credit Guarantee Options. Deposit Insurance. Supervisory College.

Course Outcomes: The Student is able to
CO1 : analyse the Indian financial system and role of commercial banks
CO2 : develop better understanding on different types of deposits and loans.
CO3 : understand the regulations in banking system.

References:
1. Management of Banking & Financial Services, Padmalatha Suresh & Justin Paul, Pearson.
2. Bank Financial Management, IIBF, Macmillan 2010.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

326 - Financial Markets and Institutions

Objectives:
1. To know about the Indian financial system and its players
2. To understand the security market regulations
3. To keep abreast of recent financial services of institutions.

Unit – I

Financial system: Introduction, functions of financial system and its components. Financial markets. Types-Capital market - Primary and secondary, money market - introduction, types of money market instruments, money at call, treasury bill, certificates of deposits, commercial papers. Bond market.

Unit – II

Financial institutions: Definition, types, role in economic development. Commercial banks – Public & private sector banks, financial innovation in commercial banks. Types of Stock Exchanges – National, Regional & Local. Financial Institutions in GIFT City. Financial Regulation - MCA, RBI, SEBI, IRDAI - introduction, and guidelines.

Unit – III

Development Financial Institutions- NABARD, SFCs, IRBI, SIDC, SIDBI– Introduction and operational policies, Role and functions. NBFCs - Concept, Services, growth, and Regulation.. Special Purpose Vehicles.

Unit – IV

Asset Management Companies. Mutual Funds - Introduction, types of mutual funds, significance, growth. Alternative Investment Funds. G-Sec market. Private and public sector insurance Companies (life and general). Leasing, Hire purchasing, Factoring and forfaiting, Bills discounting.

Unit – V

Management of Non-Performing Assets: Credit Rating - Introduction, Growth. Foreign Exchange Market, Forex Policy, Participants, Services. Fintechs.

Course Outcomes: The Student is able to
CO1 : explain overview of financial system.
CO2 : discuss about various financial institutions.
CO3 : gain knowledge of the commercial banks and their roles.
CO4 : appraise the activities of various non-banking financial institutions.

References:
1. Nalini Prava Tripathy : Financial Services, Prentice Hall

2. MY Khan **: Indian Financial System** (Tata McGraw-Hill)
3. Bhole Mahakud: **Financial Institutions and Markets** (McGraw Hill)

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

331 - Training and Developmenmt

Objectives:
1. To appreciate the significances of training and development
2. To introduce the basic concepts in training and development
3. To understand the methods of training and development and
4. To study the HRD practices in organizations.

Unit – I

Training & Development: Scope, objectives, beneficiaries, forces influencing working and learning, training practices, future trends. Strategic Training, and Development - Evolution of training role, training needs, models of organising training & department, outsourcing training.

Unit – II

Needs Assessment: Importance, scope, methods and techniques of training need assessment(TNA), organizational and operational analysis. Training Design - Factors affecting training design, budgeting for training, costs involved in training programs, design theory, outcomes of design, identification of alternative methods of instructions, considerations in designing effective training programs, implementation, Output of TNA

Unit – III

Learning: learning theories, learning process, instructional emphasis for learning outcomes, designing effective training programs, feedback. Training Methods & Trainer's Style- types of training, training methods, choosing a training method, competence of trainer, trainer's skills, trainer's styles, trainer grid, trainer's roles, do's and don'ts for trainers.

Unit – IV

Training Evaluation: Factors influencing transfer of learning, reasons for evaluating training, evaluation process, determining outcomes, evaluation techniques, models of training evaluation, training audit, Resistance to Evaluation. E-Learning and use of Technology in Training - Technology and multimedia, computer-based training, developing effective online learning, blended learning, simulations, mobile technology and training methods, intelligent tutoring systems, technologies for training administration, learning management systems

Unit – V

Management Development: Need, importance, Training for executive level management, approaches, development planning process, company strategies for providing development. Coaching – Need, types, Benefits. Mentoring – Purpose, types, Benefits. Contemporary Issues in Training and Development - dual career paths, career plateau, coping with career breaks, balancing work and life.

Course Outcomes: The Student is able to
CO1 : understand the Concepts of Training and Development and its Practical relevance to Organization.
CO2 : assess the training needs of business firms.
CO3 : apply the Training methods in the organizational context.

Reference:
Employee Training and Development, 4th Edition by Noe, Raymond A., Irwin/McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

332 - HR Audit

Objectives:
1. Aims to provide a conceptual understanding of HR Audit.
2. To learn the methodology and issues connected with HR Audit.
3. Understand workforce issues, HR Audit Reports.

Unit – I

Human Resource Audit: Introduction, Objectives, Concepts, Components, Need, Benefits. Components of Human Resource Development Audit, Human Resource Audit Goal, Defining the Audit Team, Approaches to Human Resource Audit, Benefits of Human Resource Audit

Unit – II

HR Audit Methodology and Issues: Introduction, Conducting Human Resource Audit, Preliminary Steps, Goals of the Audit, Areas of the Audit, Issues in HR Audit, Strategies, Alignment of HR Audit. HR Audit Process - Introduction, Audit of Human Resource Function, Planning Questions, Collecting Data, Analysing the Audit Data, Interpretation, Assessing the Ability for Change.

Unit – III

HR Audit and Workforce Issues: Introduction, Workforce Communication and Employee Relations, Performance Management, Compensation System, Team building System. Challenges in HR Audit **-** Assessing the Ability for Change, Post Audit Steps, Preventive and Corrective Actions, Role in Business Improvement, Methodology and Limitations

Unit – IV

Human Resource Audit Report: HR Audit Report – purpose, Report Design – Preparation of report, Use of HR Audit report for business improvement. HR Audit for Legal Compliance and Safe Business Practices. Scope of Human Resource Audit, Pre-employment Requirements, Hiring Process, New-hire Orientation Process, Workplace Policies and Practices

Unit – V

Human Resource Auditing as a Tool of Human Resource Valuation: Introduction, Rationale of Human Resource Valuation and Auditing, Valuation of Human Resources, Issues in Human Capital Measurement and Reporting.

Course Outcomes: The Student is able to
CO1 : gain a comprehensive knowledge of the HR Audit concepts, Methodology, Workforce Issues and HR Valuation.

CO2 : apply these concepts in the organizations for employee development and reporting.

Reference:

T. V. Rao HRD Audit: Evaluating the Human Resource Function for Business Improvement, Sage Publications 2014 / 2nd

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

333 - Human Resource Planning

Objectives:
1. To provide an exposure of theories, techniques and approaches to HR Planning.
2. To create a practical orientation towards the Emerging trends in the HR field.

Unit – I

INTRODUCTION: Concepts of Human resource planning (HRP) – objectives, and factors affecting HRP, significance. Macro level scenario of HRP – Process, benefits, problems and limitations of HRP, Planning job requirements and descriptions – Job Information, Job description, Job evaluation, Skills Analysis.

Unit – II

MANPOWER PLANNING - Anticipating Man power needs – Man power Inventory, Expected Loss and Extra needs, Existing post or new post to be created, demand and supply forecasting, career planning and succession planning, wastage analysis, retention, redeployment and exit strategies. Recruitment - Introduction to recruitment, nature and need of recruitment, workers' expectations, proactive recruitment and reactive recruitment, electronic recruitment, innovative recruitment sources - electronic resumes, career websites, international electronic recruitment, electronic web sources.

Unit – III

SELECTION PROCESS: Job analysis to man specification, Selecting sources of recruitment, Internal & External recruitment sources, interviewing, job descriptions, Review in the applications and resumes. Planning basic questions, competency-based questions, key competency category, competency-based lead-ins, generic competence questions, additional types of questions, probing questions, questioning techniques to avoid, Types of Interviews. Hiring Methods - Nature of hiring, Methods of hiring, External Hiring, meaning and definition of external recruitment, sources of external hiring. Performance Appraisal and Development.

Unit – IV

PRE-EMPLOYMENT TESTING - Testing advantages and disadvantages, test validation, testing categories, Computer based testing, background check policy, reference check, guidelines for releasing and obtaining Information Performance Tests - Mental ability, Group discussion, mechanical ability test, role plays, Personality assessment, assessment centres, personal interview, integrity testing, Drug testing, graphology.

Unit – V

REFERENCE CHECKING AND APPOINTMENT ORDERS: Meaning, definition and purpose; Verification of character, criminal antecedents, previous work behaviour and educational qualifications. Verification of community certificates in public sector companies.

Statutory requirements (under the shops and commercial establishments act), Contents of appointment letter, hardcopy (or softcopy), method of delivery and retrieving the acknowledgement copy, medical examination & acceptance of offer for joining.

Course Outcomes: The Student is able to
CO1 : explain the basic concepts and importance of Human Resource Planning.
CO2 : identify the importance of Career Planning.
CO3 : evaluate the need for improving the HR Information Systems.

References:

1. Stephen Robbins. Essentials of Organizational Behaviour. Pearson.
2. Dhamija, Hasan, Singh. Talent Management in India. Atlantic Publication.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

334 - Labour Laws and Industrial Relations

Objectives:
1. Create awareness of existing labour laws
2. Expose the students to causes of Industrial disputes and settlement procedures.

Unit – I

Industrial Relations – concepts, Significance, trends in India. Trade Unionism – theory, policy, their influence on HRM, objectives and functions, structure, types, Indian trade union movement, their strength and weakness.

Unit – II

Industrial relations industrial disputes, causes, handling and settling disputes, employee grievances, steps in grievance handling, causes for poor industrial relations, remedies.

Unit – III

Concept, function and Importance, principles and forms of collective bargaining procedure conditions for effective bargaining. workers' participation in management, Role and methods of workers' participation – Joint Management Councils, Works Committees.

Unit – IV

Industrial Conflicts – Causes, Types, Consequences, Prevention, Settlement, Conciliation, Arbitration, Adjudication. Causes of Grievances & Disputes. Role IR Officer. Government Machinery for Industrial Relations.

Unit – V

Factories Act 1948 – the Workman's Compensation Act, 1923. the Employees State Insurance Act 1948. the Employees Provident Funds and Miscellaneous Provisions Act, 1952. The Payment of Wages Act, 1936. the Minimum Wages Act, 1948. the Industrial Disputes Act 1987. the Industrial Employment (standing orders) Act, 1946. the Trade Union Act, 1926 and latest legislations.

Course Outcomes: The Student is able to
CO1 : understand labour laws
CO2 : acquire skills for conflict resolution

References:
1. P.R.N. Sinha. Industrial Relations, Trade Unions and Labour Legislation. Pearson, 2017
2. The Industrial Relations Code - 2020. Commercial Law Publishers, 2021.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

335 - Leadership Development

Objectives:
1. To introduce the concepts of Leadership, Communication and Motivation.
2. To enable the students to appreciate the nuances of Leader's Personality and its impact on building a strong Team.

Unit – I

Introduction to Leadership: Leadership - Definition, the nature of Leadership, Manager vs Leaders, Traits of good leaders and followers, Effective leadership behaviours, level of conceptualization Participative Leadership and Empowerment. Participative Nature, Normative decisions framework, Delegation, Motivation and Empowerment, Consequences of empowerment, Facilitating conditions for empowerment.

Unit – II

Transformational Leadership and Adaptive Leadership : Concepts of power and authority, Influence processes, Power types and sources, Power acquisition – Social exchange theory, Strategic contingency theory. Consequences of Position and Personal power, Influence tactics and its usage and effectiveness.
Leader as change and Transformation agent: Leading change – coaching and mentoring. Transactional, transformational, level five leaders and servant leadership. Charismatic Leadership
Early contingency theories of effective leadership: Contingency approaches - Fiedler's contingency model, Hersey and Blanchard's theory, Path goal theory and Blake and Mouton managerial grid.

Unit – III

Leadership in Teams and strategic Leadership in Organization : Nature of teams and determinants of team performance. Leadership in teams, procedures for facilitating team learning, Leadership training programs, Ethical leadership, gender and leadership, leadership in different cultures, managing diversity, Women Leadership

Unit – IV

Personality Traits : Personality And Leadership – Values, Attitudes, Charisma, Leader's Mind, Emotional Intelligence, Leading with Heart and Mind, Love and Fear, Moral Leadership, Courage, Building Followers, Empowerment, Motivation. Communication in Crisis.

Unit – V

Blue Ocean Shift : Red Ocean Strategy vs. Blue Ocean Strategy, Blue Ocean Strategy: Aligning Value, Profit and People in Pursuit of Differentiation and Low Cost. Vision,

Mission, Strategic Formulation, Shaping Culture and Values, Leading Change and Innovation.

Course Outcomes: The Student is able to
CO1 : identify the leadership qualities to run an organization successfully.
CO2 : understand the various behavioural concepts.
CO3 : develop the organisational structures for effective decision making.
CO6 : discuss team building resources of inspirational leaders in business.

References:

1. Peter G. Northouse. Leadership – Theory and Practice. SAGE, 2018.
2. Conger, Riggio. Practice of Leadership – Developing the Next Generation Leaders. Wiley.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

336 – Counselling Skills for Managers

Objectives:
1. Aims to provide a comprehensive knowledge of the counselling concepts, counselling process, counselling skills.
2. Understand performance management and organizational change along with their Organizational applications.

Unit – I

Introduction to counselling – approaches – Psycho analytic approaches – behaviourist approaches – humanistic approach – Goals of counselling – role of counsellor – values in counselling.

Unit – II

The process of counseling – 5-D model of the counseling process – counseling procedure – referral procedure. – Guidelines for effective counseling – advanced skills in counseling – action strategies

Unit – III

Counselling skills – counselling relationship – Non verbal communication – verbal communication – listening barriers – counsellor's Qualities – core conditions of counselling – role conflicts in counselling – change behavior through counselling – general principal and techniques

Unit – IV

Organizational application – change management- Downsizing - managing diversity – mentoring – Team management / Conflict. Resolution crisis/ Trauma – consulting – upward feedback – the leaning organization – organizational development – Dealing with problem subordinates

Unit – V

Performance management – career counselling – performance counselling – pre disciplinary action – Grievance interview – alcoholism and other substance abuse – concepts of alcoholism – alcohol abuse and industry- the counsellors role – ethics in counselling – ethics principals

Course Outcomes: The Student is able to
CO1 : gain a comprehensive knowledge of all the essentials concepts of Counselling.
CO2 : apply the counselling concepts in the real-life organizational applications.

Reference:
Narayana Rao S. Counselling and Guidance. Tata McGraw Hill Publishing.

NOTE TO THE PAPER SETTER:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

341 – System Analysis and Design

Objectives:
1. To introduce the concepts of System analysis and design
2. To focus on different components of System analysis and design.
3. To plan, design and develop such information systems.

Unit – I

System Analysis Fundamentals: Introduction to System, System Analysis and Design, Need for System Analysis and Design, Role of the System Analyst, System Development Strategies: SDLC, Structured Analysis Development Method, System Prototype Method.

Unit – II

Case Tools: Benefits of Computer-Assisted Tools, Categories of Automated Tools, Case Components Organizations as System: Interrelatedness and Interdependence of System, System Process, Boundaries, System Feedback, Managing Project

Unit – III

Review and Selection Fact-Finding Techniques: Interview, Questionnaire, Record Review, Observation Data Flow Diagram: Advantages, Notations, Rules, Levelling, Logical and Physical DFD. Data Dictionary: Importance, Data Elements, Describing Process Specification Structured Decisions: Decision Tree, Decision Tables, Structured English.

Unit – IV

The Essentials of Design Designing Effective Output: Objectives, Types of Output, Method, Factors to consider - Designing Effective Input: Objectives, Guideline for Form design, Screen and Web Forms, Designing User Interface: Objectives, Types of user interface, Designing Accurate Data – Entry Procedures: Objectives, Effective coding, Data-Entry Method, Ensuring data quality through input validation

Unit – V

Quality Assurance through Software Engineering - Design of Software, Software design and documentation: Structured Flowcharts, HIPO, Warnier / Orr Diagrams Managing Quality Assurance: Level of Assurance, Level of Test Implementation of Information System: Training Strategies, Conversion, Post Implementation Review - Case Studies - Financial Accounting System - Payroll System - Library System – Inventory System - Online Banking System - Railway Reservation system (Input, Output, DFD)

Course Outcomes: The Student is able to
CO1 : Comprehend the basic concepts of System Development.
CO2 : To prepare object-oriented Analysis, Design and System Implementation.

CO3 : Apply SAD principles in organizational context.

Reference:
Hoffer, J., Modern System Analysis and Design. Pearson.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

342 - Database Management Systems

Objectives:
1. To introduce the concepts of Database Systems, Relational Models and Data Storage.
2. To provide insights into the various Hierarchical Models and the operation of Indexing and Hashing.

Unit – I

Introduction – Data Models, Database languages, Transaction, Storage management. Database administrator – Users, overall system structure, Entity – Relationship Model – Basic concepts, Mapping constraints, keys, E - R Diagram, Weak Entity Sets, reduction of E-R Diagram to tables.

Unit – II

Relational Model – structure, relational algebra, extended operations, Modifications on a Database, views. SQL – basic structure, set operations, aggregate functions. Nested Sub queries – derived relations, views.

Unit – III

Integrity constraints, Domain constraints, referential integrity, assertion, triggers, functional dependencies. relational database design, decomposition, normalization using functional, multivalued, Join dependencies. Domain – Key Normal form – alternative approaches.

Unit – IV

Object Oriented Data Model – Languages. Object Relational databases - Nested Relations. Complex types and object Orientation - Querying with complex types, creation of complex values and objects, comparison.

Unit – V

Database System Architectures- Centralized Systems, Client server systems, Distributed Systems. Parallel databases – introduction, inter query, intra query, intra-operation, interoperation parallelism. distributed databases –distributed data storage, network transparency, Query processing. Transaction model–Commit protocols, coordinator selection, concurrency control, deadlock handling. multi database systems.

Course Outcomes: The Student is able to
CO1 : develop the appropriate Database Models as per the needs of the organization.
CO2 : build the Network Models and map the network to the Files.

Reference:
Thomas Connolly, Database Systems: A practical approach to Design, Implementation and Management. Pearson.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

343 – Data Mining and Data Warehousing

Objectives:
1. To introduce the concepts of Data Warehousing and Data Mining.
2. To focus on the technical aspects of Data warehousing and mining for effective decisions.

Unit – I

Data Warehousing Introduction – Definition. Architecture-Warehouse Schema Warehouse server-OLAP operations. Data Warehouse technology – Hardware and operating system, Data Mining – Definition. DM Techniques – current trends in data mining. Different forms of Knowledge – Data selection, cleaning, Integration, Transformation, Reduction and Enrichment. Data mining v/s Statistical Analysis, Tasks solved by Data Mining Methods

Unit – II

Data: Types of data, Data Quality, Data Pre-processing, Measures of similarity and dissimilarity. Exploration - Summary statistics, Visualization. Association rules-Introduction, Methods to discover association rule, Apriori algorithm Partition Algorithm. Data warehouse Architecture - Types, benefits, methods and approaches. Data Modelling - Data Analysis Techniques, Conceptual Modelling, Logical Modelling, Physical Modelling. Overview of Modelling Techniques, Dimensional Modelling, Facts, dimensions, Hierarchies, Aggregates, Measures, Cubes, Star Schema, Snowflake Schema.

Unit – III

AR Algorithms: Pincher search algorithm – Dynamic Item set algorithm – FP Tree growth algorithm. Classification: Decision Tree classification, Bayesian Classification, Classification by Back Propagation.

Unit – IV

Clustering: Introduction, Clustering Paradigms, Partitioning Algorithms. K means & K Mediod algorithms, CLARA, CLARANS, Hierarchical clustering, DBSCAN, BIRCH, Categorical Clustering algorithms, STIRR, ROCK, CACTUS.

Unit – V

Introduction to machine learning – Supervised learning, Unsupervised learning. Machine learning and data mining - Introduction –Web content mining – Web structure mining –Web usage mining –Text mining –Text clustering, Temporal mining -Spatial mining, Visual data mining – Knowledge mining. Various tools and techniques for implementation using weka, RapidMiner and Matlab.

Course Outcomes: The Student is able to
CO1 : Organize raw data to make it suitable for various data mining algorithms.
CO2 : Measure interesting patterns from different kinds of databases.

CO3 : Apply the techniques of clustering, classification, association finding, feature selection and visualization to real world data.

Reference:

Acharya, Chellappan. Big Data and Analytics. Wiley.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

344 – Logistics Management

Objectives:
1. To introduce the concepts of Logistics, Marketing interface, customer service and Competitive Strategy.
2. To focus on the Application of Optimization models for building an efficient and integrated Supply chain and its maintenance

Unit – I

Logistics – The Logistics of Business, The Logistical Value Proposition, The Work of Logistics, Logistical Operating Arrangements, Flexible Structure. Customer Accommodation – Customer Focused Marketing, Customer Services, Customer Satisfaction, Customer Success, Forecasting. Supply Chain Process.

Unit – II

Procurement and Manufacturing – The Quality Imperative-Procurement, Manufacturing, Logistical Interfaces, Lead Time, Pipe Line Management, Information Technology Framework – Information System Functionality, Comprehensive Information System Integration, Communication Technology, Rationale for ERP Implementation, ERP System Design.

Unit – III

Inventory – Inventory Functionality and Definitions, Inventory Carrying Cost, Planning Inventory, Managing Uncertainty, Inventory Management Policies, Inventory Management Practices. Transportation – Transport Functionality, Principles and Participants, Transportation Service, Transportation Economics and Pricing, Transport Administration, Documentation.

Unit – IV

Warehousing – Strategic Warehousing, Warehousing Operations, Warehousing Ownership, Arrangements, Warehouse Decisions. Packaging And Materials Handling – Packaging Perspectives, Packaging for Materials, Handling Efficiency, Materials Handling.

Unit – V

Operational Integration – Value created by Integration, Systems Concept and Analysis, Logistical Integration. Objectives, Enterprise Integration. Network Integration – Enterprise Facility, Network. Warehouse Requirements, Total Cost Integration, Formulating Logistical Strategy. Relationship Development and Management – Development and Management of Internal Logistics Relationships.

Course Outcomes: The Student is able to

CO1 : Get knowledge regarding basic concepts of Logistics and Supply Chain.
CO2 : Analyse different logistics strategies to get competitive advantage.
CO3 : Assess the profitability by measuring the logistics performance and maintaining supply chain relationships.

References:

1. Ganapathi, Nandi. Logistics Management. Oxford University Press.
2. Bowersox, Closs & Cooper. Supply Chain Logistics Management. McGraw Hill.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

345 – Data Analytics with R (Online)

Objectives:
1. To introduce the concepts of Software Engineering, System Design and Maintenance.
2. To focus on Planning , Cost Estimation and Quality aspects of System Implementation with R.

Unit – I

Introduction to R – Installing R and R-Studio, downloading additional packages in R, using the R-Studio interface. Importing data into R – text files, Excel, from other statistical software packages, from databases, and from the web, viewing data. Arithmetic with R, Variable assignment, basic data types in R. Vectors, Matrices, Data frames and Lists. Categorical data – factors, discretizing variables.

Unit – II

Data Preparation – Exploring raw data, basic data visualization through graphs, cleaning data, preparing data for analysis – missing and special values, outliers and obvious values. The dplyr package and the tbl class, Selecting and mutating data – joining data with dplyr, filtering and arranging data, Filtering based on factors, Summarizing data and the pipe operator, and working with databases.

Unit – III

Data Visualization – Frequency tables and Cross-tabulation. Introduction to base graphics in R, different plot types, adding details to plots, managing visual complexity, creating plot arrays. plot customization, other graphics systems in R. The ggplot2 package, Grammar of Graphics, aesthetics, geometries, the qplot( ) function, statistics in graphs.

Unit – IV

Data Exploration – Exploring categorical data, exploring numerical data, Descriptive Statistics – measures of central tendency and variability. Exploratory Data Analysis using graphs.

Unit – V

Statistical Analysis – Testing of Hypothesis – t-test, Chi-Square test, ANOVA, Correlation. Simple Linear Regression, multiple regression – assumption checking, model estimation and validation.

Course Outcomes: The Student is able to
CO1 : outline the issues and challenges faced while managing data.
CO2 : do the Project Scheduling, tracking, Risk analysis and Quality management.
CO3 : do Statistical Analysis using R

References:

1. Andy Field, Discovering Statistics Using R. SAGE
2. Kiran Pandya, Statistical Analysis in Simple Steps using R. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

346 – Distributed Computing Systems (Online)

Objectives:
1. To introduce the concepts of Data communication, Network Protocols and Transmission.
2. To focus on technical aspects of ISDN, OSI preference Model and Digital Data Transmission.

Unit – I

Basics concepts: Computer architecture: CICS, RISC, Multi-core. Computer networking - ISO/OSI Model. Evolution of operating systems. Introduction to distributed computing systems (DCS)

Unit – II

DCS design goals, Transparencies, Fundamental issues. Distributed Coordination: Temporal ordering of events, Lamport's logical clocks, Vector clocks; Ordering of messages, Physical clocks, Global state detection

Unit – III

Process synchronization: Distributed mutual exclusion algorithms, Performance matrix.

Unit – IV

Inter-process communication Message passing communication, Remote procedure call, Transaction communication; Group communication; Broadcast atomic protocols

Unit – V

Deadlocks in distributed systems, Load scheduling and balancing techniques, Distributed database system. Case studies

Course Outcomes: The Student is able to

CO1 : comprehend the concepts of Data communication, Network Protocols and Data Transmission.
CO2 : build the Data Networks that would facilitate Distributed computing.

Reference:
Distributed Systems Concepts and Design, G. Coulouris, J. Dollimore, Pearson.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.

(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

351 – Personal Discovery through Entrepreneurship

Objectives:
1. This course aims to enable the student to identify his strengths and limitations.
2. To provide the necessary skills to evaluate appropriate business opportunities.
3. To choose the best business model to ensure Entrepreneurial success.

Unit – I

Personal Discovery – Match a student's problem-solving interests with their personal capabilities and fundamental core values. Personal Values, Arenas of Excellence, Team Building, Defining Purpose, Developing a Mission Statement.

Unit – II

Solution Discovery I (Problem Identification) – Develop the ability to Identify and Solve problems based on an understanding of the opportunity space, new or recombined technologies, and empathy with people and their challenges. Ideation and Impact, User Insights, Concept Design, Validation.

Unit – III

Solution Discovery II (Solution Design) – Design new products and services and understanding when to apply Low, Medium, and High Fidelity prototyping concepts when testing solutions. Product Line Strategy, Prototyping, Validation.

Unit – IV

Business Model Discovery – Understand how to commercialize innovations to create sustainable companies. Industry Analysis, Types of Business Models, Building Revenue Models, Designing Operating Models, Defining Customer Decision Journey, Validation.

Unit – V

Discovery Integration – Achieve a balance between business and societal goals and communicate the vision about the plan. Determining Company Impact, Value Creation, Story Telling, Pitching to Stakeholders.

Course Outcomes: The Student is able to
CO1 : Identify strengths and to search for the most suitable business opportunities.
CO2 : Logically proceed through the stages of Problem Identification, Solution Design, Business model decisions and integration to become a successful Entrepreneur.

Reference:

Meyer and Lee (2020), Personal Discovery through Entrepreneurship, The Institute for Enterprise Growth, LLC. Boston, MA., USA

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

352 – Creativity, Innovation and Entrepreneurship

Objectives:
1. To understand the creativity and innovations management aspects in an enterprise.
2. To impart Creative problem solving, Creative intelligence and Innovation Management.

Unit – I

The Creativity Phenomenon: Creative Cerebration, Creative Personality and Motivation, Creative Environment, Creative Technology, Creativity Training. Puzzles of Creativity. Spiritual and social roots of creativity. Essence, Elaborative and Expressive Creativities. Quality of Creativity, Existential, Entrepreneurial and Empowerment Creativities. Criteria for evaluating Creativity- Credible Evaluation. Improving the quality of our creativity.

Unit – II

Mastering Creative Problem Solving: Structuring of ill-defined problems, Creative Problem solving. Models of Creative problem solving. Mechanisms of Divergent thinking, Useful mechanisms of convergent thinking, Techniques of Creativity Problem solving

Unit – III

Creative Intelligence: Creative Intelligence abilities - model of Creative Intelligence, Convergent thinking ability, Traits Congenial to creativity, Creative Personality and forms of creativity. Motivation and Creativity- Blocks to creativity, fears and Disabilities. Strategies for Unblocking, Energy for creativity, Designing Creative Environment.

Unit – IV

Innovation Management: Concept of Innovation, Levels of Innovation, Incremental Vs Radical Innovation. Inbound and Outbound Ideation, Open and Other Innovative Ideation Methods. Theories of outsourcing New Product Development: Transaction Cost, Resource Based, Resource Dependence, Knowledge Based Theories.

Unit – V

Micro and Macro Perspectives of Innovation: Systems Approach to Innovation. Innovation in the context of Emerging Economies. Organizational factors affecting innovation. Leadership and Innovations- Open Innovation, Innovation Framework, Innovations developed by Open Technology Communities.

Course Outcomes: The Student is able to
CO1 : Comprehend the concepts associated with Creativity
CO2 : Acquire the skills for Creative problem solving.
CO3 : Understand the idea of Creative Intelligence and Innovation
CO4 : Apply Creativity and Innovation ideas in Organizational context.

References:

1. Maital, Seshadri. Innovation Management, Strategies, Concepts and texts for Growth and Profit. SAGE.
2. David Robertson. The Power of Little Ideas, HBR Press.

NOTE TO THE PAPER SETTER:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.

(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

353 – Startups Management

Objectives:
1. To understand New venture creation opportunities, Startup Capital requirements and legal formalities.
2. To Manage the Venture through the stages of Introduction, Growth, Harvest and Decline.

Unit – I

Startups opportunities – The New Industrial Revolution, The Big Idea, Generate Ideas with Brainstorming, Business Startups, Ideation, Venture Choices, The Rise of Startups Economy, The Six Forces of Change, The Startups Equation, The Entrepreneurial Ecosystem, Entrepreneurship in India. Government Initiatives.

Unit – II

Startups Capital Requirements and Legal Environment – Identifying Startups Capital Resource requirements, estimating Startups cash requirements, Develop financial assumptions, Constructing a Process Map, Positioning the venture in the value chain, Launch strategy to reduce risks, Startups financing metrics, The Legal Environment, Approval for New Ventures, Taxes or duties payable for new ventures.

Unit – III

Startups Financial Issues – Feasibility Analysis, The cost and process of raising capital, Unique funding issues of a high-tech ventures, Funding with Equity, Financing with Debt, Funding startups with bootstrapping, crowd funding, strategic alliances.

Unit – IV

Startups Survival and Growth – Stages of growth in a new venture, Growing with the market, Growing within the industry, Venture life patterns, Reasons for new venture failures, Scaling Ventures, preparing for change, Leadership succession. Support for growth and sustainability of the venture.

Unit – V

Planning for Harvest and Exit – Dealing with Failure, Bankruptcy, Exit Strategies, Selling the business, Cashing out but staying in, being acquired, Going Public (IPO), Liquidation.

Course Outcomes: The Student is able to
CO1 : acquire the skills needed for identifying the right business opportunities and initiating the process of establishing the new Venture.
CO2 : gain the necessary managerial competencies for leading the Venture through its stages of Growth, Maturity and Decline.

References:

1. Mahoney, Markham. Management Consultancy, Oxford University Press.
2. Rajeev Roy, Entrepreneurship, Oxford University Press.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

354 – Private Equity and Venture Capital (Online)

Objectives:
1. To understand the evolution of venture capital financing over the years.
2. To identify various legal structures of venture capital firms.
3. To evaluate potential business ideas and prepare a successful business plan.
4. To understand different stages of business life cycles.
5. To know how venture capitalists exit from the business.

Unit – I

Introduction to Private Equity – Concept of PE and its characteristics, Definition, Difference between PE, VC and Hedge Funds, Nature of PE Firm, Players in the PE market, benefits of PE finance, Venture Capital, Over view to Venture Capital, definition, features, types, roles.

Unit – II

Legal Structure - PE Fund, Legal structure and terms, Private equity investments and financing, Private equity funds and private equity firms, Investment features and considerations.

Unit – III

Valuation Approaches – Structure and regulation of Venture Capital and Private Equity, Business Cycle of PE, Structure of VCPE firms, Limited liability partnerships, Routes of VCPE investments in India, Regulatory aspects of VCPE investments, Valuation approaches, risk and return, analysis of funds, conventional method, revenue multiplier method.

Unit – IV

Strategies adopted during the Business Life Cycles – Strategies of PE, leverage Buyout, growth capital, mezzanine capital, distressed debt, other Strategies. Size, performance and economic environment of PE global context. PEPI and Fund Indices, PE in India an overview, Due Diligence, Procedure and challenges, Due diligence in emerging PE Market, investing in developing market, past performance and strategy.

Unit – V

Exit Strategy – Modes of Exits in Indian Context and Challenges involved, IPO, Promoter Buyback, Sale to other PE Funds, Sale to other strategic Investors, Stake Swaps, M&As, open market, Secondary Market, Buyback of shares

Course Outcomes: The Student is able to
CO1 : comprehend the concept of Private Equity, Venture Capital and the Legal framework related to the PE/Venture Capital funds.

CO2 : gain the professional competence to formulate appropriate Strategies for PE/Venture capital Funds.
CO3 : devise exit strategies.

Reference:
Raj Kumar. Venture Capital Investments. SAGE.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

355 – Family Business Management

Objectives:
1. To understand the importance of family-owned businesses.
2. To identify the needs of Family Business Owners.
3. To protect family wealth and prepare succession plans.

Unit – I

Introduction to Family Business – Family Business as a unique synthesis, wealth management, Succession and Continuity – The three generation rule, Building Family business that last, The systems theory model of Family Business, Agency Theory of Family business, The stewardship perspective of family business, Competitive Challenges and Competitive advantages of family businesses, The role of Genograms and family messages to understand the family system. Family emotional intelligence, The ECI-U Model.

Unit – II

Ownership Challenges and Family Governance – Shareholder Priorities, Managers vs Owners, Responsibilities of shareholders to the company, Effective Governance of the shareholder, firm relationship, Family Governance – Structure, Challenges to family governance, Managing the challenges of succession. Enterprise Sustainability – Twelve elements of strategic fit and its implications on family firms.

Unit – III

Successor Development – Characteristics of next-generation leaders, Next-generation attributes interests and abilities for responsible leadership, Next-generation personalities, managing interdependence, CEO as an architect of succession and continuity, Types of CEOs and the transfer of power. Importance and functions of family office.

Unit – IV

Strategic Planning and Transgenerational Entrepreneurship – Life cycle stages influencing family business strategy, Turning core competencies into competitive advantage, The unique vision of family-controlled businesses, Strategic regeneration, The Business Rejuvenation matrix, Intrapreneurship.

Unit – V

The Future of Family Business – New Leaders of the Evolution, Three states of evolution Continuity and culture, changing the culture, The change formula, Organization Development approaches to change, Commitment planning, Organic competencies and business's future, Thriving through competition, Institutionalizing the change.

Course Outcomes: The Student is able to

CO1 : comprehend all the concepts related to the Family Business organization including Family Governance, Successor Development and Strategic Planning.
CO2 : apply these concepts in building the competitive strength of the Family business units.
CO3 : manage Family Wealth.

References:

1. Rajiv G. Agarwal, Family Business Management. SAGE
2. Baron, Lachenauer. Family Business Handbook – How to build and sustain a successful, enduring enterprise.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

356 - Women Entrepreneurs

Objectives:
1. Understand the role of women entrepreneurship in different facets of society.
2. Know the various livelihood supports for women Employment opportunities.
3: Elucidate the role of various developmental schemes supporting women entrepreneurship.

Unit – I

Women Entrepreneurship, Significance of women entrepreneurship, Factors contributing to women Entrepreneurship, Characteristics, Challenges faced by Women Entrepreneurs

Unit – II

Growth of women Entrepreneurship, Entrepreneurship in Sectors like Agriculture, Tourism, Health care, Transport and allied services, Relationship between Entrepreneurship and empowerment, Achievements of Woman Entrepreneurs, Role Models of Woman Entrepreneur.

Unit – III

Women Employment Opportunities, Livelihood support for women Employment, Supporting agencies, Income Generating Programme, IRDP, Rural Credit & women's Self-help Groups, Skill Development and Technology Transfer, Technologies for Women, Impact on Women's Development Programs and policy measures at International, National and State Levels.

Unit – IV

Strategies of Women Entrepreneurship Development, EDP, Objectives, Evolution of women entrepreneur development programme, Special Women and EDPs, Micro Enterprises and Self-employment, Opportunities.

Unit – V

Trends and Patterns of Women Entrepreneurship, Non-Stereotyping Women, Institution and Schemes supporting Women Entrepreneurs – SIDO, DIC, EDI, NIESBUD, /SEWA, ALEAP - Institutional infrastructure.

Course Outcomes: The Student is able to
CO1 : comprehend the Role of Women entrepreneurs in the different facets of society and the Livelihood opportunities for women employment.
CO2 : gain practical insights into the various Government Schemes available for promoting Women Entrepreneurs.
CO3 : understand the prospects and challenges of women entrepreneurs.

Reference:

Hisrich, Robert D., Michael Peters and Dean Shepherd Entrepreneurship, Tata McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

Semester – IV

401 – Digital Business Models

Objectives:
1. This course aims to provide an overview of the business opportunities created by Digital Technologies.
2. To understand risks of Digital Business models, impact on Jobs and Employee relations.
3. To explore the options for Platforms, Digital design and Customer Satisfaction.

Unit – I

Digital Technologies, Digital disruptions, organisations' functioning in Digital age, common traps, Transition into Digital era. Aligning firms' strategy and culture, Digital Matrix Framework, Transformation phases to re-invent. Micro economic policies in Digital business. Game Theory.

Unit – II

Areas to digitalise, Biggest pay out or risk, current business model or invent in new digital business. First mover advantage, Risk of late to move, effect of digital attracters. Network and scale effects. Own Vs shared platforms. SaaS – software as a service. Digital, Physical, and Physital options.

Unit – III

Digital business – Effect on jobs, employment, freelancing, fixed or flexible times and days, office work, remote work, non-employment work arrangements, labour automation with AI and Robotics. Reskilling. Employment quality, need to review rights and obligations related to employment reationships. Safety net for employees affected by Digitalisation.

Unit – IV

Platforms – Role of CIO,CTO, Hosting on cloud – Life and shift, IaaS - Infrastructure as a Service, PaaS - Platform as a Service, and FaaS – Function as a Service. Cloud by domain – Supply chain, commercial, and Enterprise. Selection of technology, sourcing, Migration, Migration of existing application. Economic feasibility, and risks. Cloud security, zero-trust applications.. Shift of IT Projects to products, Integration with Business. Benefits & rights of platforms. Parent and host country regulations, and restrictions.

Unit – V

Customer preferences, customer centric, Digital Marketing – aligned to firm's culture and products. Design thinking, value innovation, blue ocean thinking, strategy canvas, four action frameworks. Minimum viable product, product life cycle, portfolio of products for digital

customers. Business model, revenue model, lean and agile business model. Supply chain, social media management.

Course Outcomes: The Student is able to
CO1 : comprehend the concepts associated with Digital Business Models.
CO2 : understand Digital Tech platforms as well as their impact on Employment.
CO3 : apply these concepts in building successful Digital Business Models.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

402 - Strategic Management

Objectives:
1. To understand basic issues and concepts related to strategic management.
2. To help students devise strategies for competitive advantage.

Unit – I

Nature of Strategic Management, Dimensions, benefits and risks. The strategic management process. Strategy formulation. Business vision and mission, Importance, Characteristics and components. Evaluating mission statements.

Unit – II

The External Assessment, Porter's five force analysis. Industry and competitive analysis. The Global Environment, competitive strategies for firms in global markets. The Internal Assessment: SWOT Analysis, BCG, McKinsey's 7s frame work, strategy and culture. Value Chain Analysis. Resource based view of the firm. Benchmarking.

Unit – III

Strategies in Action: The balanced scorecard, types of strategies, Integrative, Intensive, Diversification strategies, defensive strategies, Porter's Generic Strategies. Strategy analysis and choice: Business level strategies. Cost leadership, Differentiation, Speed and market focus. Multi business strategy: BCG matrix, GE Nine Cell matrix. Limitations of portfolio approaches. The Parenting framework.

Unit – IV

Strategy Implementation: Short term objectives, functional tactics. Empowering Operating personnel, Allocation of recourses, managing resource conflict. Structure and strategy: Improving effectiveness of traditional organisational structures. Creating Agile Virtual Organisations, Modular organisation. Towards boundary less structures.

Unit – V

Leadership and culture: Strategic intent, Shaping organisational culture. Role of leader in organisational culture. Strategy evaluation, Strategy evaluation process. Corporate Governance.

Course Outcomes: The Student is able to
CO1 : Develop vision, mission and objectives of the organization.
CO2 :Analyse industry and develop techniques of competitive analysis.
CO3: Appraise strategic leadership styles and actions.
CO4: Formulate effective strategies in business.
CO5: Develop a frame work for the implementation of strategies in business.

6. Wheelen, Hunger, Concepts in Strategic Management and Business Policy, Pearson 2018

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

403 - Business Laws

Objectives:
1. To introduce the statutory provisions that affect the business decisions.
2. To give an exposure to important commercial laws, to understand the legal implications of a modern business organisation.
3. To understand the legal regulations related to the companies.

Unit – I

Contract Act: Offer and Acceptance, Consideration and Capacity of the Parties, Free Consent, Indemnity and Guarantee, Bailment and Agency. The Negotiable Instruments Act: Definition, Types of Negotiable Instruments, Negotiation, Endorsement and Crossing of Cheque, Dishonour of Cheques, Parties to Negotiable Instruments.

Unit – II

Contract of Sale of Goods: Sale, and Agreement to Sale, Conditions and Warranties, Performance of Contract of Sale, Unpaid Seller and his Rights, Caveat Emptor, Partnership Act, and Limited Liability Act.

Unit – III

Concept of Company and its Characteristics. Formation of a company. Memorandum and Articles of Association. Board of Directors, Role, Functions. Arbitration.

Unit – IV

Social Responsibility of Business. Consumer Protection Act, Consumer Councils, Redressals. Right to Information Act.

Unit – V

Meeting of Directors and Shareholders. Winding up and Dissolution of a company. Ethics, and Morals, Ethical Practices.

Course Outcomes: The Student is able to
CO1 : Analyze the Indian Contract Act.
CO2 : Evaluate Sales of Goods Act and the machinery for redressal of consumer grievances.
CO3: Elaborate rights and duties of agent and principal.
CO4: Examine the rights and duties of partners, dissolution of partnership firm.
CO5: Explain the kinds of Negotiable Instruments and Goods and Services Act.
CO6: Evaluate the global issues with respect to business ethics.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

404 - Organisation Development

Objectives:
1. To understand the forces that stimulate change
2. To understand the necessity, resistance and strategies for change.
3. To enable the skills for the application of OD in organizations.

Unit – I

General Introduction to OD – Overview of the field of OD, Definitions of OD, A short history of OD and its evolution, Growth and relevance of OD, characteristics of OD, Values, assumptions, and beliefs in OD. Ethical Issues in OD.

Unit – II

Foundations of OD – Models and Theories of planned Change – (a) Lewin's Change Model (b) Burke – Litwin Model (c) General Model of planned Change, systems theory, participation and Empowerment. Teams and Team work, parallel learning Structures – A 'normative-reductive' strategy of changing, Applied behavioral Science, Action Research as a process and as an approach.

Unit – III

Managing the OD process – Diagnosis – The six-box Model – The action component – OD interventions and their nature – An overview of classification of OD interventions – Planning, choosing, and implementing of an intervention strategy. Evaluation and institutionalizing OD interventions – The program management component – Conditions for optimal success of OD – Issues in Consultations – Client Relationship.

Unit – IV

Human Process Interventions – Human Process approaches – T-groups, Process-consultation, Third party intervention, Team Interventions, Techniques and exercises used in Team interventions. Role Analysis Technique, Role Negotiation Technique, Responsibility Changing, Force Field Analysis. Broad Team Building interventions. Organizational Process approaches – Organization Confrontation, Inter-Group Relations interventions, Grid OD. Training Experiences.

Unit – V

Techno-Structural and Strategic Interventions – Techno-structural interventions: Structural design – (i) Restructuring Organizations, Downsizing, Reengineering (ii) Employee involvement: Quality Circles, Total Quality Management (iii) Work Design: R. Engineering approach, System approach. Strategic Interventions: Organizational Transformation and its Characteristics, Cultural change, Self – designing organizations, organizational Learning.

Course Outcomes: The Student is able to
CO1 : apply the Diagonistic processes for OD.
CO2 : facilitate Team interventions and Structural interventions.
CO3 : contribute towards the Other Interventions that lead to Organization Development.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

411 – Marketing of Services

Objectives:
1. To differentiate between product and service businesses
2. To equip for a career in marketing in the service industry.

Unit – I

Marketing of Services, Introduction, Growth of the Service Sector, The Concept of Service, Characteristics of Services, Classification of Services, Designing the Service Blueprint, Using Technology, Developing Human Resources, Building Service Aspirations.

Unit – II

Marketing mix in services marketing, The Seven Ps, Product Decisions, Pricing Strategies and Tactics, Promotion of Services and Placing or Distribution Methods for Services, Additional Dimensions in Services Marketing, People, Physical Evidence and Process, Internet, and Social Media as a service channel.

Unit – III

Strategic Marketing Management for Services, Matching Demand and Supply through Capacity Planning and Segmentation, Internal Marketing of a Service, External versus Internal Orientation of Service Strategy.

Unit – IV

Delivering Quality Services, Causes of Service-Quality Gaps: The Customer Expectations versus Perceived Service Gap, Factors and Techniques to Resolve this Gaps in Service. Quality Standards, Factors and Solutions, The Service Performance Gap Key Factors and Strategies for Closing the Gap. Developing Appropriate and Effective Communication about Service Quality. Measuring Customer Satisfaction, Customer Feedback.

Unit – V

Marketing of Services with special reference to Financial Services, Health Services, Hospitality Services including Travel, Hotels and Tourism, Professional Services, Public Utility Services, Communication Services, Educational Services.

Course Outcomes: The Student is able to
CO1 : Analyse the basic concepts of services marketing.
CO2 : Understand customer needs and expectations.
CO3 : Develop market segmentation process in services marketing.
CO4 : Discuss the pricing strategies of services marketing.
CO5 : Importance of marketing communication in services promotion.

References:

1. Zeithaml, Bitner, Gremler, Pandit. Services Marketing. 2018, McGraw Hill
2. Jauhari, Dutta. Services Marketing. OUP

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

412 – Industrial Marketing

Objectives:
1. To help the learner distinguish between consumer marketing and industrial marketing
2. To learn to formulate industrial marketing strategies and to design industrial marketing mix elements

Unit – I

Introduction to Industrial Markets - Industrial Marketing System, Concepts and Characteristics. Types of Industrial Markets, Industrial Buyer Behaviour. Consumer Marketing Vs. Industrial Marketing.

Unit – II

Strategic Industrial Marketing - Marketing Information Systems and Marketing Research, B2B Commerce. Value, and Vendor Analysis.

Unit – III

Classification of Industrial Products and Services - New Product Development and Introduction, Industrial Product Management, Pricing Decisions in Industrial Markets.

Unit – IV

Formulating Channel Strategies and Physical Distribution decisions – Channel Management - Promotional Strategies for Industrial Goods/ Services. Personal Selling

Unit – V

Developing Marketing Strategies and Programs for Industrial Goods / Services. Formulating channel strategy , Channel Conflicts, Logistics. Pricing strategy, Promotional strategy, Industrial Advertising, Exhibitions, Brochures, Marketing in Social Media. Sales force automation.

Course Outcomes: The Student is able to
CO1 : Outline fundamentals of Industrial Marketing.
CO2 : Identify the general strategies for Industrial Marketing.
CO3 : Market industrial products using social media.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

413 – International Marketing

Objectives:
1. To gain knowledge of marketing management in the international scenario.
2. Appreciate the nuances of international marketing environment and develop marketing strategies for the dynamic global markets.

Unit – I

The international marketing environment, Political and legal systems, Multilateral and Geographical Groupings, International Marketing Environment, Cultural, political, Legal. Business Customs, Economic and Financial dimensions.

Unit – II

Understanding the global consumer market, Scope and challenges of international marketing, Assessing international market opportunities, Marketing Research. Export and Import Policies. Incentives for Exports. Trade Barriers.

Unit – III

International marketing management, Planning and organization, Market entry strategies, Export, joint ventures and direct investments.

Unit – IV

Global product management, standardization vs. Differentiation, Product planning and development, Marketing industrial products and services globally, Pricing for international markets.

Unit – V

Global logistics management, International distribution systems, Global advertising and promotional strategies, Sales management, Developing marketing strategies and programs for international markets. Export & Import Procedures, and Documentation.

Course Outcomes: The Student is able to
CO1 : gain a conceptual understanding of International Marketing.
CO2 : develop Marketing Strategies for Global markets.

1. Cateora, Money, Gilly, Graham. International Marketing. McGraw Hill, 2019
2. Joshi. International Marketing, OUP

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five

questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

414 – Retail Management

Objectives:
1. This course is designed to provide the learner a good understanding of the concepts, strategies,and trends associated with the retail operations.
2. To help the learner to explore the current retail environment, key retail management strategies ,and trends in retailing.

Unit – I

An overview of Retailing - Types of stores, Product Retailing vs. Service Retailing, Non store Retailing, Retail strategy, Achieving competitive advantage and positioning Retailing environment, Legal, Social, Economic, Technological issues. Trends in the Indian Retailing Industry.

Unit – II

Retail store location and layout - Country/Region analysis, Trade area analysis, Site evaluation and selection, Store design and layout, Comprehensive store planning, Exterior design and layout, Interior store design and layout, Interior design elements.

Unit – III

Planning merchandise needs and merchandise budgets - Methods for determining inventory evaluation, Assortment planning, buying and vendor relations. Merchandise pricing – Price strategies, Psychological pricing, Mark-up and markdown strategies.

Unit – IV

Communicating with the retail customer - Retail promotion mix, Advertising, Sales promotion, Publicity, Retail selling process, Retail database, In-store customer service. Customer Experience Management.

Unit – V

Globalization and changing retail formats – Online retailing, International Retailing, Impact of Global Brands. Opportunities and Challenges - Market entry formulas, New customized formats, customized stores, portable stores, merchandise depots, retail theatre, service malls, customer-made stores, interactive kiosk 'shopping arcades. Franchising. Ethics

Course Outcomes: The Student is able to

CO1 : Outline fundamentals of Retailing.
CO2 : Formulate location and layout strategies of retailing.
CO3 : Analyse various pricing strategies.
CO4 : Design and develop franchising models.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

415 – Supply Chain Management

Objectives:
1. Acquaint the students with supply chain management system elements, structure, organisation and process.
2. To understand the role of supply chain and logistics in corporate strategy.

Unit – I

Physical distribution: Participation in the physical distribution functions, The environment of physical distribution, Channel design strategies and structures, selecting channel members, Setting distribution objectives and tasks. Target markets and channel design strategies.

Unit – II

Managing the marketing channel - Product, Pricing and Promotion issues in channel Management and Physical Distribution. Motivating channel members, Evaluating channel member performance, Vertical marketing systems, Retail co-operatives, Franchise systems and corporate marketing systems.

Unit – III

Supply Chain: Building Blocks of a Supply Chain Network. Performance Measures in Supply Chain World, Models for Supply Chain Decision Making.

Unit – IV

Supply Chain Inventory Management: Economic Order Quantity Models, Recorder Point Models, Multichannel Inventory systems, Supply chain Facilities Layout, Capacity Planning, Inventory optimization, Dynamic Routing and Scheduling.

Unit – V

Relation to ERP: E-procurement, E-Logistics, Internet Auctions, E-markets, Electronic Business Process, Optimization SCM. Managing International Supply Chain.

Course Outcomes: The Student is able to
CO1 : Get knowledge regarding basic concepts of Distribution and Supply Chain.
CO2 :Analyse different logistics strategies to get competitive advantage.
CO3: Assess the profitability by measuring the logistics performance and maintaining supply chain relationships.

References:
1. Sunil Chopra, Meindl & Kalra. SUPPLY CHAIN MANAGEMENT, Pearson

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

416 – Sales Management

Objectives:
1. To understand and apply concepts and techniques of Personal Selling and Sales Management.
2. To understand and apply the dynamics of channel management and sales force management.

Unit – I

Selling and Marketing concept – theories of selling. Classification of sales people – Characteristics of sales people. Personal selling - Selling Process. Prospecting: Steps – Pre approach: Objectives, Sources – The Approach: objectives, methods. The presentation: strategies, developing, situational selling. Handling objections: Attitude, strategy, Methods, Types of objections, Specific situations. Closing – tactics, methods, follow up.

Unit – II

Sales organization: Types sales potential – Determining the sales force profile. Product market analysis – Determining the sales force size. Territory management: Accounts and sales potential salesperson workload, designing territories, reasons and procedures and assigning to sales persons, routing, time management.

Unit – III

Sales force management: Recruitment and Selection: Job analysis, Manpower Planning, Job specification and Job description, sources of sales recruits, Problems in screening and selecting the applicants. Sales targets: Quantitative & Qualitative methods. Planning sales force training methods, content, execution, training the dealer salespersons and evaluating the training programmes. Leadership and supervision. Compensation: Objectives, remuneration methods, incentives. Motivating the sales force – Sales meetings and Sales Contests.

Unit – IV

Evaluation and control: Performance Appraisal, Sales budget, Sales Quotas, Systems approach, Sales Management audit. Sales analysis: sales related, cost related, activity related. Determinants of sales person performance. Financial, and Non-Financial Rewards.

Unit – V

Distribution Objective/Strategy - Interface between Sales force and Channel, Channel Design, Implementing Channel Design, Managing the Channel Members, Channel Power and Conflict. Channel Evaluation; Distribution planning, costs and control. Functions of intermediaries (wholesaler & retailers), Selection and motivation of intermediaries, Need, criterion and establishing objectives for intermediaries; Control issues- Major cost centres in distribution, establishing standards for control, Controlling channel members and tools for control

Course Outcomes: The Student is able to

CO1 : Devise personal selling and sales management strategies.
CO2 : Select appropriate channels for sales management.
CO3 : Implement sales force techniques and reward management.

References:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

421 – International Financial Management

Objectives:
1. To have exposure on International aspects of Financial Management
2. To understand the Foreign Exchange Management
3. To introduce derivatives aspect of International Finance

Unit – I

Introduction to International Financial management: Domestic vs international finance, International financial market integration, currency crisis, and global recession and risk spill over.

Unit – II

Balance of Payments - Structure - Contents of Current, Capital, and Reserve Accounts. Linkages and Impact on Exchange Rates, Capital Markets & Economy. Understanding BOP structure of a country for Investment and Raising Finance. Foreign Currency – Options, Futures, Forwards, Swaps.

Unit – III

Foreign Exchange Markets: Nature, Functions, Transactions, Participants, Forex Markets in India, Forex dealing, Foreign exchange regimes, Foreign exchange rate determination, factors affecting foreign exchange and Foreign Exchange Rate Mathematics. Foreign Exchange Exposure: Risk, Measurement and Management. Global Firms Foreign exchange exposure - Transaction, economic, and translation exposures, potential currency exposure impact on global firms and investor performance. Foreign exchange risk management strategies through Forward contracts, future contracts, money market hedges, and options contracts.

Unit – IV

Fundamental Parity Relationships and Exchange Rate Forecasting– Purchasing Power Parity, Covered and Uncovered Interest Rate Parity, International Fisher's Effect, Forward Rate Parity. Influence of these parity relationships on Exchange Rates. Methods of Forecasting foreign exchange rates and foreign exchange volatility.

Unit – V

International Capital Markets - Sources of International Finance, Debt and Equity Markets, International Equity Diversification. Short-term Vs Long-term Finance. Export Import Finance. ADRs, GDRs, IDRs - benefits and costs of holdings for investors, benefits and costs of issuance for corporations. International Capital Structure – Parent Vs Subsidiary Norms. Global Capital Structure –Factors affecting the choice of markets and structure. International Cost of Capital – Calculation, Cost of Foreign Debt, Cost of Foreign Equity, Use of International CAPM. RBI Guidelines.

Course Outcomes: The Student is able to

CO1 : Evaluate the functioning of international financial system and monetary system .
CO2 : Analyse the international financial markets and the various international financial instruments .
CO3 : Discuss the advantages of foreign exchange market .
CO4 : Identify and evaluate foreign direct investments .
CO5 : Design strategies to deal with international tax environment .

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

422 – Financial Derivatives

Objectives:
1) To know the basic concepts of Derivatives and Derivative markets.
2) To understand the Valuation Models and Trading Strategies.
3) To apply the Derivative products for effective Financial Risk Management.

Unit – I

Introduction: Futures and Options Market in India – Futures, Forwards, Options, Margins, Types of Orders. Tax Treatment of Gains and Losses. Arbitrage, Hedging, Speculation. Pricing, Usage, Valuation.

Unit – II

Futures: Markets, Basis Risk, Cross Hedging, Optimal Hedge Ratio, Liquidity and Other Risks, Index Futures. Interest rates – Types of rates, Zero rates, Bond Pricing, Duration. Term structure. Interest Rate Futures: Quotation, Pricing, Usage.

Unit – III

Swaps: Quotation, Pricing, and Usage. Interest rate swaps. Foreign currency swaps. Credit risk, valuation of swap contracts.

Unit – IV

Trading Strategies with Options and Futures – Spreads, Straddles, strangles, Butterflies, Others. Put Call Parity.

Unit – V

Options – Option Basics, Option Pricing Bounds, Binomial Option Pricing Models, Risk Neutral Valuation, Delta Hedging, Modelling Stochastic Processes, Ito Processes, Ito's Lemma, Black Scholes, Value at Risk, Option Greeks and Implied Volatilities, Exotic Options, Credit Derivatives.

Course Outcomes: The Student is able to
CO1 : Appraise the role and importance of derivatives.
CO2 : Analyzing the forward and future contracts and their pricing.
CO3 : Mitigating the risk of financial institutions by using Swaps.
CO4 : Develop trading strategies using options and futures.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

423 – Risk Management and Insurance

Objectives:
1. To introduce the concept of risk management and insurance
2. To familiarize the conceptual frame work of risk management and insurance decisions

Unit – I

Risk: Definitions, Types of Risk, Risk Management Process and Methods. Objectives of Risk Management, Risk Pooling and Insurance, Probability Concepts. Role of IRDA. Growth and Scope for Insurance Industry. Principles and Legal aspects of Insurance.

Unit – II

Institutions for Insurance and Reinsurance - Economic Rationale and requirements, Insurance Laws and Regulation, Insurance Pricing, Asymmetric Information / Moral Hazard / Adverse Selection, Deductibles/ Co-insurance. Risk Identification, Perception of Risk, Threat Analysis, Event Analysis, Statistical Methods of Risk Evaluation, Value at Risk. Risk Management Methods.

Unit – III

Risk reduction: Pooling – Risk reduction through pooling. Independent losses – Pooling arrangements with correlated losses. Insurers as managers of risk pooling arrangements. Risk diversification. Hedging with options, Forwards / futures. Comparison of derivative and insurance contracts.

Unit – IV

Life Insurance – Features, LIC of India, Products, Calculation of Premiums, Surrender Value, Mathematics of life Insurance, Mortality Tables, Risk premium, interest table, Premium Calculations - Factors determining premium, Extra premium, Actuarial aspects, Term assurance, annuities. Group insurance, Non-Life Insurance – Fire insurance – Standard fire policy, Marine, Cargo and Hull Insurance. Types – Auto Insurance, Home Insurance, Worker Compensation / ESIC, Health Insurance. Commercial Insurance - Transport, Marine, Catastrophe, Liability etc. Claims Settlement.

Unit – V

Pension Plans. Corporates Risk Management and Insurance, Actuarial Mathematics. Captive Insurance. Reinsurance. Impact of Technology on Insurance Industry.

Course Outcomes: The Student is able to
CO1 : understand the concept of risk management and various types of risk.
CO2 : select insurance products based on risks and legal aspects.
CO3 : devise insurance products based on needs and legal frameworks.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

424 - Management Control Systems

Objectives:
1. The main aim of the course is to appraise the students about the concept of Management Control Systems.
2. To offer knowledge of responsibility centers.

Unit – I

Fundamentals of Management Control: Nature of Management Control Systems, Basic concepts, Boundaries of Management Control, Impact of the Internet on Management Control, Management control environment, Goal congruence, Informal factors that influence goal congruence. Formal control systems- types of organizations, Functions of the controller.

Unit – II

Performance measurement – Difficulties in implementing performance measurement systems, interactive control. Strategic Planning and Management Control.

Unit – III

Responsibility centres – Revenue centres, Expenses centres, Administrative and support centres, Research and Development centres, Marketing centres, Profit centres, General considerations. Business units as profit centres – Other profit centres, Measuring profitability. Transfer pricing – Objectives of transfer prices, Transfer pricing methods. Pricing corporate services. Administration of transfer prices.

Unit – IV

Management control process – Strategic planning, Nature of strategic planning, Analysing proposed new programs, Analysing ongoing programs. strategic planning process – Understanding strategies, Concept of strategies, Corporate level strategies, Business unit strategies. Budget preparation – Nature of a budget, Other budgets, Budget preparation process.

Unit – V

Service organizations – Service organizations in general, professional service organizations, Financial service organizations, Health care organizations, Non-profit organizations. Multinational organizations, Cultural differences.

Course Outcomes: The Student is able to
CO1 : comprehend the basic concepts in designing effective Management Control Systems..
CO2 : apply these concepts in Budgeting and Responsibility Centre Accounting.
CO3: understand the concepts related to Transfer Pricing

Reference:

Robert N Anthony and Vijay Govindarajan, Management Control Systems, McGraw-Hill 2017

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

425 - Managing Fintechs (Online)

Objectives:
1. To learn about the major areas in FinTech, Digital Finance and Alternative Finance.
2. To know about major technological trends, including cryptocurrencies, AI and Big Data.
3. To understand FinTech Regulation, RegTech and technological innovation in Finance.

Unit – I

FinTech: Introduction, Transformation. FinTech Evolution: Infrastructure, Banks Startups and Emerging Markets. Collaboration between Financial Institutions and Startups. FinTech Typology. Emerging Economics: Opportunities and Challenges. From too-Small-To-Care to Too-Big-To-Fail. Introduction to Regulation Industry - The Future of RegTech and other Technologies Impacting it.

Unit – II

Payments, Crypto currencies and Blockchain – Introduction, Individual Payments, Digital Financial Services, Mobile Money. Regulation of Mobile Money – SFMS, RTGS, NEFT, NDS Systems, Crypto currencies. Legal and Regulatory Implications of Crypto currencies. Blockchain. The Benefits from New Payment Stacks.

Unit – III

Digital Finance and Alternative Finance – Introduction, Brief History of Financial Innovation. Digitization of Financial Services. FinTech & Funds, Crowd funding, Charity and Equity, P2P and Marketplace Lending, New Models and New Products, ICO.

Unit – IV

FinTech Regulation and RegTech. Introduction - FinTech Regulations Evolution of RegTech. RegTech Ecosystem: Financial Institutions – RegTech Ecosystem Ensuring Compliance from the Start: Suitability and Funds – RegTech Startups: Challenges –RegTech Ecosystem: Regulators Industry – Use

Unit – V

Data & Tech – Introduction, History of Data Regulation, Data in Financial Services, Application of Data Analytics in Finance - Methods of Data Protection: GDPR Compliance and Personal Privacy. AI Transforming the Future of FinTech – Digital Identity. Change in mindset: Regulation 1.0 to 2.0 (KYC to KYD). AI & Governance – New Challenges of AI and Machine Learning - Challenges of Data

Course Outcomes: The Student is able to
CO1 : comprehend the concepts underlying the Digital models supporting the Fintech Innovation, the Security issues involved and the Regulation of Fintech.

CO2 : apply these concepts in developing the Fintech products that would meet the Customer expectations.

Reference:

Sanjay Phadke. Fintech Future. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

426 – Financial Engineering

Objectives:
1. To introduce the concept of Financial Engineering and its evolution
2. To acquaint the students with the conceptual tools of Financial Engineering
3. To make the student understand the physical tools of Financial Engineering, its processes and strategies.
4. To appraise the students with the recent developments and future trends in Financial Engineering

Unit – I

Meaning and Scope of Financial Engineering, Tools of Financial Engineering, Factors contributing to the Growth of Financial Engineering. Cash Instruments – T-Bills, Bonds, Repo & Reverse Repo Rates, Key Rates,

Unit – II

Return and Risk – Measurement, Interest Rates, Exchange Rates, Inflation. Yield Curve Construction. Generic Discount Factors. Interest Rate Risk, Swaps, Swap Valuation, Swap Spreads, Duration based Hedging. Market Risk, Credit Risk, Operational Risk, Liquidity Risk, Systemic Risk.

Unit – III

Asset - Liability Management, Hedging, Arbitrage. Synthetic Instruments. Dynamic Portfolio Allocation, Portfolio allocation with volatility targets. VaR and CVaR.

Unit – IV

Product Development: Futures, Forwards, and Options. Fixed Income Securities, Equity, Differential voting rights, Hybrid securities. GARCH.

Unit – V

Teaser loans, Credit default swaps, Collateralised mortgage obligations, Syndication, Securitisation, Enhancing credit ratings. Tax driven deals, Treaty shopping.

Course Outcomes: The Student is able to
CO1 : comprehend the concepts of Financial Engineering and Derivative products.
CO2 : apply these concepts to identify the right derivative products for solving Finance problems.
CO3 : gain a working knowledge of Asset-Liability Management and Innovative Financial Products.

Reference:

Marshall, Bansal. Financial Engineering. Pearson.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

431 - Strategic Human Resource Development

Objectives:
1. This course is designed to provide a comprehensive understanding of the concepts, strategies,and trends associated with HRD.
2. It aims to educate the students regarding HRD functions, HRD programmes, Career Development and Employee Socialisation.

Unit – I

Introduction: The changing economic, business, technological, socio-cultural and political environment and its implications for managing organisations and human resources; Business and organizational restructuring and its implications for human resource management; Corporate strategy and human resource management; The HRM and approaches to HRM; HRM in personnel management; work organisation and systems; social organisation of the work place and its strategic importance; Human resource policies; Integrating HR Strategies with corporate strategies; Human Resource Management as an approach to organisation design and the role of HRM in organisation management;

Unit – II

Human Resource Management in other countries; Human Resource Planning and its linkage to corporate planning; HR planning process, techniques/methods; HR planning in an on-going organisation; integrating HR plans with other plans and management functions; Future directions of HR planning; Developing HR information system

Unit – III

Managing Human Resources Inflow-Resourcing plans; Recruitment and selection strategies; alternative to recruitment; selection methods and techniques; role of consultants and assessment centres in recruitment and selection and retention policies. Developing Human Resources - Concept of HRD; HRD as a strategic approach to employee performance: HRD and TQM; HRD experience in different industries; corporate training and development strategies.

Unit – IV

Performance management - Concept, Philosophy, process. performance appraisal: team performance management and evaluation, Counselling, Coaching. Compensation and Rewards management - Reward strategies and philosophy; HRM approach to rewards management

Unit – V

Strategic management of employee relations -HRM approach to employee relations: HRM values and employee relations, change management, HRM and culture management, employees' involvement and participation in decision making and management of organization, negotiating employee relations, HRM and trade unions.

Course Outcomes: The Student is able to

CO1 : Analyze the fundamental concepts of HRM and functions of HRD.
CO2 : Develop sub-systems of HRD.
CO3 : Apply training and development practices.
CO4 : Identify the issues in employee counseling and wellness.

References:

2. Gary Rees. Strategic Human Resource Management. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

432 – Reward Management

Objectives:
1. To understand the various dimensions of Compensation Management
2. To know how the compensation options are determined
3. To gain awareness of the role of various bodies involved in Compensation Management

Unit – I

Reward system – compensation & non compensation dimension, system for non-Compensation. Job analysis – Planning a Job analysis program, Collection and description of job data, designing of custom-made job analysis questionnaire, Guidelines for conducting a job analysis interview. Concept of Equity, Gender Equity.

Unit – II

Job Description – Broad, generic job (class descriptions versus Narrow, specific job (Position) descriptions, A job contract, Planning, operations and control, elements of the job description, Job summary, other ways of describing job facts of evaluation, Job requirements and pay, whole job ranking, position classification, Predetermined grading Approach, market pricing approach, a maturity curve method, Development and use of compensable factors.

Unit – III

Pay structure architecture, Determining pay policy line, the need for more than one pay structure, displaying job data, identifying lowest and highest rate of pay, developing pay grades, single rate pay grade, two tire wage plan, multiple point pay structure, range or spread dimension, pay grade width, determining pay grade minimum and maximum rates of pay, internal design consideration, spread of range and steps, pay grade overlap, broad banding.

Unit – IV

Short term incentives – Premium and differentials, pay for unit produced, individual based bonus and rewards, organization wide short term incentives, Scanlon plan, lincon's incentive system. Productivity Gain Sharing Schemes.

Unit – V

Long term incentives – Designing a long term incentive and deferred compensation plan, Qualified deferred compensation arrangement, Social security, retirement plan, pension plans, profit sharing plan, stock bonus plan, ESOP, employer benefits and employer costs for ESOP, Individual retirement account, Savings incentive match plan for employees.

Course Outcomes: The Student is able to
CO1 : Contrast different types of incentive plans and determine plan suitable to organization.
CO2 : Implement different types of employee benefits.
CO3 : Design different methods of wage determination applicable to different cadres of employees.
CO4 : Evaluate the mechanism of wage boards and its role in fixation of wage

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

433 – Labour Legislations

Objectives:
1. This course is aimed at developing an understanding of the interaction pattern among labour, management and the State.
2. To impart basic knowledge of the Indian Labour Laws and their distinctive features.
3. To impart knowledge of the various enactments with focus on practice.

Unit – I

Introduction to Labour Legislation: Social legislation and Labour Legislation, Forces influencing Labour Legislation in India, Principals of modern Labour Legislation, types of Labour Legislation. International Labour Organisation: Preamble to the constitution, Organisation structure, Major Activities of ILO, International standards of Labour and their influence on Indian Labour Legislation

Unit – II

The Factories Act, 1948: objective, coverage, welfare measures, administrative machinery, Industrial Employment (standing order) Act, 1946: Objective, Coverage, Benefits and main provisions of the act. Trade Union Act, 1926: Objective, Registration Process and miscellaneous provisions Industrial Disputes Act, 1947: Objective, Coverage, Benefits, strikes and lockout, Conciliation Officers, Board, Court of enquiry, Labour Court, tribunals, National tribunals, Amendments

Unit – III

Collective Bargaining: Importance, Levels, Collective agreements, Hurdles to Collective Bargaining in India. The Workmen's Compensation Act, 1923: Objective, Coverage, Benefits, Main provisions. Employee's State Insurance Act, 1948: objective, scope, coverage, benefits, The role of ESI Corporation and ESI Hospitals, critical appraisal of the Act

Unit – IV

The Employee's Provident Fund and Miscellaneous Provision Act, 1952: objective, coverage, employers' obligations, benefits, penalties, critical appraisal of the Act. The Payment of Gratuity Act, 1972: Objective, Coverage, Employers' obligations, benefits, critical appraisal of the Act. The Maternity Benefit Act, 1961, Child Labour (Prohibition and Regulation Act, 1986).

Unit – V

Contract Labour (Regulation and Abolition Act, 1986). Designing Social Security Programmes. Labour Codes. Counselling & Education Programmes. Social Contract.

Course Outcomes: The Student is able to
CO1 : comprehend the Employee Legislation concerning Employee Payments, Collective Bargaining, Workmen Compensation and Welfare.
CO2 : apply these concepts in the HR management by ensuring all the Legislative provisions are complied with.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

434 – Management of Change

Objectives:
1. To understand the forces that stimulate the change, necessity and resistance to it.
2. To manage the change process with the understanding of OD skills.

Unit – I

Change – Concept, Forms, Need, and Problems of Change. Stimulating forces – Planned change, Methods, Techniques. change agents, unplanned change, Model of organisational change, Lewin's three Step Model.

Unit – II

Resistance to change – individual factors, organisational factors, techniques to overcome resistance to change.

Unit – III

Change programs – effectiveness of change programs, change process, job redesign, socio-technical systems. Consultation Process, Controlling, and Regulation of Change. Social and Ethical Challenges in Organisational Change.

Unit – IV

OD – basic values, phases of OD, entry, contracting, diagnosis, feedback, change plan, intervention, evaluation, termination.

Unit – V

OD intervention – human process interventions, structure and technological interventions. Preparing Organisation for Change, Assessing Readiness for Change. Strategy interventions – sensitivity training, survey feedback, process consultation, team building, inter-group development, innovations, learning organizations.

Course Outcomes: The Student is able to
CO1 : understand the need for change and prepare the organization for change.
CO2 : implement various OD interventions for change.

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

435 – Stress Management

Objectives:
1. To understand the concept of stress and its impact on mental and physical wellbeing.
2. To understand the importance of using effective coping skills to resolve stress.

Unit – I

Stress: Meaning, discovery of stress, General Adaptation. Syndrome, inevitability of stress. Classification of stressors, Physical and emotional stressors – Impact in the human being, bodily changes, the nervous mechanism and hormones release. Sources of Stress. Nature of stress- Constructs and Problems.

Unit – II

Stress in colleges – Students challenges, opportunities, coping, life script formation, Myths, Assumptions of Stress Management. Stress severity, rating of stressors, and assessment of individual stress, Short term, and long term effects. Behaviour disorders – medical disorders, emotional disorders, cognitive disorders. Personality and stress, type A, B, C and E personalities.

Unit – III

Stress in occupation, stress and job performance, Managerial activities and Executive stress. stress and management change, Decision making under stress, Burnout, Coping with Resources and Processes, Assertiveness Training

Unit – IV

Managing stress – coping responses, Relaxation techniques, Breathing techniques, Mediation, Muscular Relaxation, Bio feedback system, Visualization and imagery, Self Talk, Positive self-control, Sleep Management, Exercise and body tune up, Aerobic exercise, Benefit of exercise.

Unit – V

Stress and Motivation, Verbal and Non-verbal indicators of stress, assessment of stress. Assertive Management – Time Management, Professional counselling, Development of B behavior and hardiness, Social Networking, Organizational coping strategies, Healthy mind and life activity, Spiritual outlook and wellness.

Course Outcomes: The Student is able to
CO1 : comprehend the concepts of Stress, Stress Management and Stress Relieving Techniques.
CO2 : apply these concepts in building Assertive Management, Social Networking and improving the Mental and Spiritual Health of the Employees.

Reference:
Jerrold S. Green Berg: Comprehensive Stress Management. McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

436 – Global Human Resource Management

Objectives:
1. This course is designed to provide a comprehensive understanding of the concepts and strategies associated with Global HRM, its Social and Cultural context.
2. Aims to educate about the International HRM functions and Industrial Relations.

Unit – I

Human and Cultural Variables in Global Organisations, Cross-cultural differences and managerial implications. Cross Cultural Research Methodologies and Hofstede Hermes Study. Structure in International Firms. Global Issues and Challenges.

Unit – II

Structural Evolution of Global Organisations -- Cross cultural leadership and decision making, Cross-cultural communication and negotiation. Managing across Cultures. Religious and Economic Implications.

Unit – III

Human Resource Management in Global Organisations – Recruitment, Selection, Training, and Development. Career and Family Balancing Issues.

Unit – IV

Compensation and Appraisal in Global Perspective. International Industrial Relations.

Unit – V

MNCs and Compensation System across Countries. People Management in USA, Asia, Europe, and Africa. Trends, and Future Challenges. Diversity – Norms, Benefits, and Challenges.

Course Outcomes: The Student is able to
CO1 : Identify the challenges of global HRM and the strategic role of Global HRM.
CO2 : Analyze the cross-cultural management problems and the necessary skill building methods.
CO3 : Develop the global labour relations and international standards in organizations.

Reference:
Anne-Wil Harzing, International Human Resource Management. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

441 – Enterprise Resource Planning

Objectives:
1. This course is designed to provide a comprehensive understanding of the concepts associated with ERP Modules, Applications and Implementation.
2. To learn post implementation issues and maintenance of ERP.

Unit – I

Introduction – Overview, Need, Advantages, and Growth of ERP. Evolution - Risks and benefits, planning design and implementation of cross functional integrated ERP systems. Management Information System (MIS), Decision Support Systems (DSS), Executive Support Systems (ESS), Data Warehousing, Data Mining, Online Analytical Processing (OLTP), Supply Chain Management (SCM), Customer Relationship Management (CRM). ERP in Small and Medium Firms.

Unit – II

ERP Solutions and functional units - Overview of ERP software solutions. Small, medium, and large enterprise vendor solutions. Business Engineering and best Business practices - Business Process Management. Overview of ERP UNITs – Sales, Marketing, Accounting, Finance, Materials and Production management etc.

Unit – III

ERP Implementation life cycle - ERP implementation strategies, Risks. People issues, technology risk, process risk, operation and maintenance risks, and managing such risks in ERP. Projects - Planning Evaluation and selection of ERP Systems. Implementation life cycle - Evaluation and selection of ERP Package, Project planning, Implementation team training and testing, End user training & Going Live. Post Evaluation & Maintenance- ERP implementation, Methodology and Frame work. Training & Data Migration. Consultants, Vendors and Employees. Role of BPR in ERP

Unit – IV

Post implementation – Maintenance of ERP, Organizational and Industrial impact, Success and Failure. Factors of ERP Implementation.

Unit – V

Emerging trends on ERP - ERP II, ERP and Internet, Extended ERP systems and ERP, bolt – on -CRM, SCM, Business analytics etc. Security & Privacy issues. Future trends in ERP systems, web enabled, Wireless technologies. Case studies.

Course Outcomes: The Student is able to
CO1 : Make basic use of Enterprise software, and its role in integrating business functions
CO2 : Analyse the strategic options for ERP identification and adoption.

CO3 : Design the ERP implementation strategies.
CO4 : Create reengineered business processes for successful ERP implementation.

Reference:
Leon. Enterprise Resource Planning. McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

442 – Decision Support Systems

Objectives:
1. To acquaint with the information needs and decision process for effective decisions.
2. To introduce the basic concepts in Decision Support Systems, illustrating, how they facilitate efficient executive decision making.

Unit – I

Introduction – Decision concept, Steps, Decision Support System, Components, Characteristics, Classifications and Applications.

Unit – II

Model Management – Model, Modeling Process, Types of Models, Optimization, Simulation. Heuristic – Descriptive, Predictive. Model Base – Modeling Languages, Model Directory, Model Base Management System, Model Execution, Integration and Command Processing, Model Packages.

Unit – III

Data Management System – Data Base, Sources of Data, Data Directory, Data Structure and Data Base Languages, Query Facility, Data Management System, DBMS as DSS Development Tool.

Unit – IV

Dialog Management – User Interface, Graphics, Multimedia, Visual Interactive Modelling. Natural language processing – Speech Recognition and Understanding, Issues in User interface.

Unit – V

Development of Decision Support Systems – Development Process, Software and Hardware, Data Acquisition, Model Acquisition, Dialog development, Integration, Testing and Validation, Training and Implementation.

Course Outcomes: The Student is able to
CO1 : Define the role of information systems in DSSs.
CO2 : Design and formulate management problems using DSS models.
CO3 : Apply linear and integer programming techniques for scheduling and optimization.

Reference:
Turban, E., Delen, E. and Sharda, R., Decision Support and Business Intelligence Systems, Pearson

NOTE TO THE PAPER SETTER:

(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

443 - AI Applications in Business (Online)

Objectives:
1. The course exposes the students to the various business applications of artificial intelligence and how it can be used to address business related problems.
2. To update them with the latest AI use cases.

Unit – I

Introduction - Management Support Systems, Decision making Models, TPS, MIS, DSS, ESS Overview, Data Model. Tacit, Explicit Knowledge, Knowledge Management system.

Unit – II

Data and Model Management Systems – Data knowledge, Data Collection, Data Warehousing, Data Mining, Data visualization, Modelling, Static and dynamic, Optimization, Heuristic, Simulation, Multidimensional modelling OLAP.

Unit – III

Evolution of ERP II - Evolution MRP, MRP II, ERP, ERPII, SCM, Group Decision support system, Technologies, Enterprise DSS, ERP Knowledge management methods, Technologies, Tools.

Unit – IV

Knowledge Based Systems - Artificial Intelligence (AI), Expert System, Knowledge Acquisition and validation, Knowledge representation, Inference techniques.

Unit – V

Advanced Intelligent Systems - Neural Computing, Fuzzy Logic, Intelligent Agents in Client Server Architecture, Implementation, Integration, Intelligent DSS.

Course Outcomes: The Student is able to
CO1 : comprehend the various Business Applications of AI and use them appropriately to solve the business problems.
CO2 : gain a fairly in-depth understanding of Data and Model Management Systems, ERP II, Knowledge-based Systems and Advanced Intelligent Systems.

References:
1. Russell, Norvig. Artificial Intelligence. Pearson
2. Goel. Artificial Intelligence. Wiley

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units

of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

444 - Systems Control and Auditing

Objectives:
1. This course is designed to provide a comprehensive understanding of the concepts of Information Systems Auditing.
2. To learn Management Controls, Data Resource Management controls, Asset Safeguarding and Integrity issues.

Unit – I

Introduction to Information Security – Definition, Secrecy and Confidentiality, Accuracy, Integrity and Authenticity, Security Threats, Vulnerabilities. Threats and Countermeasures, Firewall, Planning and Administration, Log analysis, Logging states, When to look at the logs, Information Security Management.

Unit – II

Ethical Hacking of Computer network, system and application, Malicious Code, Mobile Code & Denial Of Service attack, Information Security Assessment Process – Network Stalking and Fingerprinting, Cracking the Shadow and Administrator, Privilege Escalation. Wireless Security and Review, RFID Hacking and Security Review, Spyware and Phishing.

Unit – III

Security Policy and Awareness – Security policy guidelines, Security awareness, People, Process and Technology. Physical Threats to the Information System, Information Infrastructure, Operating system fundamentals and security.

Unit – IV

Access Control Systems and Methodology – Access Control Overview, Identification and Authentication Techniques, Access Control Techniques, Access Control Methodologies and Implementation, Access Control Administration, Access Control Working Process. Attacks and Monitoring – Monitoring, Intrusion Detection, Penetration Testing, Methods of Attacks, Access Control Compensations, Security Testing Working Process.

Unit – V

Auditing and Monitoring – Auditing, Monitoring, Monitoring Tools and Techniques, Penetration Testing Techniques, Inappropriate Activities, Indistinct Threats and Countermeasures, IT Act, The Cyber Regulations Appellate. ISO 27000 – Impact of ISO 27000 on Information Security Management Systems.

Course Outcomes: The Student is able to
CO1 : gain a comprehensive understanding of Information Systems Audit.

CO2 : devise Management Controls, Data Resource Management Controls, Evidence collection and Asset Safeguarding.
CO3 : Implement Information Security Management Systems.

Reference:
Hoffer, George, Valacich. Modern Systems Analysis and Design. Pearson

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

445 – E-Business

Objectives:
1. Understand the factors for the growth of E – Business.
2. Learn about online promotion and CRM.

Unit – I

Introduction - Origin, need and factors affecting Electronic Business, Features of Electronic Business, Electronic business Framework, Internet as an Electronic business Enabler, Economic and social impacts of e-business.

Unit – II

Electronic Business Models: Value Proposition, Revenue Model, Market Opportunity, Competitive Environment, Competitive Advantage, Market Strategy, Organizational Development, Management Team. Electronic Data Interchange. Electronic Payment Systems (Cash, Check, Credit Card, Stored Value, Accumulating Balance), Working of Online Credit Card, Transaction Security.

Unit – III

Business Models: Business to consumer (B2C) Business Models, Types of B2C, Business to Business (B2B) Business Models, Types of B2B, Consumer to Consumer (C2C) Business Models, Types of C2C, Peer to Peer Business Models, M-commerce Business Models.

Unit – IV

Online Retailing: Segmentation of e-markets, marketing mix in internet marketing, online auctions. Online retail industry dynamics, Online mercantile model for customer perspective, Management Challenges in online retailing, electronic publishing. Online market research, Online marketing communications, Online advertising, Online branding, Online customer relationship, Online pricing strategies.

Unit – V

E-business: Search engine optimization, web research, web advertising, security of online transactions, cyber laws. Online banking implementation, changing dynamics in banking industry, Management issues in online banking, Introduction to Mobile commerce Challenges emerging in Mobile Commerce, Application areas of Mobile Commerce.

Course Outcomes: The Student is able to
CO1 : grasp the process and challenges of E-Business.
CO2 : select appropriate business models for different products.
CO3 : conduct online market research.

References:

1. Joseph. E-Commerce: An Indian Perspective. Prentice Hall
2. Laudon, Traver. E-Commerce, Business, Technology, Society. Pearson

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

446 – Software Project Management

Objectives:
1. This course intends to equip the students with the tools and techniques of Software Project Management.
2. Design and implement information system with effectiveness and efficiency.

Unit – I

Introduction to Software Project Management: Software as an Evolving product, characteristics and components of software products, Software engineering process: various models like linear, sequential, prototype, RAD, incremental, Spiral, Component, Assembly, Concurrent developmental and formal methods model, etc.

Unit – II

Planning a software project - Objectives, Effort, time, staffing and cost estimation. Make or - buy decisions. Software project scheduling: defining tasks, Activity Network, Gantt Charts, scheduling using PERT/CPM, PERT Charts, Project planning and Analysis.

Unit – III

Software Configuration and Design - Components of configuration, versions control and configuration audit. Software Design Process: Concepts, functional and object-oriented design, structured analysis, structured design, modular design, and design documentation.

Unit – IV

Software Testing: Objectives, Methods of testing, Mc Cabe's cyclomatic complexity metric, testing GUI's, testing Clients/Server architectures, testing real systems. Strategies for testing, Unit testing, Integration Testing, System testing and debugging.

Unit – V

Software implementation process and problems/issues: Emerging trends in Software Project Management, Case studies. Software quality assurance and standards, quality policy, quality controls, Software Risks, Reactive and Pro-active Risk Strategies, Risk Identification, Risk Projection, Risk Mitigation, Risk Monitoring and Management.

Course Outcomes: The Student is able to
CO1 : acquire the knowledge of the Tools and techniques used in Software Project Management.
CO2 : apply this knowledge in the effective Management of Software Project Management.

Reference:
Software Project Management - Bob Hughes & Mike Cotterell. McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

451 – Social Entrepreneurship

Objectives:
1. To familiarize the students with the concept and overview of new trends in entrepreneurship with a view to enhance entrepreneurial talent.
2. The paper aims to create an understanding of the concept of Social Entrepreneurship.
3. It seeks to prepare the minds with skills, structures and process associated with Social Entrepreneurship and management of Social Enterprises.

Unit – I

Understanding Social Entrepreneurship and Organizational form – Defining Social Entrepreneurship, Difference between Social and Business Entrepreneurship, Evolution of Social Entrepreneurship in India, Process and Types of Social Entrepreneurship, Challenges, Strategies and future of social entrepreneurship.

Unit – II

Building blocks of social enterprise – Social enterprise as a business model, types of Business Models, Understanding the Pricing Models, Creating the Delivery Channels, Financing the social enterprise, Making social enterprise competitive, Communication strategies for social enterprises. Social Entrepreneurships and its Linkage with NGOs, Microfinance, etc., Role of ICT, SHGs, Case Studies.

Unit – III

New Directions for Social Entrepreneurship: Managing startup social enterprises, Measuring performance of social enterprises, Governance of Social Enterprises, Corporate Social Entrepreneurship, Contemporary Issues in Social Entrepreneurship, Case Studies.

Unit – IV

Understanding Women Entrepreneurship: Concept, Evaluation, Importance and functions of women entrepreneurship, Topologies and categories of women entrepreneurs, Entrepreneurial Process among Women Entrepreneurs, Financial Structure of Enterprises Owned by Women Entrepreneurs, Challenges of Women entrepreneurs.

Unit – V

Growth & Strategies: Women entrepreneurs in India and aboard, Government policy on Women Entrepreneurship, Organizations Promoting Women Entrepreneurs in India, Profile of Enterprise, Socio –Economic Origins, Motivating & Facilitating Factors of Women Entrepreneurs; Work-Home role Conflict, Entrepreneurial Performance, Problem & prospects. Case Studies.

Course Outcomes: The Student is able to

CO1 : to comprehend the Process of Social Entrepreneurship, the building blocks of Social Enterprise and Women Entrepreneurship.
CO2 : apply these ideas for promoting Social Entrepreneurs and also gain insights into the New directions for Social Entrepreneurship.

References:

1. Bornstein, Davis. Social Entrepreneurship. OUP
2. Bornstein. How to Change the World. OUP

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

452 – Negotiation

Objectives:
1. To enhance and improve the techniques of Negotiation.
2. To understand interpersonal disputes and necessary negotiation skills.

Unit – I

Conflict: Different thoughts on conflict, Constructive and Destructive Conflict, Conflict, Chaos and complexity theories, Systems approach to conflict Diagnosis. Managing, using, resolving conflict through negotiation. Personality: Facets of Personality and its impact on Negotiation, Approach and Temperament. Self- monitoring, competitiveness and type A and type B personality, Jungian personality preferences, Four main alternative Preferences and Temperaments. Mental Mechanisms: Major and Minor mental mechanisms

Unit – II

Negotiation: All Human Interaction is Negotiation, Negotiation and its components, Personal nature of Negotiation, Conscious and Unconscious determinants of Negotiation performance, Rules of Negotiation, Negotiation process and preparation, Team negotiation. Negotiation Style: Four major Negotiation Styles (Avoidance, Competitive, Compromising and Collaborative), choosing the appropriate style, Alternative styles, strategies and techniques of negotiation

Unit – III

Understanding the importance of perception, power, communication, leadership and public relations in negotiation. Principles of persuasion, Third party intervention. Distributive Bargaining: Classical distributive bargaining, Opening offers, Role of norms, Counteroffers.

Unit – IV

Integrative Bargaining: Integrative versus Distributive Bargaining, The Categorization Method, Interest based Bargaining. Gaining leverage through power and persuasion: leveraging power from your BATNA (Best Alternative To a Negotiated Agreement), leveraging the sources of power, leveraging power through persuasion, leverage power through pressure tactics.

Unit – V

Ethics, fairness, and trust in negotiation: Ethics - values and behaviours in negotiations, Fairness - substantive and procedural fairness in negotiation, appropriate or inappropriate negotiating tactics, Trust – bases and relationship in negotiating trust, trust and distrust, establishing trust. Closing the Deal and Post Negotiation. Evaluation – agreement template, closing stage, moving past statement and building a relationship.

Course Outcomes: The Student is able to
CO1 : acquire the conceptual knowledge about Conflicts, Negotiation, Integrative Bargaining and Ethical issues.
CO2 : apply this knowledge in organizational context for Conflict Resolution, Negotiation and Settlement of Disputes.

References:
1. Prashant Chaudhary. Selling and Negotiation Skills. SAGE
2. HBR's 10 Must Reads – On Negotiation. HBR Publications

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

453 - Design Thinking and Innovation

Objectives:
1. To transform creative thinking into design thinking in every stage of problem.
2. To apply design thinking to real-life problems / situations in order to evolve innovative and workable solutions

Unit – I

Innovation & Creativity: Meaning of Innovation and creativity. Difference between innovation and creativity, role in Industry and organizations, dynamics of creative thinking, Process of Design Thinking, implementing the process in driving innovation, design thinking skills to improve an existing product or design a new product.

Unit – II

Identification of customer needs, customer needs statements, user innovations. Develop user needs into product specifications, establish product metrics to define those specifications.

Unit – III

Applied Creativity - brainstorming, and concept generation process in designing needs solutions. Prototyping - prototyping methods, strategies, to represent customer needs and product specifications.

Unit – IV

Design for Services - Understand design of services, potential for innovations within them, application of product development frameworks to the service context. Product Architecture - modular and integral product architectures building blocks of a product.

Unit – V

Financial analysis, Business rationale. Design Thinking in Various Sectors (Health sector, Finance, Education, Infrastructure). Product Development Processes - staged, spiral, and agile, aligned to project needs.

Course Outcomes: The Student is able to
CO1 : use Creative Thinking and transform it into Design Thinking.
CO2 : apply innovatively to evolve solutions to practical problems.

Reference:
Devyani M. Lal, Design Thinking. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five

questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

454 – Business Planning and Ethics

Objective:
To disseminate the knowledge regarding Business Plans and the relevance of Ethics while taking business decisions.

Unit – I

Business Plan – Meaning, The why of business plan, Basic parameters, Timing of decisions. Project parameters – the common considerations, Factors of successful business, capital management, financial control, anticipating change and adaptability.

Unit – II

Business plan process – sources of information, Internet, government sources and statistics. Offline research resources – library, SBDC's, Trade and Industries Associations. Sources of market research – evaluating data, benefits of market study, coverage of market study, information sources.

Unit – III

Business Plan components – The Executive Summary, company description, Industry analysis and trends, Target market, Competition, strategic position and risk assessment, Marketing plan and sales strategy, operations, Technology plan, management and organization

Unit – IV

Business ethics - Definition and importance, Benefits of business ethics, Emerging ethical issues in business, Ethics as a dimension of social responsibility.

Unit – V

The ethical decision-making process – understanding ethical decision making and corporate governance, Individual factors, organizational factors. Implementing and auditing ethics programs. Business ethics in global economy.

Course Outcomes: The Student is able to
CO1 : understand the concepts underlying the Business Plan and the Ethical issues related to it.
CO2 : apply this knowledge to develop Business Plans that are Ethically acceptable.

References:

1. Crane, Matten. Business Ethics. OUP
2. Andrew Ghillyer. Business Ethics Now. McGraw Hill
3. Cullen. Business, Ethics and Society. SAGE

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

455 - SaaS for Enterpreneurs

Objectives:
1. Acquaint with softwares necessary to run businesses.
2. Understand the issues related to developing, purchasing or leasing the softwares.

Unit – I

Web 2.0 and other consumer technologies, tools, techniques, Blogging, Wikis and social networks. Online business promotions and content going viral. Cost of online infrastructure, from web 2.0 to Enterprise 2.0.; SaaS – Software as a service

Unit – II

Uses of online software and services, loss of control, integration challenged, security and threats, SaaS Applications – Adoption, adaptability, features performance.

Unit – III

Evaluating the SaaS company, Hosting the data and SaaS applications, reliability of the vendor, customer service, protection of data, pricing options. Free vs Paid Software, virtual office, CRM, Support and Customer Service, Online service and Back-up, Online invoicing.

Unit – IV

SaaS to build market and measure online presence, web based apps, location based services, real-time web and information overload.

Unit – V

From Niche to growth, Niche matrix, Customer success predictability, corporate marketing vs demand generations, pipe line creation, early adaptors vs main stream buyers, customer lifetime value, employee ownership, functional ownership, financial ownership.

Course Outcomes: The Student is able to
CO1 : select required softwares for business.
CO2 : decide on whether to develop, buy or use by paying for the softwares needed.
CO3 : decide on hosting data on site or on-cloud.

Reference:
Sahil Parikh, The SAAS EDGE. McGraw Hill

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.

(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

456 – Statistics for Business Analytics (Online)

Objectives:
1. This course helps the students to understand and analyze statistical problems in a business framework.
2. They shall be exposed to fundamental statistical techniques to solve real life problems and enable them to take better decisions

Unit – I

Introduction: History, Subdivisions within Statistics, Data collection, Editing, Classification, Tabulation, Diagrammatic and Graphical representation of data.

Unit – II

Measures of Central tendency and Dispersion: Arithmetic Mean, Geometric Mean, Harmonic Mean, Median, Mode, Mean Deviation, Quartile Deviation, Standard Deviation, Skewness, Kurtosis and Moments.

Unit – III

Probability and Probability Distributions: Introduction to Probability, Probability Rules, Probabilities under Conditions of Statistical Independence, Probabilities under Conditions of Statistical Dependence, Revising Prior Estimates of Probabilities, Bayes' Theorem, Random Variables, Use of Expected Value in Decision Making, Binomial Distribution, Poisson Distribution, Normal Distribution.

Unit – IV

Sampling and Estimation: Random Sampling, Introduction to Sampling Distributions, Relationship Between Sample Size and Standard Error, Point Estimates, Interval Estimates, Confidence Intervals, Calculating Interval Estimates of the Mean from Large Samples.

Unit – V

Testing of Hypotheses: Hypothesis, Steps in Hypothesis Testing, Measuring the Power of a Hypothesis Test, Hypothesis Testing of Means and Proportions, Hypothesis Testing for Differences between Means and Proportions, Analysis of Variance, One way ANOVA and Two way ANOVA, Non-parametric tests: Chi-Square Test, The Sign Test for Paired Data, The Mann Whitney U Test, Kruskal-Wallis Test, The Kolmogorov-Smirnov test. Correlation, Regression and Time Series: Correlation, Product moment correlation, Rank correlation, Bi-variate correlation, Regression, Simple linear Regression, Line of best fit, Time Series, Trend Analysis, Cyclical Variation, Seasonal Variation, Irregular Variation, Time Series Analysis in Forecasting.

Course Outcomes: The Student is able to

CO1 : comprehend the basis concepts of Statistics and their applications in Business decisions.
CO2 : apply the Statistical concepts in arriving at the right Inferential decisions.

References:

1. Bowerman, O'Connell, Murphree. Business Statistics in Practice, using Data, Modelling and Analytics
2. Panneerselvam, Nagesh, Kumar. Business Statistics and Analytics. Cengage

NOTE TO THE PAPER SETTER:
(i) With regard to Part A of the question paper, ten questions shall be set covering all units of the syllabus with equal weightage (two questions from each unit), out of which five questions (one question from each unit) will be answered by the students.
(ii) For Part - B of the question paper, the CASE shall be not less than 500 words.

ANNEXURE – II

QUESTION PAPER STRUCTURE FOR MBA SEMESTER END – EXAMINATIONS

- **Each Course examination shall have a maximum of 70 Marks and the examination shall be of 3 Hrs duration.**
- **The question paper shall have two parts viz. Part- A and Part-B.**

PART-A (5X10=50 Marks)

Descriptive / Numerical Type questions, each question carries 10 Marks.
Answer **FIVE** questions (one question from each unit).

Unit – I

1.

(OR)

2.

Unit – II

SRI VENKATESWARA UNIVERSITY: TIRUPATI
S.V.U COLLEGE OF CM & CS
DEPARTMENT OF COMPUTER SCIENCE

Course
MCA Degree Programme

Choice Based Credit System (CBCS)
Academic Year 2023 – 24

Amended asper NEP2020

About the Department

The Department was established in 1985 and ever since its inception; the department has been a pioneering academic centre for higher education, research, and innovation in core and key areas of computer science and applications.

The Department of Computer Science was given the status of the separate department in 2003 after bifurcation from College of Engineering. It has grown in stature to be ranked amongst the best in the university offering world class pedagogical and research experience to its students.

The Department is recognized under Special Assistance Programme (SAP) by the University Grants Commission and has been awarded (NO: F.3-49/2011 (SAP-II)) for a period of 5 years with an amount of Rs.47,00,000 and SAP DRS–II with an amount of Rs.88,00,000 & with DST – FIST with an amount of Rs.60,00,000 CS researchers contribute to cutting-edge research in topical areas of computer science and applications and are active researchers in their respective domains of expertise enhancing publication profile and citations accumulated by the publications

The department's alumni include renowned academicians, leaders in computer and IT industry, distinguished scientists, and trendsetting entrepreneurs (UGC SAP DRS-II & DST –FIST)

The department currently offers two PG level professional programmes following Choice Based Credit System and two research-oriented programmes. Both M.Sc. (CS) & MCA are interdisciplinary programmes offering Computer Science subjects along with Mathematics, Statistics, Management and Commerce are also having as one of the core /elective subjects.

The courses offered in the department meet the requirements of both the industry and research. The curriculum is designed to train the students in developing application programmes (software) and also designing and developing computing systems (hardware). Faculty members taking classes, involving in curriculum development and implementation in the departments having computer subjects like Zoology, Biotechnology, Geography, Microbiology, Bioinformatics etc.

Vision

Uncompromising and unflinching efforts to turn a student into a consummate individual to stand up to changes and surge ahead against any backdrop

Mission

Sublime education, through which the student develops himself equips and soars to the cherished and lofty goals with ease and élan

MCA Degree Programme (CBCS) Regulations 2016-2017

CHOICE-BASED CREDIT SYSTEM (CBCS)

1. Duration of the Program:

The professional postgraduate programme leading to the degree of Master of Computer Applications will extend 3 academic years/over a period of six semesters each semester will normally have duration of 90 working days.

2. Minimum Qualifications for Admission :

Candidates for admission into the first semester of the M.C.A. degree programme must have a B.Tech / B.C.A / B.Sc / B.Com / B.A degree or any equivalent graduation program with Mathematics as one of the subject at 10+2 level or at graduation.

3. Admission Procedure

3.1. Admission into MCA Program will be only through ICET Examination for Indian Students conducted by Andhra Pradesh State Council of Higher Education(APSCHE).

3.2. Admission of Foreign / NRI Students for MCA Program:

- Students should have earned their qualifying degree from a University / Institute recognized by the Association of Indian Universities / similar Indian body.
- Students nominated by Foreign Governments may be accepted to MCA programmes, without any further test / interview, if their request for admission is routed through MHRD / any agency of the Government of India.

4. Structure of the Programme:

The M.C.A. programme has a curriculum, with syllabus consisting of:

- Core courses, which give a broad base in the main field of study in the academic programme concerned
- Elective courses chosen by the student in consultation with the faculty adviser
- Elective Course: Elective course is a course which can be chosen from a pool of papers. It may be:
  - Supportive to the discipline of study
  - Providing an expanded scope
  - Enabling an exposure to some other discipline/domain
  - Nurturing student's proficiency/skill.

  An elective may be "Generic Elective" focusing on those courses which add generic proficiency to the students. These electives shall be "Discipline centric".

- Second type elective may be open elective and shall be offered for other disciplines.
- The Foundation Courses may be of two kinds: Compulsory Foundation and Elective foundation. "Compulsory Foundation" courses are the courses based upon the content that leads to Knowledge enhancement. They are mandatory for all disciplines. Elective Foundation courses are value-based and are aimed at man-making education.
- Laboratory, project work and software design courses where special emphasis is laid on the

application of knowledge to real-life problems.

- The program will also include seminars, Technical Seminars, Group discussions and practical Industry exposure training, as prescribed by the Board of Studies in the curriculum & syllabus and approved by the Academic Council.
- In addition, the students may audit courses, in consultation with the faculty adviser.

5. The Credit System:

- Each course has a certain number of credits assigned to it, depending upon whether it is a lecture or tutorial or practical work and the number of periods assigned per week. The practical courses shall include laboratory work and project work.
- **The credits are assigned according to the following pattern:**
  - 1 credit for each lecture period/week,
  - 1 credit for each tutorial period/week,
  - 1 credit for each practical session of 2 periods/week &
  - 2 credits for each project session of 3 periods / week.

6. Minimum Instruction Days:

- The normal duration of MCA Course is six semesters.
- Semesters, I, II, III, IV, and V shall consist of a minimum of 90 instruction days (based on six instruction days per week) excluding the days allotted for tests, examinations and preparation holidays.
- Sixth semester shall consist of a minimum of 15 weeks for undertaking major project work either in the College or any of the recognized Public Service Sectors/ Government Sectors, National Laboratories and Industrial Houses or any other organizations approved by the Department.

7. Course Registration:

Every student has to register for the set of courses offered by the Department in that semester including those of Open Elective courses and MOOCS courses with the total number of their Credits being limited by considering the permissible weekly contact hours.

8. Credits Required for Award of MCA Degree:

A student earns credits by passing courses every semester. A student, who has registered the M.C.A. degree programme, has to acquire 162 credits to be come eligible for the award of the degree.

9. Evaluation of Academic Performance:

The performance of the students in each semester shall be evaluated paper wise. The Scheme of instruction and Examinations shown in Annexure -I shall be followed. The distribution of marks between sessional work (based on internal assessment) and University Examination is as follows:

Paper Category	Sessional Marks	University Examination Marks
Theory	**20**	**80**
Practical	**20** **Designing of the Program (05) + Program Execution (10) + Viva-Voce(05)**	**80** **Record (20) + Designing of the Program (20) + Program Execution(30) + Viva Voce(10)**
Seminar / Technical Seminars / Group discussion	**50** **Content Preparation (12) + Communication Skills (12) +** **Presentation Skills (12) + Attempting Queries (14)**	-
Minor Project Work	**20** **Presentation(10) + Viva Voce (10)**	**80** **Documentation (10) + Presentation(20) + Execution(30) + Viva Voce (20)**
	100 **Project Documentation (50)** **Presentation(30) + Viva Voce (20)**	**200** **paper based on project should be submitted to the National / International Conference and Published in the Proceedings** **Or** **paper based on project Should be published in National / International Journal (50 Marks)** **1. Project Documentation : 50 Marks** **2. Presentation : 50 Marks** **Viva Voce : 50 Marks**

- For both Theory and Laboratory papers two Internal Assessments will be conducted and best of two Assessments considered for award of Sessional marks. The duration of the these tests will be 2 hours. These sessional marks are to be communicated to the Controller of Examinations Office on or before the commencement of the end Semester examination.

10. University Examinations:

10.1. For each theory subject, there shall be a comprehensive University Examination of three hours duration. Setting of Question papers shall be done by external examiners from the panels recommended by the Board of Studies.

10.2. (a) For each practical subject, the University Examination shall be conducted by one Internal examiner and one external examiner/two examiners.

(b) Viva -Voce examination in practical subject shall be conducted by Examiners (One Internal and One External Examiner/Two Examiners)

10.3. Viva-Voce Examination in Minor Project Work shall be conducted by One Internal Examiner and One External Examiner / Two Examiners

10.4. Viva-voce examination in Major Project Work shall be conducted by a committee consisting of Two External Examiners and One Internal Examiner / Three Examiners

10.5. (a) The Examiners for Practical examinations and Viva-voce examinations (Stated in 10.2) shall be appointed from among the panels submitted by the Chairperson/Chairman of the Board of Studies.

(b) The Examiners for Project report evaluation for Minor/Major Project Works and Viva Voce examination for Minor/Major Project Works (Stated in 10.3, 10.4) shall be appointed from among the panels submitted by the Chairperson/Chairman of the Board of Studies.

10.6. The internal examiners for theory/practical/minor project work shall have at least three years of teaching experience at PG level in ratified position.

10.7. The internal examiners for major project work shall have at least five years of teaching experience at PG level in ratified position.

11.Attendance Requirements:

11.1. Regular course of study, in a semester, means a minimum average attendance of 75% in all the papers computed by totaling the number of periods of lectures, tutorials, and practical's and project as the case may be, held in every paper as the denominator and the total number of periods attended by the student in all papers, as the numerator.

11.2. However, a student has to put in a minimum attendance of 50% in each subject, in addition to the condition laid down in clause 11.1.

11.3. No consideration whatsoever in attendance will be shown to any student for late admission due to any reason.

11.4. Condonation of shortage of attendance may be recommended provided a student puts in at least 62.5% attendance, in all the papers put together as calculated in clause 11.1 above, along with a minimum of 50% attendance in each subject as stated in clause 11.2, and provided the Principal is satisfied with the reason for shortage of attendance.

11.5. A student, who could not satisfy these requirements of attendance as given in clauses above, in any semester, shall have to repeat that semester.

11.6. A student shall not be permitted to study any semester for more than three times during the course of study.

11.7. A certificate of satisfactory attendance must be submitted by the student from the organization where he/she undertakes Project Work. For the above purpose, the candidate is not expected to avail more than 12 working days of leave of absence.

11.8. Further, a student is required to complete the course of study satisfying the attendance requirements in all the six semesters, within a period of first twelve semesters from the time of admission, failing which he/she shall forfeit his /her seat.

11.9. A student, who has not satisfied the minimum attendance requirements in any semester, may repeat that semester after obtaining written permission from the Principal, canceling the previous record of attendance and sessional marks of that semester. However, this facility may be availed by any student not more than twice during the entire course of study and the entire course of study shall be within the first twelve semesters as stipulated in clause 11.8.

12. Academic Requirements:

12.1. A candidate shall be declared to have passed whole examination of a semester if he/she secures a minimum aggregate of 50% along with minimum marks of 40% in the University Examination in each theory and practical paper, including project work. Aggregate for this purpose shall mean the total marks obtained in the University Examination and sessionals put together in all the papers of that semester.

12.2. A candidate who secures a minimum aggregate of 50% in any semester as specified in clause 12.1, but fails to secure the paper minimum of 40% in the University Examination in any paper, shall be declared to have failed in that paper. The candidate may appear for the University Examination in such papers as and when conducted and pass by securing the subject minimum of 40% in each of such papers.

12.3. A candidate, who could not secure the minimum aggregate of 50% in any semester, as given in clause 12.1, shall be declared to have exempted in such theory papers in which he/she secured a minimum of 50% of the marks in the University Examination.

12.4. A candidate who could not secure the minimum aggregate of 50% in any semester, as given in clause 12.1, shall be declared to have exempted in such practical papers in which he/she secured a minimum of 40% in the University Examination and a minimum of 50% of the marks in the University Examination and sessionals put together in each of such papers.

12.5. A candidate has to appear for all the other papers in which he/she has not satisfied the stipulations of clauses 12.3 and 12.4, and pass compartmentally by satisfying the stipulations stated in clauses 12.3 and 12.4. Rechecking of the aggregate shall not arise when a candidate opts for compartmental passing.

12.6. Candidates who would not like to avail themselves of the facility of compartmental pass given in clauses 10.3, 10.4 and 10.5 may reappear for the whole examination of that semester, after canceling the previous result. In such a case, clauses 12.1 to 12.5 shall apply in that order.

12.7. Candidates shall register for improvement in one or more theory papers of a semester indicating the same in the application form. However, improvement facility is not extended to practical and project work papers.

NOTE: The question of checking the aggregate shall arise only when the candidate registers for the whole examinations for the first time or when he/she registers for the whole examinations at a subsequent attempt after having canceled the previous result.

13.Condition of Promotion:

A candidate shall be promoted to the next semester, if he/she satisfies the minimum attendance requirements of that semester of MCA as stipulated in clause 12.

14.Award of Degree:

The degree of MCA shall be conferred on a candidate who has satisfied the following conditions:

14.1. The candidate, after admission to the MCA program of the University, must have studied each of the six semesters of MCA program at least once in any college to which affiliation is accorded by S.V.University to offer MCA Programme.

14.2. The candidate must have satisfied minimum attendance requirements as stipulated in clause 11, and minimum academic requirements as prescribed in clause 12, in each of the six semesters of the MCA program.

14.3. The Programme of Study for the M.C.A. Degree shall cover normally a period of Three academic years, comprising of Six semesters and No student shall be permitted to complete the course of study of M.C.A. Degree earlier than six semesters or to take not more than twelve consecutive semesters, failing which he / she shall forfeits his / her seat.

15. Award Grades and Grade Points:

15.1. After a candidate has satisfied all requirements for the award of the degree as specified in clause 14, he/she shall be placed in one of the following three classifications, irrespective of whether the candidate passed compartmentally or otherwise, even after the regular period of study of six semesters.

Grade Point: It is a numerical weight allotted to each letter grade on a 10-point scale.

Letter Grade: It is an index of the performance of students in a said course. Grades are denoted by letters O, A+, A, B+, B, C, P and F.

Semester Grade Point Average (SGPA): It is a measure of performance of work done in a semester. It is ratio of total credit points secured by a student in various

courses registered in a semester and the total course credits taken during that semester. It shall be expressed up to two decimal places

SGPA (Si) = $\sum(C_i \times G_i) / \sum C_i$

where C_i is the number of credits of the ith course and G_i is the grade point scored by the student in the ith course.

The **CGPA** is also calculated in the same manner taking into account all the courses undergone by a student over all the semesters of a programme, i.e.

Cumulative Grade Point Average (CGPA): It is a measure of overall cumulative performance of a student over all semesters. The CGPA is the ratio of total credit points secured by a student in various courses in all semesters and the sum of the total credits of all courses in all the semesters. It is expressed up to two decimal places

CGPA = $\sum(Ci \times Si) / \sum Ci$

Where Si is the SGPA of the ith semester and Ci is the total number of credits in that semester. The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts

Letter Grades and Grade Points

A 10 point grading system with the following letter grades is to be followed:

Letter Grade	Grade Point
O (Outstanding)	10
A+(Excellent)	9
A(Very Good)	8
B+(Good)	7
B(Above Average)	6
C(Average)	5
P (Pass)	4
F(Fail)	0
Ab (Absent)	0

A student obtaining Grade F shall be considered failed and will be required to reappear in the examination.

For non credit courses 'Satisfactory' or "Unsatisfactory' shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA

For this purpose, aggregate shall mean the aggregate of the marks in the University Examinations and sessionals put together at all six semester of MCA.

15.2. A Candidate, before and even after becoming eligible for the award of the Degree, may reappear for the University Examination, as and when conducted, in any of the theory subjects, which he/she has already passed, for the purpose of improving the aggregate. However, this facility cannot be availed by a candidate who has taken the Provisional pass Certificate. Candidates shall not be permitted to appear for University examination in Practical papers including project work for the purpose of improvement.

16.Award of Rank:

The rank shall be awarded based on the following:

16.1. Ranks shall be awarded for the top ten students appearing for the regular MCA examination.

16.2. Only such candidates, who satisfy the minimum academic requirements as stipulated in clause 12, by the end of their sixth semester, and become eligible for the award of the degree, are eligible for the award of rank. Candidates, who lose one or more semesters for any reason whatever, are not eligible for the award of rank.

16.3. For the purpose of awarding rank, aggregate of marks in University Examination and Sessionals put together at all the semesters of MCA, secured at the first attempt only, shall be taken into account.

16.4. Award of Prizes, scholarships and other honors shall be according to the rank secured by a candidate, consistent with the desire of the Donor.

17. Transitory Regulations:

17.1. Candidates who studied the MCA Course under the Regulations (Semester Pattern) 2006 and revised syllabus from 2007-08 & 2010-2011 but who could not satisfy the minimum attendance requirements in any semester may join the appropriate semester in the Regulations (For the full time, regular course) – 2015-16 for the remaining part of the course and be governed by the Regulations of that batch from then on. Any candidate admitted under the Regulations who wished to join under the Regulations, 2015-2016 under any other circumstances may also join the appropriate semester and be governed by the Regulations-2015-16 from that semester onwards.

17.2. University Examinations shall be conducted three more times, after the last regular examination, in all those papers prescribed under the Regulations, 2006 and revised syllabus from 2007-2008 & 2010-2011

17.3. Candidates, who satisfied the minimum attendance requirements in any semester under the Regulations, 2006 and revised syllabus from 2007-08 & 2010-2011 but who are yet to pass some papers of that semester even after Three chances shall appear for the equivalent papers under Regulations-2015-2016, specified by the Chairman / Chairperson of the Board of Studies.

18. Amendments of Regulation:

The University may, from time to time, revise, amend, or change the Regulations, Scheme of Examinations and Syllabi, whenever necessary.

Programme Specific Outcomes(PSO's)

- **PSO1**

  Demonstrate understanding of the principles and working of the hardware and software aspects of computer systems.

- **PSO2**

  Ability to understand the structure and development methodologies of software systems. Possess professional skills and knowledge of software design process. Familiarity and practical competence with a broad range of programming language and open-source platforms.

- **PSO3**

  Be acquainted with the contemporary issues, latest trends in technological Development and there by innovate new ideas and solutions to existing problems.

Programme Objectives

The objective of the MCA curriculum is to equip the students with the ability to analyze varieties of real-life problems and develop computer based solutions for effectiveness and efficiency. Keeping in view the requirements of the evolving software industry and also to provide a foundation for higher studies in Computer Science, effort has been made in the choice of subjects to balance between theory and practical aspects of Computer Science. On successful completion of this course a student can find a career in software industries, corporate sectors, or Government Organizations as a technical professional or pursue research in the core areas of Computer Science and Applications. MCA graduates will demonstrate analytical and design skills including the ability to generate creative solutions and foster team-oriented, professionalism through effective communication in their careers.

Programme Outcomes

Sno	Program Outcomes
PO1	**Computational Knowledge:** Apply knowledge of computing fundamentals, computing specialization, mathematics, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements.
PO2	**Problem Analysis:** Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines.
PO3	**Design /Development of Solutions:** Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.
PO4	**Conduct investigations of complex Computing problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage:** Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations.
PO6	**Professional Ethics:** Understand and commit to professional ethics and cyber regulations, responsibilities, and norms of professional computing practices.
PO7	**Life-long Learning:** Recognize the need, and have the ability, to engage in independent learning for continual development as a computing professional.
PO8	**Project management and finance:** Demonstrate knowledge and understanding of the computing and management principles and apply these to one's own work, as a member

	and leader in a team, to manage projects and in multidisciplinary environments.
PO9	**Communication Efficiency:** Communicate effectively with the computing community, and with society at large, about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions.
PO10	**Societal and Environmental Concern:** Understand and assess societal, environmental, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practices.
PO11	**Individual and Team Work:** Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary environments.
PO12	**Innovation and Entrepreneurship:** Identify a timely opportunity and using innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.

Programme Educational Objectives(PEO's)

- To enhance foundation of mathematics, computer application and problem-solving methodology for effective implementation in the area of s/w development.
- To effectively design, implement, improve, and manage the integrated socio-technical systems.
- To inculcate effective communication skills combined with professional & ethical attitude.
- To gain multidisciplinary knowledge through real time projects and industry internship training and providing a sustainable competitive edge in R&D and meeting industry needs.

The following are the Open Elective Courses offered by the Department Of Computer Science for theStudents other Disciplines:

MCA III Semester:

Programming in C
Open-Source Tools
Internet Fundamentals

EFFECT FROM 2020-21

FIRST SEMESTER

MCA 101: DISCRETE MATHEMATICAL STRUCTURE

Department	Master of Computer Applications	Course Type	Dscc
Course Title	Discrete Mathematical Structures	Course Code	MCA 101
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course objectives: They course will discuss fundamental. This course concepts and tools in discrete mathematics with emphasis on their applications to computer science. understanding the Topics include logic and Boolean. C&cuits, sets, Functions, relations, detereministic algorithms. and randomized algorithms, analysis techniques based on counting methods and recurrence relations, trees and graphs.

Course Outcomes:

Co 1. Understand the concept of Mathematical logic and Solve problem, Rules of Inference and to uselogical notations quantifiers

Co 2. understand the concept of Mathematical inductions Such as sets relations and functions andable to Formulate problems and solve recurrence relations.

Co 3. understands the basic concept of counting (or) enumerating different configurations and fundamentals and explains the permutation notion, calculates the number of subsets of given size via bionomial coffiencient, and finds number of subsets. List combinational tools and solve related problems to use mathematical Induction methods in proofs, we Inclusion-exclusion principle and solves problems. via pigeon hole principle. how to prove and explain the binomial theorem and solves various distribution problems using Express multinomial theorem and its proofs. how to designs Fibonacci numbers and gives for the nth Fibonacci number

Co 4. understand the basic concepts of Advanced Counting techniques as explains basic

notations about cobber Combinational probability and express the law of large numbers and law of small numbers. And understands the integers, divisors and primes. to express the divisibility of integers and explains the primes and their history To demonstrate the factorization into primes calely Eulalian algorithm, and explaining how to test whether a number is a prime.

Co 5. understanding the basic concepts of Graphs and tree notations. Defines the graphs such as vertex, edge and degree of a vertex are. solving everyday. problems via graphs, express Cayleytheorem Explains Eulalian and Hamilton graphs.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3

CO_5	3	2	3	3	3	-	1	-	-	-	2	-	2	1	3

COURCE LEARNING OUT COMES [CLO'S]

- Learn the foundation of mathematics to be able to perform basic computations in higher mathematics
- Learn able to read the understand middle –level proofs
- Learn to write and understand basic proofs
- Learn to develop and maintain problem solving skills
- Learn to use mathematical ideas to model real-world problems
- Learn and understands to able communicate mathematical ideas with others
- Have experience using technology to address mathematical ideas
- Learn and describing objects and problems in computer algorithms, programming languages cryptography, automated theorem proving and software development.

UNIT-I

Logic and Proof: Propositional Logic, Propositional, Predicators and Quantifiers, Nested Quantifiers, Rules of Inference, Induction to Proofs, Proof Methods and Strategies.

UNIT-II

Induction and Recursion: Mathematical Induction, Strong Induction and Well Ordering, Recursive Definitions and Structural Induction, Recursive Algorithms.

UNIT-III

Counting: The basics of counting, The Pigeonhole Principle, Permutations and Combinations, Binomial Coefficients, Generalized permutations and Combination, Generating Permutations and Combinations.

UNIT-IV

Advanced Counting Techniques: Recurrence Relations, Solving Linear Recurrence Relations, Divide and Conquer algorithms and Recurrence Relations, Inclusion – Exclusion, Applications of Inclusion – Exclusion.

UNIT – V

Graphs: Graphs And Graph Methods, Graph Terminology And Special Types of Graphs, Representing Graphs and Graphs Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest-Path Problems, Planar Graphs, Graph Coloring,

MCA 102: Object Oriented Programming with Java

Department	Master of Computer Applications	Course Type	Dscc
Course Title	OOPs with java	Course Code	MCA 102
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

COURSE OBJECTIVES:

The course should enable the students to:

Co 1. Understand the basic object oriented programming concepts and apply them in problem solving.

Co 2. Illustrate inheritance concepts for reusing the program.

Co 3. Demonstrate on the multi-tasking by using multiple threads.

Co 4. Develop data-centric applications using JDBC.

Co 5. Understand the basics of java console and GUI based programming.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**

CO_2	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_3	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_4	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_5	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3

COURSE LEARNING OUTCOMES (CLOs):

1. Use object oriented programming concepts to solve real world problems.
2. Explain the concept of class and objects with access control to represent real world entities.
3. Demonstrate the behavior of programs involving the basic programming constructs like control structures, constructors, string handling and garbage collection.
4. Use overloading methodology on methods and constructors to develop application programs.
5. Demonstrate the implementation of inheritance (multilevel, hierarchical and multiple) by using extend and implement keywords.
6. Describe the concept of interface and abstract classes to define generic classes.
7. Use dynamic and static polymorphism to process objects depending on their class.
8. Illustrate different techniques on creating and accessing packages (fully qualified name and import statements).
9. Understand the impact of exception handling to avoid abnormal termination of program using checked and unchecked exceptions.
10. Demonstrate the user defined exceptions by exception handling keywords (try, catch, throw, throws and finally).
11. Use multithreading concepts to develop inter process communication.
12. Understand and implement concepts on file streams and operations in java programming for a given application programs.
13. Describe the backend connectivity process in java program by using JDBC drivers.
14. Develop java application to interact with database by using relevant software component (JDBC Driver).
15. Understand the process of graphical user interface design and implementation using AWT or swings.
16. Use different layouts (Flow Layout, Boarder Layout, Grid Layout, Card Layout) to position the controls for developing graphical user interface.
17. Build the internet-based dynamic applications using the concept of applets.
18. Develop applets that interact abundantly with client environment and deploy on the server.
19. Knowledge on usage of graphical IDE for design and implementation of real time applications in java.

Posses the knowledge and skills for employability and to succeed in national and international level competitive exams.

UNIT-I

Introduction: Object Oriented Programming Concepts, Features of Java Language, Architecture, Data Types, Variables, Operators, Control Structures, Arrays. Class : Classes, Wrapper Classes, Constructors, Overloading of methods, Access control, Nested and Inner classes, Abstract classes. Inheritance: Inheritance basics, Using Super, Multilevel hierarchy, Method overriding, Dynamic method dispatch, Final with inheritance.

UNIT-II

Math Class and Methods, Packages and Interfaces, Exception Handling: fundamentals, exception types, uncaught exceptions, using try, nested try statements, throw, throws, Java built-in exceptions, user defined exceptions. Multithreading: Thread model, main thread, creating a thread, Multiple threads, Thread priorities, synchronization, Inter thread communication, String handling.

UNIT-III

Wrapper Classes: Number class, Character class, Boolean class. More utility classes: Vector, Stack, Dictionary, Hash table. String Tokenizer, Bit set, Data Calendar. Input/output: File, Stream classes, Byte Streams, Character Streams. GUI Programming,

UNIT-IV

Features Applets: Applet basics, Applet architecture, an applet skeleton, Applet display method, Repainting, Using Status window, HTML APPLET tag, passing parameters to applet, Audio Clip interface. Even Handling; two event handling mechanisms, Event model, Event classes, sources of events, Event Listener interfaces, Adapter classes. Introduction to SWING: Window Fundamentals, working with frame windows, creating window programs, working with color, fonts, SWING Controls, Layout Managers and Menus: Control fundamentals, Labels, Using buttons, check box s, checkbox group, choice controls, lists, scroll bars, Text field, layout managers, menu bars, and menus.

UNIT-V

Network Programming with Java: Networking classes and Interfaces, Internet Address, Factory method, Instance Methods, Sockets, Knowing IP address URL-URL Connection class. Creating a server that sends data, creating a client that receives data, two way communications between server and client, Stages in a JDBC program, registering the driver, connecting to a abase, Preparing SQL statements, improving the performance of a JDBC program.

MCA 103: COMPUTER ORGANIZATION

Department	Master of Computer Applications	Course Type	DSCC
Course Title	Computer Organization	Course Code	MCA 103
L-T-P	3-1-0	Credits	4
Contact Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	80	CIE Marks	20

Course Objectives:

CO1. Understand the basic concepts and structure of computers.

CO2. Understand concepts of register transfer logic and arithmetic operations.

CO3. Learn the concepts addressing modes and memory organization.

CO4. Learn the different types of serial communication techniques.

CO5. Summarize the Instruction execution stages.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**
CO_1	3	2	3	3	3	-	2	-	-	-	2	3	2	1	3
CO_2	3	2	3	3	3	-	2	-	-	-	2	3	2	1	3
CO_3	3	2	3	3	3	-	2	-	-	-	2	3	2	1	3
CO_4	3	2	3	3	3	-	2	-	-	-	2	3	2	1	3
CO_5	3	2	3	3	3	-	2	-	-	-	2	3	2	1	3

Course Learning Outcomes:

1. Understand the theory and architecture of central processing unit.
2. Analyze some of the design issues in terms of speed, technology, cost,
   a. performance.
3. Design a simple CPU with applying the theory concepts.
4. Use appropriate tools to design verify and test the CPU architecture.
5. Learn the concepts of parallel processing, pipelining and interprocessor
   a. communication.
6. Understand the architecture and functionality of central processing unit.
7. Exemplify in a better way the I/O and memory organization.
8. Define different number systems, binary addition and subtraction, 2's
9. complement Representation and operations with this representations

UNIT I

Flip-flops – Registers and shift registers – counters – decoders – Multiplexers – PLDs – sequential circuits. Basic Structure of Computers. Functional UNITs – Basic operational concepts – Bus structures – performance

– Multiprocessors and Multi computers – Historical Perspective.

UNIT II

Addressing Methods and Machine Program Sequencing: 1. sic Concepts: –Memory locations and address, Main Memory operations, Instructions and Instruction Sequencing –Addressing Modes.

UNIT III

Input / Output organization: Accessing I/O Devices – Interrupts – Direct Memory Access-I/O Hardware- Standard I/O Interface.

UNIT IV

Memory System Concepts: – Semiconductor RAM Memories - Read only memories – Cache Memories – Performance Considerations –Virtual Memories: - Memory Management Requirements, Arithmetic: - Addition and subtraction of sign members – Design of fast adders –

Multiplication of positive members – Signed operand multiplication – Fast multiplication – Integer division – Floating point numbers and operations.

UNIT V

Basic Processing UNIT: Concepts – execution of a complete instruction – Multiple – Bus organization – Hardware control – Micro Programmed Control. Pipelining: Concepts – Data hazards – Instruction hazards – Influence on Instruction sets - data path and control constructions.

MCA 104: OPERATING SYSTEMS

DEPARTMENT	MASTER OF COMPUTER APPLICATIONS (MCA)	COURSE TYPE	DSC
COURSE TITLE	OPERATING SYSTEMS	COURSE CODE	MCA 104
L-T-P	3-1-0	CREDITS	4
CONTACT HOURS	60 Hrs	DURATION OF SEE	3 Hrs
SEE MARKS	70	CIE MARKS	30

COURSE DESCRIPTION:

This course examines the important problems in operating system design and implementation. The operating system provides an established, convenient, and efficient interface between user programs and the bare hardware of the computer on which they run. The operating system is responsible for sharing resources (e.g., disks, networks, and processors), providing common services needed by many different programs (e.g., file service, the ability to start or stop processes, and access to the printer), and protecting individual programs from interfering with one another. The course will start with a brief historical perspective of the evolution of operating systems over the last fifty years and then cover the major components of most operating systems. Particular emphasis will be given to three major OS subsystems: process management (processes, threads, CPU scheduling, synchronization, and deadlock), memory management (segmentation, paging, swapping), and file systems; and on operating system support for distributed systems.

Course Objectives:

At the end of the course, the students will be able to:

Co 1. Use the features of types of operating systems, functions, structure, and operations on the processes executing in the system to solve the problems.
Co 2. Employ the knowledge scheduling algorithms to solve the real life problems.
Co 3. Examine the deadlocks occurred in the real world applications and will be able to provide the remedial measures to avoid the deadlock situation.

Co 4. Employ the concepts of memory management including virtual memory and resource sharing among the user application processes.

Co 5. Solve the problems related to file system interface and implementation, disk management and protect the system and Use UNIX tools using features such as filters pipes, redirection, and regular expressions. Customize their UNIX working environment.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	2	3	3	-	-	3	1	-	-	2	3	2	1	3
CO_2	3	2	3	3	-	-	3	1	-	-	2	3	2	1	3
CO_3	3	2	3	3	-	-	3	1	-	-	2	3	2	1	3
CO_4	3	2	3	3	-	-	3	1	-	-	2	3	2	1	3
CO_5	3	2	3	3	-	-	3	1	-	-	2	3	2	1	3

Course Learning Outcomes: Through the study of this course, students will gain a comprehensive understanding on the concepts and functions of a modern operating system. Students will be able to:

1. Explain the role of the operating system as a high level interface to the hardware.
2. Use OS as a resource manager that supports multiprogramming.
3. Explain the low level implementation of CPU dispatch.
4. Explain the low level implementation of memory management.
5. Explain the performance trade-offs inherent in OS implementation.

SYLLABUS

UNIT I

Computer System Structures: Computer System operation, I/O Structure, storage structures, Storage hierarchy, Hardware protection, Network structure. Operating system structures: System components, Operating System services, System calls, System programs, System structure, Virtual

machines, System Design and Implementation, System Generation. Processes: Processes Concept, Processes Scheduling, Operations in processes, Inter-processes communication, Communication in Client server ems, Threads: overview, multithreading models, Threading issues, Threads.

UNIT II

CPU Scheduling: Scheduling criteria, Scheduling Algorithms, Multiple processor Scheduling, Real-time scheduling. Process Synchronization: - The critical-section problem, Synchronization hardware, Semaphores, Classic problems of Synchronization, Critical regions, Monitors. Dead Locks: Deadlock characterization, Deadlock handling, Deadlock prevention, Deadlock avoidance, Deadlock detection, and Recovery.

UNIT III

Memory Management: Swapping, Contiguous memory allocation Paging, Segmentation with paging Concept of Virtual memory Demand paging Page replacement, Allocation of frames, Thrashing. File System Interface & Implementation: File concept, Access methods, Directory structure, File System Mounting File Sharing Protection, File system structure, and implementation, Directory implementation, Allocation methods. Free space management, Efficiency and performance, Recovery.

UNIT IV

I/O Systems: overview, I/O hardware, Application I/O interface, Kernel I/O subsystem, Transforming I/O to Hard ware operations, streams, Performance of I/O. Mass Storage Structure:- Disk Structure Disk Scheduling, Disk management, Swap-space Management,

RAID Structure.

UNIT V

Security: User authentication, program threats, system threats, security systems Facilities, Linux system: History, Design principles, Kernel modules, process management, Scheduling Memory Management, File Systems.

105A ACCOUNTING AND FINANCIAL MANAGEMENT

DEPARTMENT	MASTER OF COMPUTER APPLICATIONS (MCA)	COURSE TYPE	DSC
COURSE TITLE	ACCOUNTING AND FINANCIAL MANAGEMENT	COURSE CODE	MCA 105A
L-T-P	3-1-0	CREDITS	4
CONTACT HOURS	60 Hrs	DURATION OF SEE	3 Hrs
SEE MARKS	70	CIE MARKS	30

Course description:

The course provides a broad introduction to all aspects of the accounting function. The language of accounting and financial management is exacting. Our aim is to increase your familiarity with key components of this language and allow you to more effectively communicate with all organisational stakeholders. Users of accounting information may be typically classified as either external users (such as investors) or internal users (such as operational managers). Different users have different information needs. This course deals with the needs of these two main user groups and how the senior management of organisations can more effectively use accounting data to connect with them.

Course Objectives:

Co 1. Provide an in-depth view of the process in financial management of the firm.

Co 2. Develop knowledge on the allocation, management and funding of financial resources.

Co 3. Improving students' understanding of the time value of money concept and the role of a financial manager in the current competitive business scenario.

Co 4. Enhancing student's ability in dealing short-term dealing with day-to-day working capital decision; and also longer-term dealing, which involves major capital investment decisions and raising long-term finance.

Co 5. Providing action plan, estimation of income and expenditure, guiding the management in forecasting and decision making etc. are some notable objectives of budget.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	-	-	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	-	-	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	-	-	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	-	-	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	-	-	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes: After completing this course the student must demonstrate the knowledge and ability to:

1. Ability to maintain full and systematic records of business transactions, ability to ascertain profit or loss of the business, to depict financial position of the business and provide accounting information to the interested parties.
2. Ascertainment of cost, Determination of selling price, Cost control & Cost reduction, Ascertaining the profit of each activity Assisting management in decision making, Matching cost with revenue and Preparation of financial statements P& L A/c and Balance Sheet.
3. Attempting to reduce the cost of finance., Ensuring sufficient availability of funds, Also, dealing with the planning, organizing, and controlling of financial activities like the procurement and utilization of funds.
4. The objectives of working capital include managing the liquidity position of a business, smoothening and shortening of its operating cycle, managing the working capital investment policies of the business and helping seasonal businesses with working capital.
5. Providing action plan, estimation of income and expenditure, guiding the management in forecasting and decision making etc. are some notable objectives of budget. A budget provides a realistic estimate of income and expenses for a period and of the financial position at the close of the period.

SYLABUS

UNIT I

Introduction to Financial Accounting Concepts: Definition and concepts, Significance, Branches of Accounting, Accounting Cycle-Journal – Ledger – Trial Balance – Final accounts.

UNIT II

Cost Accounting: Elements of Cost, Nature and significance – Cost classification and Allocation, Cost Sheet

– Method of Inventory Valuation.

UNIT III

Financial Management: Meaning, scope and role. Financial Analysis through Ratios: Types of Ratios, Liquidity, Activity, Capital Structure and profitability ratio, Limitations of Ratios.

UNIT IV

Working Capital Management: Nature, Elements and Importance of working capital, types of working capital,Determinants of working capital.

UNIT V

Budgeting: Budgets, Purpose, Budgetary control, preparation of budgets, Types of budgeting methods,difference between Master Budget, fixed and flexible budgeting.

Text Books:

MCA II SEMESTER

MCA 201: Computer Oriented Operations Research

Department	Master of Computer Applications	Course Type	Dscc
Course Title	COOR	Course Code	MCA 201
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

COURSE OBJECTIVES:

The objective of the course is to present an introduction to Operations Research is a discipline that deals with the Application of Advanced Analytical Methods to help make better decisions. Further, the term operational analysis is used in the British Military as an intrinsic part of capability development, management and assurance. OR was introduced as a subject for academic study in American University. They were generally Schools of Engineering, Public Administration, Business Applied Mathematics, Economics, Statics, Commerce, Management and Computer Science etc. Research Society of America (ORSA) in 1950.

The course should enable the students to:

Co 1. An Operating system may be defined a set of arts required for achievement of a desired outcome. Such complex, integrated arts can be performed by four types of systems.

Co 2. Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles ofmathematics, natural sciences, and engineering sciences. Design solutions for complex engineering problems and design system componentsor processes that meet the specified needs environmental considerations and apply OR Techniques, resources, and modern engineering and OR tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Co 3. A computer assisted mathematical representation of Real-Life problem under certain assumptions using Monte-Carlo Simulation, Use of Random Numbers, Forecasting models.

Co 4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Co 5. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and needfor sustainable development.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	2	3	-	3	3	3	-	-	-	2	3	2	1	3
CO_2	3	2	3	-	3	3	3	-	-	-	2	3	2	1	3
CO_3	3	2	3	-	3	3	3	-	-	-	2	3	2	1	3
CO_4	3	2	3	-	3	3	3	-	-	-	2	3	2	1	3
CO_5	3	2	3	-	3	3	3	-	-	-	2	3	2	1	3

COURSE LEARNING OBJECTIVES:

The objective of the course is to present an introduction to Operations Research is a discipline that deals with the Application of Advanced Analytical Methods to help make better decisions. Further, the term operational analysis is used in the British Military as an intrinsic part of capability development, management and assurance.

OR was introduced as a subject for academic study in American University. They were generally Schools of Engineering, Public Administration, Business Applied Mathematics, Economics, Stastics, Commerce, Management and Computer Science etc. Research Society of America (ORSA) in 1950.

The course should enable the students to:

CLO 1: An Operation may be defined a set of arts required for achievement of a desired outcome. Such complex, integrated arts can be performed by four types of systems. (1) Man (11) Machine (iii) Man-Machine unit and (iv) Organization of men, machines, and man-machine units. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems (Engineering Knowledge).

CLO 2: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences (Problem Analysis).

CLO 3: A computer assisted mathematical representation of Real-Life problem under certain assumptions using Monte-Carlo Simulation, Use of Random Numbers Forecasting models.

CLO 4: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change (Life-long learning). Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development (Environment and Sustainability).

Problem-Solving Skills: The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.

UNIT - I

Linear Programming: Concept of Linear Programming Model, Development of LP Model, Graphical Method, Simplex Method, Duality, Formulation of Dual Problem, Application of Duality,(Text Book 1).

UNIT-II

Transportation Problem: mathematical Model for Transportation Problem, Types of transportation problem, Finding the Initial Basic Solution, Optimal Solution by U-V method, Assignment problem, Formulation of Assignment problem-Hungerian Method, Method of Solution, Branch and Bound Technique for Assignment Problem,(Text Book 1).

UNIT-III

Network Techniques: Shortest-Path Model, Systematic Method- Dijkstra's Algorithm, Floyid's Algorithm,Minimum Spanning Tree Problem, Prime Algorithm, Krusakal algorithm, Maximal Flow Problem, Linear Programming Modeling for Maximal Flow Problem, Maximal Flow Problem Algorithm, (Text Book 1).

UNIT-IV

Games and Strategies : Two –Person Zero- Sum Games, Maxmin- Minimax Principle, Games Without Saddle Points- Mixed Strategies, Graphic Solution Of 2 x n, And m x 2 Games , Dominance Property, Arithmetic Model For n x n Games, General Solution For m x n Rectangular Games(Text Book 2).

UNIT – V

Queueing Theory: Queueing System, Elements of Queueing System, Operating Characteristics of Queueing System, Probability Distributions In Queueing System, Classification Of Queueing Models, Poisson Queueing Systems, Non Poisson Queueing Systems. Network Scheduling by PERT / CPM: Rules o f Network Construction, Critical Path Analysis, Probability Considerations in PERT (Text Book 2).

MCA 202: Data Structures Using Java

Department	Master of Computer Applications	Course Type	Dscc
Course Title	DS USING JAVA	Course Code	MCA 202
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Couse Objectives:

Co 1. Apply the Laplace Transform technique to evaluate integrals , differential equations and their applications to engineering problems.

Co 2. Demonstrate the concept of Partial Differential Equation and their applications to engineering problems.

Co 3. Apply the Fourier Transform technique to evaluate improper integral and their applications to engineering problems

Co 4. Identify the analytic function and their applications to solve complex integrals

Co 5. Discuss the complex transformations and their applications to rotate, translate and magnify the images.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_1	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_2	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_3	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_4	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_5	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3

Couse Learning Outcomes:

Upon Completing the Course, Students will able to:

1. Learn the basic types for data structure, implementation and application.

2. Know the strength and weakness of different data structures.

3. Use the appropriate data structure in context of solution of given problem..

4. Develop programming skills which require to solve given problem

UNIT I

Linear Data Structures: Abstract Data Types - Asymptotic Notations: Big-Oh, Omega and Theta – Best, Worst and Average case Analysis: Definition and an exae – Arrays and its representations – Stacks and Queues – Linked lists – Linked list based implementation of Stacks and Queues – Evaluation of Expressions – Linked list based polynomial addition.

UNIT II

Non-Linear Data Structures; Trees – Binary Trees – Binary tree representation and traversals – Threaded binary trees – Binary tree representation of trees – Application of trees: Set representation and Union-Find operations – Graph and its representations – Graph Traversals DFS and BFS – Connected components, Applications of Graphs-Minimum cost spanning tree using Kruskal's algorithm, Dijkstra's algorithm for Single Source Shortest Path Problem.

UNIT III

Search Structures and Priority Queues: AVL Trees – Red-Black Trees – Splay Trees – Binary Heap – Leftist Heap-Implementation of priority Queue ADT with Heap

UNIT IV

Sorting: Insertion sort – Merge sort – Quick sort – Heap sort – Radix Sort- Comparison of sorting algorithms in terms of Complexity - Sorting with disks – k-way merging – Sorting with tapes – Poly-phase merge.

UNIT V

Searching and Indexing: Linear Search – Binary Search - Hash tables – Overflow handling – CylinderSurface Indexing – Hash Index – B-Tree Indexing, B+ Trees.

203: DATA COMMUNICATION AND COMPUTER NETWORKS

DEPARTMENT	MASTER OF COMPUTER APPLICATIONS (MCA)	COURSE TYPE	DSC
COURSE TITLE	DATA COMMUNICATION AND COMPUTER NETWORKS	COURSE CODE	MCA 203
L-T-P	3-1-0	CREDITS	4
CONTACT HOURS	60 Hrs	DURATION OF SEE	3 Hrs
SEE MARKS	70	CIE MARKS	30

Course Objectives: At the end of the course, the students will be able to:

- Build an understanding of the fundamental concepts of data communication and computer networking.
- Understand how errors detected and corrected that occur in transmission
- How collisions to be handled when many stations share a single channel
- Know about routing mechanisms and different routing protocols
- Understand transport layer functions and know about different application layer protocols.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**
CO_1	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_2	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_3	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_4	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3

CO_5	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3

Learning Outcomes: After completing this course the student must demonstrate the knowledge and ability to:

1. Describe the basis and structure of an abstract layered protocol model

2. Independently understand basic computer network technology and Identify the different types of network topologies and protocols.

3. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer.

4. Identify the different types of network devices and their functions within a network and Understand and building the skills of subnet and routing mechanisms.

5. Familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation and Understand how the Internet works today.

UNIT I

Introduction, Network models – Internet model, OSI model Physical Layer: Signals – Analog, Digital, Digital Transmission – Coding, Sampling, Analog Transmission – Modulation of digital and analog signal, Multiplexing – FDM, WDM, TDM, Transmission Media – cable, wireless, Circuit switching and Telephone network, DSL Technology, Cable modern, SONET.

UNIT II

Data Link Layer: Error detection and correction, Data link control and Protocols – Stop and wait, Go-back-n, Selective repeat, HDLC, Point to point access, LANS – Traditional Ethernet, Fast Ethernet, Wireless LAN's – IEEE 802.11, Blue tooth, Connecting LANs – Connecting devices, Backbone networks, Virtual LANS, 2G,3G,4G,5G wireless technologies, Satellite networks, Virtual circuit switching, Frame relay, ATM.

UNIT III

Network Layer: Inter-networks, Addressing, Routing, Network layer Protocols, Types of Internet protocols – ARP, IPV4, ICMP, IPV6, Routing – Introduction, Unicast routing, Protocols – RIP, OSPF, BGP, Multicast Routing.

UNIT IV

Transport Layer: Process-to-Process Delivery, UDP, TCP, Data traffic, Congestion a d Control, Quality of service (QOS) and techniques to improve QOS, Integrated services, QOS in Switched Networks Security: Introduction. Symmetric-key and Asymmetric cryptography, Key Management and Kerberos, Message security, Digital signature, User authentication, E-mail Security, Web security, Social Issues.

UNIT V

Application Layer: Design issues, file transfer, accessed management. Client-Server model, Socket interface Introduction to DNS, Distribution of name space, DNS IP the Internet. Electronic mail, SMTP, File Transfer,FTP, HTTP, World Wide web, Video-conferencing.

MCA 204: Advanced Database Management Systems

Department	Master of Computer Application	Course Type	DSCC
Corse Title	ADBMS	Course Code	MCA 204
L-T-P	3-1-0	Credits	4
Contact Hours	60Hrs	Duration of SEE	3Hrs
SEE Marks	70	CIE Marks	30

Course Objective:

The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a ADBMS, and Analyze and Implement the concept of Object- Relational database, XML Data. Practice SQL, PL/SQL concepts required for developing Data base programs.

Course Outcomes (Cos):

Co 1. To provide a strong foundation in advanced database concepts. To Understand the basic concepts and the applications of database systems, Database Languages, Data Dictionary, Database Administrators and Database Users, DBMS Architecture, Structure of Relational Databases.

Co 2. To Provide the basics of SQL and construct queries using SQL. To understand the relational database design principles. To Practice SQL, PL/SQL concepts required for maintaining database.

Co 3. To Impart the concepts of object-based data type to deal with large data and to Implement O-R Features. To Implement the concept of XML for developing the Application Programming Interfaces through XML.

Co 4. Basic concepts of query processing; converting SQL queries into Relational Algebra, based on cost-based query optimization. To Provide Basic Algorithms for executing query operations And Query Optimization.

Co 5. To learn Transaction management and Concurrency Control Concepts. To learn different protocols to handle the concurrency control and deadlock situation.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**

CO_2	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_3	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_4	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3
CO_5	3	3	3	3	3	3	3	-	2	2	3	3	2	1	3

Course Learning Outcomes (CLOs):

1. Describe the fundamental elements of Relational database management systems.
2. Explain the basic concepts of relational data model, entity-relationship model, relational database design.
3. Design ER-models to represent simple database application scenarios.
4. Design Relational database and formulate SQL queries on data. And to implement PL/SQL Programs.
5. Implement the database design for Object based Data bases and Structure of XML with Applications.
6. Design Query Processing: Measures of Query Cost and Algorithms to implement Selection Operation- Sorting-Joint Operation- Evaluation of Expressions-Query Optimization.
7. Learn Transaction concept, Transaction State-Implementation of Atomicity and Durability- Concurrent Executions- Serializability- Deadlock handling.

UNIT-I

Introduction: Database- System Application – Purpose of Database Systems – View of Data – Database Languages– Relational Databases – Database Design–Object– based and Analysis – Database Architecture. Entity Relationship Model-Constraints-Entity-Relationship Diagrams, Design Issue-Weak Entity Sets- Database Design for Banking Enterprise and Unified Mod ling language. Structure of Relational Databases - Relational Algebra Operation– Modification of the Database.

UNIT-II

SQL : Data Definition- Structure of SQL Queries- Set Operations- Aggregate Functions- Nested Sub queries- Complex Queries – SQL Data Types and Schemas- Integrity Constraints-Authorization-Embedded SQL- Dynamic SQL- -Authorization in SQL.;PL/SQL Programming: Introduction, Control structures, functions, Exception handling, Cursors, Triggers, Package.

UNIT-III

Object- Databases and XML: Object-based databases – Complex data types, structured types and inheritance in SQL, table inheritance, array and Multiset types in SQL, object identity and reference types in SQL, implementing O-R features, Persistent programming languages, OO vs OR. XML – Structure of XML, Document Schema, Querying and Transformation, API in XML, XML applications.

UNIT-IV

Query Processing: Measures of Query Cost-Selection Operation-Sorting-Joint Operation-Evaluation of Expressions-Query Optimization: Transformation of Relational Expressions-Estimating Statistics of Expression Results-Choice of Evaluation Plans.

UNIT-V

Transactions: Transaction concept, Transaction State-Implementation of Atomicity and Durability-Concurrent Executions- Serializability- Recoverability-Implementation of Isolation-Testing for Serializability, Concurrency Control: Lock Based Protocols-Timestamp-Based Protocols-Validation-Based Protocols- Multiple Granularity-Multiversion Schemes. Deadlock handling-Insert and Delete Operations-Weak Levels of Consistency-Concurrency in Index Structures

MCA 205A: E-Commerce

Department	Master of Computer Applications	Course Type	Dscc
Course Title	ECOM	Course Code	MCA 205A
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Description and Objectives:

This course provides an introduction to information systems for business and management. It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems

Course Outcomes: After Completion of the subject student should able to

Co 1. Understand the basic concepts and technologies used in the field of management information systems;
Co 2. Have the knowledge of the different types of management information systems;
Co 3. Understand the processes of developing and implementing information systems;
Co 4. Be aware of the ethical, social, and security issues of information systems;

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**

CO_2	3	2	-	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	2	-	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	2	-	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	2	-	3	3	-	3	3	-	-	2	1	2	1	3

UNIT I

Electronic Commerce: Electronic Commerce Framework; Electronic Commerce and Media Convergence; The Anatomy of E-Commerce Application; Electronic Commerce Organization Applications- The Network Infrastructure for Electronic Commerce: Market Forces Influencing the I- Way; Components of the I Way; Network Access Equipment; the Last Mlle: Local Roads a d Access Ramps; Global Information Distribution: Networks: Public Policy Issues Shaping the I-Way. Case study: B2B ecommerce

UNIT II

The Internet as a Network Infrastructure: The Internet Terminology; Chronological History of the Internet NSFNET: Architecture and Components: Globalization of the Academic Internet; Internet Governance: The Internet Society –An Overview of Internet: Applications –Electronic Commerce; World Wide Web(WWW) as the Architecture: Web Background: Hypertext Publish ng; Technology behind the Web: Security and the Web-Consumer-Oriented Electronic Commerce: Oriented Applications; Mercantile Process, Models Mercantile Models from the Consumer's Perspective; Mercantile Models from the Merchant's Perspective. Case study: E-Commerce/High Security (Pci).

UNIT III

Electronic Payment Systems: Types of Electronic Payment Systems; Smart Cards and Electronic Payment Systems; Credit Card-Based Electronic Payment systems: Risk and Electronic payment Systems Designing Electronic Payment systems – Inter organizational Commerce and EDI: Legal, security, and Privacy Issues: EDI and Electronic Commerce – EDI Implementation, MIME, and Value- Added Networks : Standardization and EDI;EDI Software Implementation: EDI Envelope for Message Transport: Value- Added Networks (VANs); Internet – Based EDI. Case study: Social Media Marketing.

UNIT IV

Intra organization Electronic Commerce: Internal Information System: Macro forces and Internal Commerce; Work-Flow Automation and Coordination; Customization and Internal Commerce; Supply Chain Management (SCM) – The Corporate Digital Library: Dimensions of Internal Electronic Commerce Systems; Making a Business Case for a Document Library; Types o Digital Document Library; Types of Digital Documents; Issues behind Document Infrastructure; Corp e Data Warehouses. Case study: Email Marketing, Email Personalization

UNIT V

M-Commerce: Introduction to Mobile Commerce, Limitations, history, applications, architecture, transaction models, payment methods, advantages, disadvantages Case study: Mobile app marketing case study: O2 Priority Moments gets small businesses on side.

MCA 205B: Cyber Security

Department	Master of Computer Applications	Course Type	Dscc
Course Title	CYBER SECURITY	Course Code	MCA 205B
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Outcomes:

Co 1. Understand the various tools and methods used in cybercrime.

Co 2. Identify risk management processes, risk treatment methods, organization of information security.

Co 3. Classify cyber security solutions and information assurance.

Co 4. Examine software vulnerabilities and security solutions to reduce the risk of exploitation.

Co 5. Analyze the cyber security needs of an organization.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**

CO_5	3	3	2	3	3	-	3	3	-	-	2	-	2	1	3

UNIT I

History of Cyber Security-Introduction to Cyber Security-Definition-Key terms-cyber Attacks and Security tools-Security Threats-Vulnerability assessments-roles in Security-Cyber Security-today-Critical Thinking in Cyber Security

UNIT II

Cyber Threat Actors and their Motives-Security Attacks, Actors and their Motive-A brief overview of types of actors and their motives-Hacking organizations-Major different types of cyber-attack-Security Attack Definition-Security services-Security Mechanisms-Network Security Model-Organizational Threats-Attacks- Security Architecture Attacks-Security Architecture -Attack models-Malware and Ransomware-Threat Examples-Threat Protection Defined-Internet Security Threats – Mapping-Internet Security Threats - Packet Sniffing-Security Threat - IP Spoofing-Security Threats - Denial of service-Security Attacks - Host insertions- What is Social Engineering, Phishing and Vishing- Cyber warfare

UNIT III

Overview of Cyber Security Concepts-CIA Triad – Confidentiality-CIA Triad – Integrity-CIA Triad – Availability-Non - Repudiation - How does it apply to CIA?-Access Management-Incidence Response-Key Concepts - Incident Response-Incident Response Process-Introduction to Frameworks and Best Practices-IT Governance Process-Cybersecurity Compliance and Audit Overview-Pentest Process and Mile 2 CPTE Training-OWASP framework

UNIT IV

Introduction to Key Security Tools -Introduction to Firewall-Firewalls - Packet Filtering-Firewalls - Application Gateway-Firewalls - XML Gateway-Firewalls - Stateless and Stateful- Firewall Administration – Firewall Selection-Firewall Administration – Firewall Configuration-IDPS Administration-VPN Administration-Antivirus/Antimalware-Penetration Testing Introduction-Penetration test Methodologies- Vulnerability Tests

UNIT V

Cyber Security –Organizational implications-cost of cybercrimes and IPR issues Web threats for organizations: the evils and Perils-Social media marketing Security and privacy Implications-Digital Forensic- Protecting people privacy in the organizations Forensic best practices for organizations. Case Studies.

MCA 205C: Neural Networks

Department	Master of Computer Applications	Course Type	Dscc
Course Title	NN	Course Code	MCA 205C
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course objectives:

Co 1. In this course, we will study the following topics:

Co 2. Basic neuron models: McCulloch-Pitts model and the generalized one, distance or similarity based neuron model, radial basis function model, etc.

Co 3. Basic neural network models: multilayer perceptron, distance or similarity based neural networks, associative memory and self-organizing feature map, radial basis function based multilayer perceptron, neural network decision trees, etc.

Co 4. Basic learning algorithms: the delta learning rule, the back propagation algorithm, self-organization learning, the r4-rule, etc.

Co 5. Applications: pattern recognition, function approximation, information visualization, etc.

CO_4	3	3	2	-	3	-	3	1	-	-	2	-	2	1	3

CO_5	3	3	2	-	3	-	3	1	-	-	2	-	2	1	3

UNIT I

Introduction: What is Neural network, Human Brain, Models of a Neuron, Neural networks viewed as Directed Graphs, Network Architectures, Knowledge Representation, Artificial Intelligence and Neural Networks, Learning Process: Error Correction learning, Memory based learning, Hebb an learning, Competitive, Boltzmann learning, Credit Assignment Problem, Memory, Adaption, Statistical nature of the learning process.

UNIT II

Single Layer PERCEPTRONS: Adaptive filtering problem, Unconstrained Organization Techniques, Linear least square filters, least mean square algorithm, learning curves, Learning rate annealing techniques, perception – convergence theorem, Relation between perception and Bayes classifier for a Gaussian Environment.

UNIT III

Multilayer Perceptron: Back propagation algorithm XOR problem, Heuristics, Output representation an d decision rule, Computer experiment, feature detection, BACK PROPAGATION - back propagation and differentiation, Hessian matrix, Generalization, Cross validation, Network pruning Techniques, Virtues and limitations of back propagation learning, Accelerated vergence, supervised learning.

UNIT IV

Self-Organization Maps: Two basic feature mapping models, Self-organization map, SOM algorithm, properties of feature map, computer simulations, learning vector quantization, Adaptive patter classification, Hierarchal Vector quantifier, context Maps.

UNIT V

Neuro Dynamics: Dynamical systems, stability of equilibrium states, Attractors, Neuro dynamical models, manipulation of attractors' as a recurrent network paradigm HOPFIELD MODELS – Hopfield models.

MCA III SEMESTER

301: SOFTWARE ENGINEERING

Department	Master of Computer Applications	Course Type	Dscc
Course Title	SE	Course Code	MCA 301
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

COURSE DESCRIPTION:

Software Engineering (SE) comprises the core principles consistent in software construction and maintenance: fundamental software processes and life-cycles, mathematical foundations of software engineering, requirements analysis, software engineering methodologies and standard notations, principles of software architecture and re-use, software quality frameworks and validation, software development, and maintenance environments and tools. An introduction to object-oriented software development process and design. Topics include: iterative development, interpretation of requirements and use case documents into code; application of design notation in UML and use of commonly-used design patterns.

Course Objectives:

Co 1. 1. Knowledge of basic SW engineering methods and practices, and their appropriate application and Describe software engineering layered technology and Process frame work and A general understanding of software process models such as the waterfall and evolutionary models.

Co 2. Understanding of software requirements and the SRS documents, Understanding of the role of project management including planning, scheduling, risk management, etc. and Describe data models, object models, context models and behavioural models.

Co 3. 3.Understanding of different software architectural styles, Understanding of implementation issues such as modularity and coding standards and Understanding of approaches to verification and validation including static analysis, and reviews.

Co 4. Understanding of software testing approaches such as unit testing and integration testing and Describe software measurement and software risks, Understanding of software

evolution and related issues such as version management.

Co 5. Understanding on quality control and how to ensure good quality software and Demonstrate the software project management skills through case studies.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes:

1. Basic knowledge and understanding of the analysis and design of complex systems and Ability to apply software engineering principles and techniques.
2. Ability to develop, maintain and evaluate large-scale software systems to produce efficient, reliable, robust and cost-effective software solutions.
3. Ability to perform independent research and analysis.
4. Ability to work as an effective member or leader of software engineering teams and to manage time, processes and resources effectively by prioritizing competing demands to achieve personal and team goals Identify and analyzes the common threats in each domain.
5. Ability to understand and meet ethical standards and legal responsibilities.

UNIT I

Software and Software Engineering: Introduction, Software, Software Myths, Software Engineering- Process:- Software Engineering, Software Processes models; Evolutionary process Models, Component based development; Formal Methods Model, Fourth generation Techniques.

An Agile view of processes and Development: Software Engineering practice – Software Engineering, communication, planning, modeling construction practices and deployment.

UNIT II

System Engineering: Computer-based systems, the system engineering Hierarchy, business process engineering, product engineering and system modeling. Building the analysis model, Requirement analysis, modeling approaches, data modeling. Behavioral model.

UNIT –III

Design Engineering: Design process and quality, design concepts the design model, and pattern-used software design. Architectural design: Software architecture, data design, architectural styles and patterns, architectural design mapping data flow into software architecture. Component-based software engineering, Critical systems development, Software reuse, User interface design, web apps design issues and architecture design.

UNIT –IV

Testing strategies: Strategies and issues, testing strategies for and object-oriented software. Validation testing and system testing. Software testing tactics: Fundamentals, black-box and white-box testing white-box testing basis path testing. Control structure testing, Black-box testing, Object-oriented testing methods. Testing methods applicable at the class level inter class testing case design.

UNIT V

Product Metrics: Software quality, framework, metrics for analysis model design model, source case and testing. Managing Software Projects: The management spectrum, the W^5 HH principle, metrics in process, software measurement, Estimation: Observations, Decomposition Techniques, Empirical Models, Estimation For Object-Oriented Projects Other Estimation Techniques, Project Scheduling, Risk Management, Reengineering.

MCA 302: COMPUTER GRAPHICS

Department	Master of Computer Applications	**Course Type**	DSCC
Course Title	Computer Graphics	**Course Code**	MCA 302
L-T-P	3-1-0	**Credits**	4
Contact Hours	60 Hours	**Duration of SEE**	3 Hours
SEE Marks	80	**CIE Marks**	20

COURSE OBJECTIVES:

The objective of the course is to present an introduction to the basic concepts of Computer Graphics. It provides the necessary theoretical background and demonstrates the application of computer science to graphics. The course further allows students to develop programming skills in Computer Graphics through programming assignments. It presents the most important drawing algorithms, 2-Dimensional and 3-Dimensional transformations, clipping, filling and interactive Computer Graphics.

The course should enable the students to:

Co 1. Introduction to Computer Graphics and its Applications. To understand various Video Display Devices and its working. To know various Input devices. To learn various line-drawing algorithms like Digital Differential Analyzer (DDA), Bresenhams line-drawing algorithm, Mid-point Circle and Mid-point Ellipse Algorithm.

Co 2. To understand the concept of Scan-line polygon filling algorithm, Boundary fill. flood-fill algorithms. To learn the concepts of basic Two-Dimensional Transformations like Translation, Rotation, Scaling, Reflection and Shearing.

Co 3. To learn the concepts of 2-Dimensional Viewing like The Viewing Pipeline, Window-to-Viewport Co-ordinate Transformation and Viewing functions. To understand the Cohen-Sutherland and Cyrus-beck line clipping algorithms and Sutherland-Hodgeman Polygon clipping algorithm.

Co 4. To provide a good understand of 3-Dimensional Object representations like polygon surfaces, Hermite curves, Quadric surfaces, Spline representation of Curves, Bezier and B-spline curves. To learn basic illumination models and various polygon rendering

methods.

Co 5. To understand the basic 3-Dimensional transformations like Translation, Rotation, Scaling, Reflection and Shearing. To learn the concept of Animation, Computer Animation languages, Animation functions, Raster animations and key frame systems.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

COURSE LEARNING OUTCOMES (CLOs):

1. Have a knowledge and understand of the structure of an interactive computer graphics system, and the separation of system components.
2. able to create interactive graphics applications.
3. Perform simple 2D graphics with lines, curves and can implement algorithms to rasterizing simple shapes, fill and clip polygons and have a basic grasp of anti-aliasing techniques.
4. Understand the concepts of 3D object representations and also Spline representation of objects.
5. Learn the basic 3D transformations of an object.
6. Creating the computer animations.

UNIT I

Overview of Graphics systems, Application areas of Computer Graphics, video-display devices, Raster-scan systems, random scan systems, graphics monitors and workstations and input devices. Output primitives: Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms.

UNIT II

Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms. 2-D Geometrical transforms: Translation, scaling, rotation, reflection and shear transformations, matrix representations and homogeneous coordinates.

UNIT III

2-D Viewing: The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland – Hodgeman polygon clipping algorithm.

UNIT IV

3-D Object representation: Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-spline curves, Bezier and B-spline surfaces. Basic illumination models, polygon rendering methods.

UNIT V

3-D Geometric transformations: Translation, rotation, scaling, reflection and shear transformations, composite transformations, 3-D viewing: Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping. Computer Animation: Design of animation sequence, gene al computer animation functions, Raster animations, Computer animation languages, Key frame systems

MCA 303: WEB TECHNOLOGIES

Department	Master of Computer Applications	Course Type	Dscc
Course Title	WEB TECH	Course Code	MCA 303
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course outcomes (cos):

Co 1. Understands the basis of internet, a web browser. Learns how to browse the web browsers, Search Engines Seeking the Net, HTTP, URL other inferred tools. and learns to create a webpage and web site HTML and advanced HTML & HTML Form with HTML-5 controls and used to describe a web page's appearance / presentation (css) or functionality behaviour (java Script)

Co 2. Understanding the de Java script based frame like J query and libraries already developed which can be used directly in software development to reduce the time to marketing also. "Javascript Is a light wait, interpreted programing language that allows user to build interactivity into otherwise Static HTML pages, Javascript supports both C-Style and C++ style comments. JQuery as a javascript toolkit designed to simplify various tasks by writing less code.

Co 3. An understanding the Rich Intanet Application Technology - AJAX is a web browser technology indepent of web server software. how to creating AJAX (Asynchis Javascript and XML) is a new technique for better, fast and more interactive web applications with the help of XML, HTML, CSS and Javascript. Web server can refer to hardware or software, of both of them working together." where as static and dynamic web server.

Co 4. Understanding the features of PHP, is a recursive acronym for ("PHP. Hypertext pre processor", to developing web based software application. PHP is MUST for students and working professionals to become a great Software Engineer specially when working in web development Domain and learns major protocols such as pop3, IMAP, and LDAP. they are PHP4 added support for Java and distribute objet architectures (COM) and CORBA), making development a possibility for the first time

Co 5. Understanding the Servlet technology is used to Create Dynamic web application and

as robust and Scalable. Servlet is java class which extends the functionality of web server by dynamically generating webpages. By default session management are not enabled the in servlet, the user has to enable at & explicitly. Java servlet page (JSP) & is compatible with HTTP request only and in Jsp Session management is automatically enabled. Java Data Base Connectivity (JDBC) which is Standard Java API for database-independent Connectivity between the java programing language and a wide range of databases

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

Course Learning (CLOS):

1. Learns all basics of Internet and browse data in webpage. Learns different internet tools.
2. Learns all the three main languages as HTML, advanced HTML, and CSS, and Java script.
3. Learns AJax is Rich Infernal Application Technology.
4. Learns the bare concepts of web server working with both static and dynamic web server
5. Learns iQuary and libraries as javascript base frame works,
6. Learns major protocols such as poP3, IMAP, and LDAP.
7. Learns Servlet Technology to create a dynamic web. application
8. Learns and gain the skills and project based expensive, essentials to develop a good webpage design and websites.

UNIT I

Introduction to Internet-Browser Architecture-IE: Chrome-Search Engines-Introduction to HTML-5-HTML-5 Tags-Audio, Video Tags – HTML-5 Forms-Controls-CSS Styling-CSS Tags-Attributes.

UNIT II

Java Script-JQuery: JavaScript Programming Scripts- Control structures- Functions-Document, Browser, Date, Math, String objects-Events- JQuery Libraries-JQuery Objects, Functions – JQuery Events-Animations.

UNIT III

AJAX Concepts: Simple AJAX objects-Ajax Libraries-Examples, Webservers IIS, Tomcat-Hosting Website

in a Web servers.

UNIT IV

Introduction to PHP: Control Structures-Arrays-Functions-Database connectivity-Introduction to ZEND Framework and applications

UNIT-V

Introduction to Java Servlets: Servlet classes and interfaces - Java Database Connectivity-Introduction toJSP-Java Server Page scriptlets -JSP Objects-JSP Web applications.

Text Books:

MCA 304A: DATA WAREHOUSING AND DATA MINING

Department	Master of Computer Applications	**Course Type**	DSCC
Course Title	Data Warehousing and Data Mining	**Course Code**	MCA 304A
L-T-P	3-1-0	**Credits**	4
Contact Hours	60 Hours	**Duration of SEE**	3 Hours
SEE Marks	80	**CIE Marks**	20

COURSE OBJECTIVES:

This course will introduce the concepts of data ware house and data mining, which gives a complete description about the principles, used, architectures, applications, design and implementation of data mining and data ware housing concepts

The knowledge of following subject is essential to understand the subject:

Understand the concepts of Data Ware housing and Data Mining Concepts.

Explain the methodologies used for analysis of data

Describe various techniques which enhance the data modeling.

Discuss and Compare various approaches with other techniques in data mining and data ware housing

COURSE OUTCOMES (Cos):

Co 1. To Be familiar with mathematical foundations of data mining tools.

Co 2. Understand and implement classical models and algorithms in data warehouses and data

mining

Co 3. Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.

Co 4. Different data mining techniques in various applications like social, scientific and environmental context.

Co 5. Build up skill in selecting the appropriate data mining algorithm for solving practical problems.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

COURSE LEARNING OUTCOMES (CLOs):

1. Understand the functionality of the various data mining and data warehousing component
2. Appreciate the strengths and limitations of various data mining and data warehousing models
3. Simplifying the Data analyzing techniques to implement various Historical data Repositories
4. Describe different methodologies used in data mining and data ware housing.
5. Compare different approaches of data ware housing and data mining with various technologies

UNIT I

Data warehousing and OLAP**:** Data Warehouse basic concepts, Data Warehouse Modelling, Data Cube and OLAP: Characteristics of OLAP systems, Multidimensional view and Data cube, Data Cube Implementations, Data Cube operations, Implementation of OLAP and overview on OLAP Software.

UNIT II

Data Mining and its Applications **:** Introduction, What is Data Mining, Motivating Challenges, Data Mining Tasks, Which technologies are used for data mining, Kinds of pattern that can be mined, Data Mining Applications, Data Pre-processing, Data cleaning, data integration, data redu on and data transformation.

UNIT III

Association Analysis: Basic Concepts and Algorithms **:** Frequent Item set Generation, Rule Generation,

Compact Representation of Frequent Item sets, Alternative methods for generating Frequent Item sets, FPGrowth Algorithm, Evaluation of Association Patterns.

UNIT IV

Classification: Methods, Improving accuracy of classification: Basics, General approach to solve classification problem, Decision Trees, Rule Based Classifiers, Nearest Neighbor Classifiers. Bayesian Classifiers, Estimating Predictive accuracy of classification methods, Improving accuracy of classification methods, Evaluation criteria for classification method Multiclass Problem.

UNIT V

Clustering Techniques: Overview: Features of cluster analysis, Types of Data and Computer Distance, Types of Cluster Analysis Methods, Partitioned Methods, Hierarchical Methods, Density Based Methods, Quality and Validity of Cluster Analysis

Text Books:

1. Jiawei Han and MichelineKamber: Data Mining - Concepts and Techniques, 2nd Edition, Morgan Kaufmann Publisher, 2006.
2. Pang-Ning Tan, Michael Steinbach, Vipin Kumar: Introduction to Data Mining, Addison-Wesley,2005.

3. Alex Berson and Stephen J.Smith: Data Warehousing, Dat ning, and OLAP ComputingMcGrawHill Publisher, 1997

MCA 304B: Big Data Analytics

Department	Master of Computer Applications	Course Type	Dscc
Course Title	BIG DATA ANALYTICS	Course Code	MCA 304B
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Description and Objectives:

This course gives an overview of Big Data, i.e. storage, retrieval and processing of big data. In addition, it also focuses on the "technologies", i.e., the tools/algorithms that are available for storage, processing of Big Data. It also helps a student to perform a variety of "analytics" on different data sets and to arrive at positive conclusions.

Course outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes	POs
1	Understand Big Data and its analytics in the real world	**1**
2	Analyze the Big Data framework like Hadoop and NOSQL to efficientlystore	**2**

	and process Big Data to generate analytics	
3	Design of Algorithms to solve Data Intensive Problems using Map Reduce Paradigm	**3**
4	Design and Implementation of Big Data Analytics using pig and spark tosolve data intensive problems and to generate analytics	**4**
5	Implement Big Data Activities using Hive	**5**

Course Objectives

Co 1. Design classification models for various standard datasets and user datasets.

Co 2. Develop clustering techniques and association rules for large standard datasets and user datasets.

Co 3. Analyse large scale data using MAPREDUCE programming which includes JAVA and HADOOP frameworks.

Co 4. Analyse large scale data using PIG and HIVE.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes:

1. Logistic Regression using MENARCHE dataset.
2. Logistic Linear Regression using TITANIC dataset.
3. Decision Tree & Cross Validation using IRIS dataset.
4. Random Forest & Cross Validation using IRIS dataset.

UNIT I

What is Big Data : Varieties of Data – Unstructured data – Trends in Data Storage - Basically Available Soft State Eventual Consistency (BASE) - Industry Examples of Big Data.

UNIT - II

Big Data Technology: New and older approaches – Data Discovery –Terminologies used in Big Data Environments- Open Source technologies for Big Data Analytics – Cloud and Big Data – Big Data Foundation – Computation – Limitations – Big Data Emerging Technologies.

UNIT III

Business Analytics –Consumption of Analytics – Creation to Consumption of Analytics – Data visualization by Organizations – 90/10 rule of critical thinking – Decision sciences and analytics – Learning over knowledge – Agility – Scale and convergence – Privacy and security in Big Data.

UNIT IV

Predictive Analytics – Target Definition - Linear Regression – Logistic Regression - Decision trees – Neural Networks – Support Vector machines - Classification trees – Ensemble methods – Association Rules – Segmentation, Sequence Rules, Social Network analytics.

UNIT V

Hadoop – Why Hadoop? – Why not RDBMS? – RDBMS Versus Hadoop - Components of Hadoop – Hadoop File System – Hadoop Technologies Stack – Managing Resources and Applications with Hadoop YARN – Data warehousing Hadoop Concepts – Applications of Hadoop using PIG, YARN,HIVE.

MCA 304C: System Programming

Department	Master of Computer Applications	Course Type	Dscc
Course Title	SYSTEM PROGRAMMING	Course Code	MCA 304C
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Objectives:

The aim of this course is to provide students with knowledge and abilities to design system programs such as assemblers, linkers, loaders, macro-processors, editors, interpreters, compilers and operating systems using modern methodologies and to implement their design using modern development tools.

Course Learning Outcomes

Co 1. Adequate knowledge in system programs (assemblers, loaders, linkers, macro-processors, text editors, debuggers, interpreters, compilers, operating systems).

Co 2. Ability to use theoretical and applied information in these areas to design system software with realistic constraints.

Co 3. Ability to conduct experiments, gather data, analyze and interpret results for investigating solutions to real life applications with assembly language programming and Unix shell programming.

Co 4. Ability to devise, select, and use modern techniques and tools needed for the design and implementation of system programs

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

SYLLABUS

UNIT I

Background introduction, system software and machine Accenture, SIC, RISC, and CISC architecture. Assembler: basic assembler functions, machine dependent and independent assembler features, assembler design options, and implementation examples.

UNIT II

Loading and linkers basic loader junction, machine dependent and independent loader features, loader design options and implementation examples. Macro processors, basic macro processor functions machines – independent macro processor features, macro processor design options, implementation examples.

UNIT III

Compilers: basic compiler functions, machine dependent and independent compiler features, compiler design options and implementation examples. Other system software: text editors and interactive debugging systems.

UNIT-IV

Introduction to Device Drivers, Design issues-Types of Drivers, Character driver-1 and Design issues, Character Driver-2- A/D converter and its design issues, Block driver-1 and its design issues.

UNIT-V

Introduction to Linux- Linux Architecture- X-windows- Linux administration tools - Commands to use LinuxOS- Executing Linux Shell scripts – Shell Programming concepts-Shell scripts.

Text Books:

1. Leland .Beck, System Software: An Introduction to systems programming :3/e, Pearson Educations Asia,2003. George pajari, Writing Unix Drivers, Addison – Wesley, 1991.

Reference Books:

1. Richard Petersen, Linux complete Reference, McGraw Hill Education (India) Private Limited; 6 edition(21 November 2007)
2. Dhamdhere, System programming and operation Systems Book 2/E, Tata Mc Graw, Hill, 1999

MCA 305A: Cryptography and Network Security

Department	Master of Computer Application	Course Type	DSCC
Corse Title	CNS	Course Code	MCA 305 A
L-T-P	3-1-0	Credits	4
Contact Hours	60Hrs	Duration of SEE	3Hrs
SEE Marks	80	CIE Marks	20

Course Objective:

To make the student learn different encryption techniques along with hash functions, MAC, digital signatures and their use in various protocols for network security and system security.

Course Outcomes (Cos):

Co 1. Analyze and design classical encryption techniques and block ciphers. Understand and analyze data encryption standard

Co 2. Understands the concepts of Conventional Encryption Algorithms, Characteristics of advanced symmetric Block Ciphers. Understands and analyze Confidentiality using Conventional Encryption.

Co 3. Understand and analyze public-key cryptography, RSA and other public-key cryptosystems. such as Diffie-Hellman Key Exchange, El Gamal Cryptosystem, hash functions etc.,

Co 4. Understand key management and distribution schemes and design User Authentication. Protocols, Analyze and design hash and MAC algorithms, and digital signatures. Design network application security schemes, such as PGP, S/ MIME, IPsec. Know about Intruders and Intruder Detection mechanisms, Types of Malicious software, Firewall Characteristics, Types of Firewalls, Firewall Location and Configurations.

Co 5. Understands and learns to provide security for Mobile and manage the Risks. Provides security for cloud-based applications. Learns to provide security for E- money like Crypto currency, Bit Coin Security and working

Co 6.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes (CLOs):

1. Understand the fundamentals of networks security, security architecture, threats and vulnerabilities
2. Apply the different cryptographic operations of symmetric cryptographic algorithms
3. Apply the different cryptographic operations of public key cryptography
4. Apply the various Authentication schemes to simulate different applications.
5. Understand various Security practices and security standards.

SYLLBUS

UNIT – 1

Cryptography – Terminology, Conventional Encryption Model, Steganography, Classical Encryption Techniques, DES Data Encryption Standard, Block Cipher Design principles and Modes of Operation.

UNIT II

Conventional Encryption Algorithms: Triples DES, International Data Encryption Algorithm, Blowfish, RC5, Characteristics of advanced symmetric Block Ciphers, Confidentiality using Conventional Encryption.

UNIT III:

Public-Key Cryptography, Introduction to Number Theory: Prime Numbers, Modular Arithmetic, Euler's Theorem, Primary and Factorization, discrete logarithm, D-H Key sharing technique, RSA and its variants-Homomorphic Encryption Techniques Message Authentication and Hash Functions – Hash and MAC algorithms..

UNIT IV

Digital, Signatures and authentication Protocols, Digital Signature Standard, Network Security Practice, Authentication Applications. Basic overview of Electronic Mail Security: pretty Good Privacy's/MIME: IP Security, Web Security – Intruders, Viruses and Worms – Firewalls.

UNIT V

Mobile Security, Risk Model, Eco-System, Service Risks, App Risks, Countermeasures- Cloud Computing Security- Threats-Security in Cloud. Security at service layers. Introduction to Block chain, Crypto currency,BitCoin Security and working, *Ethereum*.

Text Books

1. Cryptography and Network Security – by William Stallings, Principles and Practice, 7th Edition, Pearson
2. Cryptography and Network Security, by John Wiley, Edn, 001

Reference Books

1. Bruce Schneier, Applied Cryptography, John Wiley, Second Edn,2001.
2. Charke Kaufman, Rodia Perlman and Mike Speciner, Network Security

MCA 305B: ARTIFICIAL INTELLIGENCE

Department	Master of Computer Applications	**Course Type**	DSCC
Course Title	Artificial Intelligence	**Course Code**	MCA **305B**
L-T-P	3-1-0	**Credits**	4
Contact Hours	60 Hrs	**Duration of SEE**	3 Hrs
SEE Marks	70	**CIE Marks**	30

COURSE OBJECTIVES:

Co 1. To introduce the prominent methods for machine learning

Co 2. To study the basics of supervised and unsupervised learning

Co 3. To study the basics of connectionist and other architectures

Co 4. Illustrate the working of classifier models like SVM, Neural Networks and identify classifier model for typical machine learning applications

Co 5. Illustrate and apply clustering algorithms and identify its applicability in real life problems.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PSO_1**	**PSO_2**	**PSO_3**
CO_1	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_2	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_3	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_4	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3
CO_5	3	2	3	3	-	-	3	2	-	-	2	3	2	1	3

COURSE LEARNING OUTCOMES

1. Differentiate various learning approaches, and to interpret the conceptsof supervised learning.
2. Compare the different dimensionality reduction techniques.
3. Apply theoretical foundations of decision trees to identify best split andBayesian classifier to label data points.
4. Illustrate the working of classifier models like SVM, Neural Networks and identify classifier model for typical machine learning applications.
5. Identify the state sequence and evaluate a sequence emission probabilityfrom a given HMM.
6. Illustrate and apply clustering algorithms and identify its applicability inreal life problems.

SYLLABUS

UNIT I

Introduction Concept of AI, history, current status, scope, agents, environments, Problem Formulations, Review of tree and graph structures, State space representation, Search graph and Search tree

UNIT II

Random search, Search with closed and open list, Depth first and Breadth first search, Heuristic search, Best first search, A* algorithm, Game Search.

UNIT III

Probability, conditional probability, Constraint Satisfaction, Propositional Logic & Satisfiability, Uncertainty in AI, Bayes Rule, Bayesian Networks- representation, construction and inference, temporal model, hidden Markov model.

UNIT IV

MDP formulation, utility theory, utility functions, value iteration, policy iteration and partially Observable MDPs.

UNIT V

Passive reinforcement learning, direct utility estimate adaptive dynamic programming, temporal difference learning, active reinforcement learning- Q learning. Introduction to Machine learning, Deep Learning.

Text Books

1. Stuart Russell and Peter Norvig, "Artificial Intelligence: A Modern Approach" , 3rd Edition, Prentice Hall
2. Elaine Rich and Kevin Knight, " Artificial Intelligence", Tata McGraw Hill

Reference Books

1. Saroj Kaushik, "Artificial Intelligence", Cengage Learning India, 2011
2. David Poole and Alan Mackworth, "Artificial Intelligence: Foundations for Computational Agents",Cambridge University Press 2010.

MCA 305C: Mobile Application Development

Department	Master of Computer Applications	Course Type	Dscc
Course Title	MAD	Course Code	MCA 305C
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Outcomes:

Co 1. Upon completion of the course students should be able to:

Co 2. Install and configure Android application development tools.

Co 3. Design and develop user Interfaces for the Android platform.

Co 4. Save state information across important operating system events.

Co 5. Apply Java programming concepts to Android application development.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	-	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	-	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	-	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	-	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	-	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcome:

1. Design and develop User Interfaces for the Android platform.
2. Content that supports this outcome:
3. Android Applications, Activities and Widgets
4. ActionBar Activities
5. Customizing Styles and Themes
6. Displaying images
7. Playing video and audio
8. UI Fragments and the Fragment Manager
9. Creating custom SurfaceViews and simple animation
10. Responding to touch events
11. Supporting different devices, localizations, orientations, API levels, and resolutions.
12. XML resources
13. Launching Activities and passing information between Activitie.

SYLLABUS

UNIT I

Introduction to mobile applications – Embedded systems - Market and business drivers for mobile applications – Publishing and delivery of mobile applications – Requirements gathering and validation for mobile applications

UNIT II

Basic Design: Introduction – Basics of embedded systems design – Embedded OS - Design constraints for mobile applications, both hardware and software related – Architecting mobile applications – User interfaces for mobile applications – touch events and gestures – Achieving quality constraints – performance, usability, security, availability and modifiability.

UNIT III

Advanced Design: Designing applications with multimedia and web access capabilities – Integration with GPS and social media networking applications – Accessing applications hosted in a cloud computing.

UNIT IV

Technology I - Android: Introduction – Establishing the development environment – Android architecture – Activities and views – Interacting with UI – Persisting data using SQLite – Packaging and deployment – Interaction with server side applications – Using Google Maps, GPS and Wifi – Integration with social media applications.

UNIT V

Technology II – IOS: Introduction to Objective C – iOS features – UI implementation – Touch frameworks –Data persistence using Core Data and SQLite – Location aware applications using Core Location and Map Kit – Integrating calendar and address book with social media application

Text Books

MCA 401A CLOUD COMPUTING

Department	Master of Computer Application	Course Type	DSCC
Corse Title	Cloud Computing	Course Code	MCA 401A
L-T-P	3-1-0	Credits	4
Contact Hours	60Hrs	Duration of SEE	3Hrs
SEE Marks	80	CIE Marks	20

Course Objective:

Cloud computing could be a key distributed systems paradigm that has big in style within the previous few years. Cloud technologies square measure pervasive, touching our daily lives any time we have a tendency to access the globe wide net, use a mobile app, or build a retail purchase. Clouds also are the de facto infrastructure for "Big Data" applications. whereas innovative Cloud services square measure offered by data technology corporations, Cloud computing is additionally grounded in foundational distributed systems and ascendible software system systems principles, and is a vigorous space of analysis by the educational community.

Course Outcomes (Cos):

Co 1. To deliver a strong fundamental concept in cloud computing. Making to understand the cloud architectures like SaaS, PaaS, LaaS and public and private cloud. To understand the distributed system models and enabling technologies for network- based systems, performances and security measures.

Co 2. To implement the basics of virtualization types and levels of virtualization implementation.

Co 3. To understand the virtualization structures, tools and mechanisms. To learn the concepts of hardware and software support for virtualization. To become familiar about virtual clusters, resource management and data center automation in virtualization.

Co 4. To Impart the concepts of cloud infrastructure, the service models and the design for storage in cloud. To understand design for data center and interconnection network. To know how to provide the security for trust management in the cloud.

Co 5. To get the knowledge on cloud programming and software environment. To Provide basic programming support on google app engine, amazon AWS and Microsoft Azure. To know the emerging cloud software environment.

Co 6. To enable the knowledge on providing security, risk and challenges for cloud environment. To provide basic knowledge on security architecture design for data security, user identification security, and access control in cloud.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	-	2	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	-	2	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	-	2	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	-	2	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	-	2	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes (CLOs):

1. Explore the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for cloud computing.
2. Identification for different cloud architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
3. Identifying the appropriate technologies, tools, mechanisms, algorithms, and approaches for the related issues.
4. Figuring out the problems for providing the data security in the cloud, and their solutions.

5. Attempting to learn the new technologies like google app engine, amazon AWS.
6. New software environments like Eucalyptus, Open nebula, Aneka will be learnt.
7. Explain the core issues of Cloud Computing such as security challenges, risk, privacy, and interoperability.

SYLLABUS

UNIT I

Cloud Architecture and Model: Technologies for Network-Based System – System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture, Cloud Models: Characteristics – Cloud Services – Cloud models (IaaS, PaaS, SaaS) – Public Vs Private Cloud –Cloud Solutions - Cloud ecosystem – Service management – Computing on demand.

UNIT II

Virtualization: Basics of Virtualization - Types of Virtualization - Implementation Levels of Virtualization - Virtualization Structures - Tools and Mechanisms - Virtualization of CPU, Memory, I/O Devices - Virtual Clusters and Resource management – Virtualization for Data-center Automation. VMWare, Virtual Box Virtualization software.

UNIT III

Cloud Infrastructure: Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development – Design Challenges - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources. Federation in the Cloud – Four Levels of Federation – Federated Services and Applications – Future of Federation.

UNIT IV

Programming Model: Parallel and Distributed Programming Paradigms – Map Reduce, Twister and Iterative Map Reduce – Hadoop Library from Apache – Mapping Applications - Programming Support – Software environments for service development; Amazon, Azure, Google App Engine, AWS - Cloud Environments - Eucalyptus, Open Nebula, OpenStack, Aneka, Cloud Sim. Cloud Storage – Storage-as-a-Service – Advantages of Cloud Storage – Cloud Storage Providers – S3.

UNIT V

Security In The Cloud: Security Overview – Cloud Security Challenges and Risks – Software-as-a-Service Security – Security Governance – Risk Management – Security Monitoring – Security Architecture Design –Data Security – Application Security – Virtual Machine Security - Identity Management and Access Control.

Text Books:

1. Kai Hwang, Geoffrey C Fox, Jack G Dongarra, "Distributed a d Cloud Computing, From ParallelProcessing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
2. Ritting house, John W., and James F. Ransome Cloud Co puting: Implementation, Management and Security?, CRC Press, 2017.

Reference Books:

1. John W.Rittinghouse and James F.Ransome, "Cloud Computing: Implementation, Management, andSecurity", CRC Press, 2010.
2. Kumar Saurabh, "Cloud Computing – insights into New-Era Infrastructure", Wiley India,2011.

MCA 401C: SOFTWARE TESTING

Department	Master of Computer Applications	Course Type	Dscc
Course Title	SOFTWARE TESTING	Course Code	MCA 401C
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Objectives:

Co 1. To study fundamental concepts in software testing

Co 2. To discuss various software testing issues and solutions in software unit test, integration and system testing.

Co 3. To expose the advanced software testing topics, such as object-oriented software testing methods.

Co 4. Understanding the functional and system testing methods.

Co 5. Student learns how to handle various issues for object oriented testing.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3
CO_1	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_2	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_3	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_4	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3
CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

Course Learning Outcomes:

At the end of this course student will:

1. List a range of different software testing techniques and strategies and be able to apply specific(automated) unit testing method to the projects.
2. Distinguish characterstics of structural testing methods.
3. Demonstrate the integration testing which aims to uncover interaction and compatibility problems as early as possible.
4. Discuss about the functional and system testing methods.
5. Demonstrate various issues for object oriented testing.

SYLLABUS:

UNIT I

The role of process in software quality: Testing as a process - Overview of the Testing Maturity Model (TMM) - Basic definitions - Software testing principles - Origins of defects - Defect classes, Defect repository - Test design - Defect example: the coin problem

UNIT II

Test case design strategies: Black box approach - Random testing - Equivalence class partitioning - Boundary value analysis - Cause and Effect graphing - State transition testing - Error guessing - White box approach - Test adequacy criteria - Coverage and control flow graphs - Covering code logic - Data flow and white box test design - Loop testing - Mutation testing - Evaluating test adequacy criteria.

UNIT III

Levels of testing: Unit test: functions, procedures, classes and methods units - Unit test planning - Designing test units - The class as a testable unit - The test harness - Integration test: goal - Integration strategies for procedures and functions - Integration strategies for classes - Designing integration test - System test - The different types - Regression testing - Alpha, beta and acceptance test - Test planning - Test plan components - Test plan attachments - Reporting test results.

UNIT IV

Software quality: Defining Quality: importance of quality - Quality control v/s quality assurance - Quality assurance at each phase of SDLC - Quality assurance in software support projects - SQA function - Quality management system in an organization - Software quality assurance plans - Product quality.

UNIT V

Software metrics and models: Walkthroughs and Inspections - Software Configuration Management -ISO:9001 Model - CMM Model - CMM and ISO comparative analysis - CMM-I.

Text Books

1. IIene Burnstein, "Practical Software Testing", Springer International Edition, First Indian reprint, 2004.
2. Nina S Godbole, "Software Quality Assurance, Principles and Practice", Narosa Publishing House, 2004.

Reference Books

1. P.C. Jorgensen, "Software Testing - A Craftman's Approach", CRC press, 1995.
2. Boris Beizer, van Nostrand Reinhold, "Software Testing Techniques", 2nd Edition, 1990.

syllabus

UNIT I

The role of process in software quality: Testing as a process - Overview of the Testing Maturity Model (TMM) - Basic definitions - Software testing principles - Origins of defects - Defect classes, Defect repository - Test design - Defect example: the coin problem

UNIT II

Test case design strategies : Black box approach - Random testing - Equivalence class partitioning - Boundary value analysis - Cause and Effect graphing - State transition testing - Error guessing - White box approach - Test adequacy criteria - Coverage and control flow graphs - Covering code logic - Data flow and white box test design - Loop testing - Mutation testing - Evaluating test adequacy criteria.

UNIT III

Levels of testing : Unit test: functions, procedures, classes and methods as units - Unit test planning - Designing test units - The class as a testable unit - The test harness - Integration test: goal - Integration strategies for procedures and functions - Integration strategies for classes - Designing integration test - System test - The different types - Regression testing - Alpha, beta and acceptance test - Test planning - Test plan components - Test plan attachments - Reporting test results.

UNIT IV

Software quality: Defining Quality: importance of quality - Quality control v/s quality assurance - Quality assurance at each phase of SDLC - Quality assurance in software support projects - SQA function - Quality management system in an organization - Software quality assurance plans - Product quality.

UNIT V

Software metrics and models: Walkthroughs and Inspections - Software Configuration Management - ISO:9001 Model - CMM Model - CMM and ISO comparative analysis - CMM-I .

MCA 402A: Essentials of Data Science

Department	Master of Computer Applications	Course Type	Dscc
Course Title	EDS	Course Code	MCA 402A
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Objectives:

The main objective of this program is to provide the best graduate education to students so that they can meet the growing national and international need for highly qualified personnel in the fields of data science and artificial intelligence. The overarching objectives of the Master of Data Science and Artificial Intelligence.

Develop a broad academic and practical literacy in computer science, statistics, and optimization, with relevance in data science and artificial intelligence, so that students are able to critically select and apply appropriate methods and techniques to extract relevant and important information from data.

1. Provide strong core training so that graduates can adapt easily to changes and new demands from industry.
2. Enable students to understand not only how to apply certain methods, but when and why they are appropriate.
3. Integrate fields within computer science, optimization, and statistics to create adept and well-rounded data scientists.
4. Expose students to real-world problems in the classroom and through experiential learning.

Course Outcomes:

Co 1. Students will develop relevant programming abilities.
Co 2. Students will demonstrate proficiency with statistical analysis of data.
Co 3. Students will develop the ability to build and assess data-based models.
Co 4. Students will execute statistical analyses with professional statistical software.

Co 5. Students will demonstrate skill in data management.

Co 6. Students will apply data science concepts and methods to solve problems in real-world contexts and will communicate these solutions effectively.

CO_5	3	-	2	3	3	-	3	-	-	-	2	1	2	1	3

UNIT I

Introduction: What is Data Science? - Big Data and Data Science, Statistical Inference - Populations and samples - Statistical modeling, probability distributions, fitting a model - Intro to R Language.

UNIT II

Exploratory Data Analysis and the Data Science Process - Basic tools (plots, graphs and summary statistics) of EDA - Philosophy of EDA - The Data Science Process - Case Study: Real Direct (online real estate firm)

UNIT III

Feature Generation and Feature Selection (Extracting Meaning From Data) - Motivating application: user (customer) retention - Feature Generation (brainstorming, role of domain expertise, and place

for imagination) - Feature Selection algorithms – Filters; Wrappers; Decision Trees; Random Forests.

UNIT IV

Data Visualization: Basic principles, ideas and tools for data visualization 3 - Examples of inspiring (industry) projects - Exercise: create your own visualization of a complex dataset

UNIT V

Data Science and Ethical Issues - Discussions on privacy, security, ethics - A look back at Data Science - Next-generation data scientists

MCA 402B: Deep Learning

Department	Master of Computer Applications	Course Type	Dscc
Course Title	DL	Course Code	MCA 402B
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course Objectives

The main objective of this course is to make students comfortable with tools and techniques required in handling large amounts of datasets. They will also uncover various deep learning methods in NLP, Neural Networks etc. Several libraries and datasets publicly available will be used to illustrate the application of these algorithms. This will help students in developing skills required to gain experience of doing independent research and study.

Course Outcomes

Co 1. Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.

Co 2. Implement deep learning algorithms and solve real-world problems.

Co 3. Learns the fundamentals of neural networks.

Co 4. Studies about the architecures of LSTM, GRU and encoder-decoder architectures.

Co 5. analyses about different case studies.

CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

UNIT I

Basics Of Neural Networks: Basic concept of Neurons – Perceptron Algorithm – Feed Forward and Back Propagation Networks.

UNIT II

Introduction To Deep Learning:: Feed Forward Neural Networks – Gradient Descent – Back Propagation Algorithm – Vanishing Gradient problem – Mitigation – RelU Heuristics for Avoiding Bad Local Minima – Heuristics for Faster Training – Nestors Accelerated Gradient Descent – Regularization – Dropout.

UNIT III

Convolutional Neural Networks: : CNN Architectures – Convolution – Pooling Layers – Transfer Learning – Image Classification using Transfer Learning

UNIT IV

More Deep Learning Architectures\:LSTM, GRU, Encoder/Decoder Architectures – Autoencoders – Standard- Sparse – Denoising – Contractive- Variational Autoencoders – Adversarial Generative Networks – Autoencoder and DBM

UNIT V

Applications Of Deep Learning: Image Segmentation – Object Detection – Automatic Image Captioning – Image generation with Generative Adversarial Networks – Video to Text with LSTM Models – Attention Models for Computer Vision – Case Study: Named Entity Recognition – Opinion Mining using Recurrent

Neural Networks – Parsing and Sentiment Analysis using Recursive Neural Networks – Sentence Classification using Convolutional Neural Networks – Dialogue Generation with LSTMs.

MCA 402C: Internet of Things

Department	Master of Computer Applications	Course Type	Dscc
Course Title	IoT	Course Code	MCA 402C
L-T-P	3-1-0	Credits	4
Contract Hours	60 Hrs	Duration of SEE	3 Hrs
SEE Marks	70	CIE Marks	30

Course description and objectives:

Students will be explored to the interconnection and integration of the physical world and the cyber space. They are also able to design & develop IOT Devices.

Course Outcomes:

Co 1. Able to understand the application areas of IOT

Co 2. Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks

Co 3. Able to understand building blocks of Internet of Things and characteristics

Co 4. Understands about big data and its types, data analysis.

Co 5. Studies about different real time applications as case studies.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PSO_1	PSO_2	PSO_3

CO_5	3	3	2	3	3	-	3	3	-	-	2	1	2	1	3

UNIT I

Fundamentals of IoT: Introduction, Definitions & Characteristics of IoT, IoT Architectures, Physical & Logical Design of IoT, Enabling Technologies in IoT, History of IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT, IoT frameworks, IoT and M2M.

UNIT II

Sensors Networks : Definition, Types of Sensors, Types of Actuators, Examples and Working, IoT Development Boards: Arduino IDE and Board Types, RaspberriPi Development Kit, RFID Principles and components, Wireless Sensor Networks: History and Context, The node, Connecting nodes, Networking Nodes, WSN and IoT.

UNIT III

Wireless Technologies For Iot**:** WPAN Technologies for IoT: IEEE 802.15.4, Zigbee, HART, NFC, Z-Wave, BLE, Bacnet, Modbus. IP Based Protocols For IoT: IPv6, 6LowPAN, RPL, REST, AMPQ, CoAP, MQTT.

Edge connectivity and protocols

UNI IV

Data Handling& Analytics**:** Introduction, Bigdata, Types of data, Characteristics of Big data, Data handling Technologies, Flow of data, Data acquisition, Data Storage, Introduction to Hadoop. Introduction to data Analytics, Types of Data analytics, Local Analytics, Cloud analytics and applications, Edge/Fog Computing

UNIT V

Applications of IoT**:** Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.

S.V.U COLLEGE OF CM & CS

DEPARTMENT OF COMPUTER SCIENCE

Course
Master of Computer Science (M.Sc. (CS))

Choice Based Credit System (CBCS)
Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department was established in 1985 and ever since its inception; the department has been a pioneering academic centre for higher education, research, and innovation in core and key areas of computer science and applications.

The Department of Computer Science was given the status of the separate department in 2003 after bifurcation from College of Engineering. It has grown in stature to be ranked amongst the best in the university offering world class pedagogical and research experience to its students.

The Department is recognized under Special Assistance Programme (SAP) by the University Grants Commission and has been awarded (NO: F.3-49/2011 (SAP-II)) for a period of 5 years with an amount of Rs.47,00,000 and SAP DRS–II with an amount of Rs.88,00,000 & with DST – FIST with an amount of Rs.60,00,000 CS researchers contribute to cutting-edge research in topical areas of computer science and applications and are active researchers in their respective domains of expertise enhancing publication profile and citations accumulated by the publications

The department's alumni include renowned academicians, leaders in computer and IT industry, distinguished scientists, and trendsetting entrepreneurs (UGC SAP DRS-II & DST –FIST)

The department currently offers two PG level professional programmes following Choice Based Credit System and two research-oriented programmes. Both M.Sc. (CS) & MCA are interdisciplinary programmes offering Computer Science subjects along with Mathematics, Statistics, Management and Commerce are also having as one of the core /elective subjects.

The courses offered in the department meet the requirements of both the industry and research. The curriculum is designed to train the students in developing application programmes (software) and also designing and developing computing systems (hardware). Faculty members taking classes, involving in curriculum development and implementation in the departments having computer subjects like Zoology, Biotechnology, Geography, Microbiology, Bioinformatics etc.

Vision

To be the source of bringing out globally competent pioneering computing professionals, researchers, innovators and entrepreneurs and thereby succeed and contribute value to the knowledge-based economy and society.

Mission

- To offer high-grade, value-based Post-graduate and Doctoral programmes in the field of Computer Applications.
- To provide conducive environment so as to achieve excellence in teaching-Learning and research and development activities.
- To bridge the gap between industry and academia by framing curricula and syllabi based on industrial and societal needs.
- To offer tasks for experiential technology- Intensive knowledge through collaborative and interdisciplinary activities.
- To provide appropriate forums to develop innovative talents, practice ethical values and inculcate as enduring learners.
- To facilitate students to nurture skills to practice their professions competently to meet thever-changing needs of society.
- Achieve academic excellence in Computer Applications through innovative teaching and learning processes.
- To prepare the students to be professionally competent to face the challenges in the industry.
- Promote inter-diciplinary research among the faculty and the students to create state of art research facilities.
- To promote quality and ethics among the students.
- Motivate the students to acquire entrepreneurial skills to become global leaders.

CHOICE BASED CREDIT SYSTEM(CBCS)

M.Sc(CS) Programme (CBCS) Regulations-2016

Amended as per NEP-2020

(with effect from the batch admitted in the academic year 2021-22)

CHOICE BASED CREDIT SYSTEM(CBCS)

1. Preamble:

M.Sc (CS) Programme is of two academic years with each academic year being divided into two consecutive (one odd + one even) semesters.

Choice-Based Credit System (CBCS) is a flexible system of learning and provides choice for students to select from the prescribed elective courses. A course defines learning objectives and learning outcomes and comprises of lectures / tutorials / laboratory work / field work / project work /viva / seminars / assignments / presentations / self-study etc. or a combination of some of these.

Under the CBCS, the requirement for awarding a degree is prescribed in terms of number of credits to be completed by the students.

The CBCS permits students to:

i.	choose electives from a wide range of courses offered by the Departments of the College/University.
ii.	opt for additional courses of interest
iii.	adopt an inter-disciplinary approach in learning
iv.	make the best use of expertise of the available faculty
v.	Skill Oriented Course and Multidisciplinary Course/Project are introduced as per Action Plan of National Education Policy-NEP-2020

2. **MINIMUM QUALIFICATION:**

Minimum qualification for seeking admission into M.Sc(CS) Programme is any U.G.Degree with computer science as one of the major subject, with at least 40% marks for general and pass marks for SC/ST in aggregate.

3. **Branch of Study::** **M.Sc(CS)** Programme

4. **Programme Duration:**

4.1 Minimum duration of the full-time M.Sc(CS) Programme is two consecutive academic years i.e. four semesters and maximum period is four academic years.

4.2 **Semester:**

Generally, each semester shall consist of 90 actual instruction days including sessional test days. However, instructional days may be reduced up to 72, when necessary, with increased instructional hours per course per week.

5. **Credits:**

Credit defines the quantum of contents/syllabus prescribed for a course and determines the number of instruction hours per week. The norms for assigning credits to a course for a duration of one semester shall be as follows:

- One credit for every one hour of lecture/tutorial per week
- One credit for every two hours of practical work/seminar per week
- 4 credits in a semester for project work.

6. **Classification of Courses:**

The courses of each specialization of study are classified into Core Courses, Elective Courses and Foundation courses. It is mandatory for a student to complete successfully all the **Core and Elective courses** pertaining to his/her of specialization of study.

1. ProgramminginC
2. OfficeAutomation
3. Open-SourceTools

6.1 **Core Course:-**

There may be a core course in every semester. This is the course which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.

6.2 **Elective Course:-**

Elective course is a course which can be chosen from a pool of papers. It may be:

- Supportive to the discipline of study
- Provide a expanded scope
- Enable an exposure to some other discipline/domain
- Nurture students's proficiency/skill

6.2.1. An elective may be "Generic Elective" focusing on those courses which add generic proficiency to the students. These electives shall be "Discipline centric". Three or Four papers may be offered, of which Two may be choosen.

6.2.2 Skill Oriented Course and Multidisciplinary Course/Project are introduced as per Action Plan of National Education Policy-NEP-2020.

6.2.3 An elective may be "Open Elective" and shall be offered for other Discipline only. Atleast one paper must be chosen for study as mandatory. More than one paper may be studies through self study.

6.3 Foundation Courses:

The Foundation Courses may be of two kinds: Compulsory Foundation and Elective foundation, "Compulsory Foundation" courses are the courses based upon the content that leads to knowledge enchancement. They are mandatory for all discipline. Elective Foundation courses are value-based and are aimed at man-making education.

6.4 Audit Course (100 Marks Inernal – Zero Credits)

The main aim of Audit Course is to aware the Contemporary Societal issues. This course is under self study.

6.5 MOOCS and e-Learning:

Discipline centric elective course through MOOCS (Massive Open Online Course) platform. Students of I, II and/or III semesters can register for the course offered by authorized Institutions/Agencies through online with the approval of the DDC concerned. The certificate issued by the Institutions/Agencies after successful completion of the course will be considered for the award of the Grade to that course in open electives only. Further, 30-40% of the syllabus of any one course in I, II and III semesters may be taught through e-Learning.

7 Course Registration:

Every student has to register for the set of Courses offered by the Department in that Semester including those of Open Elective course of the other Departments and MOOCS courses with the total number of their Credits being limited by considering the permissible weekly contact hours (typically: 36/Week).

8 Credits Required for Award of Degree:

A student shall become eligible for the award of M.Sc(CS), if he/she earns a **minimum of 96** credits by passing all the core and electives along with practicals, seminars, comprehensive viva-voce prescribed for the programme.

- It is mandatory for a student to complete successfully all the core courses pertaining to his/her specialization of study.

- A student may choose Generic Electives from the list of elective courses offered from his/her specialization of study.

- Further, a student may select from a list of Elective courses from other Departments as Open Electives to "suit the required" number of credits, such that the total credits is atleast 96.
- There should be a register maintained by the Head of the Department indicating for each student, the course (s) registered by the student within the department, so that "Generic Electives" opted by the student are indicated.

- In the case of Open Elective, the Head of the Department should prepare a statement /register indicating the courses choosen / opted by the students of the department in other departments.
- The Head of the Department should send the list of registered papers (opted by the student) to the Principal with a copy to the controller of examinations immediately with in a week commencement of each semester.
- A copy of the courses registered by the students in each semester approved by the Principal shall be sent to the Academic Branch as well as Examination Branch.
- The list of students registered for Mooc's shall be furnished giving details of the programme with a copy to the Principal and Controller of Examinations.
- A model of Registers to be maintained by the Head of the Department is given in the Annexure. It is mandatory on the part of the Head of the Department to maintain Register for each Course separately.

9. **Scheme of Instruction :**

The Board of Studies (BOS) of each specialization shall formulate the scheme of instruction and detailed syllabi. For every course learning objectives and learning outcomes should be defined. While formulating the scheme of instruction, the BOS shall facilitate to offer the minimum number of credits for the entire Programme. The syllabi of theory courses shall be organized into four/five units of equal weight. The question paper for the semester end University Examination in theory course shall consist of four / five units, two questions from each unit of syllabus carrying a total of 60 marks. There shall be short answer questions

for a total of 20 marks.

Part A contains of 20 marks with two short question from each unit out of which the student has to answer five questions with each question carrying 4 marks with a total of 20 marks.

Examination in theory shall consists of five units in each paper, two questions from each unit of syllabus out of which a student shall answer one question carrying 12 marks for each question with a total of 60 marks.

10. EVALUATION:

10.1Evaluation shall be done on a continuous basis i.e. through Continuous Internal Evaluation (CIE) in the Semester and Semester End Examination (SEE). For each theory course, there shall be two internal tests of two hours duration carrying 20 marks each and one Semester end Examination of 3 hours duration carrying 80 marks. Internal marks for a maximum of 20 shall be awarded based on the average performance of the two internal tests.

10.2The first internal test shall be held immediately after the completion of 50% of the instruction days covering 50% of the syllabus. The second internal test shall be held immediately after the completion of 90 instruction days covering the remaining the 50% of the syllabus.

10.3 It is mandatory for a student to attend both the internal tests in each theory course. The weighted average of the marks secured in two tests is awarded as sessional marks. However, 0.8 shall be assigned as weight for the best performance of the two tests whereas for the other test it shall be 0.2. If a student is absent for any of the internal test for whatsoever reason, the marks for that test shall be zero.

10.4 The students shall be permitted to verify the valuation of answer scripts of sessional tests and signature same the verification.

10.5 The valuation and verification of answer scripts of Sessional Tests shall be completed within a week after the conduct of the internal Tests. The answer scripts shall be maintained in the department until the semester end results are announced.

10.6 The valuation of End-Semester Examination answer scripts shall be arranged by the Controller of Examinations as per the University procedures in vogue.

10.7 : Evaluation of Practicals:

For each practical course, the sessional marks for a maximum of 100 shall be awarded by the teacher based on continuous assessment of practical work. The Semester end University practical Examinations carrying 100 marks shall be conducted by i) Internal examiners and ii) external examiner permitted by the Board of Studies of the Department a panel submitted to the Controller of examiners.

11 : PROJECT WORK:

11.1 The work shall be carried out in the concerned department of the student or in any recognized Educational Institutions of Higher learning/Universities/Industry/Organization as approved by the DDC. The student shall submit the outcome of the project work in the form of a report.

11.2 The Project work shall be evaluated at the end of the IV semester with 300 marks in which 100 marks are Internal and 200 marks are External evaluation of the project work.

12. Grading and Grade Points:

Grade Point: It is a numerical weight allotted to each letter grade on a 10-point scale

Letter Grade: It is an index of the performance of students in a said course. Grades are denoted by letters O, A+, A, B+, B, C, P and F.

Semester Grade Point Average (SGPA): It is a measure of performance of work done in a semester. It is the ratio of total credit points secured by a student in the courses registered in a semester and a total course credits taken during that semester. It shall be given up to two decimal places.

SGPA (Si) = Σ(Ci x Gi) / ΣCi

where Ci is the number of credits of the ith course and Gi is the grade point scored by the student in the ith course.

The CGPA is also calculated in the same manner taking into account all the courses undergone by a student over all the semesters of a programme, i.e.

Cumulative Grade Point Average (CGPA): It is a measure of overall cumulative performance of a student over all semesters. The CGPA is the ratio of total credit points secured by a student in the courses in all semesters and the sum of the total credits of all courses in all the semesters. It is given up to two decimal places.

CGPA = Σ(Ci x Si) / Σ Ci

Where Si is the SGPA of the ith semester and Ci is the total number of credits in that semester.

The SGPA and CGPA shall be rounded off to two decimal points and reported in the transcripts.

Letter Grades and Grade Points:

A 10-point grading system with the following letter grades is to be followed.

Grades and Grade Points

Marks	Grade Point	Letter Grade
75-100	7.5-10	O (Outstanding)
65-74	6.5-7.4	A+ (First)
60-64	6.0-6.4	A (First
55-59	5.5-5.9	B+ (Second)
50-54	5.0-5.4	B (Second)
40-49	4.0-4.9	C(Third)
00-39	0.0-3.9	F (Fail)

A student obtaining Grade F shall be considered failed and will be required to reappear in the examination.

12.1 In each Semester, every student who satisfies the attendance requirements should register for examination, failing which he/she shall not be promoted to the next semester. Any such student who has not registered for examination in a semester shall repeat that semester in the next academic year after obtaining the proceedings of the Principal.

12.2 To pass a course in M.Sc(CS) Programme, a student has to secure the minimum grade of (P) in the PG Semester end Examination. A student obtaining Grade F shall be considered failed and will be required to reappear in the examination as supplementary candidate.

12.3 A student is eligible to improve the marks in a paper in which he has already passed, within 4 years from the year of admission as and when it is conducted for the subsequent batches. This provision shall not be provided once the candidate is awarded Degree.

12.4 A student who has failed in a course can reappear for the Semester end Examination as and when it is held in the normal course. The Sessional Marks obtained by the student will be carried over for declaring the result.

12.5 Whenever the syllabus is revised for a course, the semester Examination shall be held in old syllabus three times. Thereafter, the students who failed in that course shall take the semester end Examination in the revised syllabus.

13. Award of Degree :

A student who has earned a minimum of 96 credits by passing in all the core courses and the minimum number of electives prescribed shall be declared to have passed the course work and shall be eligible for the award of degree.

13.1 A student who has earned extra credit shall be issued an separate certificate to that effect, mentioning the subject and grade.

14. Ranking and Award of Prizes / Medals:

14.1 Ranks shall be awarded in each branch of study on the basis of Cumulative Grade Point Average (CGPA) for top ten percent of the students or top three students whichever is higher.

14.2 The students who have become eligible for the award of PG degree by passing regularly without break, shall only be considered for the award of ranks.

14.3 Award of prizes, scholarships and other honours shall be according to the rank secured by the student as said above and in conformity with the desire of the Donor.

15. Attendance Requirements:

15.1 A student is required to complete the Programme of Study satisfying the attendance requirements in all the semesters within twice the prescribed period of study four academic years from the year of admission, failing which he/she forfeits his/her seat.

15.2 A student shall repeat the semester if he/she fails to satisfy the attendance requirements given below:

- A student shall attend at least 60 percent of the maximum hours of instruction taken by the teacher for each course.

- A student shall attend at least 75 percent of the maximum hours of instruction taken for all the courses put together in that semester.

15.3 The Principal shall condone the shortage of attendance of a student provided, the student satisfies the clause 15.2 and obtain atleast 60% of overall attendance in a semester on **medical grounds only.**

15.4 A student who fails to satisfy the attendance requirements specified in clause 15.2 shall **repeat that semester** in the subsequent academic years with the written permission of the Principal.

15.5 A student shall not be permitted to study any semester more than two times during the Programme of his/her study.

15.6 A student who satisfies the attendance requirements specified in clause 15.2 in any semester may be permitted to repeat that semester after canceling the previous attendance and sessional marks of that semester with the written permission of the Principal. However, this facility shall be extended to any student not exceeding twice during the entire Programme of study provided the stipulation in clause 15.1 is met.

16. **Conditions of Promotion:**

A student shall be eligible for promotion to the next semester provided, if he/she satisfies the attendance requirements in the immediately preceding semester as specified in clause 15. The Principal of the concerned college will furnish the promotion list to the HOD at the beginning of II,III& IV Semester.

17. Transitory Regulations:

17.1 A student who has been repeated in the previous regulations for not satisfying the attendance requirements shall be permitted to join in these regulations provided the clauses 15.1 and 15.4 hold good.

17.2 Semester end University Examinations under the regulations that immediately precede these regulations, shall be conducted two times after the conduct of last regular examination under those regulations.

17.3 The students who satisfy the attendance requirements under the regulations that immediately precede these regulations, but do not pass the courses shall appear for the Semester end University Examinations in equivalent courses under these regulations as specified by the BOS concerned.

Programme Specific Outcomes (PSO's)

PSO1

- Demonstrate understanding of the principles and working of the hardware and software aspects of computer systems.

PSO2

- Ability to understand the structure and development methodologies of software systems. Possess professional skills and knowledge of software design process. Familiarity and practical competence with a broad range of programming language and open source platforms.

Programme Objectives

The objective of the MCA curriculum is to equip the students with the ability to analyse varieties of real-life problems and develop computer based solutions for effectiveness and efficiency. Keeping in view the requirements of the evolving software industry and also to provide a foundation for higher studies in Computer Science, effort has been made in the choice of subjects to balance between theory and practical aspects of Computer Science. On successful completion of this course a student can find a career in software industries, corporate sectors, or Government Organizations as a technical professional or pursue research in the core areas of Computer Science and Applications. MCA graduates will demonstrate analytical and design skills including the ability to generate creative solutions and foster team-oriented, professionalism through effective communication in their careers.

Programme Out comes

PO1	**ComputationalKnowledge:**Applyknowledgeofcomputingfundamentals,computingspecialization, mathematics,anddomainknowledgeappropriateforthecomputingspecialization to theabstraction and conceptualizationofcomputingmodelsfromdefined problemsand requirements.
PO2	**ProblemAnalysis:**Identify,formulate,researchliterature,andsolvecomplexcomputingproblemsreach ingsubstantiatedconclusionsusingfundamentalprinciplesofmathematics,computingsciences, and relevant domaindisciplines.
PO3	**Design /Development of Solutions:** Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meetspecifiedneeds with appropriateconsideration for publichealth and safety,cultural,societal, andenvironmental considerations.
PO4	**ConductinvestigationsofcomplexComputingproblems:**Useresearch-basedknowledgeandresearchmethodsincludingdesignofexperiments,analysisandinterpretationofda ta, andsynthesis oftheinformationto providevalid conclusions.
PO5	**ModernToolUsage:**Create,select,adaptandapplyappropriatetechniques,resources,andmoderncomp utingtoolstocomplexcomputingactivities,withanunderstandingofthelimitations.
PO6	**ProfessionalEthics:**Understandandcommittoprofessionalethicsandcyberregulations,responsibilitie s,andnormsofprofessionalcomputingpractices.
PO7	**Life-longLearning:**Recognize theneed,andhavetheability,toengageinindependentlearningforcontinualdevelopmentasacomputingp rofessional.
PO8	**Projectmanagementandfinance:**Demonstrateknowledgeandunderstandingofthecomputingandman agementprinciplesandapplythesetoone'sownwork,asamemberandleader in a team, to manageprojectsandinmultidisciplinary environments.
PO9	**CommunicationEfficiency:**Communicateeffectivelywiththecomputingcommunity,andwithsociety atlarge,aboutcomplexcomputingactivitiesbybeingabletocomprehendand writeeffectivereports, designdocumentation, makeeffectivepresentations, andgiveand understandclearinstructions.
PO10	**SocietalandEnvironmentalConcern:**Understandandassesssocietal,environmental,health,safety,le gal,andculturalissueswithinlocalandglobalcontexts,andtheconsequentialresponsibilitiesrelevant to professional computingpractices.
PO11	**IndividualandTeamWork:** Functioneffectivelyasanindividualandasamemberorleaderindiverseteamsandinmultidisciplinaryenv ironments.
PO12	**InnovationandEntrepreneurship:**Identifyatimelyopportunityandusinginnovationtopursuethatop portunitytocreatevalueandwealthforthebettermentoftheindividualandsocietyat large.

Programme Educational Objectives(PEO's)

PEO1

- Domain Expertise: apply and continuously acquire knowledge, both theoretical and applied,relatedtocore areas ofcomputerscience;

PEO2

- Computing Skills and Ethics: Demonstrate the ability to work effectively as a team memberand/orleader inan ever-changingprofessionalenvironment;

PEO3

- LifelongLearningandResearch: workproductivelyascomputerprofessionalsdemonstratingeffective use of oral and written communication, working competently as a member of ateamunit,adheringtoethical standards intheprofession.

Course Objectives:

CO1:Conceptualizethebasicsoforganizationalandarchitecturalissuesofadigitalcomputerandclassifyandcomputetheperformanceofmachines,MachineInstructions.
CO2:Understand conceptsof registertransfer logicand arithmetic operations.
CO3:Explaindifferenttypesofaddressingmodesandmemoryorganization.
CO4:Learnthedifferenttypesofserialcommunicationtechniques.
CO5:SummarizetheInstructionexecutionstages.

Course Learning Outcomes:

CLO1:Understandthetheoryandarchitectureofcentralprocessingunit.
CLO2:Analyzesomeofthedesignissuesintermsofspeed,technology,cost,performance.
CLO3. Design asimpleCPUwith applyingthe theory concepts.
CLO4: UseappropriatetoolstodesignverifyandtesttheCPUarchitecture.
CLO5: Learntheconceptsofparallelprocessing,pipeliningandinterprocessorcommunication.
CLO6: Understandthearchitectureandfunctionalityofcentralprocessingunit.
CLO7: ExemplifyinabetterwaytheI/Oandmemoryorganization.

UNITI:

Logic Circuits:Logic functions–synthesis of logic functions–Minimizationsoflogic-SynthesiswithNANDandNORgatesImplementationofLogicgates-Flip-flops–Registersandshiftregisters – counters – decoders – Multiplexers – PLDs – sequential circuits. Basic Structure of Computers:FunctionalUnits-Basic operational concepts–Bus structures–performance–MultiprocessorsandMulti computers: Functional Units – Basic operational concepts – Bus structures – performance –MultiprocessorsandMulticomputers–HistoricalPerspective.

UNITII:

Machine Instructions and programs: Numbers, Arithmetic operations and characters – Memorylocationsandaddress,operations–instructionsandinstruction,sequencing–addressingmodes.

UNITIII:

Input / Output organization: accessing I/O Devices – Interrupts – direct memory access – buses 240-interfacecircuits–Standard I/O Interfaces.

UNITIV:

Memory System, Concepts – semiconductor RAM memories - Read only memories – cachememories–performanceconsiderations–virtualmemoriesmanagementrequirements–secondarystorageArithmetic:Additionandsubtractionofsignmembers–designoffastadders–multiplication of positive members – signed operand multiplication – fast multiplication – integer division – floatingpointnumbersandoperations.

UNITV:

BasicProcessingUnit:Concepts–executionofacompleteinstruction–Multiple–Busorganization –hardwarecontrol–microprogrammedcontrol.Pipelining:Concepts–Datahazards–instructionhazards–influenceonInstructionsets-datapathandcontrolconstructions–superscaloperation-ultraSPARCII–Performanceconsiderations.

CO2: Identifyclasses, objects,members of a class and relationships among them
CO3:Usearraysandclassarray
CO4:CreateandaccesspackagesDescribefeaturesofclassesandinterfacesinJava
CO5:Demonstratetheconceptsofpolymorphismandinheritance

CourseLearningOutcomes:

CLO1:Abilitytochooseappropriatedatastructuressuchasstack,queues,linkedlist,treesandgraphsto representitemsinreal world
CLO2:
Abilitytoanalyzethetimeandspacecomplexitiesofalgorithms,andimplementvarioussearchingandsortingtechniques
CLO3:Implementlinearandnon-lineardata structures
CLO4:Abilitytodesignprogramsusingavarietyofdata structuressuchasstacks,queues,hashtables,binarytrees,searchtrees,heaps,graphs, andB-treesto solve specificproblems
CLO5:Evaluatealgorithmsanddatastructuresintermsoftimeandspacecomplexityofbasicoperations.

UNIT–I:

Object Oriented Programming Fundamentals & Java: Java Features, Object Oriented ProgrammingConcepts – Abstraction, Encapsulation, Inheritance, and Polymorphism. Java Fundamentals: DataTypes,variables,arrays,Inheritancetoclasses:classfundamentals,Objects,References,Constructors, Overloading of methods, Access control, Nested and Inner classes. Inheritance:Inheritancebasics,Usingsuper,multilevelhierarchy,methodoverriding,dynamicmethoddispatch,abstractclasses,finalwith inheritance.

UNIT-II:

Packages,ExceptionsandThreads:PackagesandInterfaces:Packages,Accessprotection,Importingpackages,interfaces,ExceptionHandling:fundamentals,exceptiontypes,uncaughtexceptions,usingtry,nestedtrystatements,throw,throws,Javabuilt-inexceptions,userdefinedexceptions. Multithreading: Thread model, main thread, creating a thread, multiple threads, thread priorities,synchronization,Interthreadcommunication,Stringhandling.

UNIT-III:

GUI Programming Features: Applets: Applet basics, Applet architecture, an applet skeleton, Appletdisplay method, Repainting, Using Status window, HTML APPLET tag, passing parameters toapplet, Audio Clip interface. Event Handling; two event handling mechanisms, Event model, Eventclasses,sourcesofevents,EventListenerinterfaces,Adapterclasses.

UNITIV:

Introduction: Concept of Data Structures - Overview of Data Structures Implementation of

DataStructures. Arrays: Definition - Terminology - One dimensional array – Multidimensional. Arrays - Pointerarrays.LinkedLists:SinglelinkedlistsCircularlinkedlist-Doublelinkedlists-CircularDouble linked lists - Applications of linked lists. Stacks: Definition - Representation of stack -Operations of stack Applications of stack. Queues: Definition - Representation of Queues – Variousqueuestructures-Application ofqueues.

UNIT-V:

Trees:Definitionandconcepts-RepresentationofBinarytree-OperationsonBinarytree-Typesofbinarytrees-Treesandforests-BTrees-B+TreeIndexing
Graphs:Terminology-Representationofgraphs-OperationsandgraphsApplicationofgraphstructures

Department	ComputerScience	**CourseType**	DSEC
CourseTitle	MathematicalFoundationof ComputerScience	**Course Code**	MSCS104GE
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

CourseObjectives:

Studentswillbeableto

CO1:Understandsettheory,relationsandfunctionstoread,understandMathematicalInductionand constructmathematical arguments.

CO2:Understandcombinatorics,logicandmathematicalreasoningtocounterenumerateobjectsinsystematicway.

CO3:Constructrecurrencerelationsforelementaryproblems,andapplygeneratingfunctionstosolverecurrencerelations.

CO4:UnderstandDefinition,composition,Inverse,Binaryandn-aryoperations,characteristicfunctionofaset,hashingfunction-Recursions,Functions,setsandpredicates

CO5:Understandtheconceptoflatticesandgraphtheory.

CourseLearningOutcomes:

Afterthecoursethestudents areexpected tobe ableto

CLO1:Verifythecorrectnessofanargumentusingpropositionalandpredicatelogicandtruthtables

CLO2: Demonstrate the ability to solve problems using counting techniques and combinatorics inthecontextofdiscreteprobability.

CLO3:Solveproblemsinvolvingrecurrencerelationsandgeneratingfunctions.

CLO4: Understand some basic properties of graphs and related discrete structures, and be able torelatethesetof practicalexamples.

UNITI

Mathematical Logic: Connectives Negation, Conjunction, disjunction, Statement Formulas and TT,Conditional and Biconditional, Well-formed formulas, tautologies, Equivalence of statementformulae, Duality law, Tautological implications, functionally complete set of connectives; NormalFormsDisjunctive,Conjunctive,Principaldisjunctiveandprincipalconjunctivenormalforms.

UNITII

The theory of inference for statement calculus, Validity using TT, rules of inference, consistency ofpremises and indirect method of proof, Automatic Theorem proving- Predicate Calculus, Predicates,the statement function, variablesandquantifiers.

UNITIII

Set Theory : Basic Concepts of Set theory, Notation, Inclusion and equality , Power set, Operationson sets, Set identities, Ordered pairs and n-tuples, Cartesian products - Relations and Ordering ,Relations,Propertiesofbinaryrelation-relationmatrixandgraphofarelation,partitionand covering of a set, equivalence relations, composition of binary relations, partial ordering, partiallyorderedset-Functions,Definition,composition,Inverse,Binaryandn-aryoperations,characteristicfunctionofaset,hashingfunction-Recursions,Functions,setsandpredicates.

UNITIV

Lattices and Boolean Algebra: Lattices as partially ordered sets, properties of lattices, Lattices asAlgebraicsystems,Somespeciallattices-Booleanalgebra,functions,representationandminimization.

UNITV

Graphtheory:Definition,Examples,PathsandCycles,Planarity,coloringgraphs

MSCS106EF:PCHARDWAREBASICS

Department	ComputerScience	**CourseType**	SEC
CourseTitle	PcHardwareBasics	**Course Code**	MSCS106EF
L-T-P	2-0-0	**Credits**	2
ContactHours	60Hrs	**DurationofSEE**	1.5Hrs
SEEMarks	50	**CIEMarks**	00

ObjectiveoftheCourse:

To train the officials to acquire basic knowledge in computer hardware and peripherals for installation, PCassembly,troubleshootingandmaintenanceincludingsystemmanagementanditsbackupandtoundertakedisasterprevention,abasicknowledgeofTCP/IPnetworksworkgroup,internetandintranet.

Course Outcomes

CO1: Identify the hardware components of a computer such as processor, memory, disk, mainboard,peripheraldevicesetc.

CO2: Identify Mother Board & its types and set up and configure Networking System using variousnetworkdevices.

CO3:InstalldifferentOperatingSystemandallotherapplicationsoftware.,Printer,Scannerandtroubleshoottheirfaults.

CO4:CustomizeOperatingSystemandmaintenanceofsystemapplicationsoftware.
AssembleandrepairDesktopComputerwithallitshardwarecomponents.

CO5:ImplementNetworkSecuritytoprotectfromvariousattacksonnetworking.

UNITI

Basic concepts and architecture, Microprocessor, System, Memory, Control unit, Arithmetic &Logic Unit.Interrupts, Operating system, Virtual memory, Cache memory. Peripheral Devices:Keyboard, CRT, Display, Monitor, Printer. Magnetic Storage Devices: Floppy disk drive, Hard diskdrive. PC Hardware overview: Hardware, BIOS-DOS Interaction, PC Hardware, Motherboardlogic,I/ODatatransfer, PCHardwarecomponents&ICs,Computermemories.

UNITII

Mother Board: Introduction to mother boards & its types, Ports, Slots, Connectors, Add on cards,Power supply units, Cabinet types, Mother boards Problem Diagnosis. Bus Standards andNetworking: ISA, PCI, SCSI, IDE, USB – comparative study and characteristics, Network InterfaceCards,Cablesandconnectors.

UNITIII

Maintenance&Troubleshooting:Systemconfiguration,Pre-Installationplanning,Installationpractice,Preventivemaintenancetools,Procedures,Plan/schedule.

UNITIV

Troubleshooting: Computer faults, Types of faults, Diagnostic programming & tools, Systematictroubleshooting, Symptom's observation & analysis, Fault diagnosis, Rectification, Troubleshootinglevels, Different troubleshooting techniques - Functional area approach, Split half method,Divergent, Convergentand feedbackpath Method.

UNITV

Installation and Troubleshooting: Hard drives, Operating system and software, Sound card, Videocard, HDD, FDD, CD-Rom drive, Key board and Mouse, Modem, Power supply, I/O ports, Printerinterface problems, Printer problems, Attaching Add-on cards. PC Assembling, up gradation andintegration,Basicdatarecovery&disaster recovery.

Department	ComputerScience	**CourseType**	DSCC
CourseTitle	ComputerNetworks	**Course Code**	MSCS 202C
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

CourseDescription:

The course introduces an overview of the concepts and fundamentals of computer networks, datacommunication concepts and techniques in a layered network architecture and their protocols,switching and routing, types of communication, various types of networks (LAN, MAN, WAN andWireless networks); bridges, routers and gateways; , network congestion, network topologies,network configuration and management, network model components, error detection and recovery;andlocalandremoteprocedures.

CourseObjectives

- Describehowcomputernetworksareorganizedwiththeconceptoflayeredapproach.
- ImplementasimpleLANwithhubs,bridgesandswitches.
- DescribehowpacketsintheInternetaredelivered.
- AnalyzethecontentsinagivenDataLinklayerpacket,basedonthelayerconcept.
- Describehowroutingprotocolswork.

CourseOutcomes(COs).

CO1: Understand fundamental underlying principles of computer networking,network components, categories of networks, OSI model and its functions.

CO2: Understand details and functionality of layered network architecture; express their knowledge in various error detection and data flow control techniques

CO3: To analyze the various routing algorithms, analyze performanceofvariouscommunicationprotocols.

CO4: Understandandcompare,distinguish the varioustransport and applicationlayer protocols

CO5: Understanding Client-Server model, SocketinterfaceIntroductiontoDNS,Distributionofnamespace,DNSintheInternet

UNIT–I:

Introduction, Network models – Internet model, OSI model Physical Layer: Signals – Analog,Digital, Digital Transmission – Coding, Sampling, Analog Transmission – Modulation of digitaland analog signal, Multiplexing – FDM, WDM, TDM, Transmission Media – cable, wireless,CircuitswitchingandTelephonenetwork,DSLTechnology,Cablemodern,SONET.

UNIT–II:

DataLinkLayer:Errordetectionandcorrection,DatalinkcontrolandProtocols–Stopandwait,Go-back-n, Selective repeat, HDLC, point to point access, Channelization, LANS – TraditionalEthernet,FastEthernet,GigabitEthernet,WirelessLAN‟s–IEEE802.11,Bluetooth,Connecting

LANs – Connecting devices, Backbone networks, Virtual LANS, Cellular telephony, Satellitenetworks,Virtualcircuit switching,Framerelay,ATM.

UNIT–III:

NetworkLayer:Inter-networks,Addressing,Routing,NetworklayerProtocols–ARP,IP,JCMP.IPV6,Routing–Introduction,Unicastrouting,Protocols–RIP,OSPF,BGP,MulticastRouting,Protocols–DVMRP,MOSPF,CBT,PIM.

UNIT–IV:

Transport Layer: Process-to-Process Delivery, UDP, TCP, Data traffic, Congestion and Control,Quality of service (QOS) and techniques to improve QOS, Integrated services, QOS in Switchednetworks. Security: Introduction. Symmetric-key cryptography, public key cryptography, Messagesecurity, Digital signature, User authentication, Key management, Kerberos. CommunicationSecurity,AuthenticationsProtocols,E-mailSecurity,Websecurity,SocialIssues.

UNIT–V:

Application Layer: Design issues, file transfer, access and management. Client-Server model,

SocketinterfaceIntroductiontoDNS,Distributionofnamespace,DNSintheInternet.Electronicmail,SMTP, FileTransfer,FTP,HTTP,WorldWideweb.

CourseDescriptionandObjectives:

This course provides an introduction to information systems for business and management. It is designedtofamiliarizestudentswithorganizationalandmanagerialfoundationsofsystems,thetechnicalfoundationfor understandinginformationsystems

Course Outcomes

AfterCompletionofthesubjectstudentshouldableto

CO1:Understandthebasicconceptsandtechnologiesusedinthefieldofmanagementinformationsystems

CO2: Have the knowledge of the different types of management information systems

CO3: Understand the processes of developing and implementing information systems

CO4:Beawareoftheethical,social,andsecurityissuesofinformationsystems

CO5: Understand Commerce, Limitations, history, applications, architecture,transactionmodels,paymentmethods,advantages,disadvantagesCasestudy

UNIT–I:

ElectronicCommerce:ElectronicCommerceFramework;ElectronicCommerceandMediaConvergence; The Anatomy of E-Commerce Application; Electronic Commerce OrganizationApplications- The Network Infrastructure for Electronic Commerce: Market Forces Influencing theI- Way; Components of the I Way; Network Access Equipment; the Last Mlle: Local Roads andAccess Ramps; Global Information Distribution: Networks: Public Policy Issues Shaping the I-Way.Casestudy:B2Becommerce

UNIT–II:

The Internet as a Network Infrastructure: The Internet Terminology; Chronological History of theInternet NSFNET: Architecture and Components: Globalization of the Academic Internet; InternetGovernance: The Internet Society –An Overview of Internet Applications –Electronic Commerce;WorldWideWeb(WWW)astheArchitecture:WebBackground:HypertextPublishing;Technology behind the Web: Security and the Web- Consumer-Oriented Electronic Commerce:Oriented Applications; Mercantile Process Models Mercantile Models from the Consumer‟sPerspective; Mercantile Models from the Merchant‟s Perspective. Case study: E-Commerce/HighSecurity(PCI)

UNIT–III:

Electronic Payment Systems: Types of Electronic Payment Systems; Smart Cards and ElectronicPayment Systems; Credit Card-Based Electronic Payment systems: Risk and Electronic PaymentSystems Designing Electronic Payment systems – Inter organizational Commerce and EDI: Legal,security,andPrivacyIssues:EDIandElectronicCommerce–EDIImplementation,MIME,andValue-Electronic Payment Systems: Types of Electronic Payment Systems; Smart Cards and ElectronicPayment Systems;

Credit Card-Based Electronic Payment systems: Risk and Electronic PaymentSystems Designing Electronic Payment systems – Inter organizational Commerce and EDI: Legal,security,andPrivacyIssues:EDIandElectronicCommerce–EDIImplementation,MIME,andValue- Added Networks : Standardization and EDI;EDI Software Implementation: EDIEnvelopefor Message Transport: Value- Added Networks (VANs); Internet – Based EDI. Case study: SocialMediaMarketing

UNIT–IV:

Intra organization Electronic Commerce: Internal Information System: Macro forces and InternalCommerce; Work-Flow Automation and Coordination; Customization and Internal Commerce;Supply Chain Management (SCM) – The Corporate Digital Library: Dimensions of InternalElectronicCommerceSystems;MakingaBusinessCaseforaDocumentLibrary; TypesofDigitalDocument Library; Types of Digital Documents; Issues behind Document Infrastructure; CorporateDataWarehouses. Casestudy:EmailMarketing,EmailPersonalization

UNIT-V:

M-Commerce: Introduction to Mobile Commerce, Limitations, history, applications, architecture,transactionmodels,paymentmethods,advantages,disadvantagesCasestudy:Mobileappmarketingcasestudy:O2PriorityMomentsgetssmallbusinessesonside

MSCS301C:DATAWAREHOUSINGANDDATAMINING

Department	ComputerScience	**CourseType**	DSCC
CourseTitle	DataWarehousingand Datamining	**Course Code**	MSCS301C
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

CourseDescription:

This course is designed to expand students' knowledge and skills gained in database management coursesand look in depth at data warehousing and data mining methods. The course examines the databasearchitectureandtechnologiesrequiredforsolvingcomplexproblemsofdataandinformation management,information retrieval, and knowledge discovery facing modern organizations. Case studiesoforganizationsusingthesetechnologiestosupportbusinessintelligencegatheringanddecisionmakingareexamined.Thiscourse also provides hands-on experience with state-of-the-art data warehousing and data mining methodsandtools.

CourseObjectives:

CO1:Befamiliarwithmathematicalfoundationsofdataminingtools.

CO2:Understandandimplementclassicalmodelsandalgorithmsindatawarehousesanddata mining

CO3:Characterizethekindsofpatternsthatcanbediscoveredbyassociationrulemining,classificationandclustering.

CO4:Masterdataminingtechniquesinvariousapplicationslikesocial,scientificandenvironmentalcontext.

CO5:Developskillinselectingtheappropriatedataminingalgorithmforsolvingpractical problems.

Course Learning Outcomes(COs):

Attheendofthiscoursestudentswillbeableto…

CLO1:Understandwarehousingarchitecturesandtoolsforsystematicallyorganizinglarge database
Andusetheir data to makestrategicdecisions.

CLO2:UnderstandKDDprocessforfindinginterestingpatternfromwarehouse.

CLO3:Removeredundancyandincompletedatafromthedatasetusingdatapreprocessing methods.

CLO4:Characterizethekindsofpatternsthatcanbediscoveredbyassociationrulemining.

CLO5:Discoverinterestingpatternsfromlargeamountsofdatatoanalyzeforpredictionsandclassification.

CLO6:Developadataminingapplicationfordataanalysisusingvarioustools.

Unit–I:

Chapter–I:DataWarehousing&OLAPTechnologies[Kambler–chapter3(3.1,3.2,3.3)]Chapter –II: Basic Data Mining Tasks: Classification-Regression-Time series Analysis Prediction-Clustering-Summarization-Association rules-Sequence discovery-Data mining Versus Knowledge discovery indatabases-the development of Data Mining-Data Mining issues-Data mining Metrics-SocialImplications of Data Mining-The future. [M.H.Dunhum – chapter 1(1.1 to 1.7)] Chapter- III: DataPreprocessing[Kambler–chapter 2(2.1 to 2.6)]

UNITII:

Chapter –I: Basic Data mining Tasks [M.H.Dunhum–chapter 1(1.1 to 1.7)] Chapter –II: Principlesof dimensional modeling-design decisions, Dimensional Modeling basics-R Modeling versusDimensionalmodeling-useofcasetools-Thestarschema-ReviewofasimpleSTARschema,insidea Dimension table, inside the fact table, the fact less fact table, Data Granularity. Star Schema keys-primary keys, surrogate keys, foreign keys. Advantages of star schema. Chapter –III: DimensionalModeling: Updates to the dimensional tables-Miscellaneous Dimensions-The Snowflake schema-Aggregatefacttables-Familiesofstars

UNIT-III:

Chapter–I:Classification:Introduction-Issuesinclassification-Statistical BasedAlgorithmRegression-Bayesian Classification-Distance based algorithm-Simple approach-K nearest approach-Decisiontreebasedalgorithms-ID3-C4.5&C5.0-CART-ScalableDTTechniquesNeuralnetworkbased algorithms-Propagation-NN Supervised Learning-Radial basis function works-Perceptrons-Rulebasedalgorithms [M.H.Dunhum –chapter 4(4.1 to4.6)]

UNIT–IV:

Chapter–I:Clustering:Introduction-Similarity&distancemeasures-outliers-Hierarchicalalgorithms agglomerative algorithms-Divisive clustering-Partitional Algorithms-Minimum spanningtreeSquarederrorclusteringalgorithm-K-meansclustering-nearestneighboralgorithm-PAMalgorithm-Bondenergyalgorithm-ClusteringwithGeneticAlgorithms-Clusteringwithneuralnetworks-Clusteringlargedatabases-BIRCH-DBSCAN-CUREalgorithm-Clusteringwithcategoricalattributes. [M.H.Dunhum –chapter 5(5.1 to5.7)]

UNIT-V:

Chapter –I: Associate Rules: - Introduction-Large Item sets-Basic Algorithms-Apriori Algorithm-Samplingalgorithm-Partitioning-ParallelandDistributedalgorithms-DataParallelism-Taskparallelism-ComparingApproaches-IncrementalRules-AdvancedAssociationRuleTechnique-Generalizedassociationrules-Multiplelevelassociationrules-Multiple–levelAssociationrules-Quantitative association rules-Using multiple minimum supports Measuring the Quality of a Rules.[M.H.Dunhumchapter6(6.1to6.8)]Chapter–II:Miningobjects-spatial,multimedia&textmining,wwwmining[Kamblerchapter10(10.1to10.5)]

MSCS304-GE-A:SYSTEMSPROGRAMMING

Department	ComputerScience	**CourseType**	DSEC
CourseTitle	SystemsProgramming	**Course Code**	MSCS304-GE-A
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

Overview:

The aim of this course is to provide students with knowledge and abilities to design system programs suchas assemblers, linkers, loaders, macro-processors, editors, interpreters, compilers and operating systemsusingmodernmethodologiesandtoimplementtheirdesignusingmoderndevelopmentto ols.

CourseObjectives:

CO1:Tointroducestudentthefundamentalmodeloftheprocessingofhigh-levellanguageprogramsforexecutiononcomputersystem.

CO2: To explain the basic operations that are performed from the time a computer is turned on until auserisableto executeprograms.

CO3: TounderstandandimplementAssembler,Loader,Linkers,Macros&Compilers.

CO4:

Tointroducestudentstheprocessmanagementandinformationmanagementviadifferent softwaretools.

CO5: Understand to devise, select, and use modern techniques and tools needed for the design andimplementation ofsystemprograms

CourseLearningOutcomes

Bytheendofthecoursestudentswillbeable to

- Adequate knowledge in system programs (assemblers, loaders, linkers, macro-processors, texteditors,debuggers,interpreters,compilers,operatingsystems).
- Ability to use theoretical and applied information in these areas to design system software withrealisticconstraints
- Recognize operating system functions such as memory management as pertaining to run timestoragemanagement
- Ability to conduct experiments, gather data, analyze and interpret results for investigating solutions to real life applications with assembly language programming and Unix shellprogramming.
- Ability to devise, select, and use modern techniques and tools needed for the design andimplementation ofsystemprograms.

UNITI:

Background introduction, system software and machine architecture, SIC, RISC, and CISCarchitecture. Assembler: basic assembler functions, machine dependent and independent assemblerfeatures,assemblerdesignoptions,andimplementationexamples.

UNITII:

Loading and linkers basic loader junction, machine dependent and independent loader features,loaderdesignoptions andimplementationexamples.Macroprocessors,basicmacroprocessorfunctionsmachines–independentmacroprocessorfeatures,macroprocessordesignoptions,implementationexamples.

UNITIII:

Compilers:basiccompilerfunctions,machinedependentandindependentcompilerfeatures,compiler design options and implementation examples. Other system software: text editors andinteractivedebuggingsystems

UNIT-IV

Introduction to Device Drivers, Design issues-Types of Drivers, Character driver-1 and Designissues, Character Driver-2- A/D converter and its design issues, Block driver-1 and its design issues-RAMDISKdriver-Anatomy-PrologueofdriversandprogrammingConsiderations.

UNIT-V

Introduction to Linux- Linux Architecture- X-windows- Linux administration tools - Commands touseLinuxOS-ExecutingLinuxShellscripts–ShellProgrammingconceptsShellscripts

MSCS304GE-A:COMPUTERALGORITHMS

Department	ComputerScience	**CourseType**	DSEC
CourseTitle	ComputerAlgorithms	**Course Code**	MSCS304GE-A
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

CourseDescription:

Introduction to the design and analysis of computer algorithms. Topics will include concepts of algorithmcomplexity, and various algorithmic design patterns like divide and conquer, dynamic programming andgreedy algorithms. Course will also cover major algorithms and data structures for searching and sorting,graphs,andsomeoptimizationtechniques.

Courseobjectives:

CO1: To teach paradigms and approaches used to analyse and design algorithms and to appreciate theimpactofalgorithmdesigninpractice.
CO2: To make students understand how the worst-case time complexity of an algorithm is defined, howasymptoticnotationisusedtoprovidearoughclassificationofalgorithms.
CO3: To explain different computational models (e.g., divide-and-conquer), order notation and variouscomplexity measures (e.g., running time, disk space) to analyse the complexity/performance ofdifferentalgorithms.
CO4: To teach various advanced design and analysis techniques such as greedy algorithms, dynamicprogramming & know the concepts of tractable and intractable problems and the classes P, NP andNP-completeproblems.
CO5: to Describe the classes P, NP, and NPComplete and be able to prove that a certain problem isNP-Complete.

AbletoanalyzeStringmatchingalgorithms

CourseLearningObjectives:

- Able to Argue the correctness of algorithms using inductive proofs and Analyze worst-case runningtimesof algorithmsusingasymptoticanalysis.
- Abletoexplainimportantalgorithmicdesignparadigms(divide-and-conquer,greedymethod,dynamic-programming and Backtracking) and apply when an algorithmic design situation calls forit.
- Able to Explain the major graph algorithms and Employ graphs to model engineering problems,whenappropriate.
- AbletoComparebetweendifferentdatastructuresandpickanappropriatedatastructureforadesignsituation.
- Able to Describe the classes P, NP, and NPComplete and be able to prove that a certain problem isNP-Complete.
- AbletoanalyzeStringmatchingalgorithms.

UNITI:

Divide–and-ConquerandGreedyMethods.

UNITII:

DynamicProgramming;BasicTraversalandSearchTechnique.

UNITIII:

Backtracking;andBranch-andBoundTechnique.

UNITIV:

LowerboundTheory;NP-HardandNP-CompleteProblems

UNITV:

MeshandHypercubeAlgorithms,theFastFourierTransformanditsApplications.

MSCS304-GE-A: USERINTERFACEDESIGNUSING.NETTECHNOLOGIES

Department	ComputerScience	**CourseType**	DSEC
CourseTitle	UserInterfaceDesignUsing .NetTechnologies	**Course Code**	MSCS304-GE-A
L-T-P	3-1-0	**Credits**	4
ContactHours	60Hrs	**DurationofSEE**	3Hrs
SEEMarks	80	**CIEMarks**	20

LearningOutcomes:

Oncompletionofthiscourse,studentswillbeableto:

CO1: Understand theimportanceofuserinterfaceandbenefitsofgooddesign.

CO2:

Understandtheuserinterfacedesignprocessandbusinessfunction,Commandandnaturall anguages

CO3: Understandthetypesofsystemmenusandnavigationschemes,InteractionDevices

CO4: Understandthecharacteristicsofwindowsanddevice-basedcontrols.

CO5: UnderstandtheDotNettechnologyscreen-basedcontrolsandkindsof tests.

Unit–I:

Human factors of interactive software goals of system engineering and user-interface design,motivations, accommodation of human diversity goal for our profession. Theories, principles, andguidelines – High-level theories, object-action interface model, Principle 1.2 and 3, guide links fordatadisplayanddataentry,balanceofautomationandhumancontrol.Managingdesignproc esses

– Usability, design pillars, development methodologies, ethnographic observation, usability testing,surveys, and continuing assessments – expert reviews, usability testing and laboratories, surveysacceptancetests,evaluationduringactiveuse,andcontrolledpsychologicallyoriented experiments.

Unit–II:

Software tolls – Specification methods, interface- building tools and evaluation and critiquing tools.Directmanipulationandvirtualenvironments– examples,explanations,programming,visual,thinkingandiconshomeautomation,remotedi rectmanipulation,visualenvironments.Menuselection, form filling, and dialog boxes – Task – related organizations item presentation sequence,response time and display rate, fact movement through menus, menu layout, form fill in, and dialogboxes. Command and natural languages – Functionality to support users' tasks, command – organizationstrategies,thebenefitsofstructure,namingandabbreviations,commandmenus, naturallanguageincomputing.

Unit–III:

InteractionDevices–

Keyboardsandfunctionkeys,pointingdevices,speechrecognitiondigitizationand generation. Image and video displays, printers. Response time and display rate-Theoreticalfoundations,expectationsandattitudes,userproductivity,variability.Presentatio

nstyles:Balancingfunction and fashion – error messages, no anthropomorphic design, display design, color, Printedmanuals, Online Help and tutorials – Reading from paper versus form displays, preparation ofprinted manuals, and preparationofonlinefacilities.

Unit–IV:

Multiple – Window strategies – Individual – Window design, multiple-window design, Coordinatorby tightly – coupled windows. Image browsing and tightly –coupled windows, personal rolemanagementandelasticwindows.Computer-supportedcooperativework-goalsofcooperation,AsynchronousInteraction:Differenttimeandplace,SynchronousDistributed:Differentplace,sametime, face to face: same place, same time, Applying CSCW to Edition, Information search andvisualization – Database Query and phrase search in textual documents, multimedia documentsearches, information visualization. Advanced filtering. Hypermedia and the world wide web(www).

Unit–V:

Introduction to Dot Net technology c#.Net Language – Control structures – GUI controls –Database GUI Controls and its connectivity to databases – ASP.Net Fundamentals and Web pagesInterfacedesigning.

CourseObjectives

CO1:Introduction aboutBiometrics,BiometricIdentification,BiometricVerification,BiometricEnrollment,Biometric System Security,AccessControlSecurityServices
CO2: Understanding the TechnicalSteganography,LinguisticSteganography,CopyRight Enforcement, Wisdom from Cryptography Principles of Steganography: Framework forSecret Communication, Security of Steganography System
CO3: Knowledge about Substitution systems and Bit Plane Tools, TransformDomain Techniques: - Spread Spectrum and Information hiding, Statistical Steganography,Distortion Techniques
CO4: To Understand Fourier Transformation, Fast Fourier Transformation, Discrete CosineTransformation, Mellin-Fourier Transformation, Wavelets, Split Images in Perceptual Bands.Applicationsof Transformationin Steganography
CO5:Knowledge aboutComputer Forensics, Rules of evidence, Evidence dynamics, Evidence collection, Data recovery

UNITI

Overview of Biometrics,BiometricIdentification,BiometricVerification,BiometricEnrollment,Biometric System Security. Authentication and Biometrics: Secure Authentication Protocols, AccessControlSecurityServices,MatchingBiometricSamples,Verificationbyhumans. Commonbiometrics:Finger PrintRecognition,FaceRecognition,SpeakerRecognition,IrisRecognition,HandGeometry,SignatureVerification

UNITII

IntroductiontoInformationHiding:TechnicalSteganography,LinguisticSteganography,CopyRight Enforcement, Wisdom from Cryptography Principles of Steganography: Framework forSecret Communication, Security of Steganography System, Information Hiding in Noisy Data ,Adaptive versus non-Adaptive Algorithms, Active and Malicious Attackers, Information hiding inWrittenText.

UNITIII

A Survey of Stenographic Techniques: Substitution systems and Bit Plane Tools, TransformDomain Techniques: - Spread Spectrum and Information hiding, Statistical Steganography,Distortion Techniques, Cover Generation Techniques. Steganalysis: Looking for Signatures: - ExtractinghiddenInformation,DisablingHiddenInformation.

UNITIV

Watermarking and Copyright Protection: Basic Watermarking, Watermarking Applications,RequirementsandAlgorithmicDesignIssues,EvaluationandBenchmarkingofWatermarkingsystem. Transform Methods: Fourier Transformation, Fast Fourier Transformation, Discrete CosineTransformation, Mellin-Fourier Transformation, Wavelets, Split Images in Perceptual Bands.Applicationsof Transformationin Steganography.

UNITV

Computer Forensics, Rules of evidence, Evidence dynamics, Evidence collection, Data recovery,Preservationofdigitalevidence,surveillancetoolsforfuturewarfare

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF CM & CS

DEPARTMENT OF COMMERCE

Course

M.COM (REGULAR)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

Name of the Department : Dept. of Commerce

1. About the Department

The Department of Commerce was one of the oldest departments established during the academic year 1969-70 in SV University (Estd.1954) to offer M.Com degree course under the aegis of Economics Department, S.V. University College of Arts and Sciences and subsequently it emerged as an independent entity during the year 1971, with Dr. O.R. Krishna Swamy as the founder member of the Department. Under the re-organized set-up during 2006, the Department became a part of the College of Commerce, Management and Information Sciences. For the new millennium, a new course i.e., MFM was started in the year 1999 under semester system. And M.Com (A&F) was started during the academic year 2005-06. Both M.Com and MFM courses were modified to incorporate Choice Based Credit System (CBCS) during the academic year 2006-07. The Department of Commerce is one of the biggest Departments in Sri Venkateswara University campus with a total strength of 320 students. To meet the overwhelming demand for accounting and finance professionals, the Department offers three courses viz., M.Com on Regular basis, M.Com (FM) and M.Com (A&F) on self-supporting basis besides PhD program. Currently, based on NEP guidelines syllabi is restructured to include core, generic electives, compulsory foundations, skill oriented course, mandatory project report, and open electives.

2. Vision, mission of the Department

Vision

"To promote accounting and finance professionals through a process of quality and value based education, consultancy, counselling, persistent skill development and infusion of human values for vibrant future".

Mission

- To groom competent, confident, creative and committed professionals in the field of accounting and finance.
- To provide the students with inclusive facilities to cater to their industry learning, placement opportunities and social needs
- To make the students occupy good positions in academic and research institutions and consultancy organizations.

M. COM (REGULAR)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

After completion of the programme, the student would be able to

- PSO 1: Familiarise the concepts of accounting and its branches-cost accounting and management accounting, finance, marketing, organizational behavior, managerial economics, quantitative techniques for business decisions and analyse the importance of these areas for placing business entity in right perspective.
- PSO 2: Acquire knowledge in business environment and marketing and HR to design constructive strategies for better prospects of business in the changing socio-economic and political conditions.
- PSO 3: Examine critically the accounting standards and reporting so as to evolve an effective accounting and reporting system.
- PSO 4: Diagnose the human behavior in organizational settings and involve in groups and teams with enthusiasm and also recognize the importance of human and professional ethics in human life and corporate life as well.
- PSO 5: Understand the value of marketing, sales promotion techniques and learn how to prepare financial statements on accounting inventory bases through tally accounting software and also acquire skills in becoming good entrepreneurs.
- PSO 6: Acquire knowledge in the field of tax planning and management, personality development, e-commerce, international financial management, e-banking operations and obtain skills in the field of cost and management accounting for arriving at concrete decisions for prosperity of business.

PROGRAMME OBJECTIVES (POBs)

After successful completion of two year Post- Graduate Degree programme in Commerce, the student would be able to

- **POB1: (KB) Knowledge Based**

  Apply Knowledge in the functional areas of management and analyse the significance of commerce in modern times. To interpret the significance of Commerce in modern times and apply as acquired knowledge in the management functional areas.

- **POB2: (PA) Problem Analysis**

  Acquire knowledge about the concepts and postulates of accounting its branches, finance and HRM and trace out appropriate solutions to the compulsory problem.To be able to gain knowledge regarding the concepts of branches of accounting like HRM & Finance by finding out solutions to every problems.

- **POB3: (Inv) Investigation**

  Critically analyse the qualitative and quantitative data on contemporary issues in the field of accounting and finance. To study the contemporary issues in areas of Accounts and Finance based on qualitative and quantitative data.

- **POB4: (Des) Design**

  Obtain skills in designing and conducting survey during the course of Project work and impact knowledge. To impact knowledge by learning skills in project work through conduct of survey of design.

- **POB5: (Tools) Use of Tools**

  Learn about the application of different statistical tools and techniques so as to arrive at suitable decision in the business and its success. To take a decision by applying various statistical tools which is dependent on business success.

- **POB6: (Team) Individual team work**

  Discern knowledge about the group dynamics and team building so as to participate in community extension and outreach programmes. So as to gain and perceive knowledge

- **POB7: (Comm) Communication skills**

  Inculcate communication skills and learn interview participation techniques for acquire Proper placement. To develop skills required for placement like interview techniques and participation techniques.

- **POB8: (Prof) Professionalism**

  Demonstrate professionalism in undertaking independent research surveys and project works. To exhibit the professionalism in terms of project works and research surveys.

- **POB9: (Impact) Impacts of course as society and environment**

  Understand the emerging trends in the field of Accounting, Finance, Marketing and HRM and their impact on society and demonstrate the knowledge required for sustainable development of industry and service sector. To make students able to showcase the knowledge required for the sustainable development of industry and service sector in the emerging fields of Accounting, Finance, Marketing and HRM.

- **POB10:(Social) Social responsibility**

  To understand and have continual knowledge to assess societal legal and cultural issues and the consequent responsibility relevant to the accounting, finance, marketing and tax planning practices by applying the reasoning provided by them.

- **POB11: (Ethics) Ethics and Equities**

  To explore the morals and ethical values in various walks of life and professions through axiomatic wisdom.

- **POB12: (LLL) Life Long Learning**

  To apply learning skills and techniques obtained through theoretical, conceptual framework, computer practical and project field experiences to resolve contemporary issues.

PROGRAMME OUTCOMES (POs)

After successful completion of two year Post- Graduate Degree programme in Commerce, the student would be able to

- **PO1: (KB) Knowledge Based**
  Apply Knowledge in the functional areas of management and analyse the significance of commerce in modern times.
- **PO2: (PA) Problem Analysis**
  Acquire knowledge about the concepts and postulates of accounting its branches, finance and HRM and trace out appropriate solutions to the compulsory problem.
- **PO3: (Inv.) Investigation**
  Critically analyse the qualitative and quantitative data on contemporary issues in the field of accounting and finance.
- **PO4: (Des) Design**
  Obtain skills in designing and conducting survey during the course of Project work and impact knowledge.
- **PO5: (Tools) Use of Tools**
  Learn about the application of different statistical tools and techniques so as to arrive at suitable decision in the business and its success.
- **PO6: (Team) Individual team work**
  Discern knowledge about the group dynamics and team building so as to participate in community extension and outreach programmes.
- **PO7: (Comm.) Communication skills**
  Inculcate communication skills and learn interview participation techniques for acquire Proper placement.
- **PO8: (Prof) Professionalism**
  Demonstrate professionalism in undertaking independent research surveys and project works.
- **PO9: (Impact) Impacts of course as society and environment**
  Understand the emerging trends in the field of Accounting, Finance, Marketing and HRM and their impact on society and demonstrate the knowledge required for sustainable development of industry and service sector.
- **PO10: (Social) Social responsibility**
  Apply reasoning provided by the continual knowledge to assess societal legal and cultural issues and the consequent responsibility relevant to the accounting, finance, marketing and tax planning practices.
- **PO11: (Ethics) Ethics and Equities**
  Explore the axiomatic wisdom an ethics and equities in various walks of life and professions and learn who to thrive in the society with moral and ethical values.
- **PO12: (LLL) Life Long Learning**
  Recognise the need for, and have the skills to engage in independent and life-long learning in the broadest context of changes and turbulent environment revolved around commerce, trade and industry. Also apply learning skills and techniques obtained through theoretical, conceptual framework, computer practical and project field experiences to resolve contemporary issues.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- **PEO 1:** To interpret the areas for placing business entity in the right perspective in the areas of importance of cost accounting and management accounting, finance, marketing, organizational behaviour, managerial economics, quantitative techniques for business decisions along with the concepts of accounting.
- **PEO 2:** To know the ideology for the changing socio-economic and political conditions in business environment and marketing and HR to design constructive strategies for better prospects of business.
- **PEO 3:** To critically observe an effective accounting and reporting system so as to evolve with the accounting standards and reporting.
- **PEO 4:** To establish the importance of human and professional ethics in human life and corporate life as well in organizational settings and involve in groups and teams with enthusiasm and also recognize the human behaviour.
- **PEO 5:** To comprehend and learn how to prepare financial statements on accounting inventory bases through tally accounting software and also acquire skills in becoming good entrepreneurs by analysing the value of marketing, sales promotion techniques.
- **PEO 6:** To make judgments for arriving at concrete decisions for prosperity of business in the field of tax planning and management, personality development, e-commerce, international financial management, e-banking operations and obtain skills in the field of cost and management accounting.

M.Com (R) I Semester

PAPER –101: ACCOUNTING STANDARDS AND REPORTING

(Core Paper)

(With Effect from the academic year2021–22)

Course Objectives

- To increase the knowledge of students on accounting principles and standards
- To enable the students to do inventory valuation
- To impart the ability to find out the cash flows
- To provide the skills to value goodwill
- To create awareness about IFRS and segment reporting

Unit –I Introduction: Accounts Concepts and Principles – GAAP (AS–1)–Branches of Accounting – Users of Accounting; Accounting Standards: Concepts – Types – Benefits – Accounting Standards in India –Indian Accounting Standards. (Theory only)

Unit – II Inventory Valuation: (AS–2) Concept – Need for inventory valuation – Inventory Valuation methods – Valuation of Inventory. (Theory and Problems)

Unit – III Cash flow statement (AS–3): Meaning and definitions – Scope – Objectives – Benefits – Classification of cash inflow and outflow–Presentation of cash flow statement – Methods – Disclosures.(Theory only)

Unit –IV Valuation of Goodwill (AS–26) : Concept– Factors affecting goodwill – Types of goodwill — Need for valuation – Methods of goodwill Valuation – Average method– Super profit method – Annuity method (Theory and Problems)

Unit – V Reporting: International Financial Reporting Standards (IFRS)–Concept–List of IFRS– Segment Reporting (AS–17)–Concept – Objectives – Purposes – Segment reporting (AS–17) – Advantages and disadvantages of segment reporting. (Theory only)

REFERENCE BOOKS:

1. JawaharLal; Accounting theory and Practice, Himalya Publishing House, New Delhi.
2. B. K .Banerjee, Financial Accounting – A dynamic approach Printice Hall India Pvt. Ltd., New Delhi

M.Com (R) I Semester

PAPER –102: ORGANISATIONAL BEHAVIOUR

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Acquire knowledge on the conceptual frame work and emerging issues of OB
- Study different theories of personality and motivation
- Form a clear idea on group dynamics and inculcate the skills to become a leader
- Learn about Organizational structures and clear understanding of management of Inter personal conflicts.
- Obtain knowledge on Organization dynamics as to organization culture, organizational change and know the significance of OB today.

Unit – I Introduction: Organizational Behaviour (OB) – Definition – Nature and Scope –Foundations –OB Model – Importance – Limitations. (Theory only)

Unit – II Individual Behaviour: Foundations of individual behaviour – Personality – Theories of personality –Trait and social learning theories – Motivation– Theories of motivation – McGregor's theory X and theory Y, Maslow's Model and Herzberg's two – Factory theory.(Theory only)

Unit – III Group Dynamics: Foundations of group behaviour – Reasons for group formation – Types of groups – Leadership – Theories of leadership (trait theory; behaviour theories) – Behavioural model (Managerial grid) – Fiedler's contingency Theory.(Theory only)

Unit – IV Organizational Processes: Organizational Change – Causes – Types – OD Interventions – Organizational conflicts – Changing view of conflicts –Inter-personal conflicts – Transactional analysis – Johari window – Life positions. (Theory only)

Unit – V Organizational Dynamics: Organizational Culture – types – Individual behaviour in the global perspective – Cultural differences– Cross Culture – Cultural adjustment – Managerial responses – Emerging Issues in OB. (Theory only)

4. Raj Agarwal, Business Environment, Excel publications.
5. Sundaram& Black. International Business Environment Text and cases, PHI.
6. Chari, S.N. International Business, Wiley India.

Course Outcomes

CO1: Identify concept, nature, factors influencing and dimensions in business environment.
CO2: Impart knowledge on economic environment, foreign technology agreements, monitory and fiscal policies and new economic policy.
CO3: Examine the politico legal environment, state intervention, reasons and types.
CO4: Understand the socio cultural environment, its nature and concept, business ethics and corporate Governance.
CO5: Understand the rationale for global environment, strategies for going global, WTO and the trading blocks.

M.Com (R) I Semester

PAPER –104: MANAGERIAL ECONOMICS

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Integrate with managerial economics meaning, nature, scope, characteristics, uses and principles.
- Employ demand forecasting objectives and methods; forecasting demand for new product.
- Allocate cost analysis, cost concepts and cost control and reduction.
- Examine production analysis basic concept and types; factors of production and returns to scale.
- Categorize nature of profits, profit planning and marginal uses of break-even analysis

Unit- I INTRODUCTION: Meaning, nature and scope of Managerial Economics– Principles of managerial economics - Role and responsibilities ofmanagerial economist – Profit: Economic profit vs. accounting profit; Profit functions: Profit optimization and slope of profit; Techniques and methods of measuring profit; Profit planning: Objective and factors affecting profit planning - Policies and techniques of profit maximization. (Theory only)

Unit-II DEMAND ANALYSIS: Demand theory and analysis - Factors determining demand – Law of diminishing marginal utility - Indifference curve analysis – Elasticity of demand: Price elasticity – Income elasticity – Cross elasticity (including problems); Demand forecasting: Objectives,methods and criteria for effective demand forecasting. (Theory only)

Unit-III COST ANALYSIS: Cost concepts and classification – Economies of scale – Short-run and Long-run cost functions –Cost control vs. cost reduction – Tools for cost control and cost reduction - Cost-Volume-Profit analysis (BEP – including problems) and its applications in cost of production. (Theory only)

Unit-IV PRODUCTION ANALYSIS: Meaning of production function - Law of variable proportions – Production with one variable input and production with two variable inputs - Law of diminishing marginal returns - Factors of production and returns to scale – Cobb-Douglas production function – Production iso-quant and iso-cost. (Theory only)

Unit-V MARKET STRUCTURE: Perfect competition: Price determination in short-run and long-run; Monopoly: Price determination in short-run and long-run; Monopsony: Price determination in short-run and long-run; Oligopoly: Price determination in short-run and long-run. (Theory only)

REFERENCE BOOKS:

1. Joel Dean. Managerial Economics, Pearson Education.
2. Varshiney&Maheswari, Managerial Economics, Sultan Chand & Co.
3. Mehta P.L., Managerial Economics, Sultan Chand & Co.
4. Dwivedi D.N., Managerial Economics, Himalaya Publishing House.
5. Trivedi M. L., Managerial Economics, McGraw Hill.

6. Mote, Paul & Gupta, Managerial Economics, McGraw Hill Ltd,

Course Outcomes

CO1: acquire managerial skills and responsibilities as a managerial economist.
CO2: Forecast the demand using opinion polling and statistical methods for existing and new products.
CO3: analyze the cost output relationship and economies of scale for cost control and cost reduction.
CO4: Appraise the input and output relationship through law of variable proportions and Cobb Douglas production function and formulate the policies on profit maximization.
CO5: Assess nature of profits, different views and functions of profits.

M.Com (R) I Semester

PAPER –105(A) : QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives

- Appreciate the use of quantitative techniques, methods of business forecasting and quantitative techniques in business decisions.
- Formulate F distribution and multiple co-relations co-efficient.
- Study probability and non-probability distributions.
- Formulate sampling theory, testing of hypothesis and type I and type II errors.
- Identify linear programming advantages and disadvantages; graphical and simplex method.

Unit– I Quantitative Techniques and Business Forecasting: Concept – Classification of Quantitative Techniques – Statistical Techniques – Programming or Operations Research Techniques –Role of Quantitative Techniques in Business and Industry – Quantitative Techniques and Business Management – Limitations of Quantitative Techniques – Methods of Business Forecasting. (Theory only)

Unit–II Probability and Probability Distributions: Basics of probability– Binomial – Poisson – Normal Distributions – Baye's Theorem. (Theory and problems)

Unit–III Sampling Theory: Concept – Types of Sampling – Hypothesis Testing–The Null Hypothesis– The significance level – Hypothesis Testing Procedure – Type I and Type II errors – Inference from Small Sample Mean Tests – Difference Between the Means of Two Independent Samples – Difference Between the Means of Two Dependent Samples of Paired Observations 't–test' and χ^2 (Chi–Square) test and its applications. (Theory and problems)

Unit–IV Analysis of Variance (F–test): Concept – Assumptions –Testing Equality of Population Means – One–way and Two–way Classifications. (Theory and Problems)

Unit–V Linear Programming: Concept – Requirements for application of Linear Programming– Assumptions–Advantages and limitations – Applications of Linear programming problem – Formulation of Linear Programming problem– Graphical Method–Simplex method. (Theory and problems)

REFERENCE BOOKS:

1. Gupta, S.P.Statistical Methods, S.Chand& Sons, New Delhi
2. Tulasian P.C., and Vishal Pandey, Quantitative Techniques – Theory and Problems Pearson Education New Delhi
3. Gupta and Khanna "Quantitative Techniques for Business Managers" PHI, New Delhi.
4. Andnda Sharma, Quantitative Techniques, Himalaya Publications, Hyderabad.

5. Kothari C.R… Quantitative Techniques Vikas Publications, Mumbai. Vikas Publications, Mumbai.

Course Outcomes

CO1: Identify the concepts Quantitative Techniques and business forecasting, quantitative approach to management as well as in business decision making.
CO2: Understand the test for equality of two population variances, analysis of variance and one way and two way classified data, basics and distributions of probability.
CO3: Demonstrate hypothesis testing, testing difference between the means of two independent/dependent samples chi-square test, requirements for application of linear programming, Formulation of linear programming problem and graphic and simplex methods of solving linear programming.
CO4: Examine the hypothesis testing
CO5: Analyse linear programming concept

M.Com (R) I Semester

PAPER –105(B) : RESEARCH METHODOLOGYIN SOCIAL SCIENCES

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

1. To understand the concept of Research along with its significance.
2. To know the classification of research and approaches to it.
3. To interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
4. To cognize the meaning of sampling and characteristics of a good sample.
5. To get to know the meaning of interpretation and report writing.

UNIT – I Introduction: Meaning and concept of research – significance of research – Characteristics of research–objectives and motivation in research –Importance of research in Social sciences – limitations of research.(Theory only).

UNIT – II Research methodology and Research methods: Meaning –Research methods vs. Methodology – Classification of research–Pure research – Applied research – Explanatory research – Descriptive research– Historical research – Research Approaches(Theory only).

UNIT – III Methods of data collection: Meaning and importance of data – Sources of data – Methods of collecting primary data and secondary data – Construction of schedule and questionnaire– Selection of appropriate method for data collection – Limitations of collecting primary and secondary data – Difference between schedule and questionnaire (Theory only).

UNIT – IV Sampling: Meaning – Methods of sampling – Random and Non–Random sampling methods – Sampling errors – Census and sample survey – Significance of sampling – factors determining sampling – Criteria of selecting a sampling procedure – Characteristics of a good sample (Theory only).

UNIT – V Interpretation and Report writing: Interpretation – Meaning – Techniques – Precautions – Report writing – Meaning –Types of reports – Steps in report writing – Precautions for writing research report – Footnotes and Bibliography – Ethical norms in research – Plagiarism (Theory only).

REFERENCE BOOKS:

1. Krishna Swami, O.R. and Ranganatham, M. "Methodology of Research in Social Sciences", Himalaya Publishing House, Mumbai.
2. Kothari, C.R.,"Research Methodology: Methods and Techniques": New Age International Publishers, New Delhi.
3. Goode and Hatt: "Methods in Social Research", New York: McGraw Hill.
4. Singh, Jaspal, "Introduction to Methods of Social Research", New Delhi, Sterling Publishers Pvt., Ltd.,.
5. Murthy. C.,"Research methodology", Vrinda Publishing Pvt., Ltd., New Delhi.

Course Outcomes:

1. Understand the concept of Research along with its significance.
2. Know the classification of research and approaches to it.
3. Interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
4. Cognize the meaning of sampling and characteristics of a good sample.
5. Get to know the meaning of interpretation and report writing.

M.Com (R) I Semester

Paper– 105(C): BANKING AND INSURANCE SERVICES

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

1. To understand Indian Financial System.
2. To know the functioning of Banks in India.
3. To interpret concept of risk and risk management.
4. To cognize concepts of life and non-life insurance.
5. To get to know the meaning of insurance and its pricing.

Unit – I	Financial System – Structure of Indian Financial System – Financial Institutions – Role in the Economy – Introduction to Banking Business – Historical Perspective – Types of Bank – Structure of Indian Banking System – Recent Trends in Banking Sector.(Theory only).
Unit – II	Commercial Banks – Structure – Functions – Types – Retail Banking – Rural Banking – ElectronicBanking – NPAs – Mobile Banking – Merits and Demerits – Banking Sector Reforms – Regulatory Mechanism.(Theory only).
Unit – III	Concept of Risk – Types – Risk Management – Methods of Handling Risks – Risk Management in Banks – Concept of Insurance – Essentials of Insurance Contract – Functions – Classification of Insurance – Current Trends in Insurance Sector.(Theory only).
Unit – IV	Life Insurance and Non Life Insurance – Fire Insurance – Types – Marine Insurance – Nomination – Assignment – Paid Up Value – Surrender Value – Claim Settlement – Progress in Business.(Theory only).
Unit – V	Insurance Pricing – Insurance Rating – Methods – Calculation of Premium – Legal Frame Work – IRDA – Salient Features – Regulations – Future Prospects for Indian Insurance Industry.(Theory only).

REFERENCE BOOKS:

1. Agarwal, O.P, Banking and Insurance, Himalaya Publishing House, New Delhi.
2. TyotsnaSethi and Niswan Bhatia, Elements of Banking and Insurance, Prentice Hall Of India (P) Ltd, New Delhi.
3. Kaninika Mishra, Fundamentals of Life Insurance – Theories and Application, PHI Learning Private.Ltd, Delhi.
4. Periasamy, P and Veeraselvam, M.,Risk and Insurance Management, Vijay Nicole Imprints Private Ltd, Noida.
5. Satya Pal Sharma, N.K, Anthony,R, Banking and Insurance, Himalaya Publishing House, New Delhi.

Course Outcomes:

1. Understanding Indian Financial System.
2. Knowing the functioning of Banks in India.
3. Interpreting concept of risk and risk management.
4. Cognizing concepts of life and non-life insurance.
5. Knowing the meaning of insurance and its pricing.

M.Com (R) I Semester

PAPER –106 (A) : BUSINESS COMMUNICATION SKILLS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

COB1: To understand the basics of process, models and methods of communication.
COB2: To analyze various types of non-verbal communication skills.
COB3: To analyze various types of verbal communication skills.
COB4: To discuss the contents of various written communication tools.
COB5: To evaluate the protocols for cross-cultural communication across the globe.

Unit–I: INTRODUCTION: Concept– Objectives– Process of communication – Methods of communication: Oral, written, non–verbal, visual, audio–visual, signs, signals and symbols, silence; Types of communication: Personal, business, internal external, upward, downward, formal, informal, lateral, interactive, mass, and grapevine;Barriers to communication – Factors affecting communication – Essentials of effective communication. (Theory only)

Unit–II: NON–VERBAL COMMUNICATION:Meaningand **t**ypes of non–verbal communication– Body language, postures and gestures – Attire – Appearance – Handshake, personal space, timing, behaviour, smile; Listening skills: Process and types of listening – Barriers to listening – Requirements for effective listening – Humor in communication – Leadership and communication. (Theory only)

Unit–III: VERBAL COMMUNICATION: Meetings: Role of chairperson – Conferences – Presentation skills – making presentations – Requirements for effective presentation; Speaking: Choosing a method of speaking – Analyzing the audience – Persuasive speaking; Report writing: Types of reports – Structure of reports – Individual, annual and committee reports – Essentials of good report writing. (Theory only)

Unit–IV: WRITTEN COMMUNICATION**:** Business letters: Essentials, Parts, and forms of business letters; Types of business letters: Tenders, quotations and orders – Circulars and memos – Office notes – Representations and suggestions – Reminders and follow up. (Theory only)

Unit–V: MEDIA AND MULTI–CULTURAL COMMUNICATION**:** Building better relations with media –Framework for managing relations with investors and governments – Impact of multi-cultural communication on business – Etic and emic approaches to culture – Overcoming cross–cultural communication problems – Cultural communication protocol in China, France, England, Switzerland, USA, and India. (Theory only)

REFERENCE BOOKS:

1. Penrose, Rasberry and Myers, “Business communication for managers”, Cengage Learning.
2. Disanza, “Business and professional communication”, Pearson Education.
3. CSG Krishnamacharyalu and L. Ramakrishna, “Business communications”, Himalaya Publishing House.
4. Krizan Merrier, Logan and Williams, “Effective Business Communication”, Cengage Learning.
5. Kelly Quintanilla and Shawn T Wahl, “Business and Professional communication”, Sage Publications.

Course Outcomes:

CO1: Understand the effective modes and methods of communication in a Business situation.
CO2: Make oneself confident to use body language and other non-verbal communication in gaining leadership.
CO3: Equip oneself strong in communicating verbally.
CO4: Equip with skills in written communication.
CO5: Build skills in managing relations with media and distinguish the protocols observed across the globe.

PAPER –106(B) : PRINCIPLES OF MANAGEMENT

(Elective Foundation)

(With effect from the academic year 2021–22)

Course Objectives

1. To comprehend the concept of management, skills and its process.
2. To learn management as a process with its principles and functions.
3. To learn the modern management process, business process engineering and reconstruction.
4. To understand the concept of Management By Objective (MBO) and quality circles.
5. To be aware of functional, personnel, financial, production, marketing, strategic and human resource managements.

UNIT–I: Concept of Management – Definition – Nature of Management – ManagementSkills – The Management Process – Features of Management – Trends towards Managerial Revolution in India.(Theory only).

UNIT–II: Management as a process – Principles and functions of ManagementOperative and Managerial functions – Planning – Organizing – Staffing – Directing – Communication – Leadership – Motivation – Co-ordination – Controlling.(Theory only).

UNIT – III: Modern Management Concepts – Business Plans – Purpose – Contents – Preparation of Plan – Business Process Re-engineering – Re-structuring – Relationship between Re-engineering and Re-structuring – Customer Relationship Management – Benefits of CRM.(Theory only).

UNIT – IV: Management by Objectives – Benefits of MBO – Setting of Objectives – Limitations of MBO – Making MBO Effective – Quality Circles.(Theory only).

UNIT–V: Functional Management – Personnel Management – Financial Management – Production Management - Marketing Management – Human Resource Management – Strategic Management – Social Responsibilities of a Modern Manager.(Theory only).

M.Com (R) I Semester

PAPER -107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

(Audit Course)

(With effect from the academic year 2021–22)

Course Objectives

COB1: To create awareness on basics of life and professions.

COB2: To make oneself capable to distinguish between subjective and objective values of society and individual.

COB3: To understand in depth the values and yams of life.

COB4: To understand the cultural values embedded in right from Bhagavad Gita till today's Gandhian philosophy.

COB5: To grasp prescription and proscription as stated in the scripts of Hinduism.

UNIT – I Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

UNIT – II Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral,concepts- right, ought, duty, obligation, justice responsibility and freedom,Good behavior and respect for elders.

UNIT – III Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy),Asteya(Non possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)- Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).

UNIT – IV Bhagavad Gita- (a) Niskamakarma.(b) Buddhism- The Four Noble Truths – Arya astangamarga(c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious, Tolerance, Gandhian Ethics.

UNIT – V Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study:

1. R. Subramanian, Professional Ethics, Oxford University press,New Delhi,2013.
2. John S Mackenjie: A manual of ethics.
3. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
4. "Management Ethics - integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
5. "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
6. Harold H. Titus: Ethics for Today
7. Maitra, S.K: Hindu Ethics
8. William Lilly : Introduction to Ethics
9. Sinha: A Manual of Ethics

10. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil(ed.) G.C.Haughton.

11. Susruta Samhita: Tr.KavirajKunjanlal, KunjalalBrishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.

12. CarakaSamhita :Tr. Dr.Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.

13. Ethics, Theory and Contemporary Issues., Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.

14. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 199

COURSE OUTCOMES:

CO1: Understand the axiomatic wisdom on ethics in various walks of life and professions.
CO2: Distinguish between various subjective and objective values that kick start one's rational behavior.
CO3: Learn and assimilate the Hinduism's four values of Purusharthas and Patanjali's five Yamas of life.
CO4: Acculturate the values embedded in Indian religious right from Bhavad Gita to Gandhian Ethics.
CO5: To excavate various prescriptive punishments stated in ancient legal texts of Hinduism like Manusmriti and Yajnavalkyasmrithithat worked as weapons to eradicate criminalism.

PAPER – 201: HUMAN RESOURCE MANAGEMENT

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Understands the concept, nature, scope, functions and objectives of human resource management.
- Carryout the job design, job analysis; Human Resource Planning, recruitment process and selection procedure.
- Examines developing and motivating human resource; Job evaluation and Quality circles.
- Elaborates maintenance of human resource, fringe benefits, employee relations and collective bargaining.
- Inspects human resource management in knowledge, process of knowledge management and virtual organizations.

Unit – I INTRODUCTION**:** Human Resource Management (HRM): Nature and scope – Objectives and functions; Evolution of HRM – Need for studying HRM – HRM policies and principles – HR Strategies – Traditional vs. strategic HRM – Challenges in HRM. (Theory only)

Unit – II ACQUISITION OF HR:Job Design: Approaches and process; Job Analysis: purposes and Process;Human Resource planning: Objectives – Factors affecting HRP– Process of HRP; Recruitment: Purposes – Factors governing recruitment– Recruitment process; Selection: Procedure – Factors governing selection;Placement and induction. (Theory only)

Unit – III TRAINING AND DEVELOPMENT OF HR: Nature and importance of training and development programs — Training vs. development – On–the–job training methods – Off–the–job training methods – Evaluation of training programs;Performance appraisal: Purposes – Methods; Job evaluation: Objectives – Principles – Methods– Advantages and problems; Career planning: Elements, merits and limitations. (Theory only)

Unit – IV MAINTENANCE OF HR:Wage and salary (w&s) administration: Principles– Process of determiningw&s**–**Wage payment methods – Incentives – Fringe benefits– Wage Policy in India; Work environment and quality of work life – Industrial relations – Disciplinary procedure – Grievance handling procedure – Collective Bargaining process. (Theory only)

Unit – V TRENDS IN HRM: Employer's brand – Business Process Outsourcing – HR Matrix; Knowledge Management: Objectives – Process; Virtual organizations: Features and types; TQM and employee productivity – HR Audit – Ethical issues in HRM – HR Information System (HRIS): Objectives – Design.(Theory only)

REFERENCE BOOKS:

1. K. Aswathappa, Human Resource Management, McGraw Hill Publications.
2. P. SubbaRao, Human Resource Management, Himalaya Publishing House.
3. N.K. Singh, Human Resource Management, Excel Publications.
4. Jyothi, Human Resource Management, Oxford university press.
5. Shashi Gupta and Rosy Joshi, Kalyani Publishers.

Course Outcomes

CO1: Explain the basic concepts, functions and objectives, evolution and development.
CO2: Critically analyze the approaches and process of job design, factors affecting human resource planning, importance of recruiting, placement and induction and nature and importance of training and career planning.
CO3: Acquire knowledge on compensation management; grievance handling and collective bargaining discover the process of knowledge management and role of leader in organizations.
CO4: Learn about compensation management with wage structure, wage payment methods incentives, fringe benefits and employee relations.
CO5: Critically analyse knowledge management and its process, virtual organisations, features, types and issues of learning organisation and role of leader in organisations.

M.Com (R) – II Semester
PAPER – 202: FINANCIAL MANAGEMENT
(Core Paper)
(With effect from the academic year 2021–22)

Course Objectives

- Describe meaning, functions and objectives; role of financial manager.
- Examine investment decision, capital budgeting, techniques of CB and methods of CB.
- Investigate management of working capital, needs and concepts.
- Asses financing decision, capital structure and capital theories.
- Design dividend decision and theories of dividend.

Unit –I Finance: Concept – Functions of Finance – Objectives of Financial Management – Profit Maximization Vs Wealth Maximization – Organization of Finance Function – Role of the Modern Financial Manager. (Theory only)

Unit– II Investment Decision: Capital Budgeting– Concept– Process – Techniques of Capital Budgeting – Traditional Methods – Payback Period (PB)– Average Rate of Return – Discounted Cash Flow Techniques – Net Present Value– Internal Rate of Return and Profitability Index .(Theory and Problems)

Unit–III Management of Working Capital: Concepts– Need for working capital– OperatingCycle– Estimation of working capital Requirements–Management of Cash –Receivables and Inventory. (Theory and Problems)

Unit–IV Financing Decision: Capital Structure –Concept–Theories of capital structure – NI – NOI– Traditional and MM Theories; Computation of Leverages– Operating Leverage– Financial Leverage and Combined Leverage; Cost of Capital –Concept– Computation of Specific cost of capital– Determination of weighted Average Cost of capital. (Theory and Problems)

Unit–V Dividend Decision: Types of Dividends– Factors Influencing the Dividend policy –Theories of Dividend – Walter-Gordon and MM Hypothesis (Theory only)

REFERENCE BOOKS:

1. Pandy, I.M: Financial Management – Vikas Publishing House, New Delhi.
2. SheebaKapil, Financial Management, Pearson Education, New Delhi.
3. Jonathan Berk Peter DeMarzo, Financial Management, Pearson Education.

M.Com (R) II Semester

PAPER –203: MARKETING MANAGEMENT

(Core Paper)

(With effect from the academic year 2021–22)

Course objectives (COBs):

- To introduce to basics of market segmentation and consumer behavior.
- To understand the metrics and components associated with Product and Price mix of 4Ps of marketing mix.
- To instill knowledge and skills in advertising, sales promotion, personal selling, publicity and direct marketing of Promotion mix.
- To lead the network of offline and online distribution networks of Place mix.
- To acquire skills in conducting marketing research surveys, and others.

Unit – I INTRODUCTION**:** Concept of Marketing - Nature and scope- Evolution- Approaches to the study of marketing- Importance - Role of marketing in Indian economy- 4Ps of marketing; Marketing environment: Micro and macro; Market segmentation: Bases for market segmentation – Characteristics of effective segmentation;Factors affecting buying behaviour. (Theory only)

Unit – II PRODUCT MIX AND PRICE MIX**:**Product Mix**:** Classification of products - Product mix and productline decisions; New product development: - Stages of new product development; Product Life Cycle (PLC): Features, objectives, and strategies in different phases of PLC; Branding: Pros and cons of Single, multiple and private branding strategies; Packaging: advantages and strategies; Labelling; PRICING: Objectives -factors influencing pricing policy -Pricing policies and strategies. (Theory only)

Unit – III PROMOTION MIX**:** Process of marketing communications; Advertising: Pros and cons – Types – Criteria for selection of advertising agencies –Media selection –Measuring impact of advertising ;Publicity: Objectives and tools – Advertising vs. publicity; Sales promotion: Objectives –Tools and techniques; Personal selling: Steps in personal selling – Salesmanship; Impact of promotion mix elements during different stages of PLC - E-CRM (Theory only)

Unit – IV PLACEMIX**:** Marketing Channels:Channel levels – Functions of distribution channels - Factors influencing channel selection - Vertical and horizontal integrations of channels - Causes of channel conflict; Functions of wholesaler and retailer- Trends in retailing- Formats of retail stores – E- marketing tools: SEO – Marketing analytics — Pay-per-Click marketing - Affiliate marketing – Social media marketing. (Theory only)

Unit – V Market Information system (MIS)**:** Components of MIS – Process of marketing research - Market research agencies in India - Marketing ethics – Indian laws affecting 4Ps of marketing. (Theory only)

REFERENCE BOOKS:

1. Philip Kotler, Principles of Marketing, Pearson Education.

PAPER –204: ADVANCED COST ACCOUNTING

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Obtain knowledge on the concept of cost accounting and know how it is different from financial and management accounting;
- Understand the features and objectives of process costing and calculation of process losses and Inter-process profits.
- Know the concept of equivalent production and accounting treatment for joint and by-products.
- Acquire knowledge on budgetary control and preparation of various functional budgets.
- Perceive the significance of ABC in cost ascertainment and control.

Unit– I	Introduction – Cost Accounting – Objectives – Scope – Advantages and limitations –Cost Accounting vs. Financial Accounting and Cost Accounting vs. Management Accounting – Concept of Cost – Cost Classification – Installation of Costing System. (Theory Only)
Unit– II	Process Costing: Features and objectives of process costing –Process Losses – Normal Loss– Abnormal Loss – Abnormal Gain – Treatment of Process Losses – Equivalent Production – Methods. (Theory and Problems)
Unit–III	Cost Control and Cost Reduction – Essentials for success of cost control – Advantages and Limitations – Differential Costing – Differences between Marginal Costing and Differential Costing – Characteristics and Significance of Differential Costing. (Theory and Problems)
Unit–IV	Budgetary Control: Concept of budget and budgetary control – Objectives – Benefits and limitations of budgetary control – Classification of Budget – Functional and Flexible budgets. (Theory and Problems)
Unit– V	Activity based costing: Concept – Meaning – Definition and characteristics ofABC – Different stages in ABC – ABC and cost drivers – Advantages ofImplementing ABC. (Theory and Problems)

REFERENCE BOOKS:

PAPER –205(A) : CORPORATE GOVERNANCE

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives

- Obtain knowledge on CG Mechanism and emerging issues in CG
- Know the genesis of CG in China USA and UK and also the code of the best practices.
- Gain Knowledge on the historical backdrop of CG in India and the guild lines pronounced by
- Various committees for effective practice in India.
- Discern knowledge on the composition of Board of Directors and Audit Committees and know
- The role of internal Auditors in India.

  Understand the CG standards and practices in India with focus on IT and futures of CG in India.

UNIT – I Corporate governance: Meaning – Need – Importance – Corporate Governance(CG) mechanism – CG Systems – Indian model of CG – CG and Value maximization – Issues in Corporate Governance.(Theory only)

UNIT – II Emergence of Corporate governance: Developments in USA and UK – Role of World Bank – OCED – McKinsey – Sarbanes –Oxley Act,2002 – World Committees on CG – The Cadbury Committee. The Hampel Committee – Principles of good CG and code of best practices. (Theory only)

UNIT –III Corporate Governance in India: Need and Importance – Historical perspective – Indian Committees and guidelines on CG – Naresh Chandra Committee – Narayana Murthy Committee – J.J Irani Committee – Kumara Mangalam Birla Committee – The CII initiatives – SEBI initiative – CG practice in India. (Theory only)

UNIT –IV Board of Directors and Audit Committee: Board of Directors and their role in CG – Composition of Board – CG issues relating to Board – Independent Directors – Clause 49 of listing agreement – Audit Committee: Duties and responsibilities of Auditors – Composition of Audit Committee – CG and internal auditors – Indian situation.(Theory only)

UNIT – V Corporate Governance Standards and practices in India: CG Standards – Methods for examining the quality and effectiveness of CG – CG standards in Indian context – CG in IT sector – Pioneers in good CG practices – Problems of CG in India – CG and Business Ethics – CG and Corporate social responsibility (CSR) – Future of CG in India.(Theory only)

REFERENCE BOOKS

1. Fernando A.C – Corporate Governance – principles, Policies and practices – Pearson Education.
2. Subash Chandra Das – Corporate Governance – Codes, Systems, Standards and Practices – PHI.
3. Kesho Prasad – Corporate Governance – PHI Learning – New Delhi–2009
4. Singh S – Corporate Governance – Global Concepts and Practices – Excel Books.
5. Donald H. Chew Jr. Staurt L Gillan – Corporate Governance at Crossroads – Tata McGraw Hill Co. Ltd.,

Course Outcomes

CO1: Assess the Corporate Governance (CG) mechanism and analyse the emerging issues in the arena of CG.
CO2: Trace out the emergence of CG in USA and UK and findings of Cadbury and Hospel committees and better understanding of code of best practices.
CO3: Grasp the historical backdrop of CG in India and perceive the guidelines pronounced by various committees on CG for its effective practice in India.
CO4: Know about the composition of Board of Directions and Audit Committees and visualise the current status of internal auditors in Indian context.
CO5 Exact knowledge on CG standards and practices in India with reference to IT sector and analyse the future of CG in India.

PAPER –205(B) : LEGAL ASPECTS OF BUSINESS

(Compulsory Foundation)

(With Effect from the academic year2021–22)

Course Objectives:

- To understand companies act and its history.
- To know the framework of companies like board of directors and auditors.
- To interpret the Negotiable Instruments Act, 1881.
- To cognize Competition Act, 2002.
- To get to know the essence of cyberspace and cyber law.

Unit–I Companies Act–I: History of Companies Act–Meaning and Nature of a Company–Kinds of Companies–Formation and Incorporation of Company–Steps in Incorporation of a Company–Memorandum of Association–Article of Association–Prospectus. (Theory only)

Unit–II Companies Act–II: Board of Directors–Types of Directors–Appointment of Directors–Board Meetings–Duties and Liabilities of Directors–Removal of Director. Company Auditors–Appointment–Responsibilities of Company Auditor–Removal of Auditor. (Theory only)

Unit–III Negotiable Instruments Act, 1881: Meaning of Negotiable Instruments–Characteristics–Classification of Instruments–Different provisions relating to Negotiation, Negotiability, Assign ability–Rights and Obligation of parties–Presentation of Instruments–Rules of Compensation. (Theory only)

Unit–IV Competition Act, 2002: Introduction–Competition–Meaning–Objectives–Extent of Applicability–Competition of Commission of India–Areas affecting Competition–Duties, Powers and Functions of Commission–Penalties. (Theory only)

Unit–V Cyberspace and cyber Law: Introduction to cyber space and cyber law–Components of cyber law–Categories Cyber Law–Punishments–Components of cyber law–Internet governing bodies–International aspects of electronic contracting–Global issues of Privacy in cyber space. (Theory only)

REFERENCE BOOKS:

1. M.C. Kuchhal, Modern Indian Company Law, Mahavir Publications.
2. N.D. Kapoor, Elements of Company Law, Sultan Chand.

PAPER–205(C): RISK MANAGEMENT

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

- To learn the concept of risk management.
- To enhance knowledge in risk management by individuals.
- To cognize the Enterprise Risk Management and its process.
- To understand the Risk Management Information System.
- To learn in detail about advanced topics in risk management.

Unit – I Concept of Risk Management – Types – Objectives – Functions – Risk Management Process – Steps – Methods of Handling Risk – Risk Retention – Control.(Theory only).

Unit – II Risk Management by Individuals – Influencing Factors – Mitigating Individual Risks – Insurance – Objectives – Costs and Benefits. (Theory only).

Unit – III Enterprise Risk Management (ERM) – Process – Components – Risk Exposures – ERM Basics – COSO Frame Work for ERM – Emerging Role of CRO and ERM in Insurance – Tools and Techniques of ERM.(Theory only).

Unit – IV Risk Management Information System (RMIS) – Objectives and Functions – Emerging Trends – Risk Manager Tasks and Responsibilities – Risk Management Strategies – Benefits.(Theory only).

Unit – V Advanced Topics in Risk Management – Changing Scope of Risk Management – Financial Analysis in Risk Management – Decision Making –Management Tools – Loss Forecasting – Control Methods.(Theory only).

REFERENCE BOOKS:

PAPER –206(A) : E–BANKING OPERATIONS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: To understand the RBI's financial norms to be followed by commercial banks.
COB2: To investigate into the roles of various commercials banks in India.
COB3: To analyze the mechanism of offline and online borrowing and lending of funds.
COB4: Familiarize with merits and demerits o e-banking applications.
COB5: Categorize the financial frauds in e-banking sector.

UNIT – I IndianBanking: Definition – Functions – Pubic vs. private sector banks; Banks vs.NBFCs –Foreign banks – Regional Rural Banks – State Co–operative Banks – District Central Co–operative Banks –Urban Co–operative Banks.(Theory only).

UNIT –II Banking services: Accepting of Deposits – Lending of funds – Retail banking – Merchant banking – Factoring services – Investment banking – Mutual fund services – Bill discounting – Issue of Letter of Credit (LC).(Theory only).

UNIT – III E–banking: Concept – NPCI – UPI – Debit Cards – Credit cards – RTGS vs. NEFT – Electronic Clearing System – Telephone Banking – Pros and cons of E–banking –Challenges in E–Banking.(Theory only).

UNIT–IV Payment systems: Pre–paid (PP) cards – Open and closed Pre–Paid cards – Post–paid creditcards –Steps in credit card processing – Requirement metrics of an effective e–payment system.(Theory only).

UNIT–V E–banking frauds: Electronic Clearing Services – Frauds in E–banking operations – Thesecurity measures taken by banks.(Theory only).

REFERENCE BOOKS

1. Ravindra Kumar, Deshpande, E–Banking, Pacific Books International.
2. Indian Institute of Banking, Digital Banking, Mumbai.
3. The Banker, Mumbai (Journal)

Course Outcomes (COs)

CO1: Familiarize oneself with safety, liquidity, profitability and productivity norms of banks as prescribed by RBI.
CO2: Acquaint oneself with the role of RRBs, SCBs, DCCBs, and UCBs in India.
CO3: Analyze the mechanisms involved in borrowing and lending of funds, and e-banking operations.
CO4: Equip oneself with pros and cons involved in application of various modes of e-banking.
CO5: Investigate into frauds encountered and security measures taken in e-clearing services in banking sector.

PAPER – 206(B): MANAGEMENT INFORMATION SYSTEMS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

- To learn the concept of Management Information Systems, Business Intelligence, Database Models, RDBMS, Data processing.
- To enhance knowledge in Systems Engineering.
- To cognize the design of MIS and Business Process Re-engineering.
- To understand the applications of MIS.
- To learn in detail about Decision Support System and ERP.

Unit-I: Introduction: Concepts of Management Information System(MIS)-Classification and their implications – Business intelligence – Database models – Database design – RDBMS and MIS; Data processing: Transaction processing – Application processing – Information system processing; Role of MIS:In management and organization effectiveness, and strategic business planning. (Theory only)

Unit-II**:** Systems Engineering (SE)**:** Types and classes of system – General model of SE – Need for system analysis – Analysis of existing and new system - System development model – Structured System Analysis and Design (SAD) – Object-oriented Analysis (OOA) – System Development through Object Oriented Technology (OOT) – Object Oriented Analysis and Design(OOAD) – Systems Development Life Cycle (SDLC). (Theory only)

Unit-III: Design of MIS and Business Process Reengineering (BPR)**:** Planning of MIS – Determining information requirements – Organization, development and implementation of MIS – Development process of MIS – Need for design of MIS – Process of design of MIS – Strategic management and MIS – Process and value stream models of business – Reasons for delay in business process – MIS and Business Process Reengineering. (Theory only)

Unit-IV: Applications of MIS:Human Resource information system – Financial information system – Production information system – Marketing information system – Material Management Information system – Services information system. (Theory only)

Unit-V: Decision Support System (DSS) and ERP: Decision Support Systems and Group Decision Support Systems – Applications of DSS – Knowledge Management System – Benefits of MIS and DSS – Enterprise Resource Planning (ERP) – ERP modules – Benefits of ERP - ERP evaluation and implementation. (Theory only)

REFERENCE BOOKS:

M.Com (R) III Semester

PAPER –303(A) : TALLY WITH GST APPLICATIONS

(Generic Elective)

(With effect from the academic year 2021–22)

Course Objectives

- To acquaint oneself with skills to prepare financial statements through Tally ERP.
- To understand basics of GST system.
- To know steps involved in generating GSTR reports.
- To know the metrics in calculation and generation of TDS and service tax reports.
- To acquire skills to create payroll receipts.

Unit–I Features of Tally accounting – Components of Gateway of Tally and button panel – Purposes and components of F11 And F12 – Creation and setting up of a company – Accounting Masters: Creation, alteration and deletion of single and multiple groups – Creation, alteration of single and multiple ledgers – Recording transactions in accounting vouchers: Creation and alteration of vouchers – Display and print of financial statements (Theory and lab).

Unit–II Inventory: Configuration **–** Inventory Masters:Creation, display and alteration of stock groups, stock categories, godowns, units of measure, stock items – Recording transactions: Creation of inventory vouchers – Display and print of inventory reports (Theory and lab).

Unit – III GST: Enabling GST features in Tally **(**Configuration) **–** Basics of GST – Rates of GST – Configure GST details of your company – Creating Party Ledgers & Tax Ledgers – Setting up of SGST, CGST, IGST rates for input and output – Creation of vouchers – Recording intra and inter–state vouchers with GST tax ledgers; Types of invoice under GST: Tax invoice vs. Bill of supply; Contents of tax invoice – Display and print of GST reports (Theory and lab).

Unit–IV TDS: Configuration –Company creation**–**Creation of ledgers and vouchers **–** Recording advance and balance payments of Tax – Generation of TDS reports (Theory and lab).

Unit–V Payroll: Configuration – Payroll features**–**Enabling payroll details – Creation of payroll masters– Creating the Pay Head ledgers – Creating the employee details and salary details of an individual – Creating details of Attendance types; List of Payroll Voucher types: Pay roll voucher and attendance voucher;Recording Attendance and Payroll voucher entries – Display and print of various payroll reports (Theory and lab).

PAPER –304: INTERNAL AUDIT AND STANDARD AUDIT PRACTICES

(Skill Oriented Course)

(With effect from the academic year 2021–22)

Course Objectives (COBs):

1. Conceptualize the knowledge in internal control including evaluation techniques.
2. Learn the meaning, features, objectives and advantages of internal audit.
3. Ascertain the basis of auditing with information systems by skill enhancement.
4. Illustrate the audit under computerized information system environment along with its internal control.
6. Outline and synthesize the reporting and its presentation techniques.

Unit 1 Introduction to internal control: Meaning – Objectives – Basic elements of internal control – Types of internal control systems – Preventive and detective controls – Advantages and limitations of internal control – Techniques for evaluation of internal control system – Native record – Check list – Flow chart – Internal control questionnaire.(Theory only)

Unit 2 Internal Audit: Meaning –features – advantages – Need of internal audit – Internal control vs. Internal audit – Internal audit vs. Operational audit; internal check: Meaning – Objectives – Features of good internal check system.(Theory only)

Unit 3 Auditing of Information Systems: Overview of Information Systems – Attributes of Information – Need for Audit of Information Systems – Effect of Computers on Audit – Changes to evidence collection – Changes to evidence evaluation – Skills required for Information Systems Auditor – Functions of IS Auditor – Categories of Information Systems Audit – Steps in Information System Audit – Role of IS Auditor in Physical Access Controls – Understanding the Layers and related audit issues. (Theory only)

Unit 4 Internal Audit under Computerized Information System (CIS) Environment**:**Special audit techniques using the computer – Scope of audit in a CIS Environment – Impact of changes on business processes (for shifting from manual to electronic medium) – Audit approaches in a CIS Environment – Internal Controls in a CIS Environment – Internal Control requirements under CIS Environment – Approach to auditing in a CIS environment – Computer Assisted Audit Techniques (CAATs). (Theory only)

Unit–V Internal audit reporting: Concept – Basic elements of internal audit report – Features of good internal audit report – Frequency of report – Segment reporting – Documentation of reporting – Importance of report drafting – Report presentation techniques – Report submission – Storage of working papers and back-up of data. (Theory only)

REFERENCES:

Advanced Auditing and Standards on Internal Audit, Issued by ICAI.

1. Information Systems Control and Audit, Issued by ICAI.
2. Standards On Internal Audit – issued by ICAI.
3. Kamal Garg, Handbook on Internal Audit: Bharat Law House.

Course Outcomes (COs):

1. To acquire knowledge in internal control, learn its advantages, limitations and techniques.
2. To learn the features, advantages and need for internal audit.
3. To enhance skills and know-how in auditing of Information systems.
4. To showcase the environment of Internal Audit under computerised information system.
5. To amend the skills and knowledge in Internal Audit reporting along with reports presentation.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF CM & CS

DEPARTMENT OF COMMERCE

Course

M.COM (ACCOUNTING & FINANCE)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

Name of the Department : Dept. of Commerce

1. About the Department

The Department of Commerce was one of the oldest departments established during the academic year 1969-70 in SV University (Estd. 1954) to offer M.Com degree course under the aegis of Economics Department, S.V. University College of Arts and Sciences and subsequently it emerged as an independent entity during the year 1971, with Dr. O.R. Krishna Swamy as the founder member of the Department. Under the re-organized set-up during 2006, the Department became a part of the College of Commerce, Management and Information Sciences. For the new millennium, a new course i.e., MFM was started in the year 1999 under semester system. And M.Com (A&F) was started during the academic year 2005-06. Both M.Com and MFM courses were modified to incorporate Choice Based Credit System (CBCS) during the academic year 2006-07. The Department of Commerce is one of the biggest Departments in Sri Venkateswara University campus with a total strength of 320 students. To meet the overwhelming demand for accounting and finance professionals, the Department offers three courses viz., M.Com on Regular basis, M.Com (FM) and M.Com (A&F) on self-supporting basis besides PhD program. Currently, based on NEP guidelines syllabi is restructured to include core, generic electives, compulsory foundations, skill oriented course, mandatory project report, and open electives.

2. Vision, mission of the Department

VISION

"To promote accounting and finance professionals through a process of quality and value based education, consultancy, counselling, persistent skill development and infusion of human values for vibrant future".

MISSION

- To groom competent, confident, creative and committed professionals in the field of accounting and finance.
- To provide the students with inclusive facilities to cater to their industry learning, placement opportunities and social needs
- To make the students occupy good positions in academic and research institutions and consultancy organizations.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

After completion of the programme, the student would be able to

- PSO 1: Perceive the framework of OB, HRM, marketing, finance and other functional areas of management.
- PSO 2: Acquire knowledge in the field of financial management and get knowledge in different tools and techniques of FM.
- PSO 3: Examine critically the accounting standards and reporting so as to evolve an effective accounting and reporting system.
- PSO 4: Diagnose the different aspects relating to IFM, SAPM, financial engineering and investment management.

PAPER –103: BUSINESS ENVIRONMENT AND POLICY

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Examine business environment, concept, nature and scope; scanning, monitoring, changing dimensions of business environment.
- Illustrates economic environment nature and scope and new economic policy.
- Develop political, legal environment; reasons for state intervention and government business interface.
- Study the socio cultural environment nature, impact of social responsibility and business ethics.
- Interpret global environment; benefits and problems of MNCs and WTO.

Unit – I Business Environment: Concept – Nature – Scope–Significance– Types of Environment– Internal and External Environment– Factors Influencing Business Environment– Techniques of Environmental Scanning and Monitoring –Emerging Dimensions of Business Environment. (Theory only)

Unit – II Economic Environment: Concept – Nature –Scope – Elements of Economic Environment – Economic System and Business Environment– Economic planning – Industrial policy – Fiscal policy– Monetary Policy–New economic policy. (Theory only)

Unit – III Political and Legal Environment: Concepts– Political institutions – Rationale and Extent of State Intervention – Reasons for State Intervention – Types of Intervention – Government Business Interface – Legal Environment– Changing Dimensions of Legal Environment. (Theory only)

Unit – IV Socio– Cultural Environment: Concept –Elements of Socio –Cultural Environment –Impact– Social Responsibility of Business – Business Ethics – Corporate Governance. (Theory only)

Unit – V Global Environment**:** Concept**–** Nature –Scope –Significance–Foreign Investment in India –Benefits and problems of MNCs – Strategies for Going Global –EXIM Policy–FEMA–Emerging Challenges of Global Business. (Theory only)

REFERENCE BOOKS

PAPER –104: MANAGERIAL ECONOMICS

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Integrate with managerial economics meaning, nature, scope, characteristics, uses and principles.
- Employ demand forecasting objectives and methods; forecasting demand for new product.
- Allocate cost analysis, cost concepts and cost control and reduction.
- Examine production analysis basic concept and types; factors of production and returns to scale.
- Categorize nature of profits, profit planning and marginal uses of break-even analysis

Unit- I INTRODUCTION: Meaning, nature and scope of Managerial Economics– Principles of managerial economics - Role and responsibilities ofmanagerial economist –PROFIT: Economic profit vs. accounting profit; Profit functions: Profit optimization and slope of profit; Techniques and methods of measuring profit; Profit planning: Objective and factors affecting profit planning - Policies and techniques of profit maximization. (Theory only)

Unit-II DEMAND ANALYSIS: Demand theory and analysis - Factors determining demand – Law of diminishing marginal utility - Indifference curve analysis – Elasticity of demand: Price elasticity – Income elasticity – Cross elasticity (including problems); Demand forecasting: Objectives,methods, and criteria for effective demand forecasting. (Theory only)

Unit-III COST ANALYSIS: Cost concepts and classification – Economies of scale – Short-run and Long-run cost functions –Cost control vs. cost reduction – Tools for cost control and cost reduction - Cost-Volume-Profit analysis (BEP – including problems) and its applications in cost of production. (Theory only)

Unit-IV PRODUCTION ANALYSIS: Meaning of production function - Law of variable proportions – Production with one variable input and production with two variable inputs - Law of diminishing marginal returns - Factors of production and returns to scale – Cobb-Douglas production function – Production iso-quant and iso-cost. (Theory only)

Unit-V MARKET STRUCTURE: Perfect competition: Price determination in short-run and long-run; Monopoly: Price determination in short-run and long-run; Monopsony: Price determination in short-run and long-run; Oligopoly: Price determination in short-run and long-run. (Theory only)

M.Com (A&F) I Semester

PAPER – 105(A): CORPORATE GOVERNANCE

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives

- Obtain knowledge on CG Mechanism and emerging issues in CG
- Know the genesis of CG in China USA and UK and also the code of the best practices.
- Gain Knowledge on the historical backdrop of CG in India and the guild lines pronounced by
  various committees for effective practice in India.
- Discern knowledge on the composition of Board of Directors and Audit Committees and know the role of internal Auditors in India.
- Understand the CG standards and practices in India with focus on IT and futures of CG in India.

UNIT – I Corporate governance: Meaning – Need – Importance – Corporate Governance(CG) mechanism – CG Systems – Indian model of CG – CG and Value maximization – Issues in Corporate Governance.(Theory only)

UNIT – II Emergence of Corporate governance: Developments in USA and UK – Role of World Bank – OCED – McKinsey – Sarbanes –Oxley Act,2002 – World Committees on CG – The Cadbury Committee. The Hampel Committee – Principles of good CG and code of best practices. (Theory only)

UNIT –III Corporate Governance in India: Need and Importance – Historical perspective – Indian Committees and guidelines on CG – Naresh Chandra Committee – Narayana Murthy Committee – J.J Irani Committee – Kumara Mangalam Birla Committee – The CII initiatives – SEBI initiative – CG practice in India. (Theory only)

UNIT –IV Board of Directors and Audit Committee: Board of Directors and their role in CG – Composition of Board – CG issues relating to Board – Independent Directors – Clause 49 of listing agreement – Audit Committee: Duties and responsibilities of Auditors – Composition of Audit Committee – CG and internal auditors – Indian situation.(Theory only)

UNIT – V Corporate Governance Standards and practices in India: CG Standards – Methods for examining the quality and effectiveness of CG – CG standards in Indian context – CG in IT sector – Pioneers in good CG practices – Problems of CG in India – CG and Business Ethics – CG and Corporate social responsibility (CSR) – Future of CG in India.(Theory only)

REFERENCE BOOKS

1. Fernando A.C – Corporate Governance – principles, Policies and practices – Pearson Education.

2. Subash Chandra Das – Corporate Governance – Codes, Systems, Standards and Practices – PHI.
3. Kesho Prasad – Corporate Governance – PHI Learning – New Delhi–2009
4. Singh S – Corporate Governance – Global Concepts and Practices – Excel Books.
5. Donald H. Chew Jr. Staurt L Gillan – Corporate Governance at Crossroads – Tata McGraw Hill Co. Ltd.,

105 : CORPORATE GOVERNANCE
CO1: Assess the Corporate Governance (CG) mechanism and analyse the emerging issues in the arena of CG.
CO2: Trace out the emergence of CG in USA and UK and findings of Cadbury and Hospel committees and better understanding of code of best practices.
CO3: Grasp the historical backdrop of CG in India and perceive the guidelines pronounced by various committees on CG for its effective practice in India.
CO4: Know about the composition of Board of Directions and Audit Committees and visualise the current status of internal auditors in Indian context.
CO5: Exact knowledge on CG standards and practices in India with reference to IT sector and analyse the future of CG in India.

PAPER –105(B) : RESEARCH METHODOLOGY IN SOCIAL SCIENCES

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

1. To understand the concept of Research along with its significance.
2. To know the classification of research and approaches to it.
3. To interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
4. To cognize the meaning of sampling and characteristics of a good sample.
5. To get to know the meaning of interpretation and report writing.

UNIT – I Introduction: Meaning and concept of research – significance of research – Characteristics of research–objectives and motivation in research – Importance of research in Social sciences – limitations of research.(Theory only)

UNIT – II Research methodology and Research methods: Meaning – Research methods vs. Methodology – Classification of research–Pure research – Applied research – Explanatory research – Descriptive research– Historical research – Research Approaches.(Theory only)

UNIT – III Methods of data collection: Meaning and importance of data – Sources of data – Methods of collecting primary data and secondary data – Construction of schedule and questionnaire– Selection of appropriate method for data collection – Limitations of collecting primary and secondary data – Difference between schedule and questionnaire.(Theory only)

UNIT – IV Sampling: Meaning – Methods of sampling – Random and Non–Random sampling methods – Sampling errors – Census and sample survey – Significance of sampling – factors determining sampling – Criteria of selecting a sampling procedure – Characteristics of a good sample.(Theory only)

UNIT – V Interpretation and Report writing: Interpretation – Meaning – Techniques – Precautions – Report writing – Meaning –Types of reports – Steps in report writing – Precautions for writing research report – Footnotes and Bibliography – Ethical norms in research – Plagiarism.(Theory only)

REFERENCE BOOKS:

1. Krishna Swami, O.R. and Ranganatham, M. “Methodology of Research in Social Sciences”, Himalaya Publishing House, Mumbai.
2. Kothari, C.R.,“Research Methodology: Methods and Techniques”: New Age International Publishers, New Delhi.

3. Goode and Hatt: “Methods in Social Research”, New York: McGraw Hill.
4. Singh, Jaspal, “Introduction to Methods of Social Research”, New Delhi, Sterling Publishers Pvt., Ltd.,.
5. Murthy. C.,“Research methodology”, Vrinda Publishing Pvt., Ltd., New Delhi.

Course Outcomes:

1. Understand the concept of Research along with its significance.
2. Know the classification of research and approaches to it.
3. Interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
4. Cognize the meaning of sampling and characteristics of a good sample.
5. Get to know the meaning of interpretation and report writing.

M.Com (A&F) I Semester

Paper– 105(C): BANKING AND INSURANCE SERVICES

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

1. To understand Indian Financial System.
2. To know the functioning of Banks in India.
3. To interpret concept of risk and risk management.
4. To cognize concepts of life and non-life insurance.
5. To get to know the meaning of insurance and its pricing.

Unit – I Financial System – Structure of Indian Financial System – Financial Institutions – Role in the Economy – Introduction to Banking Business – Historical Perspective – Types of Bank – Structure of Indian Banking System – Recent Trends in Banking Sector. (Theory only)

Unit – II Commercial Banks – Structure – Functions – Types – Retail Banking – Rural Banking – Electronic Banking – NPAs – Mobile Banking – Merits and Demerits – Banking Sector Reforms – Regulatory Mechanism. (Theory only)

Unit – III Concept of Risk – Types – Risk Management – Methods of Handling Risks – Risk Management in Banks – Concept of Insurance – Essentials of Insurance Contract – Functions – Classification of Insurance – Current Trends in Insurance Sector. (Theory only)

Unit – IV Life Insurance and Non Life Insurance – Fire Insurance – Types – Marine Insurance – Nomination – Assignment – Paid Up Value – Surrender Value – Claim Settlement – Progress in Business. (Theory only)

Unit – V Insurance Pricing – Insurance Rating – Methods – Calculation of Premium – Legal Frame Work – IRDA – Salient Features – Regulations – Future Prospects for Indian Insurance Industry. (Theory only)

REFERENCE BOOKS:

1. Agarwal, O.P, Banking and Insurance, Himalaya Publishing House, New Delhi.
2. TyotsnaSethi and Niswan Bhatia, Elements of Banking and Insurance, Prentice Hall Of India (P) Ltd, New Delhi.

M.Com (A&F) I Semester

PAPER –106(A) : BUSINESS COMMUNICATION SKILLS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

COB1: To understand the basics of process, models and methods of communication.
COB2: To analyze various types of non-verbal communication skills.
COB3: To analyze various types of verbal communication skills.
COB4: To discuss the contents of various written communication tools.
COB5: To evaluate the protocols for cross-cultural communication across the globe.

Unit–I: INTRODUCTION:Concept– Objectives– Process of communication – Methods of communication: Oral, written, non–verbal, visual, audio–visual, signs, signals and symbols, silence;Types of communication: Personal, business, internal external, upward, downward, formal, informal, lateral, interactive, mass, and grapevine; Barriers to communication – Factors affecting communication – Essentials of effective communication. (Theory only)

Unit–II: NON–VERBAL COMMUNICATION:Meaningand **t**ypes of non–verbal communication– Body language, postures and gestures – Attire – Appearance – Handshake, personal space, timing, behavior, smile; Listening skills: Process and types of listening – Barriers to listening – Requirements for effective listening – Humor in communication – Leadership and communication. (Theory only)

Unit–III: VERBAL COMMUNICATION: Meetings: Role of chairperson – Conferences – Presentation skills – making presentations – Requirements for effective presentation; Speaking: Choosing a method of speaking – Analyzing the audience – Persuasive speaking; Report writing: Types of reports – Structure of reports – Individual, annual and committee reports – Essentials of good report writing. (Theory only)

Unit–IV: WRITTEN COMMUNICATION**:** Business letters: Essentials, Parts, and forms of business letters; Types of business letters: Tenders, quotations and orders – Circulars and memos – Office notes – Representations and suggestions – Reminders and follow up. (Theory only)

Unit–V: MEDIA AND MULTI–CULTURAL COMMUNICATION**:** Buildingbetter relations with media –Framework for managing relations with investors and governments – Impact of multicultural communication on business – Etic and emic approaches to culture – Overcoming cross–cultural communication problems – Cultural communication protocol in China, France, England, Switzerland, USA, and India. (Theory only)

REFERENCE BOOKS:

1. Penrose, Rasberry and Myers, “Business communication for managers”, Cengage Learning.
2. Disanza, “Business and professional communication”, Pearson Education.
3. CSG Krishnamacharyalu and L. Ramakrishna, “Business communications”, Himalaya Publishing House.
4. Krizan Merrier, Logan and Williams, “Effective Business Communication”, Cengage Learning.

5. Kelly Quintanilla and Shawn T Wahl, “Business and Professional communication”, Sage Publications.

COURSE OUTCOMES:

CO1: Understand the effective modes and methods of communication in a Business situation.
CO2: Make oneself confident to use body language and other non-verbal communication in gaining leadership.
CO3: Equip oneself strong in communicating verbally.
CO4: Equip with skills in written communication.
CO5: Build skills in managing relations with media and distinguish the protocols observed across the globe.

M.Com (A&F) II Semester

PAPER – 201: ADVANCED COST ACCOUNTING

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Obtain knowledge on the concept of cost accounting and know how it is different from financial and management accounting;
- Understand the features and objectives of process costing and calculation of process losses and Inter-process profits.
- Know the concept of equivalent production and accounting treatment for joint and by-products.
- Acquire knowledge on budgetary control and preparation of various functional budgets.
- Perceive the significance of ABC in cost ascertainment and control.

Unit– I	Introduction – Cost Accounting – Objectives – Scope – Advantages and limitations – Cost Accounting vs. Financial Accounting and Cost Accounting vs. Management Accounting – Concept of Cost – Cost Classification – Installation of Costing System. (Theory Only)
Unit– II	Process Costing: Features and objectives of process costing –Process Losses – Normal Loss– Abnormal Loss – Abnormal Gain – Treatment of Process Losses – Equivalent Production – Methods. (Theory and Problems)
Unit–III	Cost Control and Cost Reduction – Essentials for success of cost control – Advantages and Limitations – Differential Costing – Differences between Marginal Costing and Differential Costing – Characteristics and Significance of Differential Costing. (Theory and Problems)
Unit–IV	Budgetary Control: Concept of budget and budgetary control – Objectives – Benefits and limitations of budgetary control – Classification of Budget – Functional and Flexible budgets. (Theory and Problems)
Unit– V	Activity based costing: Concept – Meaning – Definition and characteristics ofABC – Different stages in ABC – ABC and cost drivers – Advantages ofImplementing ABC. (Theory and Problems)

REFERENCE BOOKS:

PAPER – 202: FINANCIAL MANAGEMENT

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Describe meaning, functions and objectives; role of financial manager.
- Examine investment decision, capital budgeting, techniques of CB and methods of CB.
- Investigate management of working capital, needs and concepts.
- Asses financing decision, capital structure and capital theories.
- Design dividend decision and theories of dividend.

Unit – I Finance: Concept – Functions of Finance – Objectives of Financial Management – Profit Maximization Vs Wealth Maximization – Organization of Finance Function – Role of the Modern Financial Manager. (Theory only)

Unit– II Investment Decision: Capital Budgeting– Concept– Process – Techniques of Capital Budgeting – Traditional Methods – Payback Period (PB)– Average Rate of Return – Discounted Cash Flow Techniques – Net Present Value– Internal Rate of Return and Profitability Index.(Theory and Problems)

Unit–III Management of Working Capital: Concepts– Need for working capital– OperatingCycle– Estimation of working capital Requirements–Management of cash–Receivables and Inventory. (Theory and Problems)

Unit–IV Financing Decision: Capital Structure –Concept–Theories of capital structure – NI_– NOI– Traditional and MM Theories; Computation of Leverages– Operating Leverage– Financial Leverage and Combined Leverage; Cost of Capital –Concept–Computation of Specific cost of capital– Determination of weighted Average Cost of capital. (Theory and Problems)

Unit–V Dividend Decision: Types of Dividends– Factors Influencing the Dividend policy –Theories of Dividend – Walter– Gordon and MM Hypothesis (Theory only)

M.Com (A&F) II Semester

PAPER –203: MARKETING MANAGEMENT

(Core Paper)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: To introduce to basics of market segmentation and consumer behavior.

COB2: To understand the metrics and components associated with Product and Price mix of 4Ps of marketing mix.

COB3: To instill knowledge and skills in advertising, sales promotion, personal selling, publicity and direct marketing of Promotion mix.

COB4: To lead the network of offline and online distribution networks of Place mix.

COB5: To acquire skills in conducting marketing research surveys, and others.

Unit – I INTRODUCTION**:** Concept of Marketing - Nature and scope- Evolution- Approaches to the study of marketing- Importance - Role of marketing in Indian economy- 4Ps of marketing; Marketing environment: Micro and macro; Market segmentation: Bases for market segmentation – Characteristics of effective segmentation;Factors affecting buying behaviour. (Theory only)

Unit – II PRODUCT MIX AND PRICE MIX**:** Product Mix**:** Classification of products -Product mix and productline decisions; New product development: - Stages of new product development; Product Life Cycle (PLC): Features, objectives, and strategies in different phases of PLC; Branding: Pros and cons of Single, multiple and private branding strategies; Packaging: advantages and strategies; Labelling; PRICING: Objectives -factors influencing pricing policy -Pricing policies and strategies. (Theory only)

Unit – III PROMOTION MIX**:** Process of marketing communications; Advertising: Pros and cons – Types – Criteria for selection of advertising agencies –Media selection –Measuring impact of advertising;Publicity: Objectives and tools – Advertising vs. publicity; Sales promotion: Objectives –Tools and techniques; Personal selling: Steps in personal selling – Salesmanship; Impact of promotion mix elements during different stages of PLC - E-CRM (Theory only)

Unit – IV PLACEMIX**:** Marketing Channels:Channel levels – Functions of distribution channels - Factors influencing channel selection - Vertical and horizontal integrations of channels - Causes of channel conflict; Functions of wholesaler and retailer- Trends in retailing- Formats of retail stores – E- marketing tools: SEO – Marketing analytics — Pay-per-Click marketing - Affiliate marketing – Social media marketing. (Theory only)

Unit – V Market Information system (MIS)**:** Components of MIS – Process of marketing research - Market research agencies in India - Marketing ethics – Indian laws affecting 4Ps of marketing. (Theory only)

REFERENCE BOOKS:

1. Philip Kotler, Principles of Marketing, Pearson Education.
2. Rama Swamy&Namakumari, Marketing Management, Sage Publications.
3. RajanSaxena, Marketing Management, McGraw Hill publications.

4. Dr.R.L.Varshney and Dr. S.L. Gupta, Marketing management Text and cases, Sulthan Chand & sons.
5. Arun Kumar, N. Meenakshi, Marketing Management, Vikas Publications.

203 : MARKETING MANAGEMENT
CO1: Chew the cud of the conceptual backdrop of marketing, acquire skills in segmenting any market, and understand the dynamics of consumer behavior.
CO2: Understand the tree structure of product mix, learn to develop a new product and strategies during its life cycle, brand and label and price it.
CO3: Acquire skills to design advertising, sales promotion techniques, and stepping into the shoes of sales executive and acquire a hold on selecting a media and agency for advertising.
CO4: Lead and coordinate the distribution network in offline and online marketing models.

PAPER –204: ACCOUNTING PRACTICES IN BANKS

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives:

- To increase the knowledge of students on accounting principles and standards
- To provide knowledge about the financial statements and its analysis.
- To provide conceptual knowledge on the accounting practices in banks.
- To provide the skills to prepare bank reconciliation statement.
- To create abilities to prepare and present the final accounts of banking companies.

UNIT–I Accounting: Meaning–Nature–Scope–Functions –Need for Accounting in Banking–Accounting cycle–Accounting Concepts and Conventions–GAAP–Accounting standards in India.(Theory only)

UNIT–II Financial Statements–Meaning and types of financial statements Nature, and Limitations of financial statements–Analysis and interpretation of financial statements–Types of financial analysis–Tools of financial analysis–Ratio analysis–Analysis of Funds Flow and Cash Flow Statement. (Theory only)

UNIT–III Accounting in Banks–Rules for bank accounts, cash/clearing/transfer vouchers/system–subsidiary book and main day book–General Ledger–Branch Vs Bank Accounts–Bank Balance Sheet Structure of accounts–categories of Assets, Liabilities and Net worth Components. Accounting for Non–Performing of Assets–Preparation of Final Accounts–Final Accounts of Banking Companies–Disclosure requirements. (Theory only)

UNIT–IV Banking Company Accounts I – Bank Reconciliation Statement–Need–Reasons for differences between cash book and Pass Book Balance–Problems of Favourable and Overdraft Balance–Ascertainment of Correct Cash Book Balance.(Theory only)

UNIT–V Banking Company Accounts II – Important Provision concerning conduct of Banking Business in India–Bankers Books–Preparation and Presentation of Final Accounts of Banking Companies. (Theory only)

REFERENCE BOOK

1. Jain and Narang, Accounting Part–I, Kalyani Publishing, Ludhiana.
2. R.NarayanaSwamy, Financial Accounting, Prentice Hall of India.
3. Arunlanadam, Advances Accounting, Himalaya Publishing House.
4. Ashok Sehgal Deepak Sehgal: Advance Accounting–II, Corporate Accounting,Taxmain's Publications.

Course Outcomes

Upon completion of this course, students will be able to

CO1: Acquires knowledge on the basic concepts, conventions and standards of accounting
CO2: Student able to understand the financial statements and apply tools to analysis
CO3: Gain knowledge about accounting process in banks and preparation of final accounts.
CO4: Acquires skills in preparation of Bank Reconciliation statement.
CO5: Able to apply accounting knowledge in preparation and presentation of final accounts of banking companies.

PAPER –205(A) : QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives

- Appreciate the use of quantitative techniques, methods of business forecasting and quantitative techniques in business decisions.
- Formulate F distribution and multiple co-relations co-efficient.
- Study probability and non-probability distributions.
- Formulate sampling theory, testing of hypothesis and type I and type II errors.
- Identify linear programming advantages and disadvantages; graphical and simplex method.

Unit– I Quantitative Techniques and Business Forecasting: Concept – Classification of Quantitative Techniques – Statistical Techniques – Programming or Operations Research Techniques –Role of Quantitative Techniques in Business and Industry – Quantitative Techniques and Business Management – Limitations of Quantitative Techniques – Methods of Business Forecasting. (Theory only)

Unit–II Probability and Probability Distributions: Basics of probability– Binomial – Poisson – Normal Distributions – Baye's Theorem. (Theory and problems)

Unit–III Sampling Theory: Concept – Types of Sampling – Hypothesis Testing–The NullHypothesis– The significance level – Hypothesis Testing Procedure – Type I and Type II errors – Inference from Small Sample Mean Tests – Difference Between the Means of Two Independent Samples – Difference Between the Means of Two Dependent Samples of Paired Observations 't–test' and χ^2 (Chi–Square) test and its applications. (Theory and problems)

Unit–IV Analysis of Variance (F–test): Concept – Assumptions –Testing Equality of PopulationMeans – One–way and Two–way Classifications. (Theory and Problems)

Unit–V Linear Programming: Concept – Requirements for application of Linear Programming– Assumptions–Advantages and limitations – Applications of Linear programming problem – Formulation of Linear Programming problem– Graphical Method–Simplex method. (Theory and problems)

REFERENCE BOOKS:

1. Gupta, S.P.Statistical Methods, S.Chand& Sons, New Delhi

3. Gupta and Khanna "Quantitative Techniques for Business Managers" PHI, New Delhi.
4. Andnda Sharma, Quantitative Techniques, Himalaya Publications, Hyderabad.

5. Kothari C.R… Quantitative Techniques Vikas Publications, Mumbai. Vikas Publications, Mumbai.

205: QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS
CO1:Identify the concepts Quantitative Techniques and business forecasting, quantitative approach to management as well as in business decision making.
CO2: Understand the test for equality of two population variances, analysis of variance and one way and two way classified data, basics and distributions of probability.
CO3: Demonstrate hypothesis testing, testing difference between the means of two independent/dependent samples chi-square test, requirements for application of linear programming, Formulation of linear programming problem and graphic and simplex methods of solving linear programming.

PAPER – 205(B) : LEGAL ASPECTS OF BUSINESS
(Compulsory Foundation)

(With Effect from the academic year2021–22)

Course Objectives:

1. To understand companies act and its history.
2. To know the framework of companies like board of directors and auditors.
3. To interpret the Negotiable Instruments Act, 1881.
4. To cognize Competition Act, 2002.
5. To get to know the essence of cyberspace and cyber law.

Unit–I Companies Act–I: History of Companies Act–Meaning and Nature of a Company–Kinds of Companies–Formation and Incorporation of Company–Steps in Incorporation of a Company–Memorandum of Association–Article of Association–Prospectus. (Theory only)

Unit–II Companies Act–II: Board of Directors – Types of Directors – Appointment of Directors – Board Meetings – Duties and Liabilities of Directors – Removal of Director. Company Auditors – Appointment – Responsibilities of Company Auditor – Removal of Auditor. (Theory only)

Unit–III Negotiable Instruments Act, 1881: Meaning of Negotiable Instruments – Characteristics –Classification of Instruments – Different provisions relating to Negotiation, Negotiability, Assign ability – Rights and Obligation of parties – Presentation of Instruments – Rules of Compensation. (Theory only)

Unit–IV Competition Act, 2002: Introduction – Competition – Meaning – Objectives – Extent of Applicability – Competition of Commission of India – Areas affecting Competition – Duties, Powers and Functions of Commission – Penalties. (Theory only)

Unit–V Cyberspace and cyber Law: Introduction to cyber space and cyber law – Components of cyber law – Categories Cyber Law–Punishments–Components of cyber law – Internet governing bodies – International aspects of electronic contracting – Global issues of Privacy in cyber space. (Theory only)

REFERENCE BOOKS:

1. M.C. Kuchhal, Modern Indian Company Law, Mahavir Publications.
2. N.D. Kapoor, Elements of Company Law, Sultan Chand.
3. K.L. Maheshwari and R.K. Maheshwari, Company Law & Secretarial Practice, New Royal Company.

Paper– 205(C): RISK MANAGEMENT

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

1. To learn the concept of risk management.
2. To enhance knowledge in risk management by individuals.
3. To cognize the Enterprise Risk Management and its process.
4. To understand the Risk Management Information System.
5. To learn in detail about advanced topics in risk management.

Unit – I Concept of Risk Management – Types – Objectives – Functions – Risk Management Process – Steps – Methods of Handling Risk – Risk Retention – Control. (Theory only)

Unit – II Risk Management by Individuals – Influencing Factors – Mitigating Individual Risks – Insurance – Objectives – Costs and Benefits. (Theory only)

Unit – III Enterprise Risk Management (ERM) – Process – Components – Risk Exposures – ERM Basics – COSO Frame Work for ERM – Emerging Role of CRO and ERM in Insurance – Tools and Techniques of ERM. (Theory only)

Unit – IV Risk Management Information System (RMIS) – Objectives and Functions – Emerging Trends – Risk Manager Tasks and Responsibilities – Risk Management Strategies – Benefits. (Theory only)

Unit – V Advanced Topics in Risk Management – Changing Scope of Risk Management – Financial Analysis in Risk Management – Decision Making – Management Tools – Loss Forecasting – Control Methods. (Theory only)

REFERENCE BOOKS:

PAPER –206(A) : E–BANKING OPERATIONS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course objectives (COBs):

- To understand the RBI's financial norms to be followed by commercial banks.
- To investigate into the roles of various commercials banks in India.
- To analyze the mechanism of offline and online borrowing and lending of funds.
- Familiarize with merits and demerits o e-banking applications.
- Categorize the financial frauds in e-banking sector.

UNIT – I: IndianBanking: Definition– Functions – Pubic vs. private sector banks; Banks vs. NBFCs – Foreign banks – Regional Rural Banks – State Co–operative Banks – District Central Co–operative Banks – Urban Co–operative Banks.(Theory only)

UNIT –II: Banking services: Accepting of Deposits – Lending of funds – Retail banking – Merchant banking – Factoring services – Investment banking –Mutual fund services – Bill discounting – Issue of Letter of Credit (LC).(Theory only)

UNIT – III E–banking: Concept – NPCI – UPI – Debit Cards – Credit cards – RTGS vs. NEFT – Electronic Clearing System – Telephone Banking – Pros and cons of E–banking – Challenges in E–Banking.(Theory only)

UNIT–IV Payment systems: Pre–paid (PP) cards – Open and closed Pre–Paid cards – Post–paid credit cards – Steps in credit card processing – Requirement metrics of an effective e–payment system.(Theory only)

UNIT–V E–banking frauds: Electronic Clearing Services – Frauds in E–banking operations – The security measures taken by banks.(Theory only)

REFERENCE BOOKS:

1. Ravindra Kumar, Deshpande, E–Banking, Pacific Books International.
2. Indian Institute of Banking, Digital Banking, Mumbai.
3. The Banker, Mumbai (Journal)

Course Outcomes:

CO1: Familiarize oneself with safety, liquidity, profitability and productivity norms of banks as prescribed by RBI.
CO2: Acquaint oneself with the role of RRBs, SCBs, DCCBs, and UCBs in India.
CO3: Analyze the mechanisms involved borrowing and lending of funds, and e-banking operations.
CO4: Equip oneself with pros and cons involved in application of various modes of e-banking.
CO5: Investigate into frauds encountered and security measures taken in e-clearing services in banking sector.

PAPER – 206(B): MANAGEMENT INFORMATION SYSTEMS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: To understand the RBI's financial norms to be followed by commercial banks.
COB2: To investigate into the roles of various commercials banks in India.
COB3: To analyze the mechanism of offline and online borrowing and lending of funds.
COB4: Familiarize with merits and demerits o e-banking applications.
COB5: Categorize the financial frauds in e-banking sector.

Unit-I: Introduction:Concepts of Management Information System(MIS)-Classification and their implications – Business intelligence – Database models – Database design – RDBMS and MIS; Data processing: Transaction processing – Application processing – Information system processing; Role of MIS:In management and organization effectiveness, and strategic business planning. (Theory only)

Unit-II**:** Systems Engineering (SE) **:**Types and classes of system – General model of SE – Need for system analysis – Analysis of existing and new system - System development model – Structured System Analysis and Design (SAD) – Object-oriented Analysis (OOA) – System Development through Object Oriented Technology (OOT) – Object Oriented Analysis and Design(OOAD) – Systems Development Life Cycle (SDLC). (Theory only)

Unit-III: Design of MIS and Business Process Reengineering (BPR)**:** Planning of MIS – Determining information requirements – Organization, development and implementation of MIS – Development process of MIS – Need for design of MIS – Process of design of MIS – Strategic management and MIS – Process and value stream models of business – Reasons for delay in business process – MIS and Business Process Reengineering. (Theory only)

Unit-IV: Applications of MIS:Human Resource information system – Financial information system – Production information system – Marketing information system – Material Management Information system – Services information system. (Theory only)

Unit-V: Decision Support System (DSS) and ERP: Decision Support Systems and Group Decision Support Systems – Applications of DSS – Knowledge Management System – Benefits of MIS and DSS – Enterprise Resource Planning (ERP) – ERP modules – Benefits of ERP - ERP evaluation and implementation. (Theory only)

PAPER – 301: FINANCIAL DERIVATIVES

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Outline financial derivatives concepts, features and types; traders in financial derivatives markets.
- Identify forwards and future contracts concepts, types, uses and functions.
- Prioritise options in financial derivatives and option pricing models.
- Compose swap market futures, types and interest rate; pricing swaps.
- Synthesize stock index futures, options and trading of stock futures and options.

Unit–I Financial Derivatives–Concept–Features– Types – Uses– Traders in Financial Derivatives Market–IndianFinancial Derivatives Market – Emerging Trends. (Theory Only)

Unit–II Forwards and Futures Contracts: Concepts– Functions – Advantages and Disadvantages –Forwards vs. Futures –Determination of Forwards and Futures Prices.(Theory and Problems)

Unit–III Options: Concept–Types of options – Difference between Options and Futures–Option Hedging Strategies –Option Pricing Models– Binomial Option Pricing Model– One step and Two Step Models–Black – ScholesOption Pricing Model. (Theory and Problems)

Unit–IV Swap Market – Concept –Features of Swap –Advantages and Disadvantages of Swaps Types of Swaps – Interest Rate Swap –Currency Swap –Equity Swaps –Pricing of Swaps. (Theory only)

Unit –V Stock Index Features– Concept –Common Features– Portfolio Management and StockIndex Features– Speculation and Stock Index Features –Trading of Stock Index Features.(Theory and Problems)

REFERENCE BOOKS:

1. Pandey , I.M., Financial Management, Vikas Publications , New Delhi.
2. Gupta, S.L., Financial Derivatives, PHI Learning Pvt. Ltd, New Delhi.

M.Com (A&F) III Semester

PAPER – 303(A): TALLY WITH GST APPLICATIONS

(Generic Elective)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: To acquaint oneself with skills to prepare financial statements through Tally ERP.
COB2: To understand basics of GST system.
COB3: To know steps involved in generating GSTR reports.
COB4: To know the metrics in calculation and generation of TDS and service tax reports.
COB5: To acquire skills to create payroll receipts.

Unit–I Features of Tally accounting – Components of Gateway of Tally and button panel – Purposes and components of F11 And F12 – Creation and setting up of a company – Accounting Masters: Creation, alteration and deletion of single and multiple groups – Creation, alteration of single and multiple ledgers – Recording transactions in accounting vouchers: Creation and alteration of vouchers – Display and print of financial statements (Theory and lab).

Unit–II Inventory: Configuration **–** Inventory Masters: Creation, display and alteration of stock groups, stock categories, godowns, units of measure, stock items – Recording transactions: Creation of inventory vouchers – Display and print of inventory reports (Theory and lab).

Unit – III GST: Enabling GST features in Tally **(**Configuration) **–** Basics of GST – Rates of GST – Configure GST details of your company – Creating Party Ledgers & Tax Ledgers – Setting up of SGST, CGST, IGST rates for input and output – Creation of vouchers – Recording intra and inter–state vouchers with GST tax ledgers; Types of invoice under GST: Tax invoice vs. Bill of supply; Contents of tax invoice – Display and print of GST reports (Theory and lab).

Unit–IV TDS: Configuration –Company creation **–** Creation of ledgers and vouchers **–** Recording advance and balance payments of Tax – Generation of TDS reports (Theory and lab).

Unit–V Payroll: Configuration – Payroll features **–** Enabling payroll details – Creation of payroll masters– Creating the Pay Head ledgers – Creating the employee details and salary details of an individual – Creating details of Attendance types; List of Payroll Voucher types: Pay roll voucher and attendance voucher;Recording Attendance and Payroll voucher entries – Display and print of various payroll reports (Theory and lab).

PAPER – 304: INTERNAL AUDIT AND STANDARD AUDIT PRACTICES

(Skill Oriented Course)

(With effect from the academic year 2021–22)

Course Objectives (COBs):

1. Conceptualise the knowledge in internal control including evaluation techniques.
2. Learn the meaning, features, objectives and advantages of internal audit.
3. Ascertain the basis of auditing with information systems by skill enhancement.
4. Illustrate the audit under computerized information system environment along with its internal control.
5. Outline and synthesize the reporting and its presentation techniques.

Unit – I Introduction to internal control: Meaning – objectives – Basic elements of internal control – Types of internal control systems – Preventive and detective controls – Advantages and limitations of internal control – Techniques for evaluation of internal control system – Native record – Check list – Flow chart – Internal control questionnaire.(Theory only)

Unit – II Internal Audit: Meaning –features – advantages – Need of internal audit – Internal control Vs. Internal audit – Internal audit Vs. Operational audit; Internal check: Meaning – Objectives – Features of good internal check system.(Theory only)

Unit – III Auditing of Information Systems: Overview of Information Systems – Attributes of Information – Need for Audit of Information Systems – Effect of Computers on Audit – Changes to evidence collection – Changes to evidence evaluation – Skills required for Information Systems Auditor – Functions of IS Auditor – Categories of Information Systems Audit – Steps in Information System Audit – Role of IS Auditor in Physical Access Controls – Understanding the Layers and related audit issues. (Theory only)

Unit – IV Internal Audit under Computerized Information System (CIS) Environment**:** **S**pecial audit techniques using the computer – Scope of audit in a CIS Environment – Impact of changes on business processes (for shifting from manual to electronic medium) – Audit approaches in a CIS Environment – Internal Controls in a CIS Environment – Internal Control requirements under CIS Environment – Approach to auditing in a CIS environment – Computer Assisted Audit Techniques (CAATs). (Theory only)

Unit – V Internal audit reporting: Concept – Basic elements of internal audit report – Features of good internal audit report – Frequency of report – Segment reporting – Documentation of reporting – Importance of report drafting – Report presentation techniques – Report submission – Storage of working papers and back–up of data. (Theory only)

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF CM & CS

DEPARTMENT OF COMMERCE

Course

M.COM (FINANCIAL MANAGEMENT)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

Name of the Department : Dept. of Commerce

About the Department

The Department of Commerce was one of the oldest departments established during the academic year 1969-70 in SV University (Estd. 1954) to offer M.Com degree course under the aegis of Economics Department, S.V. University College of Arts and Sciences and subsequently it emerged as an independent entity during the year 1971, with Dr. O.R. Krishna Swamy as the founder member of the Department. Under the re-organized set-up during 2006, the Department became a part of the College of Commerce, Management and Information Sciences. For the new millennium, a new course i.e., MFM was started in the year 1999 under semester system. And M.Com (A&F) was started during the academic year 2005-06. Both M.Com and MFM courses were modified to incorporate Choice Based Credit System (CBCS) during the academic year 2006-07. The Department of Commerce is one of the biggest Departments in Sri Venkateswara University campus with a total strength of 320 students. To meet the overwhelming demand for accounting and finance professionals, the Department offers three courses viz., M.Com on Regular basis, M.Com (FM) and M.Com (A&F) on self-supporting basis besides PhD program. Currently, based on NEP guidelines syllabi is restructured to include core, generic electives, compulsory foundations, skill oriented course, mandatory project report, and open electives.

Vision, mission of the Department

VISION

"To promote accounting and finance professionals through a process of quality and value based education, consultancy, counselling, persistent skill development and infusion of human values for vibrant future".

MISSION

- To groom competent, confident, creative and committed professionals in the field of accounting and finance.
- To provide the students with inclusive facilities to cater to their industry learning, placement opportunities and social needs
- To make the students occupy good positions in academic and research institutions and consultancy organizations.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

After completion of the programme, the student would be able to

- PSO 1: Understand the framework of OB, HRM, marketing, finance and other functional areas of management.
- PSO 2: Obtain knowledge in the field of financial management and get knowledge in different tools and techniques of FM.
- PSO 3: Examine critically the accounting standards and reporting so as to evolve an effective accounting and reporting system.
- PSO 4: Diagnose the different aspects relating to IFM, SAPM, financial engineering and investment management.
- PSO 5: Understand the value of marketing, sales promotion techniques and learn how to prepare financial statements on accounting inventory bases through tally accounting software and also acquire skills in becoming good entrepreneurs.

5.	M.Com (FM) 405	A	Security Market Operations	6	4	Open Elective	20	80	100
		B	Business Ethics						
Total				**36**	**24**		**120**	**480**	**600**

- **All CORE Papers are Mandatory**
- **Generic Elective – Choose two papers**
- ***Multi-Disciplinary course / Project Work is Mandatory**
- **Open electives are for the students of other departments. Minimum one paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**
- **Interested students may register for MOOC with the approval of the concerned DDC.**
- ****In IV semester, paper 404 – Project Report and Viva-voce, this consists of 100 marks (50 marks for project report and 50 marks for viva-voce).**

M.Com (FM) I Semester
PAPER –101: ACCOUNTING STANDARDS AND REPORTING
(Core Paper)
(With Effect from the academic year2021–22)

Course Objectives

- To increase the knowledge of students on accounting principles and standards
- To enable the students to do inventory valuation
- To impart the ability to find out the cash flows
- To provide the skills to value goodwill
- To create awareness about IFRS and segment reporting

Unit –I Introduction: Accounts Concepts and Principles – GAAP (AS–1)–Branches of Accounting – Users of Accounting; Accounting Standards: Concepts – Types – Benefits – Accounting Standards in India –Indian Accounting Standards.(Theory only)

Unit – II Inventory Valuation: (AS–2) Concept – Need for inventory valuation – Inventory Valuation methods – Valuation of Inventory. (Theory and Problems)

Unit – III Cash flow statement (AS–3): Meaning and definitions – Scope – Objectives –Benefits – Classification of cash inflow and outflow–Presentation of cash flow statement – Methods – Disclosures.(Theory only)

Unit –IV Valuation of Goodwill (AS–26): Concept– Factors affecting goodwill – Types of goodwill — Need for valuation – Methods of goodwill Valuation – Average method– Super profit method – Annuity method. (Theory and Problems)

Unit – V Reporting: International Financial Reporting Standards (IFRS)–Concept–List of IFRS– Segment Reporting (AS–17)–Concept – Objectives – Purposes – Segment reporting (AS–17) – Advantages and disadvantages of segment reporting. (Theory only)

REFERENCE BOOKS:

1. JawaharLal; Accounting theory and Practice, Himalya Publishing House, New Delhi.
2. B. K .Banerjee, Financial Accounting – A dynamic approach Prentice Hall India Pvt. Ltd., New Delhi
3. CA. Ravi KanthMiriyala; Accounting standards made easy, Bharat Law House Pvt. Ltd. New Delhi
4. NithinBalwani, Accounting and Finance for Manager, Excel Books, New Delhi.
5. http://en.wikipedia.org/wiki/IFRS

Course Outcomes

Upon completion of this course, students will be able to

CO1: Familiarises about principles of accounting, accounting and reporting standards
CO2: Acquires knowledge on methods of valuation of inventory and goodwill
CO3: Understands the importance and flow of cash
CO4: Students acquires the skills of goodwill valuation.
CO5: Provide an idea about segment and interim reporting.

M.Com (FM) I Semester
PAPER –102: FINANCIAL MANAGEMENT
(Core Paper)
(With Effect from the academic year2021–22)

Course Objectives:

- To increase the knowledge of students on accounting principles and standards
- To enable the students to do inventory valuation
- To impart the ability to find out the cash flows
- To provide the skills to value goodwill
- To create awareness about IFRS and segment reporting

Unit – I Finance: Concept – Functions of Finance – Objectives of Financial Management – Profit Maximization Vs. Wealth Maximization – Organization of Finance Function – Role of the Modern Financial Manager. (Theory only)

Unit– II Investment Decision: Capital Budgeting– Concept– Process – Techniques of Capital Budgeting – Traditional Methods – Payback Period (PB)– Average Rate of Return – Discounted Cash Flow Techniques – Net Present Value– Internal Rate of Return and Profitability Index. (Theory and Problems)

Unit–III Financing Decision: Capital Structure – Concept- Theories of Capital Structure – Net Income approach (NI), Net Operating Income approach (NOI) - Traditional and MM Theories –Cost of Capital: Concept-Computation of Specific Cost of Capital – Determination of weighted Average Cost of Capital. (Theory & Problems)

Unit–IV Leverage Analysis: Concept - Types – Operating – Financial and Combined leverages - Computation of Leverages - EBIT – EPS Analysis –Financial Breakeven- Indifference Points. (Theory and Problems)

Unit–V Dividend Decision: Types of Dividends– Factors Influencing the Dividend policy –Theories of Dividend – Walter– Gordon and MM Hypothesis (Theory only)

REFERENCE BOOKS:

1. Pandy, I.M: Financial Management – Vikas Publishing House, New Delhi.
2. SheebaKapil, Financial Management, Pearson Education ,New Delhi.
3. Jonathan Berk Peter DeMarzo, Financial Management, Pearson Education,2008.
4. Chandrabose, Fundamentals of, Financial Management – PHI, New Delhi.

9. Prasanna Chandra, Financial Management Tata McGraw Hill, New Delhi
10. SheebaKapil, Financial Management Strategy, Implementation and Control, PragathiPrakasam Publication, Meerut.

Course Outcomes

Upon completion of this course, students will be able to

CO1: Examine the objectives of financial management using present value and future value concepts.
CO2: Evaluate opportunity of investment decision applying techniques of capital budgeting and estimate the working capital requirements of an enterprise.
CO3: Analyse financing decisions using theories of capital structure and weighted average cost of capital and estimate the degree of risk through leverage concept.
CO4: Assess the dividend distribution of a firm through important theories of dividend.
CO5: Categorise dividend decision and theories of dividend policy.

M.Com (FM) I Semester

PAPER –103: BUSINESS ENVIRONMENT AND POLICY

(Core Paper)

(With Effect from the academic year2021–22)

Course Objectives:

- Examine business environment, concept, nature and scope; scanning, monitoring, changing dimensions of business environment.
- Illustrates economic environment nature and scope and new economic policy.
- Develop political, legal environment; reasons for state intervention and government business interface.
- Study thesocio cultural environment nature, impact of social responsibility and business ethics.
- Interpret global environment; benefits and problems of MNCs and WTO.

Unit – I Business Environment**:** Concept – Nature –Scope–Significance–Types of Environment– Internal and External Environment– Factors Influencing Business Environment–Techniques of Environmental Scanning and Monitoring –Emerging Dimensions of Business Environment. (Theory only)

Unit – II Economic Environment**:** Concept – Nature –Scope –Elements of Economic Environment– Economic System and Business Environment– Economic planning – Industrial policy –Fiscal policy– Monetary Policy–New economic policy. (Theory only)

Unit – III Political and Legal Environment**:** Concepts– Political institutions – Rationale and Extent of State Intervention – Reasons for State Intervention – Types of Intervention –Government Business Interface – Legal Environment–Changing Dimensions of Legal Environment. (Theory only)

Unit – IV Socio– Cultural Environment**:** Concept–Elements of Socio –Cultural Environment –Impact– Social Responsibility of Business – Business Ethics – Corporate Governance. (Theory only)

Unit – V Global Environment**:** Concept**–** Nature –Scope –Significance–Foreign Investment in India – Benefits and problems of MNCs – Strategies for Going Global –EXIM Policy–FEMA– Emerging Challenges of Global Business. (Theory only)

REFERENCE BOOKS

1. Francis Cherunilam, Business environment – Text and cases, Himalaya Publishing House.
2. K. Aswathappa, Essentials of Business environment, Himalaya Publishing House.
3. Pandey G.N. Environmental Management, Vikas publishing house.
4. Raj Agarwal, Business Environment, Excel publications.
5. Sundaram& Black. International Business Environment Text and cases, PHI.
6. Chari, S.N. International Business, Wiley India.

Course Outcomes

Upon completion of this course, students will be able to

CO1: Identify concept, nature, factors influencing and dimensions in business environment.
CO2: Impart knowledge on economic environment, foreign technology agreements, monitory and fiscal policies and new economic policy.
CO3: Understand the rationale for global environment, strategies for going global, WTO and the trading blocks.
CO4: Understand the socio cultural environment
CO5: Examine the rationale for global environment

M.Com (FM) I Semester

PAPER –104: ORGANISATIONAL BEHAVIOUR

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- Acquire knowledge on the conceptual frame work and emerging issues of OB
- Study different theories of personality and motivation
- Form a clear idea on group dynamics and inculcate the skills to become a leader
- Learn about Organizational structures and clear understanding of management of Interpernual conflicts.
- Obtain knowledge on Organization dynamics as to organization culture, organizational change and know the significance of OB today.

Unit – I Introduction: Organizational Behaviour (OB) – Definition – Nature and Scope – Foundations –OB Model – Importance – Limitations. (Theory only)

Unit – II Individual Behaviour: Foundations of individual behaviour – Personality –Theories of personality –Trait and social learning theories – Motivation– Theories of motivation – McGregor's theory X and theory Y, Maslow's Model and Herzberg's two – Factory theory.(Theory only)

Unit – III Group Dynamics: Foundations of group behaviour – Reasons for group formation – Types of groups – Leadership – Theories of leadership (trait theory; behaviour theories) – Behavioural model (Managerial grid) – Fiedler's contingency Theory.(Theory only)

Unit – IV Organizational Processes: Organizational Change – Causes – Types – OD Interventions – Organizational conflicts – Changing view of conflicts –Inter-personal conflicts – Transactional analysis – Johari window – Life positions. (Theory only)

Unit – V Organizational Dynamics: Organizational Culture – types – Individual behaviour in the global perspective – Cultural differences– Cross Culture – Cultural adjustment – Managerial responses – Emerging Issues in OB. (Theory only)

REFERENCE BOOKS:

1. Aswathappa K., Organizational Behavior: Text, Cases and Games, Himalaya Publishing House, Hyderabad.
2. Fred Luthans, Organizational Behaviour, Tata McGraw Hill Publishing House, New Delhi.
3. JitS.Chandan, Organization Behaviour, Vikas Publishing House, New Delhi.
4. John W. Newstrom and Keith Davis, Organizational Behaviour, Human Behaviour at work, Tata McGraw Hill Publishing House, New Delhi.
5. Kavita Singh, Organisational Behaviour: Text and Cases, Pearson, Delhi.

Course Outcomes

CO1: Understand the framework for OB and its emerging issues
CO2: Diagnose the outcome of different theories of personality and motivation.
CO3: Acquire knowledge on group dynamics and learn skills that help him to become a leader.
CO4: Outline appropriate form of organisational structure and understand clearly better man agent of interpersonal conflicts.
CO5: Obtain wisdom as organisational dynamics as to organisational Culture, managing resistance to change. Also learn the concept of OB and its significance in modern times.

M.Com (FM) I Semester

PAPER –105(A): QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives

- Appreciate the use of quantitative techniques, methods of business forecasting and quantitative techniques in business decisions.
- Formulate F distribution and multiple co-relations co-efficient.
- Study probability and non-probability distributions.
- Formulate sampling theory, testing of hypothesis and type I and type II errors.
- Identify linear programming advantages and disadvantages; graphical and simplex method.

Unit– I Quantitative Techniques and Business Forecasting: Concept – Classification of Quantitative Techniques – Statistical Techniques – Programming or Operations Research Techniques – Role of Quantitative Techniques in Business and Industry – Quantitative Techniques and Business Management – Limitations of Quantitative Techniques – Methods of Business Forecasting. (Theory only)

Unit–II Probability and Probability Distributions: Basics of probability – Binomial –Poisson – Normal Distributions – Baye's Theorem. (Theory and problems)

Unit–III Sampling Theory: Concept – Types of Sampling – Hypothesis Testing – The Null Hypothesis – The significance level – Hypothesis Testing Procedure – Type I and Type II errors – Inference from Small Sample Mean Tests – Difference Between the Means of Two Independent Samples – Difference Between the Means of Two Dependent Samples of Paired Observations 't–test' and χ^2 (Chi–Square) test and its applications. (Theory and problems)

Unit–IV Analysis of Variance (F–test): Concept – Assumptions – Testing Equality of Population Means – One–way and Two–way Classifications. (Theory and Problems)

Unit–V Linear Programming: Concept – Requirements for application of Linear Programming – Assumptions – Advantages and limitations – Applications of Linear programming problem – Formulation of Linear Programming problem– Graphical Method – Simplex method. (Theory and problems)

REFERENCE BOOKS:

1. Gupta, S.P.Statistical Methods, S.Chand& Sons, New Delhi
2. Tulasian P.C., and Vishal Pandey, Quantitative Techniques – Theory and Problems Pearson Education New Delhi
3. Gupta and Khanna "Quantitative Techniques for Business Managers" PHI, New Delhi.
4. Ananda Sharma, Quantitative Techniques, Himalaya Publications, Hyderabad.
5. Kothari C.R… Quantitative Techniques Vikas Publications, Mumbai. Vikas Publications, Mumbai.

Course Outcomes

Upon completion of this course, students will be able to

CO1:Identify the concepts Quantitative Techniques and business forecasting, quantitative approach to management as well as in business decision making.
CO2:Understand the test for equality of two population variances, analysis of variance and one way and two way classified data, basics and distributions of probability.
CO3: Demonstrate hypothesis testing, testing difference between the means of two independent/dependent samples chi-square test, requirements for application of linear programming, Formulation of linear programming problem and graphic and simplex methods of solving linear programming.
CO4:Examine the hypothesis testing
CO5:Analyse linear programming concept

M.Com (FM) I Semester

PAPER –105(B): RESEARCH METHODOLOGY IN SOCIAL SCIENCES

(Compulsory Foundation)

(With effect from the academic year 2021–22)

Course Objectives:

- To understand the concept of Research along with its significance.
- To know the classification of research and approaches to it.
- To interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
- To cognize the meaning of sampling and characteristics of a good sample.
- To get to know the meaning of interpretation and report writing.

UNIT – I Introduction: Meaning and concept of research – significance of research – Characteristics of research–objectives and motivation in research – Importance of research in Social sciences – limitations of research.(Theory only)

UNIT – II Research methodology and Research methods: Meaning – Research methods vs. Methodology – Classification of research–Pure research – Applied research – Explanatory research – Descriptive research– Historical research – Research Approaches.(Theory only)

UNIT – III Methods of data collection: Meaning and importance of data – Sources of data – Methods of collecting primary data and secondary data – Construction of schedule and questionnaire– Selection of appropriate method for data collection – Limitations of collecting primary and secondary data – Difference between schedule and questionnaire.(Theory only)

UNIT – IV Sampling: Meaning – Methods of sampling – Random and Non–Random sampling methods – Sampling errors – Census and sample survey – Significance of sampling – factors determining sampling – Criteria of selecting a sampling procedure – Characteristics of a good sample.(Theory only)

UNIT – V Interpretation and Report writing: Interpretation – Meaning – Techniques – Precautions – Report writing – Meaning –Types of reports – Steps in report writing – Precautions for writing research report – Footnotes and Bibliography – Ethical norms in research – Plagiarism.(Theory only)

REFERENCE BOOKS:

1. Krishna Swami, O.R. and Ranganatham, M. "Methodology of Research in Social Sciences", Himalaya Publishing House, Mumbai.
2. Kothari, C.R.,"Research Methodology: Methods and Techniques": New Age International Publishers, New Delhi.
3. Goode and Hatt: "Methods in Social Research", New York: McGraw Hill.
4. Singh, Jaspal, "Introduction to Methods of Social Research", New Delhi, Sterling Publishers Pvt., Ltd.,.
5. Murthy. C.,"Research methodology", Vrinda Publishing Pvt., Ltd., New Delhi.

Course Outcomes:

1. Understand the concept of Research along with its significance.
2. Know the classification of research and approaches to it.
3. Interpret the methods and sources of data collection with special attention to questionnaire and schedule construction.
4. Cognize the meaning of sampling and characteristics of a good sample.
5. Get to know the meaning of interpretation and report writing.

M.Com (FM) I Semester
PAPER –105(C) : MANAGERIAL ECONOMICS
(Compulsory Foundation)
(With effect from the academic year 2021–22)

Course Objectives

- Integrate with managerial economics meaning, nature, scope, characteristics, uses and principles.
- Employ demand forecasting objectives and methods; forecasting demand for new product.
- Allocate cost analysis, cost concepts and cost control and reduction.
- Examine production analysis basic concept and types; factors of production and returns to scale.
- Categorize nature of profits, profit planning and marginal uses of break-even analysis

Unit- I INTRODUCTION: Meaning, nature and scope of Managerial Economics– Principles of managerial economics - Role and responsibilities ofmanagerial economist –PROFIT: Economic profit vs. accounting profit; Profit functions: Profit optimization and slope of profit; Techniques and methods of measuring profit; Profit planning: Objective and factors affecting profit planning - Policies and techniques of profit maximization. (Theory only)

Unit-II DEMAND ANALYSIS: Demand theory and analysis - Factors determining demand – Law of diminishing marginal utility - Indifference curve analysis – Elasticity of demand: Price elasticity – Income elasticity – Cross elasticity (including problems); Demand forecasting: Objectives,methods, and criteria for effective demand forecasting. (Theory only)

Unit-III COST ANALYSIS: Cost concepts and classification – Economies of scale – Short-run and Long-run cost functions –Cost control vs. cost reduction – Tools for cost control and cost reduction - Cost-Volume-Profit analysis (BEP – including problems) and its applications in cost of production. (Theory only)

Unit-IV PRODUCTION ANALYSIS: Meaning of production function - Law of variable proportions – Production with one variable input and production with two variable inputs - Law of diminishing marginal returns - Factors of production and returns to scale – Cobb-Douglas production function – Production iso-quant and iso-cost. (Theory only)

Unit-V MARKET STRUCTURE: Perfect competition: Price determination in short-run and long-run; Monopoly: Price determination in short-run and long-run; Monopsony: Price determination in short-run and long-run; Oligopoly: Price determination in short-run and long-run. (Theory only)

REFERENCE BOOKS:

1. Joel Dean. Managerial Economics, Pearson Education.
2. Varshiney&Maheswari, Managerial Economics, Sultan Chand & Co.
3. Mehta P.L., Managerial Economics, Sultan Chand & Co.
4. Dwivedi D.N., Managerial Economics, Himalaya Publishing House.
5. Trivedi M. L., Managerial Economics, McGraw Hill.
6. Mote, Paul & Gupta, Managerial Economics, McGraw Hill Ltd,

Course Outcomes

CO1: acquire managerial skills and responsibilities as a managerial economist.
CO2: Forecast the demand using opinion polling and statistical methods for existing and new products.
CO3: analyze the cost output relationship and economies of scale for cost control and cost reduction.
CO4: Appraise the input and output relationship through law of variable proportions and Cobb-Douglas production function and formulate the policies on profit maximization.
CO5: Assess nature of profits, different views and functions of profits.

M.Com (FM) I Semester
PAPER – 106(A): BUSINESS COMMUNICATION SKILLS
(Elective Foundation)
(With effect from the academic year 2021–22)

Course Objectives:

COB1: To understand the basics of process, models and methods of communication.
COB2: To analyze various types of non-verbal communication skills.
COB3: To analyze various types of verbal communication skills.
COB4: To discuss the contents of various written communication tools.
COB5: To evaluate the protocols for cross-cultural communication across the globe.

Unit–I: INTRODUCTION: Concept– Objectives– Process of communication – Methods of communication: Oral, written, non–verbal, visual, audio–visual, signs, signals and symbols, silence; Types of communication: Personal, business, internal external, upward, downward, formal, informal, lateral, interactive, mass, and grapevine; Barriers to communication – Factors affecting communication – Essentials of effective communication. (Theory only)

Unit–II: NON–VERBAL COMMUNICATION:Meaningand **t**ypes of non–verbal communication– Body language, postures and gestures – Attire – Appearance – Handshake, personal space, timing, behaviour, smile; Listening skills: Process and types of listening – Barriers to listening – Requirements for effective listening – Humour in communication – Leadership and communication. (Theory only)

Unit–III: VERBAL COMMUNICATION: Meetings: Role of chairperson – Conferences – Presentation skills – making presentations – Requirements for effective presentation; Speaking: Choosing a method of speaking – Analysing the audience – Persuasive speaking; Report writing: Types of reports – Structure of reports – Individual, annual and committee reports – Essentials of good report writing. (Theory only)

Unit–IV: WRITTEN COMMUNICATION**:** Business letters: Essentials, Parts, and forms of business letters; Types of business letters: Tenders, quotations and orders – Circulars and memos – Office notes – Representations and suggestions – Reminders and follow up. (Theory only)

Unit–V: MEDIA AND MULTI–CULTURAL COMMUNICATION**:** Building better relations with media –Framework for managing relations with investors and governments – Impact of multicultural communication on business – Etic and emic approaches to culture – Overcoming cross–cultural communication problems – Cultural communication protocol in China, France, England, Switzerland, USA, and India. (Theory only)

REFERENCE BOOKS:

1. Penrose, Rasberry and Myers, “Business communication for managers”, Cengage Learning.
2. Disanza, “Business and professional communication”, Pearson Education.
3. CSG Krishnamacharyalu and L. Ramakrishna, “Business communications”, Himalaya Publishing House.
4. Krizan Merrier, Logan and Williams, “Effective Business Communication”, Cengage Learning.
5. Kelly Quintanilla and Shawn T Wahl, “Business and Professional communication”, Sage Publications.

Course outcomes:

CO1: Understand the effective modes and methods of communication in a business situation.
CO2: Make oneself confident to use body language and other non-verbal communication in gaining leadership.
CO3: Equip oneself strong in communicating verbally.
CO4: Equip with skills in written communication.
CO5: Build skills in managing relations with media and distinguish the protocols observed across the globe.

M.Com (FM) I Semester
PAPER – 106(B):PRINCIPLES OF MANAGEMENT
(Elective Foundation)
(With effect from the academic year 2021–22)

Course Objectives

- To comprehend the concept of management, skills and its process.
- To learn management as a process with its principles and functions.
- To learn the modern management process, business process engineering and reconstruction.
- To understand the concept of Management By Objective (MBO) and quality circles.
- To be aware of functional, personnel, financial, production, marketing, strategic and human resource managements.

UNIT–I: Concept of Management – Definition – Nature of Management – Management Skills – The Management Process – Features of Management – Trends towards Managerial Revolution in India.(Theory only)

UNIT–II: Management as a process – Principles and functions of Management – Operative and Managerial functions – Planning – Organizing – Staffing – Directing – Communication – Leadership – Motivation – Co-ordination – Controlling.(Theory only)

UNIT – III: Modern Management Concepts – Business Plans – Purpose – Contents – Preparation of Plan – Business Process Re-engineering – Re-structuring – Relationship between Re-engineering and Re-structuring – Customer Relationship Management – Benefits of CRM.(Theory only)

UNIT – IV: Management by Objectives – Benefits of MBO – Setting of Objectives – Limitations of MBO – Making MBO Effective – Quality Circles.(Theory only)

UNIT–V: Functional Management – Personnel Management – Financial Management – Production Management - Marketing Management – Human Resource Management – Strategic Management – Social Responsibilities of a Modern Manager.(Theory only)

M.Com (FM) I Semester
PAPER -107: HUMAN VALUES AND PROFESSIONAL ETHICS – I
(Audit Course)
(With effect from the academic year 2021–22)

Course Objectives

COB1: To create awareness on basics of life and professions.
COB2: To make oneself capable to distinguish between subjective and objective values of society and individual.
COB3: To understand in depth the values and yams of life.
COB4: To understand the cultural values embedded in right from Bhagavad Gita till today's Gandhian philosophy.
COB5: To grasp prescription and proscription as stated in the scripts of Hinduism.

UNIT – I Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

UNIT – II Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral, concepts- right, ought, duty, obligation, justice responsibility and freedom, Good behavior and respect for elders.

UNIT – III Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha (Non- stealing). Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).

UNIT – IV Bhagavad Gita- (a) Niskamakarma.(b) Buddhism- The Four Noble Truths – Arya astangamarga (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious, Tolerance, Gandhian Ethics.

UNIT – V Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study:

1. R. Subramanian, Professional Ethics, Oxford University press,New Delhi,2013.

PAPER – 201: ADVANCED COST ACCOUNTING
(Core Paper)
(With effect from the academic year 2021–22)

Course Objectives

- Co 1: Obtain knowledge on the concept of cost accounting and know how it is different from financial and management accounting;
- Co 2: Understand the features and objectives of process costing and calculation of process losses and Inter-process profits.
- Co 3: Know the concept of equivalent production and accounting treatment for joint and by-products.
- Co 4: Acquire knowledge on budgetary control and preparation of various functional budgets.
- Co 5: Perceive the significance of ABC in cost ascertainment and control.

Unit– I	Introduction – Cost Accounting – Objectives – Scope – Advantages and limitations – Cost Accounting vs. Financial Accounting and Cost Accounting vs. Management Accounting – Concept of Cost – Cost Classification – Installation of Costing System. (Theory Only)
Unit– II	Process Costing: Features and objectives of process costing –Process Losses – Normal Loss– Abnormal Loss – Abnormal Gain – Treatment of Process Losses – Equivalent Production – Methods. (Theory and Problems)
Unit–III	Cost Control and Cost Reduction – Essentials for success of cost control – Advantages and Limitations – Differential Costing – Differences between Marginal Costing and Differential Costing – Characteristics and Significance of Differential Costing. (Theory and Problems)
Unit–IV	Budgetary Control: Concept of budget and budgetary control – Objectives – Benefits and limitations of budgetary control – Classification of Budget – Functional and Flexible budgets. (Theory and Problems)
Unit– V	Activity based costing: Concept – Meaning – Definition and characteristics of ABC – Different stages in ABC – ABC and cost drivers – Advantages of Implementing ABC. (Theory and Problems)

REFERENCE BOOKS:

1. Jain S.P., AND K.L.Narang, Cost Accounting Principles and Practice Kalayani Publishers New Delhi.
2. Rathnam P.V., Rathanm S costing advanced problems and solutions, KitabMahal Distributors.

PAPER – 202: FINANCIAL MARKETS AND SERVICES

(Core Paper)

(With effect from the academic year 2021–22)

Course Objectives

- COB1: To understand the framework of Indian financial system and money market.
- COB2: To evaluate the metrics of primary market and secondary capital market.
- COB3: To demonstrate the role of merchant bankers.
- COB4: To analyze the metrics involved in credit rating the financial instruments issued by companies in primary market.
- COB5: To create plans and understand the metrics for getting finance from venture capital firms.

UNIT–I FINANCIAL SYSTEM AND MONEY MARKET: Indian Financial system: Evolution – Structure – Functions – Components; Role in the Indian economic development; Financial Sector reforms: MONEY MARKET: Significance–Instruments of money market including Call money, Commercial bills, Commercial papers, Certificates of deposits, Repo and reverse repo, MMMFs, Money market derivatives and Primary dealers. (Theory only)

UNIT–II CAPITAL MARKET AND SEBI: Structure, participants and instruments of CAPITAL MARKET; Primary market: Functions –Methods of floating new issues –Intermediaries including merchant bankers, underwriters, bankers, brokers and registrars to the issue, debenture trustees, and portfolio managers; Secondary market: Listing andonline trading of securities – Categories of shares – Primary market vs. secondary market – CDSL and NSDL; SEBI: Functions– Powers. (Theory only)

UNIT–III MERCHANT BANKING: Concept – Originand evolution – Scope – Functions – Commercial banking vs. merchant banking; SEBI Regulations on pre–issue and post– Issue obligations of merchant banker. (Theory only)

UNIT–IV CREDIT RATING AND FACTORING: CREDIT RATING: Significance – Features – Process of credit rating – Advantages and drawbacks of credit rating; Rating methodology of CRISIL, CARE, ICRA, FITCH; SEBI regulations on credit rating; FACTORING: Mechanism – Functions – Types; Factoring vs. bills discounting – Legal aspects of factoring agreement (Theory only).

UNIT–V VENTURE CAPITAL FINANCING AND MUTUAL FUNDS: Features – Stages of venture capital financing (VCF) – Financial analysis – Investment nurturing and its types – Exit route –Management buy–ins and management buy–outs – Mezzanine finance – VCF scenario in India – SEBI Regulations on VCF; MUTUAL FUNDS: Concept – Classification of MFs– Organization and management –MF evaluation – SEBI Guidelines on MFs (Theory only).

REFERENCE BOOKS

PAPER –204: CORPORATE GOVERNANCE
(Core Paper)
(With effect from the academic year 2021–22)

Course Objectives:

- Co 1 : Obtain knowledge on CG Mechanism and emerging issues in CG
- Co 2 : Know the genesis of CG in China USA and UK and also the code of the best practices.
- Co 3 : Gain Knowledge on the historical backdrop of CG in India and the guild lines pronounced by various committees for effective practice in India.
- Co 4 : Discern knowledge on the composition of Board of Directors and Audit Committees and know the role of internal Auditors in India.
- Co 5 : Understand the CG standards and practices in India with focus on IT and futures of CG in India.

UNIT – I Corporate governance : Meaning – Need – Importance – Corporate Governance(CG) mechanism – CG Systems – Indian model of CG – CG and Value maximization – Issues in Corporate Governance.(Theory only)

UNIT – II Emergence of Corporate governance: Developments in USA and UK – Role of World Bank – OCED – McKinsey – Sarbanes –Oxley Act,2002 – World Committees on CG – The Cadbury Committee. The Hampel Committee – Principles of good CG and code of best practices. (Theory only)

UNIT –III Corporate Governance in India: Need and Importance – Historical perspective – Indian Committees and guidelines on CG – Naresh Chandra Committee – Narayana Murthy Committee – J.J Irani Committee – Kumara Mangalam Birla Committee – The CII initiatives – SEBI initiative – CG practice in India. (Theory only)

UNIT –IV Board of Directors and Audit Committee: Board of Directors and their role in CG – Composition of Board – CG issues relating to Board – Independent Directors – Clause 49 of listing agreement – Audit Committee: Duties and responsibilities of Auditors – Composition of Audit Committee – CG and internal auditors – Indian situation.(Theory only)

UNIT – V Corporate Governance Standards and practices in India: CG Standards – Methods for examining the quality and effectiveness of CG – CG standards in Indian context – CG in IT sector – Pioneers in good CG practices – Problems of CG in India – CG and Business Ethics – CG and Corporate social responsibility (CSR) – Future of CG in India.(Theory only)

REFERENCE BOOKS

1. Fernando A.C – Corporate Governance – principles, Policies and practices – Pearson Education.
2. Subash Chandra Das – Corporate Governance – Codes, Systems, Standards and Practices – PHI.
3. Kesho Prasad – Corporate Governance – PHI Learning – New Delhi–2009
4. Singh S – Corporate Governance – Global Concepts and Practices – Excel Books.
5. Donald H. Chew Jr. Staurt L Gillan – Corporate Governance at Crossroads – Tata McGraw Hill Co. Ltd.,

Course Outcomes

Upon completion of this course, students will be able to

CO1: Assess the Corporate Governance (CG) mechanism and analyse the emerging issues in the arena of CG.
CO2: Trace out the emergence of CG in USA and UK and findings of Cadbury and Hostel committees and better understanding of code of best practices.
CO3: Grasp the historical backdrop of CG in India and perceive the guidelines pronounced by various committees on CG for its effective practice in India.
CO4: Know about the composition of Board of Directions and Audit Committees and visualise the current status of internal auditors in Indian context.
CO5: Exact knowledge on CG standards and practices in India with reference to IT sector and analyse the future of CG in India.

PAPER –205(A) :WORKING CAPITAL MANAGEMENT
(Compulsory Foundation)

(With Effect from the academic year2021–22)

Course Objectives:

- To impart basic knowledge on working capital concepts and source of WC
- To provide the skills to estimate working capital
- To enables the students familiarise with the cash management techniques.
- To comprehend the concept of receivables and its management.
- To provide the skills of inventory management with different techniques.

Unit–I Introduction: Concept of working of capital – Need and Significance – Types of working capital – Permanent and Variable working capital – Sources of Working Capital – Long–term sources – Short–term sources – Financing of Current Assets: Matching – Conservative – Aggressive Approaches (Theory only)

Unit–II Estimation of Working Capital: Determinants of Working Capital – Techniques of Forecasting Working Capital – Operating Cycle – Estimation of Gross and Net Working Capital requirements (Theory and Problems)

Unit–III Cash Management: Concept – Objectives – Motives – Facets – Cash collection and disbursement – Optimum Cash balances – Investment of surplus funds – Cash Budget – Cash Management Techniques – Cash Management Models: Baumol Model – Miller and Orr Model. (Theory and Problems)

Unit–IV Receivables Management: Concept – Nature and goals – Variables – Credit policy – Optimum credit policy – Credit evaluation – Monitoring receivables.(Theory only)

Unit–V Inventory management: Concept – Need – Objectives – Level of Inventory – Techniques of Inventory Management – EOQ analysis – ABC analysis – JIT system – VED analysis. (Theory and problems)

REFERENCE BOOKS:

1. Pandey, I.M. Financial Management, Vikas Publishing House, New Delhi.
2. Hrishikes Bhattacharya, Working Capital Management–Strategies and Techniques, Prentice–Hall of India Pvt. Ltd., New Delhi.
3. G.V. SatyaSekhar, Working Capital Management, Wiley India Pvt. Ltd., New Delhi.
4. R.P. Rutagi, Working Capital Management, Taxmann Publications Private Limited, New Delhi.
5. Khan and Jain: Financial Management, Tata McGraw Hill, New Delhi.
6. Prasanna Chandra, Financial Management, Tata McGraw Hill, New Delhi.

PAPER– 205(C): RISK MANAGEMENT
(Compulsory Foundation)
(With Effect from the academic year2021–22)

Course Objectives:

- To learn the concept of risk management.
- To enhance knowledge in risk management by individuals.
- To cognize the Enterprise Risk Management and its process.
- To understand the Risk Management Information System.
- To learn in detail about advanced topics in risk management.

Unit – I Concept of Risk Management – Types – Objectives – Functions – Risk Management Process –Steps – Methods of Handling Risk – Risk Retention – Control.(Theory only)

Unit – II Risk Management by Individuals – Influencing Factors – Mitigating Individual Risks – Insurance – Objectives – Costs and Benefits. (Theory only)

Unit – III Enterprise Risk Management (ERM) – Process – Components – Risk Exposures – ERM Basics – COSO Frame Work for ERM – Emerging Role of CRO and ERM in Insurance – Tools and Techniques of ERM. (Theory only)

Unit – IV Risk Management Information System (RMIS) – Objectives and Functions – Emerging Trends – Risk Manager Tasks and Responsibilities – Risk Management Strategies – Benefits. (Theory only)

Unit – V Advanced Topics in Risk Management – Changing Scope of Risk Management – Financial Analysis in Risk Management – Decision Making –Management Tools – Loss Forecasting – Control Methods. (Theory only)

REFERENCE BOOKS:

M.Com (FM) II Semester
PAPER – 206(A): E–BANKING OPERATIONS
(Elective Foundation)
(With effect from the academic year 2021–22)

Course objectives (COBs):

- To understand the RBI's financial norms to be followed by commercial banks.
- To investigate into the roles of various commercials banks in India.
- To analyze the mechanism of offline and online borrowing and lending of funds.
- Familiarize with merits and demerits o e-banking applications.
- Categorize the financial frauds in e-banking sector.

UNIT – I IndianBanking: Definition– Functions – Pubic vs. private sector banks; Banks vs. NBFCs – Foreign banks – Regional Rural Banks – State Co–operative Banks – District CentralCo-operative Banks – Urban Co-operative Banks.(Theory only)

UNIT –II Banking services: Accepting of Deposits – Lending of funds – Retail banking – Merchant banking – Factoring services – Investment banking – Mutual fund services – Bill discounting – Issue of Letter of Credit (LC). (Theory only)

UNIT – III E–banking: Concept – NPCI – UPI – Debit Cards – Credit cards – RTGS vs. NEFT – Electronic Clearing System – Telephone Banking – Pros and cons of E–banking –Challenges in E–Banking. (Theory only)

UNIT–IV Payment systems: Pre–paid (PP) cards – Open and closed Pre–Paid cards – Post–paid credit cards – Steps in credit card processing – Requirement metrics of an effective e–payment system.(Theory only)

UNIT–V E–banking frauds: Electronic Clearing Services – Frauds in E–banking operations –The security measures taken by banks.(Theory only)

REFERENCE BOOKS:

1. Ravindra Kumar, Deshpande, E–Banking, Pacific Books International.
2. Indian Institute of Banking, Digital Banking, Mumbai.
3. The Banker, Mumbai (Journal)

Course Outcomes

CO1: Familiarize oneself with safety, liquidity, profitability and productivity norms of banks as prescribed by RBI.
CO2: Acquaint oneself with the role of RRBs, SCBs, DCCBs, and UCBs in India.
CO3: Analyze the mechanisms involved borrowing and lending of funds, and e-banking operations.
CO4: Equip oneself with pros and cons involved in application of various modes of e-banking.
CO5: Investigate into frauds encountered and security measures taken in e-clearing services in banking sector.

PAPER – 206(B): MANAGEMENT INFORMATION SYSTEMS

(Elective Foundation)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: To understand the RBI's financial norms to be followed by commercial banks.
COB2: To investigate into the roles of various commercials banks in India.
COB3: To analyze the mechanism of offline and online borrowing and lending of funds.
COB4: Familiarize with merits and demerits o e-banking applications.
COB5: Categorize the financial frauds in e-banking sector.

Unit-I: Introduction: Concepts of Management Information System(MIS)- Classification and their implications – Business intelligence – Database models – Database design – RDBMS and MIS; Data processing: Transaction processing – Application processing – Information system processing; Role of MIS: In management and organization effectiveness, and strategic business planning. (Theory only)

Unit-II**:** Systems Engineering (SE) **:**Types and classes of system – General model of SE – Need for system analysis – Analysis of existing and new system - System development model – Structured System Analysis and Design (SAD) – Object-oriented Analysis (OOA) – System Development through Object Oriented Technology (OOT) – Object Oriented Analysis and Design(OOAD) – Systems Development Life Cycle (SDLC). (Theory only)

Unit-III: Design of MIS and Business Process Reengineering (BPR)**:** Planning of MIS – Determining information requirements – Organization, development and implementation of MIS – Development process of MIS – Need for design of MIS – Process of design of MIS – Strategic management and MIS – Process and value stream models of business – Reasons for delay in business process – MIS and Business Process Reengineering. (Theory only)

Unit-IV: Applications of MIS: Human Resource information system – Financial information system – Production information system – Marketing information system – Material Management Information system – Services information system. (Theory only)

Unit-V: Decision Support System (DSS) and ERP: Decision Support Systems and Group Decision Support Systems – Applications of DSS – Knowledge Management System – Benefits of MIS and DSS – Enterprise Resource Planning (ERP) – ERP modules – Benefits of ERP - ERP evaluation and implementation. (Theory only)

REFERENCE BOOKS:

M.Com (FM) III Semester
PAPER – 303(A) : TALLY WITH GST APPLICATIONS
(Generic Elective)
(With effect from the academic year 2021–22)

Course Objectives:

- COB1: To acquaint oneself with skills to prepare financial statements through Tally ERP.
- COB2: To understand basics of GST system.
- COB3: To know steps involved in generating GSTR reports.
- COB4: To know the metrics in calculation and generation of TDS and service tax reports.
- COB5: To acquire skills to create payroll receipts.

Unit–I Features of Tally accounting – Components of Gateway of Tally and button panel – Purposes and components of F11 And F12 – Creation and setting up of a company – Accounting Masters: Creation, alteration and deletion of single and multiple groups – Creation, alteration of single and multiple ledgers – Recording transactions in accounting vouchers: Creation and alteration of vouchers – Display and print of financial statements (Theory and lab).

Unit–II Inventory: Configuration – Inventory Masters: Creation, display and alteration of stock groups, stock categories, godowns, units of measure, stock items –Recording transactions: Creation of inventory vouchers – Display and print of inventory reports (Theory and lab).

Unit – III GST: Enabling GST features in Tally (Configuration) – Basics of GST – Rates of GST – Configure GST details of your company – Creating Party Ledgers & Tax Ledgers – Setting up of SGST, CGST, IGST rates for input and output – Creation of vouchers – Recording intra and inter–state vouchers with GST tax ledgers; Types of invoice under GST: Tax invoice vs. Bill of supply; Contents of tax invoice – Display and print of GST reports (Theory and lab).

Unit–IV TDS: Configuration –Company creation – Creation of ledgers and vouchers – Recording advance and balance payments of Tax – Generation of TDS reports (Theory and lab).

Unit–V Payroll: Configuration – Payroll features – Enabling payroll details – Creation of payroll masters– Creating the Pay Head ledgers – Creating the employee details and salary details of an individual – Creating details of Attendance types; List of Payroll Voucher types: Pay roll voucher and attendance voucher ; Recording Attendance and Payroll voucher entries – Display and print of various payroll reports (Theory and lab).

PAPER – 304: INTERNAL AUDIT AND STANDARD AUDIT PRACTICES

(Skill Oriented Course)

(With effect from the academic year 2021–22)

Course Objectives (COBs):

1. Conceptualise the knowledge in internal control including evaluation techniques.
2. Learn the meaning, features, objectives and advantages of internal audit.
3. Ascertain the basis of auditing with information systems by skill enhancement.
4. Illustrate the audit under computerised information system environment along with its internal control.
5. Outline and synthesize the reporting and its presentation techniques.

Unit 1: Introduction to internal control: Meaning – objectives – Basic elements of internal control – Types of internal control systems – Preventive and detective controls – Advantages and limitations of internal control – Techniques for evaluation of internal control system – Native record – Check list – Flow chart – Internal control questionnaire.(Theory only)

Unit 2: Internal Audit: Meaning –features – advantages – Need of internal audit –Internal control Vs. Internal audit – Internal audit Vs. Operational audit; internal check: Meaning – Objectives – Features of good internal check system.(Theory only)

Unit 3 Auditing of Information Systems: Overview of Information Systems – Attributes of Information – Need for Audit of Information Systems – Effect of Computers on Audit – Changes to evidence collection – Changes to evidence evaluation – Skills required for Information Systems Auditor – Functions of IS Auditor – Categories of Information Systems Audit – Steps in Information System Audit – Role of IS Auditor in Physical Access Controls – Understanding the Layers and related audit issues. (Theory only)

Unit 4 Internal Audit under Computerized Information System (CIS) Environment**: S**pecial audit techniques using the computer – Scope of audit in a CIS Environment – Impact of changes on business processes (for shifting from manual to electronic medium) – Audit approaches in a CIS Environment – Internal Controls in a CIS Environment – Internal Control requirements under CIS Environment – Approach to auditing in a CIS environment – Computer Assisted Audit Techniques (CAATs). (Theory only)

Unit 5: Internal audit reporting: Concept – Basic elements of internal audit report – Features of good internal audit report – Frequency of report – Segment reporting – Documentation of reporting – Importance of report drafting – Report presentation techniques – Report submission – Storage of working papers and back–up of data. (Theory only)

REFERENCES:

PAPER – 402: PROJECT PLANNING AND CONTROL
(Core Paper)
(With effect from the academic year 2021–22)

Course Objectives

- Define a project and operations of corporate long range planning and phases of capital budgeting.
- Distinguishes project ideas and technical analysis, project rating index and methods of forecasting.
- Illustrates financial analysis project planning, forms of project organization and performance evaluation of project.
- Understand Social cost benefit analysis and methods of SCBA
- Contrast public projects context of Indian projects, approval procedure and guidelines for preparation of feasibility report.

Unit –I Projects And Operations: Concept – Nature and Characteristics of a Project – **Categories of** Projects **–** Project Life Cycle**–** Concept of Project Management – Tasks and Responsibilities of a Project Manager – Capital investments – Importance and Difficulties – Phases of Capital Budgeting – Facets of Project Analysis – Elementary Investment Strategies. (Theory only)

Unit–II Project Ideas and Technical Analysis: Generation of Project Ideas – Monitoring the Environment – Corporate Appraisal – Scouting for Project Ideas – Preliminary Screening – Project Rating Index – Sources of Primary and Secondary Information – Conduct of Market Survey – Methods of Demand Forecasting – Material Inputs and Utilities – Manufacturing Technology – Product Mix–Capacity of Plant – Location and Site – Machineries and Equipment. (Theory only)

Unit–III Financial Analysis And Project Planning: Cost of Project – Means of Finance – Estimation of Sales and Production – Profitability Projections – Break-Even Point – Projected Cash Flow Statement – Forms of Project Organization – Project Planning – Functions of planning – Planning the project work – Tools of planning – Hierarchy of plans – Project Control – Purpose of Control – Human aspects of project management – Pre-Requisites for Successful Project Implementation – Abandonment Analysis. (Theory only)

Unit–IV Social Cost Benefit Analysis (SCBA): Social Cost Benefit Analysis – Concept and Rationale for SCBA – Commercial Profitability vs. SCBA – Methods for SCBA – UNIDO Approach – Little-Mirrlees (L-M) Approach – SCBA in India. (Theory only)

Unit–V Public Projects: NITI Aayog; Project Appraisal and Management Division (PADM); Core functions – Institutional Arrangement for appraisal of Schemes and Projects; Original Cost Estimates (OCE); Time frame for appraisal and approval of schemes and projects – Appraisal and approval of public-funded schemes and projects – Generic structure of a Detailed Project Report (DPR) – Format for EFC/SFC memorandum for appraisal of projects. (Theory only)

PAPER – 403(A): INSURANCE MANAGEMENT

(Generic elective)

(With effect from the academic year 2021–22)

Course Objectives

Co 1 : Perceive the concept of RM, Socio-economic relevance, regulatory framework and latest developments in Insurance sector.

Co 2 : Acquire knowledge on various types of life insurance policies and the terminology relating to the concept of insurance.

Co 3 : Understand different types of non-life insurance with reference to marine and fire insurance and their progress and claim settlement thereon.

Co 4: Seek awareness on miscellaneous insurance including health, personal accident crop insurance and practical problems in implementation and claim settlement.

Co 5: Understand different aspects of management of investments of funds by LIC and GIS, Legal Restrictions on their investments. Also exhibit the global insurance scenario and future Prospects of India insurance.

Unit – I Introduction**:** Concept of Risk – Types of risk – Risk management – Objectives – Methods of handling risk – Concept of insurance – fundamental principles – Socio–economic significance –Regulatory framework– Growth and Development of Insurance in India – Emerging challenges. (Theory only)

Unit – II Types of Insurance: Life insurance – Essentials of life insurance contract – Classification of life insurance policies – Re–insurance – Double insurance – Assignment – Surrender value – Settlement of Claims – Progress of life insurance business in India – Role of LIC. (Theory only)

Unit – III Non–Life Insurance: Marine insurance – Marine losses – Types of marine insurance Settlement of claims – Fire insurance – Nature – Uses – Settlement of claims – Progress of fire insurance. (Theory only)

Unit – IV Investment of funds: Principles– Types of investment – Factors influencing investment decisions – Legal restrictions on investments by LIC. (Theory only)

Unit – V Miscellaneous Insurance: Health insurance and Personal accident Insurance – objectives – uses – Crop insurance – salient features – Uses – Operation of crop insurance scheme – Practical problems (Theory only)

REFERENCE BOOKS:

PAPER – 403(B): PERSONALITY DEVELOPMENT AND SOFT SKILLS

(Generic elective)

(With effect from the academic year 2021–22)

Course objectives (COBs):

COB1: Familiarize with the theories of personality including sick and healthy personalities.

COB2: Dramatize the processes involved in effective reading, listening, messaging and feedback.

COB3: Develop the skills for coaching, mentoring, persuading and change making.

COB4: Develop the skills to be lead leader, chair the meeting, problem solver, conflict resolver and Negotiator.

COB5: Develop self esteem and build positive attitude and personality.

Unit–I Foundations of personality development (PD): Concept of Personality – Theories of personality: Psycho-dynamic theory - Trait theory – Big-5 Theory; Personality Determinants: Physical, social, educational, family, intellectual and emotional determinants; Causes for sick personality and healthy Personality. (Theory only)

Unit-II Self-awareness skills: Self-awareness and management; communicating: Sending inter personal messages – Listening and reading non-verbal messages –Providing feedback. (Theory only)

Unit-III Motivating: Goal setting skills – Coaching -Counselling and Mentoring – Empowering people through delegation; Leading: Politicking - Persuading - Applying leadership styles – Managing Change. (Theory only)

Unit- IV Teaming skills: Working with teams – Running meetings – Valuing diversity: Problem solving: Ethical decision making - Creative problem solving – Resolving conflicts – Negotiation. (Theory only)

Unit- V Self-esteem skills: Characteristics – Causes of low self-esteem – Steps to build positive self-esteem; Attitude: Steps in building positive attitude; Interpersonal skills; Steps in developing positive Personality. (Theory only)

REFERENCE BOOKS:

M.Com (FM) IV Semester

PAPER – 403(C): INTERNATIONAL ACCOUNTING AND REPORTING

(Generic Elective)

(With effect from the academic year 2021–22)

Course Objectives:

- To provide the conceptual knowledge on international accounting and its status.
- To impart the knowledge on international accounting standards.
- To provide knowledge on combination and consolidation of international business.
- To comprehend the skills to analyse the international financial statements.
- To enable the students to understand financial reporting and disclosure practices of international business.

Unit –I International Accounting: concept –nature – scope– importance – international audit types– Status of International Accounting in select countries. (Theory only)

Unit– II International Accounting Standards– Concept – Objectives– Need for harmonization– IFRS and Indian GAAP– Global convergence accounting – Need for Convergence – Benefits and challenges of Convergence (Theory only)

Unit – III International Business Combinations and Consolidations – Concept – Need for consolidations Motives of combinations –Accounting treatment of combinations– Consolidation techniques– Mechanics of Consolidations. (Theory only)

Unit–IV International Financial Statement Analysis– Concept – Need for financial statement analysis– techniques – Complexities in analysis of global financial statements– Challenges and Opportunities in cross border analysis. (Theory only)

Unit –V International Financial Reporting and Disclosure – Introduction– Need for Transnational reporting and disclosure– Developments of disclosure – Reporting and disclosure practices; Segment Disclosure, Corporate governance disclosure.(Theory only)

REFERENCE BOOKS:

1. Mohapatra, A.K.Das "International Accounting, prentice Hall of Indian Pvt.Ltd. New Delhi.

M.Com (FM) IV Semester
PAPER – 403(D): GST AND CUSTOMS DUTY
(With effect from the academic year 2021–22)

Course Objectives (COBs):

1. Outline the concepts of GST, its applicability, features and objectives.
2. Look into the registration procedures and return types under GST.
3. Exemplify about the supply of goods and services along with valuation.
4. Draft the eligibility for ITC by learning the concepts of ITC.
5. Ascertain customs duty and find out its assessable value.

Unit–I Introduction: Concept of GST – Structure of GST – Features of CGST, SGST, UTGST, and IGST Acts – Objectives of GST – VAT vs. GST – Benefits of GST – Applicability of GST – Exemptions from GST – Rates of GST (Theory only).

Unit–II Registration under GST: Persons liable and persons not–liable for registrations; Types of dealers in GST – Deemed registration – Registration process for new applicants – Cancellation of registration and revocation; Reverse Charge Mechanism; Returns under GST: Person liable to pay GST– Computation of GST – Liability and payment of GST –Types of GST returns– Revision of GST returns – Penalty/Late fee – Refund of GST (Theory and problems).

Unit–III Supply of goods and services:Scope of supply: Types of supply based on location, combination, and recipient and tax treatment – Time of Supply – Place of Supply – Value of Supply (Theory and problems).

Unit–IV Input Tax Credit (ITC): Concept – Eligibility for taking Input Tax Credit (ITC)–Utilization of ITC – Conditions for taking ITC – Input Tax Credit in special circumstances – Distribution of ITC by Input Service Distributor (ISD) – Computation of ITC (Theory and problems).

Unit–V Customs duty: Definitions–Circumstances of levy of customs duties – Types of customs duties – Exemption from customs duties – Import procedure under customs –Export Procedure under customs – Method of valuation for customs – Calculation of assessable value – Calculation of custom duty (Theory and problems).

PAPER –405(B) :BUSINESS ETHICS
(Open elective)
(With effect from the academic year 2021–22)

Course Objectives (COBs):

1. Learn the basic concepts of business ethics.
2. Explore the important theories of ethics.
3. Exemplify about ethical decision making business.
4. Investigate into Globalisation and business ethics.
5. Illustrate about creating ethical organisations.

UNIT – I Business Ethics: Meaning, Principles of Business Ethics – Evolution and Development of Business Ethics – Importance and Need for Business Ethics – Significance of Business Ethics – Values and Ethics in Business – Code of Ethics .(Theory only)

UNIT – II Nature and some important Theories of Ethics – Sources of Business Ethics – Managing Ethics – Values, Ethics and Business Strategy – Ethical issues and Dilemmas in Business – Sources of Ethical Problems – Improving Ethics in Business – Theory of Ethical Egoism – Theory of Ethical Utilitarianism – Theory of Egalitarianism. (Theory only)

UNIT – III Ethical Decision making in Business – Ethical Decision making with Cross–holder conflicts and competition – Applying Moral Philosophy to Ethical Decision–making – Factors influencing Ethical Decision making – A framework of Ethical Decision–making – Using the Ethical decision making framework to improve Ethical decisions.(Theory only)

UNIT – IV Globalisation and Business Ethics – History of Globalisation – Growth of Global Corporations – Factors facilitating Globalisation – Business Ethics in Global Economy – Ethical perceptions and International Business – Global Values – Role of Ethics in International Business. (Theory only)

UNIT – V Creating an Ethical Organisation – Human nature and unethical behaviour in organisations – Code of conduct – Code of Ethics vs. Code of Conduct – Ethics Committees – Ethics Communication Systems – Ethics Training Programming – Disciplinary system – System to monitor and enforce Ethical Standards.(Theory only)

REFERENCE BOOKS:

SVU COLLEGE OF PHARMACEUTICAL SCIENCES

DEPARTMENT OF PHARMACY

Course

B. PHARMACY PROGRAMME (Self Supporting Course)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

B. PHARMACY PROGRAMME

(PCI Syllabus)

Choice based credit system (CBCS) Pattern

About the Department

The Pharmacy course was started in 2006 in the department of Biochemistry. The Pharmacy department was established in 2016, to promote advanced science and research in pharmaceutical sciences and to cater to the needs of the student community of A.P. in general and of the Rayalaseema region. The courses offered by the department are M.Pharmacy in 2006, B.Pharmacy in 2013 and PhD in 2015 and these are self supporting courses. Department has basic research facilities which include equipment like Centrifuges Spectrophotometers and required for carrying out research.

Vision

- To impart quality and value embedded education and research in Pharmaceutical Sciences.
- To create technologically superior and ethically strong global manpower, in the arena of Pharmacy Profession.
- Carving the youth as dynamic, competent, valued and knowledgeable Professionals of Pharmacy field.

Mission

- Transforming Students into Full-fledged Pharmacists and participate actively in the field of Pharmacy.
- Promoting Quality Research in Emerging Areas of Pharmaceutical Sciences.
- To instill scientific zeal and develop skilled human resource to meet contemporary challenges in Pharmacy Profession.
- To facilitate young adult learners with opportunities to hone their ethics and leadership potential.
- Imparting technical education that encourages Independent thinking, develops strong domain of knowledge, hones contemporary skills and Positive attitudes towards holistic growth of young minds.
- Evolving the Institution into a Center of Academic and Research Excellence in Pharmaceutical Education and lead the field of pharmaceutical sciences and pharmacy practice with the mission of strengthening the healthcare of the country.

Programme Specific Outcomes

At the end of successful completion of programme, a graduate will

- Have adequate knowledge and scientific information regarding basic principles of Pharmaceutical & Medicinal Chemistry, Pharmaceutics including Cosmeticology, Pharmacology, and Pharmacognosy including herbal medicines.
- Be able to develop and assure the quality of various pharmaceutical dosage forms including those of herbal origin as per standards of official books, WHO and other regulatory agencies like USFDA, MHRA etc.
- Be able to counsel the patients leading to physical and social well being and work as a team member of clinical trial.
- Be able to do product detailing, marketing, distribution and selling of pharmaceutical products.
- Be able to perform experimental procedures as per laboratory standards in the area of Pharmaceutics, Pharmaceutical Chemistry, Pharmacology and Pharmacognosy..
- Be able to perform research on various medical aspects and implement the Pharmaceutical knowledge in formulating the best suitable dosage form to provide high quality medicines to the society.

Programme Objectives

- To uphold all laws, regulations, safety and ethical standards that apply to the experimental procedures in animals and the environment
- To impart adequate hands-on training in various animal models and determine the effects of drugs using animal models
- To provide practical inputs in pharmacokinetic studies of various drugs and formulations in animals to establish in-vitro and in-vivo correlations
- Acquire practical knowledge in various analytical techniques used in molecular biology
- To train students in using suitable statistical methods for interpretation of results
- To prepare the students in teamwork, lifelong learning and continuous improvement

Programme Outcomes

After the completion of the B.Pharmacy Programme the students will be able to,

- Develop an understanding for the need of pharmaceutical sciences and technology towards giving quality life to people in society through the quality of medicines.
- Apply the knowledge and skills gained through education to gain recognition in professional course and society.
- Create awareness in society about the effective and safe use of medicines.
- Act efficiently as a leader in the diverse areas of the profession to demonstrate the ability to plan and implement professional activities.
- Provide a practical knowledge of the basic pharmaceutical sciences and the skill, acquire to deal with problems in pharmaceutical field
- Develop ability for in-depth information and critical thinking in order to identify, formulate and solve the issues related to Pharmaceutical Industry, Regulatory Agencies, Hospital Pharmacy & clinical Pharmacy for better services to the community.
- Identify the goals and regulations involved in the drug discovery and development, manufacture, distribution and sale of medicines and develop problem-based learning approach and analytical thinking in his/her academic and professional life.

- Update the knowledge through continuous learning to face the challenges for better services to the community.
- Design and develop process to perform experiments in various pharmaceutical areas like Pharmacognosy, Pharmaceutical Chemistry including Analytical Chemistry, Pharmaceutical Biotechnology, Pharmacology, Formulation and Development.
- Fill the gap with other health care communities to provide innovative solutions for the purpose of maintain public health.
- Develop team spirit for the development of student profession to the social needs and professional ethics.
- Understand, analyze and communicate the value of their professional roles in society (e.g. health care professionals, promoters of health, educators, managers, employers, employees).
- Create a talent pool by involving students in research projects and to make students to undertake research projects under faculty guidance for publication.
- Foster ambitious desire among students to undertake higher studies, career growth and life-long learning.

Programme Educational Objectives

- To produce Pharmacy graduates with strong fundamental concepts and high technical competence in pharmaceutical sciences and technology.
- To provide students with a strong and well defined concepts in the¬ various fields of pharmaceutical sciences viz., Pharmaceutics, Pharmaceutical chemistry, Pharmacognosy, Pharmacology and Pharmacy Practice according to the requirement of pharmaceutical industries, community and hospital pharmacy.
- To develop a sense of teamwork and awareness amongst students¬ towards the importance of interdisciplinary approach for developing competence in solving complex problems in the area of Pharmaceutical Sciences.
- To encourage the students to participate in life-long learning¬ process for a highly productive career and to relate the concepts of Pharmaceutical Sciences towards serving the cause of the society

SEMESTER I

Course Code	Course Title	No of Hours Per week	No of Credits
BP101T	Human Anatomy and Physiology I– Theory	04	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

1. Understanding the gross morphology, structure and functions of various organs of the human body.
2. Knowledge on various homeostatic mechanisms and their imbalances.
3. Identification of the various tissues and organs of different systems of human body.
4. Understanding the coordinated working pattern of different organs of each system.

Course Content:

Unit I

Introduction to human body

Definition and scope of anatomy and physiology, levels of structural organization and body systems, basic life processes, homeostasis, basic anatomical terminology.

Cellular level of organization

Structure and functions of cell, transport across cell membrane, cell division, cell junctions. General principles of cell communication, intracellular signaling pathway activation by extracellular signal molecule, Forms of intracellular signaling: a) Contact-dependent b) Paracrine c) Synaptic d) Endocrine

Tissue level of organization

Classification of tissues, structure, location and functions of epithelial, muscular and nervous and connective tissues.

Unit II

Integumentary system: Structure and functions of skin

Skeletal system

Divisions of skeletal system, types of bone, salient features and functionsof bones of axial and appendicular skeletal system Organization of skeletal muscle, physiology of muscle contraction, neuromuscular junction

Joints

Structural and functional classification, types of joints movements and its articulation

Unit III

Body fluids and blood

Body fluids, composition and functions of blood, hemopoeisis, formation of hemoglobin, anemia, mechanisms of coagulation, blood grouping, Rh factors, transfusion, its significance and disorders of blood, Reticulo endothelial system.

Lymphatic system

Lymphatic organs and tissues, lymphatic vessels, lymph circulation and functions of lymphatic system

Unit IV

Peripheral nervous system:

Classification of peripheral nervous system: Structure and functions of sympathetic and parasympathetic nervous system. Origin and functions of spinal and cranial nerves.

Special senses

Structure and functions of eye, ear, nose and tongue and their disorders.

Unit V

Cardiovascular system

Heart – anatomy of heart, blood circulation, blood vessels, structure and functions of artery, vein and capillaries, elements of conduction system of heart and heart beat, its regulation by autonomic nervous system, cardiac output, cardiac cycle. Regulation of blood pressure, pulse, electrocardiogram and disorders of heart.

Text Books:

1. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.
2. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York
3. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co,Riverview,MI USA
4. Text book of Medical Physiology- Arthur C,GuytonandJohn.E. Hall. Miamisburg, OH, U.S.A.
5. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.

Course Outcomes:

After completion of the course the student able to

1. Know the fundamental knowledge on the structure and functions of the various systems of the human body.
2. Understanding all the homeostatic mechanisms of the body
3. Understand the relationship of anatomy with various disciplines of pharmacy.
4. Understand the dynamic constancy of the body, cell and its components, tissue and types of tissue, blood, and its function and composition.
5. Can understand theimbalance in the normal functioning of various systems under various pathological settings.
6.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2	2	2	2	2	2	2	1	2	1	1	1	1
CO3	3	3	3	2	3	3	3	3	3	3	3	3
CO4	2	2	2	1	1	2	2	2	2	2	1	1
CO5	2	2	3	1	3	2	3	2	3	3	1	2

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP102T	Pharmaceutical Analysis I–Theory	04	04
Sessional Marks: 25		**End Semester Examination Marks : 75**	

Objectives:

1. Understand the principles of volumetric and electro chemical analysis
2. Carryout various volumetric and electrochemical titrations
3. Develop analytical skills

Course Content:

Unit I

UNIT-I (a) Pharmaceutical analysis- Definition and scope i) Different techniques of analysis ii) Methods of expressing concentration iii) Primary and secondary standards. iv) Preparation and standardization of various molar and normal solutions- Oxalic acid, sodium hydroxide, hydrochloric acid, sodium thiosulphate, sulphuric acid, potassium permanganate and ceric ammonium sulphate (b)Errors: Sources of errors, types of errors, methods of minimizing errors, accuracy, precision and significant figures (c)Pharmacopoeia, Sources of impurities in medicinal agents,limit tests.

UNIT-II • Acid base titration: Theories of acid base indicators, classification of acid base titrations and theory involved in titrations of strong, weak, and very weak acids and bases, neutralization curves

• Non aqueous titration: Solvents, acidimetry and alkalimetry titration and estimation of Sodium benzoate and Ephedrine HCl

UNIT-III • Precipitation titrations: Mohr's method, Volhard's, Modified Volhard's, Fajans method, estimation of sodium chloride.

•Complexometric titration: Classification, metal ion indicators, masking and demasking reagents, estimation of Magnesium sulphate, and calcium gluconate. •Gravimetry: Principle and steps involved in gravimetric analysis. Purity of the precipitate: co-precipitation and post precipitation, Estimation of barium sulphate.

• Basic Principles,methods and application of diazotisation titration.

UNIT-IV Redox titrations (a) Concepts of oxidation and reduction (b) Types of redox titrations (Principles and applications) Cerimetry, Iodimetry, Iodometry, Bromatometry, Dichrometry, Titration with potassium iodate.

UNIT-V • Electrochemical methods of analysis

•Conductometry- Introduction, Conductivity cell, Conductometric titrations, applications.

•Potentiometry - Electrochemical cell, construction and working of reference (Standard hydrogen, silver chloride electrode and calomel electrode) and indicator electrodes (metal electrodes and glass electrode), methods to determine end point of potentiometric titration and applications.

• Polarography - Principle, Ilkovic equation, construction and working of dropping mercury electrode and rotating platinum electrode, applications.

Text Books:

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry
4. Bentley and Driver's Textbook of Pharmaceutical Chemistry
5. John H. Kennedy, Analytical chemistry principles 6. Indian Pharmacopoeia.

Course Outcomes:

After completion of the course, the student able to

1. It gives knowledge about the fundamental methodology to prepare different strength of solutions.
2. It facilitate the students to predict the sources of mistakes and errors.
3. It also helps to develop the fundamentals of volumetric analytical skills.
4. It provides the basic knowledge in the principles of electrochemical analytical techniques
   The student will be provided with the skillto improve by the course content in terms of analytical techniques to perform the estimation of different category drugs.
5. Develop insight into the fundamental chemical principlesthat facilitate the analytical estimations.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	1	2	2	2	2	2	1	1	1

CO5	3	3	2	1	3	3	3	2	3	1	1	1

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP103 T	Pharmaceutics-I(Theory)	04	04
Sessional Marks: 25		**End Semester Examination Marks : 75**	

Objectives:

1. Know the history of profession of pharmacy
2. Understand the basics of different dosage forms, pharmaceutical incompatibilities and pharmaceutical calculations
3. Understand the professional way of handling the prescription
4. Preparation of various conventional dosage forms.

Course Content:

Unit I

Historical background and development of profession of pharmacy: HistoryofprofessionofPharmacy inIndianinrelationtopharmacyeducationindustryand organization, Pharmacy as a career, Pharmacopoeias: Introduction totheIP, BP,USP and ExtraPharmacopoeia.

Dosageforms: Introductiontodosageforms,classificationanddefinitions

Prescription: Definition, Parts of prescription, handling of Prescription andErrorsin prescription.

Posology: Definition, Factors affecting posology. Pediatric dose calculationsbasedonage,body weight and bodysurfacearea.

Unit II

Pharmaceutical calculations: Weights and measures – Imperial &Metricsystem, Calculations involving percentage solutions, alligation, proof spirit and isotonic solutions based on freezing pointandmoleweighteightt.

Powders: Definition, classification, advantages and disadvantages, Simple &compound powders – official preparations, dusting powders, effervescent,efflorescentandhygroscopicpowders,eutecticmixtures.Geometricdilutions.

Liquid dosage forms: Advantages and disadvantages of liquid dosage forms.Excipients used in formulation of liquid dosage forms. Solubility enhancementtechniques

Unit III

Monophasic liquids: Definitions and preparations of Gargles, Mouthwashes,Throat Paint, Eardrops, Nasal drops, Enemas, Syrups, Elixirs, Liniments andLotions.

Biphasicliquids:

Suspensions: Definition, advantages and disadvantages, classifications,Preparation of suspensions; Flocculated and Deflocculated suspension &stabilityproblemsand methods to overcome.

Emulsions: Definition, classification, emulsifying agent, test for the identificationof type of Emulsion, Methods of preparation & stability problems and methods toovercome.

Unit IV

Suppositories: Definition, types, advantages and disadvantages, types of bases,methods of preparations. Displacement value & its calculations, evaluation ofsuppositories.

Pharmaceutical incompatibilities: Definition, classification, physical, chemicalandtherapeuticincompatibilities with examples.

Unit V

Semisolid dosage forms: Definitions, classification, mechanisms and factorsinfluencing dermal penetration of drugs. Preparation of ointments, pastes, creamsand gels. Excipients used in semi solid dosage forms. Evaluation of semi soliddosagesforms

Text Books:

H.C. Ansel et al., Pharmaceutical Dosage Form and Drug Delivery System, Lippincott Williams and Walkins, New Delhi.

2. Carter S.J., Cooper and Gunn's-Dispensing for Pharmaceutical Students, CBS publishers, New Delhi.

3. M.E. Aulton, Pharmaceutics, The Science& Dosage Form Design, Churchill Livingstone, Edinburgh. 4. Indian pharmacopoeia.

5. British pharmacopoeia.

6. Lachmann. Theory and Practice of Industrial Pharmacy,Lea&Febiger Publisher, The University of Michigan.

7. Alfonso R. Gennaro Remington. The Science and Practice of Pharmacy, Lippincott Williams, New Delhi.

11. Dilip M. Parikh: Handbook of Pharmaceutical Granulation Technology, Marcel Dekker, INC, New York.

12. Francoise Nieloud and Gilberte Marti-Mestres: Pharmaceutical Emulsions and Suspensions, Marcel Dekker, INC, New York.Dispensing Pharmacy, Cooper &Gunns CBS, Publ. and Distributors New Delhi – (2008).

13 Dispensing Pharmacy, R.M Metha, 2006 Vallabh Publication, New Delhi.

REFERENCES

1. Text Book of Pharmaceutics, E.A. Rawlins, Bentley"s ELBS publ.

2. Essential dosage calculations -Hospital Pharmacy. Lorria& William, William Hassan.

Course Outcomes:

After Completion of the course the student able to

1. Recognize the formulation aspects of different dosage forms;
2. Formulate different types of dosage forms;
3. Appreciate the importance of good formulation for effectiveness.
4. Do different pharmaceutical calculation involved in formulation.
5. Gain basic knowledge of various Pharmacopoeias and their significance with respect to the various fields of pharmaceutical sciences.

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP104T	Pharmaceutical Inorganic Chemistry–Theory	04	04
Sessional Marks: 25	**End Semester Examination Marks : 75**		

Objectives:

1.Knowledge on the history and concept of pharmacopoeia and its editions.

2**.** Understanding the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals.

3. The medicinal and pharmaceutical importance of inorganic compounds.

4. Knowledge on various anions and cations of different pharmaceutical inorganic compounds.

5. Knowledge on methods to prepare inorganic pharmaceuticals.

Course Content:

UNIT I

Impurities in pharmaceutical substances:

History of Pharmacopoeia, Sources and types of impurities, principle involved in the limit test for Chloride, Sulphate, Iron, Arsenic, Lead and Heavy metals, modified limit test for Chloride and Sulphate.

General methods of preparation, assay for the compounds superscripted with asterisk (*), properties and medicinal uses of inorganic compounds belonging to the following classes.

UNIT II

Acids, Bases and Buffers

Buffer equations and buffer capacity in general, buffers in pharmaceutical systems, preparation, stability, buffered isotonic solutions, measurements of tonicity, calculations and methods of adjusting isotonicity.

Major extra and intracellular electrolytes

Functions of major physiological ions, Electrolytes used in the replacement therapy: Sodium chloride*, Potassium chloride, Calcium gluconate* and Oral Rehydration Salt (ORS), Physiological acid base balance.

Dental products

Dentifrices, role of fluoride in the treatment of dental caries, Desensitizing agents, Calcium carbonate, Sodium fluoride, and Zinc eugenol cement.

UNIT III

Gastrointestinal agents Acidifiers

Ammonium chloride* and Dil. HCl

Antacid

Ideal properties of antacids, combinations of antacids, Sodium Bicarbonate*, Aluminum hydroxide gel, Magnesium hydroxide mixture

Cathartics

Magnesium sulphate, Sodium orthophosphate, Kaolin and Bentonite

Antimicrobials

Mechanism, classification, Potassium permanganate, Boric acid, Hydrogen peroxide*, Chlorinated lime*, Iodine and its preparations.

UNIT IV

Miscellaneous compounds Expectorants

Potassium iodide, Ammonium chloride*.

Emetics

Copper sulphate*, Sodium potassium tartarate Haematinics: Ferrous sulphate*, Ferrous gluconate

Poison and Antidote

Sodium thiosulphate*, Activated charcoal, Sodium nitrite333

Astringents

Zinc Sulphate, Potash Alum

UNIT V

Radiopharmaceuticals

Radio activity, Measurement of radioactivity, Properties of α, β, γ radiations, Half life, radio isotopes and study of radio isotopes - Sodium iodide I131 , Storage conditions, precautions & pharmaceutical application of radioactive substances.

Text Books

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London, 4 th edition.
2. A.I. Vogel, Text Book of Quantitative Inorganic analysis
3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry, 3 rd Edition
4. M.L Schroff, Inorganic Pharmaceutical Chemistry
5. Bentley and Driver's Textbook of Pharmaceutical Chemistry
6. Anand&Chatwal, Inorganic Pharmaceutical Chemistry
7. Indian Pharmacopoeia.

Course Outcomes:

1.To understand the history and concept of pharmacopoeia and its editions.

2. Knowledge about the sources of impurities and methods to determine the impurities in inorganic pharmaceuticals.

3. Identification of limit tests of different pharmaceutical inorganic compounds.

4. Understand the method to prepare inorganic pharmaceuticals.

5. Justify the medicinal importance of acidifiers, antacids, cathartics and antimicrobial agents as gastrointestinal agents in addition to the awareness on handling and applications of radiopharmaceuticals.

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP105T	Communication skills– Theory	02	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

Objectives:

1. To enable students speak effectively in formal and informal situation.
2. To equip the students with a wide range of vocabulary,so as to enable them use language more effectively.
3. To understand the strategies of the interviews to facilitate better response during the"placement" interviews.
4. To understand the characteristics of successful group discussions.
5. To identify areas of evaluation of GDs(group discussion) conducted by organization as part of the selection presentation.
6. Effectively manage the team as a team player.

Course Content:

Unit I

Communication Skills: Introduction, Definition, The Importance of Communication, The Communication Process – Source, Message, Encoding, Channel, Decoding, Receiver, Feedback, Context

Barriers to communication: Physiological Barriers, Physical Barriers, Cultural Barriers, Language Barriers, Gender Barriers, Interpersonal Barriers, Psychological Barriers, Emotional barriers

Perspectives in Communication: Introduction, Visual Perception, Language, Other factors affecting our perspective - Past Experiences, Prejudices, Feelings, Environment**Unit Unit II**

Elements of Communication: Introduction, Face to Face Communication - Tone of Voice, Body Language (Non-verbal communication), Verbal Communication, Physical Communication

Communication Styles: Introduction, The Communication Styles Matrix with example for each -Direct Communication Style, Spirited Communication Style, Systematic Communication Style, Considerate Communication Style

Unit III

Basic Listening Skills: Introduction, Self-Awareness, Active Listening, Becoming an Active Listener, Listening in Difficult Situations

Effective Written Communication: Introduction, When and When Not to Use Written Communication - Complexity of the Topic, Amount of Discussion' Required, Shades of Meaning, Formal Communication

Writing Effectively: Subject

Unit IV

Interview Skills: Purpose of an interview, Do's and Dont's of an interview

Giving Presentations: Dealing with Fears, Planning your Presentation, Structuring Your Presentation, Delivering Your Presentation, Techniques of Delivery

Unit V

Group Discussion: Introduction, Communication skills in group discussion, Do's and Dont's of group discussion

Text Books:

1. Basic communication skills for Technology, Andreja. J. Ruther Ford, 2nd Edition, Pearson Education, 2011
2. Communication skills, Sanjay Kumar, Pushpalata, 1stEdition, Oxford Press, 2011
3. Organizational Behaviour, Stephen .P. Robbins, 1stEdition, Pearson, 2013
4. Brilliant- Communication skills, Gill Hasson, 1stEdition, Pearson Life, 2011
5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5thEdition, Pearson, 2013
6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010
7. Communication skills for professionals, Konarnira, 2ndEdition, New arrivals – PHI, 2011
8. Personality development and soft skills, Barun K Mitra, 1stEdition, Oxford Press, 2011
9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning indiapvt.ltd, 2011
10. Soft skills and professional communication, Francis Peters SJ, 1stEdition, Mc Graw Hill Education, 2011
11. Effective communication, John Adair, 4thEdition, Pan Mac Millan,2009
12. Bringing out the best in people, Aubrey Daniels, 2ndEdition, Mc Graw Hill, 1999

Course Outcomes:

After Completion of the course the student able to

1. To equip students with Pre-presentations and to understand the structure of a good presentation and devise various techniques for delivering a successful presentation.
2. To help students overcome stage fear and take questions.
3. To enable the students to become global citizens.
4. This course will prepare the young pharmacy student to interact effectively with doctors, nurses and other health workers.
5. At the end of the course the students will get the soft skills set to work cohesively with the team as a team player and add value to the pharmaceutical business.

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP106RBT	Remedial Biology –Theory	02	02
Sessional Marks:15End Semester Examination Marks :35			

Objectives: The student shall be able to know

1.Know the classification and salient features of five kingdoms of life.

2.Understand the basic components of anatomy and physiology of plant.

3.Know understand the basic components of anatomy and physiology animal with special reference to human.

Course Content:

Unit I

Living world:

Definition and characters of living organisms.
Diversity im the living world.
Binomial nomenclature
Five kingdoms of life and basis of classification salient features of Monera, Protista, Fungi, Animalia and Plantae, Virus.

MORPHOLOGY OF FLOWERING PLANTS

Morphology of different parts of flowering plants-Root, stem, inflorescence, flower, leaf, fruit, seed.
General anatomy of Root, stem, leaf of monocotyledons and dicotyledons.

Unit II

Body fluids and circulation

Composition of blood, blood groups, coagulation of blood.
Composition and functions of lymph.
Human circulatory system.
Structure of human heart and blood vessels.
Cardiac cycle, Cardiac output and ECG.

Digestion and Absorption

Human alimentary canal and digestive glands.

Role of digestive enzymes.

Digestion, absorption and assimilation of digested food.

Breathing and respiration

Human respiratory system.

Mechanism of breathing and its regulation.

Exchange of gases, transport of gases, and regulation of respiration.

Respiratory volumes.

Unit III

Excretory products and their elimination

Modes of excretion.

Human excretory system-structure and function.

Urine formation.

Renin angiotensin system.

Neural control and coordination

Definition and classification of nervous system.

Structure of a neuron.

Generation and conduction of nerve impulse.

Structure of brain and spinal cord.

Functions of cerebrum, cerebellum, hypothalamus, and medulla oblongata.

Chemical coordination and regulation

Endocrine glands and their secretions.

Functions of hormones secreted by endocrine glands.

Human Reproduction

Parts of female reproductive system.

Parts of male reproductive system.

Spermatogenesis and Oogenesis.

Menstrual cycle.

Unit IV

Plants and mineral nutrition:

Essential mineral, macro and micro nutrients.

Nitrogen metabolism, Nitrogen cycle, Biological nitrogen fixation.

Photosynthesis

Autotrophic nutrition, photosynthesis, photosynthetic pigments, Factors affecting photosynthesis.

Unit V

Plant respiration: Respiration, glycolysis, fermentation (anaerobic).

Plant growth and development

Phases and rate of plant growth, Condition of growth, Introduction to plant growth regulators.

Cell – The unit of life

Structure and functions of cell and cell organelles. Cell division.

Tissues

Definition, types of tissues, location and functions.

Text books

a. Text book of Biology by S.B. Gokhale.
b. A Text book of biology by Dr.Thulajappa and Dr.Seetaram.

Reference Books

a. A text book of Biology by B.V. Sreenivasa Naidu.
b. A text book of biology by Naidu and Murthy.
c. Botany for degree students by A.C. Dutta.
d. Outlines of Zoology by M. Ekambaranathaayyer and T.N. Ananthakrishnan.
e. A manual for pharmaceutical Biology practical by S.B. Gokhale and C.K. Kokate.

Course Outcomes:

After Completion of the course the student able to

1.Know the kingdoms of life.

2.Know the body fluids, absorption, digestion, respiration.

3.Know the excretory products, neural control, chemical coordination, and human reproduction.

4.Know the Nutrition in plants and photosynthesis.

5.Know the respiration in plants, cell, and tissues.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	1	1	1	1	1	1	1	1	1
CO2	1	1	1	1	1	1	1	1	2	1	1	1
CO3	1	1	1	1	1	1	1	1	2	1	1	1
CO4	1	1	1	1	1	1	1	1	2	1	1	1
CO5	1	1	1	1	1	1	1	1	1	1	1	1

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP106RMT	Remedial Mathematics– Theory	02	02
Sessional Marks:15	**End Semester Examination Marks :35**		

Objectives:

1. Know the theory and their application in Pharmacy

2. Solve the different types of problems by applying theory

3. Appreciate the important application of mathematics in Pharmacy

Course Content:

Unit-I

Partial fraction

Introduction, Polynomial, Rational fractions, Proper and Improper fractions, Partial fraction , Resolving into Partial fraction, Application of Partial Fraction in Chemical Kinetics and Pharmacokinetics

Logarithms

Introduction, Definition, Theorems/Properties of logarithms, Common logarithms, Characteristic and Mantissa, worked examples, application of logarithm to solve pharmaceutical problems.

Function*:*

Real Valued function, Classification of real valued functions,

Limits and continuity :

Introduction , Limit of a function, Definition of limit

Unit-II

Matrices and Determinant:

Introduction matrices, Types of matrices, Operation on matrices, Transpose of a matrix, Matrix Multiplication, Determinants, Properties of determinants , Product of determinants, Minors and co-Factors, Adjoint or adjugate of a square matrix , Singular and non-singular matrices, Inverse of a matrix, Solution of system of linear of equations using matrix

method, Cramer's rule, Characteristic equation and roots of a square matrix, Cayley–Hamilton theorem,Applicationof Matrices in solving Pharmacokinetic equations

Unit- III

Calculus

Differentiation : Introductions, Derivative of a function, Derivative of a constant, Derivative of a product of a constant and a function , Derivative of the sum or difference of two functions, Derivative of the product of two functions (product formula), Derivative of the quotient of two functions (Quotient formula) – **Without Proof**, Derivative of *xnw.r.t*x,where*n*is any rational number, Derivative of *ex,*, Derivative of loge *x ,* Derivative of *ax* ,Derivative of trigonometric functions from first principles (without Proof), Successive Differentiation, Conditions

Unit- IV

Analytical Geometry

Introduction: Signs of the Coordinates, Distance formula,

Straight Line : Slope or gradient of a straight line, Conditions for parallelism and perpendicularity of two lines, Slope of a line joining two points, Slope – intercept form of a straight line

Integration:

Introduction, Definition, Standard formulae, Rules of integration , Method of substitution, Method of Partial fractions, Integration by parts, definite integrals, application

Unit- V

Differential Equations : Some basic definitions, Order and degree, Equations in separable form , Homogeneous equations, Linear Differential equations, Exact equations, Application in solving Pharmacokinetic equations

Laplace Transform : Introduction, Definition, Properties of Laplace transform, Laplace Transforms of elementary functions, Inverse Laplace transforms, Laplace transform of derivatives, Application to solve Linear differential equations, Application in solving Chemical kinetics and Pharmacokinetics equations

Text Books

1. Differential Calculus by Shanthinarayan
2. Pharmaceutical Mathematics with application to Pharmacy by Panchaksharappa Gowda D.H.
3. Integral Calculus by Shanthinarayan
4. Higher Engineering Mathematics by Dr.B.S.Grewal

Course Outcomes:

1. This program shall create an awareness about the mathematical problems, to develop an statistical evaluation.
2. To adopt skills in identifying and solving problems.
3. Know the theory and their application in Pharmacy research
4. Solve the different types of problems by applying theory in drug discovery
5. Deal with mathematical correlations in pharmacokinetic modeling studies.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	1	1	1	1	2	1	3	1	1	1
CO2	1	2	1	1	2	1	3	1	3	1	2	1
CO3	2	2	2	1	2	2	2	2	3	2	1	2
CO4	1	2	2	1	1	2	2	2	3	2	1	1
CO5	2	2	1	1	1	1	2	1	3	1	1	2

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP107P	Human Anatomy and Physiology – Practical	04	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

Objectives:

1. Knowledge on various experiments related to special senses and nervous system.
2. Understanding the procedure for estimation of the various experiments related to the haemotology.
3. Perform and record the blood pressure, heart rate, pulse rate.
4. Knowledge on basic terminologies used in anatomy and physiology to identify body parts, directional terms, body planes and various organ system within human body.

Course Content:

1. Study of compound microscope.
2. Microscopic study of epithelial and connective tissue
3. Microscopic study of muscular and nervous tissue
4. Identification of axial bones
5. Identification of appendicular bones
6. Introduction to hemocytometry.
7. Enumeration of white blood cell (WBC) count
8. Enumeration of total red blood corpuscles (RBC) count
9. Determination of bleeding time
10. Determination of clotting time
11. Estimation of hemoglobin content
12. Determination of blood group.
13. Determination of erythrocyte sedimentation rate (ESR).
14. Determination of heart rate and pulse rate.
15. Recording of blood pressure.

Text Books:

6. Essentials of Medical Physiology by K. Sembulingam and P. Sembulingam. Jaypee brothers medical publishers, New Delhi.

7. Anatomy and Physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York
8. Physiological basis of Medical Practice-Best and Tailor. Williams & Wilkins Co,Riverview,MI USA
9. Text book of Medical Physiology- Arthur C,GuytonandJohn.E. Hall. Miamisburg, OH, U.S.A.
10. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA, U.S.A.
11. Textbook of Human Histology by Inderbir Singh, Jaypee brother's medical publishers, New Delhi.
12. Textbook of Practical Physiology by C.L. Ghai, Jaypee brother's medical publishers,New Delhi.

Course Outcomes:

After Completion of the course the student is able to

1. Differentiate the structures of the various systems of the human body.
2. Perform the experiments like blood cell count, hemoglobin content, bleeding and clotting time and various physiological Parameters theoretically and practically.
3. Identify the structural (microscopically and macroscopically) and functional details about different organ systems such as cardiovascular, lymphatic, digestive,and muscular system
4. Understand some simple clinical methods employed in thegeneral diagnosis of diseases.
5. Insight into the influence of a given disease condition on certain vital clinical parameters.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	2	2	2	2	2	2	2	2	2
CO2	2	2	2	2	2	2	1	2	1	2	1	1
CO3	3	3	3	2	3	3	3	3	3	3	3	3
CO4	2	2	2	1	1	2	2	2	2	2	1	1

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP108P	Pharmaceutical Analysis I – Practical	04	02
Sessional Marks: 15		**End Semester Examination Marks : 35**	

Objectives:

1. Thissubjects deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs

2. Knowledge on various type of titrations

3. Handling of physico-chemical equipment .

4. Calculation of molarity, normality, percentage puity etc.

Course Content:

I .Limit Test of the following

(1) Chloride

(2) Sulphate

(3) Iron

(4) Arsenic

II .Preparation and standardization of

(1) Sodium hydroxide

(2) Sulphuric acid

(3) Sodium thiosulfate

(4) Potassium permanganate

(5) Ceric ammonium sulphate

III .Assay of the following compounds along with Standardization of Titrant

(1) Ammonium chloride by acid base titration

(2) Ferrous sulphate by Cerimetry

(3) Copper sulphate by Iodometry

(4) Calcium gluconate by complexometry

(5) Hydrogen peroxide by Permanganometry

(6) Sodium benzoate by non-aqueous titration

(7) Sodium Chloride by precipitation titration

IV .Determination of Normality by electro-analytical methods

(1) Conductometric titration of strong acid against strong base

(2) Conductometric titration of strong acid and weak acid against strong base

(3) Potentiometric titration of strong acid against strong base

Text Books:

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, Stahlone Press of University of London

2. A.I. Vogel, Text Book of Quantitative Inorganic analysis

3. P. Gundu Rao, Inorganic Pharmaceutical Chemistry

4. Bentley and Driver's Textbook of Pharmaceutical Chemistry

5. John H. Kennedy, Analytical chemistry principles

6. Indian Pharmacopoeia.

Course Outcomes:

1. This course is designed to perform and get trained to the electro chemical tests like potentiometery, complexometery, polarimetery.

2. Hands on training on different titrations like complexometric titrations, precipitation titrations, redox titrations.

3.Under stand the process of limit test and procedures.

4.Gain knowledge on the determination of Normality, Molarity, Molality.

5. Understand the process how to prepare the solution and its standardization.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	1	2	2	2	2	2	1	1	1

CO3	3	3	3	2	3	3	3	2	3	2	2	2
CO4	3	3	3	2	3	3	3	3	3	2	2	1
CO5	3	3	2	2	3	3	3	2	3	1	1	1

3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP109P	Pharmaceutics I – Practical	04	02
Sessional Marks: 15		**End Semester Examination Marks : 35**	

OBJECTIVES;

1. Understand the basics of different dosage forms,
2. Know the importance pharmaceutical calculations.
3. Understanding Preparation and procedures of various conventional dosage forms;
4. Understanding pharmaceutical incompatibilities and their side-effects

Course Content:

Syrups

a) SyrupIP'66

b) CompoundsyrupofFerrousPhosphate BPC'68

2. Elixirs

a)Piperazinecitrateelixir

b)Paracetamolpediatric elixir

3. Linctus

a)TerpinHydrateLinctusIP'66

4. Solutions

b)IodineThroatPaint(MandlesPaint)

a) Strongsolutionofammoniumacetate

b) Cresolwithsoapsolution

c) Lugol'ssolution

5. Suspensions

a) Calaminelotion

b) MagnesiumHydroxidemixture

c) AluminimumHydroxidegel

6. Emulsions

a) TurpentineLiniment

b) Liquidparaffine emulsion

7. PowdersandGranules

a) ORSpowder(WHO)

b) Effervescentgranules

c) Dustingpowder

d) Divdedpowders

8. Suppositories

a) Glycerogelatinsuppository

b) Cocabutter suppository

c) ZincOxide suppository

9. Semisolids

a) Sulphurointment

b) Non-staining-iodineointmentwithmethylsalicylate

c) Carbopalgel

10. GarglesandMouthwashes

a) Iodinegargle

b) Chlorhexidinemouthwash

COURSE OUTCOMES:

1. This course is designed to impart a fundamental knowledge on the preparatory pharmacy with arts of preparing the different conventional dosage forms.
2. To understand the different pharmaceutical calculation involved in formulation;
3. Practical knowledge on formulation procedure of different dosage forms;

4. Highlights the Practical allowance to formulate different types of dosage forms;and
5. Gain Knowledge on criteria to appreciate the good formulation for effectiveness.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Code	Course Title	No of Hours Per week	No of Credits
BP110P	Pharmaceutical Inorganic Chemistry– Practical	04	02
Sessional Marks: 15	**End Semester Examination Marks :35**		

Objectives:

1**.** Understanding the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals.

2. The medicinal and pharmaceutical importance of inorganic compounds.

4. Identification on different types of limit test in pharmaceutical inorganic compounds.

5. Knowledge on methods to prepare inorganic pharmaceuticals.

Course Content:

I Limit tests for following ions

Limit test for Chlorides and Sulphates

Modified limit test for Chlorides and Sulphates

Limit test for Iron

Limit test for Heavy metals

Limit test for Lead

Limit test for Arsenic

II Identification test

Magnesium hydroxide

Ferrous sulphate

Sodium bicarbonate

Calcium gluconate

Copper sulphate

III Test for purity

Swelling power of Bentonite

Neutralizing capacity of aluminum hydroxide gel

Determination of potassium iodate and iodine in potassium Iodide

IV Preparation of inorganic pharmaceuticals

Boric acid

Potash alum

Ferrous sulphate

Text Books

1. A.H. Beckett & J.B. Stenlake's, Practical Pharmaceutical Chemistry Vol I & II, StahlonePress of University of London, 4 th edition.
2. Indian Pharmacopoeia

Course Outcomes:

1. To recall the sources of limit tests, preparation and identification of compounds.
2. To demonstrate the preparation of inorganic pharmaceuticals
3. To apply knowledge to perform modified limit tests.
4. To analyze various inorganic pharmaceutical compounds.
5. Knowledge of preparation methods ofinorganic pharmaceuticals.

Course Code	Course Title	No of Hours Per week	No of Credits
BP111P	Communication skills– Practical	02	01
Sessional Marks : 10		**End Semester Examination Marks : 15**	

Objectives:

1. To enable students speak effectively in formal and informal situation.
2. To equip the students with a wide range of vocabulary,so as to enable them use language more effectively.
3. To understand the strategies of the interviews to facilitate better response during the"placement" interviews.
4. To understand the characteristics of successful group discussions.
5. To identify areas of evaluation of GDs(group discussion) conducted by organization as part of the selection presentation.

Course Content:

Thefollowing learning modules are to be conducted using wordsworth® English language lab software

Basic communication covering the following topics

Meeting People
Asking Questions
Making Friends
What did you do?
Do's and Dont's

Pronunciations covering the following topics

Pronunciation (Consonant Sounds)
Pronunciation and Nouns
Pronunciation (Vowel Sounds)

Advanced Learning

Listening Comprehension / Direct and Indirect Speech

Figures of Speech

Effective Communication

Writing Skills

Effective Writing

Interview Handling Skills

E-Mail etiquette

Presentation Skills

Text Books:

1. Basic communication skills for Technology, Andreja. J. Ruther Ford, 2nd Edition, Pearson Education, 2011

2. Communication skills, Sanjay Kumar, Pushpalata, 1stEdition, Oxford Press, 2011

3. Organizational Behaviour, Stephen .P. Robbins, 1stEdition, Pearson, 2013

4. Brilliant- Communication skills, Gill Hasson, 1stEdition, Pearson Life, 2011

5. The Ace of Soft Skills: Attitude, Communication and Etiquette for success, Gopala Swamy Ramesh, 5thEdition, Pearson, 2013

6. Developing your influencing skills, Deborah Dalley, Lois Burton, Margaret, Green hall, 1st Edition Universe of Learning LTD, 2010

7. Communication skills for professionals, Konarnira, 2ndEdition, New arrivals – PHI, 2011

8. Personality development and soft skills, Barun K Mitra, 1stEdition, Oxford Press, 2011

9. Soft skill for everyone, Butter Field, 1st Edition, Cengage Learning indiapvt.ltd, 2011

10. Soft skills and professional communication, Francis Peters SJ, 1stEdition, Mc Graw Hill Education, 2011

11. Effective communication, John Adair, 4thEdition, Pan Mac Millan,2009

12. Bringing out the best in people, Aubrey Daniels, 2ndEdition, Mc Graw Hill, 1999

Course Outcomes:

After Completion of the course the student able to

1. To equip students with Pre-presentations and to understand the structure of a good presentation and devise various techniques for delivering a successful presentation.
2. To help students overcome stage fear and take questions.
3. To enable the students to become global citizens.
4. This course will prepare the young pharmacy student to interact effectively with doctors, nurses and other health workers.
5. At the end of the course the students will get the soft skills set to work cohesively with the team as a team player and add value to the pharmaceutical business.

BP112RBP REMEDIAL BIOLOGY-PRACTICAL

Course Code	Course Title	No of Hours Per week	No of Credits
BP112RBP	Remedial biology – Practical	02	01
Sessional Marks:10End Semester Examination Marks :15			

OBJECTIVES:

1.To know about microscope, different cutting techniques, mounting, staining and permanent slide preparation.

2.To study about cell and morphology of plants and its modifications.

3.To study about frog by using computer models.

4.To study and identify bones and microscopic tissues.

5.To determine blood groups, blood pressure and tidal volume.

1.Introduction to experiments in biology

a. Study of microscope.

b. Section cutting techniques.

c. Mounting and staining.

d. Permanent slide preparation.

2. Study of cell and its inclusions.

3. Study of stem, root, leaf, seed, fruit, flower and their modifications.

4. Detailed study of frog by using computer models.

5. Microscopic study and identification of tissues pertinent to stem, root, leaf, seed, fruit and flower.

6. Identification of bones.

7. Determination of blood group.

8. Determination of blood pressure.

9. Determination of tidal volume.

REFERENCE BOOKS:

1.Practical human anatomy and physiology by S.R. Kale and R.R.Kale.

2. A manual for pharmaceutical biology practical by S.B. Gokhale, C.K.Kokate and S,P.shriwastava.

3. Biology practical manual according to National core curriculum. Biology forum of Karnataka. Prof. M.J.H. Shafi.

OUTCOMES: The student able to know

1. How to use microscope, section cutting, mounting, staining, and permanent slide preparation.
2. About the cell and its functions.
3. About the frog with respect to human.
4. About the bone and tissues in humans and plants.
5. About the blood groups, blood pressure and tidal volume.

SVU COLLEGE OF PHARMACEUTICAL SCIENCES

SRI VENKATESWARA UNIVERSITY,

Tirupati - 517502

B. PHARMACY PROGRAMME

(PCI Syllabus)

Choice based credit system (CBCS) Pattern

SEMESTER II

Course Code	Course Title	No of Hours Per week	No of Credits
BP 201T	Human Anatomy and Physiology-II – Theory	4	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Thorough knowledge on various homeostatic mechanisms and their imbalances.
3. Step wise procedures to understand and perform the hematological tests like blood cell count, Hb estimation, bleeding time, clotting time etc
4. To know the working pattern of different organs of each system.
5. Differentiate various tissues and organs of different systems of human body.
6. knowledge on interlinked mechanisms in the maintenance of normal functioning of human body.

Course Content:

UNIT I

- **Nervous system**

  Organization of nervous system, neuron neuroglia, classification and properties of nerve fibre, electrophysiology, action potential, nerve impulse, receptors, synapse, neurotransmitters.

Central nervous system: Meninges, ventricles of brain and cerebrospinal fluid, structure and functions of brain (cerebrum, brain stem, cerebellum), spinal cord (gross structure, functions of afferent and efferent nerve tracts, reflex activity).

UNIT II

- **Digestive system**

  Anatomy of GIT Tract with special reference to anatomy and functions of stomach,(Acid production in the stomach, regulation of acid production through parasympathetic nervous system, pepsin role in protein digestion) small intestine and large intestine, anatomy and functions of salivary glands, pancreas and liver, movements of GIT, digestion and absorption of nutrients and disorders of GIT.

- **Energetics**

  Formation and role of ATP, creatinine phosphate and BMR.

UNIT III

- **Respiratory system**

  Anatomyof respiratory system with special reference to anatomy of lungs, mechanism of respiration, regulation of respiration.

  Lung Volumes and capacities, transport of respiratory gases, artificial respiration and resuscitation methods.

- **Urinary system**

  Anatomy of urinary tract with special reference to anatomy of kidney and nephrons, functions of kidney and urinary tract, physiology of urine formation, micturition reflex and role of kidneys in acid base balance, role of RAS in kidney and disorders of kidney.

UNIT IV

- **Endocrine system**

  classification of hormones, mechanism of hormone action, structure and function of pituitary gland, thyroid gland, parathyroid gland,adrenal gland, pancreas, pineal gland, thymus and their disorders.

UNIT V

- **Reproductive system**

Anatomy of male and female reproductive system, Functions of male and female reproductive system, sex hormones, physiology of menstruation, fertilization,spermatogenesis, oogenesis, pregnancy and parturition.

- **Introduction to genetics**

  Chromosomes, genes and DNA, protein synthesis, genetic pattern of inheritance.

Text Books

1. Essentials of Medical Physiology by K.Sembulingam and P.sembulingam. Jaypee brothes medical publishers, New Delhi.

2. Anatomy and physiology in Health and Illness by Kathleen J.W. Wilson, Churchill Livingstone, New York

3. Physiological basis of Medical practice-Best and Tailor. Williams &Wilkins Co,Riverview, MI USA.

4. Principles of Anatomy and Physiology by Tortora Grabowski. Palmetto, GA USA.

5. Text book of Human histology by Inderbir singh.

6. Text book of Medical physiology by Arthur C Guyton.

Course Outcomes:

1. Know the gross morphology, structure and functions of various organs of the human body.

2. Perform all the hematological tests with the help of specimens

3. Note all the points regarding the tissues various organs of human body

4. Brief knowledge on clinical significance of various systems in our body.

5. Application of the role of genetics in day to day life.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Code	Course Title	No of Hours Per week	No of Credits
BP202T	Pharmaceutical Organic Chemistry I - Theory	04	04
Internal Marks :25		**End Semester Examination Marks :** 75	

Objectives:

1. To impart knowledge on writing organic structures, various methods of nomenclature, and isomerism respectively.
2. To create awareness on the aspects of chemical reactivity and stability.
3. To motivate towards understanding the organic reactions.

Course Content:

Generalmethodsofpreparation/ synthesisand chemical reactionsof the compound classessuperscriptedwithasterisk(*)tobe discussed.

Emphasisondefinition,types,classification,principles/mechanisms,applications,examples anddifferences.

Unit I

- **Classification,nomenclatureandisomerism**

ClassificationofOrganicCompounds

CommonandIUPACsystemsofnomenclatureof organiccompounds(upto10Carbonsopenchainandcarbocyclicco mpounds)

Structuralisomerismsinorganiccompounds

Unit II

- **Alkanes*,Alkenes*and Conjugateddienes***

SP^3 hybridization in alkanes, Halogenation of alkanes, uses of paraffins.Stabilitiesofalkenes,SP^2hybridizationinalkenes E_1andE_2reactions–kinetics,orderofreactivityofalkylhalides,rearrangementofcarbocations, Saytzeffs orientation and evidences.E_1 verses E_2 reactions, Factors affecting E_1andE_2reactions.Ozonolysis,electrophilicadditionreactionsofalkenes,Markownikoff'sorient

ation,freeradicaladditionreactionsofalkenes,AntiMarkownikoff'sorientation.

Stabilityofconjugateddienes,Diel-Alder,electrophilicaddition,freeradicaladditionreactionsofconjugated dienes,allylicrearrangement

Unit III

- **Alkyl halides***

  SN_1andSN_2reactions-kinetics,orderofreactivityofalkylhalides,stereochemistryandrearrangementofcarbocations.

  SN_1versusSN_2reactions,Factorsaffecting$SN_1$and SN_2reactions

  Structureandusesofethylchloride,Chloroform,trichloroethylene,tetrachloroethylene,dichloromethane,tetrachloromethaneandiodoform.

- **Alcohols*-**

  Qualitativetests,StructureandusesofEthylalcohol,Methylalcohol,chlorobutanol, Cetosterylalcohol,Benzyl alcohol,Glycerol,Propyleneglycol

Unit IV

- **Carbonylcompounds*(Aldehydesandketones)**

  Nucleophilic addition, Electromeric effect, aldol condensation, Crossed Aldol condensation,Cannizzaroreaction,CrossedCannizzaroreaction,Benzoincondensation,Perkincondensation, qualitative tests, Structure and uses of Formaldehyde, Paraldehyde, Acetone,Chloralhydrate,Hexamine,Benzaldehyde,Vanilin,Cinnamaldehyde.

Unit V

- **Carboxylicacids***

  Acidity of carboxylic acids, effect of substituents on acidity, inductive effect and qualitativetestsfor carboxylicacids,amideand ester

  Structure and Uses of Acetic acid, Lactic acid, Tartaric acid, Citric acid, Succinic acid. Oxalicacid, Salicylic acid, Benzoic acid, Benzyl benzoate, Dimethyl phthalate, Methyl

salicylate andAcetylsalicylicacid

- **Aliphaticamines*-**
  Basicity,effectofsubstituentonBasicity.Qualitativetest,Structureandusesof Ethanolamine,Ethylenediamine,Amphetamine

Text Books (All Latest Editions):

1. Organic ChemistrybyMorrisonandBoyd
2. OrganicChemistrybyI.L.Finar ,Volume-I
3. Textbook of OrganicChemistrybyB.S.Bahl&ArunBahl.
4. Organic ChemistrybyP.L.Soni
5. Reaction and reaction mechanisms by Ahluwaliah/ Chatwal.

Course Outcomes:

After Completion of this course, the student could be able to:

1. Guess and writethestructure, systematic/ trivial name, and pharmaceutical uses (if any)associated with the specifiedorganic compounds.
2. Understand the general concept of isomerism and distinguish structural isomers.
3. Infer the chemical nature of the compounds on the basis of qualitative chemical tests.
4. Understand the significance of certain electronic effects with respect to the reactivity/ stability of organic compounds specified.
5. Understand and gain insight into the organic reactions by analyzing their fair reaction mechanisms.

Course Code	Course Title	No of Hours Per week	No of Credits
BP203T	Biochemistry – Theory	04	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

1. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
2. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
3. Understand the genetic organization of mammalian genome and functions of DNA in the synthesis of RNAs and proteins.

Course Content:

Unit I

Biomolecules

Introduction, classification, chemical nature and biological role of carbohydrate, lipids, nucleic acids, amino acids and proteins.

Bioenergetics

Concept of free energy, endergonic and exergonic reaction, Relationship between free energy, enthalpy and entropy; Redox potential.

Energy rich compounds; classification; biological significances of ATP and cyclic AMP

Unit II

Carbohydrate metabolism

Glycolysis – Pathway, energetics and significance

Citric acid cycle- Pathway, energetics and significance

HMP shunt and its significance; Glucose-6-Phosphate dehydrogenase (G6PD) deficiency

Glycogen metabolism Pathways and glycogen storage diseases (GSD)

Gluconeogenesis- Pathway and its significance

Hormonal regulation of blood glucose level and Diabetes mellitus

Biological oxidation

Electron transport chain (ETC) and its mechanism.

Oxidative phosphorylation & its mechanism and substrate phosphorylation

Inhibitors ETC and oxidative phosphorylation/Uncouplers

Unit III

Lipid metabolism

β-Oxidation of saturated fatty acid (Palmitic acid)

61

Formation and utilization of ketone bodies; ketoacidosis

De novo synthesis of fatty acids (Palmitic acid)

Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormone and vitamin D

Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity.

Amino acid metabolism

General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders

Catabolism of phenylalanine and tyrosine and their metabolic disorders (Phenyketonuria, Albinism, alkeptonuria, tyrosinemia)

Synthesis and significance of biological substances; 5-HT, melatonin, dopamine, noradrenaline, adrenaline

Catabolism of heme; hyperbilirubinemia and jaundice

Unit IV

Lipid metabolism

β-Oxidation of saturated fatty acid (Palmitic acid)

61

Formation and utilization of ketone bodies; ketoacidosis

De novo synthesis of fatty acids (Palmitic acid)

Biological significance of cholesterol and conversion of cholesterol into bile acids, steroid hormone and vitamin D

Disorders of lipid metabolism: Hypercholesterolemia, atherosclerosis, fatty liver and obesity.

Amino acid metabolism

General reactions of amino acid metabolism: Transamination, deamination & decarboxylation, urea cycle and its disorders

Catabolism of phenylalanine and tyrosine and their metabolic disorders

(Phenyketonuria, Albinism, alkeptonuria, tyrosinemia)

Synthesis and significance of biological substances; 5-HT, melatonin,

dopamine, noradrenaline, adrenaline

Catabolism of heme; hyperbilirubinemia and jaundice

Unit V

Enzymes

Introduction, properties, nomenclature and IUB classification of enzymes

Enzyme kinetics (Michaelis plot, Line Weaver Burke plot)

Enzyme inhibitors with examples

Regulation of enzymes: enzyme induction and repression, allosteric

enzymes regulation

Therapeutic and diagnostic applications of enzymes and isoenzymes

Coenzymes –Structure and biochemical functions

Text Books:

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K. Murry, Daryl K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U.Chakrapani
5. Textbook of Biochemistry by Rama Rao.
6. Textbook of Biochemistry by Deb.
7. Outlines of Biochemistry by Conn and Stumpf
8. Practical Biochemistry by R.C. Gupta and S. Bhargavan.
9. Introduction of Practical Biochemistry by David T. Plummer. (3rd Edition)
10. Practical Biochemistry for Medical student

Course Outcomes:

After Completion of the course the student able to

1. Know the fundamental knowledge on the biochemical Pathways of the body
2. Understanding the catalytic role of enzymes, importance of enzyme inhibitors
3. Understand the genetic organization of mammalian genome
4. To Understand the DNA in the synthesis of RNAs and proteins
5. Present the results, conclusions, and relevance of scientific experiments to a specific audience

7. 3-High, 2-Medium, 1-Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP 204T	PathopphysiologyI–Theory	04	04
Sessional Marks: 25		**End Semester Examination Marks : 75**	

Objectives:

1. This subject describe the etiology and pathogenesis of the selected disease states.

2. Knowledge on name the signs and symptoms of the diseases.

3. It also describe and Mention the complications of the diseases.

Course Content:

Unit I

UNIT-I Basic principles of Cell injury and Adaptation: Introduction, definitions, Homeostasis, Components and Types of Feedback systems, Causes of cellular injury,Pathogenesis (Cell membrane damage, Mitochondrial damage, Ribosome damage, Nuclear damage),Morphology of cell injury – Adaptive changes (Atrophy, Hypertrophy, hyperplasia, Metaplasia, Dysplasia),Cell swelling, Intra cellular accumulation, Calcification, Enzyme leakage and Cell Death Acidosis &Alkalosis,Electrolyte imbalance.

- Basic mechanism involved in the process of inflammation and repair: Introduction, Clinical signs of inflammation, Different types of Inflammation,Mechanism of Inflammation – Alteration in vascular permeability and blood flow, migration of WBC's,Mediators of inflammation,Basic principles of wound healing in the skin,Pathophysiology of Atherosclerosis

UNIT-II Cardiovascular System: Hypertension, congestive heart failure, ischemic heart disease (angina,myocardial infarction, atherosclerosis and arteriosclerosis)

- Respiratory system:Asthma, Chronic obstructive airways diseases.
- Renal system:Acute and chronic renal failure .

UNIT-III Haematological Diseases: Iron deficiency, megaloblasticanemia (Vit B12 and folic acid), sickle cell anemia, thalasemia, hereditary acquired anemia, hemophilia

- Endocrine system: Diabetes, thyroid diseases, disorders of sex hormones
- Nervous system: Epilepsy, Parkinson's disease, stroke, psychiatric disorders: depression, schizophrenia and Alzheimer's disease.
- Gastrointestinal system: Peptic Ulcer

UNIT-IV Inflammatory bowel diseases, jaundice, hepatitis (A,B,C,D,E,F) alcoholic liver disease.

- Disease of bones and joints: Rheumatoid arthritis, osteoporosis and gout
- Principles of cancer: classification, etiology and pathogenesis of cancer
- Diseases of bones and joints:Rheumatoid Arthritis, Osteoporosis,Gout
- Principles of Cancer: Classification, etiology and pathogenesis of Cancer

UNIT-V- Infectious diseases:Meningitis,Typhoid, Leprosy, Tuberculosis Urinary tract infections
- Sexually transmitted diseases:AIDS, Syphilis, Gonorrhea

Text Books:

1. Vinay Kumar, Abul K. Abas, Jon C. Aster; Robbins &Cotran Pathologic Basis of Disease; South Asia edition; India; Elsevier; 2014.

2. Harsh Mohan; Text book of Pathology; 6 th edition; India; Jaypee Publications; 2010.

3. Laurence B, Bruce C, Bjorn K. ; Goodman Gilman's The Pharmacological Basis of Therapeutics; 12 th edition; New York; McGraw-Hill; 2011.

4. Best, Charles Herbert 1899-1978; Taylor, Norman Burke 1885-1972; West, John B (John Burnard); Best and Taylor's Physiological basis of medical practice; 12th ed; united states;

5. William and Wilkins, Baltimore;1991 [1990 printing].

6. Nicki R. Colledge, Brian R. Walker, Stuart H. Ralston;Davidson's Principles and Practice of Medicine; 21st edition; London; ELBS/Churchill Livingstone; 2010.

7. Guyton A, John .E Hall; Textbook of Medical Physiology; 12 th edition; WB Saunders Company; 2010.

8. Joseph DiPiro, Robert L. Talbert, Gary Yee, Barbara Wells, L. Michael Posey; Pharmacotherapy: A Pathophysiological Approach; 9 th edition; London; McGraw-Hill Medical; 2014.

9. V. Kumar, R. S. Cotran and S. L. Robbins; Basic Pathology; 6 th edition; Philadelphia; WB Saunders Company; 1997. 10. Roger Walker, Clive Edwards; Clinical Pharmacy and Therapeutics; 3 rd edition; London; Churchill Livingstone publication; 2003.

Course Outcomes:

After Completion of the course the student able

1. Identifies Name the signs, symptoms and complications of the diseases.
2. Students Get thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms.
3. To Study the aetiology and pathogenesis of the selected disease states
4. The baseline knowledge required to practice medicine safely, confidently, rationally and effectively.
5. The ability to search the medical literature, including electronic databases, and to locate and interpret up-to-date evidence to optimize patient care.

Course Code	Course Title	No of Hours Per week	No of Credits
BP205T	Computer Applications in Pharmacy – Theory	03	03
Sessional Marks : 25		**End Semester Examination Marks : 50**	

Objectives:

1. know the various types of application of computers in pharmacy
2. know the various types of databases
3. know the various applications of databases in pharmacy

UNIT I

Number system: Binary number system, Decimal number system, Octal number system, Hexadecimal number systems, conversion decimal to binary, binary to decimal, octal to binary etc, binary addition, binary subtraction – One's complement ,Two's complement method, binary multiplication, binary division

Concept of Information Systems and Software : Information gathering, requirement and feasibility analysis, data flow diagrams, process specifications, input/output design, process life cycle, planning and managing the project

UNIT II

Web technologies:Introduction to HTML, XML,CSS and Programming languages, introduction to web servers and Server Products

Introduction to databases, MYSQL, MS ACCESS, Pharmacy Drug database

UNIT III

Application of computers in Pharmacy – Drug information storage and retrieval, Pharmacokinetics, Mathematical model in Drug design, Hospital and Clinical Pharmacy, Electronic Prescribing and discharge (EP) systems, barcode medicine identification and automated dispensing of drugs, mobile technology and adherence monitoring

Diagnostic System, Lab-diagnostic System, Patient Monitoring System, Pharma Information System

UNIT IV

Bioinformatics: Introduction, Objective of Bioinformatics, Bioinformatics Databases, Concept of Bioinformatics, Impact of Bioinformatics in Vaccine Discovery

UNIT V

Computers as data analysis in Preclinical development:

Chromatographic dada analysis(CDS), Laboratory Information management System (LIMS) and Text Information Management System(TIMS)

Text Books:

1. Computer Application in Pharmacy – William E.Fassett –Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.

2. Computer Application in Pharmaceutical Research and Development –Sean Ekins – Wiley-Interscience, A John Willey and Sons, INC., Publication, USA

3. Bioinformatics (Concept, Skills and Applications) – S.C.Rastogi-CBS Publishers and Distributors, 4596/1- A, 11 Darya Gani, New Delhi – 110 002(INDIA)

4. Microsoft office Access - 2003, Application Development Using VBA, SQL Server, DAP and Infopath – Cary N.Prague – Wiley Dreamtech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi - 110002

Course Outcomes:

After Completion of the course the student is able to

1 know the various types of application of computers in pharmacy profession

2. know the various types of databases used in profession

3. know the usage of softwares in pharmacy

4. Operate a variety of advanced spreadsheet, operating system and word processing functions.

5. Maintain quality assurance through critically evaluating procedures and results.

Course Code	Course Title	No of Hours Per week	No of Credits
BP206T	Environmental Science– Theory	03	03
Sessional Marks:25	**End Semester Examination Marks :50**		

Objectives:

1. Create the awareness about environmental problems among learners.
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate learner to participate in environment protection and environment improvement.
5. Acquire skills to help the concerned individuals in identifying and solving environmental problems.
6. Strive to attain harmony with Nature.

Course Content:

Unit-I

The Multidisciplinary nature of environmental studies

Natural Resources

Renewable and non-renewable resources

Natural resources and associated problems

a) Forest resources; b) Water resources; c) Mineral resources; d) Food resources; e) Energy resources; f) Land resources: Role of an individual in conservation of natural resources.

Unit-II

Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Introduction, types, characteristic features, structure and function of the ecosystems: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit- III

Environmental Pollution

Air pollution; Water pollution; Soil pollution

Text Books

1. Y.K. Sing, Environmental Science, New Age International Pvt, Publishers,
Bangalore
2. Agarwal, K.C. 2001 Environmental Biology, Nidi Publ. Ltd. Bikaner.
3. BharuchaErach, The Biodiversity of India, MapinPublishingPvt. Ltd.,
Ahmedabad – 380 013, India, 4. Brunner R.C., 1989, Hazardous Waste Incineration, McGraw Hill Inc. 480p
5. Clark R.S., Marine Pollution, Clanderson Press Oxford
6. Cunningham, W.P. Cooper, T.H. Gorhani, E & Hepworth, M.T. 2001,
Environmental Encyclopedia, Jaico Publ. House, Mumbai, 1196p
7. De A.K., Environmental Chemistry, Wiley Eastern Ltd.
8. Down of Earth, Centre for Science and Environment.

Course Outcomes:

1. This program shall create an awareness about environmental problems, develop an attitude towards of concern for the environment.

2 To compare the natural, renewable and non-renewable resources and the problems associated with them.

3 To motivate the learners to participate in environment protection and improvement.

4 To analyze the concepts of eco system including structure and functions.

5 To adopt skills in identifying and solving environmental problems.

CO-PO MAPPING

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Code	Course Title	No of Hours Per week	No of Credits
BP207P	Human Anatomy And Physiology II – (Practical)	04	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

Objectives:

1. know the gross morphology, structure and functions of various organs of the human body.

2. Perform all the hematological tests with the help of specimens.

3 Note all the points regarding the tissues various organs of human body.

4 Brief knowledge on clinical significance of various systems in our body.

5 Application of the role of genetics in day to day life.

Course Content:

1. To study the integumentary and special senses using specimen and models
2. To Study the nervous system and endocrine system using specimen and models
3. To demonstrate the function of olfactory nerve.
4. To demonstrate the visual and reflex activity.
5. Recording of body temperature.
6. To examine the different types of taste.
7. Recording of basal mass index.
8. Study of family planning devices and pregnancy diagnosis test.
9. To demonstrate positive and negative feedback mechanism.
10. To determine Tidal volume and vital capacity.
11. Permanent slides of vital organs and gonads.
12. To demonstrate total blood count by cell analyser

Text Books

1. Practical workbook of Human physiology by Srinageswari and Rajeev Sharma.

2. Note all the points regarding the tissues various organs of human body
3. Brief knowledge on clinical significance of various systems in our body.
4. Application of the role of genetics in day to day life.

Course Outcomes:

This subject is to inculcate the students about the structure and functioning of various systems and to perform hematological tests, body temperature and BMI.

1. Prepare the charts and tables for easy understanding of various systems and positive & negative feed back mechanism.

2. Awareness on family planning devices and pregnancy diagnosis test.

3. Identify the structural (microscopically and macroscopically) and functional details about different organ systems such as cardiovascular, lymphatic, digestive, muscular system

4. Identify the various tissues and organs of different systems of human body.

5. Homeostasis mechanisms and their imbalances

Course Code	Course Title	No of Hours Per week	No of Credits
BP208P	Pharmaceutical Organic Chemistry I - Practical	04	02
Internal Marks :15		**End Semester Examination Marks :** 35	

Objectives:

1. To impart practical knowledge on various fundamental tests for the identification of some elements and compounds of pharmaceutical importance.
2. To create awareness on basic techniques practiced in the organic synthesis.
3. Allow to gain insight into the construction of molecular models and their significance.

Course Content:

1. Systematicqualitativeanalysisofunknownorganiccompoundslike

Preliminarytest:color,odour,aliphatic/aromaticcompounds,saturationandunsaturation, etc.

Detection of elements like Nitrogen, Sulphur and Halogen by Lassaigne'stest

Solubilitytest

FunctionalgrouptestlikePhenols,Amides/Urea,Carbohydrates,Amines,Carboxylicacids,Aldehydesand Ketones,Alcohols,Esters,AromaticandHalogenatedHydrocarbons,NitrocompoundsandAnilides.

Meltingpoint/Boilingpointoforganiccompounds

Identificationoftheunknowncompoundfromtheliteratureusing meltingpoint/ boilingpoint.

Preparationofthederivativesandconfirmationoftheunknowncompoundbymeltingpoint/ boilingpoint.

Minimum5unknownorganiccompoundsto beanalysedsystematically.

2. Preparationofsuitablesolidderivativesfromorganiccompounds

3. Constructionofmolecularmodels

Text Books:

1. Practical OrganicChemistrybyMannand Saunders.
2. Vogel'stextbookofPracticalOrganicChemistry
3. AdvancedPracticalorganicchemistrybyN.K.Vishnoi.
4. Introduction toOrganicLaboratorytechniquesbyPavia,Lampman andKriz.

Course Outcomes:

After Completion of the course the student could be able to:

1. Assess the identity in terms of the physico-chemical properties of the compounds of specified chemical classes.
2. Get hands- on- experience in basic techniques of organic synthesis.
3. Account for reactivity / stability of compounds.
4. Write the reaction, name the reaction and orientation of reaction.
5. Write the structure, name and the type of isomerisms of the organic compounds.

Course Code	Course Title	No of Hours Per week	No of Credits
BP209P	Biochemistry – Practical	04	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

Objectives:

5. Understanding the gross morphology, structure and functions of various organs of the human body.
6. Knowledge on various homeostatic mechanisms and their imbalances.
7. Identification of the various tissues and organs of different systems of human body.
8. Understanding the coordinated working pattern of different organs of each system.

Course Content:

1. Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch)
2. Identification tests for Proteins (albumin and Casein)
3. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method)
4. Qualitative analysis of urine for abnormal constituents
5. Determination of blood creatinine
6. Determination of blood sugar
7. Determination of serum total cholesterol
8. Preparation of buffer solution and measurement of pH
9. Study of enzymatic hydrolysis of starch
10. Determination of Salivary amylase activity
11. Study the effect of Temperature on Salivary amylase activity.
12. Study the effect of substrate concentration on salivary amylase activity.

Text Books:

1. Principles of Biochemistry by Lehninger.
2. Harper's Biochemistry by Robert K. Murry, Daryl K. Granner and Victor W. Rodwell.
3. Biochemistry by Stryer.
4. Biochemistry by D. Satyanarayan and U.Chakrapani
5. Textbook of Biochemistry by Rama Rao.
6. Textbook of Biochemistry by Deb.

7. Outlines of Biochemistry by Conn and Stumpf

Course Outcomes:

After Completion of the course the student able to perform

1.Qualitative analysis of carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose and starch), Proteins (albumin and Casein)

2. Quantitative analysis of reducing sugars (DNSA method) and Proteins (Biuret method)

3. Qualitative analysis of urine for abnormal constituents

4. Determination of blood creatinine, blood sugar, serum total cholesterol

5.Study the effect of substrate concentration on salivary amylase activity.

Sessional Marks : 10		**End Semester Examination Marks : 15**	

Objectives:

1. know the various types of application of computers in pharmacy
2. know the various types of databases
3. know the various applications of databases in pharmacy

Course Content

1. Design a questionnaire using a word processing package to gather information about a particular disease.
2. Create a HTML web page to show personal information.
3 Retrieve the information of a drug and its adverse effects using online tools
4 Creating mailing labels Using Label Wizard , generating label in MS WORD
5 Create a database in MS Access to store the patient information with the required fields Using access
6. Design a form in MS Access to view, add, delete and modify the patient record in the database
7. Generating report and printing the report from patient database
8. Creating invoice table using – MS Access
9. Drug information storage and retrieval using MS Access
10. Creating and working with queries in MS Access
11. Exporting Tables, Queries, Forms and Reports to web pages
12. Exporting Tables, Queries, Forms and Reports to XML pages

Text Books:

1. Computer Application in Pharmacy – William E.Fassett –Lea and Febiger, 600 South Washington Square, USA, (215) 922-1330.
2. Computer Application in Pharmaceutical Research and Development –Sean Ekins – Wiley-Interscience, A John Willey and Sons, INC., Publication, USA

3. Bioinformatics (Concept, Skills and Applications) – S.C.Rastogi-CBS Publishers and Distributors, 4596/1- A, 11 Darya Gani, New Delhi – 110 002(INDIA)

4. Microsoft office Access - 2003, Application Development Using VBA, SQL Server, DAP and Infopath – Cary N.Prague – Wiley Dreamtech India (P) Ltd., 4435/7, Ansari Road, Daryagani, New Delhi - 110002

Course Outcomes:

After Completion of the course the student is able to

1 know the various types of application of computers in pharmacy profession

2. know the various types of databases used in profession

3. know the usage of softwares in pharmacy

4.create a HTML, web page to show personal information.

5.Generating report and printing the report from patient database

CO-PO MAPPING

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	1	2	1	3	2	3	2	3	2
CO2	2	3	2	2	3	2	2	2	1	1	1	2
CO3	2	3	1	1	2	2	3	2	3	2	2	3
CO4	2	3	1	1	3	3	2	1	2	1	2	3
CO5	2	2	3	2	2	3	2	1	2	3	2	3

3-High, 2-Medium, 1-Low

SEMESTER III

Course Code	Course Title	No of Hours Per week	No of Credits
BP 301 T	Pharmaceutical organic chemistry II (Theory)	03+ 01 (Tutorial)	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives: Upon completionofthecoursethestudentshallbeableto

1. writethestructure,nameandthetypeofisomerismoftheorganic compound
2. writethereaction,namethereactionandorientationofreactions
3. account for reactivity/stabilityof compounds,
4. prepareorganiccompounds

CourseContent:

General methods of preparation and reactions of compounds superscripted with asterisk (*) to beexplained

To emphasize on definition,types,classification,principles/mechanisms,applications, examplesanddifferences

UNITI

- **Benzeneanditsderivatives**
  - **A.** Analytical, synthetic and other evidences in the derivation of structureofbenzene,Orbitalpicture,resonanceinbenzene,aromaticcharacters ,Huckel'srule
  - **B.** Reactionsofbenzene-nitration,sulphonation,halogenation-reactivity,Friedelcraftsalkylation-reactivity,limitations,Friedelcraftsacylation.
  - **C.** Substituents,effectofsubstituentsonreactivity andorientationofmonosubstitutedbenzenecompoundstowardselectrophilicsubstitutionreaction
  - **D.** StructureandusesofDDT,Saccharin, BHCandChloramine

UNITII

- **Phenols*-**
  Acidityofphenols,effectofsubstituentsonacidity,qualitativetests,Structureanduseso fphenol,cresols, resorcinol,naphthols
- **AromaticAmines*-**
  Basicityofamines,effectofsubstituentsonbasicity,andsyntheticusesof aryldiazonium salts
- **AromaticAcids*–**
  Acidity,effectofsubstituentsonacidityandimportantreactionsofbenzoicacid.

UNIT III

FatsandOils

a. Fattyacids–reactions Hydrolysis, Hydrogenation, Saponification and Rancidity of oils, Dryingoils.
b. Analyticalconstants–Acidvalue,Saponificationvalue,Estervalue,Iodine value, Acetyl value, Reichert Meissl (RM) value – significance andprincipleinvolvedintheirdetermination.

UNITIV

- **Polynuclearhydrocarbons:**

a. Synthesis,reactions
b. StructureandmedicinalusesofNaphthalene,Phenanthrene,Anthracene,Diphen ylmethane,Triphenylmethaneandtheirderivatives

UNITV

- **Cycloalkanes***
  Stabilities–Baeyer'sstraintheory, limitation of Baeyer'sstraintheory,Coulson and Moffitt's modification, Sachse Mohr's theory (Theory ofstrainlessrings),reactionsofcyclopropaneandcyclobutaneonly.

Recommended Books(LatestEditions)

1.OrganicChemistrybyMorrison andBoyd

1. OrganicChemistrybyI.L.Finar, Volume-I
2. Textbook of OrganicChemistrybyB.S.Bahl&ArunBahl.
3. Organic ChemistrybyP.L.Soni

4. Practical OrganicChemistrybyMannand Saunders.
5. Vogel'stextbookofPracticalOrganicChemistry
6. AdvancedPracticalorganicchemistrybyN.K.Vishnoi.
7. Introduction toOrganicLaboratorytechniquesbyPavia,LampmanandKriz.

COURSE OUTCOME:

After Completion of this course, the student could be able to:

1. Guess and writethestructure according to the stereochemical specifications.
2. Fairly understand the aspects of heterocyclic chemistry in terms of naming and reactivity.
3. Assess and understand the pharmaceutical applications and importance of the specified named reactions
4. Infer the chemical nature of the compounds on the basis of qualitative chemical tests.
5. Understand the significance of certain electronic effects with respect to the reactivity/ stability of organic compounds specified.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	3	1	1	1	1	2	1	3	3	3
CO2	3	1	2	1	1	1	1	2	1	3	3	3
CO3	3	1	2	1	1	1	1	1	1	3	3	3
CO4	3	1	2	1	1	1	2	1	1	3	3	3
CO5	3	1	2	1	1	1	2	1	1	3	3	3

3- High, 2- Medium, 1- Low

Course Code	Course Title	No of Hours Per week	No of Credits
BP 302 T	Physical Pharmaceutics I (Theory)	03+ 01 (Tutorial)	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives: Uponthecompletionofthecoursestudentshallbeableto

1. Understandvariousphysicochemicalpropertiesofdrugmoleculesinthedes igningthedosageforms
2. Knowtheprinciplesofchemicalkinetics&tousethem forstabilitytestingnaddeterminationofexpirydateofformulations
3. Demonstrate use of physicochemical properties in the formulationdevelopmentandevaluationofdosageforms.

CourseContent:

UNIT-I

Solubilityofdrugs: Solubilityexpressions,mechanismsofsolutesolventinteractions,idealsolubility parameters,solvation&association,quantitativeapproachtothefactorsinfluencingsolubilityofdr ugs,diffusionprinciplesinbiologicalsystems.Solubilityofgas in liquids,solubility of liquidsin liquids,(Binary solutions,idealsolutions)Raoult'slaw,realsolutions. Partially miscible liquids, Critical solution temperature andapplications.Distributionlaw,its limitationsandapplications

UNIT-II

States of Matter and properties of matter: State of matter, changes in the state of matter,latentheats,vapourpressure,sublimationcriticalpoint,eutecticmixtures,gases,aerosolsin halers,relativehumidity,liquidcomplexes,liquidcrystals,glassystates,solid-crystalline,amorphous& polymorphism.

Physicochemicalpropertiesofdrugmolecules: Refractiveindex,opticalrotation,dielectriccons tant,dipolemoment,dissociationconstant,determinationsandapplications

UNIT-III
