Surfaceandinterfacialphenomenon: Liquidinterface,surface&interfacialtensions,surface free energy, measurement of surface & interfacial tensions, spreading coefficient,adsorptionatliquidinterfaces,surfaceactiveagents,HLBScale,solubilisation,deter gency,adsorptionatsolidinterface.

UNIT-IV

Complexationandproteinbinding: Introduction,ClassificationofComplexation,App lications,methodsofanalysis,proteinbinding,Complexationanddrugaction,crystalline structures ofcomplexesandthermodynamictreatment ofstabilityconstants.

UNIT-V

pH,buffersandIsotonicsolutions: Sorensen'spHscale,pHdetermination(electrometr ic and calorimetric), applications of buffers, buffer equation, buffer capacity,buffersinpharmaceuticalandbiologicalsystems,bufferedisotonicsolutions.

Recommended Books:(LatestEditions)

1. PhysicalPharmacybyAlfredMartin
2. ExperimentalPharmaceuticsbyEugene,Parott.
3. TutorialPharmacybyCooper and Gunn.
4. StocklosamJ.PharmaceuticalCalculations,Lea &Febiger,Philadelphia.
5. LibermanH.A,LachmanC.,PharmaceuticalDosageforms,Tablets, Volume-1to3,MarcelDekkarInc.
6. LibermanH.A,LachmanC,PharmaceuticalDosageforms. Dispersesystems,volume1,2,3.Marcel DekkarInc.
7. Physical PharmaceuticsbyRamasamyCandManavalanR.

COURSE OUTCOME

1. The course deals with the various physical and physicochemical properties
2. Principles involved in dosage forms/formulations.
3. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development
4. Stability studies of pharmaceutical dosage forms
5. Standardisation of the pharmaceutical dosage forms

BP 303 T	Pharmaceutical Microbiology (Theory)	03+ 01 (Tutorial)	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives: Upon completionofthesubjectstudentshallbeableto;

1. Understandmethodsofidentification,cultivationandpreservationofvariousmicroorganisms
2. To understand the importance and implementation of sterlization inpharmaceuticalprocessingandindustry
3. Learn sterilitytestingof pharmaceutical products.
4. Carriedoutmicrobiological standardizationofPharmaceuticals.
5. Understandthecellculturetechnologyanditsapplicationsinpharmaceutica lindustries.

Course Content:

UnitI

Introduction,historyofmicrobiology,itsbranches,scopeanditsimportance.IntroductiontoProkaryotesandEukaryotesStudyofultra-structureandmorphologicalclassificationofbacteria,nutritional requirements, raw materials used for culture media and physicalparameters forgrowth,growth curve, isolationand preservation methodsforpurecultures,cultivationofanaerobes,quantitativemeasurementofbacterialgrowth (total&viablecount).Studyofdifferenttypesofphaseconstrastmicroscopy,darkfieldmicroscopyandelectronmicroscopy.

UnitII

Identificationofbacteriausingstainingtechniques(simple,Gram's&Acidfaststaining)andbiochemicaltests (IMViC).Study of principle, procedure, merits, demerits and applications of physical,chemicalgaseous,radiationandmechanicalmethodofsterilization.Evaluation of theefficiencyof sterilization methods.Equipmentsemployedinlargescalesterilization.Sterilityindicators.

UnitIII

Study of morphology, classification, reproduction/replication andcultivationofFungi andViruses.Classificationandmode ofactionofdisinfectantsFactorsinfluencingdisinfection,antisepticsandtheirevaluation.Forbacterio staticandbactericidalactionsEvaluationofbactericidal&Bacteriostatic.Sterilitytestingofproducts(s olids,liquids,ophthalmicandothersterileproducts)accordingtoIP,BPandUSP.

UnitIV

Designingofasepticarea,laminarflowequipments;study ofdifferentsources of contamination inan aseptic area and methodsof prevention,cleanareaclassification.

Principles and methods of different microbiological assay. Methods forstandardizationofantibiotics,vitaminsandaminoacids.Assessmentofanewantibiotic.

UnitV

Typesofspoilage,factorsaffectingthemicrobialspoilageofpharmaceuticalproducts,sourcesandtypesof microbialcontaminants,assessmentofmicrobialcontaminationandspoilage.Preservationofpharmaceu ticalproductsusingantimicrobialagents,evaluation ofmicrobialstabilityofformulations.

Growthofanimalcellsinculture,generalprocedureforcellculture,Primary,establ ished andtransformedcellcultures.

Application ofcellcultures inpharmaceutical industryandresearch.

RecommendedBooks(Latestedition)

6. Probisher,Hinsdilletal:FundamentalsofMicrobiology,9thed.Japan
7. CooperandGunn's:TutorialPharmacy,CBSPublisherandDistribution.

8. Peppler:MicrobialTechnology.

COURSE OUTCOME :

After Completion of the course the student able to

1. To acquire knowledge on HVAC systems, layout designs, GMP standards sanitation personal hygiene in sterile product manufacturing facilities.
2. To know the various types of sterile products with their formulation in large scale industries.
3. To develop skill for lab scale manufacture of few SVPs, LVPs, ophthalmic products with labelling and quality control.
4. To develop skill for microbiological assays
5. To get the knowledge of Pharmaceutical Spoilage

1. Toknowvariousunit operationsusedin Pharmaceuticalindustries.
2. Tounderstandthematerialhandlingtechniques.
3. Toperformvariousprocessesinvolvedinpharmaceuticalmanufacturingprocess.
4. Tocarryoutvarioustesttopreventenvironmentalpollution.
5. Toappreciateandcomprehendsignificanceofplantlayoutdesignforoptimu museofresources.
6. Toappreciatethevariouspreventivemethodsusedforcorrosioncontrolin Pharmaceuticalindustries.

Coursecontent:

UNIT-I

- **Flowoffluids:** Typesof manometers,Reynoldsnumber anditssignificance,Bernoulli'stheoremanditsapplications,Energylosses, Orificemeter,Venturimeter,Pitot tubeandRotometer.
- **SizeReduction:**Objectives,Mechanisms&Lawsgoverningsizereduction, factors affecting size reduction, principles, construction, working, uses, merits anddemerits of Hammer mill, ball mill, fluid energy mill, Edge runner mill & endrunnermill.
- **SizeSeparation:**Objectives,applications&mechanismofsizeseparation,o fficialstandardsofpowders,sieves,sizeseparationPrinciples,construction, working,uses,meritsanddemeritsofSieveshaker,cycloneseparator,Airsep arator,Bagfilter&elutriationtank.

UNIT-II

- **Heat Transfer:** Objectives, applications & Heat transfer mechanisms. Fourier'slaw, Heat transfer by conduction, convection & radiation. Heat interchangers &heatexchangers.

- **Evaporation:**Objectives,applicationsandfactorsinfluencingevaporation, differences between evaporation and other heat process. principles, construction,working,uses,meritsanddemeritsofSteamjacketedkettle,horizontaltubeevaporator,climbingfilmevaporator,forcedcirculationevaporator,multipleeffect evaporator&Economyofmultipleeffect evaporator.

- **Distillation:**BasicPrinciplesandmethodologyofsimpledistillation,flashdistillation,fractionaldistillation,distillationunderreducedpressure,steamdistillation&moleculardistillation

UNIT-III

- **Drying:** Objectives, applications & mechanismof drying process, measurements& applications of Equilibrium Moisture content, rate of drying curve. principles,construction, working, uses, merits and demerits of Tray dryer, drum dryer spraydryer,fluidizedbeddryer,vacuum dryer,freezedryer.

- **Mixing:** Objectives, applications & factors affecting mixing, Difference betweensolidandliquidmixing,mechanismofsolidmixing,liquidsmixingandsemisolidsmixing.Principles,Construction,Working,uses,MeritsandDemeritsof Double cone blender, twin shell blender, ribbon blender, Sigma blade mixer,planetarymixers, Propellers, Turbines, Paddles& SilversonEmulsifier,

UNIT-IV

- **Filtration:**Objectives,applications,Theories&Factorsinfluencingfiltration,filteraids,filtermedias.Principle,Construction,Working,Uses,Meritsan

ddemeritsofplate&framefilter,filterleaf,rotary drumfilter,Metafilter&Cartridgefilter,membranefilters andSeidtzfilter.

- **Centrifugation:**Objectives,principle&applicationsofCentrifugation,principles, construction, working, uses, merits and demerits of Perforated basketcentrifuge, Non-perforated basket centrifuge, semi continuous centrifuge & supercentrifuge.

UNIT-V

- **Materialsofpharmaceuticalplantconstruction,Corrosionanditsprevention:** Factors affecting during materials selected for Pharmaceutical plantconstruction,Theoriesofcorrosion,typesofcorrosionandthereprevention.Ferrousandnonferrousmetals,inorganicandorganicnonmetals,basicof materialhandlingsystems.

Recommended Books:(LatestEditions)

Course Code	Course Title	No of Hours Per week	No of Credits
BP 305 P	Pharmaceutical organic chemistry II (Practical)	04	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

OBJECTIVES :

1. To impart practical knowledge on various fundamental tests for the identification of some elements and compounds of pharmaceutical importance.

2.To create awareness on basic techniques practiced in the organic synthesis.

3.Allow to gain insight into the construction of molecular models and their significance.

I Experimentsinvolvinglaboratorytechniques

- Recrystallization
- Steamdistillation

II Determinationoffollowingoilvalues(includingstandardizationofr eagents)

- Acidvalue
- Saponificationvalue
- Iodinevalue

III Preparationofcompounds

- Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol /Aniline byacylationreaction.
- 2,4,6-Tribromoaniline/ParabromoacetanilidefromAniline/
- Acetanilide byhalogenation(Bromination)reaction.
- 5-Nitrosalicylicacid/MetadinitrobenzenefromSalicylicacid/N

itro benzenebynitrationreaction.

- Benzoic acidfromBenzyl chloride byoxidationreaction.
- Benzoicacid/Salicylicacidfromalkylbenzoate/alkylsalicylat ebyhydrolysisreaction.
- 1-Phenylazo-2-naptholfromAnilinebydiazotizationandcouplingreactions.
- BenzilfromBenzoinbyoxidationreaction.
- DibenzalacetonefromBenzaldehydebyClaisonSchmidt reaction
- Cinnammic acidfromBenzaldehydebyPerkinreaction
- *P*-Iodobenzoicacidfrom *P*-aminobenzoicacid

9. Textbook of OrganicChemistrybyB.S.Bahl&ArunBahl.
10. Organic ChemistrybyP.L.Soni
11. Practical OrganicChemistrybyMannand Saunders.
12. Vogel'stextbookofPracticalOrganicChemistry
13. AdvancedPracticalorganicchemistrybyN.K.Vishnoi.
14. Introduction toOrganicLaboratorytechniquesbyPavia,LampmanandKriz.

COURSE OUTCOME :

1.Assess the identity in terms of the physico-chemical properties of the compounds of specified chemical classes.

2.Get hands- on- experience in basic techniques of organic synthesis.

3. Infer the chemical nature of the compounds on the basis of qualitative chemical tests.

4. Understand the significance of certain electronic effects with respect to the reactivity/ stability of organic compounds specified.

5. Understand and gain insight into the organic reactions by analyzing their fair reaction mechanisms.

9. PhysicalPharmaceuticsbyC.V.S.Subramanyam
10. TestbookofPhysicalPhramacy,byGauravJain&RoopK.Khar

COURSE OUTCOME :

1. This course helps to compare and evaluate the solubility of various combination compound modify for better solubility approaches by use different level of methods
2. recognize the formulation aspects of different dosage forms;
3. formulate different types of dosage forms;
4. appreciate the importance of good formulation for effectiveness.
5. do different pharmaceutical calculation involved in formulation;

13. Bergeysmanualofsystematicbacteriology,WilliamsandWilkins-AWaverlycompany.

COURSE OUTCOME :

After Completion of the course the student able to

1. Learners gain knowledge on some sterile marketed products.
2. Learners gain knowledge on blood products which are not possible in laboratory and large scale manufacture.
3. To know the skills of aseptic techniques principles of sterilization and validation of aseptic areas.
4. Knowledge on blood products and surgical dressing with their formulation details.
5. Production of asceptic products and quality control.

BP 308 P	Pharmaceutical Engineering (Practical)	04	02
Sessional Marks : 15		**End Semester Examination Marks : 35**	

OBJECTIVES :

To know various unit operations used in Pharmaceutical industries.

2. To understand the material handling techniques.

3. To perform various processes involved in pharmaceutical manufacturing process.

4. To carry out various test to prevent environmental pollution.

5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.

6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

I. Determinationofradiationconstantofbrass,iron,unpaintedandpainted glass.

II. Steamdistillation –Tocalculatetheefficiencyofsteam distillation.

III. To determine theoverallheattransfercoefficientbyheatexchanger.

IV. Constructionofdryingcurves(forcalciumcarbonateandstarch).

V. Determinationofmoisturecontentandlossondrying.

VI. Determination of humidity of air – i) From wet and dry bulb temperatures –use ofDewpointmethod.

VII. DescriptionofConstructionworkingandapplicationofPharmaceuticalMachinery such as rotary tablet machine, fluidized bed coater, fluid energy mill,dehumidifier.

VIII. Size analysis by sieving – To evaluate size distribution of tablet granulations –Construction of various size frequency curves including

IX. Sizereduction:ToverifythelawsofsizereductionusingballmillanddeterminingKicks,Rittinger's,Bond'scoefficients,powerrequirementandcriticalspeed ofBall Mill.

X. Demonstration of colloid mill, planetary mixer, fluidized bed dryer, freeze dryerandsuchothermajorequipment.

XI. FactorsaffectingRateofFiltrationandEvaporation(Surfacearea,Concent

rationandThickness/ viscosity

XII. TostudytheeffectoftimeontheRateofCrystallization.

XIII. To calculate the uniformity Index for given sample by using Double ConeBlender.

COURSE OUTCOME

1. To understand the basic principles involved in unit operations such as size reduction, size separation, distillation and drying.
2. To demonstrate and explain about the construction, working and applications of pharmaceutical equipment's such as colloid mill, planetary mixer, fluidized bed dryer and freeze dryer.
3. To experiment with the process variables of filtration, evaporation and infer the same.
4. To determine radiation constant of brass, iron, unpainted and painted glass.
5. To determine overall heat transfer coefficient by heat exchanger and calculate the efficiency of steam distillation.

SEMESTER IV

Course Code	Course Title	No of Hours Per week	No of Credits
BP 401 T	Pharmaceutical organic chemistry III (Theory)	03+ 01 (Tutorial)	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

1. To enlighten on various aspects of stereoisomerism.
2. To create awareness on the nomenclature of heterocyclic compounds, their reactivity, and chemical reactions.
3. To highlight the importance of above heterocyclic compounds with respect to some of the drug classes that bear them as structural scaffolds.
4. To emphasize some of the named reactions and their applications with respect to pharmacy.

CourseContent:

Note:Toemphasizeondefinition,types,mechanisms,examples,uses/applic ationsUNIT-I

Stereoisomerism

Opticalisomerism–

Opticalactivity,enantiomerism,diastereoisomerism,mesocompoundsEl ementsofsymmetry,chiral andachiralmolecules
DLsystemofnomenclatureofopticalisomers,sequencerules,RSsystemofnomenclatureof optical isomers

Reactionsofchiralmolecules

Racemicmodificationandresolutionofracemicmixture.Asym metricsynthesis: partialandabsolute

UNIT-II

Geometricalisomerism

Nomenclatureofgeometricalisomers(CisTrans,EZ,SynAntisystems)
Methodsofdeterminationofconfigurationofgeometricalisomers.
ConformationalisomerisminEthane,n-ButaneandCyclohexane.

Stereoisomerisminbiphenylcompounds(Atropisomerism)andconditionsforopticalactivity.
Stereospecificandstereoselectivereactions

UNIT-III

Heterocycliccompounds:

Nomenclatureandclassification

Synthesis,reactionsandmedicinalusesoffollowingcompounds/derivativesPyrrole,Furan,andThiopheneRelativearomaticityandreactivityofPyrrole,Furan andThiophene

UNIT-IV

Synthesis,reactionsandmedicinalusesoffollowingcompounds/derivativesPyrazole,Imidazole,OxazoleandThiazole.Pyridine, Quinoline,Isoquinoline, AcridineandIndole.BasicityofpyridineSynthesisandmedicinalusesofPyrimidine,Purine,azepinesandtheirderivatives

UNIT-V

Reactionsofsyntheticimportance

Metalhydridereduction($NaBH_4$and$LiAlH_4$),Clemmensenreduction,Birchreduction,WolffKishnerreduction.Oppenauer-oxidationandDakinreaction. Beckmanns rearrangement and Schmidt rearrangement.Claisen-Schmidtcondensation

RecommendedBooks(LatestEditions)

1. OrganicchemistrybyI.L.Finar,Volume-I&II.
2. A textbook oforganicchemistry–Arun Bahl,B.S.Bahl.

3. HeterocyclicChemistrybyRajK.Bansal
4. Organic ChemistrybyMorrisonandBoyd
5. HeterocyclicChemistrybyT.L.Gilchrist

COURSE OUTCOME :

After Completion of this course, the student could be able to:

1. Guess and writethestructure according to the stereochemical specifications.
2. Fairly understand the aspects of heterocyclic chemistry in terms of naming and reactivity.
3. Assess and understand the pharmaceutical applications.
4. Importance of the specified named reactions.
5. Synthesis of different pharmaceutical products.

Objectives:1. Understand the chemistry of drugs and its pharmacological activity.

2. Understand the drug metabolic pathways, adverse effects and therapeutic value of drugs.

3. Know the Structural Activity Relationship (SAR) of different class of drugs.

4. Chemical synthesis of drugs.

CourseContent:

Study of the development of the following classes of drugs, Classification, mechanism ofaction, uses of drugs mentioned in the course, Structure activity relationship of selectiveclassofdrugsas specified in thecourseand synthesisofdrugssuperscripted (*)

UNIT-I

IntroductiontoMedicinalChemistry

History and development of medicinal chemistryPhysicochemicalpropertiesinrelationtobiologica laction

Ionization,Solubility,PartitionCoefficient,Hydrogenbonding,Proteinbinding,Chelation,Bi oisosterism,OpticalandGeometricalisomerism.

Drugmetabolism

Drugmetabolismprinciples-PhaseIandPhaseII.

Factorsaffectingdrugmetabolism includingstereochemicalaspects.

UNIT-II

DrugsactingonAutonomicNervousSystemAd renergicNeurotransmitters:

Biosynthesisandcatabolismofcatecholamine. Adrenergicreceptors (Alpha&Beta)andtheirdistribution.

Sympathomimeticagents:SARofSympathomimeticagents

Directacting:Nor-epinephrine,Epinephrine,Phenylephrine*,Dopamine,

Methyldopa,Clonidine,Dobutamine,Isoproterenol,Terbutaline,Salbutamol*,Bitolterol,Naphazoline,OxymetazolineandXylometazoline.

- Indirect acting agents: Hydroxyamphetamine, Pseudoephedrine,Propylhexedrine.
- Agentswithmixedmechanism:Ephedrine,Metaraminol.

AdrenergicAntagonists:

Alphaadrenergicblockers: Tolazoline*,Phentolamine,Phenoxybenzamine,Prazosin,Dihydroergotamine,Methysergide.

Betaadrenergicblockers:SARofbetablockers,Propranolol*,Metibranolol,Atenolol,Betazolol,Bisoprolol,Esmolol,Metoprolol,Labetolol,Carvedilol.

UNIT-III

Cholinergicneurotransmitters:

Biosynthesisandcatabolismofacetylcholine.

Cholinergicreceptors(Muscarinic&Nicotinic)andtheirdistribution.

Parasympathomimeticagents:SARofParasympathomimeticagents

Directactingagents: Acetylcholine,Carbachol*,Bethanechol,Methacholine,Pilocarpine.

Indirectacting/Cholinesterase inhibitors(Reversible & Irreversible): Physostigmine,Neostigmine*,Pyridostigmine,Edrophoniumchloride,Tacrine hydrochloride, Ambenonium chloride, Isofluorphate, Echothiophateiodide,Parathione,Malathion.

Cholinesterasereactivator: Pralidoximechloride.

CholinergicBlockingagents:SARofcholinolyticagents

Solanaceousalkaloidsandanalogues: Atropinesulphate,Hyoscyaminesulphate,Scopolaminehydrobromide,Homatropinehydrobromide,Ipratropiumbromide*.

Syntheticcholinergicblockingagents: Tropicamide,Cyclopentolatehydrochloride,Clidiniumbromide,Dicyclominehydrochloride*,Glycopyrrolate,Methanthelinebromide,Propanthelinebromide,Benztropinemesylate,Orphenadrinecitrate, Biperidinehydrochloride,Procyclidinehydrochloride*, Tridihexethylchloride,Isopropamide iodide,Ethopropazinehydrochloride.

UNIT-IV

DrugsactingonCentralNervousSystem

A. **SedativesandHypnotics:**

Benzodiazepines:SAR ofBenzodiazepines,Chlordiazepoxide,Diazepam*,Oxazepam,Chlorazepate,Lorazepam,Alprazolam,Zolpidem

Barbiturtes:SARofbarbiturates,Barbital*,Phenobarbital,Mephobarbital,Amobarbital, Butabarbital, Pentobarbital,Secobarbital

Miscelleneous:

Amides&imides:Glutethmide.

Alcohol&theircarbamatederivatives:Meprobomate,Ethchlorvynol.Aldehy de&theirderivatives:Triclofossodium,Paraldehyde.

B. Antipsychotics

Phenothiazeines:SARofPhenothiazeines-Promazinehydrochloride,Chlorpromazinehydrochloride*,Triflupromazine,Thioridazinehydrochloride,Piperacetazinehydrochloride,Prochlorperazinemaleate,Trifluoperazinehydrochloride.

RingAnaloguesofPhenothiazeines: Chlorprothixene,Thiothixene,Loxapine succinate,Clozapine.

Flurobuterophenones: Haloperidol,Droperidol,Risperidone.

Betaaminoketones: Molindonehydrochloride.

Benzamides: Sulpieride.

Anticonvulsants: SAR of Anticonvulsants**,** mechanism of anticonvulsantaction

Barbiturates:Phenobarbitone,Methabarbital.

Hydantoins: Phenytoin*,Mephenytoin,Ethotoin

Oxazolidinediones: Trimethadione,Paramethadione

Succinimides: Phensuximide, Methsuximide, Ethosuximide*

Urea andmonoacylureas: Phenacemide, Carbamazepine*

Benzodiazepines:Clonazepam

Miscellaneous: Primidone,Valproicacid,Gabapentin,Felbamate

UNIT– V

DrugsactingonCentralNervousSystem

Generalanesthetics:

Inhalationanesthetics: Halothane*,Methoxyflurane,Enflurane,Sevoflurane,Isoflurane,Desflurane.

Ultrashortactingbarbitutrates: Methohexitalsodium*,Thiamylalsodium,Thiopental sodium.

Dissociativeanesthetics: Ketaminehydrochloride.

Narcoticandnon-narcoticanalgesics

Morphineandrelateddrugs:SARofMorphineanalogues,Morphinesulphate,Codeine,Meperidinehydrochloride,Anilerdinehydrochloride,Diphenoxylate hydrochloride, Loperamide hydrochloride, Fentanyl citrate*,Methadonehydrochloride*,Propoxyphenehydrochloride,Pentazocine, Levorphanoltartarate.

Narcoticantagonists: Nalorphinehydrochloride,Levallorphantartarate,Naloxonehydrochloride.

Anti-inflammatory agents: Sodium salicylate, Aspirin, Mefenamic acid*,Meclofenamate, Indomethacin, Sulindac, Tolmetin,Zomepriac, Diclofenac,Ketorolac,Ibuprofen*,Naproxen, Piroxicam, Phenacetin, Acetaminophen,Antipyrine,Phenylbutazone.

RecommendedBooks(LatestEditions)

7. Organic ChemistrybyI.L.Finar, Vol.II.
8. The OrganicChemistryofDrugSynthesis byLednicer, Vol. 1-5.

COURSE OUTCOME

This subject is designed to impart

1. Fundamental knowledge on the structure, chemistry..
2. Therapeutic value of drugs.
3. Understand the Structural Activity Relationship (SAR) of drugs.
4. Importance of physicochemical properties and metabolism of drugs.
5. Chemical synthesis of important drugs under each class.

Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives: Uponthecompletionofthecoursestudentshallbeableto

1. Understandvariousphysicochemicalpropertiesofdrugmoleculesinthedesigningthedosageforms
2. Knowtheprinciplesofchemicalkinetics&tousethem forstabilitytestingnaddeterminationofexpirydateofformulations
3. Demonstrate use of physicochemical properties in the formulationdevelopmentandevaluationofdosageforms.

CourseContent:

UNIT-I

Colloidaldispersions: Classificationofdispersedsystems&theirgeneralcharacteristics,size&shapesofcolloidalparticles,classificationofcolloids&comparative account of their general properties. Optical, kinetic & electrical properties.Effectof electrolytes,coacervation,peptization&protectiveaction.

UNIT-II

Rheology: Newtonian systems, law of flow, kinematic viscosity, effect of temperature,non-Newtoniansystems,pseudoplastic,dilatant,plastic,thixotropy,thixotropyinformulation,determinationofviscosity,capillary,fallingSphere,rotationalviscometers

Deformation of solids: Plastic and elastic deformation, Heckel equation, Stress, Strain,ElasticModulus

UNIT-III

Coarse dispersion: Suspension, interfacial properties of suspended particles, settling insuspensions, formulation of flocculated and

deflocculatedsuspensions. Emulsions andtheories of emulsification, microemulsion and multiple emulsions; Stability of emulsions,preservation of emulsions,rheologicalpropertiesofemulsions andemulsionformulation byHLBmethod.

UNIT-IV

Micromeretics: Particle size and distribution, mean particle size, number and weightdistribution,particlenumber,methodsfordeterminingparticlesizebydifferentmethods, counting and separation method, particle shape, specific surface, methods fordeterminingsurfacearea,permeability,adsorption,derivedpropertiesofpowders,porosity,packingarrangement,densities,bulkiness&flowproperties.

UNIT-V

Drug stability: Reaction kinetics: zero, pseudo-zero, first & second order, units of basicrate constants, determination of reaction order. Physical and chemical factors influencingthe chemical degradation of pharmaceutical product: temperature, solvent, ionic strength,dielectric constant, specific & general acid base catalysis, Simple numerical problems.Stabilization of medicinal agents against common reactions like hydrolysis & oxidation.Acceleratedstabilitytestinginexpirationdatingofpharmaceuticaldosageforms.Photolyticdegradation andits prevention.

6. LibermanH.A,LachmanC,Pharmaceuticaldosageforms.Dispersesystems,volume1,2,3.Marcel DekkarInc.

COURSE OUTCOME :

1. The course deals with the various physical and physicochemical properties
2. Principles involved in dosage forms/formulations.
3. Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development.
4. Stability studies of pharmaceutical dosage forms
5. Better knowledge on the different properties of ingredients

Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

Upon completionofthiscoursethestudentshouldbeableto

1. Understandthepharmacological actionsofdifferentcategoriesofdrugs
2. Explainthemechanismofdrugactionatorgansystem/subce llular/macromolecularlevels.
3. Apply the basic pharmacological knowledge in the prevention and treatment ofvariousdiseases.
4. Observetheeffect ofdrugs on animals bysimulated experiments
5. Appreciate correlation ofpharmacologywithotherbiomedicalsciences

CourseContent:

UNIT-I **0**

1. GeneralPharmacology

a. IntroductiontoPharmacology-
Definition,historicallandmarksandscopeofpharmacology,natureandsource ofdrugs,essentialdrugsconceptandroutesofdrug administration, Agonists, antagonists(competitive and non competitive), sparereceptors,addiction,tolerance,dependence,tachyphylaxis,idiosyncras y,allergy.

b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism
andexcretionofdrugs.Enzymeinduction,enzymeinhibition,kineticsof elimination

UNIT-II **12Hours**

GeneralPharmacology

a. Pharmacodynamics- Principles and mechanisms of drug action. Receptor theoriesand classification of receptors, regulation of receptors. drug receptors interactionssignaltransductionmechanisms,G-protein–coupledreceptors,ionchannelreceptor,transmembrane enzyme linked receptors, transmembrane JAK-STAT bindingreceptorand receptors that regulate transcription factors, dose responserelationship, therapeutic index, combined effects of drugs and factors modifyingdrugaction.

b. Adversedrugreactions.

c. Druginteractions(pharmacokineticandpharmacodynamic)

d. Drugdiscoveryandclinicalevaluation ofnew drugs- Drugdiscoveryphase,preclinical evaluation phase, clinical trial phase, phases of clinical trials andpharmacovigilance.

UNIT-III

2. Pharmacologyofdrugsactingonperipheralnervoussystem

a. OrganizationandfunctionofANS.

b.Neurohumoraltransmission,co-transmissionandclassificationofneurotransmitters.

c. Parasympathomimetics,Parasympatholytics,Sympathomimetics,sympatholytics.

d. Neuromuscularblockingagentsandskeletalmusclerelaxants(peripheral).

e. Localanestheticagents.

f. Drugsusedinmyastheniagravisandglaucoma

UNIT-IV **0**

3. Pharmacologyofdrugsactingoncentralnervoussystem

a. NeurohumoraltransmissionintheC.N.S.specialemphasisonimportanceofv ariousneurotransmitterslikewithGABA,Glutamate,Glycine,serotonin,do pamine.

b. Generalanestheticsandpre-anesthetics**.**

c. Sedatives,hypnoticsandcentrallyactingmuscle relaxants.

d. Anti-epileptics

e. Alcoholsanddisulfiram

UNIT-V

3. Pharmacologyofdrugsactingoncentralnervoussystem

a. Psychopharmacologicalagents:Antipsychotics,antidepressants,anti-anxietyagents,anti-manicsandhallucinogens.

b. DrugsusedinParkinsonsdiseaseandAlzheimer'sdisease.

c. CNSstimulantsandnootropics.

d. Opioidanalgesicsand antagonists

e. Drugaddiction,drugabuse,toleranceanddependence.

7. SharmaH.L.,SharmaK.K.,Principlesof Pharmacology,Parasmedicalpublisher Modern Pharmacologywithclinical Applications,byCharles R.Craig&Robert

COURSE OUTCOME :

1. The subject is to impart knowledge about the action of the drug, different routes of drug administration, toxic effects etc.
2. Students would have understood the pharmacological actions of different

categories of drugs.

3. Mechanism of drug action at organ system, sub cellular and macromolecular levels have been studied.
4. They have understood the application of basic pharmacological knowledge in the prevention and treatment of different diseases.
5. Signal transduction mechanism of various receptors have been understood.

BP 405 T	**PharmacognosyAndPhytochemistry I** (Theory)	03+ 01 (Tutorial)	04
Sessional Marks : 25		**End Semester Examination Marks : 75**	

Objectives:

1. Students should know about the techniques involved in cultivation and production of crude drugs

2. Study about crude drugs, their uses and chemical nature of drugs

3.Familiar with the evaluation techniques for herbal drugs

4. Evaluate the microscopic and macroscopic characteristics of the crude drugs

CourseContent:

UNIT-I

IntroductiontoPharmacognosy:

(a) Definition,history,scopeanddevelopmentofPharmacognosy

(b) SourcesofDrugs–Plants,Animals,Marine&Tissueculture

(c) Organizeddrugs,unorganizeddrugs(driedlatex,driedjuices,driedextracts,gu msandmucilages,oleoresinsandoleo- gum -resins).

Classificationofdrugs:

Alphabetical,morphological,taxonomical,chemical,pharmacological,chemoand serotaxonomicalclassificationofdrugs

Qualitycontrolof Drugsof NaturalOrigin:

Adulterationofdrugsofnaturalorigin.Evaluationbyorganoleptic,microscopic,phy sical,chemicaland biologicalmethodsandproperties.

Quantitativemicroscopyofcrudedrugsincludinglycopodiumsporemethod,leafcon stants,cameralucidaanddiagramsofmicroscopic objectstoscale withcameralucida.

UNIT-II

Cultivation,Collection,Processingandstorageofdrugsofnaturalorigin:

CultivationandCollectionofdrugsofnat uraloriginFactors influencing cultivation of medicinal plants.Planthormonesand theirapplications.

Polyploidy,mutationandhybridizationwithreferencetomedicinalplants

Conservationofmedicinalplants

UNIT-III

Planttissueculture:

Historicaldevelopmentofplanttissueculture,typesofcultures,Nutritionalrequirem ents,growthand theirmaintenance.

Applicationsofplanttissueculture inphar macognosy.Edible vaccines

UNITIV

Pharmacognosyinvarioussystemsofmedicine:

RoleofPharmacognosy inallopathyandtraditionalsystemsofmedicinenamely,Ayurveda,Unani,Siddha,H omeopathyand Chinesesystemsof medicine.

Introductiontosecondarymetabolites:

Definition,classification,propertiesandtestforidentificationofAlkaloids,Glycosides,Flavonoids,Tannins, Volatileoiland Resins

UNITV

Studyofbiologicalsource,chemicalnatureandusesofdrugsofnaturalorigincontainingfollowingdrugs

PlantProducts:

Fibers-Cotton,Jute,Hemp

Hallucinogens,Teratogens,Naturalallergens

Primarymetabolites:

Generalintroduction,detailedstudywithrespecttochemistry,sources,preparation, evaluation, preservation, storage, therapeutic used and commercial utility as PharmaceuticalAids and/orMedicines forthefollowingPrimarymetabolites:

Carbohydrates: Acacia,Agar,Tragacanth,Honey

ProteinsandEnzymes: Gelatin,casein,proteolyticenzymes(Papain,bromelain,serratiopeptidase,urokinase, streptokinase,pepsin).

Lipids(Waxes,fats,fixedoils):Castoroil,Chaulmoograoil,WoolFat,BeesWax

MarineDrugs:

Novelmedicinalagentsfrommarinesources

8. The OrganicChemistryofDrugSynthesis byLednicer, Vol. 1-5.

9. IndianPharmacopoeia.

10. Textbookofpracticalorganicchemistry-A.I.Vogel.

COURSE OUTCOME :

After Completion of the course the student able to

1. This subject is intended to impart students about the fundamental knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially, involved in the study of producing plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine.
2. Significance of pharmacognostic parameters & study of crude drugs.
3. Understand the underlying reason of evolutionary significance of secondary metabolites production in plants & other organisms & deduce their significance as medicinal molecules.
4. How these primary metabolites are used comprehensively as a source to develop Pharmaceutical & industrial applications.
5. Study about the source, name, chemical structures, methods of extraction, qualitative & quantitative analysis of glycosides & tannin.

9. IndianPharmacopoeia.
10. Textbookofpracticalorganicchemistry-A.I.Vogel.

COURSE OUTCOME :

This subject is to inculcate the students will able to know

1. Basic knowledge on scope of Medicinal chemistry and interlinked subjects

2. Handling the glassware and Preparations of the synthetic drugs and how to calibrate the chemicals.

3. Perform the synthesis of the drugs with their chemical structures.

4. Compare the test drug with that of the standard drug by assay methods.

5. Understand the partition coefficient of any two drugs.

9. AnatomyofCrudeDrugsbyM.A. Iyengar

COURSE OUTCOME :

After successful completion of this course, students will be able to:

1. Demonstrate chemical tests to identify unorganized crude drugs
2. Evaluate the quality and purity of crude drugs
3. Perform linear measurements for crude drug identification
4. The main purpose of subject is to impart the students the knowledge of how thesecondary metabolites is produced in the crude drugs, how to isolate and identify andproduce them industrially.
5. Also, this subject involves the study of producing the plants andphytochemicals through plant tissue culture, drug interactions and basic principles oftraditional system of medicine

SEMISTER V

Course Code	Course Title	No of Hours Per week	No of Credits
BP501T.	**MEDICINAL CHEMISTRY – II-Theory**	03+01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks : 75**	

Objectives: Upon completion of the course the student shall be able to

1. Understand the chemistry of drugs with respect to their pharmacological activity
2. Understand the drug metabolic pathways, adverse effect and therapeutic value ofdrugs
3. Know the Structural Activity Relationship of different class of drugs
4. Study the chemical synthesis of selected drugs

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted (*)

Course Content

UNIT- I

Antihistaminic agents: Histamine, receptors and their distribution in thehumanbodyH1–antagonists: Diphenhydramine hydrochloride*, Dimenhydrinate, Doxylamines cuccinate, Clemastine fumarate, Diphenylphyraline hydrochloride, Tripelenamine hydrochloride, Chlorcyclizine hydrochloride, Meclizinehydrochloride, Buclizine hydrochloride, Chlorpheniramine maleate, Triprolidinehydrochloride*, Phenidaminetartarate, Promethazine hydrochloride*,Trimeprazine tartrate, Cyproheptadine hydrochloride, Azatidine maleate,Astemizole, Loratadine, Cetirizine, Levocetrazine Cromolyn sodiumH2-antagonists: Cimetidine*, Famotidine, Ranitidin.Gastric Proton pump inhibitors: Omeprazole,Lansoprazole, Rabeprazole,PantoprazoleAnti-neoplastic agents:Alkylating agents: Meclorethamine*, Cyclophosphamide, Melphalan,Chlorambucil, Busulfan, ThiotepaAntimetabolites: Mercaptopurine*, Thioguanine, Fluorouracil, Floxuridine, Cytarabine, Methotrexate*, AzathioprineAntibiotics: Dactinomycin, Daunorubicin,

Doxorubicin, BleomycinPlant products: Etoposide, Vinblastin sulphate, Vincristin sulphateMiscellaneous: Cisplatin, Mitotane.

UNIT – II

Anti-anginal:

Vasodilators: Amyl nitrite, Nitroglycerin*, Pentaerythritol tetranitrate, Isosorbidedinitrite*, Dipyridamole. Calcium channel blockers: Verapamil, Bepridil hydrochloride, Diltiazemhydrochloride, Nifedipine, Amlodipine, Felodipine, Nicardipine, Nimodipine. Diuretics:Carbonic anhydrase inhibitors: Acetazolamide*, Methazolamide,Dichlorphenamide.Thiazides: Chlorthiazide*, Hydrochlorothiazide, Hydroflumethiazide,Cyclothiazide,Loop diuretics: Furosemide*, Bumetanide, Ethacrynic acid.Potassium sparing Diuretics: Spironolactone, Triamterene, Amiloride.Osmotic Diuretics: MannitolAnti-hypertensive Agents: Timolol, Captopril, Lisinopril, Enalapril, Benazeprilhydrochloride, Quinapril hydrochloride, Methyldopatehydrochloride,* Clonidinehydrochloride, Guanethidine monosulphate, Guanabenz acetate, Sodiumnitroprusside, Diazoxide, Minoxidil, Reserpine, Hydralazine hydrochloride.

UNIT- III

Anti-arrhythmic Drugs: Quinidine sulphate, Procainamide hydrochloride, Disopyramidephosphate*, Phenytoin sodium, Lidocaine hydrochloride, Tocainide hydrochloride,Mexiletine hydrochloride, Lorcainide hydrochloride, Amiodarone, Sotalol.Anti-hyperlipidemic agents: Clofibrate, Lovastatin, Cholesteramine andCholestipolCoagulant & Anticoagulants: Menadione, Acetomenadione, Warfarin*,Anisindione, clopidogrelDrugs used in Congestive Heart Failure: Digoxin, Digitoxin, Nesiritide,Bosentan, Tezosentan.

UNIT- IV

Drugs acting on Endocrine systemNomenclature, Stereochemistry and metabolism ofsteroidsSex hormones: Testosterone, Nandralone, Progestrones, Oestriol, Oestradiol,Oestrione, Diethyl stilbestrol.Drugs for erectile dysfunction: Sildenafil, Tadalafil.

Oral contraceptives: Mifepristone, Norgestril, LevonorgestrolCorticosteroids: Cortisone, Hydrocortisone, Prednisolone, Betamethasone,DexamethasoneThyroid and antithyroid drugs: L-Thyroxine, L-Thyronine, Propylthiouracil,Methimazole.

UNIT – V

Antidiabetic agents:Insulin and its preparationsSulfonyl ureas: Tolbutamide*,Chlorpropamide, Glipizide, Glimepiride.Biguanides: Metformin.Thiazolidinediones: Pioglitazone, Rosiglitazone. Meglitinides: Repaglinide,

Nateglinide.Glucosidase inhibitors: Acrabose, Voglibose.Local Anesthetics: SAR of Local anestheticsBenzoic Acid derivatives; Cocaine, Hexylcaine, Meprylcaine, Cyclomethycaine,Piperocaine.Amino Benzoic acid derivatives: Benzocaine*, Butamben, Procaine*, Butacaine, Propoxycaine, Tetracaine, Benoxinate. Lidocaine/Anilide derivatives: Lignocaine, Mepivacaine, Prilocaine, Etidocaine.Miscellaneous: Phenacaine, Diperodon, Dibucaine.*

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry.
2. Foye's Principles of Medicinal Chemistry. 3. Burger's Medicinal Chemistry, Vol I to IV.
4.Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences.
6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II. 8. The Organic Chemistry of Drug Synthesis by Lednicer, Vol. 1to 5.
9. Indian Pharmacopoeia.
10. Text book of practical organic chemistry- A.I.Vogel.

Course Outcome:

1. This subject is designed to impart fundamental knowledge on the structure, chemistry
2. To acquire knowledge of therapeutic value of drugs.
3. The subject emphasizes on structure activityrelationships of drugs, importance of physicochemical properties and metabolism ofdrugs.
4. The syllabus also emphasizes on chemical synthesis of important drugs under each class.
5. To understand the drug development of chemical moieties

Course Code	Course Title	No of Hours Per week	No of Credits
BP502T.	Industrial Pharmacy-I- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the course the student shall be able to

1. Know the various pharmaceutical dosage forms and their manufacturingtechniques.
2. Know various considerations in development of pharmaceutical dosage forms
3. Formulate solid, liquid and semisolid dosage forms and evaluate them for theirquality

Course content:

UNIT-I

Preformulation Studies: Introduction to preformulation, goals and objectives, study ofphysicochemical characteristics of drug substances.

a. Physical properties: Physical form (crystal & amorphous), particle size, shape, flowproperties, solubility profile (pKa, pH, partition coefficient), polymorphism

b. Chemical Properties: Hydrolysis, oxidation, reduction, racemisation, polymerizationBCS classification of drugs & its significantApplication of preformulation considerations in thedevelopment of solid, liquid oral andparenteral dosage forms and its impact on stability of dosage forms.

UNIT-II

Tablets:

a. Introduction, ideal characteristics of tablets, classification of tablets. Excipients, Formulation of tablets, granulation methods, compression and processing problems.Equipment's and tablet tooling.

b. Tablet coating: Types of coating, coating materials, formulation of coatingcomposition, methods of coating, equipment employed and defects incoating.

c. Quality control tests: In process and finished product tests

Liquid orals: Formulation and manufacturing consideration of syrups and elixirssuspensions and emulsions; Filling and packaging; evaluation of liquid oralsofficial inpharmacopoeia

UNIT-III

Capsules:

a. Hard gelatin capsules: Introduction, Production of hard gelatin capsule shells. Sizeofcapsules, Filling, finishing and special techniques of formulation of hard gelatincapsules,manufacturing defects. In process and final product quality control testsfor capsules.

b. Soft gelatin capsules: Nature of shell and capsule content, size ofcapsules,importance of base adsorption and minim/gram factors, production, inprocess and final product quality control tests. Packing, storage and stability testingof soft gelatin capsules and their applications.

Pellets: Introduction, formulation requirements, pelletization process, equipments formanufacture of pellets

UNIT-IV

Parenteral Products:

a. Definition, types, advantages and limitations. Preformulation factors and essentialrequirements, vehicles, additives, importance of isotonicity

b. Production procedure, production facilities and controls,aseptic processing

c. Formulation of injections, sterile powders, large volume parenterals andlyophilized products.

d. Containers and closures selection, filling and sealing of ampoules, vials and infusionfluids. Quality control tests of parenteral products.

Ophthalmic Preparations: Introduction, formulation considerations; formulation of eyedrops, eye ointments and eye lotions; methods of preparation; labeling, containers;evaluation of ophthalmic preparations

UNIT-V

Cosmetics: Formulation and preparation of the following cosmetic preparations:lipsticks, shampoos, cold cream and vanishing cream, tooth pastes, hair dyes andsunscreens.Pharmaceutical Aerosols: Definition, propellants, containers, valves, types of aerosol

systems; formulation and manufacture of aerosols; Evaluation of aerosols; Qualitycontrol and stability studies.

Packaging Materials Science: Materials used for packaging of pharmaceutical products,factors influencing choice of containers, legal and official requirements for containers,stability aspects of packaging materials, quality control tests.

Course Outcome:

1. To understand the formulation of solid dosage form
2. To acqire knowledge on opharmaceutical additives and various pharmaceutical dosage forms on the performance ofthe drug product.
3. To understand of the capsule formulation and characterization
4. To understand the formulation of injection and capacitation of sterile product
5. To understand the preparation of cosmetics and evaluation studies

Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives: Upon completion of this course the student should be able to

1. Understand the mechanism of drug action and its relevance in the treatment ofdifferent diseases
2. Demonstrate isolation of different organs/tissues from the laboratory animals bysimulated experiments
3. Demonstrate the various receptor actions using isolated tissue preparation
4. Appreciate correlation of pharmacology with related medical sciences

Course Content:

UNIT-I

1. Pharmacology of drugs acting on cardio vascular system

a. Introduction to hemodynamic and electrophysiology of heart.

b. Drugs used in congestive heart failure

c. Anti-hypertensive drugs.

d. Anti-anginal drugs.

e. Anti-arrhythmic drugs.

f. Anti-hyperlipidemic drugs.

UNIT-II

1. Pharmacology of drugs acting on cardio vascular system

a. Drug used in the therapy of shock.

b. Hematinics, coagulants and anticoagulants.

c. Fibrinolytics and anti-platelet drugs

d. Plasma volume expanders

2. Pharmacology of drugs acting on urinary system

a. Diuretics

b. Anti-diuretics.

UNIT-III

3. Autocoids and related drugs

a. Introduction to autacoids and classification

b. Histamine, 5-HT and their antagonists.

c. Prostaglandins, Thromboxanes and Leukotrienes.

d. Angiotensin, Bradykinin and Substance P. e. Non-steroidal anti-inflammatory agents

f. Anti-gout drugs

g. Antirheumatic drugs

UNIT-IV

5. Pharmacology of drugs acting on endocrine system

a. Basic concepts in endocrine pharmacology. b. Anterior Pituitary hormones- analogues andtheir inhibitors.

c. Thyroid hormones- analogues and their inhibitors.

d. Hormones regulating plasma calcium level- Parathormone, Calcitonin andVitamin-D.

d. Insulin, Oral Hypoglycemic agents and glucagon.

e. ACTH and corticosteroids.

UNIT-V

5. Pharmacology of drugs acting on endocrine system

a. Androgens and Anabolic steroids.

b. Estrogens, progesterone and oral contraceptives.

c. Drugs acting on the uterus.

6. Bioassay

a. Principles and applications of bioassay. b.Types of bioassay

c. Bioassay of insulin, oxytocin, vasopressin, ACTH,d-tubocurarine,digitalis, histamineand 5-HT

Course Outcome:

1. This subject is intended to impart the fundamental knowledge of drug pharmacology
2. To understand the various aspects (classification, mechanism of action, therapeutic effects, clinical uses, side effects and contraindications) of drugs acting on different systems of body
3. To understand of general pharmacology of Non-steroidal anti-inflammatory agents
4. To understand ofPharmacology of drugs acting on endocrine system
5. To understand of emphasis on the basic concepts of bioassay

BP504T.	PHARMACOGNOSY AND PHYTOCHEMISTRY II- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the course, the student shall be able

1. to know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents
2. to understand the preparation and development of herbal formulation.
3. to understand the herbal drug interactions
4. to carryout isolation and identification of phytoconstituents

Course Content:

UNIT-I

Metabolic pathways in higher plants and their determination

a) Brief study of basic metabolic pathways and formation of different secondary metabolitesthrough these pathways- Shikimic acid pathway, Acetate pathways and Amino acid pathway. b) Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT-II

General introduction, composition, chemistry & chemical classes, biosources, therapeuticuses and commercial applications of followingsecondary metabolites:

Alkaloids: Vinca, Rauwolfia, Belladonna, Opium,Phenylpropanoids and Flavonoids: Lignans,Tea, RutaSteroids, Cardiac Glycosides & Triterpenoids: Liquorice, Dioscorea, Digitalis

Volatile oils: Mentha, Clove, Cinnamon, Fennel, Coriander,

Tannins: Catechu, Pterocarpus

Resins: Benzoin, Guggul, Ginger, Asafoetida, Myrrh, Colophony

Glycosides: Senna, Aloes, Bitter AlmondIridoids, Other terpenoids &Naphthaquinones: Gentian, Artemisia, taxus, carotenoids

UNIT-III

Isolation, Identification and Analysis of Phytoconstituents

a) Terpenoids: Menthol, Citral, Artemisin

b) Glycosides: Glycyrhetinic acid &Rutin

c) Alkaloids: Atropine,Quinine,Reserpine,Caffeine

d) Resins: Podophyllotoxin, Curcumin

UNIT-IV

Industrial production, estimation and utilization of the following phytoconstituents:Forskolin, Sennoside, Artemisinin, Diosgenin, Digoxin, Atropine, Podophyllotoxin, Caffeine, Taxol, Vincristine and Vinblastine

UNIT V

Basics of Phytochemistry

Modern methods of extraction, application of latest techniques like Spectroscopy,chromatography and electrophoresis in the isolation, purification and identification of crudedrugs.

Course Outcome:

1. The main purpose of subject is to impart the students the knowledge of how thesecondary metabolites is produced in the crude drugs,
2. To understand of how to isolate and identify andproduce them industrially.
3. The study of producing the plants andphytochemicals through plant tissue culture,
4. To understand the drug interactions and basic principles oftraditional system of medicine
5. To understand the basic photochemistry of isolation and purification of crude drugs

BP505T.	PHARMACEUTICAL JURISPRUDENCE- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the course, the student shall be able to understand:

1. The Pharmaceutical legislations and their implications in the development andmarketing of pharmaceuticals.
2. Various Indian pharmaceutical Acts and Laws
3. The regulatory authorities and agencies governing the manufacture and sale ofpharmaceuticals
4. The code of ethics during the pharmaceutical practice

Course Content:

UNIT-I

Drugs and Cosmetics Act, 1940 and its rules 1945:
Objectives, Definitions, Legal definitions of schedules to the Act andRules
Import of drugs – Classes of drugs and cosmetics prohibited from import, Import under license or permit. Offences and penalties. Manufacture of drugs – Prohibition of manufactureand sale of certain drugs,Conditions for grant of license and conditions of license for manufacture of drugs, Manufacture of drugs for test, examination and analysis, manufacture ofnew drug, loanlicense and repacking license.

UNIT-II

Drugs and Cosmetics Act, 1940 and its rules 1945.Detailed study of Schedule G, H, M, N, P, T, U, V, X, Y, Part XII B, Sch F & DMR (OA)Sale of Drugs – Wholesale, Retail sale and

Restricted license. Offences and penaltiesLabeling& Packing of drugs- General labeling requirements and specimen labels fordrugs and cosmetics, List of permitted colors. Offences and penalties.

Administration of the Act and Rules – Drugs Technical Advisory Board, Central drugsLaboratory, Drugs Consultative Committee, Government drug analysts, Licensingauthorities, controlling authorities, Drugs Inspectors

UNIT-III

Pharmacy Act –1948: Objectives, Definitions, Pharmacy Council of India; itsconstitution and functions, Education Regulations, State and Joint state pharmacycouncils; constitution and functions, Registration of Pharmacists, Offences andPenalties

Medicinal and Toilet Preparation Act –1955: Objectives, Definitions, Licensing, Manufacture In bond and Outside bond, Export of alcoholic preparations,Manufacture of Ayurvedic,Homeopathic, Patent & Proprietary Preparations.Offences and Penalties.

Narcotic Drugs and Psychotropic substances Act-1985 and Rules: Objectives,Definitions, Authorities and Officers, Constitution and Functions of narcotic &Psychotropic Consultative Committee, National Fund for Controlling the DrugAbuse, Prohibition, Control and Regulation, opium poppy cultivation and productionof poppy straw, manufacture, sale and export of opium, Offences and Penalties

UNIT-IV

Study of Salient Features of Drugs and Magic Remedies Act and itsrules: Objectives, Definitions, Prohibition of certain advertisements, Classes of
Exempted advertisements, Offences and Penalties

Prevention of Cruelty to animals Act1960: Objectives, Definitions, InstitutionalAnimal Ethics Committee, CPCSEA guidelines for Breeding and Stocking ofAnimals, Performance of Experiments, Transfer and acquisition of animals forexperiment, Records, Power to suspend or revoke registration, Offences and Penalties

National Pharmaceutical Pricing Authority: Drugs Price Control Order (DPCO)-2013.Objectives, Definitions, Sale prices of bulk drugs, Retail price of formulations,Retail price andceiling price of scheduled formulations, National List of EssentialMedicines (NLEM)

UNIT-V

Pharmaceutical Legislations – A brief review, Introduction, Study of drugs enquirycommittee, Health survey and development committee, Hathi committee andMudaliar committee

Code of Pharmaceutical ethics D definition, Pharmacist in relation to his job, trade, medicalprofession and his profession, Pharmacist's oath

Medical Termination of Pregnancy Act

Right to Information Act

Introduction to Intellectual Property Rights (IPR)

Recommended books: (Latest Edition)

1. Forensic Pharmacy by B. Suresh
2. Text book of Forensic Pharmacy by B.M. Mithal
3. Hand book of drug law-by M.L. Mehra
4. A text book of Forensic Pharmacy by N.K. Jain
5. Drugs and Cosmetics Act/Rules by Govt. of India publications.
6. Medicinal and Toilet preparations act 1955 by Govt. of India publications.
7. Narcotic drugs and psychotropic substances act by Govt. of India publications
8. Drugs and Magic Remedies act by Govt. of India publication
9. Bare Acts of the said laws published by Government. Reference books (Theory)

Course Outcome:

1. This course is designed to impart basic knowledge on importantlegislations related to the profession of pharmacy in India.
2. To recall the pharmaceutical legislations, ethics, right to information, medical termination of pregnancy and intellectual property rights.
3. To relate the significance of Drugs and cosmetics act 1940 and its rules 1945 in relation to import and manufacture of drugs.
4. To apply the knowledge on schedules pertaining to Drugs and cosmetics act 1940 and its rules 1945 and also administration of the act and rules.
5. To understand the functions of pharmacy councils and implementation of education regulations in pharmacy.To appraise the importance of medicinal and toilet preparations act and narcotic drugs and psychotropic substances act and rules.

Objectives:

Upon completion of the course the student shall be able to

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms
3. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality
4. This course to knowledge on formulation and evaluation of different types of tablets and capsules, injection, ointments, creams

Course content

1. Preformulation studies on paracetamol/asparin/or any other drug
2. Preparation and evaluation of Paracetamol tablets
3. Preparation and evaluation of Aspirin tablets
4. Coating of tablets- film coating of tables/granules
5. Preparation and evaluation of Tetracycline capsules
6. Preparation of Calcium Gluconate injection
7. Preparation of Ascorbic Acid injection
8. Qulaity control test of (as per IP) marketed tablets and capsules
9. Preparation of Eye drops/ and Eye ointments
10. Preparation of Creams (cold / vanishing cream)
11. Evaluation of Glass containers (as per IP)

BP508P.	PHARMACOGNOSY AND PHYTOCHEMISTRY II- Practical	04	02
Sessional Marks: 15		End Semester Examination Marks: 35	

Objectives:

To identify Morphology, histology and powder characteristics & extraction & detectionof:Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander

2. Exercise involving isolation & detection of active principles

a. Caffeine - from tea dust.

b. Diosgenin from Dioscorea

c. Atropine from Belladonna

d. Sennosides from Senna

3. Separation of sugars by Paper chromatography

4. TLC of herbal extract of different compounds

Course content

1. Morphology, histology and powder characteristics & extraction & detection of: Cinchona, Cinnamon, Senna, Clove, Ephedra, Fennel and Coriander

2. Exercise involving isolation & detection of active principles

a. Caffeine - from tea dust.

b. Diosgenin from Dioscorea

c. Atropine from Belladonna

d. Sennosides from Senna

3. Separation of sugars by Paper chromatography

4. TLC of herbal extract

5. Distillation of volatile oils and detection of phytoconstitutents by TLC

6. Analysis of crude drugs by chemical tests: (i) Asafoetida (ii) Benzoin (iii) Colophony (iv) Aloes (v) Myrrh

Recommended Books: (Latest Editions)

10. The formulation and preparation of cosmetic, fragrances and flavours. 11. Remington'sPharmaceutical sciences. 12. Text Book of Biotechnology by Vyas and Dixit.
13. Text Book of Biotechnology by R.C. Dubey.

Course Outcome:

1. To know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents by use chromatographic technique
2. The main purpose of subject is to impart the students the knowledge of how thesecondary metabolites is produced in the crude drugs,
3. To understand of how to isolate and identify andproduce them industrially.
4. The study of producing the plants andphytochemicals through plant tissue culture,
5. To understand the drug interactions and basic principles oftraditional system of medicine

SEMESTER VI

Course Code	Course Title	No of Hours Per week	No of Credits
BP601T.	MEDICINAL CHEMISTRY – III-Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the course student shall be able to

1. Understand the importance of drug design and different techniques of drugdesign.
2. Understand the chemistry of drugs with respect to their biological activity.
3. Know the metabolism, adverse effects and therapeutic value of drugs.
4. Know the importance of SAR of drugs.

Study of the development of the following classes of drugs, Classification, mechanism of action, uses of drugs mentioned in the course, Structure activity relationship of selective class of drugs as specified in the course and synthesis of drugs superscripted by (*)

Course Content:

UNIT – I

Antibiotics

Historical background, Nomenclature, Stereochemistry, Structure activityrelationship, Chemical degradation classification and important products ofthe following classes.

β-Lactam antibiotics: Penicillin, Cepholosporins, β- Lactamase inhibitors,Monobactams

Aminoglycosides: Streptomycin, Neomycin, Kanamycin

Tetracyclines: Tetracycline,Oxytetracycline, Chlortetracycline, Minocycline, Doxycycline

UNIT – II

Antibiotics

Historical background, Nomenclature, Stereochemistry, Structure activityrelationship,Chemical degradation classification and important products ofthe following classes.

Macrolide: Erythromycin Clarithromycin, Azithromycin.

Miscellaneous: Chloramphenicol*, Clindamycin.

Prodrugs: Basic concepts and application of prodrugs design.

Antimalarials: Etiology of malaria. Quinolines: SAR, Quinine sulphate, Chloroquine*,Amodiaquine, Primaquine phosphate, Pamaquine*, Quinacrine hydrochloride, Mefloquine. Biguanides and dihydro triazines: Cycloguanil pamoate, Proguanil.

Miscellaneous: Pyrimethamine, Artesunete, Artemether, Atovoquone.

UNIT – III

Anti-tubercular Agents

Synthetic anti-tubercular agents: Isoniozid*, Ethionamide, Ethambutol,Pyrazinamide, Paraamino salicylic acid.*

Anti-tubercular antibiotics: Rifampicin, Rifabutin, CycloserineStreptomycine, Capreomycinsulphate.Urinary tract anti-infective agents

Quinolones: SAR of quinolones, Nalidixic Acid,Norfloxacin, Enoxacin,Ciprofloxacin*,Ofloxacin, Lomefloxacin, Sparfloxacin, Gatifloxacin,Moxifloxacin

Miscellaneous: Furazolidine, Nitrofurantoin*, Methanamine. Antiviral agents:Amantadine hydrochloride, Rimantadine hydrochloride, Idoxuridinetrifluoride, Acyclovir*, Gancyclovir, Zidovudine, Didanosine, Zalcitabine,Lamivudine, Loviride, Delavirding, Ribavirin,Saquinavir, Indinavir,Ritonavir.

UNIT – IV

Antifungal agents:

Antifungal antibiotics: Amphotericin-B, Nystatin, Natamycin, Griseofulvin.Synthetic Antifungal agents: Clotrimazole, Econazole, Butoconazole,Oxiconazole Tioconozole, Miconazole*, Ketoconazole, Terconazole,Itraconazole, Fluconazole, Naftifinehydrochloride, Tolnaftate*. Anti-protozoal Agents: Metronidazole*, Tinidazole, Ornidazole,Diloxanide, Iodoquinol, Pentamidine Isethionate, Atovaquone, Eflornithine.Anthelmintics: Diethylcarbamazine citrate*, Thiabendazole, Mebendazole*,Albendazole, Niclosamide, Oxamniquine, Praziquantal, Ivermectin.Sulphonamides and SulfonesHistorical development, chemistry, classification and SAR of Sulfonamides:Sulphamethizole,Sulfisoxazole,

Sulphamethizine, Sulfacetamide*,Sulphapyridine, Sulfamethoxaole*,Sulphadiazine, Mefenide acetate, Sulfasalazine.Folate reductase inhibitors: Trimethoprim*,Cotrimoxazole.Sulfones: Dapsone*.

UNIT – V

Introduction to Drug DesignVarious approaches used in drug design.Physicochemical parameters used in quantitative structure activityrelationship (QSAR) such as partitioncoefficient, Hammet's electronicparameter, Tafts steric parameter and Hanschanalysis.Pharmacophoremodeling and docking techniques. Combinatorial Chemistry: Concept and applications

chemistry: solid phase and solution phase synthesis.of combinatorial

Course Outcome:

1. This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
2. The subject emphasis on modern techniques ofrational drug design like quantitative structure activity relationship (QSAR),
3. To understand the Prodrugconcept, combinatorial chemistry and Computer aided drug design (CADD).
4. To understand the emphasizes on the chemistry, mechanism of action, metabolism, adverse effects, Structure Activity Relationships (SAR),
5. To understand the therapeutic uses and synthesis of importantdrugs.

Course Code	Course Title	No of Hours Per week	No of Credits
BP602T.	PHARMACOLOGY-III- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of this course the student should be able to:

1. understand the mechanism of drug action and its relevance in the treatment ofdifferent infectious diseases
2. comprehend the principles of toxicology and treatment of various poisoningsand
3. appreciate correlation of pharmacology with related medical sciences.

Course Content:

UNIT-I

1. Pharmacology of drugs acting on Respiratory system

a. Anti -asthmatic drugs

b. Drugs used in the management of COPD

c. Expectorants and antitussives

d. Nasal decongestants

e. Respiratory stimulants

2. Pharmacology of drugs acting on the Gastrointestinal Tract

a. Antiulcer agents.

b. Drugs for constipation and diarrhoea. c. Appetite stimulants and suppressants.

d. Digestants and carminatives.

e. Emetics and anti-emetics.

UNIT-II

3. Chemotherapy

a. General principles of chemotherapy. b. Sulfonamides and cotrimoxazole.

c. Antibiotics- Penicillins, cephalosporins, chloramphenicol, macrolides,quinolones and fluoroquinolins, tetracycline and aminoglycosides

UNIT-III

3. Chemotherapy

a. Antitubercular agents

b. Antileprotic agents

c. Antifungal agents

d. Antiviral drugs

e.Anthelmintics

f. Antimalarial drugs

g. Antiamoebic agents

UNIT-IV

Chemotherapy

l. Urinary tract infections and sexually transmitted diseases.

Chemotherapy of malignancy.

4. Immunopharmacology

a. Immunostimulants

b. Immunosuppressant

Protein drugs, monoclonal antibodies, target drugs to antigen, biosimilars

UNIT-V

5. Principles of toxicology

a. Definition and basic knowledge of acute, subacute and chronic toxicity.

b. Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicityand mutagenicity

c. General principles of treatment of poisoning

d. Clinical symptoms and management of barbiturates, morphine, organophosphosphoruscompound and lead, mercury and arsenic poisoning.

6. Chronopharmacology

a. Definition of rhythm and cycles.

b. biological clock and their significance leading to chronotherapy.

Course Outcome:

1. To understand the basic pharmacology of various drugs impart the fundamental knowledge on various aspects
2. To understand (classification, mechanism of action, therapeutic effects, clinical uses, side effects

3. To understand contraindications) of drugs acting on respiratory and gastrointestinal system, infectious
4. To understand diseases, immuno-pharmacology and in addition,
5. To understand emphasis on the principles of toxicology and chrono pharmacology.

Course Code	Course Title	No of Hours Per week	No of Credits
BP603T.	HERBAL DRUG TECHNOLOGY-Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of this course the student should be able to:

1. understand raw material as source of herbal drugs from cultivation to herbal drugproduct
2. know the WHO and ICH guidelines for evaluation of herbal drugs
3. know the herbal cosmetics, natural sweeteners, nutraceuticals
4. appreciate patenting of herbal drugs, GMP.

Course content:

UNIT-I

Herbs as raw materials

Definition of herb, herbal medicine, herbal medicinal product, herbal drug preparationSource of HerbsSelection, identification and authentication of herbal materialsProcessing of herbal raw materialBiodynamic AgricultureGood agricultural practices in cultivation of medicinal plants including Organic farming.

Pest and Pest management in medicinal plants: Biopesticides/Bioinsecticides. Indian Systems of Medicine

a) Basic principles involved in Ayurveda, Siddha, Unani and Homeopathy

b) Preparation and standardization of Ayurvedic formulations viz Aristas and Asawas, Ghutika,Churna, Lehya and Bhasma.

UNIT-II

Nutraceuticals

General aspects, Market, growth, scope and types of products available in the market. Healthbenefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritablebowel syndrome and various Gastro intestinal diseases. Study of following herbs as

health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, SpirulinaHerbal-Drug and Herb-Food Interactions: General introduction to interaction and

classification.

Study of following drugs and their possible side effects and interactions:Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper & Ephedra.

UNIT-III

Herbal Cosmetics

Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gumscolours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin

care, hair care and oral hygiene products.

Herbal excipients:

Herbal Excipients – Significance of substances of natural origin as excipients – colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavors& perfumes. Herbal formulations:

Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage formslike phytosomes

UNIT- IV

Evaluation of Drugs WHO & ICH guidelines for the assessment of herbal drugsStability testing of herbal drugs. Patenting and Regulatory requirements of natural products:

a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy

b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma & Neem.Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs & Cosmetics Act for ASU drugs.

UNIT-V

General Introduction to Herbal Industry

Herbal drugs industry: Present scope and future prospects. A brief account of plant-basedindustries and institutions involved in work on medicinal andaromatic plants in India. Schedule T – Good Manufacturing Practice of Indian systems of medicineComponents of GMP (Schedule – T) and its objectivesInfrastructural requirements, working space, storage

area, machinery and equipment,standard operating procedures, health and hygiene, documentation and records.

Course Outcome:

1. To basic understanding of herbal drugindustry,
2. To understanding the quality of raw material, guidelines for quality of herbal drugs,
3. To understanding herbal cosmetics,natural sweeteners, nutraceutical etc.
4. To understanding the subject also emphasizes on Good ManufacturingPractices (GMP),
5. To understanding patenting and regulatory issues of herbal drugs

Course Code	Course Title	No of Hours Per week	No of Credits
BP604T.	BIOPHARMACEUTICS AND PHARMACOKINETICS- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the course student shall be ableto:

1. Understand the basic concepts in biopharmaceutics and pharmacokinetics andtheir significance.
2. Use of plasma drug concentration-time data to calculate the pharmacokineticparameters to describe the kinetics of drug absorption, distribution,metabolism, excretion, elimination.
3. To understand the concepts of bioavailability and bioequivalence of drugproducts and their significance.
4. Understand various pharmacokinetic parameters, their significance &applications.

Course Content:

UNIT-I

Introduction

BiopharmaceuticstoAbsorption; Mechanisms of drug absorption through GIT, factors influencing drugabsorption though GIT, absorption of drug from Non per oral extra-vascularroutes, Distribution Tissue permeability of drugs, binding of drugs, apparent, volume of drug distribution, plasma and tissue protein binding of drugs, factors affectingprotein-drug binding. Kinetics of protein binding, Clinical significance of proteinbinding of drugs

UNIT- II

Elimination: Drug metabolism and basic understanding metabolic pathways renalexcretion of drugs, factors affecting renal excretion of drugs, renal clearance, non-renalroutes of drug excretion of drugs

Bioavailability and Bioequivalence: Definition and Objectives of bioavailability, absolute and relative bioavailability, measurement of bioavailability, in-vitro drugdissolution models, in-vitro-in-vivo correlations, bioequivalence studies, methods toenhance the dissolution rates and bioavailability of poorly soluble drugs.

UNIT- III

Pharmacokinetics: Definition and introduction to Pharmacokinetics, Compartmentmodels, non-compartment models, physiological models, One compartment openmodel.

(a). Intravenous Injection (Bolus)

(b). Intravenous infusion and

(c) Extravascular administrations. Pharmacokinetics parameters - KE, t1/2, Vd, AUC,Ka, Clt andCLR- definitions methods of eliminations, understanding of their significance and application

UNIT- IV

Multicompartment models: Two compartment open model. IV bolusKinetics of multiple dosing, steady state drug levels, calculation of loading andmaintenance doses and their significance in clinical settins.

UNIT- V

Nonlinear Pharmacokinetics:

a. Introduction,

b. Factors causing non-linearity.

c. Michaelis-menton method of estimating parameters, Explanation with example ofdrugs.

Recommended Books: (Latest Editions)

1. Biopharmaceutics and Clinical Pharmacokinetics by, Milo Gibaldi.

2. Biopharmaceutics and Pharmacokinetics; By Robert F Notari

3. Applied biopharmaceutics and pharmacokinetics, Leon Shargel and Andrew B.C.YU 4th edition,Prentice-Hall Inernationaledition.USA

4. Bio pharmaceutics and Pharmacokinetics-A Treatise, By D. M. Brahmankar and Sunil B.Jaiswal,VallabhPrakashan Pitampura, Delhi

5. Pharmacokinetics: By Milo Glbaldi Donald, R. Mercel Dekker Inc. 6. Hand Book ofClinical Pharmacokinetics, By Milo Gibaldi and Laurie Prescott byADIS Health Science Press.
7. Biopharmaceutics; By Swarbrick
8. Clinical Pharmacokinetics, Concepts and Applications: By Malcolm Rowland and
9. Thomas, N. Tozen, Lea and Febrger, Philadelphia, 1995.
10. Dissolution, Bioavailability and Bioequivalence, By Abdou H.M, Mack,Publishing Company,Pennsylvania 1989.
11. Biopharmaceutics and Clinical Pharmacokinetics-An introduction 4th edition Revised and expanded by Rebort F Notari Marcel Dekker Inn, New York and Basel, 1987.
12. Remington's Pharmaceutical Sciences, By Mack Publishing Company, Pennsylvnia

Course Outcome:

1. To understand of basic knowledge and skills of Biopharmaceutics
2. To understand the basic process of drug in body
3. To understand pharmacokinetics models to understand ADME Studies
4. To understand compartmental models to drug Pharmacokinetics their applications
5. To understand the pharmaceutical dosage form as per in pharmaceutical development

BP605T.	PHARMACEUTICAL BIOTECHNOLOGY - Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives:

Upon completion of the subject student shall be able to;

1. Understanding the importance of Immobilized enzymes in PharmaceuticalIndustries
2. Genetic engineering applications in relation to production of pharmaceuticals
3. Importance of Monoclonal antibodies in Industries
4. Appreciate the use of microorganisms in fermentation technology

Course Content

Unit I

a) Brief introduction to Biotechnology with reference to Pharmaceutical Sciences.

b) Enzyme Biotechnology- Methods of enzyme immobilization and applications.

c) Biosensors- Working and applications of biosensors in Pharmaceutical Industries.

d) Brief introduction to Protein Engineering. e) Use of microbes in industry. Production of Enzymes- General consideration - Amylase, Catalase, Peroxidase, Lipase, Protease, Penicillinase. f) Basic principles of genetic engineering.

Unit II

a) Study of cloning vectors, restriction endonucleases and DNA ligase.

b) Recombinant DNA technology. Application of genetic engineering in medicine.

c) Application of r DNA technology and genetic engineering in the production of:

i) Interferon ii) Vaccines- hepatitis- B iii) Hormones-Insulin.

d) Brief introduction to PCR

Unit III

Types of immunity- humoral immunity, cellular immunity

a) Structure of Immunoglobulins

b) Structure and Function of MHC

c) Hypersensitivity reactions, Immune stimulation and Immune suppressions.

d) General method of the preparation of bacterial vaccines, toxoids, viral vaccine, antitoxins, serum-immune blood derivatives and other products relative to immunity. e) Storage conditions and stability of official vaccines

f) Hybridoma technology- Production, Purification and Applications

g) Blood products and Plasma Substituties.

Unit IV

a) Immuno blotting techniques- ELISA, Western blotting, Southern blotting.

b) Genetic organization of Eukaryotes and Prokaryotes

c) Microbial genetics including transformation, transduction, conjugation, plasmids andtransposons.

d) Introduction to Microbial biotransformation and applications.

e) Mutation: Types of mutation/mutants.

Unit V

a) Fermentation methods and general requirements, study of media, equipments, sterilization methods, aeration process, stirring.

b) large scale production fermenter design and its various controls.

c) Study of the production of - penicillins, citric acid, Vitamin B12, Glutamic acid, Griseofulvin,

d) Blood Products: Collection, Processing and Storage of whole human blood, dried human plasma, plasma Substituties.

Recommended Books (Latest edition):

1. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applicationsof RecombinantDNA: ASM Press Washington D.C.

2. RA Goldshy et. al., :Kuby Immunology.

3. J.W. Goding: Monoclonal Antibodies.

4. J.M. Walker and E.B. Gingold: Molecular Biology and Biotechnology by RoyalSociety of Chemistry. 5. Zaborsky: Immobilized Enzymes, CRC Press, Degraland, Ohio.

6. S.B. Primrose: Molecular Biotechnology (Second Edition) Blackwell ScientificPublication.

7. Stanbury F., P., Whitakar A., and Hall J., S., Principles of fermentation technology, 2nd edition, Aditya books Ltd., New Delhi

Course Outcome:

1. To understand the Biotechnology has a long promise to revolutionize the biological sciences andtechnology.
2. To understand the Scientific application of biotechnology in the field of genetic engineering, medicine and fermentation technology makes the subject interesting.
3. To understand the Biotechnology is leading to new biological revolutions in diagnosis, preventionand cure of diseases, new and cheaper pharmaceutical drugs.
4. To understand the Biotechnology has already produced transgenic crops and animals and
5. To understand the futurepromises lot more. It is basically a research-based subject.

BP606T.	PHARMACEUTICAL QUALITY ASSURANCE- Theory	03+01 (Tutorial)	04
Sessional Marks: 25		End Semester Examination Marks: 75	

Objectives: Upon completion of the course student shall be able to:

1.understand the cGMP aspects in a pharmaceutical industry

2.appreciate the importance of documentation

3.understand the scope of quality certifications applicable to pharmaceuticalindustries understand the responsibilities of QA & QC departments

Course content:

UNIT – I

Quality Assurance and Quality Management concepts: Definition and concept of Quality control, Quality assurance and GMPTotal Quality Management (TQM): Definition, elements, philosophiesICH Guidelines: purpose, participants, process of harmonization, Brief overview of QSEM,with special emphasis on Q-series guidelines, ICH stability testing guidelinesQuality by design (QbD): Definition, overview, elements of QbD program, toolsISO 9000 & ISO14000: Overview, Benefits, Elements, steps for registrationNABL accreditation : Principles and procedures

UNIT - II

Organization and personnel: Personnel responsibilities, training, hygiene and personal records.

Premises: Design, construction and plant layout, maintenance, sanitation, environmentalcontrol, utilities and maintenance of sterile areas, control of

contamination.Equipments and raw materials: Equipment selection, purchase specifications, maintenance, purchase specifications and maintenance of stores for raw materials.

UNIT – III

Quality Control: Quality control test for containers, rubber closures and secondary packingmaterials.Good Laboratory Practices: General Provisions, Organization and Personnel, Facilities,Equipment, Testing Facilities Operation, Test and Control Articles, Protocol for Conduct of aNonclinical Laboratory Study, Records and Reports, Disqualification of Testing Facilities

UNIT – IV

Complaints: Complaints and evaluation of complaints, Handling of return good, recalling and waste disposal.Document maintenance in pharmaceutical industry: Batch Formula Record, Master FormulaRecord, SOP, Quality audit, Quality Review and Quality documentation, Reports anddocuments, distribution records.

UNIT – V

Calibration and Validation: Introduction, definition and general principles of calibration,qualification and validation, importance and scope of validation, types of validation, validation

master plan. Calibration of pH meter, Qualification of UV-Visible spectrophotometer, General

principles of Analytical method Validation.Warehousing: Good warehousing practice,materials management

Recommended Books: (Latest Edition)

1. Quality Assurance Guide by organization of Pharmaceutical Products of India.
2. Good Laboratory Practice Regulations, 2nd Edition, Sandy Weinberg Vol. 69.
3. Quality Assurance of Pharmaceuticals- A compendium of Guide lines and Relatedmaterials Vol I WHO Publications.
4. A guide to Total Quality Management- Kushik Maitra and Sedhan K Ghosh
5. How to Practice GMP's – P P Sharma. 6. ISO 9000 and Total Quality Management – Sadhank G Ghosh
7. The International Pharmacopoeia – Vol I, II, III, IV- General Methods of Analysisand Quality specification for Pharmaceutical Substances, Excipients and Dosageforms
8. Good laboratory Practices – Marcel Deckker Series

9. ICH guidelines, ISO 9000 and 14000 guidelines

Course Outcome:

1. To understand the various aspects of quality control
2. To understand the and qualityassurance aspects of pharmaceutical industries.
3. To understand the deals with the important aspects likes GMP, QC tests,
4. To understand the documentation, quality certifications
5. To understand the regulatory affairs.

Course Code	Course Title	No of Hours Per week	No of Credits
BP607P.	**MEDICINAL CHEMISTRY- III- Practical**	**04**	**02**
Sessional Marks: 15		**End Semester Examination Marks: 35**	

Objectives:

To understand to synthesis of selected molecules

To understand the binary and ternary mixture analysis to identification of compounds

Course content

I Preparation of drugs and intermediates

1 Sulphanilamide

2 7-Hydroxy, 4-methyl coumarin

3 Chlorobutanol

4 Triphenyl imidazole

5 Tolbutamide

6 Hexamine

II Assay of drugs

1 Isonicotinic acid hydrazide

2 Chloroquine

3 Metronidazole

4 Dapsone

5 Chlorpheniramine maleate

6 Benzyl penicillin

III Preparation of medicinally important compounds or intermediates by Microwave irradiation technique

IV Drawing structures and reactions using chem draw®

V Determination of physicochemical properties such as logP, clogP, MR, Molecularweight, Hydrogen bond donors and acceptors for class of drugs course contentusing drug design software Drug likeliness screening (Lipinskies RO5)

Recommended Books (Latest Editions)

1. Wilson and Giswold's Organic medicinal and Pharmaceutical Chemistry. 2. Foye's Principles of Medicinal Chemistry. 3. Burger's Medicinal Chemistry, Vol I to IV.
4. Introduction to principles of drug design- Smith and Williams.
5. Remington's Pharmaceutical Sciences. 6. Martindale's extra pharmacopoeia.
7. Organic Chemistry by I.L. Finar, Vol. II. 8. The Organic Chemistry of Drug Synthesis byLednicer, Vol. 1-5.
9. Indian Pharmacopoeia. 10. Text book of practical organic chemistry- A.I.Vogel.

Course Outcome:

This course helps to how to separation and identification compound given unknown mixture.

It imparts take it knowledge on crude separation and identification technique

Course Code	Course Title	No of Hours Per week	No of Credits
BP608 P.	PHARMACOLOGY-III-Practical	04	02
Sessional Marks: 15		End Semester Examination Marks: 35	

Objectives:

1.To understand the handling of different equipments used in experimental pharmacology.

2.To know about the preparation and purpose of different physiological salt solutions used in the experimental pharmacology.

3.Knowledge on miotics and mydriasis, locomotor movements.

4.All the simulation techniques has been demonstrated by using software as animal dissection has been banned for UG studies.

Course Content

1. Dose calculation in pharmacological experiments
2. Antiallergic activity by mast cell stabilization assay
3. Study of anti-ulcer activity of a drug using pylorus ligand (SHAY) rat model and NSAIDS induced ulcer model.
4. Study of effect of drugs on gastrointestinal motility
5. Effect of agonist and antagonists on guinea pig ileum
6. Estimation of serum biochemical parameters by using semi- autoanalyser
7. Effect of saline purgative on frog intestine
8. Insulin hypoglycemic effect in rabbit
9. Test for pyrogens (rabbit method)
10. Determination of acute oral toxicity (LD50) of a drug from a given data
11. Determination of acute skin irritation / corrosion of a test substance
12. Determination of acute eye irritation / corrosion of a test substance
13. Calculation of pharmacokinetic parameters from a given data
14. Biostatistics methods in experimental pharmacology (student's t test, ANOVA)

15. Biostatistics methods in experimental pharmacology (Chi square test, Wilcoxon Signed Rank test)

*Experiments are demonstrated by simulated experiments/videos

Recommended Books (Latest Editions)

1. Rang H. P., Dale M. M., Ritter J. M., Flower R. J., Rang and Dale's Pharmacology, Churchil Livingstone Elsevier

3. Goodman and Gilman's, The Pharmacological Basis of Therapeutics
4. Marry Anne K. K., Lloyd Yee Y., Brian K. A., Robbin L.C., Joseph G. B., Wayne A.K., Bradley R.W., Applied Therapeutics, The Clinical use of Drugs. The Point LippincottWilliams & Wilkins
5. Mycek M.J, Gelnet S.B and Perper M.M. Lippincott's Illustrated Reviews- Pharmacology
6. K.D.Tripathi. Essentials of Medical Pharmacology, , JAYPEE Brothers MedicalPublishers (P) Ltd, New Delhi.
7. Sharma H. L., Sharma K. K., Principles of Pharmacology, Paras medical publisherModern Pharmacology with clinical Applications, by Charles R.Craig& Robert,
8. Ghosh MN. Fundamentals of Experimental Pharmacology. Hilton & Company, Kolkata,
9. Kulkarni SK. Handbook of experimental pharmacology. VallabhPrakashan,
10. N.Udupa and P.D. Gupta, Concepts in Chronopharmacology.

Course Outcome:

After successful completion of this course, students will be able to:

1. Handling of different instruments used in Experimental Pharmacology.
2. Know about the different routes of drug administration, blood withdrawal etc.,
3. Evaluate the different activities on animals.
4. Demonstration of different simulation methods.
5. They would have finally learnt to apply the knowledge of drugs practically using simulated pharmacological experiments

BP609P.	HERBAL DRUG TECHNOLOGY--Practical	04	02
Sessional Marks: 15		End Semester Examination Marks: 35	

Objectives:

1.To perform preliminary phytochemical screening of crude drugs.

2.To prepare and standardized of extract in cosmetic formulations semisolid dosage form

3. To Determination of Aldehyde content, phenol content, total alkaloid

Course Content

1. To perform preliminary phytochemical screening of crude drugs.

2. Determination of the alcohol content of Asava and Arista

3. Evaluation of excipients of natural origin

4. Incorporation of prepared and standardized extract in cosmetic formulations like creams, lotions and shampoos and their evaluation.

5. Incorporation of prepared and standardized extract in formulations like syrups, mixtures and tablets and their evaluation as per Pharmacopoeial requirements. 6. Monograph analysis of herbal drugs from recent Pharmacopoeias

7. Determination of Aldehyde content

8. Determination of Phenol content

9. Determination of total alkaloids

Recommended Books: (Latest Editions)

1. Textbook of Pharmacognosy by Trease& Evans.

2. Textbook of Pharmacognosy by Tyler, Brady & Robber.

3. Pharmacognosy by Kokate, Purohit and Gokhale

4. Essential of Pharmacognosy by Dr.S.H.Ansari

5. Pharmacognosy & Phytochemistry by V.D.Rangari

6. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in Indian Medicine & Homeopathy)

7. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

Course Outcome:

1. To understand the of phytochemical screening of crude drugs
2. To understand thedetermination of herbal content
3. To understand the various types of Evaluation of excipients
4. To understand theAyurvedic Formulation
5. To understand the various Quality Control of Herbal Drugs

SEMESTER VII

Course Code	Course Title	No of Hours Per week	No of Credits
BP701T	Instrumental Methods of Analysis (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25End Semester Examination Marks: 75			

Objectives:

1) Elaborate various principles, theory and instruments employed for the characterization and analysis of drugs.
2) Elaborate various principles, theory and instruments employed for the characterization and analysis of drugs.
3) Studying the basic concepts, types and principles of various volumetric methods.
4) Studying the basic concepts, principles of gravimetric method of analysis
5) Understanding basic concepts types and principles of various electrochemical methods of analysis.

Course Contents:

UNIT - I

UV Visible spectroscopy: Electronic transitions, chromophores, auxochromes, spectral shifts, solvent effect on absorption spectra, Beer and Lambert's law, Derivation and deviations. Instrumentation - Sources of radiation, wavelength selectors, sample cells, detectors- Photo tube, Photomultiplier tube, Photo voltaic cell, Silicon Photodiode. Applications - Spectrophotometric titrations, Single component and multi component analysis Fluorimetry Theory, Concepts of singlet, doublet and triplet electronic states, internal and external conversions, factors affecting fluorescence, quenching, instrumentation and applications

UNIT –II

IR spectroscopy: Introduction, fundamental modes of vibrations in poly atomic molecules, sample handling, factors affecting vibrations Instrumentation - Sources of radiation, wavelength selectors, detectors - Golay cell, Bolometer, Thermocouple, Thermister, Pyroelectric detector and applications

Flame Photometry-Principle, interferences, instrumentation and applications

Atomic absorption spectroscopy- Principle, interferences, instrumentation and applications

Nepheloturbidometry- Principle, instrumentation and applications

UNIT –III

Introduction to chromatography:

Adsorption and partition column chromatography-Methodology, advantages, disadvantages and applications.

Thin layer chromatography- Introduction, Principle, Methodology, Rf values, advantages, disadvantages and applications.

Paper chromatography-Introduction, methodology, development techniques, advantages, disadvantages and applications

Electrophoresis– Introduction, factors affecting electrophoretic mobility, Techniques of paper, gel, capillary electrophoresis, applications

UNIT –IV

Gas chromatography - Introduction, theory, instrumentation, derivatization, temperature programming, advantages, disadvantages and applications

High performance liquid chromatography (HPLC)-Introduction, theory, instrumentation, advantages and applications.

UNIT –V

Ion exchange chromatography- Introduction, classification, ion exchange resins, properties, mechanism of ion exchange process, factors affecting ion exchange, methodology and applications

Gel chromatography- Introduction, theory, instrumentation and applications Affinity chromatography- Introduction, theory, instrumentation and applications

Text Books:

1. Instrumental Methods of Chemical Analysis by B.K Sharma
2. Organic spectroscopy by Y.R Sharma
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors

4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake
6. Organic Chemistry by I. L. Finar
7. Organic spectroscopy by William Kemp
8. Quantitative Analysis of Drugs by D. C. Garrett
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi
10. Spectrophotometric identification of Organic Compounds by Silverstein

Course Outcomes:

After Completion of the course the student able to

1) To understand selected instrumental analytical techniques (spectroscopic and chromatographic methods) and differentiate with volumetric analysis.
2) To gain knowledge on interaction of EMR with matter and to build the analytical understanding at the level of atom, group and molecular structure of organic and inorganic compounds with different functional groups and their applications in pharmacy.
3) To maximize knowledge on characterization and estimation of ions by spectroscopical techniques
4) To simplify affinity of matter with stationary phase and mobile phase, physical and chemical. This subject is intended to impart students about the fundamental knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially, involved in the study of producing plants and phytochemicals through plant tissue culture, drug interactions and basic principles of traditional system of medicine.
5) To maximize knowledge on Ion exchange chromatography and Gel chromatography along with their pharmaceutical applications.

Course Code	Course Title	No of Hours Per week	No of Credits
BP702T	Industrial Pharmacy II (Theory)	03+ 01 (Tutorial)	04
Sessional Marks:25		**End Semester Examination Marks:75**	

Objectives:

1. The scheduled activities in a pharmaceutical firm.
2. The pre formulation studies of pilot batches of pharmaceutical industry.
3. The significance of dissolution and product stability
4. Manage the scale up process in pharmaceutical industry.
5. Assist in technology transfer.
6. To establish safety guidelines, which prevent industrial hazards

Course Content:

UNIT-I

Pilot plant scale up techniques: General considerations - including significance of personnel requirements, space requirements, raw materials, Pilot plant scale up considerations for solids, liquid orals, semi solids and relevant documentation, SUPAC guidelines, Introduction to platform technology

UNIT-II

Technology development and transfer: WHO guidelines for Technology Transfer(TT): Terminology, Technology transfer protocol, Quality risk management, Transfer from R & D to production (Process, packaging and cleaning), Granularity of TT Process (API, excipients, finished products, packaging materials) Documentation, Premises and equipment, qualification and validation, quality control, analytical method transfer, Approved regulatory bodies and agencies, Commercialization - practical aspects and problems (case studies), TT agencies in India - APCTD, NRDC, TIFAC, BCIL, TBSE / SIDBI; TT related documentation - confidentiality agreement, licensing, MoUs, legal issues

UNIT-III

Regulatory affairs: Introduction, Historical overview of Regulatory Affairs, Regulatory authorities, Role of Regulatory affairs department, Responsibility of Regulatory Affairs Professionals

Regulatory requirements for drug approval: Drug Development Teams, Non-Clinical Drug Development, Pharmacology, Drug Metabolism and Toxicology, General considerations of Investigational New Drug (IND) Application, Investigator's Brochure (IB) and New Drug Application (NDA), Clinical research / BE studies, Clinical Research Protocols, Biostatistics in Pharmaceutical Product Development, Data Presentation for FDA Submissions, Management of Clinical Studies.

UNIT-IV

Quality management systems: Quality management & Certifications: Concept of Quality, Total Quality Management, Quality by Design (QbD), Six Sigma concept, Out of Specifications (OOS), Change control, Introduction to ISO 9000 series of quality systems standards, ISO 14000, NABL, GLP

UNIT-V

Indian Regulatory Requirements: Central Drug Standard Control Organization (CDSCO) and State Licensing Authority: Organization, Responsibilities, Certificate of Pharmaceutical Product (COPP), Regulatory requirements and approval procedures for New Drugs.

Text Books:

(Latest Editions) 1. Regulatory Affairs from Wikipedia, the free encyclopedia modified on 7th April available at http,//en.wikipedia.org/wiki/Regulatory_ Affairs.

2. International Regulatory Affairs Updates, 2005. available at http://www.iraup.com/about.php

3. Douglas J Pisano and David S. Mantus. Text book of FDA Regulatory Affairs A Guide for Prescription Drugs, Medical Devices, and Biologics' Second Edition.

4. Regulatory Affairs brought by learning plus, inc. available at http.//www.cgmp.com/ra.htm.

Course Outcomes:

After successful completion of this course, students will be able to:

1. This course is designed to impart knowledge and skills necessary to train the students to be on par with the routine of Industrial activities in Production.
2. On completion of this course, it is expected that students will be able to understand various concepts of Technology development and transfer.
3. Handle the scheduled activities in a pharmaceutical firm. Manage the production of large batches of pharmaceutical formulations.
4. Understand the concepts and applicatyion Quality management systemsin pharmaceutical industry.
5. Understand the concepts of Indian Regulatory requirements and approval procedures for New Drugs and their application in pharmaceutical industry.

Course Code	Course Title	No of Hours Per week	No of Credits
BP703T	Pharmacy Practice (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks : 75**	

Objectives:

1. Know various drug distribution methods in a hospital
2. Appreciate the pharmacy stores management and inventory control
3. Monitor drug therapy of patient through medication chart review and clinical review
4. Obtain medication history interview and counsel the patients
5. Identify drug related problems

Course Content:

UNIT I:

a) Hospital and its organization- Definition, Classification of hospital- Primary, Secondary and Tertiary hospitals, Classification based on clinical and non- clinical basis, Organization Structure of a Hospital, and medical staffs involved in the hospital and their functions.

b) Hospital pharmacy and its organization- Definition, functions of hospital pharmacy, Organization structure, Location, Layout and staff requirements, and Responsibilities and functions of hospital pharmacists.

c) Adverse drug reaction Classifications - Excessive pharmacological effects, secondary pharmacological effects, idiosyncrasy, allergic drug reactions, genetically determined toxicity, toxicity following sudden withdrawal of drugs, Drug interaction- beneficial interactions, adverse interactions, and pharmacokinetic drug interactions, Methods for detecting 149 drug interactions, spontaneous case reports and record linkage studies, and Adverse drug reaction reporting and management.

d) Community Pharmacy- Organization and structure of retail and wholesale drug store, types and design, Legal requirements for establishment and maintenance of a drug store, Dispensing of proprietary products, maintenance of records of retail and wholesale drug store.

UNIT II:

a) Drug distribution system in a hospital Dispensing of drugs to inpatients, types of drug distribution systems, charging policy and labelling, dispensing of drugs to ambulatory patients, and dispensing of controlled drugs.

b) Hospital formulary Definition, contents of hospital formulary, Differentiation of hospital formulary and Drug list, preparation and revision, and addition and deletion of drug from hospital formulary.

c) Therapeutic drug monitoring Need for Therapeutic Drug Monitoring, Factors to be considered during the Therapeutic Drug Monitoring, and Indian scenario for Therapeutic Drug Monitoring.

d) Medication adherence Causes of medication non-adherence, pharmacist role in the medication adherence, and monitoring of patient medication adherence.

e) Patient medication history interview Need for the patient medication history interview, medication interview forms.

f) Community pharmacy management Financial, materials, staff, and infrastructure requirements.

UNIT III:

a) Pharmacy and therapeutic committee Organization, functions, Policies of the pharmacy and therapeutic committee in including drugs into formulary, inpatient and outpatient prescription, automatic stop order, and emergency drug list preparation.

b) Drug information services Drug and Poison information centre, Sources of drug information, Computerised services, and storage and retrieval of information.

c) Patient counselling Definition of patient counselling; steps involved in patient counselling, and Special cases that require the pharmacist

d) Education and training program in the hospital Role of pharmacist in the education and training program, Internal and external training program, Services to the nursing homes/clinics, Code of ethics for community pharmacy, and Role of pharmacist in the interdepartmental communication and community health education.

e) Prescribed medication order and communication skills Prescribed medication order- interpretation and legal requirements, and Communication skills- communication with prescribers and patients.

UNIT IV

a) Budget preparation and implementation Budget preparation and implementation

b) Clinical Pharmacy Introduction to Clinical Pharmacy, Concept of clinical pharmacy, functions and responsibilities of clinical pharmacist, Drug therapy monitoring - medication chart review, clinical review, pharmacist intervention, Ward round participation, Medication history and pharmaceutical care. Dosing pattern and drug therapy based on Pharmacokinetic & disease pattern.

c) Over the counter (OTC) sales Introduction and sale of over the counter, and Rational use of common over the counter medications.

UNIT V

a) Drug store management and inventory control Organisation of drug store, types of materials stocked and storage conditions, Purchase and inventory control: principles, purchase procedure, purchase order, procurement and stocking, Economic order quantity, Reorder quantity level, and Methods used for the analysis of the drug expenditure

b) Investigational use of drugs Description, principles involved, classification, control, identification, role of hospital pharmacist, advisory committee.

c) Interpretation of Clinical Laboratory Tests Blood chemistry, haematology, and urinalysis

Text Books:

1. Merchant S.H. and Dr.J.S.Quadry. A textbook of hospital pharmacy, 4th ed. Ahmadabad: B.S. Shah Prakakshan; 2001.

2. Parthasarathi G, Karin Nyfort-Hansen, Milap C Nahata. A textbook of Clinical Pharmacy Practice- essential concepts and skills, 1 st ed. Chennai: Orient Longman Private Limited; 2004.

1. Therapeutic drug monitoring. ISSN: 0163-4356

2. Journal of pharmacy practice. ISSN : 0974-8326

3. American journal of health system pharmacy. ISSN: 1535-2900 (online)

4. Pharmacy times (Monthly magazine)

Course Outcomes:

1. Understand the elements of pharmaceutical care and provide comprehensive patient care services
2. Interpret the laboratory results to aid the clinical diagnosis of various disorders.
3. Provide integrated, critically analysed medicine and poison information to enable healthcare professionals in the efficient patient management.
4. Monitor drug therapy of patient through medication chart review and clinical review.
5. Obtain medication history interview and counsel the patients. Identify drug related problems

BP704T	Novel Drug Delivery System (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. The various approaches for development of novel drug delivery systems.
2. The criteria for selection of drugs and polymers for the development of NTDS
3. The formulation and evaluation of novel drug delivery systems
4. The need, concept, design and evaluation of various customized, sustained and controlled release dosage forms.
5. To formulate and evaluate various novel drug delivery systems

Course Contents:

UNIT-I

Controlled drug delivery systems: Introduction, terminology/definitions and rationale, advantages, disadvantages, selection of drug candidates. Approaches to design-controlled release formulations based on diffusion, dissolution and ion exchange principles. Physicochemical and biological properties of drugs relevant to controlled release formulations

Polymers: Introduction, classification, properties, advantages and application of polymers in formulation of controlled release drug delivery systems.

UNIT-II

Microencapsulation: Definition, advantages and disadvantages, microspheres /microcapsules, microparticles, methods of microencapsulation, applications

Mucosal Drug Delivery system: Introduction, Principles of bioadhesion / mucoadhesion, concepts, advantages and disadvantages, transmucosal permeability and formulation considerations of buccal delivery systems

Implantable Drug Delivery Systems: Introduction, advantages and disadvantages, concept of implants and osmotic pump

UNIT-III

Transdermal Drug Delivery Systems: Introduction, Permeation through skin, factors affecting permeation, permeation enhancers, basic components of TDDS, formulation approaches

Gastro-retentive drug delivery systems: Introduction, advantages, disadvantages, approaches for GRDDS – Floating, high density systems, inflatable and gastroadhesive systems and their applications **Naso-pulmonary drug delivery system**: Introduction to Nasal and Pulmonary routes of drug delivery, Formulation of Inhalers (dry powder and metered dose), nasal sprays, and nebulizers

UNIT-IV

Targeted drug Delivery: Concepts and approaches advantages and disadvantages, introduction to liposomes, niosomes, nanoparticles, monoclonal antibodies and their applications

UNIT-V

Ocular Drug Delivery Systems: Introduction, intra ocular barriers and methods to overcome –Preliminary study, ocular formulations and ocuserts

Intrauterine Drug Delivery Systems: Introduction, advantages and disadvantages, development of intra uterine devices (IUDs) and applications

Text Books:

1. Y W. Chien, Novel Drug Delivery Systems, 2 nd edition, revised and expanded, Marcel Dekker, Inc., New York, 1992.

2. Robinson, J. R., Lee V. H. L, Controlled Drug Delivery Systems, Marcel Dekker, Inc., New York, 1992.

3. Encyclopedia of Controlled Delivery. Edith Mathiowitz, Published by Wiley Interscience Publication, John Wiley and Sons, Inc, New York. Chichester/Weinheim

5. S.P. Vyas and R.K. Khar, Controlled Drug Delivery -concepts and advances, VallabhPrakashan, New Delhi, First edition 2002.

Journals

1. Indian Journal of Pharmaceutical Sciences (IPA)

2. Indian Drugs (IDMA)

3. Journal of Controlled Release (Elsevier Sciences)

4. Drug Development and Industrial Pharmacy (Marcel & Decker) 5. International Journal of Pharmaceutics (Elsevier Sciences)

Course Outcomes:

1. This subject is designed to impart basic knowledge on the area of novel drug delivery systems.
2. To understand various approaches for development of novel drug delivery systems and technologies.
3. To understand the criteria for selection of drugs and polymers for the development of Transdermal Drug Delivery Systems and Gastro-retentive drug delivery systems, their formulation and evaluation.
4. Understand the formulation and evaluation of targeted drug delivery systems using novel techniques.
5. To understand the need, concept, design and evaluation of various customized, sustained and controlled release dosage forms.

Course Code	Course Title	No of Hours Per week	No of Credits
BP705P	Instrumental Methods of Analysis (Practical)	04	02
Sessional Marks: 15		**End Semester Examination Marks: 35**	

Objectives:

To develop ability to work in pharmaceutical industries on modern analytical methods, instruments like

1. Analytical method development, Validation,
2. Analytical research
3. Achieving global standards.

Course Contents:

1 Determination of absorption maxima and effect of solvents on absorption maxima of organic compounds

2 Estimation of dextrose by colorimetry

3 Estimation of sulphanilamide by colorimetry

4 Simultaneous estimations of ibuprofen and paracetamol by UV spectroscopy

5 Assay of paracetamol by UV- Spectrophotometry

6 Estimation of quinine sulfate by fluorimetry

7 Study of quenching of fluorescence

8 Determination of sodium by flame photometry

9 Determination of potassium by flame photometry

10 Determination of chlorides and sulphates by nepheloturbidometry

11 Separation of amino acids by paper chromatography

12 Separation of sugars by thin layer chromatography

13 Separation of plant pigments by column chromatography

14 Demonstration experiment on HPLC

15 Demonstration experiment on Gas Chromatography

Practical Books:

1. Instrumental Methods of Chemical Analysis by B.K Sharma
2. Organic spectroscopy by Y.R Sharma
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake
6. Organic Chemistry by I. L. Finar
7. Organic spectroscopy by William Kemp
8. Quantitative Analysis of Drugs by D. C. Garrett
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi
10. Spectrophotometric identification of Organic Compounds by Silverstein

Course Outcomes:

1. Discusses the effect of impurities on the quality of drugs and behavioural pattern of drugs
2. Aids in understanding the SOP and usage of software associated with various analytical instruments
3. Helps in gaining knowledge of interpretation of spectra and of chromatograms.
4. Develop skill in analysing various pharmaceutical dosage forms.
5. Work on various analytical equipments and their application in pharmaceutical industry.

Course Code	Course Title	No of Hours Per week	No of Credits
BP706PS	Practice School	12	06
Sessional Marks: 25		**End Semester Examination Marks: 125**	

Objectives:

Every candidate shall undergo practice school for a period of 150 hours evenly distributed throughout the semester. The student shall opt any one of the domains for practice school declared by the program committee from time to time. At the end of the practice school, every student shall submit a printed report (in triplicate) on the practice school he/she attended (not more than 25 pages). Along with the exams of semester VII, the report submitted by the student, knowledge and skills acquired by the student through practice school shall be evaluated by the subject experts at college leveland grade point shall be awarded.

Course Outcomes:

After successful completion of this course students will be able to:

1. Work in team and undertake a project in the area of Pharmacy
2. Present, exhibit and document the project work • Develop a project report
3. Apply concepts of pharmaceutical sciences for executing the project
4. Apply appropriate research methodology while formulating a project
5. Define specifications, synthesize, analyse, develop and evaluate a project

SEMESTER VIII

Course Code	Course Title	No of Hours Per week	No of Credits
BP801T	Biostatistics and Research Methodology (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Discuss the various steps involved in conducting research.
2. Defining between the different types of research and list the motivation in research.
3. Recall the basic criteria for a good research problem encountered by researchers in India.
4. Featuring of a good research design and recalling the principles of research design.

Course Contents:

UNIT-I

Introduction: Statistics, Biostatistics, Frequency distribution

Measures of central tendency: Mean, Median, Mode- Pharmaceutical examples

Measures of dispersion: Dispersion, Range, standard deviation, pharmaceutical problems

Correlation: Definition, Karl Pearson's coefficient of correlation, Multiple correlation - Pharmaceuticals examples

UNIT-II

Regression: Curve fitting by the method of least squares, fitting the lines y= a + bx and x = a + by, Multiple regression, standard error of regression– Pharmaceutical Examples

Probability: Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties - problems Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples

Parametric test: t-test (Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference

UNIT-III

Non- Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, Kruskal-Wallis test, Friedman Test

Introduction to Research: Need for research, Need for design of Experiments, Experiential Design Technique, plagiarism

Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph

Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohorts studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

UNIT-IV

Blocking and confounding system for Two-level factorials

Regression modelling: Hypothesis testing in Simple and Multiple regressionmodels

Introduction to Practical components of Industrial and Clinical Trials Problems: Statistical Analysis Using Excel, SPSS, MINITAB ®, DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach.

UNIT-V

Design and Analysis of experiments:

Factorial Design: Definition, Advantage of factorial design

Response Surface methodology: Central composite design, Historical design, Optimization Techniques

Text Books (Latest edition):

1. Pharmaceutical statistics- Practical and clinical applications, Sanford Bolton, publisher Marcel Dekker Inc. NewYork.

2. Fundamental of Statistics – Himalaya Publishing House- S.C.Guptha

3. Design and Analysis of Experiments –PHI Learning Private Limited, R. Pannerselvam,

4. Design and Analysis of Experiments – Wiley Students Edition, Douglas and C. Montgomery

Course Outcomes:

1. Develop the ability to apply the methods while working on a research project work
2. Describe the appropriate statistical methods required for a particular research design
3. Choose the appropriate research design and develop appropriate research hypothesis for a research project
4. Develop a appropriate framework for research studies.
5. Design and implement the principles of research design.

Course Code	Course Title	No of Hours Per week	No of Credits
BP802T	Social and Preventive Pharmacy (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. The purpose of this course is to introduce to students a number of health issues and their challenges.
2. This course also introduced a number of national health programmes.
3. The roles of the pharmacist in these contexts are also discussed.

Course Contents:

UNIT I:

Concept of health and disease: Definition, concepts and evaluation of public health. Understanding the concept of prevention and control of disease, social causes of diseases and social problems of the sick.

Social and health education: Food in relation to nutrition and health, Balanced diet, Nutritional deficiencies, Vitamin deficiencies, Malnutrition and its prevention.

Sociology and health: Socio cultural factors related to health and disease, Impact of urbanization on health and disease, Poverty and health

Hygiene and health: personal hygiene and health care; avoidable habits.

UNIT II:

Preventive medicine: General principles of prevention and control of diseases such as cholera, SARS, Ebola virus, influenza, acute respiratory infections, malaria, chicken guinea, dengue, lymphatic filariasis, pneumonia, hypertension, diabetes mellitus, cancer, drug addiction-drug substance abuse.

UNIT III:

National health programs, its objectives, functioning and outcome of the following: HIV AND AIDS control programme, TB, Integrated disease surveillance program (IDSP), National leprosy control programme, National mental health program, National programme for prevention and control of deafness, Universal immunization programme, National programme for control of blindness, Pulse polio programme.

UNIT IV:

National health intervention programme for mother and child, National family welfare programme, National tobacco control programme, National Malaria Prevention Program, National programme for the health care for the elderly, Social health programme; role of WHO in Indian national program

UNIT V:

Community services in rural, urban and school health: Functions of PHC, Improvement in rural sanitation, national urban health mission, Health promotion and education in school.

TEXT BOOKS (LATEST EDITION):

1. Short Textbook of Preventive and Social Medicine, Prabhakara GN, 2 nd Edition, 2010, ISBN: 9789380704104, JAYPEE Publications

2. Textbook of Preventive and Social Medicine (Mahajan and Gupta), Edited by Roy RabindraNath, SahaIndranil, 4 th Edition, 2013, ISBN: 9789350901878, JAYPEE Publications

3. Review of Preventive and Social Medicine (Including Biostatistics), Jain Vivek, 6 th Edition, 2014, ISBN: 9789351522331, JAYPEE Publications

4. Essentials of Community Medicine—A Practical Approach, HiremathLalita D, HiremathDhananjaya A, 2 nd Edition, 2012, ISBN: 9789350250440, JAYPEE Publications

5. Park Textbook of Preventive and Social Medicine, K Park, 21 st Edition, 2011, ISBN-14: 9788190128285, BANARSIDAS BHANOT PUBLISHERS.

6. Community Pharmacy Practice, Ramesh Adepu, BSP publishers, Hyderabad

Recommended **Journals:**

1. Research in Social and Administrative Pharmacy, Elsevier, Ireland

Course Outcomes:

1. After the successful completion of this course, the student shall be able to: Acquire high consciousness/ realization of current issues related to health and pharmaceutical problems within the country and worldwide.
2. Have a critical way of thinking based on current healthcare development.

3. Evaluate alternative ways of solving problems related to health and pharmaceutical issues.
4. The purpose of this course is to introduce the students a number of health issues and their challenges.
5. To introduce the students about the roles of a pharmacist in community services.

Course Code	Course Title	No of Hours Per week	No of Credits
BP803ET	Pharma Marketing Management (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. The course aims to provide an understanding of marketing concepts.
2. Technologies and their applications in the pharmaceutical industry

Course Contents:

UNIT I

Marketing: Definition, general concepts and scope of marketing; Distinction between marketing & selling; Marketing environment; Industry and competitive analysis; Analyzing consumer buying behavior; industrial buying behavior.

Pharmaceutical market: Quantitative and qualitative aspects; size and composition of the market; demographic descriptions and socio-psychological characteristics of the consumer; market segmentation&targeting.Consumer profile; Motivation and prescribing habits of the physician; patients' choice of physician and retail pharmacist.Analyzing the Market role of market research.

UNIT II

Product decision: Classification, product line and product mix decisions, product life cycle,product portfolio analysis; product positioning; New product decisions; Product branding, packaging and labelling decisions, Product management in pharmaceutical industry.

UNIT III

Promotion: Methods, determinants of promotional mix, promotional budget; An overview of personal selling, advertising, direct mail, journals, sampling, retailing, medical exhibition, public relations, online promotional techniques for OTC Products.

UNIT IV

Pharmaceutical marketing channels: Designing channel, channel members, selecting the appropriate channel, conflict in channels, physical distribution management: Strategic importance, tasks in physical distribution management.

Professional sales representative (PSR): Duties of PSR, purpose of detailing, selection and training, supervising, norms for customer calls, motivating, evaluating, compensation and future prospects of the PSR.

UNIT V

Pricing: Meaning, importance, objectives, determinants of price; pricing methods and strategies, issues in price management in pharmaceutical industry. An overview of DPCO (Drug Price Control Order)and NPPA (National Pharmaceutical Pricing Authority).

Emerging concepts in marketing: Vertical & Horizontal Marketing; RuralMarketing; Consumerism; Industrial Marketing; Global Marketing.

Text Books: (Latest Editions)

1. Philip Kotler and Kevin Lane Keller: Marketing Management, Prentice Hall of India, New Delhi

2. Walker, Boyd and Larreche: Marketing Strategy- Planning and Implementation, Tata MC GrawHill, New Delhi.

3. Dhruv Grewal and Michael Levy: Marketing, Tata MC Graw Hill

4. Arun Kumar and N Menakshi: Marketing Management, Vikas Publishing, India

5. RajanSaxena: Marketing Management; Tata MC Graw-Hill (India Edition)

6. Ramaswamy, U.S &Nanakamari, S: Marketing Managemnt:Global Perspective, IndianContext,Macmilan India, New Delhi.

7. Shanker, Ravi: Service Marketing, Excell Books, New Delhi

Course Outcomes:

1. Recognise the concepts, need and importance of management and application of the various principles of marketing management.
2. Understanding the concepts of product decision.
3. Evaluate and apply various approaches of promotion in marketing management.

4. Access various pharmaceutical management channels and their applications in the pharmaceutical industry
5. Evaluate and apply concepts of pricing and related regulatory agencies.

CO5	3	3	3	3	3	2	3	2	2	3	3	3

3=High, 2=Medium, 1=Low.

Course Code	Course Title	No of Hours Per week	No of Credits
BP804ET	Pharmaceutical Regulatory Science (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Explain the stages of drug discovery and discussing preclinical and non-clinical activities in new drug discovery.
2. Describe about clinical studies of drug discovery and importance of generic drugs
3. Concept of generic drugs development and explaining the procedure for the export of pharmaceutical products from India.
4. Discussing the regulatory requirements for drug registration in ASEAN countries.
5. Enlisting the basic requirements of ACTD (ASEAN common technical document) research

Course Contents:

UNIT I

New Drug Discovery and development Stages of drug discovery, Drug development process, pre-clinical studies, non-clinical activities, clinical studies, Innovator and generics, Concept of generics, Generic drug product development.

UNIT II

Regulatory Approval Process Approval processes and timelines involved in Investigational New Drug (IND), New Drug Application (NDA), Abbreviated New Drug Application (ANDA). Changes to an approved NDA / ANDA.

Regulatory authorities and agencies Overview of regulatory authorities of India, United States, European Union, Australia, Japan, Canada (Organization structure and types of applications)

UNIT III

Registration of Indian drugproduct in overseas market Procedure for export of pharmaceutical products, technical documentation, Drug Master Files (DMF), Common

Technical Document (CTD), electronic Common Technical Document (eCTD), ASEAN Common Technical Document (ACTD)research.

UNIT IV

Clinical trials Developing clinical trial protocols, Institutional Review Board / Independent Ethics committee - formation and working procedures, Informed consent process and procedures, GCP obligations of Investigators, sponsors & Monitors, Managing and Monitoring clinical trials, Pharmacovigilance - safety monitoring in clinical trials

UNIT V

Regulatory Concepts Basic terminology, guidance, guidelines, regulations, Laws and Acts, Orange book, Federal Register, Code of Federal Regulatory, Purple book.

Text Books (Latest edition):

1. Drug Regulatory Affairs by Sachin Itkar, Dr. N.S. Vyawahare, NiraliPrakashan.
2. The Pharmaceutical Regulatory Process, Second Edition Edited by Ira R. Berry and Robert P. Martin, Drugs and the Pharmaceutical Sciences,Vol.Informa Health care Publishers.
3. New Drug Approval Process: Accelerating Global Registrations By Richard A Guarino, MD, 5th edition, Drugs and the Pharmaceutical Sciences,Vol.190.
4. Guidebook for drug regulatory submissions / Sandy Weinberg. By John Wiley & Sons. Inc.
5. FDA Regulatory Affairs: a guide for prescription drugs, medical devices, and biologics /edited by Douglas J. Pisano, David Mantus.
6. Generic Drug Product Development, Solid Oral Dosage forms, Leon Shargel and IsaderKaufer, Marcel Dekker series, Vol.143
7. Clinical Trials and Human Research: A Practical Guide to Regulatory Compliance By Fay A. Rozovsky and Rodney K. Adams
8. Principles and Practices of Clinical Research, Second Edition Edited by John I. Gallin and Frederick P. Ognibene

Course Outcomes:

1. Explain the process of drug discovery, development and generic product development
2. Describe the regulatory approval process and registration procedures for API and drug products.

3. Basic understanding of regulations of India with other global regulated markets
4. Understand the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
5. Learn the basic understanding the importance of orange book, Federal Register, Code of Federal Regulatory, and purple book.

Course Code	Course Title	No of Hours Per week	No of Credits
BP805ET	Pharmacovigilance (Theory)	03+01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Course designed to impart advanced knowledge and skills required to learn the concept of generic drug and their development, various regulatory filings.
2. To know the chemistry, manufacturing controls and their regulatory.
3. To know the approval process of documents filing process of IND, NDA.
4. Upon completion of the course, it is expected that the students will be able to The Concepts of innovator and generic drugs, drug development understand The Regulatory guidance's and guidelines for filing and approval process.

Course Contents:

UNIT I

Introduction to Pharmacovigilance

- History and development of Pharmacovigilance
- Importance of safety monitoring of Medicine
- WHO international drug monitoring programme
- Pharmacovigilance Program of India(PvPI)

Introduction to adverse drug reactions

- Definitions and classification of ADRs
- Detection and reporting
- Methods in Causality assessment
- Severity and seriousness assessment
- Predictability and preventability assessment
- Management of adverse drug reactions

Basic terminologies used in pharmacovigilance

- Terminologies of adverse medication related events
- Regulatory terminologies

UNIT II

Drug and disease classification

- Anatomical, therapeutic and chemical classification of drugs
- International classification of diseases
- Daily defined doses
- International Non proprietary Names for drugs

Drug dictionaries and coding in pharmacovigilance

- WHO adverse reaction terminologies
- MedDRA and Standardised MedDRA queries
- WHO drug dictionary
- Eudravigilance medicinal product dictionary

Information resources in pharmacovigilance

- Basic drug information resources
- Specialised resources for ADRs

Establishing pharmacovigilance programme

- Establishing in a hospital
- Establishment & operation of drug safety department in industry
- Contract Research Organisations (CROs)
- Establishing a national programme

UNIT III

Vaccine safety surveillance

- Vaccine Pharmacovigilance
- Vaccination failure
- Adverse events following immunization

Pharmacovigilance methods

- Passive surveillance – Spontaneous reports and case series
- Stimulated reporting
- Active surveillance – Sentinel sites, drug event monitoring and registries
- Comparative observational studies – Cross sectional study, case control study and cohort study
- Targeted clinical investigations

Communication in pharmacovigilance

- Effective communication in Pharmacovigilance
- Communication in Drug Safety Crisis management
- Communicating with Regulatory Agencies, Business Partners, Healthcare facilities & Media

UNIT IV

Safety data generation

- Pre clinical phase
- Clinical phase
- Post approval phase (PMS)

ICH Guidelines for Pharmacovigilance

- Organization and objectives of ICH
- Expedited reporting
- Individual case safety reports
- Periodic safety update reports
- Post approval expedited reporting
- Pharmacovigilance planning
- Good clinical practice in pharmacovigilance studies

UNIT V

Pharmacogenomics of adverse drug reactions

- Genetics related ADR with example focusing PK parameters.

Drug safety evaluation in special population

- Paediatrics
- Pregnancy and lactation
- Geriatrics

CIOMS

- CIOMS Working Groups
- CIOMS Form

CDSCO (India) and Pharmacovigilance

- D&C Act and Schedule Y
- Differences in Indian and global pharmacovigilance requirements

TEXT BOOKS (LATEST EDITION):

1. Textbook of Pharmacovigilance: S K Gupta, Jaypee Brothers, Medical Publishers.

2. Practical Drug Safety from A to Z by Barton Cobert, Pierre Biron, Jones and Bartlett Publishers.
3. Mann's Pharmacovigilance: Elizabeth B. Andrews, Nicholas, Wiley Publishers.
4. Stephens' Detection of New Adverse Drug Reactions: John Talbot, Patrick Walle, Wiley Publishers.
5. An Introduction to Pharmacovigilance: Patrick Waller, Wiley Publishers.
6. Cobert's Manual of Drug Safety and Pharmacovigilance: Barton Cobert, Jones& Bartlett Publishers.
7. Textbook of Pharmacoepidemiolog edited by Brian L. Strom, Stephen E Kimmel, Sean Hennessy, Wiley Publishers.
8. A Textbook of Clinical Pharmacy Practice -Essential Concepts and Skills:G.Parthasarathi, Karin NyfortHansen,Milap C. Nahata
9. National Formulary of India
10. Text Book of Medicine by YashpalMunjal 11. Text book of Pharmacovigilance: concept and practice by GP Mohanta and PK Manna
11. Text book of Pharmacovigilance: concept and practice by GP Mohanta and PK Manna

Course Outcomes:

1. Explain the regulatory requirements for conducting clinical trial
2. Describe in detail about various types of clinical trial designs
3. Explain the responsibilities of key players involved in clinical trials
4. Describe the documentational requirements for Clinical trials
5. Explain Adverse drug reaction and its management

BP806ET	Quality Control and Standardization of Herbals (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Explaining method of quality assurance of traditional system of medicine in herbal drug industries.
2. Explaining method of quality assurance of traditional system of medicine in herbal drug industries by following Good Laboratory
3. Good Agricultural Practices (GAP) guidelines in traditional system of medicine for quality assurance in herbal drug industries
4. WHO guidelines on Current Good Manufacturing Practices (cGMP) for herbal medicines
5. Good Agricultural and Collection Practices (GACP) for Medicinal Plants.

Course Contents:

UNIT I

Basic tests for drugs – Pharmaceutical substances, Medicinal plants materials and dosage forms WHO guidelines for quality control of herbal drugs. Evaluation of commercial crude drugs intended for use

UNIT II

Quality assurance in herbal drug industry of cGMP, GAP, GMP and GLP in traditional system of medicine. WHO Guidelines on current good manufacturing Practices (cGMP) for Herbal Medicines WHO Guidelines on GACP for Medicinal Plants.

UNIT III

EU and ICH guidelines for quality control of herbal drugs**.** Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines

UNIT IV

Stability testing of herbal medicines. Application of various chromatographic techniques in standardization of herbal products. Preparation of documents for new drug application and export registration GMP requirements and Drugs & Cosmetics Act provisions.

UNIT V

Regulatory requirements for herbal medicines. WHO guidelines on safety monitoring of herbal medicines in pharmacovigilance systems Comparison of various Herbal Pharmacopoeias. Role of chemical and biological markers in standardization of herbal products

Text Books: (Latest Editions)

1. Pharmacognosy by Trease and Evans

2. Pharmacognosy by Kokate, Purohit and Gokhale

3. Rangari, V.D., Text book of Pharmacognosy and Phytochemistry Vol. I , Carrier Pub., 2006.

4. Aggrawal, S.S., Herbal Drug Technology. Universities Press, 2002.

5. EMEA. Guidelines on Quality of Herbal Medicinal Products/Traditional Medicinal Products,

6. Mukherjee, P.W. Quality Control of Herbal Drugs: An Approach to Evaluation of Botanicals. Business Horizons Publishers, New Delhi, India, 2002.

WHO Regional Publications, Western Pacific Series No 3, WHO Regional office for the Western Pacific, Manila, 1998.

9. WHO. The International Pharmacopeia, Vol. 2: Quality Specifications, 3rd edn. World Health Organization, Geneva, 1981.

10. WHO. Quality Control Methods for Medicinal Plant Materials. World Health Organization, Geneva, 1999.

11. WHO. WHO Global Atlas of Traditional, Complementary and Alternative Medicine. 2 vol. set. Vol. 1 contains text and Vol. 2, maps. World Health Organization, Geneva, 2005.

12. WHO. Guidelines on Good Agricultural and Collection Practices (GACP) for Medicinal Plants. World Health Organization, Geneva, 2004.

Course Outcomes:

1. Explain basic tests for drugs to obtain dosage form for pharmaceutical substances and medicinal plants
2. Explain methods for evaluation of pharmaceutical substances, medicinal plants and commercial crude drugs.
3. Describe guidelines for cGMP, GAP, GMP and GLP for quality assurance of herbal drugs in industry
4. Describe guidelines for quality control of herbal drugs and evaluation of safety and efficacy of herbal medicines.
5. Explain regulatory approval process and their registration in Indian and international markets.

Course Code	Course Title	No of Hours Per week	No of Credits
BP807ET	Computer Aided Drug Design (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Discussing the various stages of drug discovery and lead discovery and its identification.
2. Validate the diversity of drug targets the various rational approaches to lead discovery.
3. Design the analogue synthesis using lead molecule.
4. Constructing the different algorithms in De novo drug design
5. Compare the various techniques in Virtual Screening and develop the protocols for Pharmacophore based screening.

Course Contents:

UNIT-I

Introduction to Drug Discovery and Development Stages of drug discovery and development

Lead discovery and Analog Based Drug Design Rational approaches to lead discovery based on traditional medicine, Random screening, Non-random screening, serendipitous drug discovery, lead discovery based on drug metabolism, lead discovery based on clinical observation.

Analog Based Drug Design: Bioisosterism, Classification, Bioisosteric replacement. Any three case studies

UNIT-II

Quantitative Structure Activity Relationship (QSAR) SAR versus QSAR, History and development of QSAR, Types of physicochemical parameters, experimental and theoretical approaches for the determination of physicochemical parameters such as Partition coefficient, Hammet's substituent constant and Tafts steric constant. Hansch analysis, Free Wilson analysis, 3D-QSAR approaches like COMFA and COMSIA.

UNIT-III

Molecular Modelling and virtual screening techniques

Virtual Screening techniques: Drug likeness screening, Concept of pharmacophore mapping and pharmacophore-based Screening,

Molecular docking: Rigid docking, flexible docking, manual docking, Docking based screening. De novo drug design.

UNIT-IV

Informatics & Methods in drug design Introduction to Bioinformatics, cheminformatics. ADME databases, chemical, biochemical and pharmaceutical databases.

UNIT-V

Molecular Modeling: Introduction to molecular mechanics and quantum mechanics.Energy Minimization methods and Conformational Analysis, global conformational minima determination.

Text Books (Latest Editions)

1. Robert GCK, ed., "Drug Action at the Molecular Level" University Prak Press Baltimore.

2. Martin YC. “Quantitative Drug Design” Dekker, New York.

3. Delgado JN, Remers WA eds “Wilson &Gisvolds’s Text Book of Organic Medicinal & Pharmaceutical Chemistry” Lippincott, New York.

4. Foye WO “Principles of Medicinal chemistry ‘Lea &Febiger.

5. Koro lkovas A, Burckhalter JH. “Essentials of Medicinal Chemistry” Wiley Interscience.

6. Wolf ME, ed “The Basis of Medicinal Chemistry, Burger’s Medicinal Chemistry” John Wiley & Sons, New York.

7. Patrick Graham, L., An Introduction to Medicinal Chemistry, Oxford University Press.

8. Smith HJ, Williams H, eds, “Introduction to the principles of Drug Design” Wright Boston.

9. Silverman R.B. “The organic Chemistry of Drug Design and Drug Action” Academic Press New York.

Course Outcomes:

1. Explain the various stages of drug discovery and learn the concept of bioisosterism.
2. Describe physicochemical Properties and the techniques involved in QSAR
3. Explain various structure-based drug design methods (Molecular docking, Denovo drug design)
4. Learn the concept of pharmacophore and modelling techniques
5. Explain the various techniques in Virtual Screening

CO4	3	2	2	2	3	2	2	3	2	3	3	3
CO5	3	2	2	2	3	2	2	3	2	3	3	3

3=High, 2=Medium, 1=Low.

Course Code	Course Title	No of Hours Per week	No of Credits
BP808ET	Cell and Molecular Biology (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. It deals with understanding the molecular aspects of the biology.
2. It majorly emphasizes the concepts of central dogma of molecular biology spanning from DNA Replication till Protein Synthesis and Reverse transcription.
3. It also helps in understanding the concepts of cellular function

Course Content:

UNIT I

a) Cell and Molecular Biology: Definition's theory and basics and Applications.

b) Cell and Molecular Biology: History and Summation.

c) Properties of cells and cell membrane.

d) Prokaryotic versus Eukaryotic

e) Cellular Reproduction

f) Chemical Foundations – an Introduction and Reactions (Types)

UNIT II

a) DNA and the Flow of Molecular Information

b) DNA Functioning

c) DNA and RNA

d) Types of RNA

e) Transcription and Translation

UNIT III

a) Proteins: Defined and Amino Acids

b) Protein Structure

c) Regularities in Protein Pathways

d) Cellular Processes

e) Positive Control and significance of Protein Synthesis

UNIT IV

a) Science of Genetics

b) Transgenics and Genomic Analysis

c) Cell Cycle analysis

d) Mitosis and Meiosis

e) Cellular Activities and Checkpoints

UNIT V

a) Cell Signals: Introduction

b) Receptors for Cell Signals

c) Signaling Pathways: Overview

d) Misregulation of Signaling Pathways

e) Protein-Kinases: Functioning

Text Books (latest edition):

1. W.B. Hugo and A.D. Russel: Pharmaceutical Microbiology, Blackwell Scientific publications, Oxford London.

2. Prescott and Dunn., Industrial Microbiology, 4th edition, CBS Publishers & Distributors, Delhi.

3. Pelczar, Chan Kreig, Microbiology, Tata McGraw Hill edn.

4. Malcolm Harris, Balliere Tindall and Cox: Pharmaceutical Microbiology.

5. Rose: Industrial Microbiology.

6. Probisher, Hinsdill et al: Fundamentals of Microbiology, 9th ed. Japan

7. Cooper and Gunn's: Tutorial Pharmacy, CBS Publisher and Distribution.

8. Peppler: Microbial Technology.

9. Edward: Fundamentals of Microbiology.

10. N.K.Jain: Pharmaceutical Microbiology, VallabhPrakashan, Delhi

11. Bergeys manual of systematic bacteriology, Williams and Wilkins- A Waverly company

12. B.R. Glick and J.J. Pasternak: Molecular Biotechnology: Principles and Applications of RecombinantDNA: ASM Press Washington D.C.

Course Outcomes:

1. It deals with understanding the molecular aspects of the biology.
2. It majorly emphasizes the concepts of central dogma of molecular biology spanning from DNA Replication till Protein Synthesis and Reverse transcription.
3. It also helps in understanding the concepts of cellular function
4. It deals with understanding the molecular aspects of the biology. It majorly emphasizes the concepts of central dogma of molecular biology spanning from DNA Replication till Protein Synthesis and Reverse transcription.
5. It also helps in understanding the concepts of cellular function.

Course Code	Course Title	No of Hours Per week	No of Credits
BP809ET	Cosmetic Science (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. cosmeceuticals (cosmetics with skin, hair and oral care benefits), Personal care and hygiene products.
2. Provide a multidisciplinary scientific knowledge to gain expertise in the field and to respond the industry challenges effectively.
3. Provide with knowledge on marketing approaches on studying consumer need, need gaps, managing competition and global markets.
4. Provide practical skills in the area of biology, formulation science and analytical techniques required to scientifically design and develop products.
5. Develop your potential to have a career in this fast-growing industry in the area of product development & research, regulatory.

Course Contents:

UNIT I

Classification of cosmetic and cosmeceutical products Definition of cosmetics as per Indian and EU regulations, Evolution of cosmeceuticals from cosmetics, cosmetics as quasi and OTC drugs

Cosmetic excipients: Surfactants, rheology modifiers, humectants, emollients, preservatives. Classification and application

Skin: Basic structure and function of skin.

Hair: Basic structure of hair. Hair growth cycle.

Oral Cavity: Common problem associated with teeth and gums.

UNIT II

Principles of formulation and building blocks of skin care products: Face wash, Moisturizing cream, Cold Cream, Vanishing cream and their advantages and disadvantages. Application of these products in formulation of cosmecuticals.

Antiperspants& deodorants- Actives & mechanism of action.

Principles of formulation and building blocks of Hair care products: Conditioning shampoo, Hair conditioner, anti-dandruff shampoo. Hair oils. Chemistry and formulation of Para-phylenediamine based hair dye. Principles of formulation and building blocks of oral care products: Toothpaste for bleeding gums, sensitive teeth. Teeth whitening, Mouthwash.

UNIT III

Sun protection, Classification of Sunscreens and SPF. Role of herbs in cosmetics: Skin Care: Aloe and turmeric Hair care: Henna and amla. Oral care: Neem and clove

Analytical cosmetics: BIS specification and analytical methods for shampoo, skin- cream and toothpaste.

UNIT IV

Principles of Cosmetic Evaluation: Principles of sebumeter, corneometer. Measurement of TEWL, Skin Color, Hair tensile strength, Hair combing properties Soaps,andsyndet bars. Evolution and skin benfits.

UNIT V

Oily and dry skin, causes leading to dry skin, skin moisturisation. Basic understanding of the terms Comedogenic, dermatitis. Cosmetic problems associated with Hair and scalp: Dandruff, Hair fall causes Cosmetic problems associated with skin: blemishes, wrinkles, acne, prickly heat and body odor. Antiperspirants and Deodorants- Actives and mechanism of action

Text Books:

1) Harry's Cosmeticology, Wilkinson, Moore, Seventh Edition, George Godwin.

2) Cosmetics – Formulations, Manufacturing and Quality Control, P.P. Sharma, 4 th Edition, Vandana Publications Pvt. Ltd., Delhi.

3) Text book of cosmelicology by Sanju Nanda &Roop K. Khar, Tata Publishers.

Course Outcomes:

1. Cosmetic Science is an interdisciplinary applied science program providing students with the opportunities to develop professional skills and fundamental concepts driving cosmetic science.

2. Cosmetic Science focuses on the needs of the cosmetic industry and its consumers, in addition to providing students with the critical and evaluative skills to become professional scientists.
3. Cosmetic Science covers a range of sciences, both pure and applied, formulation development and industry operations, all of which give you a broad range of career opportunities.
4. Provide with knowledge on marketing approaches on studying consumer need, need gaps, managing competition and global markets.
5. Provide practical skills in the area of biology, formulation science and analytical techniques required to scientifically design and develop products.

Course Code	Course Title	No of Hours Per week	No of Credits
BP810ET	Experimental Pharmacology (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Understanding the in vivo and in vitro experiments, use of software for the study of preclinical experiments.
2. Understanding the PA2 and PD2 value of drugs using isolated tissue preparations.
3. Understanding the brief idea about statistics, its applications in experimental pharmacology.
4. Understanding to solve problems using various statistical tests

Course Contents:

UNIT –I

Laboratory Animals: Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals, Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. Techniques for collection of blood and common routes of drug administration in laboratory animals, Techniques of blood collection and euthanasia.

UNIT –II

Preclinical screening models

a. Introduction: Dose selection, calculation and conversions, preparation of drug solution/suspensions, grouping of animals and importance of sham negative and positive control groups. Rationale for selection of animal species and sex for the study.

b. Study of screening animal models for Diuretics, nootropics, anti-Parkinson's,antiasthmatics, **Preclinical screening models:** for CNS activity- analgesic, antipyretic,anti-inflammatory, general anaesthetics, sedative and hypnotics, antipsychotic, antidepressant, antiepileptic, antiparkinsonism, alzheimer's disease

UNIT –III

Preclinical screening models: for ANS activity, sympathomimetics, sympatholytic, parasympathomimetic, parasympatholytic, skeletal muscle relaxants, drugs acting on eye, local anaesthetics.

UNIT –IV

Preclinical screening models: for CVS activity- antihypertensives, diuretics, antiarrhythmic, antidyslepidemic, anti-aggregatory, coagulants, and anticoagulants Preclinical screening models for other important drugs like antiulcer, antidiabetic, anticancer and antiasthmatics.

Research methodology and Bio-statistics Selection of research topic, review of literature, research hypothesis and study design Pre-clinical data analysis and interpretation using Students 't' test and One-way ANOVA. Graphical representation of data.

Text Books (latest edition):

1. Fundamentals of experimental Pharmacology-by M.N.Ghosh
2. Hand book of Experimental Pharmacology-S.K.Kulakarni
3. CPCSEA guidelines for laboratory animal facility.
4. Drug discovery and Evaluation by Vogel H.G.
5. Drug Screening Methods by Suresh Kumar Gupta and S. K. Gupta
6. Introduction to biostatistics and research methods by PSS Sundar Rao and J Richard

Course Outcomes:

1. Study of commonly used instruments in experimental pharmacology.
2. Introduction to CPCSEA guidelines and OECD guidelines.
3. Introduction to animal physiology with their biochemical reference values in various animal species.
4. Study of methods for collection of blood, body fluids and urine from experimental animals.
5. Record the effect of drug on Concentration Response Curves (CRC) using suitable isolated tissue preparations (Synergism and Antagonism).

3=High, 2=Medium, 1=Low.

Course Code	Course Title	No of Hours Per week	No of Credits
BP811ET	Advanced Instrumentation Techniques (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Know various sampling techniques employed in analysis of solid, semisolid and liquids dosage forms
2. Brief knowledge about electromagnetic spectrum and its interaction with matter.
3. Understand the principal, instrumentation and working of different instrumental analytical techniques available for quality control.
4. Study various qualitative and quantitative applications of atomic and molecular spectrophotometric methods.

Course Contents:

UNIT-I

Nuclear Magnetic Resonance Spectroscopy Principles of H-NMR and C-NMR, chemical shift, factors affecting chemical shift, coupling constant, Spin - spin coupling, relaxation, instrumentation and applications

Mass Spectrometry- Principles, Fragmentation, Ionization techniques – Electron impact, chemical ionization, MALDI, FAB, Analysers-Time of flight and Quadrupole, instrumentation, applications

UNIT-II

Thermal Methods of Analysis: Principles, instrumentation and applications of ThermogravimetricAnalysis (TGA), Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC)

X-Ray Diffraction Methods: Origin of X-rays, basic aspects of crystals, Xray Crystallography, rotating crystal technique, single crystal diffraction,powder diffraction, structural elucidation and applications.

UNIT-III

Calibration and validation-as per ICH and USFDA guidelines

Calibration of following Instruments Electronic balance, UV-Visible spectrophotometer, IR spectrophotometer, Fluorimeter, Flame Photometer, HPLC and GC

UNIT-IV

Radio immune assay: Importance, various components, Principle, different methods, Limitation and Applications of Radio immunoassay

Extraction techniques: General principle and procedure involved in the solid phase extraction and liquid-liquid extraction

UNIT-V

Hyphenated techniques-LC-MS/MS, GC-MS/MS, HPTLC-MS.

Text Books (Latest Editions)

1. Instrumental Methods of Chemical Analysis by B.K Sharma
2. Organic spectroscopy by Y.R Sharma
3. Text book of Pharmaceutical Analysis by Kenneth A. Connors
4. Vogel's Text book of Quantitative Chemical Analysis by A.I. Vogel
5. Practical Pharmaceutical Chemistry by A.H. Beckett and J.B. Stenlake
6. Organic Chemistry by I. L. Finar
7. Organic spectroscopy by William Kemp
8. Quantitative Analysis of Drugs by D. C. Garrett
9. Quantitative Analysis of Drugs in Pharmaceutical Formulations by P. D. Sethi
10. Spectrophotometric identification of Organic Compounds by Silverstein

Course Outcomes:

1. Apply the analytical techniques to study bulk-drug pharmaceuticals, quality control.
2. Develop in-depth knowledge and critical awareness of the application of modern.
3. Know preparation and standardization of various concentrations of acids and bases.
4. Understand the basic concepts involved in electro-analytical techniques and its types.
5. Understand theory, principle, types and techniques of coulometric titration

BP812ET	Dietary Supplements and Nutraceuticals (Theory)	03+ 01 (Tutorial)	04
Sessional Marks: 25		**End Semester Examination Marks: 75**	

Objectives:

1. Know the regulatory Requirements for nutraceuticals
2. Understand the regulation for registration and labelling of nutraceuticals and food supplements in India, USA and Europe.

Course Contents:

UNIT I

a. Definitions of Functional foods, Nutraceuticals and Dietary supplements. Classification of Nutraceuticals, Health problems and diseases that can be prevented or cured by Nutraceuticals i.e. weight control, diabetes, cancer, heart disease, stress, osteoarthritis, hypertension etc.

b. Public health nutrition, maternal and child nutrition, nutrition and ageing, nutrition education in community.

c. Source, Name of marker compounds and their chemical nature, Medicinal uses and health benefits of following used as nutraceuticals/functional foods: Spirulina, Soyabean, Ginseng, Garlic, Broccoli, Gingko, Flaxseeds

UNIT II

Phytochemicals as nutraceuticals: Occurrence and characteristic features (chemical nature medicinal benefits) of following

a) Carotenoids- α and β-Carotene, Lycopene, Xanthophylls, leutin

b) Sulfides: Diallylsulfides, Allyl trisulfide.

c) Polyphenolics: Reservetrol

d) Flavonoids- Rutin ,Naringin, Quercitin, Anthocyanidins, catechins, Flavones

e) Prebiotics / Probiotics.: Fructo oligosaccharides, Lactobacillum

f) Phytoestrogens :Isoflavones, daidzein, Geebustin, lignans

g) Tocopherols

h) Proteins, vitamins, minerals, cereal, vegetables and beverages as functional foods: oats, wheat bran, rice bran, sea foods, coffee, tea and the like.

UNIT III

a) Introduction to free radicals: Free radicals, reactive oxygen species, production of free radicals in cells, damaging reactions of free radicals on lipids, proteins, Carbohydrates, nucleic acids.

b) Dietary fibres and complex carbohydrates as functional food ingredients.

UNIT IV

a) Free radicals in Diabetes mellitus, Inflammation, Ischemic reperfusion injury, Cancer, Atherosclerosis, Free radicals in brain metabolism and pathology, kidney damage, muscle damage. Free radicals involvement in other disorders. Free radicals theory of ageing.

b) Antioxidants: Endogenous antioxidants – enzymatic and nonenzymatic antioxidant defence, Superoxide dismutase, catalase, Glutathione peroxidase, Glutathione Vitamin C, Vitamin E, α- Lipoic acid, melatonin Synthetic antioxidants: Butylated hydroxy Toluene, Butylated hydroxy Anisole.

c) Functional foods for chronic disease prevention

UNIT V

a) Effect of processing, storage and interactions of various environmental factors on the potential of nutraceuticals.

b) Regulatory Aspects; FSSAI, FDA, FPO, MPO, AGMARK. HACCP and GMPs on Food Safety. Adulteration of foods.

c) Pharmacopeial Specifications for dietary supplements and nutraceuticals.

Text Books:

1. Dietetics by Sri Lakshmi

2. Role of dietary fibres and nutraceuticals in preventing diseases by K.TAgusti and P.Faizal: BSPunblication.

3. Advanced Nutritional Therapies by Cooper. K.A., (1996).

4. The Food Pharmacy by Jean Carper, Simon & Schuster, UK Ltd., (1988).

5. Prescription for Nutritional Healing by James F.Balch and Phyllis A.Balch 2 ndEdn., Avery Publishing Group, NY (1997).

6. G. Gibson and C.williams Editors 2000 Functional foods WoodheadPubl.Co.London.

7. Goldberg, I. Functional Foods. 1994. Chapman and Hall, New York.

8. Labuza, T.P. 2000 Functional Foods and Dietary Supplements: Safety, Good Manufacturing Practice (GMPs) and Shelf-Life Testing in Essentials of Functional Foods M.K. Sachmidl and T.P. Labuza eds. Aspen Press.
9. Handbook of Nutraceuticals and Functional Foods, Third Edition (Modern Nutrition)
10. Shils, ME, Olson, JA, Shike, M. 1994 Modern Nutrition in Health and Disease. Eighth edition. Lea and Febiger

Course Outcomes:

1. Know different Acts and guidelines that regulate Drugs & Cosmetics, Medical Devices, Biologicals & Herbals, and Food & Nutraceuticals industry in India.
2. Understand the approval process and regulatory requirements.
3. Drugs & Cosmetics, Medical Devices, Biologicals & Herbals, and Food& Nutraceuticals.
4. Know various approaches in treating and preventing diseases.
5. Understand the regulation for registration and labelling of nutraceuticals and food supplements in India, USA and Europe.

Course Code	Course Title	No of Hours Per week	No of Credits
BP813PW	Project Work	12	06
Sessional Marks: -		**End Semester Examination Marks: 150**	

Objectives:

1. Final Year Projects represent the culmination of study towards the Bachelor of Pharmaceutical sciences degree. Projects offer the opportunity to apply and extend material learned throughout the program. Assessment is by means of a seminar presentation, submission of a thesis, and a public demonstration of work undertaken.
2. In contrast to the majority of courses studied elsewhere in the program, projects are undertaken individually or in small groups.
3. This necessarily introduces the dimension of workload management into the program to enable completion of a large, relatively unstructured "assignment" over the course of the semester.

Course Outcomes:

After successful completion of this course students will be able to:

1. Work in team and undertake a project in the area of Pharmacy
2. Apply concepts of pharmaceutical sciences for executing the project
3. Apply appropriate research methodology while formulating a project
4. Define specifications, synthesize, analyse, develop and evaluate a project
5. Present, exhibit and document the project work • Develop a project report

SRI VENKATESWARA UNIVERSITY: TIRUPATI

SVU COLLEGE OF PHARMACEUTICAL SCIENCES

DEPARTMENT OF PHARMACY

Course

M. PHARMACY PHARMACOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

M. PHARMACY PROGRAMME
Choice based credit system (CBCS) Pattern

(Pharmacology)

About the Department

The Pharmacy course was started in 2006 in the department of Biochemistry. The Pharmacy department was established in 2016, to promote advanced science and research in pharmaceutical sciences and to cater to the needs of the student community of A.P. in general and of the Rayalaseema region. The courses offered by the department are M.Pharmacy in 2006, B.Pharmacy in 2013 and PhD in 2015 and these are self supporting courses. Department has basic research facilities which include equipment like Centrifuges Spectrophotometers and required for carrying out research.

Vision

- To impart quality and value embedded education and research in Pharmaceutical Sciences.
- To create technologically superior and ethically strong global manpower, in the arena of drug innovation.
- Carving the youth as dynamic, competent, valued and knowledgeable Professionals in the field of Pharmacology.

Mission

- Transforming Students into Full-fledged Pharmacists and participate actively in the field of Pharmacy.
- Promoting Quality Research in Emerging Areas of Pharmaceutical Sciences.
- To instill scientific zeal and develop skilled human resource to meet contemporary challenges in Pharmacy Profession.
- To facilitate young adult learners with opportunities to hone their ethics and leadership potential.
- Imparting technical education that encourages Independent thinking, develops strong domain of knowledge, hones contemporary skills and Positive attitudes towards holistic growth of young minds.

- Evolving the Institution into a Center of Academic and Research Excellence in Pharmaceutical Education and lead the field of pharmaceutical sciences and pharmacy practice with the mission of strengthening the healthcare of the country.

Programme Specific Outcomes

At the end of successful completion of programme, a Post graduate will

- Have adequate knowledge and scientific information regarding basic principles of Pharmacology, and Pharmacognosy including herbal medicines.
- Be able to develop new dosage regimens including those of herbal origin as per standards of official books.
- Be able to perform experimental procedures as per laboratory standards in the area of Pharmacology.
- Be able to counsel the patients leading to physical and social well being and work as a team member of clinical trial.
- Be able to perform research on various medical aspects and implement the Pharmaceutical knowledge in formulating the best suitable dosage form to provide high quality medicines to the society.

Programme Objectives

- To uphold all laws, regulations, safety and ethical standards that apply to the experimental procedures in animals and the environment
- To impart adequate hands-on training in various animal models and determine the effects of drugs using animal models
- To provide practical inputs in pharmacokinetic studies of various drugs and formulations in animals to establish in-vitro and in-vivo correlations
- Acquire practical knowledge in various analytical techniques used in molecular biology
- To train students in using suitable statistical methods for interpretation of results
- To prepare the students in teamwork, lifelong learning and continuous improvement

Programme Outcomes

After the completion of the M.Pharm Pharmacology Programme the students will be able to,

- Produce Pharmacy graduates with strong basics and high technical knowledge to cater the various areas of Drug Development
- Develop an understanding for the need of pharmaceutical sciences and technology towards giving quality life to people in society through the quality of drugs.
- Apply the knowledge and skills gained through education to gain recognition in professional course and society.
- Act efficiently as a leader in the diverse areas of the profession to demonstrate the ability to plan and implement professional activities.
- Develop ability for in-depth information and critical thinking in order to identify, formulate and solve the issues related to Pharmaceutical Industry, Regulatory Agencies, Hospital Pharmacy & clinical Pharmacy for better services to the community.
- Identify the goals and regulations involved in the drug discovery and development, manufacture, distribution and sale of medicines and develop problem-based learning approach and analytical thinking in his/her academic and professional life.
- Update the knowledge through continuous learning to face the challenges for better services to the community.
- Design and develop process to perform experiments in various pharmaceutical areas like Pharmacognosy, Pharmaceutical Chemistry including Analytical Chemistry, Pharmaceutical Biotechnology, Pharmacology, Formulation and Development.
- Fill the gap with other health care communities to provide innovative solutions for the purpose of maintain public health.
- Develop team spirit for the development of student profession to the social needs and professional ethics.
- Understand, analyze and communicate the value of their professional roles in society (e.g. health care professionals, promoters of health, educators, managers, employers, employees).
- Create a talent pool by involving students in research projects and to make students to undertake research projects under faculty guidance for publication.

Programme Specific Outcomes

At the end of successful completion of programme, a Post graduate will

- Have adequate knowledge and scientific information regarding basic principles of Pharmacology, and Pharmacognosy including herbal medicines.
- Be able to develop new dosage regimens including those of herbal origin as per standards of official books.
- Be able to perform experimental procedures as per laboratory standards in the area of Pharmacology.
- Be able to counsel the patients leading to physical and social well being and work as a team member of clinical trial.
- Be able to perform research on various medical aspects and implement the Pharmaceutical knowledge in formulating the best suitable dosage form to provide high quality medicines to the society.

STRUCTURE OF COURSESMASTER OF PHARMACY

TABLE –1: COURSE OF STUDY FOR M. PHARM - PHARMACOLOGY

I SEMESTER						
Course code	**Course**	**Credit hours**	**Credit points**	**Hrs/wk**	**Marks**	**Core/Elective**
MPL101T	Modern Pharmaceutical Analytical Techniques	4	4	4	100	Core

-	Research work and Colloquium	10	10	250
Total		50	30	750

FIRST SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
MPA 101T	MODERN PHARMACEUTICAL ANALYTICAL TECHNIQUES	04	04
Sessional Marks: 15			Continuous mode:10
End Semester Examination Marks: 75			Totalmarks:100

OBJECTIVES:

After completion of course student is able to know about chemicals and excipients. The analysis of various drugs in single and combination dosage forms. Theoretical and practical skills of the instruments

COURSE CONTENT:

UNIT- I

UV-Visible spectroscopy: Theory, Laws, Instrumentation associated with UV- Visible spectroscopy, Choice of solvents and solvent effect and Applications of UVVisible spectroscopy, Difference/ Derivative spectroscopy.

a. IR spectroscopy: Theory, Modes of Molecular vibrations, Sample handling, Instrumentation of Dispersive and Fourier -Transform IR Spectrometer, Factors affecting vibrational frequencies and Applications of IR spectroscopy, Data Interpretation.

b. Spectroflourimetry: Theory of Fluorescence, Factors affecting fluorescence (Characterestics of drugs that can be analysed by fluorimetry), Quenchers, Instrumentation and Applications of fluorescence spectrophotometer. c. Flame emission spectroscopy and atomic absorption spectroscopy: Principle, Instrumentation, Interferences and Applications.

UNIT-II

1HNMR spectroscopy Principle, Instrumentation, Solvent requirement in 1HNMR, Relaxation process, NMR signals in various compounds, Chemical shift, Factors influencing chemical shift, Spin-Spin coupling, Coupling constant, Applications of 1HNMR spectroscopy. Brief outline of principles of 13C NMR.

Unit III

Mass Spectroscopy: Principle, Theory, Instrumentation of Mass Spectroscopy, Different types of ionization like electron impact, chemical, field, FAB and MALDI, Mass fragmentation and its rules, Meta stable ions, Isotopic peaks and Applications of Mass spectroscopy.

UNIT-IV

Chromatography: Principle, instrumentation, chromatographic parameters, factors affecting resolution, isolation of drug from excipients, data interpretation and applications of the following: a. High Performance Thin Layer Chromatography. b. Gas chromatography c. High Performance Liquid chromatography d. Ultra-High Performance Liquid chromatography e. LC-MS f. Affinity chromatography

UNIT-V

a. Electrophoresis: Principle, Instrumentation, working conditions, factors affecting separation and applications of the following: a) Paper electrophoresis b) Gel electrophoresis c) Capillary electrophoresis d) Zone electrophoresis e) Moving boundary electrophoresis f) Iso electric focusing. b. X ray Crystallography: Production of X rays, Different X ray methods, Bragg ‘s law, Rotating crystal technique, X ray powder technique, Types of crystals and applications of X- ray diffraction.

UNIT-VI

a. Immunoassays: Principles, procedures and types of RIA, ELISA b. Thermal techniques: Principle, instrumentation and pharmaceutical applications of DTA, DSC, TGA.

2. Principles of Instrumental Analysis - Doglas A Skoog, F. James Holler, Timothy A.Nieman, 5th edition, Eastern press, Bangalore, 1998.
3. Instrumental methods of analysis – Willards, 7th edition, CBS publishers. 4. Practical Pharmaceutical Chemistry – Beckett and Stenlake, Vol II,
4 th edition, CBS Publishers, New Delhi, 1997.
5. Organic Spectroscopy - William Kemp, 3rd edition, ELBS, 1991.
6. Quantitative Analysis of Drugs in Pharmaceutical formulation - P D Sethi, 3rd Edition, CBS Publishers, New Delhi, 1997.
7. Pharmaceutical Analysis - Modern Methods – Part B - J W Munson, Vol 11, Marcel. Dekker Series
8. Spectroscopy of Organic Compounds, 2nd edn., P.S/Kalsi, Wiley estern Ltd., Delhi.
9. Textbook of Pharmaceutical Analysis, KA.Connors, 3rd Edition, John Wiley & Sons, 1982

COURSE OUTCOMES:

1. Explain the importance of modern instrumentation in pharmaceutical analysis.Describe the fundamental principles and applications of spectroscopic techniques Viz., UV- Visible, IR,Students also able to demonstrate and use flame photometry, nepheloturbidometry
2. To determine the structural and functional group identification by using NMR-C13 and H1
3. Qualitative and quantitative identification of compound by Mass spectroscopy using different ionization technique
4. The chromatographic techniques for qualitative and quantitative analysis of pharmaceutical compounds.
5. The electrophoresis techniques and their applications in pharmaceutical industry.
6. Principle procedures involved in immunoassay and pharmaceutical applications: RIA, ELISA. DTA, DSC, TGA.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	2	1	3	2	1	2	1	2	3	1
CO2	3	1	2	3	2	2	1	2	3	3
CO3	1	1	2	1	3	1	2	3	1	3
CO4	3	2	3	2	1	2	3	3	1	1
CO5	3	2	3	2	1	2	3	2	1	3
CO6	2	1	2	3	1	2	3	1	2	1

Course Code	Course Title	No of Hours Per week	No of Credits
MPL 102T	ADVANCED PHARMACOLOGY-I	04	04
Sessional Marks: 15 End Semester Examination Marks: 75		Continuous mode:10 Totalmarks:100	

OBJECTIVES:

1. Upon completion of the course the students shall be able to:
2. Discuss the pathophysiology and pharmacotherapy of certain diseases
3. Explain the mechanism of drug actions at cellular and molecular level
4. Understand the adverse effects and contraindications
5. Understand clinical uses of drugs used in treatment of diseases

COURSE CONTENT:

UNIT- I

Neurotransmission

1. General aspects and steps involved in neurotransmission.
2. Neurohumoral transmissioninautonomicnervoussystem(Detailedstudy about neurotransmitters - Adrenaline and Acetyl choline).
3. Neurohumoral transmission in centralnervoussystem(Detailed study about neurotransmitter pathways - Serotonergic, dopaminergic, GABA, glutamate and glycine pathways).
4. Non adrenergic non cholinergic transmission (NANC). Cotransmission
5. Peptidenergic neurotransmission: Neuropeptides and Neuromodulators

UNIT-II

SystemicPharmacology

A detailed study on pathophysiology of diseases wherever applicable, mechanism of action, pharmacology and toxicology of existing as well as novel drugs used in the following systems

Autonomic Pharmacology

Parasympathomimetics and Parasympatholytics, Sympathomimetics and Sympatholytics

Unit III

CentralnervoussystemPharmacology

General and local anesthetics. Sedatives and hypnotics, drugs used to treat anxiety. Depression, psychosis, mania, epilepsy, neurodegenerative diseases. Narcotic and non-narcotic analgesics.

UNIT-IV

CardiovascularPharmacology

Diuretics, anti-hypertensives, anti-ischemics, anti- arrhythmics, drugs for heart failure and hyperlipidemia. Hematinics, coagulants , anticoagulants, fibrinolytics and antiplatelet drugs.

UNIT-V

Autocoid Pharmacology

The physiological and pathological role of Histamine, Serotonin, Kinins, Prostaglandins Opioid autocoids. Pharmacology of antihistamines, 5HT antagonist

REFERENCES:

1. The Pharmacological Basis of Therapeutics, Goodman and Gillman ‘s

4. Hand book of Clinical Pharmacokinetics by Gibaldi and Prescott.
5. Applied biopharmaceutics and Pharmacokinetics by Leon Shargel and AndrewB.C.Yu.
6. Graham Smith. Oxford textbook of Clinical Pharmacology.
7. Avery Drug Treatment
8. Dipiro Pharmacology, Pathophysiological approach.
9. Green Pathophysiology for Pharmacists. Robbins & Cortan Pathologic Basis of Disease,9th Ed. (Robbins Pathology
10. A Complete Textbook of Medical Pharmacology by Dr. S.K Srivastava published byAPC Avichal Publishing Compan
11. KD.Tripathi. Essentials of Medical Pharmacology.
12. Modern Pharmacology with Clinical Applications, Craig Charles R. & Stitzel Robert E.,Lippincott Publishers
13. Clinical Pharmacokinetics & Pharmacodynamics: Concepts and Applications – Malcolm Rowland and Thomas N.Tozer, Wolters Kluwer, Lippincott Williams & Wilkins Publishers
14. Applied biopharmaceutics and Pharmacokinetics, Pharmacodynamics andDrugmetabolismforindustrialscientists
15. Modern Pharmacology,Craig CR. &Stitzel RE, Little Brown Company

COURSE OUTCOMES:

1. Explain general pharmacological concepts such as pharmacodynamics and pharmacokinetics
2. Explain the general concept of Neurotransmission, neurotransmitters and drugs affecting it &Explain the Pharmacology of sympathetic and parasympathetic neurotransmitters including their agonist and antagonist
3. Explain the different Classes of drugs used in various CNS disorders like anxiety, depression, mania,psychosis, epilepsy, neurodegenerative diseases &Describe the Pharmacology of general and local anesthetics &Classify & Explain the Pharmacology of narcotic and non-narcotic analgesics
4. Explain the Pharmacology of cardiovascular drugs such as diuretics, anti-hypertensives, anti-ischemic, anti-hyperlipidemic, drugs used in CCF,hematinics, coagulants, anti-coagulants, fibrinolytics and antiplatelet drugs
5. Describe the physiological and pathological role of histamine,5-HT, Kinins,prostaglandins, opioid autacoids and Pharmacology of antihistamines and 5-HT antagonist.

CO-PO-MAPING

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

3- High, 2- Medium, 1- Low

Course Code	Course Title	No of Hours Per week	No of Credits
MPL 103T	Pharmacological And Toxicological Screening Methods-I	04	04
Sessional Marks: 15			Continuous mode:10
End Semester Examination Marks: 75			Totalmarks:100

OBJECTIVES:

1. Upon completion of the course the student shall be able to,
2. Appraise the regulations and ethical requirement for the usage of experimental animals.
3. Describe the various animals used in the drug discovery process and good laboratorypractices in maintenance and handling of experimental animals
4. Describe the various newer screening methods involved in the drug discovery process
5. Appreciate and correlate the preclinical data to humans

COURSE CONTENT:

UNIT- I

Laboratory Animals

Common laboratory animals: Description, handling and applications of different species and strains of animals.

Transgenic animals: Production, maintenance and applications. Anaesthesia and euthanasia of experimental animals.

Maintenance and breeding of laboratoryanimals.

CPCSEA guidelines to conduct experiments on animals.

UNIT-II

Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.

General principles of preclinical screening.

CNS Pharmacology, CNS stimulants and depressants, anxiolytics, anti-psychotics and anti-epileptics

Drugs for neurodegenerative diseases like Parkinsonism and Alzheimers.

Drugs acting on Autonomic Nervous System.

Unit III

Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.

Respiratory Pharmacology: anti-asthmatics and anti-allergics.

Reproductive Pharmacology: Aphrodisiacs and anti-fertility agents. Analgesics, anti-inflammatory and anti-pyretic agents.

Gastrointestinal drugs: anti-ulcer, anti -emetic, anti-diarrheal and laxatives.

UNIT-IV

PrePreclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.

Cardiovascular Pharmacology: anti-hypertensives, anti-arrythmics, anti-ischemics,anti- atherosclerotic agents and diuretics.

Drugs for metabolic disorders like anti-diabetic, anti-dyslipidemic agents. Anti-cancer agents.

Hepatoprotective screening methods

UNIT-V

Preclinical screening of new substances for the pharmacological activity using in vivo, in vitro, and other possible animal alternative models.

Immunomodulators, Immunosuppressants and immunostimulants Limitations of animal experimentation

Alternate animal experiments- In silico and in vitro approaches
Extrapolation of in vitro data to preclinical and preclinical to humans

4. Methods in Pharmacology by Arnold Schwartz.
5. Fundamentals of experimental Pharmacology by M.N.Ghosh
6. Pharmacological experiment on intact preparations by Churchill Livingstone
7. Drug discovery and Evaluation by Vogel H.G.
8. Experimental Pharmacology by R.K.Goyal.
9. Preclinical evaluation of new drugs by S.K. Guta
10. Handbook of Experimental Pharmacology, SK.Kulkarni
11. Practical Pharmacology and Clinical Pharmacy, SK.Kulkarni, 3rd Edition.
12. David R.Gross. Animal Models in Cardiovascular Research, 2nd Edition, Kluwer Academic Publishers, London, UK.
13. Screening Methods in Pharmacology, Robert A.Turner.
14. Rodents for Pharmacological Experiments, Dr.Tapan Kumar chatterjee.
15. Practical Manual of Experimental and Clinical Pharmacology by Bikash Medhi (Author), Ajay Prakash (Author)

COURSE OUTCOMES:

1. Describe the regulations and ethical requirement for the usage of various species and strains of experimental animals and explain CPCSEA guidelines, GLP,
2. Classify Bioassay, Explain the principle, scope, limitations and methods of bioassay
3. Classify and explain various preclinical invitro ,invivo and other possible animal alternative models for the screening of following classes of drugs such as behavioral and muscle co ordination, CNS stimulants and depressants, anxiolytics, anti-psychotics, anti epileptics and nootropics.
4. Drugs for neurodegenerative diseases like Parkinsonism, Alzheimers and multiple sclerosis. Drugs acting on Autonomic Nervous System.
5. Classify and explain various preclinical invitro ,invivo and other possible animal alternative models for the screening of following classes of drugs such as Respiratory Pharmacology: anti-asthmatics, drugs for COPD and anti allergics. Reproductive Pharmacology: Aphrodisiacs and antifertility agents Analgesics, antiinflammatory agents

CO-PO-MAPING

course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	2	2	1	2	1	2	2	1	3	3

Course Code	Course Title	No of Hours Per week	No of Credits
MPL 104T	Cellular and Molecular Pharmacology	04	04
Sessional Marks: 15			Continuous mode:10
End Semester Examination Marks: 75			Totalmarks:100

OBJECTIVES:

1. Upon completion of the course, the student shall be able to,
2. Explain the receptor signal transduction processes.
3. Explain the molecular pathways affected by drugs.
4. Appreciate the applicability of molecular pharmacology and biomarkers in drugdiscovery process.
5. Demonstrate molecular biology techniques as applicable for pharmacology

COURSE CONTENT:

UNIT- I

Cell biology

Structure and functions of cell and its organelles. Introduction to Cell Biology
Protein Structure and Function. Membranes and Cell Architecture. MembraneTransport. Genes, Genomics and Chromosomes.Applications of siRNA and micro RNA, gene mapping and gene sequencing.

UNIT-II

Cell signaling

1. Intercellular and intracellular signaling pathways.
2. Classification of receptor family and molecular structure of ligand gated ion channels; G-proteincoupled receptors, tyrosine kinase receptors and nuclear receptors.
3. Secondary messengers: cyclic AMP, cyclic GMP, calcium ion, inositol 1,4,5-trisphosphate, (IP3), NO, and diacylglycerol.
4. Detailed study of following intracellular signaling pathways: cyclic AMP signaling pathway, mitogen-activated protein kinase (MAPK) signaling, Janus kinase (JAK)/signal transducer and activator of transcription (STAT) signaling pathway

Unit III

Molecular pharmacology

Pharmacology of sodium, calcium, potassium and chloride channels and their modulators. NMDA, GABA, Glycine, Serotonin, Dopamine, Histamine and Endothelin (ET) receptors,
their classification, signal transduction mechanism, agonists and antagonists.
Role of Cytokines, Prostaglandins, TNF-α, Bradykinins, Leucotrienes, PAF, Interferons and Adhesion molecules in Inflammation.

UNIT-IV

Cell Cycle

Introduction to the Cell Cycle, Phase and Regulation of Cell cycle and Cell Proliferation, Mitosis, Meiosis and Cytokinesis.
Cell death– events, regulators, intrinsic and extrinsic pathways of apoptosis.
Necrosis and autophagy

UNIT-V

CellculturetechniquesandBiosimilars

Basic equipment's used in cell culture lab. Cell culture media, various types of cell culture, general procedure for cell cultures; isolation of cells, subculture, cryopreservation, characterization of cells and their application. Principles and applications of cell viability assays, glucose uptake assay, Calcium influx assays. Principles and applications of flow cytometry.

Biosimilars: Definitions, Generics and Branded drugs, biosimilars, introduction to biologics, differences between biosimilars and generics, manufacturing process and technical challenges associated with production of biosimilar molecules, current status of biosimilars.

12. Basic Cell Culture (Practical Approach) - J. M. Davis.
13. Animal Cell Culture: A Practical Approach - John R Masters.
14. Current Protocols in Molecular Biology - Frederick M. Ausuvel et al. Vol 1 to 6.

COURSE OUTCOMES:

1. Explain cellular structure and functions and cell regulation
2. Describe molecular and cellular cell signaling pathways & Describe in detail Principles and applications of genomic and proteomic tools
3. Principles ,applications and recent advances in gene therapy & Describe in detail Principles and applications of Pharmacogenomics
4. Explain the Principles and applications of proteomics science
5. Describe in detail Principles and applications of Immunotherapeutics& Describe Cell culture techniques and biosimilars

CO4	2	2	3	2	2	1	1	1	2	1	1	1
CO5	2	1	3	1	1	1	1	1	2	1	1	1

Course Code	Course Title	No of Hours Per week	No of Credits
MPL 104T	PharmacologicalPractical-I	04	04
Totalmarks:150			

COURSE CONTENT:

1. AnalysisofpharmacopoeialcompoundsandtheirformulationsbyUV Vis spectrophotometer
2. SimultaneousestimationofmulticomponentcontainingformulationsbyUV spectrophotometry
3. Experiments based on, PC, TLC & HPLC
4. Experiments based on Gas Chromatography
5. Estimation of riboflavin/quinine sulphate by fluorimetry
6. Estimation of sodium/potassium by flame photometry.
7. Handling of laboratory animals.
8. Various routes of drug administration.
9. Techniques of blood sampling, anesthesia and euthanasia of experimental animals.
10. Functional observation battery tests (modified Irwin test)
11. Evaluation of CNS stimulant, depressant, anxiogenics and anxiolytic, anticonvulsant activity.
12. Evaluation of analgesic, anti-inflammatory, local anesthetic, mydriatic and miotic activity.
13. Evaluation of diuretic activity.
14. Evaluation of antiulcer activity by pylorus ligation method.
15. Oral glucose tolerance test.
16. Isolation and identification of DNA from various sources (Bacteria, Cauliflower, onion, Goat liver).
17. Isolation of RNA from yeast
18. Estimation of proteins by Braford/Lowry's in biological samples.
19. Estimation of RNA/DNA by UV Spectroscopy
20. Gene amplification by PCR.
21. Protein quantification Western Blotting.
22. Enzyme based in-vitro assays (MPO, AChEs, α amylase, α glucosidase).
23. Cell viability assays (MTT/Trypan blue/SRB).
24. DNA fragmentation assay by agarose gel electrophoresis.
25. DNA damage study by Comet assay.
26. Apoptosis determination by fluorescent imaging studies.
27. Pharmacokinetic studies and data analysis of drugs given by different routes of administration using softwares
28. Enzyme inhibition and induction activity
29. Extraction of drug from various biological samples and estimation of drugs in biological fluids using different analytical techniques (UV)
30. Extraction of drug from various biological samples and estimation of drugsin biological fluids using different analytical techniques (HPLC).

9. Basic Cell Culture (Practical Approach) by J. M. Davis (Editor)
10. Animal Cell Culture: A Practical Approach by John R. Masters (Editor)
11. Practical Manual of Experimental and Clinical Pharmacology by Bikas Medhi(Author), Ajay Prakash (Author) Jaypee brothers' medical publishers Pvt. Ltd

COURSE OUTCOMES:

1. The subject is designed to strengthen the basic knowledge in the field of pharmacology and to
2. impart recent advances in the drugs used for the treatment of variousdiseases.
3. In addition, this subject helps the students to understand the concepts of drug action an mechanisms involved Understand the adverse effects.
4. Contraindications and clinical uses of Explain the mechanism of drug actions at cellular and molecular level.
5. Discuss the pathophysiology and pharmacotherapy of certain diseases Objectives Upon completion of the course the student shall be able to : drugs used in treatment of diseases

SECOND SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
MPL201T	AdvancedPharmacology–II	04	04
Sessional Marks: 15 End Semester Examination Marks: 75		Continuous mode:10 Totalmarks:100	

OBJECTIVES:

1. Upon completion of the course the student shall be able to:
2. Explain the mechanism of drug actions at cellular and molecular level
3. Discuss the Pathophysiology and pharmacotherapy of certain diseases
4. Understand the adverse effects, contraindications and clinical uses of drugs used in treatment of diseases

COURSE CONTENT:

UNIT- I

Endocrine Pharmacology

Molecular and cellular mechanism of action of hormones such as growth hormone, prolactin, thyroid, insulin and sex hormones, Anti-thyroid drugs, Oral hypoglycemic agents, Oral contraceptives, Corticosteroids. Drugs affecting calcium regulation.

UNIT-II

Chemotherapy

1) Cellular and molecular mechanism of actions and resistance of antimicrobial agents such as ß-lactams, aminoglycosides, quinolones, Macrolide antibiotics. Antifungal, antiviral, and anti-TB drugs.
2) Drugs used in Protozoal InfectionsDrugs used in the treatment of HelminthiasisChemotherapyofcancer.

Unit III

Immunopharmacology :

Cellular and biochemical mediators of inflammation and immune response. Allergic or hypersensitivity reactions.

Pharmacotherapy of asthma and COPD.

Immunosuppressants and Immunostimulants

UNIT-IV

GIT Pharmacology

Antiulcer drugs, Prokinetics, anti-emetics, anti-diarrheals and drugs for constipation and irritable bowelsyndrome

UNIT-V

Pharmacology of Free radicals

Generation of free radicals, role of free radicals in etiopathology of various diseases such as diabetes, neurodegenerative diseases and cancer.
Protective activity of certain important antioxidants.
Recent Advances in antioxidant treatment of Alzheimer's disease, Parkinson's disease, Cancer, Diabetes mellitus

REFERENCES:

CO4	2	2	1	1	2	2	2	1	1	1	3	1
CO5	2	2	2	1	1	1	1	2	2	1	1	1

Course Code	Course Title	No of Hours Per week	No of Credits
MPL202T	PharmacologicalAndToxicological ScreeningMethods-II	04	04
Sessional Marks: 15 End Semester Examination Marks: 75		Continuous mode:10 Totalmarks:100	

OBJECTIVES:

1) Upon completion of the course, the student shall be able to,
2) Explain the various types of toxicity studies.
3) Appreciate the importance of ethical and regulatory requirements for toxicity studies.
4) Demonstrate the practical skills required to conduct the preclinical toxicity studies.

COURSE CONTENT:

UNIT- I

Basic definition and types of toxicology (general, mechanistic, regulatory and descriptive)
Regulatory guidelines for conducting toxicity studies OECD, ICH and EPA. OECD principles of Good laboratory practice (GLP).
History, concept and its importance in drug development

UNIT-II

Acute, sub-acute and chronic- oral, dermal and inhalational studies as per OECD guidelines.
Acute eye irritation, skin sensitization, dermal irritation & dermal toxicity studies. Test item characterization- importance and methods in regulatory toxicology studies.

Unit III

Reproductive toxicology studies.
Male reproductive toxicity studies, female reproductive studies (segment I and segment III),Teratogenecity studies (segment II)
Genotoxicity studies (Ames Test, in vitro and in vivo Micronucleus and Chromosomal aberrations studies),In vivo carcinogenicity studies

UNIT-IV

IND enabling studies (IND studies)
Definition of IND, importance of IND, industry perspective, list of studies needed for INDsubmission.Safety pharmacology studies-origin,concepts and importance of safety pharmacology. HERG assay.

UNIT-V

Toxicokinetics

Toxicokinetic evaluation in preclinical studies, Importance and applications of toxicokinetic studies. Alternative methods to animal toxicity testing- US FDA, ECVAM, CAAT and OECD approved methods.

REFERENCES:

1) Hand book on GLP, Quality practices for regulated non-clinical research
2) and development (http://www.who.int/tdr/publications/documents/glphand book. pdf).
3) Schedule Y Guideline: drugs and cosmetics (second amendment) rules,2005, ministry of health and family welfare (department of health) New Delhi

4) Drugs from discovery to approval by Rick NG.
5) Animal Models in Toxicology, 3rd Edition, Lower and Bryan
6) OECD test guidelines.
7) Principles of toxicology by Karen E. Stine, Thomas M. Brown.
8) Guidance for Industry M3(R2) Nonclinical Safety Studies for the Conduct of Human Clinical Trials and Marketing Authorization for Pharmaceuticals (http://www.fda.gov/downloads/drugs/guidancecomplianceregulatoryinformation/guidances/ucm073246.pdf)

COURSE OUTCOMES:

1) Explain the basics and the types of toxicology&Describe the regulatory guidelines for conducting toxicological studies
2) Explain various toxicity studies as per OECD guidelines
3) Describe special toxicity studies & Describe in detail about various methods employed in drugdiscovery and development
4) Explain the concept of Safety pharmacology studies
5) Explain the Importance and applications of toxicokinetics& Explain Alternative methods to animal toxicity testing.

CO-PO MAPING

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	1	3	1	2	1	2	1	2	1	1	1
CO4	2	1	2	2	2	2	1	2	1	2	1	2
CO5	2	1	1	3	2	3	1	1	1	1	1	1

Course Code	Course Title	No of Hours Per week	No of Credits
MPL204T	ClinicalResearchAndPharmacovigilance	04	04
Sessional Marks: 15			**Continuous mode:10**
End Semester Examination Marks: 75			**Totalmarks:100**

COURSE OBJECTIVES

1. Upon completion of the course, the student shall be able to,
2. Explain the regulatory requirements for conducting clinical trial
3. Demonstrate the types of clinical trial designs
4. Explain the responsibilities of key players involved in clinical trials
5. Execute safety monitoring, reporting and close-out activities
6. Explain the principles of Pharmacovigilance
7. Detect new adverse drug reactions and their assessment
8. Perform the adverse drug reaction reporting systems and communication in Pharmacovigilance

COURSE CONTENT

1.Regulatory Perspectives of Clinical Trials:

Origin and Principles of International Conference on Harmonization - Good Clinical Practice(ICH-GCP) guidelines

Ethical Committee: Institutional Review Board, Ethical Guidelines for Biomedical Research and Human Participant- Schedule Y, ICMR

Informed Consent Process: Structure and content of an Informed Consent Process Ethical principles governing informed consent process.

2. Clinical Trials: Types and Design

Experimental Study- RCT and Non RCT

Observation Study: Cohort, Case Control, Cross sectional

Clinical Trial Study Team Roles and responsibilities of Clinical Trial Personnel: Investigator, Study Coordinator, Sponsor, Contract Research Organization and its management

3. Clinical Trial Documentation

Guidelines to the preparation of documents, Preparation of protocol, Investigator Brochure, Case Report Forms, Clinical Study Report Clinical Trial Monitoring-Safety Monitoring in CT Adverse Drug Reactions: Definition and types. Detection and reporting methods. Severity and seriousness assessment. Predictability and preventability assessment, Management of adverse drug reactions; Terminologies of ADR.

4. Basic aspects, terminologies and establishment of pharmacovigilance

History and progress of pharmacovigilance. Significance of safety monitoring. Pharmacovigilance in India and international aspects, WHO international drug monitoring programme, WHO and Regulatory terminologies of ADR, evaluation of medication safety, establishing pharmacovigilance centres in hospitals, industry and national programmes related to pharmacovigilance. Roles and responsibilities in pharmacovigilance.

5. Methods, ADR reporting and tools used in Pharmacovigilance

International classification of diseases, International Non-proprietary names for drugs, Passive and Active surveillance, Comparative observational studies, Targeted clinical investigations and Vaccine safety surveillance. Spontaneous reporting system and Reporting to regulatory authorities, Guidelines for ADRs reporting. Argus, Aris G Pharmacovigilance, VigiFlow,Statistical methods for evaluating medication safety data.

6.Pharmaco epidemiology.

Study methodology, measurement of treatments and outcomes, sources of bias and control ofconfounding, techniques to reduce bias and confounding.

6. Handbook of Clinical Research - Julia Lloyd & Ann Raven. Churchill Livingstone.
7. Principles of Clinical Research - Giovanna di Ignazio & Di Giovanna and Haynes.
8. Relevant Research and Review articles and guidelines

COURSE OUTCOMES

1. Explain the regulatory requirements for conducting clinical trial
2. Describe in detail about various types of clinical trial designs & Explain the responsibilities of key players involved in clinical trials
3. Describe the documentational requirements for Clinical trials
4. Explain Adverse drug reaction and its management &Describe basic concepts, and establishment of Pharmacovigilence
5. Explain ADR reporting, methods and tools used in Pharmacovigilence
6. Describe Pharmacoepidemiology, pharmacoeconomics and safety pharmacology

Totalmarks:150			

COURSE CONTENT

1. To record the DRC of agonist using suitable isolated tissues preparation.
2. To study the effects of antagonist/potentiating agents on DRC ofagonist using suitable isolated tissue preparation.
3. To determine to the strength of unknown sample by matching bioassay by using suitable tissue preparation.
4. To determine to the strength of unknown sample by interpolation bioassay by using suitable tissue preparation.
5. To determine to the strength of unknown sample by bracketing bioassay by using suitabletissue preparation.
6. To determine to the strength of unknown sample by multiple point bioassay by using suitable tissue preparation.
7. Estimation of PA2 values of various antagonists using suitable isolated tissue preparations.
8. To study the effects of various drugs on isolated heart preparations
9. Recording of rat BP, heart rate and ECG.
10. Recording of rat ECG
11. Drug absorption studies by averted rat ileum preparation.
12. Acute oral toxicity studies as per OECD guidelines.
13. Acute dermal toxicity studies as per OECD guidelines.
14. Repeated dose toxicity studies- Serum biochemical, haematological, urine analysis, functional observation tests and histological studies.
15. Drug mutagenicity study using mice bone-marrow chromosomal aberration test.
16. Protocol design for clinical trial.(3 Nos.)
17. Design of ADR monitoring protocol.
18. In-silico docking studies. (2 Nos.)
19. In-silico pharmacophore based screening.
20. In-silico QSAR studies.
21. ADR reporting

REFERENCES

5. Applied biopharmaceutics and Pharmacokinetics by Leon Shargel andAndrewB.C.Yu.
6. Handbook of Essential Pharmacokinetics, Pharmacodynamics and Drug Metabolism
7. For Industrial Scientists

COURSE OUTCOMES:

1. This subject is designed to impart the knowledge on preclinical evaluation of drugs and recent experimental techniques in the drug discovery and development.
2. The subject content helps the student to understand the maintenance of laboratory animals as per the guidelines.
3. Basic knowledge of various in-vitro and in-vivo preclinical evaluation processes Appraise the regulations and ethical requirement for the usage of Objectives Upon completion of the course the student shall be able to, Describe the various animals used in the drug discovery process and experimental animals.

4. Good laboratory practices in maintenance and handling of experimental Describe the various newer screening methods involved in the drug animals
5. Appreciate and correlate the preclinical data to humans discovery process

MPA203T	QualityControlAndQualityAssurance	04	04
Sessional Marks: 15			**Continuous mode:10**
End Semester Examination Marks: 75			**Totalmarks:100**

COURSE OBJECTIVES

1. At the completion of this subject it is expected that the student shall be able to know
2. The cGMP aspects in a pharmaceutical industry
3. To appreciate the importance of documentation
4. To understand the scope of quality certifications applicable to Pharmaceutical industries
5. To understand the responsibilities of QA & QC departments

COURSE CONTENT

1. Concept and Evolution of Quality Control and Quality Assurance

Good Laboratory Practice, GMP, Overview of ICH Guidelines - QSEM, with special emphasis on Q-series guidelines.

Good Laboratory Practices: Scope of GLP, Definitions, Quality assurance unit, protocol for conduct of non-clinical testing, control on animal house, report preparation and documentation.

2. cGMP guidelines according to schedule M, USFDA (inclusive of CDER and CBER) Pharmaceutical Inspection Convention (PIC), WHO and EMEA covering: Organization and personnel responsibilities, training, hygiene and personal records, drug industry location, design, construction and plant lay out, maintenance, sanitation, environmental control, utilities and maintenance of sterile areas, control of contamination and Good Warehousing Practice. CPCSEA guidelines.

3. Analysis of raw materials, finished products, packaging materials, in process quality control (IPQC), Developing specification (ICH Q6 and Q3)

Purchase specifications and maintenance of stores for raw materials. In process quality control and finished products quality control for following formulation in Pharma industry according to Indian, US and British pharmacopoeias: tablets, capsules, ointments, suppositories, creams, parenterals, ophthalmic and surgical products (How to refer pharmacopoeias), Quality control test for containers, closures and secondary packing materials.

4. Documentation in pharmaceutical industry: Three tier documentation, Policy, Procedures and Work instructions, and records (Formats), Basic principles- How to maintain, retention and retrieval etc. Standard operating procedures (How to write), Master Formula Record, Batch Formula Record, Quality audit plan and reports. Specification and test procedures, Protocols and reports. Distribution records. Electronic data

5.Manufacturing operations and controls: Sanitation of manufacturing premises, mix-ups and cross contamination, processing of intermediates and bulk products, packaging operations, IPQC, release of finished product, process deviations, charge-in of components, time limitations on production, drug product inspection, expiry date calculation, calculation of yields, production record review, change control, sterile products, aseptic process control, packaging.

11. Good Manufacturing Practices for Pharmaceuticals a plan for total quality control – Sidney H. Willig, Vol. 52, 3rd edition, Marcel Dekker Series.

COURSE OUTCOMES

1. Understand and differentiate quality control and quality assurance &Learn good laboratory practices for non clinical laboratory
2. Discuss GMP guidelines by various regulated countries &Learn pharmacopoeal guidelines about in process quality control testing
3. Appreciate the need of documentation in pharmaceutical industry &Overview of CTDs and their requirements in regulated markets
4. Learn the quality assurance aspects of manufacturing and process control
5. Discuss about intellectual property rights and their scope in pharmaceutical industry

THIRD SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
MPL 301 T	**Research Methodology & Biostatistics**	04	04
Sessional Marks: 15			**Continuous mode:10**
End Semester Examination Marks: 75			**Totalmarks:100**

COURSE CONTENT

1.General Research Methodology: Research, objectives, requirements, practical difficulties, review of literature, study design, types of studies, strategies to eliminate errors/bias, controls, randomization, crossover design, placebo, blinding techniques.

2.Biostatistics: Definition, applications, sample size, importance of sample size, factors influencing sample size, drop outs, statistical tests of significance, Spearman correlation, regression analysis, null hypothesis, P values, degrees of freedom, interpretation of P values.

3.Parametric tests -students "t" test, ANOVA non-parametric tests - chi square test, Sign test, Signed rank test, wilcoxon rank-sum test.

4.Medical and Human Research: History, values in medical ethics, autonomy, beneficence, non-maleficence, double effect, conflicts between autonomy and beneficence/non- maleficence, informed consent, confidentiality, criticisms of orthodox medical ethics, importance of communication, control resolution, guidelines, ethics committees, cultural concerns, truth telling, online business practices, conflicts of interest, referral, vendor relationships, treatment of family members, sexual relationships, fatality.

5. CPCSEA guidelines for laboratory animal facility: Goals, veterinary care, quarantine, surveillance, diagnosis, treatment and control of disease, personal hygiene, location of animal facilities to laboratories, anesthesia, euthanasia, physical facilities, environment, record keeping, SOPs, personnel and training, transport of lab

COURSE OUTCOMES

1. Learn general research methodology & Understand the basic concepts of biostatistics
2. Learn different parametric and non-parametric tests
3. Understand the functions of ethics committees in medical research
4. Learn the guidelines for developing animal facilities & Explain the guidelines and importance of medical research
5. Learn the guidelines for the experimentation on animalUnderstand the genesis of bioethics with special reference toHelsinkldeclaration

SRI VENKATESWARA UNIVERSITY: TIRUPATI

SVU COLLEGE OF PHARMACEUTICAL SCIENCES

DEPARTMENT OF PHARMACY

Course

M. PHARMACY PHARMACEUTICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

M. PHARMACY PROGRAMME
Choice based credit system (CBCS) Pattern

(Pharmaceutics)

About the Department

The Pharmacy course was started in 2006 in the department of Biochemistry. The Pharmacy department was established in 2016, to promote advanced science and research in pharmaceutical sciences and to cater to the needs of the student community of A.P. in general and of the Rayalaseema region. The courses offered by the department are M.Pharmacy in 2006, B.Pharmacy in 2013 and PhD in 2015 and these are self supporting courses. Department has basic research facilities which include equipment like Centrifuges Spectrophotometers and required for carrying out research.

Vision

- To impart quality and value embedded education and research in Pharmaceutical Sciences.
- To create technologically superior and ethically strong global manpower, in the arena of Pharmacy Profession.
- Carving the youth as dynamic, competent, valued and knowledgeable Professionals of Pharmacy field.

Mission

- Transforming Students into Full-fledged Pharmacists and participate actively in the field of Pharmacy.
- Promoting Quality Research in Emerging Areas of Pharmaceutical Sciences.
- To instill scientific zeal and develop skilled human resource to meet contemporary challenges in Pharmacy Profession.
- To facilitate young adult learners with opportunities to hone their ethics and leadership potential.
- Imparting technical education that encourages Independent thinking, develops strong domain of knowledge, hones contemporary skills and Positive attitudes towards holistic growth of young minds.
- Evolving the Institution into a Center of Academic and Research Excellence in Pharmaceutical Education and lead the field of pharmaceutical sciences and pharmacy practice with the mission of strengthening the healthcare of the country.

Programme Specific Outcomes

At the end of successful completion of programme, a Post graduate will

- Have adequate knowledge and scientific information regarding basic principles of Pharmaceutical & Medicinal Chemistry, Pharmaceutics including Cosmeticology.
- Be able to develop and assure the quality of various pharmaceutical dosage forms including those of herbal origin as per standards of official books, WHO and other regulatory agencies like USFDA, MHRA etc.
- Be able to apply the knowledge and skill gained from various subjects and the aptitude developed throughout the course of the program in performing a job either independently or as a member of a team in various fields of pharmacy profession.
- Be able to perform research on various medical aspects and implement the Pharmaceutical knowledge in formulating the best suitable dosage form to provide high quality medicines to the society.
- Render the services to the public by providing patient centric effective treatments to curb the therapeutic issues with the required medicines and explain the effects of the drugs by analyzing the scientific literature for improving their health and well-being.

Programme Objectives

- To uphold all laws, regulations, safety and ethical standards that apply to the experimental procedures of the pharmaceutical formulations
- To Provide a practical knowledge of the basic pharmaceutical sciences and the skill, acquire to deal with problems in pharmaceutical field
- To To update the knowledge through continuous learning to face the challenges for better services to the community.
- Acquire practical knowledge in various analytical techniques
- To prepare the students in teamwork, lifelong learning and continuous improvement

Programme Outcomes

After the completion of the M.Pharm Pharmaceutics programme the students will be able to,

- Produce Pharmacy graduates with strong basics and high technical knowledge to cater the various areas of Pharmaceutical industry.
- Develop an understanding for the need of pharmaceutical sciences and technology towards giving quality life to people in society through the quality of medicines.
- Apply the knowledge and skills gained through education to gain recognition in professional course and society.
- Impart knowledge and skills on criteria for selection of drugs, dose calculations, dose adjustments by applying biopharmaceutical theories, pharmacokinetic and bioequivalence models which gives technical skill knowledge in In-vitro and In-vivo studies using computer simulations.
- Act efficiently as a leader in the diverse areas of the profession to demonstrate the ability to plan and implement professional activities.
- Provide a practical knowledge of the basic pharmaceutical sciences and the skill, acquire to deal with problems in pharmaceutical field
- Develop ability for in-depth information and critical thinking in order to identify, formulate and solve the issues related to Pharmaceutical Industry, Regulatory Agencies, Hospital Pharmacy & clinical Pharmacy for better services to the community.
- Identify the goals and regulations involved in the drug discovery and development, manufacture, distribution and sale of medicines and develop problem-based learning approach and analytical thinking in his/her academic and professional life.
- To update the knowledge through continuous learning to face the challenges for better services to the community.
- Design and develop process to perform experiments in various pharmaceutical areas like Pharmacognosy, Pharmaceutical Chemistry including Analytical Chemistry, Pharmaceutical Biotechnology, Pharmacology, Formulation and Development.
- Fill the gap with other health care communities to provide innovative solutions for the purpose of maintain public health.
- Understand, analyze and communicate the value of their professional roles in society (e.g. health care professionals, promoters of health, educators, managers, employers, employees).

Programme Educational Objectives

- To provide students with a strong and well defined concepts in the¬ various fields of pharmaceutical sciences viz., Pharmaceutics, Pharmaceutical chemistry, Pharmacognosy, Pharmacology and Pharmacy Practice according to the requirement of pharmaceutical industries, community and hospital pharmacy.
- To develop a sense of teamwork and awareness amongst students¬ towards the importance of interdisciplinary approach for developing competence in solving complex problems in the area of Pharmaceutical Sciences.
- To encourage the students to participate in life-long learning¬ process for a highly productive career and to relate the concepts of Pharmaceutical Sciences towards serving the cause of the society

FIRST SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
MPA 101T	MODERN PHARMACEUTICAL ANALYTICAL TECHNIQUES	04	04
Sessional Marks: 15		Continuous mode:10	
End Semester Examination Marks: 75		Totalmarks:100	

OBJECTIVES:

After completion of course student is able to know about chemicals and excipients. The analysis of various drugs in single and combination dosage forms. Theoretical and practical skills of the instruments

COURSE CONTENT:

UNIT- I

UV-Visible spectroscopy: Theory, Laws, Instrumentation associated with UV- Visible spectroscopy, Choice of solvents and solvent effect and Applications of UVVisible spectroscopy, Difference/ Derivative spectroscopy.

a. IR spectroscopy: Theory, Modes of Molecular vibrations, Sample handling, Instrumentation of Dispersive and Fourier -Transform IR Spectrometer, Factors affecting vibrational frequencies and Applications of IR spectroscopy, Data Interpretation.

b. Spectroflourimetry: Theory of Fluorescence, Factors affecting fluorescence (Characterestics of drugs that can be analysed by fluorimetry), Quenchers, Instrumentation and Applications of fluorescence spectrophotometer. c. Flame emission spectroscopy and atomic absorption spectroscopy: Principle, Instrumentation, Interferences and Applications.

UNIT-II

1HNMR spectroscopy Principle, Instrumentation, Solvent requirement in 1HNMR, Relaxation process, NMR signals in various compounds, Chemical shift, Factors influencing chemical shift, Spin-Spin coupling, Coupling constant, Applications of 1HNMR spectroscopy. Brief outline of principles of 13C NMR.

Unit III

Mass Spectroscopy: Principle, Theory, Instrumentation of Mass Spectroscopy, Different types of ionization like electron impact, chemical, field, FAB and MALDI, Mass fragmentation and its rules, Meta stable ions, Isotopic peaks and Applications of Mass spectroscopy.

UNIT-IV

Chromatography: Principle, instrumentation, chromatographic parameters, factors affecting resolution, isolation of drug from excipients, data interpretation and applications of the following: a. High Performance Thin Layer Chromatography. b. Gas chromatography c. High Performance Liquid chromatography d. Ultra-High Performance Liquid chromatography e. LC-MS f. Affinity chromatography

UNIT-V

a. Electrophoresis: Principle, Instrumentation, working conditions, factors affecting separation and applications of the following: a) Paper electrophoresis b) Gel electrophoresis c) Capillary electrophoresis d) Zone electrophoresis e) Moving boundary electrophoresis f) Iso electric focusing. b. X ray Crystallography: Production of X rays, Different X ray methods, Bragg ‘s law, Rotating crystal technique, X ray powder technique, Types of crystals and applications of X- ray diffraction.

UNIT-VI

a. Immunoassays: Principles, procedures and types of RIA, ELISA b. Thermal techniques: Principle, instrumentation and pharmaceutical applications of DTA, DSC, TGA.

9. Textbook of Pharmaceutical Analysis, KA.Connors, 3rd Edition, John Wiley & Sons, 1982

COURSE OUTCOMES:

1. Explain the importance of modern instrumentation in pharmaceutical analysis.Describe the fundamental principles and applications of spectroscopic techniques Viz., UV- Visible, IR,Students also able to demonstrate and use flame photometry, nepheloturbidometry
2. To determine the structural and functional group identification by using NMR-C13 and H1
3. Qualitative and quantitative identification of compound by Mass spectroscopy using different ionization technique
4. The chromatographic techniques for qualitative and quantitative analysis of pharmaceutical compounds.
5. The electrophoresis techniques and their applications in pharmaceutical industry.
6. Principle procedures involved in immunoassay and pharmaceutical applications: RIA, ELISA. DTA, DSC, TGA.

Course Code	Course Title	No of Hours Per week	No of Credits
MPH 102T	DRUG DELIVERY SYSTEM	04	04
Sessional Marks: 15		Continuous mode:10	
End Semester Examination Marks: 75		Totalmarks:100	

OBJECTIVES:

Upon completion of the course, student shall be able to understand

- The various approaches for development of novel drug delivery systems.
- The criteria for selection of drugs and polymers for the development of delivering system
- The formulation and evaluation of Novel drug delivery systems.

COURSE CONTENT:

Unit I

1. a. Sustained Release (SR) and Controlled Release (CR) formulations: Introduction & basic concepts, advantages/ disadvantages, factors influencing, Physicochemical & biological approaches for SR/CR formulation, Mechanism of Drug Delivery from SR/CR formulation. b. Rate Controlled Drug Delivery Systems: Principles &Fundamentals, Types; Activation Modulated Drug Delivery Systems: Mechanically activated, pH activated, Enzyme activated, and Osmotic activated Drug Delivery Systems: Feedback regulated Drug Delivery Systems: Principles & Fundamentals.

UNIT-II

a) Gastro-Retentive Drug Delivery Systems: Principle, concepts, advantages and disadvantages, Modulation of GI transit time approaches to extend GI transit.

b) Buccal Drug Delivery Systems: Principle of muco adhesion, advantages and disadvantages, mechanism of drug permeation, Methods of formulation and its evaluations.

c) Polymers: introduction, definition, classification, Molecular weight averages, Molecular weight determination from viscosity, Polymers as thickening agent, Preparation of polymer solution, Polymers in the solid state, Fabrication technology, and applications.

Unit III

a) Occular Drug Delivery Systems: Barriers of drug permeation, Methods to overcome barriers.

b) Transdermal Drug Delivery Systems: Structure of skin and barriers, Penetration enhancers, Formulation and evaluation of Transdermal Drug Delivery Systems.

UNIT-IV

Protein and Peptide Delivery: Barriers for protein delivery. Formulation and Evaluation of Delivery systems of proteins and other macromolecules. Vaccine delivery systems: Vaccines, uptake of antigens, single shot vaccines, mucosal and transdermal delivery of vaccines

UNIT-V

Protein and Peptide Delivery: Barriers for protein delivery. Formulation and Evaluation of Delivery systems of proteins and other macromolecules. Vaccine delivery systems: Vaccines, uptake of antigens, single shot vaccines, mucosal and transdermal delivery of vaccines

UNIT-VI

Dosage Form for Personalized Medicine: Introduction, Definition, Pharmacogenetics, Categories of Patients for Personalized Medicines, Customized drug delivery systems, A brief note on Bio electronic Medicines, 3D printing of pharmaceuticals, Tele pharmacy.

JOURNALS

1. Indian Journal of Pharmaceutical Sciences (IPA)
2. Indian drugs (IDMA)
3. Journal of controlled release (Elsevier Sciences) desirable
4. Drug Development and Industrial Pharmacy (Marcel & Decker) desirable.

COURSE OUTCOMES:

1. To understand criteria for selection of drugs, polymers, development and evaluation of novel drug delivery systems.
2. Understand the concepts and applications of Novel Drug Delivery Systems.
3. Apply knowledge in developing various novel formulations as per requirements.
4. Analyze various evaluation parameters for oral, parenteral, topical etc. drug delivery systems.
5. Evaluate the drug polymer compatibility studies
6. Formulate industrially feasible, cost-effective strategy for development of new dosage forms.

Course Code	Course Title	No of Hours Per week	No of Credits
MPH 103T	MODERN PHARMACEUTICS	04	04

Sessional Marks: 15 **Continuous mode:10**
End Semester Examination Marks: 75 **Totalmarks:100**

OBJECTIVES:

Upon completion of the course, student shall be able to understand

- The elements of preformulation studies.
- The Active Pharmaceutical Ingredients and Generic drug Product development
- Industrial Management and GMP Considerations.
- Optimization Techniques & Pilot Plant Scale Up Techniques
- Stability Testing, sterilization process & packaging of dosage forms.

COURSE CONTENT:

1. a) Preformulation Concepts – Drug Excipient interactions - different methods, kinetics of stability, Stability testing.

b) Theories of dispersion: Emulsion and Suspension, SMEDDS. Its formulation and evaluation.

c) Preparation and stability of large and small volume parenteral – physiological and formulation consideration, Manufacturing and evaluation.

2. Optimization techniques in Pharmaceutical Formulation: Concept and parameters of optimization, Optimization techniques in pharmaceutical formulation and processing. Statistical design, Response surface method, Contour designs, Factorial designs and application in formulation development.

3. Validation: Introduction to Pharmaceutical Validation, Scope &merits of Validation, Types of Validation, Government regulation, Manufacturing process Model, URS,DQ,IQ,OQ&P.Q.of facilities. Validation and calibration of Master plan, ICH & WHO guidelines for calibration and validation of equipment, Process Validation of Tablets, Capsules, Parenterals.

4. a) cGMP & Industrial Management: Objectives and policies of current good manufacturing practices, layout of buildings, services, equipment and their maintenance.

b) Production management: Production organization. Materials management: handling and transportation, inventory management and control, production and planning control, Sales forecasting, budget and cost control, industrial and personal relationship. Concept of Total Quality Management.

5. a) Compression and compaction: Physics of tablet compression, compression and consolidation, effect of friction, distribution of forces, compaction profiles.

b) Study of consolidation parameters; Diffusion parameters, Dissolution parameters and Pharmacokinetic parameters, Heckel plots, Similarity factors – f2 and f1, Higuchi and Peppa's plot.

12.Drug formulation manual; By D.P.S. Kohli and D.H.Shah. Eastern publishers, New Delhi.
13. How to practice GMPs; By P.P.Sharma. Vandhana Publications, Agra.
14. Pharmaceutical Process Validation; By Fra. R. Berry and Robert A. Nash.

15. Pharmaceutical Preformulations; By J.J. Wells.
16. Applied production and operations management; By Evans, Anderson, Sweeney and Williams.
17. Encyclopedia of Pharmaceutical technology, Vol I – III.

COURSE OUTCOMES:

1. After successful completion of this course students will be able to: Describe the physiochemical properties important for formulation of solid, liquid and sterile dosage forms.
2. Interpret formulation data and subsequent analysis data towards choice of the most relevant formulations.
3. Produce pharmaceutical formulations from known reference sources in a quality that is suitable for patient use.
4. Explain the concept and importance of testing of product performance, and the ability to interpret such data.
5. Describe the principles of sterile production and explain why quality assurance and validation of critical steps in the production process are of particular importance.
6. Develop cosmetics and with desired Safety, stability, and efficacy.

CO5	2	1	2	1	2	1	1	3	1	3	1	3

Course Code	Course Title	No of Hours Per week	No of Credits
MPH 104T	REGULATORY AFFAIRS	04	04
Sessional Marks: 15		Continuous mode:10	
End Semester Examination Marks: 75		Totalmarks:100	

OBJECTIVES:

Upon completion of the course, it is expected that the students will be able to understand

- The Concepts of innovator and generic drugs, drug development process
- The Regulatory guidance's and guidelines for filing and approval process
- Preparation of Dossiers and their submission to regulatory agencies in different countries
- Post approval regulatory requirements for actives and drug products
- Submission of global documents in CTD/ eCTD formats
- Clinical trials requirements for approvals for conducting clinical trials
- Pharmacovigilance and process of monitoring in clinical trials.

COURSE CONTENT:

UNIT-I

Documentation in Pharmaceutical industry: Master formula record, DMF (Drug Master File), distribution records. Generic drugs product development: Introduction, Hatch Waxman act and amendments, CFR (CODE OF FEDERAL REGULATION), in-vitro drug product performance.

UNIT-II

Regulatory requirement for product approval: API, biologics, novel therapies, obtaining NDA, ANDA for generic drugs, ways and means of US registration for foreign drugs.

UNIT-III

CMC, post approval regulatory affairs: Regulation for combination products and medical devices.CTD and ECTD format, industry and FDA liaison. ICH - Guidelines of ICHQ, S E, M Regulatory requirements of EU, MHRA, TGA and ROW countries.

UNIT-IV

Non clinical drug development: Global submission of IND, NDA, ANDA. Investigation of medicinal products dossier, (IMPD) and investigator brochure (IB).

UNIT-VI

Clinical trials: Developing clinical trial protocols. Institutional review board/ independent ethics committee Formulation and working procedures, informed Consent process and procedures. HIPAA- new, requirement to clinical study process, pharmacovigilance, safety monitoring in clinical trials.

10. Good manufacturing practices for Pharmaceuticals: A plan for total quality control, Second edition; By Sidney H. Willig.

COURSE OUTCOMES:

1. After successful completion of this course students will be able to:
2. Take independent responsibility for the development of novel drug and generic drug along with their drug products, from concepts to clinics.
3. Independently initiate and carry out proper actions between regulatory authorities and the marketing application authorization applicant/holder.
4. Critically examine and evaluate scientific data and conclusions intended for regulatory review
5. Enable improvement of the regulatory environment by implementing and upholding good regulatory practices.
6. Knowledge on developing clinical trial protocols, ethics committee, monitoring clinical trials and pharmacovigilance.
7. Knowledge on procedures for registration of Indian drug products in overseas market, CTD.

MPH 105P	Pharmaceutics Practical-I	04	04

Sessional Marks: 15 **Continuousmode:10**
End Semester Examination Marks: 75 **Totalmarks:100**

OBJECTIVES:

1. After completion of course student is able to know about chemicals and excipients. The analysis of various drugs in single and combination dosage forms.
2. The criteria for selection of drugs and polymers for the development of delivering system
3. The Active Pharmaceutical Ingredients and Generic drug Product development
4. Preparation of Dossiers and their submission to regulatory agencies in different countries
5. Clinical trials requirements for approvals for conducting clinical trials

COURSE CONTENT:

1. Analysis of pharmacopoeial compounds and their formulations by UV Vis spectrophotometer
2. Simultaneous estimation of multi component containing formulations by UV spectrophotometry
3. Experiments based on PC, TLC & HPLC
4. Experiments based on Gas Chromatography
5. Estimation of riboflavin/quinine sulphate by fluorimetry
6. Estimation of sodium/potassium by flame photometry
7. To perform In-vitro dissolution profile of CR/ SR marketed formulation
8. Formulation and evaluation of sustained release matrix tablets
9. Formulation and evaluation osmotically controlled DDS
10. Preparation and evaluation of Floating DDS- hydro dynamically balanced DDS
11. Formulation and evaluation of Mucoadhesive tablets.
12. Formulation and evaluation of trans dermal patches.
13. To carry out preformulation studies of tablets.
14. To study the effect of compressional force on tablets disintegration time.
15. To study Micromeritic properties of powders and granulation.
16. To study the effect of particle size on dissolution of a tablet.
17. To study the effect of binders on dissolution of a tablet.
18. To plot Heckal plot, Higuchi and peppas plot and determine similarity factors.

COURSE OUTCOMES:

1. Qualitative and quantitative identification of compound by Mass spectroscopy using different ionization technique
2. Formulate industrially feasible, cost-effective strategy for development of new dosage forms.
3. Interpret formulation data and subsequent analysis data towards choice of the most relevant formulations.
4. Independently initiate and carry out proper actions between regulatory authorities and the marketing application authorization applicant/holder.
5. Knowledge on developing clinical trial protocols, ethics committee, monitoring clinical trials and pharmacovigilance.

MPH	**SEMINARS AND ASSIGNMENT**	**07**	**04**
Total marks: 100			

OUTCOMES:

1. 1.Description of key goals to be accomplished by the assignment
2. Introduce students to different types of scholarly sources and how to access them
3. Explore an appreciation of the self in relation to its larger diverse social and academic contexts.

SECOND SEMESTER

Course Code	Course Title	No of Hours Per week	No of Credits
MPH 201T	**MOLECULAR PHARMACEUTICS (NANO TECH AND TARGETED DDS)**	04	04
Sessional Marks: 15		**Continuous mode:10**	
End Semester Examination Marks: 75		**Total marks:100**	

OBJECTIVES:

Upon completion of the course student shall be able to understand

1. The various approaches for development of novel drug delivery systems.
2. The criteria for selection of drugs and polymers for the development of NTDS
3. The formulation and evaluation of novel drug delivery systems.

COURSE CONTENT:

Unit I

Targeted Drug Delivery Systems: Concepts, Events and biological process involved in drug targeting. Tumor targeting and Brain targeting.

Unit II

Targeting Methods: Introduction, types, preparation evaluation. Nano Particles & Liposomes, Niosomes.

Unit III

Micro Capsules / Micro Spheres: Types, preparation and evaluation, and applications of Monoclonal Antibodies:Aquasomes, Phytosomes, Electrosomes.

Unit IV

a) Pulmonary Drug Delivery Systems:Types, Preparation and Evaluation of Aerosols, propellents, Containers, Types, preparation and evaluation.

b) Intra Nasal Route Delivery systems; Types, preparation and evaluation.

Unit V

Nucleic acid based therapeutic delivery system: Gene therapy, introduction (ex-vivo & in-vivo gene therapy). Potential target diseases for gene therapy (inherited disorder and cancer). Gene expression systems (viral and nonviral gene transfer). Liposomal gene delivery systems and its Biodistribution and Pharmacokinetics. Knowledge of therapeutic antisense molecules and aptamers as drugs of future.

3. N.K. Jain, Controlled and Novel Drug Delivery, CBS Publishers & Distributors, NewDelhi, First edition 1997 (reprint in 2001)..

Course outcomes:

1.Basics of medical devices and IVDs, process of development, ethical and quality considerations harmonization initiatives for approval and marketing of medical devices and IVDs regulatory approval process for medical devices and IVDs in India, US, Canada, EU, Japan and ASEAN clinical evaluation and investigation of medical devices and IVDs.

2. The various approaches for development of novel drug delivery systems.

3. The criteria for selection of drugs and polymers for the development of NTDS

4. The formulation and evaluation of novel drug delivery systems.

5.Development and validation of the UV spectroscopic analytical method of drug.

MPH 202T	**ADVANCE BIO PHARMACEUTICS AND PHARMACOKINETICS**	04	04
Sessional Marks: 15 Continuous mode:10 **End Semester Examination Marks :75 Total marks:100**			

Objectives:

Upon completion of this course it is expected that students will be able to understand,

1. The basic concepts in biopharmaceutics and pharmacokinetics.
2. The use raw data and derive the pharmacokinetic models and parameters the best describe the process of drug absorption, distribution, metabolism and elimination.
3. The critical evaluation of biopharmaceutic studies involving drug product equivalency.
4. The design and evaluation of dosage regimens of the drugs using pharmacokinetic and biopharmaceutic parameters.
5. The potential clinical pharmacokinetic problems and application of basics of pharmacokinetic

Course Content:

Unit I

Drug Absorption from the Gastrointestinal Tract: Gastrointestinal tract, Mechanism of drug absorption, Factors affecting drug absorption, Formulation and Physicochemical factors. pH–partition theory of drug absorption. Dissolution rate, Dissolution process, Noyes–Whitney equation, Factors affecting the dissolution rate, Formulation and processing factors.

Gastrointestinal absorption: role of the dosage form, Solution (elixir, syrup and solution) as a dosage form, Suspension as a dosage form, Capsule as a dosage form, Tablet as a dosage form, Dissolution methods, Correlation of invivo data with in vitro dissolution data. Transport model: Permeability, Solubility, Charge State, Properties of the Gastrointestinal Tract (GIT), pH Microclimate, Intracellular pH Environment, Tight-Junction Complex, Oral Absorption enhancers.

Unit II

Biopharmaceutic considerations in drug product design and In Vitro Drug Product performance: Introduction, biopharmaceutic factors affecting drug bioavailability, rate- limiting steps in drug absorption, physicochemical nature of the drug formulation, factors affecting drug product performance, in vitro: dissolution and drug release testing, compendial methods of dissolution, alternative methods of dissolution testing, meeting dissolution requirements, problems of variable control in dissolution testing, performance of drug products, dissolution profile comparisons, drug product stability, considerations in the design of a drug product.

Unit III

a) Drug Product Performance, In Vivo: Bioavailability and Bioequivalence: drug product performance, purpose of bioavailability studies, relative and absolute availability, methods for assessing bioavailability, bioequivalence studies, design and evaluation of bioequivalence studies, study designs, crossover study designs, evaluation of the data of bioequivalence example, study submission and drug review process. Biopharmaceutics classification system and methods.

b) Permeability: In-vitro, in-situ and In-vivo methods. generic biologics (biosimilar drug products), clinical significance of bioequivalence studies, special concerns in bioavailability and bioequivalence studies, generic substitution, Bio waivers.

Unit IV

Pharmacokinetics: Basic considerations, pharmacokinetic models, compartment modeling: one compartment model- IV bolus, IV infusion, extra-vascular; two compartment - model in brief, Non-linear pharmacokinetics: causes of non-linearity, Michaelis – Menten equation, estimation of Km and Vmax.
Drug interactions: introduction, the effect of protein binding interactions, the effect of tissue- binding interactions, cytochrome p450-based drug interactions, drug interactions linked to transporters. Drug interactions involving digoxin, warfarin, theophylline.

Unit V
a) Application of Pharmacokinetics: Modified-Release Drug Products, Targeted Drug Delivery Systems and Biotechnological Products. Introduction to Pharmacokinetics and pharmacodynamic drug interactions. Pharmacokinetics and pharmacodynamics of biotechnology drugs.
b) Chrono Therapeutic Drug Delivery System: Introduction, classification, physiology of circadian rhythmicity, circadian rhythm changes in cardiac and liver diseased conditions. Chronopharmacokinetics of anti-hypertensives and anti-asthmatics.

MPH 204T	COSMETICS & COSMECEUTICALS	04	04
Sessional Marks: 15 Continuous mode:10 End Semester Examination Marks: 75		Total marks:100	

Objectives:

Upon completion of the course, the students shall be able to understand

1. Key ingredients used in cosmetics and cosmeceuticals.
2. Key building blocks for various formulations.
3. Current technologies in the market
4. Various key ingredients and basic science to develop cosmetics and cosmeceuticals
5. Scientific knowledge to develop cosmetics and cosmeceuticals with desired Safety, stability, and efficacy

Course Content:

Unit I

Cosmetics – Regulatory: Definition of cosmetic products as per Indian regulation. Indian regulatory requirements for labeling of cosmetics. Regulatory provisions relating to import of cosmetics, Misbranded and spurious cosmetics. Regulatory provisions relating to manufacture of cosmetics – Conditions for obtaining license, prohibition of manufacture and sale of certain cosmetics, loan license, offences and penalties.

Unit II

Cosmetics - Biological aspects: Structure of skin relating to problems like dry skin, acne, pigmentation, prickly heat, wrinkles and body odor. Structure of hair and hair growth cycle. Common problems associated with oral cavity. Products for Cleansing and care for face, eye lids, lips, hands, feet, nail, scalp, neck, body and under-arm.

Unit III

Building blocks for different product formulations of cosmetics/cosmeceuticals: Surfactants – Classification and application. Emollients, rheological additives: classification and application. Antimicrobials, preservatives, their merits and demerits. Factors affecting preservative efficacy. Building blocks for formulation of a moisturizing cream, vanishing cream, cold cream, shampoo and toothpaste, Soaps and syndet bars. Perfumes; Classification of perfumes. Perfume ingredients listed as allergens in EU regulation. Controversial ingredients: Parabens, formaldehyde liberators, dioxane.

Unit IV

Design of cosmeceutical products: Sunscreens- classification and regulatory aspects. Addressing dry skin, acne, sun-protection, pigmentation, prickly heat, wrinkles, body odor, dandruff, dental cavities, bleeding gums, mouth odor and sensitive teeth through cosmeceutical formulations.

Unit V

Herbal Cosmetics: Herbal ingredients used in Hair care, skin care and oral care. Review of guidelines for herbal cosmetics by private bodies like cosmos with respect to preservatives, emollients, foaming agents, emulsifiers and rheology modifiers. Challenges in formulating herbal cosmetics.

4. Handbook of cosmetic science and Technology A.O.Barel, M.Paye and H.I. Maibach. 3 rd edition

5. Cosmetic and Toiletries recent suppliers catalogue.

6. CTFA directory.

Course Outcomes:

Key ingredients used in cosmetics and cosmeceuticals.

1. Key building blocks for various formulations.

2.Various key ingredients and basic science to develop cosmetics and cosmeceuticals.

3.Scientific knowledge to develop cosmetics and with desired Safety, stability, and efficacy.

4.Learn formulation, manufacture & evaluation of baby cosmetics like baby oils, powders etc.

5.Understand formulation of manicure products like nail lacquer, remover etc.

6. Explain the concept of cosmeceuticals, history, difference between cosmetics & cosmeceuticals & cosmeceutical agents.

Course Code	Course Title	No of Hours Per week	No of Credits
MPH 205P	**PHARMACEUTICS PRACTICAL II**	**04**	**04**
Sessional Marks: 15	**Continuous mode:10 End Semester**		
Examination Marks: 75	**Total marks:100**		

OBJECTIVES:

1. The various approaches for development of novel drug delivery systems.
2. The criteria for selection of drugs and polymers for the development of NTDS
3. The critical evaluation of biopharmaceutic studies involving drug product equivalency.
4. The potential clinical pharmacokinetic problems and application of basics of pharmacokinetic
5. Scientific knowledge to develop cosmetics and cosmeceuticals with desired Safety, stability, and efficacy.

Course contents

1. To study the effect of temperature change, non solvent addition, incompatible polymer addition in microcapsules preparation.

2. Preparation and evaluation of Alginate beads

3. Formulation and evaluation of gelatin /albumin microspheres

4. Formulation and evaluation of liposomes/niosomes

5. Formulation and evaluation of spherules

6. Improvement of dissolution characteristics of slightly soluble drug by Solid dispersion technique.

7. Comparison of dissolution of two different marketed products /brands

8. Protein binding studies of a highly protein bound drug & poorly protein bound drug

9. Bioavailability studies of Paracetamol in animals.

10. Pharmacokinetic and IVIVC data analysis by Winnoline R software

11. In vitro cell studies for permeability and metabolism

12. DoE Using Design Expert® Software

13. Formulation data analysis Using Design Expert® Software

14. Quality-by-Design in Pharmaceutical Development

15. Computer Simulations in Pharmacokinetics and Pharmacodynamics

16. Computational Modeling of Drug Disposition

17. To develop Clinical Data Collection manual

18. To carry out Sensitivity Analysis, and Population Modeling.

19. Development and evaluation of Creams

20. Development and evaluation of Shampoo and Toothpaste base

21. To incorporate herbal and chemical actives to develop products

22. To address Dry skin, acne, blemish, Wrinkles, bleeding gums and dandruff.

Course outcomes:

1. Development and validation of the UV spectroscopic analytical method of drug.
2. The design and evaluation of dosage regimens of the drugs using pharmacokinetic and biopharmaceutic parameters.
3. The potential clinical pharmacokinetic problems and application of basics of pharmacokinetic
4. The potential clinical pharmacokinetic problems and application of basics of pharmacokinetic
5. Explain the concept of cosmeceuticals, history, difference between cosmetics & cosmeceuticals & cosmeceutical agents.
6. CO-PO Mapping

Total marks:100			

OUTCOMES:

1. Provide students with preliminary skills to do further research in the field of international relations
2. Teach students to break down a piece of writing into its component parts and analyze the arguments.
3. Give students the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.

Sessional Marks: 15 Continuous mode:10			
End Semester Examination Marks: 75		Total marks:100	

SCOPE

The subject is designed to impart knowledge on the current state of the art techniques involved in computer assisted drug design.

OBJECTIVES

1. At completion of this course it is expected that students will be able to understand
2. Role of CADD in drug discovery
3. Different CADD techniques and their applications
4. Various strategies to design and develop new drug like molecules.
5. Working with molecular modelling softwares to design new drug molecules
6. The in silico virtual screening protocols

Course Content:

Unit I

a. Introduction to Computer Aided Drug Design (CADD) History, different techniques and applications. Quantitative Structure Activity Relationships: Basics History and development of QSAR: Physicochemical parameters and methods to calculate physicochemical parameters: Hammett equation and electronic parameters (sigma), lipophilicity effectsand parameters (log P, pi-substituent constant), steric effects (Taft steric and MR parameters) Experimental and theoretical approaches for the determination of these physicochemical parameters.

Unit II

Quantitative Structure Activity Relationships: Applications Hansch analysis, Free Wilson analysis and relationship between them, Advantages and disadvantages; Deriving 2D- QSAR equations.3D-QSAR approaches like COMFA and COMSIA.

QSAR statistical methods: regression analysis and partial least square analysis.

Unit III

Molecular Modelling and Docking

1. Molecular and Quantum Mechanics in drug design. Energy Minimization Methods: comparison between global minimum conformation and bioactive conformation
2. Methods to derive three-dimensional structure of protein : X-Ray Crystallography, NMR, homologous modeling.
3. Molecular docking and drug receptor interactions: Rigid docking, flexible docking, manual docking and extra-precision docking. Agents acting on enzymes such as DHFR, HMG-Co A reductase and HIV protease, choline esterase (AchE&BchE)

Unit IV

Molecular Properties and Drug Design

1. Prediction and analysis of ADMET properties of new molecules and its importance in drug design.
2. De novo drug design: Receptor/enzyme-interaction and its analysis, Receptor/enzyme cavity size prediction, predicting the functional components of cavities, Fragment based drug design.

Unit V

Pharmacophore Mapping and Virtual Screening

1. Concept of pharmacophore, pharmacophore mapping,identification of Pharmacophore features and Pharmacophore modeling; Conformational search used in pharmacophore mapping.
2. Virtual Screening Techniques

3. Drug-likeness screening, Similarity based methods and Pharmacophore based screening, structure based in-silico virtual screening protocols.

(MPC 203T)	COMPUTER AIDED DRUG DESIGN	04	04
Sessional Marks: 15 Continuous mode:10			
End Semester Examination Marks: 75		Total marks:100	

This course is designed to impart knowledge and skills necessary for computer Applications in pharmaceutical research and development who want to understand the application of computers across the entire drug research and development process. Basic theoretical discussions of the principles of more integrated and coherent use of computerized information (informatics) in the
drug development process are provided to help the students to clarify the concepts

OBJECTIVES

1. Upon completion of this course it is expected that students will be able to understand,
2. History of Computers in Pharmaceutical Research and Development
3. Computational Modeling of Drug Disposition
4. Computers in Preclinical Development
5. Optimization Techniques in Pharmaceutical Formulation
6. Computers in Market Analysis
7. Computers in Clinical Development
8. Artificial Intelligence (AI) and Robotics
9. Computational fluid dynamics(CFD)

Course Content:

Unit I

a. Computers in Pharmaceutical Research and Development: A General Overview: History of Computers in Pharmaceutical Research and Development. Statistical modeling in Pharmaceutical research and development: Descriptive versus Mechanistic Modeling, Statistical Parameters, Estimation, Confidence Regions, Nonlinearity at the Optimum, Sensitivity Analysis, Optimal Design, Population Modeling.
b. Quality-by-Design in Pharmaceutical Development: Introduction, ICH Q8 guidelines, Regulatory and industry views on QbD, Scientifically based QbD - examples of application.

Unit II

Computational Modeling of Drug Disposition: Introduction,Modeling Techniques: Drug Absorption, Solubility, Intestinal Permeation, Drug Distribution
Drug Excretion, Active Transport; P-gp, BCRP, Nucleoside Transporters, hPEPT1, ASBT, OCT, OATP,BBB-Choline Transporter.

Unit III

Computer-aided formulation development: Concept of optimization, Optimization parameters, Factorial design, Optimization technology & Screening design. Computers in Pharmaceutical Formulation: Development of pharmaceutical emulsions, microemulsion drug carriers. Legal Protection of Innovative Uses of Computers in R&D, The Ethics of Computing in Pharmaceutical Research, Computers in Market analysis.

Unit IV

Computer-aided biopharmaceutical characterization: Gastrointestinal absorption simulation. Introduction, Theoretical background, Model construction, Parameter sensitivity analysis, Virtual trial, Fed vs. fasted state, In vitro dissolution and in vitro- invivo correlation, Biowaiver considerations.

Unit V

Computer Simulations in Pharmacokinetics and Pharmacodynamics: Introduction, Computer Simulation: Whole Organism, Isolated Tissues, Organs, Cell, Proteins and Genes. Computers in Clinical Development: Clinical Data Collection and Management, Regulation of Computer Systems.

3. Encyclopedia of Pharmaceutical Technology, Vol 13, James Swarbrick, James. G.Boylan, Marcel Dekker Inc, New York, 1996.

Course Outcomes:

1. To utilize various molecular modeling softwares in the design of novel drug-like molecules.
2. To apply the various softwares for physicochemical property prediction.
3. To understand how current drugs were developed by using pharmacophores modeling and docking technique.
4. Computers in Clinical Development
5. Artificial Intelligence (AI) and Robotics
6. Computational fluid dynamics(CFD)
7. CO-PO Mapping

(MPL 203T)	PRINCIPLES OF DRUG DISCOVERY	04	04
Sessional Marks: 15 Continuous mode:10			
End Semester Examination Marks: 75		Total marks:100	

SCOPE : The subject imparts basic knowledge of drug discovery process. This informationwill makethe student competent in drug discovery process.

OBJECTIVES

1. Upon completion of the course, the student shall be able to,
2. Explain the various stages of drug discovery.
3. Appreciate the importance of the role of genomics, proteomics and bioinformatics indrug discovery
4. Explain various targets for drug discovery.
5. Explain various lead seeking method and lead optimization
6. Appreciate the importance of the role of computer aided drug design in drug discovery

Course Content:

Unit I

An overview of modern drug discovery process:

Target identification, target validation, lead identification and lead Optimization. Economics of drug discovery. Target Discovery and validation- Role of Genomics, Proteomics and Bioinformatics. Role of Nucleic acid microarrays, Protein microarrays, Antisense technologies, siRNAs, antisense oligonucleotides, Zinc finger proteins. Role of transgenic animals in target
validation.

Unit II

Lead Identification- combinatorial chemistry & high throughput screening, in silico leaddiscovery techniques, Assay development for hit identification.
Protein structure
Levels of protein structure, Domains, motifs, and folds in protein structure. Computational prediction of protein structure: Threading and homology modeling methods. Application ofNMR and X-ray crystallography in protein structure prediction.

Unit III

Rational Drug Design

Traditional vs rational drug design, Methods followed in traditional drug design, High throughput screening, Concepts of Rational Drug Design,Rational Drug Design Methods: Structure and Pharmacophore based approaches Virtual Screening techniques: Drug likenessscreening, Concept of pharmacophore mapping and pharmacophore based Screening

Molecular docking: Rigid docking, flexible docking, manual docking; Docking basedscreeningDe novo drug design.

Quantitative analysis of Structure Activity Relationship

History and development of QSAR, SAR versus QSAR, Physicochemical parameters, Hanschanalysis, Fee Wilson analysis and relationshipbetween them.

Unit IV

QSAR Statistical methods – regression analysis, partial least square analysis (PLS) andother multivariate statistical methods. 3D-QSAR approaches like COMFA and COMSIA Prodrug design-Basic concept, Prodrugs to improve patient acceptability, Drug solubility, Drug absorption and distribution, site specific drug delivery and sustained drug action.

Rationale of prodrug design and practical consideration of prodrug design.

7. American Chemical Society: Washington,DC, 1999.
8. J. Rick Turner. New drug development design, methodology and, analysis. John Wiley &Sons, Inc., New Jersey

Course Outcomes:

1. The students would appreciate the knowledge on the basics of drug discovery.
2. They would have better understanding on the various stages of drug discovery.
3. They would have studied the importance of the role of genomics, proteomics and bioinformatics in drug discovery.
4. They would have studied on the various targets for drug discovery.
5. They would have better understanding on the lead seeking method and lead optimization
6. They would have learnt the importance of the role of computer aided drug design in drug discovery.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

Institute of Advanced Study in Education- IASE

Course

Bachelor of Education (B.Ed)

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

About the Institution:

- The Institute of Advanced Study in Education (IASE) S.V University was established in 1998, as per New Education Policy - 1986, under the centrally sponsored scheme of Teacher Education by the Ministry of Human Resource Development (MHRD) Govt. of India during IX plan. The main purpose of establishing IASE is to uplift the Department of Education as IASE, to improve the quality of Teacher Education and Secondary Education. To achieve the above objectives the Institute was conducted Pre-Service and In-service Teacher Training Programmes. It was also conducted workshops on Secondary School Curriculum, Guidance and Counseling at Intermediate level. The overall leadership was provided by the Principal and Faculty members in an effective manner. Almost 23 batches of students were successfully completed. Nearly 2300 students were awarded degree. Till 2014-15 the B.Ed course was run as one year programme. After 2015 onwards it was offered as Two year programme. The Curriculum was structured as per NCTE norms. Nearly 80% students were getting jobs in DSC. Some students were getting jobs in private corporate schools and some are getting jobs in other organizations (TTD, Police department etc). A good number of Extension activities, Awareness programmes on Right to Education Act, Stress Management, Study skills etc. were conducted. The institution is extending its services to High school students, Teachers, Head masters, DIETS in terms of In-Service training. To update administrative skills the Staff are encouraged to attend and share their expertise through Seminars, Conferences, Workshops and Faculty development programmes. Future vision of IASE is to offer courses like Integrated B.Ed., B.Ed Special Education and Diploma in Primary Education.

Vision

- To create Teachers for elementary, secondary and higher education holistically to train the future generations of the Country.

Mission

- The department creates environment to train the teachers in leadership roles as caring teachers, professional experts. Training teachers in communication skills to communicate clearly and effectively, to solve problems, use effective education tools to meet the global standards.
- The main purpose of establishing IASE is to uplift the Department of Education as IASE, to improve the quality of Teacher Education and Secondary Education.

PROGRAMME OUTCOMES

On successful completion of the two-year B.Ed. programme, pupil teachers will be able to develop-

- Teaching competency: Know, select and use of learner-centered teaching methods, understanding of paradigm shift in conceptualizing disciplinary knowledge in school curriculum, necessary competencies for organizing learning experiences, select and use of appropriate assessment strategies for facilitating learning
- Pedagogical skills: Applying teaching skills and dealing with classroom problems.

- Teaching through Nonconventional Modes: Evolving a system of education which enhances the potential of every learner to acquire, retain and transform knowledge leading to wisdom society through creative, experiential and joyful modes of learning.
- Integration of Artificial Intelligence in Education: Transform the educational landscape by providing open access to quality, value based and socially relevant education to all by harnessing the disruptive potential of AI.
- Critical Thinking: Analysis of Curriculum, construction of blue print, selecting appropriate teaching strategies according to needs of students and conducting action research to solve classroom problems.
- Effective Communication: Presenting seminar before peer students and teachers and practicing communication skills through various linguistic activities and applying it for better classroom communication.
- Sensitivity towards Inclusion: Identifying the diversities and dealing it in inclusive classrooms environment, guidance and counselling programmes for disabled students.
- Content Analysis: Analyses the text-books and syllabus.
- Effective Citizen Ethics: Understand different values, morality, and social service and accept responsibility for the society.
- Self-directed Learning: Preparing scripts for seminars, lesson plans and online content.
- Social Resilience: Understand about social entities and enable to tolerate absorb, cope up with adverse conditions of life.
- Physical Development: Practice yoga, self-defence, sports and scouting-guiding.
- Team Work: Enable to work as a member or leader in diverse teams and in multi-disciplinary settings by following the principles of collaborative learning, cooperative learning and team teaching.

PROGRAMME SPECIFIC OUTCOMES

- Enable to comprehend the development in physical, cognitive, social and emotional areas, contemporary issues and educational policies of education system in India, teaching-learning methods, strategies, epistemological basis of education, school management, professional ethics and observation of school activities by school internship.
- Understand the individual differences among students, measuring the attainment, evaluating progress, and assessing learning abilities, guidance programmes and administering psychological tools, ICT based Communication and teaching and lesson planning.

- Practice teaching in Schools, inculcate the real experiences of classroom teaching and online teaching for remote areas' students by using ICT and its different tools and software.
- Understand the classroom diversities and enable them to deal with diverse learners in inclusive
- classroom setup, education for human rights and women empowerment, environmental education and developing online content.

SEMESTER -I

COURSE OUTCOMES

Course-I

PHILOSOPHICAL FOUNDATIONS OF EDUCATION

Objectives

To enable the student teachers to

1. Understand the concepts of Education and Philosophy
2. Understand the Indian Philosophical thought on Education
3. Understand the Implications of various western schools of thought on Education
4. Understand the implications made by recent thinkers on education.
5. Appreciate the nobility of teaching as a profession.

Course Content

Unit-1: Introduction to Philosophy and Education

1.1 Concept and Scope of Philosophy

1.2 Concept and Scope of Education

1.3 Types and Functions of Education

1.4 Relationship between Philosophy and Education.

1.5 Philosophy and aims of Education

Unit-2: Indian Education: Historical Perspective

2.1 Education during Ancient Period (Vedic Education, Buddhist Education and Jains)

2.2 Education during Medieval Period (Including Islamic Education)

2.3 Education during Modern Period (Pre-Independent and Post Independent era)

i. Rabindranath Tagore

ii. Sri Aurobindo Gosh

iii. Mohandas Karamchand Gandhi

iv. Jiddu Krishna Murthy

v. Dr.BR.Ambeddkar

vi Moulana Abdul Kalam Azad

Unit-3: Eastern Systems and Western Schools of Philosophy

3.1 Eastern Systems of Philosophy

i. Sankhya ii. Yoga iii. Nyaya iv. Vedanta

3.2 Western Schools of Philosophy

i. Idealism ii. Naturalism iii. Pragmatism iv. Existentialism

Unit-4: Value Education

4.1 Concept of Value

4.2 Classification of Values

4.3 Value Crisis

4.4 Approaches to inculcate Values

4.5 Values and Harmonious Life

Unit-5: Teaching as a Profession

5.1 Teacher: Professional Competencies and Commitments

5.2 Teacher as a Nation Builder

5.3 Teacher as a Creator and Facilitator of Knowledge

5.4 Professional ethics of teachers

5.5 Teacher and the Future Society.

CO-Po Attainment in outcome based Education

Course Name-PHILOSOPHICAL FOUNDATIONS OF EDUCATION

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the concepts of Education and Philosophy
2	CO_2	Understand the Indian Philosophical thought on Education
3	CO_3	Understand the Implications of various western schools of thought on Education
4	CO_4	Understand the implications made by recent thinkers on education.
5	CO_5	Appreciate the Mobility of teaching as a profession.

Course-II

PERSPECTIVES IN CHILD DEVELOPMENT

Objectives

To enable the student teachers to

1. Compare relative merits and applications of different Approaches of Human Development
2. Recognize that childhood is a period of socialization and how socialization practices affect their development
3. Critically analyze developmental variations among children placed and exposed to different socio-cultural contexts
4. Appreciate the process of development with special focus on childhood and adolescence
5. Recognize that adolescence as a period of transition and threshold of adulthood

Course Content

Unit-1: Approaches of Human Development

1.1 Concept of Growth, Development and Maturation

1.2 Principles of Development

1.3 Stages of Growth and Development (Infancy Childhood, Adolescence)

1.4 Dimensions of Growth and Development (Physical, Cognitive, Emotional, Social, Moral, language)

1.5 Longitudinal and cross sectional approaches of understanding development

Unit-2: Theories of Development

2.1 Cognitive theory of Development (Piaget‟s)

2.2 Psycho-social theory of development (Erikson).

2. 3 Theory of Moral Development (Kohlberg‟s).

2. 4 Theory of psycho- sexual development (Freud).

2. 5 Theory of Emotional Development (Goldstein).

Unit-3: Childhood as a period of Socialization

3.1 Characteristics of childhood – developmental tasks.

3.2 Child development – Physical, cognitive, social, emotional, moral and language development during childhood.

3.3 Child in different socio-cultural contexts.

3.4 Process of socialization – conflicts resolution and social development.

3.5 Stages of Social development – Isolated play, parallel play and social play.

Characteristics of socially matured person.

Unit-4: Adolescence as a period of transition

4.1 Characteristics and needs in Adolescence

4.2 Genesis of problems during adolescence-Physical, cognitive, emotional, social, moral and language development

4.3 Adolescent Groups – Gangs

4.4 Mechanisms of adjustment with special reference to defense mechanisms and holistic development

4.5 Leadership: Types of Leadership, Development of Leadership qualities in adolescents and its educational implications.

Unit-5: Individual Differences

1.1 Dimensions of Individual differences-cognitive abilities, interests, aptitude, creativity, personality and values

1.2 Theory of multiple intelligence (Gardner) – Implications for understanding differences in children

1.3 Difference in children based on learning styles and socio cultural context (home language and Instructional language)

1.4 Individual differences based on cognitive abilities – learning difficulties, slow learners and intellectually challenged, intellectual giftedness - implications for catering to individual variations in view of "differences" rather than "deficits" perspective.

1.5 Fostering creativity among children

CO-Po Attainment in outcome based Education

Course-III

INFORMATION AND COMMUNICATION TECHNOLOGY (ICT) FOR ENRICHING TEACHING AND LEARNING

Objectives

To enable the student teachers to

1. explain the concept of educational technology
2. explain the concept of ICT in education
3. appreciate the influence of ICT for improving the professional competencies
4. comprehend communicative skills and effective classroom interaction
5. use different approaches of ICT integration in education

Course Content

Unit-1: Information and Communication Technology (ICT)

1.1 Educational Technology – Concept, Growth, Objectives, Characteristics, Advantages, Challenges and Impact

1.2 Information Technology - Knowledge Explosion, Preservation and Retrieval

1.3 Communication – Concept, Elements, Process, Barriers & Types – Teaching as Communication - Communication Technology – Its application in Education

1.4 Instructional Media and Aids – Aural, Print, Visual and multimedia

1.5 Concept, Importance, Characteristics and Scope of Information and Communication Technology (ICT)

Unit-2: ICT in Education

2.1 Knowledge Acquisition and Multi-sensory approach

2.2 Classroom Communication and Communicative Skills for Teachers and Students - Flanders Interaction Analysis Category System

2.3 Individualized Instruction – Concept, Need, Principles and Techniques

2.4 Programmed Learning - Principles, Types, modes of presentation, development, application and role of teacher

2.5 Changing roles of the learner and the teacher in ICT-Integration and Challenges

Unit-3: Computer Fundamentals and Applications

3.1 Types, Characteristics and features of Computers

3.2 Components of Computers – Hardware, Software, Memory and Maintenance of computers

3.3 Operating Systems - DOS, Windows and Macintosh and Mobile Apps for Teaching

3.4 Software for Word Processing, Presentation, Statistical & Graphical, Page

Layout, multimedia and webpage creator

3.5 Concept, Applications and Challenges of Computer networks, Internet, E-mail and Digital Space

Unit-4: ICT Enriched Learning Experiences

4.1 Application of ICT for Enriching Classroom Experiences

4.2 Application and use of Multimedia Educational Software for classroom situations

4.3 Use of Internet based media for teaching and learning enrichment - Acknowledgement

4.4 Project based learning using computers, Internet and Activities

4.5 Collaborative learning using group discussion, projects, field visits, blogs, etc.

Unit-5: Application of Computers in Education

5.1 Computer as a learning tool – Concept of E-learning

5.2 Web 2.0 Technologies-characteristics, types and examples

5.3 Virtual Classroom, Smart Boards, Tools and Opportunities

5.4 Open Educational Resources – Concept and Significance

5.5 Critical issues in Internet usage – Authenticity, Addiction, Plagiarism, Ethical and Legal Standards

‘

CO-Po Attainment in outcome based Education

Course Name-INFORMATION AND COMMUNICATION TECHNOLOGY (ICT) FOR ENRICHING TEACHING AND LEARNING

Course Outcome

Sl.No	Course Number	Co’s Description
1	CO_1	Explain the concept of educational technology
2	CO_2	Explain the concept of ICT in education
3	CO_3	Appreciate the influence of ICT for improving the professional competencies

4	**CO_4**	Comprehend communicative skills and effective classroom interaction
5	**CO_5**	Use different approaches of ICT integration in education

CO-PO MappingMatrix/ProgrammeArticulationMatrix:

	PO 1 Knowledge	**PO_2** Analysis	**PO_3** Investigation	**PO** 4 D Design evelopment	**PO_5** ModernTools	**PO_6** Society	**PO** 7 Environment	**PO_8** Ethics	**PO_9** Teamwork	**PO_{10}** Communication	**PO** 11 ProgrammeManagement	**PO_{12}** LifelongLeering

Course-IV

PEDAGOGY OF MATHEMATICS

Objectives

To enable the student teachers to

1. develop insight into the meaning, nature, scope and objectives of mathematics education
2. appreciate the role of mathematics in day to day life
3. understand history, development of mathematics and the contributions of Indian mathematicians to mathematics
4. understand aims and objectives of different branches of mathematics
5. Identify the role of branches of mathematics and their implications on the society.

Course Content

Unit-1: Meaning, Nature, and Scope of Mathematics

1.1 Meaning, Nature, and scope of mathematics.

1.2 History of Mathematics with special emphasis on teaching of mathematics.

1.3 Contributions of Indian Mathematicians

a) Aryabhatta b) Brahmagupta c) Varahamihira d) Bhaskaracharya e) SrinivasaRamanujan.

1.4 Contributions of Western Mathematicians

a)Euclid b)Pythagoras c) Renedescarte d) Geroge Cantor.

1.5 Correlation of Mathematics with other school subjects and with other branches of mathematics.

Unit-2: Aims and objectives of Teaching Mathematics

2.1 Need for establishing general objectives for teaching mathematics.

2.2 Aims, Values and general objectives of teaching mathematics.

2.3 Specific objectives and teaching points of various content areas in different branches of secondary school mathematics.

2.4 Recommendations of various Educational Committees and Commissions as regards to Aims and Objectives of Teaching Mathematics.

2.5 Meaning and Concept of Academic Standards of CCE.

2.6 Linking Blooms Taxonomy with Academic Stands.

Unit-3: Methods, Approaches and Strategies in Teaching and Learning of Mathematical Concepts

3.1 Nature of Concepts, types of Concepts, Concept Formation and concept assimilation; distinguishing and stating necessary and sufficient conditions in the process of teaching concepts. Comparing and contrasting. Giving counter

example and non example in teaching concepts. Planning and implementation strategies in teaching concepts.

3.2 Creating awareness among student teachers on various concepts of Arithmetic, Algebra, Geometry, Trigonometry and Probability and Statistics from classics VI to X.

3.3 Methods of Teaching Mathematics: Inductive and Deductive : Analytic and Synthetic: Laboratory. Heuristic, Project Method and Activity Based Teaching.

3.4 Problem solving- Stages and Steps in problem solving; Discovering or Exploring various options for solving a given problem in Algebra, Arithmetic, Geometry, Trigonometry, Probability and Statistics.

3.5 Concept Attainment Model of Jerome Bruner.

Unit-4: Planning for Teaching – Learning Mathematics

4.1 Microteaching: Concept, Definition, Microteaching cycle, Components of Microteaching, Merits and Limitations.

4.2 Microteaching Skills: Introducing a lesson, Explaining a Concept, Stimulus Variation, Illustrating with Examples, Probing Questioning, Reinforcement, Structuring Classroom Questions, and Blackboard writing.

4.3 Planning of Instruction: Unit plan, Period plan based on Blooms Taxonomy and academic standards.

4.4 Technology Integrated Lesson-Planning the Lesson by digital technology.

Unit-5: Learning Resources in Mathematics

1.1 Mathematics Text Book – Importance and Criteria of good Mathematics text book.

1.2 A Critical Analysis of existing Secondary School Mathematics Text Books.

1.3 Audio, Visual and Multimedia resources – Selection and designing.

5.4 On line Resources – ICT based Pedagogical tools.

5.5 Using community resources for mathematics learning. Visits, mathematical field trips and excursions.

5.6 Handling hurdles in utilizing resources.

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF MATHEMATICS

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Develop insight into the meaning, nature, scope and objectives of mathematics education
2	CO_2	Appreciate the role of mathematics in day to day life
3	CO_3	Understand history, development of mathematics and the contributions of Indian
4	CO_4	Understand aims and objectives of different branches of mathematics
5	CO_5	Identify the role of branches of mathematics and their implications on the society.

PO Attainment	15	15	11	11	14	09	11	15	14	15	05	15

Course-IV

PEDAGOGY OF SOCIAL SCIENCES

Objectives

To enable the student-teachers to

1. understand the meaning and scope of Social Sciences
2. develop general and specific aims of teaching social sciences
3. inculcate values through teaching of Social Sciences
4. understand major concepts and develop critical thinking through teaching inter disciplines of Social Sciences
5. acquire knowledge on different strategies and approaches of teaching and developing skills in connection of resources.

Course Content

Unit-1: Social Sciences as an integrated area of Study

1.1 Meaning, Nature and Scope of Natural and Social Sciences

1.2 Distinction between Natural and Social Sciences

1.3 Meaning, History, Nature, Scope and Development of Social Studies

1.4 Distinction between social sciences and social studies

1.5 Understanding society through various social sciences

Unit-2: Aims Objectives and Academic Standards of Social Sciences

2.1 Major aims and objectives of teaching Social Sciences

2.2 Bloom's taxonomy of Educational Objectives

2.3 Academic Standards and Learning outcomes of teaching Social Sciences

2.4 Recommendations of NPE 1986, NCF 2005, APSCF 2011

2.5 Values of Teaching Social Sciences

Unit-3: Approaches, Methods, Strategies and Techniques of Teaching Social Sciences

3.1 Meaning, need and significance of various approaches, methods, strategies and techniques of Teaching Social Sciences

3.2 Teacher Centered Approaches – Lecture, Lecture-demonstration, Source and Supervisory Study

3.3 Learner centered approaches –Project, Problem Solving, Discussion, Inductive and Deductive, Observation, Constructivist Approach

3.4 Strategies / Techniques - Brain Storming, Team Teaching, Mind Mapping, Questioning

3.5 Activities – Dramatization, Role play, Field Trips, Social Science Clubs,

Exhibitions

Unit-4: Planning in Teaching Social Sciences

4.1 Microteaching – Meaning, Concept and Steps

4.2 Microteaching Skills - Introduction, Explanation, Questioning, Reinforcement, Stimulus Variation

4.3 Year Plan and Unit Plan

4.4 Need and Importance of Lesson Planning (Period Planning)

4.5 Technology Integrated Lesson Planning

Unit-5: Teaching Learning Resources in Social Sciences

5.1 Community Resources – Human and Material

5.2 Social Science Library, Laboratory and Museum

5.3 Need and Significance of Current and Controversial issues in teaching social sciences

5.4 Handling hurdles in utilizing resources

5.5 Professional Development of Social Sciences Teacher

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF SOCIAL SCIENCES

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the meaning and scope of Social Sciences
2	CO_2	Develop general and specific aims of teaching social sciences
3	CO_3	Inculcate values through teaching of Social Sciences
4	CO_4	Understand major concepts and develop critical thinking through teaching inter disciplines of Social Sciences
5	CO_5	Acquire knowledge on different strategies and

		approaches of teaching and developing skills in connection of resources.

Course-IV

PEDAGOGY OF BIOLOGICAL SCIENCES

Objectives

To enable the student-teachers to

1. develop an insight on the meaning, scope, nature and aims of biological science
2. identify and relate everyday experiences with the learning of biological science
3. integrate the knowledge of biological science with other school subjects
4. facilitate the development of scientific attitude in the learners of biological science
5. develop competencies for teaching and learning biological science through

Herbarium and Constructivist approaches

Herbarium and Constructivist approaches

Course Content

Unit-1: Introduction to Science

1.1. Meaning and Functions of Science

1.2. Nature and Scope of Science

1.3. Structure of Science

1.4. Branches of Science

1.5 History of Biological Science

Unit-2: Aims and Values of Biological Science

2.1. Aims of Teaching Biological Science

2.2. Values of Teaching Biological Science

2.3. Competences of a Biological Science Teacher

2.4. Correlation of Biological Science with other school Subjects

Unit-3: Objectives of Teaching Biological Science

3.1. Meaning and Importance of objectives

3.2. Revised Blooms Taxonomy of Educational Objectives.

3.3. Instructional Objectives and specifications with examples

3.4. Academics Standards mentioned in the school biological science text

Book published by government of Andhra Pradesh

Unit-4: Methods and Techniques of Teaching Biological Science

4.1 Micro Teaching Techniques

4.2 Lecture Method, lecture Demonstration Method, and Laboratory Method

4.3 Scientific Method (Inductive and Deductive Method)

4.4 Project Method

Unit-5: Planning for Teaching Biological Science

5.1 Year Plan

5.2 Lesson Plan

5.3 Period Plan (Herbartian and Constructivist approach and CCE Model)

5.4 Learning Experiences

5.5 Planning ICT Applications in Learning Biology.

CO-Po Attainment in outcome based Education

Course-V

PEDAGOGY OF PHYSICAL SCIENCES

Objectives

To enable the student-teachers to

1. Know the nature of science, structure, value and correlation with other school subjects.
2. Draw the attention on development of science and the contributions of western and Indian scientists.
3. Understand the aims and objectives of teaching physical sciences.
4. Develop the skill of organizing science curriculum and critique on the present secondary school physical sciences curriculum.
5. Organize the content into plan of action and practice the micro and macro teaching skill.

Course Content

Unit-1: Introduction to Science and Physical Sciences

1.1 Science and Physical Sciences – Meaning, Nature, Scope and Importance

1.2 Structure of Science – Syntactic Structure (Process of Science – Domain of Inquiry), Substantive Structure - Product of Science-Facts, Concepts, Theories, Laws and Principles – characteristics in the context of Physical sciences (citing examples)

1.3 Values of Learning Physical Sciences

1.4 Correlation of Physical Sciences with Mathematics, Biological Sciences, Social Studies, Languages, Fine Arts, Environment, Health, Development, Peace and Equity

1.5 Analysis of selected concepts of Physics and Chemistry from 6-10 classes

Unit-2: Development of Science - Physical Sciences

2.1 Milestones in the Development of Sciences – Physics and Chemistry

2.2 Contributions of Western and Indian Scientists

2.3 Landmarks, Status and Development Indian Science and Technology

2.4 Physical Science and Human Life

2.5 Rationale in Inspiring Students to study Physical Science

Unit-3: Aims. Objectives and competencies of Teaching Physical Sciences

3.1 Aims and Objectives of Teaching Physical Sciences

3.2 Taxonomy of Educational Objectives – Bloom, Krathwohl, Simpson, et al –

Revised Bloom's Taxonomy and Higher Order ThinkingSkills

3.3 Instructional Objectives of Teaching Physical Sciences

3.4 Behavioral or Specific Objectives of Teaching Physical Sciences

3.5 Competencies for Teaching of Physical Sciences

Unit-4: Approaches, Methods and Techniques of Teaching Physical Sciences

4.1 Concept of Teaching with special reference to Physical Science – Approaches and Methods – Student Participation in Learning

4.2 Teacher-centered Methods - Lecture, Lecture-cum-Demonstration, Historical

4.3 Student-centered Methods - Heuristic, Project, Scientific and Laboratory (Illustration of each method by taking examples from specific contents of Physics and Chemistry)

4.4 Modern Teaching Techniques - Brainstorming, Team Teaching and Models of Teaching – Concept Attainment Model and Enquiry TrainingModel

4.5 Microteaching - Concept and Meaning, Skills of Microteaching, Practice of Microteaching Skills

Unit-5: Planning for Teaching Physical Sciences

5.1 Importance of Planning for Teaching

5.2 Year Plan

5.3 Unit Plan

5.4 Period Plan (Lesson Plan) – Herbertian Steps vs. Constructivist Approach

5.5 Teaching Strategies and Academic Standards, CCE model period plan for classroom teaching

Course-V

PEDAGOGY OF ENGLISH

Objectives

To enable the student-teacher to

1. understand the place of English Language Teaching in India
2. understand the different roles of language
3. understand the importance of home language, school language and the role of mother tongue in education.
4. understand different skills of English language
5. identify different Methods, Approaches and Techniques needed for teaching different skills of ELT in the Indian context

Course Content

Unit-1: Introduction to ELT

1.1 Meaning, nature and scope of ELT

1.2 Status of English Language in the global and Indian contexts

1.3 Aims and Objectives of Teaching English in India

1.4 Language and Education Policy in India

1.5 Teaching English in Bilingual/Multi-lingual contexts

Unit-2: Methods and Approaches in ELT

2.1 Method, Approach and Technique

2.2 Grammar Translation Method, Direct Method, Bilingual Method and Dr. West‟s Method

2.3 Oral, Situational and Structural Approaches

2.4 Communicative Language Teaching

2.5 Micro skills in ELT

Unit-3: Listening and Speaking Skills

3.1 Types and Sub-skills of Listening

3.2 Techniques of and materials for teaching Listening

3.3 Sub-skills of Speaking

3.4 Techniques of and materials for teaching Speaking

3.5 Activities to develop Listening and Speaking skills.

Unit-4: Reading and Writing Skills

4.1 Types and Sub-skills of Reading; Methods of Teaching Reading

4.2 Reading and Reflecting on text

4.3 Mechanics of Writing

4.4 Sub-skills and techniques of Writing

4.5 Activities to develop Reading and Writing skills.

Unit-5: Developing integrated skills and use of ICT in English Language Teaching

5.1 Teaching of Prose

5.2 Teaching of Poetry

5.3 Use of Multi-media in ELT

5.4 Online resources for ELT

5.5 ELT and Social Networking

CO-Po Attainment in outcome based Education

Course-V

PEDAGOGY OF TELUGU

భాషా విద్య (తెలుగు)

లక్ష్యాలు:

రెండేళ్ళ శిక్షణ పూర్తి చేసుకున్న ఛాత్రోపాధ్యాయులు:

1) సమాజంలో భాష పాత్రను అర్థం చేసుకుంటారు, ప్రాధాన్యతను గుర్తిస్తారు.
2) భాషకు, సాహిత్యానికి మధ్య గల సంబందాన్ని గుర్తిస్తారు.
3) వివిధ భాషా రూపాలను ప్రశంసిస్తారు, సొంతం చేసుకుంటారు.
4) భాషల మధ్య అనువాదం యొక్క ప్రదాన్యతను గుర్తించి తమ విద్యార్థులను అనువాదం చేయమని ప్రోత్సహిస్తారు.
5) సాహిత్య, శాస్త్ర, భాషా గ్రంధాలను సంప్రదిస్తారు, ప్రశంసిస్తారు, విశ్లేషిస్తారు.
6) సందర్భానుగుణ భాషాపయోగాన్ని అలవర్చుకుంటారు, తమ విద్యార్థులకు అలవరుస్తారు.
7) పిల్లల భాష -ఇంటి భాష, జన వ్యవహార భాషలను ప్రశంసిస్తారు.
8) భాషా బోధన - అభ్యాసన పై భారతీయ - ప్రాశ్చాత్య దృక్పదాలను తులనాత్మకంగా అనుగుణంగా పరిశీలిస్తారు.

I. భాష, సమాజం భావనలు

భాష మరియు సమాజం - సమాజంలోని వివిధ వర్గాల భాష- భాష మరియు లింగ వివక్ష - భాష మరియు అస్తిత్వం - భాష మరియు సాధికారత, సామాజిక విధులు.

భాష వివిధ భావనలు

గృహ భాష (ఇంటి భాష) వైయక్తిక, కుటుంబ భాషలు- పరిసరాల్లోని-భాషలు - పాఠశాలల్లో భాష-పాఠశాలేతర వ్యవహారాల్లో భాష -పిల్లల భాష - తెలుగు వాచకాల్లో భాష - భాషేతర వాచకాల్లో భాష-ఒక పాఠ్యాంశంగా భాష మాధ్యమ భాష (ప్రాధాన్యత, పరిమితులు)-భాష మరియు మాధ్యమ భాషల మధ్యగల సంబంధాలు.

భాషావిద్య- రాజ్యాంగ అధికరణాలు - నింబధనలు, సిఫార్సులు

భారత రాజ్యాంగం అధికరణాలు 343 - 351, 350 (A)
ముదలియార్ కమీషన్ (1952), కొఠారి విద్యాసంఘం (1964-66)
జాతీయ విద్యావిధానం (1986) కార్యచరణ పథకం (1992)
జాతీయ విద్యా ప్రణాళిక చట్రం (2005) సిఫార్సులు
ఇతర కమిటీలు - కమీషన్ల సిఫార్సులు - అధికార భాష - త్రిభాషా సూత్రం.

భాషా విద్య (తెలుగు)

లక్ష్యాలు:

Course-VI

SOCIOLOGICAL FOUNDATIONS OF EDUCATION

Objectives

To enable the student-teachers to

1. understand the sociological basis of Education
2. understand the impact of culture and socialization on Education
3. sensitize the student teacher about the impact of Education on the quality of life
4. understand the preamble of the constitution in the light of Education
5. organize various programmes to achieve national integration and international Understanding

Course Content

Unit-1: Sociology and Education

1.1 Meaning, nature and scope of sociology

1.2 Relationship between sociology and Education

1.3 Agencies of socialization (Family, peer group, school, Media, Religion

1.4 Role of Teacher in Socialization process

1.5 Impact of Socialization on Education

Unit-II: Culture and Education

2.1 Meaning and definitions of culture

2.2 Characteristics of culture

2.3 Dimensions of culture, cultural lag, cultural pluralism

2.4 Impact of culture on Education

2.5 Role of Education in preservation, transmission and promotion of culture

Unit-III: Social Change and Education

3.1 Meaning and factors responsible for Social change

3.2 Concept and attributes of Modernization

3.3 Social stratification, Social Mobility and Education

3.4 Education as a facilitator for social change

3.5 Social Networking its implications on social cohesion and education

Unit-IV: Democracy and Education

4.1 Concept and Principles of Democracy

4.2 Equality and equity in Education

4.3 Preamble of the Constitution in relation to Education

4.4 Role of Education in strengthening democracy and democratic citizenship

Teacher as a democrat

Unit-V: Education and National Integration

5.1 Concept, Need for National Integration

5.2 Education as an instrument for national integration

5.3 Programmes to promote National Integration and International understanding,

5.4 Peace education in schools

5.5 Social Crisis and its Management

CO-Po Attainment in outcome based Education

Course Name-SOCIOLOGICAL FOUNDATIONS OF EDUCATION

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the sociological basis of Education
2	CO_2	Understand the impact of culture and socialization on Education
3	CO_3	Sensitize the student teacher about the impact of Education on the quality of life
4	CO_4	Understand the preamble of the constitution in the light of Education
5	CO_5	Organize various programmes to achieve national integration and international

CO-PO MappingMatrix/ProgrammeArticulationMatrix:

	PO$_1$ Knowledge	**PO$_2$** Analysis	**PO$_3$** Investigation	**PO$_4$** D Design evelopment	**PO$_5$** ModernTools	**PO$_6$** Society	**PO$_7$** Environment	**PO$_8$** Ethics	**PO$_9$** Teamwork	**PO$_{10}$** Communication	**PO$_{11}$** ProgrammeManagement	**PO$_{12}$** LifelongLeering

Course-VII

LEARNING AND TEACHING

Objectives

To enable the student-teachers to

1. To be aware of the process of learning and information processing
2. To gain an understanding of different theoretical perspectives on learning
3. To reflect on their own implicit understanding of the nature and kinds of learning
4. To explore the possibilities of designing learning environment and experiences at school
5. To appreciate the critical role of learner differences and social contexts in making meanings and drawing implications for schools and teachers

Course Content

Unit-1: Process of Learning

1.1 Concept of learning, types of learning and factors influencing learning

1.2 Learning process: Attention, sensation, perception, and concept formation

1.3 Memory & forgetting: concept, types of memory, applicability to learning and strategies for better management of memory.

1.4 Transfer of learning: concept, theories and types(Horizontal and Vertical)

1.5 Role of motivation in learning; methods of improving motivation

Unit-2: Behaviorist Perspectives of Learning

2.1 Trial and error - Thorndike, Laws of learning, concept and principles and classroom implications

2.2 Classical Conditioning - Pavlov, concept and principles and classroom implications

2.3 Operant Conditioning – Skinner, concept and principles and classroom implications

2.4 Compare these perspectives in terms of their merits and applicability to classroom learning

Unit-3: Cognitive and Humanist Perspectives of Learning

3.1 Cognitive perspectives of learning (insight learning – Kohler, Discovery learning - Bruner, Developmental theory of learning - Piaget, Social Learning - Bandura, Social constructivism – Vygotsky)

3.2 Humanist perspectives of learning (Learner centered approach – Rogers)

Unit-4: Teaching Process

4.1 Concept of teaching, teaching as a profession and teacher as a professional,

teaching as an art and science

4.2 Distinction between Instruction, training and teaching

4.3 Phases of teaching: planning, execution and reflection

4.4 Role of teacher in teaching learning process: teacher as a model, facilitator, negotiator, co-learner, reflective practitioner and classroom researcher

4.5 Functions of a teacher in classroom, school and community

Unit-5: Learning Environment and Learning Engagement

5.1 Meaning of learning environment and learning engagement

5.2 Creating positive and productive environment for learning - creation of emotionally safe learning environment to increase learning

5.3 Development of emotional intelligence

5.4 Role of culture in the educative process, creating culturally responsive learning environment, create cultural congruity between home and school

5.5 Assisted performance, supervised discussion and reciprocal teaching as strategies to enhance motivation and learning

Co-Po Attainment in outcome based Education

Course Name-LEARNING AND TEACHING

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	To be aware of the process of learning and information processing
2	CO_2	To gain an understanding of different theoretical perspectives on learning
3	CO_3	To reflect on their own implicit understanding of the nature and kinds of learning
4	CO_4	To explore the possibilities of designing learning environment and experiences at school

5	**CO_5**	To appreciate the critical role of learner differences and social contexts in making meanings and drawing implications for schools and teachers

Course-VIII

CLASSROOM MANAGEMENT LEADERSHIP AND ACTION RESEARCH

Objectives

To enable the student-teachers to

1. understand the importance of classroom organization
2. understand the importance of classroom Management
3. develop ability to face the problems in managing the classroom.
4. understand the role of leadership of a teacher
5. undertake different action research projects to improve professional practices

Course Content

Unit-1: Classroom Organization

1.1 Classroom organization – Meaning and purpose

1.2 Classroom Seating Arrangement for different purposes

1.3 Technology integration – OHP/ LCD, Smart board, Chalk board, White board, Display boards, multimedia, E-Classroom.

1.4 Characteristics of Classroom Environment - Learner friendly and inclusive

1.5 Management and maintenance of physical and material resources to optimize access to learning; Sharing of resources – School Complex

Unit-2: Classroom Management

2.1 Classroom management – concept, need and approaches .

2.2 Managing with different types of students – Leader, Follower, passive

2.3 Classroom behavior management – problems, mistakes, disciplinary practices, corporal punishments, classroom rules, routines and regulations.

2.4 Violation of rights of children – legal consequences.

2.5 Strategies to manage behavior problems- preventive, supportive and corrective.

2.6 Time management in a classroom – Allocated time, instructional time, engaged time and Academic learning time.

Unit-3: Role of Teacher in School Functions

3.1 Teacher as a facilitator of learning

3.2 Perspective planning and coordination with authorities for support.

3.3 Accountability and self assessment of teachers and feedback mechanisms.

3.4 Conducive school environment – team work, transparency, self esteem among head teacher, teachers, students.

Unit-4: Teacher as a Leader

4.1 Concept, Nature and Characteristics of a Leader

4.2 Types of Leadership

4.3 Strategies to develop leadership qualities

4.4 Role of a teacher as a leader in managing classroom dynamics

Unit-5: Action Research in Education

5.1 Action Research – Meaning, Need and Scope

5.2 Steps in Action Research

5.3 Action Research Cycle

5.4 Action Research Problem Areas – Student, Classroom, School, Teacher, Administration, etc.

Co-Po Attainment in outcome based Education

Course Name-CLASSROOM MANAGEMENT LEADERSHIP AND ACTION RESEARCH

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the importance of classroom organization and classroom Management
2	CO_2	Develop ability to face the problems in managing the classroom.
3	CO_3	Understand the role of leadership of a teacher
4	CO_4	Develop the Leadership Qualities in Student Teacher
5	CO_5	Undertake different action research projects to improve professional practices

CO-PO MappingMatrix/ProgrammeArticulationMatrix:

	PO$_1$ Knowledge	**PO**$_2$ Analysis	**PO**$_3$ Investigation	**PO**$_4$ D Design evelopment	**PO**$_5$ ModernTools	**PO**$_6$ Society	**PO**$_7$ Environment	**PO**$_8$ Ethics	**PO**$_9$ Team work	**PO**$_{10}$ Communication	**PO**$_{11}$ ProgrammeManagement	**PO**$_{12}$ LifelongLeering

Course-IX

ART EDUCATION

Objectives

To enable the student-teachers to

1. integrate Art with Education and become better communicator.
2. develop creative thinking through different Art forms.
3. realize that liberal arts help in making better professionals.
4. understand Art as a medium of expression.
5. understand the role of Art as a medium of Education.

Course Content

Unit-1: Art and Aesthetics

1.1 Aesthetics – as a branch of Philosophy.

1.2 Aesthetics – its meaning, dimensions and constituents.

1.3 Art as a form of Aesthetics.

1.4 Indian Art and Rasa principle.

1.5 Importance of Arts in Education

Unit-2: Art and Education

2.1 Art as a medium of education.

2.2 Art as a unifying principle in education.

2.3 Art and Society.

2.4 Art and Human development.

2.5 Art for self- expression, keen observation, and sense of appreciation.

Unit-3: Place of Visual Art and Performing Arts in Teaching

3.1 Different forms of visual and performing Arts.

3.2 Teaching as an Art.

3.3 Drama as a form of Teaching.

3.4 Identification of local Art forms and their integration to teaching – learning.

3.5 Evaluation strategies; assessing the different forms of Art.

Unit-4: Contributions made by Contemporary thinkers on Art and Education

4.1 Rabindranath Tagore

4.2 A.K. Coomara Swamy

4.3 Herbert Read

4.4 Elliot Eisener

Unit-5: Art and Craft in Education

5.1 Art in Craft

5.2 Craft in Art

5.3 Traditional Craft and their relevance to Education

5.4 Local Craft and their place in SUPW

5.5 Indian Festivals and its Artistic significance

CO-Po Attainment in outcome based Education

Course Name-ART EDUCATION

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Integrate Art with Education and become better communicator.
2	CO_2	Develop creative thinking through different Art forms.
3	CO_3	Realize that liberal arts help in making better professionals.
4	CO_4	Understand Art as a medium of expression.
5	CO_5	Understand the role of Art as a medium of Education.

SEMESTER-III

Course-X

PEDAGOGY OF MATHEMATICS

Objectives

To enable the student-teachers to

1. Appreciate Mathematics as a tool to engage the mind of the student
2. Appreciate mathematics to strengthen the students resource
3. See mathematics as something to talk about to communicate through to discuss among themselves to work together on.
4. Construct appropriate assessment tools for evaluating mathematics learning.
5. Stimulate curiosity, creativity and inventiveness of mathematics

Course Content

Unit-1: Mathematics Curriculum:

1.1 Meaning and objectives of curriculum

1.2 Principles for designing and Organizing Curriculum

1.3 Approaches for Organizing Curriculum

1.4 Meaning of syllabus and difference between syllabus and curriculum

1.5 Recommendations and critical appraisal of NCFSE- 2005, APSCF – 2011 and other commissions on Mathematics curriculum.

1.6 Discussion of important concepts, principles and processes from the topics of the branches as specified below.

i. Arithmetic: Development of number system, Ratio and Proportion, Percentages and other topics based on them.

ii. Algebra: Sets and Operations on them, Systems of Linear Equations and their graphical solutions, Quadratic Equations, theory of Indices and Logarithms, Reminder and factor theorems.

iii. Probability and Statistics: Basic concepts of Probability, Representation of data, Measures of Central Tendencies.

vi. Geometry: Theoretical, Practical and Co-ordinate Geometry, Distance formula, section formula.

Menstruation; Areas and Volumes

v. Trigonometry: Trigonometrical Ratios, Identities. Composite Angles, Multiple and Sub multiple angles, Heights and Distances.

Unit-2: Language and Aesthetic sense of Mathematics

2.1 Aesthetic Sense in Mathematics; three aesthetic experience variables identified

by Brikhoof and their relation.

2.2 Co-existence of Precision and beauty in Mathematics- order pattern, structure and symmetry

2.3 Recreational Mathematics – Mathematical games, puzzles, and riddles.

2.4 Language of Mathematics

Unit-3: Assessment and Evaluation

3.1 Testing of Mathematical abilities of children

3.2 Meaning of Assessment, measurement and evaluation in mathematics

3.3 Achievement test in mathematic- Arithmetic, Algebra, and Geometry.

3.4 Speed test in Mathematics - Arithmetic, Algebra, and Geometry.

3.5 Preparation of test items – Precautions to be taken while preparing test items in different branches of mathematics

3.6 Concept of CCE and measurement of different behavioral changes like interest attitude, and aptitude in learning mathematics.

Unit-4: Mathematics for all

4.1 Speed and accuracy in Mathematics

4.2 Understanding Learners – Gifted slow, backwardness and dyscalculia

4.3 Activities enriching Mathematics learning- Mathematical Clubs, fairs and its activities, Olympiad, Recreational activities

4.4 Mathematic Laboratory and its effective use

4.5 Teaching learners with special needs - Co-operative learning, Peer learning, Reciprocal learning – Breur, using technology to meet diverse needs of learners.

Unit-5: Professional Development in Mathematics Teacher

5.1 In-service programmes for Mathematics Teacher

5.2 Mathematics Teachers Associations – Role, and Uses

5.3 Journals and other resource material in Mathematics Education

5.4 Professional Growth – Participation in conferences/Seminars/ Workshops and E-Learning

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF MATHEMATICS

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Appreciate Mathematics as a tool to engage the mind of the student
2	CO_2	Appreciate mathematics to strengthen the students resource
3	CO_3	. See mathematics as something to talk about to communicate through to discuss among themselves to work together on.
4	CO_4	. Construct appropriate assessment tools for evaluating mathematics learning
5	CO_5	. Stimulate curiosity, creativity and inventiveness of mathematics

Course-X

PEDAGOGY OF SOCIAL SCIENCES

Objectives

To enable the student teachers to

1. understand the teaching and learning of geography, economics, history, political science and identify the difference among them
2. understand the importance of social science curriculum and its organization
3. understand various teaching aids for social sciences
4. understand the assessment process through CCE
5. sensitize and equip teachers to handle social issues and concerns in a responsible manner

Course Content

Unit-1: Teaching and Learning of Geography and Economics

1.1 Fundamental concepts of Geomorphology - Latitudes, longitudes, earth movements, climatology, temperature, pressure, wind, humidity; Hydrology and Oceanography – Hydrological Cycle, Ocean and Ocean deposits

1.2 Indian Geography-Political divisions, Rivers and Landforms

1.3 Meaning, Nature and Scope of Economics; Key concepts in Economics

1.4 Classification of Economic Systems

1.5 Teaching strategies of geography and economics

Unit-2: Unit-VII: Teaching Learning of History and Political Science

2.1 Periodisation of World History, Indian History – Ancient, Medieval, Modern and Contemporary society with special reference to Secondary School Social Studies Textbooks

2.2 Capitalism, Democracy and Citizenship – American and French Revolutions

2.3 Nature and Scope of Political Science; Key concepts and current trends

2.4 Indian Constitution – Fundamental Rights and Duties; Organs of Government-Legislature, Executive and Judiciary

2.5 Teaching Strategies of Teaching History and Political Science

Unit-3: Social Science Curriculum

3.1 Curriculum – Meaning, Nature and Scope

3.2 Principles of Social Sciences Curriculum Construction

3.3 Approaches of organizing social studies curriculum – concentric, spiral, chronological, topical and correlation

3.4 Qualities and Characteristics of Good Social Science Textbook

3.5 Analysis of Social Science Textbook of State Board and CBSE

Unit-4: Teaching Learning Material in Social Sciences

4.1 Need and significance of Teaching Learning Material in Teaching Social Sciences

4.2 Globe and Maps – Types of Maps – Map Language, Map Reading and Map Making

4.3 Charts and Graphs – Types of Charts – Chronology, Tabular, Diagrammatic and Pictorial; Types of Graphs – Bar, Pie, Line and Pictorial

4.4 Models – Working, Still and Diorama

4.5 Objects, Specimens and Scrap book

Unit-5: Evaluation in Learning Social Sciences

5.1 Meaning, Nature and Characteristics of Evaluation

5.2 Forms of Evaluation

5.3 Quantitative and Qualitative Tools of Evaluation in Social Sciences

5.4 CCE Model of assessment in social sciences

5.5 Analysis and Interpretation of test scores

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF SOCIAL SCIENCES

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the teaching and learning of geography, economics, history, political science and identify the difference among them
2	CO_2	Understand the importance of social science curriculum and its organization
3	CO_3	Understand various teaching aids for social sciences
4	CO_4	Understand various teaching aids for social sciences
5	CO_5	Understand the assessment process through CCE

Course-X

PEDAGOGY OF BIOLOGICAL SCIENCES

Objectives

To enable the student-teachers to

1. Understand the curriculum development issues in biological science
2. Identify the role and use of laboratory, ICT, and TLM in the teaching of biological science teaching effectively
3. Develop the skill of writing lesson plan period plan
4. Develop micro teaching skills
5. Develop the skill of constructing test papers

Course Content

Unit-1: Biological Science Curriculum and Textbooks

1.1 Meaning and Definitions of curriculum

1.2 Principles of Curriculum Construction

1.3 Organizational Approaches of Curriculum: Logical, Psychological,

1.4 Topical concentric and spiral

1.5 Steps involved in the development of science curriculum

1.6 Basic Criteria of Validity of a Science Curriculum context, - Cognitive, Process, Historical, Environmental Science and Ethical Validity

1.7 Curriculum at upper Primary, Secondary and Higher secondary stages.

1.8 National Curriculum Framework, 2005 – Position paper on Science

1.9 Andhra Pradesh State Curriculum Framework 2011- Science

1.10 Qualities of good biological science text books

1.11 Analysis of Secondary School Biological Science text book

Unit-2: Biological Science Laboratory

2.1 Importance of practical work in Biological Science

2.2 Planning of science laboratories, Lecture cum laboratory, all-purpose laboratory, mobile science laboratory

2.3 Procurement, care and maintenance of laboratory equipment

2.4 First Aid

Unit-3: Teaching Learning Materials

3.1 Edgar Dale's Cone of experience

3.2 Audio, visual Instructional aids

3.3 Activity aids (Aquarium, Vivarium, Terrarium, Herbarium), Electronic Teaching Aids

3.4 Improvisation of Teaching aids

Unit-4: Resources for Teaching Biological Science

4.1 Science Kit

4.2 Science library

4.3 Science club

4.4 Science exhibition and science fair

4.5 Science Museum

4.6 Community Resource

Unit-5: Evaluation in Biological Science

5.1 Concept of test, measurement and evaluation

5.2 Evaluation- meaning, types, Process, and tools

5.3 Qualities of a Good test and types of tests

5.4 Preparation of Continuous Comprehensive Evaluation (CCE) Record

5.5 Analysis and interpretation of test scores.

5.6 Assessment of performance of the student, electronic assessment

5.7 Preparation of portfolio

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF BIOLOGICAL SCIENCES

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	Understand the curriculum development issues in biological science
	CO_2	. Identify the role and use of laboratory, ICT, and TLM in the teaching of biological science teaching effectively
3	CO_3	Develop the skill of writing lesson plan period plan
4	CO_4	Develop teaching skills

Course-XI

PEDAGOGY OF PHYSICAL SCIENCES

Objectives

To enable the student-teachers to

1. understand the importance of physical science curriculum and its organization
2. develop the skill, procurement and maintenance of the science laboratory.
3. equip the resources for effective teaching of physical sciences.
4. utilize the applications of science and technology on society.
5. construct the achievement test on CCE model and analyze the results

Course Content

Unit-1: Science Curriculum and Textbooks

1.1 Curriculum - Concept and Meaning, Principles of Curriculum Construction

1.2 Different Approaches of Curriculum Organization: Concentric, Topical, Psychological & Logical – Learner Centered curriculum

1.3 Curriculum organization in terms of NCF-2005, RTE-2009, NCFTE-2009, APSCF-2011

1.4 Characteristics of a Good Physical Sciences Text Book

1.5 Learning Resources for Physical Science – Exploring alternative resources

Unit-2: Instructional Material for Physical Sciences Teaching

2.1 Importance of Practical Work in Physics and Chemistry

2.2 Planning and Organization of Science Laboratories, Procurement and Care of Laboratory Equipment, Registers, Safety and First-Aid – Conduct of Laboratory experiments

2.3 Development of Improvised Apparatus for concrete and abstract concepts

2.4 ICT and multimedia resources for teaching Physical Sciences - Simulated computer based laboratory activities

2.5 Self Learning Material (SLM) – Characteristics and Functions - Preparation of Self Learning Material on one lesson – Analysis of its Effectiveness by Classroom Discussion and Preparation of SLM by each student for their classroom use

Unit-3: Lifelong Physical Sciences Learning

3.1 Science Clubs, Science Exhibition, Science Museums, Science Fairs and Olympiads

3.2 Role of Government and Non-Governmental Organizations in the Propagation of Science

3.3 Utilizing Knowledge Resources – Identification of online and offline resources – context and challenges in Utilization

3.4 Science Communication in India – DST-NCSTC Network – National Children Science Congress, National Teachers Science Congress, Initiative for Research and Innovation in Science

3.5 Development of Scientific Temper and encouraging and inspiring students to choose science as career and to become scientists

Unit-4: Professional Development of Physical Sciences Teachers

4.1 Professional development of Physical Sciences Teachers

4.2 Participation in Seminars, Conferences, Workshops and In-service Training Programmes

4.3 Membership in Professional Organisations; Teachers as a community of learners

4.4 Role of reflective practices in professional development of physical science teachers

4.5 Teacher as a researcher: Action Research in Physical science - Learning to understand how children learn science

Unit-5: Evaluation in Physical Science

5.1 Evaluation of Learning Outcomes in Physical Sciences

5.2 Qualities of a good test - Written and Practical

5.3 Planning, Preparation and Conduct of Achievement Test in CCE model

5.4 Evaluation of Responses, Scoring and Tabulati

5.5 Analysis and Interpret

CO-Po Attainment in outcome based Education

Course Name-PEDAGOGY OF PHYSICAL SCIENCES

Course Outcome

Sl.No	Course Number	Co's Description
1	CO_1	. understand the importance of physical science curriculum and its organization
2	CO_2	develop the skill, procurement and maintenance of the science laboratory
3	CO_3	equip the resources for effective teaching of physical sciences

4	**CO_4**	utilize the applications of science and technology on society
5	**CO_5**	construct the achievement test on CCE model and analyze the results

Course-XI

PEDAGOGY OF ENGLISH

Objectives

To enable the student-teachers to

1. get acquaintance with skills of communication for classroom teaching
2. develop creativity among learners
3. use multilingualism as a strategy in the classroom situation
4. understand the basics of English grammar
5. develop the skills of presentation of vocabulary

Unit-1: Language across Curriculum

1.1 Need for Communication

1.2 Communication for classroom teaching

1.3 Classroom interaction patterns

1.4 Interpersonal skills

1.5 Individual/Pair/Group activities

Unit-2: Teaching of Grammar

2.1 Need and importance of teaching Grammar

2.2 Types of Grammar and Techniques of Teaching Grammar

2.3 Using Authentic materials to teach Grammar

2.4 Grammar Games and the related activities

2.5 Remedial teaching in Grammar

Unit-3: Teaching Vocabulary, Study and Reference skills

3.1 Selecting and Grading vocabulary items

3.2 Techniques of teaching vocabulary

3.3 Vocabulary games

3.4 Techniques of teaching Study Skills: Note-making/Note-taking/Mind mapping/Brain-storming

3.5 Techniques of teaching Reference Skills: Dictionary, Thesaurus, Encyclopedia and Bibliographies

Unit-4: Introduction to Phonetics

4.1 Vowels and Diphthongs

4.2 Consonants

4.3 Stress

4.4 Intonation

4.5 Techniques of using Language Laboratory

Unit-5: Language Assessment and Evaluation

5.1 Concept of Evaluation and Characteristics of a good test in English

5.2 Progress and assessment of development of language skills; CCE; techniques of evaluation – oral and written; self evaluation; peer evaluation; group evaluation.

5.3 Typology of questions: activities and tasks reflecting - problem solving, creative and critical thinking and enhancing imagination.

5.4 Preparing tests for different skills of language – Listening, speaking, reading, writing, study skills and reference skills

5.5 Preparation of Scholastic Achievement Test (SAT) giving weightages to objectives and learning expriences.

భాషావిద్య (తెలుగు)

లక్ష్యాలు:

రెండేళ్ళ శిక్షణ పూర్తి చేసుకున్న ఛాత్రోపాధ్యాయులు:

1) పద్యం, గద్యం, వ్యాకరణం, వ్యాసం, కథ నాటిక మున్నగు ప్రక్రియల బోధనను సమర్థంగా నిర్వహింస్తారు.
2) పాఠ్యబోధనకు అనువైన వ్యూహాలు, భోదన సామాగ్రిని ఎంపిక చేసుకుంటారు.
3) విద్య ప్రణాళిక, విషయ ప్రణాళిక, పాఠ్యపుస్తకాల మధ్యగల సంబందాలను అవగతం చేసుకుంటారు.
4) భాషా మూల్యంకనం భావనలను అర్థం చేసుకొని, తమ విద్యార్థుల ఉప లబ్ధిని వివిధ మూల్యాంకన విధానాల్లో అంచనావేస్తారు.
5) భాషాభ్యాసనం/భోధనల్లో భాషా ప్రయోగశాల, కంపూటర్ల ప్రధాన్యతను గుర్తిస్తారు. తమ బోధనలో వినియోగిస్తారు.
6) తెలగు భాషాసాహిత్యాలు, ప్రజల సంస్కృతి వారసత్వాల ఎడ స్పృహను పెంపొందించుకొని తమ విద్యార్థులలో సంస్కృతీస్పృహను పెంపొందిస్తారు.

I. భాష - సాహిత్యం - సౌందర్య శిల్పము

భాష - ఆలోచనలు-సృజనాత్మకత

భాష వివిధ సాహిత్య ప్రక్రియలు - లక్షణాలు (1వ తరగతి నుండి 10వ తరగతి తెలుగు ప్రథమ ద్వితీయ భాషా వాచకాల్లో పరిచయమైన ప్రక్రియలు)

పద్యప్రక్రియలు - ఇతిహాస కవిత - పురాణ కవిత - కావ్యకవిత - ఆధునిక పద్యం

వచన ప్రక్రియలు - గద్యం - లేఖ - వ్యాసం - సంపాదకీయం - జీవిత చరిత్ర, ఆత్మకథ - దినచర్య - యాత్రాకథనం - కథానిక

నాటక ప్రక్రియలు - సంభాషణ - నాటిక

బాల సాహిత్యం - భావ కవిత్వం - అభ్యుదయ కవిత్వం - విప్లవ కవిత్వం - స్త్రీవాద సాహిత్యం - దళిత వాద సాహిత్యం -మైనారిటీ వాద సాహిత్యం, జాతీయోద్యమ కవిత్వం - ఆంద్రోద్యమ కవిత్వం - శాస్త్ర సాహిత్యం.

ఇతర ప్రధాన ప్రక్రియలు - నవల, నవలిక ఇత్యాదులు

తెలుగు సాహిత్య చరిత్రలో ప్రముఖ రచయితలు - కవులు - కవయిత్రులు

II. **భాషాసాహిత్యాలు - బోధనాప్రక్రియలు:**

గద్య బోధన - వాచకబోధన - ఉపవాచక బోధన -పద్యబోధన-సంభాషణ/నాటక బోధన-వ్యాకరణ బోధన-వ్యాస రచన బోధన- కథా బోధన.

(యూనిట్ - III లో పొందుపరచిన పద్ధతులు అన్వయం చేసుకోవాలి)

* భాషా సాహిత్యాల బోధనలో ప్రాధాన్యతలు - భాష - పరిసరాలు విద్యార్థుల అనుభవాలు ఆసక్తులతో సమన్వయం.
* ప్రశంసా శక్తిని, సృజనాత్మకతలను పెంపొందించుటకు ప్రకియల బోధన

III. **భాషాభ్యసనం, బోధన ప్రణాళికలు, బోధన సామాగ్రి నిర్మాణం.**

* **విద్యా ప్రణాళికలు:**

విద్యా ప్రణాళికల్లో తెలుగు భాషా స్థానం (మాతృభాషగా మాధ్యమ భాషగా)

డిజిటల్ మాధ్యమాలు:

* పాఠ్యపుస్తకం- నిర్మాణం - లక్షణాలు.
* తగరతి బోధన ప్రణాళికలు - వార్షిక పథకం - సమగ్ర పాఠ్యపథకం - దైనిక పాఠ్యపథకం. అవశ్యకత- మౌళిక భావనలు - తయారీలో మెలకువలు.
* భాషా సహ పాఠ్య కార్యక్రమాలు - భాషా క్రీడలు - రచనా క్రీడలు - భాషణ క్రీడలు - భాషా సాహిత్య యాత్రలు - సాహిత్య సభలు.

* **గ్రంథాలయాలు :** పరామర్శ గ్రంథాలు - నిఘంటువులు - విజ్ఞాన సర్వస్వాలు-మూల గ్రంథాలు-వినియోగం.
* **భాషా బోధనాభ్యసన ఉపకరణాలు:** భాషా ప్రయోగ శాల - కంప్యూటర్లు, దృశ్యశ్రవ్య, శ్రవ్య దృశ్య - ద్విమితీయ, త్రిమితీయా ఉపకరణాలు.
* **మాధ్యమాలు:** అచ్చుమాధ్యమాలు-దృశ్యమాధ్యమాలు (ప్రింట్ అండ్ విజువల్ మీడియా)

IV. **భాషాభ్యసనం - బోధన - ఆధునిక ధోరణులు.**

* కార్యక్రమయుత బోధన - బృంద బోధన, నియోజనాల బోధన (వ్యక్తి పద్ధతి) కంప్యూటర్ సహాయక బోధన/ అభ్యసనం-లోపనివారణ - బోధన కృత్యాధార బోధన, స్వయం అధ్యయనం పర్యావేక్షనాత్మక అధ్యయనం - మౌలిక భావనలు - పరిమితులు.

భాషా సాహిత్య కృషిలో వివిద సంస్థలు :

తెలుగు అకాడమీ - ఆంధ్రసాహిత్య పరిషత్ (కాకినాడ), వేటపాలెం గ్రంథాలయం -సి.పి. బ్రౌను అకాడమీ, కడప-తెలుగు విశ్వవిద్యాలయం, తిరుపతి ప్రాచ్యలిఖిత పుస్తక భాండాగారము ఆంధ్రప్రదేశ్ సాహిత్య అకాడమీ, లలిత కళా అకాడమీ, నాటక అకాడమీలు, తదితర సంస్థలు

V. **భాషాభ్యసనం - బోధన - మూల్యాంకనం:**

మూల్యాంకనం - పరీక్ష - నికష - పరిగణన, భావనలు- సామర్థ్యాధారిత మూల్యాంకనం - నిరంతర సమగ్ర మూల్యాంకనం- రూపణ మూల్యాంకనం - సంకనల మూల్యాంకనం - లోప నిర్ధారణ మూల్యాంకనం -ప్రొగ్నస్టిక్ మూల్యాంకనం-మూల్యాంకనానికి ప్రశ్నాపత్రాలు - ప్రశ్నల తయారీ- వివిధ ప్రశ్నారూపాలు, ప్రశ్నల లక్షణాలు - మెలకువలు- పాఠాంత నికషలు - అంతర్గత మూల్యాంకనం - బాహిర మూల్యాకనం, విద్యార్థులు/అభ్యాసకుల స్వీయ మూల్యాంకనం- మూల్యాంకనం - భాషా కౌశల నికషలు - శ్రవణ నికష - పఠన నికష - భాషణ నికష - లేఖన నికష - అభిరుచి నికష-ఆసక్తి నికష - సృజనాత్మక నికష, ప్రశంసానికష, భాషా స్పృహ నికష - నిర్మాణం - విశ్లేషణ - మెలకువలు - మాదిరి సమాధాన పత్రాలు- ప్రశ్నపత్రాల సమాధానాలను సరిచూచుట - ఫలితాల నివేదన -గ్రేడింగ్ - ఫలితాల వ్యాఖ్యానం

బోధన సంబంధ కృత్యాలు:

1. ఏవేని మూడు స్థానిక వార్తాపత్రికల్లోని – సంపాదకీయ వ్యాసాలు, వార్తా వ్యాఖ్యలను సమీక్షించి, ముఖ్యభావనలను, భాషా లక్షణాలను క్రోడీకరించి, వ్యాసరూపంలో నివేదిక తయారు చేయుట.
2. నచ్చిన ఒక కవి/రచయితల ఒక కవిత/కథను ప్రశంసిస్తూ రాయుట.
3. కార్యక్రమయుత బోధనపై ఒక పాఠం సిద్ధం చేయించుట.
4. బాలల పత్రికలు – భాషాభ్యసనానికి వాటి తోడ్పాటుపై పిల్లల అభిప్రాయ సేకరణ.
5. స్థానిక భాషా విశేషాలు – జాతీయాలు – సామెతలు – పొడుపు కథలు – సేకరణ.

పరామర్శ గ్రంథాలు:

కోర్సు V నందు పొందుపరచబడినవి.

Course-XII

LEARNING ASSESSMENT

Objectives

To enable the student-teachers to

1. Understand the nature of assessment and evaluation and their role in teachinglearning process.
2. Understand the perspectives of different schools of learning on learning assessment
3. Realize the need for school based and authentic assessment
4. Examine the contextual roles of different forms of assessment in schools
5. Understand the different dimensions of learning and the related assessment procedures, tools and techniques

Course Content

Unit-1: Perspectives on Assessment and Evaluation

1.1 Meaning of Assessment, Measurement, Tests, Examination, Appraisal, and Evaluation and their interrelationships

1.2 Purpose(s) and principles of Assessment, characteristics of quality assessment

1.3 Current thinking about learning based on Behaviorist, Cognitivist and Constructivist learning theories and their implications for classroom assessmentchanging the culture of classroom assessment

1.4 Classification of assessment: based on *purpose* (prognostic, formative, diagnostic and summative), *scope* (teacher made, standardized), *attribute measured* (achievement, aptitude, attitude, etc.), *nature of information gathered* (qualitative, quantitative), *mode of response* (oral and written; selection and supply), *nature of interpretation* (self-referenced, norm-referenced, criterionreferenced) and *context* (internal, external)

1.5 Policy perspectives on examinations and evaluation: Recommendations in National Policies of Education and curriculum frameworks- continuous and comprehensive assessment

Unit-2: Formative and Summative Assessment

2.1 Formative Assessment (FA) meaning, purpose, essential elements (formative assessment in practice), major barriers to wider use of FA, role of students and teachers in formative assessments,

2.2 Observation, questioning, reflection on learning as strategies for using assessment in the process of learning;

2.3 Use of Projects, Assignments, Work sheets, Practical work, Performance-based activities and Reports as assessment devices; Self, Peer and Teacher assessments- use of rubrics,

2.4 Summative assessment: meaning, purpose, summative assessment in practice, use of teacher-made and standardized test

2.5 Aligning formative and summative assessments

Unit-3: Tools of Assessment

3.1 Assessment of cognitive learning: understanding and application; thinking skills –convergent, divergent, critical, problem solving, and decision making;

3.2 Selected-Response Assessment: Multiple Choice, Binary Choice, and Matching and Constructed Response Assessment: Completion, Short-Answer, and essay Items as tools-nature, advantages and limitations, guidelines for their construction and scoring

3.3 Assessment of affective learning: attitude and values, interest, self-concept; tools and procedures for their assessment; observation, interview, rating scales, check-lists, inventories as tools/techniques, their uses and preparation

3.4 Assessment of Performance/ project-based assessment- meaning, characteristics, scope; using rubrics to grade a performance-based assessment

3.5 Portfolios: meaning, types, purposes, guidelines for portfolio entries and assessing portfolios

Unit-4: Planning, Construction, Administration and Reporting of assessment

4.1 Planning: Deciding on what, why and how to assess- difference between instructional, learning and assessment objectives, stating of assessment objectives , deciding on the nature and form of assessment - oral tests and written tests; open book examination; weightage to content, objectives, allocation of time; Preparation of a blue print

4.2 Construction/selection of items: writing test items/questions, reviewing and refining the items, assembling the test items; writing test directions and guidelines for administration (if any), Scoring procedure – manual and electronic; Development of Rubrics

4.3 Administration, item analysis and determining item and test characteristics; Item response analysis, ascertaining student needs, identifying student interests and feeding forward for improving learning

4.4 Analysis and Interpretation of Students‟ Performance

Processing test data: graphical representations; calculation of measures of

central tendency and variability, and derived scores- percentiles, percentile rank, percentage score, grade point averages, z-scores; and Frame of reference for interpretation of assessment data: norm-referenced, criterion-referenced and self-referenced ie., relative and absolute interpretation;

4.6 Reporting Student Performance – content and formats; Progress reports, Cumulative records, Profiles, and Open house; Using feedback for reporting to different stakeholders – students, parents, and administrators

4.7 Use of Feedback for teachers‟ self-improvement and curriculumrevision

Unit-5: Issues, Concerns and Trends in Assessment and Evaluation

5.1 Existing Practices*:* Class/Unit tests, half- yearly and annual examinations, Board examinations and Entrance tests, State and National achievement surveys; Management of assessment and examinations; Use of question bank

5.2 Issues and Problems: Marking Vs Grading, Non-detention policy, Objectivity Vs Subjectivity; Impact of entrance test and public examination on teaching and learning – the menace of coaching.

5.3 Trends in assessment and evaluation*:* Online examination, Computer-based examination and other technology based examinations, Standards- based assessment – international practices

Course-XIII

UNDERSTANDING THE SELF

Objectives

To enable the student-teachers to

1. understand that any Self is a human resource to exercise all the resources: cognitive, affective and psychomotor resources.
2. make them realize that the Self does not have independent existence but related to Nature, other selves and the „Unknown" causing it and this great design of the Universe.
3. make the student-teacher perform one's function to the possible extent as any part of the Nature is silently doing so; thereby developing self-actualization and selfesteem.
4. realize that one is responsible as a person and as a teacher for the integrated development of oneself and one's pupils: Physical, cognitive, social, emotional, aesthetic, moral, and spiritual developments.
5. realize the commonness and uniqueness prevalent in Nature and human nature and feel equality as the reality and contribute to the furtherance of evolution at mental level.

Course Content

Unit-1: Self as a human resource:

1.1 Cognitive resources of the self: Self-critical awareness about one"s abilities and opportunities to develop independent thinking-critical thinking and creative thinking, decision making and problem solving and develop them as skills.

1.2 Affective resources: Feelings of love, joy, appreciation; emotions like fear, anger, jealousy, affection, happiness to be understood both as assets and threats or limiting factors.

1.3 Sensitize the ability to identify the structural and functional commonality of the human body except the organs of reproduction and allied features of the human kind.

1.4 Empathic understanding of geographical, climatic and genetic conditions causing physical differences.

Unit-2: Self in relation to social identities:

2.1 Self-critical awareness of the causes for one"s positive and negative relations with the people based on caste, class, language, religion, nation, region etc.,

2.2 Self-critical understanding of the basic realities of the man- made divisions over the time-scale.

2.3 Critical understanding of the Nature‟s necessity of gender difference for the onset and continuity of human race.

2.4 Critical understanding of the basic realities of cultural differences across the time-scale and across the globe.

Unit-3: Self (person) as a part of the Nature:

3.1 Nature, harmony in existence and co-existence

3.2 Dependence of Self on the Nature for the very life; dependence of self on other selves for comfortable living.

3.3 Responsibility of self towards conservation, protection and enrichment of plant and animal life.

3.4 Responsibility of self towards other human beings in the family, society, and people across the globe.

Unit-4: Self in relation to profession:

4.1 Self-critical awareness of teaching competency: adequacy of subject matter knowledge, professional skills, and effective communication to the students.

4.2 Self-critical awareness of one‟s attitudes towards students, teaching, teaching material , interest in students and subject and one‟s aptitude in the inculcation of interest in students and in tapping their abilities to realize the values identified in the lesson.

4.3 Self-critical awareness of suitability of one‟s role being performed contextually to enrich learners‟ capabilities and guiding them for self-actualization while interacting.

4.4 Self-critical awareness of involvement in team work with colleagues, head of the institution parents of learners and management for the development of the learners.

Unit-5: Self- development through self-learning (Self-knowledge):

5.1 Development of self and social identities in the learners to enrich human resources and self-esteem; Realistic understanding of any self as depending on the source of the whole existence for spiritual awakening free of any religious identity.

5.2 Objective view of beliefs, prejudices and stereotypes to liberate from irrational tendencies.

5.3 Understanding human roots in animal and possibility of heights in the divinity through the philosophers like Swamy Vivekananda, Sri Aurobindo and J. Krishnamurti to awaken oneself to Truth, beauty and goodness both inside and

outside.

5.4 Yogic practices for physical, mental and spiritual health and to lay the seeds or foundations for Self-realization.

SEMESTER-IV

Course-XIV

CONTEMPORARY INDIA AND EDUCATION

Objectives

To enable the student-teachers to

1. Understand and Contextualize ideals of the Constitution of India;
2. Appreciate humanistic agenda of the Constitution on India;
3. Value and recognize the role of education in realizing the ideals of the Constitution;
4. Develop critical awareness about the issues of education that are coming in the way of realization of the values of the Constitution;
5. Understanding and develop positive attitudes towards various forms of exclusion;

Course Content

Unit-1 Normative Vision of Indian Education: Indian Constitution

1.1 Constitution of India Basic Features

i. Fundamental Rights

ii. Directive principles of state policy

iii. Federal Structure

1.2 Preamble of the Constitution : The ideals

i. Sovereign Nation

ii. Democratic and Secular polity

iii. Liberty equality & fraternity

iv. Justice: Social, Economic and political

Unit- 2 Education as Fundamental Right

2.1 Human Rights; Meaning Nature , and Classification;

2.2 Right of Children : International convention and Indian Constitution; Education as Fundamental Right of Children-2009

2.3 Issues in Implementing RTE-2009: A critical understanding

i. Issues that affect and negate the children‟s right to education (Child Labor: Street children, abandoned and orphans)

ii. Differently abled children: Attitude towards the girl child and her participation in schooling, punishment, abuse and violence in Schools).

Unit-3 Contemporary Indian Schooling: Concerns and Issues

3.1 Equality of Educational Opportunity : Meaning and nature : Forms of inequality : Religion, Regional, Caste, Gender and other marginalized groups.

3.2 Inequality in Schooling: Public – Private schools , Rural – urban schools, Masselite schools , single teacher schools and many other forms of in-equal school systems. Critical understanding of Paradox of Equal opportunity and in-equal schooling: positive discrimination; concept and issues and policy interventions.

3.3 Schooling: Quality concerns and issues

i. Universal access

ii. Universal Enrollment

iii. Universal retention

iv. Universal success

Unit-4 Understanding Exclusion in schooling

4.1 Exclusion: Meaning and Nature

4.2 Forms of Exclusion: a) physical / Psychological Exclusion

4.3 Different types of differently abled children: Nature of problems and their impact on learning

4.4 Measure to address the issue of learning of differently abled children and professional preparedness of Institutions;

4.5 Socio-cultural and economic exclusion: Understanding different forms of socioculture and economic exclusion in schooling – Caste, Class, Gender, Minority, and other Marginalized sections of the society.

Unit- 5 Secondary Education: Concerns and Issues

5.1 Secondary School stage: its linkages with primary and higher secondary stages of education;

5.2 Aims of Secondary School Stages of Education

5.3 Universalisation of Secondary School stages of Education: Its Status

i. Quantitative expansion , Qualitative consolidation and Equity perspective – A sociological understanding;

ii. Issues in Secondary school stages of Education :Privatization, Vocationalization

iii. Reforms in Secondary School Stages Education: Curricular , Pedagogical and Examinations;

5.4 Rashtriya Madhyamika Shiksha Abhiyan (RMSA): Goals and policy intervention for Quality Secondary School Stages of Education

Course-XV

GENDER, SCHOOL AND SOCIETY

Objectives

To enable the student-teachers to

1. understand the gender related issues

2. develop sociological perspectives about the impact of culture. Tradition, Socialization, division of labour on gender aspects

3. create an awareness about the impact of gender on Education

4. understand the dynamics of gender perspectives and sensitization

5. create the knowledge regarding equality and its relationship to women education

Course Content

Unit-1: Basics of Gender

1.1 Concept, Meaning, Scope of gender,

1.2 The difference between sex and Gender - Gender discrimination

1.3 The characteristics of patriarchal system and its impact on Women‟sstatus

1.4 The need and importance of Women‟s Education – its benefits

Unit-2: Factors affecting gender Discrimination

2.1 Factors influencing gender differences and practices- inequality in ratio, female infanticide, feticide, crime, violence.

2.2 Religious, Physical, Sociological, Economic, Political, Legal, employment, Psychological etc **.**

2.3 Sociolisation process and its impact on decision making Women / Girls Education

2.4 Rural / Urban /Tribal Societies in relation to girls Education

2.5 Women and Girls status at present in our Society

Unit-3: Historical Perspectives and changing status of Women

3.1 Epic . Vedic age – Kaikeyi, Sathyabhama, Gargi, Maitreyi, Lopamudra etc.

3.2 Medieval age – Rami Lakshmi Bai, Chennamma, Rudramadevi.

3.3 British Age – Victoria, Elizebeth, Noorjahan

3.4 Present Age – Indira Gandhi, Sushma Swaraj, Bandaranayake, Kiranbedi, Kalpana Chawala, Prathibapatil, Meerakumar.

Unit-4: Legal issues of Gender

4.1 Women’s Rights

4.2 Legal Provisions

4.3 Equality of Sexes

4.4 Education and division of Labour – Home, School, Society, work place

Unit-5: Gender and Education

5.1 Educational provisions specially meant for girls Education

5.2 Emerging trends in the field of girls Education – Reservations

5.3 Gender as an influencing factor in course choices

5.4 Women empowerment through girls education – its need – National Development

CO-Po Attainment in outcome based Education

Course-XVI

INCLUSIVE EDUCATION

Objectives

To enable the student-teachers to

1. Acquire knowledge about the concept of inclusive education for different types of special needs children.
2. Able to identify the different types of special needs children and their characteristics.
3. Develop understanding in identification and assessment of children with special needs.
4. Critically evaluate the policy perspectives emerged at national and international levels for empowering children with special needs.
5. To develop the required skills for teaching children with special needs in regular schools.

Course Content

Unit-1: Concept of Inclusive Education

1.1 Inclusive Education – concept, meaning, definition and importance.

1.2 Concept of Impairment, Disability and Handicap

1.3 Concept of Special Education, Integrated Education, Mainstreaming and Inclusive Education

1.4 Need for Inclusive Education in India for children with special needs.

Unit-2: Types and Characteristics of Children with Special Needs

2.1 Concept, types and characteristics of different types of children with special learning needs:

2.2 Children with Physical challenges– Visual, Hearing, Loco-motor and Neurological.

2.3 Children with Intellectual challenges – Gifted, Mentally Challenged, Autism (ASD) and Learning Difficulties (LD).

2.4 Children with Emotional and Behavioral deviations with special reference to ADHD and Juvenile Delinquency.

2.5 Children with Socio- cultural deviations (SC, ST, Minorities) and Linguistic Minorities.

Unit-3: Identification, Assessment and Educational Provisions

3.1 Identification, assessment and education of Children with physical challenges – Visual, Hearing, Loco-motor and Neurological.

3.2 Identification, assessment and education of Children with Intellectual challenges – Gifted, Mentally Challenged, Autism, Learning Difficulties (LD).

3.3 Identification, assessment and education of Children with Emotional and Behavioral deviations with special reference to ADHD and Juvenile Delinquency.

3.4 Identification, assessment and education of Children with Socio- cultural deviations and Linguistic minorities.

3.5 Challenges and prospects in Identification and assessment of children in inclusive education.

Unit-4: Policy Perspectives for Children with Special Needs

4.1 International Legislations –Salmanca Declaration, UNESCAP, UNCRPD

4.2 National Legislations – NPE-1986, PoA-1992, RCI Act-1992, PWD Act-1995 with latest amendments , National Trust Act-1999, RTE Act-2009

4.3 Government schemes and provisions – SSA, RMSA with special reference to the provisions and activities aimed at meeting the needs of children with special learning needs.

Unit-5: Educating Children in Inclusive Classrooms

5.1 Need for creation of physical, psychological, sociological barriers free environment within and outside the classroom

5.2 Assistive devices and technologies required for education of children with special needs in inclusive classroom

5.3 Need for parent and community involvement to promote positive behaviours and social competence in children with special learning needs

5.4 Need for multi-disciplinary approach to address the educational needs of children with special learning needs

5.5 Challenges and prospects in providing education in inclusive classrooms.

CO-Po Attainment in outcome based Education

Course-XVII

ENVIRONMENTAL EDUCATION

Objectives

To enable the student-teachers to

1. recognizes the concept and importance and participate in various activities of swatch bharath
2. recognizes the need and importance of environmental education.
3. identify the factor responsible for environmental degradation and environmental pollution
4. develop strategies to curb out environmental degradation in their house and locality.
5. recognizes the role of government and non government agencies in reducing the environmental issues faced by mankind.

Course Content

Unit-1: Swatch Bharath- an Environmental Awakening

1.1 Meaning, concept, definition of Swatch Bharath

1.2 Evolution of the concept of Swatch Bharath, objectives, its campaign and execution.

1.3 Integration of Swatch Bharath campaign with educational institutions

1.4 Strategies to implement the Swatch Bharath campaign in schools and other educational institutions.

Unit-2: Objectives, Scope and Nature of Environmental Education

2.1 Meaning, importance, definition, characteristics and objectives of environmental education

2.2 Importance, objectives, scope and guiding principles of environmental education.

2.3 Factors of degradation of environment – adverse socio –economic impacts of degradation of environment.

2.4 Types of pollution: Land, Air, Water, Noise, and Radiation

2.5 Green house effect - Ozone layer depletion.

2.6 Importance of need and scope of environmental conservation and regeneration.

2.7 Impact of industry/mining/transport on environment

Unit-3: Environmental Management and Protection

3.1 Need for environmental management – functions and characteristics of environmental management

3.2 Dimensions of environmental management. Factors responsible for flora and

fauna extinction

3.3 Measures to conserve flora and fauna.- causes for forest fire- measures of prevention

3.4 Major environmental problems in India – Environmental protection and polices in India

3.5 Need and objectives of conservation – Environmental conservation measures taken in India, waste management, alternative sources of energy, organic farming, rain water harvesting, community participation in nature resource management, water and forests.

3.6 Constitutional amendments made and Environmental laws,

Unit-4: Environmental Movements and Developments

4.1 Environmental movements in India: Silent Valley movement, Chipko movement, Narmada Bachao, Andolan, National Test Range at Balipal, Orissa.

4.2 Conditions for achieving the goals of sustainable development

4.3 Strategies for sustainable development in India

4.4 The Stockholm conference 1972 – Brundtland commission 1983 –Nairobiconference 1982 – The Rio Summit 1992

4.5 The Rio Declaration at the earth charter – Major achievements of the Rio Summit – Main features of the Rio Declaration

4.6 Kyoto conference and part on Global Warming 1997.

Unit-5: Environmental Education in the School Curriculum and Means to Sensitize the Students

5.1 Environmental education at Primary, Secondary and Higher Education level

5.2 Major constraints for its implementation at these levels.

5.3 Teacher‟s role – national resource center for environmental education.

5.4 Characteristics of good teaching method.

5.5 Seminar, Workshop, Problem–solving, Field trips and Surveys, Projects, Exhibition and other methods.

5.6 Relative efficiency of teaching methods, Role of IT and media in environment and human health.

B.Tech. Program Regulations

Scheme of Instruction & Syllabus

(Effective from the Batch Admitted in **2023 – 24**)

DEPARTMENT OF CHEMICAL ENGINEERING

S V UNIVERSITY COLLEGE OF ENGINEERING

TIRUPATI- 517502

About the Department

Department is ranked 17 in top 20 National Universities in Chemical Engineering based on publication output (122 papers ,973 citations) as per "measures of performance of Universities in India: An Analysis of the Publication output in Science and Technology CSIR – National Institute of Science and Technology and Development Studies, New Delhi,2011. Department of Chemical Engineering, established in 1977, offers an undergraduate and a postgraduate course in chemical engineering, besides providing research guidance leading to a doctoral degree. The curriculum is regularly revised to incorporate newer subjects and the present curriculum is well balanced to meet the requirements of the industry and higher learning institutions. Three elective courses on advance topics are offered at the undergraduate level. One general and three electives in one of the following streams bioprocess engineering/high polymer engineering/energy engineering, are taught at postgraduate level. The laboratories of this department are well equipped with facilities to conduct about 100 experiments, at undergraduate and postgraduate level. Project work/dissertation on process analysis/design/core soft/experimental themes is to be submitted by undergraduates as a part of the curriculum. Postgraduate dissertations based on experimental or modelling and simulation study over a period of 1 year are prescribed. Students have been performing consistently well in GATE and recruitment tests conducted by various organizations. On an average 30% secure admission into M.Tech program of IIT's and IISc Bangalore, 45% are placed in the campus recruitments and the balance joins NIT's, other universities, civil services and higher education. All India first rank was bagged by a student of this department in GATE 2009.

THE VISION

- To be a world class department of chemical engineering in effective teaching and knowledge creation which is seamlessly integrated with bordering sciences and is committed to ignite and propel young minds with passion for originality, innovation and excellence.

THE MISSION

- To train technically competent and socially aware chemical engineers through innovative and rigorous educational programs to meet technological needs of the society
- To encourage self-learning, problem solving, inquisitiveness and team work among students.
- To enable students to develop capabilities needed to perform in multidisciplinary environment.
- To promote industry- institute interaction to nurture collaborative and applied research programs
- To help students develop a well-rounded personality with qualities of innovative thinking, leadership, entrepreneurship and ethical mind.
- To create amiable ambience of academics for intellectual pursuit and innovative research

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING
REGULATIONS – 2020 (R-20)
For B.Tech – Regular / Lateral Entry / Hons / Major-Minor

Henceforth, these shall be known as Regulations **R-20** and shall be applicable from the batch admitted in the academic year 2020-2021 through the State level EAMCET and ECET. They shall be applicable to B.Tech Lateral Entry admitted in 2021-2022 at the second year level (for Second, Third and Fourth years of study).

1 **System**

The system is a flexible Choice Based Credit System (CBCS) permitting students

a) To choose electives from a wide range of courses offered by the Institute or on-line platforms
b) To undergo additional courses
c) To adopt an inter-disciplinary approach

2 **Programs**

The University offers Regular B.Tech programs in

i) Chemical Engineering (ChE)
ii) Civil Engineering (CE)
iii) Electrical & Electronics Engineering(EEE)
iv) Electronics & Communication Engineering (ECE)
v) Mechanical Engineering (ME)
vi) Computer Science & Engineering (CSE)

In addition, meritorious students will have the option to choose B.Tech (Honours) or B.Tech (Major-Minor), both with extra courses and credits, in addition to those prescribed for B.Tech (Regular). Different Major-minor combinations are offered by the Institute subject to certain conditions specified herein this document

3 **Duration**

ALL PROGRAMS ARE OF FOUR YEARS DURATION, each academic year consisting of two semesters, making a total of 8 semesters.

Each semester shall consist of 18 weeks with a typical academic work of 30 hours / week of instruction, equivalent to 90 instruction days. Number of instruction days may be reduced, when necessary, with an increased number of instruction hours per week per course

4 **Instruction**

Instruction is imparted in the following format

i) Basic Courses in Sciences and Basic Engineering to form the conceptual base
ii) Professional Core Courses intended knowledge development and enhancement in the chosen discipline of study.
iii) Elective Courses, both Professional and Open, intended to (a) to provide extended knowledge in the discipline of study, (b) to provide a broadened scope in the same discipline, (c) to enable an exposure to some other disciplines and (d) to enhance students' proficiency/skill.
iv) Audit Courses intended to provide awareness of the contemporary societal issues

5 **Course Code**

Each course shall be identified by an alpha-numeric course code, consisting of 2 alphabets followed by three numerals. XXxyy

XX denotes the department which offers the course.

x denotes the semester in which the course is offered

yy denotes a serial number assigned by the course offering department

CE : Civil Engineering	CO : Commerce
CH : Chemical Engineering	CY : Chemistry
CS : Computer Science and Engineering	EO : Economics
EC: Electronics and Communication Engineering	EN : English
EE : Electrical and Electronics Engineering	MA : Mathematics
ME : Mechanical Engineering	PH : Physics
	HU : Humanities
	BO: Biological Sciences
	MG : Management

6 **Scheme of Instruction & Syllabus**

6.1 A Board of Studies (Pass) of each department, constituted by the University, with experts from internal and external academic departments , industry, society, alumni and students shall formulate the Scheme of Instruction and Evaluation of a program and the detailed syllabus content of the courses.

6.2 All the Boards of Studies (Pass) shall together formulate the scheme of instruction and examinations, and detailed syllabi for all the courses of the First and Second Semesters which shall be mostly common for all the branches of study

7 **Attendance Requirement**

7.1 A student is required to complete the study of the Program satisfying the attendance requirements in all the Semesters within a maximum period of eight academic years from the year of admission to become eligible for the award of B.Tech degree, failing which he/she forfeits his/her admission.

7.2 A student shall be detained in a Semester if he/she fails to satisfy the attendance requirements given below:

i) Attendance in Audit Courses shall not be considered for calculation of academic requirements

ii) A student shall attend a minimum of 50 percent of the hours of instruction taken by the teacher, in each course (Theory + Tutorial)

iii) A student shall attend a minimum of 75 percent of total instruction hours conducted during that semester – Theory + Tutorial + Practical

iv) However, a committee, headed by the Principal, can condone shortage of attendance, due to ill health of the student, up to 10 percent (65 – 75 %) for those students, who attend a minimum of 65 percent of total instruction hours with a minimum 50 percent in each course.

v) A student who fails to satisfy the attendance requirements specified in clauses 7.2 (i, ii, iii) shall be detained and will have to repeat that Semester in the subsequent academic years with the written permission of the Principal subject to the clause 7.1

vi) A student shall not be permitted to study any semester more than three times during the entire Programme of study

vii) A student who satisfies the attendance requirements specified in either of the clauses 7.2 (ii or iii) in any semester may be permitted to repeat that semester cancelling the previous attendance and sessional marks of that semester with the written permission of the Principal. However, this facility shall not be extended to any student more than twice during the entire Programme of study as specified in clause 7.1

8 **Credit -**

This is the unit by which the course work is measured. It determines the number of hours of instructions required per week. It is a weightage index, used in the computation of Grade Point Average, indicative of the student performance.

Theory / Tutorial …. 1 hr /week …. 1 credit
Practical … 2 hr/week …. 1 credit

Credit requirement for the Award of Degree : Successful performance in

B.Tech (Regular)	160 credits
B,Tech (Lateral Entry)	123 credits (II, III & IV years only)
B,Tech (Honors)	160 + 20 additional credits in the same discipline
B.Tech (Major-Minor)	160 (Major discipline) + 20 credits in another (Minor) discipline

9 **Examination – Evaluation**

9.1 Evaluation shall be carried out through Internal Tests and Semester End Examination.

9.2 For each theory course, there shall be two sessional tests. Each test is of two hours duration

carrying 40 marks. Internal Test I will be conducted around the middle of the semester, on 50 % of the course content. Internal Test II will be at the end of the semester on the second 50% of the course syllabus.

It is mandatory for a student to attend both the sessional tests in each theory course. The weighted average of the marks secured in two tests is awarded as sessional marks. A weightage of 0.8 shall be assigned for the better performance of the two tests whereas for the other test it shall be 0.2. If a student is absent for any of the internal tests for whatsoever reason, the marks awarded for that test shall be zero.

Students are permitted to verify their internal test scripts after valuation.

The valuation and verification of answer scripts of Sessional Tests shall be completed within fifteen days after the conduct of the respective Sessional Tests.

9.3End-Semester Examination is of 3 hours duration carrying 60 marks. It shall be conducted after the last working day of the semester covering the entire syllabus prescribed for that course.

The question paper for end-semester examination shall be set by an external paper setter. The Chairman, BoS shall recommend a panel comprising at least six external paper setters for each theory course to the University. The University shall arrange for setting the question paper by appointing one external paper setter from that panel

Model Question Paper for each theory course shall be prepared by the concerned teacher within 30 days from the commencement of the Semester and the same shall be forwarded to the Controller of Examinations through the Chairman, BOS concerned.

Two questions shall be set from each unit of the syllabus, out of which one question shall be answered by the student. Each question of the unit carries a maximum of 12 marks.

However, the Chairman, BoS shall accord exception in question paper format, if necessary. The question papers shall assess the understanding of the concepts and their applications in solving problems and at least 50% of the questions shall be numerical. Further, the question papers of design-oriented courses shall assess the abilities of analysing and evaluating design alternatives

The valuation of End-Semester Examination answer scripts shall be arranged by the Controller of Examinations as per the University procedures in vogue.

9.4 For each practical course except project work, the sessional marks for a maximum of 40 shall be awarded based on the continuous assessment of practical work by the teacher concerned. An End-Semester Examination of 3 hours duration carrying 60 marks shall be conducted by two examiners, one external and one internal appointed by the Principal. The Principal shall appoint the external examiner from among the panel of examiners

recommended by the Chairman, BoS concerned. He shall appoint the internal examiner nominated by the Head of the Department concerned

9.5For Project work, the guide shall assess the progress of project work continuously and award marks for a maximum of 40. A committee consisting of one external examiner and two internal examiners from the department shall value the project work and conduct viva-voce for a maximum of 60 marks.The Principal shall appoint the external examiner from among the panel of examiners recommended by the Chairman, BoS concerned. He shall appoint the internal examiner nominated by the Head of the Department concerned.

10 **Course Performance**

10.1 In each semester, every student who satisfies the attendance requirements has to register for the semester-end examination, failing which he/she shall not be promoted to the next semester. Any such student who has not registered for the semester-end examination in a semester shall repeat that semester in the next academic year with the written permission of the Principal.

10.2 To pass a course in the program, a student has to secure a minimum of 40% of maximum marks in the semester-end examination and a minimum Grade of P overall (both sessional and semester-end examination marks put together). A student obtaining Grade F shall be considered failed and shall be required to reappear for the semester-end examination. A student shall not be allowed to reappear for the semester-end examination in a course which he/she has already passed the course to improve the score

10.3 A student who has failed in a course shall be allowed to reappear for the semester-end examination as and when it is conducted in the normal course. The Sessional Marks obtained by the student shall be carried over for declaring the results

10.4 semester-end examination in any course of a particular regulation shall be conducted three times. Thereafter, the students who failed in that course shall take the semester-end examination in the equivalent papers of the subsequent regulation, suggested by the Chairman, BoS concerned.

10.5 Instant supplementary semester end examinations shall be conducted after announcement of IV year results for outgoing students in courses listed for IV year to save an year of time for outgoing students

11 **Promotion Rules**

11.1Astudentshallbepromotedfromfirstyeartosecondyearifhefulfilstheminimum attendance requirements.

11.2A student will be promoted from II year to III year if he fulfils the academic requirementof40%ofcreditsuptoeitherIIyearI-SemesterorIIyearII-Semesterfrom all the examinations, whether or not the candidate takes the examinations and secures prescribed

minimum attendance in II year II semester.

11.3 A student shall be promoted from III year to IV year if he fulfils the academic requirementsof40%ofthecreditsuptoeitherIIIyearIsemesterorIIIyearIIsemester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester

12 **Student Performance - Grading and Grade Points**

12.1 Letter Grade – Grade Point

Letter Grade is an index of the performance of students in a said course.
Grade Point is a numerical weight allotted to each letter grade on a 10-point scale

Letter Grade	Range of Marks (Internal + End-Sem)	Grade Point
O (Outstanding)	**91 – 100**	**10**
A+ (Excellent)	**81 – 90**	**9**
A (Very Good)	**71 – 80**	**8**
B+ (Good)	**61 – 70**	**7**
B (Above Average)	**51 – 60**	**6**
C (Average)	**41 – 50**	**5**
P (Pass)	**40**	**4**
F (Fail)	**<40**	**0**
Ab (Absent)	**-**	**0**

A student obtaining Grade F or Absent for a semester end examination shall be considered failed in that course and he / she shall have to reappearin the Semester- end examination as and when it is conducted in the normal course. .

12.2 Grade Point Average

Semester Grade Point Average **(SGPA)**: It is a measure of student's performance in a semester.

Cumulative Grade Point Average **(CGPA)**: It is a measure of overall performance of a student over all semesters.

Computation of SGPA and CGPA

SGPA is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses and the sum of the number of credits of all the courses in the semester.

$$\textbf{SGPA } (S_i) = \sum_{i=1}^{N} (C_i \times G_i) / \sum_{i=1}^{N} C_i$$

where C_i is the number of credits of the ith course, G_i is the grade point scored in the ith course and N is the number of courses in the semester

$$\textbf{CGPA} = \sum_{i=1}^{M} (C_i \times S_i) / \sum_{i=1}^{M} C_i$$

where S_i is the SGPA of the ith semester, C_i is the total number of credits in that semester and M is the number of semesters.

SGPA and CGPA shall be rounded off to two decimal points and reported in the transcripts.

12.3 Award of Class:

After a student has satisfied the requirements prescribed for the completion of the programandiseligiblefortheawardofB.Tech.degree,he/sheshallbeplacedinone of the following:

Class Awarded	CGPA Secured
First Class with Distinction	≥ 7.5
First Class	≥ 6.5 < 7.5
Second Class	≥ 5.5 < 6.5
Pass Class	≥ 4.0 < 5.5

Equivalent percentage is (CGPA – 0.5) multiplied by 10.

13 **MOOCs (Online courses)**

Certain prescribed courses will have to be pursued on Online platforms. This is recommended to encourage students to tap these resources and to prepare them for self-study.

1) **A**ll open elective courses are to be successfully completed on SWAYAM online portal of Government of India

2) Courses offered by the concerned Department as Program Core / Program Elective / Audit courses shall not be opted as open elective.

3) A student is free to opt for any course relating to (a) Domain Engineering (b) General Engineering (c) management and (d) functional / technical English, in consultation with his / her Department. It should not be a course offered by the Department.

4) Opted course shall carry 3 credits and of 12 or more weeks of duration

5) A student is free to enrol and complete an online course from III semester to VII

semester of his / her B.Tech program, under permission of the concerned Head of the Department.

(6) Head of the Department concerned shall make arrangement for collection and consolidation of performance certificates in online courses for onward transmission to the University.

14 **Summer Internship**

All students shall have to undergo Internship during summer vacation breaks, of a duration of 6 weeks after 4th or 6th semester. They shall submit a certificate from the organization concerned and present a seminar on the internship in the beginning of seventh semester for its assessment and inclusion in the 7th semester Marks Statement..

15 **Gap Year**

Gap year(s) shall be availed by the student himself/herself who wants to pursue entrepreneurship by taking a break of one year at any time after completing II year of study. A committee shall be constituted to evaluate the proposal submitted by the student and to decide on permitting the student to avail the Gap Year. Students shall be permitted to re-join the succeeding year from the date of commencement of class work and shall be under the academic regulations in force at that time

Gap year may be extended by another year (i.e. a total of two years) and shall not be counted for the maximum period of eight academic years for the completion of the program

16 **Ranks & Awards**

16.1 Ranks shall be awarded in each branch of study on the basis of Cumulative Grade Point Average (CGPA) for the top three students.

16.2 The students who have become eligible for the award of the degree by passing regularly all the eight Semesters shall only be considered for the award of ranks.

16.3 Award of prizes, scholarships and other honors shall be according to the rank secured by the student and in conformity with the desire of the Donor.

17 **Grievance Redressal Committee**

The Principal shall constitute a Grievance Redressal Committee of three Professors from the faculty of the college for a period of two years. The senior most among them shall be convener of the committee who receives the grievances from the students and places the same before the committee for its consideration. The committee shall submit its redressal recommendations to the Principal for his consideration

18 **Amendment to Regulations**

Sri Venkateswara University reserves the right to amend the regulations at any time in future without any notice. Further, the interpretation of any of the clauses of the regulations entirely rests with the University

B.Tech (Honors) Program

Additional Regulations for B.Tech (Honours) Program

H1 Students of a Department/Discipline are eligible to opt for B.Tech (Honors) Program offered by the same Department/Discipline, to be completed within the stipulated period of 4 years.

H2 A student shall be permitted to register for B.Tech (Honours) at the beginning of IV semester, provided that the student has acquired a minimum of 8.25CGPA up to the end of II semester without any backlogs.

A student will have to consistently perform and at any later point of time, if his/her overall CGPA falls below 8.25, his/her registration for B.Tech (Honours) will be cancelled and such students will continue with the regular Program.

The credits earned in additional courses till that time will be treated as extra credits.

H3 Students can select additional and advanced courses offered by their respective department in which they are pursuing the degree and get an honors degree in the same discipline.

H4 In addition to fulfilling all the requisites of a Regular B.Tech Programme, a student shal learn20 additional credits to be eligible for the award of B.Tech(Honours)degree. This is in addition to the credits essential for obtaining the Under-Graduate Degree in Major Discipline (i.e. 160credits).

H5 Of the 20 additional Credits to be acquired, 16 credits shall be earned by undergoing specified courses listed as pools, with four courses, each carrying 4 credits. The remaining 4 credits must be acquired through two MOOCs, which shall be discipline-specific, each with 2 credits and with a minimum duration of 8/12weeks as recommended by the Board of studies

H6 It is the responsibility of the student to acquire/complete prerequisite before taking the respective course. The courses offered in each pool shall be domain specific courses and advanced courses.

*****

B.Tech (Major-Minor) Program

Additional Regulations for B.Tech (Major-Minors) Program

MM1 Students who are desirous of pursuing their special interest areas other than the chosendisciplineofEngineeringmayoptforadditionalcoursesinanother specified engineering discipline from among the combinations offered by the Institute.

Such a program is referred to as B.Tech (Major) in discipline A and Minor in discipline B.

MM2 Combinations will be decided, based on the compatibility, relevance, and the trend in technology, by the Boards of Studies of the participating Disciplines of Engineering. The list of combinations may alter from time to time.

MM3 A student shall be permitted to register for B.Tech(Major-Minors)at the beginning of IV semester, provided the student has acquired a minimum of 8.25CGPA upto the end of II semester without any backlogs.

A student will have to consistently perform and at any later point of time, if his/her overall CGPA falls below 8.25, (both major and minor combined) his/her registration for B.Tech (Major-Minor) will be cancelled and such students will continue with the regular major program.

The credits earned in additional courses till that time will be treated as extra credits.

MM4 The students registered for B.Tech (Major-Minors) shall have to successfully complete 160 credits (in the major discipline) and 20 additional credits (in the minor discipline) subject to clause **MM3**.

MM5 Scheme for 160 credits in the major discipline shall be the same as that ofB.Tech regular program. For the additional 20 credits, BOS of the minor degree component shall prescribe the courses, in consultation with the Chairperson, BOS of the major discipline

MM6 Of the 20 additional Credits to be acquired in the minor discipline, 16 credits shall be earned by undergoing specified four courses listed, each carrying 4 credits. The remaining 4 credits must be acquired through two MOOCs, which shall be minor discipline-specific, each with 2 credits and with a minimum duration of 8/12weeks as recommended by the Board ofstudies

MM7 Minor must be completed simultaneously with a major degree program. A student cannot earn the Minor after he/she has already earned bachelor's degree.

PROGRAM OUTCOMES

A graduate of this Department after successful completion of B.Tech, will be able

- To integrate and apply concepts of mathematics, physics, chemistry and biology to real life situations.
- To apply principles of conservation, thermodynamics, transport processes, reaction engineering and process control to analyze and design process equipment.
- To develop mathematical models of chemical engineering systems.
- To demonstrate computational abilities and use of software tools in design & simulation of process and equipment.
- To apply techniques of optimization to improve the performance of chemical processes.
- To analyze equipment and processes for retrofitting and debottlenccking.
- To conduct energy audit and suggest strategies for its conservation.
- To incorporate effective measures for environmental protection and sustainability into chemical process design.
- To participate in laboratory scale process development and scale up or scale down of processes.
- To communicate effectively in both verbal and written forms.
- To adapt to changing scenario and circumstances, with self confidence.
- To succeed in competitive examinations like GATE, UPSC

PROGRAM EDUCATIONAL OBJECTIVES

The Department of Chemical Engineering offers B.Tech (Chemical Engineering) program with the following objectives of enabling its graduates.

- To seek career as Chemical engineers in traditional Chemical industries and also in areas of manufacture of newer materials, pharmaceuticals and biological, environmental remediation and development of renewable energy sources.

- To pursue higher qualification in Chemical Engineering or a related discipline, with a view to become a researcher or an academician.

- To be able to synthesize a chemical process from simple and even complex chemistry and to translate any chemical process from conceptual to commercial stage.

- To possess good breadth in scientific and engineering knowledge so as to understand, analyze and to offer novel solutions to problems arising in today's rapidly changing increasingly technological global society.

- To be socially conscious chemical engineers through their sensitivity towards impact on environment, energy, security and sustainability.

I Semester **MA101 MATHEMATICS –I**

(I Semester-Common for all branches)

Instruction:3(L) +1(T) /week **Credits:4** **Assessment:40+60**

UNIT I

Differential Equations: Linear differential equations of second and higher order with constant coefficients-particular integrals-homogeneous differential equations with variable coefficients-method of parameters-simulation equations.

UNITII

Laplace Transforms I: Laplace transforms of standard functions-inverse transforms-transforms of derivatives and integrals-derivatives of transforms-integrals of transforms.

UNITIII

Laplace Transforms II: Transforms of periodic functions-convolution theorem-applications to solution of ordinary differential equations.

UNITIV

Calculus: Roll's and Mean value theorems - Taylor's and Maclaurins's series-maxima and minima for functions of two variables - Infinite series - Convergence Tests series of positive terms - comparison, Ratio tests - Alternating series - Leibnitz's rule - Absolute and conditional convergence.

UNITV

Multiple Integrals: Curve tracing (both Cartesian and polar coordinate) - Evaluations of double and Triple integrals-change of order of integrations-change of variables of integrations-simple applications to areas and volumes.

(ISemester-CY101forCivil&MechanicalEngg) (II Semester -CY 202 for EEE, ECE & CSE)

Instruction:3(L) +1(T) /week Credits: 4 Assessment:40+60

UNIT I

Atomicandmolecularstructure(12lectures)

Postulates of quantum chemistry. Schrodinger equation. Particle in a box solutions, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomics, Pi-molecular orbitals of butadiene and benzene. Band structure of solids and the role of doping on band structures

UNITII

Spectroscopictechniquesandapplications

Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclearmagnetic resonance and magnetic resonance imaging, surface characterization techniques.

UNITIII

Chemicalequilibria,Intermolecularforcesandpotentialenergysurfaces

Use of free energy in Thermodynamic functions: energy, entropy and free energy. Estimations of entropyandfreeenergies.Freeenergyandemf.Cellpotentials,theNernstequationandapplications.

Use of free energy considerations in metallurgy through Ellingham diagram. Equations of state of real gases and critical phenomena.

UNITIV

Periodicproperties

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atomsin the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular

geometries, Born- Haber cycle, The use of reduction potentials, Properties of ionic and covalent compounds.

UNITV

Stereochemistry,Organicreactionsandsynthesisofadrugmolecule

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations andsymmetryandchirality,enantiomers,diastereomers,opticalactivity,absoluteconfigurationsand conformational analysis. Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings Synthesis of a commonly used drug molecule.

Unit-I

ElectricDCCircuits:Kirchhoff'sVoltage&Currentlaws,SuperpositionTheorem,Star –Delta Transformations.
ACCircuits:ComplexrepresentationofImpedance,Phasordiagrams,Power&PowerFactor, Solution of Single Phase Series & Parallel Circuits. Solution of Three Phase circuits and Measurement of Power in Three Phase circuits.

Unit-II

SinglePhaseTransformers:PrincipleofOperationofaSinglephaseTransformer,EMFequation, regulation and Efficiency of a single phase transformer.
DCMachines:PrincipleofOperation,Classification,EMFandTorqueequations,Characteristicsof Generators and Motors

UNIT-III

ThreePhaseInductionMotor:PrincipleofRotatingMagneticField,PrincipleofOperationof3- φI.M., Torque-Speed Characteristics of 3-φ I.M.

UNIT-IV

p-njunctionoperation,diodeapplications,Zenerdiodeas regulator.
Transistorandapplications:Introductiontotransistors,BJTCharacteristics,biasingand applications

UNIT-V

IntegratedCircuits:Operationalamplifiers,Applications:adder,subtractor,Integratorand Differentiator.
Digital Circuits: logic gates, Combinational Logic circuits, Flip-Flops, countersandshiftregisters,Laboratorymeasuringinstruments:digital multi-meters and Cathode Ray Oscilloscopes (CRO's).

Textbooks:

1. ElectricalTechnologyby EdwardHughes

2. BasicElectricalEngineeringbyNagrathandKothari

CourseOutcomes:Attheendofthecourse,studentswillbeableto

1. understandthebasicconceptsofD.C.singlephaseand3-phasesupplyandcircuitsandsolve basic electrical circuit problems
2. understandthebasicconceptsoftransformersandmotorsusedasvariousindustrialdrives

3. understandtheconceptofpowerfactorimprovementforindustrialinstallationsandconceptsof most economical power factor
4. understandtheoperationandcharacteristicsofdiodes,transistors,integratedcircuitsanddigital circuits.

I&IISemesters

ME105/ME205ENGINEERINGGRAPHICSANDDESIGN

(I Semester - ME105 for ChE, CE & ME)
(IISemester-ME205forEEE,ECE&CSE)

Instruction: 2(L) +3 (Drg) /weekCredits: 3.5 **Assessment:40+60**

Unit IIntroduction to Engineering Drawing

Principles of Engineering Graphics and their significance, usage of Drawing instruments,lettering,ConicsectionsincludingtheRectangularHyperbola(Generalmethodonly);Cycloid,Epi-cycloid,Hypo- cycloid and Involutes.

UnitII

Scales-Scales–construction ofPlain&DiagonalScales.

Projectionsofpoints,lines-ProjectionsofPointsandlinesinclined tobothplanes, including traces;

UnitIII

Question Paper
Modular–4questionsfrom
Units I t0 IV, 15 marks each

Projectionsofplanes

Projectionsofplanes(Regularsurfacesonly)inclinedPlanes-AuxiliaryPlanes

ProjectionsofRegularSolids(Simplesolids–cylinder,cone,prism&pyramid)thoseinclined to

both the Planes-Auxiliary Views

UnitIV

IsometricProjections&Orthographicprojections

Principles of Orthographic Projections-Conventions Draw simple objects, dimensioning and scale. Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric

Views to Orthographic Views and Vice-versa, Conventions.

UnitVIntroduction to CAD

CAD workstation and peripherals, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars Standard, Object Properties, Draw, Modify and Dimension, Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom used in CAD, Select and erase objects.;

II Semester MA201MATHEMATICSII

(IISemester-forallbranches)

Instruction:3(L) +1(T) /week Credits: 4

Assessment:40+60 Unit I

Matrices: rank of a matrix-solution of system of linear equations-Eigen values, vectors –Canley-Hamilton theorem-quadratic forms-diagonalization.

UnitII

Vector Calculus: Gradient, Divergence, Curl of a vector and related properties-line, surface, volume integrals- Green's, Stokes's and Gauss Divergence theorems and its applications.

UnitIII

Fourier Series: Fourier series-even and odd functions, periodic functions-half range sine and cosine series-harmonic analysis.

UnitIV

Special Functions I: Gamma and Beta functions-series solutions of differential equations-ordinary points.

UnitV

Special Functions II: Bessel function-recurrence formulae-generating function for $J_n(X)$-Lengender polynomials-recurrence formulae-generating function for $P_n(X)$ - Rodriguez's formula -orthogonality of Lengender polynomials.

II Semester **PY202ENGINEERINGPHYSICS**

(IISemester-forChE,CE&ME)

Instruction:3(L) +1(T) /week **Credits: 4** **Assessment:40+60**

UNIT IWave Optics

Interference: Huygen`s Principle-Principle of Superposition-Interference of Light-Young`s double slit experiment- -Newton's Rings.

Diffraction: FraunhoferDiffractionataSingleSlitandaCircularAperture-PlaneDiffractiongrating – Resolving Power-Rayleigh`s Criterion-Resolving power of Grating and Microscope.

Lasers : Introduction – Spontaneous and Stimulated Emission of Radiation – Population Inversion – Types of Lasers – Ruby Laser – He-Ne Laser – Semiconductor Laser – Applications of Lasers.

UNITIIMechanicsofRigidBody

RigidBody-RotationalMotionandKinematics Relations-KineticEnergy andAngularMomentum of a Rotating Body-Equation of Motion of a Rigid body (Torque of a Rigid Body)-Combined Translation and Rotational Motion of a Rigid Body- Body Rolling on an inclined Plane.

MechanicsofContinuousMedia

Elasticity, Stress and Strain- Hook`s Law and Behaviour of Wire Under Load- Elastic Constants-Relation Between Elastic Modulii-Types of Supports, Beams and Loads-Different types of Bending-Cantilever with an End Load. Ultrasonic Waves - Sound Absorption and Reverberation -Sabine Formula - Acoustics of Buildings.

UNITIIIElectromagnetismandmagneticpropertiesofMaterials

Laws of Electrostatistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws-Maxwells Equations – Polarization - Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization - Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and Hesteresis, Applications of ferromagnetic materials.

UNITIVQuantumMechanics

Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – DavisonandGermerExperiment –G.P.ThomsonExperiment–Heisenberg'sUncertaintyPrinciple– Schrödinger'sTimeIndependentandTimeDependentWaveequation–SignificanceofWave

Function–ElectroninanInfiniteSquarePotentialWell–ProbabilityDensitiesandEnergyLevels.

UNITVNanoPhysicsandNanotechnology

Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C^{60} (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials.

TextBooks/ReferenceBooks:

1. R.K.GaurandS.L.Gupta``EngineeringPhysics"SultanandChandPub.,New Delhi
2. S.L.GuptaandSanjeevGupta`UnifiedPhysics`Vol.IJaiPrakashNath&Co.,Meerut.

6. V.Raghavan "MaterialScience",TataMcGrawHillPublications.
7. M.S.RamachandraRaoandShubraSingh,``NanoscienceandNanotechnology`` Wiley India Pvt.Ltd, New Delhi

CourseOutcomes: Attheendofthecourse,studentswillbeableto

1. Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering courses
2. understand the quantum mechanics and ultimately the quantum behavior of charged particles when they are in motion.
3. identify and apply appropriate analytical and mathematical tools of Physics in solving Engineering problems
4. apply the basic principles of Mechanics of rigid body and continuous media and their applicationsunderstand the principles in electrostatics and electromagnetics and magnetic properties of materials.
5. understand size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices.
6. thinkandparticipatedeeply,creatively,andanalyticallyinemergingareasofengineering technology.
7. Learnthebasicsofinstrumentation,designoflaboratorytechniques,measurement,data acquisition, interpretation, and analysis.
8. providemultidisciplinaryexperiencesthroughoutthecurriculum.

I&IISemesters

CS103/CS203 PROGRAMMING FOR PROBLEM SOLVING

(ISemester–CS103forEEE,ECE&CSE) (II Semester –CS 203 for ChE, CE & ME)

Instruction:3(L) +1(T) /week **Credits: 4** **Assessment:40+60**

Course Objectives:

1. Toacquireproblemsolvingskills
2. Tobeabletodevelopflowchartsandalgorithmsforthegivenproblem
3. TolearnhowtowritemodularprogramsinC
4. Toenabletousearrays,pointers,stringsandstructuresinsolvingproblems.
5. To explain the difference between object-oriented programming and procedural programming.
6. Tounderstandprinciplesofobject-oriented programming.

UNIT-I

Problem Solving : Problem solving techniques, Computer as a problem solving tool, Programming Languages – Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements: Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements:while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continuestatements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions, Passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures containing arrays,Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, Reading from a file, Writing onto a file.

UNITV

Introduction to Object-Oriented Programming (OOP): NeedforOOP, PrinciplesofOOP,Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

CourseOutcomes: Attheendofthecourse,studentwillbeableto

1. DevelopandtestprogramsinCandcorrectsyntaxandlogical errors.
2. Implementconditionalbranching,iterationand recursion.
3. Decomposeaproblemintofunctionsandsynthesizeacomplete program.
4. Usearrays,pointers,stringsandstructurestoformulatealgorithmsandprograms
5. Usefilestoperformread andwriteoperations.
6. Handleprogrammingassignmentsbasedonclass,abstraction,encapsulation,overloadingand inheritance.

CE104/CE 204 ENGINEERINGMECHANICS

(I Semester –CE 104 for EEE)(IISemester–CE204forCE&ME)

Instruction:3(L)+1(T)/week Credits:4 Assessment:40+60

UNITI

STATICS:Basic concepts – System of force, Concurrent and non-concurrent coplanar and non-coplanar forces – Resultant – Moment of force and its application – Couples and resultant of force systems – Equilibrium of systems of forces – Free body diagrams, Equations of equilibrium of coplanar systems and spatial systems.

UNITII

Analysis ofplane trusses: Types ofsupports – Types oftrusses – Analysis oftrusses using method of joints and method of sections.

UNITIII

CENTRE OF GRAVITY AND MOMENTS OF INERTIA: Theory of Pappus – Centroids of composite figures – Areas of gravity of bodies – Moment of inertia – Parallel and perpendicular axis theorems – Moments of inertia of composite areas (rolled and built up sections) – Radius of gyration of areas.

UNITIV

SIMPLE STRESES AND STRAINS: Elasticity and plasticity – Types of stresses and strains – Hooke's law – Stress-strain diagram for mild steel – Working stress – Factor of safety.

Lateral strain – Poisson's ratio and volumetric strain – Elastic moduli and relationship between elastic constants – Bars of varying section – Composite bars – Temperature stresses.

UNITV

STRAIN ENERGY: Gradual, sudden and impact loading – Endurance limit principles of virtual work and its applications.

TEXTBOOKS:

1. GhoseD.N.–AppliedMechanicsandStrengthofMaterials.
2. Timoshenko&Young–Engineering Mechanics.
3. JunarkarSB–MechanicsofStructures–Vol.I.
4. JunarkarSB–Elements ofApplied Mechanics.

CourseOutcomes: Attheendofthecourse,studentwillbeableto

1. applythebasicknowledgeofforce system.
2. knowthetypes ofsupports occurin civilengineering structures
3. knowthegeometricalpropertiesofdifferent crosssections.
4. understanddifferenttypesofstressesandstrains,elasticconstants.
5. understandthebehaviorofdifferentinternalforcesunderdifferenttypesofloading.
6.

LaboratoryOutcomes

- Upon completion of this laboratory course, students will be able to fabricate components with their own hands.
- Theywillalsogetpracticalknowledgeofthedimensionalaccuraciesanddimensional tolerances possible with different manufacturing processes.
- Byassemblingdifferentcomponents,theywillbeabletoproducesmalldevicesoftheir interest.

Course Outcomes : Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry to fabricatecomponents using different materials.

Instruction:4(L) **Credits: 0(Zero)**

Assessment:40+60 UNIT I

EnvironmentalStudiesandNaturalResources

Definition, Scope and importance of Environment, Environmental studies, Need for publicawareness

ComponentsofEnvironment-Atmosphere,Hydrosphere,Lithosphere.

Renewableand**Non-RenewableResourcesandassociatedproblems**

Waterresources:Useandoverutilizationofsurfaceandgroundwater,floods,drought,conflictsover water, dam benefits and problems.

Forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Land resources: Land as a resource, land degradation, Man induced landslides, soil erosion and desertification.

Mineral resources: Use and overexploitation, Environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused agriculture and overgrazing, effects ofmodern agriculture, fertilizer – pesticide problems, water logging, salinity, Case studies.

Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.

Roleofanindividualinconservationofnatural resources.

UNITII

EcosystemandBiodiversity

Ecosystem - Concept of an ecosystem, Structure and functions of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

Introduction,types,characteristicfeatures,structureandfunctionofthefollowingecosystem.

(a)Forestecosystem.(b)Grasslandecosystem
(c)Desertecosystem.(d)Aquaticecosystem(ponds,streams,lakes,rivers,oceans,estuaries)

Biodiversityanditsconservation:

Definition,geneticspeciesandecosystemdiversity,BiogeographicallyclassificationofIndia.

Valueofbiodiversity:consumptiveuse,productiveuse,social,ethical,aestheticand optionvalues, Biodiversity at global, National and local levels, India as a mega-diversity nation.

Hot-spotsofbiodiversity,Threatstobiodiversity:habitatloss,poachingofwildlife,man –wildlife conflicts, Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT–III

EnvironmentalpollutionandGlobalEffects

Definition,Causes,Effects,andcontrolmeasuresof(a)Airpollution(b)Waterpollution(c)Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards

SolidwasteManagement:Causes,effectsandcontrolmeasuresofurbanandindustrialwastes.

Role of an individual in prevention of pollution.

Pollutioncasestudies.

Disastermanagement:Floods,earthquakes,cyclone,landslides,Tsun

ami. Climate change-Global warming, Acid rain, Ozone

depletion.

UNIT–IV

EnvironmentIssuesandManagement

- Environment and Human health – Epidemic diseases, HIV/AIDS, Aviation Flue, WaterBorne Diseases.
- Environmental Impact Assessment, Sustainable Development, Clean Production and Clean Development Mechanisms
- Environment Legislation: Environmental Protection Act, Water Act, Air Act, Wild Life Protection Act, Forest Conservation Act, Public Liability & Insurance Act, Issues involved in Enforcementof Environmental legislation.

UNIT–V

SocialIssuesandtheEnvironment

- Populationgrowth,PopulationExplosion,PopulationControl,WomenandChildwelfare.
- Urbanization, Industrialization, Development projects, Resettlement and Rehabilitation of people – Problems concerned, Case studies.
- Consumerism and Waste Products Conservation, Public Awareness, Water Conservation, Rainwaterharvesting,watershedmanagement,Wastelandreclamation,HumanRights,Value education, Environmental ethics- Issues and possible solution.
- Roleofinformation Technologyin EnvironmentandHuman Health.

B. Tech. III semester Chemical Engineering

MA 301 B **MATHEMATICS – III**

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Objectives:

1. This course aims at providing the student to acquire the knowledge on the calculus of functions of complex variables.
2. To understand power series and expansion of analytic function.
3. To understand Laurent Series, poles, singular points, Residue theorem and its applications.
4. The aim is to analyze the solutions of partial differential equations.
5. To discuss the boundary value problems, one dimensional wave equation, heat equation and Laplace Equation.

UNIT - I

Complex analysis - I: Analytical functions - Cauchy-Reimann equations – Construction of Analytic functions- Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT - II

Complex analysis - II**:** Taylor's and Laurents' series- Transformations- Conformal mapping - Bilinear transformations - Transformation of 1/z, z^2, sin z and cos z.

UNIT - III

Complex Analysis –III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluation of real integrals

UNIT - IV

Partial differential equations - I : Formation of differential equations - Classification - First order linear partial differential equations – Legranges' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT- V

Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heat equation – Laplace's equation.

Text Books:

1. Grewal B S, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. Venkataraman M K, Engineering Mathematics, Vol. I & II, National Publishing Company, 1993.
3. Venkataraman M K, Engineering Mathematics, National Publishing Company, 1995.
4. Grewal B S, Engineering Mathematics, 13th Edition, Khanna Publications.
5. Kreyszig E, Advanced Engineering Mathematics, 8th edition, Wiley, 1998.

COURSE OUTCOME:

1	Applying various statistical models and methods for drawing conclusions and making decisions under uncertainty in engineering contexts
2	Apply statistical and numerical methods in various computer science related projects, seminars and research
3	Apply the knowledge of iterative methods to solve algebraic and transcendental equations, simultaneous linear equations, ODE (ordinary differential equations)
4	Acquire knowledge of finite differences, interpolation, numerical differentiation and numerical integration
5	Demonstrate a basic knowledge of the techniques for accurate and efficient solution of models based on linear and nonlinear systems of equations, ordinary differential equations and partial differential equations.

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

CH302E **ENGINEERING AND SOLID MECHANICS** III semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Objectives:

1. The course is designed to give fundamental knowledge of mechanics of deformable solids including stress, strain, stress – strain relations.
2. Theories of failure and energy methods.

Unit I :

Introduction, Point Kinematics: Moving point in various coordinate systems (Cartesian,Cylindrical, Path)

Rigid body kinematics: Translation and rotation, relative motion, angular velocity, General motion of a rigid body, General relative motion

Unit II :

Equivalent force systems, Resultant forces, Linear and Angular Momentum, Laws of motion(Euler's Axioms), Free Body Diagrams, Dynamics of point mass models of bodies.

Equilibrium of rigid bodies, distributed forces, Analysis of structures: Trusses, Forces in

Unit III :

Beams: Shear Force and Bending Moment

Unit IV :

Frictional forces, Laws of Coulomb friction, impending motion

Inertia tensor, Principal Moments of Inertia, Moment of momentum relations for rigid bodies,Euler's Equations of Motion

Unit V :

State of stress at a point, equations of motion, principal stress, maximum shear stress, Concept of strain, strain displacement relations, compatibility conditions, principal strains, transformation of stress/strain tensor, state of plane stress/strain.

Uniaxial stress and strain analysis of bars, thermal stresses, Torsion of circular bars and thinwalled members, Bending of straight/curves beams, transverse shear stresses, deflection of beams, Buckling of columns

TEXT BOOKS :

1. Engineering Mechanics, Strength of Materials and Elements of Structural Analysis – C.Venkataramaiah&A.V.NarasimhaRao

REFERENCES :

1. Strength of Materials – I.B.Prasad.
2. Strength of Materials – S.S.Bhavikatti.
3. Mechanics of Structures Vol. I --- S.B. Junnarkar
4. Strength of Materials part - I ----Stephen Timoshenko.

Course Outcomes :

At the end of this course students will be able to

1. Learn about the elastic and plastic behavior of material and evaluate stress invariants, principal stresses and their directions.
2. Euler's Axioms, Free Body Diagrams, Dynamics of point mass models of bodies.
3. Shear Force and Bending Moment
4. Principal Moments of Inertia, Moment of momentum relations for rigid bodies,Euler's Equations of Motion.
5. Concept of strain, strain displacement relations, compatibility conditions, Uniaxial stress and strain analysis of bars.

HS303C MANAGERIAL ECONOMICS AND ACCOUNTANCY III Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Detailed Syllabus:

Unit -I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR,NPV,IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

Unit -II

Depreciation and methods of calculating depreciation (straight line, sum of the years digit method, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

Unit -III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

Unit -IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

Unit -V

Cost Accounting: Introduction, Classification of costs, Methods of costing, Techniques of costing, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

Reading Text Books:

1. Henry Malcom Steiner, Engineering Economics Principles, 2nd Edition, McGraw Hill Education, 1996.
2. Dewett. K.K., Modern Economic Theory, Sultan Chand and Co., 2006.
3. A.N.Agarwal, Indian Economy, Wiley Eastern Limited, New Delhi.
4. Jain and Narang, Accounting Part-I, Kalyani Publishers, 2011.
5. Arora, M.N. Cost Accounting: Principles and Practice, 12th Edition, Vikas Publication, 2012.

Course Outcomes: After the completion of the course the student will be able to:

CO1	Understand Macro Economic environment of the business and its impact on enterprise.
CO2	Identify various cost elements of the product and its effect on decision making.
CO3	Understand the concepts of financial management and smart investment.
CO4	Prepare the Accounting records and interpret the data for Managerial Decisions.

Mapping of course outcomes with program outcomes:

CO4	2	-	-	-	-	-	-	-	-	-	3	-

CH304C **CHEMICAL PROCESS CALCULATIONS**

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives:

1. To understand different representations of mixture compositions and reaction stoichiometry.

2. To understand the ideal gas law and its applications.

3. To learn the concepts of vapor pressure and different representations of vapor presence in gas mixtures.

4. To understand and to apply the law of conservation of mass.

5. To understand and to apply the law of conservation of energy.

6. To analyze combustion operations, from material and energy perspective.

UNIT – I:

Basic concepts – Units & Dimensions - Graphical integration and differentiation - use of log-log, semi-log and triangular graphs, conversion of units.

Stoichiometric and composition relations - Stoichiometric relation, basis of calculation, method of expressing composition of mixture and solutions, density and specific gravity.

Behavior of ideal gases: Ideal gas law and applications, gaseous mixtures, gases in chemical reactions.

UNIT - II:

Mass balance without chemical reaction – Formulation – Mass balance calculations for unit operations like distillation, absorption, extraction, crystallization (single solute systems), drying, evaporation

UNIT - III:

Mass balance with chemical reaction – Mass balance calculations for processes involving reactions – Mass balance calculations for systems involving recycle, purge and bypass

UNIT - IV :

Vapor pressure - Concept of vapor pressure, liquefaction and liquid state, vaporization, boiling point, effect of temperature on vapor pressure, vapor pressure plots, vapor pressure of immiscible liquids and solutions, Raoult's law and its limitations.

Humidity and saturation: Relative and percent saturation, dew point, wet and dry bulb temperatures, Humidity charts

UNIT - V:

Energy balance

Thermophysics- Concepts of energy, energy balance equation, heat capacity of gases, liquids and mixtures in energy balance problems, Kopp's rule, latent heat - heats of fusion and vaporization, Trouton's ratio, Kistyakowski equation.

Thermochemistry - Heats of formation, combustion and reaction, Hess law, Calculation of heat of reaction from heat of formation / combustion data, Effect of temperature and pressure on heat of reaction, Adiabatic reaction temperature

fuels & combustion- Heating value, Theoretical and actual flame temperatures

TEXT BOOK:

1. Chemical Process Principles part - I, Material and Energy Balances by Hougen, O.A., Watson, K.M. and Ragatz, R.A. John Wiley and sons, 2nd ed.
2. Chemical Process Calculations - David Himmelblau

REFERENCES:

1. Stoichiometry (3 rdedition) - Bhatt and Vora , tata-McGraw-Hill Publication.
2. Elementary Principles of Chemical Process , 3 rd edition – Richard M.Felder& Ronald W.Rousseau, Wiley – Eastern
3. Process Calculations by K.V.Narayanan and Lakshmi Kutty.

Course Outcomes:

1. To understand the dimension-unit systems and their inter relationships, to be able to represent mixture compositions in different forms and to be able to make calculations using reaction stoichiometry.
2. To be able to make mass balance calculations for different operations, without

   reaction, its mathematical form and its application to different operations and reactions.
3. To be able to make mass balance calculations for different operations, with reaction , its mathematical form and its application to different operations and reactions.
4. To have learnt the significance of vapor pressure and its dependence and to have learnt different representations of partial saturation and to apply ideal gas law in conjunction with variation in levels of saturation.
5. To be able to estimate parameters like oxygen requirement, flue gas analysis, energy released and flame temperatures.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3			2	3		1						
CO4		1		2								
CO5			2	2	1							

CH305C **MOMENTUM TRANSFER**

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives :

1. To learn dimensional analysis, fluid statics and its applications.
2. To understand the important phenomena observed in flowing fluids, basic quantitative laws and equations of fluid flow.
3. To form a firm idea of the flow of impressible and impressible fluid flow through pipes and in thin layers.
4. To understand the flow past solid surfaces, through packed bed and in fluidized beds and able to learn the settling characteristics of particles through fluids.
5. To learn the working and performance of pumps and impressors, valves and able to understood the instruction and operation of flow measuring devices.

UNIT - I:

Introduction: Units, Dimensions and Dimensional analysis, Fluid statics and its applications.

UNIT - II:

Fluid flow phenomena, kinematics, of flow, velocity field - streamlines - irrotational flow - Newton's law of viscosity - Non-Newtonian fluids - Laminar and turbulent flows,

Basic equations of fluid flow - continuity equation - Bernoulli's equation and its applications.

UNIT - III:

Flow of incompressible fluids in conduits and thin layers - Laminar and turbulent flows in pipes and closed channels - Universal velocity distribution - friction factor, effect of fittings and valves. Flow of compressible fluids - continuity equation, mechanical and total energy balances, velocity of sound, ideal gas equation, stagnant temperature.

UNIT - IV:

Flow pas immersed bodies, drag force and drag coefficient, friction in flow through bed of solids - motion of particles through fluids - free and hindered settling - Mechanism and pressure drop of fluidization and its applications - fundamental concepts of two – phase, gas liquid flow.

UNIT - V:

Transportation and metering of fluids, fluid moving machinery - classification and performance of pumps and compressors - selection and specifications - measurement of flowing fluids, storage and handling.

TEXT BOOKS:

1. Unit operations of Chemical Engineering (7th ed) Warren L.McCabe, Juliane Smith and Peter Harriott, McGraw Hill.

REFERENCES:

1. 1. Chemical Engineering Vol.I by Coulson and Richardson, Pergamon Press.
2. Solved Examples in Chemical Engineering by G.K.Roy
3. "Fluid Mechanics" 2nd edition by Noel de Nevers, Mc Graw Hill

Course Outcomes:

1. To be able to perform dimensional analysis of fluid flow problems and develop pressure drop equations for fluid static equipments in which fluid is at rest.
2. To have the knowledge on different types of flow regions in fluid flow, rheological properties of fluids, turbulence and boundary layers.
3. To be able to carry out macroscopic mass, momentum and energy balance to solve engineering problems related to fluid flow and to analyze flow past solid surface, through packed bed and in fluidized beds.
4. Determine the minimum fluidization velocity andterminal velocity of the fluid in Stokes and Newton's law regions.
5. The analysis of fluid flow measuring devices like Orifice meter, Venturimeter, Rotameter and Pitot tube, the construction and working of Centrifugal and reciprocating pumps. And also give the knowledge on different types of valve, selection of pipe and fittings.

CH306C CHEMICAL ENGINEERING THERMODYNAMICS –I

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives:

1. To understand the concepts of energy, forms of energy, equilibrium and reversibility

2. To learn and apply the first law of thermodynamics

3. To understand the P-V-T behavior of pure fluids

4. To learn the concept of entropy and to apply second law of thermodynamics

5. To study the feasibility of processes

6. To learn thermodynamic analysis of refrigeration and different flow processes

UNIT - I:

Introduction – Scope, Dimensions and Units – Mass, mole, volume, force, temperature, pressure, work, energy, heat, internal energy.

The first law of thermodynamics, Energy balance for closed systems, Thermodynamic state and state functions, equilibrium, The phase rule, The reversible process, enthalpy, heat capacity, Mass and energy balances for open systems, Energy balances for steady state flow processes

UNIT - II:

Volumetric properties of pure substances: P-V-T behaviour, Virial expressions, The ideal gas, Applications of Virial equations , Cubic equations of state - vander walls and Redlich - Kwongg equations, Theorem of corresponding states, generalized correlation – Pitzer correlation.

UNIT - III:

Heat effects – Sensible and latent heat effects, Heats of formation , combustion and reaction, Temperature dependence, heat effects of industrial reactions .

UNIT - IV:

Second law – Statement, Heat engine, Thermodynamic Temperature scale, concept of entropy, mathematical statement of second law, Entropy changes of an ideal gas, Calculation of ideal work and lost work The Third Law of Thermodynamics

UNIT - V:

Refrigeration: The Carnot refrigerator, The vapor compression cycle, choice of refrigerant, cascade systems, absorption refrigeration, Heat pump, Liquefaction process.Thermodynamics of flow processes- Duct flow of Compressible fluids – turbines – compression process.Production of power from heat– The steam power plant, Internal combustion engines, Jet engines

TEXT BOOK:

1. J.M.Smith , H C Van Ness and M.M.Abbott - Introduction to Chemical Engineering

Thermodynamics 6th ed. Tata McGraw-Hill Publishing Company .

REFERENCES:

1. Chemical Engineering Thermodynamics by Thomas E.Daubert

2. Chemical Engineering Thermodynamics, YVC Rao, University publications.

Course Outcomes:

1. To have learnt the fundamental ideas about energy, equilibrium and reversibility. To be able to apply first law to estimate heat and work effects in closed, open and flow systems.

2. To understand PV and PT phase diagrams, ideal gas law and its applications. To be able to estimate heat and work effects for different processes – isothermal, isobaric, isometric, and adiabatic processes.
3. To be to apply second law of thermodynamics to estimate efficiency of a cycle. To have understood the concept of entropy and its estimation.
4. To have learnt different refrigeration cycles and also to be able to calculate their COP.

5. To have learnt the thermodynamic analysis of flow processes.

CH307L MOMENTUM TRANSFER LABORATORY

Instruction Hours/Week: 3(P) Credits: 1.5 Assessment : 40 + 60

Any 10/12 experiments on

Flow Through Straight Pipe, Frictional losses Due To Fittings, Venturi meter , Orifice meter, Flow Through Helical Coil, Characteristics Of Centrifugal Pump, Flow Through Annulus, Frictional Loss Due To Sudden Expansion, Bernoulli's Experiment, Flow Through Packed Bed, Fluidization.

CH308L ANALYSIS LABORATORY

Instruction Hours/Week: 3(P) Credits: 1.5 Assessment : 40 + 60

10 / 12 experiments from

Chemical Analysis - Water(Hardness & total chlorides), Estimation Of Chromium, Analysis of Bleaching Powder, Estimation Of Phenol, Estimation Of Sugars, Analysis Of Vegetable Oils, Analysis Of Soda Ash, Analysis Of Pyrolusite, Analysis of Urea

Instrumental Analysis - .Flurometer, Refractometer, Polarimeter, Conductometric Titration, Viscosity And Flash Point Determination, .Measurement Of pH, Colourimeter, Potentiometric Titration, Fuel Characterization-Calorific Value, Flash And Cloud Points.

CH309S COMPUTER SKILLS

Instruction Hours/week: 1(L) + 2(P) Credits :2 Assessment : 40 + 60

Course Educational Objective (CEOs)

1. Identify basic terms, concepts, and functions of computer system components.
2. To enable the student to use MSWORD.
3. To acquaintwith MSEXCEL and MSPOWERPOINT
4. To familiarizewith browsing the INTERNET and EMAIL

- MS WORD: Text Basics, Text Formatting and saving file, working with Objects.
- MS WORD: Header & Footers, Working with bullets and numbered lists, Tables.
- MS WORD: Styles and Content, Merging Documents, Sharing and Maintaining Document
- MS WORD: Sharing and Maintaining Document, : Proofing the document, Printing
- MS EXCEL: Introduction to Excel, Formatting excel work book
- MS EXCEL: Perform Calculations with Functions, Sort and Filter Data with Excel
- MS EXCEL: Create Effective Charts to Present Data Visually,Analyze Data Using PivotTables and Pivot Charts,Protecting and Sharing the work book
- MS EXCEL: Use Macros to Automate Tasks, Proofing and Printing, Preparation of various data collection forms, Mathematical Calculations using Spreadsheet
- MS POWER POINT: Setting Up PowerPoint Environment, Creating slides and applying themes,Working with bullets and numbering,Working with Objects,Slide show option and print
- INTERNET AND EMAIL: What is Internet, Types of internet networks , Receiving Incoming Messages , Sending Outgoing Messages, Email addressing , Email attachments, Browsing, Search engines , Text chatting, Job Searching.

Course Outcomes (COs)

After completion of the course the student will:

a) The study and use of MS WORD, MS EXCEL , POWER POINT AND Google Forms with their utilization in Chemical engineering project works and personal works

MC310A **CONSTITUTION OF INDIA**

Instruction Hours/Week: 2(L) Credits: 0 Assessment: 0 + 100

Course Objectives: Students will be able to

1. Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.

2. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.

3. To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution

Unit-I

History of Making of the Indian Constitution: History

Drafting Committee, (Composition & Working)

Philosophy of the Indian Constitution: Preamble

Salient Features

Unit-II

- **Contours of Constitutional Rights & Duties:**
- Fundamental Rights
- Right to Equality
- Right to Freedom
- Right against Exploitation
- Right to Freedom of Religion
- Cultural and Educational Rights
- Right to Constitutional Remedies
- Directive Principles of State Policy
- Fundamental Duties.

Unit-III

- **Organs of Governance:**
- Parliament
- Composition
- Qualifications and Disqualifications

- Powers and Functions
- Executive
- President
- Governor
- Council of Ministers
- Judiciary, Appointment and Transfer of Judges, Qualifications
- Powers and Functions

Unit-IV

- **Local Administration:**
- District's Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.
- Pachayati raj: Introduction, PRI: ZilaPachayat.
- Elected officials and their roles, CEO ZilaPachayat: Position and role.
- Block level: Organizational Hierarchy (Different departments),
- Village level: Role of Elected and Appointed officials,
- Importance of grass root democracy

Unit-V

- **Election Commission:**
- Election Commission: Role and Functioning.
- Chief Election Commissioner and Election Commissioners.
- State Election Commission: Role and Functioning.

Institute and Bodies for the welfare of SC/ST/OBC and women

Text Books/References:

1. The Constitution of India, 1950 (Bare Act), Government Publication.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Outcomes:

Students will be able to:

a) Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
b) Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.

c) Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
Discuss the passage of the Hindu Code Bill of 1956.

B. Tech. IV semester Chemical Engineering

CH401B **MATHEMATICS - IV**

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Objectives:

1. This course aims at providing the student with the knowledge on Various numerical methods for solving equations, interpolating the polynomials.
2. Evaluation of Finite Differences And Difference Equations**.**
3. To acquaint the students with different types of numerical methods to solve transcendental equations, derivatives and integrals.
4. To provide suitable and effective methods called Numerical Methods, for differential equations.
5. Evaluation of iterative methods and Finite Difference approximation to derivatives, solutions of Laplace, Poisson equations by iterative methods.

Unit I :

Curve fitting by the method of least squares, Fitting of (i) Straight line (ii) Second degree parabola (iii) Exponential curves, Solutions of Algebraic & Transcendental Equations: Determination of roots of non - linear equations by iterative methods - Falsi position method - bisection method - Newton Raphson method - Multiple roots by Newton Raphson method - Complex roots by Mueller's method.

Solution Of Linear And Non-Linear Algebraic Equations - iterative methods - Gauss elimination with pivotal condensation - Gauss Seidal& Jacobi iterative methods.

Unit-II :

Numerical Interpolation, Integration & Differentiation - Newton's forward& backward interpolation formula - Lagrange's interpolation formula. Numerical differentiation with forward and backward differences, Numerical Integration with Trapezoidal rule, Simpson's 1/3 rule and Simpson's 3/8 rule andRomberg method.

UNIT - III:

Solution Of Ordinary & Partial Differential Equations - Taylor series method - Euler's method - Euler's modified method - Runge Kutta second & fourth order methods - Runge Kutta Gill method - Milne's predictor and corrector methods for first order equations.

Finite Difference approximation to derivatives, solutions of Laplace, Poisson equations by iterative methods.

UNIT - IV:

Random variables, Discrete and Continuous distributions, expectation, variance. Distributions: Binomial, Poisson, Normal and Exponential Properties and applications.

Correlation: curve fitting by method of least squares - Linear, Quadratic and Exponential fitting – Correlation – Rank, Correlation - Regression analysis - Multiple correlation.

UNIT - V:

Testing of Hypothesis –Null and alternate hypothesis, level of significance and critical region-Z-test for single mean and difference of means, single proportion and difference of proportions - t-test for single mean and difference of means - F-test for comparison of variances, Chi-square test for goodness of fit

TEXT BOOK:

1. Higher Engineering Mathematics – B.S.Grewal.
2. Numerical methods by E. Balagurusamy, Tata McGraw-Hill Publishing Co.
3. Numerical Methods for Scientific and Engineering Computation 3rd edition by Jain, New Age International.
4. S P Gupta, Statistical Methods, 38th Edition, Sultan Chand & Sons Educational Publishers, 2009.
5. K V Iyengar et al, Probability and Statistics 2nd Edition, S. Chand & Company Ltd, 2010.
6. S. C. Gupta and V K Kapur, Fundamentals of Applied Statistics, 3rd Edition, Sultan Chand & Sons Educational Publishers.

Course Outcomes: At the end of the course, students will be able to

1. After the completion of course, students will be able to apply numerical methods to solve all type of equations.
2. Derive interpolating polynomials using interpolation formulae.
3. Solve integral equations numerically.
4. Analyse the data and develop skills to solve Algebraic & Transcendental Equations.
5. Derive numerical methods solution of differential equations.To find the Solution of Linear And Non-Linear Algebraic Equations.

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

CH402C PARTICLE AND FLUID PROCESSING

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives :

1. To develop understanding of solids, their characterization, solid handling and mixing.
2. To develop understanding of the principles of communition, milling and size reduction operations.
3. To understand separation of solid mixtures.
4. To understand the different techniques of separation of solid-liquid mixtures.
5. To understand on methods and effect of agitation and mixing of liquids.

Syllabus:

UNIT - I: Characterization of particulate masses

Properties, handling and mixing of particulate solids: characterization of solid particles, properties of particulate masses, storage, transportation and mixing of solids, types of mixers, mixers for cohesive solids, mixers for free flowing solids.

UNIT - II: Size reduction

Principles of comminution, computer simulation of milling, Operations size reduction equipment - crushers, grinders, ultra fine grinders, cutting machines, equipment and operation.

UNIT - III: Mechanical separations -I

Screening, screening equipment, Separations based on motion of particles through fluids, gravity settling processes and centrifugal settling processes, Gas cleaning. Flotation

UNIT – IV:Mechanical separations-II

Filtration – Cake filters - Centrifugal filters, principles of cake filtration and clarifying filters, liquid clarification, principles of clarification, cross flow filtration,

UNIT - V:

Agitation and mixing of liquids: agitation of liquids, circulation velocities, power consumption in agitated vessel, blending and mixing - suspension of solid particles, dispersion operation.

TEXT BOOK:

1. Unit operations of Chemical Engineering (5th ed) Warren L.McCabe, Juliane Smith and Peter Harriott, McGraw Hill.

REFERENCE:

1. Chemical Engineering Vol.I&II, Coulson and Richardson , Pergamon Press.

2. Mechanical Operations for Chemical Engineers by Narayanan & Bhattacharya, Khanna Publishers

Course Outcomes :

1. To be able to determine the Volume surface mean diameter, mass mean diameter, number of particles and types of mixers.
2. To have the knowledge of different types of Crushers, grinders, ultrafine grinders, cutters, to be able to find the power requirement using three crushing laws.
3. To be able to calculate the screening effectiveness .To have understood settling processes and flotation technique.
4. To develop the rate equations for constant pressure and constant volume filtration techniques and also to solve the problems related to these techniques.To have acquired the construction and operation of different filtration, settling and clarifying equipment.
5. To understand the functioning of agitated vessels and to calculate the power consumption.To have the knowledge on different types of turbines, blending and mixing.

CO5		1			1				1			1

CH403C CHEMICAL ENGINEERING THERMODYNAMICS - II

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives :

1. To develop frame work to estimate thermodynamic properties of fluids

2. To systematize the synthesis of mixture properties from pure component properties

3. To develop equilibrium criterion and examine its various forms

4. To study phase equilibria

5. To study chemical reaction equilibria

Syllabus

Unit I :
Thermodynamic properties of fluids
Property relations for homogeneous phases - Residual properties - Two phase systems - Thermodynamic diagrams - Tables - Properties from virial equations - Properties from equations of state - Properties from Pitzer-type correlations

UNIT – II :
Solution thermodynamics
Fundamental property relations - Chemical potential as a criterion for phase equilibrium - Partial properties -Ideal gas mixtures - Fugacity and fugacity coefficient for pure species and component in solutions - Ideal solutions - Excess properties, Liquid phase properties from VLE data, models for excess Gibb's energy, property changes of mixing.

UNIT – III
VLE at low to moderate pressures
Nature of equilibrium - Phase rule, Duhem's theorem, qualitative behaviour, the gamma/phi formulation of VLE, Dewpoint and bubble point calculations, flash calculations.

UNIT – IV
Topics in Phase Equilibria:
VLE from cubic equations of state, VLE from k-value correlations - Equilibrium and stability - liquid-liquid equilibrium (LLE), vapor-liquid-liquid equilibrium (VLLE)

UNIT - V:

Chemical reaction equilibria

Reaction coordinate - application of equilibrium criterion to chemical reactions - standard Gibb's energy change and the equilibrium constant - effect of temperature on equilibrium constant - Evaluation of equilibrium constant - relation to composition - equilibrium conversion for single reactions - phase rule and Duhem's theorem for reacting systems.

TEXT BOOK:

1. J.M.Smith and H C Van Ness, Introduction to Chemical Engineering Thermodynamics

5th ed. McGraw Hill 1996.

2. Chemical Engineering Thermodynamics, YVC Rao, University publication

REFERENCES:

1. Chemical Engineering Thermodynamics by Thomas E.Daubert

Course Outcomes :

1. To be able to develop and use expressions for property estimation. To be able to calculate property values from equations of state.
2. To have learnt the concepts of residual, excess, partial molar properties and property changes of mixing**.** To have understood concepts of ideal solutions, fugacity and activity coefficient.
3. To be able to use modified forms of Raoult's law for non-ideal systems, Dewpoint and bubble point calculations.
4. To be able to make phase equilibrium calculations using Raoult's law. To have learnt the concepts of LLE and VLLE.
5. To have learnt the concept of equilibrium constant and its calculation. To be able to estimate equilibrium conversion of single and simple multiple reactions.

CH404C **HEAT TRANSFER**

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives :

1. To understand different modes of heat transfer and their characterization
2. To understand the transfer mechanism of heat in fluids with and without phase change
3. To learn the principles of radiation heat transfer
4.. To design heat exchange equipment
5. To understand the principles of evaporation and the working of equipment and to learn the principles of crystallization

Unit I : Heat transfer by conduction

Fourier's law - one dimensional steady state conduction- compound resistances in series - plain wall, cylinder, sphere - critical thickness of insulation - Unsteady state heat conduction - one dimensional, semi infinite solid, infinite slab – lumped hat capacity systems

Unit II : Principles of Heat Flow

Principles of heat flow in fluids – heat exchange equipment – parallel and countercurrent flow – energy balances – calculation of overall heat transfer coefficient – log mean temperature difference – single and multiple heat exchangers – correction for LMTD – Fouling Factors – Effective Coefficients for Unsteady State conduction – NTU & Effectiveness Methods.

Unit III : Heat transfer to fluids with out phase change

Concept of hydrodynamic and thermal boundary layers – Forced Convection in laminar flow over plates and in tubes – correlations for heat transfer in turbulent flow – Dimensional Analysis – Heat Transfer at High velocities

Analogy between heat and momentum transfer – Reynold's, Prandtl and Colburn analogies – Transfer in Transition region

Transfer to liquid metals - Natural Convection – Heat transfer over vertical plates and tubes, horizontal plates and tubes

Unit IV : Heat transfer to Fluids With Phase Change & Radiation

Heat transfer from condensing vapors - drop wise and film wise condensation - Nusselt assumptions and derivation of Nusselt equation – Condensation of superheated vapors - effect of non-condensable gases on rate of condensation - heat transfer to boiling liquids

Fundamentals of Radiation heat transfer – laws of black body radiation – radiation between surfaces – view factors – radiant heat exchange between black and non-black surfaces – combined heat transfer by conduction, convection and radiation – radiation shields

Unit V : Condensers & Evaporators

Condensers - boiler and calandria - heat transfer in agitated vessels, heat transfer in packed beds - scraped surface exchangers – Plate Type Heat exchangers – Extended Surfaces
Evaporation : types of evaporators – capacity and economy of evaporators - material and energy balances in single effect evaporators - multiple effect evaporators – methods of feeding

Text book

1. Unit Operations of Chemical Engineering by Warren L.McCabe and Julian C.Smith

Reference Book

1. Heat Transfer by J.P.Holman, McGraw-Hill Publications

Course Outcomes :

1. To be able to calculate the heat transfer flux in one-dimensional heat conduction .To have learnt the concepts of turbulence, boundary layer and analogies.

2. To have understood the construction and flow patterns in heat exchange equipment.

3. To be able to calculate heat flux in natural convection. To be able to estimate heat flux in forced convection.

4. To have understood the concepts of black body, view factors and to be able to calculate radiation heat flux. To be able to handle conduction-convection conduction-convection-radiation heat transfer.

5. To be able to design heat exchangers and condensers. To have understood the functioning of evaporators.

CH405C MASS TRANSFER OPERATIONS – I

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives:

1. To understand the mechanisms of mass transfer – diffusive and convective transport
2. To synthesize the overall resistance for transfer from individual phase resistances
3. To develop the frame work for the design of equipment for staged and continuous contacting devices
4. To learn the construction, operation and inoperable conditions in gas-liquid contacting devices
5. To understand the equilibrium considerations in the operations – absorption/drying/humidification

UNIT - I:

Introduction: Scope of Mass Transfer Operations - Classification of Mass Transfer Operations - Choice of Separation method - Methods of conducting Mass Transfer Operations - design principles.

Diffusion In Fluids : Molecular diffusion - The equation of continuity - Steady state molecular diffusion of Fluids at rest and in laminar flow - Diffusivity of gases and liquids - Applications of molecular diffusion.

Eddy Diffusion - Mass transfer coefficients - Mass transfer coefficients in laminar flow and turbulent flow - mass transfer theories - Mass, Heat and Momentum Transfer Analogies - Mass Transfer data for simple situations.

UNIT - II:

Inter Phase Mass Transfer: Equilibrium – Overall mass transfer coefficients – gas phase & liquid phase controlled situations

Equipment for gas-liquid contact – Description of continuous and stage wise contact equipment – packing for packed columns liquid distribution – mass transfer coefficients in packed columns - inoperable conditions – stage , ideal stage, Point, plate and column efficiency – comparison of plate and packed columns

UNIT - III

Gas Absorption: Equilibrium solubility of gases in liquids - choice of solvent for absorption- Co-current and Counter current flow (one component transferred) – material balance, Minimum liquid - gas ratio for absorbers, Dilute gas mixtures, Absorption factor – Kremser-Brown equations - Determination of number of transfer units and height of transfer unit

UNIT - IV:

Humidification Operations: Vapor - liquid Equilibrium and Enthalpy for a pure substance - vapor gas mixtures, Air-water system - Adiabatic saturation curves, wet bulb temperature – Psychrometric charts – humidification and dehumidification – Operating lines and design of packed humidifiers, dehumidifiers - cooling towers - spray chamber - Evaporative cooling.

UNIT - V:

Drying : Equilibrium - Insoluble solids - Soluble solids - Drying Operations - Batch Drying - Mechanisms of Batch Drying-Thorough Circulation Drying - Continuous Drying -Equipment - Rate of drying

TEXT BOOK:

1. Mass Transfer Operations - Robert E.Treybal (3rd Ed.) McGraw Hill, Kogakusha.

REFERENCE :

1. Principles of Mass transfer and Separation Processes – B. K.Datta - PHI

Course Outcomes :

1. To be able to calculate the flux in cases involving diffusive transfer. To appreciate the contribution of turbulence to transfer and to calculate coefficients and from them, the flux.
2. To be able to differentiate different representations of resistances and to properly integrate them to obtain the overall resistance. To be able to estimate the process parameters like solvent requirement, number of theoretical stages, height and diameter of columns.
3. To understand equilibrium relevant to absorption and to calculate the number of stages, number and height of transfer units.
4. To understand the equilibrium concerned to humidification, various methods of conducting the operation and to design a cooling tower.
5. To understand the mechanism of drying operation and to calculate the time of drying.

CH406C CHEMICAL TECHNOLOGY

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Educational Objectives:

1. To know the difference between unit operations and unit processes.
2. To learn principles of different unit operations like screening, filtration, size reduction, mixing.
3. To learn how to draw flow sheet for a process.
4. To know the industrial production of cements, industrial gases, nitrogen, sulphur phosphorous, glass and ceramic industries.
5. To learn the thermodynamic considerations, engineering problems and economic factors in the production.

UNIT - I

Water Technology: Sources of water - methods of treating fresh water - Desalination - Activated Sludge Process

Fuel and Industrial gases: Natural gas, LPG, Carbon dioxide, Hydrogen, Nitrogen and Synthesis gas.

Chlor-Alkali Industry: Manufacture of Soda Ash , Caustic Soda & Chlorine

UNIT - II

Nitrogen Industries - Synthetic Ammonia, Urea, Nitric acid .Phosphorous Industries: Super Phosphate & Triple Super Phosphate, Phosphoric acid

Sulfur and Sulfuric acid

UNIT - III

Cement- Types and manufacture. Pulp And Paper Industry - Methods of pulping, Production of sulphate and sulphite pulp, production of paper - wet process.

Sugar And Starch Industry - Manufacture Of Cane Sugar, Production Of Starch From Maize

UNIT IV

Oils, fats and waxes: Edible oil - extraction of vegetable oils- Hydrogenation of oils - Methods of production of essential oils .

Soaps and detergents- manufacture of soaps, detergents and glycerin

Manufacture of Industrial alcohol, acetone and butanol, acetic acid, vinegar, Penicillin.

UNIT - V

Synthetic fibers: Manufacture of Rayon, Nylon and polyester fibers.

Plastics: Classification-types of synthetic resins and plastics and their manufacture - Thermosetting resins-thermoplastic resins, oil soluble and modified resins-laminated Plastics.

Rubbers: Classification, natural rubber, monomers for synthetic rubber, manufacture of SBR.

TEXT BOOK:

1. Chemical Process Industries by R.N.Shreve and J.A.Brink Jr. McGraw Hill 5th ed.

REFERENCE:

1. Dryden's Outlines of Chemical Technology by Gop al Rao and Marshall sitting. – Boca Raton

Course Outcomes:

1. Able to differentiate unit operations and unit processes. To Know the basic principles of different unit operations. Able to know constituents of petroleum, and the extraction of petroleum compounds petrol, diesel
2. Can understand the raw materials and production of Ammonia, Urea, Phosphorus industries.
3. Can understand the raw materials, pulp and paper industry, reactions involved and the production of sugar, starch.
4. Get knowledge about alcohol, soaps, edible oils, hydrogenation of oils and extraction of vegetable oils.
5. Can understand the difference between paints and varnishes and about the production. Know the classification of plastics, industrial production of plastics and rubbers.

CH407L PARTICLE AND FLUID PROCESSING LAB

Instruction : 3 hr/ week Credits : 1.5 Assessment 40 + 60

EXPERIMENTS:

1.Sieve Analysis 2.Roll Crusher

3.Ball Mill 4.Rod Mill

5.Pulverizer 6.Cyclone Separator

7.Crystallizer 8.Plate And Frame Filter Press

9.Leaf Filter 10.Hydro Classifier

11.Motion Of Particles Through A Fluid 12.Disk Grinder

CH408L HEAT TRANSFER LABORATORY

Instruction Hours/Week: 3 hr/week Credits: 1.5 Assessment: 40 + 60

Any 8/10 experiments on Double Pipe Heat Exchanger, Heat Transfer through Composite Wall, Thermal Conductivity of Insulating Powder, Heat Transfer from Pin Fin Apparatus, Heat Transfer through Natural Convection, Heat Transfer through Forced Convection, Critical Heat Flux Apparatus, Heat Transfer in Agitated Equipment, Condensation of Steam on Vertical Copper Tube, Radiation heat Transfer.

CH309S **PYTHON PROGRAMMING**

Instruction Hours/Week: 3(L) Credits: 2 Assessment : 40 + 60

Course Objectives:

The objective of the course is to impart to the students:

1. Python syntax and semantics and be fluent in the use of Python flow control and functions.
2. The concepts of Object-Oriented Programming as used in Python.
3. Exposure to various problems solving approaches of computer science in various Domains.
4. Various data structures like lists and dictionaries using python.
5. Introduce Python third- Party Tools for various domains.

UNIT I

Introduction to Python: Features and History of Python, Print and Input Functions, Variables, Keywords, Comments

Types: Numerical Types (int, float, complex), Strings, Boolean, Type Conversion Operators: Arithmetic, Relational, Logical, Bitwise, Assignment, Identity, Membership.

Control Flow: Indentation, if-elif-else, while, for, break, continue, pass, else-with loops.

UNIT II

Functions: Introduction, Required Arguments, Default Arguments, Keyword Arguments, Variable Number of Arguments, Variable Scope and Lifetime, Global Variables, Lambda Functions, Command Line Arguments.

Object-Oriented Programming: Classes and Objects, Built in Class Methods and Attributes, Self, Constructor, Destructor, Inheritance, Data Hiding, Overriding Methods and Overloading Operators.

UNIT III

Data Structures, Files and Exception Handling:

Lists, Nested Lists, List Comprehensions, Tuples and Sequences, Sets, Dictionaries. File I/O: Opening, Closing, Reading and Writing Handling Exceptions, Multiple Except Blocks, Multiple Exceptions in a Single Block, Except Block without Exception, The Else Clause, Raising Exceptions, Built-in and User-Defined Exceptions, The FinallyBlock.

UNIT IV

Modules, Packages and Standard Library:

Introduction Modules, Import and From-Import, Packages in Python, Used Defined Modules and Packages, PIP. The Python Standard Library: Numeric and Mathematical Modules, String Processing, Date & Time, Calendar, Operating System, Web Browser.

Python Third- Party Tools:

Survey of The Most Common 3rd Party Packages: Requests, Numpy/Scipy, Matplotlib/ Pyplot, Pandas, Pillow, Flask/Django/Twisted, Pep8, Scikit-Learn/Nltk, Stanford-Corenlp, Bcrypt, Beautiful Soup, and More.

UNIT V

GUI, Graphics and Applications:

GUI Design with Tkinter: Button, Canvas, Check Button, Entry, Frame, Label, List Box, Menu, Menu Button, Message, Radio Button, Scale, Scrollbar, Text Graphics with Turtle: Motion Control, Pen, Colour, Fill, Multiple Turtles, Reset and Clear.

Text Books:

1. ReemaThareja, Python Programming using problem solving approach, First Edition, Oxford University Press, 2017
2. Mark Lutz,Learning Python, fifth Edition, O‟Rielly,2016

Reference Books:

1. Mark Lutz, Programming Python, Fourth Edition, O‟ReillyMedia,2010.
2. John V.Guttag,Introduction to Computation and Programming Using Python with Applicationto Understanding, PHI.

3. Allen Downey, Think Python: How to think like a Computer Scientist, Green TeaPress.
4. Paul Barry,Head First Python: A Brain-Friendly Guide, Second Edition, O‟Reilly.
5. The Python Standard Library,Python 3.6.5 documentation(Web Resource)https://docs.python.org/3/library/.

Course Outcomes

Having successfully completed this course the students will be able to:

a) Understand the structure, syntax, and semantics of the Python language.
b) Interpret the concepts of Object-Oriented Programming as used in Python.
c) Demonstrate proficiency in handling Strings and File Systems.
d) Implement desktop/Web-based applications using the Python programming language.
e) Boost hireability through innovative and independent learning.

f) MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

B. Tech. V Semester Chemical Engineering Syllabus

CH501C MASS TRANSFER OPERATIONS – II V semester
Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed to chemical engineering students to learn the vapor-liquid equilibrium of mixture of components for the separation. Students can learn various equipments used for the continuous separation of components by considering the physical properties of the mixture by distillation process. Based on the solubility of the components students are able to use liquid-liquid equilibrium of the mixtures for their separation. Various methods are used for the extraction of valuable components present in solids. In this course various membrane separation processes are used for separation of mixture of components based on physical properties of components. Can understand the principles of ion exchange and adsorption process.

Course Educational Objectives:

1. To understand VLE and to learn the different types of distillation operations.
2. To understand the design of continuous fractionating columns in distillation operations.
3. To understand LLE and to learn the design of staged columns for liquid-liquid and solid-liquid extraction and also to learn the construction and operation of different equipment for the said operations.
4. To get a fundamental understanding of membrane separations and solid –liquid leaching operations.
5. To understand the mechanism of adsorption and ion exchange processes

UNIT – I : Distillation – I

Vapor- Liquid Equilibrium - P-x-y and t-x-y diagrams – x-y and H-x-y diagrams - ideal solutions - Raoult's Law, positive and negative deviations from ideality, Minimum and Maximum

boiling azeotropes Steam distillation - Flash vaporization - Differential Distillation – batch distillation with reflux.

UNIT – II : Distillation – II

Continuous Fractionation - Binary systems, Multistage towers - The method of Ponchan and Savarit - The method of McCabe-Thiele - Feed tray location, total reflux, minimum reflux ratio, optimum reflux ratio, use of open steam, multiple feeds, partial and total condensers - Packed bed distillation. – Principles of azeotropic and Extractive Distillation.

UNIT - III: Liquid - Liquid Extraction

Liquid Extraction - Fields of usefulness - Liquid Equilibria - Equilateral Triangular coordinates - Rectangular coordinates - Rectangular coordinates on solvent free basis - Systems of three liquids - One pair partially soluble, two pairs partially soluble - Effect of temperature, choice of solvent. Single stage Extraction - Multistage cross current extraction and continuous counter current multistage extraction with out and with reflux - Insoluble liquids – Equipment for solvent extraction - agitated vessels, Emulsions and Dispersions, Mixer - settler cascades, sieve tray towers. Continuous contact (Differential)contactors - Spray towers - packed towers - Mechanically agitated counter current extractors, Rotating Disc contactors, centrifugal Extractors.

UNIT IV: Leaching

Preparation of the solid - Temperature of Leaching - unsteady - state operation - in-place Leaching, Heap leaching, percolation tanks - Counter current multiple contact (the shanks system), percolation in closed vessels, Filter - press leaching Agitated vessels. –Batch settling - Steady - stage (continuous) operation - Leaching during grinding, Agitated vessel, Thickeners, continuous counter current Decantation, Hydro cyclones, continuous leaching of course solids, classifiers, leaching of vegetable seeds.

Basics of Membrane Separations – classification – capillary and solution diffusion models – retention coefficient – concentration polarization – fouling – membranes (operational requirement – structure and preparation) – components of a typical membrane separation plant – micro filtration – ultrafiltration – reverse osmosis – dialysis – electro dialysis - pervaporation

UNIT – V:Adsorption

Types of adsorption - Nature of Adsorbents - Adsorption equilibrium - single gases and vapors, vapor and gas mixtures, liquids. Adsorption operations - Stage wise operation - Multistage cross current and counter current operation, application of the Freundlich equation, Equipment - Agitated vessels, Fluidized beds, Steady state fixed bed absorbers, adsorption wave, Ion Exchange - Principles of ion exchange, Techniques and applications, Equilibrium Rate of ion exchange.

Text Book:

1. Mass Transfer Operations - Robert E Treybal (3rd ed.) McGraw Hill, Kogakusha.

Reference Books :

1. Bioseparations – Principles and Techniques – B.Sivasankar

2. Principles of Mass transfer and Separation Processes – B. K.Datta - PHI

Course Outcomes:

1. To be able to analyze different phase diagrams – pxy, txy, hxy, bimodal solubility curve and Nxy representations. To be able to calculate flash calculations. To be able to apply Rayleigh's equation (differential distillation).
2. To be able to calculate the number of ideal stages using Ponchon-Savarit and McCabe-Theile procedures. To acquire a fundamental understanding of azeotropic and extractive distillation.
3. To be able to calculate the solvent requirement and number of stages for different contacting patterns like single stage, cross current and countercurrent modes.
4. To be familiar with different constructions of equipment suitable for extraction and leaching.
5. To be able to explain the equilibrium of adsorption and to calculate the material requirement and number of stages for different contacting schemes. To have visualized fixed and moving bed adsorption and regeneration.

CH502C **CHEMICAL REACTION ENGINEERING – I** V semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed for chemical engineering student to understand the principles of chemical reactions, the mathematical rate equations for various types of reactions occurring in process industries. Various types of reactors used in process industries, rate equations for series and parallel multiple reaction can be discussed. The temperature and pressure effects in various chemical reactions can be discussed.

Course Educational Objectives:

1. To provide knowledge on different types of reactions, reaction rate and mechanism
2. To provide knowledge on collection and analysis of batch reactor data for homogeneous reactions
3. To provide knowledge of different types of ideal reactors and to derive their design equations
4. To teach about different reactor configurations, their selection and performance analysis and to provide a foundation on deriving rate expressions for multiple reactions.
5. To teach about the heat effects during the reaction and finding the rate of reaction

UNIT - I:

Introduction: Performance equation, Classification of Reactions, Variables affecting the rate of reaction, Definition of Reaction rate.

Kineticsof Homogeneous Reaction: Concentration - dependent term of a rate equation - Temperature dependent term of Rate equation, Searching for a mechanism.

UNIT - II:

Interpretation of Batch Reactor Data: Constant - Volume Batch Reactor - Integral method and differential method of Analysis of Data. Variable - Volume Batch Reactor - differential and integral methods of analysis of Data. Temperature and Reaction Rate, the search for a rate equation.

Single Ideal Reactor Design - Ideal Batch Reactor - Steady state mixed flow Reactor - Steady state plug flow Reactor - Space time, Space velocity, holding time in flow systems.

UNIT - III:

Design for Single Reactions: Size comparison of Single Reactions - Batch Reactors - Mixed Vs.Plug flow Reactors - First and Second order Reactions - Variations of Reactant ratio for second order reactions - General graphical procedure. Multiple Reactor systems - plug flow Reactors in series and/ or in parallel, Equal size mixed Reactors in series and/or in parallel, mixed reactors of different sizes in series - reactors of different types in series, Recycle reactor (omit auto catalytic reactions).

UNIT - IV:

Design for Multiple Reactions: Reactions in Parallel - in series - successive first order reactions - first order followed by zero order reaction - zero order followed by first order reaction successive irreversible reactions of different orders. Reversible reactions; series/parallel reactions and applications.

UNIT - V:

Temperature and Pressure Effects: Single Reactions - Heats of Reactions from Thermodynamics, Equilibrium constant from Thermodynamics, General Graphical Design Procedure, Optimum temperature progression. Heat effects, Adiabatic and Non-adiabatic operations, comments and Extensions. Exothermic Reactions in Mixed Reactors - A special problem.

TEXT BOOK:
1. Chemical Reaction Engineering (3rd Ed) Octave Levenspiel.

REFERENCES:
1. Chemical Engineering Kinetics (3rd ed) J M Smith.
2. Elements of Chemical Reaction Engineering (2nd) - H.ScottFoggler

Course Outcomes :

1. To be able to write rate expressions for elementary reactions and to study the temperature dependence of reactions.
2. To be able to apply analytical procedures (integral, differential, fractional life, initial velocity methods) to convert batch reactor data in to kinetic expression.
3. To be able to make performance analysis of multiple reactor systems – PFR in series and parallel, CSTRs in series and in parallel, mixed reactors in series.
4. To be able to analyse multiple reactions – series, parallel and series-parallel. To be able to suggest reaction controls for desired product distribution.
5. To be able to estimate heat effects of industrial reactions. To be able to suggest optimum temperature progression.

CH503C **PROCESS DYNAMICS AND CONTROL** V semester

Instruction hours /week: 3 (L) Credits: 3 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed for chemical engineering students to understand the transfer functions for different types of systems in process industries, able to identify different controller elements used in process industries, can draw the block diagrams for control systems and able to learn the stability of systems in process industries. Frequency response of control systems can be studied. Different types of controller arrangements and controller tuning methods are studied.

Course Educational Objectives:

1. To introduce the fundamental principles of system dynamics and response, with emphasis on process systems
2. To introduce the basic features of different controllers and control elements
3. To develop and analyze feedback control loops for stability
4. To introduce the features of advanced control strategies
5. To train the students in the basic approach of modeling a physical process

UNIT I:

Response of first order systems: Physical examples of first order systems, Response of first order systems in series.

UNIT II:

Higher Order Systems: Characteristics, response and transportation lag, Control systems: controllers and final control elements, Block diagrammatic representation.

UNIT III:

Closed loop transfer functions, Transient response of simple control systems Stability, Routh Criterion.

UNIT - IV:

Root Locus: Transient response from locus, Application of root locus to control systems
Introduction to Frequency Response: control systems design by frequency response.

UNIT - V:

Advanced Control Strategies: Cascade control, feed forward control, ratio control, Smith predictor, internal model control, Controller tuning and process identification, control valves.

TEXT BOOK:

1. Process systems Analysis and process Control by D R Coughanowr, 2nd ed. McGraw Hill.

REFERENCES:

1. Chemical Process Control by G.Stephanopolous, Prentice Hall 1998.

2. Computer Control of Industrial Processes, Emenule, S.Savas, McGraw-Hill, London.

Course Outcomes :

1. To be able to model physical systems/processes like thermometer / level systems / manometer. To have acquired the ability to study the response behavior of systems.
2. To be able to suggest an appropriate controller for an application.To develop feed back control loops and reduce it to single block representation for further analysis.
3. To be able to construct and analyze Routh array.
4. To be able to obtain the locus of roots of a characteristic equation. To be able to make stability analysis-based frequency response (Bode plots) approach.
5. To have learnt the basics of advanced control strategies. To have learnt controller tuning rules.

CH504C **MATERIAL SCIENCE** V semester

Instruction hours /week: 2 (L) Credits: 2 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed to chemical engineering students to understand different types of engineering materials, their physical properties and their structures. The phase diagrams, heat treatment of materials can be studied. Different ceramics, composite and nano material can be studied. The corrosion types in materials can be studied.

Course Educational Objectives:

1) To have fundamental knowledge on engineering materials.
2) To study Phase diagrams and its applications and can learn different Heat treatment processes.
3) To have knowledge on Ceramic and composite materials.
4) To study Corrosion, its nature and its prevention
5) To learn a basic view of Nano materials.

UNIT - I: **ENGINEERING MATERIALS**

Classification - levels of structure - properties Mechanical, thermal, electrical, and magnetic properties) - structure - property relationship. Structure of solids - crystalline and non crystalline state - Inorganic solids - Crystal Imperfections (point defects, line defects and surface imperfections, Grain boundaries).

UNIT - II: **METALS AND ALLOYS**

Elastic and Plastic deformations - Re-crystallization - cold and hot working - creep, fatigue and Fracture. Phase diagrams and their applications - phase rule - completely soluble, partially soluble, Insoluble in solid phase, peritectic phase diagrams. Iron - Iron carbide phase diagram. Heat treatment processes - Annealing - quenching and tempering - Age hardening.

UNIT – III :**CERAMIC PHASES AND THEIR PROPERTIES**

Structure of ceramics - Mechanical and electrical properties. Abrasives - silicon carbide various silicates - structure of quartz - uses. Piezo and Ferroelectric material - $BaTiO_3$.

COMPOSITE MATERIALS - Fiber, particle and Plastic reinforced composites. Whiskers. Porosity - Bulk characteristics. Agglomerated materials - concrete - Asphalt and Asphalt mixtures.

UNIT - IV: **CORROSION**

Definition - Electrochemical principles - Environmental effects - oxidizers, Temperature, Agitation (velocity) and polarization. Passivity. Eight forms of corrosion (brief) - Galvanic, Crevice corrosion, Selective leaching, Erosion and Hydrogen damage. Corrosion of metals and Alloys due to sulfuric, hydrochloric nitric, phosphoric and acetic acids. Corrosion prevention and control - Selection of materials - Design principles - Inhibitors - Alteration of environment - Anodic protection. Inorganic and Metallic coatings. Organic coatings.

UNIT - V: NANOMATERIALS

Evolution of nanotechnology - Electron Microscopy – Priniciples of SEM, TEM, SPM and STM - Manipulation of atoms (manipulator – tweezer – nanodots – self assembly – nanolithography) - Nano materials - Plasma arcing - Chemical Vapor Deposition - Sol gel - Electrodeposition - Ball milling - Applications of Nanomaterials

TEXT BOOKS:

1. Elements of material science by Van Vlack L.R. Addison Wesley Publishing Co.
2. Corrosion Engineering by Mars G.Fontana
3. Nanotechnology : Basic Science and Emerging Trends – Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons and BurkhardReguse, Overseas Press

REFERENCES :

1. Material science and Engineering by V.Raghavan.
2. Material Science by William Smith

Course Outcomes:

1. Able to understand classification, properties and the structures of Engineering materials. Able to have knowledge on Crystal imperfections.
2. To learn various deformations regarding Creep, Fracture, Cold and Hot working.Able to understand Phase diagram and its applications. To learn various heat treatment process regarding Annealing, Quenching and Tempering.
3. Able to understand the Mechanical and Electrical properties of Ceramic materials. Able to understand various forms of Composites.
4. Able to learn various forms of Corrosion. Able to have knowledge on Corrosion prevention and control.
5. Able to have knowledge on Evolution of Nanotechnology, Electron Microscope and its applications.

CH505E **INDUSTRIAL MANAGEMENT** V semester

Instruction hours /week: 2 (L) Credits: 2 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed for students to understand the functions of management at various levels of an organization. Plant layout and the factors influencing production are also discussed. Elements of cost, quality control and plant maintenance are also discussed.

Course Objectives:

1. To understand the concept of management, administration, organization, objectives, nature, scope, role, responsibilities & approaches of a management.
2. Enable the students to be educated with planning/production and plant layouts, studying about strategies of material handling and equipment's, selection of site locations andStudy PPC through PERT/CPM.
3. Able to familiarize the basic cost concepts, allocation and control of various costs and methods of costing, purchasing, inventory control systems, EOQ models, etc.
4. Understand the concept of control charts, TQM concepts towards improvement of quality through quality improvement techniques.
5. Gain personal and professional insight intoplant Maintenance in an Industry, personnel management, exposure to the industrial relations and related aspects prevailing in industries and various Labor Legislations applicable to businesses.

UNIT:I

Administration, Management and Organisation, Scientific management, functions of management, principles of management, types of organization/Principles for organization, enterpreneurship - Concept, need development of enterpreneual talents, pitfalls and steps for successful enterpreneurship.

UNIT - II:

Plant location, location factors, plant layout, objectives, types of lay outs, material handling, objectives, equipment and factors influencing their selection.

Production planning and control - objectives and functions, types of production systems - project scheduling: Introduction to PERT/CPM Techniques,

Marketing management – introduction and functions.

UNIT - III:

Elements of cost - methods of allocation of overhead charges - outlines of financial cost and cost accounting - methods of costing and control - sources of finance.

Purchasing - objectives, source selection and vendor rating - stores management - inventory management, basic EOQ model and inventory control systems – ABC Analysis

UNIT - IV:

Quality – Control charts – Control charts for Variables (X and R charts) – Control charts for attributes (p and C charts only) - acceptance sampling plans(single sampling only) - OC curve and its characteristics – Reliability - Total Quality Management - Quality costs – Quality Circles – Six-sigma concept – Quality improvement techniques – Introduction to ISO-9000

UNIT - V:

Plant Maintenance – need and Objectives – types of maintenance – safety in industries – principles of accident prevention in chemical industries

Personnel Management - functions - role of personnel manager -concepts of job evaluation and merit rating- Factories act - Industrial disputes - Collective bargaining - labor participation in management .

Text Books:
1. Management for business and industry - Claude S George Jr.
2. Industrial Engineering and Management - O.P.Khanna

Reference Books:
1. Production Control - Moore
2. Production -operation Management - Adam &Eberts.
3. Operations management - Joseph G. Marks.

Course Outcomes:

1. Understand the evolutionary development of management thought, general principles of management and conceptof entrepreneurship.
2. Able to identify and design plant location, plant layout, material handling systems and apply forecasting and PPC techniques to production systems.
3. To realize the importance of significance of quality, manage quality improvement teams and identify requirements of quality improvement programs for various industries.
4. Able to construct an operating characteristic curve for various sampling plans, construct and interpret various charts and apply quality improvement techniques in real world situations.
5. Understand the philosophy and basic concepts of quality improvement, design, use, and interpret control charts for variables, attributes, and quality improvement techniques.

V Semester Chemical Engineering Electives Syllabus

CH506C **INDUSTRIAL SAFETY& HAZARD ANALYSIS** V semester
Instruction hours /week : 3 Credits : 3 Assessment: 40+ 60

Course Description:

This course is designed to chemical engineering students to understand the importance of safety in process industries. Various government regulations to be followed in process industries can be learned. Safety measure to be taken when any accident took place in process industries and various software techniques to identify the range of damage to the process industries are studied.

Course Objectives

1. To learn about accident and loss statistics, safety concepts
2. To educate about industrial hygiene, evaluation and control of toxic releases
3. To give knowledge about fire and explosions, prevention methods and designs
4. To know about relief systems like types, relief sizing for different services
5. To educate about hazards identification and different hazop studies.

UNIT – I

Introduction: Safety concepts and programs, Engineering ethics – Accident and loss statistics – Acceptable risk public perceptions – Nature of the accident process and inherent safety.

Toxicology: Methods of entry of toxins in to biological organisms and their effects – Elimination of toxicants from Biological organisms – Toxicological studies – Thresh hold limits – models for dose and response curves.

Unit – II

Industrial Hygiene: Government regulations – process safety and risk management. Plan – Industrial hygiene identification, evaluation and control toxic release and dispersion models; important source models dispersion models of puff with no wind and wind pubb with no wind and with source on ground - pasquill – Gifford model – worst case conditions – effect of release momentum and Buoyancy and release mitigation.

Unit – III

Fires and Explosions : The fire triangle – distinction between fires and explosions – definitions – Flammability characteristics of liquids and vapors – Flam mobility diagram ignition energy – Auto ignition and adiabatic compression – ignition sources – sprays and mists - explosions and their characteristics – damage to people and property – fires explosion - prevention methods and designs.

Unit – IV

Relief concepts – definitions – location of relieves – Relief types, scenarios data for sizing and relief systems relief-sizing for liquid and gas services – rupture disc relieves – two-phase flow during run away reaction relieves – deflagration venting for dust and vapor explosions – venting for fires external to process vessels – venting for thermal expansion of process fluids.

Unit – V

Hazard Identification - Check lists – Surveys HAZOP and HAZAN Studies – safety reviews – Review of probability theory – Event trees – Fault trees – QRA and LOPA analysis – Accident Investigations with typical case histories.

Text Book:-

D.A. Crowl and J.F.Louvar – Chemical process safety (Fundamentals with applications) Printice Hall (2002)

References:-

1. H.H.Faweett and W.S.Wood – Safety and accident prevention in chemical operations, 2nd edn, John wiley and sons, 1982.
2. Coulsion and Richardson – Chemical Engineering – R.K.Sinnot, Vol-6, Butterworth – Heinmann Ltd., 1996.

Course Outcomes: At the end of the course, student will be able to

1. Knows about different types of accidents and loss statistics, risk to public life and safety measures to be taken
2. Is able to understand about government regulations of industrial hygiene , identification of hygiene evaluation and control of toxic releases
3. Able to learn difference between fire and explosion, flammability characteristics of liquids and vapors
4. Knows about relief definition, types, relief sizing for liquid and gas services and about rupture disc relieves
5. Have knowledge about hazard, surveys of hazard and different hazop studies and Can understand QRA and LOPA analysis, event trees, fault trees, accident investigations

CH506C **ENERGY ENGINEERING** V semester

Instruction hours /week : 3 Credits: 3 Assessment: 40+ 60

Course Description:

This course is designed to chemical engineering students to understand the energy consumption at various sectors and to identify various sources of alternative energy. Students can identify various techniques for renewable energy sources.

Course Educational Objectives:

1. To understand the present situation of energy supply and consumption rate in the world and India.
2. Make the students to have knowledge on alternative energy sources like solar energy,nuclear energy resources, and hydrogen energy and non-conventional energies like gobar gas plants, wind energy, ocean energy and geothermal energy.
3. To understand the importance of fuel cell and their working
4. To understand the renewable energy sources like wind energy.
5. Students will learn principles of conservation and audit,to get knowledge on economic concept of energy.

UNIT - I:

Scenario – Energy Consumption as a measure of prosperity – World energy future – Energy consumption (world & India) Energy Sources and its availability

Fossil fuels - Coal and coke - Occurrence, preparation, classification

Petroleum and natural gas - Constitution, occurrence, sources and production.

Processed fuels - Water gas, Producer gas, Refinery gas, LPG.

UNIT - II:

Solar energy– Solar radiation at earth's surface – Solar energy collectors – Flat plate collectors, Concentrating collectors, non concentrating collectors Storage systems – Solar pond, extraction of thermal energy, applications . Applications of Solar Energy and conversion methods.

UNIT - III:

Chemical energy sources – Fuel Cells – Classification – Types – Applications

Nuclear energy – Uranium as Energy source, types of reactors – sources in India, Nuclear Fuel Complex

Hydrogen energy – Introduction – Storage – Transportation – Utilization of Hydrogen gas – Hydrogen as an alternative fuel

UNIT - IV:

Other non-conventional energy sources – Gobar gas plants - Principle, construction and working – KVIC Plant - Impact on rural development -

Wind energy - Introduction – Wind energy conversion system – classification - advantages & disadvantages – applications – storage

Ocean energy – Ocean Thermal electric conversion – open cycle, closed cycle – Utilization

Geothermal energy – Introduction – Geothermal sources – hydrothermal sources – advantages & disadvantages – applications

UNIT – V :

Energy conservation - Economic concept of energy – Principles of conservation and audit – cogeneration – heat recuperators – regenerators – heat pipe – heat pump

REFERENCE:

1. Conventional Energy Technology – Fuels an Chemical Energy by S.B.Pandya, TMH
2. Energy Resources, Demand and Conservation (with special reference to India) by ChamanKashkari, TMH (1975).
3. Solar Energy Utilization, G.D.Rai, Khanna Pub. (1984).
4. Non-conventional Energy Sources G.D.Rai, Khanna publications.
5. Energy Conservation and Utilization by JerroldH.Krentz, Allyn and Bacur Inc1976.
6. Elements of Energy Conservation by Rused C.K, McGraw-Hill

Course outcomes

1. Students will be able to understand present situation of energy resources
2. Students will be able to get knowledge on solar energy collectors ,Students will come to know applications of solar energy and conversion methods .
3. Able to understand utilization of Hydrogen energy, Have the knowledge on fuel cells
4. Able to implement principles and working knowledge of Gobar plants, Will have the knowledge on wind energy and its applications, Acquired knowledge on ocean thermal electric conversion.
5. Acquired basic knowledge on economic concept of energy and principles of conservation and audit.

CH506C **INDUSTRIAL EFFLUENT TREATMENT** V semester

Instruction: 3 hr/week Credits: 3 Assessment: 40+ 60

Course Description:

This course is designed for chemical engineering students to understand the various laws for the protection of environment. Types of pollutions, causes for pollution and different methods used for the mitigation of pollution can learn by the students.

Course Educational Objectives:

1. Develop and apply high performance structural materials ,systems and Improve the reliability, performance, and disaster-resistance of water supplies, treatment processes, and distribution systems
2. Create new engineering materials to improve the performance of infrastructure and Characterize and mitigate natural and man-made hazards
3. Improve fundamental knowledge of the inter-relationships between the built environment and natural systems
4. Develop the technological innovations needed to safeguard, improve, and economize infrastructure and society
5. Pursue lifelong learning through continuing education and/or advanced degrees in environmental engineering or other related fields.

UNIT - I:

INTRODUCTION TO ENVIRONMENT - Environmental pollution - causes and effects - Legislation for environmental pollution control - water act 1974 and clean air act 1981.Waste water sources - domestic, municipal and industrial - characterization - treatment requirements, Analysis of pollutants.

UNIT - II:

WASTE WATER TREATMENT - Removal of BOD- biological treatment- activated sludge process, aerobic and anaerobic processes, Neutralization and clarification, etc., special separations such as adsorption, ion exchange, reverse osmosis, electro dialysis.

UNIT - III:

POLLUTION CONTROL FOR SPECIFIC POLLUTANTS – Removal of Chromium, phenolic effluents, particulate matter, sulfur dioxide, oxides of nitrogen, Pollution control aspects of fertilizer industries, petroleum refinery and petrochemical units and miscellaneous industries.

UNIT -IV:

AIR POLLUTION - Types of pollutants and their effect on vegetation and materials - meteorological factors - air quality - control methodologies for air pollution, Solid waste management - Characteristics of municipal solid waste and hazardous materials - collection and transportation - treatment methods - land filling, incineration - recovery and disposal.

UNIT - V :

HAZARD WASTE TREATMENT: Types - Sources, properties of hazardous waste. Primary, secondary & tertiary treatment for liquid wastes, treatment of gaseous wastes. Conventional/modern unit operations for separations, bio-remediation.Physico chemical and biological treatment. Case studies; CN, HCN, phenolics.

6. Industrial Effluent Treatment Vol.2 J.K.Walters&A.Wint Applied Science publishing Ltd. London.
7. Treatment of Hazardous wastes Noyes Data corp. NJ (1983).

COURSE OUTCOMES:

1. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability.
2. An ability to recognition of the water treatment processes and control methodologies for air pollution. An ability to use different techniques for hazard waste treatment. Able to understand about removal of BOD, Chromium and Particulate matter.
3. An ability to know about the main sources of different types of pollutions and control methods, Student can reach to reduce the pollution control aspects of fertilizer industries, petroleum refineries.
4. An ability to know types of air pollution and their effect on vegetation, control methodologies for air pollution. Characteristics of municipal solid waste, its treatment methods.
5. An ability to apply knowledge of biological treatment methods and case studies for hazard waste treatments like CN, HCN and heavy metals. An ability to design the equipment for removal of particulate matter from effluent gases.

CH507L MASS TRANSFER OPERATIONS LAB V Semester

Instruction : 3hr/ week Credits:1.5 Assessment: 40 + 60

1. Diffusion In Still Air
2. .Diffusion Through Porous Wall

3. Surface Evaporation
4. Wetted Wall Column
5. Vapour- Liquid Equilibrium
6. Liquid-Liquid Equilibrium
7. Humidification/Dehumidification in Packed Column
8. Continuous Drying
9. Differential Distillation
10. Absorption in Bubble Column
11. Spray Extraction Column
8. Ion-Exchange Column
12. Absorption in Packed Tower

CH508L PROCESS DYNAMICS AND CONTROL LAB V Semester

Instruction hours /week : 3 (P) Credits: 1.5 Assessment: 40 + 60

1. Characteristics of Control Valves
2. Dynamics of Liquid Filled Manometer
3. Dynamics of Mixing Process
4. Study of Two Interacting Liquid Level Systems
5. Characterization of Liquid Level System
6. Dynamics of Stirred Tank with Heat Transfer
7. Study of Temperature Control Loop
8. Characteristics of I/P Converter
9. Response of Pressure Vessels
10. Dynamics of Thermometer

CH509S COMPUTATIONAL TECHNIQUES LAB V Semester

Instruction : 3hr/ week Credits: 2 Internal Assessment: 100

Exposure to MAT Lab with the following

1. Euler's Method

2. Runge-Kutta Fourth Order Method
3. Regular Falsi Method
4. Newton Raphson Method
5. Newton Raphson Multiple Roots Method
6. Newton Forward Interpolation Method
7. Newton Backward Interpolation Method
8. Lagranges Interpolation Method
9. Jacobi Iteration Method
10. Gauss-Siedel Iteration Method

MC510A Universal Human Values V Semester
Instruction: Hours/Week: 2L Credits: 0 Internal Assessment: 100

Pre-requisites/co-requisites: None.

COURSE DESCRIPTION:

The methodology of this course is universally adaptable, involving a systematic and rational study of the human being vis-à-vis the rest of existence. It is free from any dogma or value prescriptions. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with and within the student himself/herself finally.

COURSE OBJECTIVES:

1. To develop a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. To understand (or developing clarity) the harmony in the human being, family, society and nature/existence.
3. To strengthen self-reflection and to develop commitment and courage to act.
4. To understand social responsibility of an engineer.
5. To appreciate ethical dilemma while discharging duties in professional life.

COURSE CONTENT:

UNIT I: Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly - A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

UNIT II: Understanding Harmony in The Human Being - Harmony in Myself! :
Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility (Sukh and Suvidha). Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer).Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health.

UNIT III: Understanding Harmony in The Family and Society- Harmony in Human-Human Relationship: Understanding harmony in the Family - the basic unit of human interaction. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness (Ubhay-tripti); Trust **(Vishwas)** and Respect **(Samman)** as the foundational values of relationship. Understanding the

meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution (Samadhan), Prosperity (Samridhi), fearlessness (**Abhay**) and co-existence as comprehensive Human Goals.Visualizing a universal harmonious order in society- Undivided Society (AkhandSamaj), Universal Order (SarvabhaumVyawastha) - from family to world family.

UNIT IV: Understanding Harmony in The Nature and Existence - Whole Existence as Coexistence: Understanding the harmony in the Nature. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature.Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT V: Implications of The Above Holistic Understanding of Harmony on Professional Ethics: Natural acceptance of human values. Definitiveness of Ethical Human Conduct.Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

COURSE OUTCOMES: On completion of this course, the students will be able to

1. To become more aware of themselves, and their surroundings (family, society, nature)
2. Distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
3. Understand the role of a human being in ensuring harmony in society and nature.
4. To become sensitive to their commitment towards what they have understood (human values, human relationship and human society)
5. Distinguish between ethical and unethical practices, and start working out the strategy to actualize a harmonious environment wherever they work.

B. Tech. VI Semester Chemical Engineering Syllabus

CH601C CHEMICAL REACTION ENGINEERING – II VI Semester
Instruction hours /week: 3 (L) Credits: 3 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed to chemical engineering students to understand the reasons for non-ideality of reactor used in process industries, can able to identify the types of reactions occurring and the rate controlling mechanism in solid-fluid reactions. Types of catalysts and mechanism of catalyst in chemical reactions can be identified. Adsorption phenomena and types of adsorption isotherms can be studied.

Course Educational Objects:

1. To develop a general methodology of combining reaction chemistry and chemical engineering concepts,
2. To optimize variety of systems where modeling or engineering of reactions is needed.
3. To understand the suitability and performance characteristics of different types of reactors like packed bed reactors mixed reactors
4. To teach various types of flows like Ideal flow, Non-Ideal flow and mixing of fluids
5. To understand the mechanism of solid Catalyzed reactions and fluid –fluid reactions

UNIT - I: Non Ideal Flow

Residence time Distribution of fluid in Vessels - E curve, the age distribution of fluid leaving in Vessel, Experimental methods, the F curve the C curve Relations among F, C and E curves, mean time for closed vessels, useful mathematical tools, ways of using Age distribution information. Conversion directly from Tracer information - linear process. Models for Non ideal flow - Segregation model, Dispersion Model, Tanks in series Model, Diagnosing ills of operating Equipment. Chemical reaction and dispersion.Mixing of fluids - self mixing of a single fluid and Mixing of two miscible fluids.

UNIT - II: Heterogeneous processes, catalysis and adsorption:

Heterogeneous Processes - Global Rates of Reaction, types of heterogeneous reactions. Catalysis - The nature of catalytic reactions, the mechanism of catalytic reactions.
Adsorption - Physical adsorption and Chemical Adsorption. Adsorption Isotherms, Rates of Adsorption. Solid catalysis - Determination of physical properties - Surface Area, Void volume, solid density, pore volume distribution.Classification of catalysts - Catalyst preparation - promoters and inhibitors, Catalyst deactivation.

UNIT - III : Solid - Catalyzed Reactions:

The Rate Equation Rate of Adsorption, Desorption, Surface Reaction, Rate of equations in terms of Fluid - phase concentrations at the catalyst surface - film resistance controls, surface phenomenon controls, Qualitative analysis of rate equation, qualitative predictions from Active - site theory, Quantitative interpretation of kinetic data, pore diffusion resistance important, diffusion in single cylindrical pores, diffusion porous catalysts, heat effects during reaction, combination of resistances for isothermal particles. Experimental methods

for finding rates - Comparison of Experimental Reactors, Determination of controlling resistances and the rate equation.

UNTI - IV : Fluid- Fluid Reactions:

The rate equation, kinetic regimes for Mass Transfer and Reaction, Rate equations for instantaneous fast, slow, intermediate and infinitely slow reactions. Hatta number and enhancement factor for first order reactions, tower reactor design.

UNIT - V : Fluid particle non-catalytic reactions;

Selection of a model - unreacted core model for spherical particles of unchanging size - diffusion through gas film controls - diffusion through ash layer controls - chemical reaction controls - rate of reaction for shrinking spherical particles - chemical reaction controls - gas film diffusion controls - determination of the rate - controlling step - application to design.

Text Books:

1. Levenspiel O Chemical Reaction Engineering 3rd ed. John Willey
2. 2. Smith J.M. Chemical Engineering Kinetics 3rd ed. McGraw Hill Newyork

Reference Books:

1. Elements of Chemical Reaction Engineering by H Scott Fogler, 2nd ed. PHI 1992

Course Outcomes:

1. Residence time Distribution of fluid in Vessels, the F curve the C curve Relations. Formulate a residence time distribution from tracer experiment results and use it to predict conversion in a non-ideal reactor.
2. Write reaction rate equations for common types of homogeneous and heterogeneous reactions. Physical adsorption and Chemical Adsorption.
3. Identify the mechanisms involved in a heterogeneous reaction and formulate an effective rate equation.
4. Calculate the impact of changing solid (or fluid) properties on the conversion of a heterogeneous reaction.
5. Fluid particle non-catalytic reactions.Unreacted core model for spherical particles, chemical reaction controls.

CH602C **TRANSPORT PHENOMENA** **VI Semester**

Instruction hours /week: 3 (L) Credits: 3 Assessment: 40 + 60

COURSE DESCRIPTION:

This course is designed to chemical engineering students to understand the fluid flow dynamics in different conduits. Students are able to apply the fundamental mass, energy, and momentum balance equations to identify the flow conditions. They can able to apply boundary conditions for any flow system.

Course Educational Objectives

1. Study the fluid dynamics, heat transfer and mass transfer together at the introductory level.
2. Carry out macroscopic mass, momentum and energy balance to solve engineering problems related to fluid and heat flow laminar flow.
3. Give an idea about simple flow problems involving Non-Newtonian models and turbulent flows.
4. Perform dimensional analysis of equation of motion and energy, time smoothed operations.
5. Analyze flow past solid surface, through packed bed and in fluidized beds and they can able to Focus on diffusivity and mechanism of mass transport, diffusion through a stagnant gas film and falling film

UNIT – I : Introduction to momentum transport - Newton's law of viscosity - pressure and temperature dependence of viscosity of liquids and gases, molecular theory of gases. Velocity distributions in laminar flow, shell momentum balances and boundary conditions, flow of a falling film - flow through circular tube and annulus - adjacent flow of two immiscible liquids.

UNIT – II : Equations of continuity and motion - Application of Navier Stokes equation and Euler equation for laminar - steady flow problems, flow through circular tube - falling film with variable viscosity - tangential annular flow of a Newtonian fluid - shape of the surface of a rotating liquid - dimensional analysis of the equation of change - Velocity distribution in turbulent flow, fluctuations and time smoothed quantities - time smoothing of equations of change for an incompressible fluid, empirical expressions for the turbulent momentum flux.

UNIT – III : Inter-phase transport in isothermal systems, Definition of friction factors - friction factors for flow in tube - pressure drop calculations, friction factors for flow around spheres - packed columns. Macroscopic mass, momentum and mechanical energy balances, Estimation of friction loss - pressure rise and friction loss in a sudden expansion, performance of a liquid - liquid ejector - power requirements for pipe line flow.

UNIT – IV : Energy transport by steady state conduction - Thermal conductivity mechanism of energy transport - Fourier's law - effect of temperature and pressure on thermal Conductivity.
Temperature distribution in solids and in laminar flow, shell energy balances - boundary conditions, heat conduction with an electrical heat source - viscous heat source - heat conduction through composite wall, addition of resistances - forced convection and free convection. Interphase transport in non-isothermal systems, Heat transfer coefficients - forced convection in tubes and around submerged objects - heat loss by free convection from a horizontal pipe - condensation of pure vapors on a solid surface.

UNIT – V : Diffusivity and mechanism of mass transport, definition of concentration, velocities and mass fluxes - Fick's law of diffusion -temperature and pressure dependence of mass diffusivity, shell mass balances, boundary conditions and applications diffusion through a stagnant gas film - diffusion with heterogeneous and homogeneous chemical reactions. Diffusion into falling - liquid film.

Text Books:

1. Transport Phenomena by R.B. Bird, Warren E. Stewart and Edwin N. Lightfoot, Wiley International Editors, II Edition, Chemical Engineering Series. 2005

Course Out comes:

1. Have the knowledge of derivations of the momentum, heat, mass flux distributions and also velocity, temperature, concentration distributions for various systems.
2. Able to Solve continuity, Navier-Stokes and energy equations to analyze engineering problems related to Newtonian fluid flow laminar flow,Perform dimensionless forms of three transport phenomena.
3. Educate about the formation and calculation of fluid friction in pipes, conduits and around sphere.
4. Know the different types of heat transfer coefficients and performance of liquid – liquid ejector.Have the knowledge of temperature, pressure dependence of viscosity, thermal conductivity and mass diffusivity.
5. Understand the diffusion with homogeneous and heterogeneous chemical reaction.

CH603C PLANT DESIGN AND PROCESS ECONOMICS VI Semester

Instruction hours / week: 3 hr/week Credits : 3 Assessment : 40 +60

Course Description:

This course is designed for chemical engineering students to understand the concepts of plant design, layout and safety majors to be taken in chemical industries. Students are able identify piping patterns in industries. Can be able to calculate the cash flow patterns by using different methods. Students can learn the various replacement methods used to identify the cost of equipments.

Course Objectives:

1. To understand the general overall design considerations and practical design considerations
2. To understand the plant location ,plant layout, plant operation and control and patent considerations
3. To understand the process design development
4. Gives an idea on time value of money and cash flow patterns
5. It gives an idea on analysis of cost estimation and to determine profitability, alternative investments and replacements

UNIT - I :

Introduction – Chemical Engineering Plant Design-General Overall Design Considerations – Practical Considerations in Design - Engineering Ethics

General Design Considerations – Health and Safety hazards – Loss Prevention – Environmental Protection Plant Location – Plant Layout – Plant Operation and Control – Patent Considerations

UNIT - II :

Process Design Development – Development of Design database – Process Creation – Process Design – Process Flow Diagrams – Piping and Instrumentation Diagrams – Vessel and Piping layout – Equipment Design and Specifications

UNIT - III :

Interest, Time Value of Money, Taxes , and Fixed Charges – Interest – Cost of Capital – Time Value of Money – Cash Flow Patterns – Compounding and Discounting factors – Income taxes – Fixed Charges

UNIT - IV:

Analysis of Cost Estimation – Cash flow for industrial Operations – Factors affecting investment and production costs – capital investment – Estimation of capital investment – Cost Indexes – Cost components in Capital Investment – Methods for estimating capital investment – estimation of revenue – Gross Profit, Net profit and cash flow - contingencies.

UNIT - V:

Profitability, Alternative investments and Replacements – Profitability Standards – Methods for calculating Profitability – Alternative Investments – Replacements – Practical factors in alternative investment and replacement analysis

Text Books:

Plant Design and Economics for Chemical Engineers , 5 th Ed. – Max S.Peters and Klaus D. Timmerhaus and Ronald E.West – McGraw Hill

References :

1. Chemical Engineering Plant Design by Vilbrandt and Dryden, McGraw Hill Intl.
2. Process Engineering Economics by H.E. Schweyer McGraw Hill Co.

Course Outcomes:

1. Students will have knowledge to understand design considerations and engineering ethics. Students able to understand plant location, plant lay out, plant operation and control in a profitable way.
2. Students able to design process flow diagrams, piping and instrumentation diagrams and vessel and piping layout.
3. Students will have the knowledge on interest, time value of money and cash flow patterns useful for cost estimation.
4. Students will have an idea on analysis of cost estimation involves capital investments, estimation of revenue, and cost indexes, students will come to know factors affecting investment and production costs.
5. They will able to find out the alternate investments and replacements, it will also helps the students to understand profitability standards and methods for calculating profitability.

Electives Syllabus

CH604C	**PROCESS INSTRUMENTATION**	**VI Semester**
Instruction: 3L	Credits : 3	Assessment : 40 +60

Course Description:

This course is designed to chemical engineering students to understand various instruments used in process industries to measure the parameters like temperature, pressure, level, composition of various mixtures.

Course Educational Objectives:

1. To learn basic structure and characteristics of measuring elements
2. To learn the construction, working and features of instruments suitable for temperature measurement
3. To learn construction and operation of pressure measuring instruments.
4. To learn construction and working of liquid-level measuring instruments.
5. To understand the utilization of different instruments like Refractometers, spectrometers and to give knowledge about recording, indicating, signaling type instrument.

UNIT - I:

Elements of instruments, static and dynamic characteristics, basic concepts of response of first order type instruments,

Temperature Measurement : mercury in glass thermometer, bimetallic thermometer, pressure spring thermometers, static accuracy and response of thermometers, thermoelectric temperature measurement, resistance thermometer bulbs and circuits, radiation receiving elements, radiation, photoelectric and optical pyrometers.

UNIT - II:

Composition Analysis, spectroscopic analysis by absorption, emission, mass and color measurement spectrometers, gas analysis by thermal conductivity, analysis of moisture, gas chromatography, refractometer.

UNIT - III:

Pressure Measurement - liquid column manometers, measuring elements for gauge pressure and vacuum, indicating elements for pressure gauge, measurement of absolute pressure, measurement of pressure in corrosive liquids, static accuracy and response of pressure gauges.

UNIT - IV:

Measurement of Head & Level: Head, density and specific gravity - direct measurement of liquid level, pressure measurement in open vessels, level measurements in pressure vessels, measurement of interface level, density measurement, level of dry materials.

UNIT - V:

Flow Measurement : Measurement of Head flow meters, area flow meters, open channel meters, viscosity meters.

Recording instruments, indicating and signaling instruments, transmission of instrument reading, control center, instrumentation diagram, process analysis.

TEXT BOOK:

1. Industrial Instrumentation by Donald P. Eckman, Wiley Eastern, 1950.

REFERENCE:

1.Principles of Industrial instrumentation by Patranabis, TMH.

Course Outcomes :

1. Can understand the basic for measuring device of temperature
2. Can able to measure the composition of the mixture with different analytical instruments
3. Can understand different instrument for pressure measurement of different liquid and elements of pressure measuring device
4. Can understand the level measurement device in the industries
5. Can understand the flow measuring device and various system of control unit in various plant

CH604C POLYMER SCIENCE AND ENGINEERING VI Semester

Instructions : 3L Credits: 3 Assessment: 40+ 60

Course Description;

This course is designed for chemical engineering students to understand various types of polymer materials, various methods for the preparation of polymer components

UNIT - I:

Classification of Polymers, Functionality, Mechanisms of Polymerization, Chair Polymerisation - Free radical, Ionic and cationic Polymerisation - Step polymerization methods. Stereoisomerism in Polymers, Chemicals and Geometrical structures in Polymers.Block and Graft Polymers. Molecular weight of Polymers - weight average, number average and viscosity average molecular weight. Principles and calculations for determination of the molecular weights - Osmometry, Ebulliometry, Light scattering, ultracentrifugation, End group Analysis and viscosity methods.

UNIT II:

Thermodynamics of Solubility of polymers.Transition in polymers.Crystallinity in Polymers.Polymer Degradation method.Kinetics of Polymerization Reactions– Free radical, Ionic Polymerization and step polymerization reactions. Derivation of rate equations and related numerical problems.

UNIT-III:

Polymerization Methods - Bulk, solution, suspension and emulsion polymerization. Comparison of Polymerization methods.Fabrication methods - Compounding Injection molding, Extrusion blow, blow extrusion, calendaring, Rotational molding, Thermoforming and vacuum forming.Polymer processing and Rheology: Non-Newtonian flow, Viscosity of Polymer solutions and suspensions, Constitutive, equations; Capillary Rheometer, Couette Rheometer, Cone and Plate Rheometer, Rheometric characterization of polymer solution and melts.

UNIT-IV:

Brief description of individual polymers.Reaction equations, brief process description with a schematic flow sheet, physical properties and uses of the following polymers.

Individual Polymers**:** Thermosets: Phenol Formaldehyde, Urea formaldehyde, Polyester and epoxy resins, Polyrethane. Thermo plastics: Polyethylene, Polypropylene, PVC, Polystyrene, and Co-polymers, PMMA, Polycarbonates.

UNIT-V:

Applications of Polymers: Membrane Separations: Membrane Applications for Polymeric materials, mechanisms of transport and membrane preparation: Biomedical Applications: Artificial organs, Controlled drug delivery, hemodialysis and hemo filtration; Electronics: Electrically conductive polymers, electronic shielding, encapsulation, photonic polymers.

Reference Books:

1. Polymer Science, V.R.Gowariker, M.V.Viswanthan, Jaidev Sridhar, Wiley eastern Ltd, 1988.
2. Plastics engineering – R.J.Crawford, Butterworth Heinemann
3. Rubber and Plastic Technology – R.Chandra and S.Mishra, CBS Publishers
4. Outlines of Polymer Technology: Manufacture of Polymers by R.N.Sinha, Prentice Hall India.
5. J R Fried – Polymer Science and Technology, Prentice Hall of India Pvt., New Delhi, Eastern Economy Edition, 2000.

CH604C **BIOPROCESS ENGINEERING** **VI Semester**

Instruction: 3L Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed to chemical engineering students to understand the enzyme kinetics for a catalytic actions and industrial applications of enzymes. Students can learn the culture preparation for enzymes, quality control, operating reactors and various product recovery methods.

Course Objectives:

1. To study the mechanism of catalytic action and study production of enzymes
2. To have a view on cell growth
3. To study the operation and cultivation method of cells in bio reactors
4. To have a view on selection and control of bio-reactors
5. To have a knowledge on recovery and purification of products

Unit I :

Enzymes :Introduction – Mechanism of catalytic action – Enzyme kinetics – Immobilized Enzyme systems – Methods and kinetics – large scale production of enzymes – medicinal and industrial utilization of enzymes

Unit II :

Cells : Microbial diversity- naming of cells – cell nutrients – metabolic regulation – transport of small molecules across cellular membrane

Cell Growth – batch growth – Quantifying cell growth – cell growth in continuous culture

Unit III :

Bioreactors – I : Operating considerations : choosing the cultivation method – batch and continuous reactors – immobilized cell systems – Solid State Fermentations

Unit IV :

Bioreactors – II : Selection, Scale-up and Control: Scale up – bioreactor instrumentation and its control – sterilization of Process fluids

Unit V :

Recovery and Purification of Products : Product recovery strategy – separation of insoluble products – cell disruption – separation of soluble products – finishing steps – integration of reactor and separation

Text Book :

1. Bioprocess Engineering – Basic Concepts by Michael L. Shuler and FikretKargi, Prentice Hall of India Pvt. Ltd.,

References :

1. Biochemical Engineering Fundamentals by J.E.BaileyandD.O.Ollis (McGraw-Hill)
2. Biochemical Engineering by S.Aiba, Humphrey and Millis.

Course Outcomes:

1. Able to analyze kinetics of enzymes and immobilized enzyme systems
2. Able to have knowledge on medicinal and industrial utilization of enzymes. Can learn microbial diversity. Have knowledge on cell growth in batch and continuous reactors
3. Able to choose different cultivation methods
4. Have knowledge on bio reactor instrumentation and its control
5. Can understand the strategies of product recovery and separation of soluble and insoluble products

CH607L CHEMICAL REACTION ENGINEERING LAB VI Semester

Instructions / Week : 3 (P) Credits: 1.5 Assessment: 40 + 60

1. Study of Temperature Dependence of Reaction
2. Kinetics Study under Pseudo Behaviour Conditions
3. Kinetics Study in a Mixed Flow Reactor
4. Kinetics Study in Adiabatic Batch Reactor
5. Modeling of a Mixed Flow Reactor
6. Flow Characterization of a Plug Flow Reactor
7. Modeling of a Packed Bed Reactor
8. Residence Time Distribution in Tanks in Series Assembly
9. Kinetics of Saponification in a Batch Reactor
10. Effect of Mass Transfer on Reaction

CH608S SIMULATION LABORATORY VI Semester

Instructions / Week: 1 (L) +2 (P) Credits: 2 Assessment: 100

Objectives:

To introduce students to use of software packages for simulation and also analyzing flow sheets

1. Introduction of Software packages.
2. Setting up models for simulation.
3. Flow sheeting concepts.
4. Steady state simulation for generation of VLE data.
5. Steady state simulation for conversion calculation for single and multiple reactions
6. Steady state simulation for heat and cooling duty of heat exchangers.
7. Simulation of flash column.
8. Steady state simulation for Bubble point and dew point calculations.

MC609A PROFESSIONAL ETHICS IN ENGINEERING VI Semester

Instruction: Hours/Week: **2L:0T:0P** **Credits: 0** **Internal Assesment:100**

Pre-requisites/co-requisites: None.

COURSE DESCRIPTION:

This course is designed to introduce engineering students to the concepts of engineering ethics. It will allow students to explore the relationship between ethics and engineering and apply classical moral theory and decision making to engineering issues encountered in academic and professional careers. It mainly focuses on improving the capacities of leadership /management through training in professional ethics. Codes of ethics have been invoked as a basis for professional engineering licensure. Violations of such ethical codes have led to many well-known tragic engineering failures that endangered human life and jeopardized public welfare. This discipline will doubtless take its place alongside such well-established fields as medical ethics, business ethics, and legal ethics.

COURSE OBJECTIVES:

To enable the students

1. To create an awareness on Engineering Ethics and Human Values.
2. To instill Moral and Social Values and Loyalty and to appreciate the rights of others.
3. To study the moral issues and decisions confronting individuals and organizations engaged in engineering profession.
4. To study the related issues about the moral ideals, character, policies, and relationships of people and corporations involved in technological activity.

UNIT I Human Values:

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II Engineering Ethics:

Senses of Engineering Ethics – Variety of moral issues – Types of inquiry – Moraldilemmas – Moral Autonomy – Kohlberg''s theory – Gilligan's theory – Consensus and Controversy –Models of professional roles – Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT –III Engineering as Social Experimentation:

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT-IV Safety, Responsibilities and Rights:

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest –

Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) Discrimination.

UNIT V Global Issues:

Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct – Corporate Social Responsibility.

COURSE OUTCOMES:

Upon completion of the course, the student should be able to:

1. Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
2. Learn the moral issues and problems in engineering; find the solution to those problems.
3. Learn the need for professional ethics, codes of ethics and roles, concept of safety, risk assessment.
4. Gain exposure to Environment Ethics & computer ethics; know their responsibilities and rights.

Grading /Assessment:

(i). Attendance: 20 marks
(ii). Group Activities/Assignments: 20 marks
(iii). Semester End Examination: 60 marks

TEXTBOOKS:

1. Mike W. Martin and Roland Schinzinger, “Ethics in Engineering”, Tata McGraw Hill, New Delhi, 2003.

B. Tech. VII Semester Chemical Engineering Syllabus

CH701C PROCESS EQUIPMENT DESIGN & DRAWING VII Semester
Instruction/ Week : 3P Credits : 1.5 Assessment : 40 + 60

Introductory topics like PFD &PID , welding symbols, materials of construction, headers and closures, nozzles and supports .

Design calculations and preparation of Engineering drawing of Process equipment like Heat exchangers, Plate Columns, Packed Columns, Evaporator, Reactor, Dryer, Storage Vessels etc.,

CH702C **OPTIMIZATION TECHNIQUES** **VII Semester**

Instruction : 3(L) hr/week Credits : 3 Assessment : 40 + 60

Course Educational Objectives:

1. To teach the best designfinding with the available resources is the goal of design optimization. Many of the design problems in aerospace systems (and also other areas) can be cast as optimization problems.
2. To teach the problems can then be solved using the optimization techniques.
3. One can model the problems well only with a good understanding of the theory behind optimization.
4. In this course we will deal with continuous optimization methods with emphasis upon nonlinear programming.
5. Application of optimization techniques for various operations.

Unit I : Introduction :

Formulation of objective function, fitting models to data, classification of functions, necessary and sufficient conditions for optimum, unimodel& multi model functions, analytical methods, Lagrange multiplier method

Unit II : Numerical methods :

Unimodel functions, Newton, quasi-Newton, secant methods, region elimination methods, polynomial approximation, quadratic and cubic interpolation technique for optimum, multimodel functions, direct methods, random, grid, hooke'snelder and mead methods, powell's technique, indirect methods, gradient and conjugate gradient methods, secant method

Unit III : Linear and Non-Linear Programming :

Review of basic concepts of LP Formulations, simplex method, integer, quadratic, geometric and dynamic programming

Unit IV : Applications- I :

Heat transfer and energy conservation, separation processes, fluid flow systems, reactor design and operation, large scale operations

Unit V : Applications – II

Optimal pipe diameter, optimal residence time for maximum yield in an ideal batch reactor, chemostat, optimization of a thermal cracker using linear programming.

Text Book :

1. Optimization of Chemical Process by T F Edgar and D M Himmelblau, McGraw Hill 1998

References :

1. Reklaitis,G.V., Ravindran A., Ragsdell K.M. Engineering Optimization, John Wiley, NY 1980
2. Bile,W.E., Swain J.J., Optimization and Industrial Experimentation, Inter Science,NY 1980

4. Beveridge,C.S., Schechter,R.S., Optimization Theory and Practice McGraw Hill, NY 1970
5. Plant Design & Economics for Chemical Engineers, 5 th Ed – Max S.Peters, Klaus D.Timmerhaus and Ronald E.West, McGraw Hill

Outcomes:

1. An ability to apply knowledge of mathematics, science, and engineering, An ability to design and conduct experiments, as well as to analyze and interpret data.

2. Become familiar with optimization methods Mathematical modeling of optimization problems

3. Implementation of the algorithms discussed and solve realistic design problems,The student should master most of the issues in numerical optimization

4. Develops ability to obtain data and information necessary to formulate and to solve problems related to Chemical Engineering with or without the support of software8.

5. This course introduces you to the optimization theory and tells you how it can be applied to solve design problems.

Electives Syllabus

CH703C PETROLEUM REFINING PROCESSES VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand the origin, composition and physical properties of petroleum. Different treatment methods of crude mixture to get various petroleum products are covered in this course. Various methods to increase the physical properties of petroleum products are also discussed.

Course Objectives:

1. Learn the formation, refining of crude oil and products of refinery.
2. Understand the means of processing data including thermal properties, important products characteristics.
3. Develop skills in drawing neat flow diagrams of different petroleum refining processes. (Cracking/reforming/alkylation/isomerization / hydro cracking etc.,) that are aimed at producing high value/demand products.
4. Identify important testing methods for important petroleum products.
5. Have idea on Indian standards for major petroleum products.

UNIT I :

Origin, Formation and Composition of Petroleum: Origin and Formation of Petroleum, Reserves and Deposits of World, Petro Glimpses and Petroleum Industry in India, Composition of Petroleum

Petroleum Processing Data: Evaluation of Petroleum, Thermal Properties of Petroleum Fractions.

UNIT II:

Important Products – Properties and Test Methods

UNIT III:

Fractionation of Petroleum: Dehydration and Desalting of Crudes, Heating of Crude-Pipe Still Heaters, Distillation of Petroleum, Blending of Gasolines.

UNIT IV:

Treatment Techniques: Fractions-Impurities, Gasoline Treatment, Treatment of Kerosene, Treatment of Lubes, Wax and Purification.

UNIT V:

Thermal and Catalytical Processes: Cracking, Catalytic Cracking, Catalytic Reforming-Introduction and Theory, Naptha Cracking, Coking, Hydrogen Processes, Alkylation, Isomerization Processes, Polymer Gasolines

Asphalt Technology**:** Source of Asphalt , Air Blowing of Bitumen, Upgradation of Heavy Crudes

Text Book

Modern Petroleum Refining Processes by B.K.Bhaskara Rao

Reference Books:

1. Petroleum Refining and Petrochemicals by N.K Sinha
2. Petroleum Refinery Engineering by Nelson, McGraw Hill.

Course Outcomes:

At the end of the course, student will be able to:

1. Describe the formation of crude oil, its refining techniques.
2. Describe the chemical composition and physical properties of crude oil
3. Understand various processes employed in petroleum refinery such that we can meet customer demand in terms of quality & quantity.
4. Demonstrate the different methods available for removal of impurities from crude and products manufacture.
5. Understand, draw and describe the process flow diagrams of various refinery processes like distillation, cracking and reforming etc.

CH703C **CO_2 CAPTURE and UTILIZATION** **VII Semester**

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand the uses of CO_2 ,its capture and storage. Various CO_2 capture techniques are covered. CO_2 utilization techniques and various methods for methods for the assessment of CO_2 life cycle are discussed.

Course Educational Outcomes:

1. To learn the carbon capture and storage techniques
2. To learn various technologies available for carbon capture
3. To learn CO_2 storage and its sequestration
4. To learn various utilizations of CO_2
5. To learn the life cycle assessment of CO_2

UNIT-I

Introduction: Global status of CO_2 emission trends, Policy and Regulatory interventions in abatement of carbon footprint, carbon capture, storage and utilization (CCS&U)

UNIT-II

CO_2 capture technologies from power plants: Post-combustion capture, Pre-combustion capture, Oxy-fuel combustion, chemical looping combustion, calcium looping combustion CO_2 capture agents and processes: Capture processes, CO_2 capture agents, adsorption, ionic liquids, metal organic frameworks

UNIT-III

CO_2 storage and sequestration: Geological sequestration methods, Biomimetic carbon Sequestration

UNIT-IV

CO_2 Utilization: CO_2 derived fuels for energy storage, polymers from CO_2, CO_2 based solvents, CO_2 to oxygenated organics, Conversion into higher carbon fuels, High temperature catalysis

UNIT-V

Environmental assessment of CO_2 capture and utilization: Need for assessment, Green chemistry and environmental assessment tools, Life cycle assessment (LCA), ISO standardization of LCA, Method of conducting an LCA for CO_2 capture and Utilization.

Text Books:

1. Carbon dioxide utilization: Closing the Carbon Cycle, Peter Styring, Elsje Alessandra Quadrelli, Katy Armstrong, Elsevier, 2015, 1st Edition.

2. Carbon Capture, Storage and, Utilization: A Possible Climate Change Solution for Energy Industry ,Goel M, Sudhakar M, Shahi RV, TERI, Energy and Resources Institute, 2015, 1st Edition.

Course Outcomes: At the end of the course the student will able to

1. Know the CO_2 capture and its importance
2. Know various capture technologies available for CO_2 and its storage
3. Know Geological sequestration methods of CO_2
4. Know various utilization of CO_2
5. Know life cycle assessment of CO_2

CH703C WATER CONSERVATION AND MANAGEMENT VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for chemical engineering student to understand the importance of water for various applications. Storage of water, quality, water management methods, minimizing the waste of water and different audit methods for the conservation of water in various industries can be studied.

Course Educational Objectives:

1. Able to learn water quality and its storage methods
2. Able to learn water conservation methods at various work places.
3. Able to learn water flow measurement techniques
4. Able to learn water preservation methods and methods to minimize water evaporation techniques.
5. Able to learn water audit methods at various work places.

Unit I: Introduction: water cycle, water storage, water quality.

Unit II: water conservation in homes; water conservation in the work place.

Unit III: water management-water quality, controlling use and quality of water, water flow measurement.

Unit IV: water quality control, testing water salinity, preserving water quality, minimising evaporation, water sanitation.

Unit V: water audits; water conservation in agriculture; water conservation in process industry; water conservation in construction industry; water conservation in service industry.

Course Outcomes: At the end of the course the student will able

1. To know the importance of water and its storage techniques
2. To know water conservation techniques at various levels
3. To know water management at various stages
4. To know water quality and water testing methods
5. To know water conservation audits at various places.

CH704C FLUIDIZATION ENGINEERING VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand various types of fluidization and its application at industrial levels. Types of gas fluidization and terminal velocity of particle are also discussed. Entrainment in fluidized beds and high velocity fluidization are discussed. Various industrial applications of fluidized bed are covered in this course.

Course Objectives:

1. This course focuses on different types of fluidization, their advantages and disadvantages.
2. Analyze the various types of distributors used for fluidized beds and its design.
3. Study the classification of particles, carry over particles in fluidization and pneumatic transport of solids.
4. Give the knowledge of Transport Disengaging Height (TDH) and its significance in entrainment.
5. This course will help to understand elutriation from fluidized beds and Elutriation constants.
6. This subject focus on solid circulation systems for fast fluidized operations and flow patterns of gas-solid mixtures flowing in horizontal and vertical pipes.
7. Educate the industrial applications of fluidized beds and spouted beds with examples.

UNIT- I

Introduction**:** The Phenomenon of fluidization, Liquid like Behavior of a fluidized Bed, Comparison with other Contacting Methods, Advantages and Disadvantages of Fluidized beds for Industrial Operations, Fluidization Quality, Selection of a Contacting Mode for a given Application, Overall Plan.

Fluidization and mapping of regimes.: Fixed beds of particles: Characterization of particles, fixed beds- One size of particles, fixed beds- Solid with a Distribution of sizes, Determination of the effective Spericity from Experiment. Fluidization without Carryover of particles Minimum Fluidizing Velocity,μ_{mf} ,Pressure Drop-verses-Velocity Diagram, Effect of Pressure and Temperature on Fluidized Behavior, Sintering and Agglomeration of Particles at High Temperature.

UNIT-II

Types of Gas Fluidization without carryover – The Geldart classification of particles; Fluidization with carryover particles – Terminal velocity of particles, u_t — Turbulent and Churning Fluidization – Pneumatic Transport of solids – Fast Fluidization – Voidage Diagrams for All Solid Carryover Regimes; The Mapping of Fluidization Regimes.

The Dense Bed: Distributors, Gas Jets, and Pumping Power: Distributor Types – Ideal Distributors – Perforated and Multiorifice Plates – Tuyeres and Caps – Pipe Grids and Spargers; Gas Entry Region of a Bed; Gas Jets in Fluidized Beds; Pressure Drop Requirements across distributors; Design of Gas Distributors Power Consumption.

UNIT – III

Entrainment and Elutriation From Fluidized Beds**:** Freeboard Behavior – Origin of Solids Ejected in to the Freeboard – experimental Findings; Location of the Gas Outlet of a Vessel – Estimation Of the TDH; Entrainment from Tall Vessels: H_f>TDH – Procedure of Zenz et al. [21,8] – The Elutriation Constant Approach – Relationship between **k** and G_s – Experimental Methods for finding **k** and $\mathbf{k}^*$ - Experimental Findings for $\mathbf{k}^*$ - Entrainment from Short Vessels: H_f<TDH – Freeboard – Entrainment Model.

UNIT – IV

High – Velocity Fluidization**:** Turbulent Fluidized Beds – Experimental Findings; Fast Fluidization - Experimental Findings; The Freeboard – Entrainment Model Applied to Fast Fluidization – Design Considerations; Pressure Drop in Turbulent and Fast Fluidization.

Circulation systems**:** Circuits for the Circulation of Solids – Classification of Circulation Loops – Pressure Balance in a Circulation loop; Finding Require Circulation Rates - Circulation Rate for Deactivating Catalysts – Circulation Rate for a Require Heat Removal Rate.

UNIT – V

Industrial Applications of Fluidized Beds**:** Historical Highlights – Coal Gasification – Gasoline from other Petroleum Fractions – Gasoline from natural and Synthesis Gases - Synthesis Reactions – Metallurgical and Other Processes; Physical Operations – Heat exchange – Solidification of a Melt to make Granules – Coating metal objects with plastic – Drying of Solids - Coating of Objects and Growth of Particles – Adsorption; Synthesis Reactions – Phallic Anhydride – Fischer – Tropsch Synthesis – acrylonotrile by the Sohio Process- Maleic anhydride - Other Catalytic Reactions – Comments – Polymerization of Olefins; Cracking of Hydrocarbons – Fluid catalytic Cracking (FCC) – Fluid Cooking and Flexi – Coking – Thermal cracking; Combustion and Incineration – Fluidized Combustion of coal – Incineration of Solid Waste; carbonization and gasification – Gasification of Coal and coke – Activation of Carbon – Gasification of Solid waste; Cacination; Reactions Involving Solids – roasting Sulfide Ores – Silicon for Semiconductor and Solar cell industries - Chlorination and Fluorination of Metal Oxides – Reduction of Iron oxide; Biofluidization.

Text Book :

References :

1. Fluidization by Davidson JF &Harison B, Academic Press.
2. Fluidization and Fluid Particle systems Zenz PA &Othmer D F, Reinhold Pub. Co

Course Out comes:

At the end of the course, student will be able to:

1. Know the advantages, disadvantages, and different types of fluidization and can understand the comparison and selection of contacting methods.
2. Determine the minimum fluidization velocity and terminal velocity and able to design gas distributors and calculate power consumption for fluidized beds.
3. Have the knowledge of characterization of particles and determination of effective sphericity from experiment.
4. Experimental findings of entrainment, Estimation of TDH, and determination of elutriation constants and understand the fast fluidization, application of entrainment models to fast fluidization and solid circulation systems for fluidized beds.
5. Have the knowledge of FCC, Combustion and Incineration of coal and Chlorination and Fluorination of Metal Oxides.

CH704C **FUEL CELL SYSTEMS** **VII Semester**

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand the importance of fuel cells, electrochemistry of fuel cells. Working and components of various types of fuel cell are discussed. Applications of fuel cells, technological and economical challenges are also discussed.

Course Educational Objectives:

1. To understand the evolution of electrochemistry and electrode interfaces
2. To get the knowledge of electrochemical technologies and applications
3. Student will learn the learn the fuel cell principles
4. To understand the electro catalysis of fuel cell reactions
5. To study the modeling analysis

UNIT-I

Introduction – Fuel Cells- Relevance and Importance – Historical Highlights - Difference from Batteries – Fuel Choice – Classification

Electrochemistry – Thermodynamic Aspects of Electrochemical(EC) Energy Conversion – Theoretical Efficiency of Heat of a Reaction to Mechanical Energy – Efficiency of EC Energy Conversion – Factors Affecting Efficiency of EC Energy Conversion Electrode Kinetics of EC Energy Conversion

UNIT-II

Alkaline Fuel Cells – Description – Working Principle – Components - Modules – Fuel Cell Stacks – General Performance Characteristics – Advancements – System Issues – Ammonia as AFC Fuel

Molten Carbonate Fuel Cells – General Principle – Cell Components – Mechanisms of Electrode Reactions- Status

UNIT-III

Phosphorus Acid Fuel Cells- Technology- Electrode Materials and Manufacturing – Stacks and Systems

Solid Oxide Fuel Cells – History – Advantages and Limitations- Cell Components – Electrode Materials – Interconnects – Fuel – Configuration and Performance – Environmental Impact – Applications

UNIT-IV

Direct Methanol Fuel Cells – Technology Evolution – The Noble Metal Issue- The Catalyst – Electro-oxidation of Methanol – The Electrolyte – Non Catalytic Aspects – Methanol Cross over to DMFC – catalyst Optimization and Scale up – Engineering Aspects.

UNIT-V

Proton Exchange Membrane Fuel Cells – Basic Scientific aspects- Challenges – Technology Development – Fuel Processing – Modeling Studies of PEMFC Performance – Applications – Challenges to High Temperature Operations – Technological and Economic Challenges

Text Book :

1. Fuel Cell : Principles and Applications – B.Viswanathan and M. AuliceScibioh – Universities Press - 2006

Course outcomes: At the end of the course the student **:**

1. Have the knowledge on electrode and electrolyte interfaces
2. Able to implement various electrochemical technologies
3. Will have an idea on fuel cell principles and able to implement the principles
4. Acquire basic knowledge on electrolysis of fuel cell reactions
5. Will have a good knowledge on modelling analysis of fuel cell systems and Can give particular attention to half cell systems

CH704C FUNDAMENTALS OF NANOTECHNOLOGY VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand the importance of nanomaterials, properties of nanomaterials, various methods for the preparation of nano materials. Various characterization techniques of nanomaterial can be discussed. Application of the nanomaterials in various fields are also discussed.

Course Educational Objectives:

1. To learn the important properties of nanomaterials and future scope of nanotechnology
2. To learn the various methods for the synthesis of nanomaterials
3. To learn various techniques for the characterization of nanomaterials
4. To learn various techniques used in nano materials preparation
5. To learn various applications of the nanomaterials

Unit – I

Introduction: Importance of Nanotechnology emergence of nanotechnology, size range ofnano particles - Thermodynamics and properties of nano scale materials, classification of nano structured materials - Bottom-up and top-down approaches- challenges in nanotechnology. Future of nanotechnology in chemical and Biochemical engineering.

Unit – II

Synthesis of nano particles and processing**:** Methods for creating nano structures – processes for producing ultra fine powders – Mechanical grinding – wet chemical synthesis of nano materials – sol-gel emulsion processes-liquid-solid reactions- Gas phase synthesis of nano materials – Furnace, flame assisted ultra sonic spray pyrolysis – Gas condensation (CVC) – cold plasma methods- particle precipitation aided CVD.

Unit – III:

Characterization of nano systems**:** Sample preparation and characterization techniques of nano structured materials – scanning electron microscopy (SEM) – Transition election microscopy and X-Ray photo electron and Auger electron spectroscopy (XPS, AES) – Scanning tunneling microscopy (STM), atomic force microscopy (AFM) – powder X-ray difractometry (XRD).

Unit – IV:

Special nano materials**:** Carbon fullerences and nanotubes – onions – carbon fullerrence-formation, properties and uses – Porous silicon preparation methods-Nano particles of SiC, alumina and zirconia and their sintering techniques – Wafer preparation, wafer cleaning techniques – lithography – etching – Mechanical attrition and nano composites.

Unit – V:

Nano – Engineering applications**:** Micro electromechanical systems (MEMS) and nano electromechanical systems (NEMS), sensors, microfluidic devices – nano pump – molecular motors – Nano bots – nano medicine – drug delivery systems – catalyis by gold nano particles – wear resistance coatings – weapons – battery and fuel cell electrodes – thermal management – automotive and aerospace components. Environmental impact of nano-particles – ethical, legal and social issues.

Text Books:

1. Introduction to nanotechnology, by Charles P.Poole and Frank Jowens, John wiley (2003)
2. Nanotechnology Research and perspectives, MIT Press (1992)

References:

1.Understanding of Nano science and technology, poori Dutta &Sushmita Gupta, Global vision, New Delhi – (2006)

Course Outcomes: At the end of the course the student will able to

1. Know the importance of nonmaterial in and their properties
2. Know the various methods used for the synthesis of nanomaterials
3. Know various techniques used for the characterization of nanomaterials
4. Know various techniques used for the preparation of special nanomaterials
5. Know the applications of nanomaterials in various fields.

CH705C PROCESS MODELINGAND SIMULATION VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand to fundamental laws used for the development of mathematical models for chemical engineering systems. Various examples of chemical engineering systems are discussed for mathematical modeling. Numerical methods are also discussed for solving differential equations. Some of the examples are also discussed for simulation.

Course Educational Objectives:

1. To understand the concepts of model, development of model, algebraic equations and linearization.
2. To educate about the development of model in the field of chemical engineering.
3. To have the knowledge on classification of models with examples.
4. To learn about the numerical methods, computer programming and simulation methods.
5. To acquire abilities to propose, solve and simulate simple chemical process, unit operation and control system models in the chemical industry.

UNIT - I: Mathematical models of Chemical Engineering systems. - Fundamentals - Introduction - Fundamental laws. Principles of formation, review of algebraic, ordinary and partial differential equations, solutions of the above equations.
Linearization, probabilization models, development of models by experiment and statistic, regression and correlation analysis.

UNIT - II: Examples of mathematical models of chemical engineering systems, constant volume CSTRs, two heated tanks, gas phase pressurized CSTR, non-isothermal CSTR.

UNIT - III: Introduction to Matrix models, lumped parameter model, distributed parameter model. Examples of single component vaporizer, batch reactor, reactor with mass transfer, ideal binary distillation column, batch distillation with holdup.

UNIT - IV: Computer simulation, numerical methods, computer programming, iterative convergence methods, numerical integration of ODEs. Discrete even and continuous simulation.

UNIT - V: Computer simulation, examples gravity flow tank, three CSTRs, in series, binary distillation column, batch reactor, VLE, dew point & bubble point calculations, counter current heat exchanger. Simulation in process control.

Text Book:

1. Process Modeling, Simulation and Control for Chemical Engineering by W.L.Luyben, 2nd ed. McGraw Hill (1990).
2. Ramirez, W: Computational Methods in Process Simulation, Butter worths publishers, New York, 1989

3. LorentzeT.Biegler, Ignacio Grossmann and Arthur W.Westerberg – Systematic Methods of Chemical Process Design – Prentice Hall International, 1997

Reference Book:

1. Edgar, T.F; Himmelblau, D.M; Optimisation of Chemical Processes, McGraw-Hill Book Co; New York.

4. A.W.Westerberg, H.P.Hutchinson, R.L.Motard and P.Winter – Process Flowsheeting – Cambridge University Press, 1985

Course outcomes: At the end of the course the student will able

1. To understand the use of mathematical model, principles of formulation and fundamental laws and develop models by experiment and correlation analysis,
2. To develop mathematical models of chemical engineering systems like two heated tanks, constant volume CSTRs and gas pressurized CSTR.
3. To have the knowledge of different types of models like lumped parameter, distributed parameter and matrix models.
4. To write the computer programming, learn the simulation of numerical methods, iterative convergence methods, and discrete even and continuous methods.
5. Ability to design, manage and operate chemical process simulation, control and instrumentation procedures.

CH705C COMPUTATIONAL FLUIDDYNAMICS VII Semester

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed to students to understand the importance of computational fluid dynamics and to develop fluid flow equation with computational fluid dynamics. Mathematical behavior of various partial differential equations is discussed. Discretization and simple computational fluid dynamics techniques are also discussed.

Course Educational Outcomes:

1. To learn the importance of computational fluid dynamics in developing the models in fluid dynamics
2. To learn the classification of partial differential equations
3. To learn the various discretization techniques
4. To learn the generation of grid with suitable boundary conditions
5. To learn simple computational fluid dynamics techniques

Unit I :

Philosophy of CFD – CFD - CFD as a research tool – CFD as a design tool – Examples **Governing Equations of Fluid Dynamics** – Introduction – Models of Flow – The sustainable derivative- Divergence of Velocity – Continuity Equation – Momentum Equation – Energy Equation – Physical boundary conditions – Forms of Governing equations suited to CFD

Unit II :

Mathematical Behaviour of Partial Differential Equations (PDEs) – Classification of quasi linear PDEs – General Method of determining the classification of PDEs – General Behavior of different classes of PDEs

Unit III :

Discretization – Basic aspects – Finite Differences – Difference equations – Explicit and Implicit approaches – Errors and analysis of stability

Unit IV :

Grids with appropriate transformations – General transformation of equations **–** Metrics and Jacobians – Form of governing equations suited to CFD – Stretched grids – boundary fitted coordinate systems – adaptive grids – modern developments in grid generation, finite volume mesh

Unit V :

Simple CFD Techniques - The Lax – Wendroff Technique – MacCormack's technique - Viscous Flows, Conservation form and space marching **–** Relaxation Technique – Aspects of numerical dissipation and dispersion – Alternating – Direction- Implicit technique – Pressure correction technique

Text Book :

1. CFD : The Basics with Applications – John D. Anderson Jr. TMH Publication

Reference

1. Introduction to CFD – PradipNiyogi, S K Chakrabarthy, M K Laha , Pearson Edu.:

Course outcomes: At the end of the course the student will able to

1. Understand the importance of computational fluid dynamics in fluid dynamics
2. Classify the partial differential equations for computational fluid dynamics
3. Use various discretization techniques
4. Apply boundary condition with the generation grids for fluid flow systems
5. Apply computational fluid dynamics techniques for fluid flow systems

CH705C **MEMBRANE SEPARATIONS** **VII Semester**

Instruction Hours/Week: 3(L) Credits: 3 Assessment: 40 + 60

Course Description:

This course is designed for students to understand various membranes separation techniques used for separation of the mixture components into pure components. Various applications of membrane separation processes are also discussed. Equipment for membrane systems and various designs of membrane systems are also discussed.

COURSE OBJECTIVES

1. sTo learn classification and principles of membrane separation processes.
2. To know the applications of membrane separation processes.
3. To get knowledge about ideal separations on capabilities of membrane processes and secondary phenomena occurring in membrane processes.
4. To know about the equipments of membrane processes.
5. To understand the design of membrane systems.

UNIT- I

Introduction to Membrane Separation Processes: Classification of separation process – separating agents – principles of gas permeation, reverse osmosis, ultra-filtration, pervaporation, dialysis, electro-dialysis.

Unit II :

Applications of membrane separation processes - separation of hydrogen or acid gases, Oxygen – nitrogen separation starting from air,- stability of membrane processes for waste water treatment, applications in pulp and paper, electroplating and electro-coating industries – applications in food industry – denaturing of liquid foods , cheese making and whey production.

Unit III :

Ideal separations on capabilities of membrane processes – separation factor, rejection factor, expressions for ideal separation factors

Secondary phenomena in membrane processes: secondary physical and transport phenomena in membrane processes, concentration polarization

Unit IV :

Equipment for membrane processes: Flat sheet, tubular, spiral wound and hollow fiber, membrane modular designs, single entry and double entry separating elements, separation stage, flow configuration.

Unit V:

Design of membrane systems: Design equations for perfect mixing and cross floe configuration, separation stages for gas permeation, reverse osmosis and ultra-filtration. Design equations foe perfect mixing and parallel flow dialyze, simple design equations for electro-dialytic stacks

Reference Books:

1) Membranes in Separation – S.T.Hwang and K.Mammermeyer, Wiley-Interscience, Newyork (1975)

2) Transport Processes and Unit Operations – Christie J.Geankoplis, Prentice Hall of India Pvt.Ltd (2000)

Course Out comes

1. Able to understand overall view of membrane separation processes. Able to learn different processes in reverse osmosis, ultra filtration, dialysis, electro dialysis.
2. have the knowledge on applications of membrane separation processes
3. To have a knowledge on separation factor, expressions for ideal separation factor. to have a knowledge on transport phenomena in membrane processes
4. Able learn knowledge on membrane modular designs, single and double entry separating elements.
5. Can understand design equations for mixing and cross flow configurations. Able to design equation for perfect mixing and parallel flow dialyze. To develop the design equation for electro dialytic stacks

CH708S INTERNET OF THINGS AND ITS APPLICATIONS VII Semester
Instruction: 1(L) + 2(P) Credits: 2 Assessment: 100

Course Overview:
Internet of Things (IoT) cuts across different application domain verticals ranging from civilian to defence sectors. These domains include agriculture, space, healthcare, manufacturing, construction, water, and mining, which are presently transitioning their legacy infrastructure to support a lot. Today it is possible to envision pervasive connectivity, storage, and computation, which, in turn, gives rise to building different lot solutions. IoT-based applications such as innovative shopping systems, infrastructure management in both urban and rural areas, remote health monitoring and emergency notification systems, and transportation systems, are gradually relying on IoT-based systems. Therefore, it is very important to learn the fundamentals of this emerging technology.

Course Learning Objectives:
The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student:
1. To understand the fundamentals of Internet of things and protocols.
2. It introduces some of the application areas where Internet of Things can be applied.
3. To build a small low-cost embedded system using Arduino / Raspberry Pi or equivalent boards.
4. To apply the concept of Internet of Things in the real-world scenario.

UNIT I:
Fundamentals of IoT: Introduction to IoT – Characteristics, Sensing, Actuation, Physical Design - Protocols – Logical Design – Enabling technologies – IoT Levels – Six Levels of IoT - Domain Specific IoTs.

UNIT II:
IOT and M2M: M2M, IoT vs M2M, Introduction to Raspberry Pi, Implementation of IoT with Raspberry Pi, Introduction to SDN, SDN and NFV for IoT, IOT system Management with NETCONF-YANG.

UNIT III:
IoT Design Methodology: IoT Systems Management – IoT Design Methodology – Specifications Integration and Application Development. Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino.

UNIT IV:
Data Analytics for IoT: Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time

DataAnalysis.

UNIT V:

Tools for IoT: Chef, Puppet, IOT code generator Case studies: Chef. Puppet – Multi-tier Deployment, NETCONF-YANG.

IOT Applications: IoT applications for industry- Future Factory Concepts, Smart Applications, Smart Cities and Smart Homes. Case Study: Agriculture, Healthcare, Activity Monitoring. Study of existing IoT platforms /middleware, IoT- A, Hydra etc.

Text Book & References:

CO1	2	3	**-**	**1**	**1**	**-**	**-**	**-**	**-**	**-**	**-**	**2**	**1**	**-**

Course Outcomes: Upon completion of this course, students will be able to:

1. Design a portable IoT using Arduino/ equivalent boards and relevant protocols.
2. Develop web services to access/control IoT devices.
3. Deploy an IoT application and connect to the cloud.
4. Analyze applications of IoT in real-time scenario.

Instruction / Week: 24P	Credits: 12	Assessment: 40+60

Definition of topic and scheme of work, execution, documentation and submission.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING

Course

B. Tech CIVIL ENGINEERING

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department:

- Established in the year 1959.
- Largest department in the University.
- Well Qualified & Experienced Faculty.
- Meritorious students, Regular conduct of student's activities, Field visits, Internships participation of students in various activities in other Institutions.
- Good Alumni Support
- Faculty actively involved in teaching, research, consultancy and extension programmes and also interaction with outside world.

Vision:

- Vision of the Civil Engineering Department is to produce globally competitive and committed Civil Engineers with ethical values to cater to the needs of the society and strive for sustainable development through research and innovation.

Mission:

- To impart quality education with the support of state-of-art Infrastructure and Faculty.
- To inculcate inquisitiveness, infuse training and research for the societal development.
- To address growing needs of sustainable infrastructure development.
- To provide technical advice and support to the industry.
- To provide awareness of global economic problems and contribute to Nation building.
- To provide entrepreneurial skills for the upliftment of the country.

PROGRAMME SPECIFIC OUTCOMES (PSO'S)

- **PSO1:** Specify, Design, test and evaluate foundations and super structure for residences, public buildings, industries, irrigation structures, transportation amenities and environmental Engineering systems.

- **PSO2:** Development of state of art skills for using modern tools, as entrepreneur in the domain field or in multidisciplinary environment.

PROGRAMME OUTCOMES

POs describe what students are expected to know or be able to do by the time of graduation from the program. Program Outcomes are established as per the process described below.

Program Outcomes of B.Tech in Civil Engineering are:

- To apply knowledge of mathematics, Science, Engineering fundamentals, and engineering specialization for the solution of complex engineering problems.
- To identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- To design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
- To use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- To create, select, and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling to complex engineering activities, with an understanding of the limitations.
- To apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- To understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- To apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- To function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- To communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- To demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

- To recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

- To provide students with the fundamental, technical knowledge and skills in mathematics, sciences and engineering to recognize, analyze and solve complex problems in the areas of Structural, Geotechnical, Hydraulics and Water Resources, Transportation and Environmental engineering.
- To provide students with individual working skills and practical experience and to fulfill their professional duties and communicate effectively in teamwork, ethical thinking, technical leadership, and lifelong learning.
- To make the students responsible professionals to work in various positions in industry or government and/or succeed in graduate or other professional organizations.
- To train the students to become engineers, managers, scientists, researchers and innovators and make substantial contributions to the society.
- To guide the students to use modern tools to solve complex engineering problems
- To make the students to strive for the improvement of the quality of life and improve the standard of living by providing environmental sustainability.

MA 101 MATHEMATICS –I

(I Semester - Common for all branches)

Instruction: 3(L) +1(T) /week Credits:4 Assessment: 40 + 60 UNIT I

Differential Equations: Linear differential equations of second and higher order with constant coefficients-particular integrals-homogeneous differential equations with variable coefficients-method of parameters-simulation equations.

UNIT II

Laplace Transforms I: Laplace transforms of standard functions-inverse transforms-transforms of derivatives and integrals-derivatives of transforms-integrals of transforms.

UNIT III

Laplace Transforms II: Transforms of periodic functions-convolution theorem-applications to solution of ordinary differential equations.

UNIT IV

Calculus: Roll's and Mean value theorems - Taylor's and Maclaurins's series-maxima and minima for functions of two variables - Infinite series - Convergence Tests series of positive terms - comparison, Ratio tests - Alternating series - Leibnitz's rule - Absolute and conditional convergence.

UNIT V

Multiple Integrals: Curve tracing (both Cartesian and polar coordinate) - Evaluations of double and Triple integrals-change of order of integrations-change of variables of integrations-simple applications to areas and volumes.

Text/Reference Books

- B S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
- M K Venkataraman, Engineering Mathematics, National Publishing Company, Chennai.
- B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
- Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

- analyze differential equations and solve them
- apply differential equations to engineering problems.
- Use transformation to convert one type into another type presumably easier to solve.
- use shift theorems to compute the Laplace transform, inverse Laplace transform and the solutions of second order, linear equations with constant coefficients.
- solve an initial value problem for an nth order ordinary differential equation using the Laplace transform.
- expand functions as power series using Maclaurin's and Talor's series
- optimize the problems related to OR, Computer science, Probability and Statistics
- draw an approximate shape by the study of some of its important characteristics such as symmetry, tangents, regions enclosing curve tracing method to find length, area, volume.
- use multiple integral in evaluating area and volume of any region bounded by the given curves.

CY 101 ENGINEERING CHEMISTRY

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60 UNIT I

Atomic and molecular structure (12 lectures)

UNIT I

Postulates of quantum chemistry. Schrodinger equation. Particle in a box solutions, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomics, Pi-molecular orbitals of butadiene and benzene. Band structure of solids and the role of doping on band structures

UNIT II

Spectroscopic techniques and applicationsPrinciples of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclearmagnetic resonance and magnetic resonance imaging, surface characterization techniques.

UNIT III

Chemical equilibria, Intermolecular forces and potential energy surfacesUse of free energy in Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies.Free energy and emf.Cellpotentials, the Nernst equation and applications.

Use of free energy considerations in metallurgy through Ellingham diagram. Equations of state of real gases and critical phenomena.

UNIT IV

Periodic properties

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, moleculargeometries, Born- Haber cycle, The use of reduction potentials, Properties of ionic and covalent compounds.

UNIT V

Stereochemistry, Organic reactions and synthesis of a drug moleculeRepresentations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings Synthesis of a commonly used drug molecule.

Reference/Textbooks

University chemistry, by B. H. Mahan

Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane 3.Fundamentals of Molecular Spectroscopy, by C. N. Banwell

Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan

Physical Chemistryby P. W. Atkins

Organic Chemistry: Structure and Function by K. P. C. Volhardt and N. E. Schore, 5th Ed.

Principles of physical chemistry, Puri, Sharma and Pattania

Course Outcomes:

At the end of the course, students will be able to

- analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
- rationalize bulk properties and processes using thermodynamic considerations.
- distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques

- rationalize periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
- list major chemical reactions that are used in the synthesis of molecules.

EN 103 ENGLISH

Instruction: 2(L) **Credits: 2**

Assessment: 40 + 60

UNIT I Vocabulary Building

The concept of Word Formation- Root words from foreign languages and their use in English- Acquaintance with prefixes and suffixes from foreign languages in English form derivatives- Synonyms, antonyms, and standard abbreviations.

UNIT II Basic Writing Skills

Sentence Structures – Use of phrases and clauses in sentences –Importance of proper punctuation - Creating coherence – Organizing principles of paragraphs in documents -Techniques for writing precisely

UNIT III Identifying Common Errors in Writing

Subject-verb agreement -Noun-pronoun agreement -Misplaced modifiers -Article -Prepositions - Redundancies -Clichés

UNIT IV Nature and Style of sensible Writing

Describing - Defining - Classifying –Providingexamples or evidence –Writingintroductionand conclusion

UNIT V Writing Practices

Comprehension - Précis Writing –EssayWriting

Reference/Textbooks:

- Practical English Usage. Michael Swan. OUP. 1995.
- Remedial English Grammar. F.T. Wood. Macmillan.2007
- On Writing Well. William Zinsser. Harper ResourceBook. 2001
- Study Writing. LizHamp- Lyonsand Ben Heasly. Cambridge University Press. 2006.
- Communication Skills. Sanjay KumarandPushpalata. Oxford University Press. 2011.
- Exercises in Spoken English. Parts.I-III. CIEFL, Hyderabad. Oxford University Press

Course Outcomes : At the end of the course, students will be able to

- learn the elements of grammar and composition of English Language.
- Learn literary texts such as Short stories and prose passages.
- maintain linguistic competence through training in vocabulary, sentence structures and pronunciation.
- develop communication skills by cultivating the habit of reading comprehension passages.
- develop the language skills like listening, speaking, reading and writing.
- Make use of self-instructed learner friendly modes of language learning through competence.

EE104BASIC ELECTRICAL AND ELECTRONICS ENGG.

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

Unit-I

Electric DC Circuits: Kirchhoff's Voltage & Current laws, Superposition Theorem, Star – Delta Transformations.

AC Circuits: Complex representation of Impedance, Phasor diagrams, Power & Power Factor, Solution of Single Phase Series & Parallel Circuits. Solution of Three Phase circuits and Measurement of Power in Three Phase circuits.

Unit-II

Single Phase Transformers: Principle of Operation of a Single phase Transformer, EMF equation, regulation and Efficiency of a single phase transformer.

DC Machines: Principle of Operation, Classification, EMF and Torque equations, Characteristics of Generators and Motors

UNIT-III

Three Phase Induction Motor: Principle of Rotating Magnetic Field, Principle of Operation of 3-φ I.M., Torque-Speed Characteristics of 3-φ I.M.

UNIT-IV

p-n junction operation, diode applications, Zener diode as regulator.

Transistor and applications: Introduction to transistors, BJT Characteristics, biasing and applications

UNIT-V

Integrated Circuits: Operational amplifiers, Applications: adder, subtractor, Integrator and Differentiator.

Digital Circuits: logic gates, Combinational Logic circuits, Flip-Flops, counters and shift registers, Laboratory measuring instruments: digital multi-meters and Cathode Ray Oscilloscopes (CRO's).

Textbooks:

- Electrical Technology by Edward Hughes
- Basic Electrical Engineering by Nagrath and Kothari

Course Outcomes: At the end of the course, students will be able to

- understand the basic concepts of D.C. single phase and 3- phase supply and circuits and solve basic electrical circuit problems
- understand the basic concepts of transformers and motors used as various industrial drives
- understand the concept of power factor improvement for industrial installations and concepts of most economical power factor
- understand the operation and characteristics of diodes, transistors, integrated circuits and digital circuits.

ME 105 ENGINEERING GRAPHICS AND DESIGN

Instruction: 2(L) +3 (Drg) /week Credits: 3.5 Assessment: 40 + 60

Unit I Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, usage of Drawing instruments,lettering, Conic sections including the Rectangular Hyperbola (General method only);Cycloid,Epi-cycloid, Hypo-cycloid and Involutes.

Unit II

Scales- Scales– construction of Plain &Diagonal Scales.

Projections of points, lines - Projections of Points and lines inclined to both planes, including traces;

Question Paper Modular – 4 questions from Units I t0 IV, 15 marks each

Unit III

Projections of planes

Projections of planes (Regular surfaces only) inclined Planes-Auxiliary Planes

Projections of Regular Solids (Simple solids – cylinder, cone, prism & pyramid) those inclined to both the Planes-Auxiliary Views

Unit IV

Isometric Projections& Orthographic projections

Principles of Orthographic Projections-Conventions Draw simple objects, dimensioning and scale. Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

Unit V Introduction to CAD

CAD workstation and peripherals, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars Standard, Object Properties, Draw, Modify and Dimension, Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom used in CAD, Select and erase objects.;

- Narayana, K.L. &P Kannaiah(2008),Text book on Engineering Drawing, Scitech Publishers
- Corresponding set of) CAD Software Theory and User Manuals

Course Outcomes: At the end of the course, the student will be able to

- make a distinction between first angle projection and third angle projection of drawing.
- draw hyperbola, parabola, Involutes and Cycloidal curves.
- draw sections of solids including cylinders, cones, prisms and pyramids.
- draw projections of lines, planes, solids and sections of solids.
- draw orthographic projections of lines, planes, and solids.

CO1	1	1	2									

MA 201MATHEMATICS II

(II Semester - for all branches)

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

Unit I

Matrices: rank of a matrix-solution of system of linear equations-Eigen values, vectors –Canley-Hamilton theorem-quadratic forms-diagonalization.

Unit II

Vector Calculus: Gradient, Divergence, Curl of a vector and related properties-line, surface, volume integrals- Green's, Stokes's and Gauss Divergence theorems and its applications.

Unit III

Fourier Series: Fourier series-even and odd functions, periodic functions-half range sine and cosine series-harmonic analysis.

Unit IV

Special Functions I: Gamma and Beta functions-series solutions of differential equations-ordinary points.

Unit V

Special Functions II: Bessel function-recurrence formulae-generating function for $J_n(X)$-Lengender polynomials-recurrence formulae-generating function for $P_n(X)$ - Rodriguez's formula - orthogonality of Lengender polynomials.

Text/Reference Books

- B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
- Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

- use ranks of matrices to decide whether the system of linear equations is consistent or not
- use Cayley-Hamilton theorem to find inverses or powers of matrices.
- use Eigen values and vectors to reduce Quadratic forms to normal form.
- to analyze motion problems from real lines to curves and surfaces in 3-D and use tools such as divergence and curl of vector and gradient, directional derivatives that play significant roles in many applications.
- use Green's theorem to evaluate line integrals along simple closed contours on the plane
- use Stokes' theorem to give a physical interpretation of the curl of a vector field
- use the divergence theorem to give a physical interpretation of the divergence of a vector field.
- find the Fourier Series to represent a function as a series of constants times sine and cosine functions of different frequencies in order to observe periodic phenomenon.
- Evaluate certain improper integrals to make them simple with introduction of Gamma and Beta functions.
- study certain special functions that arise in solving certain ordinary differential equations to model many physical phenomena.

PY 202ENGINEERING PHYSICS

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I Wave Optics

Interference: Huygen`s Principle-Principle of Superposition-Interference of Light-Young`s double slit experiment- -Newton's Rings.

Diffraction: Fraunhofer Diffraction at a Single Slit and a Circular Aperture-Plane Diffraction grating – Resolving Power-Rayleigh`s Criterion-Resolving power of Grating and Microscope.

Lasers : Introduction – Spontaneous and Stimulated Emission of Radiation – Population Inversion – Types of Lasers – Ruby Laser – He-Ne Laser – Semiconductor Laser – Applications of Lasers.

UNIT II Mechanics of Rigid Body

Rigid Body-Rotational Motion and Kinematics Relations-Kinetic Energy and Angular Momentum of a Rotating Body-Equation of Motion of a Rigid body (Torque of a Rigid Body)-Combined Translation and Rotational Motion of a Rigid Body- Body Rolling on an inclined Plane.

Mechanics of Continuous Media

Elasticity, Stress and Strain- Hook`s Law and Behaviour of Wire Under Load- Elastic Constants-Relation Between Elastic Modulii-Types of Supports, Beams and Loads-Different types of Bending-Cantilever with an End Load. Ultrasonic Waves - Sound Absorption and Reverberation -Sabine Formula - Acoustics of Buildings.

UNIT III Electromagnetism and magnetic properties of Materials

Laws of Electrostatistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws-Maxwells Equations – Polarization - Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization - Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and Hesteresis, Applications of ferromagnetic materials.

UNIT IV Quantum Mechanics

Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – Davison and Germer Experiment – G.P.Thomson Experiment – Heisenberg's Uncertainty Principle – Schrödinger's Time Independent and Time Dependent Wave equation – Significance of Wave Function – Electron in an Infinite Square Potential Well – Probability Densities and Energy Levels.

UNIT V NanoPhysics and Nanotechnology

Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C^{60} (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials.

Text Books / Reference Books:

- V. Raghavan "Material Science", Tata McGraw Hill Publications.
- M.S.RamachandraRao and Shubra Singh, ``Nanoscience and
- Nanotechnology`` Wiley India Pvt.Ltd, New Delhi

Course Outcomes: At the end of the course, students will be able to

- Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering courses
- understand the quantum mechanics and ultimately the quantum behavior of charged particles

when they are in motion.

- identify and apply appropriate analytical and mathematical tools of Physics in solving Engineering problems
- apply the basic principles of Mechanics of rigid body and continuous media and their applications understand the principles in electrostatics and electromagnetics and magnetic properties of materials.
- understand size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices.
- think and participate deeply, creatively, and analytically in emerging areas of engineering technology.
- Learnthe basics of instrumentation, design of laboratory techniques, measurement, data acquisition, interpretation, and analysis.
- provide multidisciplinary experiences throughout the curriculum.

CS203 PROGRAMMING FOR PROBLEM SOLVING

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40 + 60**

Course Objectives:

- To acquire problem solving skills
- To be able to develop flowcharts and algorithms for the given problem
- To learn how to write modular programs in C
- To enable to use arrays, pointers, strings and structures in solving problems.
- To explain the difference between object-oriented programming and procedural programming.
- To understand principles of object-oriented programming.

UNIT-I

Problem Solving : Problem solving techniques, Computer as a problem solving tool, Programming Languages – Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements: Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements: while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continue statements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions,

Passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures containing arrays, Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, Reading from a file, Writing onto a file.

UNIT V

Introduction to Object-Oriented Programming (OOP): Need for OOP, Principles of OOP, Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

Course Outcomes: At the end of the course, student will be able to

- Develop and test programs in C and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.
- Decompose a problem into functions and synthesize a complete program.
- Use arrays, pointers, strings and structures to formulate algorithms and programs

- Use files to perform read and write operations.
- Handle programming assignments based on class,abstraction, encapsulation, overloading and inheritance.

CE 204 ENGINEERING MECHANICS

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40 + 60**

UNIT I

STATICS : Basic concepts – System of force, Concurrent and non-concurrent coplanar and non-coplanar forces – Resultant – Moment of force and its application – Couples and resultant of force systems – Equilibrium of systems of forces – Free body diagrams, Equations of equilibrium of coplanar systems and spatial systems.

UNIT II

Analysis of plane trusses: Types of supports – Types of trusses – Analysis of trusses using method of joints and method of sections.

UNIT III

CENTRE OF GRAVITY AND MOMENTS OF INERTIA: Theory of Pappus – Centroids of composite figures – Areas of gravity of bodies – Moment of inertia – Parallel and perpendicular axis theorems – Moments of inertia of composite areas (rolled and built up sections) – Radius of gyration of areas.

UNIT IV

SIMPLE STRESES AND STRAINS : Elasticity and plasticity – Types of stresses and strains – Hooke's law – Stress-strain diagram for mild steel – Working stress – Factor of safety.

Lateral strain – Poisson's ratio and volumetric strain – Elastic moduli and relationship between elastic constants – Bars of varying section – Composite bars – Temperature stresses.

UNIT V

STRAIN ENERGY: Gradual, sudden and impact loading – Endurance limit principles of virtual work and its applications.

TEXTBOOKS:

- Ghose D.N. – Applied Mechanics and Strength of Materials.
- Timoshenko & Young – Engineering Mechanics.
- Junarkar SB – Mechanics of Structures – Vol. I.
- Junarkar SB – Elements of Applied Mechanics.

Course Outcomes: At the end of the course, student will be able to

- apply the basic knowledge of force system.
- know the types of supports occur in civil engineering structures
- know the geometrical properties of different cross sections.
- understand different types of stresses and strains, elastic constants.
- understand the behavior of different internal forces under different types of loading.

ME 205 WORKSHOP/MANUFACTURING PRACTICE

(ME 105 for EEE, ECE & CSE)

(ME 205 for ChE,CE & ME)

Instruction: 0(L) +3 (lab)/week Credits: 1.5 Assessment: 40 + 60

Workshop Practice: Five practices among

1. Machine shop 2.Fittingshop 3.Carpentry 4.Electrical wiring

1. Welding shop 6.Casting 7.Smithy 8.Plasticmoulding&GlassCutting

Examinations could involve the actual fabrication of simple components, utilizing one or More of the techniques covered above.

Detailed Contents

- ManufacturingMethods-casting,forming,machining,joining, advanced manufacturing methods
- CNC machining, Additive manufacturing
- Fitting operations & power tools.
- Electrical &Electronics
- Carpentry
- Plastic moulding. Glass cutting
- Metal casting.
- Welding(arc welding & gas welding), brazing

The above course content is learnt by online videos/ppt presentations.

Text/ReferenceBooks:

Laboratory Outcomes

- Upon completion of this laboratory course, students will be able to fabricate components with their own hands.
- They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
- By assembling different components, they will be able to produce small devices of their interest.

Course Outcomes : Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry to fabricatecomponents using different materials.

CS206 PROGRAMMING FOR PROBLEM SOLVING LAB

Instruction: 0(L) +3 (Lab)) /week Credits: 1.5 Assessment: 40 + 60

Course Objectives:

- To provide exposure to problem-solving through programming
- To train the student on the concepts of the C- Programming language

The following programs shall be developed and executed in Programming Language C.

- Programs on conditional control constructs.
- Programs on iterative statements (while, do-while, for).
- Programs on recursive procedures
- Programs on arrays, matrices (single and multi-dimensional arrays).
- Programs using user defined functions, demonstrating parameter passing methods viz. call by value and call by reference.
- Programs using different library functions viz. ctype.h, math.h, stdio.h, stdlib.h, string.h, conio.h and pre-processor directives.
- Programs using pointers (int pointers, char pointers) and pointer arrays.
- Programs on structures and unions
- Programs on File Processing.
- Programs on Pointers to structures and Self-referential structures

Course Outcomes: After Completion of this course the student would be able to

- Develop the C code for the given algorithm.
- Understand, debug and trace the execution of programs written in C language.

ENVIRONMENTAL SCIENCE

Instruction: 4(L) Credits: 0(Zero)

Assessment: 40 + 60

UNIT I

Environmental Studies and Natural Resources

Definition, Scope and importance of Environment, Environmental studies, Need for public awareness

Components of Environment- Atmosphere, Hydrosphere, Lithosphere.

Renewable and **Non-Renewable Resources and associated problems**

Water resources: Use and over utilization of surface and ground water, floods, drought, conflicts over water, dam benefits and problems.

Forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Land resources: Land as a resource, land degradation, Man induced landslides, soil erosion and desertification.

Mineral resources: Use and overexploitation, Environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused agriculture and overgrazing, effects of modern agriculture, fertilizer – pesticide problems, water logging, salinity, Case studies.

Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.

Role of an individual in conservation of natural resources.

UNIT II

Ecosystem and Biodiversity

Ecosystem - Concept of an ecosystem, Structure and functions of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

Introduction, types, characteristic features, structure and function of the following ecosystem.

(a) Forest ecosystem. (b) Grassland ecosystem

(c) Desert ecosystem. (d) Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and its conservation:

Definition, genetic species and ecosystem diversity, Biogeographically classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation.

Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man – wildlife conflicts, Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT – III

Environmental pollution and Global Effects

Definition, Causes, Effects, and control measures of (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.

Pollution case studies.

Disaster management: Floods, earthquakes, cyclone, landslides, Tsunami. Climate change-Global warming, Acid rain, Ozone depletion.

UNIT – IV

Environment Issues and Management

- Environment and Human health – Epidemic diseases, HIV/AIDS, Aviation Flue, Water Borne Diseases.
- Environmental Impact Assessment, Sustainable Development, Clean Production and Clean Development Mechanisms
- Environment Legislation: Environmental Protection Act, Water Act, Air Act, Wild Life Protection Act, Forest Conservation Act, Public Liability & Insurance Act, Issues involved in Enforcement of Environmental legislation.

UNIT – V

Social Issues and the Environment

- Population growth, Population Explosion, Population Control, Women and

Child welfare.

- Urbanization, Industrialization, Development projects, Resettlement and Rehabilitation of people – Problems concerned, Case studies.
- Consumerism and Waste Products Conservation, Public Awareness, Water Conservation, Rain water harvesting, watershed management, Wasteland reclamation, Human Rights, Value education, Environmental ethics- Issues and possible solution.
- Role of information Technology in Environment and Human Health.

Text Books / Reference Books :

- Gilbert M, Introduction to Environmental Engineering and Science, Masters Publication by Prentice –Hall of India Private Ltd., 1991
- William P Cunningham and Mary Ann Cunningham, Principles of Environmental Science, Tata McGraw Hill Publishing Co.Ltd, 2002

Course Outcomes:

At the end of the course, students will be able to

- acquire knowledge in
  - diverse components of environment and natural resources
  - ecosystem and biodiversity & its conservation methods
  - population growth and human health
  - green technology
- identify and resolve the issues related to sources of different types of pollutions
- provide solutions to individuals, industries and government for sustainable development of natural resources
- apply environmental ethics in protection of diversified ecosystems.

MA 301B Mathematics – III

Instruction Hours/week : 3(L) **Credits :3**

Sessional Marks : 40 **Semester-end Examination Marks: 60**

Course Educational Objective (CEOs):

1. To introduce the solution methodologies for second order Partial Differential Equations with applications in engineering
2. To provide an overview of probability and statistics to engineers

UNIT I

Complex analysis - I: Analytical functions - Cauchy-Riemann equations – Construction of Analytic functions- Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT II

Complex analysis - II: Taylor's and Laurent's' series- Transformations- Conformal mapping - Bilinear transformations - Transformation of $1/z$, z^2, sin z and cos z.

UNIT III

Complex analysis –III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluation of real integrals

UNIT IV

Partial differential equations - I : Formation of differential equations - Classification - First order linear partial differential equations – Lagrange's' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT V

Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heat equation – Laplace's equation.

Text Books:

1. Grewal B S, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. Venkataraman M K, Engineering Mathematics, Vol. I & II, National Publishing Company, 1993.
3. Venkataraman M K, Engineering Mathematics, National Publishing Company, 1995.
4. Grewal B S, Engineering Mathematics, 13th Edition, Khanna Publications.
5. Kreyszig E, Advanced Engineering Mathematics, 8th edition, Wiley, 1998.

Course Outcomes (COs):

At the end of the course students will be able to

1. Solve field problems in engineering involving PDEs.
2. Formulate and solve problems involving random variables and apply statistical methods for analysing experimental data.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1		1	1					1	1	
CO2	2	2		1	1					1	1	

CE 302C STRENGTH OF MATERIALS

Instruction Hours/week : 3(L) **Credits :3**

Sessional Marks : 40 **Semester-end Examination Marks:60**

Course Educational Objective (CEOs):

1. To acquire the knowledge about behavior of members subjected to various types of forces on the members.
2. To impart procedure for drawing shear force and bending moment diagrams for beams.
3. To make the student able to analyze flexural stresses in beams due to.
4. To enable the student to apply the concepts of strength of materials in engineering applications and design problems.

UNIT I

SHEAR FORCE AND BENDING MOMENT:

Definition of beam - Types of beams - Concept of shear force and bending moment - S.F and B.M diagrams for cantilever, simply supported and overhanging beams subjected to point loads, u.d.l, uniformly varying loads and combination of these loads - Point of contra flexure - Relation between S.F, B.M and rate of loading at a section of a beam.

UNIT II

FLEXURAL STRESSES AND SHEAR STRESSES:

Theory of simple bending - Distribution of flexural stresses and shear stresses - Resilience due to flexure and shear. Principal stresses and principal strains - Mohr's circle of stresses.

UNIT III

COMBINED DIRECT AND BENDING STRESSES:

Stresses under the combined action of direct loading and B.M - Core of a section - Circular, rectangular and triangular (solid and hollow) - Determination of stresses in the case of chimneys, retaining walls and dams.

UNIT IV

COLUMNS AND STRUTS:

Introduction – classification of columns – Axially loaded compression members – Euler's crippling load theory – derivation of Euler's critical load formulae for various end conditions – Equivalent length – Slenderness ratio – Euler's critical stress – Limitations of Euler's theory – Rankine – Gordon formula – eccentric loading and Secant formula – Prof. Perry's formula.

UNIT V

CYLINDERS:

Thin cylinders subjected to internal fluid pressure - Thick cylinders under internal and external pressure - Compound cylinders.

TEXT BOOKS:

1) Mechanics of Structures Vol.I & Vol.II by S.B.Junnarkar.
2) Analysis of Structures by Vazirani & Ratwani.
3) Strength of Materials Vol.I & Vol.II by Timoshenko.
4) Strength of Materials by Andrew Pytal and Ferdinand L.Singer (Longman).

REFERENCES:

1) Engineering Mechanics by Egor. P. Popov.

Course Outcomes (COs):

After completion of the course the student will be able to:

1) Develop shear force and bending moment diagrams for different load cases.

2) Compute the flexural stresses for different load cases and different cross-sections.

HS 303C MANAGERIAL ECONOMICS AND ACCOUNTANCY

Instruction Hours/week : 3(L) **Credits :3**

Sessional Marks : 40 **Semester-end Examination Marks :60**

Course Educational Objective (CEOs):

- To learn the fundamental concepts of economics and analysis methods.
- To study depreciation methods and inflation process and trade policies.
- To acquire knowledge in basic concepts of accounting, principles.
- To learn the techniques for preparing cost sheet.

Unit -I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR, NPV, IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

Unit -II

Depreciation and methods of calculating depreciation (straight line, sum of the years digit method, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

Unit -III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

Unit -IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

Unit -V

Cost Accounting: Introduction, Classification of costs, Methods of costing, Techniques of costing, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

TEXT BOOKS:

- Henry Malcom Steiner, Engineering Economics Principles, 2nd Edition, McGraw Hill Education, 1996.
- Dewett. K.K., Modern Economic Theory, Sultan Chand and Co., 2006.
- A.N. Agarwal, Indian Economy, Wiley Eastern Limited, New Delhi.
- Jain and Narang, Accounting Part-I, Kalyani Publishers, 2011.
- Arora, M.N. Cost Accounting: Principles and Practice, 12th Edition,Vikas Publication, 2012.

Course Outcomes (COs): After the completion of the course the student will be able to:

- Understand Macro Economic environment of the business and its impact on enterprise.
- Identify various cost elements of the product and its effect on decision making.
- Understand the concepts of financial management and smart investment.
- Prepare the Accounting records and interpret the data for Managerial Decisions.

CO4			1			2					1	

CE 304C SURVEYING

Instruction Hours/week : 3(L) **Credits :3**

Sessional Marks : 40 **Semester-end Examination Marks :60**

Course Educational Objectives (CEOs):

1. Highlight the purpose of surveying in civil engineering construction,
2. Explain different types of curves, their requirement and curve setting.
3. Formulate survey observations and perform calculations
4. Train on utilization of surveying instruments like EDM, Total station and GPS.

UNIT – I

Introduction and Basic Concepts: Introduction, Objectives, classification and principles of surveying, Scales, Shrinkage of Map, Conventional symbols and Code of Signals, Surveying accessories, phases of surveying.

Measurement of Distances and Directions

Linear distances- Approximate methods, Direct Methods- Chains- Tapes, ranging, Tape corrections, indirect methods- optical methods- E.D.M. method.

Prismatic Compass- Bearings, included angles, Local Attraction, Magnetic Declination and dip.

UNIT - II

Levelling and Contouring

Leveling- Basics definitions, types of levels and levelling staves, temporary adjustments, methods of levelling, booking and Determination of levels- HI Method-Rise and Fall method, Effect of Curvature of Earth and Refraction.

Contouring- Characteristics and uses of Contours, Direct & Indirect methods of contour surveying, interpolation and sketching of Contours.

Computation of Areas and Volumes

Areas - Determination of areas consisting of irregular boundary and regular boundary

(coordinates, MDM, DMD methods), Planimeter.

Volumes - Computation of areas for level section and two level sections with and without transverse slopes, determination of volume of earth work in cutting and embankments, volume of borrow pits, capacity of reservoirs.

UNIT - III

Theodolite Surveying: Types of Theodolites, Fundamental Lines, temporary adjustments, measurement of horizontal angle by repetition method and reiteration method, measurement of vertical Angle, Trigonometrical levelling when base is accessible and inaccessible.

Traversing: Methods of traversing, traverse computations and adjustments, Gale's traverse table, Omitted measurements.

UNIT - IV

Tacheometric Surveying: Principles of Tacheometry, stadia and tangential methods of Tacheometry.

Curves: Types of curves and their necessity, elements of simple curve, setting out of simple Curves, Introduction to compound curves. Elements of Reverse curve - Transition curve – length of curve – Elements of transition curve - Vertical curves.

UNIT - V

MODERN SURVEYING INSTRUMENTS:

Modern Field Survey Systems: Principle of Electronic Distance Measurement, Modulation, Types of EDM instruments, Distomat, Total Station – Parts of a Total Station – Accessories – Advantages and Applications, Field Procedure for total station survey, Errors in Total Station Survey; Global Positioning Systems- Segments, GPS measurements, Applications of GPS.

TEXT BOOKS:

1. Surveying and levelling by R. Subramanian, Oxford university press, New Delhi.

2. Chandra A M, "Higher Surveying", New age International Pvt. Ltd., Publishers, New Delhi, 2002.

3. Hoffman. B, H. Lichtenegga and J. Collins, Global Positioning System - Theory and

Practice, Springer -Verlag Publishers, 2001.

- Surveying and leveling by R. Agor Khanna Publishers 2015.

Course Outcomes (COs):

After completion of the course the student will be able to:

- Identify data collection methods and prepare field notes.
- Measure and layout elevations and relative position of points, understand plans and field notes.
- Ability to design, set out curves and use modern equipment.
- Calculate angles, distances, levels, estimate measurement errors and apply corrections.
- Interpret survey data and compute areas and volumes.

CE 305C BUILDING MATERIALS AND CONSTRUCTION

Instruction Hours/Week: 3(L) Credits : 3

Sessional Marks : 40 **Semester-end Examination Marks**: 60

Course Educational Objective (CEOs):

- To learn and understand the manufacturing, physical and mechanical properties of various construction materials and their testing procedures.
- To study the basic building components.
- To learn the methods to be followed in constructing various components of a building.

UNIT-I

STONES-BRICKS

Stone as building material-Selection of stones for construction-Tests on stones-Qualities of a good building stone-Deterioration of stones-Preservation of stones.

Bricks-composition of good brick earth-Manufacture of bricks-Classification of bricks-Tests for bricks-Absorption, Crushing strength, Hardness, presence of soluble salts, shape and size, soundness, structure-Uses of bricks-Refractories.

UNIT-II

CEMENT-AGGREGATES

Cement ingredients-Setting action of cement-Manufacturing process of ordinary cement
-Types of cement – Field and laboratory tests for cement-storage and uses of cement.

Aggregates-Qualities-classification of aggregates-Testing of Aggregates—Grading of aggregates-classification of sand-Bulking of sand- properties of good sand.

UNIT-III

TIMBER AND OTHER MATERIALS

Timber-Qualities of good timber- Market forms-Industrial timber, Plywood, Veneer-.
Steel -Market forms of steel. Aluminum -properties , alloys of aluminium.

UNIT-IV

CONSTRUCTION ELEMENTS

Types of foundations, Stone Masonry-joints in stone masonry, classification of stone masonry. Brick Masonry-Bonds in brick masonry, types of brick masonry. Lintels- Types of lintels. Roofs and its types. Flooring -types of flooring, timber floors, composite floors. Damp proofing-meaning, causes, effects, materials used for damp proofing, methods of damp proofing.

UNIT-V

OTHER ELEMENTS

Pointing-objects, mortar for pointing, method of pointing, types of pointing. Plastering-requirements of good plaster, methods of plastering. Painting-types of paints, painting on different surfaces failure of paint, defects in painting. Varnishing- characteristics of ideal varnish, ingredients, types, process of varnishing. Distempering-properties, ingredients of a distemper, process of distempering.

Thermal Insulation - insulating materials, thermal insulation of exposed doors, windows, exposed roofs and exposed walls. Acoustics-definition, types of absorbent materials, conditions for good acoustics, methods of sound insulation.

TEXTBOOKS:

- Sushil Kumar "Building Materials and construction", 20th edition, reprint 2015,StandardPublishers
- Dr. B. C. Punmia, Ashok kumar Jain, Arun Kumar Jain, "Building Construction, Laxmi Publications (P) ltd., New Delhi.
- Rangwala S. C. "Engineering Materials", Charotar Publishing House, India.

- Jagadish. K.S, “Alternative Building Materials Technology”, New Age International,2007.
- M. S. Shetty, “Concrete Technology”, S. Chand & Co. New Delhi.

Course Outcomes (COs):

After completion of the course the student will able to:

- Explain the manufacturing, physical and mechanical properties of various construction materials and their testing procedures.
- Describe the basic building components.
- Apply the methods to be followed in constructing various components of a building.

CE 306C ENGINEERING GEOLOGY

Instruction Hours/Week : 3(L) Credits : 2

Sessional Marks : 40 **Semester-end Examination Marks**: 60

Course Educational Objective (CEOs):

- To learn various geological parameters.
- To study characteristics of various minerals and their Identification.
- To study the formation and features of rocks and their Identification .
- To learn elements of geological structures.
- To acquire knowledge in preliminary causes for landslides and earth quakes.

UNIT – I

Introduction to geology and its various branches -Role of Earth Sciences in Civil Engineering Operations, Processes acting at the surface of the earth - Volcanism, Geological action of wind, glaciers, rivers and oceans - Application of Earth Science in Civil Engineering Practices, Understanding the earth, internal structure and composition. Weathering, erosion and denudations process on earth material and natural agencies, Geological work of wind, river underground water and glaciers.

UNIT – II

Mineralogy: Mineral properties, composition and their use in the manufacture of construction materials – Quartz Group; Feldspar Group; Kaolin; Asbestos; Carbonate Group ; Gypsum; Mica Group; Ore minerals - Iron ores; pyrite; Chlorite. Study of minerals like Garnet, Olivine, Hornblende, Augite, Calcite, Talc, Kyanite, Bauxite and Clay minerals.

UNIT – III

Petrology: Origin and formation of rocks - Classification of rocks - Igneous, Sedimentary and Metamorphic rocks - Their textures and structures -Study of rocks like Granite, Gabbro, Dolerite, Basalt, Breccia, Conglomorate, Sand stone, Shale, Limestone, Laterite, Quartzite, Schist, Gneiss, Marble, Slate. Definition of rock - Rock forming processes - Geological

classification of rocks - Megascopic study, Chemical and Mineralogical Composition of rock.

UNIT – IV

Structural Geology: Elements of structural geology like strike, dip, outcrop. Study of folds, joints, faults and their importance in civil engineering works. Dykes and sills, common structures and textures - Out crop, strike and dip study of common geological structures associating with the rocks such as folds, faults unconformities, and joints – their important types. Their importance insitu and drift soils, common types of soils, their origin and occurrence in India.

UNIT – V

Geology of dams, reservoirs, tunnels landslides and rock falls. Earthquakes. Groundwater exploration. Rock as construction materials. Site selection for dams and tunnels – analysis of failures in dams and tunnels - Seismic zones of India - Earth quakes, their causes and effects. Seismic waves, Richter scale. Landslides - causes and effects; Tsunami –causes and effects.

TEXT BOOKS:

- A text book of geology By Mukharjee.P.K.
- A Text Book of Engineering Geology - N.Chennakesavulu.
- Engineering and general Geology by Parbin Singh
- Engineering Geology by R.E.Goodman

REFERENCES:

- Principles of Engineering geology and Geotechnics By Krynine & Judd
- Geology for Engineers by Blyth & de freitaus
- Fundamental of Engineering Geology by F.H.Bell.

Course Outcomes (COs):

After completion of the course the student will be able to:

- To apply the geological knowledge to Civil Engineering Constructions, at different stages. The kind of study exposes the geological draw backs, if any.

- To help the site engineers to take suitable precautionary measures to overcome the drawbacks but also to take advantage of the site geology findings wherever possible.
- To take precautionary measures in civil engineering constructions based on geological parameters.

CE 307P SURVEYING LAB

Instruction Hours/week : 3 (P) **Credits : 1.5**

Sessional Marks : 40 **Semester-end Examination Marks: 60**

Course Educational Objective (CEOs):

1. To apply the possess knowledge about survey field techniques
2. To apply the possess knowledge about traverse survey
3. To determine distances, areas of polygons
4. To gain knowledge of modern field measurement tools and techniques

EXERCISE – 1

Measurement of distance by chain, Tape and Area of a polygon by cross staff survey

EXERCISE – 2

Compass traversing and adjustment of closing error by Bowditch method (Graphical method)

EXERCISE – 3

Plane table survey; finding the area of a given boundary

EXERCISE – 4

Fly levelling: Height of the instrument method and rise and fall method.

EXERCISE – 5

Fly levelling; Longitudinal Section and Cross sections of a given road profile.

EXERCISE – 6

Theodolite Survey: Determining the Horizontal and Vertical Angles Finding the distance between two inaccessible points.

EXERCISE – 7

Tachometric survey: Heights and distance problems using tachometric principles.

EXERCISE – 8

Set out simple curve using Perpendicular offsets from long chord and Rankine's deflection angles method.

EXERCISE – 9

Total Station: Determination of area using total station.

EXERCISE – 10

Total Station: Determination of Remote height.

Course Outcomes (COs):

After completion of the course the student will have:

- Ability to use the techniques, skill and surveying equipment for engineering practice.
- Ability to apply mathematics concepts in the field of surveying.
- Ability to develop an understanding of modern surveying equipment

* * * * *

CE 308P MATERIAL TESTING LAB

Instruction Hours/Week : 2(P) **Credits** : 1

Sessional Marks : 40 **Semester-end Examination Marks**: 60

Course Educational Objective (CEOs):

- To make student understand the fundamental modes of loading of the structures
- To train student in methods for determining mechanical properties of materials.

LIST OF EXPERIMENTS

- Tension and Torsion Test on Mild Steel bar and HYSD bar
- (a) Deflection Test on Simply Supported Beam
- (b) Charpy Impact Test
- Deflection Test on Fixed Beam
- (b) Izod Impact Test
- Compression Test on Wood
- (b) Shear Test on Wood
- Test on Closed coil Helical Spring
- (b) Bending Test on Carriage Spring
- Deflection Test on beam under Uniform Bending
- (b) Bending Test on R.S. Joist
- 7 Sieve Analysis of coarse and fine aggregates
- 8 Bulking of Sand by Volume and Weight methods
- 9 Normal consistency, Initial and Final Setting Times of Cement
- 10 Tests on concrete
- Slump Test
- Compressive Strength of Concrete Cubes
- Compaction Factor Test
- Compressive Strength of Concrete Cylinders
- 11 (a) Specific gravity & Water absorption of Coarse aggregate

- (b) Specific gravity of Cement
- 12 Water absorption and Compressive Strength of Bricks

Course Outcomes (COs):

After completion of the course the student will be able to

- Determine the properties of different building construction materials.
- Analyse the behaviour of different construction materials.

CE 309S COMPUTER SKILLS

Instruction Hours/week: 2 (P) **Credits :1**

Sessional Marks : 40 **Semester-end Examination Marks: 60**

Course Educational Objectives (CEOs):

1. To learn and use MSWORD.
2. To learn and use MSEXCEL,MSPOWERPOINT
3. To learn and browse the INTERNET and EMAIL

EXERCISE – 1:

MS WORD: Text Basics, Text Formatting and saving file, working with Objects

EXERCISE – 2 :

MS WORD: Header & Footers, Working with bullets and numbered lists, Tables

EXERCISE –3:

MS WORD: Styles and Content, Merging Documents, Sharing and Maintaining Document

EXERCISE –4 :

MS WORD: Sharing and Maintaining Document, : Proofing the document, Printing

EXERCISE –5:

MS EXCEL: Introduction to Excel, Formatting excel work book

EXERCISE –6

MS EXCEL: Perform Calculations with Functions, Sort and Filter Data with Excel

EXERCISE – 7:

MS EXCEL: Create Effective Charts to Present Data Visually, Analyze Data Using PivotTables and Pivot Charts, Protecting and Sharing the work book

EXERCISE – 8:

MS EXCEL: Use Macros to Automate Tasks, Proofing and Printing

EXERCISE – 9:

MS POWER POINT: Setting Up PowerPoint Environment, Creating slides and applying themes, Working with bullets and numbering, Working with Objects, Slide show option and print

EXERCISE – 10:

INTERNET AND EMAIL: What is Internet, Receiving Incoming Messages , Sending Outgoing Messages, Email addressing , Email attachments, Browsing, Search engines , Text chatting, Job Searching.

COURSE OUTCOMES (COs):

After completion of the course the student will be able to:

1. Use MS WORD, MS EXCEL AND POWER POINT in any civil engineering project works and for personal works.

MC310A CONSTITUTION OF INDIA

Instruction Hours/Week : 2(L) **Credits : -**

Sessional Marks : 100 **End Semester Examinations Marks : -**

Course Educational Objectives(CEOs): Students will learn:

- To Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

Unit-I

History of Making of the Indian Constitution:

History ,Drafting Committee, (Composition & Working)

Philosophy of the Indian Constitution: Preamble Salient Features

Unit-II

Contours of Constitutional Rights & Duties:

- Fundamental Rights
- Right to Equality
- Right to Freedom
- Right against Exploitation
- Right to Freedom of Religion
- Cultural and Educational Rights
- Right to Constitutional Remedies
- Directive Principles of State Policy

- Fundamental Duties.

Unit-III

Organs of Governance:

- Parliament
- Composition
- Qualifications and Disqualifications
- Powers and Functions
- Executive
- President
- Governor
- Council of Ministers
- Judiciary, Appointment and Transfer of Judges, Qualifications
- Powers and Functions

Unit-IV

Local Administration:

- District's Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.
- Pachayati raj: Introduction, PRI: Zila Pachayat.
- Elected officials and their roles, CEO Zila Pachayat: Position and role.
- Block level: Organizational Hierarchy (Different departments),
- Village level: Role of Elected and Appointed officials,
- Importance of grass root democracy

Unit-V

Election Commission:

- Election Commission: Role and Functioning.
- Chief Election Commissioner and Election Commissioners.
- State Election Commission: Role and Functioning.
- Institute and Bodies for the welfare of SC/ST/OBC and women.

TEXT BOOKS/REFERENCES:

- The Constitution of India, 1950 (Bare Act), Government Publication.
- Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
- M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
- D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Outcomes(COs):

Students will be able to:

- Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.

- Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
- Discuss the passage of the Hindu Code Bill of 1956.

MA 401C PROBABILITY & STATISTICS

Instruction Hours/Week: 3(L)

Credits: 3

Sessional Marks : 40 **End Semester Examinations Marks: 60**

Course Educational Objective (CEOs)

The objective of this course is

- To familiarize the students with numerical methods of solving the non-linear equations, interpolation, differentiation, integration, and ordinary differential equations.
- To impart knowledge in basic concepts and few techniques in probability and statistics in relation to the engineering applications.

UNIT- I

SOLUTION TO ALGEBRAIC EQUATIONS: Solution of polynomial and transcendental equations: bisection method, Newton-Raphson method and Regula-Falsi method. finite differences, relation between operators, interpolation using Newton's forward and backward difference formulae. Interpolation with unequal intervals: Newton's divided difference and Lagrange's formulae.

UNIT- II

NUMERICAL DIFFERENTIATION AND INTEGRATION: Numerical Differentiation, numerical integration- trapezoidal rule and Simpson's 1/3rd and 3/8 rules. Ordinary differential equations-Taylor's series, Euler and modified Euler's methods. Runge-Kutta method of fourth order for solving first and second order equations.

UNIT -III

PROBABILITY : Probability axioms, addition law and multiplicative law of probability, conditional probability, Baye's theorem, random variables (discrete and continuous)**,** probability

distribution: Binomial - Poisson approximation to the binomial distribution and normal distribution-their properties.

UNIT- IV

TESTING OF HYPOTHESIS: Formulation of null hypothesis, critical regions, level of significance. Large sample tests: test for single proportion, difference of proportions, test for single mean and difference of means.

UNIT -V

SMALL SAMPLE TESTS: Student t-distribution(single mean, two means and paired t-test), Testing of equality of variances (F-test), $\chi 2$ - test for goodness of fit, $\chi 2$ - test for independence of attributes.

Textbooks:

- B. S. Grewal, Higher Engineering Mathematics, 44/e, Khanna Publishers, 2017.
- P. Kandasamy, K. Thilagavathy, K. Gunavathi, Numerical Methods, S. Chand & Company, 2/e, Reprint 2012.

References

- Veerarajan T., Engineering Mathematics, Tata McGraw-Hill, New Delhi, 2008.
- Erwin kreyszig, Advanced Engineering Mathematics, 9/e, John Wiley & Sons, 2006.
- N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.

Course Outcomes:

At the end of the course students will be able to

- evaluate approximating the roots of polynomial and transcendental equations by different algorithms
- Apply different algorithms for approximating the solutions of ordinary differential equations to its analytical computations
- apply discrete and continuous probability distributions
- design the components of a classical hypothesis test

infer the statistical inferential methods based on small and large sampling tests

CE 402C CONCRETE TECHNOLOGY

Instruction Hours/Week : 3(L) **Credits : 3**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course objectives:

- Explain the functional role of ingredients of concrete and apply this knowledge to mix design philosophy
- Develop fundamental knowledge in the fresh and hardened properties of concrete
- Produce the testing methodology to evaluate the properties of concrete during fresh and hardened stage
- Knowledge on the behaviour of concrete with response to stresses developed.
- Knowledge on the special concretes And design a concrete mix which fulfils the required properties for fresh and hardened concrete

UNIT-I

CEMENTS AND AGGREGATES:

General, Manufacture of Portland cement by dry process, Approximate oxide composition limits of OPC, Bogue's compounds, heat liberation from a setting cement, structure of hydrated cement, water requirements for hydration.

TYPES OF CEMENTS: Ordinary Portland cement, Rapid hardening cement, Sulphate resisting cement, Slag cement, Quick setting cement, Super sulphated cement, Portland pozzolana cement, air entraining cement, coloured cement, expansive cement, High alumina cement.

AGGREGATES: Classification, source, size and shape texture and influence of texture on strength, specific gravity of aggregates, moisture in aggregates, bulking of fine aggregate, methods used for determination of moisture content of aggregates, grading of aggregates, sieve analysis, standard grading curve, grading limits of fine aggregates as per IS ; gap grading.

UNIT-II

WATER & ADMIXTURES: Quality of water for mixing concrete, Tolerable concentrations of some impurities in mixing water, permissible limit for solids as per IS456-2000, use of sea water for mixing concrete.

ADMIXTURES AND CONSTRUCTION CHEMICALS: General, plasticizers and super plasticizers – Dosage, mixing procedure, equipment, effect of super plasticizes on the properties of hardened concrete, Retardors, accelerators. Air-entraining admixtures, factors affecting amount of air-entrainment, effect of air-entrainment on the properties of concrete, fly ash, effect of fly ash on fresh and hardened concrete, high volume fly ash concrete, silica fume, available forms, effect of silica fume on compressive strength of concrete, construction chemicals for curing, construction chemicals for water proofing.

UNIT-III

FRESH CONCRETE:

Workability, factors affecting workability, slump test, Kelly ball test, V-B test, compaction factor test, segregation, bleeding, volume batching and weigh batching, hand mixing, machine mixing, mixing time, compaction of concrete, hand compaction, compaction by vibration, internal vibrator, form work vibrator, table vibrator, platform vibrator, surface vibrator.

UNIT-IV

HARDENED CONCRETE: General, water-cement ratio; gel/space ratio; gain of strength with age; maturity concept of concrete, effect of maximum size of aggregate on strength.

TEST ON HARDENED CONCRETE: Compression test; moulds and compacting; curing; failure of compression specimen; effect of height/diameter ration strength; flexural strength of concrete; tensile strength of concrete; non-destructive testing methods

ELASTICITY, CREEP AND SHRINKAGE: Elastic properties of aggregate, Factor's affecting modulus of elasticity, poisson's ratio, creep and factors affecting creep, shrinkage and factors affecting shrinkage.

DURABILITY OF CONCRETE: Factors contributing to cracks in concrete, sulphate attack and methods of controlling sulphate attack, chloride attack, corrosion of steel and its control.

CONSTRUCTION EQUIPMENT: Selection of equipment for earth work, concreting, material handling and erection of structures-Dewatering and pumping equipments

UNIT-V

SPECIAL CONCRETES AND CONCRETING METHODS: Fibre reinforced concrete; Fibres used, factors effecting properties, aspect ratio of fibres, orientation of fibres, workability, mixing, applications, current development in FRC.

NO-FINES CONCRETE: mix proportion, drying shrinkage, Thermal conductivity, applications.

Ferrocement: Casting techniques, hand plastering, semi-mechanized process, Centrifuging, guniting, applications.

LIGHT-WEIGHT CONCRETE: Natural and artificial light-weight aggregates, properties of common light-weight concretes. High performance concrete.

PROPORTIONING OF CONCRETE MIXES: Concept of mix design, variables in proportioning ,different methods of mix design, nominal mix and design mix, Indian standard method of mix design.

TEXT BOOK

1. Concrete Technology by M.S.Shetty, S.Chand & Company Pvt. Ltd., New Delhi

REFERENCE BOOKS

1. Properties of concrete by A.M.Neville, Longman Publishers
2. Concrete technology by M.L.Gambhir, Tata McGraw-Hill Publishing company Ltd., New Delhi.

Course Outcomes:

At the end of the course student is able to

- Understand various ingredients of concrete and their role.
- Examine knowledge on the fresh and hardened properties of concrete.
- Design concrete mixes using various methods.
- Perceive special concretes for accomplishing performance levels.

E403C FLUID MECHANICS AND HYDRAULIC MACHINES

Instruction Hours/Week : 2(L) +1(T) Credits : 3

Sessional Marks : 40 End Semester Examinations Marks: 60

Course Educational Objective (CEOs)

- To understand the significance of fluid properties.
- To apply the knowledge of fluid flow concepts and fundamental equations.
- To solve the problems related to impacts of jets and flow measurements.
- To apply the knowledge of laminar and turbulent flows.
- To design the characteristics of turbines and pumps.

UNIT – I

FLUID PROPERTIES

Definition of a fluid –Density, Specific weight, Specific volume, Specific gravity – Viscosity – Bulk modulus of elasticity – Vapour pressure – Surface tension and capillarity- Pressure at a point – Absolute and gauge pressures

FLUID STATICS

Pascal's law – Pressure measurement – Manometers- Mechanical gauges – Hydrostatic pressure and force: horizontal, vertical and inclined planes, Curved surfaces.

UNIT – II

FLUID FLOW CONCEPTS

Flow characteristics – Velocity – Acceleration – Types of flow – Streamlines, Path lines, Streak lines – Stream function, Velocity potential, flow-net – Circulation and Vorticity.

FUNDAMENTAL EQUATIONS

Continuity equation – Energy Equation - Euler's equation of motion along a streamline – Bernoulli's equation – Applications of Bernoulli's Equation – Free jets and vortex flows.

UNIT III

IMPACTS OF JETS

Linear momentum equation - Impacts of jets on free and fixed moving vanes – Moment of momentum equation.

FLOW MEASUREMENT

Velocity measurement – Pitot tubes – Flow measurements: Flow through pipes- Venturi meter, Orifice meter and Nozzle meter- Flow through Channels: Weir and notches – Flow through tanks: Orifice and Mouth pieces.

UNIT IV

LAMINAR FLOW

Laminar flow through: circular pipes, annulus and parallel plates. Stoke's law, Measurement of viscosity.

TURBULENT FLOW

Reynolds experiment, Transition from laminar to turbulent flow, Definition of turbulence, scale and intensity, Causes of turbulence, Turbulent flow in pipes. Reynolds stresses, semi-empirical theories of turbulence, Prandtl's mixing length theory, universal velocity distribution equation. Resistance to flow of fluid in smooth and rough pipes,

UNIT V

HYDRAULIC TURBINES

Classifications of turbines – Pelton Wheel, Francis Turbine and Kaplan Turbine velocity triangles at inlet and outlet – work done and efficiency– Draft Tube theory- Specific Speed – Characteristic Curves .

CENTRIFUGAL PUMPS

Components – Working – Types – Workdone – Heads – Losses and Efficiencies – Specific Speed – Multi Stage Pumps – Performance Characteristic Curves – Net positive Suction Head (NPSH).

Course Outcomes (COs)

After completion of the course the student will be

- Able to solve fluid flow problems using fundamental principles
- Able to apply the knowledge of fluid flow concepts and fundamental equations for solving problems
- Able to measure pressure, velocity and discharge, and apply the knowledge of impacts of jets related to real life problems.
- Able to analyze the flow problems in laminar and turbulent flow conditions.
- Able to analyze the characteristics of turbines and pumps.

TEXT BOOKS

- Hydraulics and Fluid Mechanics including Hydraulic Machines by P.N. Modi and S.M. Seth – Twentieth edition 2015, Standard Book House , New Delhi.
- Fluid Mechanics and Hydraulic Machines by R.K.Rajput - 2002 Publication, S.Chand & Company Ltd., New Delhi.
- Fluid Mechanics and Hydraulic Machines by R.K.Bansal -Revised Ninth edition 2010, Laxmi Publications (P) Ltd., New Delhi.

REFERENCE BOOKS

- Fluid Mechanics by Victor L. Streeter and E.Benjamin Wylie, Keith W. Bedford – Edition 2010, Tata Mc Graw Hill Education Private Limited, New Delhi.
- Fluid Mechanics and Turbo machines by Madan Mohan Das. – First Edition 2009, PHI Learning Pvt.Ltd., New Delhi.

CE 404C STRUCTURAL ANALYSES

Instruction Hours/Week :2(L)+1(T) **Credits : 3**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course Objectives

- to teach the student with basic concepts for determination of principal stresses and strains in various structural elements.
- to demonstrate analytical methods for determining strength & stiffness and assess stability of structural members.
- to train the student compute shear stresses in different cross-sections and analyze failure mechanisms.
- to make the student analyze circular shafts subjected to torsion
- to make the student determine critical loads for columns with different end conditions.

UNIT- I

DEFLECTIONS: Relationship between curvature, slope and deflection - Differential equation for the elastic line of a beam - Slope and deflection of cantilevers and simply supported beams by integration method, moment area method and conjugate beam method. Uniform bending – slope, deflection and radius of curvature – Differential equation for elastic line of a beam – Double integration and Macaulay's methods. Determination of slope and deflection for cantilever and simply supported beams under point loads, U.D.L. uniformly varying load-Mohr's theorems – Moment area method – application to simply supported and overhanging beams- analysis of propped cantilever beams under UDL and point loads.

UNIT-II

TORSION OF CIRCULAR SHAFTS: Theory of pure torsion in solid and hollow circular shafts - Transmission of power - Combined bending, torsion and end thrust.

SPRINGS: Types of springs - Close and open coiled helical springs under axial loads and axial couple - springs in series and parallel - Carriage or leaf springs.

UNIT- III

INFLUENCE LINES AND MOVING LOADS:

Influence lines for reactions, BM and SF; Curves of maximum BM and SF for single, two and multiple loads, udl longer and shorter than span, enveloping parabolic and EUDL – forces in truss members.

UNIT- IV

ENERGY THEOREMS: Virtual work and energy principles - Maxwell's, Betti's theorems, Castigliano's first theorem and unit load method - Deflection of simple beams and pin-jointed trusses. Strain energy in linear elastic system, expression of strain energy due to axial load, bending moment and shear force. Introduction to finite element method for plane stress and plane strain.

UNIT- V

INDETERMINATE STRUCTURES: Indeterminate Structural Analysis – Determination of static and kinematic indeterminacies – Analysis of plane trusses with two degrees of internal and external indeterminacy - Castigliano's theorem–II – Lack of fit.

TEXT BOOKS:

- Analysis of Structures Vol.I & II by V.N.Vazirani & M.N.Ratwani.
- Intermediate Structural Analysis by Wang.
- Mechanics of Structures Vol.II by S.B.Junarkar.

- Structural Analysis by L.S.Negi & R.S.Jangid.
- Theory of Structures - Vol.I by S.P.Gupta, G.S.Pandit & R.Gupta.
- Fundamentals of Structural Analysis by Sujit Kumar Roy & Subrata Chakrabarty.

Course Outcomes:

On completion of the course, the student will be able to:

- Understand various engineering properties of materials
- Estimate magnitudes under combined loads in members and structures
- Determine shear stresses for different cross-sections.
- Determine deflection at any point on a beam under simple or combined loads
- Apply failure criteria to implement in design of structural members.
- Analyze members under torsion, combined torsion and bending moment for determination of energy absorption

CE 405C WATER QUALITY AND TREATMENT

Instruction Hours/Week : 3(L) **Credits : 3**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course Educational Objective (CEOs)

- To know the water quality of different sources and water demand estimation.
- To analyze the distribution network
- To learn about the water quality parameters
- To know the design concepts of water treatment plant
- To study the advanced water treatment methods.

UNIT – I

SOURCES AND DEMAND OF WATER: Different sources of water, quantity and quality of different sources, Types and variation in water demand, factors affecting water demand, design period, population forecasting – Different methods and their suitability.

UNIT-II

WATER COLLECTION, CONVEYANCE AND DISTRIBUTION: Intake works for collection of surface water – Conveyance of water – Gravity and pumping – Their design – Different materials used for conveying conduits and their suitability, systems of distribution – Distribution reservoirs – Distribution networks, design of simple and complex pipe networks, pipe accessories – Valves and their location and suitability.

UNIT – III

WATER USES AND QUALITY REQUIREMENTS: Sources of water pollution, water borne diseases. Need for protected water supply,water quality – Physical, chemical and biological characteristics, water quality standards for different uses.

WATER TREATMENT: Conventional water treatment processes units and their functions. Theory and design of aeration,coagulation, flocculation and clarification, Determination of optimum dose of alum for coagulation of water.

UNIT – IV

FILTRATION AND DISINFECTION: Theory of Filtration – Different types of filters and their design. Disinfection – Disinfectant's mechanism of disinfection – Different methods of Disinfection. Types of Chlorination - Break point chlorination.

UNIT – V

ADVANCED TREATMENT METHODS: Treatment methods for removal of fluorides, arsenic, hardness, iron and manganese, salinity, colour.

TEXT BOOKS :

- Water Treatment Principles and Design by James M. Montgomery.
- Water Supply Engineering, by S.K.Garg.
- Environmental Engineering by H.S.Peavy et al.
- Water Supply and Sewerage, by E.W.Steel.

Course Outcomes (COs)

After completion of the course the student will be:

- Able to estimate the water demand of any area and understand the water sources and its quality
- Able to solve the distribution network problems

- Able to explain the water quality parameters
- Able to plan and design water treatment plant
- Able to understand advanced water treatment technologies

CE 406C SOIL MECHANICS

Instruction Hours/Week : 2(L)+1(T) **Credits : 3**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course Objectives:

The objectives of this course is:

- To enable the student to find out the index properties of the soil and classify it.
- To enable the students to differentiate between compaction and consolidation of soils and to determine the consolidation settlement.
- To enable the student to determine permeability of soils using various methods.
- To impart the concept of seepage of water through soils and determine the seepage discharge.
- To enable the students to determine Shear Strength of soils using various methods.

UNIT- I

SOIL COMPOSITION AND PHASE RELATIONSHIPS:

Types of soils - formation and deposition - Phase composition and Soil as 3−Phase system- Weight-Volume parameters : moisture content, unit weights, degree of saturation, voids ratio, porosity, specific gravity, mass specific gravity - Relationship between various soil parameters - Determination of Moisture content, Specific gravity and Unit weights using various methods.

UNIT -II

IDENTIFICATION AND CLASSIFICATION OF SOILS:

Index properties- Determination of particle size-Dry Sieve Analysis &Sedimentation Analysis-Determination of Consistency limits-liquid limit, plastic limit, shrinkage limit - Indices from Index properties-Density Index, Plasticity, Liquidity and Consistency indices, Flow & Toughness indices - Soil classification based on particle size , texture - Unified and Indian standard soil classification systems – Engineering significance of classification and classification parameters- Tests for field identification of soils

UNIT -III

SOIL WATER & EFFECTIVE STRESS PRINCIPLE:

Mode, Occurrence and types of soil water – Geostatic stresses in soils - capillarity – Total Stress- Pore water pressure- Effective Stress Principle - nature of effective stress, effect of ground level, surcharge &water table on effective stress.

PERMEABILITY & SEEPAGE ANALYSIS:

Darcy's law- coefficient of permeability: determination by constant-head and falling-head methods-Permeability of stratified soils - factors affecting Permeability -Movement of water through soils- stream and potential functions - flow nets, graphical method to plot flow nets-seepage pressure - quick sand condition.

UNIT- IV

CONSOLIDATION OF SOILS:

comparison between compaction and consolidation, initial, primary & secondary consolidation - Terzaghi's theory of consolidation, final settlement of soil deposits, computation of consolidation settlement and secondary consolidation.

UNIT – V

SHEAR STRENGTH OF SOILS:

Shear strength of soils - Mohr'-Coulomb Failure Criteria - Measurement of shear strength - Direct shear, Unconfined compression and Tri-axial compression tests - Shear strength parameters - Shear strength of cohesive and cohesion less soils - Test conditions - Stress Paths under different stress conditions.

TEXT BOOKS:

- C. Venkataramiah, Geotechnical Engineering, New age International Pvt. Ltd, (2002).
- K. R. Arora, Soil Mechanics and Foundation Engg., Standard Publishers and Distributors, Delhi.

REFERENCES:

- Gopal Ranjan & A. S. R. Rao, Basic and Applied Soil Mechanics, New age International Pvt . Ltd, New Delhi.
- Braja M. Das Principles of Geotechnical Engineering, Cengage Learning
- B. C. Punmia, Ashok Kumar Jain and Arun Kumar Jain, Soil Mechanics and Foundation, Laxmi publications Pvt. Ltd., New Delhi

Course Outcomes:

At the end of the course, the student must be able to:

- Identify and classify various soils based on their characteristics.
- Compute effective stress under different conditions
- Evaluate permeability and seepage of soils.
- Understand consolidation in soils and Calculate consolidation time and settlement of soils.
- Understand shear strength theories and Determine Shear Characteristics of soils

CE407P FLUID MECHANICS AND HYDRAULIC MACHINES LAB

Instruction Hours/Week : 3(P) **Credits : 1.5**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course Educational Objective (CEOs)

- To determine the coefficient of discharge in flow measuring devices.
- To determine the coefficients of different losses in pipe flow.
- To draw the performance characteristic curves of pumps.

FLOW MEASUREMENT

- Calibration of Small Orifice
- Calibration of Venturimeter
- Calibration of Orifice meter
- Calibration of Bend meter
- Calibration of Triangular Notch

HEAD LOSSES IN PIPES

- Determination of Friction factor of the pipe material
- Determination of Head Loss coefficient due to Sudden Contraction
- Determination of Head loss coefficient due to Gate Valve in a pipe line
- Determination of Head Loss coefficient due to Bend in a pipe line

HYDRAULIC MACHINES

- Characteristic curves of 0.8 kW two stage centrifugal pump
- Characteristic curves of variable speed centrifugal pump

Course Outcomes (COs)

After completion of the course the student will be:

- Able to calibrate the flow measuring devices.
- Able to calculate loss coefficients for use in the pipe flow analysis.
- Able to prepare the characteristic curves of the pumps.

CE408P SOIL MECHANICS LABORATORY

Instruction Hours/week : 2 (P) **Credits :1**

Sessional Marks : 40 **Semester-end Examination: 60**

Course Educational Objective (CEOs)

The course should enable the students to:

- Develop laboratory skills in dealing with soil as a medium of water flow , for structural support and a primary building material.
- Know the procedure to measure /determine engineering properties of soils in the laboratory.
- To conduct following experiments on different types of soils to arrive the engineering properties.

List of Experiments

- Grain Size Distribution by Dry Sieve Analysis.
- Grain Size Distribution by Hydrometer Analysis
- Specific Gravity of soils and Free Swell Index
- Consistency limits by Liquid limit and by Plastic limit
- In-situ density using Core Cutter method and Shrinkage Limit of given soil pat
- Shrinkage Limit of given soil
- In-situ density by Sand Replacement method.
- I.S. Light Compaction test/ Standard Proctor Compaction test

Course Outcomes (COs)

After completion of the course the student will be able to:

- Depict the procedures for measuring the engineering properties of soils.

- Describe the procedure for measuring the basic properties and compaction characterstics of soils.

- Assess the soil for engineering applications

CE409S PYTHON PROGRAMMING

Instruction Hours/Week: 1(T) +2(P) **Credits : 2.0**

Sessional Marks : 40 **End Semester**

Examinations Marks : 60

Course Educational Objective (CEOs)

- Computer programming skills are now becoming part of basic education as these skills are increasingly of vital importance for future job and career prospects.
- The Python programming language which is one of the most popular programming languages worldwide.
- The course shows you how to use the free open-source Python to write basic programs and high-level applications using concepts such as Class, BIF of Python, functions, variables, If Else statements, For loops, While loops, iterative and recursive programs and algorithms such as the Insertion Sort algorithm.
- This course will be of great interest to all learners who would like to gain a thorough knowledge and understanding of the basic components of computer programming using the Python language – and might be a gentle introduction to programming for those who think they might have a longer-term interest in the subject area.

UNIT I

Introduction to Python Programming Language: Introduction to Python Language: What is Python? Why Python? Installing Python on Windows, Python IDLE, Python Literals, Python Data Types Basic Input-Output operations, Operators in Python, Decision making in Python, Conditional execution in Python, Logical and bit operations in Python, Naming Conventions,

String Operations, String Slices, String Operators, Numeric Data Types, Conversions, Data type conversion, Built in Functions.

UNIT II

Python Built-in Data Structures: Introduction, List, Tuples, Dictionary, Sets, List Operations append, extend, insert, remove, pop, slice, and reverse, List Comprehension, Dictionary operations, Sorting Dictionaries, Copying Collections, Set operations. Standard python modules math, time, IO and time, Regular expressions, multi-threading.

UNIT III

Classes in Python, Principles of Object Oriented programming, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes.

UNIT IV

Functions, I/O, Exception Handling in Python

Introduction:Defining your own functions, keyword and optional parameters, mapping functions, lambda functions, **Data Streams:** Creating Your Own Data Streams · Access Modes · Writing Data to a File · Reading Data From a File · Additional File Methods · Using Pipes as Data Streams · Handling IO Exceptions · Working with Directories · Metadata · Errors · Run Time Errors · The Exception Model · Exception Hierarchy · Handling Multiple Exceptions

Unit V

Python API development.

Introduction to API, Python API programming, Python web application frameworks, REST API, Python Flask, Flask Environment, Routing, Cookies, Sessions, Running Flask Application, Testing API with POSTMAN client

Course Outcomes (COs)

Upon completion of this course, students should be able to

- Apply the OOP principles and best practices of python programming.
- Write clear and effective pythonic code.
- Create applications using python programming.
- Implementing databases using SQLite and Access databases using python programming.
- Understand and feel comfortable in working with web application frameworks.
- Develop APIs required for the web applications using web frameworks like Flask and Fast API.

CE410P COMPUTER AIDED BUILDING DRAWING

Instruction Hours/Week : 3(P) **Credits : 1.5**

Sessional Marks : 40 **End Semester Examinations Marks : 60**

Course Educational Objective (CEOs)

- Develop parametric design and the conventions of formal engineering drawing
- Produce and interpret 2D drawings
- Communicate a design idea/concept graphically/ visually
- Examine a design critically and with understanding of AUTOCAD software.

UNIT- I

INTRODUCTION: Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, coordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.

UNIT- II

SYMBOLS AND SIGN CONVENTIONS: Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawing symbols, welding symbols; dimensioning standards

UNIT- III

MASONRY BONDS: English Bond and Flemish Bond – Corner wall and Cross walls – One brick wall and one and half brick wall

UNIT- IV

BUILDING COMPONENTS: Terms, Doors, Windows, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan.

UNIT- V

TYPICAL BUILDING DRAWINGS: A Building, An Office building, A Dwelling, A Residential House, Plan of a Secondary School, Bank, Primary Health Centre, Duplex House.

It may be advisable to conduct Drawing sessions along with Lab demonstrations.

Text book:

Building Planning and Drawing – Dr. N. Kumaraswamy and A. Kameshwara Rao – CHARATOR PUBLISHING HOUSE**.**

COURSE OUTCOMES:

At the end of the course the student will be able to

- Develop drawing skills for effective demonstration of building details.
- Draw building plans using Computer Aided Design and Drafting soft wares.
- Develop engineering project drawings incorporating details and design parameters in 2D.
- Examine efficacy of AUTOCAD design and Drawing.

SRI VENKATESWARA UNIVERSITY : TIRUPATI

Scheme of Instruction and Syllabi of 4 Year BTech (Computer Science and Engineering), BTech (Honors in CSE) and BTech (Minor in CSE) under Regulations - 2020

By

Prof. Ch. D. V. Subba Rao
Chairman
Board of Studies in CSE (Combined)

Department of Computer Science and Engineering
SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING
TIRUPATI – 517 502, Andhra Pradesh

About the Department

- The Department of Computer Science and Engineering was established in 1986 offering B.Tech Program with initial intake of 20. Now the B.Tech (CSE) intake is increased to 40. The new programme 6 Year B.Tech & M.Tech Dual Degree course was introduced in 2015.
- The post graduate program i.e. M.Tech (CSE) was started in the year 2005 with initial intake of 18 and now it is increased to 25. The MTech students, qualified in GATE receive Rs 8000 fellowship per month from AICTE. The Ph.D admissions in CSE started in the year 2002 and there are nearly 34 scholars are working for their doctoral degree. The thrust areas of research of the department are Natural Language Processing, Distributed Systems, Grid Computing, Artificial Intelligence, Software Architecture, Data Mining, Wireless Networks and Speech Processing.

Vision

- To be one of the premier departments for achieving excellence in teaching and research with social responsibility and for producing innovative technical graduates in Computer Science and Engineering.

Mission

- To impart Computer Science and Engineering education by utilizing state of the art computing facilities.
- To infuse scholarly inquisitiveness, professional behavior and ethical values among students and research scholars, thereby making an imprint in the technological, economic and social development of the nation.
- To impart high quality professional training of international standards to meet the current and future demands of the industry and academia.
- To develop adequate e-infrastructure, environment and culture for the state of the art research work in Computer Science and Engineering.

PROGRAMME OUTCOMES:

- PO1: An ability to apply knowledge of computing, mathematics, science and engineering fundamentals appropriate to the discipline
- PO2: An ability to analyze a problem, and identify and formulate the computing requirements appropriate to its solution.
- PO3: An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations
- PO4: An ability to design and conduct experiments, as well as to analyze and interpret data
- PO5: An ability to use current techniques, skills, and modern tools necessary for computing practice.
- PO6: An ability to analyze the local and global impact of computing on individuals, organizations, and
- society.
- PO7: Knowledge of contemporary issues.
- PO8: An understanding of professional, ethical, legal, security and social issues and responsibilities.
- PO9: An ability to function effectively, individually as well as in teams.
- PO10: An ability to communicate fluently with a variety of audiences.
- PO11: Recognition of the need for and an ability to engage in continuing professional development.
- PO12: An understanding of engineering and management principles and applying these as a member/leader in a team, in managing projects.

Program Educational Objectives

- PEO1: To Provide quality learning through effective teaching-learning process enabled by free and open learning environment in turn Producing highquality graduate.
- PEO2: For Prepare students for proper positioning them in the society (academic, industrial, research and entrepreneurial areas in particular) with reference to trans-disciplinary activities, regular professional activities with high degree of innovation, competence, and commitment.
- PEO3: To create broad based expertise in the areas of CSE in general and a few (minimum of 4 to 5) focused areas for in-depth study and high quality research such as e- technologies, very large databases, data mining / warehousing, networking, security, high performance computing systems, embedded systems, software engineering methodology, s/w quality testing, multimedia, theoretical computer science aspects and so on.
- PEO4: To inculcate the culture of Lifelong learning during the evolution of the student to a full-fledged professional through educating the applicant about the ever increasingneeds of the society, technological trends and ethical values.
- PEO5: To set up a sense of efficient administrative / economical practices, to evolve the applicant with the required leadership qualities and managerial skills.

PROGRAMMING FOR PROBLEM SOLVING

No.of Credits: 4 Instruction Hours/ Week: 4

Course Objectives:

- To acquire problem solving skills
- To be able to develop flowcharts and algorithms for the given problem
- To learn how to write modular programs in C
- To enable to use arrays, pointers, strings and structures in solving problems.
- To explain the difference between object oriented programming and procedural programming.
- To understand principles of object oriented pogromming.

UNIT-I

Problem Solving : Problem solving techniques, Computer as a problem solving tool, Programming Languages - Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements : Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements: while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continue statements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions, Passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures containing arrays, Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, Reading from a file, Writing onto a file.

UNIT V

Introduction to Object-Oriented Programming (OOP): Need for OOP, Principles of OOP, Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

Course Outcomes:

At the end of the course, student will be able to

- Develop and test programs in C and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.
- Decompose a problem into functions and synthesize a complete program.
- Use arrays, pointers, strings and structures to formulate algorithms and programs
- Use files to perform read and write operations.
- Handle programming assignments based on class, abstraction, encapsulation, overloading and inheritance.

(With effect from the academic year 2020-21)

PROGRAMMING FOR PROBLEM SOLVING LABORATORY

No. of Credits: 1.5 Instruction Hours/Week: 3

Course Objectives:

- To provide exposure to problem-solving through programming
- To train the student on the concepts of the C- Programming language

The following programs shall be developed and executed in Programming Language C.

- Programs on conditional control constructs.
- Programs on iterative statements (while, do-while, for).
- Programs on recursive procedures
- Programs on arrays, matrices (single and multi-dimensional arrays).
- Programs using user defined functions, demonstrating parameter passing methods viz. call by value and call by reference.
- Programs using different library functions viz. ctype.h, math.h, stdio.h, stdlib.h, string.h, conio.h and pre-processor directives.
- Programs using pointers (int pointers, char pointers) and pointer arrays.
- Programs on structures and unions
- Programs on File Processing.
- Programs on Pointers to structures and Self-referential structures

Course Outcomes:

After Completion of this course the student would be able to

- Develop the C code for the given algorithm.
- Understand, debug and trace the execution of programs written in C language.

Reference Books:

- Scheldt H, C: The Complete Reference, 4th Edition, Tata McGraw-Hill,2002.

II Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2020-21)

DATA STRUCTURES

No.of Credits: 4 Instruction Hours/ Week: 4

Course objectives:

- Develop skills to design and analyze linear and nonlinear data structures.
- Develop algorithms for manipulating linked lists, stacks, queues, trees and graphs.
- Develop recursive algorithms as they apply to trees and graphs.
- Strengthen the ability to identify and apply the suitable data structure for the given real world problem
- Understand the various techniques of sorting and searching

UNIT I

Introduction: Data types/Objects/Structures, Abstract definition of Data Structures, Overview of linear and nonlinear data structures, Analysis of algorithms, Algorithm specification, Asymptotic notation, Time-Space trade-off, Searching: Linear, Binary and Fibonacci search and their complexity analysis.

Arrays: Definition, Multidimensional arrays, Pointer arrays, Representation of arrays – Row major and Column major orders, Application of arrays – Polynomials, Sparse matrices representation.

UNIT II

Stacks and Queues: Introduction, ADT, Array representation, Operations and Applications of Stacks - Evaluation of expressions, Code generation for stack machines, Implementation of recursion, Factorial calculation and Towers of Hanoi; Circular Queue, Priority Queue, Double ended queue, Applications of Queues - Simulation, CPU Scheduling; Multiple stacks and queues

UNIT III

Linked Lists: Singly linked lists and chains, Circular linked list, Doubly linked list, Circular doubly linked list, Complexity analysis of the same, Linked representation of Stacks and Queues, Applications of linked lists - Polynomial representation, Sparse matrix multiplication, Dynamic storage management; Generalized list representation, Recursive algorithms for lists, Recursive lists

UNIT IV

Trees: Basic tree terminologies, Binary trees – Definition, Properties, ADT, Representations, Operations and Applications; Binary Search Trees, Heap Trees, Threaded binary trees, Height balanced trees – AVL Trees, Red black tree, Splay tree Their operations and complexity analysis.

UNIT V

Sorting Techniques: Insertion sort, Selection sort, Bubble sort, Quick sort, Radix sort Merge sort, External sort – Introduction, K-way Merge sort.

Graphs: Basic terminologies, Representations, ADT, Operations on graphs – DFS, BFS, Spanning trees, Biconnected components, Minimum cost spanning trees.

Course Outcomes:

After completion of the course the students will be able to

- Choose appropriate data structure for the specified problem definition.
- Implement linear and non-linear data structures viz. stacks, queues, linked list, trees, graphs.
- Apply the concept of trees and graph data structures for the real world problems.
- Comprehend the implementation of sorting and searching algorithms

Text Books:

II Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2020-21)

DATA STRUCTURES LABORATORY

No. of Credits: 1 Instruction Hours/Week: 2

Course Objectives:

- To understand the practical application of linear and nonlinear data structures.
- To develop and execute programs in C++/C to solve problems using data structures such as arrays, linked lists, stacks, queues, trees, and graphs.
- To develop and execute programs in C to implement various sorting and searching techniques

- Develop an algorithm to implement stack using arrays. Code it in C++.
- Develop an algorithm to evaluate a given postfix expression using stack. Code it in C.
- Develop an algorithm to convert a given infix expression to postfix form using stacks. Code it in C.
- Develop algorithms to implement i) Linear queue and ii) Circular queue using arrays. Code it in C++.
- Develop an algorithm to implement double ended queue (de queue) using arrays. Code it in C++.
- Develop algorithms using dynamic variables and pointers, to construct a singly linked list consisting of the following information in each node: student id (integer), student name (character string) and semester (integer). The operations to be supported are:
    a. Inserting a node i) at the front of a list ii) at the rear of the list ii) at any position in the list
    b. Deleting a node based on student id. If the specified node is not present in the list, an error Message should be displayed.
    c. Searching a node based on student id. If the specified node is not present in the list an error message should be displayed.
    d. Displaying all the nodes in the list.

  Code the same in C++.
- Develop an algorithm using dynamic variables and pointers to construct a stack of integers using singly linked list and to perform the following operations:
- Push, ii) Pop iii) Display (The program should print appropriate messages for stack overflow and stack empty). Code the same in C++.
- Develop an algorithm using dynamic variables and pointers to construct a queue of integers using singly linked list and to perform the following operations: a. Insert
    - b. Delete c. Display. The program should print appropriate messages for queue full
    - and queue empty. Code the same in C++.
- Develop an algorithm to support the following operations on a doubly linked list where each node consists of integer data object:
    a. Create a doubly linked list
    b. Insert a new node

c. Delete the specific node
d. Display the contents of the list.

Code the same in C++.

- Develop algorithms to
  a. Construct a binary tree of integers.
  b. Traverse the binary tree using inorder, preorder and postorder. (both recursive and non-recursive versions)
  c. Display the elements in the tree.

  Code the same in C++.

- Develop algorithms to create a binary search tree (BST) and perform the following operations on it. Find (a) Minimum element (b) Maximum element (c) Search for a given element (d) Find predecessor of a node (e) Find successor of a node (f) Delete a node with specific key value. Code the same in C++.
- Develop an algorithm to construct an AVL tree for the given set of elememnts. Code it in C++.
- Develop algorithms to Sort the given list of elements (i.e. numbers or strings)
  (a) Insertion sort (b) Merge sort (c) Quick sort (d) Heap sort
  Code the same in C.
- Develop algorithms to implement of graph traversals by applying:
  (a) BFS (b) DFS. Code the same in C/C++.
- Develop algorithms to find out a minimum spanning tree of a simple connected
  - undirected graph by applying: (a) Prim's algorithm (b) Kruskal's algorithm
  - Code the same in C/C++.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- Identify the appropriate data structure for given problem.
- Have practical knowledge on the application of data structures.
- Analyze the time and space efficiency of the data structure.

Text Books:

- Object Oriented Programming with ANSI & Turbo C++, Ashok N.Kamthane, Pearson Education
- Scheldt H, C: The Complete Reference, 4th Edition, Tata McGraw-Hill, 2002.
- Ellis Horowitz, Sartaj Sahni and Dinesh Mehta, Fundamentals of Data Structures in C++ Universities Press, Second Edition.
- Data Structures using C and C++, YedidyahLangsam.MosheJ.Augenstein Aaron M.Tenenbaum, 2nd Edition,PHI
- ADTs, Data Structures and Problem Solving with C++, Larry Nyhoff, Pearson Education.

MA301C

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

MATHEMATICS III

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

- This course aims at providing the student to acquire the knowledge on the calculus of functions of complex variables.
- To understand power series and expansion of analytic function.
- To understand Laurent Series, poles, singular points, Residue theorem and its applications.
- The aim is to analyze the solutions of partial differential equations.
- To discuss the boundary value problems, one dimensional wave equation, heat equation and Laplace Equation.

UNIT I

Complex analysis - I: Analytical functions - Cauchy- Reimann equations – Construction of Analytic functions- Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT II

Complex analysis - II**:** Taylor's and Laurents' series - Transformations - Conformal mapping - Bilinear transformations - Transformation of 1/z, z^2, sin z and cos z.

UNIT III

Complex analysis - III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluation of real integrals.

UNIT IV

Partial differential equations - I : Formation of differential equations - Classification - First order linear partial differential equations – Legranges' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT V

Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heat equation – Laplace's equation.

Course Outcomes:

Upon successful completion of this course, the student should be able to

- Understand the analyticity of complex functions and conformal mappings.
- Apply Cauchy's integral formula and Cauchy's integral theorem to evaluate improper
- integrals along contours.
- Describe basic properties of complex integration and having the ability to compute such integrals.
- Describe conformal mappings between various plane regions.

- Apply the concepts of Complex Analysis in many branches of Engineering, including the branches of hydrodynamics, thermodynamics, and particularly quantum mechanics.
- Compute the residue of a function and use the Residue Theory to evaluate a contour integral or an integral over the real line.
- Formulate/solve/classify the solutions of Partial differential equations.
- Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit's method.
- Apply Variables separable methods to solve boundary value problems.
- Find the solution of one dimensional wave equation, heat equation and Laplace equation.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

DATABASE MANAGEMENT SYSTEMS

No.of Credits: 4 Instruction Hours/Week: 3L+1T

Course Objectives:

- To learn data models, conceptualize and depict a database system using ER diagram
- To understand the internal storage structures in a physical DB design
- To demonstrate the fundamental concepts, operation and function of different components of database systems.
- To describe the roles of transaction processing and concurrency control in a modern DBMS.
- To demonstrate key issues in the operation of a DBMS including query processing, security and integrity.
- To design and implement a database application.

UNIT-I

Introduction: Managing Data, File Systems versus a DBMS, Advantages of a DBMS, Storing data in a DBMS, Queries in a DBMS, Transactions, Structure of a DBMS.

Introduction to Data base design: ER diagrams, Beyond ER Design, Entities, Attributes and Entity sets, Relationships and Relationship sets, Additional features of ER Model, Conceptual Design with the ER Model, Conceptual Design for Large enterprises.

Relational Model: Introduction to the Relational Model, Integrity Constraints over Relations, Enforcing Integrity constraints, Querying relational data, Logical data base Design, Introduction to Views Destroying/ altering Tables and Views.

UNIT-II

Relational Algebra and Calculus: Relational Algebra , Relational calculus, Expressive Power of Algebra and calculus.

SQL: Form of Basic SQL Query, UNION, INTERSECT and EXCEPT, Nested Queries, Aggregate Operators, NULL values , Complex Integrity Constraints in SQL, Triggers and Active Databases, Designing Active Databases

UNIT-III

Schema Refinement and Normal Forms: Introduction, Functional Dependencies, Reasoning about FDS, Normal Forms - FIRST, SECOND, THIRD Normal forms, BCNF, Properties of Decompositions, Normalization, Schema Refinement in Data base Design, Multi valued Dependencies , FOURTH Normal Form, Join Dependencies, FIFTH Normal form, Inclusion Dependencies.

Database Application Development: Accessing Databases from Applications, Introduction to JDBC, JDBC Classes and Interfaces, SQLJ, Stored Procedures.

UNIT-IV

Overview of Transaction Management: ACID Properties, Transactions and Schedules, Concurrent Execution of Transactions, Lock-based Concurrency Control, Performance Locking, Transaction Support in SQL, Introduction to Crash Recovery.
Concurrency Control: 2PL, Serializability and Recoverability, Introduction to Lock Management, Lock Conversions, Dealing with Deadlocks, Specialized Locking Techniques, Concurrency Control without Locking

Crash Recovery: Introduction to ARIES, Log, Recovery related Structures, Write-Ahead Log Protocols, Checkpointing, Recovering from a System Crash, Media Recovery, Interaction with Concurrency Control

UNIT-V

Overview of Storage and Indexing: Data on External Storage, File Organization and Indexing, Index data Structures, Comparison of File Organizations, Indexes and Performance Tuning.

Indexing and Hashing: Intuitions for tree indexes, Indexed Sequential Access Method, B+ Trees: A Dynamic Index Structure, Search, Insert, Delete, Duplicates, B+ Trees in Practice, Static Hashing, Extendable Hashing, Linear Hashing, Extendible vs. Linear Hashing.

Parallel and Distributed Databases: Introduction, Architectures for Parallel Databases, Parallel Query Evaluation, Parallelizing Individual Operations, Introduction to Distributed Databases, Distributed DBMS Architectures, Storing Data in Distributed DBMS, Distributed Catalog Management, Distributed Query Processing

Course Outcomes:

Upon successful completion of this course, the student should be able to

- Use relational algebra and relational calculus, to express database queries.
- Use SQL to interact with database management systems.
- Design appropriate database tables, using functional dependencies and normal forms.
- Implement a disk-oriented database storage manager with heap table and indexes.
- Understand, compare, and implement the major concurrency control algorithms.
- Implement database recovery algorithms and verify their correctness.
- Identify trade-offs among database systems techniques and contrast distributed/parallel alternatives for both on-line transaction processing and on-line analytical workloads.

Text Books:

- Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems, Third Edition, McGraw-Hill, 2014.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

DISCRETE MATHEMATICAL STRUCTURES

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

This course is designed to

- Use mathematical reasoning in order to read, comprehend, and construct mathematical arguments and theorem proving techniques.
- Familiarize students with the basic concept of functions, basic set theory, countability and counting arguments.
- Present basic concepts of number theory and teach students how to apply the same to cryptography.
- Reinforce the method of recursion and use of structural induction.
- Introduce fundamental concepts of graph theory and present different graph models.
- Familiarize students with minimum spanning trees and shortest-path problems.

UNIT I

Logic, Prepositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs, Methods of Proof and Strategy.

UNIT II

Sets, Set Operations, Functions, Sequences and Summations, Introduction to Semigroups, Groups, Subgroups, Normal subgroups.
Relations and their properties, n-ary relations and their applications, Representing relations, Closures of relations, Equivalence relations, Partial orderings, Lattices.

UNIT III

Counting: Basics of Counting, Pigeonhole principle, Permutations and Combinations, Binomial Coefficients, Generalized Permutations and Combinations, Generating Permutations and Combinations.
Advanced Counting Techniques: Recurrence Relations, Solving Recurrence Relations, Divide-and-Conquer Algorithms and Recurrence Relations, Generating Functions, Inclusion-and-Exclusion and its Applications.
Number Theory and its Applications.

UNIT IV

Introduction to graphs, Graph terminology, Applications of some special graphs, epresentation of graphs, Graph isomorphism.Connectivity: Connectedness in undirected and directed graphs, Paths and Isomorphism,Construction of reliable communication networks, Euler path, amilton path, Chinese postman problem, Shortest path problems, Traveling salesman problem.

UNIT V

Planar graphs, Kuratowski's theorem, Graph coloring and applications.Introduction to trees, Application of trees, Spanning trees, Applications of backtracking, Minimum spanning trees, Flows, Cuts, Max-flow Min-cut problem.

Course Outcomes

On successful completion of this course the students will be able to:

- Verify the correctness of an argument using propositional and predicate logic
- Construct proofs using direct proof, proof by contraposition, proof by contradiction, proof by cases, and mathematical induction.
- Solve problems involving recurrence relations and generating functions.
- Construct and analyze graph models for problems in different areas.
- Design and develop real time application using graph theory

Text Books:

- Kenneth H Rosen, Discrete Mathematics and its Applications, 6th edition, McGraw-Hill Companies.
- Mott J L, Kandel A, and Baker T P, Discrete Mathematics for Computer Scientists and Mathematicians, 2nd edition, PHI, 2004.

- Mott J L, Kandel A, and Baker T P, Discrete Mathematics for Computer Scientists and Mathematicians, 2nd edition, PHI, 2004.
- Kolman B, Busby R C, Ross S C, and Rehman N, Discrete Mathematical Structures, 5th edition, Pearson Education, 2006.
- Lipschutz S, Lipson M, Discrete Mathematics, 2nd edition, TMH, 2006.

CS304C

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

BASIC ELECTRICAL ENGINEERING

No.of Credits: 3 Instruction Hours/Week: 3

UNIT I

Basic Circuit Concepts: Electrical circuit elements (R, L and C), Classification of Circuit elements, Voltage and Current sources, Source transformation Techniques – Kirchhoff's laws – Star-delta transformation – Network reduction techniques – Mesh and Nodal Analysis for D.C. Circuits – Concept of mutual inductance – Dot convention.

UNIT II

Network Topology: Graph, tree, incidence matrix, and tie set and cut set matrices – Formulation of equilibrium equations based on graph theory. Duality and dual circuits.
A.C. Fundamentals: Periodic wave forms – Average and effective values of different waveforms – Form factor and crest factor.

UNIT III

A.C. Circuits: Phase and phase difference – Phasor notation – Concept of reactance, impedance, susceptance and admittance – Power factor – Active and reactive power – Impedance Triangle – Power triangle – Steady State analysis of single-phase A.C. circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel) – Phasor diagrams. Mesh and Nodal Analysis for A.C. Circuits.

UNIT IV

D.C. Machines: Construction of a D.C. Machine, D.C. Generator: Operation, lassification and EMF equation. D.C. Motor: Operation, Back E.M.F, Types and Applications.Single Phase Transformers: Principle of Operation, Types, EMF equation.

UNIT V

Three Phase Induction Motor: Production of Rotating Magnetic Field, Construction and operation of 3-Phase Induction Motor. Alternators: Construction and working of Alternators.

Course Outcomes

Having successfully completed this course the students will be able to:

- understand and analyze basic electric and magnetic circuits.
- study the working principles of electrical machines and power converters.
- introduce the components of low-voltage electrical installations.

Text/Reference Books:

- Sudhakar and Shyammohan, Circuits and Networks: Analysis and Synthesis,5thEdition, Tata McGraw-Hill.
- Ravish R. Singh, Network Analysis and Synthesis, Tata McGraw-Hill.
- Nagrath and Kothari, Basic Electrical Engineering, 4th Edition, Tata McGraw-Hill.
- 4. D.C.Kulshreshtha, Basic Electrical Engineering, McGraw-Hill.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

ELEMENTS OF ELECTRONICS AND COMMUNICATION ENGINEERING

No.of Credits: 3 Instruction Hours/Week: 3

UNIT I

Basic Electronic Devices: Semiconductor fundamentals, Principle of operation and V-I Characteristics of Diodes (PN, Zener, Photo, LED, Laser Diode), Transistors (BJT, JFET, MOSFET).

Microelectronics: Concept of miniaturization of electronic systems, Basic principles of monolithic integrated circuit technology, IC fabrication of simple circuit elements.

UNIT II

Transistor Amplifiers: Concept of an amplifier -Gain, Input and Output impedance, Frequency response, Biasing of a transistor, CB, CE and CC Configurations and their characteristics, Multi stage Amplifiers.

Concept of feedback: Negative and Positive feedback, Advantages and limitations, Oscillator Operation, RC phase shift oscillator and Crystal oscillator.

UNIT III

Analog ICs: Concept of differential amplifier, Operational Amplifier (OPAMP), Characteristics of an OP AMP and its applications - Inverting and non-inverting amplifiers, Summer, Integrator, Differentiator.

555 timer, and its application as multi-vibrator, Phase Locked Loop (PLL), and its application as frequency multiplier.

UNIT IV

Basics of Communication Engineering: Introduction, Signal Spectrum, Bandwidth, Noise; Concept of Communication - Source, Channel, Sink; Types of channels; Concept of information and entropy, Shannon's law, Bit rate; Analog Modulation Schemes - AM, FM; Pulse Modulation Schemes - Sampling, PAM, PWM, PPM, PCM, DM; Multiplexing - FDM,TDM.

UNIT V

A/D and D/A Converters: D to A converters- Basic principle, Weighted resistor and ladder types; A to D Converters - Basic principle, Ramp, Successive approximation types.

Basic Electronics Instruments: Block diagram and principle of operation of - Digital Multi-meter, Function generator, Cathode Ray Oscilloscope (CRO).

Text Books:

- Bogart Jr. T F, Beasley J S, and Rico G, Electronic Devices and Circuits, 6th edition, Pearson Education, 2006.

BASIC PYTHON PROGRAMMING

No.of Credits: 2 Instruction Hours/Week: 1T+2P

Course Objectives:

The course is designed to:

- Python syntax and semantics and be fluent in the use of Python flow control and functions.
- the concepts of Object-Oriented Programming as used in Python.
- various problems solving approaches of computer science in various Domains.
- various data structures like lists and dictionaries using python.
- introduce Python third- Party Tools for various domains.

UNIT I

Introduction to Python Programming: Features and History of Python, The Future of Python, Writing and Executing First Python Program, Literal Constants, Variables and Identifiers, Data Types, Input Operation, Comments, Reserved Words, Indentation, Operators and Expressions, Expressions in Python, Operations on Strings, Other Data Types, Type Conversion.

Decision Control Statements: Introduction to Decision Control Statements, Selection/ Conditional Branching Statements, Basic Loop Structures/Iterative Statements, Nested Loops, The break, continue and pass Statement, The else Statement used with Loops.

UNIT II

Functions and Modules: Introduction, Function Definition, Function Call, Variable Scope and Lifetime, The return statement, More on Defining Functions, Lambda Functions or Anonymous Functions, Documentation Strings, Good Programming Practices, Recursive Functions, Modules, Packages in Python, Standard Library modules, Globals(), Locals(), and Reload(), Function Redefinition.

Python Strings Revisited: Introduction, Concatenating, Appending, and Multiplying Strings, Strings are Immutable, String Formatting Operator, Built-in String Methods and Functions, Slice Operation, ord() and chr() Functions, in and not in operators, Comparing Strings, Iterating String, The String Module, Regular Expressions, Metacharacters in Regular Expression.

UNIT III

File Handling: Introduction, File Path, Types of Files, Opening and Closing Files, Reading and Writing Files, File Positions, Renaming and Deleting Files, Directory Methods.

Data Structures: Sequence, Lists, Functional Programming, Tuple, Sets, Dictionaries.

Classes and Objects: Introduction, Defining Classes, Creating Objects, Data Abstraction, Class Method and self Argument, The _init_() Method, Class Variables and Object Variables, The _del_() Method, Other Special Methods, Public and Private Data Members, Private Methods, Calling a Class Method from Another Class Method, Built-in Functions to Check, Get, Set, and Delete Class Attributes, Built-in Class Attributes, Garbage Collection, Class Methods,StaticMethods.

UNIT IV

Inheritance: Introduction, Inheriting Classes in Python, Types of Inheritance, Composition or Containership or Complex Objects, Abstract Classes and Interfaces, Metaclass.

Operator Overloading: Introduction, Implementing Operator Overloading, Reverse Adding, Overriding _getitem_() and _setitem_() Methods, Overriding the in Operator, Overloading Miscellaneous Functions, Overriding the _call_() Method.

Error and Exception Handling: Introduction to Errors and Exceptions, Handling Exceptions, Multiple Except Blocks, Multiple Exceptions in a Single Block, Except Block Without Exception, The else Clause, Raising Exceptions, Instantiating Exceptions, Handling Exceptions in Invoked Functions, Built-in and User-defined Exceptions, The finally Block, Pre-defined Clean–up Action, Re-raising Exception, Assertions in Python, Multi-threading.

UNIT V

Survey of The Most Common 3rd Party Packages: Requests, Numpy/Scipy, Matplotlib/ Pyplot, Pandas, Pillow, Flask/Django/Twisted, Pep8, Scikit-Learn/Nltk, Stanford-Corenlp, Bcrypt, Beautiful Soup, and More.

GUI Design with Tkinter: Button, Canvas, Check Button, Entry, Frame, Label, List Box, Menu, Menu Button, Message, Radio Button, Scale, Scrollbar, Text Graphics with Turtle: Motion Control, Pen, Colour, Fill, Multiple Turtles, Reset and Clear.

Course Outcomes

Having successfully completed this course the students will be able to:

- understand the structure, syntax, and semantics of the Python language.
- interpret the concepts of Object-Oriented Programming as used in Python.
- demonstrate proficiency in handling Strings and File Systems.
- implement desktop/Web-based applications using the Python programming language.

Text Books:

- Reema Thareja, Python Programming using problem solving approach, First Edition, Oxford University Press, 2017.

III Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

CONSTITUTION OF INDIA

No.of Credits: Nil Instruction Hours/Week: 2

Course Objectives:

The objective of the course is to impart to the students

- understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- address the growth of Indian opinion regarding modern Indian intellectuals'
- constitutional role and entitlement to civil and economic rights as well as the
- emergence of nationhood in the early years of Indian nationalism.
- address the role of socialism in India after the commencement of the Bolshevik
- Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

UNIT I

History and philosophy of the Indian Constitution:
History -Drafting Committee, (Composition & Working) - Preamble - Salient Features

UNIT II

Contours of Constitutional Rights & Duties: Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

UNIT III

Organs of Governance: Parliament – Composition - Qualifications and Disqualifications - Powers and Functions, Executive President – Governor - Council of Ministers - Judiciary, Appointment and Transfer of Judges, Qualifications - Powers and Functions.

UNIT IV

Local Administration:
District's Administration Head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy

UNIT V

Election Commission: Election Commission: Role and Functioning - Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning.Institute and Bodies for the welfare of SC/ST/OBC and women.

Course Outcomes

Having successfully completed this course the students will be able to know:

- the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
- the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
- the circumstances surrounding the foundation of the Congress Socialist Party [CSP]
- under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of
- direct elections through adult suffrage in the Indian Constitution.
- the passage of the Hindu Code Bill of 1956.

Text/Reference Books:

- The Constitution of India, 1950 (Bare Act), Government Publication.
- Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
- M. P. Jain, Indian Constitution Law, Lexis Nexis, 7th Edition, 2014.
- D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

IV Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

DIGITAL ELECTRONICS AND LOGIC DESIGN

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives

- To understand the essential knowledge on the fundamental of digital circuits
- To understand the overview on the design principles of digital computing systems

UNIT I

Number Representation, Signed and Unsigned, Code Conversion, Review of Boolean Algebra and DeMorgan's Theorem, Sum-of-Product and Product-of-Sum forms, Canonical forms, Karnaugh maps up to 6 variables.

UNIT II

MSI devices like Comparators, Multiplexers, Encoder, Decoder, Driver & Multiplexed Display, Half andFull Adders, Subtractors, Serial and Parallel Adders, BCD Adder, Barrel shifter and ALU

UNIT III

Sequential Logic Design: Building blocks like S-R, JK and Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Shift registers, Finite state machines, Design of synchronous FSM, Algorithmic State Machines charts. Designing synchronous circuits like Pulse train generator, PseudoRandom Binary Sequence generator, Clock generation

UNIT IV

Logic Families and Semiconductor Memories: TTL NAND gate, Specifications, Noise margin, Propagation delay, fan-in, fan-out, Tristate TTL, ECL, CMOS families and their interfacing, Memory elements, Conceptof Programmable logic devices like FPGA. Logic implementation using Programmable Devices.

UNIT V

VLSI Design flow: Design entry: Schematic, FSM & HDL, different modeling styles in VHDL, Data typesand objects, Dataflow, Behavioral and Structural Modeling, Synthesis and Simulation VHDL constructs and codes for combinational and sequential circuits.

Course outcomes:

At the end of this course students will demonstrate the ability to

- Design and analyze combinational logic circuits
- Design and analyze synchronous sequential logic circuits
- Design and implement complicated digital systems using Verilog
- Design a VLSI circuit for an application

Text/Reference Books:

IV Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

SIMULATION AND MODELING

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives

- To introduce various system modeling and simulation techniques, and highlight their applications in different areas.
- To provide an overview of modeling, through the basic concepts of systems analysis.
- To provide the elements needed to understand how the models can be used in simulation, forecasting, planning and management, and how they can be integrated to support decision-making

UNIT -I

Introduction to Simulation, Definitions, Types of Simulation Models, Applications, System and Environment, Components of System, Scope, Advantages and Limitations of Simulation.

UNIT- II

Introduction to Sampling, Statistical Distributions – Discrete and Continuous, Generation of Random Numbers and Random Variates.

UNIT- III

Introduction to Mathematical Modeling and Types, Applications, Simulations of Queuing, Inventory and Manufacturing Systems.

UNIT- IV

Introduction to Input data and output Analysis for single Model, Comparing Alternative System Configurations.

UNIT- V

Simulation of computer system, Introduction, Simulation Tools – Process and Event Orientation, CPU and Memory simulation, Simulation of Complex Systems.

Course Outcomes

After successful completion of the course the students would be able to

- describe the components of continuous and discrete systems and simulate the same.
- model any system from different fields.
- discuss the simulation methods and select the suitable technique on the problems.
- implement the model on the computer and from the results, check for the validity of the model and correctness of the assumptions present in the model.
- understand the limitations of their model and nuances in computer modeling of systems.

Text Books:

- Banks J, Carson II J S, Nelson B L, Nicole D M and Shahabudeen P, Discrete-Event System Simulation, Pearson Education, 2007.

- Geoffrey Gordon, System Simulation, 2nd edition, Pearson Education, 2015.

IV Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

MANAGERIAL ECONOMICS AND ACCOUNTANCY

No.of Credits: 3 Instruction Hours/Week: 3

UNIT I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR, NPV, IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

UNIT II

Depreciation and methods of calculating depreciation (straight line, sum of the years digit method, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

UNIT III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

UNIT IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

UNIT V

Cost Accounting: Introduction, Classification of costs, Methods of costing, Techniques of costing, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

Course Outcomes:

On successful completion of this course the students will be able to

- Understand Macro Economic environment of the business and its impact on enterprise.
- Identify various cost elements of the product and its effect on decision making.
- Understand the concepts of financial management and smart investment.
- Prepare the Accounting records and interpret the data for Managerial Decisions.

IV Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2021-22)

COMPUTER ORIENTED NUMERICAL METHODS

No.of Credits: 3 Instruction Hours/Week: 3

UNIT I

Errors in Numerical Calculations: Truncation and Round-off errors, Effect of errors in data; Closed form solution versus Iterative methods.
Roots of Nonlinear Equations: Bisection, False position and, Newton-Raphson methods.

UNIT II

Iterative Solution of Liner Equations - Jacobi iteration, Gauss-Seidel and Relaxation methods; Convergence of iteration methods.

UNIT III

Interpolation - Lagrange polynomials, Newton's difference formula, Cubic splines, and Two dimensional interpolation.

UNIT IV

Numerical Differentiation - Differentiating continuous and tabulated functions, Difference tables and Richardson extrapolation. Numerical integration - Trapezoidal, Simpson's 1/3 and Simpson's 3/8 Rules.

UNIT V

Numerical Solution of Ordinary Differential Equations - Taylor's Series, Euler's, Runge-Kutta methods.

Text Books:

- Schilling R J, and Harries S L, Applied Numerical Methods for Engineers Using MATLAB and C, Thomson Brooks/Cole, 2006.

IV Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2021-22)

COMPUTER ORGANIZATION

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives

The course is designed to

- make the students understand the basic structure and operations of various functional units of a digital computer.
- familiarize the students with arithmetic and logic unit and implementation of fixed point and floating-point arithmetic operations.
- Make the stdents understand how to design processing unit using hardwired control and microprogrammed control approaches.
- familiarize the students with hierarchical memory system.
- expose the students with different ways of communicating with I/O devices and standard I/O interfaces.

UNIT I

Structure of Computers: Introduction, Performance, Memory addressing and Operations, Instructions and Instruction sequencing, Addressing modes, Basic l/0 operations, Pushdown stacks, Subroutines, Encoding of machine instructions, Brief description and functional classification of IA-32 Pentium instruction set

UNIT II

Basic Processing Unit: Fundamental concepts, Single and Multiple bus organization, Hardwired control, Multiprogrammed control – Microinstructions, Microprogram sequencing, Wide-branch addressing, Microinstructions with next-address field, Prefetching microinstructions.

Arithmetic: Multiplication – Booth algorithm; Integer division, Floating-Point Addition and Subtraction.

UNIT III

The memory System: Basic concepts, RAM and ROM Memories and their internal organization, Cache Memories - Mapping functions, Replacement algorithms; Performance Considerations, Virtual Memories, Secondary Storage.

UNIT IV

Input/ Output Organization: Accessing l/O devices; Interrupts –Enabling and disabling, Handling multiple devices; Direct Memory Access - Bus Arbitration; Buses – Synchronous and Asynchronous; Interface circuits – Parallel port, Serial port

UNIT V

Pipelining: Basic concepts, Data hazards, Instruction hazards, Influence on instruction sets, Data path and control considerations, Superscalar operation.
Processor Families: The ARM family, The Motorola 680x0 and Coldfire families, The IA-32 family.

Course Outcomes:

On successful completion of this course the students will be able to

- Identify the basic structure and functional units of a digital computer.
- Analyze the effect of addressing modes on the execution time of a program.
- Design processing unit using the concepts of hardwired control or microprogrammed control.
- Select appropriate interfacing standards for I/O devices.
- Identify the roles of various functional units of a computer in instruction execution.
- Understand memory hierarchy and its impact on computer cost/performance.
- Understand the advantage of instruction level parallelism and pipelining for high performance processor design.

Text Books

- Hamacher C, Vranesic Z, and Zaky S, Computer Organization, 5th edition, McGraw-Hill.

DESIGN AND ANALYSIS OF ALGORITHMS

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

- To understand how to design an algorithm for the given problem.
- To analyze the complexity of an algorithm in terms of time and space.
- To get better insight on different strategies of algorithm design.

UNIT-I

Introduction: What is an Algorithm?, Algorithm Specification, Performance Analysis - Space Complexity, Time Complexity, Amortized Complexity, Asymptotic Notation (O, Ω, Θ), Practical Complexities, Performance Measurement, Randomized Algorithms: An Informal Description, Identifying the Repeated Element, Primality Testing, Advantages and Disadvantages.

Sets and Disjoint Set Union: Introduction, Union and Find Operations.

UNIT-II

Divide-and-Conquer: General Method, Defective Chess Board, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quicksort, Selection, Strassen's Matrix Multiplication, Convex Hull.

UNIT-III

The Greedy Method: The General Method, Container Loading, Knapsack Problem, Tree Vertex Splitting, Job Sequencing with Deadlines, Minimum-Cost Spanning Trees, Optimal Storage on Tapes, Optimal Merge Patterns, Single-Source Shortest Paths.

Basic Traversal and Search Techniques: Techniques for Binary Trees, Techniques for Graphs, Connected Components and Spanning Trees, Biconnected Components and DFS.

UNIT-IV

Dynamic Programming: The General Method, Multistage Graphs, All Pairs Shortest Paths, Single-Source Shortest Paths: General Weights, Optimal Binary Search Trees, String Editing, 0/1-Knapsack, Reliability Design, The Traveling Salesperson Problem, Flow Shop Scheduling.

Backtracking: The General Method, The 8-Queens Problem, Sum of Subsets, Graph Coloring, Hamiltonian Cycles, Knapsack Problem.

UNIT-V

Branch-and-Bound: The Method, 0/1 Knapsack Problem, Traveling Salesperson, Efficiency Considerations.

$\mathcal{NP}$-Hard and $\mathcal{NP}$-Complete Problems: Basic Concepts, Cook's Theorem, NP-Hard Graph Problems, NP-Hard Scheduling Problems.

PRAM Algorithms: Introduction, Computational Model, Fundamental Techniques and Algorithms, Selection.

Course Outcomes:

Upon successful completion of this course, the student should be able to

- Develop systematically an algorithm for solving a problem
- Analyze the time and space complexity of the given algorithm
- Identify algorithm design methodology to solve problems.
- Distinguish between P and NP classes of problems

Text Books:

- Ellis Horowitz, Sartaj Sahni, and Sanguthevar Rajasekaran, Fundamentals of Computer Algorithms, 2nd edition, Universities Press, 2008.

BASIC WEB DESIGNING

No.of Credits: 2 Instruction Hours/Week: 1T+2P

Course Objectives:

The objectives of this course is to acquire knowledge on the

- Web related terminology and how does a website work.
- Web standards and W3C elements
- Responsive Web Designing
- Client-side Scripting Languages (Front End)
- Domains and Hosting

UNIT I

Introduction to Web and Web Design Principles:

Brief History of Internet, What is World Wide Web, Why create a web site, Web Standards, Web pages, Website, Web browsers and Web servers and Web protocols. Basic principles involved in developing a web site, Planning process, Five Golden rules of web designing, Designing navigation bar, Page design, Home Page Layout, Design concept.

UNIT II

Introduction to HTML:

What is HTML, HTML Documents, Basic structure of an HTML document, Creating an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, HTML Tags. Introduction to elements of HTML, Working with Text, Working with Lists, Tables and Frames, Working with Hyperlinks, Images and Multimedia, Working with Forms and controls.

UNIT III

Introduction to Cascading Style Sheets:

Concept of CSS, Creating Style Sheet, CSS Properties, CSS Styling (Background, Text Format, Controlling Fonts), Working with block elements and objects, Working with Lists and Tables, CSS Id and Class, Box Model (Introduction, Border properties, Padding Properties, Margin properties), CSS Advanced (Grouping, Dimension, Display, Positioning, Floating, Align, Pseudo class, Navigation Bar, Image Sprites, Attribute sector), CSS Color, Creating page Layout and Site Designs.

UNIT IV

Introduction to Java Script:

What is Java Script? Basics of Java Script: Variables, functions, and Operators, select HTML elements with Java Script, Java Script Events and Event Handlers, Regular expressions and pattern matching in Java Script. Form validation using Java Script.

UNIT V

Introduction to Web Publishing or Hosting:

Creating the Web Site, Saving the site, Working on the web site, Creating web site structure,

Creating Titles for web pages, Themes-Publishing web sites. Case study: Web publishing and hosting using Heroku cloud platform (https://www.heroku.com/).

Course Outcomes

Having successfully completed this course the students will be able to:

- describe and explain the relationship among HTML, XHTML, CSS, JavaScript, XML
- and other web technologies.
- create and publish advanced web pages with the help of HTML frames, scripting languages, and CSS.
- design forms for thick clients using JavaScript with interactive responsiveness and validations.
- design, host and publish websites in various domains.

Text Books:

- Kogent Learning Solutions Inc., HTML 5 in simple steps, Dreamtech Press.
- A beginner's guide to HTML, NCSA, 14th May 2003.
- Murray, Tom/Lynchburg, Creating a Web Page and Web Site, College, 2002.

Reference Books:

- Web Designing and Architecture-Educational Technology Centre, University of Buffalo.
- Steven M Schafer, HTML, XHTML, CSS and JavaScript, Wiley India.
- Ian Pouncey, Richard York, Beginning CSS: Cascading Style Sheets for Web Design, Wiley India.
- Kogent Learning, Web Technologies: HTML, JavaScript, Wiley India.

V Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2022-23)

FORMAL LANGUAGES AND AUTOMATA THEORY

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Identify different formal language classes and their relationships
- Design grammars and recognizers for different formal languages
- Understand the logical limits to computational capacity
- Get proper insight on un-decidable problems

UNIT I

Why study Automata Theory, Central Concepts of Automata Theory, Informal Picture of Finite Automata, Deterministic Finite Automata, Nondeterministic Finite Automata and Applications, Finite Automation with Epsilon Transitions.

UNIT II

Regular Expressions and their Applications, Finite Automata and Regular Expressions, Algebraic Laws for Regular Expressions.
Properties of Regular Languages, Equivalence and Minimization of Automata.

UNIT III

Context Free Grammars (CFG), Parse Trees, Applications of CFG, Ambiguity in Grammars and Languages.
Definition of Pushdown Automaton, The Languages of a PDA, Equivalence of PDA's and CFG's, Deterministic Pushdown Automata.

UNIT IV

Normal forms for CFG, Pumping Lemma for Context Free Languages, Closure and Decision Properties of CFLs
Turing Machine Model, Representation of Turing Machines, Language Acceptability by TM, Design of TMs, Universal Turing Machine, Halting Problem of TM, Church-Turing Thesis.

UNIT V

A Language that is not Recursively Enumerable, An Undecidable Problem that is Recursively Enumerable, Undecidable Problems about Turing Machines,
The Classes of P and NP, NP Complete Problem.

Text Books:

- John E. Hopcroft, Rajeev Motwani and Jeffrey D. Ullman, Introduction to Automata Theory, Languages, and Computation, Pearson Education Asia.
- Martin J C, Introduction to Languages and the Theory of Computation, 3rd edition, Tata McGraw-Hill, 2003.

Reference Books:

- Krithivasan K, Introduction to Formal Languages, Automata Theory and Computation, Pearson Education, 2009.
- Rich E, Automata, Computability, and Complexity – Theory and Applications, Pearson
- Education, 2012.
- Singh A, Elements of Computation Theory, Springer, 2009.
- Cohen D I A, Introduction to Computer Theory, 2nd edition, John Wiley, 2000.
- Lewis H, Papadimitriou C H, Elements of the Theory of Computation, 2nd edition, Prentice Hall, 1997.

Course Outcomes

At the end of the course, students will be able to

- Write a formal notation for strings, languages and machines.
- Design finite automata to accept a set of strings of a language.
- Determine whether the given language is regular or not.
- Design context free grammars to generate strings of context free language.
- Determine equivalence of languages accepted by pushdown automata and languages generated by context free grammars
- Distinguish between computability & non-computability and decidability &
- undecidability.

V Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2022-23)

OPERATING SYSTEMS

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- provide knowledge about the services rendered by operating systems
- present detail discussion on processes, threads and scheduling algorithms.
- discuss various file-system design and implementation issues
- provide good insight on various memory management techniques
- expose the students with different techniques of handling of deadlocks
- familiarize students the basics of Linux system and perform administrative tasks on
- Linux servers
- discuss how the protection domains help to achieve security in a system

UNIT I

Operating Systems Overview: Operating system functions, Operating system structure, Operating systems operations, protection and security, Computing environments, Open-Source Operating Systems

System Structures: Operating System Services, User and Operating-System Interface, systems calls, Types of System Calls, system programs, operating system structure, operating system debugging, System Boot.

UNIT II

Process Concept: Process scheduling, Operations on processes, Interprocess communication, Communication in client server systems.

Multithreaded Programming: Multitheading models, Thread libraries, Threading issues, Examples.

Process Scheduling: Basic concepts, Scheduling criteria, Scheduling algorithms, Multiple processor scheduling, Thread scheduling, Examples.

Inter-process Communication: Race conditions, Critical Regions, Mutual exclusion with busy waiting, Sleep and wakeup, Semaphores, Mutexes, Monitors, Message passing, Barriers, Classical IPC Problems - Dining philosophers problem, Readers and writers problem.

UNIT III

Memory-Management Strategies: Introduction, Swapping, Contiguous memory allocation, Paging, Segmentation, Examples.

Virtual Memory Management: Introduction, Demand paging, Copy on-write, Page replacement, Frame allocation, Thrashing, Memory-mapped files, Kernel memory allocation, Examples.

UNIT IV

Deadlocks: Resources, Conditions for resource deadlocks, Ostrich algorithm, Deadlock detection and recovery, Deadlock avoidance, Deadlock prevention.

File Systems: Files, Directories, File system implementation, management and optimization.
Secondary-Storage Structure: Overview of disk structure, and attachment, Disk scheduling, RAID structure, Stable storage implementation.

UNIT V

System Protection: Goals of protection, Principles and domain of protection, Access matrix, Access control, Revocation of access rights.
System Security: Introduction, Program threats, System and network threats, Cryptography for security, User authentication, Implementing security defenses, Firewalling to protect systems and networks, Computer security classification.
Case Studies: Linux, Microsoft Windows 7.

Text Books:

- Silberschatz A, Galvin P B, and Gagne G, Operating System Concepts, 9th edition, Wiley, 2013.
- Tanenbaum A S, Modern Operating Systems, 3rd edition, Pearson Education, 2008. (for Interprocess Communication and File systems.)

Reference Books:

- Tanenbaum A S, Woodhull A S, Operating Systems Design and Implementation, 3rd edition, PHI, 2006.
- Dhamdhere D M, Operating Systems A Concept Based Approach, 3rd edition, Tata McGraw-Hill, 2012.
- Stallings W, Operating Systems -Internals and Design Principles, 6th edition, Pearson Education, 2009
- Nutt G, Operating Systems, 3rd edition, Pearson Education, 2004

Course Outcomes

By the end of this course students will be able to:

- Recognize how the applications interact with the operating system as the later working as intermediary program between the machine and the application.
- Understand how operating system manages resources such as processors, memory and I/O.
- Demonstrate knowledge and understanding of how concurrency in OS is handled.
- Understand the techniques used to implement the process manager
- Implement various memory management and demand paging techniques.
- Comprehend virtual memory abstractions in operating systems
- Design and develop file system interface.
- Understand various schemes available for achieving system protection and system security

V Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2022-23)

COMPUTER NETWORKS

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:
The course is designed to

- Provide insight about fundamental concepts, basic taxonomy and terminology of Computer Networks.
- Gain comprehensive knowledge about the principles, protocols, and significance of Layers in OSI and TCP/IP

UNIT I

Introduction to Computer Networks: Networks, Component and Categories, Topologies, Transmission Media, Reference Models: ISO/OSI Model and TCP/IP Model.
Physical Layer: Analog and Digital Signals, Periodic Analog Signals, Transmission Impairments, Data rate limits, Performance, Digital data transmission techniques, Analog data transmission techniques, Multiplexing: FDM, WDM and TDM; Spread Spectrum, Switching: Circuit and Packet.

UNIT II

Data Link Layer and Medium Access Sub Layer: Design Issues, Error Detection and Error Correction, Elementary Data Link Protocols, Sliding Window Protocols, Channel allocation problems, Multiple Access Protocols: Pure ALOHA, Slotted ALOHA, CSMA/CD, CSMA/CA; IEEE 802.3 Ethernet.

UNIT III

The Network Layer: Network layer design issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the Internet: IPV4 Addresses, IPV6, Internet Control protocol, OSPF, BGP, IP, ICMPv4, IGMP.

UNIT IV

The Transport Layer: The Transport Service, Elements of Transport Protocols, Congestion Control, Internet Transport Protocols: UDP, TCP; Network Performance Measurement.

UNIT V

The Application Layer: Introduction, Client-Server Programming, Domain Name System (DNS), WWW and HTTP, FTP, E-mail, TELNET, Secure Shell, SNMP, IP Security Architecture, Firewalls.

Text Books:

- Computer Networks, Andrew S. Tanenbaum, Wetherall, Pearson, 5th edition, 2010.
- Data communications and Networking, Behrouz A. Forouzan, Mc Graw Hill Education, 5th edition, 2012.

Reference Books:

- Kurose J F, Ross K W, *Computer Networking – A Top-Down Approach*, 5th edition, Pearson Education, 2010.
- Peterson L L, Davie B S, *Computer Networks - A Systems Approach*, 5th edition, Morgan Kaufmann, 2011.
- Forouzan B A, Mosharraf F, *Computer Networks – A Top-Down Approach*, Tata McGraw-Hill, 2012.
- Olifer N, Olifer V, *Computer Networks – Principles, Technologies, and Protocols for* Network Design, Wiley, 2006.

Course Outcomes

By the end of this course students will be able to:

- Choose the transmission media depending on the requirements.
- Explain the functions of different layer of the OSI Protocol
- Analyze MAC layer protocols and LAN technologies
- Implement routing and congestion control algorithms
- Design new protocols for computer network.
- Configure DNS, DDNS, TELNET, EMAIL, FTP, WWW, HTTP, SNMP, Bluetooth, Firewalls using open source software and tools.

CS504C

V Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2022-23)

SOFTWARE ENGINEERING

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to understand

- Software life cycle models.
- Software requirements and SRS document.
- Different software design strategies
- Quality control and how to ensure good quality software.
- Planning and estimation of software projects.
- Maintenance of software and gain knowledge of the overall project activities.

UNIT I

Introduction to Software Engineering: The Nature of Software, The Unique Nature of WebApps, Software Engineering, Software Process, Software Engineering Practice, Software Myths.

Process Models: A Generic Process Model, Process Assessment and Improvement, Prescriptive Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models, Process Technology, Product and Process.

Agile Development: Agility, Agility and the Cost of Change, Extreme Programming, Agile Process Models

UNIT II

Understanding Requirements: Requirements Engineering, Eliciting Requirements, Developing Use Cases, Building the Requirements Model, Negotiating Requirements, Validating Requirements.

Requirements Modeling: Requirements Analysis, Scenario based Modeling, Class based Modeling, Requirements Modeling Strategies, Flow Oriented Modeling, Patterns for Requirement Modeling, Requirements Modeling for WebApps

Design Concepts: Design Process, Design Concepts, Design Model.

Architectural Design: Software Architecture, Architectural Genres, Architectural Styles, Architectural Design, Alternative Architectural Designs, Architectural Mapping using Data flow.

UNIT III

Component Level Design: Component, Class based Components, Conducting Component level design, Component level Design for WebApps, Designing Traditional Components, Component based Development.

User Interface Design: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, WebApp Interface Design, Design Evaluation.

Pattern Based Design: Design Patterns, Pattern based Software Design, Architectural Patterns, Component Level Design Patterns, User Interface Design Patterns.

UNIT IV

Software Quality Concepts: Software Quality, Software Quality Dilemma, Achieving Software Quality.

Software Quality Assurance: Elements of Software Quality Assurance, SQA Goals and Metrics, Formal Approaches to SQA, Statistical SQA, Software Reliability.

Software Testing Strategies: A Strategic Approach to Software Testing, Strategic Issues, Unit Testing and Integration Testing (both Conventional and OO Software), Test Strategies for WebApps, Validation Testing, System Testing, Art of Debugging.

Testing Conventional Applications: Software Testing Fundamentals, Internal and External View of Testing, White-Box Testing, Basis Path Testing, Control Structure Testing, Black-Box Testing, Model based Testing, Testing for Specialized Environments, Patterns for Software Testing.

Computer Aided Software Engineering: CASE and its Scope, CASE Environment, CASE Support in Software Life Cycle, Characteristics of CASE Tools, Towards Second Generation CASE Tool.

UNIT V

Managing Software Projects: Project Management Concepts, Metrics in the Process and Project Domains, Software Measurement, Metrics for Software Quality, Project Planning Process, Software Scope and Feasibility, Software Project Estimation, Decomposition Techniques, Empirical Estimation Models, Estimation for OO Projects, Project Scheduling – Basic Principles, Defining a Task Set and Task Network, Scheduling, Introduction to Risk Management, Software Maintenance, Software Supportability, Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering.

Text Books:

- Pressman R S, *Software Engineering: A Practitioner's Approach*, 7th edition, McGraw-Hill, 2010.
- Sommerville I, *Software Engineering*, 9th edition, Pearson Education, 2011.

Reference Books:

- Jalote P, *Software Engineering: A Precise Approach*, Wiley, 2010.
- Braude E J, Bernstein M E, *Software Engineering: Modern Approaches*, 2nd edition, Wiley, 2010.
- Saleh K A, *Software Engineering*, J Ross Publishing, 2009.
- Bruegge B, Dutoit A H, *Object-Oriented Software Engineering Using UML, Patterns, and*
- *Java*, 3rd edition, Prentice Hall, 2009.
- Bennett S, McRobb S, Farmer R, *Object-Oriented System Analysis and Design Using UML*, 4nd edition, McGraw-Hill, 2010.
- Lethbridge T C, Laganiere R, *Object-Oriented Software Engineering*, 2nd edition, McGraw-Hill, 2005.

Course Outcomes

By the end of this course students will be able to

- Define and develop a software project from requirement gathering to implementation.
- Obtain knowledge about principles and practices of software engineering.
- Focus on the fundamentals of modeling a software project.
- Obtain knowledge about estimation and maintenance of software systems
- Comprehend, assess, and calculate the cost of risk involved in a project management
- Implement testing methods at each phase of SDLC

JAVA PROGRAMMING (Skill Advance Course)

No.of Credits: 3 Instruction Hours/Week: 2T+2P

Course Objectives:
The course is designed to

- Identify Java language components and how they work together in applications.
- Learn how to design a graphical user interface (GUI) with Java Swing.
- Understand how to use Java APIs for program development.
- Learn how to extend Java classes with inheritance and dynamic binding.
- Learn how to use exception handling in Java applications.
- Understand how to design applications with threads in Java.

The course shall cover the following topics:

- Introduction
- Data Types, Variables, Arrays, Operators
- Control Statements
- Classes and Methods
- Inheritance
- Packages and Interfaces
- Exception handling
- Stream based I/O
- Multithreaded Programming
- The Collections Framework
- Networking
- Applet and AWT
- GUI Programming with Swings
- Introduction to JDBC

Text Books:

- Herbert Schildt, *Java The complete reference*, 9th edition, McGraw Hill Education (India) Pvt. Ltd.

Reference Books:

- Paul Dietel, Harvey Dietel, *Java How to Program*, 10th Edition, Pearson Education.
- T. Budd, *Understanding Object-Oriented Programming with Java*, updated edition, Pearson Education.
- Cay S. Horstmann, *Core Java Volume – 1 Fundamentals*, Pearson Education.
- Sagayaraj, Dennis, Karthik and Gajalakshmi, *Java Programming for core and*
- *advanced learners*, University Press
- Y. Daniel Liang, *Introduction to Java programming*, Pearson Education.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

V Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2022-23)

UNIVERSAL HUMAN VALUES

No.of Credits: Nil Instruction Hours/Week: 2

Course Objectives:
The course is designed to

- develop a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
- understand (or developing clarity) the harmony in the human being, family, society and nature/existence.
- strengthen self-reflection and to develop commitment and courage to act.
- understand social responsibility of an engineer.
- appreciate ethical dilemma while discharging duties in professional life.

UNIT I

Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly - A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

UNIT II

Understanding Harmony in The Human Being - Harmony in Myself! :
Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility (Sukh and Suvidha). Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health.

UNIT III

Understanding Harmony in The Family and Society- Harmony in Human-Human Relationship: Understanding harmony in the Family - the basic unit of human interaction. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness (Ubhay-tripti); Trust (Vishwas) and Respect (Samman) as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution (Samadhan), Prosperity (Samridhi), fearlessness (Abhay) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order

in society- Undivided Society (Akhand Samaj), Universal Order (Sarvabhaum Vyawastha) - from family to world family.

UNIT IV

Understanding Harmony in The Nature and Existence - Whole Existence as Coexistence: Understanding the harmony in the Nature. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT V

Implications of The Above Holistic Understanding of Harmony on Professional Ethics: Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

Text Books:

- Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010.
- Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.

- Story of Stuff, http://www.storyofstuff.com
- AI Gore, An Inconvenient Truth, Paramount Classics, USA
- Charle Chaplin, Modern Times, United Artists, USA
- IIT Delhi, Modern Technology - the Untold Story.

Course Outcomes

Having successfully completed this course the students will be able to:

- become more aware of themselves, and their surroundings (family, society, nature)
- distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
- understand the role of a human being in ensuring harmony in society and nature.
- become sensitive to their commitment towards what they have understood (human values, human relationship and human society)
- distinguish between ethical and unethical practices, and start working out the strategy to actualize a harmonious environment wherever they work.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

COMPILER DESIGN

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Enrich the knowledge in various phases of compiler and its use
- Identify different methods of lexical analysis
- Design top-down and bottom-up parsers
- Develop syntax directed translation schemes
- Develop algorithms to generate code for a target machine
- Use the tools related to compiler design effectively and efficiently

UNIT I

Introduction to Assembler, Compiler and Interpreter; Elements of ALP, Single Pass and Two Pass Assemblers, Structure of a Compiler

Lexical Analysis: Role of Lexical Analyzer, Input Buffering, Specification of Tokens, Recognition of Tokens, Lexical Analyzer Generator (Lex)

UNIT II

Syntax Analysis: Introduction, Context Free Grammars, Writing a Grammar, Top-down Parsing, Bottom-up Parsing, Introduction to LR Parsing, More Powerful LR Parsers, Introduction to YAAC.

UNIT III

Syntax Directed Translation (SDT): Syntax Definitions, Evaluation Orders for SDTs, Applications of SDTs, Schemes of SDTs

Run Time Environments: Storage Organization, Stack Allocation of Space, Access to Nonlocal Data on the Stack, Heap Management.

UNIT IV

Intermediate Code Generation: Variants of Syntax Trees, Three Address Code, Types and Declarations, Translation of Expressions, Type Checking, Control Flow Statements, Back Patching.

UNIT V

Code Generation: Issues in the Design of a Code Generator, The Target Language, Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, A Simple Code Generator, Peephole Optimization.

Text Books:

- Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, Compilers Principles, Techniques and Tools, Second Edition, Pearson Education, 2014.
- D M Dhamdhere, Systems Programming, TMH Education, 2011.

Reference Books:

- Jean Paul Tremblay, Paul G Serenson, "The Theory and Practice of Compiler Writing", BS ublications, 2005
- Dhamdhere, D. M., "Compiler Construction Principles and Practice", 2nd edition, Macmillan India Ltd., New Delhi, 2008

Course Outcomes

By the end of this course students will be able to:

- Design a compiler for a simple programming language
- Understand phases in the design of compiler
- Design top-down and bottom-up parsers
- Develop syntax directed translation schemes
- Comprehend and adapt to Lex and Yacc tools in compiler design

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

ARTIFICIAL INTELLIGENCE

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand the basic principles of AI toward problem solving, inference, perception,knowledge representation, and learning.
- Introduce the concepts of machine learning and neural networks.
- Examine the applications of AI techniques in intelligent agents, artificial neural networks and other machine learning models.

UNIT I

The History of AI: What is Intelligence, Search for Mechanical Intelligence, Evolution of Artificial Intelligence (AI), Systems Approach, Overview of topics.

Uninformed Search: General state space search, General Search Paradigms Depth-First Search, Depth-Limited Search, Iterative Deepening Search, Breadth-First Search, Bi-directional Search, Uniform-Cost Search.

Informed Search: Best-First Search, N-Queens problem, A* Search, Eight Puzzle problem, Hill Climbing Search, Simulated Annealing, Tabu Search, Constraint Satisfaction, Constraint Satisfaction algorithms: Generate and Test, Backtracking, Forward Checking and Look Ahead, Min-Conflicts Search.

UNIT II

AI and Games: Two Player Games, The Minimax Algorithm, Tic-Tac-Toe problem, Minimax with Alpha-Beta Pruning, Classical Game AI, Checkers, Chess, Scrabble, Video Game AI, Movement and Path finding, Table Lookup with Offensive and Defensive Strategy, NPC Behavior, Team AI, Real-Time Strategy AI.

Knowledge Representation (KR): Types and Role of Knowledge, Semantic Nets, Frames, Propositional Logic, First Order Logic (Predicate Logic), Semantic Web, Computational Knowledge Discovery, Ontology, Common Sense.

UNIT III

Machine Learning: Machine Learning Algorithms, Supervised Learning, Decision Trees, Unsupervised Learning, Markov Models and implementation, Nearest Neighbor Classification, 1NN and k-NN Examples. Evolutionary Computation: Introduction to Evolutionary Computation, Biological Motivation, Genetic Algorithms, Genetic Programming, Evolutionary Strategies, Differential Evolution.

UNIT IV

Neural Networks I: Concept of Neural Networks, Biological Motivation, Fundamentals of Neural Networks, The Perceptron, Least-Mean-Square (LMS) Learning, Learning with Backpropagation, Probabilistic Neural Networks, Tips for Building Neural Networks. Neural Networks II: Unsupervised Learning, Hebbian Learning, Simple Competitive Learning, k-Means Clustering, Adaptive Resonance Theory, Hopfield Auto-Associative Model.

UNIT V

Robotics and AI: Introduction, Taxonomy of Robotics, Hard vs. Soft Robotics, Braitenburg Vehicles, Natural Sensing and Control, Perception with Sensors, Actuation with Effectors, Robotic Control Systems, Simple Control Architectures, Movement Planning, Distributed Robotics. Intelligent Agents: Anatomy of an Agent, Agent Properties and AI, Hybrid Agent, Agent Architectures, Types of Architectures, Agent Languages, Agent Communication. Biologically Inspired and Hybrid Models: Cellular Automata, Artificial Immune Systems, Artificial Life, Fuzzy Logic, Evolutionary Neural Networks, Ant Colony Optimization, Affective Computing.

Text Books:

1. M Tim Jones, Artificial Intelligence - A Systems Approach, Infinity Science Press, 2008.

Reference Books:

- Russel S, Norvig P, Artificial Intelligence: A Modern Approach, 3rd edition, Pearson Education, 2010.
- Rich E, Knight K, Nair S B, Artificial Intelligence, 3rd edition, Tata McGraw-Hill, 2009.
- Luger G F, Artificial Intelligence, 6th edition, Pearson Education, 2009.
- Carter M, Minds and Computers: An Introduction to the Philosophy of Artificial Intelligence, Edinburgh University Press, 2007.
- Coppin B, Artificial Intelligence Illuminated, Jones & Bartlett, 2004.
- Ertel W, Introduction to Artificial Intelligence, Springer, 2011.

Course Outcomes

By the end of this course students will be able to:

- Demonstrate basic understanding of artificial intelligence and its fundamentals.
- Identify a search algorithm for a problem and estimate its time and space complexities.
- Possess the skill for representing knowledge using the appropriate technique for a given problem
- Possess the ability to apply AI techniques to solve problems of game playing, expert systems, machine learning and robotics.

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

CRYPTOGRAPHY AND NETWORK SECURITY

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

This course aims at training students to master the:

- Understand the basic categories of threats to computers and networks
- Discuss various cryptographic algorithms including secret key cryptography and public-key cryptography.
- Different encryption techniques along with hash functions, MAC, digital signatures
- Design issues and working principles of various authentication protocols and PKI standards.

UNIT I

Introduction to Security: Security Attacks, Security Services, Security Mechanisms, Fundamental Security Design Principles, Attack Surfaces and Attack Trees, a Model for Network Security Mathematics of Cryptography: Algebraic Structures (Groups, Rings, Fields and Galois Fields), Divisibility and the Division Algorithm, The Euclidean Algorithm, Modular Arithmetic, Prime Numbers, Fermat's and Euler's Theorems, Testing for Primality, The Chinese Remainder Theorem, Discrete Logarithms

UNIT II

Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor Machines, Steganography Block Ciphers: Traditional Block Cipher Structure, The Data Encryption Standard, The Strength of DES, Block Cipher Design Principles, Advanced Encryption Standard, AES Structure, AES Transformation Functions, AES Key Expansion, Multiple Encryption and Triple DES, Block Cipher Modes of Operation

UNIT III

Public-Key Cryptography: Principles of Public-Key Cryptosystems, The RSA Algorithm, Diffie-Hellman Key Exchange, Elgamal Cryptographic System, Elliptic Curve Cryptography Cryptographic Hash Functions: Applications of Cryptographic Hash Functions, Requirements and Security, Secure Hash Algorithm (SHA) Message Authentication Codes: Requirements for Message Authentication Codes, HMAC, CMAC

UNIT IV

Digital Signatures: Digital Signatures, Elgamal Digital Signature Scheme, Schnorr Digital Signature Scheme, NIST Digital Signature Algorithm, Elliptic Curve Digital Signature Algorithm Key Management and Distribution: Symmetric Key Distribution Using Symmetric Encryption, Symmetric Key Distribution Using Asymmetric Encryption, Distribution of Public Keys, X.509 Certificates, Public-Key Infrastructure User Authentication: Remote User-Authentication Principles, Remote User-Authentication Using Symmetric Encryption, Kerberos, Remote User-Authentication Using Asymmetric Encryption.

UNIT V

Transport-Level Security: Web Security Considerations, Transport Layer Security, Secure Shell (SSH) Electronic Mail Security: S/MIME, Pretty Good Privacy IP Security: IP Security Overview, Encapsulating Security Payload, Combining Security Associations, Internet Key Exchange

Text Books:

1. William Stallings, *Cryptography and Network Security*, 8th Edition, Pearson Education

Reference Books:

- Bernard L. Menezes, Ravinder Kumar, *Cryptography, Network Security and Cyber* Laws, Cengage Learning.
- Behrouz A Forouzan, Debdeep Mukhopadhyaya, *Cryptography and Network* Security, 3rd Edition, Mc-GrawHill.
- Jason Albanese, Wes Sonnenreich, *Network Security Illustrated*, McGraw Hill.

Course Outcomes

At the end of the course, the students will be able to:

- Apply different encryption and decryption techniques to solve problems related to confidentiality and authentication.
- Understand key management and distribution schemes and design user authentication protocols
- Apply different digital signature algorithms to achieve authentication and create secure applications
- Perform simple vulnerablility assessments and password audits.
- Configure simple firewall architectures

CS604C

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

COMPUTER GRAPHICS

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand the basics of various inputs and output computer graphics hardware devices.
- Exploration of fundamental concepts in 2D and 3D computer graphics.
- Learn 2D raster graphics techniques, 3D modelling, geometric transformations, 3D
- viewing and rendering.

UNIT I

Introduction- Image processing as picture analysis, Advantages of Interactive Graphics, Representative uses of computer graphics, Classification of applications, Development of hardware and software for computer graphics, Conceptual framework for Interactive Graphics.

Scan Converting Lines – Basic Incremental algorithm, Midpoint Line algorithm and additional issues; Scan Converting Circles, Scan Converting Ellipses, Solid Filling– Rectangles, Polygons and Ellipse arcs; Pattern filling, Thick primitives, Cohen-Sutherland line clipping algorithm, Parametric line clipping algorithms, Sutherland-Hodgeman polygon clipping algorithm, Generating characters and Antialiasing.

UNIT II

Display Systems - Raster-scan and Random scan.

Geometrical transformations – 2D transformations, Homogeneous coordinates, Matrix representation of 2D transformations, Composition of 2D transformations, Window to view-port transformation, Matrix representation of 3D transformations, Composition of 3D transformations and Transformation as a change in coordinate system.

Representing Curves and surfaces – Polygon meshes, Parametric cubic curves, Parametric bicubic surfaces andQuadric surfaces.

Fractals – Lines and Surfaces.

UNIT III

Viewing in 3D - Projections, Specifying an arbitrary 3D view, Examples of 3D viewing, Mathematics of planar geometric projections, Implementing planar geometric projections, Coordinate systems.

Solid Modeling – Representing solids, Regularized Boolean set operations, Primitive instancing, Sweep representations, Boundary representations, Spatial-Partitioning Representations, Constructive solid geometry, Comparison of representations, User interfaces forsolidmodelling.

UNIT IV

Achromatic and Colored Light – Achromatic light, Chromatic color, Color models for raster graphics, Reproducing color, Using color in computer graphics.
Visible Surface Determination – Functions of two variables, Techniques for efficient visible surface algorithms, z-Buffer algorithm, Scan-line algorithms, Visible surface ray tracing.

UNIT V

Illumination Models - Ambient light, Diffuse reflection, Atmospheric attenuation.
Shading4 Models – Constant shading, Interpolated shading, Polygon mesh shading, Gouraud shading, Phong shading, Problems with interpolated shading.
Surface Detail – Surface-detail polygons, Texture mapping, Bump mapping.
Animation – Conventional and Computer-Assisted animation, Animation languages, Methods of controlling animation, Basic rules of animation, Problems peculiar to animation.

Text Books:

1. Hughes J F, Van Dam A, Foley J D, et al., Computer Graphics*:* Principles and Practice, 3rd edition, Addison-Wesley, 2013.

Reference Books:

- Foley J D, Van Dam A, Feiner S K, John F H, Computer Graphics: Principles & Practice in C, 2nd edition, Pearson Education, 1995.
- Ragiv Chopra, Computer Graphics, S. Chand& Company, 2012.

Course Outcomes

At the end of the course, students will be able to

- Understand the various computer graphics hardware and display technologies.
- Implement various 2D and 3D objects transformation techniques.
- Apply 2D and 3D viewing technologies into the real world applications.

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

DATA MINING (Professional Elective I)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand the principles of Data Warehousing and Data Mining
- Know the Architecture of a Data Mining system
- Learn pre-processing techniques and data mining functionalities
- Compare and contrast classification and clustering algorithms

UNIT I

Introduction: Why Data Mining? What Is Data Mining? What Kinds of Data Can Be Mined? What Kinds of Patterns Can Be Mined? Which Technologies Are Used? Which Kinds of Applications Are Targeted? Major Issues in Data Mining.

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity.

Data Preprocessing: An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization.

UNIT II

DataWarehouse: Basic Concepts, DataWarehouse Modeling: Data Cube and OLAP, DataWarehouse Design and Usage, DataWarehouse Implementation, Data Generalization by Attribute-Oriented Induction.

Data Cube Computation, Data Cube Computation Methods, Processing Advanced Kinds of Queries by Exploring Cube Technology, Multidimensional Data Analysis in Cube Space.

UNIT III

Mining Frequent Patterns, Associations and Correlations: Basic Concepts, Frequent Itemset Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods.

Advanced Pattern Mining: A Road Map, Pattern Mining in Multilevel, Multidimensional Space, Constraint-Based Frequent Pattern Mining, Mining High-Dimensional Data and Colossal Patterns, Mining Compressed or Approximate Patterns, Pattern Exploration and Application.

Classification: Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy.

UNIT IV

Classification-Advanced Methods: Bayesian Belief Networks, Classification by Backpropagation, Support Vector Machines, Classification Using Frequent Patterns, Lazy Learners (or Learning from Your Neighbors), Other Classification Methods, Additional Topics Regarding Classification.

Cluster Analysis: Basic Concepts, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods, Evaluation of Clustering.

UNIT V

Advanced Cluster Analysis: Probabilistic Model-Based Clustering, Clustering High-Dimensional Data, Clustering Graph and Network Data, Clustering with Constraints.

Outlier Detection: Outliers and Outlier Analysis, Outlier Detection Methods, Statistical Approaches, Proximity-Based Approaches, Clustering-Based Approaches, Classification-Based Approaches, Mining Contextual and Collective Outliers, Outlier Detection in High-Dimensional Data.

Overview of Data Mining Trends and Research Frontiers: Mining Complex Data Types, Other Methodologies of Data Mining, Data Mining Applications, Data Mining and Society, Data Mining Trends.

Text Books:

1. Jiawei Han, Micheline Kamber and Jian Pei, Data Mining: Concepts and Techniques, 3rd Edition, Morgan Kaufmann Publishers, Elsevier, 2012.

Reference Books:

- Guide for Building Decision Support Systems, First Edition, Pearson Education India, 2002.
- K.P.Soman, Shyam Diwakar,V.Ajay, Insight Into Data Mining: Theory and Practice, Prentice Hall India, 2006.

Course Outcomes

By the end of this course students will be able to

- Comprehend the various architectures and its application with data mining
- Design and develop data mining algorithms to analyze raw real world data
- Apply preprocessing techniques for data cleansing
- Analyze multi-dimensional modeling techniques and Classification & Clustering algorithms.

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

DISTRIBUTED SYSTEMS (Professional Elective I)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Familiarize the students with the basics of distributed computing systems.
- Understand issues related to clock Synchronization and distributed mutual exclusion.
- Introduce the concepts of distributed object based systems and distributed file systems.

UNIT I

Distributed Systems: Introduction, Goals, Types of Distributed Systems.
Architectures: Architectural Styles, System Architectures, Architectures versus Middleware, Self-Management in Distributed Systems.
Processes: Threads, Virtualization, Clients, Servers, Code Migration.

UNIT II

Communication: Fundamentals, Remote Procedure Call, Message-Oriented Communication, Stream-Oriented Communication, Multicast Communication.
Naming: Names, Identifiers and Addresses, Flat Naming, Structured Naming, Attribute-Based Naming.

UNIT III

Synchronization: Clock Synchronization, Logical Clocks, Mutual Exclusion, Global Positioning of Nodes, Election Algorithms.
Consistency and Replication: Introduction, Data-Centric Consistency Models, Client-Centric Consistency Models, Replica Management, Consistency Protocols.

UNIT IV

Fault Tolerance: Introduction, Process Resilience, Reliable Client-Server Communication, Reliable Group Communication, Distributed Commit, Recovery.
Security: Introduction, Secure Channels, Access Control, Security Management.

UNIT V

Distributed Object-Based Systems: Architecture, Processes, Communication, Naming, Synchronization, Consistency and Replication, Fault Tolerance, Security.
Distributed File Systems: Architecture, Processes, Communication, Naming, Synchronization, Consistency and Replication, Fault Tolerance, Security.

Text Books:

- Andrew S. Tanenbaum, Maarten Van Steen, Distributed Systems: Principles and Paradigms, Second Edition, Pearson Education, 2007.

Reference Books:

- Brendan Burns, Designing Distributed Systems: Patterns and Paradigms for Scalable, Reliable Services, O'Reilly, First Edition, 2018.
- Sukumar Ghosh, Distributed Systems: An Algorithmic Approach, CRC Press, Second Edition, 2014.
- Kenneth P Birman, Guide to Reliable Distributed Systems: Building High-Assurance Applications and Cloud-Hosted Services, Springer, 2014.
- George Coulouris, Jean Dollimore, Tim Kindberg and Gordon Blair, Distributed Systems: Concepts and Design, Pearson Education, Fifth Edition, 2012.
- Maarten Van Steen, Andrew S. Tanenbaum, Distributed Systems, CreateSpace Independent Publishing Platform/ Amazon Digital Services, Third Edition, 2017.
- Roberto Vitillo, Understanding Distributed Systems, Roberto Vitillo, 2021.
- Gerard Tel, Introduction to Distributed Algorithms, Cambridge University Press, Second Edition, 2000.
- Andrew S. Tanenbaum, Distributed Operating Systems, Pearson Education, First Edition, 2002.

Course Outcomes

Having successfully completed this course the students will be able to:

- Understand the design principles in distributed systems and the architectures for distributed systems
- Apply various distributed algorithms related to clock synchronization, concurrency control, deadlock detection, load balancing.
- Develop the Mutual Exclusion and Deadlock detection algorithms in distributed systems.
- Analyze fault tolerance and recovery in distributed systems and algorithms for the same.
- Analyze the design and functioning of distributed file systems.

OBJECT ORIENTED ANALYSIS AND DESIGN
(Professional Elective I)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:
The course is designed to

- Understand the Object-based view of systems
- Develop robust object-based models for systems
- Inculcate necessary skills to handle complexity in software design
- Understand the notations of Unified Modelling Language

UNIT I

OOAD Basic Concepts – Complexity: The Structure of Complex Systems, The Inherent Complexity of Software, The Five Attributes of a Complex System, Organized and Disorganized Complexity, Bringing Order to Chaos, On Designing Complex Systems.

The Object Model: The Evolution of the Object Model, Foundations of the Object Model, Elements of the Object Model, Applying the Object Model.

UNIT II

Classes and Objects: The Nature of an Object, Relationships among Objects, The Nature of a Class, Relationships among Classes, The Interplay of Classes and Objects, On Building Quality Classes and Objects.

Classification: The Importance of Proper Classification, Identifying Classes and Objects, Key Abstractions and Mechanisms.

UNIT III

Method – Notation: The Unified Modeling Language, Package Diagrams, Component Diagrams, Deployment Diagrams, Use Case Diagrams, Activity Diagrams, Class Diagrams, Sequence Diagrams, Interaction Overview Diagrams, Composite Structure Diagrams, State Machine Diagrams, Timing Diagrams, Object Diagrams, Communication Diagrams.

UNIT IV

Process: First Principles, The Macro Process: The Software Development Lifecycle, The Micro Process: The Analysis and Design Process.

Pragmatics: Management and Planning, Staffing, Release Management, Reuse, Quality Assurance and Metrics, Documentation, Tools, Special Topics, The Benefits and Risks of Object-Oriented Development.

UNIT V

Applications - System Architecture: Satellite-Based Navigation - Inception, Elaboration, Construction, Post-Transition.

Artificial Intelligence: Cryptanalysis - Inception, Elaboration, Construction, Post-Transition.

Web Application: Vacation Tracking System - Inception, Elaboration, Construction, Transition and Post-Transition.

Course Outcomes

Having successfully completed this course the students will be able to:

- Analyse and model software specifications.
- Abstract object-based views for generic software systems.
- Deliver robust software components.

Text Books:

1. Grady Booch, Robert A. Maksimchuk, Michael W. Engle, Bobbi J. Young, Jim Conallen, Kelli A. Houston, *Object-Oriented Analysis and Design with Applications*, Addison-Wesley/Pearson, Third Edition, 2015.

ADVANCED PYTHON PROGRAMMING

No.of Credits: 3 Instruction Hours/Week: 2T+2P

Course Objectives:

The course is designed to

- Familiarize the basics of Python Third Party Tools and usages.
- Understand the advantage of using Python libraries for implementing Machine Learning models.
- Understand the Python Data Structures for Full Stack Development.

The course shall cover the following topics:

- Parallel System Tools: Forking Processes, Threads, Program Exits, Interprocess Communication, The multiprocessing Module, Other Ways to Start Programs, A Portable Program-Launch Framework, Other System Tools Coverage.

- GUI Design with Tkinter: Menus, Listboxes and Scrollbars, Text, Canvas, Grids, Time Tools, Threads, and Animation, Other Widgets and Options.

- GUI Coding Techniques: GuiMixin: Common Tool Mixin Classes, GuiMaker: Automating Menus and Toolbars, ShellGui: GUIs for Command-Line Tools, GuiStreams: Redirecting Streams to Widgets, Reloading Callback Handlers Dynamically, Wrapping Up Top-Level Window Interfaces, GUIs, Threads, and Queues, More Ways to Add GUIs to Non-GUI Code, The PyDemos and PyGadgets Launchers.

- Complete GUI Programs: PyEdit: A Text Editor Program/Object, PyPhoto: An Image Viewer and Resizer, PyView: An Image and Notes Slideshow, PyDraw: Painting and Moving Graphics, PyClock: An Analog/Digital Clock Widget, PyToe: A Tic-Tac-Toe Game Widget.

- Network Scripting: Python Internet Development Options, Plumbing the Internet, Socket Programming, Handling Multiple Clients, Making Sockets Look Like Files and Streams, A Simple Python File Server.

- Client-Side Scripting: FTP: Transferring Files over the Net, Transferring Files with ftplib, Transferring Directories with ftplib, Transferring Directory Trees with ftplib, Processing Internet Email, POP: Fetching Email, SMTP: Sending Email, email: Parsing and Composing Mail Content, A Console-Based Email Client, The mailtools Utility Package, NNTP: Accessing Newsgroups, HTTP: Accessing Websites, The urllib Package Revisited, Other Client-Side Scripting Options.

- The PyMailGUI Client: Major PyMailGUI Changes, A PyMailGUI Demo, PyMailGUI Implementation, Ideas for Improvement.

- Server-Side Scripting: What's a Server-Side CGI Script?, Running Server-Side Examples, Climbing the CGI Learning Curve, Saving State Information in CGI Scripts, The Hello World Selector, Refactoring Code for Maintainability, More on HTML and URL Escapes, Transferring Files to Clients and Servers.

- The PyMailCGI Server: The PyMailCGI Website, The Root Page, Sending Mail by SMTP, Reading POP Email, Processing Fetched Mail, Utility Modules, Web Scripting Trade-Offs.

- Databases and Persistence: Persistence Options in Python, DBM Files, Pickled Objects, Shelve Files, The ZODB Object-Oriented Database, SQL Database Interfaces, ORMs: Object Relational Mappers, PyForm: A Persistent Object Viewer (External).

- Data Structures: Implementing Stacks, Implementing Sets, Subclassing Built-in Types, Binary Search Trees, Graph Searching, Permuting Sequences, Reversing and Sorting Sequences, PyTree: A Generic Tree Object Viewer.

- Text and Language: Strategies for Processing Text in Python, String Method Utilities, Regular Expression Pattern Matching, XML and HTML Parsing, Advanced Language Tools, Custom Language Parsers, PyCalc: A Calculator Program/Object.

- Python Data Structures for Data Science: Numpy, Pandas, Scipy, MatplotLib, Seaborn

- Python Data Structures for Full Stack Development, Python for Natural Language
- Processing

- Python for Machine Learning: Working with Beautiful Soup, Scikit-Learn, NLP withPython, Text mining with python.

- Python for Deep Learning: Working with Tensor flow, Keras and PyTorch

- Python for Cryptography and Network Security: Stanford-Corenlp, Bcrypt

Text Books:

- Mark Lutz, Programming Python, O`Reilly, 4th Edition, 2010

Course Outcomes

Having successfully completed this course the students will be able to:

- Apply Python Third- Party Tools in real time environment.
- Apply Python for Cryptography and Network Security.
- Implement Full stack development apps.
- Apply Python libraries for implementing Machine Learning models.
- Apply basic principles of Python Data Structures for Data Science.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VI Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2022-23)

PROFESSIONAL ETHICS

No.of Credits: Nil | Instruction Hours/Week: 2

Course Objectives:

The course is designed to

- create an awareness on Engineering Ethics and Human Values.
- instill Moral and Social Values and Loyalty and to appreciate the rights of others.
- study the moral issues and decisions confronting individuals and organizations
- engaged in engineering profession.
- study the related issues about the moral ideals, character, policies, and
- relationships of people and corporations involved in technological activity.

UNIT I

Human Values: Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II

Engineering Ethics: Senses of Engineering Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg''s theory – Gilligan's theory – Consensus and Controversy –Models of professional roles – Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III

Engineering as Social Experimentation: Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV

Safety, Responsibilities and Rights: Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR)
Discrimination.

UNIT V

Global Issues: Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct – Corporate Social Responsibility.

Text Books:

- Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.
- Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

Reference Books:

- Charles B. Fleddermann, "Engineering Ethics", Pearson Prentice Hall, New Jersey, 2004.
- Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, "Engineering Ethics – Concepts and Cases", Cengage Learning, 2009.
- John R Boatright, "Ethics and the Conduct of Business", Pearson Education, New Delhi, 2003.
- Edmund G Seebauer and Robert L Barry, "Fundamentals of Ethics for Scientists and Engineers", Oxford University Press, Oxford, 2001.
- Laura P. Hartman and Joe Desjardins, "Business Ethics: Decision Making for
- Personal Integrity and Social Responsibility" Mc Graw Hill education, India Pvt. Ltd., New Delhi, 2013.

Course Outcomes

Having successfully completed this course the students will be able to:

- Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
- Learn the moral issues and problems in engineering; find the solution to those problems.
- Learn the need for professional ethics, codes of ethics and roles, concept of safety, risk assessment.
- Gain exposure to Environment Ethics & computer ethics; know their responsibilities and rights.

VII Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2023-24)

CYBER SECURITY (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Analyze and evaluate the cyber security needs of an organization.
- Design and develop security architecture for an organization.
- Develop cyber security strategies and policies.
- Determine and analyze software vulnerabilities and develop necessary security solutions.

UNIT I

Building a Secure Organization, Preventing System Intrusions, Guarding Against Network Intrusions, Internet Security, The Botnet Problem, Intranet Security, Local Area Network Security.

UNIT II

Wireless Network Security, Cellular Network Security, RFID Security, Protecting Mission-Critical Systems, Security Management Systems, Information Technology Security Management, Identity Management.

UNIT III

Intrusion Prevention and Detection Systems, Computer Forensics, Network Forensics, Firewalls, Penetration Testing, Vulnerability Assessment.

UNIT IV

NET Privacy, Personal Privacy Policies, Virtual Private Networks, Identity Theft, VoIP Security, SAN Security, SAN Devices Security.

UNIT V

Risk Management, Physical Security Essentials, Biometrics, Information Warfare, Security Through Diversity, Reputation Management, Content Filtering, Data Loss Protection.

Text Books:

- Vacca J R (Editor), Computer and Information Security Handbook, 2nd edition, Elsevier / Morgan Kaufmann, 2013.
- Belapure S, Godbole N, Cyber Security, Wiley, 2011.

Reference Books:

- Gogolin G, Digital Forensics Explained, CRC / Auerbach, 2013.
- Godbole N, Information Systems Security, Wiley, 2015.
- Wu C H, Irwin J D, Introduction to Computer Networks and Cyber Security, CRC Press, 2013.
- Singer P W, Friedman A, Cyber Security and Cyber War: What Everyone Needs to Know, Oxford University Press, 2014.
- Boddington R, Practical Digital Forensics, Packt, 2016.
- Drake J J, Lanier Z, et al., Android Hacker's Handbook, Wiley, 2014.
- Graham J, Howard R, Olson R, Cyber Security Essentials, CRC Press, 2010.
- Hadnagy C, Wilson P, Social Engineering: The Art of Human Hacking, Wiley, 2010

Course Outcomes

By the end of this course students will be able to:

- Effectively use cyber security and computer forensics software/tools
- Measure the performance and troubleshoot cyber security systems.
- Protect the network from both internal and external attacks
- Provide new security solutions and implement the same confidently.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VII Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2023-24)

MACHINE LEARNING (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:
The course is designed to

- Understand the basic concepts, techniques and algorithms used in machine learning.
- Formulate machine learning problems corresponding to different applications.
- Develop skills of using recent machine learning software for solving practical problems.
- Develop skills of using recent machine learning software for solving practical problems.
- Evaluate performance and to identify the limitations of machine learning algorithms.

UNIT I

Introduction to Machine Learning: Well-Posed Learning Problems, Designing a Learning System, Perspectives and Issues in Machine learning.
Concept Learning: Introduction, A Concept Learning Task, Concept Learning as Search, Find-S: Finding a Maximally Specific Hypothesis, Version Spaces and the Candidate-Elimination Algorithm, Remarks on Version Spaces and Candidate Elimination, Inductive Bias.
Decision Tree Learning: Introduction, Decision Tree Representation. Appropriate Problems for Decision Tree Learning, The Basic Decision Tree Algorithm, Hypothesis Space Search in Decision Tree Learning, Inductive Bias in Decision Tree Learning, Issues in Decision Tree Learning.

UNIT II

Artificial Neural Networks: Introduction, Neural Networks Representations, Appropriate Problems for Neural Network Learning, Perceptrons, Multilayer Networks and the Backpropagation Algorithm, Remarks on the Backpropagation Algorithm, An Illustrative Example: Face Recognition, Advanced Topics in Artificial Neural Networks.
Evaluating Hypothesis: Motivation, Estimating Hypothesis Accuracy, Basics of Sampling Theory, A General Approach for Deriving Confidence Intervals, Difference in Error of Two Hypothesis, Comparing Learning Algorithms.

UNIT III

Bayesian Learning: Introduction, Bayes Theorem, Concept Learning, Maximum Likelihood and Least-Squared Error Hypothesis, Maximum Likelihood Hypothesis for Predicting Probabilities, Minimum Description Length Principle, Bayes Optimal Classifier, Gibbs Algorithm, Naïve Bayes Classifier, An Example Learning to Classify Test, Bayesian Belief Networks, The EM Algorithm.

Computational Learning Theory: Introduction, Probably Learning an Approximately Correct Hypothesis, Sample Complexity for Finite Hypothesis Spaces, Sample Complexity for Infinite Hypothesis Spaces, The Mistake Bound Model of Learning.

UNIT IV

Instance-Based Learning: Introduction, k-Nearest Neighbor Learning, Locally Weighted Regression, Radial Basis Functions, Case-Based Reasoning, Remarks on Lazy and Eager Learning.

Genetic Algorithms: Motivation, Genetic Algorithms, An Illustrative Example, Hypothesis Space Search, Genetic Programing, Models of Evaluation and Learning, Parallelizing Genetic Algorithms.

Learning Sets of Rules: Introduction, Sequential Covering Algorithms, Learning Rule Sets: Summary, Learning First-Order Rules, Learning Sets of First-Order Rules: FOIL, Induction as Inverted Deduction, Inverting Resolution.

UNIT V

Analytical Learning: Introduction, Learning with Perfect Domain Theories: Prolog-EBG, Remarks on Explanation-Based Learning, Explanation-Based Learning of Search Control Knowledge.

Combining Inductive and Analytical Learning: Motivation, Inductive-Analytical Approaches to Learning, Using Prior Knowledge to Initialize the Hypothesis, Using Prior Knowledge to Alter the Search Objective, Using Prior Knowledge to Augment Search Operators, State of the Art.

Reinforcement Learning: Introduction, The Learning Task, Q learning, Non-deterministic Rewards and Actions, Temporal Difference Learning, Generalizing from Examples, Relationship to Dynamic Programming.

Text Books:

1. Tom M. Mitchell, Machine Learning, McGraw Hill Education, 2018.

Reference Books:

- Stephen Marsland, Taylor & Francis, Machine Learning: An Algorithmic Perspective, 2nd Edition, CRC Press, 2015.
- Ethem Alpaydin, Introduction to Machine Learning, 2nd Edition, MIT Press, 2010.
- Stuart J. Russell and Peter Norvig, Artificial Intelligence A Modern Approach: 3rd Edition, Pearson Education, 2010.
- M.Tim Jones, Artificial Intelligence: A Systems Approach,3rd Edition, Infinity Science Press, New Delhi, 2008.
- Elaine Ritch, Kevin Knight, Shivashankar B Nair, Artificial Intelligence, 3rd Edition, Tata McGraw Hill Education, 2009.

Course Outcomes

Having successfully completed this course the students will be able to:

- Design and implement various machine learning algorithms in a range of real world applications
- Analyze the underlying mathematical relationships within machine learning techniques.
- Realize the strengths and weaknesses of popular machine learning approaches
- Comprehend the concepts in Bayesian analysis from probability models

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VII Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2023-24)

BIG DATA ANALYTICS (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Discuss the challenges traditional data mining algorithms face when analyzing Big Data.
- Introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- Comprehend machine learning and deep learning algorithms for data analytics.
- Understand how big data analytics can leverage into a key component

UNIT I

Introduction to Analytics and Big Data - Characteristics of Big Data, Domain Specific Examples of Big Data Viz. Web, Financial, Healthcare, IoT, Environment, Logistics & Transportation, Industry, Retail; Analytics Flow for Big Data, Big Data Stack, Mapping Analytics Flow to Big Data Stack, Case Studies: Genome Data Analysis and Weather Data Analysis, Analytics Patterns.

UNIT II

Overview of Setting up Big Data Stack, Big Data Patterns - Analytics Architecture Components & Design Styles, MapReduce Patterns.
NoSQL - Key-Value Databases, Document Databases, Column Family Databases, Graph Databases.

UNIT III

Data Acquisition - Data Acquisition Considerations, Publish-Subscribe Messaging Frameworks, Big Data Collection Systems, Messaging Queues, Custom Connectors.
Big Data Storage - HDFS: Architecture and Usage Examples.
Batch Analysis - Hadoop and MapReduce, Hadoop-MapReduce Examples, Pig, Case Study: Batch Analysis of News Articles, Apache Oozie, Apache Spark, Apache Solr.

UNIT IV

Real-time Analysis - Stream Processing, Storm Case Studies, In-Memory Processing, Spark Case Studies.
Interactive Querying - Spark SQL, Hive, Amazon Redshift, Google BigQuery.
Serving Databases & Web Frameworks - Relational (SQL) Databases, Non-Relational (NoSQL) Databases, Python Web Application Framework-Django, Case Study: Django application for viewing weather data.

UNIT V

Analytics Algorithms - Frameworks, Clustering, Case Study: Song Recommendation System, Classification & Regression, Case Studies: Classifying Handwritten Digits and Genome Data Analysis (Implementation), Recommendation Systems.
Data Visualization - Frameworks & Libraries, Overview of Visualization Examples.

Text Books:

- Arshdeep Bhaga, Vijay Madisetti, Big Data Science and Analytics: A Hands-On Approach, 1st Edition, VPT Publishers, 2019.
- Michael Minelli, Michele Chambers, Ambiga Dhiraj, Big Data, Big Analytics: Emerging Business Intelligence and Analytic Trends for Today's Businesses, Wiley, 2013.

Reference Books:

- EMC Education Services, "Data Science & Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data", Wiley, 2016.
- Frank J Ohlhorst, "Big Data Analytics: Turning Big Data into Big Money", Wiley and SAS Business Series, 2012.
- Rajkumar Buyya, Rodrigo N. Calheiros and Amir Vahid Dastjerdi (Editors), "Big
- Data Principles and Paradigms", Morgan Kaufmann (An imprint of Elsevier), 2016.
- Colleen McCue, "Data Mining and Predictive Analysis: Intelligence Gathering and Crime Analysis", Elsevier, 2007.
- Michael Berthold, David J. Hand, Intelligent Data Analysis, Springer, 2007.
- Anand Rajaraman and Jeffrey David Ullman, Mining of Massive Datasets, Cambridge University Press, 2012.
- Bill Franks, "Taming the Big Data Tidal Wave: Finding Opportunities in Huge Data
- Streams with Advanced Analytics", Wiley and SAS Business Series, 2012.
- Paul Zikopoulos, Chris Eaton, Paul Zikopoulos, "Understanding Big Data: Analytics
- for Enterprise Class Hadoop and Streaming Data", McGraw Hill, 2011.

Course Outcomes

By the end of this course students will be able to

- Understand big data challenges in different domains viz. social media, transportation, finance, medicine and apply the concepts of big data analytics for the said domains.
- Apply several newer algorithms for Clustering, Classifying and finding associations in Big Data
- Design and develop Hadoop and Map Reduce Framework
- Handle several Data Intensive tasks using the Map Reduce Paradigm

VII Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2023-24)

CLOUD COMPUTING (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand fundamental concepts of cloud computing and its services.
- Demonstrate an understanding of Service models, deployment models andVirtualization
- Understand the programming and implementation issues of Cloud

UNIT I

Computing Paradigms: High-Performance Computing, Parallel Computing, Distributed Computing, Cluster Computing, Grid Computing, Cloud Computing, Biocomputing, Mobile Computing, Quantum Computing, Optical Computing, Nano computing, Network Computing.

Cloud Computing Fundamentals: Motivation for Cloud Computing, Defining Cloud Computing, 5-4-3 Principles of Cloud computing, Cloud Ecosystem, Requirements for Cloud Services, Cloud Application, Benefits and Drawbacks.

Cloud Computing Architecture and Management: Introduction, Cloud Architecture, Anatomy of the Cloud, Network Connectivity in Cloud Computing, Applications on the Cloud, Managing the Cloud, Migrating Application to Cloud.

Cloud Deployment Models: Introduction, Private Cloud, Public Cloud, Community Cloud, Hybrid Cloud.

UNIT II

Cloud Service Models: Introduction, Infrastructure as a Service, Platform as a Service, Software as a Service, Other Cloud Service Models.

Technological Drivers for Cloud Computing: Introduction, SOA and Cloud, Virtualization, Multicore Technology, Memory and Storage Technologies, Networking Technologies, Web 2.0, Web 3.0, Software Process Models for Cloud, Programming Models, Pervasive Computing, Operating System, Application Environment.

UNIT III

Virtualization: Introduction, Virtualization Opportunities, Approaches to Virtualization, Hypervisors, From Virtualization to Cloud Computing.

Programming Models for Cloud Computing: Introduction, Extended Programming Models for Cloud, New Programming Models Proposed for Cloud,

Software Development in Cloud: Introduction, Different Perspectives on SaaS Development, New Challenges, Cloud-Aware Software Development Using PaaS Technology.

UNIT IV

Networking for Cloud Computing: Introduction, Overview of Data Center Environment, Networking Issues in Data Centers, Transport Layer Issues in DCNs, TCP Enhancements for DCNs.

Cloud Service Providers: Introduction, EMC, Google, Amazon Web Services, Microsoft, IBM, SAP Labs, Salesforce, Rackspace, VMware, Manjrasoft.

UNIT V

Open Source Support for Cloud: Introduction, Open Source Tools for IaaS, Open Source Tools for PaaS, Open Source Tools for SaaS, Open Source Tools for Research, Distributed Computing Tools for Management of Distributed Systems.

Security in Cloud Computing: Introduction, Security Aspects, Platform-Related Security Audit and Compliance.

Advanced Concepts in Cloud Computing: Intercloud, Cloud Management, Mobile Cloud, Media Cloud, Interoperability and Standards, Cloud Governance, Computational Intelligence in Cloud, Green Cloud, Cloud Analytics.

Text Books:

1. K. Chandrasekaran, Essentials of Cloud Computing, CRC press, 2014.

Reference Books:

- Buyya R, Vecchiola C, Selvi S T, Mastering Cloud Computing, McGraw Hill Education (India), 2013.
- Dan C. Marinescu, Cloud Computing - Theory and Practice, Morgan Kaufmann (an imprint of Elsevier), 2013.
- Rajkumar Buyya, James Broberg, Andrzej Goscinski, Cloud Computing - Principles and Paradigms, Wiley India, 2011.
- Kai Hwang, Geoffrey C Fox, Jack J Dongarra, Distributed and Cloud Computing - From Parallel Processing to the Internet of Things, Morgan Kaufmann (an imprint of Elsevier), 2012.
- Tim Mather, SubraKumaraswamy, ShahedLatif, Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance, O'Reilly.
- Rittinghouse J W, Ransome J F, Cloud Computing - Implementation, Management, and Security, CRC Press, 2010.
- Velte A T, Velte T J, Cloud Computing - A Practical Approach, McGraw Hill, 2011.
- Shroff G, Enterprise Cloud Computing - Technology, Architecture, Applications, Cambridge University Press, 2010.
- Antonopoulos N, Gillam L, Cloud Computing - Principles, Systems and Applications, Springer, 2010.
- Furht B, Escalante A, Handbook of Cloud Computing, Springer, 2010.

Course Outcomes

By the end of this course students will be able to:

- Develop the ability to understand the basics of cloud computing and different cloud deployment models.
- Handle resource management and security issues of cloud computing.
- Evaluate the performance of different cloud service models.
- Identify, analyze and use different cloud services/applications/tools available from key cloud providers.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VII Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2023-24)

IMAGE PROCESSING (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand the fundamentals of Digital imaging and Image Processing techniques.
- Discuss the concepts of image compression and segmentation.
- Evaluate the performance of image processing algorithms and systems.

UNIT I

Introduction: Fundamentals of Image Processing, Applications of Image Processing, Human Visual Perception, Introduction to Image Formation, Sampling and Quantization, Binary Image, Three-Dimensional Imaging, Image file formats. Color and Color Imagery: Perception of Colors.

UNIT II

Image Transformation: Fourier Transforms, Discrete Cosine Transform, Walsh-adamard Transform, Karhaunen-Loeve Transform or PCA. Discrete Wavelet Transform: Wavelet Transform, Extension to 2D Signals, Lifting Implementation of the Discrete Wave Transforms.

UNIT III

Image Enhancement and Restoration : Introduction, Distinction between image enhancement and restoration, Histrogram-based Contrast Enhancement, Frequency Domain Methods of Image Enhancement, Noise Modeling, Image Restoration, Image Reconstruction, Image Segmentation.

UNIT IV

Recognition of Image Patterns : Introduction, Decision Theoretic Pattern Classification, Baesian Decision Theory, Nonparametric Classification, Linear Discriminant Analysis, Unsupervised Classification Strategies-clustering, K-means clustering algorithm, Syntactic Pattern Classification, Syntactic Inference, Symbolic Projection method. Texture and Shape Analysis.

UNIT V

Fuzzy Set Theory in Image Processing : Introduction, Use of Fuzzy Image, Preliminaries and Background, Image as a Fuzzy Set, Fuzzy Methods of Contrast Enhancement, Image Segmentation using Fuzzy Methods, Fuzzy Approaches to Pixel Classification, Fuzzy c-Means Algorithm, Fusion of Fuzzy logic with neural network. Image mining and Content-Based Retrieval.

Text Books:

- Maria Petrou and Costas Petrou , “Image Processing the Fundamentals”, John-Wiley and Sons Publishers, 2nd edition, 2010.
- Rafael C. Gonzalez , Richard E. Woods, Steven L. Eddins, "Digital Image Processing Using MATLAB", 2nd edition, Gatesmark Publishing, 2009.
- Tinku Acharya and Ajoy K. Ray, “Image Processing Principles and Applications”, John Wiley & Sons publishers, 2005.

Reference Books:

- Rafael Gonzalez and Richard E. Woods, Digital Image Processing, 4th edition, Pearson, 2017.
- Anil K Jain, Fundamentals of Digital Images Processing, First edition, Pearson, 2015.

Course Outcomes

By the end of this course students will be able to:

- Understand Image representation and modeling.
- Design and apply image enhancement and restoration techniques
- Develop image processing techniques for assisting digital forensics

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VII Semester B.Tech (CSE) – CBCS Regulations-2020
(With effect from the academic year 2023-24)

SOFT COMPUTING (Professional Elective)

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Understand basic ANN architectures, algorithms and their limitations
- Understand the concepts of feed forward and feedback ANN.
- Discuss the Fuzzy logic concepts, Fuzzy principles and relations
- Familiarize Genetic Algorithm and its applications to Soft Computing.
- Design and develop ML techniques with assistance of MATLAB

UNIT I

Introduction of soft computing - Soft computing vs. Hard computing- Various types of soft computing techniques- Applications of soft computing-Neuron- Nerve structure and synapse- Artificial Neuron and its model- Activation functions- Neural network architecture- Single layer and Multilayer feed forward networks- McCullochPitts neuron model- Perceptron model- MLP- Back propagation learning methods- Effect of learning rule coefficient.

UNIT II

Counter propagation network - Architecture - Functioning & Characteristics of counter-propagation network - Hopfield/ Recurrent network – Configuration - Stability constraints associative memory- and characteristics- Limitations and applications- Hopfield vs Boltzman machine - Adaptive Resonance Theory – Architecture – Classifications -Implementation and training-Associative Memory.

UNIT III

Different faces of imprecision - Inexactness, Ambiguity, Undecidability, Fuzziness and certainty, Fuzzy sets and Crisp sets. Intersections of Fuzzy sets, Union of Fuzzy sets, the complement of Fuzzy sets - Fuzzy reasoning. Linguistic variables, Fuzzy propositions, Fuzzy compositional rules of inference - Methods of decompositions and Defuzzification.

UNIT IV

Basic concept of Genetic algorithm and detail algorithmic steps - Adjustment of free parameters- Solution of typical control problems using Genetic algorithm - Concept on some other search techniques like tabu search and ant colony search techniques for solving optimization problems.

UNIT V

GA application to optimization problems - Case studies: Identification and control of linear and nonlinear dynamic systems using MATLAB - Neural Network toolbox. Stability analysis of Neural Network interconnection systems - Implementation of fuzzy logic controller using MATLAB fuzzy logic toolbox - Stability analysis of fuzzy control systems.

Text Books:

- Timothy J. Ross, “Fuzzy Logic with Engineering Applications”, Wiley India, 3rd edition, 2012.
- Zimmermann H. J. "Fuzzy set theory and its Applications" Springer international edition, 2011.
- David E. Goldberg, “Genetic Algorithms in Search, Optimization, and Machine Learning”, Pearson Education, 2009.
- Laurene V. Fausett, “Fundamentals of Neural Networks: Architectures, Algorithms, And Applications”, Pearson Education, 1st edition, 1993.
- W. T. Miller, R. S. Sutton and P. J. Webros, “Neural Networks for Control”, MIT Press, 1996.

Reference Books:

1. S. Rajasekaran, and G. A. Vijayalakshmi Pai, Neural Networks, Fuzzy Logic and Genetic Algorithms: Synthesis, and Applications, Prentice Hall of India, 2007.

Course Outcomes

By the end of this course students will be able to:

- Comprehend the fuzzy logic and the concept of fuzziness involved in various systems.
- Understand the role of soft computing techniques in solving real world applications
- Build optimal classifiers using genetic algorithms
- Implement fuzzy logic controller using MATLAB fuzzy logic toolbox

OPTIMIZATION TECHNIQUES

No.of Credits: 3 Instruction Hours/Week: 3

Course Objectives:

The course is designed to

- Cast engineering extrema (minima/maxima) problems into optimization framework.
- Learn efficient computational procedures to solve optimization problems.

UNIT I

Overview of Operations Research, Modeling approach, Decision analysis and Games-Decision environments, Decision making under certainty, Decision making under risk, Decision making under uncertainty, Game theory.

UNIT II

Liner Programming – Formulation, Graphical method, Simplex method, Duality, Formulation of transportation, Assignment and Transshipment models. Goal programming – Formulation, Weighting and Preemptive methods.

UNIT III

Integer Linear Programming – Applications, Branch and bound, and Cutting plane algorithms.

UNIT IV

Nonlinear Programming - Sample applications, Graphical illustration of nonlinear programming problems, Types of nonlinear programming problems, One-variable unconstrained optimization, Multivariable unconstrained optimization.

UNIT V

Karush-Kuhn-Tucker conditions for constrained optimization, Quadratic programming, Separable programming, Convex programming and Non-convex programming.

Text Books:

- Hillier F S, and Lieberman G J, *Introduction to Operations Research*, 7th edition, Tata McGraw-Hill, 2003.

Reference Books:

- Taha H A, Operations Research – An Introduction, 8th edition, Prentice Hall of India, 2006.
- Wagner H M, Principles of Operations Research with Applications to Managerial Decisions, 2nd edition, Prentice Hall of India, 2004.
- Tulsian P C, and Pandey V, Quantitative Techniques – Theory and Problems, Pearson Education Asia, 2002.

Course Outcomes

After successful completion of the course, student will be able to

- Apply basic concepts of mathematics to formulate an optimization problem
- Analyse and appreciate variety of performance measures for various optimization problems
- Select appropriate solution technologies and strategies,
- Interpret the solution of an optimization problem
- Understand the effects of problem variation on the optimal solution.

VII Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2023-24)

MOBILE APPLICATION DEVELOPMENT

No.of Credits: 2 Instruction Hours/Week: 2L+2P

Course Objectives

The course is designed to

- Impart both conceptual and practical knowledge on Android OS.
- Understand and develop robust applications for Mobile devices on Android platform.

The course shall cover the following topics:

- **Introduction to Android Programming:** What is Android?, Obtaining the Required
- Tools, Launching Your First Android Application.
- **Using Android Studio for Android Development:** Exploring the IDE, Using Code
- Completion, Debugging Your Application, Publishing Your Application.
- **Activities, Fragments, and Intents:** Understanding Activities, Linking Activities
- Using Intents, Fragments, Displaying Notifications.
- **Introduction to Android User Interface:** Understanding the Components of a Screen, Adapting to Display Orientation, Managing Changes to Screen Orientation, Utilizing the Action Bar, Creating the User Interface Programmatically, and Listening for UI Notifications.
- **Designing User Interface with Views:** Using Basic Views, Using Picker Views, Using List Views to Display Long Lists, Understanding Specialized Fragments.
- **Displaying Pictures and Menus with Views:** Using Image Views to Display
- Pictures, Using Menus with Views, Using WebView.
- **Data Persistence:** Saving and Loading User Preferences, Persisting Data to Files, Creating and Using Databases.
- **Content Providers:** Sharing Data in Android, Using a Content Provider, Creating
- Your Own Content Providers, Using the Content Provider.
- **Messaging:** SMS Messaging, Sending Email.
- **Location-Based Services:** Displaying Maps, Getting Location Data, Monitoring aLocation.
- **Networking:** Consuming Web Services Using HTTP, Consuming JSON Services.
- **Developing Android Services:** Creating Your Own Services, Establishing Communication Between a Service and an Activity, Binding Activities to Services, Understanding Threading.
- **Publishing Android Applications:** Preparing for Publishing, Deploying APK Files.

Text Books:

- J. F. DiMarzio, Beginning Android Programming with Android Studio, John Wiley & Sons, Inc., Fourth Edition, 2017.
- Wei-Meng Lee, Beginning Android™ 4 Application Development, John Wiley & Sons, Inc., 2012.

Reference Books:

- Ian Darwin, Android Cookbook: Problems and Solutions for Android Developers, O'Reilly, Second Edition, 2017.
- Bill Phillips, Chris Stewart and Kristin Marsicano, Android Programming: The Big Nerd Ranch Guide, Big Nerd Ranch, Third Edition, 2017.
- Wei-Meng Lee, Android™ Application Development Cookbook: 93 Recipes for Building Winning Apps, John Wiley & Sons, Inc., 2013.
- Peter Späth, Pro Android with Kotlin: Developing Modern Mobile Apps, Apress, 2018.
- Neil Smyth, Android Studio 3.0 Development Essentials – Android 8 Edition, Neil Smyth / Payload Media, Inc., 2017.

Course Outcomes

Having successfully completed this course the students will be able to:

- Demonstrate their skills of using Android software development tools
- Demonstrate knowledge on mobile platforms, mobile user interface and user interface design requirements.
- Develop mobile applications and publish in different mobile platforms.

CS/PROJ

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

VIII Semester B.Tech (CSE) – CBCS Regulations-2020 (With effect from the academic year 2023-24)

PROJECT WORK, SEMINAR AND INTERNSHIP IN INDUSTRY

No.of Credits: 12

Students, not exceeding four per batch, shall pursue either research-oriented or application-oriented Project Work. The steps to be followed in executing the Project Work are given below:

Research-Oriented Project Work

1. Motivation
2. Literature Survey
3. Problem Definition
4. Model Formulation (System Model)
5. System Design/ Algorithm Development
6. Proof of Correctness
7. Performance Analysis
8. Performance Measurement
9. Results and Conclusions

Application-Oriented Project Work

1. Motivation
2. Problem Definition
3. Feasibility Study
4. Software Requirements Analysis
5. Software Design
6. Test Case Design
7. Coding
8. Testing
9. Conclusions

DISTRIBUTED DATABASES

No.of Credits: 4 Instruction Hours/Week: 3L+1T

Course Objectives:

- To expose the need for distributed database technology to confront with the
- deficiencies of the centralized database systems.
- To introduce basic principles and implementation techniques of distributed database systems.
- To familiarize students with the principles and knowledge of parallel databases.

UNIT I

Introduction: What Is a Distributed Database System?, History of Distributed DBMS, Data Delivery Alternatives, Promises of Distributed DBMSs, Design Issues, Distributed DBMS Architectures.

Distributed and Parallel Database Design: Data Fragmentation, Allocation, Combined Approaches, Adaptive Approaches, Data Directory.

Distributed Data Control: View Management, Access Control, Semantic Integrity Control.

UNIT II

Distributed Query Processing: Overview, Data Localization, Join Ordering in Distributed Queries, Distributed Cost Model, Distributed Query Optimization, Adaptive Query Processing.

Distributed Transaction Processing: Background and Terminology, Distributed Concurrency Control, Distributed Concurrency Control Using Snapshot Isolation, Distributed DBMS Reliability, Modern Approaches to Scaling Out Transaction Management.

UNIT III

Data Replication: Consistency of Replicated Databases, Update Management Strategies, Replication Protocols, Group Communication, Replication and Failures.

Database Integration - Multidatabase Systems: Database Integration, Multidatabase Query Processing.

Parallel Database Systems: Objectives, Parallel Architectures, Data Placement, Parallel Query Processing, Load Balancing, Fault-Tolerance, Database Clusters.

UNIT IV

Peer-to-Peer Data Management: Infrastructure, Schema Mapping in P2P Systems, Querying Over P2P Systems, Replica Consistency, Blockchain.

Big Data Processing: Distributed Storage Systems, Big Data Processing Frameworks, Stream Data Management, Graph Analytics Platforms, Data Lakes.

UNIT V

NoSQL, NewSQL, and Polystores: Motivations for NoSQL, Key-Value Stores, Document Stores, Wide Column Stores, Graph DBMSs, Hybrid Data Stores, Polystores.

Web Data Management: Web Graph Management, Web Search, Web Querying, Question Answering Systems, Searching and Querying the Hidden Web, Web Data Integration.

Course Outcomes:
After completion of the course the students will be able to

- Design and implement distributed databases.
- Handle query processing in a distributed database system.
- Comprehend transaction management and analyze various approaches to concurrency control in distributed databases.
- Design and implement various algorithms and techniques for deadlock and recovery in distributed databases.

Text Books:

1. M. Tamer Ozsu and Patrick Valduriez, "Principles of Distributed Database Systems", Fourth Edition, Springer, 2020.

Reference Books:

- Stefano Ceri and Giuseppe Pelagatti, Distributed Databases: Principles and Systems, McGraw Hill Education, 2017.

- Sachin Deshpande, Distributed Databases, Dreamtech Press.
- David Bell and Jane Grimson, Distributed Database Systems, First Edition, Addison-Wesley, 1992.
- Hector Garcia-Molina, Jeffrey D. Ullman, Jennifer Widom: Database Systems: The Complete Book, Second Edition, Pearson Education.

CSHN 02

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Honors in CSE) – CBCS Regulations-2020

ADVANCED OPERATING SYSTEMS

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

- Familiarize the students with the basics of hardware and software issues in distributed computing systems.
- Understand issues related to Synchronization, mutual exclusion, naming, synchronization, consistency and replication,
- Introduce the concepts of distributed file systems, distributed shared virtual memory fault tolerance and deadlocks in distributed systems.

UNIT I

Distributed systems – Introduction, Hardware concepts, Software concepts and Design issues. Layered protocols, Asynchronous transfer mode networks, Client server model, Remote procedure call, Group communication.

UNIT II

Clock synchronization, Mutual exclusion, Election algorithms, Atomic transactions, Deadlocks in distributed systems.
Threads, System models, Processor allocation, Scheduling in distributed systems.

UNIT III

Fault tolerance, Real-time distributed systems, Distributed file systems – Design, Implementation and Trends.
Distributed shared memory – Introduction and shared memory concept.

UNIT IV

DSM Consistency models, Page-based distributed shared memory.
Case study Amoeba – Introduction, Objects and capabilities, Process management, Memory management, Communication and Servers.

UNIT V

Multimedia operating systems – Introduction, Multimedia files, Video compression, Audio compression, Multimedia process scheduling, Multimedia file system paradigms, File placement, Caching, Disk scheduling for multimedia.

Text Books:

- Tanenbaum A S, Distributed Operating Systems, Pearson Education, 2005.
- Tanenbaum A S, Modern Operating Systems, 3rd Edition, Pearson Education, 2008.

Reference Books:

1. Andrew S Tanenbaum Maarten Van Steen, Distributed Systems: Principles and Paradigms, Pearson, 2006.

Course Outcomes:

After completion of the course the students will be able to

- Understand the design principles in distributed operating systems and the architectures for distributed systems
- Implement clock synchronization, concurrency control, deadlock detection, load balancing related to distributed operating systems.
- Efficiently handle the issues of Mutual Exclusion and Deadlock detection and recovery in distributed operating systems.
- Design and implement distributed file systems and Distributed shared virtual memory.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Honors in CSE) – CBCS Regulations-2020

NATURAL LANGUAGE PROCESSING

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Understand computational properties of natural languages and the commonly used algorithms for processing linguistic information.
- Learn basics of semantic analysis and discourse analysis and drives it to machine translation
- Learn how to process written text from basic of fundamental knowledge of Finite automata, Regular expression and probabilistic model with n-grams.

.

UNIT I

Introduction to SLP, Regular Expressions and Automata, Words and Transducers, N-grams, Part-of-Speech Tagging, Hidden Markov and Maximum Entropy Models.

UNIT II

Phonetics, Speech Synthesis, Automatic Speech Recognition, Speech Recognition: Advanced Topics, Computational Phonology.

UNIT III

Formal Grammars of English, Syntactic Parsing, Statistical Parsing, Features and Unification, Language and Complexity.

UNIT IV

Semantics and Pragmatics, The Representation of Meaning, Computational Semantics, Lexical Semantics, Computational Lexical Semantics, Computational Discourse.

UNIT V

Information Extraction, Question Answering and Summarization, Dialogue and Conversational Agents, Machine Translation.

Course Outcomes:

After completion of the course the students will be able to

- Comprehend and analyze the various elements of speech processing
- Design and develop machine learning techniques in the area of NLP
- Demonstrate the state-of-the-art algorithms and techniques for text-based processing
- Perform POS tagging for a given natural language

.

Text Books:

1. Jurafsky D, Martin J H, *Speech and Language Processing: An Introduction to Natural Language Processing*, Computational Linguistics and Speech Recognition, 2nd edition, Pearson Education, 2013.

Reference Books:

- Chopra D, Joshi N, Mastering Natural Language Processing with Python, Packt, 2016.
- Watanabe S, Jen-Tzung Chien J T, Bayesian Speech and Language Processing, Cambridge University Press, 2015.

B.Tech (Honors in CSE) – CBCS Regulations-2020

SOFTWARE ARCHITECTURE AND DESIGN PATTERNS

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Impart knowledge on the different architectural styles and architectural patterns for the software
- Understand design patterns and their underlying object oriented concepts
- Focus on the architectural design issues as well as the use of design patterns for different applications

UNIT I

Design Patterns: Origin and History, Architectural to Software Design Patterns, What Is a Design Pattern?, More about Design Patterns.

UML: A Quick Reference - Structure Diagrams, Behavior Diagrams, Model Management Diagram, Class Diagrams, Sequence Diagrams.

Basic Patterns: Interface, Abstract Parent Class, Private Methods, Accessor Methods, Constant Data Manager, Immutable Object, Monitor.

UNIT II

Creational Patterns: Factory Method, Singleton, Abstract Factory, Prototype, Builder.

Collectional Patterns: Composite, Iterator, Flyweight, Visitor.

UNIT III

Structural Patterns: Decorator, Adapter, Chain of Responsibility, Façade, Proxy, Bridge, Virtual Proxy, Counting Proxy, Aggregate Enforcer, Explicit Object Release, Object Cache.

UNIT IV

Behavioral Patterns: Command, Mediator, Memento, Observer, Interpreter, State, Strategy, Null Object, Template Method, Object Authenticator, Common Attribute Registry.

UNIT V

Concurrency Patterns: Critical Section, Consistent Lock Order, Guarded Suspension, Read-Write Lock.

Case Study: A Web Hosting Company – Objective, KPS Hosting Solutions: A Brief Overview, Requirements, Business Objects and Their Association, Framework for Application Processing, Conclusion.

Text Books:

1. Partha Kuchana, Software Architecture Design Patterns in Java, Auerbach Publications – A CRC Press Company, 2004.

Reference Books:

- Mark Richards, Neal Ford, Fundamentals of Software Architecture: An Engineering Approach, O'Reilly, First Edition, 2020.
- Kamalmeet Singh, Adrian Ianculescu, Lucian-Paul Torje, Design Patterns and Best Practices in Java: A Comprehensive Guide to Building Smart and Reusable Code in Java, Packt Publishing, First Edition, 2018.
- Erich Gamma, Design Patterns, Pearson Education.
- Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides, Design Patterns: Elements of Reusable Object-Oriented Software, Addison-Wesley/Pearson Education, 1995.
- Steven John Metsker, William C. Wake, Design Patterns in Java, Addison-Wesley/ Pearson Education, 2006.
- Alan Shalloway, James R. Trott, Design Patterns Explained: A New Perspective on Object-Oriented Design, Pearson Education, 2004.
- Frank Buschmann, Regine Meunier, Hans Rohnert, Peter Sommerlad, Michael Stal, Pattern-Oriented Software Architecture: A System of Patterns, John Wiley & Sons, 1996.
- Len Bass, Paul Clements, Rick Kazman, Software Architecture in Practice, Addison-Wesley Professional, Third Edition, 2012.

Course Outcomes:

After completion of the course the students will be able to

- Apply his knowledge to create an architecture for given application.
- Explain the role of analyzing architectures.
- Able to identify different structural patterns.
- Design creational, structural and behavioral patterns.
- Recognize major software architectural styles, design patterns, and frameworks.

CSHN 07

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Honors in CSE) – CBCS Regulations-2020

DEEP LEARNING

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Learn some advanced topics such as recurrent neural networks, long short term memory cells and convolutional neural networks.
- Learn deep recurrent and memory networks and deep Turing machines
- Understand different types of deep learning network models.

UNIT I

Introduction to Machine Learning: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyperparameters and Validation Sets, Estimators, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Descent, Building a Machine Learning Algorithm, Challenges Motivating Deep Learning.

UNIT II

Review of fundamental learning techniques, Feed forward neural network - Artificial Neural Network, activation function, multi-layer neural network, Training Neural Network: Risk minimization, loss function, back propagation, regularization, model selection, and optimization. Conditional Random Fields: Linear chain, partition function, Markov network, Belief propagation, Training CRFs, Hidden Markov Model, Entropy.

UNIT III

Deep Feedforward Networks: Example: Learning XOR, Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation and Other Differentiation Algorithms, Historical Notes.

Regularization for Deep Learning: Parameter Norm Penalties, Norm Penalties as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Semi-Supervised Learning, Multi-Task Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging and Other Ensemble Methods, Dropout, Adversarial Training, Tangent Distance, Tangent Prop, and Manifold Tangent Classifier.

UNIT IV

Optimization for Training Deep Models: How Learning Differs from Pure Optimization, Challenges in Neural Network Optimization, Basic Algorithms, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates, Approximate Second-Order Methods, Optimization Strategies and Meta-Algorithms.

Convolutional Networks: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features, The Neuroscientific Basis for Convolutional Networks, Convolutional Networks and the History of Deep Learning.

UNIT V

Sequence Modeling: Recurrent and Recursive Nets, Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Deep Recurrent Networks, Recursive Neural Networks, The Challenge of Long-Term Dependencies, Echo State Networks, Leaky Units and Other Strategies for Multiple Time Scales, The Long Short-Term Memory and Other Gated RNNs, Optimization for Long-Term Dependencies, Explicit Memory.

Practical Methodology: Performance Metrics, Default Baseline Models, Determining Whether to Gather More Data, Selecting Hyperparameters, Debugging Strategies, Example: Multi-Digit Number Recognition.

Applications: Large-Scale Deep Learning, Computer Vision, Speech Recognition, Natural Language Processing, Other Applications.

Course Outcomes:

After completion of the course the students will be able to

- Explain different types of deep learning network models
- Apply optimization techniques to improve the performance of deep neural networks.
- Implement tools on Deep Learning techniques.

Text Books:

1. Ian Goodfellow, Yoshua Bengio and Aaron Courville, Deep Learning, MIT Press, 2016.

Reference Books:

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Honors in CSE) – CBCS Regulations-2020

ADVANCED PARALLEL PROCESSING

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Understand engineering trade-offs involved in designing modern parallel computers
- Develop programming skills to effectively implement parallel architecture

UNIT I

Introduction: Heterogeneous Parallel Computing, Architecture of a Modern GPU, Why More Speed or Parallelism?, Speeding Up Real Applications, Parallel Programming Languages and Models, Overarching Goals.

History of GPU Computing: Evolution of Graphics Pipelines, GPGPU: An Intermediate Step, GPU Computing.

Introduction to Data Parallelism and CUDA C: Data Parallelism, CUDA Program Structure, A Vector Addition Kernel, Device Global Memory and Data Transfer, Kernel Functions and Threading.

UNIT II

Data-Parallel Execution Model: Cuda Thread Organization, Mapping Threads to Multidimensional Data, Matrix-Matrix Multiplication - A More Complex Kernel, Synchronization and Transparent Scalability, Assigning Resources to Blocks, Querying Device Properties, Thread Scheduling and Latency Tolerance.

CUDA Memories: Importance of Memory Access Efficiency, CUDA Device Memory Types, A Strategy for Reducing Global Memory Traffic, A Tiled Matrix-Matrix Multiplication Kernel, Memory as a Limiting Factor to Parallelism.

Performance Considerations: Warps and Thread Execution, Global Memory Bandwidth, Dynamic Partitioning of Execution Resources, Instruction Mix and Thread Granularity.

UNIT III

Parallel Patterns: Convolution – Background, 1D Parallel Convolution - A Basic Algorithm, Constant Memory and Caching, Tiled 1D Convolution with Halo Elements, A Simpler Tiled 1D Convolution - General Caching.

Parallel Patterns: Prefix Sum – Background, A Simple Parallel Scan, Work Efficiency Considerations, A Work-Efficient Parallel Scan, Parallel Scan for Arbitrary-Length Inputs.

Parallel Patterns: Sparse Matrix-Vector Multiplication – Background, Parallel SpMV Using CSR, Padding and Transposition, Using Hybrid to Control Padding, Sorting and Partitioning for Regularization.

UNIT IV

Application Case Study: Molecular Visualization and Analysis – Application Background, A Simple Kernel Implementation, Thread Granularity Adjustment, Memory Coalescing.

Parallel Programming and Computational Thinking: Goals of Parallel Computing, Problem Decomposition, Algorithm Selection, Computational Thinking.

An Introduction to OpenCL™: Background, Data Parallelism Model, Device Architecture, Kernel Functions, Device Management and Kernel Launch, Electrostatic Potential Map in OpenCL.
Parallel Programming with OpenACC: OpenACC versus CUDA C, Execution Model, Memory Model, Basic OpenACC Programs, Future Directions of OpenACC.

UNIT V
Thrust: A Productivity-Oriented Library for CUDA – Background, Motivation, Basic Thrust Features, Generic Programming, Benefits of Abstraction, Programmer Productivity, Best Practices.
Programming a Heterogeneous Computing Cluster: Background, A Running Example, MPI Basics, MPI Point-to-Point Communication Types, Overlapping Computation and Communication, MPI Collective Communication.
CUDA Dynamic Parallelism: Background, Dynamic Parallelism Overview, Important Details, Memory Visibility, A Simple Example, Runtime Limitations, A more Complex Example.

Course Outcomes:
After completion of the course the students will be able to

- Design and implement parallel programs in environments such as CUDA, OpenMP
- Generate parallel programs for matrix, graph and sorting problems using CUDA
- library
- Learn about different OpenMP programming, MPI programming,
- Develop parallel programs using OpenCL library
- Analyze the functionality of GPU architecture using parallel computing platform
- CUDA.

DATA STRUCTURES

No.of Credits: 4 Instruction Hours/Week: 3L+1T

Course Objectives:

- Develop skills to design and analyze linear and nonlinear data structures.
- Develop algorithms for manipulating linked lists, stacks, queues, trees and graphs.
- Develop recursive algorithms as they apply to trees and graphs.
- Strengthen the ability to identify and apply the suitable data structure for the given real world problem.
- Understand the various techniques of sorting and searching.

UNIT I

Introduction: Data types/Objects/Structures, Abstract definition of Data Structures, Overview of linear and nonlinear data structures, Analysis of algorithms, Algorithm specification, Asymptotic notation, Time-Space trade-off, Searching: Linear, Binary and Fibonacci search and their complexity analysis.

Arrays: Definition, Multidimensional arrays, Pointer arrays, Representation of arrays – Row major and Column major orders, Application of arrays – Polynomials, Sparse matrices representation.

UNIT II

Stacks and Queues: Introduction, ADT, Array Representation, Operations and Applications of Stacks - Evaluation of expressions, Code generation for stack machines, Implementation of recursion, Factorial calculation and Towers of Hanoi; Circular Queue, Priority Queue, Double ended queue, Applications of Queues - Simulation, CPU Scheduling; Multiple stacks and queues.

UNIT III

Linked Lists: Single linked lists and chains, Circular linked list, Doubly linked list, Circular doubly linked list, Complexity analysis of the same, Linked representation of Stacks and Queues, Applications of linked lists - Polynomial representation, Sparse matrix multiplication, Dynamic storage management; Generalized list representation, Recursive algorithms for lists, Recursive lists.

UNIT IV

Trees: Basic tree terminologies, Binary Trees – Definition, Properties, ADT, Representations, Operations and Applications; Binary Search Trees, Heap Trees, Threaded binary trees, Height balanced trees – AVL Trees, Red black tree, Splay tree Their operations and complexity analysis.

UNIT V

Sorting Techniques: Insertion sort, Selection sort, Bubble sort, Quick Sort, Radix sort, Merge sort, External sort – Introduction, K-way Merge sort.

Graphs: Basic terminologies, Representations, ADT, Operations on graphs – DFS, BFS, Spanning Trees, Biconnected components, Minimum cost spanning trees.

Course Outcomes:
After completion of the course the students will be able to

- Choose appropriate data structure for the specified problem definition.
- Implement linear and non-linear data structures viz. stacks, queues, linked list, trees, graphs.
- Apply the concept of trees and graph data structures for the real world problems.
- Comprehend the implementation of sorting and searching algorithms.

B.Tech (Minor in CSE) – CBCS Regulations-2020

COMPUTER ORGANIZATION

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives

The course is designed to

- make the students understand the basic structure and operations of various functional units of a digital computer.
- familiarize the students with arithmetic and logic unit and implementation of fixed point and floating-point arithmetic operations.
- Make the students understand how to design processing unit using hardwired control and microprogrammed control approaches.
- familiarize the students with hierarchical memory system.
- expose the students with different ways of communicating with I/O devices and standard I/O interfaces.

UNIT I

Structure of Computers: Introduction, Performance, Memory addressing and Operations, Instructions and Instruction sequencing, Addressing modes, Basic l/0 operations, Pushdown stacks, Subroutines, Encoding of machine instructions, Brief description and functional classification of IA-32 Pentium instruction set.

UNIT II

Basic Processing Unit: Fundamental concepts, Single and Multiple bus organization, Hardwired control, Multiprogrammed control – Microinstructions, Microprogram sequencing, Wide-branch addressing, Microinstructions with next-address field, Prefetching microinstructions.

Arithmetic: Multiplication – Booth algorithm; Integer division, Floating-Point Addition and Subtraction.

UNIT III

The memory System: Basic concepts, RAM and ROM Memories and their internal organization, Cache Memories - Mapping functions, Replacement algorithms; Performance Considerations, Virtual Memories, Secondary Storage.

UNIT IV

Input/ Output Organization: Accessing l/O devices; Interrupts –Enabling and disabling, Handling multiple devices; Direct Memory Access - Bus Arbitration; Buses – Synchronous and Asynchronous; Interface circuits – Parallel port, Serial port

UNIT V

Pipelining: Basic concepts, Data hazards, Instruction hazards, Influence on instruction sets, Data path and control considerations, Superscalar operation.

Processor Families: The ARM family, The Motorola 680x0 and Coldfire families, The IA-32 family.

Course Outcomes:

On successful completion of this course the students will be able to

- Identify the basic structure and functional units of a digital computer.
- Analyze the effect of addressing modes on the execution time of a program.
- Design processing unit using the concepts of hardwired control or microprogrammed control.
- Select appropriate interfacing standards for I/O devices.
- Identify the roles of various functional units of a computer in instruction execution.
- Understand memory hierarchy and its impact on computer cost/performance.
- Understand the advantage of instruction level parallelism and pipelining for high performance processor design.

B.Tech (Minor in CSE) – CBCS Regulations-2020

DATABASE MANAGEMENT SYSTEMS

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

- To learn data models, conceptualize and depict a database system using ER diagram
- To understand the internal storage structures in a physical DB design
- To demonstrate the fundamental concepts, operation and function of different components of database systems.
- To describe the roles of transaction processing and concurrency control in a modern
- DBMS.
- To demonstrate key issues in the operation of a DBMS including query processing, security and integrity.
- To design and implement a database application.

UNIT-I

Introduction: Managing Data, File Systems versus a DBMS, Advantages of a DBMS, Storing data in a DBMS, Queries in a DBMS, Transactions, Structure of a DBMS.

Introduction to Data base design: ER diagrams, Beyond ER Design, Entities, Attributes and Entity sets, Relationships and Relationship sets, Additional features of ER Model, Conceptual Design with the ER Model, Conceptual Design for Large enterprises.

Relational Model: Introduction to the Relational Model, Integrity Constraints over Relations, Enforcing Integrity constraints, Querying relational data, Logical data base Design, Introduction to Views Destroying/ altering Tables and Views.

UNIT-II

Relational Algebra and Calculus: Relational Algebra , Relational calculus, Expressive Power of Algebra and calculus.

SQL: Form of Basic SQL Query, UNION, INTERSECT and EXCEPT, Nested Queries, Aggregate Operators, NULL values , Complex Integrity Constraints in SQL, Triggers and Active Databases, Designing Active Databases

UNIT-III

Schema Refinement and Normal Forms: Introduction, Functional Dependencies, Reasoning about FDS, Normal Forms - FIRST, SECOND, THIRD Normal forms, BCNF, Properties of Decompositions, Normalization, Schema Refinement in Data base Design, Multi valued Dependencies , FOURTH Normal Form, Join Dependencies, FIFTH Normal form, Inclusion Dependencies.

Database Application Development: Accessing Databases from Applications, Introduction to JDBC, JDBC Classes and Interfaces, SQLJ, Stored Procedures.

UNIT -IV

Overview of Transaction Management: ACID Properties, Transactions and Schedules, Concurrent Execution of Transactions, Lock-based Concurrency Control, Performance Locking, Transaction Support in SQL, Introduction to Crash Recovery.
Concurrency Control: 2PL, Serializability and Recoverability, Introduction to Lock
Management, Lock Conversions, Dealing with Deadlocks, Specialized Locking Techniques, Concurrency Control without Locking

Crash Recovery: Introduction to ARIES, Log, Recovery related Structures, Write-Ahead Log Protocols, Checkpointing, Recovering from a System Crash, Media Recovery, Interaction with Concurrency Control

UNIT-V

Overview of Storage and Indexing: Data on External Storage, File Organization and Indexing, Index data Structures, Comparison of File Organizations, Indexes and Performance Tuning.

Indexing and Hashing: Intuitions for tree indexes, Indexed Sequential Access Method, B+ Trees: A Dynamic Index Structure, Search, Insert, Delete, Duplicates, B+ Trees in Practice, Static Hashing, Extendable Hashing, Linear Hashing, Extendible vs. Linear Hashing.

Parallel and Distributed Databases: Introduction, Architectures for Parallel Databases, Parallel Query Evaluation, Parallelizing Individual Operations, Introduction to Distributed Databases, Distributed DBMS Architectures, Storing Data in Distributed DBMS, Distributed Catalog Management, Distributed Query Processing

Course Outcomes:

Upon successful completion of this course, the student should be able to

- Use relational algebra and relational calculus, to express database queries.
- Use SQL to interact with database management systems.
- Design appropriate database tables, using functional dependencies and normal forms.
- Implement a disk-oriented database storage manager with heap table and indexes.
- Understand, compare, and implement the major concurrency control algorithms.
- Implement database recovery algorithms and verify their correctness.
- Identify trade-offs among database systems techniques and contrast distributed/parallel alternatives for both on-line transaction processing and on-line analytical workloads.

CSMN 04

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Minor in CSE) – CBCS Regulations-2020

COMPUTER NETWORKS

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Provide insight about fundamental concepts, basic taxonomy and terminology of Computer Networks.
- Gain comprehensive knowledge about the principles, protocols, and significance of Layers in OSI and TCP/IP

UNIT I

Introduction to Computer Networks: Networks, Component and Categories, Topologies, Transmission Media, Reference Models: ISO/OSI Model and TCP/IP Model.

Physical Layer: Analog and Digital Signals, Periodic Analog Signals, Transmission Impairments, Data rate limits, Performance, Digital data transmission techniques, Analog data transmission techniques, Multiplexing: FDM, WDM and TDM; Spread Spectrum, Switching: Circuit and Packet.

UNIT II

Data Link Layer and Medium Access Sub Layer: Design Issues, Error Detection and Error Correction, Elementary Data Link Protocols, Sliding Window Protocols, Channel allocation problems, Multiple Access Protocols: Pure ALOHA, Slotted ALOHA, CSMA/CD, CSMA/CA; IEEE 802.3 Ethernet.

UNIT III

The Network Layer: Network layer design issues, Routing Algorithms, Congestion Control Algorithms, Quality of Service, Internetworking, The Network layer in the Internet: IPV4 Addresses, IPV6, Internet Control protocol, OSPF, BGP, IP, ICMPv4, IGMP.

UNIT IV

The Transport Layer: The Transport Service, Elements of Transport Protocols, Congestion Control, Internet Transport Protocols: UDP, TCP; Network Performance Measurement.

UNIT V

The Application Layer: Introduction, Client-Server Programming, Domain Name System (DNS), WWW and HTTP, FTP, E-mail, TELNET, Secure Shell, SNMP, IP Security Architecture, Firewalls.

Text Books:

- Computer Networks, Andrew S. Tanenbaum, Wetherall, Pearson, 5th edition, 2010.
- Data communications and Networking, Behrouz A. Forouzan, Mc Graw Hill Education, 5th edition, 2012.

Reference Books:

- Kurose J F, Ross K W, *Computer Networking – A Top-Down Approach*, 5th edition, Pearson Education, 2010.
- Peterson L L, Davie B S, *Computer Networks - A Systems Approach*, 5th edition, Morgan Kaufmann, 2011.
- Forouzan B A, Mosharraf F, *Computer Networks – A Top-Down Approach*, Tata McGraw-Hill, 2012.
- Olifer N, Olifer V, *Computer Networks – Principles, Technologies, and Protocols for* Network Design, Wiley, 2006.

Course Outcomes

By the end of this course students will be able to:

- Choose the transmission media depending on the requirements.
- Explain the functions of different layer of the OSI Protocol
- Analyze MAC layer protocols and LAN technologies
- Implement routing and congestion control algorithms
- Design new protocols for computer network.
- Configure DNS, DDNS, TELNET, EMAIL, FTP, WWW, HTTP, SNMP, Bluetooth, Firewalls using open source software and tools.

CSMN 05

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Minor in CSE) – CBCS Regulations-2020

SOFTWARE ENGINEERING

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to understand

- Software life cycle models.
- Software requirements and SRS document.
- Different software design strategies
- Quality control and how to ensure good quality software.
- Planning and estimation of software projects.
- Maintenance of software and gain knowledge of the overall project activities.

UNIT I

Introduction to Software Engineering: The Nature of Software, The Unique Nature of WebApps, Software Engineering, Software Process, Software Engineering Practice, Software Myths.

Process Models: A Generic Process Model, Process Assessment and Improvement, Prescriptive Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models, Process Technology, Product and Process.

Agile Development: Agility, Agility and the Cost of Change, Extreme Programming, Agile Process Models

UNIT II

Understanding Requirements: Requirements Engineering, Eliciting Requirements, Developing Use Cases, Building the Requirements Model, Negotiating Requirements, Validating Requirements.

Requirements Modeling: Requirements Analysis, Scenario based Modeling, Class based Modeling, Requirements Modeling Strategies, Flow Oriented Modeling, Patterns for Requirement Modeling, Requirements Modeling for WebApps

Design Concepts: Design Process, Design Concepts, Design Model.

Architectural Design: Software Architecture, Architectural Genres, Architectural Styles, Architectural Design, Alternative Architectural Designs, Architectural Mapping using Data flow.

UNIT III

Component Level Design: Component, Class based Components, Conducting Component level design, Component level Design for WebApps, Designing Traditional Components, Component based Development.

User Interface Design: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, WebApp Interface Design, Design Evaluation.

Pattern Based Design: Design Patterns, Pattern based Software Design, Architectural Patterns, Component Level Design Patterns, User Interface Design Patterns.

UNIT IV

Software Quality Concepts: Software Quality, Software Quality Dilemma, Achieving Software Quality.

Software Quality Assurance: Elements of Software Quality Assurance, SQA Goals and Metrics, Formal Approaches to SQA, Statistical SQA, Software Reliability.

Software Testing Strategies: A Strategic Approach to Software Testing, Strategic Issues, Unit Testing and Integration Testing (both Conventional and OO Software), Test Strategies for WebApps, Validation Testing, System Testing, Art of Debugging.

Testing Conventional Applications: Software Testing Fundamentals, Internal and External View of Testing, White-Box Testing, Basis Path Testing, Control Structure Testing, Black-Box Testing, Model based Testing, Testing for Specialized Environments, Patterns for Software Testing.

Computer Aided Software Engineering: CASE and its Scope, CASE Environment, CASE Support in Software Life Cycle, Characteristics of CASE Tools, Towards Second Generation CASE Tool.

UNIT V

Managing Software Projects: Project Management Concepts, Metrics in the Process and Project Domains, Software Measurement, Metrics for Software Quality, Project Planning Process, Software Scope and Feasibility, Software Project Estimation, Decomposition Techniques, Empirical Estimation Models, Estimation for OO Projects, Project Schedu ling – Basic Principles, Defining a Task Set and Task Network, Scheduling, Introduction to Risk Management, Software Maintenance, Software Supportability, Software Reengineering, Reverse Engineering, Restructuring, Forward Engineering, Economics of Reengineering.

Text Books:

1. Pressman R S, *Software Engineering: A Practitioner's Approach*, 7th edition, McGraw-Hill, 2010.
2. Sommerville I, *Software Engineering*, 9th edition, Pearson Education, 2011.

Reference Books:

- Jalote P, Software Engineering: A Precise Approach, Wiley, 2010.
- Braude E J, Bernstein M E, Software Engineering: Modern Approaches, 2nd edition, Wiley, 2010.
- Saleh K A, Software Engineering, J Ross Publishing, 2009.
- Bruegge B, Dutoit A H, Object-Oriented Software Engineering Using UML, Patterns, and Java, 3rd edition, Prentice Hall, 2009.
- Bennett S, McRobb S, Farmer R, Object-Oriented System Analysis and Design Using UML, 4nd edition, McGraw-Hill, 2010.

- Lethbridge T C, Laganiere R, Object-Oriented Software Engineering, 2nd edition, McGraw-Hill, 2005.

Course Outcomes

By the end of this course students will be able to

- Define and develop a software project from requirement gathering to implementation.
- Obtain knowledge about principles and practices of software engineering.
- Focus on the fundamentals of modeling a software project.
- Obtain knowledge about estimation and maintenance of software systems
- Comprehend, assess, and calculate the cost of risk involved in a project management
- Implement testing methods at each phase of SDLC

CSMN 06

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

B.Tech (Minor in CSE) – CBCS Regulations-2020

JAVA AND WEB TECHNOLOGY

No.of Credits: 4 Instruction Hours/ Week: 3L+1T

Course Objectives:

The course is designed to

- Learn how to extend Java classes with inheritance and dynamic binding.
- Learn how to use exception handling in Java applications.
- Understand how to design applications with threads in Java.
- Learn how to design a graphical user interface (GUI) with Java Swing.
- Understand how to use Java APIs for program development.
- Understand the Web designing using HTML, XML, DHTML and Javascript

UNIT I

Core Java Programming: Introduction to Java programming; Object-oriented programming with Java Classes and Objects, Constructors; Overloading Methods and Constructors, this keyword, Garbage Collection, Type Conversion and Casting, Control Statements, Parameter Passing, Recursion, String Class and String handling methods.

Inheritance: Basics, Using Super, Creating Multilevel hierarchy, Method overriding, Dynamic Method Dispatch, Using Abstract classes, Using final with inheritance, Object class.

UNIT II

Packages: Basics, Finding packages and CLASSPATH, Access Protection, Importing packages.

Interfaces: Definition, Implementing Interfaces, Extending Interfaces, Nested Interfaces, Applying Interfaces, Variables in Interfaces.

Exception handling - Fundamentals, Exception types, Uncaught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws and finally, built-in exceptions, creating own exception subclasses.

UNIT III

Stream based I/O (java.io) – The Stream classes-Byte streams and Character streams, Reading console Input and Writing Console Output.

Working with types: Wrapper classes; Autoboxing, Generics.

Multithreading: The Java thread model, Creating threads, Thread priorities, Synchronizing threads, Interthread communication.

Applets; Event Handling; Basics of AWT and Swing; Basic concepts of networking.

UNIT IV

HTML: HTTP and HTML: Berners-Lee's Basics, The Request/Response Procedure, The Benefits of HTML5, Introduction to elements of HTML, Working with Text, List, Tables, Images, Forms, Frames, Hyperlinks, Images and Multimedia.

CSS: Introduction, Importing a Style Sheet, Using IDs, Using Classes, Using Semicolons, CSS Rules, Style Types, CSS Selectors, The CSS Cascade, Measurements, Fonts and

Typography, Managing Text Styles, CSS Colors, Positioning Elements, Pseudo-Classes, Shorthand Rules, The Box Model and Layout, Attribute Selectors, The box-sizing Property, CSS3 Backgrounds, Multiple Backgrounds, CSS3 Borders, Text Effects.

UNIT V

XML - Document type definition, XML Schemas, Document Object Model.
Java Script - Control statements, Functions, Arrays, Objects, Events, Dynamic HTML with Java Script.
Web servers – IIS, Apache and Apache Tomcat Servers.
Database Connectivity with MySQL - JDBC, Servlets.

Course Outcomes:

After completion of the course the students will be able to

- Write GUI programs using swing controls in Java.
- Write multithreaded programs.
- Design and develop dynamic and interactive web sites.
- Handle Java Database Connectivity with MySQL.

Text Books:

- Herbert Schildt, Java - The Complete Reference, Mcgraw Hill Education, Ninth Edition, 2014.
- Paul J. Deitel, Harvey M. Deitel, Abbey Deitel, “Internet & World Wide Web How to Program”, Deitel Series, Fifth edition, 2012.
- Robin Nixon, Learning PHP, MySQL, JavaScript, CSS & HTML5, O’Reilly, Third Edition, 2014.

Reference Books:

- Paul Dietel, Harvey Dietel, Java How to Program, Pearson Education, Eleventh Edition, 2017.
- Jennifer Niederst Robbins, Learning Web Design: A Beginner’s Guide to HTML,
- CSS, Javascript, and Web Graphics, O’Reilly, Fifth Edition, 2018.
- Jim Keogh, J2EE - The complete Reference, First Edition, McGraw Hill Education, 2017.
- Robert W. Sebesta, “Programming the World Wide Web”, Pearson, Fourth edition, 2008.
- David William Barron, “The World of Scripting Languages”, Wiley Publications, 2000.
- Jon Duckett, Beginning HTML, XHTML, CSS, and JavaScript, Wiley India, 2009.
- Rob Larsen, Beginning HTML & CSS, John Wiley & Sons, Inc, 2013.
- M. Srinivasan, Web Technology: Theory and Practice, Pearson, 2012.

Scheme of Instructions and Detailed Syllabus

for

B. Tech- Electrical and Electronics Engineering

(I -VIII Semesters)

(the Academic Year 2023 – 24)

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING

(AUTONOMOUS)

SRI VENKATESWARA UNIVERSITY:: TIRUPATI-517502

(A.P), INDIA.

About the Department

Department of Electrical and Electronics Engineering has started functioning from the year 1959 since the inception of the S.V. University College of Engineering and pioneered itself in catering the needs of the students, industry and society.The department is offering one Under Graduation course B.Tech (EEE) and one Post Graduation course (Power systems). Both UG and PG programs have been accredited by NBA, New Delhi.The department offers Ph.D program (Part-time & Full –time) in wide range of research areas like Renewable Energy Sources, Power Quality, Reactive Power and Control Management, Electrical Distribution Systems, Electrical Vehicles etc. So far more than 100 Ph.D degrees have been awarded and 30 are in pipeline.The annual intake is 72 in UG program and 18 in PG program.Based on AICTE/APSCHE guidelines, the department is regularly updating the curriculum to meet the industrial, academic and societal needs.The Department has 4 Professors, 2 Assistant professors, 9 Academic Consultants and 9 supporting staff. To meet the academic & research requirements the department has developed 9 laboratories which are regularly maintained and the equipment updated. With the financial pport from TEQIP the department and lab facilities have been improved.All the faculty embers are ommitted to teaching and research. Students of UG and PG are encouraged to take up high uality projects within the college and in industries as well. Most of the UG students get selected in ampus placements while some of them opt for higher studies. Good numbers of students have got placed in Public Sector Undertaking (PSU) through GATE exam. Co-curricular and tracurricular activities are regularly conducted to impart life skills amongst the students and make them feel responsible towards the society and country. The department has active and strong Alumni who are occupying top positions like CEO, EE, GM etc. in highly reputed organizations in India and abroad. They provide financial support to improve the various facilities in the department and college.

Vision:

- The department aims at catering to the needs and aspirations of the people and their development, reach to the world through state of art technologies of Electrical and Electronics Engineering and to serve the society at large.

Mission:

- To provide the necessary domain expertise and infrastructure to the students.
- To make available the advanced laboratories, application oriented engineering principles for students and researchers.
- To offer research and industry orientation to become successful service oriented technocrats.

Choice Based Credit System (CBCS):

- Choice Based Credit system (CBCS) has been implemented in the campus in the year 2004. CBCS is a flexible system of learning and provides choice for students to select courses of his/her choice from the prescribed electric courses. Under this system students are permitted to opt for additional courses of his/her interest, adopt an inter disciplinary approach in learning and make use of expertise of available facility.

Programme Specific Outcomes (PSO's)

At the end of the Program, students will be able to

- PSO 1: Generate Transmit, Distribute, Control and Utilize electrical power effectively by analyzing and applying appropriate techniques and hardware/software tools.
- PSO 2: Develop different electrical and electronics circuits/models using semiconductor and Power Electronic devices considering the environmental and societal needs

Programme Outcomes

- **PO1**: **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- **PO2**: **Problem analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- **PO3**: Design / Development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal and environmental considerations.
- **PO4**: Conduct investigations of complex problems: Use research – based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- **PO5**: Modern tool usage: Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6**: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7**: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of, and need for sustainable development.
- **PO8**: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9**: Individual and team work: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.
- **PO10**: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.

- **PO11**: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12**: Life-long learning: Recognize the need for , and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Educational Objectives (PEO's)

- **PEO1:** Graduates will, demonstrate professional behavior to cater the global needs of the industry and society.
- **PEO2:** Graduates will pursue higher education to upgrade their professional and research skills and inculcate the attitude of lifelong learning.
- **PEO3:** Graduates will develop the qualities like creativity, leadership, team work and professional ethics contributing to the societal growth.

DEPARTMENT OF ELECTICAL AND ELECTRONICS ENGINEERING
R20 REGULATIONS
SYLLABUS

I – SEMESTER

MA101	MATHEMATICS –I	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will be able to

- Analyze differential equations and solve them
- Apply differential equations to engineering problems.
- Use transformation to convert one type into another type presumably easier to solve.
- Use shift theorems to compute the Laplace transform, inverse Laplace transform and the solutions of second order, linear equations with constant coefficients.
- Solve an initial value problem for an nth order ordinary differential equation using the Laplace transform.
- Expand functions as power series using Maclaurin's and Taylor's series
- Optimize the problems related to OR, Computer science, Probability and Statistics
- Draw an approximate shape by the study of some of its important characteristics such as symmetry, tangents, regions enclosing curve tracing method to find length, area, volume.
- Use multiple integral in evaluating area and volume of any region bounded by the given curves.

UNIT I

Differential Equations: Linear differential equations of second and higher order with constant coefficients-particular integrals-homogeneous differential equations with variable coefficients-method of parameters-simulation equations.

UNIT II

Laplace Transforms I: Laplace transforms of standard functions-inverse transforms-transforms of derivatives and integrals-derivatives of transforms-integrals of transforms.

UNIT III

Laplace Transforms II: Transforms of periodic functions-convolution theorem-applications to solution of ordinary differential equations.

UNIT IV

Calculus: Roll's and Mean value theorems - Taylor's and Maclaurins's series-maxima and minima for functions of two variables - Infinite series - Convergence Tests series of positive terms - comparison, Ratio tests - Alternating series - Leibnitz's rule - Absolute and conditional convergence.

UNIT V

Multiple Integrals: Curve tracing (both Cartesian and polar coordinate) - Evaluations of double and Triple integrals-change of order of integrations-change of variables of integrations-simple applications to areas and volumes.

PY 102	MODERN PHYSICS	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will be able to

- Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering courses
- Understand the quantum mechanics and ultimately the quantum behavior of charged particles when they are in motion.
- Identify and apply appropriate analytical and mathematical tools of Physics in solving Engineering problems
- Apply knowledge of band theory in the area of electronics and understanding the basic electron transportation phenomenon in microdevices.
- Understand the principles in electrostatics and electromagnetics and magnetic properties of materials.
- Understand size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices.
- Think and participate deeply, creatively, and analytically in emerging areas of engineering technology.
- Learn the basics of instrumentation, design of laboratory techniques, measurement, data acquisition, interpretation, and analysis.
- Provide multidisciplinary experiences throughout the curriculum.

UNIT I

Quantum Mechanics : Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – Davison and Germer Experiment – G.P. Thomson Experiment – Heisenberg's Uncertainty Principle – Schrödinger's Time Independent and Time Dependent Wave equation – Significance of Wave Function – Electron in an Infinite Square Potential Well – Probability Densities and Energy Levels.

UNIT II

Band Theory of Solids : Classical Free Electron Theory of Metals – Success and Failures – Quantum Free Electron Theory – Fermi Factor – Electron in Periodic Potential – Bloch Theorem – Kronig – Penney Model – Distinction between Metals , Insulators and semiconductors- Energy Band Structures.

UNIT III

Semiconductors – Introduction- Intrinsic and Extrinsic Semiconductors – Density of states – Carrier Concentrations at Equilibrium – Hall Effect. PN Junction Diode – Energy Band Diagram – Forward and Reverse Bias- Current – Voltage characteristics – Applications- Zener

Diode – Light Emitting Diode- Photo diode -Solar Cell – Semiconductor Laser.

UNIT IV

Electromagnetism and magnetic properties of Materials:

Laws of Electrostatistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws- Maxwell Equations – Polarization – Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization – Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and hysteresis, Applications of ferromagnetic materials.

UNIT V

NanoPhysics and Nanotechnology : Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C^{60} (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials. 10 hrs.

CS 103	PROGRAMMING FOR PROBLEM SOLVING	4 Credits
Sessional Marks: **40**	**2L:1T:0P**	End Examination Marks: **60**

Course Objectives:

- To acquire problem solving skills
- To be able to develop flowcharts and algorithms for the given problem
- To learn how to write modular programs in C
- To enable to use arrays, pointers, strings and structures in solving problems.
- To explain the difference between object-oriented programming and procedural programming.
- To understand principles of object-oriented programming.

UNIT-I

Problem Solving: Problem solving techniques, Computer as a problem solving tool, Programming Languages – Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements: Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements: while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continue statements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions, Passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard

library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures containing arrays, Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, Reading from a file, Writing onto a file.

UNIT V

Introduction to Object-Oriented Programming (OOP): Need for OOP, Principles of OOP, Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

Course Outcomes: At the end of the course, student will be able to

- Develop and test programs in C and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.
- Decompose a problem into functions and synthesize a complete program.
- Use arrays, pointers, strings and structures to formulate algorithms and programs
- Use files to perform read and write operations.
- Handle programming assignments based on class, abstraction, encapsulation, overloading and inheritance

CE 104	ENGINEERING MECHANICS	Credits: 4
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, student will be able to

- apply the basic knowledge of force system.
- know the types of supports occur in civil engineering structures
- know the geometrical properties of different cross sections.
- understand different types of stresses and strains, elastic constants.
- understand the behavior of different internal forces under different types of loading.

UNIT I

STATICS : Basic concepts – System of force, Concurrent and non-concurrent coplanar and non- coplanar forces – Resultant – Moment of force and its application – Couples and resultant of force systems – Equilibrium of systems of forces – Free body diagrams, Equations of equilibrium of coplanar systems and spatial systems.

UNIT II

Analysis of plane trusses: Types of supports – Types of trusses – Analysis of trusses using method of joints and method of sections.

UNIT III

CENTRE OF GRAVITY AND MOMENTS OF INERTIA: Theory of Pappus – Centroids of composite figures – Areas of gravity of bodies – Moment of inertia – Parallel and perpendicular axis theorems – Moments of inertia of composite areas (rolled and built up sections) – Radius of gyration of areas.

UNIT IV

SIMPLE STRESES AND STRAINS : Elasticity and plasticity – Types of stresses and strains – Hooke's law – Stress-strain diagram for mild steel – Working stress – Factor of safety.

Lateral strain – Poisson's ratio and volumetric strain – Elastic moduli and relationship between elastic constants – Bars of varying section – Composite bars – Temperature stresses.

UNIT V

STRAIN ENERGY: Gradual, sudden and impact loading – Endurance limit principles of virtual work and its applications.

TEXTBOOKS:

- Ghose D.N. – Applied Mechanics and Strength of Materials.

- Timoshenko & Young – Engineering Mechanics.
- Junarkar SB – Mechanics of Structures – Vol. I.
- Junarkar SB – Elements of Applied Mechanics.

ME 105	WORKSHOP/MANUFACTURING PRACTICE	Credits: 1.5
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Laboratory Outcomes

- Upon completion of this laboratory course, students will be able to fabricate components with their own hands.
- They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
- By assembling different components, they will be able to produce small devices of their interest.

Course Outcomes:

1. Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry to fabricatecomponents using different materials.

Workshop Practice: Five practices among

- Machine shop
- Fitting shop
- Carpentry
- Electrical wiring
- Welding shop
- Casting
- Smithy
- Plastic moulding & Glass Cutting Examinations could involve the actual fabrication of simple components, utilizing one or More of the techniques covered above.

Detailed Contents

- Manufacturing Methods-casting, forming, machining, joining, advanced manufacturing methods
- CNC machining, Additive manufacturing
- Fitting operations & power tools.
- Electrical &Electronics
- Carpentry
- Plastic moulding. Glass cutting
- Metal casting.

- Welding(arc welding & gas welding), brazing

The above course content is learnt by online videos/ppt presentations.

CS 106	PROGRAMMING FOR PROBLEM SOLVING LAB	Credits: 1.5
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Objectives:

- To provide exposure to problem-solving through programming
- To train the student on the concepts of the C- Programming language

The following programs shall be developed and executed in Programming Language C.

- Programs on conditional control construct.
- Programs on iterative statements (while, do-while, for).
- Programs on recursive procedures
- Programs on arrays, matrices (single and multi-dimensional arrays).
- Programs using user defined functions, demonstrating parameter passing methods viz. call by value and call by reference.
- Programs using different library functions viz. ctype.h, math.h, stdio.h, stdlib.h, string.h, conio.h and pre-processor directives.
- Programs using pointers (int pointers, char pointers) and pointer arrays.
- Programs on structures and unions
- Programs on File Processing.
- Programs on Pointers to structures and Self-referential structures

Course Outcomes: After Completion of this course the student would be able to

- Develop the C code for the given algorithm.
- Understand, debug and trace the execution of programs written in C language.

Reference Books:

- Scheldt H, C: The Complete Reference, 4th Edition, Tata McGraw-Hill, 2002.

CE 107	**ENVIRONMENTAL SCIENCE** *(Audit Course / No University Exam)*	**Credits: 0(Zero)**
Sessional Marks: **40**	**4L:0T:0P**	End Examination Marks: **60**

Course Outcomes:

At the end of the course, students will be able to

- Acquire knowledge in
  - diverse components of environment and natural resources
  - ecosystem and biodiversity & its conservation methods
  - population growth and human health
  - green technology
- Identify and resolve the issues related to sources of different types of pollutions
- Provide solutions to individuals, industries and government for sustainable development of natural resources
- Apply environmental ethics in protection of diversified ecosystems.

UNIT I

Environmental Studies and Natural Resources

Definition, Scope and importance of Environment, Environmental studies, Need for public awareness

Components of Environment- Atmosphere, Hydrosphere, Lithosphere.

Renewable and **Non-Renewable Resources and associated problems**

Water resources: Use and over utilization of surface and ground water, floods, drought, conflicts over water, dam benefits and problems.

Forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Land resources: Land as a resource, land degradation, Man induced landslides, soil erosion and desertification.

Mineral resources: Use and overexploitation, Environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused agriculture and overgrazing, effects of modern agriculture, fertilizer – pesticide problems, water logging, salinity, Case studies.

Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.

Role of an individual in conservation of natural resources.

UNIT II

Ecosystem and Biodiversity

Ecosystem - Concept of an ecosystem, Structure and functions of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

Introduction, types, characteristic features, structure and function of the following ecosystem.
(a) Forest ecosystem. (b) Grassland ecosystem
(c) Desert ecosystem. (d) Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and its conservation:
Definition, genetic species and ecosystem diversity, Biogeographically classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation. Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man – wildlife conflicts, Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT – III

Environmental pollution and Global Effects

Definition, Causes, Effects, and control measures of (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards
Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.
Pollution case studies.
Disaster management: Floods, earthquakes, cyclone, landslides, Tsunami. Climate change-Global warming, Acid rain, Ozone depletion.

UNIT – IV

Environment Issues and Management

- Environment and Human health – Epidemic diseases, HIV/AIDS, Aviation Flue, Water Borne Diseases.
- Environmental Impact Assessment, Sustainable Development, Clean Production and Clean Development Mechanisms
- Environment Legislation: Environmental Protection Act, Water Act, Air Act, Wild Life

Protection Act, Forest Conservation Act, Public Liability & Insurance Act, Issues involved in Enforcement of Environmental legislation.

UNIT – V

Social Issues and the Environment

- Population growth, Population Explosion, Population Control, Women and Child welfare.
- Urbanization, Industrialization, Development projects, Resettlement and Rehabilitation of people – Problems concerned, Case studies.
- Consumerism and Waste Products Conservation, Public Awareness, Water Conservation, Rain water harvesting, watershed management, Wasteland reclamation, Human Rights, Value education, Environmental ethics- Issues and possible solution.
- Role of information Technology in Environment and Human Health.

II – SEMESTER

MA 201	MATHEMATICS II	Credits: 4
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will be able to

- Use ranks of matrices to decide whether the system of linear equations is consistent or not
- Use Cayley-Hamilton theorem to find inverses or powers of matrices.
- Use Eigen values and vectors to reduce Quadratic forms to normal form.
- To analyze motion problems from real lines to curves and surfaces in 3-D and use tools such as divergence and curl of vector and gradient, directional derivatives that play significant roles in many applications.
- Use Green's theorem to evaluate line integrals along simple closed contours on the plane
- Use Stokes' theorem to give a physical interpretation of the curl of a vector field
- Use the divergence theorem to give a physical interpretation of the divergence of a vector field.
- Find the Fourier Series to represent a function as a series of constants times sine and cosine functions of different frequencies in order to observe periodic phenomenon.
- Evaluate certain improper integrals to make them simple with introduction of Gamma and Beta functions.
- Study certain special functions that arise in solving certain ordinary differential equations to model many physical phenomena.

Unit I

Matrices: rank of a matrix-solution of system of linear equations-Eigen values, vectors – Canley- Hamilton theorem-quadratic forms- diagonalization.

Unit II

Vector Calculus: Gradient, Divergence, Curl of a vector and related properties-line, surface, volume integrals- Green's, Stokes's and Gauss Divergence theorems and its applications.

Unit III

Fourier Series: Fourier series-even and odd functions, periodic functions-half range sine and cosine series-harmonic analysis.

Unit IV

Special Functions I: Gamma and Beta functions-series solutions of differential equations-

ordinary points.

Unit V

Special Functions II: Bessel function-recurrence formulae-generating function for $J_n(X)$-Lengender polynomials-recurrence formulae-generating function for $P_n(X)$ - Rodriguez's formula - orthogonality of Lengender polynomials.

CY 202	ENGINEERING CHEMISTRY	Credits: 4
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will be able to

- Analyze microscopic chemistry in terms of atomic and molecular orbital and intermolecular forces.
- Rationalize bulk properties and processes using thermodynamic considerations.
- Distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
- Rationalize periodic properties such as ionization potential, electro negativity, oxidation states and electro negativity.
- List major chemical reactions that are used in the synthesis of molecules.

UNIT I

Atomic and molecular structure (**12 lectures**)

Postulates of quantum chemistry. Schrodinger equation. Particle in a box solutions, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomics, Pi-molecular orbitals of butadiene and benzene. Band structure of solids and the role of doping on band structures

UNIT II

Spectroscopic techniques and applications

Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclearmagnetic resonance and magnetic resonance imaging, surface characterization techniques.

UNIT III

Chemical equilibria, Intermolecular forces and potential energy surfaces

Use of free energy in Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies.Free energy and emf.Cellpotentials, the Nernst equation and applications.

Use of free energy considerations in metallurgy through Ellingham diagram. Equations of state of real gases and critical phenomena.

UNIT IV

Periodic properties

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular
geometries, Born- Haber cycle, The use of reduction potentials, Properties of ionic and covalent compounds.

UNIT V

Stereochemistry, Organic reactions and synthesis of a drug molecule

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings Synthesis of a commonly used drug molecule.

203	ENGLISH	Credits: 2
Sessional Marks: **40**	**2L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will be able to

- learn the elements of grammar and composition of English Language.
- Learn literary texts such as Short stories and prose passages.
- maintain linguistic competence through training in vocabulary, sentence structures and pronunciation.
- develop communication skills by cultivating the habit of reading comprehension passages.
- develop the language skills like listening, speaking, reading and writing.
- Make use of self-instructed learner friendly modes of language learning through competence.

UNIT I

Vocabulary Building

The concept of Word Formation- Root words from foreign languages and their use in English- Acquaintance with prefixes and suffixes from foreign languages in English form derivatives- Synonyms, antonyms, and standard abbreviations.

UNIT II

Basic Writing Skills

Sentence Structures – Use of phrases and clauses in sentences –Importance of proper punctuation - Creating coherence – Organizing principles of paragraphs in documents - Techniques for writing precisely

UNIT III

Identifying Common Errors in Writing

Subject-verb agreement -Noun-pronoun agreement -Misplaced modifiers -Article -Prepositions - Redundancies -Clichés

UNIT IV

Nature and Style of sensible Writing

Describing - Defining - Classifying –Providing examples or evidence –Writing introduction and conclusion

UNIT V

Writing Practices

Comprehension - Précis Writing –Essay Writing

EE 204	ELECTRICAL CIRCUITS	Credits: 4
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

UNIT I

Basic Circuit Concepts: Electrical circuit elements (R, L and C), Classification of Circuit elements, Voltage and Current sources, Source transformation Techniques– Kirchhoff's laws – Star-delta transformation – Network reduction techniques - Mesh and Nodal Analysis for D.C. Circuits– Concept of mutual inductance – Dot convention.

UNIT II

Network Topology: Graph, tree, incidence matrix, and tie set and cut set matrices – Formulation of equilibrium equations based on graph theory. Duality and dual circuits
A.C. Fundamentals: Periodic waveforms – Average and effective values of different waveforms - Form factor and crest factor.

UNIT III

A.C. Circuits: Phase and phase difference – Phasor notation – Concept of reactance, impedance, susceptance and admittance – Power factor -Active and reactive power – Impedance Triangle-Power triangle – Steady State analysis of single-phase A.C. circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel) – Phasor diagrams. Mesh and Nodal Analysis for A.C. Circuits.

UNIT IV

Resonance: Series and Parallel Resonance – Resonant frequency, Half power frequencies, bandwidth and Quality Factor.

Locus diagrams: Current locus diagrams of RL and RC series circuits and two branch parallel circuits.

UNIT V

Three Phase Circuits: Advantages of three phase systems – Phase sequence – Balanced and Unbalanced systems – Magnitude and phasor relationships between line and phase voltages and currents in balanced star and delta circuits – Analysis of balanced and unbalanced three phase circuits with star and delta connected loads, Measurement of three phase power – Two wattmeter method.

Text Books:

- Sudhakar and Shyammohan, Circuits and Networks: Analysis and Synthesis, 5th Edition, Tata McGraw-Hill

- Ravish R. Singh, Network Analysis and Synthesis, Tata Mc. Graw Hill.
- Abhijit Chakrabarti: Circuit Theory Analysis and Synthesis, 7th Revised Edition, Dhanpat Rai & Co

ME 205	ENGINEERING GRAPHICS AND DESIGN	Credits: 3.5
Sessional Marks: **40**	**2L:0T:3P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, the student will be able to

- Make a distinction between first angle projection and third angle projection of drawing
- Draw hyperbola, parabola, Involutes and Cycloidal curves.
- Draw sections of solids including cylinders, cones, prisms and pyramids.
- Draw projections of lines, planes, solids and sections of solids.
- Draw orthographic projections of lines, planes, and solids.

Question Paper
Modular – 4 questions from
Units I t0 IV, 15 marks each

Unit I

Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epi-cycloid, Hypo- cycloid and Involutes.

Unit II

Scales- Scales– construction of Plain &Diagonal Scales.

Projections of points, lines - Projections of Points and lines inclined to both planes, including traces;

Unit III

Projections of planes

Projections of planes (Regular surfaces only) inclined Planes-Auxiliary Planes

Projections of Regular Solids (Simple solids – cylinder, cone, prism & pyramid) those inclined to

both the Planes-Auxiliary Views

Unit IV

Isometric Projections& Orthographic projections

Principles of Orthographic Projections-Conventions Draw simple objects, dimensioning and scale. Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

Unit V

Introduction to CAD

CAD workstation and peripherals, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars Standard, Object Properties, Draw, Modify and Dimension, Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom used in CAD, Select and erase objects.;

EN 206	ENGLISH COMMUNICATION LAB	Credits: 1.5
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Outcomes:

The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

Listening Comprehension -Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace - Interviews -Formal Presentations

Reference/Text Books:

III – SEMESTER

MA301B	MATHEMATICS –III	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will demonstrate the ability to

- Acquire the knowledge of functions of complex variables.
- understand power series and expansion of analytic function.
- understand Laurent Series, poles, singular points, Residue theorem and its applications.
- analyze the solutions of partial differential equations.
- discuss the boundary value problems, one dimensional wave equation, heat equation and Laplace Equation.

UNIT- I

Complex analysis - I: Analytical functions - Cauchy-Riemann equations – Construction of Analytic functions- Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT-II

Complex analysis - II: Taylor's and Laurent's' series- Transformations- Conformal mapping - Bilinear transformations - Transformation of $1/z$, z^2, sin z and cos z.

UNIT- III

Complex analysis –III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluation of real integrals

UNIT- IV

Partial differential equations - I : Formation of differential equations - Classification - First order linear partial differential equations – Lagrange's' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT- V

Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heat equation – Laplace's equation.

Text Books:

EE302C	ELECTRO MAGNETIC FIELDS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, students will demonstrate the ability to

- get acquainted with different coordinate systems and their transformation.
- learn different concepts in Electrostatic fields.
- learn different concepts in magnetic fields
- get acquainted with time varying electric and magnetic fields.

UNIT-I

Electrostatic Fields: Review of Vector Algebra & Vector Calculus, Coulomb's law. Electric field intensity. Electric flux density and Gauss's law. Gauss's law in point form. Electrostatic potential. Potential gradient. Energy stored in electric field.

UNIT-II

Conductors and Dielectrics: Current and current density. Continuity equation. Conductors – Ohm's law, Resistance, Power dissipation, and Joule's law. Dielectrics – Dipole moment, Polarization, and bound charge densities. Boundary conditions. Capacitance.

UNIT-III

Magnetostatic fields: Force of a magnet on a current carrying wire**,** Biot-Savart law. Lorentz force law. Ampere's circuital law. Ampere's circuital law in point form. Scalar and vector Magnetic potential, Magnetic flux density.

UNIT-IV

Magnetic field in materials: Magnetic moment, Magnetization, and Bound current densities. Boundary conditions. Inductance. Energy stored in magnetic field.

UNIT-V

Maxwell's equations: Faraday's law – Motional and Transformer induced emfs, Faraday's law in point form. Displacement current. Maxwell's equations in differential and integral forms. Wave equation and its general solution for free space conditions.

Text Books:

- Mathew N.O. Sadiku, "Elements of Electromagnetics", Oxford University Press.
- Edward C. Jordan and Keith G. Balmain, “Electromagnetic Waves and Radiating Systems”, Prentice-Hall of India Pvt. Ltd.

EE303C	NETWORK ANALYSIS	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Apply Network theorems for the analysis of electrical circuits.
- Analyze the time domain behavior of electrical circuits under transient conditions.
- Evaluate the network functions and two-port network parameters.
- Synthesize the one port networks using Foster and Cauer methods.

UNIT-I

Network Theorems: Superposition Theorem– Reciprocity theorem -Thevenin's and Norton's Theorems – Maximum Power Transfer Theorem- Millman's Theorem –– Tellegen's Theorem – Compensation Theorem - Application of these Theorems for D.C. circuits and sinusoidal steady state A.C. circuits.

UNIT-II

Transient Analysis: Time domain analysis of RL, RC, and RLC circuits for D.C. and sinusoidal excitations – Determination of initial conditions – Concept of time constant – Transient response of RL, RC, and RLC circuits using Laplace Transform techniques.

UNIT-III

Network Functions: One-port and Two-port networks – Driving point and transfer functions of networks – Properties of driving point and transfer functions – Concept of complex frequency, poles and zeros – Time domain response from pole-zero diagram – Restrictions on pole-zero locations.

UNIT-IV

Two-port Network Parameters: Open circuit impedance and short circuit admittance parameters – Hybrid and inverse-hybrid parameters – Transmission and inverse transmission parameters – Inter relationships between parameter sets – Series, Parallel, and Cascade connection of two-port networks – Conditions for reciprocity and symmetry of two-port networks. Terminated two-port networks – Image parameters.

UNIT-V

Elementary Ideas of Network Synthesis: Positive real functions - Hurwitz polynomials - Properties and realization of RL, RC, and LC immittance functions by Foster and Cauer methods.

Text Books:

- Sudhakar and Shyammohan, Circuits and Networks: Analysis and Synthesis, 5th Edition, Tata McGraw-Hill
- Ravish R. Singh, Network Analysis and Synthesis, Tata Mc. Graw Hill.
- Abhijit Chakrabarti: Circuit Theory Analysis and Synthesis, 7th Revised Edition, Dhanpat Rai & Co
- M. E. Van Valkenburg; "Network analysis"; Pearson Education, Third Revised Edition.

EE304C	**D.C. MACHINES AND TRANSFORMERS**	**4 Credits**
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks:**60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the concepts of energy conversion principles, constructional details and principle of operation of DC machines and Transformers.
- Analyze the performance of the DC Machines under various operating conditions using their various characteristics and testing methods.
- Analyze the parallel operation of DC machines and transformers and select appropriate machine as per applications.
- Evaluate the performance of Transformers using phasor diagrams, connections, testing methods and equivalent circuits

UNIT-I

Principles of electromechanical energy conversion: Energy in magnetic system, field energy and mechanical force, single and multiply-excited magnetic field systems, forces/torques in systems with permanent magnets, energy conversion via electric field, dynamical equations of electro mechanical systems.

UNIT-II

DC Generators: Construction, armature windings and its types, Emf equation, armature reaction, compensating windings, commutation, characteristics and types of generators.
Parallel operation of DC Generators: DC shunt and series generators in parallel, equalizing connections

UNIT-III

DC Motors: Force on conductor carrying current, Torque and power equations, speed control, starting and characteristics of dc motors, Losses and efficiency, testing and applications of DC machines.

UNIT-IV

Transformers: Principle, construction and operation, equivalent circuit, phasor diagrams, voltage regulation, losses and efficiency, all day efficiency, Testing of transformers**.**
Autotransformer: Construction, principle, applications and comparison with two winding transformers.

UNIT-V

Three-phase transformer: Construction, Cooling, types of connection and their comparative features, Phase conversions - Scott connection, Tap-changing transformers - No-load and on-load tap-changing of transformers, Three-winding transformers, Parallel operation of transformers.

EE305C	**ANALOG ELECTRONICS**	**3 Credits**
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- understand the characteristics of various components.
- Understand the biasing techniques
- Design and analyze various rectifiers, small signal amplifier circuits.
- Design sinusoidal and non-sinusoidal oscillators.
- Understand the functioning of OP-AMP and design OP-AMP based circuits.

UNIT-I

DIODE CIRCUITS: P-N junction diode, I-V characteristics of a diode; review of half-wave and full-wave rectifiers, clamping and clipping circuits. Input output characteristics of BJT in CB, CE, CC configurations, biasing circuits, Load line analysis, common-emitter, common-base and common collector amplifiers; Small signal equivalent circuits,

UNIT-II

MOSFET CIRCUITS: MOSFET structure and I-V characteristics. MOSFET as a switch. small signal equivalent circuits - gain, input and output impedances, small-signal model and common-source, common-gate and common-drain amplifiers, trans conductance, high frequency equivalent circuit.

UNIT-III

MULTI-STAGE AND POWER AMPLIFIERS: Direct coupled and RC Coupled multi-stage amplifiers; Differential Amplifiers, Power amplifiers - Class A, Class B, Class C.

UNIT-IV

FEEDBACK AMPLIFIERS: Concepts of feedback – Classification of feedback amplifiers – General characteristics of Negative feedback amplifiers – Effect of Feedback on Amplifier characteristics – Voltage series, Voltage shunt, Current series and Current shunt Feedback configurations – Simple problems.

OSCILLATORS: Condition for Oscillations, RC type Oscillators-RC phase shift and Wien-bridge Oscillators, LC type Oscillators –Generalized analysis of LC Oscillators, Hartley and Colpitts Oscillators.

UNIT-V

OPERATIONAL AMPLIFIERS: Ideal op-amp, Output offset voltage, input bias current, input offset current, slew rate, gain bandwidth product, Inverting and non-inverting amplifier, Differentiator, integrator, Square-wave and triangular wave generators.

Text Books:

- Integrated Electronics, Jacob Millman, Christos C Halkias, McGraw Hill Education, 2nd edition 2010
- Op-Amps & Linear ICs – Ramakanth A. Gayakwad, PHI, 2003.

EE306L	ELECTRICAL CIRCUITS AND NETWORKS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Verify Network theorems for the analysis of electrical circuits.
- Analyze the time domain behavior of electrical circuits under transient conditions.
- Draw the locus diagrams and analyse the resonance conditions.
- Evaluate the two-port network parameters.

Experiments related to the course contents of two courses

(1) Electrical Circuits

(2) Network Analysis.

EE307L	D.C. MACHINES AND TRANSFORMERS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Test the performance of any DC machines and single-phase transformers, by conducting suitable experiments and report the results.
- Analyze the various speed control methods of DC motors and characteristics of DC machines.
- Understand the significance of different connections of three-phase transformers.

Experiments related to the course contents of the course D.C. Machines and Transformers.

EE309S	COMPUTER SKILLS	2 Credits
Sessional Marks: **40**	**1L:0T:2P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Identify basic terms, concepts, and functions of computer system components.
- Select and use the appropriate software application to complete a particular task such as a word Processing skill to create, save, modify business documents.
- Identify basic concepts and procedures for creating, viewing, and managing files, and folders for different operating systems.
- Identify basic concepts of organization and procedures for creating, and viewing will software presentation such as PowerPoint.

Experiments related to the following topics:

- Installations of Computer Software.
- Word Processing using MS Office.
- Documentation using LaTex.
- Mathematical Calculations using Spreadsheet.
- Presentation using Power Point.
- Brief study of internet and types of networks.
- Brief Study of world wide web and web browsers.
- Brief Study of Electronic Mail management system.
- Preparation of various data collection forms.

MC310A	CONSTITUTION OF INDIA	0 Credits
Sessional Marks: **0**	**2L:0T:0P**	End Examination Marks: **100**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
- address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

UNIT-I

History of Making of the Indian Constitution: History. Drafting Committee, (Composition & Working)

Philosophy of the Indian Constitution: Preamble Salient Features

UNIT-II

- **Contours of Constitutional Rights & Duties:**
- Fundamental Rights
- Right to Equality
- Right to Freedom
- Right against Exploitation
- Right to Freedom of Religion
- Cultural and Educational Rights
- Right to Constitutional Remedies
- Directive Principles of State Policy
- Fundamental Duties.

UNIT-III

- **Organs of Governance:**
- Parliament
- Composition
- Qualifications and Disqualifications
- Powers and Functions
- Executive
- President
- Governor
- Council of Ministers
- Judiciary, Appointment and Transfer of Judges, Qualifications
- Powers and Functions

UNIT-IV

- **Local Administration:**
- District's Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.
- Pachayati raj: Introduction, PRI: Zila Pachayat.
- Elected officials and their roles, CEO Zila Pachayat: Position and role.
- Block level: Organizational Hierarchy (Different departments),
- Village level: Role of Elected and Appointed officials,
- Importance of grass root democracy

UNIT-V

- **Election Commission:**
  - Election Commission: Role and Functioning.
  - Chief Election Commissioner and Election Commissioners.
  - State Election Commission: Role and Functioning.
  - Institute and Bodies for the welfare of SC/ST/OBC and women.

Text Books/References:

IV - SEMESTER

EE401C	POWER SYSTEMS-I	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will be able to

- Understand the power system structure and principles of energy generation from conventional and renewable energy sources
- Analyze the economic aspects of power generation.
- Acquire the knowledge on parameter calculations and mechanical design in transmission lines.

UNIT-I

Fundamentals of Power systems: Evolution of Power Systems- Present Day Scenario-Structure of a power system-Conventional and Renewable Energy Sources.

Power Stations: Hydro-electric, Thermal Stations, Gas Turbine and Nuclear power Stations-Selection of site, Main parts, lay out and working principle.

UNIT-II

Renewable Energy sources: Necessity- principle of operation and working of Solar electric system, wind electric system, bio-mass and bio-gas plants, Fuel cells, Tidal and Geothermal power plants - applications.

UNIT–III

Economic aspects of power stations: Types of loads-Load curve, load duration and integrated load duration curves-Load factor-Demand factor-Diversity factor-Capacity factor-Utilization and plant use factors-The effect of these factors on generation-Number and size of generating units-Base load and peak load plants-Costs of electrical energy-Types of tariff charges on consumers.

UNIT-IV

Inductance and capacitance calculations of transmission lines: Line Conductors-Resistance-Inductance and capacitance of single phase and three phase lines with symmetrical and unsymmetrical spacings-Composite conductors-transposition-Bundled Conductors-Effect of earth on capacitance.

UNIT-V

Mechanical design of Transmission line: Catenary Curve-Sag tension calculations- Supports at equal and different levels, effect of wind and ice loading – stringing chart – sag template – conductor vibrations.

Corona: Introduction- critical disruptive voltages-Corona loss-factors affecting corona loss-Methods of reducing corona loss-Disadvantages of corona-Inductive interference between power and communication lines.

Text Books:

- C..L.Wadhwa, "Generation Distribution and utilization of Electrical energy" , New Age International

EE402C	INDUCTION MOTORS AND SYNCHRONOUS MACHINES	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Course Outcomes: Upon completion of this course, students will be able to

- Understand the constructional details and principle of operation of Induction and Synchronous Machines.
- Understand parallel operation, speed control and starting of AC machines.
- Analyze the performance of the Induction and Synchronous Machines using the phasor diagrams, equivalent circuits and by testing.
- Select appropriate AC machine for any application and appraise its significance.

UNIT-I

Three phase Induction Motors: Construction and principle of operation, types, torque equations, torque slip characteristics, phasor diagrams, equivalent circuit, circle diagram, testing and starting methods.

UNIT-II

Speed control of Three-phase Induction Motors: Pole changing, Cascade connection, injection of emf in to rotor circuit, V/f control of 3-phase induction motor, Double cage induction motor, induction generator and its applications.

Single-phase Induction Motors: Construction, principle, double revolving field theory, equivalent circuit, applications, starting methods, Universal motor

UNIT-III

Synchronous Generators: Construction, principle, emf equation, Armature reaction, leakage flux, synchronous reactance, equivalent circuit, Phasor diagram, voltage regulation, determination of regulation by synchronous impedance method, mmf method, ZPF method, ASA method.

UNIT-IV

Theory of Synchronous Machines: Phasor diagram, determination of X_d and X_q from Slip test, Expression for power expressions, power angle characteristics.

Parallel Operation of Synchronous Generators: Conditions, Synchronizing, load sharing, operation of alternator with infinite busbars, effect of change of mechanical input and excitation, Excitation systems, transient and sub- transient reactance.

UNIT-V

Synchronous Motors: Principle of operation, methods of starting, Phasor diagram, variation of current and power factor with excitation, Predetermination of V and inverted V curves, Hunting and use of damper bars, Synchronous condenser and power factor correction, Excitation and power circles.

Text Books:

EO403C	MANAGERIAL ECONOMICS AND ACCOUNTANCY	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand Macro Economic environment of the business and its impact on enterprise.
- Identify various cost elements of the product and its effect on decision making.
- Understand the concepts of financial management and smart investment.
- Prepare the Accounting records and interpret the data for Managerial Decisions.

UNIT -I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR, NPV, IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

UNIT -II

Depreciation and methods of calculating depreciation (straight line, sum of the years digit method, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

UNIT -III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

UNIT -IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

UNIT -V

Cost Accounting**:** Introduction, Classification of costs, Methods of costing, Techniques of costing, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

Text Books:

- Henry Malcom Steiner, Engineering Economics Principles, 2nd Edition, McGraw Hill Education, 1996.

- A.N. Agarwal, Indian Economy, Wiley Eastern Limited, New Delhi.
- Jain and Narang, Accounting Part-I, Kalyani Publishers, 2011.
- Arora, M.N. Cost Accounting: Principles and Practice, 12th Edition, Vikas Publication, 2012.

EE404C	DIGITAL ELECTRONICS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand working of logic families and logic gates.
- Design and implement Combinational and Sequential logic circuits.
- Understand the process of Analog to Digital conversion and Digital to Analog conversion.

1. Be able to use PLDs to implement the given logical problem.

UNIT-I

Fundamentals of Digital Systems and logic families: Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, Boolean algebra, examples of IC gates, number systems-binary, signed binary, octal hexadecimal number, binary arithmetic, one's and two's complements arithmetic, codes, error detecting and correcting codes, characteristics of digital lCs, digital logic families, TTL, Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

UNIT-II

Combinational Digital Circuits: Standard representation for logic functions, K-map representation, simplification of logic functions using K-map, minimization of logical functions. Don't care conditions, Multiplexer, De-Multiplexer/Decoders, Adders, Subtractors, BCD arithmetic, carry look ahead adder, serial adder, ALU, elementary ALU design, popular MSI chips, digital comparator, parity checker/generator, code converters, priority encoders, decoders/drivers for display devices, Q-M method of function realization.

UNIT-III

Sequential circuits and systems: A 1-bit memory, the circuit properties of Bi stable latch, the clocked SR flip flop, J- K-T and D-types flip flops, applications of flip flops, shift registers, applications of shift registers, serial to parallel converter, parallel to serial converter, ring counter, sequence generator, ripple (Asynchronous) counters, synchronous counters, counters design using flip flops, special counter IC's, asynchronous sequential counters, applications of counters.

UNIT-IV

A/D and D/A Converters: Digital to analog converters: weighted resistor/converter, R-2R Ladder

D/A converter, specifications for D/A converters, examples of D/A converter lCs, sample and hold circuit, analog to digital converters: quantization and encoding, parallel comparator A/D converter, successive approximation A/D converter, counting A/D converter, duals lope A/D converter, A/D converter using voltage to frequency and voltage to time conversion, specifications of A/D converters, example of A/D converter ICs

UNIT-V

Semiconductor memories and Programmable logic devices: Memory organization and operation, expanding memory size, classification and characteristics of memories, sequential memory, read only memory (ROM), read and write memory (RAM), content addressable memory (CAM), charge de coupled device memory (CCD), commonly used memory chips, ROM as a PLD, Programmable logic array, Programmable array logic, complex Programmable logic devices (CPLDS), Field Programmable Gate Array (FPGA).

Text Books:

EE405C	SIGNALS AND SYSTEMS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Differentiate between various types of signals and understand the implication of operations of signals
- Understand and classify systems based on the impulse response behaviour of both continuous-time and discrete-time systems
- Perform domain transformation from time to frequency and understand the energy distribution as a function of frequency
- Usefulness of convolution for analysing the LTI systems and understand the concepts of power spectral density through correlation.
- Solve differential and difference equations with initial conditions using Laplace and Z-transforms.

UNIT-I

Introduction to Signals and Systems: Definition and classification of signals and systems**,** Basic operations on signals, Elementary signals, Classification of Continuous-Time and Discrete-Time Systems, Basic System Properties, Linear Time-Invariant Systems - Discrete-Time LTI Systems, Convolution Sum, Continuous-Time LTI Systems Convolution Integral. Causal LTI Systems Described by Differential and Difference Equations.

Signal Analysis: Analogy between vectors and signals, Orthogonal signal space, Signal approximation using orthogonal functions, Mean square error, Closed or complete set of orthogonal functions, Orthogonality in complex functions.

UNIT-II

Fourier series and Fourier Transform: Fourier series Representation of Continuous-Time Periodic Signals, Dirichlet's conditions, Properties of Continuous-Time Fourier Series. Trigonometric Fourier Series and Exponential Fourier Series with examples, Complex Fourier spectrum.

Deriving Fourier Transform from Fourier series, Fourier Transform of standard signals, Fourier Transform of Periodic Signals, Properties of Continuous-Time Fourier Transform,

Magnitude-Phase responses, Parseval's theorem, Inverse Fourier transform.

Discrete-Time Fourier Transform – Properties, Inverse Discrete-time Fourier Transform.

Introduction to Hilbert Transform.

UNIT-III

Convolution and Correlation: Continuous-time convolution, Convolution sum, Correlation between signals, Cross correlation, Autocorrelation, Properties, Energy spectral density, Power spectral density, Relation between convolution and correlation.

UNIT-IV

Behavior of continuous time LTI systems: Distortion less transmission through a system, signal bandwidth, system bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Poly-Wiener criterion for physical realization, relationship between bandwidth and rise time.

Sampling: Sampling Theorem, Reconstruction of a Signal from its Samples Using Interpolation, types of sampling-natural sampling, flat- top sampling and impulse sampling, Effect of under sampling -Aliasing.

UNIT-V

System Analysis using Laplace and z -Transforms:

Laplace Transform - Region of Convergence – Relation between Laplace and Fourier Transform, Inverse Laplace Transform, Properties, Analysis and Characterization of LTI Systems Using Laplace Transform, Z-Transform -Region of Convergence - Properties, Inverse z-Transform, Analysis and Characterization of LTI Systems Using z-Transforms.

EE406L	INDUCTION MOTORS AND SYNCHRONOUS MACHINES LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Test the performance of induction motors and synchronous machines by conducting suitable experiments and report the results.
- Analyze the speed control methods of three-phase induction motors by conducting suitable experiments.
- Understand the parallel operation and estimate the regulation of alternators.

Experiments related to the course contents of the course - Induction & Synchronous Machines.

EE407L	ANALOG AND DIGITAL ELECTRONICS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Plot the characteristics of Electronic Devices to understand the behavior
- Design, construct and test amplifier circuits and interpret results
- Design and analyze combinational logic circuits
- Design and analyze flip flops and Sequential logic circuits

Experiments related to the course contents of two courses

(1) Analog Electronics

(2) Digital Electronics.

EE409S	**PYTHON PROGRAMMING**	**2 Credits**
Sessional Marks: **40**	**1L:0T:2P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Implement python programming constructs to build small to large applications.
- Implement the problems in terms of real-world objects.
- Evaluate and handle the errors during runtime involved in a program.
- Extract and import packages for developing different solutions for real time problems

Experiments related to the Python Programming Course:

- Python Programming Fundamentals
- Python Built-in Data Structures
- Classes & Objects
- Functions, I/O, Exception Handling in Python
- Applications

V – SEMESTER

EE501C	POWER SYSTEMS-II	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: Power systems-1, Network Analysis

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Analyze the performance of different transmission lines and different voltage control methods
- Understand the concepts of substations and overhead line insulators
- Study and Evaluate power system transients
- Understand the concepts of Underground Cables
- Analyze and understand the concepts of Distribution systems

UNIT-I

Performance of transmission lines: Representation of lines - short transmission lines - medium transmission lines - Nominal pie and T representation of long lines by distributed parameters - Equivalent T and Pie representation of long transmission lines - Evaluation of ABCD parameters of long lines - Ferranti effect.

Voltage Control using Shunt and series capacitors - synchronous capacitors - Tap changing andBooster Transformers - Surge Impedance Loading (SIL).

UNIT-II

Substations: Number and size - Location and installation - The main equipment in substations - Bus Arrangements - Key diagram of a typical primary substation.

Overhead line insulators: Introduction - Types of insulators - Potential distribution over a string of insulators - Methods of equalizing the potential, string efficiency - Testing of insulators.

UNIT–III

Power system transients: Introduction - Circuit closing transients - Sudden symmetrical short circuit analysis of alternator - Recovery transient due to removal of a short circuit - Travelling waveson transmission line - Surge impedance and wave velocity - Specification

of travelling waves - Reflections and refractions of waves - Different types of terminations - Forked line - Successive reflections - Bewley's Lattice Diagram - Attenuation and Distortion - Arcing grounds.

UNIT-IV

Underground Cables: Introduction - The insulation types - Insulating materials for EHV voltage cables - Classification of cables - Parameters of single core cable - Grading of cables -Capacitance of three core belted cable break down of cables - Heating of cables – dielectric loss and Sheath losses - Current rating of cables

UNIT-V

AC Distribution: Comparison of AC single phase, 3 phase 3 wire and 3 phase 4 wire systems with DC 2 wire - Types of primary distribution systems - Types of secondary Distribution systems - AC distributors fed at one end and at both ends-Kelvin's law - Limitations of Kelvin's law - Load estimation - Selection voltage of primary distribution - Choice of scheme - Size of feeders, power factor correcting methods

Text Books:

- C..L.Wadhwa, "Electrical Power systems" New age publications.
- B.R.Gupta, "Power system analysis and design" third edition, Wheeler publishing.
- William D.Stevenson "Elements of power system analysis" fourth edition, Mc Grawhill International editions.

Reference Books

EE502C	LINEAR CONTROL SYSTEMS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: Engineering Mathematics, Network Analysis

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the modeling of linear-time-invariant systems using transfer function andstate-space representations.
- Understand the concept of stability and its assessment for linear-time invariant systems.
- Understand the applications of control systems in industries.

UNIT–I

Introduction: System representation – Classification of systems – Control system technologies –Types of control Systems: open loop and closed loop systems - Advantages and disadvantages of control systems – Examples of open loop and closed loop control systems – Transfer function andlimitations

UNIT-II

Mathematical modeling of physical systems : Mathematical modeling and transfer functions ofelectrical, mechanical and electro-mechanical systems – Electrical analogues – Block diagram and their reduction techniques – Signal flow graphs – Introduction to servo motors – DC Servo motors
– two-phase AC servo motors.

UNIT-III

Time domain analysis: Standard test input signals – step response of first and second order systems – Time domain specifications – steady state error – static error and generalized error coefficients – Problems.

UNIT-IV

Stability of control systems: Introduction – Bounded Input –Bounded Output (BIBO) – Necessary conditions for stability – Characteristic equation and location of roots in s-plane for stability – Routh-Hurwitz criterion – Root locus techniques – Rules for construction of root loci.

UNIT-V

Frequency domain analysis: Introduction to frequency domain specifications – correlation between time domain and frequency domain responses – Frequency response plots – polar plots –Nyquist Plots – Relative stability using Nyquist criterion – Bode plots – Gain margin and Phase margin.

Text Books:

- I.J. Nagrath and M. Gopal, "Control system Engineering", Wiley Eastern Ltd.
- Benjamin C. Kuo, "Automatic Control system", Prentice Hall, 1995.
- Ch. Chengaiah and G.V Marutheswar, "Control Systems A comprehensive Lab Manual", B.S Publications, 2017.

EE503C	POWER ELECTRONICS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre Requisites: Analog Electronics

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the differences between signal level and power level devices.
- Analyze controlled rectifier circuits.
- Analyze the operation of DC-DC choppers.
- Analyze the operation of Inverters and Cyclo-Converters.

UNIT-I

Silicon controlled Rectifier – Static characteristics and ratings – turn-ON and turn-OFF mechanism – Gate characteristics – Series and parallel operation of SCR's static and dynamic equalization circuits – Protection circuits – Design of snubber circuit – Class A,B,C,D,E types ofcommutation circuits.

UNIT-II

Phase controlled Rectifiers - Principles of phase control – Half-wave and full- wave controlled rectifiers with resistive, inductive and RLC load – Freewheeling diode operation – Bridge rectifiers – Single phase and three phase Rectifiers with inductive load – Half and fully controlled rectifiers – freewheeling diode operation – Effect of source inductance – Dual converter – circulation and non-circulating current mode of operation.

UNIT-III

Choppers – D.C.Choppers – Principles of operation – control strategies, constant and variable frequency system, current limit control – Types of chopper circuits – Type-A, Type B and TypeE chopper circuits Morgan chopper Jone's chopper

UNIT-IV

Inverters – Classification – series and parallel inverters improved series inverters – Bridge inverters – Commutation circuits – current and voltage commutation circuits – single phase andthree phase inverters – output waveform control – Mc Murray Inverter – Introduction to PWM techniques

UNIT-V

Cyclo-converters – Principle of operation – single phase step-up and step down cycloconverters – Three-phase half-wave cycloconverters – output voltage equation – circulation and non-circulating current mode of operation – Load commutated cycloconverter.

Speed control – Speed control of DC motors using controlled rectifiers and choppers – Speedcontrol of induction motors using inverters

Text Books:

- An introduction to Thyristors and their application – Dr. M. Ramamoorthy – East West press.
- Power Electronics - Dr. P.S. Bimbhra 2nd edition – Khanna publishers.
- Power Electronics – M.D. SINGH and K.B. KHANCHANDANI – Tata Mc.Graw Hill publishers.
- Industrial and Power Electronics – RASHID (3rd Edition)

EE504C.i	WIND AND SOLAR ENERGY SYSTEMS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: Power systems-I, Induction Motors and Synchronous Machines

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the solar radiation, measurements, characteristics of solar PV cell and wind turbines.
- Develop the models of PV system and wind turbine, and their applications.
- Analyze the electrical characteristics and operation of various wind-driven electrical generators.
- Understand various power electronic converters used for hybrid system

UNIT-I

Basic characteristics of sunlight – solar spectrum – insolation specifics– irradiance and irradiation- pyranometer – solar energy statics- Solar PV cell – I-V characteristics –P-V characteristics– fill factor-Modeling of solar cell– maximum power point tracking.

UNIT-II

PV module – blocking diode and bypass diodes– composite characteristics of PV module – PV array– PV system –PV-powered fan–PV fan with battery backup–PV-powered pumping system –PV powered lighting systems–grid- connected PV systems.

UNIT-III

Wind source–wind statistics-energy in the wind –turbine power characteristics - aerodynamics – rotor types – parts of wind turbines– braking systems–tower- control and monitoring system.

UNIT-IV

General characteristics of induction generators– grid-connected and self-excited systems– steady- state equivalent circuit-performance predetermination–permanent magnet alternators–steady- stateperformance.

UNIT-V

Power electronic converters for interfacing wind electric generators – power quality issues-hybrid systems-wind-diesel systems – wind-solar systems.

EE504C.ii	ELECTRICAL DISTRIBUTION SYSTEM	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: Power systems-1

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the basics of Distribution systems
- Understand different Distribution Transformers &feeders
- Understand the basics of Substations
- Understand the working of Protective devices and coordination
- Acquire the knowledge of power factor and voltage control

.

UNIT-I

Introduction to distribution systems: An overview of the role of computers in distribution system planning. Load modeling and characteristics. Coincidence factor, contribution factor and loss factor. Classification of loads (Residential, Commercial, Agricultural and Industrial) and theircharacteristics.

UNIT-II

Distribution Transformers &feeders – Distribution transformer types, regulation and efficiency.Design considerations of distribution feeders – Radial and loop types of primary feeders, voltage levels, feeder loading; basic design practice of the secondary distribution system.

UNIT-III

Substations – Introduction – types of substations - main equipments in substations - Busbar Arrangements- Key diagram of a typical primary substation - Rating of a distribution substation, service area within primary feeders. Benefits derived through optimal location of substations.

UNIT-IV

Protective devices and coordination – Objectives of distribution system protection, Types of common faults and procedure for fault calculations. Protective Devices: Principle of operation of fuses, circuit reclosures, line Sectionalizers, and circuit breakers. Coordination of protective devices General coordination procedure.

UNIT-V

Power factor improvement and voltage control – Capacitive compensation for power-

factor control – Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and Switched), power factor correction, capacitor allocation.

Voltage control – Equipment for voltage control, effect of series capacitors, effect of AVB/AVR,line drop compensation.

Text Books:

- "Electric power Distribution system Engineering "– by Turan Gonen, Mc Graw-Hill book company.
- V. Kamaraju, Electrical Power Distribution Systems, Tata Mc Graw Hill Publishing Company, 2nd edition, 2010.

EE504C.iii	ELECTRICAL SAFETY	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre Requisites: Power Systems-1

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the need of electrical safety in different locations
- Understand the need of electrical safety during installation of equipment's
- Describe the electrical safety in residential, commercial and agricultural installations.
- Explain the necessity of electrical safety in Hazardous zones
- Understand electrical safety in distributed systems and usage of Fire extinguishers

UNIT-I

INTRODUCTION TO ELECTRICAL SAFETY, SHOCKS AND THEIR PREVENTION:

Terms and definitions, objectives of safety and security measures, Hazards associated with electric current, and voltage, who is exposed, principles of electrical safety, Approaches to prevent Accidents, scope of subject electrical safety. Primary and secondary electrical shocks, possibilities of getting electrical shock and its severity, medical analysis of electric shocks and itseffects, shocks due to flash/ Spark over's, prevention of shocks, safety precautions against contact shocks, flash shocks, burns, residential buildings and shops.

UNIT-II

SAFETY DURING INSTALLATION OF PLANT AND EQUIPMENT: Introduction,

preliminary preparations, preconditions for start of installation work, during, risks during installation of electrical plant and equipment, safety aspects during installation, field quality and safety during erection, personal protective equipment for erection personnel, installation of a large oil immersed power transformer, installation of outdoor switchyard equipment, safety during installation of electrical rotating machines, drying out and insulation resistance measurement of rotating machines.

UNIT-III

ELECTRICAL SAFETY IN RESIDENTIAL, COMMERCIAL AND AGRICULTURAL

INSTALLATIONS: Wiring and fitting – Domestic appliances – water tap giving shock – shock from wet wall – fan firing shock – multi-storied building – Temporary installations – Agricultural

pump installation – Do's and Don'ts for safety in the use of domestic electrical appliances

UNIT-IV

ELECTRICAL SAFETY IN HAZARDOUS AREAS: Hazardous zones – class 0,1 and 2 – spark, flashovers and corona discharge and functional requirements –Specifications of electrical plants, equipments for hazardous locations – Classification ofequipment enclosure for various hazardous gases and vapours – classification of equipment/enclosure for hazardous locations.

UNIT-V

ELECTRICAL SAFETY IN DISTRIBUTION SYSTEM: Total quality control and management – Importance of high load factor – Disadvantages of low power factor – Causes

of low P.F. – power factor improvement – equipment – Importance of P.F. improvement

Fire Extinguishers: Fundamentals of fire-initiation of fires, types; extinguishing techniques, prevention of fire, types of fire extinguishers, fire detection and alarm system; CO2 and Halogen gas schemes; foam schemes.

Text Books:

EE506L	CONTROL SYSTEMS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Pre-requisites: Control Systems

Course Outcomes: At the end of the course, the student will be able to:

- Simulate the physical control system for stability studies
- Demonstrate feedback controllers
- Develop logic gates using PLC

LIST OF EXPERIMENTS

- Modeling of Physical Systems (Mechanical and Electrical systems).
- Block Diagram Reduction of Linear Systems
- Time response analysis of Linear Systems for impulse and step inputs
- Frequency response analysis of Linear Systems
- Stability and relative stability analysis of Linear Systems Using (Root Locus, Bode and Nyquist plot).
- Time Response analysis of Second Order System.
- Study the effect of P, PD, PI, PID controllers on second order systems.
- Magnitude and phase plot of Lag and lead compensators.
- Determination of transfer function and effect of feedback on DC servo motor.
- Study of logic gates using PLC

Additional Experiments

- Design of Lag and Lead Compensators for a given system
- Stepper motor control using Simulation tools.
- Study the effect of P, PD, PI, PID controllers on DC servomotor system using PLC.

EE507L	**POWER ELECTRONICS LAB**	**1.5 Credits**
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Pre-requisites: Power electronics Theory

Course Outcomes: At the end of the course, the student will be able to :

- Examine the characteristics of Power electronic devices
- Analyze the performance of different power converters using trainer kits.
- Evaluate the performance of different power converters using simulation tools

LIST OF EXPERIMENTS

- Study the operation of a matrix converter.
- Obtain the static V-I characteristics of SCR and IGBT.
- Connect 1-Φ fully controlled rectifier and to control the speed of a DC motor.
- Observe the output waveform of series inverter.
- Verify the operation of dual converter.
- Observe the output waveforms of 1-Φ parallel inverter at different frequencies.
- Study the speed control of 3-Φ induction motor in open- loop and closed loop using sinusoidal PWM techniques.
- Study the circuit of 3-Φ half controlled rectifier.
- Verify Jone's chopper.

EE508S	MATLAB Laboratory	2 Credits
Sessional Marks: **40**	**1L:0T:2P**	End Examination Marks: **60**

Pre-requisites: Computer Skills

Course Outcomes: At the end of the course, the student will be able to :

- Learn the MATLAB environment and its programming fundamentals
- Write programs using commands and functions
- Handle and solve problems using MATLAB and to draw the plots
- Create Simulink model

LIST OF EXPERIMENTS

- To write a program for matrix operation and various functions.
- To develop a program for finding solutions of linear equations and factorial of a number.
- To develop a program for geometric progression and convolution of two signals.
- To write a program to draw a circle and different type of plots.
- To write a program for different types of waveforms with and without switch case.
- To develop a program for integral and differentiation of a polynomial.
- To develop a program to find largest & smallest and ascending & descending order by using MATLAB software.
- To write a program to find date & calendar, given input year is leap year or not
- To develop a program for displaying multiplication table and factorial of a given number.
- To write a program code for taking students and employee details

MC509A	UNIVERSAL HUMAN VALUES	0 Credits
Sessional Marks: **Nil**	**2L:0T:0P**	End Examination Marks:**100**

Pre-requisites/co-requisites: None.

COURSE OUTCOMES: At the end of this of this course, the students will be able

- To become more aware of themselves, and their surroundings (family, society, nature)
- To distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
- To Understand the role of a human being in ensuring harmony in society and nature.
- To become sensitive to their commitment towards what they have understood(human values, human relationship and human society)
- To Distinguish between ethical and unethical practices, and start working out thestrategy to actualize a harmonious environment wherever they work.

UNIT I

Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of everyhuman being with their correct priority. Understanding Happiness and Prosperity correctly - Acritical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

UNIT II

Understanding Harmony in The Human Being - Harmony in Myself: Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility (Sukh and Suvidha). Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaningofProsperity in detail. Programs to ensure Sanyam and Health.

UNIT III

Understanding Harmony in The Family and Society- Harmony in Human- Human Relationship: Understanding harmony in the Family - the basic unit of human interaction. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness (Ubhay-tripti); Trust **(Vishwas)** and Respect **(Samman)** as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence.

Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution (Samadhan), Prosperity (Samridhi), fearlessness (**Abhay**) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society (Akhand Samaj), Universal Order (Sarvabhaum Vyawastha) - fromfamily to world family.

UNIT IV

Understanding Harmony in The Nature and Existence - Whole Existence as Coexistence: Understanding the harmony in the Nature. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT V

Implications of The Above Holistic Understanding of Harmony on Professional Ethics: Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basisfor Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competencein professional ethics: a. Ability to utilize the professional competence for augmenting universalhuman order b. Ability to identify the scope and characteristics of people friendly and eco- friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

VI - SEMESTER

EE601C	POWER SYSTEM ANALYSIS	4 Credits
Sessional Marks: **40**	**3L:1T:0P**	End Examination Marks: **60**

Pre-Requisites: Power systems-2

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Analyze symmetrical and unsymmetrical faults.
- Apply the load flow techniques and carry out load flow study of power systems.
- Study and analyze the transient and steady state stability of power systems

UNIT-I

Fault studies: Per unit system, Introduction to symmetrical fault analysis-short circuit capacity ofa bus-The short circuit currents and the reactance of synchronous machines-Internal voltages of loaded machines under transient conditions-Expressions for fault MVA in terms of per unit and percentage quantities-Need for current limiting reactors and their location-selection of circuit breakers.

UNIT-II

Sequence Networks: Symmetrical Components-phase shift of symmetrical components in Star- Delta transformer banks -Power in terms of symmetrical components - Sequence impedances and sequence networks-Sequence impedances of generators-Sequence impedances of transmission lines-Sequence impedances of transformers.

Unsymmetrical fault Analysis: Fault current calculations for single line to Ground fault, Line toLine fault and Double line to Ground fault, open conductor faults.

UNIT-III

Load flow studies: Need for load flow studies in a power system-Formation of Bus admittance matrix-Classification of types of buses in a power system-Formulation of load flow equations- Gauss-Seidel, iterative method for load flow studies-Treatment of PV bus-Acceleration factors- Newton Raphson method for load flow solution with rectangular and polar coordinates- formulation of load flow equations-Decoupled and fast decoupled load flow.

UNIT-IV

Stability studies: Classification of stability studies-The power flow equations of round rotor andsalient pole synchronous machine connected to infinite bus through a

transmission system under steady state and transient state - Power flow equations of a two-machine system - Power flow equations in terms of ABCD constants-Power angle diagrams-Derivation of swing equation, Inertia constant. steady state stability analysis: Steady state stability and steady state stability limits.

UNIT-V

Transient stability analysis: General considerations and assumptions-Transient stability and stability limits-Reduction of two finite machine system to one machine system-Solution of swing equation of one machine system by point-by-point method-Digital solution by numerical methods- Equal area criterion-Limitations of equal area criterion- Determination of critical clearing angle. methods for improving power system stability.

EE602C	ELECTRICAL AND ELECTRONICS MEASUREMENTS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre Requisites: Electrical Circuits

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the working principle of different measuring instruments.
- Select appropriate measuring instruments for measuring various parameters in theirlaboratory courses.
- Study and correlate the significance of different measuring instruments, recorders andoscilloscopes.

UNIT–I

Measurements – Errors & classification, Deflecting, control, and damping torques in instruments Measurement of voltage & current - permanent magnet moving coil and moving iron meters, dynamometer type instruments.

UNIT–II

Measurement of potential difference, current, and resistance – DC bridges, A.C & DC potentiometers.

Measurement of inductance, capacitance, and resistance- AC bridges.

UNIT–III

Instrument transformers – Current and Potential Transformers, Ratio and phase angle errors.

Measurement of power – Electrodynamic instruments, Induction instruments.

Measurement of energy – Single phase and three phase energy meters.

UNIT–IV

Power factor meters**,** Synchronoscopes, Ratiometers, Frequency meters, Q-meters, Digital Voltmeters, Multimeters.

UNIT – V

Transducers – Position transducers, Force transducers, Piezo-electric transducers, Hall effecttransducers. Temperature measurement.

Signal sources – Oscillators, Function generator & pulse generators.

Oscilloscopes - CRO, Digital storage and Analog storage Oscilloscope. Analog &

DigitalRecorders, error analysis.

EE603C	MICRO PROCESSORS AND MICROCONTROLLERS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: Digital Electronics

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Do assembly language programming.
- Do interfacing design of peripherals like I/O, A/D, D/A, timer etc.
- Understand the architecture and features of 8051 microcontroller.

UNIT-I

Development of microprocessors, 8086 microprocessor – Architecture, Instruction set, Addressing modes, Interrupt system. Minimum mode 8086 system and timings, Maximum mode 8086 system and timings.

UNIT-II

Assembler directives, Assembly language programs (8086) with Assembler directives for addition, subtraction, multiplication, division etc., sorting and searching, bit manipulation, Programs using look–up tables, Delay subroutines. Stages of software development.

UNIT-III

Data transfer schemes – Synchronous, Asynchronous, Interrupt driven and DMA type schemes, Programmable interrupt controller (8259) and its interfacing, Programmable DMA controller (8257) and its interfacing, Programmable Interval Timer (8253) and its interfacing, Programmable Communication Interface (8251 USART) and its interfacing.

UNIT-IV

Memory interfacing to 8086 – Interfacing various types of RAM and ROM chips, 8255 PPI and its interfacing, ADC and DAC Interfacing, Data acquisition, Waveform generation, Traffic light controller, Stepper motor control, temperature measurement and control.

UNIT-V

8051 Microcontroller – Architecture, register set, Instruction set, Interrupt structure, timer and serial port operations, Memory and I/O interfacing, Simple Assembly language programs.

Text Books:

- A.K. Ray and K.M. Bhurchandi, "Advanced Microprocessors and Peripherals", TMH.
- Douglas V. Hall, "Microprocessors and interfacing: Programming and hardware", TMH,2nd edition.
- Kenneth J Ayala, "The 8051 Micro Controller Architecture, Programming and Applications", Pernam International / Thomson Publishers, 2nd Edition, 2005.
- Ajay V. Deshmukh, "Microcontrollers – theory applications", Tata McGraw-Hill Company

EE604C	UTILIZATION OF ELECTRICAL POWER	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: D.C. Machines and Transformers, Induction Motors and Synchronous Machines

Course Outcomes: At the end of this course, students will demonstrate the ability to

- To provide students basic practical knowledge of illumination and to get general ideas aboutstreet lighting, building lighting.
- To provide students' knowledge about the various electric heating methods and their advantages.
- To make students to learn electrical welding methods and their advantages
- To provide students basic practical knowledge of electric drives and to learn the characteristicsof different mechanical loads.
- To provide students' knowledge about the electric traction & their advantages.

UNIT–I

Illumination: Nature of light, definitions, Laws of illumination, different types of lamps, construction and working of incandescent lamp, fluorescent lamp and discharge lamps, Illumination schemes; indoor and outdoor, Illumination levels. General ideas about street lighting,building lighting.

UNIT–II

Electric Heating: Advantages of electrical heating, Heating methods: Resistance heating, Induction heating, Electric arc heating, construction and working of arc furnace, Dielectric heating,Infra-red heating, Microwave heating, design problems of resistance heating element.

UNIT –III

Electric Welding: Advantages of electric welding, Welding methods, Principles of resistance welding, welding equipments used, Principle of electric arc welding, carbon arc, metal arc, hydrogen arc welding methods and their applications. Advantages of using coated electrodes, comparison between AC and DC arc welding, welding control circuits.

UNIT –IV

Electric Drives: Introduction, Advantages of electric drives, Characteristics of different mechanical loads, Types of motors used in electric drive, types of braking, Methods of power transfer, selection of motors for different types of domestic loads.

UNIT –V

Electric Traction: Advantages of electric traction, Different systems of electric traction, DC and AC systems, diesel electric system, types of services – urban, sub-urban, and main lines and their speed-time curves, pentagraph, Factors affecting scheduled speed, types of motors used for electric traction, Starting and braking of traction motors.

Text Books:

- Utilization of Electrical Energy by JB Gupta, Kataria Publications, Ludhiana.
- A.Text Book. of Electrical Power by Dr. SL Uppal, Khanna Publications, Delhi.
- Modern Electric Traction by H Partap, Dhanpat Rai & Sons, Delhi.
- Utilization of Electrical Energy by OS Taylor, Pitman Publications.
- Generation, Distribution and Utilization if Electrical Power by CL Wadhwa, WileyEastern,Ltd., New Delhi

EE605C.i	ADVANCED CONTROL SYSTEMS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre Requisites: Linear Control Systems

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the need of compensators and controllers for design aspects
- Design controllers to satisfy the desired design specifications using simple controller structures (P, PI, PID, compensators).
- Understand the state space analysis and build system matrix for stability purpose.
- Understand system Controllability and Observability.

UNIT- I

Compensators: Introduction to Compensators – Need for compensators – Types of Compensators - Lead, Lag, Lead lag compensators – Transfer function of compensators – Comparison of compensators – Applications of compensators.

UNIT- II

Controllers: Introduction to controllers – Need for controllers – Types of Controllers – Proportional, Integral and Derivative Controllers – Transfer function of controllers - PI, PD, PID Controllers – Design of controllers using frequency domain analysis – Comparison of controllers - Applications of controllers.

UNIT-III

State variable descriptions: Introduction – Comparison of advanced control theory and classical control theory – concepts of state, state variables, state vector, state space representation of physical systems – representation in state variable form, phase variables and canonical variables.

UNIT-IV

Controllability and Observability: Definition of controllability and Observability – Controllability and Observability tests for continuous time systems – Duality Principle of Controllability and Observability – Pole placement by state feedback design – State observers – Full order and reduced order observers

UNIT-V

Time response of linear system: Introduction – Solution of state equations – Homogenous andNon-homogenous – State Transition matrix – Properties of STM – Computation of STM

Non linear systems – Introduction – common physical non linearities – Dead Zone,

JumpResonance, Stiction, Friction, Hysteresis etc

Text Books:

- K. Ogata, "Modern Control Engineering", Prentice Hall, 2010.
- Benjamin C. Kuo, "Automatic Control system", Prentice Hall, 1995.
- A Nagoor Khani, "Advanced Control Theory", CBS Publications, 2020.

EE605C.ii	ENERGY MANAGEMENT AND AUDITING	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre-Requisites: D.C. Machines and Transformers, Induction Motors and Synchronous Machines, Power systems-1

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand energy audit of industries and management of energy systems
- Analyze the methods of improving efficiency of electric motors, power factor and design a good illumination system
- Evaluate and analyze economic aspects of energy saving equipment

UNIT-I

Energy Management: Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting- Energy manger, Qualities and functions, language, Questionnaire – check list for top management.

UNIT-II

Basic Principles of Energy Audit: Energy audit- definitions, concept, types of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes- Energy audit of industries- energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT-III

Energy Efficient Motors: Energy efficient motors, factors affecting efficiency, loss distribution, constructional details, characteristics – variable speed, variable duty cycle systems, RMS hp-voltage variation-voltage unbalance- over motoring- motor energy audit.

UNIT-IV

Power Factor Improvement, Lighting and Energy Instruments: Power factor – methods of improvement, location of capacitors, pf with nonlinear loads, effect of harmonics on power factor, power factor motor controllers – Good lighting system design and practice, lighting control, lighting

energy audit – Energy Instruments- wattmeter, data loggers, thermocouples, pyrometers, lux meters, tongue testers, application of PLC's.

UNIT-V

Economic Aspects and Analysis: Economics Analysis-Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis- Energy efficient motors- calculation of simple payback method, net present worth method- Power factor correction, lighting – Applications of life cycle costing analysis, return on investment.

Text Books

- "Energy management", W.R. Murphy and G. Mckay Butter worth, Heinemann publications.
- "Energy management", Paul o' Callaghan, Mc-graw Hill Book company-1st edition,1998

References:

- "Energy efficient electric motors", John.C. Andreas, Marcel Dekker Inc Ltd-2nd edition,1995-

EE605C.iii	SPECIAL MACHINES	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Pre Requisites: D.C. Machines and Transformers, Induction Motors and Synchronous Machines

Course Outcomes: At the end of the course, student will be able to

- Understand field aspects of electrical machines
- Understand the operation and control of
  a. Stepper motors
  b. BLDC motors
  c. SR motor

UNIT-I

Field aspects of electrical machines: Review of Maxwell's equations and solution of Laplace's and Poisson's equations. Concept of magnetic vector potential. Eddy current braking. Linear motors: Basic principle of operation and types. End effects & transverse edge effects. Field analysis & Propulsion force; equivalent circuit.

UNIT-II

Stepper motors: Construction and operation of Stepper Motors: variable reluctance, permanent magnet, hybrid stepper motors, characteristics of stepper motors. Drive Circuits for Stepper motors: Block diagram of stepper motor controller, logic sequence generator, power drivers, current suppression circuits, and acceleration and deceleration circuits.

UNIT-III

Microprocessor control of stepper motors: microprocessor-based stepper motor controller, PC based stepper motor controller. Micro-stepping Control of Stepper motors: the micro-stepping principle, advantages of micro stepping, design of basic micro-stepping controller. Applications of stepper motor

UNIT-IV

Brushless DC motor: principle of operation of BLDC motor, square wave permanent magnet brushless motor drives, sine wave permanent magnet Brushless DC motor drives, phasor diagram, torque speed characteristics, controllers for BLDC motors, alternating current drives with PM andsynchronous reluctance hybrid motors.

UNIT-V

Switched Reluctance Motor Drives: Types of SR motors, principle of operation, static torque production, energy conversion loop, dynamic torque production. Converter Circuits, Control of SR motors: current regulation, commutation, torque

speed characteristics, shaft position sensing.

Text Books:

- "V .V.Athani, "Stepper Motors Fundamentals, Applications, and Design", New Age.
- TJE Miller, "Brushless Permanent-Magnet and Reluctance Motor Drives" Clarendon Press,Oxford .

EE607L	MICRO PROCESSORS AND MICRO CONTROLLERS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Pre-Requisites: Micro Processors and Micro Controllers

Course Outcomes: At the end of the course, students will be able to:

- Demonstrate program proficiency using the various instructions of the 8086microprocessor.
- Demonstrate program proficiency using the various instructions of the 8051microcontroller
- Design systems for different applications by interfacing external devices

LIST OF EXPERIMENTS

Part-1: 8086 programs:

- Program to demonstrate data transfer operation
- Program to demonstrate arithmetic operation
- Program to demonstrate logical operation
- Program to demonstrate shift operation
- Program to demonstrate string operation
- Program to demonstrate looping operation
- Program to demonstrate decision making operations

PART-2: 8051 PROGRAMS:

- Program to demonstrate data transfer and arithmetic operations
- Program to demonstrate logical and shift operations
- Program to demonstrate looping operations
- Programming timer / counter.
- Programming Serial communication application.
- Programs to demonstrate bit-manipulation operations.

PART-3: INTERFACING PROGRAMS (using 8086 & 8051 Kits)

- Interfacing ADC
- Interfacing DAC.
- Interfacing stepper motor.

- Interfacing 7-segment display.
- Interfacing Traffic light controller.
- Waveform generation

EE608L	ELECTRICAL AND ELECTRONICS MEASUREMENTS LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Pre-Requisites: Electrical and Electronics Measurements

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Design and validate DC and AC bridges.
- Analyze the dynamic response and the calibration of few instruments.
- Learn about various measurement devices, their characteristics, their operation and their limitations.
- Understand statistical data analysis.
- Understand computerized data acquisition.

Lectures/Demonstrations:

- Concepts relating to Measurements: True value, Accuracy, Precision, Resolution, Drift, Hysteresis, Dead-band, Sensitivity.
- Errors in Measurements. Basic statistical analysis applied to measurements: Mean, Standard Deviation, Six-sigma estimation, Cp, Cpk.
- Sensors and Transducers for physical parameters: temperature, pressure, torque, flow. Speed and Position Sensors.
- Current and Voltage Measurements. Shunts, Potential Dividers. Instrument Transformers, Hall Sensors.
- Measurements of R, L and C.
- Digital Multi-meter, True RMS meters, Clamp-on meters, Meggers.
- Digital Storage Oscilloscope.

Experiments

- Measurement of a batch of resistors and estimating statistical parameters.
- Measurement of L using a bridge technique as well as LCR meter. Measurement of C using a bridge technique as well as LCR meter.
- Measurement of Low Resistance using Kelvin's double bridge.
- Measurement of High resistance and Insulation resistance using Megger.
- Usage of DSO for steady state periodic waveforms produced by a function generator.

Selection of trigger source and trigger level, selection of time-scale and voltage scale. Bandwidth of measurement and sampling rate.

- Download of one-cycle data of a periodic waveform from a DSO and use values to compute the RMS values using a C program.
- Usage of DSO to capture transients like a step change in R-L-C circuit.
- Current Measurement using Shunt, CT, and Hall Sensor.

EE609S	JAVA PROGRAMMING	2 Credits
Sessional Marks: **40**	**1L:0T:2P**	End Examination Marks: **60**

Pre Requisites: Basics of JAVA

Course Outcomes: At the end of the course, the student will be able to:

- Understand the software's for writing Java programming and code to accept an integer and print its factorial.
- Develop the Java code for different applications.

List of Modules

- Downloading and installing JDK and JRE. Executing simple java program which prints Hello world.
- Program to accept an integer and prints its factorial.
- Develop a java program to create class, which contains data and methods (private and public), create an object to access those members.
- Develop a java program which demonstrates method over loading.
- Develop a java program which demonstrates constructor and constructor over loading use this keyword.
- Develop a java program which creates and Access Static and Non-static members of a class.
- Develop the java program to study different methods provided in String and String Buffer classes.
- Develop a java program that demonstrates single inheritance, use super keyword.
- . Develop a java program for abstract class to find areas of different shapes.
- Develop a java program to achieve multiple inheritance using interfaces.
- Develop a java program to create an interface named Vehicle which contains two abstract methods. (Specifications (), Display ()). Provide two classes named Two- wheeler, Four-wheeler that is implemented by that interface.
- Develop a java program to create a package and accesses it.
- Develop a java program that demonstrates try, catch and finally.
- Develop a java program that displays a frame with two Labels, two Text Fields and Two Buttons.

MC610A	PROFESSIONAL ETHICS IN ENGINEERING	0 Credits
Sessional Marks: **Nil**	**2L:0T:0P**	End Examination Marks: **100**

Pre-requisites/co-requisites: None.

COURSE OUTCOMES: At the end of the course, the student should be able to:

- Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
- Learn the moral issues and problems in engineering; find the solution to those problems.
- Learn the need for professional ethics, codes of ethics and roles, concept of safety, risk assessment.
- Gain exposure to Environment Ethics & computer ethics; know their responsibilities and rights.

UNIT I

Human Values: Morals, values and Ethics – Integrity – Work ethic – Service learning –Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuingtime – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II

Engineering Ethics: Senses of Engineering Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy –Models of professional roles – Theories about right action – Self-interest – Customsand Religion – Uses of Ethical Theories.

UNIT III

Engineering as Social Experimentation: Engineering as Experimentation –Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT-IV

Safety, Responsibilities and Rights: Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining– Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Right– Intellectual Property Rights (IPR)Discrimination.

UNIT V

Global Issues: Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct – Corporate Social Responsibility

TEXT BOOKS:

- Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.
- Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

VII - SEMESTER

EE701C	POWER SYSTEM PROTECTION	3 Credits
Sessional Marks :**40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the different components of a protection system.
- Evaluate fault current due to different types of faults in a network.
- Understand the protection schemes for different power system components.
- Understand the basic principles of digital protection.
- Understand system protection schemes, and the use of wide-area measurements.

UNIT–I

Protection against over voltages: Causes of over voltages-over voltages due to lightning –Rodgaps-Horn Gaps-Expulsion type and valve type lightning arresters-lightning arrester calculations- ground wires-counter poises-surge absorbers and surge diverters. Basics of Insulation coordination
- Power system earthing.

UNIT-II

Fuses: Definitions, characteristics, types, HRC fuses.
Circuit breakers: Introduction - Formation of Arcs in CBs - arc interruption theories - Definitions - Current chopping - Classification of circuit breakers - Oil circuit breakers- Air blast circuitbreaker - SF6 circuit breaker-Vacuum circuit breaker - Testing of circuit breakers.

UNIT–III

Protective Relaying fundamentals: Introduction – Need for protective systems in a power system – Zones of protection - Primary and backup protection – definition and functional characteristics of a protective relay – operating principles of various electromagnetic relays.

UNIT-IV

Types of Protective Relays: Overcurrent relays – Directional overcurrent relays – applications of over current relays. Distance relays: the universal torque equation – impedance, reactance and mhorelays - differential relays – percentage differential relays – Static relays.

UNIT–V

Generator Protection: Protection against stator faults, against rotor faults and against abnormalconditions.

Transformer Protection: Buchholz relay, differential protection, percentage differentialprotection.

Busbar protection: - Frame leakage protection scheme

Text Books:

- Badri Ram & D.N. Vishwakarma – Power system protection and switch gear., TMHpublishing Company Ltd. 1995.
- C.L. Wadhwa – Electrical power systems, Wiley Eastern Ltd.
- B. Ravindranath & M. Chander, power system protection & switch gear., Wiley EasternLtd.

EE702C.i	ELECTRICAL VEHICLES	3 Credits
Sessional Marks :**40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the basics of electric vehicles, technical characteristics and properties ofbatteries and also to design battery pack.
- Know the ratings and requirements of electrical machines.
- Apply the regenerative braking and sizing of motors.
- Configure and design the components of hybrid electric vehicles.

UNIT I

Electric Vehicles: Introduction, Components, vehicle mechanics – Roadway fundamentals, vehicle kinetics, Dynamics of vehicle motion - Propulsion System Design.

UNIT II

Battery: Basics – Types, Parameters – Capacity, Discharge rate, State of charge, state of Discharge, Depth of Discharge, Technical characteristics, Battery pack Design, Properties of Batteries.

UNIT III

DC & AC Electrical Machines: Motor and Engine rating, Requirements, DC machines, three phase A.C machines, Induction machines, permanent magnet machines, switched reluctance machines.

UNIT IV

Electric Vehicle Drive Train: Transmission configuration, Components – gears, differential,clutch, brakes regenerative braking, motor sizing.

UNIT V

Hybrid Electric Vehicles: Types – series, parallel and series, parallel configuration – Design –Drive train, sizing of components.

Text book:

- Iqbal Hussain, "Electric & Hybrid Vehicles – Design Fundamentals", Second Edition, CRC Press, 2011.
- James Larminie, "Electric Vehicle Technology Explained", John Wiley & Sons, 2003.

Reference Books:

- Mehrdad Ehsani, Yimin Gao, Ali Emadi, "Modern Electric, Hybrid Electric, and FuelCell Vehicles: Fundamentals", CRC Press, 2010.
- Sandeep Dhameja, "Electric VehicleBatterySystems", Newnes, 2000

EE702C.ii	FLEXIBLE AC TRANSMISSIONSYSTEMS	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the working principles of FACTS devices and their operating characteristics.
- Understand the working principles of static shunt and series compensation.
- Understand the basic concepts of UPFC and IPFC
- Understand the usage of Static voltage regulators and phase shifters

UNIT-I

Flexible Ac Transmission System: Transmission interconnections, flow of power in ac systems, loading capability, dynamic stability considerations, basic types of FACTS controllers.

UNIT-II

Static Shunt Compensators: Objectives of shunt compensation, static var compensators,STATCOM configuration, characteristics and control, comparison between STATCOM and SVC.

UNIT-III

Static Series Compensation: Objectives of series compensation, Variable Impedance type series compensators, switching converter type series compensators, external control for series reactive compensators.

UNIT-IV

UPFC: Principle of operation and characteristics, independent active and reactive power flow control, comparison of UPFC with the series compensators and phase angle regulators.

IPFC: Principle of operation and characteristics and control aspects.

UNIT-V

Static voltage regulators and phase shifters: Introduction**,** Principles of operation-Steady statemodel and characteristics - power circuit configurations

Text Books :

- Hingorani ,L.Gyugyi,' Concepts and Technology of flexible ac transmission

system',IEEE Press New York, 2000.

- K.R.Padiyar, "FACTS controllers in power transmission and distribution", New ageInternational Publishers, Delhi, 2007.
- R. Mohan Mathur and Rajiv K. Varma, 'Thyristor - based FACTS controllers forElectrical transmission systems', IEEE press, Wiley Inter science, 2002.

EE702C.iii	RESTRUCTURED POWER SYSTEM	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the concepts of Restructuring of Power Industry
- Understand the basics of Transmission Congestion Management
- Understand the concepts of Locational Marginal Prices and Financial Transmission Rights
- Understand the basics of Ancillary Service Management
- Understand different pricing techniques of Transmission Network

UNIT I

INTRODUCTION TO RESTRUCTURING OF POWER INDUSTRY Introduction:

Deregulation of power industry, restructuring process, Issues involved in deregulation, Deregulation of various power systems – Fundamentals of Economics: Consumer behavior, Supplier behavior, Market equilibrium, short and long run costs, Various costs of production – Market models: Market models based on Contractual arrangements, Comparison of various market models

UNIT II

TRANSMISSION CONGESTION MANAGEMENT Definition of Congestion, reasons for transfer capability limitation, Importance of congestion management, Features of congestion management – Classification of congestion management methods – Calculation of ATC - Non – market methods – Market methods – Nodal pricing – Inter zonal and Intra zonal congestion management – Price area congestion management – Capacity alleviation method.

UNIT III

LOCATIONAL MARGINAL PRICES AND FINANCIAL TRANSMISSION RIGHTS

Locational marginal pricing– Lossless DCOPF model for LMP calculation – Loss compensated DCOPF model for LMP calculation – ACOPF model for LMP calculation – Financial Transmission rights – Risk hedging functionality -Simultaneous feasibility test and revenue adequency – FTR issuance process: FTR auction, FTR allocation — Flow gate rights – FTR andmarket power

UNIT IV

ANCILLARY SERVICE MANAGEMENT Introduction of ancillary services – Types of Ancillary services – Classification of Ancillary services – Load generation balancing related services – Voltage control and reactive power support devices – Black start capability service

UNIT V

PRICING OF TRANSMISSION NETWORK Transmission pricing – Principles –Classification – Rolled in transmission pricing methods – Marginal transmission pricing paradigm - Composite pricing paradigm – Merits and demerits of different paradigm.

EE703C.i	POWER SYSTEM OPERATION AND CONTROL	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand economic operation and analyze methods for unit commitment of power systems.
- Analyze voltage control and frequency regulation methods.
- Realize stability issues and reactive power compensation.

UNIT-I

Economic operation of power systems: Introduction – operating cost of a thermal plant –Economic dispatch neglecting losses and no generation limits –Economic dispatch including losses - derivation of loss formula - Hydroelectric power plant model – Scheduling of hydropower plant.

UNIT-II

Unit commitment and optimal power flow constraints of unit commitment problem – Solution methods of unit commitment – priority list methods – Dynamic programming approach to solve the unit commitment problem - optimal power flow solution – Elementary treatment of optimal power flow with and without constraints

UNIT-III

Load frequency control: The load frequency control problem – Basic P-f and Q-V control loops of a synchronous generator – Governor model- prime mover model – Generator model – Load model – concept of Single & Multi area power systems – Block diagrams representation of an isolated single area power system – steady state and dynamic responses of uncontrolled and proportional plus integral control of single area power system – load frequency control of two-areapower system – Tie line bias control.

UNIT-IV

Automatic voltage regulator – introduction - modeling of amplifier, exciter, Generator and sensor – A simplified AVR block diagram – Excitation system stabilizer – Rate feedback and PID controller – automatic excitation generation control with system – placement and optimal feed- back design.

UNIT-V

Voltage stability and reactive power control- voltage stability problems in a power system –over flow of reactive power control – control of reactive power flow on a line – load compensation

– specification of load compensator – uncompensated and compensated transmission lines

Text Books:

- "Power system analysis" by Hadi Saadat, Tata Mc Grawhill International.
- "Modern power system analysis" by J. Nagarath & DP Kothari, Tata Mc Grawhill secondedition
- "Power system analysis and design" by B.R. Gupta wheeler publishing
- "Electrical energy system theory" by O.I. Elgerd Tata Mc Grawhill Ltd second edition.

EE703C.ii	POWER SEMICONDUCTOR CONTROLLED DRIVES	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the fundamental concepts of electrical drives.
- Understand the principles of speed-control of dc motors and induction motors.
- Understand the power electronic converters used for dc motor and induction motor speed control.

UNIT-I

Electrical Drives – An introduction – Electrical Drives, Advantages of Electrical Drives, parts of electrical drives – Electrical motor, power modulators, sources, control unit, choice of electricaldrives, status of dc and ac drives.

Dynamics of Electrical Drives – Fundamental Torque equations, speed torque convention and multi quadrant operation, Equivalent values of drive parameters – Loads with rotational motion, loads with translational motion, measurement of moment of inertia. Components of load torques, Nature and classification of load torques, calculation of time and energy loss in transient operation,steady state stability, load equalization.

UNIT-II

Control of electrical drives – Modes of operation, speed control and drive classifications closedloop control of drives.

D.C. Motor drives – Starting, Braking, speed control - Armature voltage control, Ward Leonard drives, controlled rectifier fed DC drives – Single phase and 3-phase fully controlled and half controlled converter fed separately excited D.C. Motor, Chopper Controlled DC drives. (separatelyexcited motor).

UNIT-III

Induction Motor Drives: Review of three phase I.M., analysis and performance. Operation with unbalanced source voltages and single phasing, analysis of I.M. fed from non-sinusoidal voltage supply. Starting, Braking, methods

UNIT-IV

Speed control methods of IM, v/f controlled induction motors, controlled current and controlled slip operation, PWM inverter drives, Multi-quadrant drives and field oriented control, slip power control, single phase I.M. Close loop control of I.M. Drives.

UNIT-V

Synchronous motor drives: cylindrical rotor wound field motor, Salient pole wound field motor, Synchronous reluctance motor, Hysteresis synchronous motor, Operation from fixed frequency supply, starting, braking, synchronous motor, variable speed drives, starting large synchronous machines.

Energy Conservation in electrical drives – Losses in electrical drive system, measures of energy conservation in electrical drives, use of efficient converters, energy efficient operation of drives, improvement of p.f., improvement of quality of supply, maintenance of motors.

Text Books:

- G.K.Dubey – Fundamentals of Electrical drives.
- Vedam Subrahmanyam - Electrical drives – Concepts and applications.

EE703C.iii	POWER QUALITY	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand the basic concepts of power quality.
- Understand the basic concepts of voltage variations and transients
- Understand different harmonics in power systems
- Understand the working of Power quality conditioners

UNIT –I

Electric power quality phenomena- IEC and IEEE definitions - power quality disturbances-voltage fluctuations – transients – unbalance - waveform distortion - power frequency variations.

UNIT–II

Voltage variations- Voltage sags and short interruptions – flicker-longer duration variations - sources – range and impact on sensitive circuits-standards – solutions and mitigations – equipment and techniques.

UNIT–III

Transients – origin and classifications – capacitor switching transient – lightning-loadswitching – impact on users – protection – mitigation.

UNIT –IV

Harmonics – sources – definitions & standards – impacts - calculation and simulation –harmonic power flow - mitigation and control techniques – filtering – passive and active.

UNIT–V

Power Quality conditioners – shunt and series compensators- DStatcom- Dynamic voltagerestorer-unified power quality conditioners-case studies.

Text Books:

- Bollen,M.H.J., 'Understanding Power Quality Problems: Voltage sags and interruptions', IEEE Press, New York, 1999.
- Arrillaga, J, Watson, N.R., Chen, S., 'Power System Quality Assessment', Wiley, New York, 1999.

- Heydt, G.T., 'Electric Power Quality', Stars in a Circle Publications, Indiana, 1991.

EE704C.i	HVDC TRANSMISSION	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Differentiate between AC and DC transmission, their advantages and applications
- Analyze HVDC converters and converter bridge characteristics
- Understand the particulars of converters and HVDC system control and reactive powercontrol
- Identify Converter faults and protection carried.
- Understand harmonics, filters and different multi terminal systems

UNIT-I

DC Power Transmission Technology:

Introduction, Comparison of AC DC transmission, Converter station, Description of DC Transmission systems, Components of a HVDC system. Choice of voltage level, Modern trends in DC transmission

UNIT-II

Analysis of HVDC Converters:

Pulse number, Choice of converter configuration, valve rating. Transformer, simplified analysis of graetz circuit with and without overlap (2 and 3 valve conduction mode) rectifier and inverter waveforms, converter bridge characteristics

UNIT-III

Converter and HVDC System Control:

Principle of DC Link control, Converter control characteristics, system and control hierarchy, firing angle control, converter and excitation angle control, starting and stopping of DC Link,Power control, Sources of reactive power, static var systems.

UNIT-IV

Converter Faults:

Protection against over currents, over voltages in converter station, surge arresters, protection against over voltages
Smoothing reactor, DC Line, Transient over-voltages in DC line, protection of DC line, DCbreakers.

UNIT-V

Generation of Harmonics, Design of AC Filters, Dc Filters, Carrier frequency and RI noise. **MTDC Links** Multi-Terminal and Multi-Infeed Systems. Series and Parallel MTDC systems using LCCs. MTDC systems using VSCs. Modern Trends in HVDC Technology. Introduction to Modular Multi-level Converters.

Text Books:

- K R Padiyar, "HVDC Transmission Systems"
- S. Rao, "EHV AC and HVDC Transmission engineering and Practice"
- J.Arrillaga, "High Voltage Direct Current Transmission", Peter Peregrinus Ltd.,1983.
- E.W.Kimbark, "Direct Current Transmission", Vol.1, Wiley-Interscience,1971.

EE704C.ii	HIGH VOLTAGEENGINEERING	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, the student will demonstrate

- Understand the basic physics related to various breakdown processes in solid, liquid andgaseous insulating materials.
- Knowledge of generation and measurement of D. C., A.C., & Impulse voltages. Knowledge of tests on H. V. equipment and on insulating materials, as per the standards.
- Knowledge of how over-voltages arise in a power system, and protection against theseover-voltages.

UNIT-I

Breakdown in solid, liquid and gas insulating materials

Ionization processes and de-ionization processes, Types of Discharge, Gases as insulating materials, Breakdown in Uniform gap, non-uniform gaps, Townsend's theory, Streamer mechanism, Corona discharge Breakdown in pure and commercial liquids, Solid dielectrics and composite dielectrics, intrinsic breakdown, electromechanical breakdown and thermal breakdown, Partial discharge, applications of insulating materials.

UNIT-II

Generation of High Voltages

Generation of high voltages, generation of high D. C. and A.C. voltages - Van de Graff Generator, Cockcroft Walton Voltage multipliers, Cascade transformer circuits, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators.

UNIT-III

Measurements of High Voltages and Currents

Peak voltage, impulse voltage and high direct current measurement method, cathode ray oscillo graphs for impulse voltage and current measurement, measurement of dielectric constant and lossfactor, partial discharge measurements.

UNIT-IV

Lightning and Switching Over-voltages

Charge formation in clouds, Stepped leader, Dart leader, Lightning Surges. Switching over- voltages, Protection against over-voltages, Surge diverters, and Surge modifiers.

UNIT-V

High Voltage Testing of Electrical Apparatus and High Voltage Laboratories Various standards for HV Testing of electrical apparatus, IS, IEC standards, Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, power transformers and some high voltage equipment, High voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H. V. Labs.

EE704C.iii	SMART GRID	3 Credits
Sessional Marks: **40**	**3L:0T:0P**	End Examination Marks: **60**

Course Outcomes: At the end of this course, students will demonstrate the ability to

- Understand smart grids and analyze the smart grid policies and developments in smart grids.
- Develop concepts of smart grid technologies and their applications.
- Analyze micro grids, distributed generation systems, the effect of power quality in smart gridand understand latest developments in ICT for smart grid.

UNIT – 1

Introduction to Smart Grid: Evolution of Electric Grid, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities & Barriers of Smart Grid, Difference between conventional & smart grid, Concept of Resilient &Self-Healing Grid, Present development & International policies on Smart Grid. Case study of Smart Grid.

UNIT – 2

Smart Grid Technologies-I: Introduction to Smart Meters, Real Time Prizing, Smart Appliances,Automatic Meter Reading (AMR), Outage Management System (OMS), Plug in Hybrid Electric Vehicles (PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation, Phase ShiftingTransformers.

UNIT – 3

Smart Grid Technologies-II: Smart Substations, Substation Automation, Feeder Automation. Geographic Information System (GIS), Intelligent Electronic Devices (IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro, Compressed Air Energy Storage, Wide Area Measurement System (WAMS), Phase Measurement Unit (PMU).

UNIT – 4

Micro grids and Distributed Energy Resources: Concept of micro grid, need & applications ofmicrogrid, formation of microgrid, Issues of interconnection, protection & control of microgrid. Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators, fuel cells, microturbines, Captive power plants, Integration of renewable energy sources.

UNIT – 5

Power Quality Management in Smart Grid: Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

Information and Communication Technology for Smart Grid: Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighborhood Area Network (NAN),

Wide Area Network (WAN).

EE707 L	POWER SYSTEM SIMULATION LAB	1.5 Credits
Sessional Marks: **40**	**0L:0T:3P**	End Examination Marks: **60**

Pre-requisites: Power systems-II, Power System Analysis, Power System Operation and Control,Power System Protection

Course Outcomes: At the end of the course, the student will be able to:

- Analyze transmission systems under steady state and transient conditions
- Perform fault calculation and network protection
- Understand the performance of renewable energy systems

LIST OF EXPERIMENTS

- Determination of Receiving end quantities and the line performance of a medium/longtransmission line using simulation tool.
- Using Computer code determine:
- Bus admittance matrix by inspection method for a 3-bus power system and obtain
- Power flow solution by Newton-Raphson method.
- Determination of Sequence components (Positive, Negative and Zero) of an alternator using simulation tool.
- Transient analysis of a Single Machine Infinite Bus (SMIB) system using simulation tool.
- Simulation of LG, LL, LLG and LLL faults on a simple power system.
- Determine steady state frequency error and frequency deviation response for an
- Isolated power system and
- Interconnected power system.
- Plot the Swing curve for a simple 3 or 4 bus power system using Simulation Tool.
- Study the Over current protection scheme using numerical relay.
- Determination of ABCD parameters and performance of a transmission line
- Determination of Positive, Negative and Zero sequence reactance for a 3-phase alternator

Additional Experiments

- Plot V-I characteristics of Solar panel at various levels of insolation.
- Study the performance of a Wind turbine system at different wind speeds and plot thecharacteristics.
- Determination of Earth resistance in humid and dry earth conditions.

EE708 S	IOT LAB	2 Credits
Sessional Marks: **40**	**1L:0T:2P**	End Examination Marks: **60**

Course Outcomes: At the end of the course, the student will be able to:

- Control different electrical and electronics applications using Arduino
- Control different electrical and electronics applications using Raspberry Pi

List of Experiments

- Interfacing LED, Push button using Arduino.
- Interfacing DHT11- Temperature and humidity sensor using Arduino.
- Interfacing Ultrasonic sensor using Arduino.
- Interfacing PIR sensor using Arduino.
- Design of Traffic Light Simulator using Arduino.
- Interfacing RFID using Arduino/ Raspberry Pi
- Interfacing of LED, Push button with Raspberry Pi (Python Program).
- Design of Motion Sensor Alarm using PIR Sensor.
- Interfacing DHT11-Temperature and Humidity Sensor with Raspberry Pi.
- Implementation of DC Motor and Stepper Motor Control with Raspberry Pi.

Project based experiments:

- Raspberry Pi based Smart Phone Controlled Home Automation.
- Smart Traffic light Controller.
- Smart Health Monitoring System.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING:

TIRUPATI-517502

R-20 – Scheme of Instructions effective from the academic year 2023 – 24

Programme Scheme

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING (AUTONOMOUS)

SRI VENKATESWARA UNIVERSITY TIRUPATI-517502

(A.P), INDIA.

About the Department

- Electronics and Communication Engineering (ECE) is an emerging stream that offers firm promises to advance students career an edge. Studying this domain of engineering would mean mastering the skills related to electronics and communication engineering as well as having an insight into the world of software skills.

- The U.G. Programme in Electronics and Communication Engineering (ECE) was started under the Department of Electrical and Electronics Engineering (EEE) in 1971 with an intake of 30. After a long co-existence with Department of EEE, due to administrative reasons and anticipated accelerated growth, it got separated and formed as Department of Electronics and Communication Engineering in September, 2011, to meet the requirements of the emerging trends in Electronics as well as communications for bright needs of the students, industry and society at large.

- At Present, the Department is offering two UG programmes, B.Tech (ECE) both Regular and Self-Supporting with an intake of 60 and two PG programmes 1. M.Tech in Communication Systems started in 2011-12 with an intake of 18 and enhanced to 24 in 2014-15 2. M.Tech in Signal Processing started in 2013-14 with intake of 18 and enhanced to 24 in 2014-15 besides offering Full-time/ Part-time Research programme. Both B.Tech (ECE) Regular and M.Tech in Communication Systems Programmes are accredited with NBA. It has well equipped laboratories. The Department also provides Research guidance based on the specialized area and continuously producing the Doctor of Philosophy Degrees (Ph.D). So far more than 150 Ph. D degrees have been awarded in various disciplines. The ECE Department is closely working with National Atmospheric Research Laboratory (NARL, Gadanki). The department is offering consultancy to Tirumala Tirupati Devasthanams (TTD) and Amararaja Power Systems.

Vision of the Department:

- To be a lead department imparting quality and value embedded higher education and research emphasizing freedom of learning and practice.

Mission of the Department:

- Transforming students into full-fledged professionals and to become leaders in dynamic global environment.
- Augmenting knowledge and technologies in rapidly advancing fields of Electronics and Communication Engineering
- Promoting in depth research and create centre of excellence in thrust areas.

Program specific outcomes (PSOs)

- PSO1- Competence in analysis and design of analog and digital system using hardware and software tools.
- PSO2- Understand, analyse the present and future generations of wireless communication technologies.

PROGRAM OUTCOMES

- PO1- **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems related to Electronics & Communication and Engineering.
- PO2- **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems related to Electronics & Communication Engineering and reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3- **Design/development of solutions:** Design solutions for complex engineering problems related to Electronics & Communication Engineering and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4- **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5- **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- PO6- **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the Electronics & Communication Engineering professional engineering practice.
- PO7- **Environment and sustainability:** Understand the impact of the Electronics & Communication Engineering professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8- **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9- **Individual and team work:** Function effectively as an individual, and

  as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10- **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design

documentation, make effective presentations, and give and receive clear instructions.

- PO11- **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to manage projects and in multidisciplinary environments.
- PO12- **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Educational Objectives (PEOs)

ECE graduates will

- PEO 1- have adequate analytical capabilities and practical knowledge to attend to the current challenging tasks and to absorb futuristic trends.
- PEO 2- have adequate analytical capabilities and practical knowledge to attend to the current challenging tasks and to absorb futuristic trends.
- PEO 3- able to abreast with the latest hardware and software design techniques and cutting-edge technologies.
- PEO 4- able to enhance the knowledge and skills continually throughout their career and to make them capable to adapt in diverse environments.
- PEO 5- imbibe leadership qualities among the students to take up challenging roles in their career by ensuring professional ethics with high sense of social responsibility.

All undergraduate students shall register for NCC/NSS/NSO activities in First semester of B.Tech. A student will be required to participate in an activity for two hours in a week during second and third semesters i.e., 60 hours. Grade shall be awarded as Satisfactory or Unsatisfactory in the mark sheet on the basis of participation, attendance, performance and behaviour. If a student gets an unsatisfactory Grade, he/she shall repeat the above activity in the subsequent years, in order to complete the degree requirements.

CMOS VLSI Design	Cyber Security	Neural Networks and Fuzzy Logic	Satellite Communication	Embedded System Design
Information Theory and Coding	Nano Electronics	Radar Engineering	Fiber Optic Communication	Real Time Operating Systems
Optimization Techniques	Sensors and Transducers	Testing and Testability	Wireless Communication	FPGA Based System Design
Hardware-Software Co-design	Electronic Instrumentation	Bio-Medical Instrumentation	MEMS	Digital Signal Processors & Architectures

Courses offered for Honors degree

S.No.	Course Code	Course Title	Prerequisite if any	Contact Hours per week		Credits
				L	T	
Any 4(Four)From the Following 6(Six) Courses						
1	ECHN01	Advanced Digital Signal Processing	Digital Signal Processing	3	1	4
2	ECHN02	Antennas and Radiating Systems	Antenna and Wave Propagation	3	1	4
3	ECHN03	Wireless and Mobile Communications	Digital Communications	3	1	4
4	ECHN04	Voice and Data Networks	NIL	3	1	4
5	ECHN05	Advanced Communication Networks	Computer Networks	3	1	4
6	ECHN06	Pattern recognition and Machine Learning	Digital Image & Video Processing	3	1	4
Two courses to be pursued through MOOCS with duration of 8 weeks each.						
7	ECHN07	Remote Sensing				2
8	ECHN08	Optical Networks				2
9	ECHNO9	Cloud Computing				2
	Total Credits					**20**

Courses offered for Minors in Electronics

S. No	Course Code	Course Title	Prerequisite if any	Contact Hours per week			Credits
				L	T	P	
Any 4(Four)From the Following 6(Six) Courses							
1.	ECMN01 (EC 104)	Electronic Devices	NIL	3	1	0	4
2.	ECMN02 (EC305C)	Digital Logic Design	NIL	3	1	0	4
3.	ECMN03 (EC306C)	Analog Circuits	Electronic Devices	3	1	0	4
4	ECMN04(EC404C)	IC Applications	Analog Circuits	3	1	0	4
5	ECMN05 (EC604C-Program Elective-II)	Electronic Instrumentation	Electronic Devices	3	1	0	4
6	ECMN06 (EC603C --Program Elective-I)	CMOS VLSI Design	1.Electronic Devices 2.Analog Circuits	3	1	0	4
Two courses to be pursued through MOOCS with a duration of 8 weeks							
7	ECMN07	Internet of Things and Applications					2
8	ECMN08	Sensors and Transducers					2
9	ECMN09	Micro-electromechanical Systems (MEMS)					2
10	ECMN10	Microprocessors and Micro Controllers					2
	Total Credits						20

Courses offered for Minors in Communications

S.No	Course Code	Course Title Offered in Semester	Prerequisite if any	Contact Hours per week			Credits
				L	T	P	
Any 4(Four)From the Following 7(Seven) Courses							
1.	ECMN11 (EC303C)	Signals & Systems	1.Mathematics-I 2.Mathematics-II	3	1	0	4
2.	ECMN12 (EC402C)	Probability theory & Stochastic Process	1.Mathematics-I 2.Mathematics-II	3	1	0	4
3.	ECMN13 (EC405C)	Analog Communications	NIL	3	1	0	4
4.	ECMN14 (EC505C)	Digital Communications	1. Signals & Systems 2. Probability theory & Stochastic Process	3	1	0	4
5.	ECMN15 (EC504C)	Antenna Wave Propagation	Electromagnetic Waves and Transmission Lines	3	1	0	4
6.	ECMN16 (EC601C)	Microwave Engineering	Antenna Wave Propagation	3	1	0	4
7.	ECMN17 (EC602C)	Computer Networks	NIL	3	1	0	4
8.	ECMN18 (EC604C-Program Elective-II)	Cyber Security	NIL	3	1	0	4

Two courses to be pursued through MOOCS with duration of 8 weeks							
9.	ECMN19	Satellite Communications					2
10.	ECMN20	Fiber optic Communications					2
11.	ECMN21	Mobile Communications					2
			Total Credits				20

FIRST YEAR SYLLABAS

I Semester MA 101MATHEMATICS –I
(I Semester - Common for all branches)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Differential Equations: Linear differential equations of second and higher order with constant coefficients-particular integrals-homogeneous differential equations with variable coefficients-method of parameters-simulation equations.

UNIT II

Laplace Transforms I: Laplace transforms of standard functions-inverse transforms-transforms of derivatives and integrals-derivatives of transforms-integrals of transforms.

UNIT III

Laplace Transforms II: Transforms of periodic functions-convolution theorem-applications to solution of ordinary differential equations.

UNIT IV

Calculus: Roll's and Mean value theorems - Taylor's and Maclaurins's series-maxima and minima for functions of two variables - Infinite series - Convergence Tests series of positive terms - comparison, Ratio tests - Alternating series - Leibnitz's rule - Absolute and conditional convergence.

UNIT V

Multiple Integrals: Curve tracing (both Cartesian and polar coordinate) - Evaluations of double and Triple integrals-change of order of integrations-change of variables of integrations-simple applications to areas and volumes.

Text/Reference Books:

1. B S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. M K Venkataraman, Engineering Mathematics, National Publishing Company, Chennai.
3. B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
4. Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

1. Analyze differential equations and solve them and also apply differential equations to engineering problems.
2. Use transformation to convert one type into another type presumably easier to solve, and also use shift theorems to compute the Laplace transform, inverse Laplace transform and the solutions of second order, linear equations with constant coefficients.

3. Solve an initial value problem for an nth order ordinary differential equation using the Laplace transform, and also expand functions as power series using Maclaurin's and Talor's series
4. Optimize the problems related to or, computer science, probability and statistics and also draw an approximate shape by the study of some of its important characteristics such as symmetry, tangents, regions enclosing curve tracing method to find length, area, volume.
5. Use multiple integral in evaluating area and volume of any region bounded by the given curves.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	3	3	1	-	1	2	1	2	2	3	-	-	-
CO2	1	3	3	1	-	1	1	1	2	1	3	-	-	-
CO3	2	3	3	1	-	1	2	1	2	2	3	-	-	-
CO4	1	2	2	1	-	1	2	1	1	1	3	-	-	-
CO5	1	2	1	2	-	2	1	1	1	1	3	-	-	-

I & II Semesters CY 101/ CY 202 ENGINEERING CHEMISTRY
(I Semester - CY 101 for Civil & Mechanical Engineering)
(II Semester -CY 202 for EEE, ECE & CSE) Instruction:
3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Atomic and molecular structure (12 lectures)
Postulates of quantum chemistry. Schrodinger equation. Particle in a box solution, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomics, Pi-molecular orbitals of butadiene and benzene. Band structure of solids and the role of doping on band structures

UNIT II

Spectroscopic techniques and applications
Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclearmagnetic resonance and magnetic resonance imaging, surface characterization techniques.

UNIT III

Chemical equilibria, Intermolecular forces and potential energy surfaces
Use of free energy in Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cellpotentials, the Nernst equation and applications. Use of free energy considerations in metallurgy through Ellingham diagram. Equations of state of real gases and critical phenomenon.

UNIT IV

Periodic properties
Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular
geometries, Born- Haber cycle, The use of reduction potentials, Properties of ionic and covalent compounds.

UNIT V

Stereochemistry, Organic reactions and synthesis of a drug molecule
Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings Synthesis of a commonly used drug molecule.

Reference/Textbooks:

1. University chemistry, by B. H. Mahan
2. Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane
3. Fundamentals of Molecular Spectroscopy, by C. N. Banwell
4. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan
5. Physical Chemistry by P. W. Atkins
6. Organic Chemistry: Structure and Function by K. P. C. Volhardt and N. E. Schore, 5th Ed.
7. Principles of physical chemistry, Puri, Sharma and Pattania

Course Outcomes: At the end of the course, students will be able to

1. Analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular Forces.
2. Rationalize bulk properties and processes using thermodynamic considerations.
3. Distinguish the ranges of the electromagnetic spectrum used for exciting different Molecular energy levels in various spectroscopic techniques.
4. Rationalize periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity, and also list major chemical reactions that are used in the synthesis of molecules.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	1	1	-	-	-	-	-	1	-	-	-	-	-
CO2	1	1	3	-	-	-	-	-	1	-	-	-	-	-
CO3	1	2	2	2	-	-	-	2	1	-	-	-	-	-
CO4	1	1	2	2	2	-	1	2	1	1	-	-	-	-

I Semester CH 102 CHEMISTRY FOR CHEMICAL ENGINEERING – I
(I Semester –For Chemical Engineering)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Introduction to quantum theory for chemical systems:
Schrodinger equation, Applications to Hydrogen atom, Atomic orbitals, many electron atoms

UNIT II

Chemical bonding in molecules:
MO theory, Structure, bonding and energy levels of bonding and shapes of many atom molecules, Coordination Chemistry, Electronic spectra and magnetic properties of complexes with relevance to bio-inorganic chemistry, organ metallic chemistry

UNIT III

Introduction to Stereochemistry:
Stereo descriptors – R, S, E, Z. Enantiomers and Diastereomers. Racemates and their resolution. Conformations of cyclic and acyclic systems.

UNIT IV

Reactivity of organic molecules:
Factors influencing acidity, basicity, and nucleophilicity of molecules, kinetic vs. thermodynamic control of reactions

UNIT V

Strategies for synthesis of organic compounds:
Reactive intermediates substitution, elimination, rearrangement, kinetic and thermodynamic aspects, role of solvents.

Text / Reference Books:

1. Physical Chemistry: G.W.Castellan, Narosa
2. Organic Chemistry: Finar; I.L. — Vol — I & II, Pearson Education
3. Organic Chemistry: Morrison & Boyd; PHI/Pearson Education.
4. Physical Chemistry: P. W. Atkins: Oxford.
5. A Text book of Physical Chemistry: K. L. Kapoor: Macmillan
6. A guide Book to Mechanism in Organic Chemistry: Peter Sykes
7. Organic Chemistry: Loudon: Oxford

Course Outcomes: At the end of the course, **s**tudents will be able to

1. Appreciate quantum theory of chemical systems
2. Appreciate aliphatic chemistry and stereochemistry
3. Write simple mechanisms.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	1	1	-	-	-	-	-	1	-	-	-	-	-
CO2	1	1	3	-	-	-	-	-	1	-	-	-	-	-
CO3	1	2	2	2	-	-	-	2	1	-	-	-	-	-

I & II Semester EN 203 ENGLISH
(I Semester - EN 103 for ChE, CE & ME) (II Semester - EN 203 for EEE, ECE & CSE)
Instruction: 2(L) Credits: 2 Assessment: 40 + 60

UNIT I
Vocabulary Building
The concept of Word Formation- Root words from foreign languages and their use in English- Acquaintance with prefixes and suffixes from foreign languages in English form derivatives- Synonyms, antonyms, and standard abbreviations.

UNIT II
Basic Writing Skills
Sentence Structures – Use of phrases and clauses in sentences –Importance of proper punctuation - Creating coherence – Organizing principles of paragraphs in documents -Techniques for writing precisely

UNIT III
Identifying Common Errors in Writing
Subject-verb agreement -Noun-pronoun agreement -Misplaced modifiers -Article -Prepositions - Redundancies -Clichés

UNIT IV
Nature and Style of sensible Writing
Describing - Defining - Classifying –Providingexamples or evidence –Writingintroductionand conclusion

UNIT V
Writing Practices
Comprehension - Précis Writing –EssayWriting

Reference/Textbooks:

1. Practical English Usage. Michael Swan. OUP. 1995.
2. Remedial English Grammar. F.T. Wood. Macmillan.2007
3. On Writing Well. William Zinsser. Harper Resource Book. 2001
4. Study Writing. LizHamp- Lyonsand Ben Heasly. Cambridge University Press. 2006.
5. Communication Skills. Sanjay Kumarand Pushpalata. Oxford University Press. 2011.
6. Exercises in Spoken English. Parts. I-III. CIEFL, Hyderabad. Oxford University Press.

Course Outcomes: At the end of the course, students will be able to

1. Learn the elements of grammar and composition, literary texts such as Short stories and prose passages of English Language.
2. Maintain linguistic competence through training in vocabulary, sentence structures and pronunciation.
3. Develop communication skills by cultivating the habit of reading comprehension passages, language skills like listening, speaking, reading and writing.

4. Make use of self-instructed learner friendly modes of language learning through competence.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	-	-	-	-	-	-	2	-	3	2	2	3	-	-
CO2	-	-	-	-	3	-	-	-	2	-	-	1	-	-
CO3	-	-	-	-	-	-	-	-	3	-	3	2	-	-
CO4	-	-	-	-	-	-	-	-	3	-	2	3	-	-

I Semester EE104 BASIC ELECTRICAL AND ELECTRONICS ENGG
(I Semester – for ChE, CE & ME)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

Unit-I
Electric DC Circuits: Kirchhoff's Voltage & Current laws, Superposition Theorem, Star – Delta Transformations. AC Circuits: Complex representation of Impedance, Phasor diagrams, Power & Power Factor, Solution of Single Phase Series & Parallel Circuits. Solution of Three Phase circuits and Measurement of Power in Three Phase circuits.

Unit-II
Single Phase Transformers: Principle of Operation of a Single phase Transformer, EMF equation, regulation and Efficiency of a single phase transformer. DC Machines: Principle of Operation, Classification, EMF and Torque equations, Characteristics of Generators and Motors

UNIT-III
Three Phase Induction Motor: Principle of Rotating Magnetic Field, Principle of Operation of 3-φ I.M., Torque-Speed Characteristics of 3-φ I.M.

UNIT-IV
P-N junction operation, diode applications, Zener diode as regulator. Transistor and applications: Introduction to transistors, BJT Characteristics, biasing and applications

UNIT-V
Integrated Circuits: Operational amplifiers, Applications: adder, subtractor, Integrator and Differentiator. Digital Circuits: logic gates, Combinational Logic circuits, Flip-Flops, counters and shift registers, Laboratory measuring instruments: digital multi-meters and Cathode Ray Oscilloscopes (CRO's).

Textbooks:
1. Electrical Technology by Edward Hughes
2. Basic Electrical Engineering by Nagrath and Kothari

Course Outcomes: At the end of the course, students will be able to

1. Understand the basic concepts of D.C. single phase and 3- phase supply and circuits and solve basic electrical circuit problems
2. Understand the basic concepts of transformers and motors used as various industrial drives.
3. Understand the concept of power factor improvement for industrial installations and concepts of most economical power factor.
4. Understand the operation and characteristics of diodes, transistors, integrated circuits and digital circuits.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	2	2	2	1	1	1	1	2	2	1	-	-
CO2	3	3	-	-	-	1	1	-	-	1		1	-	-
CO3	3	3	3	3	2	1	1	1	1	1	2	-	-	-
CO4	2	3	2	1	3	1	-	-	2	2	3	2	3	2

I & II Semesters
ME 105 / ME 205ENGINEERING GRAPHICS AND DESIGN
(I Semester - ME105 for ChE, CE & ME)
(II Semester - ME205 for EEE, ECE & CSE) Instruction: 2(L) +3
(Drg) /week Credits: 3.5 Assessment: 40 + 60

Unit I
Introduction to Engineering Drawing
Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only);Cycloid,Epi-cycloid, Hypo-cycloid and Involutes.

Unit II
Scales- Scales– construction of Plain &Diagonal Scales.
Projections of points, lines - Projections of Points and lines inclined to both planes, including traces;
Question Paper
Modular – 4 questions from Units I t0 IV, 15 marks each

Unit III
Projections of planes
Projections of planes (Regular surfaces only) inclined Planes-Auxiliary Planes
Projections of Regular Solids (Simple solids – cylinder, cone, prism & pyramid) those inclined to both the Planes-Auxiliary Views

Unit IV
Isometric Projections& Orthographic projections
Principles of Orthographic Projections-Conventions Draw simple objects, dimensioning and scale. Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

Unit V
Introduction to CAD
CAD workstation and peripherals, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars Standard, Object Properties, Draw, Modify and Dimension, Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom used in CAD, Select and erase objects.

Text/Reference Books:

1. Bhatt N.D., Panchal V.M. &Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House.
2. Shah, M. B & Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education.
3. Agrawal B. & Agrawal C.M. (2012) Engineering Graphics, TMH Publication.

4. Narayana, K.L. &P Kannaiah(2008),Text book on Engineering Drawing, Scitech Publishers.
5. Corresponding set of) CAD Software Theory and User Manuals

Course Outcomes: At the end of the course, the student will be able to

1. Make a distinction between first angle projection and third angle projection of drawing.
2. Draw hyperbola, parabola, involutes and cycloidal curves.
3. Draw sections of solids including cylinders, cones, prisms and pyramids.
4. Draw orthographic projections of lines, planes, solids and sections of solids.

.

I & II Semesters EN 106 / EN 206 ENGLISH COMMUNICATION LAB
(I Semester - EN 106 for ChE, CE & ME)
(II Semester - EN206 for EEE, ECE & CSE)

Instruction: 0(L) +3(Lab) /week Credits: 1.5 Assessment: 40 + 60

Listening Comprehension -Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations

Reference/Text Books:

1. Practical English Usage. Michael Swan. OUP. 1995.
2. Remedial English Grammar. F.T. Wood. Macmillan.2007
3. On Writing Well. William Zinsser. Harper Resource Book. 2001
4. Study Writing. LizHamp– Lyons and Ben Heasly. Cambridge Univ. Press. 2006
5. Communication Skills. Sanjay Kumar and Pushpalata. Oxford Univ. Press.2011
6. Exercises in Spoken English. PartsI-III.CIEFL, Hyderabad. Oxford Univ. Press

Course Outcomes:

The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	-	-	-	-	-	-	-	-	1	3	2	3	-	-

I Semester PY 102 MODERN PHYSICS
(For I Semester –EEE, ECE & CSE)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Quantum Mechanics : Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – Davison and Germer Experiment – G.P. Thomson Experiment – Heisenberg's Uncertainty Principle – Schrödinger's Time Independent and Time Dependent Wave equation – Significance of Wave Function – Electron in an Infinite Square Potential Well – Probability Densities and Energy Levels.

UNIT II

Band Theory of Solids : Classical Free Electron Theory of Metals – Success and Failures – Quantum Free Electron Theory – Fermi Factor – Electron in Periodic Potential – Bloch Theorem – Kronig – Penney Model – Distinction between Metals , Insulators and semiconductors- Energy Band Structures.

UNIT III

Semiconductors – Introduction- Intrinsic and Extrinsic Semiconductors – Density of states – Carrier Concentrations at Equilibrium – Hall Effect. PN Junction Diode – Energy Band Diagram – Forward and Reverse Bias- Current – Voltage characteristics – Applications- Zener Diode – Light Emitting Diode- Photo diode -Solar Cell – Semiconductor Laser.

UNIT IV

Electromagnetism and magnetic properties of Materials:

Laws of Electro statistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws- Maxwell Equations – Polarization – Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization – Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and hysteresis, Applications of ferromagnetic materials.

UNIT V

Nanophysics and Nanotechnology: Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C60 (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials.

7. V. Raghavan "Material Science", Tata McGraw Hill Publications.
8. M.S. Ramachandra Rao and Shubra Singh, `Nanoscience and Nanotechnology` Wiley India Pvt. Ltd, New Delhi.

Course Outcomes: At the end of the course, students will be able to

1. Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering courses and also understand the quantum mechanics and ultimately the quantum behavior of charged particles when they are in motion.
2. Identify and apply appropriate analytical and mathematical tools of Physics in solving Engineering problems and also apply knowledge of band theory in the area of electronics and understanding the basic electron transportation phenomenon in microdevices.
3. Understand the principles in electrostatics and electromagnetics and magnetic properties of materials, size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices.
4. Think and participate deeply, creatively, and analytically in emerging areas of engineering technology, analyze the basics of instrumentation, design of laboratory techniques, measurement, data acquisition, interpretation, and analysis and also provide multidisciplinary experiences throughout the curriculum.

Mapping of course outcomes with program outcomes:

CO4	2	1	1	1	-	-	-	-	-	-	-	1	-	-

I & II Semesters CS 103 / CS203 PROGRAMMING FOR PROBLEM SOLVING
(I Semester –CS 103 for EEE, ECE & CSE)
(II Semester –CS 203 for ChE, CE & ME) Instruction: 3(L)
+1(T) /week Credits: 4 Assessment: 40 + 60

Course Objectives:

1. To acquire problem solving skills
2. To be able to develop flowcharts and algorithms for the given problem
3. To learn how to write modular programs in C
4. To enable to use arrays, pointers, strings and structures in solving problems.
5. To explain the difference between object-oriented programming and procedural programming.
6. To understand principles of object-oriented programming.

UNIT-I

Problem Solving: Problem solving techniques, Computer as a problem-solving tool, Programming Languages – Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements: Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements: while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continue statements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions, passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, accessing structures, Nested structures, Arrays of structures, Structures containing arrays, Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, reading from a file, Writing onto a file.

UNIT V

Introduction to Object-Oriented Programming (OOP): Need for OOP, Principles of OOP, Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

Course Outcomes: At the end of the course, student will be able to

1. Develop and test programs in C and correct syntax and logical errors.
2. Implement conditional branching, iteration and recursion, and decompose a problem into functions and synthesize a complete program.
3. Use arrays, pointers, strings and structures to formulate algorithms and programs and also use file to perform read and write operations.
4. Handle programming assignments based on class, abstraction, encapsulation, overloading and inheritance.

I & II Semesters CE 104 / CE 204 ENGINEERING MECHANICS
(I Semester –CE 104 for EEE)
(II Semester –CE 204 for CE & ME)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I
STATICS : Basic concepts – System of force, Concurrent and non-concurrent coplanar and non-coplanar forces – Resultant – Moment of force and its application – Couples and resultant of force systems – Equilibrium of systems of forces – Free body diagrams, Equations of equilibrium of coplanar systems and spatial systems.

UNIT II
Analysis of plane trusses: Types of supports – Types of trusses – Analysis of trusses using method of joints and method of sections.

UNIT III
CENTRE OF GRAVITY AND MOMENTS OF INERTIA: Theory of Pappus – Centroids of composite figures – Areas of gravity of bodies – Moment of inertia – Parallel and perpendicular axis theorems – Moments of inertia of composite areas (rolled and built up sections) – Radius of gyration of areas.

UNIT IV
SIMPLE STRESES AND STRAINS : Elasticity and plasticity – Types of stresses and strains – Hooke's law – Stress-strain diagram for mild steel – Working stress – Factor of safety.
Lateral strain – Poisson's ratio and volumetric strain – Elastic moduli and relationship between elastic constants – Bars of varying section – Composite bars – Temperature stresses.

UNIT V
STRAIN ENERGY: Gradual, sudden and impact loading – Endurance limit principles of virtual work and its applications.

TEXTBOOKS:

1. Ghose D.N. – Applied Mechanics and Strength of Materials.
2. Timoshenko & Young – Engineering Mechanics.
3. Junarkar SB – Mechanics of Structures – Vol. I.
4. Junarkar SB – Elements of Applied Mechanics.

Course Outcomes: At the end of the course, student will be able to

1. Apply the basic knowledge of force system.
2. Know the types of supports occur in civil engineering structures
3. Know the geometrical properties of different cross sections.
4. Understand different types of stresses and strains, elastic constants, and also understand the behavior of different internal forces under different types of loading.

I Semester EC 104 ELECTRONIC DEVICES
(I Semester - for ECE only)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Semiconductor Materials: Atomic structure, Electrons in periodic Lattices, Classifying Materials: Semiconductors, conductors and insulators, Semiconductor material groups, Covalent bonding, Energy Bandgaps, Energy bands in intrinsic and extrinsic silicon /Germanium, Density of Impurity States, Electrical Conductivity and Mobility, , Electronic Properties of N-type and P-type semiconductors, Carrier transport: diffusion current, drift current, mobility and resistivity; sheet resistance, design of resistors. Generation and recombination of carriers; Poisson and continuity equation, P-N junction characteristics, I-V Characteristics, and small signal switching models, Diode resistances and diode capacitances.

UNIT II

Diode models, Avalanche breakdown, Zener diode, Schottky diode, Tunnel diode, Varactor diode and their applications, Testing a diode.
Rectifiers: Diode equivalent circuits, Analysis of diode circuits, Characteristics and comparison of Half-wave, Full-wave and Bridge rectifiers, Analysis of filters (C, L, LC, and CLC) used with Full-wave rectifiers, line regulation and load regulation.

UNIT III

Bipolar Junction Transistors: Bipolar Junction Transistor action, PNP and NPN transistors, CB, CE, and CC configurations and their I-V characteristics, Analytical expressions for transistor characteristics, Typical junction voltages and maximum ratings. Determination of h-parameters from BJT characteristics, Ebers-Moll Model, Multi Emitter transistor.

UNIT IV

Bipolar Junction Transistor Biasing: Operating point, stabilization, thermal runaway.
Field Effect Transistors: Characteristics and parameters of JFET, Pinch off and saturation regions, MOS capacitor, Depletion and Enhancement type of MOSFET, I-V characteristics, and small signal models of MOS transistor, UJT and its I-V characteristics, Metal Semiconductor FET, FET biasing schemes.

UNIT V

Optoelectronic Devices: Principle of operation and characteristics of LED. LCD, LDR, Photoconductor, Photodiode, Phototransistor, Solar cell, PIN photodiode, Charge-Coupled Devices, APD (avalanche photodiode) and their applications.
Power Semiconductor Devices: Device structure, equivalent circuit and characteristics of PNPN Diode, SCR, DIAC and TRIAC.

7. Y. Tsividis and M. Colin, “Operation and Modeling of the MOS Transistor,” Oxford University Press, 2011.

Course Outcomes: At the end of the course, student will be able to

1. Understand the principles of semiconductor physics of the intrinsic, *p* and *n* type materials and also the characteristics of the diode and some special function diodes and their application in electronic circuits.
2. Use mathematics to analyze electronic devices typical of those in switching and rectifier circuits.
3. Understand and utilize the mathematical models of semiconductor junctions and transistors for circuits and systems.
4. Understand the characteristics of the transistors and opto-electronic devices and their application in electronic circuits and also apply thyristors in power switching and control circuits

I Semester MA 104 PROBABILITY AND STATISTICS
(I Semester - for CSE only)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I
Probability: Introduction, Axiomatic approach, Conditional probability, Baye's theorem, Stochastic process, Random variables, Discrete and Continuous distributions, Expectation, Variance, moments, Moments generating functions.

UNIT II
Distributions - Binomial, Poisson, Normal, Uniform, Exponential and Gamma. Properties and applications.

UNIT III
Estimator-Estimation of parameters by Method of moments and maximum likelihood-Testing of hypothesis-small sample tests-t-test, F-test and Chi-Square test.

UNIT IV
Correlation: Curve fitting by method of least squares-Linear, Quadratic and Exponential Fitting-Correlation-rank correlation-Regression analysis-Multiple correlation.

UNIT V
Quality Control: Concept of quality of a manufactured product-Causes of variation-Principle of Shewart Control charts-X-Chart, R-Chart, p-Chart, np-chart and C-Chart.

I & II Semesters ME 105 / ME 205 WORKSHOP/MANUFACTURING PRACTICE
(ME 105 for EEE, ECE & CSE)
(ME 205 for ChE, CE & ME)
Instruction: 0(L) +3 (lab)/week Credits: 1.5 Assessment: 40 + 60

Workshop Practice: Five practices among

1. Machine shop
2. Fitting shop
3. Carpentry
4. Electrical wiring
5. Welding shop
6. Casting
7. Smithy
8. Plastic moulding & Glass Cutting

Examinations could involve the actual fabrication of simple components, utilizing one or More of the techniques covered above.

Detailed Contents:

1. Manufacturing Methods-casting, forming, machining, joining, advanced manufacturing
2. methods
3. CNC machining, Additive manufacturing
4. Fitting operations & power tools.
5. Electrical &Electronics
6. Carpentry
7. Plastic moulding. Glass cutting
8. Metal casting.
9. Welding (arc welding & gas welding), brazing

The above course content is learnt by online videos/ppt presentations.

Laboratory Outcomes

1. Upon completion of this laboratory course, students will be able to fabricate components with their own hands.
2. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
3. By assembling different components, they will be able to produce small devices of their interest.
4. Course Outcomes: Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry to fabricate components using different materials.

Mapping of course outcomes with program outcomes:

I & II Sem CS 106/ CS206 PROGRAMMING FOR PROBLEM SOLVING LAB
(CS 106 for EEE, ECE & CSE)
(CS 206 for ChE, CE & ME)
Instruction: 0(L) +3 (Lab)) /week Credits: 1.5 Assessment: 40 + 60

Course Objectives:

1. To provide exposure to problem-solving through programming
2. To train the student on the concepts of the C- Programming language

The following programs shall be developed and executed in Programming Language C.

1. Programs on conditional control constructs.
2. Programs on iterative statements (while, do-while, for).
3. Programs on recursive procedures.
4. Programs on arrays, matrices (single and multi-dimensional arrays).
5. Programs using user defined functions, demonstrating parameter passing methods viz. call by value and call by reference.
6. Programs using different library functions viz, ctype.h, stdio.h, stdlib.h, string.h, conio.h and pre-processor directives.
7. Programs using pointers (int pointer, char pointer) and pointer arrays.
8. Programs on structures and unions.
9. Programs on file processing.
10. Programs on pointers to structures and self-referential structures.

Course Outcomes: After completion of this course the student would be able to

1. Develop the C code for the given algorithm.
2. Understand, debug and trance the execution of program written in C language.

Refence Books:

1. Scheldt H, C: The complete Reference, 4th Edition, Tata McGraw-Hill, 2022.

II Semester MA 201 MATHEMATICS II
(II Semester - for all branches)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

Unit I
Matrices: rank of a matrix-solution of system of linear equations-Eigen values, vectors –Canley-Hamilton theorem-quadratic forms-diagonalization.

Unit II
Vector Calculus: Gradient, Divergence, Curl of a vector and related properties-line, surface, volume integrals- Green's, Stokes's and Gauss Divergence theorems and its applications.

Unit III
Fourier Series: Fourier series-even and odd functions, periodic functions-half range sine and cosine series-harmonic analysis.

Unit IV
Special Functions I: Gamma and Beta functions-series solutions of differential equations-ordinary points.

Unit V
Special Functions II: Bessel function-recurrence formulae-generating function for Jn(X)-Lengender polynomials-recurrence formulae-generating function for Pn(X) - Rodriguez's formula - orthogonality of Lengender polynomials.

Text/Reference Books:

1. B S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. M K Venkataraman, Engineering Mathematics, National Publishing Company, Chennai.
3. B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
4. Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

1. Use ranks of matrices to decide whether the system of linear equations is consistent or not, and also use Cayley Hamilton theorem to find inverses or powers of matrices.
2. Use eigen values and vectors to reduce quadratic forms to normal form, and also to analyze motion problems from real lines to curves and surfaces in 3-d and use tools such as divergence and curl of vector and gradient, directional derivatives that play significant roles in many applications.
3. Use green's theorem to evaluate line integrals along simple closed contours on the plane and also use stokes' theorem to give a physical interpretation of the curl of a vector field
4. Use the divergence theorem to give a physical interpretation of the divergence of a vector field, and also find the Fourier series to represent a function as a series of constants times sine and cosine functions of different frequencies in order to observe periodic phenomenon.
5. Evaluate certain improper integrals to make them simple with introduction of gamma and beta functions, and also study certain special functions that arise in solving certain ordinary differential equations to model many physical phenomena.

Mapping of course outcomes with program outcomes:

CO5	3	1	3	2	2	-	1	2	2	1	2	3	-	-

II Semester PY 202ENGINEERING PHYSICS
(II Semester - for ChE, CE& ME)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Wave Optics

Interference: Huygen`s Principle-Principle of Superposition-Interference of Light-Young`s double slit experiment- -Newton's Rings.

Diffraction: Fraunhofer Diffraction at a Single Slit and a Circular Aperture-Plane Diffraction grating –Resolving Power-Rayleigh`s Criterion-Resolving power of Grating and Microscope.

Lasers : Introduction – Spontaneous and Stimulated Emission of Radiation – Population Inversion – Types of Lasers – Ruby Laser – He-Ne Laser – Semiconductor Laser – Applications of Lasers.

UNIT II

Mechanics of Rigid Body

Rigid Body-Rotational Motion and Kinematics Relations-Kinetic Energy and Angular Momentum of a Rotating Body-Equation of Motion of a Rigid body (Torque of a Rigid Body)-Combined Translation and Rotational Motion of a Rigid Body- Body Rolling on an inclined Plane.

Mechanics of Continuous Media

Elasticity, Stress and Strain- Hook`s Law and Behaviour of Wire Under Load- Elastic Constants-Relation Between Elastic Modulii-Types of Supports, Beams and Loads-Different types of Bending-Cantilever with an End Load. Ultrasonic Waves - Sound Absorption and Reverberation -Sabine Formula - Acoustics of Buildings.

UNIT III

Electromagnetism and magnetic properties of Materials

Laws of Electro statistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws-Maxwells Equations – Polarization - Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization - Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and Hesteresis, Applications of ferromagnetic materials.

UNIT IV

Quantum Mechanics

Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – Davison and Germer Experiment – G.P. Thomson Experiment – Heisenberg's Uncertainty Principle – Schrödinger's Time Independent and Time Dependent Wave equation – Significance of Wave Function – Electron in an Infinite Square Potential Well – Probability Densities and Energy Levels.

UNIT V

Nano Physics and Nanotechnology

Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C60 (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials.

Text Books / Reference Books:

6. V. Raghavan "Material Science", Tata McGraw Hill Publications.
7. M.S. RamachandraRao and Shubra Singh, "Nanoscience and Nanotechnology" Wiley India Pvt. Ltd, New Delhi

Course Outcomes: At the end of the course, students will be able to

1. Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering course and also understand the quantum mechanics and ultimately the quantum behavior of charged particles when they are in motion.
2. Identify and apply appropriate analytical and mathematical tools of physics in solving engineering problems, and also apply the basic principles of mechanics of rigid body and continuous media and their applications unrest and the principles in electrostatics and electromagnetics and magnetic properties of materials.
3. Understand size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices, and also think and participate deeply, creatively, and analytically in emerging areas of engineering technology.
4. Learn the basics of instrumentation, design of laboratory techniques, measurement, data acquisition, interpretation, and analysis, and also provide multidisciplinary experiences throughout the curriculum.

Mapping of course outcomes with program outcomes:

II Semester CY203CHEMISTRY FOR CHEMICAL ENGINEERING-II
(II Semester - For ChE only)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

Colloids: Classification of colloids; Size and shape; preparation of sols; Origin of charge in Colloidal particles: Stability of Colloids: Kinetic. Optical & electrical Properties: Electro kinetic phenomena: Electrical Double Layer; Ultracentrifuge and Molecular weight determination of Macromolecules. Viscosity: Definition of viscosity of a liquid; Determination of Viscosity; Surface Tension: Introduction: Origin of Surface Tension: Surface energy, Capillarity; Contact Angle; Measurement of Surface Tension by Capillary rise method; Variation of Surface Tension of a liquid with Temperature and Concentration.

UNIT II

Kinetic theory of gases: Van der Waals Equation of state, Maxwell distribution law, vapour-liquid equilibrium, Colligative property. Adsorption: Introduction; Gibb's adsorption equation; Surface Excess; Adsorption isotherms: Freundlich, Langmuir, BET adsorption equations: Surface Films: Langmuir Balance: two-dimensional equation of state.

UNIT III

Introduction to quantum mechanics: Spectral shape pf Blackbody radiation, Planck's equation and a concept of quanta, breakdown of the classical equipartition principle, basic postulates of quantum mechanics, Hamiltonian function *&*Hamiltonian operator, important properties of a Hamiltonian operator, Heisenberg's uncertainty principle.

UNIT IV

Common organic reactions and their mechanisms: Friedel-Crafts, Claisen Condensation, Cannizaro, Aldolcondensation. Fischer-Troapsch synthesis, Birch reduction, pekins reaction, Riemer Tiemer reaction Wolf Kishner Reductio and Grignard reaction;

UNIT V

Aminoacids: Classification; General methods of preparation and properties of amino acids, polypeptide synthesis, General properties of proteins, colour tests, enzymes. Lipids, fats and steroids; nucleic acid, DNA & RNA - generation and structure. Carbohydrate: Classification, Glucose and fructose, Disaccharides: Sucrose, maltose.

Text / Reference Books:

1. Physical Chemistry: G.W.Castellan, Narosa
2. Organic Chemistry: Finar; I.L. — Vol — I & II, Pearson Education
3. Organic Chemistry: Morrison & Boyd; PHI/Pearson Education.
4. Physical Chemistry: P. W. Atkins: Oxford.
5. A Text book of Physical Chemistry: K. L. Kapoor: Macmillan
6. A guide Book to Mechanism in Organic Chemistry: Peter Sykes
7. Organic Chemistry: Loudon: Oxford

Course outcomes: At the end of the course, students will be able to

1. Understand the theoretical principles underlying molecular structure, bonding and properties
2. Know the fundamental concepts of structure and function in organic reactions, the use of Kinetics and thermodynamics to elucidate mechanisms of reactions
3. Predict reactivity patterns and propose reasonable mechanisms

Mapping of course outcomes with program outcomes:

II Semester EE 204 ELECTRICAL CIRCUITS
(II Semester - For ECE only)
Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT-I

Basic Circuit Concepts: Electrical circuit elements (R, L and C), Classification of Circuit elements, Voltage and Current sources, Source transformation Techniques– Kirchhoff's laws – Star-delta transformation – Network reduction techniques - Mesh and Nodal Analysis for D.C. Circuits– Concept of mutual inductance – Dot convention.

UNIT-II

Network Topology: Graph, tree, incidence matrix, and tie set and cut set matrices – Formulation of equilibrium equations based on graph theory. Duality and dual circuits

A.C. Fundamentals: Periodic waveforms – Average and effective values of different waveforms - Form factor and crest factor.

UNIT-III

A.C. Circuits: Phase and phase difference – Phasor notation – Concept of reactance, impedance, susceptance and admittance – Power factor -Active and reactive power – Impedance Triangle-Power triangle – Steady State analysis of single-phase A.C. circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel) – Phasor diagrams. Mesh and Nodal Analysis for A.C. Circuits.

UNIT-IV

Resonance: Series and Parallel Resonance – Resonant frequency, Half power frequencies, bandwidth and Quality Factor.

Locus diagrams: Current locus diagrams of RL and RC series circuits and two branch parallel circuits.

UNIT-V

Three Phase Circuits: Advantages of three phase systems – Phase sequence – Balanced and Unbalanced systems – Magnitude and phasor relationships between line and phase voltages and currents in balanced star and delta circuits – Analysis of balanced and unbalanced three phase circuits with star and delta connected loads, Measurement of three phase power – Two wattmeter method

Text Books:

1. Sudhakar and Shyammohan, Circuits and Networks: Analysis and Synthesis, 5th Edition, Tata McGraw-Hill
2. Ravish R. Singh, Network Analysis and Synthesis, Tata Mc. Graw Hill.
3. Abhijit Chakrabarti: Circuit Theory Analysis and Synthesis, 7th Revised Edition, Dhanpat Rai & Co.

Course outcomes: At the end of the course, students will be able to

CO1: Explain the operation & Characteristic of DC machines.
CO2: Explain the operation & performance of transformer.
CO3: Calculate efficiency of various Induction motors.
CO4: Determine regulation by synchronous impedance method (OC test & SC test).

UNIT-III
A.C. Circuits: Phase and phase difference – Phasor notation – Concept of reactance, impedance, susceptance and admittance – Power factor -Active and reactive power – Impedance Triangle-Power triangle - Steady State analysis of single-phase A.C. circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel) – Phasor diagrams. Mesh and Nodal Analysis for A.C. Circuits.

UNIT-IV
D.C. Machines: Construction of a D.C. Machine, **D.C. Generator:** Operation, Classification and EMF equation. **D.C. Motor:** Operation, Back E.M.F, Types, and Applications.
Single Phase Transformers: Principle of Operation, Types, EMF equation.

UNIT-V
Three Phase Induction Motor: Production of Rotating Magnetic Field, Construction and operation of 3-Phase Induction Motor.
Alternators: Construction and working of Alternators.

Text Books:

1. Sudhakar and Shyammohan, Circuits and Networks: Analysis and Synthesis, 5th Edition, Tata McGraw-Hill
2. Ravish R. Singh, Network Analysis and Synthesis, Tata Mc. Graw Hill.
3. Nagrath and Kothari,Basic Electrical Engineering, 4th Edition, Tata Mc. Graw Hill.
4. D. C. Kulshreshtha, “Basic Electrical Engineering”, McGraw Hill.

Course Outcomes: At the end of this course, students will be able to

1. Understand and analyze basic electric and magnetic circuits.
2. Study the working principles of electrical machines and power converters.
3. Introduce the components of low-voltage electrical installations.

Mapping of course outcomes with program outcomes:

II Semester CS 204 DATA STRUCTURES
(II Semester – for CSE only)
Instruction: 3 hr / week Credits: 3 Assessment: 3

Course objectives:

1. Develop skills to design and analyze linear and nonlinear data structures.
2. Develop algorithms for manipulating linked lists, stacks, queues, trees and graphs.
3. Develop recursive algorithms as they apply to trees and graphs.
4. Strengthen the ability to identify and apply the suitable data structure for the given real world problem
5. Understand the various techniques of sorting and searching

UNIT I

Introduction: Data types/Objects/Structures, Abstract definition of Data Structures, Overview of linear and nonlinear data structures, Analysis of algorithms, Algorithm specification, Asymptotic notation, Time-Space trade-off, Searching: Linear, Binary and Fibonacci search and their complexity analysis.

Arrays: Definition, Multidimensional arrays, Pointer arrays, Representation of arrays – Row major and Column major orders, Application of arrays – Polynomials, Sparse matrices representation.

UNIT II

Stacks and Queues: Introduction, ADT, Array representation, Operations and Applications of Stacks - Evaluation of expressions, Code generation for stack machines, Implementation of recursion, Factorial calculation and Towers of Hanoi; Circular Queue, Priority Queue, Double ended queue, Applications of Queues - Simulation, CPU Scheduling; Multiple stacks and queues

UNIT III

Linked Lists: Singly linked lists and chains, Circular linked list, Doubly linked list, Circular doubly linked list, Complexity analysis of the same, Linked representation of Stacks and Queues, Applications of linked lists - Polynomial representation, Sparse matrix multiplication, Dynamic storage management; Generalized list representation, Recursive algorithms for lists, Recursive lists

UNIT IV

Trees: Basic tree terminologies, Binary trees – Definition, Properties, ADT, Representations, Operations and Applications; Binary Search Trees, Heap Trees, Threaded binary trees, Height balanced trees – AVL Trees, Red black tree, Splay tree Their operations and complexity analysis.

UNIT V

Sorting Techniques: Insertion sort, Selection sort, Bubble sort, Quick sort, Radix sort Merge sort, External sort – Introduction, K-way Merge sort.

Graphs: Basic terminologies, Representations, ADT, Operations on graphs – DFS, BFS, Spanning trees, Biconnected components, Minimum cost spanning trees.

Course Outcomes: After completion of the course the students will be able to

1. Choose appropriate data structure for the specified problem definition.
2. Implement linear and non-linear data structures viz. stacks, queues, linked list, trees, graphs.

3. Apply the concept of trees and graph data structures for the real world problems.
4. Comprehend the implementation of sorting and searching algorithms

Text Books:

1. Ellis Horowitz and Sartaj Sahani, "Fundamentals of Data Structures", Computer Science Press.
2. Ellis Horowitz, Sartaj Sahni and Dinesh Mehta, Fundamentals of Data Structures in C++ Universities Press, Second Edition.
3. Debasis Samanta, Classic Data Structures, Second Edition, Prentice Hall of India

Reference Books:

1. Aaron M. Tenenbaum, Yedidyah Langsam and Moshe J. Augenstein "Data Structures Using C and C++", PHI Learning Private Limited
2. Jean Paul Trembley and Paul G. Sorenson, "An Introduction to Data Structures with applications", McGraw Hill.
3. R. Kruse etal, "Data Structures and Program Design in C", Pearson Education

Mapping of course outcomes with program outcomes:

II Semester CS 207 DATA STRUCTURES LAB

(for CSE only)

Instruction: 2 (Lab) hr / week Credits: 1 Assessment: 3

Course Objectives:

1. To understand the practical application of linear and nonlinear data structures.
2. To develop and execute programs in C++/C to solve problems using data structures such as arrays, linked lists, stacks, queues, trees, and graphs.
3. To develop and execute programs in C to implement various sorting and searching techniques

1. Develop an algorithm to implement stack using arrays. Code it in C++.
2. Develop an algorithm to evaluate a given postfix expression using stack. Code it in C.
3. Develop an algorithm to convert a given infix expression to postfix form using stacks. Code it in C.
4. Develop algorithms to implement i) Linear queue and ii) Circular queue using arrays. Code it in C++.
5. Develop an algorithm to implement double ended queue (de queue) using arrays. Code it in C++.
6. Develop algorithms using dynamic variables and pointers, to construct a singly linked list consisting of the following information in each node: student id (integer), student name (character string) and semester (integer). The operations to be supported are:
    a. Inserting a nodei) at the front of a list ii) at the rear of the list ii) at any position in the list
    b. Deleting a node based on student id. If the specified node is not present in the list, an error Message should be displayed.
    c. Searching a node based on student id. If the specified node is not present in the list an error message should be displayed.
    d. Displaying all the nodes in the list.
7. Develop an algorithm using dynamic variables and pointers to construct a stack of integers using singly linked list and to perform the following operations: Code the same in C++.
    i) Push, ii) Pop iii) Display (The program should print appropriate messages for stack overflow and stack empty). Code the same in C++.
8. Develop an algorithm using dynamic variables and pointers to construct a queue of integers using singly linked list and to perform the following operations:
    a. Insert b. Deletec. Display. The program should print appropriate messages for queue full and queue empty. Code the same in C++.
9. Develop an algorithm to support the following operations on a doubly linked list where each node consists of integer data object:
    a. Create a doubly linked list
    b. Insert a new node
    c. Delete the specific node
    d. Display the contents of the list. Code the same in C++.
10. Develop algorithms to
    a. Construct a binary tree of integers.

b. Traverse the binary tree using inorder, preorder and postorder. (both recursive and non-recursive versions)
c. Display the elements in the tree. Code the same in C++.

11. Develop algorithms to create a binary search tree (BST) and perform the following operations on it. Find (a) Minimum element (b) Maximum element (c) Search for a given element (d) Find predecessor of a node (e) Find successor of a node (f) Delete a node with specific key value. Code the same in C++.
12. Develop an algorithm to construct an AVL tree for the given set of elements. Code it in C++.
13. Develop algorithms to Sort the given list of elements (i.e. numbers or strings)
    (a) Insertion sort (b) Merge sort (c) Quick sort (d) Heap sort Code the same in C.
14. Develop algorithms to implement of graph traversals by applying:
    (a) BFS (b) DFS. Code the same in C/C++.
15. Develop algorithms to find out a minimum spanning tree of a simple connected undirected graph by applying: (a) Prim's algorithm (b) Kruskal's algorithm Code the same in C/C++.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Identify the appropriate data structure for given problem.
2. Have practical knowledge on the application of data structures.
3. Analyze the time and space efficiency of the data structure.

Text Books:

1. Object Oriented Programming with ANSI & Turbo C++, Ashok N. Kamthane, Pearson Education
2. Scheldt H, C: The Complete Reference, 4th Edition, Tata McGraw-Hill, 2002.
3. Ellis Horowitz, Sartaj Sahni and Dinesh Mehta, Fundamentals of Data Structures in C++ Universities Press, Second Edition.
4. Data Structures using C and C++, Yedidyah Langsam. MosheJ. Augenstein Aaron M. Tenenbaum, 2nd Edition, PHI
5. ADTs, Data Structures and Problem Solving with C++, Larry Nyhoff, Pearson Education.
   (a) Forest ecosystem. (b) Grassland ecosystem

Mapping of course outcomes with program outcomes:

CE 107 / CE 207 ENVIRONMENTAL SCIENCE *Audit Course*
(CE 107 for EEE, ECE &CSE) *No Univ.Exam*
(CE 207 for ChE, CE & ME)
Instruction: 4(L) Credits: 0(Zero) Assessment: 40 + 60

UNIT I
Environmental Studies and Natural Resources
Definition, Scope and importance of Environment, Environmental studies, Need for public awareness
Components of Environment- Atmosphere, Hydrosphere, Lithosphere.
Renewable and **Non-Renewable Resources and associated problems**
Water resources: Use and over utilization of surface and ground water, floods, drought, conflicts over water, dam benefits and problems.
Forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
Land resources: Land as a resource, land degradation, Man induced landslides, soil erosion and desertification.
Mineral resources: Use and overexploitation, Environmental effects of extracting and using mineral resources, case studies.
Food resources: World food problems, changes caused agriculture and overgrazing, effects of modern agriculture, fertilizer – pesticide problems, water logging, salinity, Case studies.
Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.
Role of an individual in conservation of natural resources.

UNIT II
Ecosystem and Biodiversity
Ecosystem - Concept of an ecosystem, Structure and functions of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.
Introduction, types, characteristic features, structure and function of the following ecosystem.
(c) Desert ecosystem. (d) Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries)
Biodiversity and its conservation:
Definition, genetic species and ecosystem diversity, Biogeographically classification of India.
Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation.
Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man – wildlife conflicts, Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT – III
Environmental pollution and Global Effects
Definition, Causes, Effects, and control measures of (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards
Solid waste Management: Causes, effects and control measures of urban and industrial wastes.
Role of an individual in prevention of pollution. Pollution case studiesDisaster management: Floods, earthquakes, cyclone, landslides, Tsunami. Climate change-Global warming, Acid rain, Ozone depletion.

UNIT – IV

Environment Issues and Management

- Environment and Human health – Epidemic diseases, HIV/AIDS, Aviation Flue, Water Borne Diseases.
- Environmental Impact Assessment, Sustainable Development, Clean Production and Clean Development Mechanisms
- Environment Legislation: Environmental Protection Act, Water Act, Air Act, Wild Life Protection Act, Forest Conservation Act, Public Liability & Insurance Act, Issues involved in Enforcement of Environmental legislation.

UNIT – V

Social Issues and the Environment

- Population growth, Population Explosion, Population Control, Women and Child welfare.
- Urbanization, Industrialization, Development projects, Resettlement and Rehabilitation of people – Problems concerned, Case studies.
- Consumerism and Waste Products Conservation, Public Awareness, Water Conservation, Rain water harvesting, watershed management, Wasteland reclamation, Human Rights, Value education, Environmental ethics- Issues and possible solution.
- Role of information Technology in Environment and Human Health.

8. AmalK.Datta, Introduction to Environmental Science and Engineering, Oxford & IBH Publishing Co.Pvt.Ltd, 2000

Course Outcomes:

At the end of the course, students will be able to

1. Acquire knowledge in
    - Diverse components of environment and natural resources
    - Ecosystem and biodiversity & its conservation methods
    - Population growth and human health
    - Green technology

2. Identify and resolve the issues related to sources of different types of pollutions
3. Provide solutions to individuals, industries and government for sustainable development of natural resources
4. Apply environmental ethics in protection of diversified ecosystems.

****

SECOND YEAR SYLLABUS

MA301B-Mathematics – III

Instruction: Hours/Week: **3L:1T:0P** Credits**: 4**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT – I
Complex analysis - I: Analytical functions - Cauchy- Reimann equations – Construction of Analytic functions-Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT – II
Complex analysis - II**:** Taylor's and Laurents' series- Transformations- Conformal mapping - Bilineartransformations - Transformation of 1/z, z^2, sin z and cos z.

UNIT – III
Complex anaylasis –III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluationof real integrals

UNIT – IV
Partial differential equations - I : Formation of differential equations - Classification - First order linear partialdifferential equations – Legranges' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT- V
Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heatequation – Laplace's equation.

Text/Reference Books:

1. Grewal B S, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. Venkataraman M K, Engineering Mathematics, Vol. I & II, National Publishing Company, 1993.
3. Venkataraman M K, Engineering Mathematics, National Publishing Company, 1995.
4. Grewal B S, Engineering Mathematics, 13th Edition, Khanna Publications.
5. Kreyszig E, Advanced Engineering Mathematics, 8th edition, Wiley, 1998.

Course Outcomes: At the end of this course students will demonstrate the ability to

CO 1: After end of the course, students will be able to understand the analyticity of complex functions and conformal mappings. Apply Cauchy's integral formula and Cauchy's integral theorem to evaluate improper integrals along contours.

CO2: Describe conformal mappings between various plane regions. Apply the concepts of complex analysis in many branches of engineering including the branches of hydrodynamics, thermodynamics, and particularly quantum mechanics.

CO3: compute the residue of a function and use the Residue theory to evaluate a contour integrals or an integral over the real line.

CO4: Formulate Solve/Classify the solutions of partial differential equations Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit;s method.
CO5: Apply variables separable methods to solve boundary value problems. Find the solutions of one-dimensional wave equation, heat equation and Laplace equation.

Mapping of course outcomes with program outcomes:

EC302C-Network Theory

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT-I

Network Theorems: Superposition Theorem– Reciprocity theorem -Thevenin's and Norton's Theorems – Maximum Power Transfer Theorem- Millman's Theorem —Tellegen's Theorem – Compensation Theorem - Application of these Theorems for D.C. circuits and sinusoidal steady state A.C. circuits, Introduction to ThreePhase Circuits.

UNIT-II

Resonance: Series and Parallel Resonance – Resonant frequency, Half power frequencies, bandwidth and Quality Factor.

Locus diagrams: Current locus diagrams of RL and RC series circuits and two branch parallel circuits.

UNIT-III

Transient Analysis: Time domain analysis of RL, RC, and RLC circuits for D.C. and sinusoidal excitations – Determination of initial conditions – Concept of time constant –Laplace transforms of signals and periodic functions and initial and final value theorems – Transient response of RL, RC, and RLC circuits using LaplaceTransform techniques.

UNIT-IV

Network Functions: One-port and Two-port networks – Driving point and transfer functions of networks – Properties of driving point and transfer functions – Concept of complex frequency, poles and zeros – Time domain response from pole-zero diagram – Restrictions on pole-zero locations.

UNIT-V

Two-port Network Parameters: Open circuit impedance and short circuit admittance parameters – Hybrid andinverse-hybrid parameters – Transmission and inverse transmission parameters – Inter relationships between parameter sets – Series, Parallel, and Cascade connection of two-ports – Conditions for reciprocity and symmetry of two-port networks. Terminated two-port networks – Image parameters.

Text/Reference Books:

1. Sudhakar and Shyammohan: Circuits and Networks: Analysis and Synthesis, 5th Edition, Tata McGraw-Hill
2. Ravish R. Singh: Network Analysis and Synthesis, Tata Mc. Graw Hill.
3. Abhijit Chakrabarti: Circuit Theory Analysis and Synthesis, 7th Revised Edition, Dhanpat Rai & Co
4. M. E. Van Valkenburg; “Network analysis”; Pearson Education, Third Revised Edition.

Course Outcomes:
At the end of this course students will demonstrate the ability to

1. Understand basics electrical circuits with nodal and mesh analysis.
2. Appreciate electrical network theorems.
   Apply Laplace Transform for steady state and transient analysis. Determine different network functions.

Mapping of course outcomes with program outcomes:

CO4	2	2	2	2	-	-	-	-	-	-	-	2

EC303C-Signals and Systems
(Common to EEE, ECE and CSE)

Instruction: Hours/Week: **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT I

Introduction to Signals and Systems:

Definition and classification of signals and systems**,** Basic operations on signals, Elementary signals, Classification of Continuous-Time and Discrete-Time Systems, Basic System Properties, Linear Time- Invariant Systems - Discrete-Time LTI Systems, Convolution Sum, Continuous-Time LTI Systems Convolution Integral. Causal LTI Systems Described by Differential and Difference Equations.

Signal Analysis:

Analogy between vectors and signals, Orthogonal signal space, Signal approximation using orthogonal functions, Mean square error, Closed or complete set of orthogonal functions, Orthogonality in complex functions.

UNIT II

Fourier series and Fourier Transform:

Fourier series Representation of Continuous-Time Periodic Signals, Dirichlet's conditions, Properties of Continuous-Time Fourier Series. Trigonometric Fourier Series and Exponential Fourier Series with examples,Complex Fourier spectrum.

Deriving Fourier Transform from Fourier series, Fourier Transform of standard signals, Fourier Transform ofPeriodic Signals, Properties of Continuous-Time Fourier Transform,
Magnitude-Phase responses, Parseval's theorem, Inverse Fourier transform.

Discrete-Time Fourier Transform – Properties, Inverse Discrete-time Fourier Transform. Introduction to Hilbert Transform.

UNIT III

Convolution and Correlation:

Continuous-time convolution, Convolution sum, Correlation between signals, Cross correlation, Autocorrelation, Properties, Energy spectral density, Power spectral density, Relation between convolution and correlation.

UNIT IV

Behavior of continuous time LTI systems:

Distortion less transmission through a system, signal bandwidth, system bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Poly-Wiener criterion for physical realization, relationship between bandwidth and rise time.

Sampling:

Sampling Theorem, Reconstruction of a Signal from its Samples Using Interpolation, types of sampling-natural sampling, flat- top sampling and impulse sampling, Effect of under sampling - Aliasing.

UNIT V

System Analysis using Laplace and z -Transforms:

Laplace Transform - Region of Convergence – Relation between Laplace and Fourier Transform, Inverse Laplace Transform, Properties, Analysis and Characterization of LTI Systems Using Laplace Transform, Z- Transform -Region of Convergence - Properties, Inverse z-Transform, Analysis and Characterization of LTI Systems Using z-Transforms.

8. C. L. Philips, J. M. Parr and Eve A. Riskin, "Signals, Systems and Transforms," Pearson Education, 4th Edition, 2008.

Course Outcomes: At the end of this course students will have the ability to

1. Differentiate between various types of signals and understand the implication of operations ofsignals
2. Understand and classify systems based on the impulse response behavior of both continuous-timeand discrete-time systems
3. Perform domain transformation from time to frequency and understand the energy distribution as afunction of frequency and also usefulness of convolution for analyzing the LTI systems and understand the concepts of power spectral density through correlation.
4. Solve differential and difference equations with initial conditions using Laplace and Z- transforms.

EC304C-ElectroMagnetic Waves and Transmission Lines

Instruction: (Hours/Week) **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT-I

Electrostatic Fields: Coulomb's law, Electric field intensity, Electric fields due to continuous charge distributions, Electric flux density, Gauss's law, Applications of Gauss's law, Electric scalar potential, Relation between E and V, Energy stored in electrostatic field, Electrostatic Boundary conditions, Capacitances.

UNIT-II

Magnetostatic fields: Biot-Savart's law, Magnetic field intensity, Magnetic fields due to continuous current distributions, Magnetic flux density, Ampere's circuital law, Applications of Ampere's circuital law, Magnetic vector potential, Relation between B and A, Energy stored in Magnetostatic field, Magnetostatic Boundary conditions, Inductances.

UNIT-III

Time-Varying EM Fields: Faraday's Law, Transformer EMF, Displacement current, Maxwell's Equationsin Point Form and in Integral Form, Phasor notation for fields, Maxwell's Equations in time harmonic form.**Introduction to waves:** Uniform plane wave, Wave equations, Derivation for **γ,** solutions for free space- conditions, Derivation for **α** and **β,** Derivation for η,

UNIT-IV

EM waves in a homogeneous medium: Wave propagation in lossy dielectrics, Wave propagation in lossless dielectrics, Wave propagation in free space, Wave propagation in good conductors, Skin Depth, Skin Resistance, Polarization, Power, Poynting theorem and Poynting vector.
EM waves in a heterogeneous medium: Reflection of a plane wave at normal incidence: transmission coefficient, reflection coefficient, Reflection of a plane wave at oblique incidence: transmission coefficient,reflection coefficient and Brewster angle in both parallel and perpendicular polarizations.

UNIT-V

Transmission Lines: Transmission line parameters, Transmission line Equations, Input impedance,Reflection coefficient, VSWR and Power of Transmission line, Smith Chart.
Applications of transmission lines: Load matching measurement, Load impedance measurement.

4. R.K. Shevgaonkar, Electromagnetic Waves, Tata McGraw Hill India Education, 2008
5. David K. Cheng, Field and Wave Electromagnetics, Pearson, second edition.

Course Outcomes: At the end of this course students will have the ability to

1. Solve electric field intensity and electric flux density in Electrostatic fields.
2. Solve magnetic field intensity and magnetic flux density in Magnetostatic fields.
3. Analyze Maxwell's equations in static fields, time varying fields, time harmonic fields and studyUniform plane wave characteristics.
4. Compute reflection coefficient and transmission coefficient of waves at media interface.
5. Understand characteristics of high frequency transmission lines and its applications.

Mapping of course outcomes with program outcomes:

EC305C-Digital Logic Design

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT I
Logic Simplification and Combinational Logic Design: Review of Boolean Algebra and De Morgan'sTheorem, SOP & POS forms, Canonical forms, Karnaugh maps up to 6 variables, Binary codes, CodeConversion.

UNIT II
MSI devices like Comparators, Multiplexers, Encoder, Decoder, Driver & Multiplexed Display, Halfand Full Adders, Subtractors, Serial and Parallel Adders, BCD Adder, Barrel shifter and ALU.

UNIT III
Sequential Logic Design: Building blocks like S-R, JK and Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Shift registers, Finite state machines, Design of synchronous FSM,Algorithmic State Machines charts. Designing synchronous circuits like Pulse train generator, Pseudorandom Binary Sequence generator.

UNIT IV
Clock generation Logic Families and Semiconductor Memories: TTL NAND gate, Specifications,Noise margin, Propagation delay, fan-in, fan-out, Tristate TTL, ECL, CMOS families and their interfacing, Memory elements, Concept of Programmable logic devices like FPGA. Logic implementation using Programmable Devices.

UNIT V
VLSI Design flow: Design entry, Schematic, FSM & HDL, different modeling styles in VHDL, Datatypes and objects, Dataflow, Behavioral and Structural Modeling, Synthesis and Simulation VHDL constructs and codes for combinational and sequential circuits.

2. Douglas Perry, "VHDL", Tata McGraw Hill, 4th edition, 2002.
3. W.H. Gothmann, "Digital Electronics- An introduction to theory and practice", PHI, 2nd Edition,2006.
4. D.V. Hall, "Digital Circuits and Systems", Tata McGraw Hill, 1989
5. Charles Roth, "Digital System Design using VHDL", Tata McGraw Hill 2nd edition 2012.

Course outcomes: At the end of this course students will demonstrate the ability to
1. Design and analyze combinational logic circuits.
2. Design & analyze modular combinational circuits with MUX/DEMUX, Decoder, Encoder.
3. Design & analyze synchronous sequential logic circuits.
4. Use HDL & appropriate EDA tools for digital logic design and simulation.

Mapping of course outcomes with program outcomes:

EC306C-Analog Circuits

Instruction: Hours/Week: **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT-I

General Amplifiers Characteristics: Concept of Amplifier, Voltage gain, Current gain, Power gain, Input and Output resistances, Conversion efficiency, Frequency response, Bandwidth, Distortion,

BJT Amplifiers: Small signal low frequency model of the transistor, Analysis of CE, CB and CC amplifiers,Approximate model analysis, Effects of coupling and bypass capacitors on low frequency response, Hybrid-Π model at high frequencies, Calculation of High-Frequency parameters in terms of Low Frequency parameters, CE short circuit gain, CE current gain with resistive load.

UNIT-II

FET Amplifiers: Small signal model, Analysis of CS, CD and CG amplifiers, comparison of performance of the three configurations, High frequency FET circuits, CS amplifier at high frequencies, CD amplifier athigh frequencies.

Multistage Amplifiers: Types of coupling, Choice of amplifier configuration, overall voltage gain and Bandwidth of n-stage amplifier, Darlington and Bootstrap circuits.

UNIT-III

Feedback amplifiers: Feedback concept, Classification, Effects of negative feedback on gain, Stability, Noise, Distortion, Bandwidth, input resistance and output resistance.

Oscillators: Review of the basic concept, Barkhausen criterion, RC oscillators (phase shift, Wien bridge etc.), LC oscillators (Hartley, Colpitt, Clapp etc.), Crystal oscillators.

UNIT-IV

Power Amplifiers: Series-Fed Class-A power amplifiers, Transformer coupled class-A power amplifiers, harmonic distortion, Push-pull amplifiers, Class-B amplifiers, Class-AB operation, Complementary symmetry Push-Pull class-B Power amplifiers, Cross-over distortion.

UNIT-V

Differential amplifier: Basic structure and principle of operation, calculation of differential gain, commonmode gain, CMRR, circuits to improve CMRR, transfer characteristics.

Operational Amplifier: Ideal op-amp characteristics, Op-amp internal circuit, examples of IC op-amps, DC and AC characteristics, Inverting and non-inverting modes of operation, voltage follower.

Text/Reference Books:

1. Millman and Halkias, “Integrated Electronics”, McGraw-Hill Co
2. Mottershed, “Electronic devices and circuits”, PHI
3. J. Millman and A. Grabel, Microelectronics, 2nd edition, McGraw Hill, 1988.
4. Salivahanan, “Electronic Devices and circuits”, TMH.
5. David A. Bell, “Electronic Devices and circuits”, PHI
6. D.Roy Choudary, Shail Bala Jain, “Linear Integrated circuits”, New Age International publishers, 2018

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Design and analyze various amplifier circuits.
2. Design sinusoidal oscillators.
3. Understand the functioning of OP-AMP and design OP-AMP based circuits.

Mapping of course outcomes with program outcomes:

PO/CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	-	-	-	-	1	2
CO2	3	3	2	2	-	1	-	-	-	-	1	2
CO3	3	3	2	2	-	1	-	-	-	-	1	2

EC309S- Entrepreneurship and Design Thinking

Instruction: Hours/Week: **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT-I

Introduction to Entrepreneurship and Design Thinking

What is an idea, how to generate an idea, basic requirements to start an enterprise/start-up.
Introduction to elements and principles of Design, basics of design-dot, line, shape, form as fundamental design components. Principles of design. Introduction to design thinking, history of Design Thinking, New materials in Industry.

Activity: Form into groups and discuss about the requirements to start a business

UNIT-II

Design Thinking Process

Design thinking process (empathize, analyze, idea & prototype), implementing the process in driving inventions, design thinking in social innovations. Tools of design thinking - person, costumer, journey map, brain storming, product development

Activity: Every student presents their idea in three minutes, every student can present design process in the form of flow diagram/flow chart etc. Every student should explain about product development.

UNIT-III

Innovation

Art of innovation, Difference between innovation and creativity, role of creativity and innovation in organizations. Creativity to Innovation. Teams for innovation, Measuring the impact and value of creativity.

Activity: Debate on innovation and creativity, Flow and planning from idea to innovation, Debate on value-based innovation.

UNIT-IV

Product Design

Problem formation, introduction to product design, Product strategies, Product value, Product planning, product specifications. Innovation towards product design Case studies.

Activity: Importance of modelling, how to set specifications, Explaining their own product design.

UNIT-V

Design Thinking in Business Processes

Design Thinking applied in Business & Strategic Innovation, Design Thinking principles that redefine business – Business challenges: Growth, Predictability, Change, Maintaining Relevance, Extreme competition, Standardization. Design thinking to meet corporate needs. Design thinking for Startups. Defining and testing Business Models and Business Cases. Developing & testing prototypes.

Activity: How to market our own product, About maintenance, Reliability and plan for startup.

Textbooks:

1. Change by design, Tim Brown, Harper Bollins (2009)
2. Design Thinking for Strategic Innovation, Idris Mootee, 2013, John Wiley & Sons.

Reference Books:

1. Design Thinking in the Classroom by David Lee, Ulysses press
2. Design the Future, by Shrrutin N Shetty, Norton Press
3. Universal principles of design- William lidwell, kritinaholden, Jill butter.
4. The era of open innovation – chesbrough.H

Course Outcomes: After completion of the course student will be able to:

1. Able to know the concepts related to Entrepreneurship & design thinking.
2. Explain the fundamentals of Design Thinking and innovation and will equip with design thinking techniques for solving problems in various sectors.
3. Analyse to work in a multidisciplinary environment and Evaluate the value of creativity
4. Formulate specific problem statements of real time issues

Mapping of course outcomes with program outcomes:

MC310A Constitution of India

Instruction: Hours/Week: **2L:0T:0P** **Credits: 0**
Evaluation Scheme: 100 Marks

UNIT-I

History of Making of the Indian Constitution:
History Drafting Committee, (Composition & Working)

Philosophy of the Indian Constitution:
PreambleSalient Features

UNIT-II

- **Contours of Constitutional Rights & Duties:**
- Fundamental Rights
- Right to Equality
- Right to Freedom
- Right against Exploitation
- Right to Freedom of Religion
- Cultural and Educational Rights
- Right to Constitutional Remedies
- Directive Principles of State Policy
- Fundamental Duties.

UNIT-III

- **Organs of Governance:**
- Parliament
- Composition
- Qualifications and Disqualifications
- Powers and Functions
- Executive
- President
- Governor
- Council of Ministers
- Judiciary, Appointment and Transfer of Judges,

QualificationsPowers and Functions

UNIT-IV

- **Local Administration:**
- District's Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of MunicipalCorporation.
- Pachayati raj: Introduction, PRI: Zila Pachayat.
- Elected officials and their roles, CEO Zila Pachayat: Position and role.
- Block level: Organizational Hierarchy (Different departments),
- Village level: Role of Elected and Appointed officials,
- Importance of grass root democracy

UNIT-V

- **Election Commission:**

- Election Commission: Role and Functioning.
- Chief Election Commissioner and Election Commissioners.
- State Election Commission: Role and Functioning.
- Institute and Bodies for the welfare of SC/ST/OBC and women.

Text Books/References:

1. The Constitution of India, 1950 (Bare Act), Government Publication.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Outcomes: At the end of this course students will demonstrate the ability to1 Students will be able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization ofsocial reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adultsuffrage in the Indian Constitution.Discuss the passage of the Hindu Code Bill of 1956.

Mapping of course outcomes with program outcomes:

EC307L-Basic Electrical Engineering Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits: **1.5**
Sessional Marks: **40** End Semester Examination Marks: **60**

List of Experiments:

1. Basic safety precautions, Introduction and use of measuring instruments – voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
2. Measuring the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope).
3. Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification. Observation of phase differences between current and voltage. Resonance in R-L-C circuits.
4. Transformers: Observation of the no-load current waveform on an oscilloscope (non-sinusoidal wave-shape due to B-H curve nonlinearity should be shown along with a discussion about harmonics).
5. Loading of a transformer: measurement of primary and secondary voltages and currents, andpower.
6. Three-phase transformers: Star and Delta connections. Voltage and Current relationships (line-line voltage, phase-to-neutral voltage, line and phase currents). Phase-shifts between the primary and secondary side. Cumulative three-phase power in balanced three-phase circuits.
7. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging
   - slip ring arrangement) and single-phase induction machine.
8. Torque Speed Characteristic of separately excited dc motor.
9. Synchronous speed of two and four-pole, three-phase induction motors. Direction reversal by change of phase-sequence of connections. Torque-Slip Characteristic of an induction motor. Generator operation of an induction machine driven at super synchronous speed.
10. Synchronous Machine operating as a generator: stand-alone operation with a load. Control of voltage through field excitation.
11. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the

use ofdc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

Course Outcomes: After completion of the course student will be able to:

CO1: Get an exposure to common electrical components and their ratings.
CO2: Make electrical connections by wires of appropriate ratings.
CO3: Understand the usage of common electrical measuring instruments.
CO4: Understand the basic characteristics of transformers and electrical machines.

Mapping of course outcomes with program outcomes:

PO/ CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	1	-	-	-	-	-	-	-	2

EC308L-Electronic Devices Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits: **1.5**
Sessional Marks: **40** End Semester Examination Marks: **60**

Hands-on experiments related to the course contents Electronic Devices LaboratoryList of Experiments:

1. P-N Junction Diode Characteristics
2. Zener Diode Characteristics
3. Half Wave Rectifiers (without and with filter)
4. Full Wave Rectifiers (without and with filter)
5. CB Characteristics
6. CE Characteristics
7. CC Characteristics
8. FET Characteristics
9. BJT Biasing
10. SCR Characteristics
11. UJT Characteristics
12. LDR characteristics
13. LED Characteristics
14. Photodiode characteristics
15. Phototransistor characteristics.

Some of the experiments can be done using any Simulation Software.

Prerequisites: None

Course Outcomes: After completion of the course student will be able to:

CO1: Plot the characteristics of electronic devices to understand their behaviour.

CO2: Design, construct and test amplifier circuits, Rectifiers, Special devices and interpret theresults.

CO3: Operate electronic test equipment using hardware/software tools to characterize the behaviourof devices and circuits.

Mapping of course outcomes with program outcomes:

PO/ CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

EC311L-Simulation Laboratory

Instruction: Hours/Week: **0L:0T:2P** Credits: **01**
Sessional Marks: **40** End Semester Examination Marks: **60**

- **All the experiments are to be simulated using MATLAB or equivalent software.**
- **Minimum of 12 - 15 experiments are to be completed.**

List of Experiments:

1. Basic Operations on Matrices.
2. Generation of Various Signals and Sequences (Periodic and Aperiodic), such as UnitImpulse, Unit Step, Square, Saw tooth, Triangular, Sinusoidal, Ramp, Sinc.
3. Operations on Signals and Sequences such as Addition, Multiplication, Scaling, Shifting,Folding, Computation of Energy and Average Power.
4. Finding the Even and Odd parts of Signal/Sequence and Real and Imaginary parts ofSignal.
5. Convolution for Signals and sequences.
6. Auto Correlation and Cross Correlation for Signals and Sequences.
7. Verification of Linearity and Time Invariance Properties of a given Continuous/DiscreteSystem.
8. Computation of Unit sample, Unit step and Sinusoidal responses of the given LTI systemand verifying its physical realizability and stability properties.
9. Gibbs Phenomenon Simulation.
10. Finding the Fourier Transform of a given signal and plotting its magnitude and phasespectrum.
11. Waveform Synthesis using Laplace Transform.
12. Locating the Zeros and Poles and plotting the Pole-Zero maps in S-plane and Z-Plane for the given transfer function and verify its stability.
13. Generation of Gaussian noise (Real and Complex), Computation of its mean, M.S. Valueand its Skew, Kurtosis, and PSD, Probability Distribution Function.
14. Verification of Sampling Theorem. Write a program to generate discrete time sequenceby sampling a continuous time signal. Show that with sampling rates less than Nyquist rate, aliasing occurs while reconstructing the signal.
15. Write a program to find autocorrelation and cross correlation of given

sequences. Removal of noise by Autocorrelation / Cross correlation.

16. Write a program to verify Linearity and Time Invariance properties of a givenContinuous/Discrete System
17. Extraction of Periodic Signal masked by noise using Correlation.
18. Write a program to find magnitude and phase response of first order low pass and highpass filter. Plot the responses in logarithmic scale.
19. Write a program to find response of a low pass filter and high pass filter, when a speechsignal is passed through these filters.
20. Write a program to generate Complex Gaussian noise and find its mean, variance, Probability Density Function (PDF) and Power Spectral Density (PSD).
21. Generate a Random data (with bipolar) for a given data rate (say 10kbps). Plot the samefor a time period of 0.2 sec.

Prerequisites: None

Course Outcomes: After completion of the course student will be able to:

CO1: Learn how to use the MATLAB software and know syntax of MATLAB programming.CO2: Understand how to simulate different types of signals and system response.
CO3: Find the Fourier Transform of a given signal and plot amplitude and phasecharacteristics.
CO4: Analyze the response of different systems when they are excited by different signalsand plot power spectral density of signals

Mapping of course outcomes with program outcomes:

EC401C-Linear Control Systems

Instruction: Hours/Week: **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Unit-I
Introduction to control problem:

Industrial Control examples, System Representation, Classification of systems, Feedback Control, Benefits of Feedback- Open-Loop and Closed-loop systems, Advantages and Disadvantages of control systems, Industrial Control examples.

Mathematical models of physical systems: Electrical, Mechanical and Electro-Mechanical, Transfer function models of linear time-invariant systems: Potentiometers, Synchros, LVDT, dc and ac servomotors, Tacho- generators, electro hydraulic valves, hydraulic servomotors, electro pneumatic valves, pneumatic actuators. Closed-loop systems, Block diagram algebra, Reduction techniques and Signal flow graph.

Unit-II
Time Response Analysis:

Standard test signals, Time response of first and second order systems for standard test inputs. Application of initial and final value theorem. Stability, steady-state accuracy, transient accuracy, disturbance rejection, insensitivity and robustness. Design specifications for second-order systems based on the time-response, Steadystate errors and error constants, Performance specifications in time-domain error, Static and Generalized error constants, Concept of stability, Routh-Hurwitz Criteria, Relative Stability analysis, Root-Locus technique, Construction of Root-loci.

Unit-III
Frequency-response analysis:

Introduction to Frequency domain specifications -Relationship between time and frequency response, Polar plots, Bode plot, stability in frequency domain, Nyquist plots. Nyquist stability criterion. Relative stability using Nyquist criterion – gain and phase margin. Performance specifications in frequency-domain, Frequency domainmethods of design.

Unit-IV
Introduction to Controller Design:

Compensation & their realization in time & frequency domain, Introduction to controllers (PI, PD, PID), Application of Proportional, Integral and Derivative Controllers, Need for Lead and Lag compensators, Applications of compensators, Comparison of controllers and compensators, Problems.

Unit-V

State variable Analysis:

Concepts of state, state variables, State space model for linear continuous time functions, Diagonalization of

State Matrix. Solution of state equations. Eigen values and Stability Analysis. Concept of controllability andobservability.

Text/Reference Books:

1. M. Gopal, "Control Systems: Principles and Design", McGraw Hill Education, 1997.
2. B. C. Kuo, "Automatic Control System", Prentice Hall, Seventh edition, 1995.
3. K. Ogata, "Modern Control Engineering", Prentice Hall, second edition, 1991.
4. I. J. Nagrath and M. Gopal, "Control Systems Engineering", New Age International, 2009K. L. Chung.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Identify the various control system components and their representations.
2. Analyze the various time domain parameters.
3. Analysis the various frequency response plots and its system.
4. Apply the concepts of various system stability criterions and design various transfer functions of digitalcontrol system using state variable models.

Mapping of course outcomes with program outcomes:

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	2	1	2	2	-	-	-	-	-	-	-	2

EC402C-Probability Theory and Stochastic Processes

Instruction: Hours/Week: **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT-I

Probability: Sets and set operations, Probability space, Events, Probability Definitions and Axioms, Mathematical Model of Experiments, Joint Probability, Conditional probability, Total Probability, and Bayestheorem, Combinatorial probability and sampling models.

Random Variable: Definition of a Random Variable, Conditions for a Function to be a Random Variable, Discrete random variables, probability mass function, probability distribution function, example random variables and distributions. Continuous random variables, probability density function, probability distribution function, Properties, Mixed Random Variable, example distributions - Binomial, Poisson, Uniform, Gaussian, Exponential, Raleigh etc.

UNIT-II

Multiple Random Variables: Vector Random Variables, Joint distribution Function, Properties of Joint Distribution, Marginal Distribution Functions, functions of one and two random variables, Conditional Distribution and Density, Methods of defining Conditioning Event, Conditional Density, Properties. Statistical Independence, Sum of Two Random Variables, Sum of Several Random Variables, Markov, Chebyshev and Chernoff bounds.

UNIT-III

Operations on Multiple Random Variables: Expected Value of a Function of Random Variables, momentsof random variable, Characteristic functions of a random variable, Joint Moments about the Origin, Joint Central Moments, Joint Characteristic Functions and Joint Gaussian Random Variables. Random sequences and modes of convergence (everywhere, almost everywhere, probability, distribution and mean square), Limit theorems: Strong and weak laws of large numbers, Central Limit Theorem, (Proof not expected), Unequal Distribution, Equal Distributions. Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

UNIT-IV

Random Process– Temporal Characteristics: The Random Process Concept, Classification of Processes,Stationary processes, First-Order Stationery Processes, Second- Order and Wide-Sense Stationarity, (N- Order) and Strict-Sense Stationarity, Mean and covariance functions, Time Averages and Ergodicity, Mean-Ergodic Processes, Correlation-Ergodic Processes, Autocorrelation Function & Its Properties, Cross- Correlation Function & its Properties, Covariance Functions, Gaussian Random Processes, Poisson RandomProcess.

Random Processes – Spectral Characteristics: Power spectral density, Properties, Relationship between Power Spectrum and Autocorrelation Function, The Cross-Power Density Spectrum, Properties, Relationship between Cross-Power Spectrum and Cross-Correlation Function.

UNIT-V

Transmission of random process through LTI systems: System Response, Convolution, Mean and Mean- squared Value of System Response, autocorrelation Function of Response, Cross-Correlation Functions of Input and Output, Spectral Characteristics of System Response: Power Density Spectrum of Response, Cross-Power Density Spectrums of Input and Output, properties of white noise, Band pass, Band-Limited and Narrowband Processes, Properties.

Text / Reference Books:

1. H. Stark and J. Woods, Probability and Random Processes with Applications to Signal Processing, 3rdEdition, Pearson Education.
2. Peyton Z. Peebles, Probability, Random Variables & Random Signal Principles, Tata McGraw Hill, 4thEdition, 2001.
3. Athanasios Papoulis and S. Unnikrishnan Pillai, Probability, Random Variables and StochasticProcesses, PHI, 4th Edition, 2002.
4. Hisashi Kobayashi, Brian L. Mark and William Turin, Probability, Random Processes, and StatisticalAnalysis, Cambridge University Press, 2012.
5. John J. Shynk, Probability, Random Variables, and Random Processes Theory and Signal ProcessingApplications, John Wiley & Sons, Inc., Hoboken, New Jersey, 2013, ISBN: 978-0-470-24209-4.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Understand representation of random signals.
2. Obtain Distribution function, Density functions, and Conditional density functions for different Randomvariables.
3. Make use of theorems related to random signals.
4. Investigate temporal and spectral characteristics of random processes.
5. Able to Model of different Noise Sources and understand propagation of random signals in LTI systems.

HS403C-Managerial Economics and Accountancy

Instruction: Hours/Week: 3**L:0T:0P** Credits**: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT – I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR, NPV, IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

UNIT – II

Depreciation and methods of calculating depreciation (straight line, sum of the years digit method, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

UNIT – III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

UNIT – IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

UNIT – V

Cost Accounting: Introduction, Classification of costs, Methods of costing, Techniques of costing, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

Text/ Reference Books:

1. Henry Malcom Steiner, Engineering Economics Principles, 2nd Edition, McGraw HillEducation, 1996.
2. Dewett. K.K., Modern Economic Theory, Sultan Chand and Co., 2006.
3. A.N. Agarwal, Indian Economy, Wiley Eastern Limited, New Delhi.
4. Jain and Narang, Accounting Part-I, Kalyani Publishers, 2011.
5. Arora, M.N. Cost Accounting: Principles and Practice, 12th Edition, Vikas Publication, 2012.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Understand Macro Economic environment of the business and its impact onenterprise.
2. Identify various cost elements of the product and its effect on decision making.
3. Understand the concepts of financial management and smart investment.
4. Prepare the Accounting records and interpret the data for Managerial Decisions.

Mapping of course outcomes with program outcomes:

EC404C-IC Applications

Instruction: Hours/Week: 3**L:0T:0P** Credits**: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

UNIT – I

Op-Amp Applications: Scale changer/inverter, Summing amplifier, Instrumentation amplifier, Instrumentationamplifier IC-AD620, DC and AC amplifiers, V to I and I to V converters, Precision rectifiers, Log and Antilog amplifiers, multiplier and divider, Analog multiplier IC-AD633, Differentiator, Integrator, Analog computation.

UNIT – II

Comparators and waveform generators: Comparator, Regenerative comparator (Schmitt Trigger), Astable and mono-stable multi-vibrators using op-amp, Triangular wave generator, Sine wave generators using op-amp. ICwaveform generator (8038).

UNIT – III

Voltage regulators: Series op-amp regulator, IC voltage regulators, 723 General purpose regulator, Switching regulators. Active filters: Low pass, high pass, band pass, band reject and all pass filters, transformation, State variable filter, Switched capacitor filters, Switched capacitor filter ICs.

UNIT – IV

555 Timer: Description of functional diagram, Monostable operation. Applications in monostable mode, Astable operation, Applications in astable mode, Schmitt trigger. Phase Locked Loops: PLL-introduction, block schematic, principles and description individual blocks, IC PLL (565), Voltage controlled oscillator (566), PLLapplications- Frequency multiplication, Frequency translation, FM & FSK demodulation.

UNIT – V

D-A and A-D Converters: Basic DAC Techniques, Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R ladder, Monolithic DAC IC-1409, A-D converters, direct type ADCs, the parallel comparator(flash) A/D converter, The counter type A/D converter, Servo tracking A/D converter, Successive approximation converter,Integrating type of ADCs, Charge balancing ADC, Dual-slope ADC, DAC/ADC specifications.

5. 5. J.V. Wait, L.P. Huelsman and GA Korn, Introduction to Operational Amplifier theory and applications, McGraw Hill, 1992.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Understand the functioning of OP-AMP and design OP-AMP based circuits.
2. Understand the functioning of voltage regulators and design IC based voltage regulators,
3. Understand the functioning of 555 timer and design 555 timer-based circuits.
4. Understand the functioning of PLL and design PLL based circuits.
5. Design ADC and DAC circuits

EC405C-Analog Communications

Instruction: (Hours/Week) **3L:0T:0P** Credits: **3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Unit – I

Introduction: Elements of communication systems, Information, Messages and Signals, Modulation, Modulation Methods, Modulation Benefits and Applications.

Amplitude Modulation & Demodulation: Baseband and carrier communication, Amplitude Modulation (AM), Rectifier detector, Envelope detector, Double sideband suppressed carrier (DSB-SC) modulation & its demodulation, Switching modulators, Ring modulator, Balanced modulator, Frequency mixer, sideband and carrier power of AM, Generation of AM signals, Single sideband (SSB) transmission, Time domain representation of SSB signals & their demodulation schemes (with carrier, and suppressed carrier), Generationof SSB signals, Vestigial sideband (VSB) modulator & demodulator, Frequency division multiplexing (FDM),Illustrative Problems.

UNIT-II

Angle Modulation & Demodulation: Concept of instantaneous frequency, Generalized concept of angle modulation- Frequency Modulation & Phase modulation : Bandwidth of angle modulated waves, Narrow bandfrequency modulation (NBFM) and Wide band FM (WBFM), Verification of Frequency modulation bandwidthrelationship, Features of angle modulation, Generation of FM waves-Indirect method, Direct generation; Demodulation of FM, Band pass limiter, Practical frequency demodulators, Small error analysis, Pre-emphasis,& De-emphasis filters, FM Capture Effect, Illustrative Problems.

UNIT-III

Noise in Communication Systems: Thermal noise, Time domain representation of narrowband noise, filteredwhite noise, Quadrature representation of narrowband noise, Envelope of narrowband noise plus sine wave, Signal to noise ratio & probability of error, Noise equivalent bandwidth, Effective noise temperature, and Noisefigure, Baseband systems with channel noise, Performance analysis (i.e. finding SNR expression) of AM, DSB-SC, SSB-SC, FM, PM in the presence of noise, Illustrative Problems.

UNIT-IV

Radio Receivers: Working principle of Super heterodyne AM and FM Receivers along with suitable block diagrams, Sensitivity, Selectivity and fidelity.

Analog Pulse Modulation Schemes: Pulse amplitude modulation – Natural sampling, flat top sampling and Pulse amplitude modulation (PAM) & demodulation, Pulse-Time Modulation – Pulse Duration and Pulse Position modulations, and demodulation schemes, PPM spectral analysis, Illustrative Problems.

UNIT-V

Information Theory: Introduction, Information and Entropy, and its properties, source coding Theorem, DataCompaction – Prefix coding, Huffman coding, Discrete Memory less channels, Mutual Information, and its properties, Channel capacity, Channel coding Theorem, Application to

binary symmetric channels, differential entropy and mutual information, Information capacity

theorem, implication of information capacity theorem, Rate Distortion, Illustrative problems

.

4. George Kennedy and Bernard Davis, "Electronics & Communication System", TMH,2004.

Course Outcomes: At the end of this course students will have the ability to

CO1: Understand the concepts of various Amplitude, Angle and Pulse Modulation schemes. Understand theconcepts of information theory with random processes. (L1)

CO2: Apply the concepts to solve problems in analog and pulse modulation schemes. (L2)

CO3: Analysis of analog communication system in the presence of noise. (L3)

CO4: Compare and contrast design issues, advantages, disadvantages and limitations of various modulationschemes in analog communication systems. (L4)

CO5: Solve basic communication problems & calculate information rate and channel capacity of a discretecommunication channel. (L5)

EC409S- Python Programming

Instruction: (Hours/Week) **1L:0T:2P** Credits: **2**
Evaluation Scheme: **100 Marks**

Unit – I

Introduction to Python Programming Language

Introduction to Python Language: What is Python? Why Python? Installing Python on Windows, Python IDLE,Python Literals, Python Data Types Basic Input-Output operations, Operators in Python, Decision making in Python, Conditional execution in Python, Logical and bit operations in Python, Naming Conventions, String Operations, String Slices, String Operators, Numeric Data Types, Conversions, Data type conversion, Built in Functions.

UNIT-II

Python Built-in Data Structures

Introduction, List, Tuples, Dictionary, Sets, List Operations append, extend, insert, remove, pop, slice, andreverse, List Comprehension, Dictionary operations, Sorting Dictionaries, Copying Collections, Set operations. Standard python modules math, time, IO and time, Regular expressions, multi-threading.

UNIT-III

Classes & Objects

Classes in Python, Principles of Object-Oriented programming, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, CustomException Classes.

UNIT-IV

Functions, I/O, Exception Handling in Python

Introduction: Defining your own functions, keyword and optional parameters, mapping functions, lambda functions, ·Data Streams · Creating Your Own Data Streams · Access Modes · Writing Data to a File · Reading Data from a File · Additional File Methods · Using Pipes as Data Streams · Handling IO Exceptions ·Working with Directories · Metadata · Errors · Run Time Errors · The Exception Model · Exception Hierarchy
· Handling Multiple Exceptions.

UNIT-V

Python API development.

Introduction to API, Python API programming, Python web application frameworks, REST API, Python Flask,Flask Environment, Routing, Cookies, Sessions, Running Flask Application, Testing API with POSTMAN client

6. A useful hands-on book: http://anh.cs.luc.edu/python/hands-on/3.1/Hands-onPythonTutorial.pdf

Course Outcomes: At the end of this course students will have the ability to

1. Apply the OOP principles and best practices of python programming.
2. Write clear and effective pythonic code.
3. Create applications using python programming.
4. Implementing databases using SQLite and Access databases using python programming.
5. Understand and feel comfortable in working with web application frameworks.
6. Develop APIs required for the web applications using web frameworks like Flask and Fast API.

EC406L-Digital Logic Design Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits: **1.5**
Sessional Marks: **40** End Semester Examination Marks: **60**

LIST OF EXPERIMENTS

1. Realization of Boolean Expressions using Gates
2. Design and realization of logic gates using universal gates
3. Design and realization of a 4 – bit Gray to Binary and Binary to Gray Converter
4. Verify the functionality of Mux and Decoder ICs
5. Design and realization of 4-bit comparator
6. Verify the functionality of Flip-Flop ICs
7. Mod-N counter using 7490 and 74190.
8. Shift register IC 7495.

Note: Implement using digital ICs.VHDL Programming:

1. Write structural and dataflow VHDL models for
   a) 4-bit ripple carry adder. b) 4-bit carry Adder – cum Subtractor.
   c) 2-digit BCD adder /subtractor d) 4-bit carry look ahead adder e) 8-bit comparator

2. Write a VHDL program in structural model for
   a) 16:1 mux realization b) 3:8 decoder realization through 2:4 decoder
3. Write a VHDL program in behavioral model for
   a) 16:1 mux b) 3:8 decoder c) 8:3 encoder d) 8 bit parity generator and checker

4. Write a VHDL program in structural and behavioral models for
   a) 8 bit asynchronous up-down counter b) 8 bit synchronous up-down counter

5. Write a VHDL program for 4-bit sequence detector through Mealy and Moore state machines.

6. Write a VHDL program in behavioral model for 8-bit shift and add multiplier.

7. Write a VHDL program in structural model for 8-bit Universal Shift Register.

Some of the experiments can be done using any Simulation Software.

Course Outcomes: At the end of this course students will have the ability to

1. Construct Basic combinational Circuits and Verification of its functionality
2. Construct Sequential Circuits and Verification of its functionality
3. Write structural, behavioral and data flow models for digital circuits
4. Simulate VHDL models of digital circuits

Mapping of course outcomes with program outcomes:

EC407L-Analog Circuits Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits**: 1.5**
Sessional Marks: **40** End Semester Examination Marks: **60**

Hands-on experiments related to the course contents Analog Circuits.
Prerequisites: Electronic Devices Laboratory.

Course Outcomes:

After completion of the course student will be able to:

List of Experiments:

1. Common Emitter Amplifier.

2. Common Collector amplifier

3. Two Stage RC coupled amplifier

4. Voltage series feedback amplifier

5. Voltage shunt feedback amplifier

6. Current series feedback amplifier

7. Current shunt feedback amplifier

8. RC phase shift oscillator

9. Wien bridge oscillator

10. LC/ crystal oscillator.

11.Class A Power Amplifier (Transformer

less) 12.Class B Complementary Symmetry

Amplifier12.Differential amplifier

13.Operational amplifier as (i) Inverting amplifies, (ii) Non-Inverting amplifier (III) Voltagefollower

Some of the experiments can be done using any Simulation Software.

Course Outcomes:
At the end of this course students will have the ability to

1. Know about the usage of equipment/components/software tools used to conduct the experiments in analog circuits.
2. Conduct the experiment based on the knowledge acquired in the theory about various analogcircuits using BJT/MOSFETs to find the important parameters of the circuit (viz. Voltage gain, Current gain, bandwidth, input and output impedances etc) experimentally.
3. Analyze the given analog circuit to find required important metrics of it theoretically and Compare the experimental results with that of theoretical ones and infer the conclusions.
4. Draw the relevant graphs between important metrics of the system from the observed measurements.

Mapping of course outcomes with program outcomes:

EC408L-IC Applications Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits**: 1.5**
Sessional Marks: **40** End Semester Examination Marks: **60**

Hands-on experiments related to the course contents

EC408L.List of Experiments:

1. Study and Operation of IC testers, pulse generator and digital trainer.
2. Frequency response of inverting and non-inverting amplifier.
3. Measurement of Op.amp parameters: (i) Offset voltage (ii) Offset current (iii) CMRR and (iv)Slew rate
4. Op-amp monostable and astable multivibrators.
5. Design 2's complement adder/subtractor using IC74283 and verify experimentally.
6. Low voltage regulator IC 723.
7. 555 timer: Monostable and astable multivibrators.
8. IC PLL (565) applications- Frequency multiplication, Frequency translation, FM & FSKdemodulation.
9. Voltage controlled oscillator (566)

Course Outcomes: After the completion of the course the student will be able to

1. Measure the parameters of IC 741 Op-amp.
2. Design applications of IC 741 Op-amp
3. Realize analog filters using Op-amp.
4. Design multivibrators using 555 IC.

Mapping of course outcomes with program outcomes:

THIRD YEAR SYLLABUS

EC501C- Computer Organization & Architecture

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview: It is important to understand Computer Architecture in order to structure a program so that it runs efficiently on a real machine. When selecting a system to use, it is important to understand the tradeoff among various components, so you can accurately compare competing systems, and understand technical literature on new computer systems. This course will cover the basic concepts of Computer organization and its Architecture that are important for you to understand, including the CPU control and data-path, memory systems including caching and virtual memory, and input/output subsystems.

Prerequisite Courses: Digital Logic Design

Course Objectives: The purpose of the course is

1. To understand the structure of a computer and its operations.
2. To understand the RTL and Micro-level operations and control in a computer.
3. Understanding the concepts of computer arithmetic, instruction set design, micro-programmed control unit, pipelining and vector processing, I/O Systems and memory organization, and operating systems.

UNIT - I:

Basic Structure of Computers: Computer Types, Functional Unit, Basic Operational Concepts, Bus Structures, Software, Performance, Multiprocessors and Multi Computers, Data Representation, Fixed Point Representation, Floating – Point Representation.

Register Transfer Language and Micro Operations: Register Transfer Language, Register Transfer Bus and Memory Transfers, Arithmetic Micro Operations, Logic Micro Operations, Shift Micro Operations, Arithmetic Logic Shift Unit, Instruction Codes, Computer Registers Computer Instructions – Instruction Cycle, Memory – Reference Instructions, Input – Output and Interrupt, STACK Organization, Instruction Formats, Addressing Modes, DATA Transfer and Manipulation, Program Control, Reduced Instruction Set Computer.

UNIT - II:

Micro Programmed Control: Control Memory, Address Sequencing, Microprogram Examples, Design of Control Unit, Hard Wired Control, Microprogrammed Control.

The Memory System: Basic Concepts of Semiconductor RAM Memories, Read-Only Memories, Cache Memories Performance Considerations, Virtual Memories Secondary Storage, Introduction to RAID.

UNIT - III:

Input-Output Organization: Peripheral Devices, Input-Output Interface, Asynchronous Data Transfer Modes, Priority Interrupt, Direct Memory Access, Input –Output Processor (IOP), Serial Communication; Introduction to Peripheral Components, Interconnect (PCI) Bus, Introduction to Standard Serial Communication Protocols like RS232, USB, IEEE 1394.

UNIT - IV:

Operating Systems Overview: Overview of Computer Operating Systems Functions, Protection and Security, Distributed Systems, Special Purpose Systems, Operating Systems Structures-Operating System Services and Systems Calls, System Programs, Operating Systems Generation.

Memory Management: Swapping, Contiguous Memory Allocation, Paging, Structure of The Page Table, Segmentation, Virtual Memory, Demand Paging, Page-Replacement Algorithms, Allocation of Frames, Thrashing Case Studies - UNIX, Linux, Windows.

Principles of Deadlock: System Model, Deadlock Characterization, Deadlock Prevention, Detection and Avoidance, Recovery from Deadlock.

UNIT - V:

File System Interface: The Concept of a File, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection.

File System Implementation: File System Structure, File System Implementation, Directory Implementation, Allocation Methods, Free-Space Management.

Text Books:

1. Computer Organization – Carl Hamacher, Zvonks Vranesic, Safea Zaky, 5th Edition, McGraw Hill.
2. Computer Systems Architecture – M. Moris Mano, IIIrd Edition, Pearson
3. Operating System Concepts- Abraham Silberchatz, Peter B. Galvin, Greg Gagne, 8th Edition, John Wiley.

References:

1. Computer Organization and Architecture – William Stallings Sixth Edition, Pearson
2. Structured Computer Organization – Andrew S. Tanenbaum, 4th Edition PHI
3. Fundamentals of Computer Organization and Design - Sivaraama Dandamudi Springer Int. Edition.
4. Operating Systems – Internals and Design Principles, Stallings, sixth Edition–2009, Pearson Education.
5. Modern Operating Systems, Andrew S Tanenbaum 2nd Edition, PHI.

Course Outcomes: After the completion of the course the student will be able to:

1. Visualize the organization of different blocks in a computer.
2. Use micro-level operations to control different units in a computer.
3. Have knowledge about the organization of Arithmetic and Logical unit and I/O unit.
4. Understand the design of Memory unit, and the overview of computer system hardware and learn about major activities of an Operating systems in a computer with regard to file management, and operating system functions.

Mapping of course outcomes with program outcomes:

EC502C Microprocessors and Microcontrollers

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview: The purpose of this course is to teach students the fundamentals of Microprocessor and Microcontroller systems. The student will be able to incorporate these concepts into their electronic designs for other courses where control can be achieved via a Microprocessor / Microcontroller implementation.

This course will start with a discussion on a simple microprocessor, 8085. Understanding this architecture is the basis to follow any other complex CPU architecture. It will be followed by a complete overview of a range of microcontrollers covering 8051, PIC, AVR and ARM. The hardware intricacies of these processors and their programming will be covered.

Pre-requisite Courses: Digital Logic Design, Analog Circuits.

Course Objectives: The purpose of the course is

1. To familiarize the Architecture, Instructions and Timings of microprocessors and micro controllers.
2. To introduce 8051 architecture and programming of microcontrollers.
3. To provide the knowledge about interfacing techniques of I/O and memory.
4. To understand the concepts of ARM architecture and Advanced ARM processors.

Unit -I

Overview of microcomputer systems and their building blocks, Introduction to 8-bit microprocessor (8085) Architecture, addressing modes, Instruction set, Machine cycles, instruction cycle and timing states, instruction timing diagrams, simple programs in 8085.

Unit -II

Semiconductor memories: RAM, ROM, SRAM, and DRAM. Memory interfacing, concepts of interrupts and Direct Memory Access.

8086 microprocessor – Architecture, Instruction set, Addressing modes, Interrupt system. Minimum mode 8086 system, Maximum mode 8086 system and timing diagrams. Concepts of virtual memory, Cache memory, Architectures of 286, and 386 processors.

Unit -III

8051 Microcontroller: Architecture, register set, addressing modes, Instruction set, Interrupt structure, I/O ports functions, timer and serial port operations, External memory interfacing with 8051.
Assembly language programming of 8051, Parallel I/O Ports, Interrupts, Timer and Counter, Serial Communication Programming.

Unit -IV

I/O interfacing: LED, LCD, Keyboard, Stepper motor, DC Motor, ADC, DAC Interface to 8051. Assemblers and compilers, C language programs, Programming and debugging tools.

Serial Communication and Bus Interface: Serial Communication Standards, Serial Data Transfer Scheme, Onboard communication interfaces - I2C, SPI, and CAN; External communication interfaces - 9-pin RS-232, USB, Bluetooth, Wi-Fi, and ZigBee. Architectures of PIC, Architecture of AVR.

Unit -V

ARM 32-bit Microcontroller: Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, debugging support, General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence. (Text 5: Ch 1, 2, 3)

Text/Reference Books:

2. D A Patterson and J H Hennessy, "Computer Organization and Design The hardware and software interface", Morgan Kaufman Publishers. (UNIT II).
3. Barry B. Brey, The Intel Microprocessors 8086/8088, 80, 86, 80286, 80386 80486, Pentium, Pentium Pro Processor, Pentium II, Pentium III, Pentium 4, Architecture, Programming and interfacing, Prentice Hall of India Private Limited, New Delhi, 2003, Pearson Education, 2004. (UNIT II).
4. Kenneth J. Ayala, "The 8051 Microcontroller Architecture, Programming and Applications", Penram International Publishing/ Thomson Publishers, 2nd Edition, 2005.
5. Joseph Yiu, The Definitive Guide to the ARM Cortex-M3‖, 2nd Edition, Newnes, (Elsevier), 2010. (UNIT V).

Course Outcomes: Upon completing this course, the student will have the ability to:

1. Do assembly language programming.
2. Do interfacing design of peripherals like, I/O, A/D, D/A, timer etc and develop systems using different microcontrollers.
3. Understand the usage of Communication interfaces with Microcontrollers.
4. Understand design ARM / PIC Microcontroller-based systems.

Mapping of course outcomes with program outcomes:

EC503C-Digital Signal Processing

Instruction : Hours/Week : **3L:0T:0P** **Credits: 3**

Sessional Marks : **40** End Semester Examination Marks: **60**

Course Description:

The course covers theory and methods for digital signal processing including basic principles governing the analysis and design of discrete-time systems as signal processing devices. Analyze the digital signals using various digital transforms DFT,FFT etc. Review of discrete-time linear, time-invariant systems, Fourier transforms and z-transforms. Introduction to Multirate signal processing, TMS DSP processors.

Course Learning Objectives:

1. To describe signals mathematically and understand how to perform mathematical operations on signals.
2. It will provide knowledge of Digital filter.
3. Design and develop the basic digital system.
4. To discuss multi rate signal processing and applications.
5. Knowledge on TMS DSP processors and their applications.

Unit -1

Discrete Fourier Transform:

Review of Discrete-time Fourier Transform, Z-Transform, Discrete Fourier transform – Properties, linear convolution, circular convolution of sequences using DFT. Computation of DFT.

Fast Fourier Transforms: Fast Fourier transforms (FFT)-Radix2 decimation in time and decimation in frequency FFT algorithms, inverse FFT and FFT for composite N.

Unit-2

IIR Digital Filters: Analog filter approximations-Butterworth and Chebyshev, design of IIR digital filters from analog filters, design examples: analog-digital transformations. Realization structures for IIR filters – direct, canonic, cascade, parallel forms.

Unit-3

FIR Digital Filters: Characteristics of FIR digital filters, frequency response. Design of FIR digital filters using window techniques, frequency sampling technique. Realization structures of FIR Filter - Transversal, Poly-phase and Linear phase structures. comparison of IIR and FIR filters.

Unit -4

Multirate Digital Signal Processing Fundamentals: Basic sample rate alteration devices, Multirate Structures for sampling rate Converters, Multistage design of decimator and Interpolator, Polyphase Decomposition.

Unit -5

DSP PROCESSORS:

Architecture of TMS320C5X: Introduction, Bus structure, Central Arithmetic Logic Unit, Auxiliary Register ALU, Index Register, Block Move Address Register, Parallel Logic Unit, Memory mapped Registers, Program controller, some flags in the status registers, On-chip memory, On-chip peripherals.

Text Books

4. B. Venkataramani, M.Bhaskar, Digital Signal Processors: Architecture, Programming and Applications, Tata McGraw Hill, 2002.
5. Handouts on DSP Processors.
6. Texas Instruments DSP Processor user manuals and application notes

Course Outcomes:

Students must be able to:

CO1: Apply DFT for the analysis of digital signals and systems
CO2: Design IIR and FIR filters
CO3: Design the Multirate Filters
CO4: Analyze and apply suitable DSP algorithm for specific application

Mapping of course outcomes with the program objectives:

EC504C- Antennas & Wave Propagation

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Pre-requisite: Electromagnetic Theory and Transmission Lines .

Course Description: Antennas and propagation effects play a crucial role in RF systems. In practice, the design of a working system such as mobile phone networks, WIFI, RFID, Satellite communication and GPS requires a good understanding of these components. This course teaches the fundamentals of antenna and propagation and shows the application in practical examples. The course covers the theory of radiation, fundamental antenna parameters and concepts, wire antennas such as dipoles and loop antennas, antenna arrays, aperture antennas, microstrip antennas, numerical analysis, communication & radar systems and propagation effects.

Course Objectives: The course objectives are:

1. To understand the concept of radiation, antenna definitions and significance of antenna parameters, to derive and analyze the radiation characteristics of thin wire dipole antennas and solve numerical problems.
2. To analyse the characteristics and design relations of UHF, VHF and Microwave Antennas.
3. To identify the antenna array requirements, to determine the characteristics of ULAs and estimate the patterns of BSA, EFA, and Binomial Arrays.
4. To understand the concepts and set-up requirements for microwave measurements, and familiarize with the procedure to enable antenna measurements.
5. To define and distinguish between different phenomenon of wave propagation (ground wave, space wave and sky wave), their frequency dependence, and estimate their characteristics, identifying their profiles and parameters involved.

UNIT-I

Antenna Basics: Basic Antenna Parameters – Patterns, Beam Area, Radiation Intensity, Beam Efficiency, Directivity-Gain-Resolution, Antenna Apertures, Effective Height. Fields from Oscillating Dipole, Field Zones, Front - to-back Ratio, Antenna Theorems, Radiation ,Retarded Potentials– HelmholtzTheorem

Thin Linear Wire Antennas – Radiation from Small Electric Dipole, Quarter Wave Monopole and Half Wave Dipole – Current Distributions, Field Components, Radiated Power, Radiation Resistance, Beam Width, Directivity, Effective Area and Effective Height, Natural Current Distributions, Far Fields and Patterns of Thin Linear Centre-fed Antennas of Different Lengths. Loop Antennas.

UNIT-II

Antenna Arrays: Point Sources – Definition, Patterns, arrays of 2 Isotropic Sources - Different Cases, Principle of Pattern Multiplication, Uniform Linear Arrays – Broadside Arrays, End fire Arrays, EFA with Increased Directivity, Derivation of their Characteristics and Comparison, BSAs with Non-uniform Amplitude Distributions – General Considerations and Binomial Arrays.

UNIT-III

VHF, UHF and Microwave Antennas - I: Arrays with Parasitic Elements, Yagi-Uda Array, Folded Dipoles and their Characteristics, Helical Antennas – Helical Geometry, Helix Modes, Practical Design Considerations for Monofilar Helical Antenna in Axial and Normal Modes, Horn Antennas – Types, Fermat's Principle, Optimum Horns, Design Considerations of Pyramidal Horns.

UNIT-IV

VHF, UHF and Microwave Antennas - II: Microstrip Antennas – Introduction, Features, Advantages and Limitations, Rectangular Patch Antennas – Geometry and Parameters, Characteristics of Microstrip Antennas. Reflector Antennas – Introduction, Flat Sheet and Corner Reflectors, Paraboloidal Reflectors – Geometry, Pattern Characteristics, Feed Methods, Reflector Types – Related Features.

UNIT-V

Ground Wave Propagation –Plane Earth Reflections, Space and Surface Waves, Wave Tilt, Curved Earth Reflections. Space Wave Propagation –Field Strength Variation with Distance and Height, Effect of Earth's Curvature, Absorption, Super Refraction, M-Curves and Duct Propagation, Scattering phenomena, Troposphere Propagation. Sky Wave Propagation –Structure of Ionosphere, Refraction and Reflection of Sky Waves by Ionosphere, Ray Path, Critical Frequency, MUF, LUF, OF, Virtual Height and Skip Distance, Relation between MUF and Skip Distance, Multi-hop Propagation.

Text/Reference Books:

1. Antennas and Wave Propagation – J.D. Kraus, R.J. Marhefka and Ahmad S. Khan, TMH, New Delhi, 4th ed., (Special Indian Edition), 2010.
2. Electromagnetic Waves and Radiating Systems – E.C. Jordan and K.G. Balmain, PHI, 2nd edition,2000.
3. Antenna Theory - C.A. Balanis, John Wiley & Sons, 3rd Ed., 2005.
4.. Antennas and Wave Propagation – K.D. Prasad, Satya Prakashan, Tech India Publications, New Delhi, 2001.

Course outcomes: At the end of this course students will have the ability to

CO1: Understand the basic parameters of antenna (L1) and apply the concepts to various antennas based on frequency, configuration and establish the radiation patterns of antenna arrays (L2)
CO2: Analysis of VHF, UHF and Microwave Antennas (L3)
CO3: Design and analysis of microstrip antennas (L4)
CO4: To understand the wave propagation in different frequency ranges (L5)

EC504C -DIGITAL COMMUNICATIONS

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

Digital Communications is a fundamental course in the stream of Electronics and Communication Engineering. This course introduces the basic concepts and principles involving in the analysis of a digital communication system including various Modulation techniques, concepts involved at the Matched filter, ISI, Signal space analysis, various digital modulation techniques and error detection and correction methods. All modern communication systems uses these concepts as fundamentals to design, operate the same. This course helps students comprehend respective Engineering competitive examinations such as GATE, IES etc.,

Course Objectives:

1. To understand the key modules of digital communication systems with emphasis on its modulation techniques
2. To analyze Matched filter, Inter-symbol interference, correlative level coding concepts
3. To understand signal space analysis to understand geometric representation of signals
4. To Understand generation and detection of various digital modulation schemes
5. To get introduced to the concept and basics of information theory and Error detection and correction codes.

UNIT I

Digital Coding of Analog Waveforms: Sampling, Quantization, Quantization noise, Encoding, Pulse Code Modulation, Regeneration, Decoding & Filtering, Noise considerations in PCM systems, Time-Division Multiplexing, Synchronization, Differential encoding, Delta Modulation, Differential Pulse Code Modulation, Processing gain, Adaptive Delta Modulation,

UNIT II

Baseband Pulse Transmission: Matched filter and it's Properties, Matched filter for rectangular pulse, Error rate due to noise, Inter-symbol Interference, Nyquist's criterion for distortion-less baseband binary transmission, Duo binary, Modified duo binary in Correlative-level coding, Baseband M-array PAM transmission, Eye patterns. .

UNIT III

Signal Space Analysis: Introduction, Geometric representation of signals, Gram-Schmidt Orthogonalization procedure, Response of bank of correlators in noise, Coherent detection of signals in noise, Correlation receiver, Probability of error.

UNIT IV

Digital Modulation Techniques: Introduction, Pass band transmission model, ASK, Coherent Phase Shift Keying – Binary phase shift keying, Quadrature shift keying, Binary Frequency shift keying, M-array Quadrature Amplitude Modulation, Non-coherent orthogonal modulation schemes-Differential PSK, Non-Coherent Binary FSK.

(Error probability, Generation and Detection, Power spectra, Bandwidth above schemes)

UNIT-V

Error Control Coding: Introduction, Examples of Error Control Coding, Methods of controlling Errors, Types of Errors, Types of Codes. Linear Block Codes: Matrix Representation of Linear Block Codes, Error Detection and Error Correctio Capabilities of Linear Block Codes. Convolution Codes: Encoders for Convolution Codes, Decoders for Convolution Codes. Illustrative Problems.

TEXT BOOKS

1. Simon Haykin, "Communication Systems," by John Wiley & Sons,3rd Edition, 2010.
2. Sam Shanmugam, "Digital and Analog Communication Systems", Wiley-India edition, 2006.

3. Bruce Carlson, & Paul B. Crilly, "Communication Systems – An Introduction to Signals & Noise in Electrical Communication", McGraw-Hill International Edition, 5th Edition, 2010.

Course Outcomes:

1. Understand the Digital communication System and able to analyse the different Digital modulation techniques.
2. Understand the concepts of baseband digital modulation schemes and Inter Symbol Interference.
3. Analyze Signal space concepts, probability of error performance of various digital binary modulation systems and are able to design digital communication systems.
4. Design a system with Error correcting codes by learning Block Codes, Cyclic Codes and Convolutional Codes.

EC506L -Analog and Digital Communication Laboratory

Instruction: Hours/Week: **0L:0T:3P** Credits: **1.5**

Sessional Marks: **40** Semester Examination Marks: **60**

Course Description:

This course gives students deep knowledge in Analog and Digital communication systems at the practical level so that students can understand the logical, analytical, and mathematical background of the communication system. This lab focuses on understanding the fundamental concepts of signal flow in Analog and Digital communication system. The Detailed analysis of AM, FM, Pulse modulations, digital modulation techniques, sampling and reconstruction, Data Conditioning and Reconditioning are done. The course covers the basic types of Analog and Digital modulation in both Simulink and equipment based.

Course Objectives

1. The course gives students deep knowledge in analog and digital communication systems at the practical level.
2. The course aims to make the student familiar with Analog and Digital Modulation and Demodulation techniques, transmission, reception etc.
3. The Course aims to write and simulate the MATLAB code to study the modulation techniques.
4. The Couse enhance the understanding theory of Analog and Digital Communication concepts.

Hands-on experiments related to the course contents ECPCT404.

List of Experiments:

1. Fourier Synthesis
2. AM Transmitter & Receiver
3. FM Transmitter & Receiver
4. AM/FM Radio Receiver
5. Analog signal sampling & Reconstruction
6. Generation & Detection of PAM/PWM/PPM
7. Generation & Detection of PCM
8. Generation & Detection of DM/SIGMA DELTA/ ADM
9. Baseband digital data transmission
10. Data conditioning & Reconditioning
11. Generation & Detection of BPSK/DPSK/DEPSK

12. Simulation of digital modulation schemes

(i) Phase Shift Keying (PSK), differential phase shift keying (DPSK), DEPSK

(ii) QPSK, M-ary PSK, Quadrature Amplitude Modulation (QAM)

Course Outcomes:

After the completion of the course the student will be able to:

1. Generate AM and FM signals and evaluate their performance.
2. Perform signal sampling by determining the sampling rates for baseband signals and reconstruct the signals.
3. Generate digital modulation signals for ASK, PSK and FSK and perform their detection.
4. Simulate MSK, DPSK, QPSK and DEPSK schemes and estimate their BER.

Mapping of course outcomes with program outcomes:

EC507L Microprocessors and Microcontrollers Laboratory

Instruction : Hours/Week : **0L:0T:3P** Credits: **1.5**

Sessional Marks : **40** Semester Examination Marks: **60**

Course Overview: This course introduces the assembly language programming of 8085 and 8051 Microcontroller. It gives a practical training of interfacing the peripheral devices with the 8085 microprocessor/ 8051microcontroller. It is useful for developing students to be proficient in the assembly language programming skills and real time applications of Microprocessor as well as microcontroller.

Course Objectives: The purpose of the course is

1. To expose students to the operation of typical microprocessor (8085) and microcontroller (8051) trainer kits.
2. To prepare the students to be able to solve different problems by developing different programs.
3. To develop the building of Microcontroller based systems.

Hands-on experiments related to the course contents EC502C.
Pre-requisites: None

Every student is free to do his / her choice of experiments in the Laboratory. Student can do at least 10 to 12 experiments only.

List of Experiments:

(8085/8086 Microprocessor Assembly Language Programming)

1. Write a simple program for arithmetic operations – addition, subtraction, multiplication and division of 16 – bit number.
2. Write a simple program for string operations like string concatenation, swapping.
3. Write a program for interfacing LCD with 8085 and display a message.
4. Write a program for interfacing Stepper Motor with 8085.
5. Write a program for flashing LEDs using 8253 /8254 (PIT) and interrupts.

(8051 Microcontroller Assembly Language Programming)

6. Write a program for performing simple arithmetic operations.
7. Write a program for performing simple Logical operations.
8. Write a simple program for flashing LEDs using software delays, timers and interrupts.
9. Write a program for interfacing Seven Segment Display / LCD with 8051 and display messages.
10. Write a program for interfacing Keypad with 8051 and display keypad input on LCD.

11. Write a program for square waveform generation, with different frequencies and duty cycles.
12. Write a program for serial communication through UART using polling and interrupt methods.
13. Write a program for interfacing ADC with 8051.
14. Write a program for Pulse Width Modulation using on-chip PWM and analog I/O modules.

Write a program for interfacing Seven Segment Display and/or LCD to ARM or 8086 processor.

Course Outcomes: After the completion of the course the student will be able to:

1. Write assembly language programmes for arithmetic and Logical operations using 8085 µp.
2. Develop assembly language programs / C and C++ programs using microcontrollers.
3. Write 8051 assembly language programs to control inbuilt timer and communication modules.
4. Interface ADC and DAC modules with microprocessor-based systems and Write assembly language programmes using ARM / 8086 processor.

Mapping of course outcomes with program outcomes:

EC508L-Digital Signal Processing Lab

Instruction : Hours/Week : **0L:0T:2P** Credits: **1**

Sessional Marks : **40** Semester Examination Marks: **60**

Course Description:

The course is to make familiar with practical implementation of the digital signal processing. digital signal processing involving filtering, deconvolution, spectral estimation, and a variety of other techniques. Laboratory work involves developing signal processing systems on a personal computer and using them with both real and simulated data. Questions related to hardware realizations are also considered. Students can able to develop DSP algorithms for convolution, correlation, DFT, filtering of signals etc. Introduction to TMS Processors software and Hardware tools.

Course Learning Objectives:

1. Understanding the mathematical operations on discrete signals
2. Can able to design Inverse DFT and FFT of a discrete time signals.
3. Model IIR and FIR filters using different techniques.
4. Implementing different DSP algorithms on TMS processors.

Part A – Using MATLAB

1. Generation of standard signals, periodic and Aperiodic signal
2. DFT and IDFT
3. FFT algorithms - Decimation in Time / Decimation in Frequency.
4. Linear and Circular Convolution in time domain and in frequency domain (using DFT)
5. Spectrum Analysis using DFT
6. IIR filter design
7. FIR filter design
8. Decimation and Interpolation

Part B – Using Code Composer Studio

9. Linear convolution of two sequences.
10. Circular convolution of two sequences.
11. Generation of Elementary signals.
12. MAC operation using various addressing modes
13. FIR Implementation.

Course Outcomes

Upon successful completion of the course, the student will be able to

1. Interpret discrete-time signals using DFT
2. Apply FFT algorithms for various signal processing operations
3. Design the Multirate Filters
4. Design IIR and FIR digital filters for real time DSP applications

EC509S-WEB Design and Development

Instruction: Hours/Week: **2L:0T:0P** **Credits: 2**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course offers a preliminary treatment of Web Design and Development concepts that yield visible and audible results through web pages. The course includes an introduction to the World Wide Web, industry standard browsers, effective site and page design, HTML, XHTML, CSS, XML, web graphics and client-side scripting. The course includes detailed discussion of design practices, such as the appropriate use of text and graphics, font and color selection, meta-tags, navigation techniques, media formats, and methods of enhancing the user experience.

COURSE OBJECTIVES:

1. To introduce the fundamentals of Internet, and the principles of web design.
2. To construct basic websites using HTML and Cascading Style Sheets.
3. To build dynamic web pages with validation using Java Script objects and by applying different event handling mechanisms.
4. To develop modern interactive web applications using PHP, XML and MySQL.

Unit–I

Introduction: Concept of WWW, Internet and WWW, HTTP Protocol: Request and Response, Web browser and Web servers, Features of latest version of Web.

Web Design: Concepts of effective web design, Web design issues including Browser, Bandwidth and Cache, Display resolution, Look and Feel of the Website, Page Layout and linking, User centric design, Sitemap, Planning and publishing website, Designing effective navigation.

Unit–II

HTML: Basics of HTML, formatting and fonts, commenting code, color, hyperlink, lists, tables, images, forms, XHTML, Meta tags, Character entities, frames and frame sets, Browser architecture and Web site structure. Overview and features of latest version of HTML.

Style sheets: Need for CSS, introduction to CSS, basic syntax and structure, using CSS, background images, colors and properties, manipulating texts, using fonts, borders and boxes, margins, padding lists, positioning using CSS, CSS2, Overview and features of latest version of CSS.

Unit–III

JavaScript: Client-side scripting with JavaScript, variables, functions, conditions, loops and repetition, Pop up boxes, Advance JavaScript: JavaScript and objects, JavaScript own objects, the DOM and web browser environments, Manipulation using DOM, forms and validations.

DHTML: Combining HTML, CSS and JavaScript, Events and buttons.

Unit–IV

XML: Introduction to XML, uses of XML, simple XML, XML key components, DTD and Schemas, Using XML with application. Transforming XML using XSL and XSLT.

PHP: Introduction and basic syntax of PHP, decision and looping with examples, PHP and HTML, Arrays, Functions, Browser control and detection, string, Form processing, Files, Advance Features: Cookies and Sessions.

Unit–V

PHP and MySQL: Basic commands with PHP examples, Connection to server, creating database, selecting a database, listing database, listing table names, creating a table, inserting data, altering tables, queries, deleting database, deleting data and tables, PHP myadmin and database bugs.

TEXT BOOKS:

1. Ralph Moseley and M. T. Savaliya, Developing Web Applications, Wiley-India Private Limited, 2011.
2. Robert W.Sebesta, Programming the World Wide Web, 7th edition, Pearson Education, 2013.

4. Internet and World Wide Web How to program, Paul J. Deitel, Harvey M. Deitel, and Abbey Deitel, 5th Edition, Pearson Education, 2011.

COURSE OUTCOMES: At the end of this course, the students will be able to

1. Describe the concepts of World Wide Web, and the requirements of effective web design.
2. Develop web pages using the HTML and CSS features with different layouts as per need of applications.
3. Use the JavaScript to develop the dynamic web pages.
4. Construct simple web pages in PHP and to represent data in XML format and use server-side scripting with PHP to generate the web pages dynamically using the database connectivity.

EC510A- Universal Human Values

Instruction: Hours/Week: **2L:0T:0P** **Credits: 0**

Sessional Marks: **100** End Semester Examination Marks: **0**

COURSE DESCRIPTION:
The methodology of this course is universally adaptable, involving a systematic and rational study of the human being vis-à-vis the rest of existence. It is free from any dogma or value prescriptions. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with and within the student himself/herself finally.
Pre-requisites/co-requisites: None.

COURSE OBJECTIVES:

1. To develop a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. To understand (or developing clarity) the harmony in the human being, family, society and nature/existence.
3. To strengthen self-reflection and to develop commitment and courage to act.
4. To understand social responsibility of an engineer.
5. To appreciate ethical dilemma while discharging duties in professional life.

UNIT I
Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly - A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

UNIT II
Understanding Harmony in The Human Being - Harmony in Myself!:
Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility(Sukh and Suvidha).Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer).Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health.

UNIT III
Understanding Harmony in The Family and Society- Harmony in Human-Human Relationship: Understanding harmony in the Family - the basic unit of human interaction. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness(Ubhay-tripti); Trust**(Vishwas)** and Respect **(Samman)**as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution (Samadhan), Prosperity(Samridhi), fearlessness (**Abhay**) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society(AkhandSamaj), Universal Order(SarvabhaumVyawastha) - from family to world family.

UNIT IV
Understanding Harmony in The Nature and Existence - Whole Existence as Coexistence:
Understanding the harmony in the Nature. Interconnectedness and mutual fulfilment among the four orders of nature-recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT V

Implications of The Above Holistic Understanding of Harmony on Professional Ethics: Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

TEXT BOOKS:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010.
2. Jeevan Vidya: EkParichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.

REFERENCE BOOKS:

2. Story of Stuff, http://www.storyofstuff.com
3. AI Gore, An Inconvenient Truth, Paramount Classics, USA
4. Charle Chaplin, Modern Times, United Artists, USA
5. IIT Delhi, Modern Technology - the Untold Story.

COURSE OUTCOMES: On completion of this course, the students will be able to

1. To become more aware of themselves, and their surroundings (family, society, nature) and distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
2. Understand the role of a human being in ensuring harmony in society and nature.
3. To become sensitive to their commitment towards what they have understood (human values, human relationship and human society) .
4. Distinguish between ethical and unethical practices, and start working out the strategy to actualize a harmonious environment wherever they work.

ASSESSMENT:

(i). Assessment by faculty mentor: 20 marks
(ii). Socially relevant project/Group Activities/Assignments: 20 marks
(iii). Semester End Examination: 60 marks

EC601C -Microwave Engineering

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Prerequisite: Antennas and Propagation

Course Description: The course will be broadly focusing on analysis, design and development of microwave circuits and systems. The course will cover introduction to Microwaves, Microwave transmission modes, Transmission lines, Impedance Matching, Microwave Network Analysis, Directional Coupler, Power Divider, Microwave Filters, Microwave Attenuator, RF switches and phase shifters, Microwave Amplifiers, Low Noise Amplifier, Microwave Mixers and Oscillators, Microwave Antennas, Microwave Measurements, Microwave Systems.

Course Objectives:

1. To get familiarized with microwave frequency bands, their applications and to understand the limitations and losses of conventional tubes at these frequencies.
2. To distinguish between different types of microwave tubes, their structures and principles of microwave power generation.
3. To impart the knowledge of Scattering Matrix, its formulation and utility, and establish the S-Matrix for various types of microwave junctions.
4. Understand the utility of Optical Fibres in Communications.

UNIT – I

Microwave Tubes: Limitations and Losses of conventional Tubes at Microwave frequencies, Cavity Klystrons – Structure, Re-entrant Cavities, Velocity Modulation Process, Applegate Diagram, Bunching Process and Small Signal Theory – Expressions for O/P Power and Efficiency. Reflex Klystrons – Structure, Velocity Modulation and Applegate Diagram, Mathematical Theory of Bunching, Power Output, Efficiency, Oscillating Modes and O/P Characteristics. Helix TWTs: Types and Characteristics of Slow Wave Structures; Structure of TWT and Amplification Process (qualitative treatment), Suppression of Oscillations, Gain Considerations.

UNIT - II

M-Type Tubes: Introduction, Cross-field Effects, Magnetrons – Different Types, Cylindrical Traveling Wave Magnetron – Hull Cut-off and Hartree Conditions, Modes of Resonance and PI-Mode Operation, Separation of PI-Mode, o/p characteristics,

Microwave Solid State Devices: Introduction, Classification, Applications. Gunn Diodes – Principle, RWH Theory, Characteristics, Modes of Operation - Gunn Oscillation Modes, Principle of operation of IMPATT and TRAPATT Devices.

UNIT - III

Waveguide Components: Coupling Mechanisms – Probe, Loop, Aperture types. Waveguide Discontinuities – Waveguide Windows, Tuning Screws and Posts, Matched Loads. Waveguide Attenuators – Different Types, Resistive Card and Rotary Vane Attenuators; Waveguide Phase Shifters – Types, Dielectric and Rotary Vane Phase Shifters, Waveguide Multiport Junctions - E plane and H plane Tees. Ferrites– Composition and Characteristics, Faraday Rotation, Ferrite Components – Gyrator, Isolator.

UNIT – IV

Scattering matrix: Importance of S-matrix, Scattering Matrix Properties, Directional Couplers –

2 Hole, Bethe Hole S Parameters, [s] matrix of Magic Tee and Circulator, Measurement of S-parameters.
MICs : Advantages of MIC's, Hybrid MIC's, Strip lines and microstrip lines, Monolithic MICs

UNIT V
Microwave Measurements: Description of Microwave Bench – Different Blocks and their Features, Errors and Precautions, Measurement of Attenuation, Frequency. Standing Wave Measurements, Measurement of Low and High VSWR., Cavity Q-factor and Impedance Measurements. Antenna gain measurements.

TEXT BOOKS:

1. Microwave Devices and Circuits – Samuel Y. Liao, Pearson, 3rd Edition, 2003.
2. Electronic Communications Systems- Wayne Tomasi, Pearson, 5th Edition
3. Microwave Engineering - David M. Pozar, John Wiley & Sons (Asia) Pvt Ltd., 1989, 3r ed., 2011 4t. 4. Microwave Engineering - G.S. Raghuvanshi, Cengage Learning India Pvt. Ltd., 2012
5.Microwave and Radar Engineering, Kulkarni, Umesh publications, 1998.
6. Microwave Engineering, Annapurna Das and Sisir K.Das, Tata Mc Graw-Hill, 2000.

Course Outcomes: At the end of this course students will have the ability to

1. Known power generation at microwave frequencies and derive the performance characteristics. (L2)
2. Understand the principles of solid-state devices. (L1)
3. Distinguish between the different types of waveguide and ferrite components, and select proper components for engineering applications (L4)
4. Understand the utility of S-parameters in microwave component design (L3) and to know the measurement procedure of various microwave parameters. (L5)

EC602C-Computer Networks

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

Computer Networks plays a vital role in the era of communication systems in resources sharing applications. The aim of this course is to introduce the concepts of Computer networking and its applications.

Course Objectives:

1. To understand the basic concepts of computer networks and internet
2. To gain knowledge about the design issues of link layer and internet layer
3. To gain knowledge about the concept of connection oriented and connection less Protocols.
4. To gain knowledge in developing different applications.

Unit -1

Introduction to Computer Networks and the Internet: Principles of network applications and Internet Challenges &Layering concepts.

OSI Reference Model & TCP/IP Reference Model.

Unit -2

DATA Link layer: ALOHA, Multiple access protocols, IEEE 802 standards, Local Area Networks, Ethernet, Wireless LAN, Flow Control, Error Detection and Error Correction.

Unit-3

Internet Layer:

IP Addressing, IP Protocol, Routing Algorithms, queuing disciplines. Congestion Control Algorithms, Resource Reservation, Admission Control and Differentiated services.

Unit-4

Transport Layer: User Datagram Protocol, Connection oriented transport protocol– Transmission Control Protocol, Remote Procedure Call. Port Addressing and Socket Programming.

Unit-5.

Application layer: The Web and Hyper Text Transfer Protocol, File transfer, Electronic mail, Domain name system, Peer-to-Peer file sharing, JPEG, MPEG. Network Security: DES & RSA.

Text / Reference books:

4. D. Comer, “Computer Networks and Internet/TCP-IP”, Prentice Hall
5. William Stallings, “Data and Computer Communication, 8th Edition, Pearson Prentice.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Design of computer networks in Internet.
2. Understand the concepts of error handling, flow control IP Addressing and Routing.
3. Understand the concept of TCP and UDP protocols.
4. Develop several protocols foe web Applications.

EC607L- Microwave Engineering Lab

Instruction : Hours/Week : **0L:0T:2P** Credits: **1.5**

Sessional Marks : **40** Semester Examination Marks: **60**

Course Description:
Electromagnetic waves and Microwave Lab will provide practical understanding on Microwave Bench setup such as Reflex Klystron and operation of various components of the same, Gunn diode and their characteristics. This course also ensures to have practical exposure on Antenna parameters measurements and simulation of the same & optical devices and it's characteristics.

Course Objectives:

1. To understand Microwave Bench setups
2. To analyze various parameters of microwave measurements
3. To understand Antenna measurements
4. To understand the characteristics of optical fiber devices.

List of Experiments:

1. Reflex klystron characteristics – I
2. Reflex klystron characteristics – II
3. Gunn diode Oscillator
4. Waveguide parameters
5. VSWR measurements
6. Directional Couplers
7. Attenuation Measurement
8. Impedance Measurement
9. Dipole Antenna Simulation using IE3D software
10. Antenna measurements

Course Outcomes: At the end of the course the students will be able to

1. Able to measure the performance of simple microwave circuits and devices.
2. Perform microwave measurements with sophistical instruments such as vector network analyser and spectrum analyzer.
3. Able to assess the performance of optical devices such as Light sources, fibers and detectors.
4. Able to plot the loss characteristics of optical fibers.

Mapping of course outcomes with program outcomes:

EC608L- COMPUTER NETWORKS LAB

Instruction: Hours/Week: **0L:0T:3P** **Credits: 1.5**

Sessional Marks: **40** End Semester Examination Marks: **60**

Prerequisites: Nil

Course Over view: This course is designed to impart knowledge about detailed knowledge of Computer Networks, various protocols used in Communication, Managing and configuring Cisco Switches and Routers, and various WAN technologies. Learn basic concepts of computer networking and acquire practical notions of protocols with the emphasis on TCP/IP.

Course Objectives: A lab provides a practical approach to Ethernet/Internet networking: Networks are assembled, and experiments are made to understand the layered architecture and how to do some important protocols work.

1. Explain network technologies and how devices access local and remote networks.
2. Explain how switching operates in a small to a medium-sized business network.
3. Design an IPv4 and IPv6 addressing scheme to provide network connectivity for a small to a medium-sized business network.
4. Implement basic network connectivity between devices.

Major Equipment Required: Required software (Open Source) like NS-2, NSG-2.1 and Wire SHARK

Note:

(a). Minimum of 12 Experiments have to be conducted

(b). All the Experiments may be Conducted using Network Simulation software like NS-2, NSG-2.1 and Wire SHARK/equivalent software.

For Experiments 2 to 10 Performance may be evaluated through simulation by using the parameters Throughput, Packet Delivery Ratio, Delay etc.

List of Experiments:

1. LAN Configuration.
2. IP Addressing.
3. Error Correction and Error Detection.
4. Routing Algorithms
5. FCFS and SJF algorithms
6. Round Robin Algorithm.
7. Peer to peer file sharing and Socket Programming

8. RSA algorithm.
9. DNS look up tables
10. HTML Design.
11. HTTP.

Course Outcomes: At the end of the course the students will be able to

1. Understand network technologies and to access local and remote networks.
2. Operate switching in a small to a medium-sized business network.
3. Design an IPv4 and IPv6 addressing scheme to provide network connectivity for a small to a medium-sized business network.
4. Implement basic network connectivity between devices.

EC609S- Internet of Things and Its Applications

Instruction: Hours/Week: 0**L:1T:2P** **Credits: 2**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

Internet of Things (IoT) cuts across different application domain verticals ranging from civilian to defense sectors. These domains include agriculture, space, healthcare, manufacturing, construction, water, and mining, which are presently transitioning their legacy infrastructure to support a lot. Today it is possible to envision pervasive connectivity, storage, and computation, which, in turn, gives rise to building different lot solutions. IoT-based applications such as innovative shopping systems, infrastructure management in both urban and rural areas, remote health monitoring and emergency notification systems, and transportation systems, are gradually relying on IoT-based systems. Therefore, it is very important to learn the fundamentals of this emerging technology.

Course Learning Objectives:

The Internet is evolving to connect people to physical things and also physical things to other physical things all in real time. It's becoming the Internet of Things (IoT). The course enables student:

1. To understand the fundamentals of Internet of things and protocols.
2. It introduces some of the application areas where Internet of Things can be applied.
3. To build a small low-cost embedded system using Arduino / Raspberry Pi or equivalent boards.
4. To apply the concept of Internet of Things in the real-world scenario.

UNIT I:

Fundamentals of IoT: Introduction to IoT – Characteristics, Sensing, Actuation, Physical Design - Protocols – Logical Design – Enabling technologies – IoT Levels – Six Levels of IoT - Domain Specific IoTs.

UNIT II:

IOT and M2M: M2M, IoT vs M2M, Introduction to Raspberry Pi, Implementation of IoT with Raspberry Pi, Introduction to SDN, SDN and NFV for IoT, IOT system Management with NETCONF-YANG.

UNIT III:

IoT Design Methodology: IoT Systems Management – IoT Design Methodology – Specifications Integration and Application Development. Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino.

UNIT IV:

Data Analytics for IoT: Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis, Apache Oozie, Apache Spark, Apache Storm, Using Apache Storm for Real-time Data Analysis.

UNIT V:

Tools for IoT: Chef, Puppet, IOT code generator Case studies: Chef. Puppet – Multi-tier Deployment, NETCONF-YANG.

IOT Applications: IoT applications for industry- Future Factory Concepts, Smart Applications, Smart Cities and Smart Homes. Case Study: Agriculture, Healthcare, Activity Monitoring. Study of existing IoT platforms /middleware, IoT- A, Hydra etc.

Text Book & References:

1. ArshdeepBahga, Vijay Madisetti, "Internet of Things – A Hands-on Approach", Universities Press, 2015.
2. Chef, Puppet, IOT code generator Case studies: Chef. Puppet – Multi-tier Deployment, NETCONF-YANG, Raspberry Pi.

4. *Simon Monk, "Programming the Raspberry Pi*: *Getting Started with Python",* McGrawHill, *2013*
5. Marco Schwartz, "Internet of Things with the Arduino Yun", Pack Publishing, 2014.

Course Outcomes: Upon completion of this course, students will be able to:

1. Design a portable IoT using Arduino/ equivalent boards and relevant protocols.
2. Develop web services to access/control IoT devices.
3. Deploy an IoT application and connect to the cloud.
4. Analyze applications of IoT in real-time scenario.

EC610A- Professional Ethics in Engineering

Instruction: Hours/Week:**2L:0T:0P** **Credits: 0**
Sessional Marks: **100** End Semester Examination Marks: **0**

COURSE DESCRIPTION:
This course is designed to introduce engineering students to the concepts of engineering ethics. It will allow students to explore the relationship between ethics and engineering and apply classical moral theory and decision making to engineering issues encountered in academic and professional careers. It mainly focuses on improving the capacities of leadership /management through training in professional ethics. Codes of ethics have been invoked as a basis for professional engineering licensure. Violations of such ethical codes have led to many well-known tragic engineering failures that endangered human life and jeopardized public welfare. This discipline will doubtless take its place alongside such well-established fields as medical ethics, business ethics, and legal ethics.
Pre-requisites/co-requisites: None.

COURSE OBJECTIVES

To enable the students
1. To create an awareness on Engineering Ethics and Human Values.
2. To instill Moral and Social Values and Loyalty and to appreciate the rights of others.
3. To study the moral issues and decisions confronting individuals and organizations engaged in engineering profession.
4. To study the related issues about the moral ideals, character, policies, and relationships of people and corporations involved in technological activity.

UNIT I
Human Values: Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation –Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II
Engineering Ethics: Senses of Engineering Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy –Models of professional roles – Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III
Engineering as Social Experimentation: Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT-IV
Safety, Responsibilities and Rights: Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) Discrimination.

UNIT V

Global Issues: Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct– Corporate Social Responsibility.

TEXTBOOKS:

1. Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.
2. Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

REFERENCES:

1. Charles B. Fleddermann, "Engineering Ethics", Pearson Prentice Hall, New Jersey,2004.
2. Charles E. Harris, Michael S. Pritchard and Michael J. Rabins, "Engineering Ethics – Concepts and Cases", Cengage Learning, 2009.
3. John R Boatright, "Ethics and the Conduct of Business", Pearson Education, New Delhi,2003.

5. Laura P. Hartman and Joe Desjardins, "Business Ethics: Decision Making for Personal Integrity and Social Responsibility" Mc Graw Hill education, India Pvt. Ltd., New Delhi, 2013.

COURSE OUTCOMES: Upon completion of the course, the student should be able to:

1. Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
2. Learn the moral issues and problems in engineering; find the solution to those problems.
3. Learn the need for professional ethics, codes of ethics and roles, concept of safety, risk assessment.
4. Gain exposure to Environment Ethics & computer ethics; know their responsibilities and rights.

Grading/Assessment:

(i). Attendance: 20 marks

(ii). Group Activities/Assignments: 20 marks

(iii). Semester End Examination: 60 marks

FOURTH YEAR SYLLABUS

EC701C -Digital Image and Video Processing

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

In this course you will learn the basic principles and tools used to process images and videos, and how to apply them in solving practical problems. Digital images and videos are everywhere these days – in thousands of scientific, consumer, industrial, and creative applications. Which are obtained from a wide range of the electromagnetic spectrum - from visible light and infrared to gamma rays and beyond. The ability to process image and video signals is therefore an incredibly important skill to master for engineering/science students, software developers, and practicing scientists. Digital image and video processing continues to enable the multimedia technology revolution we are experiencing today.

This course will strengthen fundamental knowledge about digital image and video processing techniques along with mathematical framework to describe and analyze images and videos. Digital image and video processing is used in almost all engineering fields and wide range of applications in industrial automation, medical, agriculture, security, entertainment, education and many more.

Course Objectives:

The student should be made to:

1. To know the concept of image fundamentals and mathematical transforms necessary for image Processing
2. To study the image enhancement and segmentation techniques
3. To learn about different color models and image compression procedures
4. To understand fundamentals of Video Coding

UNIT-1:

Digital Image Fundamentals: Elements of visual perception, image sensing and acquisition, image sampling and quantization, basic relationships between pixels – neighborhood, adjacency, connectivity, distance measures.

Image Transforms: Need for image transforms, Fourier transform, 2-D Discrete Fourier transform and its properties, Walsh Transform, Hadamard Transform, Discrete Cosine Transform.

UNIT –II

Image Enhancements and Filtering: Gray level transformations, histogram equalization and specifications, pixel-domain smoothing filters – linear and order-statistics, pixel-domain.

Sharpening filters: first and second derivative, frequency domain filters – low-pass and high-pass filters.

Image Segmentation: Detection of discontinuities, edge linking and boundary detection, thresholding –global and adaptive, region-based segmentation.

UNIT –III

Image Compression: Image compression fundamentals - Coding Redundancy, Spatial and Temporal redundancy, Compression models: Lossy & Lossless, Shannon Fano coding, Huffman coding, Bit plane coding, Transform coding, Predictive coding, Lossy Predictive coding, JPEG Standards.

UNIT –IV

Color Image Processing: Color models– RGB, YUV, HSI; Color transformations– formulation, color complements.

Video Processing: Video Formation, Perception and Representation, Video capture and display, Analog video raster, Analog color television systems, Digital video.

UNIT –V

Fundamentals of Video Coding: Inter-frame redundancy, motion estimation techniques – full search, fast search strategies, forward and backward motion prediction, frame classification – I, P and B; Video sequence hierarchy – Group of pictures, frames, slices, macro-blocks and blocks; Elements of a video encoder and decoder; Video coding standards – MPEG and H.26X.

Video Segmentation: Temporal segmentation–shot boundary detection, hard-cuts and soft-cuts.

5. Yao Wang,Jorn Ostermann and Ya Qin Zhang "Video processing and Communications" Prentice Hall Publishers, 2002, ISBN 0-13-017547-1.

Course Outcomes:

At the end of the course, students will demonstrate the ability to:

1. Mathematically represent the various types of images and analyze them.
2. Process these images for the enhancement of certain properties or for optimized use of the resources.
3. Develop algorithms for image compression and coding.
4. Apply basic operations on video and estimate the motion of two-dimensional video.

EC707S-Machine learning and its Applications.

Instruction: Hours/Week: **2L:0T:0P** **Credits: 2**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course provides an introduction to the fundamental methods at the core of modern machine learning. It covers theoretical foundations as well as essential algorithms for supervised and unsupervised learning. Classes on theoretical and algorithmic aspects are complemented by practical lab sessions.

COURSE OBJECTIVES:

1. To learn the concept of how to learn patterns and concepts from data without being explicitly programmed in various IOT nodes.
2. To design and analyze various machine learning algorithms and techniques with a modern outlook focusing on recent advances.
3. Explore supervised and unsupervised learning paradigms of machine learning.
4. To explore Deep learning technique and various feature extraction strategies.

Unit 1:

Supervised Learning (Regression/Classification) Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes. Linear models: Linear Regression, Logistic Regression, Generalized Linear Models, Support Vector Machines, Nonlinearity and Kernel Methods. Beyond Binary Classification: Multi-class/Structured Outputs, Ranking.

Unit 2

Unsupervised Learning -Clustering: K-means/Kernel K-means , Dimensionality Reduction: PCA and kernel PCA, Matrix Factorization and Matrix Completion Generative Models (mixture models and latent factor models).

Unit 3

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, Random Forests.)

Unit 4

Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning.

Unit 5

Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference Recent trends in various learning techniques of machine learning and classification methods for IOT applications, Various models for IOT applications.

2. Trevor Hastie, Robert Tibshirani, Jerome Friedman, The Elements of Statistical Learning, Springer 2009 (freely available online)
3. Christopher Bishop, Pattern Recognition and Machine Learning, Springer, 2007.

Course Outcomes: After completion of course, students would be able to:

1. Understand the mathematical and statistical prospective of machine learning algorithms through python programming.
2. Design and evaluate the unsupervised models through python in built functions.
3. Evaluate the machine learning models pre-processed through various feature engineering algorithms by python programming.
4. Design and apply various reinforcement algorithms to solve real time complex problems.

EC603C- CMOS VLSI Design

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

This is an introductory course that covers basic theories and techniques of digital VLSI design in CMOS technology. In this course, we will study the fundamental concepts and structures of designing digital VLSI systems including CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, interconnect analysis, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies, VLSI architecture.

Prerequisite Courses: Electronic Devices, Analog Circuits and Digital Logic Design

Course Learning Objectives:

1. To learn basic CMOS Circuits.
2. To learn CMOS process technology.
3. To learn techniques of chip design using programmable devices.
4. To learn the concepts of designing VLSI Subsystems.

Unit -1

Integrated circuit fabrication process: oxidation, diffusion, ion implantation, photolithography and twin-tub CMOS process.

Brief Introduction to MOS, PMOS, NMOS, CMOS & BiCMOS technologies. Review of MOS transistor models, Non-ideal behaviour of the MOS Transistor, $\mathbf{I_{ds} - V_{ds}}$ relationships, MOS transistor threshold Voltage, Transistor as a switch, Inverter characteristics.

Unit -2

Integrated Circuit Layout: VLSI Design Flow, MOS Layers, Stick Diagrams, Design Rules and Layout, CMOS Design rules for wires, Contacts and Transistors Layout Diagrams for CMOS Inverters and Gates, Scaling of MOS circuits.

Basic Circuit Concepts: Sheet Resistance R_s and its concepts to MOS, Area Capacitance calculations, Inverter Delays, driving large Capacitive Loads, Wiring Capacitances. Delay: RC Delay model, linear delay model, logical path efforts. Power, interconnect and Robustness in CMOS circuit layout.

Unit -3

Combinational Circuit Design: CMOS logic families including static, dynamic and dual rail logic, Switch logic, Alternate gate circuits. Shifters, Adders, Parity generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multipliers, Counters, High Density Memory Elements.

Unit -4

Sequential Circuit Design: Static Circuits, Design of latches and Flip-flops.

Test and Testability: Fault-modeling and simulation, test generation, design for testability, Built-in-self-test.

Unit -5

Physical Design: Floor-Planning, Placement, routing, Power delay estimation, Clock and Power routing.

Design styles: Full-custom, Standard Cells, Gate-arrays, FPGAs, CPLDs and Design Approach for Full-custom and Semi-custom devices.

3. John M. Rabaey, A. Chandrakasan, B. Nikolic, Digital Integrated Circuits: A Design Perspective", 2nd Edition, Pearson, 2016.

Course Outcomes: At the end of the course the students will be able to

1. Learn CMOS process technology.
2. Analyze and implement various CMOS static logic circuits using Lambda based design rules.
3. Design different CMOS circuits using various logic families along with their circuit layouts for subsystem design.
4. To learn techniques of chip design using programmable devices and use HDL tools for designing VLSI Subsystems.

EC603C-INFORMATION THEORY AND CODING

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

Information is the source of a communication system, whether it is analog or digital. Information theory is a mathematical approach to the study of coding of information along with the quantification, storage, and communication of information. With the increasing importance in the field of digital communications, the information theory emphasizes basic aspects such as discrete modulation techniques and coding theory. The purpose of this course is to introduce various concepts in information theory, error detection and correction codes. various fundamental concepts of encoding algorithms.

Course Objectives:

The student should be made to:

1.Be familiar with the concept of amount of information, entropy, channel capacity

2.To know the different communication channels, channel capacity and relation among them.

3. To understand and analyze the various error-detection and error-correction codes

4. To know the design concepts of cyclic codes, convolution codes.

UNIT I

Information Theory: Introduction, Measure of information, Information content of message, Average Information content of symbols in Long Independent sequences, Average Information content of symbols in Long dependent sequences, Markov Statistical Model of Information Sources, Entropy and Information rate of Markoff Sources

UNIT II:

Source Coding: Source coding theorem, Prefix Codes, Kraft McMillan Inequality property – KMI

Encoding of the Source Output, Shannon's Encoding Algorithm. Shannon Fano Encoding Algorithm, Huffman codes, Extended Huffman coding, Arithmetic Coding, Lempel – Ziv Algorithm.

UNIT III

Information Channels: Communication Channels, Channel Models, Channel Matrix, Joint probability Matrix, Binary Symmetric Channel, System Entropies, Mutual Information, Channel Capacity, Channel Capacity of: Binary Symmetric Channel, Binary Erasure Channel, Muroga,s Theorem, Continuous Channels

UNIT IV

Error Control Coding: Introduction, Examples of Error control coding, methods of Controlling Errors, Types of Errors, types of Codes, Linear Block Codes: matrix description

of Linear Block Codes, Error Detection and Error Correction Capabilities of Linear Block Codes, Single Error Correcting Hamming Codes, LDPC CODES

Binary Cyclic Codes: Algebraic Structure of Cyclic Codes, Encoding using an (n-k) Bit Shift register, Syndrome Calculation, Error Detection and Correction

UNIT V

Cyclic Codes: Golay Codes, BCH Codes.

Convolution Codes: Convolution Encoder, Time domain approach, Transform domain approach, Code Tree, Trellis and State Diagram, The Viterbi Algorithm, TURBO CODES .

4. Information Theory and Coding, K.N.Haribhat, D.Ganesh Rao, CengageLearning, 2017.

Course Outcomes:

Upon completion of the course, the student should be able to:

1. Describe basic parameters of Information, the concepts of source coding techniques, and Error Control coding techniques)
2. Apply knowledge of Information theory and error control coding techniques to solve problems
3. Analyze various source coding and channel coding techniques for error detection and error correction in the information bearing signals
4. Analyze and compare audio and video coding techniques

Mapping of course outcomes with program outcomes:

EC603C-Optimization Techniques

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

The students will try to learn the operation research models using optimization techniques based upon the fundamentals of engineering mathematics (minimization and Maximization of objective function). The problem formulation by using linear, dynamic programming, game theory and queuing models.

Course Objectives:

1. Operation research models using optimization techniques based upon the fundamentals of engineering mathematics (minimization and Maximization of objective function).
2. The problem formulation by using linear, dynamic programming, game theory and queuing models.
3. The stochastic models for discrete and continuous variables to control inventory and simulation of manufacturing models for the production decision making.
4. Formulation of mathematical models for quantitative analysis of managerial problems in industry.

Unit 1

Introduction to Classical Methods & Linear Programming Problems Terminology, Design Variables, Constraints, Objective Function, Problem Formulation. Calculus method, Kuhn Tucker conditions, Method of Multipliers.

Unit 2

Linear Programming Problem, Simplex method, Two-phase method, Big-M method, duality, Integer linear Programming, Dynamic Programming, Sensitivity analysis.

Unit 3

Single Variable Optimization Problems: Optimality Criterion, Bracketing Methods, Region Elimination Methods, Interval Halving Method, Fibonacci Search Method, Golden Section Method. Gradient Based Methods: Newton-Raphson Method, Bisection Method, Secant Method, Cubic search method.

Unit 4

Multi Variable and Constrained Optimization Technique, Optimality criteria , Direct search Method, Simplex search methods, Hooke-Jeeve‘s pattern search method, Powell‘s conjugate direction method, Gradient based method, Cauchy‘s Steepest descent method, Newton‘s method , Conjugate gradient method. Kuhn - Tucker conditions, Penalty Function, Concept of Lagrangian multiplier, Complex search method, Random search method

Unit 5

Intelligent Optimization Techniques: Introduction to Intelligent Optimization, Soft Computing, Genetic Algorithm: Types of reproduction operators, crossover & mutation,

Simulated Annealing Algorithm, Particle Swarm Optimization (PSO) - Graph Grammer Approach - Example Problems
Genetic Programming (GP): Principles of genetic programming, terminal sets, functional sets, differences between GA & GP, random population generation, solving differential equations using GP.

5. D. E. Goldberg, "Genetic algorithms in Search, Optimization, and Machine learning", Addison-Wesley Longman Publishing, 1989.

Course Outcomes:

At the end of this course, students will be able to

1. Understand importance of optimization.
2. Ability to go in research by applying optimization techniques in problems of Engineering and Technology.
3. Apply basic concepts of mathematics to formulate an optimization problem .
4. Analyze and appreciate variety of performance measures for various optimization problems .

EC603C-Hardware-Software Co-design

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course will cover the fundamental topics of HW/SW code design and partitioning concepts in designing embedded systems. The emphasis will be on goals and methodology for partitioning hardware/software in embedded systems**.**

Course Objectives:

1. To provide an understanding of system-level design of embedded systems comprised of both hardware and software.
2. To investigate topics such as Hardware Software partitioning, mapping and scheduling, Co-simulation, synthesis and verification relevant to co-design.
3. To explore, analysis and optimization processes in support of algorithmic and architectural design decisions.
4. Gain design experience with case studies using contemporary high-level methods and tools.

UNIT I

NATURE OF HARDWARE AND SOFTWARE

Hardware, Software, Definition of Hardware/Software Co-Design – Driving factors Platform design space – Application mapping – Dualism of Hardware design and software design – Concurrency andparallelism, Data flow modeling and Transformation – Data Flow Graph – Tokens, actors and queues,Firing rates, firing rules and Schedules – Synchronous data flow graph – control flow modeling – Adding time and resources – Transformations.

UNIT II

DATA FLOW IMPLEMENTATION IN SOFTWARE AND HARDWARE

Software Implementation of Data Flow – Converting queues and actors into software, Dynamic Scheduler – Hardware Implementation of Data Flow – single rate SDF graphs into hardware, Pipelining – Analysis of control flow and data flow – construction of control and data flow graph – Translating C into hardware – Designing data path and controller.

UNIT III

DESIGN SPACE OF CUSTOM ARCHITECTURES

Finite state machines with data path – FSMD design example, Limitations – Micro programmed Architecture – Micro programmed control, microinstruction encoding, Micro programmed data path, micro programmed machine – General purpose Embedded Core – RISC pipeline, Program organization SoC interfaces for custom hardware – Design Principles in SoC Architecture.

UNIT IV
HARDWARE/ SOFTWARE INTERFACES
Principles of Hardware/software communication – synchronization schemes, communication constrained versus Computation constrained, Tight and Loose coupling - On-chip buses – Memory mapped interfaces – coprocessor interfaces – custom instruction interfaces – Coprocessor hardware interface – Data and control design, programmer's model.

UNIT V
CASE STUDIES Trivium Cripto coprocessor – Trivium stream cipher algorithm, Trivium for 8-bit platforms – AES coprocessor, CORDIC coprocessor – algorithm and implementation.

4. Patrick Schaumont, A Practical Introduction to Hardware/Software Codesign, 2nd Edition, Springer.

Course Outcomes: After completion of this course the students will be able to

1. Analyze and apply design methodologies.
2. Appreciate the fundamental building blocks of the using hardware and software co-design and
3. Relate implementation and testing environments and techniques and their interrelationships.
4. Get familiar with modern hardware/software tools for building prototypes and to be able to
   demonstrate practical competence in these areas

EC604C-Cyber Security

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

The course deals with the underlying principles of cryptography and network security. It develops the mathematical tools required to understand the topic of cryptography. Starting from the classical ciphers to modern day ciphers, the course provides an extensive coverage of the techniques and methods needed for the proper functioning of the ciphers. The course deals with the construction and cryptanalysis of block ciphers, stream ciphers and hash functions. The course defines offers the construction and cryptanalysis of public key ciphers, namely RSA. The key exchange problem and solutions using the Diffie-Hellman algorithm are discussed. Message Authentication Codes (MAC) and signature schemes are also detailed. The course deals with modern trends in asymmetric key cryptography, namely using Elliptic Curves. The course ends with the awareness about different network attacks and precautions to be taken for the security.

Course Objectives:

The student should be made to:

1. To know the basics of Cryptography and Network Security.
2. To be able to secure a message over insecure channel by various means.
3. To learn about how to maintain the Confidentiality, Integrity and Availability of a data.
4. To have the knowledge of security requirements for a network against various threats

UNIT-I

Introduction: OSI Security Architecture - Classical Encryption techniques – Cipher Principles – Data Encryption Standard – Block Cipher Design Principles and Modes of Operation - Evaluation criteria for AES – AES Cipher – Triple DES – Placement of Encryption Function – Traffic Confidentiality

UNIT-II

Public Key Cryptography Key Management - Diffie-Hellman key Exchange – Elliptic Curve Architecture and Cryptography - Introduction to Number Theory – Confidentiality using Symmetric Encryption – Public Key Cryptography and RSA.

UNIT-III

Authentication And Hash Function: Authentication requirements – Authentication functions – Message Authentication Codes – Hash Functions – Security of Hash Functions and MACs – MD5 message Digest algorithm - Secure Hash Algorithm – RIPEMD – HMAC Digital Signatures – Authentication Protocols – Digital Signature Standard.

UNIT-IV

Network Security Authentication Applications: Kerberos – X.509 Authentication Service – Electronic Mail Security – PGP – S/MIME - IP Security – Web Security.

UNIT-V

System Level Security Intrusion detection – password management – Viruses and related Threats – Virus Counter measures – Firewall Design Principles – Trusted Systems.

TextBook:

2. Bruce Schneier, "Applied Cryptography", John Wiley & Sons Inc, 2001.
3. Charles B. Pfleeger, Shari Lawrence Pfleeger, "Security in Computing", Third Edition, Pearson Education.

Course Outcomes

1.Understand different encryption techniques

2. Implement basic security algorithms required by any computing system

3. Analyze the vulnerabilities in any computing system to design a security solution

4. Analyze the possible security attacks and their effective countermeasures in real time systems

Mapping of course outcomes with program outcomes:

EC604C-Nano Electronics

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

This course covers specialized topics in modern Nano electronics. It offers an introduction to electron transport in Nano scale semiconductor devices as well as an introduction to magnetism and spintronics. Models for Nano scale transistors and quantum effects in these will be treated.

Course Objectives:

This course is aimed to:

1. Make them understand various advanced concepts in Nano electronics.
2. Explode the fundamentals on QED, SED, molecular electronics, and spintronics.
3. Train the students on state of the art computational tools for modelling and simulation of nano electronics devices.

UNIT I

Introduction: Evolution of science and nanotechnology, Introduction to nanotechnology, Difference between Nano science and nanotechnology, Feynman predictions on Nano technology, Role of up and top down approaches in nanotechnology, challenges in nanotechnology.

UNIT II

Molecular Nanotechnology: Electron microscope – scanning electron microscope – atomic force microscope –scanning tunnelling microscope – Nano manipulator – Nano tweezers – atom manipulation – Nano dots – self-assembly – dip pen nanolithography.

UNIT III

Nano powders-Synthesis and processing of Nano powders-process for producing ultrafine powders-mechanical milling, wet chemical synthesis, gas condensation process, chemical vapour condensation, laser ablation, Design and synthesis of self-assembled nanostructured materials.

UNIT–IV

Nano Materials: History of Materials, Definition, classification of Nanostructured Materials, cause of interest in Nanomaterial's, Nanomaterial's preparation-present and future applications of Nanomaterials,special nanomaterial's, characterization and tools: carbon nanotubes, Nano composites, carbon fullerenes: An overview of preparation, properties, Electron microscopy techniques: scanning Electron Microscopy, Transmission Electron Microscopy, scanning probe Microscopy-X ray Methods

UNIT-V

Nano Electronics-Introduction to micro, Nano fabrication: optical lithography, Electron beam lithography, Atomic lithography, Molecular beam Epitaxy, MEMS-Introduction, principles, Types of MEMS:-Mechanical, Thermal, Magnetic MEMS, Fabrication of MEMS.

Course outcomes

Upon successful completion of the course, the student will be able to:

1. Understand various aspects of Nano-technology and the processes involved in making Nano- components and material.
2. Leverage advantages of the Nano-materials and appropriate use in solving practical problems.
3. Understand various aspects of Nano-technology and the processes involved in making Nano-
components and material
4. Leverage advantages of the Nano-materials and appropriate use in solving practical problems.

EC604C-Sensors and Transducers

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview: It is important to understand the concepts of Sensors and Transducers. When selecting a system to use, it is important to understand the tradeoff among various components, so you can accurately use appropriate instruments. This course will cover the basic concepts of instrumentation that are important for you to understand, including the requirements for specific applications.

Course Objectives:

The purpose of the course is

1. To know the performance characteristics of instrument and the quality of measurement based on the type of transducer based on the transduction principles.
2. Understanding the concepts of Measurements and Developments in Sensor Technology.

UNIT- I

Instrument Characteristics: Block diagram of generalized instrument system, Static characteristics - Desirable & Undesirable characteristics; Dynamic characteristics - Transfer function, Dynamic response of zero order, First order and second order instruments to step input. **Measurement Errors and Statistical Analysis:** Definition of parameters, Combination of limiting error, Statistical treatment, Curve fitting methods.

UNIT- II

Transducers: Classification of transducers, Characteristics of transducers.
Passive Transducer Principles: Variable resistance - Change in length and area; Variable inductance - Change in self-inductance, Change in mutual inductance, Production of eddy currents, Variable capacitance - Change in area, Distance and dielectric**.**

UNIT- III

Active Transducer Principles: Thermoelectric, Piezoelectric and Photoelectric effects
Displacement Measurement: Introduction, Pneumatic transducers - Flapper Nozzle transducer; Electrical transducers - Resistive, inductive and capacitive; Digital displacement transducer

UNIT- IV

Velocity, Acceleration and Vibration Measurement: Electromagnetic tachometer, Digital Methods - Photo electric and toothed rotor variable reluctance tachometers, Principles of accelerometers, Types of accelerometers - LVDT, Strain gauge and piezo electric accelerometers.

UNIT- V

Developments in Sensor Technology: Introduction, Smart sensors, Micro sensors, IR radiation sensors, Ultrasonic sensors, Fiber optic sensors, Chemical sensors and Bio sensors.

Text Books:

1. A.K.Ghosh, "Introduction to Measurements & Instrumentation", 3rd Ed., PHI, 2009. (UNIT I)

2. http://nptel.ac.in/courses/112103174/3

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Analyze the various performance characteristics of instrument and the quality of Measurement.
2. Identify the type of transducer based on the transduction principles.
3. Select the relevant transducer for measurement of displacement, velocity and acceleration to meet the requirements of industrial applications.
4. Identify the additional attributes in advanced sensors.

Mapping of course outcomes with program outcomes:

EC604C- Electronic Instrumentation

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course deals with the basics of electronic instruments used in laboratory and industry. In the process they learn different type of instruments like voltmeter, ammeter, Q meter, Bridges, transducers and display devices CRO, CRT. After learning this subject student will be master in working principle and application of all types of instruments.

Course Objectives:

- To explain basic concepts and definitions in measurement.
- To describe the bridge configurations and their applications.
- To understand, design aspects and performance criterion of measuring instruments.
- To understand the working principle of various transducers.

UNIT-I

Measurement and Error: Definitions, accuracy and precision, types of errors.
DC Ammeters, DC Voltmeters, Series type ohmmeter, Shunt type ohmmeter. AC Voltmeter using rectifiers, True RMS responding voltmeter. Analog Instruments – Transistor voltmeter, micro voltmeter (chopper type) - DC differential voltmeter - AC voltmeters.

UNIT-II

Cathode Ray Oscilloscopes : Motion of electron in electric field and in magnetic field – Block diagram of CRO, CRT, Electrostatic deflection sensitivity – Vertical and Horizontal deflection systems – Principle of operation of Dual beam, Digital, Dual trace, Sampling and Storage CROs – Measurements with CRO (voltage, current, time, frequency, phase angle, Lissajous figures).

UNIT-III

Q meter and measurement methods.Bridges: Wheatstone, Kelvin's, Maxwell, Hay and Schering bridges. Wave analyzers (AF & RF) - Harmonic distortion analyzers – Spectrum analyzer.

UNIT-IV

Digital instruments – Digital voltmeters (Ramp, Dual slope, stair case, successive approximation types) Digital Multimeter, universal counter, Digital tachometer, Digital phase meter IEEE 488 Bus.

UNIT-V

Transducers – Classification and selection of transducers – strain gauges – Temperature measurement (resistance thermometer, thermo couples and thermistors) LVDT – Peizo electric transducer.

Text Books :

2.https://nptel.ac.in/courses/108106070

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Emphasize the basic electronics measurement concepts & Design the different analog and digital

   electronics voltmeters
2. Identify and use different analyzers and oscilloscopes.
3. Design the Measurement of different bridges& generators to make measurements and analyze measurement.
4. Analyze the concepts of Transducers based on applications.

4.	Bio-Medical Electronics

EC702C-NEURAL NETWORKS AND FUZZY LOGIC

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

To master the various fundamental concepts of fuzzy logic and artificial neural networks.

This will help you to get sufficient knowledge to analyze and design the various intelligent control systems

Course Objectives:

1. This course introduces the basics of Neural Networks and essentials of Artificial Neural Networks with Single Layer and Multilayer Feed Forward Networks.
2. It deals with Associate Memories and introduces Fuzzy sets and Fuzzy Logic system components.
3. The Neural Network and Fuzzy Network system application to Electrical Engineering is also presented. This subject is very important and useful for doing Project Work.
4. The main objective of this course is to provide the student with the basic understanding of neural networks and fuzzy logic fundamentals.

Unit – 1

Artificial Neural Networks: Introduction to neural networks, biological neurons, artificial neurons, McCulloch-Pitt's neuron model, neuron modeling for artificial neural systems, feed forward network, perceptron network, Supervised and un-supervised learning.

Learning Rules: Hebbian learning Rule, Perceptron learning Rule, Delta learning Rule, Winner-take-all learning rule, Out-star learning rule.

Unit – 2

Supervised Learning: Perceptrons, exclusive OR problem, single layer perceptron network, multi-layer feed forward networks: linearly non separable patter classification, delta learning rule for multi perceptron layer, error back propagation algorithm, training errors , ADALINE, introduction to Radial Basis Function Networks(RBFN).

Unit – 3

Un-Supervised Learning: Hamming net, Max net. Winner–take–all learning, counter propagation network, feature mapping, self-organizing feature maps

Applications of neural Algorithms: elementary aspects of applications of character recognition.

Neural Network control applications: Process identification, Basic dynamic learning control architecture.

Unit – 4

Fundamentals of fuzzy logic and fuzzy sets: Definition of fuzzy set , a-level fuzzy set , cardinality, operations on fuzzy sets: union, intersection, complement, Cartesian product, algebraic sum, definition of fuzzy relation, properties of fuzzy relations, fuzzy composition.

Unit – 5

Design of Fuzzy Systems: Components of fuzzy systems, functions of fuzzification, Rule base patterns, Inference mechanisms.

Methods of de-fuzzification: COG, COA, MOM, Weighted average, height methods, Design of Fuzzy Systems for temperature setting of water heater, fuzzy system for control of air conditioner.

Course Outcomes:

After successful completion of the course, the student will be In a position to

1. Understand the Biological neural systems and construction of artificial neural systems.
2. Understand and explain different learning rules
3. Understand the concept of pattern classification.
4. Identify the different types of supervised and unsupervised training algorithms.

EC702C-RADAR ENGINEERING

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

It is important to understand the concepts of principles of Radar Engineering, Mri radar and practical applications of Radar.

Course Objectives: The purpose of the course is

1. To understand the basic principle of radar systems and Doppler and MTI Radar.
2. To know how the detection of Noise and principle of Radar receiver.

UNIT I

INTRODUCTION TO RADAR: Basic Radar, The simple form of the Radar Equation, Radar Block Diagram and operation, Applications of Radar, The Radar Equation, Detection of Signals in Noise, Receiver Noise and the Signal to-Noise Ratio, Probability Density Functions- Probabilities of Detection and False Alarm-Integration of Radar Pulses, Radar Cross Section of Targets Radar cross Section Fluctuations- Transmitter Power, Pulse Repetition Frequency-System losses.

UNIT-II

MTI Radar: Introduction to Doppler and MTI Radar- Delay Line Cancellers, Staggered Pulse Repetition Frequencies, Doppler Filter Banks, Digital MTI Processing, Moving Target Detector, Limitations to MTI Performance.

UNIT- III

Pulse Doppler Radar: Tracking with Radar, Mono-pulse Tracking, Conical Scan and Sequential Lobing, Limitations to Tracking Accuracy, Low-Angle Tracking: Tracking in Range, Other Tracking Radar Topics, Comparison of Trackers, Automatic Tracking with Surveillance Radars (ADT), Radar Antennas.

UNIT- IV

Detection of Signals in Noise: Introduction, Matched Filter Receiver, Detection Criteria, Detectors, Automatic Detector, Integrators, Constant-False Alarm Rate Receivers, The Radar operator, Signal Management

UNIT- V

The Radar Receiver: Receiver noise Figure, Super heterodyne Receiver, Radar Displays. Applications: Electronic Support Measure (ESM), Electronic Counter Measure (ECM), Electronic Counter-Counter Measure (ECCM), Stealth Technology.

2. http://www.radartutorial.eu/07.waves/wa04.en.html

Course outcomes

Upon successful completion of the course, the student will be able to:

1. Understand the principles and applications of RADAR
2. Demonstrate the Doppler Effect and the concepts of continuous wave radars.
3. Analyze the tracking radar systems and mono pulse radar.
4. Understand radar signal detection in presence of noise and its performance

EC702C-Testing and Testability

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Pre-requisite, if any: **Digital Logic Design**

Course Overview: The purpose of the course is know the to understand the VLSI testing, types of faults and Fault Diagnosis.

Course Objectives: The purpose of the course is

1. To learn the role of VLSI testing.
2. Understand the types of Faults, Design for Testability and Fault Diagnosis.

Unit-1

Role of testing in VLSI Design flow, Testing at different levels of abstraction, Fault error, defect, diagnosis, yield, Types of testing, Rule of Ten, Defects in VLSI chip. Modelling basic concepts, Functional modelling at logic level and register level, structure models, logic simulation, delay models.

Unit-2

Various types of faults, Fault equivalence and Fault dominance in combinational sequential circuits. Fault simulation applications, General fault simulation algorithms- Serial, and parallel, Deductive fault simulation algorithms. Combinational circuit test generation, Structural Vs Functional test, ATPG, Path sensitization methods.

Unit-3

Difference between combinational and sequential circuit testing, five and eight valued algebra, and Scan chain-based testing method. D-algorithm procedure, Problems, PODEM Algorithm, Problems on PODEM Algorithm. FAN Algorithm, Problems on FAN algorithm, Comparison of D, FAN and PODEM Algorithms. Design for Testability, Ad-hoc design, Generic scan-based design.

Unit-4

Classical scan-based design, System level DFT approaches, Test pattern generation for BIST, and Circular BIST, BIST Architectures, and Testable memory design-Test Algorithms -Test generation for Embedded RAMs.

Unit-5

Fault Diagnosis Logic Level Diagnosis - Diagnosis by UUT reduction - Fault Diagnosis for Combinational Circuits - Self-checking design - System Level Diagnosis.

8. A.L. Crouch, "Design Test for Digital IC's and Embedded Core Systems", Prentice Hall International.

Course Outcomes: At the end of the course, the students will be able to:

1. Identify the significance of testable design
2. Understand the concept of yield and identify the parameters influencing the same
3. Specify fabrication defects, errors and faults.
4. Implement combinational and sequential circuit test generation algorithms and techniques to improve fault coverage

EC702C-Bio-Medical Instrumentation

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview: The purpose of the course is know the human physiology and various sources of

bioelectric signals and the types of electrodes to be used and Safety aspects to be followed.

Course Objectives: The purpose of the course is

1. To gain knowledge on human physiology for measurement of electrical and non-electrical parameter in the human body.
2. Understand medical assisting and therapy equipment and safety measures when using Bio-Medical Instrumentation.

Unit-1

Brief introduction to human physiology- Problems encountered while making measurements on a human body-Structure of cell – Function of each components of the cell – Membrane potential – Action potential – Generation and Conduction- Anatomy and Physiological aspects of respiration.

Unit-2

Bio-electrodes and bio-potential amplifiers ---Origin of bio potential and its propagation. Electrode-electrolyte interface, electrode–skin interface, half cell potential, impedance, polarization effects of electrode – non-polarizable electrodes. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Recording problems .

Unit-3

. Need for bio-amplifier - single ended bio-amplifier, differential bio-amplifier, isolation amplifiers, Chopper amplifier. ECG, EEG, EMG Lead systems and recording methods, Typical waveforms.

Unit-4

Measurement of blood temperature, pressure and flow. Impedance plethysmography. Ultrasonic, X-ray and nuclear imaging.

Prostheses and aids: Introduction to Pacemakers, defibrillators, heart-lung machine, Dialyzers, Diathermy .

Unit-5

Safety aspects: – devices to protect against electrical hazards – Ground fault interrupter, isolation transformer, line isolation monitor, receptacle tester, electrical safety analyzer equipment, preventive maintenance.

3. Webster, “Medical Instrumentation Application & Design”, John Wiley & Sons

E-resources and other digital material:

1. http://www.eeeuniversity.com/2013/08/ei2311-biomedical-instrumentation.html

Course outcomes: Upon successful completion of the course, the student will be able to:

1. Understand the physical foundations of biological systems and bioelectric potentials in medical field and Examine the various sources of bioelectric signals and the types of electrodesto be used.
2. Describe the acquisition and amplification of the bio-signals
3. Gain knowledge on the measurement of electrical and non-electrical parameter in the human body and Understand medical assisting and therapy equipment.
4. Discuss on electrical safety, hazards, protection against shock and testing of electrical systems

Mapping of course outcomes with program outcomes:

EC703C-Satellite Communication

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

This course will provide you with an in-depth background of satellite communication techniques, modern satellite multiple access, modulation and coding schemes, as well as providing an update on key emerging technologies and future systems.

Course Objectives:

1. To Enable students to become familiar with satellites and satellite services.
2. Study of satellite orbits and launching.
3. Study of Earth segment and space segment components.
4. Study of satellite access by various users.

Unit -1

Introduction to Satellite Communication: Principles and architecture of satellite Communication, Brief history of Satellite systems, advantages, disadvantages, applications and frequency bands used for satellite communication.

Orbital Mechanics: Orbital equations, Kepler's laws, Apogee and Perigee for an elliptical orbit, evaluation of velocity, orbital period, angular velocity etc. of a satellite, concepts of Solar day and Sidereal day.

Unit -2

Satellite sub-systems: Study of Architecture and Roles of various sub-systems of a satellite system such as Telemetry, tracking, command and monitoring (TTC & M), Attitude and orbit control system (AOCS), Communication sub-system, power sub-systems etc.

Unit -3

Typical Phenomena in Satellite Communication: Solar Eclipse on satellite, its effects, remedies for Eclipse, Sun Transit Outage phenomena, its effects and remedies, Doppler frequency shift phenomena and expression for Doppler shift. Satellite link budget.

Unit -4

Satellite link budget: Flux density and received signal power equations, Calculation of System noise temperature for satellite receiver, noise power calculation, Drafting of satellite link budget and C/N ratio calculations in clear air and rainy conditions.

Unit -5

Modulation and Multiple Access Schemes: Various modulation schemes used in satellite communication, Meaning of Multiple Access, Multiple access schemes based on time, frequency, and code sharing namely TDMA, FDMA and CDMA.

Text /Reference Books:

1. Timothy Pratt Charles W. Bostian, Jeremy E. Allnutt: Satellite Communications: Wiley India. 2nd edition 2002.
2. Tri T. Ha: Digital Satellite Communications: Tata McGraw Hill, 2009.
3. Dennis Roddy: Satellite Communication: 4th Edition, McGraw Hill, 2009.

Course Outcomes: At the end of this course students will demonstrate the ability to

1. Visualize the architecture of satellite systems as a means of high speed, high range communication system.
2. State various aspects related to satellite systems such as orbital equations, sub-systems in a satellite, link budget, modulation and multiple access schemes.
3. Solve numerical problems related to orbital motion and design of link budget for the given parameters and conditions.

EC703C-Fiber Optic Communications

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

Optical fibers have several advantages over conventional copper cables. Optical communication enjoys high bandwidth and thus useful for transmitting huge information securely and with less repeaters to longer distances. The performance of optical system is superior to conventional communication and thus has widespread use in industry.

Course Objectives:

Optical Communication has got greater applicability and students of Communication discipline should master the subject. This course will enable the students:

1. To understand deeply the fundamental aspects of optical communication
2. To analyze the types of fibers and understand the performance by comparison
3. To design optical receivers of optical systems
4. To simulate the performance through parameters like BER and S/N Ratio
5. To apply the principles of optical communication to networks.

Unit -1

Overview of Optical Fiber Communication: The evolution of fiber optic systems, elements of an optical fiber transmission link, block diagram, advantages of optical fiber communication, applications.

Introduction to vector nature of light, propagation of light, Ray theory transmission, total internal reflection, acceptance angle, numerical aperture and skew rays, propagation of light in a cylindrical dielectric rod, Ray model, wave model., Modes, electromagnetic mode theory and propagation, single mode and multimode fibers, linearly polarized modes.

Unit -2

Different types of optical fibers, Fiber material, fiber cables and fiber fabrication, fiber joints, fiber connectors, splicer, Modal analysis of a step index fiber. Signal degradation on optical fiber due to dispersion and attenuation, Fabrication of fibers and measurement techniques like OTDR.

Unit -3

Optical Sources and Detectors: Coherent and non-coherent sources, quantum efficiency, modulation capability of optical sources, LEDs: Working principle and characteristics, Laser diodes: Working principle and characteristics, Working principle and characteristics of Photo-detectors: PIN-diodes, APDs, detector responsivity, noise analysis in detectors, coherent and non-coherent detection

Unit -4

Optical Receiver, Switches & Amplifiers

Receiver structure, bit error rate of optical receivers, and receiver performance, Optical link design - BER calculation, quantum limit, power penalties.
Optical switches - coupled mode analysis of directional couplers, electro-optic switches.
Optical amplifiers - EDFA, Raman amplifier.

Unit -5

Optical Networks: SONET and SDH standards, architecture of optical transport networks (OTNs), network topologies, Operational principle of WDM and DWDM systems, WDM network elements and Architectures, Principles of WDM networks, Solutions.
Nonlinear effects in fiber optic links: Concept of self-phase modulation, group velocity dispersion and solution based communication.

Text/Reference Books:

1. J. Keiser, Fibre Optic communication, McGraw-Hill, 5th Ed. 2013 (Indian Edition).
2. John M. Senior, Optical Fiber Communications: Principles and Practice, Pearson, 3rd Ed. 2008.

G. Agrawal, Nonlinear fibre optics, Academic Press, 2nd Ed. 1994.

Course Outcomes:

At the end of the course, students will demonstrate the ability to:

1. Understand the principles fiber-optic communication, the components and the bandwidth advantages.
2. Understand the properties of the optical fibers and optical components.
3. Understand operation of lasers, LEDs, and detectors.
4. Analyze system performance of optical communication systems and design optical networks and understand non-linear effects in optical fibers.

Mapping of course outcomes with program outcomes:

EC703C-WIRELESS COMMUNICATION

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course provides a comprehensive overview and advanced knowledge of modern mobile and wireless communication systems. Building on the prior knowledge on digital communications, students develop further understanding on the challenges and opportunities brought by the wireless medium in designing current and future wireless communication systems and networks.

Course Objectives:

1. To provide the students with the fundamental treatment about many practical and theoretical concepts that forms Basic of wireless communications.
2. To equip the students with various kinds of wireless networks and it's operations .
3. To provide an to provide analytical perspective on the design and analysis of traditional and emerging wireless networks, And to discuss the need to get off and solution methods, the fundamental problems in wireless networking .
4. To train students do understand the architecture and operation of various wireless wide area networks such as GSM, IS-95, GPRS and SMS.
5. To train students to understand wireless LAN architectures and operations.
6. To prepare students to understand the emerging techniques OFDM and its importance in the wireless communications.

UNIT-I

THE CELLULAR CONCEPT-SYSTEM DESIGN FUNDAMENTALS: Introduction, Frequency reuse, Channel assignment strategies, Handoffs strategies-prioritizing handoffs, Practical handoff considerations, Interference and system capacity – Co-channel interference and system capacity, Channel planning for wireless systems, Adjacent channel interference, Power control for reducing interference, Trunking and grade of service, Improving coverage and capacity in cellular systems - Cell splitting, Sectoring.

UNIT-II

MOBILE RADIO PROPAGATION LARGE-SCALE PATH LOSS: Introduction to radio wave propagation, Free space propagation model, Relating power to electric field, The three basic propagation mechanisms, Reflection-reflection from dielectrics, Brewster angle, Reflection from prefect conductors, Ground reflection (two-ray) model, Diffraction-fresnel zone geometry, Knife-edge diffraction model, Multiple knife-edge diffraction, Scattering, Outdoor propagation models-Longley-Ryce model, Okumura model, Hata model, PCS extension to Hata model, Walfisch and Bertoni losses (Same floor), Partition losses between floors, Log-distance path loss model, Ericsson multiple breakpoint model, Attenuation factor model, Signal penetration into buildings, Ray tracing and site specific modeling.

UNIT-III

MOBILE RADIO PROPAGATION: SMALL-SCALE FADING AND MULTIPATH: Small scale multipath propagation-factors influencing small scale fading, Doppler shift, Impulse response

model of a multipath channel-Relationship between Bandwidth and received power, small-scale multipath measurements Direct RF pulse system, Spread spectrum sliding correlator channel sounding, Frequency domain channels sounding, Parameters of mobile multipath channels-time dispersion parameters, Coherence bandwidth, Doppler spread and coherence time, Types of small-scale fading-fading effects, Due to multipath time delay spread, flat fading, Frequency selective fading, Fading effects due to Doppler spread-fast fading, Slow fading, Statistical models for multipath fading channels-clarke's model for flat fading, Spectral shape due to Doppler spread in Clarke's model, Simulation of Clarke and gans fading model, Level crossing and fading st statistics, Two-ray Rayleigh fading model.

UNIT-IV

EQUALIZATION AND DIVERSITY: Introduction, Fundamentals of equalization, Training a generic adaptive equalizer, Equalizers in a communication receiver, Linear equalizers, Non-linear equalization Decision Feedback Equalization (DFE), Maximum Likelihood Sequence Estimation (MLSE) Equalizer, Algorithms for adaptive equalization-zero forcing algorithm, Least means square algorithm, Recurisve least squares algorithm, Diversity techniques-derivation of selection diversity improvement, Derivation of maximal ratio combining improvement, Practical space diversity consideration-selection diversity, Feedback or scanning diversity, Maximal ratio combining, Equal gain combining, Polarization diversity, Frequency diversity, Time diversity, RAKE receiver.

UNIT-V

WIRELESS NETWORKS: Introduction to wireless networks, Advantages and disadvantages of wireless local area networks, WLAN topologies, WLAN standard IEEE 802.11, IEEE 802.11 medium access control, Comparision of IEEE 802.11 a, b, g and n standards, IEEE 802.16 and its enhancements, Wireless PANs, HiperLan, WLL.

TEXT BOOKS:

1. Rappaport,T.S., ―Wireless communications‖, Pearson Education, Second Edition, 2010.(UNIT I, II, IV)

Course Outcomes:

Upon completion of the course, the student will be able to:

1. Understand the principles of wireless communications.
2. Understand fundamentals of wireless networking.
3. Understand cellular system design concepts.
4. Analyse various multiple access schemes used in wireless communication.

Mapping of course outcomes with program outcomes:

EC703C-MEMS

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Overview:

The course will cover fabrication technologies, material properties, structural mechanics, basic sensing and actuation principles, packaging, and MEMS markets and applications. The course will emphasize the fabrication and materials of micro/nano systems.

Course Objectives:

1. Key aim is to learn micro-electro-mechanical systems (MEMS) and micro-integrated system.
2. Properties of useful materials will be discussed in context to MEMS and BioMEMS. Micro-electronics process modules used in the design and fabrication of MEMS and micro-integrated systems will be presented.
3. Applications of these systems in a variety of sensors and transducers for broad ranges of implantable biomedical applications will be described.
4. Recent advances in wearable biomedical applications of MEMS and bio MEMS will also be discussed in detail.

Unit -1

Introduction and Historical Background, Scaling Effects, Micro/Nano Sensors.

Unit -2

Actuators and Systems overview: Case studies.

Unit -3

Review of Basic MEMS fabrication modules: Oxidation, Deposition Techniques, Lithography (LIGA), and Etching.

Unit -4

Micromachining: Surface Micromachining, sacrificial layer processes, Stiction, Bulk Micromachining, Isotropic Etching and Anisotropic Etching, Wafer Bonding.

Unit -5

Mechanics of solids in MEMS/NEMS: Stresses, Strain, Hookes's law, Poisson effect, Linear Thermal Expansion, Bending; Energy methods, Overview of Finite Element Method, Modeling of Coupled Electromechanical Systems.

7. M.H. Bao, Micromechanical Transducers: Pressure sensors, accelerometers, and Gyroscopes, Elsevier, New York, 2000.

Course Outcomes:

At the end of the course, students will demonstrate the ability to:

1. Appreciate the underlying working principles of MEMS and NEMS devices.
2. Design and model MEM devices.
3. Gain a knowledge of basic approaches for various sensor design
4. Gain the technical knowledge required for computer-aided design, fabrication, analysis and characterization of Nano-structured materials, micro- and Nano-scale devices.

EC704C-Embedded System Design

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course is **to enable the students to understand embedded-system programming and apply that knowledge to design and develop embedded solutions**. Interaction with peripheral devices. Activities. Identify hardware and software components to build an embedded system.

Prerequisite: Microprocessors and Microcontrollers; Computer Organization and Operating Systems.

Course Objectives:

1. To provide an overview of Design Principles of Embedded System.
2. To provide clear understanding about the role of firmware.
3. To understand the necessity of operating systems in correlation with hardware systems.
4. To learn the methods of interfacing and synchronization for tasking.

UNIT - I:

Introduction to Embedded Systems: Definition of Embedded System, Embedded Systems Vs General Computing Systems, History of Embedded Systems, Classification, Major Application Areas, Purpose of Embedded Systems, Characteristics and Quality Attributes of Embedded Systems.

UNIT - II:

Typical Embedded System: Core of the Embedded System: General Purpose and Domain Specific Processors, ASICs, PLDs, Commercial Off-The-Shelf Components (COTS), Memory: ROM, RAM, Memory according to the type of Interface, Memory Shadowing, Memory selection for Embedded Systems, Sensors and Actuators, Communication Interface: Onboard and External Communication Interfaces.

UNIT - III:

Embedded Firmware: Reset Circuit, Brown-out Protection Circuit, Oscillator Unit, Real Time Clock, Watchdog Timer, Embedded Firmware Design Approaches and Development Languages.

UNIT - IV:

RTOS Based Embedded System Design: Operating System Basics, Types of Operating Systems, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling.

UNIT - V:

Task Communication: Shared Memory, Message Passing, Remote Procedure Call and Sockets, Task Synchronization: Task Communication/Synchronization Issues, Task Synchronization Techniques, Device Drivers, Methods to Choose an RTOS.

TEXT BOOKS:

1. Introduction to Embedded Systems - Shibu K.V, Mc Graw Hill.

REFERENCE BOOKS:

2. Embedded System Design - Frank Vahid, Tony Givargis, John Wiley.
3. Embedded Systems – Lyla, Pearson, 2013
4. An Embedded Software Primer - David E. Simon, Pearson Education.
5.

Course Objectives:

1. To provide an overview of Design Principles of Embedded System.
2. To provide clear understanding about the role of firmware.
3. To understand the necessity of operating systems in correlation with hardware systems.
4. To learn the methods of interfacing and synchronization for tasking.

EC704C-Real Time Operating System

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Abstract / Outline:

In several software applications, especially in embedded application, the operating system is required to support the application to meet the timing constraints. The operating system achieves this by deploying suitable scheduling algorithms. A major problem arises, when the real-time tasks share resources. Priority inversions can take place in this case, unless suitable techniques are deployed. Starting with a brief introduction to real-time operating systems, we first discuss the important real-time task/thread scheduling algorithms and resource sharing protocols. An effort towards standardization of real-time operating systems has come to be known as POSIX-RT. We review POSIX-RT requirements. Besides, we review several commercial and open source real-time operating systems.

Prerequisites: C Programming, Computer Organization and Operating Systems, and Operating Systems.

Course Objectives:

1. To provide an overview of Design Principles of Embedded System.
2. To provide clear understanding about the role of firmware.
3. To understand the necessity of operating systems in correlation with hardware system.
4. To learn the methods of interfacing and synchronization for tasking.

UNIT – I:

Introduction: Introduction to UNIX/LINUX, Overview of Commands, File I/O, (open, create, close, lseek, read, write), Process Control (fork, vfork, exit, wait, waitpid, exec).

UNIT – II:

Real Time Operating Systems: Brief History of OS, Defining RTOS, The Scheduler, Objects, Services, Characteristics of RTOS, defining a Task, asks States and Scheduling, Task Operations, Structure, Synchronization, Communication and Concurrency. Defining Semaphores, Operations and Use, Defining Message Queue, States, Content, Storage, Operations and Use.

UNIT – III:

Objects, Services and I/O: Pipes, Event Registers, Signals, Other Building Blocks, Component Configuration, Basic I/O Concepts, I/O Subsystem.

UNIT – IV:

Exceptions, Interrupts and Timers: Exceptions, Interrupts, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Operations.

UNIT – V:

Case Studies of RTOS: RT Linux, Micro C/OS-II, Vx Works, Embedded Linux, and Tiny OS.

TEXT BOOK:

1. Qing Li, "Real Time Concepts for Embedded Systems", 2011, Elsevier.

3. Dr. Craig Hollabaugh, "Embedded Linux: Hardware, Software and Interfacing", 2008, 1st Edition, Pearson.

Course Outcomes:

1. Understand concepts of Real-Time systems and modeling
2. Recognize the characteristics of a real-time system
3. Understand and develop document on an architectural design of a real-time system
4. Develop and document Task scheduling, resource management, real-time operating systems and fault tolerant applications of Real-Time Systems.

EC704C-FPGA Based System Design

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Pre-Requisite(s): Digital Logic Design

Course Description: This course covers the advanced design and analysis of digital circuits with HDL. The primary goal is to provide in depth understanding of system design. The course enables students to apply their knowledge for the design of advanced digital hardware systems with help of FPGA tools.

Course Objectives:

1. Understand Digital system design using HDL.
2. Know FPGA architecture, interconnect and technologies.
3. Know different FPGA's and implementation methodologies.
4. Understand configuring and implementing digital embedded system, micro-controllers, microprocessors, DSP algorithms on FPGA.

UNIT I:

Verilog HDL Coding Style: Lexical Conventions - Ports and Modules – Operators - Gate Level Modeling - System Tasks &Compiler Directives - Test Bench - Data Flow Modeling - Behavioral level Modeling -Tasks & Functions.

UNIT II:

Overview of FPGA Architectures and Technologies: FPGA Architectural options, coarse vs fine grained, vendor specific issues (emphasis on Xilinx FPGA), Antifuse, SRAM and EPROM based FPGAs, FPGA logic cells, interconnection network and I/O Pad.

UNIT III:

Verilog Modelling of Combinational and Sequential Circuits: Behavioral, Data Flow and Structural Realization – Adders – Multipliers- Comparators - Flip Flops - Realization of Shift Register - Realization of a Counter- Synchronous and Asynchronous FIFO –Single port and Dual port RAM – Pseudo Random LFSR – Cyclic Redundancy Check.

UNIT IV

Synchronous Sequential Circuits: State diagram-state table –state assignment-choice of flipflops – Timing diagram –One hot encoding Mealy and Moore state machines – Design of serial adder using

Mealy and Moore state machines - State minimization – Sequence detection- Design examples: Sequence detector, Serial adder, Vending machine using One Hot Controller. Optimization of Speed: Introduction, Strategies for Timing Improvement; Optimization of Area, Optimization of power.

Unit V

FPGA and its Architecture: Types of Programmable Logic Devices- PLA & PAL- FPGA Generic Architecture. Types of FPGAs, CLBs vs LAB vs Slices, MUX vs LUT based logic implementation, ALTERA Cyclone II Architecture – Timing Analysis and Power analysis using Quartus-II- SOPC Builder- NIOS-II Soft-core Processor- System Design Examples using ALTERA FPGAs – Traffic light Controller, Real Time Clock -Interfacing using FPGA: VGA, Keyboard, LCD.

4. Michael D. Ciletti, "Advanced Digital Design with the Verilog HDL," First Edition, 2003, Prentice Hall, ISBN: 0130891614.

Course Outcomes: Upon successful completion of this course, students will be able to:

1. Design and optimize complex combinational and sequential digital circuits by using Verilog HDL.
2. Design and model digital circuits with Verilog HDL at behavioural, structural, and RTL Levels.
3. Develop test benches to simulate combinational and sequential circuits and analyse Digital design in terms of area, power and speed..
4. Understand the FPGA Architecture and Implementation of the combinational and sequential digital circuits in FPGA.

EC704C-Digital Signal Processors & Architectures

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course explains fundamental concepts of Digital Signal Processing and implementation of various applications on Advanced Processor. Helps students to understand architecture of advanced Digital Signal Processor and how to program it for signal processing applications.

Prerequisite: Students should have an understanding of Microcontroller architecture as well as basic C and assembly language programming skills and basic understanding of discrete time signals and systems

Course Objectives:

1. To describe features and architectural improvements of DSP processors.
2. To introduce addressing modes and instruction description of TMS320C6x processors.
3. To demonstrate data representation in DSP Processors and FIR filters.
4. 4. To demonstrate the usefulness of the adaptive filters and learn techniques of code optimization.

Unit 1

Programmable DSP Hardware: Processing Architectures (von Neumann, Harvard), DSP core algorithms (FIR, IIR, Convolution, Correlation, FFT), IEEE standard for Fixed and Floating Point Computations, Special Architectures Modules used in Digital Signal Processors (like MAC unit, Barrel shifters), On-Chip peripherals, DSP benchmarking.

Unit 2

Structural and Architectural Considerations: Parallelism in DSP processing, Texas Instruments TMS320 Digital Signal Processor Families, Fixed Point TI DSP Processors: TMS320C1X and TMS320C2X Family,TMS320C25 –Internal Architecture, Arithmetic and Logic Unit, Auxiliary Registers, Addressing Modes (Immediate, Direct and Indirect, Bit-reverse Addressing), Basics of TMS320C54x and C55x Families in respect of Architecture improvements and new applications fields, TMS320C5416 DSP Architecture, Memory Map, Interrupt System, Peripheral Devices, Illustrative Examples for assembly coding.

Unit 3

VLIW Architecture: Current DSP Architectures, GPUs as an alternative to DSP Processors, TMS320C6X Family, Addressing Modes, Replacement of MAC unit by ILP, Detailed study of ISA, Assembly Language Programming, Code Composer Studio, Mixed Cand Assembly Language programming, On-chip peripherals, Simple applications developments as an embedded environment.

Unit 4

Multi-core DSPs: Introduction to Multi-core computing and applicability for DSP hardware, Concept of threads, introduction to P-thread, mutex and similar concepts, heterogeneous and homogenous multi-core systems, Shared Memory parallel programming –OpenMP approach of parallel programming, PRAGMA directives, OpenMP Constructs for work sharing like for loop, sections, TI TMS320C6678 (Eight Core subsystem).

Unit 5

FPGA based DSP Systems: Limitations of P-DSPs, Requirements of Signal processing for Cognitive Radio (SDR), FPGA based signal processing design-case study of a complete design of DSP processor,High Performance Computing using P-DSP: Preliminaries of HPC, MPI, OpenMP, multicore DSP as HPC infrastructure.

6. E.S.Gopi, "Algorithmic Collections for Digital Signal Processing Applications Using MATLAB", 1st Edition, Springer Netherlands,2007.

Course Outcomes:

At the end of this course students will be able to

1. Identify and formalize architectural level characterization of P-DSP hardware
2. Ability to design, programming (assembly and C), and testing code using Code Composer Studio environment
3. Deployment of DSP hardware for Control, Audio and Video Signal processing applications
4. Understanding of major areas and challenges in DSP based embedded systems

SYLLABUS

FOR

Honors Degree, Minors in Electronics and Minors in Communications

Courses offered for Honors degree

ECHN01- Advanced Digital Signal Processing

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: Digital signal processing is a method of processing real world signals (represented by a sequence of numbers) using mathematical techniques to perform transformations or extract information.

Course Objectives:

1. To analyze multirate DSP systems.
2. To determine coefficients for perfect reproduction filter banks and wavelets.
3. To choose parameters to take a wavelet transform, and interpret and process the result.

UNIT-I

Multi rate DSP, Decimators and Interpolators, Sampling rate conversion, multistage decimator & interpolator, poly phase filters, QMF, digital filter banks, Applications in sub band coding

UNIT-II

Linear prediction & optimum linear filters, stationary random process, forward-backward linear prediction filters, solution of normal equations, AR Lattice and ARMA Lattice-Ladder Filters, Wiener Filters for Filtering and Prediction.

UNIT-III

Adaptive Filters, Applications, Gradient Adaptive Lattice, Minimum mean square criterion, LMS algorithm, Recursive Least Square algorithm

UNIT-IV

Estimation of Spectra from Finite-Duration Observations of Signals. Nonparametric Methods for Power Spectrum Estimation, Parametric Methods for Power Spectrum Estimation, Minimum-Variance Spectral Estimation, Eigenanalysis Algorithms for Spectrum Estimation.

UNIT-V

Application of DSP & Multi rate DSP, Application to Radar, introduction to wavelets, application to image processing, design of phase shifters, DSP in speech processing & other applications.

Text Books :

1.J.G.Proakis and D.G.Manolakis"Digital signal processing: Principles, Algorithm and Applications", 4th Edition, Prentice Hall, 2007.
2.N. J. Fliege, "Multirate Digital Signal Processing: Multirate Systems -Filter Banks – Wavelets", 1st Edition, John Wiley and Sons Ltd, 1999.
3.Bruce W. Suter, "Multirate and Wavelet Signal Processing",1st Edition, Academic Press, 1997.
4.M. H. Hayes, "Statistical Digital Signal Processing and Modeling", John Wiley & Sons Inc., 2002.
5.S.Haykin, "Adaptive Filter Theory", 4th Edition, Prentice Hall, 2001.
6.D.G.Manolakis, V.K. Ingle and S.M.Kogon, "Statistical and Adaptive Signal Processing", McGraw Hill, 2000.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. To understand theory of different filters and algorithms
2. To understand theory of multi rate DSP, solve numerical problems and write algorithms
3. To understand theory of prediction and solution of normal equations
4. To know applications of DSP at block level

Mapping of course outcomes with program outcomes:

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	3		3		1	1					2			
CO3	3	2	2	3	2	2					3	3	3	3
CO4	3	2	2	2	2	2					3	3	3	3

ECHN02- Antennas and Radiating Systems

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: Radiation intensity, or the antenna power pattern, in a given direction is defined as the power radiated from an antenna per unit solid angle. The radiation intensity is a far field parameter which can be obtained by simply multiplying the radiation power density by the square distance

Course Objectives:

1. To fundamental antenna parameters and numerical methods to analyze and differentiate the antennas.
2. To concept of radiation mechanism of various antennas.
3. To mechanism and models for radio-wave propagation.

UNIT-I

Types of Antennas: Wire antennas, Aperture antennas, Micro strip antennas, Array antennas Reflector antennas, Lens antennas, Radiation Mechanism, Current distribution on thin wire antenna.

Fundamental Parameters of Antennas: Radiation Pattern, Radiation Power Density, Radiation Intensity, Directivity, Gain, Antenna efficiency, Beam efficiency, Bandwidth, Polarization, Input Impedance, radiation efficiency, Antenna Vector effective length, Friis Transmission equation, Antenna Temperature.

UNIT-II

Linear Wire Antennas: Infinitesimal dipole, Small dipole, Region separation, Finite length dipole, half wave dipole, Ground effects.

Loop Antennas: Small Circular loop, Circular Loop of constant current, Circular loop with non uniform current.

UNIT-III

LinearArrays: Two element array, N Element array: Uniform Amplitude and spacing, Broadside and End fire array, Super directivity, Planar array, Design consideration.

UNIT-IV

Aperture Antennas: Huygen's Field Equivalence principle, radiation equations, Rectangular Aperture, Circular Aperture.

Horn Antennas: E-Plane, H-plane Sectoral horns, Pyramidal and Conical horns.

UNIT-V

Micro strip Antennas: Basic Characteristics, Feeding mechanisms, Method of analysis, Rectangular Patch, Circular Patch, Reflector Antennas: Plane reflector, parabolic reflector, Cassegrain reflectors, Introduction to MIMO.

Text Books :

1. Constantine A. Balanis, "Antenna Theory Analysis and Design", John Wiley & Sons, 4th edition, 2016.
2. John D Kraus, Ronald J Marhefka, Ahmad S Khan, "Antennas for All Applications", Tata McGraw-Hill, 2002.

4. I.J.Bhal and P.Bhartia, "Micro-strip antennas", Artech house, 1980.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Compute the far field distance, radiation pattern and gain of an antenna for given current distribution.
2. Estimate the input impedance, efficiency and ease of match for antennas.
3. Compute the array factor for an array of identical antennas.
4. Design antennas and antenna arrays for various desired radiation pattern characteristics.

Mapping of course outcomes with program outcomes:

CHN03- Wireless and Mobile Communications

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course offers an insight into the concepts of mobile and wireless data communication technologies. The objective of this course is to enable the student to understand the emerging technologies of wireless and mobile communications and simulate them.

Course Objectives:

1. To understand the new trends in mobile/wireless communications networks.
2. To understand multiple radio access techniques.
3. To analyze various routing algorithms used in mobile/wireless networks.
4. To identify the issues in transport and application layers.

UNIT-I

Cellular Communication Fundamentals: Cellular system design, Frequency reuse, cell splitting, handover concepts, Co channel and adjacent channel interference, interference reduction techniques and methods to improve cell coverage, Frequency management and channel assignment.GSM architecture and interfaces, GSM architecture details, GSM subsystems, GSM Logical Channels, Data Encryption in GSM, Mobility Management, Call Flows in GSM.2.5 G Standards: High speed Circuit Switched Data (HSCSD), General Packet Radio Service (GPRS), 2.75 G Standards: EDGE.

. **UNIT-II**

Spectral efficiency analysis based on calculations for Multiple access technologies: TDMA, FDMA and CDMA, Comparison of these technologies based on their signal separation techniques, advantages, disadvantages and application areas. Wireless network planning (Link budget and power spectrum calculations)

UNIT-III

Mobile Radio Propagation: Large Scale Path Loss, Free Space Propagation Model, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering, Practical Link Budget Design using Path Loss Models, Outdoor Propagation Models, Indoor Propagation Models, Signal Penetration into Buildings. Small Scale Fading and Multipath Propagation, Impulse Response Model, Multipath Measurements, Parameters of Multipath channels, Types of Small Scale Fading: Time Delay Spread; Flat, Frequency selective, Doppler Spread; Fast and Slow fading

UNIT-IV

Equalization, Diversity: Equalizers in a communications receiver, Algorithms for adaptive equalization, diversity techniques, space, polarization, frequency diversity, Interleaving

UNIT-V

Code Division Multiple Access: Introduction to CDMA technology, IS 95 system Architecture, Air Interface, Physical and logical channels of IS 95, Forward Link and Reverse link operation, Physical and Logical channels of IS 95 CDMA, IS 95 CDMA Call Processing, soft Handoff, Evolution of IS 95 (CDMA One) to CDMA 2000, CDMA 2000 layering structure and channels.
Higher Generation Cellular Standards:3G Standards: evolved EDGE, enhancements in 4G standard, Architecture and representative protocols, call flow for LTE, VoLTE, UMTS, introduction to 5G.

Text Books :

1. V.K.Garg, J.E.Wilkes, "Principle and Application of GSM", Pearson Education, 5th edition, 2008.
2. V.K.Garg, "IS-95 CDMA & CDMA 2000", Pearson Education, 4th edition, 2009.
3. T.S.Rappaport, "Wireless Communications Principles and Practice", 2nd edition, PHI,2002.

5. Asha Mehrotra, "A GSM system Engineering" Artech House Publishers Bosten, London, 1997.

Course outcomes :
Upon successful completion of the course, the student will be able to:

1. Apply frequency-reuse concept in mobile communications, and to analyze its effects on interference, system capacity, handoff techniques .
2. Distinguish various multiple-access techniques for mobile communications e.g. FDMA, TDMA, CDMA, and their advantages and disadvantages.
3. Analyze path loss and interference for wireless telephony and their influences on a mobile-communication system's performance.
4. Analyze and design CDMA system functioning with knowledge of forward and reverse channel details, advantages and disadvantages of using the technology

Mapping of course outcomes with program outcomes:

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	3		3		1	1					2			
CO3	3	2	2	3	1	1					3	3	3	3
CO4	3	2	2	2	1	1					3	3	3	3

ECHN04- Voice and Data Networks

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:
This course provides an introduction to voice and data networking technologies, including public and priv ate voice services, Ethernet and Internet data technologies, network security, business applications and net work management. The structure, regulation, andhistory of the telecom and data network industry will be discussed as well.

Course Objectives:

1. To protocol, algorithms, trade-offs rationale.
2. To routing, transport, DNS resolutions
3. To network extensions and next generation architecture.

UNIT-I

Network Design Issues, Network Performance Issues, Network Terminology, centralized and distributed approaches for networks design, Issues in design of voice and data networks

. **UNIT-II**

Layered and Layer less Communication, Cross layer design of Networks, Voice Networks (wired and wireless) and Switching, Circuit Switching and Packet Switching, Statistical Multiplexing.

UNIT-III

Data Networks and their Design, Link layer design- Link adaptation, Link Layer Protocols, Retransmission. Mechanisms (ARQ), Hybrid ARQ (HARQ), Go Back N, Selective Repeat protocols and their analysis.

UNIT-IV

Queuing Models of Networks , Traffic Models , Little's Theorem, Markov chains, M/M/1 and other Markov systems, Multiple Access Protocols , Aloha System , Carrier Sensing , Examples of Local area networks.

UNIT-V

Inter-networking, Bridging, Global Internet, IP protocol and addressing, Sub netting, Classless Inter domain Routing (CIDR) , IP address lookup , Routing in Internet. End to End Protocols, TCP and UDP. Congestion Control, Additive Increase/Multiplicative Decrease, Slow Start, Fast Retransmit/ Fast Recovery, Congestion avoidance, RED TCP Throughput Analysis, Quality of Service in Packet Networks, Network Calculus, Packet Scheduling Algorithms.

Text Books :

1. D. Bertsekas and R. Gallager, “Data Networks”, 2nd Edition, Prentice Hall, 1992.
2. L. Peterson and B. S. Davie, “Computer Networks: A Systems Approach”,5th Edition, Morgan Kaufman, 2011.

6. Aaron Kershenbaum,Telecommunication Network Design Algorithms,McGraw Hill, 1993.
7. Vijay Ahuja, “Design and Analysis of Computer Communication Networks”, McGraw Hill, 1987

Course outcomes :
Upon successful completion of the course, the student will be able to:

1. Understand Protocol, algorithms, trade-offs rationale.
2. Analyze Routing, transport, DNS resolutions
3. Know about Network extensions and next generation architectures
4. Analyze and design voice and data networking technologies

Mapping of course outcomes with program outcomes:

PO / CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	2	2	1						1			
CO2	3		3		1	1					2			
CO3	3	2	2	3	2							3	3	3
CO4	3	2	2	2	2	2						3	3	3

ECHN05- Advanced Communication Networks

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: Basic techniques for modeling and analyzing communication networks. Fairness and utility functions, routing, congestion control, pricing, queuing models, loss networks, multi-class queues and scheduling.

Course Objectives:

1. To fairness and network utility maximization
2. To optimization based routing and congestion control
3. To basic queuing models and their application to switching and scheduling in networks.

UNIT-I

Overview of Internet-Concepts, challenges and history. Overview of -ATM. TCP/IP Congestion and Flow Control in Internet-Throughput analysis of TCP congestion control. TCP for high bandwidth delay networks. Fairness issues in TCP.

. **UNIT-II**

Real Time Communications over Internet. Adaptive applications. Latency and throughput issues. Integrated Services Model (intServ). Resource reservation in Internet. RSVP.
Characterization of Traffic by Linearly Bounded Arrival Processes (LBAP). Leaky bucket Algorithm and its properties.

UNIT-III

Packet Scheduling Algorithms-requirements and choices. Scheduling guaranteed service connections. GPS, WFQ and Rate proportional algorithms. High speed scheduler design. Theory of Latency Rate servers and delay bounds in packet switched networks for LBAP traffic.;
Active Queue Management - RED, WRED and Virtual clock. Control theoretic analysis of active queue management

UNIT-IV

IP address lookup-challenges. Packet classification algorithms and Flow Identification-Grid of Tries, Cross producting and controlled prefix expansion algorithms.
Admission control in Internet. Concept of Effective bandwidth. Measurement based admission control. Differentiated Services in Internet (DiffServ). DiffServ architecture and framework

UNIT-V

IPV4, IPV6, IP tunnelling, IPswitching and MPLS, Overview of IP over ATM and its evolution to IP switching. MPLS architecture and framework. MPLS Protocols. Traffic engineering issues in MPLS.

5.George Kesidis, "ATM Network Performance", Kluwer Academic, Research Papers, 2005.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand advanced concepts in Communication Networking.
2. Design and develop protocols for Communication Networks.
3. Understand the mechanisms in Quality of Service in networking.
4. Optimise the Network Design.

Mapping of course outcomes with program outcomes:

ECHN06- Pattern Recognition and Machine Learning

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course introduces fundamental concepts, theories, and algorithms for pattern recognition and machine learning, which are used in computer vision, speech recognition, data mining, statistics, information retrieval, and bioinformatics. Topics include: Bayesian decision theory, parametric and non-parametric learning, data clustering, component analysis, boosting techniques, support vector machine, and deep learning with neural networks.

Course Objectives:

1. To understand, describe and critique pattern recognition, machine learning and deep learning techniques.
2. To identify and select suitable modeling, learning and prediction techniques to solve a problem.
3. To design and implement a machine learning solution.
4. To appraise ethical and privacy issues of artificial intelligence techniques.

UNIT-I

Introduction to Pattern Recognition: Problems, applications, design cycle, learning and adaptation, examples, Probability Distributions, Parametric Learning - Maximum likelihood and Bayesian Decision Theory- Bayes rule, discriminant functions, loss functions and Bayesian error analysis

UNIT-II

Linear models: Linear Models for Regression, linear regression, logistic regression Linear Models for Classification.

UNIT-III

Neural Network: perceptron, multi-layer perceptron, back propagation algorithm, error surfaces, practical techniques for improving back propagation, additional networks and training methods, Adaboost, Deep Learning

UNIT-IV

Linear discriminant functions - decision surfaces, two-category, multi-category, minimum-squared error procedures, the Ho-Kashyap procedures, linear programming algorithms, Support vector machine

UNIT-V

Algorithm independent machine learning – lack of inherent superiority of any classifier, bias and variance, re-sampling for classifier design, combining classifiers

Unsupervised learning and clustering – k-means clustering, fuzzy k-means clustering, hierarchical clustering

Text Books :

1. Richard O. Duda, Peter E. Hart, David G. Stork, "Pattern Classification", 2nd Edition John Wiley & Sons, 2001.
2.Trevor Hastie, Robert Tibshirani, Jerome H. Friedman, "The Elements of Statistical Learning", 2nd Edition, Springer, 2009.
3.C. Bishop, "Pattern Recognition and Machine Learning", Springer, 2006.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Study the parametric and linear models for classification
2. Design neural network and SVM for classification
3. Understand Linear discriminant functions
4. Develop machine independent and unsupervised learning techniques.

Mapping of course outcomes with program outcomes:

CO4	3	2	2	2	2	2					3	3	3	3

Courses offered for Minors in Electronics

ECMN01(EC 104)- Electronic Devices

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course develops a basic understanding of the fundamentals and principles of analog and digital circuits and electronic devices. This understanding is a critical step towards being able to design new electronic circuits or use them appropriately as part of a larger engineering system.

Course Objectives:

1. To familiarize the student with the principal of operation, analysis and design of junction diode, BJT and FET transistors and amplifier circuits.
2. To understand diode as a rectifier.
3. To study basic principal of filter of circuits and various types

UNIT-I

Semiconductor Materials: Atomic structure, Electrons in periodic Lattices, Classifying Materials: Semiconductors, conductors and insulators, Semiconductor material groups, Covalent bonding, Energy Band gaps, Energy bands in intrinsic and extrinsic silicon /Germanium, Density of Impurity States, Electrical Conductivity and Mobility, , Electronic Properties of N-type and P-type semiconductors, Carrier transport: diffusion current, drift current, mobility and resistivity; sheet resistance, design of resistors. Generation and recombination of carriers; Poisson and continuity equation, P-N junction characteristics, I-V Characteristics, and small signal switching models, Diode resistances and diode capacitances.

UNIT-II

Diode models, Avalanche breakdown, Zener diode, Schottky diode, Tunnel diode, Varactor diode and their applications, Testing a diode.

Rectifiers: Diode equivalent circuits, Analysis of diode circuits, Characteristics and comparison of Half-wave, Full-wave and Bridge rectifiers, Analysis of filters (C, L, LC, and CLC) used with Full-wave rectifiers, line regulation and load regulation.

UNIT-III

Bipolar Junction Transistors: Bipolar Junction Transistor action, PNP and NPN transistors, CB, CE, and CC configurations and their I-V characteristics, Analytical expressions for transistor characteristics, Typical junction voltages and maximum ratings. Determination of h-parameters from BJT characteristics, Ebers-Moll Model, Multi Emitter transistor.

UNIT-IV

Bipolar Junction Transistor Biasing: Operating point, stabilization, thermal runaway.

Field Effect Transistors: Characteristics and parameters of JFET, Pinch off and saturation regions, MOS capacitor, Depletion and Enhancement type of MOSFET, I-V characteristics, and small signal models of MOS transistor, UJT and its I-V characteristics, Metal Semiconductor FET, FET biasing schemes.

UNIT-V

Optoelectronic Devices: Principle of operation and characteristics of LED. LCD, LDR, Photoconductor, Photodiode, Phototransistor, Solar cell, PIN photodiode, Charge-Coupled Devices, APD (avalanche photodiode) and their applications.

Power Semiconductor Devices: Device structure, equivalent circuit and characteristics of PNPN Diode, SCR, DIAC and TRIAC. .

7. Y. Tsividis and M. Colin, "Operation and Modeling of the MOS Transistor," Oxford University Press, 2011.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand the principles of semiconductor physics of the intrinsic, *p* and *n* type materials.
2. Understand the characteristics of the diode and some special function diodes and their application in electronic circuits and rectifier circuits
3. Understand basics of transistors for circuits and systems.
4. Understand the characteristics of the Transistors biasing opto-electronic devices and Power Semiconductor Devices and their application in electronic circuits.

ECMN02(EC305C)**- Digital Logic Design**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course develops a basic understanding of the fundamentals and principles of Logic circuits and VLSI Design flow. This understanding is a critical step towards being able to design new Logic circuits or use them appropriately as part of a larger engineering system

Course Objectives:

1. To familiarize the student with Basic Logic circuits and designing.
2. To learn the design concepts of MSI devices, Sequential Logic Design and VLSI Design flow.

UNIT I

Logic Simplification and Combinational Logic Design: Review of Boolean Algebra and De Morgan's Theorem, SOP & POS forms, Canonical forms, Karnaugh maps up to 6 variables, Binary codes, Code Conversion**.**

UNIT II

MSI devices like Comparators, Multiplexers, Encoder, Decoder, Driver & Multiplexed Display, Half and Full Adders, Subtractors, Serial and Parallel Adders, BCD Adder, Barrel shifter and ALU**.**

UNIT III

Sequential Logic Design: Building blocks like S-R, JK and Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Shift registers, Finite state machines, Design of synchronous FSM, Algorithmic State Machines charts. Designing synchronous circuits like Pulse train generator, Pseudorandom Binary Sequence generator.

UNIT IV

Clock generation Logic Families and Semiconductor Memories: TTL NAND gate, Specifications, Noise margin, Propagation delay, fan-in, fan-out, Tristate TTL, ECL, CMOS families and their interfacing, Memory elements, Concept of Programmable logic devices like FPGA. Logic implementation using Programmable Devices**.**

UNIT V

VLSI Design flow: Design entry, Schematic, FSM & HDL, different modeling styles in VHDL, Data types and objects, Dataflow, Behavioral and Structural Modeling, Synthesis and Simulation VHDL constructs and codes for combinational and sequential circuits.

Text / Reference Books:

1. R.P. Jain, "Modern digital Electronics", Tata McGraw Hill, 4th edition, 2009.
2. Douglas Perry, "VHDL", Tata McGraw Hill, 4th edition, 2002.

4. D.V. Hall, "Digital Circuits and Systems", Tata McGraw Hill, 1989
5. Charles Roth, "Digital System Design using VHDL", Tata McGraw Hill 2nd edition 2012.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Design and analyze combinational logic circuits.
2. Design & analyze modular combinational circuits with MUX/DEMUX, Decoder, Encoder.
3. Design & analyze synchronous sequential logic circuits.
4. Use HDL & appropriate EDA tools for digital logic design and simulation

Mapping of course outcomes with program outcomes:

ECMN03(EC306C)- Analog Circuits

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course develops a basic understanding of the fundamentals and principles of analog circuits and electronic devices in electrical and electronic engineering.

Course Objectives:

1. To specify the small signal equivalent model of transistors
2. To analyze transistor amplifier circuits
3. To design multistage transistor amplifier circuits
4. To identify and discuss operating principles of differential amplifiers
5. To design and analyze integrated circuit biasing
6. To analyze frequency response of linear amplifiers

UNIT-I

General Amplifiers Characteristics: Concept of Amplifier, Voltage gain, Current gain, Power gain, Input and Output resistances, Conversion efficiency, Frequency response, Bandwidth, Distortion,

BJT Amplifiers: Small signal low frequency model of the transistor, Analysis of CE, CB and CC amplifiers, Approximate model analysis, Effects of coupling and bypass capacitors on low frequency response, Hybrid-Π model at high frequencies, Calculation of High-Frequency parameters in terms of Low Frequency parameters, CE short circuit gain, CE current gain with resistive load.

UNIT-II

FET Amplifiers: Small signal model, Analysis of CS, CD and CG amplifiers, comparison of performance of the three configurations, High frequency FET circuits, CS amplifier at high frequencies, CD amplifier at high frequencies.

Multistage Amplifiers: Types of coupling, Choice of amplifier configuration, overall voltage gain and Bandwidth of n-stage amplifier, Darlington and Bootstrap circuits.

UNIT-III

Feedback amplifiers: Feedback concept, Classification, Effects of negative feedback on gain, Stability, Noise, Distortion, Bandwidth, input resistance and output resistance.

Oscillators: Review of the basic concept, Barkhausen criterion, RC oscillators (phase shift, Wien bridge etc.), LC oscillators (Hartley, Colpitt, Clapp etc.), Crystal oscillators.

UNIT-IV

Power Amplifiers: Series-Fed Class-A power amplifiers, Transformer coupled class-A power amplifiers, Push-pull amplifiers, Class-B amplifiers, Class-AB operation, Complementary symmetry Push-Pull class-B Power amplifiers

Current mirror: Basic topology and its variants, V-I characteristics, output resistance and minimum sustainable voltage (VON), maximum usable load

UNIT-V

Differential amplifier: Basic structure and principle of operation, calculation of differential gain, common mode gain, CMRR, circuits to improve CMRR, transfer characteristics.

Operational Amplifier: Ideal op-amp characteristics, Op-amp internal circuit, examples of IC op-amps, DC and AC characteristics, Inverting and non-inverting modes of operation, voltage follower.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Design and analyze various amplifier circuits.
2. Design sinusoidal oscillators.
3. Understand the functioning Power Amplifiers, Differential amplifier..
4. Understand the functioning of OP-AMP and design OP-AMP based circuits.

Mapping of course outcomes with program outcomes:

ECMN04(EC404C) - IC Applications

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: The main aim of this lab is to teach the linear and non-linear applications of operational amplifiers (741). Students are made familiar with theory and applications of 555 timers. Students are made to Design combinational logic circuits using digital ICs.

Course Objectives:

1. To introduce the basic building blocks of linear integrated circuits.
2. To teach the linear and non - linear applications of operational amplifiers
3. To introduce the theory and applications of analog multipliers and PLL.
4. To understand and implement the working of basic digital circuits

UNIT-I

Op-Amp Applications: Scale changer/inverter, Summing amplifier, Instrumentation amplifier, Instrumentation amplifier IC-AD620, DC and AC amplifiers, V to I and I to V converters, Precision rectifiers, Log and Antilog amplifiers, multiplier and divider, Analog multiplier IC-AD633, Differentiator, Integrator, Analog computation.

. UNIT-II

Comparators and waveform generators: Comparator, Regenerative comparator (Schmitt Trigger), Astable and mono-stable multi-vibrators using op-amp, Triangular wave generator, Sine wave generators using op-amp. IC waveform generator (8038).

UNIT-III

Voltage regulators: Series op-amp regulator, IC voltage regulators, 723 General purpose regulator, Switching regulators.

Active filters: Low pass, high pass, band pass, band reject and all pass filters, transformation, State variable filter, Switched capacitor filters, Switched capacitor filter ICs.

UNIT-IV

555 Timer: Description of functional diagram, Monostable operation. Applications in monostable mode, Astable operation, Applications in astable mode, Schmitt trigger.

Phase Locked Loops: PLL- introduction, block schematic, principles and description individual blocks, IC PLL (565), Voltage controlled oscillator (566), PLL applications- Frequency multiplication, Frequency translation, FM & FSK demodulation.

UNIT-V

D-A and A-D Converters: Basic DAC Techniques, Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R ladder, Monolithic DAC IC-1409, A-D converters, direct type ADCs, the parallel comparator(flash) A/D converter, The counter type A/D converter, Servo tracking A/D converter, Successive approximation converter, Integrating type of ADCs, Charge balancing ADC, Dual-slope ADC, DAC/ADC specifications.

Text Books :

5. J.V. Wait, L.P. Huelsman and GA Korn, Introduction to Operational Amplifier theory and applications, McGraw Hill, 1992. Sons, 1975.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand the functioning of OP-AMP and design OP-AMP based circuits.
2. Understand the functioning of voltage regulators and design IC based voltage regulators,
3. Understand the functioning of 555 timer and design 555 timer based circuits.
4. Understand the functioning of PLL and design PLL based circuits.
5. Design ADC and DAC circuits.

ECMN05(EC604C-Program Elective-II)**- Electronic Instrumentation**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course deals with the basics of electronic instruments used in laboratory and industry. In the process they learn different type of instruments like voltmeter, ammeter, Q meter, Bridges, transducers and display devices CRO, CRT. After learning this subject student will be master in working principle and application of all types of instruments.

Course Objectives:

1. To explain basic concepts and definitions in measurement.
2. To describe the bridge configurations and their applications.
3. To understand, design aspects and performance criterion of measuring instruments.
4. To understand the working principle of various transducers.

UNIT-I

Measurement and Error: Definitions, accuracy and precision, types of errors.
DC Ammeters, DC Voltmeters, Series type ohmmeter, Shunt type ohmmeter. AC Voltmeter using rectifiers, True RMS responding voltmeter. Analog Instruments – Transistor voltmeter, micro voltmeter (chopper type) - DC differential voltmeter - AC voltmeters.

UNIT-II

Cathode Ray Oscilloscopes : Motion of electron in electric field and in magnetic field – Block diagram of CRO, CRT, Electrostatic deflection sensitivity – Vertical and Horizontal deflection systems – Principle of operation of Dual beam, Digital, Dual trace, Sampling and Storage CROs – Measurements with CRO (voltage, current, time, frequency, phase angle, Lissajous figures).

UNIT-III

Q meter and measurement methods.
Bridges: Wheatstone, Kelvin's, Maxwell, Hay and Schering bridges.
Wave analyzers (AF & RF) - Harmonic distortion analyzers – Spectrum analyzer.

UNIT-IV

Digital instruments – Digital voltmeters (Ramp, Dual slope, stair case, successive approximation types) Digital Multimeter, universal counter, Digital tachometer, Digital phase meter IEEE 488 Bus.

UNIT-V

Transducers – Classification and selection of transducers – strain gauges – Temperature measurement (resistance thermometer, thermo couples and thermistors) LVDT – Peizo electric transducer..

Text Books :

1. 1. H.S.Kalsi, "Electronic Instrumentation" TMH, 1995.
2. Helfric and Cooper, "Modern Electronic Instrumentation and measurement techniques", PHI, 1995.
3. A.K.Sawhney , " Electrical and electronic measurements and instrumentation", Danapat Rai & Co.,18th edition., 2007.

E-resources and other digital material
1.https://nptel.ac.in/courses/108106070
2.https://nptel.ac.in/courses/108106070

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Emphasize the basic electronics measurement concepts & Design the different analog and digital electronics voltmeters
2. Identify and use different analyzers oscilloscopes.
3. Design the Measurement of different bridges& generators to make measurements and analyze measurement.
4. Analyze the concepts of Transducers based on application

ECMN06(EC603C --Program Elective-I)**- CMOS VLSI Design**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This is an introductory course that covers basic theories and techniques of digital VLSI design in CMOS technology. In this course, we will study the fundamental concepts and structures of designing digital VLSI systems including CMOS devices and circuits, standard CMOS fabrication processes, CMOS design rules, static and dynamic logic structures, interconnect analysis, CMOS chip layout, simulation and testing, low power techniques, design tools and methodologies, VLSI architecture.

Prerequisite Courses: Electronic Devices, Analog Circuits and Digital Logic Design.

Course Objectives:

1. To learn basic CMOS Circuits.
2. To learn CMOS process technology.
3. To learn techniques of chip design using programmable devices.
4. To learn the concepts of designing VLSI Subsystems

UNIT-I

Integrated circuit fabrication process: oxidation, diffusion, ion implantation, photolithography and twin-tub CMOS process.

Brief Introduction to MOS, PMOS, NMOS, CMOS & BiCMOS technologies. Review of MOS transistor models, Non-ideal behavior of the MOS Transistor, $I_{ds} - V_{ds}$ relationships, MOS transistor threshold Voltage, Transistor as a switch, Inverter characteristics**.**

UNIT-II

Integrated Circuit Layout: VLSI Design Flow, MOS Layers, Stick Diagrams, Design Rules and Layout, CMOS Design rules for wires, Contacts and Transistors Layout Diagrams for CMOS Inverters and Gates, Scaling of MOS circuits.

Basic Circuit Concepts: Sheet Resistance R_s and its concepts to MOS, Area Capacitance calculations, Inverter Delays, driving large Capacitive Loads, Wiring Capacitances. Delay: RC Delay model, linear delay model, logical path efforts. Power, interconnect and Robustness in CMOS circuit layout

UNIT-III

Combinational Circuit Design: CMOS logic families including static, dynamic and dual rail logic, Switch logic, Alternate gate circuits. Shifters, Adders, Parity generators, Comparators, Zero/One Detectors, Binary Counters, ALUs, Multipliers, Counters, High Density Memory Elements.

UNIT-IV

Sequential Circuit Design: Static Circuits, Design of latches and Flip-flops.

Test and Testability: Fault-modeling and simulation, test generation, design for testability, Built-in-self-test.

UNIT-V

Physical Design: Floor-Planning, Placement, routing, Power delay estimation, Clock and Power routing.

Design styles: Full-custom, Standard Cells, Gate-arrays, FPGAs, CPLDs and Design Approach for Full-custom and Semi-custom devices. .

Text Books :

1. 1 Neil H.E. Weste and David Money Harris, CMOS VLSI design: A Circuits and Systems Perspective, 4th Edition, Pearson Education India, 2015.
2. Kamran Eshraghian, Eshraghian Douglas and A. Pucknell, Essentials of VLSI circuits and systems, PHI, 2005 Edition.
3. John M. Rabaey, A. Chandrakasan, B. Nikolic, Digital Integrated Circuits: A Design Perspective", 2nd Edition, Pearson, 2016.

Course outcomes :
Upon successful completion of the course, the student will be able to:

1. Learn CMOS process technology.
2. Analyze and implement various CMOS static logic circuits using Lambda based design rules.
3. Design different CMOS circuits using various logic families along with their circuit layouts for subsystem design.
4. To learn techniques of chip design using programmable devices and use HDL tools for designing VLSI Subsystems.

Courses offered for Minors in Communications

ECMN11((EC303C**))- Signals and Systems**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course focuses on analyzing signals (sound, voltage, communication transmissions, pressure, images, etc.) and the systems that act on them (circuits, physical echos, mechanical dynamics, modulation, etc.). We concentrate on the Fourier transform and linear-time invariant systems, providing a depth of tools for sampling, manipulating, preserving, and interpreting information signals

Course Objectives:

1. To represent and classify signal and systems.
2. Represent and apply singularity functions.
3. Obtain the response of a continuous, linear, time-invariant, causal system by using convolution.
4. Obtain the Fourier series expansion of a periodic signal and apply it to continuous, linear, time-invariant systems.
5. Obtain and plot the Fourier transform for simple a periodic continuous-time signals.

UNIT-I

Introduction to Signals and Systems:

Definition and classification of signals and systems as seen in everyday life, and in various branches of engineering and science. Signal properties: periodicity, absolute integrability, determinism and stochastic character, Elementary signals such as Impulse, step, ramp, sinusoidal and exponential signals, Operations on signals. Basic System Properties (Continuous-Time and Discrete-Time): linearity: additivity and homogeneity, shift-invariance, causality, stability, realizability, Examples, Causal LTI Systems Described by Differential and Difference Equations.

Signal Analysis:

Analogy between vectors and signals, Orthogonal signal space, Signal approximation using orthogonal functions, Mean square error, Closed or complete set of orthogonal functions, Orthogonality in complex functions.

UNIT-II

Fourier series and Fourier Transform:

The Response of LTI Systems to Complex Exponentials. Fourier series Representation of Continuous-Time Periodic Signals, Convergence of the Fourier series, Properties of Continuous-Time Fourier Series. The Continuous-Time Fourier Transform – properties. Discrete-Time Fourier Transform – Properties, Basic Fourier Transform Pairs. Introduction to Hilbert Transform.

UNIT-III

Convolution and Correlation of Signals:

Concept of convolution in time domain and frequency domain, Graphical representation of convolution, Convolution property of Fourier transforms, Cross correlation and auto correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and energy/power spectral density function. Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

UNIT-IV

Behaviour of continuous and discrete-time LTI systems:

The Magnitude-Phase Representation of the Fourier Transform, The Magnitude-Phase Representation of the Frequency Response of LTI Systems, Distortion less transmission through a system, signal bandwidth, system bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Poly-Wiener criterion for physical realization, relationship between bandwidth and rise time, State-space Representation of systems, State-Space Analysis, Multi-input, multi-output representation.

Sampling and Reconstruction:

The Sampling Theorem and its implications, Spectra of sampled signals, Reconstruction: ideal interpolator, zero-order hold, first-order hold, Aliasing and its effects. Relation between continuous and discrete time systems, Introduction to the applications of signal and system theory: modulation for communication, filtering, feedback control systems.

UNIT-V

The Laplace Transform -The Region of Convergence - Properties, The Inverse Laplace Transform, Laplace Transform Pairs, Analysis and Characterization of LTI Systems Using the Laplace Transform, Unilateral Laplace Transform. The Z-Transform -Region of Convergence - Properties, The Inverse z-Transform, Common z-Transform Pairs, Analysis and Characterization of LTI Systems Using z-Transforms, Unilateral z-Transform.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Analyze different types of signals
2. Understand the concepts of continuous time and discrete time systems.
3. Analyze systems in complex frequency domain.
4. Investigate whether the system is stable or not.
5. Understand sampling theorem and its implications

ECMN12(EC402C)**- Probability theory & Stochastic Process**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course explanations and expositions of probability and stochastic processes concepts which they need for their experiments and research. It also covers theoretical concepts of probability and stochastic processes pertaining to handling various stochastic modeling.

Course Objectives:

1. To provide mathematical background and sufficient experience so that student can read, write and understand sentences in the language of probability theory.
2. To introduce students to the basic methodology of "probabilistic thinking" and apply it to problems.
3. To understand basic concepts of Probability theory and Random Variables, how to deal with multiple Random Variables.
4. To understand the difference between time averages statistical averages

UNIT-I

Sets and set operations, Probability space, Conditional probability Total Probability, and Bayes theorem, Combinatorial probability and sampling models.

Discrete random variables, probability mass function, probability distribution function, example random variables and distributions. Continuous random variables, probability density function, probability distribution function, example distributions

UNIT-II

Joint distributions, functions of one and two random variables, moments of random variables; Conditional distribution, densities and moments, Characteristic functions of a random variable; Markov, Chebyshev and Chernoff bounds.

UNIT-III

Random sequences and modes of convergence (everywhere, almost everywhere, probability, distribution and mean square); Limit theorems; Strong and weak laws of large numbers, Central Limit Theorem, (Proof not expected), Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

UNIT-IV

Random Process: Classification of Processes, Stationary processes, Mean and covariance functions, Time Averages and Ergodicity, Mean-Ergodic Processes, Correlation-Ergodic Processes, Autocorrelation Function & Its Properties, Cross-Correlation Function & its Properties, Covariance Functions, Gaussian Random Processes, Poisson Random Process.

Power spectral density, Properties, Relationship between Power Spectrum and Autocorrelation Function, The Cross-Power Density Spectrum, Properties, Relationship between Cross-Power Spectrum and Cross-Correlation Function.

UNIT-V

Transmission of random process through LTI systems: System Response – Convolution, Mean and Mean-squared Value of System Response, autocorrelation Function of Response, Cross-Correlation Functions of Input and Output, Spectral Characteristics of System Response: Power Density Spectrum of Response, Cross-Power Density Spectrums of Input and Output, properties of white noise, Band pass, Band-Limited and Narrowband Processes, Properties

6. P. G. Hoel, S. C. Port and C. J. Stone, Introduction to Stochastic Processes, UBS Publishers.
7. S. Ross, Introduction to Stochastic Models, Harcourt Asia, Academic Press.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand representation of random signals.
2. Investigate characteristics of random processes.
3. Make use of theorems related to random signals.
4. Able to Model of different Noise Sources and to understand propagation of random signals in LTI systems

Mapping of course outcomes with program outcomes:

ECMN13 (EC405C)**- Analog Communications**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: This course gives concepts of Different Analog communications which they need for their experiments and research.

Course Objectives: To understand

1. The concepts of various Amplitude, Angle and Pulse Modulation schemes and information theory with random processes.
2. The working principle of Radio Receivers

. **Unit – I**

Introduction: Elements of communication systems, Information, Messages and Signals, Modulation, Modulation Methods, Modulation Benefits and Applications.

Amplitude Modulation & Demodulation: Baseband and carrier communication, Amplitude Modulation (AM), Rectifier detector, Envelope detector, Double sideband suppressed carrier (DSB-SC) modulation & its demodulation, Switching modulators, Ring modulator, Balanced modulator, Frequency mixer, sideband and carrier power of AM, Generation of AM signals, Single sideband (SSB) transmission, Time domain representation of SSB signals & their demodulation schemes (with carrier, and suppressed carrier), Generation of SSB signals, Vestigial sideband (VSB) modulator & demodulator, Frequency division multiplexing (FDM), Illustrative Problems.

UNIT-II

Angle Modulation & Demodulation: Concept of instantaneous frequency, Generalized concept of angle modulation- Frequency Modulation & Phase modulation : Bandwidth of angle modulated waves, Narrow band frequency modulation (NBFM) and Wide band FM (WBFM), Verification of Frequency modulation bandwidth relationship, Features of angle modulation, Generation of FM waves-Indirect method, Direct generation; Demodulation of FM, Band pass limiter, Practical frequency demodulators, Small error analysis, Pre-emphasis, & De-emphasis filters, FM Capture Effect, Illustrative Problems.

UNIT-III

Noise in Communication Systems: Thermal noise, Time domain representation of narrowband noise, filtered white noise, Quadrature representation of narrowband noise, Envelope of narrowband noise plus sine wave, Signal to noise ratio & probability of error, Noise equivalent bandwidth, Effective noise temperature, and Noise figure, Baseband systems with channel noise, Performance analysis (i.e. finding SNR expression) of AM, DSBSC, SSB-SC, FM, PM in the presence of noise, Illustrative Problems.

UNIT-IV

Radio Receivers: Working principle of Super heterodyne AM and FM Receivers along with suitable block diagrams, Sensitivity, Selectivity and fidelity.

Analog Pulse Modulation Schemes: Pulse amplitude modulation – Natural sampling, flat top sampling and Pulse amplitude modulation (PAM) & demodulation, Pulse-Time Modulation – Pulse Duration and Pulse Position modulations, and demodulation schemes, PPM spectral analysis, Illustrative Problems.

UNIT-V

Information Theory: Introduction, Information and Entropy, and its properties, source coding Theorem, Data Compaction – Prefix coding, Huffman coding, Discrete Memory less channels, Mutual Information, and its properties, Channel capacity, Channel coding Theorem, Application to binary symmetric channels, differential entropy and mutual information, Information capacity theorem, implication of information capacity theorem, Rate Distortion, Illustrative problems

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand the concepts of various Amplitude, Angle and Pulse Modulation schemes and information theory with random processes and to solve problems in analog and pulse modulation schemes
2. Analysis of analog communication system in the presence of noise.
3. Compare and contrast design issues, advantages, disadvantages and limitations of various modulation schemes in analog communication systems.
4. Solve basic communication problems & calculate information rate and channel capacity of a discrete communication channel.

ECMN14(EC505C) **- Digital Communications**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**

Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description:

This course provides an introduction to voice and data networking technologies, including public and pri vate voice services, Ethernet and Internet data technologies, network security, business applications and network management. The structure, regulation, andhistory of the telecom and data network industry wil l be discussed as well.

Course Objectives:

1. To protocol, algorithms, trade-offs rationale.
2. To routing, transport, DNS resolutions
3. To network extensions and next generation architecture.

UNIT I

Source Coding Systems: Sampling, Quantization, Quantization noise, Encoding, Pulse Code Modulation (PCM), Line codes, Regeneration, Decoding and Filtering, Noise considerations in PCM systems, Time-Division Multiplexing (TDM), Synchronization, Differential encoding, Delta modulation (DM), Differential Pulse Code Modulation (DPCM), Processing gain, Adaptive Delta Modulation (ADM).

UNIT II

Introduction to Baseband Pulse Transmission, Matched filter and it's Properties,Matched filter for rectangular pulse, Error rate due to noise, Inter-symbol Interference (ISI), Nyquist's criterion for distortion less baseband binary transmission, Duo binary, Modified duo binary in Correlative-level coding, Baseband M-array PAM transmission, Eye diagrams.

UNIT III

Signal Space Analysis: Introduction, Geometric representation of signals, Gram-Schmidt Orthogonalization procedure, Conversion of the Continuous AWGN channel into a vectorchannel, Coherent detection of signals in noise, Correlation receiver, Probability of error**.**

UNIT IV

Passband Data Transmission: Introduction, Passband transmission model, ASK, Coherent Phase Shift Keying – Binary phase shift keying (BPSK), Quadrature shift keying (QPSK), Binary Frequency shift keying (BFSK), M-array Quadrature Amplitude Modulation (M-array QAM), Non-coherent orthogonal modulation schemes-Differential PSK, Non-Coherent Binary FSK.

(Error probability, Generation and Detection, Power spectra, signal constellation diagram of above schemes)

UNIT-V

Error Control Coding: Repetition & Parity Check Codes, Interleaving, Code Vectors and Hamming Distance, Forward Error Correction (FEC)Systems, Linear Block Codes, Cyclic Codes, Convolutional Encoding methods- Code Tree, Trellis and State Diagram, Decoding Methods- Sequential, Viterbi.

Text Books :

1. Simon Haykin, "Communication Systems," by John Wiley & Sons,3rd Edition, 2010.
2. Sam Shanmugam, "Digital and Analog Communication Systems", Wiley-India edition, 2006.

3. Bruce Carlson, & Paul B. Crilly, "Communication Systems – An Introduction to Signals & Noise in Electrical Communication", McGraw-Hill International Edition, 5th Edition, 2010.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand the Digital communication System and able to analyse the different Digital modulation techniques.
2. Understand the concepts of baseband digital modulation schemes and Inter Symbol Interference.
3. Analyze Signal space concepts, probability of error performance of various digital binary modulation systems and are able to design digital communication systems.
4. Design a system with Error correcting codes by learning Block Codes, Cyclic Codes and Convolution Codes.

ECMN15(EC504C) **Antenna Wave Propagation**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: Antennas and propagation effects play a crucial role in RF systems. In practice, the design of a working system such as mobile phone networks, WiFi, RFID, Satellite communication and GPS requires a good understanding of these components. This course teaches the fundamentals of antenna and propagation and shows the application in practical examples. The course covers the theory of radiation, fundamental antenna parameters and concepts, wire antennas such as dipoles and loop antennas, antenna arrays, aperture antennas, microstrip antennas, numerical analysis, communication & radar systems and propagation effects.

Course Objectives:

1. To understand the concept of radiation, antenna definitions and significance of antenna parameters, to derive and analyze the radiation characteristics of thin wire dipole antennas and solve numerical problems.
2. To analyse the characteristics and design relations of UHF, VHF and Microwave Antennas.
3. To identify the antenna array requirements, to determine the characteristics of ULAs and estimate the patterns of BSA, EFA, and Binomial Arrays.
4. To understand the concepts and set-up requirements for microwave measurements, and familiarize with the procedure to enable antenna measurements.
5. To define and distinguish between different phenomenon of wave propagation (ground wave, space wave and sky wave), their frequency dependence, and estimate their characteristics, identifying their profiles and parameters involved.

UNIT-I

Antenna Basics: Basic Antenna Parameters – Patterns, Beam Area, Radiation Intensity, Beam Efficiency, Directivity-Gain-Resolution, Antenna Apertures, Effective Height. Fields from Oscillating Dipole, Field Zones, Front - to-back Ratio, Antenna Theorems, Radiation,
Retarded Potentials–Helmholtz Theorem
Thin Linear Wire Antennas – Radiation from Small Electric Dipole, Quarter Wave Monopole and Half Wave Dipole – Current Distributions, Field Components, Radiated Power, Radiation Resistance, Beam Width, Directivity, Effective Area and Effective Height, Natural Current Distributions, Far Fields and Patterns of Thin Linear Centre-fed Antennas of Different Lengths. Loop Antennas.

UNIT-II

Antenna Arrays: Point Sources – Definition, Patterns, arrays of 2 Isotropic Sources - Different Cases, Principle of Pattern Multiplication, Uniform Linear Arrays – Broadside Arrays, End fire Arrays, EFA with Increased Directivity, Derivation of their Characteristics and Comparison, BSAs with Non-uniform Amplitude Distributions – General Considerations and Binomial Arrays.

UNIT-III

VHF, UHF and Microwave Antennas - I: Arrays with Parasitic Elements, Yagi-Uda Array, Folded Dipoles and their Characteristics, Helical Antennas – Helical Geometry, Helix Modes, Practical Design

Considerations for Monofilar Helical Antenna in Axial and Normal Modes, Horn Antennas – Types,Fermat's Principle, Optimum Horns, Design Considerations of Pyramidal Horns.

UNIT-IV

VHF, UHF and Microwave Antennas - II: Microstrip Antennas – Introduction, Features, Advantages and Limitations, Rectangular Patch Antennas – Geometry and Parameters, Characteristics of Microstrip Antennas. Reflector Antennas – Introduction, Flat Sheet and Corner Reflectors, Paraboloidal Reflectors – Geometry, Pattern Characteristics, Feed Methods, Reflector Types – Related Features.

UNIT-V

Ground Wave Propagation –Plane Earth Reflections, Space and Surface Waves, Wave Tilt, Curved Earth Reflections. Space Wave Propagation –Field Strength Variation with Distance and Height, Effect of Earth's Curvature, Absorption, Super Refraction, M-Curves and Duct Propagation, Scattering phenomena, Troposphere Propagation. Sky Wave Propagation –Structure of Ionosphere, Refraction and Reflection of Sky Waves by Ionosphere, Ray Path, Critical Frequency, MUF, LUF, OF, Virtual Height and Skip Distance, Relation between MUF and Skip Distance, Multi-hop Propagation.

Text Books :

1. Antennas and Wave Propagation – J.D. Kraus, R.J. Marhefka and Ahmad S. Khan, TMH, New Delhi, 4th ed., (Special Indian Edition), 2010.
2. Electromagnetic Waves and Radiating Systems – E.C. Jordan and K.G. Balmain, PHI, 2nd edition,2000.
3. Antenna Theory - C.A. Balanis, John Wiley & Sons, 3rd Ed., 2005.
4.. Antennas and Wave Propagation – K.D. Prasad, Satya Prakashan, Tech India Publications,New Delhi, 2001..

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Understand the basic parameters of antenna (L1) and apply the concepts to various antennas based on frequency, configuration and establish the radiation patterns of antenna arrays (L2)
2. Analysis of VHF, UHF and Microwave Antennas (L3)
3. Design and analysis of microstrip antennas (L4)
4. To understand the wave propagation in different frequency ranges (L5)

Mapping of course outcomes with program outcomes:

ECMN16((EC601C)**- Microwave Engineering**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: The course will be broadly focusing on analysis, design and development of microwave circuits and systems. The course will cover introduction to Microwaves, Microwave transmission modes, Transmission lines, Impedance Matching, Microwave Network Analysis, Directional Coupler, Power Divider, Microwave Filters, Microwave Attenuator, RF switches and phase shifters, Microwave Amplifiers, Low Noise Amplifier, Microwave Mixers and Oscillators, Microwave Antennas, Microwave Measurements, Microwave Systems.

Course Objectives:

1. To get familiarized with microwave frequency bands, their applications and to understand the limitations and losses of conventional tubes at these frequencies.
2. To distinguish between different types of microwave tubes, their structures and principles of microwave power generation.
3. To impart the knowledge of Scattering Matrix, its formulation and utility, and establish the S-Matrix for various types of microwave junctions.
4. Understand the utility of Optical Fibres in Communications

UNIT – I

Microwave Tubes: Limitations and Losses of conventional Tubes at Microwave frequencies,
Cavity Klystrons – Structure, Re-entrant Cavities, Velocity Modulation Process, Applegate Diagram, Bunching Process and Small Signal Theory – Expressions for O/P Power and Efficiency. Reflex Klystrons – Structure, Velocity Modulation and Applegate Diagram, Mathematical Theory of Bunching, Power Output, Efficiency, Oscillating Modes and O/P Characteristics. Helix TWTs: Types and Characteristics of Slow Wave Structures; Structure of TWT and Amplification Process(qualitative treatment), Suppression of Oscillations, Gain Considerations**.**

UNIT - II

M-Type Tubes: Introduction, Cross-field Effects, Magnetrons – Different Types, Cylindrical Traveling Wave Magnetron – Hull Cut-off and Hartree Conditions, Modes of Resonance and PI-Mode Operation, Separation of PI-Mode, o/p characteristics,
Microwave Solid State Devices: Introduction, Classification, Applications. Gunn Diodes – Principle, RWH Theory, Characteristics, Modes of Operation - Gunn Oscillation Modes, Principle of operation of IMPATT and TRAPATT Devices.

UNIT - III

Waveguide Components: Coupling Mechanisms – Probe, Loop, Aperture types. Waveguide Discontinuities – Waveguide Windows, Tuning Screws and Posts, Matched Loads. Waveguide Attenuators – Different Types, Resistive Card and Rotary Vane Attenuators; Waveguide Phase Shifters – Types, Dielectric and Rotary Vane Phase Shifters, Waveguide Multiport Junctions - E plane and H plane Tees. Ferrites– Composition and Characteristics, Faraday Rotation, Ferrite Components – Gyrator, Isolator**.**

UNIT – IV

Scattering matrix: Importance of S-matrix, Scattering Matrix Properties, Directional Couplers – 2 Hole, Bethe Hole S Parameters, [s] matrix of Magic Tee and Circulator, Measurement of S-parameters.
MICs : Advantages of MIC's, Hybrid MIC's, Strip lines and microstrip lines, Monolithic MICs

UNIT V

Microwave Measurements: Description of Microwave Bench – Different Blocks and their Features, Errors and Precautions, Measurement of Attenuation, Frequency. Standing Wave Measurements, Measurement of Low and High VSWR., Cavity Q-factor and Impedance Measurements. Antenna gain measurements.

Text Books :

1. Microwave Devices and Circuits – Samuel Y. Liao, Pearson, 3rd Edition, 2003.
2. Electronic Communications Systems- Wayne Tomasi, Pearson, 5th Edition
3. Microwave Engineering - David M. Pozar, John Wiley & Sons (Asia) Pvt Ltd., 1989, 3r ed., 2011 4t.
4. Microwave Engineering - G.S. Raghuvanshi, Cengage Learning India Pvt. Ltd., 2012
5. Kulkarni, "Microwave and Radar Engineering", Umesh publications, 1998.
6. Annapurna Das and Sisir K.Das, "Microwave Engineering" Tata Mc Graw-Hill, 2000.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Known power generation at microwave frequencies and derive the performance characteristics. (L2)
2. Understand the principles of solid state devices. (L1)
3. Distinguish between the different types of waveguide and ferrite components, and select proper components for engineering applications (L4)
4. Understand the utility of S-parameters in microwave component design (L3) and to know the measurement procedure of various microwave parameters. (L5)

ECMN17(EC602C-)- Computer Networks

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: **:** Computer Networks plays an vital role in the era of communication systems in resources sharing applications. The aim of this course is to introduce the concepts of Computer networking and its applications.

Course Objectives:

To gain knowledge in developing different applications

1. To understand the basic concepts of computer networks and internet
2. To gain knowledge about the design issues of link layer and internet layer
3. To gain knowledge about the concept of connection oriented and connection less Protocols.

Unit -I

Introduction to Computer Networks and the Internet: Principles of network applications and Internet Challenges &Layering concepts.
OSI Reference Model & TCP/IP Reference Model.

Unit -II

Link layer: ALOHA, Multiple access protocols, IEEE 802 standards, Local Area Networks, Ethernet, Wireless LAN,Flow Control, Error Detection and Error Correction.

Unit -III

Internet Layer:
IP Addressing, IP Protocol, Routing Algorithms, queuing disciplines.
Congestion Control Algorithms, Resource Reservation ,Admission Control and Differentiated services

Unit -IV

Transport Layer: User Datagram Protocol, Connection oriented transport protocol– Transmission Control Protocol, Remote Procedure Call. Port Addressing and Socket Programming.

Unit –V

Application layer: The Web and Hyper Text Transfer Protocol, File transfer, Electronic mail, Domain name system, Peer-to-Peer file sharing,JPEG,MPEG .
Network Security: DES & RSA

Text Books :

1. J.F. Kurose and K. W. Ross, 1."Computer Networking – A top down approach Pearson Education, 5th Edition
2. Andrew S Tanenbaum, "Computer Networks", Prentice Hall India Fourth Edition.
3. Behrouz A. Forouzan, "Data Communications and Networking", Tata McGraw Hill, 4th Edition
4. D. Comer, "Computer Networks and Internet/TCP-IP", Prentice Hall
5. William Stallings, "Data and Computer Communication, 8th Edition, Pearson Prentice

Course outcomes :

Upon successful completion of the course, the student will be able to:

1. Design of computer networks in Internet.

2. Understand the concepts of error handling ,flow control ,IP Addressing and Routing.
3. Understand the concept of TCP and UDP protocols.
4. Develop several protocols foe web Applications

ECMN18(EC604C-Program Elective-II)**- Cyber Security**

Instruction: Hours/Week: **3L:0T:0P** **Credits: 3**
Sessional Marks: **40** End Semester Examination Marks: **60**

Course Description: The course deals with the underlying principles of cryptography and network security. It develops the mathematical tools required to understand the topic of cryptography. Starting from the classical ciphers to modern day ciphers, the course provides an extensive coverage of the techniques and methods needed for the proper functioning of the ciphers. The course deals with the construction and cryptanalysis of block ciphers, stream ciphers and hash functions. The course defines offers the construction and cryptanalysis of public key ciphers, namely RSA. The key exchange problem and solutions using the Diffie-Hellman algorithm are discussed. Message Authentication Codes (MAC) and signature schemes are also detailed. The course deals with modern trends in asymmetric key cryptography, namely using Elliptic Curves. The course ends with the awareness about different network attacks and precautions to be taken for the security.

Course Objectives:

1. To know the basics of Cryptography and Network Security.
2. To be able to secure a message over insecure channel by various means.
3. To learn about how to maintain the Confidentiality, Integrity and Availability of a data.
4. To have the knowledge of security requirements for a network against various threats.

Unit -I

Introduction: OSI Security Architecture - Classical Encryption techniques – Cipher Principles – Data Encryption Standard – Block Cipher Design Principles and Modes of Operation - Evaluation criteria for AES – AES Cipher – Triple DES – Placement of Encryption Function – Traffic Confidentiality

Unit –II

Public Key Cryptography Key Management - Diffie-Hellman key Exchange – Elliptic Curve Architecture and Cryptography - Introduction to Number Theory – Confidentiality using Symmetric Encryption – Public Key Cryptography and RSA.

Unit -III

Authentication And Hash Function: Authentication requirements – Authentication functions – Message Authentication Codes – Hash Functions – Security of Hash Functions and MACs – MD5 message Digest algorithm - Secure Hash Algorithm – RIPEMD – HMAC Digital Signatures – Authentication Protocols – Digital Signature Standard.

Unit -IV

Network Security Authentication Applications: Kerberos – X.509 Authentication Service – Electronic Mail Security – PGP – S/MIME - IP Security – Web Security.

Unit –V

System Level Security Intrusion detection – password management – Viruses and related Threats – Virus Counter measures – Firewall Design Principles – Trusted Systems.

3. Charles B. Pfleeger, Shari Lawrence Pfleeger, "Security in Computing", Third Edition, Pearson Education.

Course outcomes :

Upon successful completion of the course, the student will be able to:

1.Understand different encryption techniques
2. Implement basic security algorithms required by any computing system
3. Analyze the vulnerabilities in any computing system to design a security solution
4. Analyze the possible security attacks and their effective countermeasures in real time systems

Mechanical Engineering

Admitted in

2023 – 24

About the Department

- Welcome to the Department of Mechanical Engineering at SVUCE Tirupati. It began its journey in the year 1959. Over the last six decades, we have grown our expertise and competence in the core Mechanical Engineering curriculum and research. The programs are designed to prepare our graduates for a rapidly changing world and to go well beyond being significant contributors. We have state of the art research facilities to support our academic programs and research. Our faculties are renowned leaders in their fields, and our students-from undergraduates, postgraduates to doctoral scholars-have the opportunity to work with them one-on-one on problems defining the state-of-the art.

- Our approach is highly interdisciplinary and collaborative, and we stress the exploration of innovative and even unconventional ideas. Our goal for undergraduate students is to give them a high-quality engineering education that includes hands-on experience. Each of our faculty members is ready and willing to work in their research specialty with capable students on individual projects. We strive to ensure that all our undergraduate students have a strong education with teaming and leadership skills, involvement in student activities, and the practical background of internship experience. We believe that emphasizing these areas will make our students well qualified to take leadership roles in the future. Finally, it is my pleasure to work with such highly distinguished staff and to serve our inquisitive and passionate student body in achieving our department mission and vision.

VISION:

To be a globally renowned center for quality education and innovative research in Mechanical Engineering

MISSION:

M1	Prepare effective and responsible graduate engineers for global requirements.
M2	Continuously strive to improve pedagogical methods employed in delivering the academic programs.
M3	Respond dynamically to the changing requirements of the industry.
M4	Conduct basic and applied research to contribute to intellectual human capital.
M5	Inculcate the spirit of entrepreneurship and social responsibility.

Choice Based Credit System (CBCS):

Choice Based Credit system (CBCS) has been implemented in the campus in the year 2004.CBCS is a flexible system of learning and provides choice for students to select courses of his/her choice from the prescribed electric courses. Under this system students are permitted to opt for additional courses of his/her interest, adopt an inter disciplinary approach in learning and make use of expertise of available facility.

Program Specific Outcomes (PSO's)

- PSO1: Graduates will able to analyze, solve and develop complex solutions in Mechanical Engineering field with ethical and environmental consciousness
- PSO2: Graduates will be able to build the nation by recognizing the needs of the society through technical concepts modern tools, managerial and entrepreneurial skills.

PROGRAM OUTCOMES

Engineering Graduates will be able to:

- **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **Environment and sustainability**: Understand the impact of the professional engineering solutions insocietal and environmental contexts, and demonstrate the knowledge of, and need for sustainable

development.

- **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Educational Objectives (PEOs)

Program Educational Objectives (PEOs) of the UG in Mechanical Engineering were established through a Curriculum Design and Development program conducted, involving all stakeholders of the Department.

- PEO1 - To prepare technocrats by imparting basic and contemporary science and engineering skills to identify and solve the problems in the academia, industry and practical research domains.
- PEO2 - To develop an ability to understand and analyze the problem requirements and design novel engineering solutions.
- PEO3 - To provide exposure on emerging technologies and work with interdisciplinary projects.
- PEO4 - To inculcate the spirit of sustainable learning and continued leadership for better decision making.
- PEO5 - To imbibe the spirit of professionalism, ethics, public policies that allow them to become responsible professional Engineers.

Division (breaking – up) of Core Subjects/Courses According to Stream (excluding electives and basic science courses):

Thermal	Manufacturing	Management	Design
04 (BTD,ATD,HT and AE)	03 (MP, MT& MC, Metrology)	02 (IE and M, OR)	04 (KoM, DoM, Machine Design, DoME)

Semester – wise Grouping of Professional Electives Courses (PECs)

Semester	Professional Elective Courses
V	1) Advanced Manufacturing Processes 2) Non – conventional Energy Sources
VI	3) Tool Design 1) Engineering Materials and Metallurgy 2) Robotic Engineering
VII	3) NC and CNC Systems 1) Additive Manufacturing 2) Quality control and Reliability
	3) Refrigeration and Air – conditioning 1) Finite Element Method 2) Nanotechnology

Semester – wise Grouping of Open Electives Courses (OECs)**

Semester	Open Elective Courses
	First OEC through SWAYAM platform (MOOCS)
VI	Second OEC through SWAYAM platform (MOOCS)
VII	Third OEC through SWAYAM platform (MOOCS)

**Open elective courses (OECs) are to be completed/done through MOOCS on SWAYAM platform (mostly NPTEL courses offered by premier institutes such as IITs and NITs).

Hence, the list of courses will vary depending upon the availability of slots pertaining to the courses offered by those premier institutes during a particular academic year.

1. PEC (Professional Elective Courses) and OEC (Open Elective Courses)

In REC – 20 (Revised Engineering Curriculum) draft provided by APSCHE the following points are highlighted with regard to MOOCs: **(page 10, point 09)**

There shall be **05** Professional Elective courses (PEC) and **04** Open Elective courses (OEC). All the Professional & Open Elective courses shall be offered for **03 credits**, wherever lab component is involved it shall be (2-0-2) and without lab component it shall be (3-0-0). If a course comes with a lab component, that component has to be cleared separately. The concerned BoS shall explore the possibility of introducing virtual labs for such courses with lab component.

All Open Electives are offered to students of all branches in general. However, a student shall choose an open Elective from the list in such a manner that he/she has not studied the same course in any form during the Programme.

But, we propose to offer 04 PEC and 03 OEC.

2. Courses under MOOCS

In REC – 20 (Revised Engineering Curriculum) draft provided by APSCHE the following points are highlighted with regard to MOOCs: **(page 10, point 11)**

A student shall be permitted to pursue up to a maximum of **two elective courses under MOOCs** during the Programme. Each of the courses must be of minimum 12 weeks in duration. Attendance will not be monitored for MOOC courses. Student has to pursue and acquire a certificate for a MOOC course only from the organizations/agencies approved by the BoS in order to earn the 3 credits. The Head of the department shall notify the list of such courses at the beginning of the semester.

3. Summer Internship and its Evaluation

Evaluation of the summer internships shall be through the **departmental committee**. A student will be required to submit a summer internship report to the concerned department and appear for an oral presentation before the departmental committee. The **report and the oral presentation** shall carry **40% and 60%** weightages respectively.

In the final semester, the student should mandatorily undergo internship and parallelly he/she should work on a **project with well-defined objectives**. At the end of the semester the candidate shall submit an internship completion certificate and a project report. A student shall also be permitted to submit project report on the work carried out during the internship. The project report shall be evaluated with an ***external examiner*** .

4. COMMUNITY SERVICE PROJECT

Community Service Project should be an integral part of the curriculum, as an ***alternative to the 2 months of Summer Internships*** / Apprenticeships / On the Job Training, whenever there is an exigency when students **cannot pursue their summer internships**.

The specific objectives are;

- To sensitize the students to the living conditions of the people who are around them,
- To help students to realize the stark realities of the society.
- To bring about an attitudinal change in the students and help them to develop societal consciousness, sensibility, responsibility and accountability
- To make students aware of their inner strength and help them to find new /out of box solutions to the social problems.
- To make students socially responsible citizens who are sensitive to the needs of the disadvantaged sections.
    - Every student should put in a minimum of **180 hours** for the Community Service Project during the summer vacation.
    - Each class/section should be assigned with a mentor.

I Semester **MA 101MATHEMATICS –I**

(I Semester - Common for all branches)

Instruction: 3(L) +1(T) /week **Credits:4** **Assessment: 40 + 60**

UNIT I

Differential Equations: Linear differential equations of second and higher order with constant coefficients-particular integrals-homogeneous differential equations with variable coefficients-method of parameters-simulation equations.

UNIT II

Laplace Transforms I: Laplace transforms of standard functions-inverse transforms-transforms of derivatives and integrals-derivatives of transforms-integrals of transforms.

UNIT III

Laplace Transforms II: Transforms of periodic functions-convolution theorem-applications to solution of ordinary differential equations.

UNIT IV

Calculus: Roll's and Mean value theorems - Taylor's and Maclaurins's series-maxima and minima for functions of two variables - Infinite series - Convergence Tests series of positive terms - comparison, Ratio tests - Alternating series - Leibnitz's rule - Absolute and conditional convergence.

UNIT V

Multiple Integrals: Curve tracing (both Cartesian and polar coordinate) - Evaluations of double and Triple integrals-change of order of integrations-change of variables of integrations-simple applications to areas and volumes.

Text/Reference Books

1. B S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. M K Venkataraman, Engineering Mathematics, National Publishing Company, Chennai.
3. B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
4. Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

1. analyze differential equations and solve them
2. apply differential equations to engineering problems.
3. Use transformation to convert one type into another type presumably easier to solve.
4. use shift theorems to compute the Laplace transform, inverse Laplace transform and the solutions of second order, linear equations with constant coefficients.
5. solve an initial value problem for an nth order ordinary differential equation using the Laplace transform.
6. expand functions as power series using Maclaurin's and Talor's series
7. optimize the problems related to OR, Computer science, Probability and Statistics
8. draw an approximate shape by the study of some of its important characteristics such as symmetry, tangents, regions enclosing curve tracing method to find length, area, volume.
9. use multiple integral in evaluating area and volume of any region bounded by the given curves.

I & II Semesters **CY 101/ CY 202 ENGINEERING CHEMISTRY**
(I Semester - CY 101 for Civil & Mechanical Engg) (II Semester -CY 202 for EEE, ECE & CSE)

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40**

+ 60 UNIT I

Atomic and molecular structure (**12 lectures**)

Postulates of quantum chemistry. Schrodinger equation. Particle in a box solutions, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomics, Pi-molecular orbitals of butadiene and benzene. Band structure of solids and the role of doping on band structures

UNIT II

Spectroscopic techniques and applications

Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclearmagnetic resonance and magnetic resonance imaging, surface characterization techniques.

UNIT III

Chemical equilibria, Intermolecular forces and potential energy surfaces

Use of free energy in Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies.Free energy and emf.Cellpotentials, the Nernst equation and applications.

Use of free energy considerations in metallurgy through Ellingham diagram. Equations of state of real gases and critical phenomena.

UNIT IV

Periodic properties

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states,

coordination numbers and geometries, hard soft acids and bases, molecular

geometries, Born- Haber cycle, The use of reduction potentials, Properties of ionic and covalent compounds.

UNIT V

Stereochemistry, Organic reactions and synthesis of a drug molecule

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings Synthesis of a commonly used drug molecule.

5. Physical Chemistryby P. W. Atkins
6. Organic Chemistry: Structure and Function by K. P. C. Volhardt and N. E. Schore, 5th Ed.
7. Principles of physical chemistry, Puri, Sharma and Pattania

Course Outcomes: At the end of the course, students will be able to

1. analyze microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. rationalize bulk properties and processes using thermodynamic considerations.
3. distinguish the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques
4. rationalize periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
5. list major chemical reactions that are used in the synthesis of molecules.

& II Semesters **EN 103/ EN 203 ENGLISH**

(I Semester - EN 103 forChE,CE & ME)

(II Semester - EN 203 for EEE, ECE & CSE)

Instruction: 2(L) **Credits: 2** **Assessment: 40 + 60**

UNIT I Vocabulary Building

The concept of Word Formation- Root words from foreign languages and their use in English- Acquaintance with prefixes and suffixes from foreign languages in English form derivatives- Synonyms, antonyms, and standard abbreviations.

UNIT II Basic Writing Skills

Sentence Structures – Use of phrases and clauses in sentences –Importance of proper punctuation - Creating coherence – Organizing principles of paragraphs in documents - Techniques for writing precisely

UNIT III Identifying Common Errors in Writing

Subject-verb agreement -Noun-pronoun agreement -Misplaced modifiers -Article - Prepositions - Redundancies -Clichés

UNIT IV Nature and Style of sensible Writing

Describing - Defining - Classifying –Providingexamples or evidence –Writingintroductionand conclusion

UNIT V Writing Practices

Comprehension - Précis Writing –EssayWriting

5. Communication Skills. Sanjay KumarandPushpalata. Oxford University Press. 2011.
6. Exercises in Spoken English. Parts.I-III. CIEFL, Hyderabad. Oxford University Press

Course Outcomes: At the end of the course, students will be able to

1. learn the elements of grammar and composition of English Language.
2. Learn literary texts such as Short stories and prose passages.
3. maintain linguistic competence through training in vocabulary, sentence structures and pronunciation.
4. develop communication skills by cultivating the habit of reading comprehension passages.
5. develop the language skills like listening, speaking, reading and writing.

Make use of self-instructed learner friendly modes of language learning through competence

I Semester **EE104BASIC ELECTRICAL AND ELECTRONICS ENGG.**

(I Semester – for ChE, CE & ME)

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40 + 60**

Unit-I

Electric DC Circuits: Kirchhoff's Voltage & Current laws, Superposition Theorem, Star – Delta Transformations.
AC Circuits: Complex representation of Impedance, Phasor diagrams, Power & Power Factor, Solution of Single Phase Series & Parallel Circuits. Solution of Three Phase circuits and Measurement of Power in Three Phase circuits.

Unit-II

Single Phase Transformers: Principle of Operation of a Single phase Transformer, EMF equation, regulation and Efficiency of a single phase transformer.
DC Machines: Principle of Operation, Classification, EMF and Torque equations, Characteristics of Generators and Motors

UNIT-III

Three Phase Induction Motor: Principle of Rotating Magnetic Field, Principle of Operation of 3- φ I.M., Torque-Speed Characteristics of 3-φ I.M.

UNIT-IV

p-n junction operation, diode applications, Zener diode as regulator.
Transistor and applications: Introduction to transistors, BJT Characteristics, biasing and applications

UNIT-V

Integrated Circuits: Operational amplifiers, Applications: adder, subtractor, Integrator and Differentiator.
Digital Circuits: logic gates, Combinational Logic circuits, Flip-Flops, counters and shift registers, Laboratory measuring instruments: digital multi-meters and Cathode Ray Oscilloscopes (CRO's).

Textbooks:

1. Electrical Technology by Edward Hughes
2. Basic Electrical Engineering by Nagrath and Kothari

Course Outcomes: At the end of the course, students will be able to

1. understand the basic concepts of D.C. single phase and 3- phase supply and circuits and solve basic electrical circuit problems
2. understand the basic concepts of transformers and motors used as various industrial drives understand the concept of power factor improvement for industrial installations andconcepts of most economical power factor
3. understand the operation and characteristics of diodes, transistors, integrated circuits and digital circuits.

105 / ME 205ENGINEERING GRAPHICS AND DESIGN

(I Semester - ME105 for ChE, CE & ME)

(II Semester - ME205 for EEE,ECE & CSE)

I & II Semesters

Instruction: 2(L) +3 (Drg) /week Credits: 3.5 **Assessment: 40 + 60**

Unit I Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, usage of Drawing instruments,lettering, Conic sections including the Rectangular Hyperbola (General method only);Cycloid,Epi-cycloid, Hypo- cycloid and Involutes.

Unit II

Scales- Scales– construction of Plain &Diagonal Scales.

Projections of points, lines - Projections of Points and lines inclined to both planes, including traces;

Question Paper
Modular – 4 questions from
Units I t0 IV, 15 marks each

Unit III

Projections of planes

Projections of planes (Regular surfaces only) inclined Planes-Auxiliary Planes

Projections of Regular Solids (Simple solids – cylinder, cone, prism & pyramid) those inclined

to both the Planes-Auxiliary Views

Unit IV

Isometric Projections& Orthographic projections

Principles of Orthographic Projections-Conventions Draw simple objects, dimensioning and scale. Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

Unit V Introduction to CAD

CAD workstation and peripherals, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars Standard, Object Properties, Draw, Modify and Dimension, Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom used in CAD, Select and erase objects.;

Text/Reference Books:

4. Narayana, K.L. &P Kannaiah(2008),Text book on Engineering Drawing, Scitech Publishers
5. Corresponding set of) CAD Software Theory and User Manuals

Course Outcomes: At the end of the course, the student will be able to

1. make a distinction between first angle projection and third angle projection of drawing.
2. draw hyperbola, parabola, Involutes and Cycloidal curves.
3. draw sections of solids including cylinders, cones, prisms and pyramids.
4. draw projections of lines, planes, solids and sections of solids.

draw orthographic projections of lines, planes, and solids.

I & II Semesters EN 106 / EN 206 ENGLISH COMMUNICATION LAB
(I Semester - EN 106 for ChE, CE & ME) (II Semester - EN206 for EEE, ECE & CSE)

Instruction: 0(L) +3(Lab) /week Credits: 1.5 Assessment: 40 + 60

Listening Comprehension -Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace - Interviews -Formal Presentations

Reference/Text Books:

1. Practical English Usage. Michael Swan. OUP. 1995.
2. Remedial English Grammar. F.T. Wood. Macmillan.2007
3. On Writing Well. William Zinsser. Harper Resource Book. 2001
4. Study Writing. LizHamp– Lyons and Ben Heasly. Cambridge Univ. Press. 2006
5. Communication Skills. Sanjay Kumar and Pushpalata. Oxford Univ. Press.2011
6. Exercises in Spoken English. PartsI-III.CIEFL, Hyderabad. Oxford Univ. Press

Course Outcomes:
The student will acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.

II Semester MA 201MATHEMATICS II

(II Semester - for all branches)

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

Unit I

Matrices: rank of a matrix-solution of system of linear equations-Eigen values, vectors –Canley-Hamilton theorem-quadratic forms-diagonalization.

Unit II

Vector Calculus: Gradient, Divergence, Curl of a vector and related properties-line, surface, volume integrals- Green's, Stokes's and Gauss Divergence theorems and its applications.

Unit III

Fourier Series: Fourier series-even and odd functions, periodic functions-half range sine and cosine series-harmonic analysis.

Unit IV

Special Functions I: Gamma and Beta functions-series solutions of differential equations-ordinary points.

Unit V

Special Functions II: Bessel function-recurrence formulae-generating function for $J_n(X)$-Lengender polynomials-recurrence formulae-generating function for $P_n(X)$ - Rodriguez's formula - orthogonality of Lengender polynomials.

Text/Reference Books

1. B S Grewal, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. M K Venkataraman, Engineering Mathematics, National Publishing Company, Chennai.
3. B V Ramana, Higher Engineering Mathematics, 6th Reprint, Tata McGraw-Hill, 2008.
4. Bali and Iyengar, Engineering Mathematics, 6th Edition, Laxmi Publications, 2006.

Course Outcomes: At the end of the course, students will be able to

1. use ranks of matrices to decide whether the system of linear equations is consistent or not
2. use Cayley-Hamilton theorem to find inverses or powers of matrices.
3. use Eigen values and vectors to reduce Quadratic forms to normal form.
4. to analyze motion problems from real lines to curves and surfaces in 3-D and use tools such as divergence and curl of vector and gradient, directional derivatives that play significant roles in many applications.
5. use Green's theorem to evaluate line integrals along simple closed contours on the plane
6. use Stokes' theorem to give a physical interpretation of the curl of a vector field
7. use the divergence theorem to give a physical interpretation of the divergence of a vector field.

8. find the Fourier series of functions consisting of constants times sine and cosine functions of different frequencies in order to observe periodic phenomenon.
9. Evaluate certain improper integrals to make them simple with introduction of Gamma and Beta functions.
10. study certain special functions that arise in solving certain ordinary differential equations to model many physical phenomena.

Mapping of Course Outcomes with Program Outcomes:

II Semester **PY 202ENGINEERING PHYSICS**
(II Semester - for ChE, CE& ME)

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40 + 60**

UNIT I Wave Optics

Interference: Huygen`s Principle-Principle of Superposition-Interference of Light-Young`s double slit experiment- -Newton's Rings.

Diffraction: Fraunhofer Diffraction at a Single Slit and a Circular Aperture-Plane Diffraction grating –Resolving Power-Rayleigh`s Criterion-Resolving power of Grating and Microscope.

Lasers : Introduction – Spontaneous and Stimulated Emission of Radiation – Population Inversion – Types of Lasers – Ruby Laser – He-Ne Laser – Semiconductor Laser – Applications of Lasers.

UNIT II Mechanics of Rigid Body

Rigid Body-Rotational Motion and Kinematics Relations-Kinetic Energy and Angular Momentum of a Rotating Body-Equation of Motion of a Rigid body (Torque of a Rigid Body)-Combined Translation and Rotational Motion of a Rigid Body- Body Rolling on an inclined Plane.

Mechanics of Continuous Media

Elasticity, Stress and Strain- Hook`s Law and Behaviour of Wire Under Load- Elastic Constants-Relation Between Elastic Modulii-Types of Supports, Beams and Loads-Different types of Bending- Cantilever with an End Load. Ultrasonic Waves - Sound Absorption and Reverberation -Sabine Formula - Acoustics of Buildings.

UNIT III Electromagnetism and magnetic properties of Materials

Laws of Electrostatistics- Electric Current- Laws of Magnetism- Ampere`s, Faraday`s laws-Maxwells Equations – Polarization - Permeability and dielectric constant- Polar and non-polar Dielectrics, Clausius-Mossotti equation, Applications of Dielectrics.

Magnetization - Permeability and Susceptibility- Classification of Magnetic Materials, Ferromagnetism-Magnetic Domains and Hesteresis, Applications of ferromagnetic materials.

UNIT IV Quantum Mechanics

Wave – Particle duality – de Broglie Concept of Matter Waves – Properties of Matter Waves – Davison and Germer Experiment – G.P.Thomson Experiment – Heisenberg's Uncertainty Principle – Schrödinger's Time Independent and Time Dependent Wave equation – Significance of Wave

Function – Electron in an Infinite Square Potential Well – Probability Densities and Energy Levels.

UNIT V NanoPhysics and Nanotechnology

Introduction to Nanomaterials –Properties: Optical Properties – Quantum Confinement – Electrical properties. Synthesis of Nanomaterials: Ball milling, Arc deposition method – Chemical Vapour Deposition-Pulsed laser deposition. Characteristics of C^{60} (Zero dimensional), Carbon Nanotubes (One Dimensional) and Graphene(Two Dimensional). Applications of Nanomaterials.

Text Books / Reference Books:

1. R.K.Gaur and S.L.Gupta ``Engineering Physics" Sultan and Chand Pub., New Delhi
2. S.L.Gupta and SanjeevGupta`UnifiedPhysics`Vol.I Jai PrakashNath& Co., Meerut.
3. HitendraK.Malik and A.K.Singh ``Engineering Physics" TataMCGraw Hill Education Pvt.Ltd., New Delhi
4. M.N.Avadhanulu and P.G.Kshirsagar ``A Textbook of Engineering Physics``S.Chand and Company Pvt.Ltd., New Delhi
5. B.L Theraja, "Modern physics", S.Chand& Company.
6. V. Raghavan "Material Science", Tata McGraw Hill Publications.
7. M.S.RamachandraRao and Shubra Singh, ``Nanoscience and Nanotechnology`` Wiley India Pvt.Ltd, New Delhi

Course Outcomes: At the end of the course, students will be able to

1. Develop appropriate competence and working knowledge of laws of modern Physics in understanding advanced technical engineering courses
2. understand the quantum mechanics and ultimately the quantum behavior of charged particles when they are in motion.
3. identify and apply appropriate analytical and mathematical tools of Physics in solving Engineering problems
4. apply the basic principles of Mechanics of rigid body and continuous media and their applicationsunderstand the principles in electrostatics and electromagnetics and magnetic properties of materials.
5. understand size depended properties of nano-dimensional materials and their effective utilization in making nano- and micro-devices for further microminiaturization of electronic devices.
6. think and participate deeply, creatively, and analytically in emerging areas of engineering technology.
7. Learnthe basics of instrumentation, design of laboratory techniques, measurement, data acquisition, interpretation, and analysis.
8. provide multidisciplinary experiences throughout the curriculum.

I & II Semesters CS 103 / CS203 PROGRAMMING FOR PROBLEM SOLVING
(I Semester –CS 103 for EEE, ECE & CSE)
(II Semester –CS 203 for ChE, CE & ME)

Instruction: 3(L) +1(T) /week **Credits: 4** **Assessment: 40 + 60**

Course Objectives:

1. To acquire problem solving skills
2. To be able to develop flowcharts and algorithms for the given problem
3. To learn how to write modular programs in C
4. To enable to use arrays, pointers, strings and structures in solving problems.
5. To explain the difference between object-oriented programming and procedural programming.
6. To understand principles of object-oriented programming.

UNIT-I

Problem Solving : Problem solving techniques, Computer as a problem solving tool, Programming Languages – Machine Language, Assembly Language, Low and High-Level Languages, Procedural and Object-Oriented Languages. Algorithm definition, Features, Criteria, Flowchart definition, Basic symbols, Sample flowcharts, Problem solving aspects, Efficiency of algorithms.

Basics of C: Structure of a C program, C tokens, Keywords, Identifiers, Basic data types and sizes, Constants, Variables, Operators in C, Operator Precedence and Associativity, Expressions, Type conversions, Basic input/output statement, Sample programs.

UNIT-II

Conditional Statements: Selection statements, Decision making within a program, Simple if statement, if-else statement, Nested if-else, if-else ladder and switch-case. Iterative statements: while-loop, do-while loop, for loop, Nested loops, Infinite loops, goto, break and continue statements, Sample programs.

Functions: Introduction to modular programming and functions, Basics, Standard Library of C functions, Prototype of a function, Parameter passing, User defined functions, Recursive functions, Passing arguments to a function: Call by reference, Call by value, Storage Classes in a single source file, Scope rules, Header files, C Pre-processor.

UNIT-III

Arrays: Introduction to arrays, Definition, Declaration, Storing elements, Accessing elements, One dimensional arrays: Array manipulation; Searching, Insertion, Deletion of an element from an array, Two dimensional arrays, Addition/Multiplication of two matrices, Transpose of a square matrix, Passing array to functions, String fundamentals, String manipulations, Standard

library string functions.

Pointers: Definition of pointer, pointer type declaration, pointer assignment, pointer initialization, Pointer arithmetic, Functions and Pointers, Dangling memory, Character pointers and functions, Pointers to pointers, Arrays and Pointers, Pointer arrays, Pointers and structures, Dynamic memory management functions.

UNIT-IV

Structures: Structures declaration, Structure variables, Initialization of structures, Accessing structures, Nested structures, Arrays of structures, Structures containing arrays, Structures and functions, Pointers to structures, Self-referential structures, Unions, Typedef, Bit-fields.

File Processing: Concept of Files, Text files and binary files, File opening in various modes and closing of a file, Reading from a file, Writing onto a file.

UNIT V

Introduction to Object-Oriented Programming (OOP): Need for OOP, Principles of OOP, Basics of C++ Programming, Operator Overloading, Function Overloading, Inheritance: Derived classes, Protected access specifier, Derived class constructors, Overriding member functions, Class hierarchies, Public and Private inheritance, Multiple inheritance.

Course Outcomes: At the end of the course, student will be able to

1. Develop and test programs in C and correct syntax and logical errors.
2. Implement conditional branching, iteration and recursion.
3. Decompose a problem into functions and synthesize a complete program.
4. Use arrays, pointers, strings and structures to formulate algorithms and programs
5. Use files to perform read and write operations.
6. Handle programming assignments based on class,abstraction, encapsulation, overloading and inheritance.

I & II Semesters CE 104 / CE 204 ENGINEERING MECHANICS

(I Semester –CE 104 for EEE)

(II Semester –CE 204 for CE & ME)

Instruction: 3(L) +1(T) /week Credits: 4 Assessment: 40 + 60

UNIT I

STATICS : Basic concepts – System of force, Concurrent and non-concurrent coplanar and non-coplanar forces – Resultant – Moment of force and its application – Couples and resultant of force systems – Equilibrium of systems of forces – Free body diagrams, Equations of equilibrium of coplanar systems and spatial systems.

UNIT II

Analysis of plane trusses: Types of supports – Types of trusses – Analysis of trusses using method of joints and method of sections.

UNIT III

CENTRE OF GRAVITY AND MOMENTS OF INERTIA: Theory of Pappus – Centroids of composite figures – Areas of gravity of bodies – Moment of inertia – Parallel and perpendicular axis theorems – Moments of inertia of composite areas (rolled and built up sections) – Radius of gyration of areas.

UNIT IV

SIMPLE STRESES AND STRAINS : Elasticity and plasticity – Types of stresses and strains – Hooke's law – Stress-strain diagram for mild steel – Working stress – Factor of safety.

Lateral strain – Poisson's ratio and volumetric strain – Elastic moduli and relationship between elastic constants – Bars of varying section – Composite bars – Temperature stresses.

UNIT V

STRAIN ENERGY: Gradual, sudden and impact loading – Endurance limit principles of virtual work and its applications.

TEXTBOOKS:

1. Ghose D.N. – Applied Mechanics and Strength of Materials.
2. Timoshenko & Young – Engineering Mechanics.
3. Junarkar SB – Mechanics of Structures – Vol. I.
4. Junarkar SB – Elements of Applied Mechanics.

Course Outcomes: At the end of the course, student will be able to

1. apply the basic knowledge of force system.
2. know the types of supports occur in civil engineering structures
3. know the geometrical properties of different cross sections.
4. understand different types of stresses and strains, elastic constants.
5. understand the behavior of different internal forces under different types of loading.

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

I & II Semesters ME 105 / ME 205 WORKSHOP/MANUFACTURING PRACTICE

(ME 105 for EEE, ECE & CSE)

(ME 205 for ChE,CE & ME)

Instruction: 0(L) +3 (lab)/week Credits: 1.5 Assessment: 40 + 60

Workshop Practice: Five practices among

1. Machine shop 2.Fittingshop 3.Carpentry 4.Electrical wiring
5. Welding shop 6.Casting 7.Smithy 8.Plasticmoulding&GlassCutting

Examinations could involve the actual fabrication of simple components, utilizing one or More of the techniques covered above.

Detailed Contents

1. ManufacturingMethods-casting,forming,machining,joining, advanced manufacturing methods
2. CNC machining, Additive manufacturing
3. Fitting operations & power tools.
4. Electrical &Electronics
5. Carpentry
6. Plastic moulding. Glass cutting
7. Metal casting.
8. Welding(arc welding & gas welding), brazing

The above course content is learnt by online videos/ppt presentations.

Laboratory Outcomes

- Upon completion of this laboratory course, students will be able to fabricate components with their own hands.

- They will also get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.
- By assembling different components, they will be able to produce small devices of their interest.

Course Outcomes : Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry to fabricatecomponents using different materials.

I & II Sem CS 106/ CS206 PROGRAMMING FOR PROBLEM SOLVING LAB
(CS 106 for EEE, ECE & CSE)
(CS 206 for ChE, CE & ME)

Instruction: 0(L) +3 (Lab)) /week Credits: 1.5 Assessment: 40 + 60

Course Objectives:

1. To provide exposure to problem-solving through programming
2. To train the student on the concepts of the C- Programming language

The following programs shall be developed and executed in Programming Language C.

1. Programs on conditional control constructs.
2. Programs on iterative statements (while, do-while, for).
3. Programs on recursive procedures
4. Programs on arrays, matrices (single and multi-dimensional arrays).
5. Programs using user defined functions, demonstrating parameter passing methods viz. call by value and call by reference.
6. Programs using different library functions viz. ctype.h, math.h, stdio.h, stdlib.h, string.h, conio.h and pre-processor directives.
7. Programs using pointers (int pointers, char pointers) and pointer arrays.
8. Programs on structures and unions
9. Programs on File Processing.
10. Programs on Pointers to structures and Self-referential structures

Course Outcomes: After Completion of this course the student would be able to

1. Develop the C code for the given algorithm.
2. Understand, debug and trace the execution of programs written in C language.

Reference Books:

1. Scheldt H, C: The Complete Reference, 4th Edition, Tata McGraw-Hill, 2002.

CE 107 / CE 207 **ENVIRONMENTAL SCIENCE** ***Audit Course***
(CE 107 for EEE, ECE &CSE) ***No Univ.Exam***
(CE 207 for ChE, CE & ME)

Instruction: 4(L) **Credits: 0(Zero)** **Assessment: 40 + 60**

UNIT I

Environmental Studies and Natural Resources

Definition, Scope and importance of Environment, Environmental studies, Need for public awareness

Components of Environment- Atmosphere, Hydrosphere, Lithosphere.

Renewable and **Non-Renewable Resources and associated problems**

Water resources: Use and over utilization of surface and ground water, floods, drought, conflicts over water, dam benefits and problems.

Forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

Land resources: Land as a resource, land degradation, Man induced landslides, soil erosion and desertification.

Mineral resources: Use and overexploitation, Environmental effects of extracting and using mineral resources, case studies.

Food resources: World food problems, changes caused agriculture and overgrazing, effects of modern agriculture, fertilizer – pesticide problems, water logging, salinity, Case studies.

Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies.

Role of an individual in conservation of natural resources.

UNIT II

Ecosystem and Biodiversity

Ecosystem - Concept of an ecosystem, Structure and functions of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

Introduction, types, characteristic features, structure and function of the following ecosystem.

(a) Forest ecosystem. (b) Grassland ecosystem
(c) Desert ecosystem. (d) Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and its conservation:

Definition, genetic species and ecosystem diversity, Biogeographically classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation.

Hot-spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man – wildlife conflicts, Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT – III

Environmental pollution and Global Effects

Definition, Causes, Effects, and control measures of (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards

Solid waste Management: Causes, effects and control measures of urban and industrial

wastes. Role of an individual in prevention of pollution.

Pollution case studies.

Disaster management: Floods, earthquakes, cyclone, landslides,

Tsunami. Climate change-Global warming, Acid rain, Ozone depletion.

UNIT – IV

Environment Issues and Management

- Environment and Human health – Epidemic diseases, HIV/AIDS, Aviation Flue, Water Borne Diseases.
- Environmental Impact Assessment, Sustainable Development, Clean Production and Clean Development Mechanisms
- Environment Legislation: Environmental Protection Act, Water Act, Air Act, Wild Life Protection Act, Forest Conservation Act, Public Liability & Insurance Act, Issues involved in Enforcement of Environmental legislation.

UNIT – V

Social Issues and the Environment

- Population growth, Population Explosion, Population Control, Women and Child welfare.
- Urbanization, Industrialization, Development projects, Resettlement and Rehabilitation of people – Problems concerned, Case studies.
- Consumerism and Waste Products Conservation, Public Awareness, Water Conservation, Rain water harvesting, watershed management, Wasteland reclamation, Human Rights, Value education, Environmental ethics- Issues and possible solution.
- Role of information Technology in Environment and Human Health.

7. Gilbert M, Introduction to Environmental Engineering and Science, Masters Publication by Prentice –Hall of India Private Ltd., 1991
8. William P Cunningham and Mary Ann Cunningham, Principles of Environmental Science, Tata McGraw Hill Publishing Co.Ltd, 2002

Course Outcomes:

At the end of the course, students will be able to

1. acquire knowledge in
   - diverse components of environment and natural resources
   - ecosystem and biodiversity & its conservation methods
   - population growth and human health
   - green technology
2. identify and resolve the issues related to sources of different types of pollutions
3. provide solutions to individuals, industries and government for sustainable development of natural resources
4. apply environmental ethics in protection of diversified ecosystems.

MA301B MATHEMATICS - III

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

Course Objectives:

1. This course aims at providing the student to acquire the knowledge on the calculus of functions of complex variables.
2. To understand power series and expansion of analytic function.
3. To understand Laurent Series, poles, singular points, Residue theorem and its applications.
4. The aim is to analyze the solutions of partial differential equations.
5. To discuss the boundary value problems, one dimensional wave equation, heat equation and Laplace Equation.

UNIT - I

Complex analysis - I: Analytical functions - Cauchy-Reimann equations – Construction of Analytic functions- Complex integration - Cauchy's theorem - Integral formula - Evaluation of integrals.

UNIT - II

Complex analysis - II**:** Taylor's and Laurents' series- Transformations- Conformal mapping - Bilinear transformations - Transformation of 1/z, z^2, sin z and cos z.

UNIT - III

Complex Analysis –III: Singularities - Poles - Residues - Residue theorem – Contour integration- Evaluation of real integrals

UNIT - IV

Partial differential equations - I : Formation of differential equations - Classification - First order linear partial differential equations – Legranges' linear equation - Method of multipliers - first order non-linear partial differential equations - Charpits method.

UNIT- V

Partial differential equations - II: Method of separation of variables - One dimensional wave equation - Heat equation – Laplace's equation.

Text Books:

1. Grewal B S, Higher Engineering Mathematics, 40th Edition, Khanna Publications, 2007.
2. Venkataraman M K, Engineering Mathematics, Vol. I & II, National Publishing Company, 1993.
3. Venkataraman M K, Engineering Mathematics, National Publishing Company, 1995.
4. Grewal B S, Engineering Mathematics, 13th Edition, Khanna Publications.
5. Kreyszig E, Advanced Engineering Mathematics, 8th edition, Wiley, 1998.

Course Outcomes: At the end of the course, students will be able to

1. After the completion of course, students will be able to Understand the analyticity of complex functions and conformal mappings.
2. Apply Cauchy's integral formula and Cauchy's integral theorem to evaluate improper integrals along contours.
3. Describe basic properties of complex integration and having the ability to compute such integrals.
4. Describe conformal mappings between various plane regions.
5. Apply the concepts of Complex Analysis in many branches of Engineering, including the branches of hydrodynamics, thermodynamics, and particularly quantum mechanics.
6. Compute the residue of a function and use the Residue Theory to evaluate a contour integral or an integral over the real line.
7. Formulate/solve/classify the solutions of Partial differential equations.
8. Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit's method.
9. Apply Variables separable methods to solve boundary value problems.
10. Find the solution of one dimensional wave equation, heat equation and Laplace equation.

*ME302C S*TRENGTH OF MATERIALS

Instruction Hours/Week: 3(L) Credits: 3 Assessment : 40 + 60

CO1	Analyze the statically determinate and indeterminate problems
CO2	Determine the stresses and strains in the members subjected to axial, bending and torsional loads
CO3	Evaluate the slope and deflection of beams subjected to loads
CO4	Determine the principal stresses and strains in structural members
CO5	Determine the torsional stress of structural beam

SYLLABUS

UNIT I

Stress And Strain: Concept of statically determinacy and indeterminacy- Determinate and Indeterminate problems in Tension and Compression - Thermal Stresses.

Elastic Constants and Impact Loading: Stress-strain diagrams for brittle and ductile materials -working stress - Strain energy in tension and compression - Impact loading - pure shear - Modulus of rigidity and Bulk modulus - Relation between E, G and K.

UNIT II

Shear Force And Bending Moment: Types of supports - Types of determinate beams - Simply supported, Cantilever, Overhanging and compound beams with articulations -Shear Force and Bending Moment diagrams.

Theory of Simple Bending: Assumptions - Theory of Simple Bending - Bending stresses in beams.

UNIT III

Principal stresses and strains: Principal planes and principal stresses, methods of determining stresses on oblique section, analytical and graphical method for determining stresses on oblique section, Mohr's circle.

Beams: Deflection of cantilever beam, simply supported beam, fixed beam.

UNIT IV

Thin Cylinders & Thick cylinders: Circumferential stresses, longitudinal stresses, Lame's equations and hoop stress.

Torsion Of Circular Shafts: Theory of Pure Torsion in Solid and Hollow circular shafts - Torsional Shear Stresses and angle of twist - transmission of Power.

UNIT V

Theories of failure: Introduction, maximum principal stress theory, maximum principal strain theory, maximum shear stress theory.

Columns and Struts: Introduction, Classification of columns, Short columns subjected to axial loads, Euler's columntheory, end conditions for long columns, crippling load expressions for different conditions.

HS303C Managerial Economics and Accountancy

Course Code	Name of the Course	Category	L-T-P-C
HS303C	Managerial Economics and Accountancy	HSMC	3-0-0-3

Pre-requisites: Nil

Course Outcomes: After the completion of the course the student will be able to:

CO1	Understand Macro Economic environment of the business and its impact on enterprise.
CO2	Identify various cost elements of the product and its effect on decision making.
CO3	Understand the concepts of financial management and smart investment.
CO4	Prepare the Accounting records and interpret the data for Managerial Decisions.

Mapping of course outcomes with program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	-	-	-	-	-	-	-		2	-	-
CO2	-	-	-	-	-	-	-	-	3	-	3	-
CO3	-	1	-	-	-	-	-	-	-	-	3	-
CO4	2	-	-	-	-	-	-	-	-	-	3	-

Detailed Syllabus:

Unit -I

Introduction to Engineering Economics, Fundamental concepts, Time value of money, Cash flow and Time Diagrams, choosing between alternative investment proposals, Methods of Economic analysis (pay back, ARR, NPV, IRR and B/C ratio), The effect of borrowing on investment, Equity vs Debt Financing, concept of leverage, Income tax leverage.

Unit -II

Depreciation and methods of calculating depreciation (straight line, sum of the years digitmethod, Declining balance method, Annuity method, Sinking fund method), National income accounting Methods of estimation, Various concepts of National Income, Significance of National income Estimation and its limitations.

Unit -III

Inflation: Definition, Process and Theories of inflation and Measure of control. New Economic Policy 1991(Industrial Policy, Trade Policy, Fiscal Policy), Impact on Industry.

Unit -IV

Accounting Principles, procedure, Double entry system, Journal, ledger, Trial balance, Cashbook, preparation of Trading and Profit and Loss account, Balance sheet.

Unit -V

Cost Accounting: Introduction, Classification of costs, Methods of costing, Techniques ofcosting, Cost sheet and preparation of cost sheet, Break-even Analysis, Meaning and its application, Limitation.

Reading Text Books:

1. Henry Malcom Steiner, Engineering Economics Principles, 2nd Edition, McGraw Hill Education, 1996.
2. Dewett. K.K., Modern Economic Theory, Sultan Chand and Co., 2006.
3. A.N. Agarwal, Indian Economy, Wiley Eastern Limited, New Delhi.
4. Jain and Narang, Accounting Part-I, Kalyani Publishers, 2011.
5. Arora, M.N. Cost Accounting: Principles and Practice, 12th Edition, Vikas Publication, 2012.

ME304C MANUFACTURING PROCESSES

Lectures/week: 3 hours

Credits: 03

Sessionals: 20 +20

End Examination: 60

Course Outcomes (COs):

CO 1 Able to understand the basic concepts of manufacturing.
CO 2 Able to select suitable manufacturing process to produce products of desired size and shape.
CO3 Able to understand the basic manufacturing processes such as foundry and metal forming processes etc.
CO4 Ability to distinguish between gas welding and arc welding fabrication processes.

UNIT – I

Introduction – What is manufacturing? Basic history of manufacturing – Selecting materials – Basic properties of materials – Classification of Manufacturing Processes – Primary Shaping Processes – Secondary or Machining Processes – Selecting manufacturing processes – Mechanization and Automation – Computers in manufacturing industries.

UNIT – II

Metal – Casting Processes – Sand Casting – Sands – Types of sand moulds – Patterns – Cores – Core prints – Sand casting operation –Different types of casting processes – Melting furnaces – Foundry Automation – Inspection of Castings.

UNIT – III

Forming and Shaping Processes –Deformation of Metals – Elastic and Plastic Deformations – Force – Extension Curve – Metal working – Cold and Hot working processes.

Rolling – Flat rolling – Roll force and power requirement – Flat rolling practice – Cold rolling – Pack rolling – Thread rolling

Forging – Open die forging – Forging force – Impression die forging – Closed – die forging – Forgeability – Forging machines – Presses and Hammers.

UNIT – IV

Extrusion and Drawing – Introduction – Different Types of Extrusion Processes – Equipment – Defects in Extrusion – Drawing Processes – Drawing practice and Drawing defects – Drawing equipment.

UNIT – V

Sheet metal forming processes – Press tool operations – shearing action – Formability – Bending – Deep drawing – Spinning – Embossing and Coining.

Fabrication Processes – Classification – Joining processes – Fusion welding processes – Solid state welding processes – Soldering and Brazing.

ME305C - BASIC THERMODYNAMICS

B.Tech IIISemester Effective from 2021-2022

Lectures / Week: 3 periods Credits:03

Objectives:

- To learn about work and heat interactions, and balance of energy between system and itssurroundings.
- To learn about application of I law to various energy conversion devices.
- To learn about the II & III laws of thermodynamics with relations.
- To understand the difference between high grade and low grade energies and law limitationson energy conversion
- To learn about the air standard cycles

UNIT - I

Basic Concepts: System, boundary, Surrounding, Universe, control volume, Types of Systems, Macroscopic and Microscopic viewpoints, Concept of Continuum, Thermodynamic Equilibrium, State, Property, Process – Reversible, Quasi static & Irreversible Processes, cycle, Causes of Irreversibility. Energy in State and in Transition – Types, Work and Heat, Point and Path function.Zeroth Law of Thermodynamics – Concept of Temperature – Principles of Thermometry – Const. Volume gas Thermometer – Scales of Temperature.

UNIT – II

First Law for Cyclic & Non-cyclic processes; Concept of total energy E; Demonstration that E is a property; Various modes of energy, Internal energy and Enthalpy; First Law of Thermodynamics and Flow Processes - Derivation of general energy equation for a control volume; Steady state steady flow processes including throttling; Unsteady processes; examples of steady unsteady Firs law applications for system & control volume

UNIT – III

Limitations of the First Law – Thermal Reservoir, Heat Engine, Heat pump, Parameters of performance, Second Law of Thermodynamics, Kelvin-Planck and Clausius Statements and their Equivalence, Corollaries, PMM of Second kind, Carnot cycle and its specialties, Carnot's theorem, Thermodynamic scale of Temperature. Clausius Inequality, Entropy, Principle of Entropy Increase, Availability and Irreversibility (Basic definitions) – Thermodynamic Potentials, Gibbs and Helmholtz Functions, Maxwell Relations – Elementary Treatment of the Third Law of Thermodynamics.

UNIT-IV

Exergy balance equation and Exergy analysis. Definition of Pure substance, Ideal Gases and ideal gas mixtures, Real gases and real gas mixtures, Compressibility charts- Properties of two- phase systems - Const. temperature and Const. pressure heating of water.

UNIT -V

Thermodynamic and Air standard cycles -; Basic Brayton cycle; Introduction to basic concepts of Gas Turbines; Sterling Engine, Otto, Diesel and Dual cycles; Air Standard Efficiency and comparison with Carnot Cycle Efficiency.

Course Outcomes:

- After completing this course, the students will be able to apply energy balance to systems and control volumes, in situations involving heat and work interactions
- Students can evaluate changes in thermodynamic properties of substances
- The students will be able to evaluate the performance of energy conversion devices
- The students will be able to differentiate between high grade and low grade energies.
- The students will be able to evaluate the performance of air standard cycles.

ME306L **- STRENGTH OF MATERIALS LABORATORY**

B.Tech III Semester Effective from- 2021-22

(P/D) / Week: 3 periods **Credits:1.5**

LIST OF EXPERIMENTS:

1. Tension test on mild steel bar
2. Tension test on HYSD steel bar
3. Compression test on wood
4. Shear test on wood
5. Torsion test on steel
6. Test on close coiled helical spring
7. Bending test on rolled steel joist
8. Bending test carriage spring
9. Charpy impact test
10. Deflection test on a beam under Uniform Bending
11. Deflection test on simple supported beam
12. Deflection test on fixed beam

ME307L - MANUFACTURING PROCESS LAB

B.Tech IIISemester Effective from- 2021-22

(P/D) / Week: 3 periods **Credits:1.5**

LIST OF EXPERIMENTS:

I. LATHE

1:Step Turning

2:Taper Turning with Knurling

3:V Threading

II. SHAPER

4: Making Square prism on Shaper

5: Slot Cutting with Shaping Machine

III. MILLING MACHINE

6: Rectangular Slot Cutting on Vertical Milling Machine

7: Hexagonal Cutting on Horizontal Milling Machine

8: Spur Gear cutting on Milling

IV. THREADING

9: Square Threading

10: Double Start V Threading

11: Drilling ,Boring and Tapping

V. WELDING

12: Joining of Two Metal Work Pieces with Arc Welding or Gas Welding

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

***ME308L* - FUELS LABORATORY**

B.Tech III Semester Effective from- 2021-22

(P/D) / Week: 3 periods **Credits: 1.5**

LIST OF EXPERIMENTS:

1. Measurements of Viscosity using Redwood Viscometer
2. Measurements of Viscosity using Saybolt Viscometer
3. Test on Cleaveland flash point apparatus
4. Test on Cleaveland fire point apparatus
5. Test on Ables Flash Point Apparatus
6. Test on Distillation Apparatus
7. Test on Aniline Point Apparatus
8. Test of calorific value of fuels using Bomb Calorimeter
9. Determine the Pour point of given samples

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

ME309S – CAD Laboratory

B.Tech III Semester Effective from- 2021-22

(P/D) / Week: 3 periods **Credits: 1.5**

Course objectives:

- Navigate through the drafting user interface.
- Create and maintain drawing sheets and views.
- Create and edit user-defined view boundaries.
- Create and edit associative section views.
- Create view dependent geometry.
- Create and edit symbols, dimensions and text.
- Generate an assembly parts list.

Introduction of 2-D and 3-D modeling:

Part Navigator, Master model drawings and drafting standards, drawing sheets, Drafting views Custom views, Move, copy, and align views, hiding geometry in drafting views, Updating drawings and drafting views, Centerline symbols, Dimensions, Notes and labels, Balloon, symbols, GD&T symbols, Surface finish, weld, and custom symbols, Section views, Editing section lines, Maintaining associativity, Detail views, View boundaries, Broken views, Break-out section views, View dependent edits, Part Attributes, Parts lists, Sectioning assembly views, Exploded views, ordinate dimensions, Hole Tables.

SYLLABUS:

Student will perform six exercises on the following,

2-D Modeling

1. Geometrical construction.
2. Orthographic projections.
3. Isometric projections.
4. Sectional views.

3-D Modeling

5. Machine components such as bolt & nuts, bearing brackets, vice bodies, etc.
6. Assembly drawing of any three simple components.

MC310A **Constitution of India**	
Instruction : Hours/Week : **2L:0T:0P** Sessional Marks : **100**	**Credits: 0**
Course Objectives: Students will be able to 1. Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective. 2. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism. 3. To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.	

Unit-I

History of Making of the Indian Constitution: History
Drafting Committee, (Composition & Working)
Philosophy of the Indian Constitution: Preamble
Salient Features

Unit-II

- **Contours of Constitutional Rights & Duties:**
- Fundamental Rights
- Right to Equality
- Right to Freedom
- Right against Exploitation
- Right to Freedom of Religion
- Cultural and Educational Rights
- Right to Constitutional Remedies
- Directive Principles of State Policy
- Fundamental Duties.

Unit-III

- **Organs of Governance:**
- Parliament
- Composition
- Qualifications and Disqualifications
- Powers and Functions
- Executive
- President
- Governor
- Council of Ministers
- Judiciary, Appointment and Transfer of Judges, Qualifications
- Powers and Functions

Unit-IV

- **Local Administration:**
- District's Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.

- Pachayati raj: Introduction, PRI: Zila Pachayat.
- Elected officials and their roles, CEO Zila Pachayat: Position and role.
- Block level: Organizational Hierarchy (Different departments),
- Village level: Role of Elected and Appointed officials,
- Importance of grass root democracy

Unit-V

- **Election Commission:**
- Election Commission: Role and Functioning.
- Chief Election Commissioner and Election Commissioners.
- State Election Commission: Role and Functioning.
- Institute and Bodies for the welfare of SC/ST/OBC and women.

Text Books/References:

1. The Constitution of India, 1950 (Bare Act), Government Publication.
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.
3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Outcomes:

Students will be able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
4. Discuss the passage of the Hindu Code Bill of 1956.

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

ME401C- FLUID MECHANICS AND HYDRAULIC MACHINERY

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Lectures/ Week :3 Hours Tutorials/ Week : 1 Hour Credits: 3

COURSE OBJECTIVES:

- To learn about the application of fluid flow concepts and fundamental equations.
- To apply the knowledge of flow through pipes and laminar flow in circular pipes.
- To understand the importance of dimensional analysis and Boundary layer concepts.
- To apply the knowledge of theory of rotodynamic machines and pumps.
- To design the different types of turbines and analyze their performance.

CONTENTS:

UNIT- I

Definition of fluid, Units and dimensions- properties of fluids, mass density, specific volume, specific gravity, viscosity, Newton's law of viscosity, compressibility, surface tension and capillarity – Fluid flow characteristics- Velocity, Acceleration, Types of flows – Stream lines, Path lines, Streak lines – Continuity Equation – Energy Equation - Momentum equation - Euler's equation of motion along a stream line- Bernoulli's equation and its applications.

UNIT –II

Flow through pipes – Laws of fluid Friction, Darcy-Weisbach equation and other formulae for Head loss due to friction in pipes, Minor losses in pipes, Pipes in Series and Pipes in Parallel, Moody's diagram - Laminar flow through circular pipes, Hagen-Poiseuille Equation.

UNIT-III

Boundary layer theory, thickness, measurement– Drag force on a flat plate due to boundary layer - Need for dimensional analysis – methods of dimension analysis – Similitude – type of similitude Dimensionless parameters – application of dimensionless parameters – Model analysis.

UNIT – IV

Theory of Rotodynamic machines - various efficiencies – velocity components at entry and exit of the rotor, velocity triangles – Centrifugal pumps, working principle, work done by the impeller, performance curves – Cavitations in pumps- Reciprocating pump – working principle.

UNIT- V

Classification of water turbines, heads and efficiencies, velocity triangles – Axial, radial and mixed flow turbines – Pelton wheel, Francis turbine, Kaplan turbine, working principles – Draft tube – Specific speed, Unit quantities, Performance curves.

Text Books:

1. Hydraulics and Fluid Mechanics by P.N. Modi and S.M. Seth.
2. Fluid Mechanics and Hydraulic Machines by R.K.Rajput.
3. Fluid Mechanics and Hydraulic Machines by R.K.Bansal.

References:

1. Fluid Mechanics by V.L. Streeter and E.Benzamine, Wylie.
2. Fluid Mechanics and Turbo machines by Madan Mohan Das.– PHI Learning Pvt.Ltd., New Delhi.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DESCRIPTION OF THE COURSE OUTCOME
CO1	Understand and analyze simple flow situations and solve fluid flow problems.
CO2	Classify flows and evaluate the flow through pipes and laminar flows.
CO3	Apply the knowledge of boundary layer theory and dimensional analysis.
CO4	Design and evaluate the performance of centrifugal and reciprocating pumps.
CO5	Design and analyze the characteristics of turbines.

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

***ME402C* – KINEMATICS OF MACHINERY**

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Lectures/ Week : 3 Hours Tutorials/ Week : 1 Hour Credits: 3

COURSE OBJECTIVES:

- The course under kinematics of Machinery has been designed to cover the basic concepts of kinematic aspects of machine elements which are useful for design of machines.
- This course provides the knowledge of mechanical engineers in Dynamic synthesis and analysis by providing significant skills and also experience in creating and modeling mechanisms and also provides the knowledge for doing position analysis of mechanisms of various machines.
- This course provides the understanding of the concepts of displacement on kinematics analysis.
- This course provides the kinematic analysis of gears and gear trains which are used in different machines.
- Ability to analyze the kinematics of cams, design of cams and followers. And also understanding of the concepts of displacement, velocity and acceleration of followers and how to determine them.

CONTENTS:

UNIT–I
BASICS OF MECHANISMS :

Elements or Links – Classification – Rigid Link, flexible and fluid link –Types of kinematic pairs – sliding, turning, rolling, screw and spherical pairs – lower and higherpairs– closedandopenpairs–constrainedmotion–completely,partially orsuccessfullyconstrainedand incompletelyconstrained – Degree of freedom, Mobility – Kutzbach criterion, Gruebler's criterion – Grashof's Law – Kinematic inversions of four-bar chain and slider crank chains – Limit positions – Mechanical advantage – Transmission Angle – Quick return mechanisms.

UNIT–II
STRAIGHT LINE MOTION MECHANISMS:

Exact and approximate, copied and generated types –Peaucellier - Hart - Scott Russel – Grasshopper – Watt- Tchebicheff - Robert Mechanisms and Pantograph.

STEERING MECHANISMS:

Conditions for correct steering – Davis Steering gear, Ackerman's steering gear.

UNIT–III

VELOCITY AND ACCELERATION ANALYSIS:

Instantaneous centers of rotation – Kennedy's theorem and its applications to planar mechanism for velocity analysis – Velocity analysis of various mechanisms using Relative velocity method, Velocity Images, Rubbing Velocity – Acceleration of simple mechanisms. Coriolis component of acceleration.

UNIT–IV

GEARS: Toothed gears – types – law of gearing, Forms of tooth- cycloidal and involute profiles. Velocity of sliding – phenomena of interference– Methods to avoid interference. Condition for minimum number of teeth to avoid interference, expressions for arc of contact and path of contact.

GEAR TRAINS: Introduction –Types of gears trains – Simple, Compound, Reverted and Epicyclic gear trains. Train value and Velocity ratios of gear trains.

UNIT–V

CAMS:

Classification of cams and followers- Terminology and definitions- Displacement diagrams- Uniform velocity, parabolic, simple harmonic and cycloidal motions – Cam profiles for specified motions – disk cam withradial Knife edge follower, flat faced follower , roller follower – Oscillatory follower cams of specified contours.

Text Books:

1. Theory of Machines :S.S.Rathan / TMH
2. Theory of Machines :R.S.Khurmi. / S.Chand
3. Mechanisms and Machine theory :J.S.RaoandR.V.Dukkipati./NewAge
4. Theory of Machines &Mechanisms :PL. Ballaney / Khanna Publishers

References:

1. The theory of Machines : ShigleyJ.E/Oxford University Press
2. Mechanisms and Dynamics of Machinery: Hamilton Mabie H. and F. W. Ocvirk / Oxford University Press.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2			2								1
CO2	1	2			2							1
CO3	2	3	2									
CO4	2	3			2	2						1
CO5	3											

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DESCRIPTION OF THE COURSE OUTCOME
CO1	Understand the principles of kinematic pairs, chains and their classification, DOF, inversions, equivalent chains and planar mechanisms.
CO2	Acquire knowledge and develop straight line motion mechanisms and steering mechanisms.
CO3	Able to draw velocity and acceleration diagrams for different mechanisms.
CO4	Able to design and develop gear and gear train depending on application.
CO5	Design cams and followers for specified motion profiles.

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

B.TECH IV SEMESTER, MECHANICAL ENGINEERING
***ME403C* – APPLIED THERMODYNAMICS**
EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Lectures/ Week : 3 Hours Tutorials/ Week : 1 Hour Credits: 4

COURSE OBJECTIVES:

- Able to learn about the Ist law analysis of combustion reactions.
- Able to learn about steam power cycles, boilers and draughts.
- Able to understand the steam generators and steam properties.
- Able to understand the compressible flows of nozzles.
- Able to analyse the performance of steam turbines.

CONTENTS:

UNIT–I

Introduction to Fuels: Solid, liquid and gaseous fuels– Calorific Value of Fuels: Determination and Calculation of from Chemical Analysis, Combustion equations – Air required complete combustion. Stoichiometry, exhaust gas analysis- First law analysis of combustion reactions-Heat calculations.

UNIT–II

Steam power cycles: Steam Power plant and its components, site selection, Carnot Vapour Power Cycle, Rankine cycle, Rankine Cycle with Reheat, Superheat, and Regeneration, Plant efficiency, Comparison of Carnot and Rankine cycles.

BOILERS: Classification Based on Working Principles & Pressures of Operation - L.P & H.P. Boilers – Mountings and Accessories. DRAUGHT: Classification – Height of Chimney for Given Draught and Discharge, Condition for Maximum Discharge, Efficiency of Chimney – Artificial Draught, Induced and Forced Draught.

UNIT–III

Steam Properties: Properties of Steam, Definitions of saturated states; PV, TS, HS Diagrams, P-V-T surface, Principle of increase of entropy; Steam Processes – Constant Volume, Constant pressure – Isothermal, Adiabatic and Hyperbolic Process, Throttling expansion.Identification of states & determination of properties.

UNIT–IV

Basics of compressible flow: Stagnation properties, Isentropic flow of a perfect gas through a nozzle, choked flow, subsonic and supersonic flows- normal shocks- use of ideal gas tables for isentropic flow and normal shock flow- Flow of steam and refrigerant through nozzle, super saturation- compressible flow in diffusers, efficiency of nozzle and diffuser.

UNIT–V

Analysis of steam turbines: Principles and operation – Classification - velocity and pressure compounding of steam turbines – Work done – Diagram Efficiency, Effect of

Blade friction – stage efficiency, Turbine reheat factor, Height of Turbine blade – Axial Thrust – losses in steam turbine; Governing of turbines.

4. Domakundwar and Kothandaraman, A Course in Thermal Engineering.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Understand the Ist law analysis of combustion reactions
CO2	Understanding of various steam power cycles, boilers and droughts.
CO3	Acquire the knowledge about the steam generators and steam properties
CO4	Acquire the knowledge on compressible flows of nozzles
CO5	Acquire the knowledge on the performance of steam turbines.

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

ME404C – Advanced Engineering Graphics

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Lectures/ Week: 1 Hour Drawing / Week: 4 Hours Credits: 3

COURSE OBJECTIVES:

- To understand the basics of Projections of solids and Auxiliary projections of solids in different inclinations of the principle planes
- To provide the knowledge of section of solids and to provide sufficient knowledge to draw section planes perpendicular to HP and inclined to VP and also of solids inclined to both the planes.
- To provide knowledge of development of surfaces, and to know how to unwound an object / solid when it is being cut by an inclined plane.
- To impart the students, the ability to analyze the interpretation of solids intersections.
- To analyze the isometric projections of simple objects.

CONTENTS:

UNIT–I

Projections of Solids (Simple Solids - Cylinder, Cone, Cube, Prism, & pyramid, Octahedron and Tetrahedron) those inclined to both the planes by Auxiliary projections.

UNIT–II

Sections of solids of tetrahedron, cube, prism, pyramids and cone, section planes perpendicular to HP and inclined to VP, Section planes perpendicular to VP and inclined to HP sections plane Perpendicular to both HP and VP true shape of the sections

UNIT-III

Development of surfaces: Development of lateral surfaces of right regular solids as prisms, pyramids, cylinders and cones which are cut by plane inclined to HP only.

UNIT-IV

Introduction to interpenetration of solids of intersection of two prisms, cylinders, cone and cylinder.

UNIT-V

Isometric Projections: Isometric Projections and views such as prisms, Pyramids, cylinders and cones. Solids placed one over the other simple mechanical components.

Text Books:

1. Bhatt N.D. and V.M. Panchal, &Ingle P. R., (2014), Engineering Drawing, Charatar Publishing House.
2. Shah, M.B. &Rana B.C, (2008), Engineering Drawing and Computer Graphics, Pearson Education.
3. K.L.Narayana and P. Kannaih, A text Book of Engineering Drawing, SCITECH Publications – (2008)

References:

1. Agrawal B. &Agrawal C.M. (2012), Engineering Graphics, TMH Publishers.
2. K. Venugopal: Engineering Drawing & Graphics, New age International Publishers.

COURSE OUTCOMES: Upon completion of this course, students will be

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Able to draw Projections of solids and Auxiliary projections of solids parallel to one plane perpendicular to both the planes
CO2	Able to analyze and draw section of solids inclined to both the planes
CO3	Able to develop surfaces of solids which are perpendicular to both the planes
CO4	Able to draw interpretation of solids in any angle
CO5	Able to draw isometric projections of simple objects

MAPPING OF COURSE OUTCOMES WITH PROGRAM OUTCOMES:

ME405C MACHINE TOOLS AND METAL CUTTING

Lectures/week: 3 hours

Credits: 03

Sessionals: 20 +20

End Examination: 60

Course Outcomes (COs):

CO 1 Able to understand the basic concepts of metal cutting and basic machine tools of workshop practice.
CO 2 Able to make a distinction between machine tools employing single point cutting tool and multipoint cutting tool.
CO3 Prepared to cut gear teeth on a given job on a milling machine by adopting suitable indexing method.
CO4 Ability to understand the basic features of Capstan and Turret lathes and machining by abrasive grains.

UNIT – I

Cutting tools: Classification – Nomenclature/Signature of Single Point Cutting Tool – Differences between orthogonal cutting and oblique cutting – Mechanism of metal cutting – Types of Chips – Chip Breakers – Forces acting on a single point cutting tool – Merchant's Circle Force Diagram – Velocity relations – Specific energy in cutting – Tool life – Tool life equation.

UNIT – II

Lathe and Shaper: Types – operations done on Lathe. Work holding devices. Boring Machines – types and constructional details – Jig boring machine – Shaper, Slotting and Planer Machines – Constructional details – Quick return mechanisms – Estimation of machining time in lathe, shaper, and planer.

UNIT – III

Drilling and Milling Machines: Types of Drilling machines – Constructional details – Operations performed on them. Twist drill elements. Classification of milling machines – Constructional details of various types – Operations performed on them. Milling methods – Up – cut and Down – cut milling. Estimation of machining time in drilling and milling.

UNIT – IV

Gear cutting by Milling and Finishing Operations: Indexing head and types of indexing methods – Simple, Compound, Differential and Angle indexing. Spur and Helical gear cutting – Gear generating methods – Gear shaping and Gear hobbing. Finishing of gear by gear shaving, gear grinding, and gear lapping.

UNIT – V

Broaching and Grinding Machines : Types of broaches – broaching operations – types of broaching machines – Vertical, Horizontal, Continuous, and Rotary broaching machines. Grinding – Grinding wheels – Manufacturing, Specification – Wheel selection. Wheel dressing and truing. Different types of grinding machines. Use of magnetic chucks – Precision grinding processes – Lapping, Honing and Super finishing. Brief introduction to Capstan and Turret lathes.

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

ME406L- FLUID MECHANICS AND HYDRAULIC MACHINERY LAB

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Practical/ Week : 3 Hours

Credits: 1.5

COURSE OBJECTIVES:

- To determine the coefficient of discharge in flow measuring devices.
- To determine the coefficient of different losses in pipe flow.
- To determine Specific Speed and draw the performances Characteristic curves of pumps.

CONTENTS:

FLOW MEASURMENT

1. Calibration of Small Orifice
2. Calibration of Venturi Meter
3. Calibration of Orifice Meter
4. Calibration of Triangular Notch

HEAD LOSSES IN PIPES

5. Determination of Friction factor of the pipe material
6. Determination of Head Loss coefficient due to sudden contraction
7. Determination of Head Loss coefficient due to Gate valve in a pipe line

HYDRAULIC MACHINES

8. Characteristic curves of 0.8 KW two stage centrifugal pump
9. Characteristic curves of 5.5 KW variable speed centrifugal pump

COURSE OUTCOMES: Upon completion of this course, students will be able to

DISCRIPTION OF THE COURSE OUTCOME	
CO1	Able to calibrate the flow measuring devices
CO2	Able to calculate loss coefficients for use in the pipe flow analysis.
CO3	Able to prepare the characteristic curves for the pumps.

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

ME407L- IC ENGINES LAB

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Practical/ Week : 3 Hours
Credits: 1.5

LIST OF EXPERIMENTS:

1. HeatbalancesheetonListerEngines.
2. PerformanceTeston2-stage Air Compressor.
3. Economical Speed Test on Kirloskar Engine.
4. Load Test on Kirloskar Engine by using Bio diesel.
5. Air fuel ratio& volumetric efficiency test on Kirloskar Engine.
6. Valve Timing diagrams for Cooper Engine.
7. Load Test on 4- stroke Kirloskar Diesel Engine
8. Smoke and Emission Test on four stroke diesel engine with 5-Gas Analyzer.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Estimate energy distribution by conducting heat balance test on IC engines.
CO2	Conduct constant speed and variable speed tests on IC engines and interpret their performance.
CO3	Evaluate the performance of air compressor.

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

B.TECH IV SEMESTER, MECHANICAL ENGINEERING

ME408L- ELECTRONICS AND ELECTRICAL ENGINEERING LAB

EFFECTIVE FROM 2021-22 (R20- Regulations 2020)

Practical/ Week :3 Hours Credits: 1.5

COURSE OBJECTIVES:

- To study and analyze basic magnetic and electric circuits.
- To acquire knowledge on operating characteristics of Transformer and DC Machines.
- To study the characteristics of various electronic components.

LIST OF EXPERIMENTS:

1. Verification of KCL & KVL
2. Measurement of Inductance
3. Verification of Super position Theorem
4. Measurement of 3 phase power
5. OC & SC Test on 1 phase Transformer
6. Brake test on DC Shunt Motor
7. OCC on DC Shunt Generator
8. 1 Phase Half wave rectifier
9. 1 Phase full wave rectifier
10. PN Junction Diode Characteristics
11. V-I Characteristics of Zener Diode
12. Logic gates (NAND & NOR)

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Verify Network Theorem and analysis of Electrical Circuits
CO2	Understand the Significance and performance of DC Machines and Single phase Transformers
CO3	Design and analyze various Rectifiers & Logic Gates

ME409S MATLAB

Lectures/week: 1 hours — Credits: 02

Laboratory/week: 2 hours* — Continuous Assessment: 40

End Examination: 60

***Evaluation is similar to regular Practical/Laboratory Class Model/Pattern**

Course Outcomes (COs):

CO 1 Able to understand the basic features of MATLAB platform
CO 2 Able to distinguish between Script file and Function file
CO3 Prepared to write simple programmes and to solve systems of linear algebraic equations – that is problem solving techniques.
CO4 Ability to make use of the numerical power of MATLAB in practical applications such as linear regression and interpreting and plotting of complex data with ease.

UNIT – I

Introduction: What is MATLAB? – MATLAB System – Starting MATLAB on Windows Platforms – MATLAB Environment – Basic commands and Syntax – Arrays and Matrices – Arithmetic and Array operations – Matrix operations and manipulations – Practice Exercises.

UNIT – II

Scripts and Functions: Script and Function files (M – files) – Control loops – Sample/simple Programmes – Basic Plotting – 2D and 3D plotting – Multiple plots – Additional plotting features – Practice Exercises.

UNIT – III

Matrix Algebra and Solutions to Systems of Linear Equations: Solving Linear algebraic equations by matrix methods – Polynomials – Symbolic mathematics – Preliminaries – Practice Exercises.

UNIT – IV

Solving Linear algebraic equations by Symbolic mathematics – Differentiation and Integration by Symbolic mathematics – Practice Exercises.

UNIT – V

Numerical Techniques: Numerical differentiation and Numerical integration – Fitting of data – Curve fitting – Interpolation of functions – Practice Exercises.

ME501C DESIGN OF MACHINE ELEMENTS

Effective from- 2020-21

Lectures / Week: 3 Periods + 1 Tutorial **credits:3**

Objectives

This course seeks to provide an introduction to the design of machine elements commonly encountered in mechanical engineering practice through

1. A strong background in mechanics of materials based failure criteria underpinning the safety – critical design of machine components
2. An understanding of the origins, nature and applicability of empirical design principles, based on safety considerations
3. An overview of codes, standards and design guidelines for different elements
4. An appreciation of parameter optimization and design iteration
5. An appreciation of the relationships between component level design and overall machine system design and performance

Course Contents

UNIT-I

Engineering Design
What is designing? ; The process of Design; design by evolution; Identification and analysis of need; True need; Specifications ; Standards of performance ; use of checklists ; Morphological Analysis ; Brainstorming; measure of physical realizibility; Designing for shipping, handling and installation; Design considerations; Design tools and resources; Design Engineer‟s Professional Responsibilities; Standards and Codes;

UNIT-II

Design Considerations – limits, fits and standardization, Modes of failure, factor of safety; Stress – strain relationships; Stress-strain relationships; shear stress and shear strain relationships; Review of failure theories for static and dynamic loading(including fatigue failure), Stress concentration factors; Reduction of stress concentration effects; Fluctuating stresses; fatigue failure; Endurance limit; Notch sensitivity; Soderberg and Goodman Diagrams; Modified Goodman‟s diagrams; fatigue design under combined stresses. Design for finite and infinite life.

UNIT-III

Design of Shafts and Keys; Design of shafts under static and fatigue loadings; Axial, Bending, Torsional stresses; Principal stresses; theories of failure. Couplings.
Keys; types of keys; Design os hank key; Effect of keyway. Design of splines.

UNIT-IV

Design of shaft couplings and pipe joints; Introduction; Types of shaft couplings; Design of sleeve or muff couplings, Clamp or Compression coupling, Flange couplings. Design of bushed type flexible coupling. Pipe Joints: Introduction, Design of pipe joints, hydraulic pipe joints, Design of flanged pipe joints

UNIT-V

Design of fasteners Threaded joints – Thread joints; ISO metric screw threads. Bolted joint in tension; Torque requirements for bolt tightening; bolted joint under fluctuating load; eccentricity loaded bolted joints in shear; bolted joints with combined stresses; Bolt of uniform strength. Analysis and applications of power screws.
Welded joints – types of welded joints; stresses in butt and filler welds; strength of welded joints; Eccentric loaded welded joints; weld joint subject to bending moment and fluctuating forces; welding symbols; welded inspection.

ME502C HEAT TRANSFER

Lectures/Week: 4
periods Tutorial/Week
: 1 Hrs.

Credits: 4
Sessional marks: 20
+20 End Examination
Marks: 60

UNIT – I

General Modes of Heat Transfer: Basic modes of Heat Transfer, Basic laws of Heat Transfer, Applications of Heat Transfer, Fourier law of heat conduction, Newton‟s law of Cooling Basic equations, Coefficient of thermal conductivity convective, Heat transfer coefficient, Stephan Boltzmann constant, Overall heat transfer coefficient.

Conduction in steady state

Theory of heat conduction, Heat flow through plane wall and cylinder with Variable Thermal conductivity, Conduction through slabs, cylinders and spheres, Concept of thermal resistance, critical thickness insulation, logarithmic mean area, concept of shape factor, one dimensional steady state conduction with heat addition.

UNIT – II

Conduction : Conduction in unsteady state periodic and a periodic temperature variance, infinite semi and infinite solids general equations for conduction in unsteady state, lumped capacitance method, transfer heat flow in semi- infinite solid, convection boundary conditions – use of Grober / Heisler charts.

UNIT – III

Radiation: Introduction, Applications of Radiation, Nature of radiation, Emissive Power-Absorption, Reflection and Transmission, concept of black body, gray body, Planck‟s Law, Stephan Boltzmann law, Kirchhoff „s law, Radiation shape factor relations, Heat exchange between black bodies, Heat exchange between non-black bodies, introduction to radiation network analysis, Radiation shields.

UNIT – IV

Convection:

Heat transfer due to free convection: Introduction, Applications, Free convection heat transfer on a vertical flat plate, Empirical correlations for vertical plates and cylinders, horizontal plates and cylinders, Natural convection cooling in electronic equipment, heat pipe.

Heat transfer due to forced convection: Introduction, Applications, Principles of convection, The boundary layer concept-The velocity and Thermal boundary layer, Laminar boundary layer on a flat plate thermal boundary layer, empirical relations, laminar and turbulent flows, heat transfer in laminar flow over a flat plate, heat transfer in turbulent flows, relations between fluid friction and heat transfer, heat transfer in laminar tube flow, turbulent flow in pipes, flow across cylinders and spheres.

UNIT – V

Heat Exchangers: Introduction, Classification of heat exchangers**,** overall heat transfer coefficient, Fouling factors, LMTD method of Heat exchanger analysis, effectiveness of heat exchangers, NTU method, Compact heat exchangers, different considerations.

Heat transfer through extended surfaces: Theory of fins, fins of uniform cross-sectional area, Analysis of Long Fin and Short fin with insulated tip, heat transfer calculations, fin efficiency, fin effectiveness.

TEXT BOOKS:

1. Heat Transfer : Holman J P
2. Heat Transfer : Mahesh M. Rathore
3. Fundamentals of Engineering Heat and Mass Transfer : Sachdeva R C
4. Fundamentals of Heat and Mass Transfer : Kothandaraman
5. Heat Transfer : R.K. Rajput
6. Basic Heat and Mass Transfer : Mills. A
7. Heat Transfer : Y.A. Cengel

ME503C Machine Drawing

Effective from- 2020-21

Lectures / Week: 3 Periods + 1 Tutorial **credits:3**

Unit – I

Orthographic Views: Conversion of Pictorial views into Orthographic views with sectioning.

Unit - II

Machine Elements: Drawing views of the following machine elements: Thread profiles, Bolted joint, machine and cap screws, types of nuts, locking devices for nuts, Foundation Bolts.
Keys: Sunk Keys, Feather Keys, Spline Shaft, Wood – Ruff Key and round Key.

Unit – III

Shaft Couplings: Muff Coupling, Split muff Coupling, Flanged Coupling, protective type flanged coupling.
Riveted Joints: Different types of rivet heads, Different types of lap joints and butt joint.

Unit – IV

Assembly Drawing: Preparation of assembly drawing of Plumber Block, Foot Step Bearing, Swivel Bearing, Screw jack, Stuffing Box, Pipe Vice, Lathe tail Stock, Clapper box, Drill Jig, Cross head, Air cock.

Unit – V

Part Drawing: Preparation of part drawing of IC engine connecting rod, Revolving Centre, Square tool post, Eccentric, V- Belt drive, Drill jig, Cross head.

ME504E ADVANCED MANUFACTURING PROCESSES

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

UNIT-I

MATERIAL REMOVAL PROCESSES: Introduction, history of machining, traditional machining processes, non-traditional machining processes, hybrid machining processes. need for non-traditional machining processes.

MECHANICAL PROCESSES: Ultrasonic machining - Introduction, the machining system, material removal process, factors affecting material removal rate, dimensional accuracy and surface quality, applications.
Water jet machining - Introduction, The machining system, Process parameters, Applications, Advantages and disadvantages of Abrasive jet machining - Introduction, Machining system, Material removal rate, Applications, Advantages and limitations of AJM.

UNIT-II

CHEMICAL PROCESSES: Chemical Milling - Introduction, Tooling for CHM, Process parameters, Material removal rate, Accuracy and surface finish, Advantages, Limitations, Applications
Photochemical Milling - Introduction, Process description Applications, Advantages
Electro Polishing - Introduction, Process parameters, Applications, Process limitations.
ELECTROCHEMICAL PROCESSES: Electro Chemical Machining: Introduction, Principles of electrolysis, Theory of ECM, ECM equipment, Basic working principles, Process characteristics, Process control, Applications
Basics of Electrochemical Drilling, Electro-Chemical Deburring, and Electro stream drilling

UNIT-III

HYBRID ELECTROCHEMICAL PROCESSES: Electro Chemical Grinding - Introduction, Material removal rate, Accuracy and surface quality, Applications, Advantages and disadvantages Electrochemical Honing - Introduction, Process characteristics, Applications
Electrochemical Super Finishing - Introduction, Material removal process, Process accuracy Electrochemical Buffing - Introduction, Material removal process

UNIT-IV

THERMAL PROCESSES: Introduction, Mechanism of material removal, The machining system, Material removal rates, Heat-affected zone, Applications. Wire EDM principle, Process parameters, surface finish and machining accuracy, applications. Laser beam machining - Introduction, material removal mechanism, applications, advantages and limitations.
electron beam machining - introduction, basic equipment and removal mechanism, applications,

advantages and disadvantages. Plasma beam machining - introduction, machining systems, material removal rate, accuracy and surface quality, applications, advantages and disadvantages. Ion beam machining - introduction, material removal rate, accuracy and surface effects, applications

UNIT-V MATERIAL ADDITION PROCESSES: INTRODUCTION, CLASSIFICATION :
Liquid-Based Techniques – stereo-lithography, holographic interference solidification, beam interference solidification, solid ground curing-liquid thermal polymerization, fused deposition, modeling, multi jet modeling, ballistic particles manufacturing, shape deposition manufacturing. Powder based processes - selective laser sintering,
laser engineered net shaping, three-dimensional printing. Solid-Based techniques -solid foil polymerization, laminated object modeling.

ME504E NON – CONVENTIONAL ENERGY SOURCES

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT – I

Introduction:

The solar energy option – Energy Scenario – Survey of Energy Resources – Classification – Need for Role and potential of new and renewable sources.

Principles of Solar Radiation:

Physics of the sun – The solar constant – Solar radiation on tilted surface – Instruments for measuring solar radiation and sunshine – Solar radiation data.

UNIT – II

Solar Energy Collection:

Flat plate and concentrating collectors – Classification of concentrating collectors – Orientation and Thermal analysis – Advanced collectors.

Solar Energy Storage:

Different methods – Sensible, Latent heat and Stratified storage – Solar Ponds

Solar Applications:

Solar heating/cooling techniques – Solar distillation and drying - Photovoltaic energy conversion.

UNIT – III

Wind Energy:

Sources and potentials – Horizontal and Vertical axis windmills – Performance characteristics.

Biogas and Bio-Mass:

Principles of Bio-conversion – Anaerobic/Aerobic digestion – Types of Bio-gas digesters – Gas yield – Combustion characteristics of bio-gas – Utilization for cooking, I.C. engine operation – Economic aspects.

UNIT – IV

Geothermal Energy:

Resources – Types of wells – Methods of harnessing the energy – Potential in India.

OTEC:

Principles – Utilization – Setting of OTEC plants - Thermodynamic cycles.

Tidal and Wave Energy:

Potential and Conversion techniques – Mini-hydel power plants – Their economics.

UNIT – V

Direct Energy Conversion:

Need for DEC – Carnot cycle – Limitations – Principles of DEC – Thermo-electric generators – Seebeck, Peltier and Joule Thompson effects – Figure of merit – Materials – Applications – MHD generators – Principles –

Dissociation and Ionization – Hall effect – Magnetic flux – MHD accelerator – MHD engine – Power generation systems – Electron gas dynamic conversion – Economic aspects

Fuel Cells:

Principle – Faraday‟s laws – Thermodynamic aspects – Selection of fuels and Operating conditions.

ME504E TOOL DESIGN

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

COURSE OBJECTIVES:

- To develop a solution oriented approach by in depth knowledge of Tool Design.
- To address the underlying concepts, methods and application of Tool Design.

CONTENTS:

UNIT –I

Cutting Tools Classification – Nomenclature of single point cutting tool – Differences between orthogonal and oblique cutting – Mechanism of metal cutting – Types of chips – chip breakers – Forces acting on a tool – Merchant circle diagram – Velocity relations – specific energy in cutting.

UNIT-II

Tool Wear – Tool life – Factors affecting tool life – Taylor's Tool life Equation – Tool wear mechanisms – Types of tool wear – Heat distribution in metal cutting – Measurement of temperature in metal cutting – Lathe tool Dynamometer – Cutting fluids – Selection and applications.

UNIT-III

Cutting Tool Materials- Requirements of tool materials, advances in tool materials, HSS, Coated HSS, Carbides ,Coated Carbides, Ceramics, Cold pressed, Hot Pressed , Ceramic composites, CBN, Diamond- properties, Advantages and limitations; Specifications for Inserts and tool holders. Design of single point cutting tool and form tool for NC Lathe work- Design of profile milling cutter and broach tools

UNIT- IV

Press Working and Economics of Machining: Press working operations- Press selection and Tonnage- Centre of Pressure- Cutting forces and clearances for Die Design – Compound and Progressive Die, Strip layout. Costs associated with machining operations- Optimum cutting speed for minimum cost and maximum production, cutting speed for minimum cost in Turning.

UNIT-V

Jigs & Fixtures- Uses- Locating devices, 3-2-1 principle of location – pin location- Radial location- 'V' location- Diamond locators. Types of clamping devices- principles of clamping. Design principles to Jigs & Fixtures – Drill Jigs, types- Drill Bushes, types- Fixtures for Turning, Milling and Welding.

TEXT BOOKS:

1. Fundamental of Tool Design – ASTME, Prentice Hall, New Delhi, 1987
2. Donaldson, Lecain and Goold - "Tool Design", McGraw Hill, New York, 1976

5. Clade S. George Jr : Management For Business Industry,1972

COURSE OUTCOMES:

DISCRIPTION OF THE COURSE OUTCOME Upon completion of this course, students will be able to	
CO1	Design single point and multipoint cutting tools.
CO2	Find out the tool wear using different techniques and also select cutting fluids to reduce the heat.
CO3	Select cutting tool materials for different operations.
CO4	Select and design dies for press working operations.
CO5	Design jigs and fixtures and Understand principles of locating and clamping systems.

ME506L MACHINE TOOLS LABORATORY

Credits: 1.5

Laboratory/week: 3 hours

Internal Test: 40 Marks

End Examination: 60 Marks

(Any eight of the following experiments will be given)

List of Experiments:

1. Force Measurement on Lathe
2. Power Measurement on Lathe
3. Production of Single point cutting tool using tool and cutter grinder
4. Differential Indexing
5. Alignment Test on Lathe
6. Alignment Test on Radial Drilling Machine
7. Thrust and Toque Measurement in Drilling Operation
8. Measurement of Tool Wear
9. Study of weld Bead in Arc Welding
10. Measurement of Forces in Milling
11. Study of Impact strength tests on Welded joints

Mapping of Course Outcomes with Program Outcomes:

ME507L HEAT TRANSFER LABORATORY

Credits: 1.5

Laboratory/week: 3 hours

Internal Test: 40 Marks

End Examination: 60 Marks

(*Any nine of the following experiments will be given*)

List of Experiments:

1. Test on Thermal conductivity of metal rod.
2. Test on Thermal conductivity of slab.
3. Test on Emissivity Measurement Apparatus.
4. Test on Lagged Pipe Apparatus.
5. Test on Steffan-Boltzman Apparatus.
6. Test on Finned tube heat exchanger.
7. Test on Natural Convection Apparatus.
8. Test on Forced Convection Apparatus.
9. Test on Vapour compression test rig.
10. Test on parallel flow and counter flow heat exchanger
11. Test on thermal conductivity of liquids.

ME601C MACHINE DESIGN

Lectures/Week: 3 periods Tut/week: 1 period

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT – I

Statistical Considerations in Design

Frequency distribution , characteristics of frequency curves, measures of central tendency and dispersion, probability – probability distribution – normal curve – population combinations – design and natural tolerances

UNIT – II

Mechanical Springs

Helical springs – stress equation and deflection equation; spring materials; spring end formation; design against – static and fluctuating loads; Design of helical and Torsional springs; Compound springs; equalized stress in spring leaves; multi leaf springs; nipping and shot peening

UNIT – III

Sliding contact bearings

Classification of bearings Hydrodynamic lubricated bearings; Materials for sliding contact bearings; Lubricants – Properties and their selection Terminology used in hydrodynamic journal bearings. Design procedure for journal bearings – Heat in bearings. Design of collar bearings.

Rolling Contact bearings :

Merits and demerits of rolling contact bearings over sliding contact bearings. Types of rolling contact bearings. Static and dynamic load capacities. Equivalent bearing load . Design for cyclic loads. Selection of radial ball bearings.

UNIT – IV

Gears: Types of gears and their applications, gear materials allowable stresses, Law of gearing Spur gears: Terminology, force analysis, Design of spur gears – Lewis equation. Check for dynamic load and

wear load. Gear wheel proportion.
Helical gears; terminology, design of helical gears, Check for wear load. Force analysis.

UNIT-V

Engine parts:
Pistons, forces acting on pistons – Construction, Design and proportions of Pistons.
Connecting rod: Thrust in connecting rod – stress due to whipping action on connecting rod ends – Cranks and crank shafts. Strength and proportions of overhang and center cranks – Crank pins, Crank shafts.

ME602C DYNAMICS OF MACHINERY

Lectures/Week: 3 periods Tut/week:

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

COURSE OBJECTIVES:

- To impart the knowledge on gyroscopic couple, friction applications to analyze the systems.
- To understand the concepts of flywheels and governors.
- To study the balancing of masses, vibration concepts for applying in different applications.

CONTENTS:

UNIT –I

Gyroscopic Couple and Force Analysis –effect ofprecession–motion on the stability of movingvehicles such as motorcycle – motorcar – aero planes and ships. Static and Dynamic Force Analysis of planar mechanisms.

UNIT–II

Friction:

Friction of screw and nuts - Pivots and collars – uniform pressure,uniform wear – friction circle and friction axis: lubricated surfaces – boundary friction – filmlubrication..

Applications: Simple block brake - Internal expanding brake- band brake of vehicle. Dynamometers – absorption and transmission types. General description and methods of operation. Clutches- Singleplate, multiplate, cone clutches.

UNIT–III

Turning Moment Diagram and Flywheels: Turning moment- Inertia torque-connecting rodangularvelocity andacceleration-crank effort andtorque diagrams-fluctuation of energy – flywheelsandtheir

Governors: Watt, Porter and Proell governors-Spring loaded governors–Hartnell and Hartung - Sensitiveness, iso-chronisms and hunting– effort and power ofthegovernors.

UNIT–IV

Balancing of masses: Static and dynamic balance, balancing of rotating masses - analytical and graphical methods. Balancing of reciprocating masses – Partial balancing – locomotive balancing – variation of tractive effort. Swaying couple and Hammer blow. Single and multi cylinder in line engines – firing order. Balancing of radial and V engines. Practical Methods of balancing of rotors.

UNIT –V

Vibrations: Free and forced vibration of single degree of freedom system, Role of damping, whirling of shafts and critical speeds. Free, forced and damped vibrations. Vibration Isolation and

Transmissibility, Transverse vibrations of beams with concentrated and distributed loads, Dunkerly's method, and Raleigh's method. Torsional vibrations - two and three rotor systems.

TEXTBOOKS:

1. Theory of Machines : R.K.Bansal
2. Theory of Machines : S.S. Rattan
3. Mechanisms and Machine Theory : J.S. Rao and R.V. Dukkipati
4. Theory of Vibrations : Thomson

REFERENCEBOOKS:

1. Theory of Machines and Mechanisms : Joseph Edward Shigely
2. Theory of Machines : Thomas Bevan
3. Mechanical Vibrations : Dehhartog.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Learn the concepts of gyroscopic effects on the stability of ships, aeroplanes and Automobiles. Learn the concepts of static and dynamic force analysis of planar mechanisms.
CO2	Understand the concepts of friction-clutches, brakes and dynamometers and its importance.
CO3	Understand the importance of turning moment diagrams, fly wheels, governors and its analysis.
CO4	Understand the balancing of rotary and reciprocating masses.
CO5	Understand the different types of vibrations.

Mapping of Course Outcomes with Program Outcomes:

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

ME603C Metrology and Instrumentation

Effective from- 2020-21

Lectures / Week: 3 periods **credits:3**

UNIT –I

Concept of measurement: - Introduction to Metrology; Need for high precision measurements; Terminologies in Measurement-Precision, accuracy, sensitivity, calibration. Errors in Measurement, types of errors, Abbe's Principle Basic standards of length- Line standard, End standards,Wavelength standard; Various Shop floor standards. Linear Measurement – Slip gauges, wringing, grades; Surface plate; Dial indicators; Height gauges and Vernier calipers. Comparators-mechanical, electrical, optical and pneumatic. Angular Measurement – Bevel protractor; Sine Bar, principle and use of sine bar, sine centre; Angle gauges. Sprit level; Angle Dekkor; Clinometers.

UNIT –II

Limits and Limit gauges – Making to suit, selective assembly, systems of limits and fits; Types of fits; Hole basis system and Shaft basis system. Standard systems of limits and fits; Shaft and Hole system; Tolerance, allowance and deviation (as per BIS). Simple problems on tolerance and allowance, shaft and hole system. Limit Gauges – GO and NO GO gauges; types of limit gauges. Gauge design - Taylor's principle of gauging; Gauge tolerance, disposition of gauge tolerance, wear allowance. Optical Measuring Instruments: - Benefits of using light waves as standards; Monochromatic light; Principle of Interference. Interference band using optical flat, application in surface measurement. Interferometers – NPL flatness interferometer, Pitter-NPL gauge interferometer.

UNIT –III

Screw thread measurement – Screw thread terminology; Measurement of major diameter; Measurement of minor or root diameter. Measurement of pitch; Measurement of effective diameter with two wire method and three wire method. Measurement of flank angle and form by profile projector and microscope. Measurement of surface texture – Meaning of surface texture, roughness and waviness; Analysis of surface traces, peak to valley height, R.M.S. value, Centre Line Average and R_a value, Rt, Rz etc. Methods of measuring surface roughness – Stylus probe, Tomlinson surface meter, Talysurf; Terms used in surface
roughness measurement – assessment length, roughness width cutoff, sampling length and evaluation length.
Interference method for measuring surface roughness – using optical flat and interferometers.
Autocollimator, principle and use of autocollimator.

UNIT –IV

Machine tool metrology – Alignment testing of machine tools like lathe, milling machine, drilling machine.
Advanced measuring devices – Laser interferometers. Coordinate Measuring Machine (CMM) – Introduction to CMM; Components and construction of CMM. Types of CMM; Advantages and application of CMM, CMM probes, types of probes – contact probes and non contact probes Machine Vision – Introduction to machine vision, functions, applications and advantages of machine vision. Steps in machine vision.

UNIT –V

Introduction to Mechanical Measurement – significance of mechanical measurement; Fundamental methods of measurement; Classification of measuring instrument. Stages in generalized measuring system – Sensor-Transducer stage, Signal-Conditioning stage, Readout-Recording stage; Types of input quantities; Active and Passive transducers. Performance characteristic of measuring devices – Static characteristics – Accuracy, Precision, Repeatability, Sensitivity, Reproducibility, Drift, Resolution, Threshold, Hysteresis, Static calibration. Dynamic characteristics- different order systems and their response-, Measuring lag, Fidelity, Dynamic error; Types of errors in measurement. Transducers – Working, Classification of transducers. Motion and Dimension measurement – LVDT – Principle, applications, advantages and limitations.

ME604E ENGINEERING MATERIALS AND METALLURGY

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

UNIT -1

Space lattice and unit cells, Crystal structures of common metallic materials – bcc –fcc- hcp – Atomic packing factor – Miller indices –spacing of lattice planes –Relation between density and lattice constant. Crystal imperfections –point, line and surface defects. Edge and screw dislocations – Burger's vector. Plastic deformation by slip and twinning .Critical resolved shear stress for slip.

UNIT – II

Testing of Engineering materials –tensile, compressive, hardness and impact tests. Creep –creep test-creep curve- Mechanism of creep. Fatigue – fatigue stress cycles – fatigue test – S-N- curve –Mechanism of fatigue. Fracture – Ductile and brittle fracture –Griffith's criterion.

UNIT – III

Construction of cooling curves for a pure metal and a solid solution / alloy – Gibb's phase rule for a metal system
– Construction and interpretation of binary phase diagrams-Types of phase diagrams –Eutectic ,Eutectoid, Peritectic, Peritectoid.-Iron-Carbon system – cooling curve of pure iron. Iron – carbide equilibrium diagram – Effect of alloying elements on Iron-Iron carbide diagram.

UNIT – IV

Plain carbon steels – Uses and limitations of plain carbon steels. Alloy steels. Effect of alloying elements in steels. High speed tool steel, stainless steels, High nickel and High chromium steels. Cast irons-grey, white, malleable and SG irons. Non- Ferrous metals and alloys –Copper, Aluminum, Magnesium, Nickel and Zinc-Properties and applications.

UNIT –V

Transformation points – Construction of TTT diagram – TTT diagram and cooling curves. Heat treatment of steels
– Annealing, Normalizing, Hardening, Tempering, Austempering, Martempering. Surface hardening of steels – Carburizing, Nitriding, Cyaniding, Flame Hardening and induction hardening.
Powder Metallurgy –production of metal powders- Basic steps in powder metallurgy - advantages limitations and applications of powder metallurgy.

ME604E ROBOTIC ENGINEERING

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

UNIT – I

Introduction: Overview - Classification of Robots – Classification by Coordinate System – Cartesian , Cylindrical, Spherical and Jointed Arm Robots – Classification by Control Method – Non – servo controlled , Servo Controlled

, Point – to – point and Continuous path controlled robots –Major Components of a Robot – Robot specifications and Performance parameters – Accuracy – repeatability - Precision and Workvolumes of different robot geometries

UNIT – II

Kinematics of Robotic Manipulators – Kinematic links and joints – General description of robot manipulators – Homogeneous transformation (HT) of objects – Forward and Inverse kinematics of two – degrees – of – freedom (DOF) Planar manipulators – Robot hand – Roll – Pitch – Yaw (RPY) Transformations – Denavit – Hartenberg (DH) Representations – Kinematic solutions by DH matrix

UNIT – III

Mathematical Modelling of a Robotic system – Robot control system – Different types of controllers – On – off , Proportional, Integral, Derivative and PD and PID controllers – Control Systems – Closed – loop and Open – loop control systems – Transfer functions – Applications of transfer functions in the context of robot controllers

UNIT – IV

Robot Drives, Sensors and Grippers – Powering the manipulator – Hydraulic, Pneumatic and Electric Drives – Robot Sensors – Types – Position, velocity, force and tactile range and proximity sensors – Robot vision – Robot grippers – Types of end – effectors/grippers – mechanical, pneumatic and magnetic grippers

UNIT – V

Industrial Applications of Robots and Robot Programming – Applications – Material handling, Machine loading and unloading, Assembly and Inspection – Programming by teach box (or pendent) – On – line and offline programming methods – Robot workcells

ME604E NC and CNC Systems

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

UNIT-I

Introduction: Basic concepts of manufacturing systems, Fundamentals of machining Fundamentals of Numerical Control, Advantages of NC systems, Classification of NC systems, Features of NC machine tools and Design considerations of NC Machine Tools, Increasing productivity with NC Machines, Machine Control Unit Functions.

UNIT-II

NC Part Programming: Introduction, Manual programming- Basic concepts, Tape format, Contour Programming- Examples. Computer Aided Programming, APT Programming- General Description, Geometric Expressions, Motion Statements, Additional APT Statements-Examples, Other Programming Systems.

UNIT-III

System Devices: Drives-Hydraulic systems, Direct- Current Motors, stepping motors, Alternate-Current Motors. Feed Back Devices- Encoders, Resolvers, Inductosyn, Tachometers. Counting Devices-Flip- Flops, Counters, Decoders. Digital to Analog Converters.

Interpolators: Digital Differential Analyzer (DDA) – Principle of Operation, Exponential Deceleration, Linear Interpolator, Circular Interpolator, Complete interpolator, CNC Software Interpolators, Reference- word CNC Interpolators.

UNIT-IV

Control Loops: Introduction, Control of point to point systems- Incremental open-loop control, Incremental Closed loop control, Absolute closed loop circuit. Control loops in contouring systems-Principle of operation, position control, operation of a two-axis system.

CNC: Basic Concepts**,** Advantages of CNC, Digital Computer- principal structure, computer memory, Input and output, Reference-Pulse Technique, Microcomputers in CNC

UNIT-V

CNC Programming: – Steps in Programm planning, Part programming, preparatory commands, miscellaneous functions, input of dimensions, spindle and federate control, Tool functions and Reference points, Commands- register, position compensation, work offsets, tool length offset, rapid poisoning, machine zero, dwell.

CNC Turning, CNC Milling, and CNC Drilling- programme examples.

ME606L SIMULATION LABORATORY

Credits: 1.5

Laboratory/week: 3 hours

Internal Test: 40 Marks

End Examination: 60 Marks

---

*(Note: Students shall carry out Any **8 from PART-A and 2 from PART-B** of the following exercises)*

PART-A

Modelling and simulation of functions of basic mechanical elements/process/systems

1. Numerical simulations and modeling of different manufacturing systems and processes using commercial software's, like ABAQUS, DEFORM, MATLAB etc.
2. Modelling of simple processes, like hardness testing, deflection of beam etc.;
3. Generation and distribution of stress during sheet and bulk forming processes;
4. Modelling of machining process (turning) and chip formation;
5. Modelling of heat transfer and temperature distribution during various thermal processes (heat treatment, metal cutting, non-conventional machining processes);
6. Network problem and CAPP problem solutions using MATLAB
7. Thermal stress simulation of a 2D component
8. Conductive/conductive heat transfer simulation of a 2D component

10 Mode frequency analysis of beams (Cantilever, Simply supported & Fixed ends) 11 Harmonic analysis of a 2D component

12 Simulations of deformations and equivalent strains in various bending operations

13 Simulations of deformations, equivalent strains and drawing forces in deep drawing operations

14 Simulations of deformations, equivalent strains and roller forces in roll forming operations

PART-B Manufacturing process Simulation

(Students shall carry out the modeling and simulation for case studies of the following)

1. Casting processes - Study of Solidification, temperatures, Residual stresses, metallurgical phases etc.
2. Forging processes - Study of cold working and hot working processes for extrusion, drawing, rolling, etc.
3. Forming Processes – Study of blanking, bending, deep drawing, etc.
4. Welding Processes – Study of arc, spot, laser welding, etc.

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

ME607L DYNAMICS LABORATORY

Credits: 1.5

Laboratory/week: 3 hours

Internal Test: 40 Marks

End Examination: 60 Marks

---

*(Note: Any **Eight** of the following exercises are to be performed)*

LIST OF EXPERIMENTS

1. Determination of Natural Frequency of Free Transverse Vibration
2. Cam Analysis – Cam Profile and Jump-speed Characteristics
3. Free Vibration of Spring Mass System – Determination of Natural Frequency
4. Compound Pendulum – Determination of Radius of Gyration and Moment of Inertia
5. Bifilar Suspension – Determination of Radius of Gyration and Moment of Inertia
6. Trifilar Suspension – Determination of Radius of Gyration and Moment of Inertia
7. Whirling of Shaft – Determination of Critical Speed
8. Balancing of Rotating Masses
9. Determination of Gyroscopic Couple
10. Experiments on centrifugal governors
11. Studies on Gear trains
12. Kinematic analysis of various mechanisms
13. Moment of inertia of flywheel & connecting rod

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

ME608L METROLOGY LABORATORY

Credits: 1.5

Laboratory/week: 3 hours

Internal Test: 40 Marks

End Examination: 60 Marks

List of Experiments:

1. Measurement of Taper plug gauge using rollers, slip gauges and micrometer
2. Measurement of internal taper of a ring gauge using spheres and cylinders
3. Study of measuring instruments
4. Measurement of spur gear
5. Measurement of Taper ring gauge using spheres and depth micrometer
6. Sine Bar (Angle measurement of a Taper plug gauge)
7. Inspection of Drill Jig
8. Straightness testing – wedge Method
9. Measurement of Angle of V – Block
10. Measurement of Plug Screw by 3 – wire method
11. a) Measurement of effective diameter (Two – wire method) of a screw tap
    b) Radius measurement of a Partial cylinder

MC610A PROFESSIONAL ETHICS IN ENGINEERING

Instruction: Hours/Week: **2L:0T:0P** **Credits: 0**

Marks:100 Pre-requisites/co-requisites: None.

COURSE DESCRIPTION:

This course is designed to introduce engineering students to the concepts of engineering ethics. It will allow students to explore the relationship between ethics and engineering and apply classical moral theory and decision making to engineering issues encountered in academic and professional careers. It mainly focuses on improving the capacities of leadership /management through training in professional ethics. Codes of ethics have been invoked as a basis for professional engineering licensure. Violations of such ethical codes have led to many well-known tragic engineering failures that endangered human life and jeopardized public welfare. This discipline will doubtless take its place alongside such well- established fields as medical ethics, business ethics, and legal ethics.

COURSE OBJECTIVES: To enable the students

1. To create an awareness on Engineering Ethics and Human Values.
2. To instill Moral and Social Values and Loyalty and to appreciate the rights of others.
3. To study the moral issues and decisions confronting individuals and organizations engaged in engineering profession.
4. To study the related issues about the moral ideals, character, policies, and relationships of people and corporations involved in technological activity.

UNIT I Human Values: Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II Engineering Ethics: Senses of Engineering Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg''s theory – Gilligan's theory – Consensus and Controversy –Models of professional roles – Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT –III Engineering as Social Experimentation: Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT-IV Safety, Responsibilities and Rights: Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) Discrimination.

UNIT V Global Issues: Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct – Corporate Social Responsibility.

COURSE OUTCOMES: Upon completion of the course, the student should be able to:

1. Discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.
2. Learn the moral issues and problems in engineering; find the solution to those problems.
3. Learn the need for professional ethics, codes of ethics and roles, concept of safety, risk assessment.
4. Gain exposure to Environment Ethics & computer ethics; know their responsibilities and rights.

Grading /Assessment:

(i). Attendance: 20 marks

(ii). Group Activities/Assignments: 20 marks (iii). Semester End Examination: 60 marks

ME701C- INDUSTRIAL ENGINEERING AND MANAGEMENT

EFFECTIVE FROM 2023-24 (R20- Regulations 2020)

Lectures/ Week : 3 Hours Tutorials/ Week : -

Credits: 3

COURSE OBJECTIVES:

- TO understand the concepts related to principles of management, Industrial disputes.
- To apply the concepts related to sales forecasting, PPC & work study.
- To understand the emerging concepts of Industrial Engineering for different applications.

CONTENTS:

UNIT–I

Management concepts:

Administration, Management and Organization. Scientific Management. Functions of Management. Principles of Management. Types of Organization. Principles of Organization. Fayol's and Taylor's contributions to Management.

Industrial disputes – Causes and methods of settling,Labour participation in management concept.A brief outline of Factories Act, Industrial disputes Act and Workmen's Compensation Act.

UNIT–II

Sales forecasting – need, Classification moving average exponential smoothing and linear regression technique.

Production Planning and Control – Objectives, Salient features and functions of PPC.

Personnel Management – A brief review of functions of personnel management. Concepts of job evaluation and merit rating

UNIT–III

Plant Location Layout – Location factors. Choice of city, Suburban and country locations. Plant Layout – Definition, Objectives, Salient features of product, process and fixed position layouts. Material Handling – Definition, Objectives, Classification of material handling equipment and factors influencing their selections

UNIT–IV

Work study – Definition, objectives and uses. Method study – definition.Objectives procedure and uses. Time study – Definition, needs, functions.

Basic concepts of break down, preventive, predictive and total productive maintenance.

UNIT–V

Contemporary Practices:

Basic concepts of Just-In-Time (JIT) System, Total Quality Management (TQM), Six sigma, Manufacturing Resource Planning (MRP-II), Enterprise Resource Planning (ERP), Business Process Re-engineering, 5S Model, Deming's PDCA, Kaizen, Poka-Yoke, Benchmarking.

TEXT BOOKS:

1. Khanna O P: Industrial Engineering And Management , 7th Edition, DhanpatRai& Sons, 2002
2. PannerSelvam R , Production and Operation Management
3. Ralph Barnes: Principles Of Motion And Time Study, Tata McGraw Hill, 1956
4. Joseph G Monks: Operation Management, 3rd Edition, McGraw-Hill, 1987

REFERENCES:

1. Adam &Edbert: Production/Operation Management, 5th Edition, Prentice Hall, 1992
2. Chary S.N.: Production and Operation Management,14th Reprint, Tata McGraw Hill, 2007
3. Buffa E S: Modern Production/Operation Management, 8th Edition, Wiley India, 2007
4. Clade S. George Jr : Management For Business Industry,1972

COURSE OUTCOMES: Upon completion of this course, students will be able to

DISCRIPTION OF THE COURSE OUTCOME	
CO1	Understand the principles of management and Industrial disputes.
CO2	Identify and design plant location, plant layout and material handling systems.
CO3	Apply forecasting and PPC techniques to production systems.
CO4	Reduce work duration in industries using work study.
CO5	Understand the contemporary concepts of Industrial Engineering.

Mapping of Course Outcomes with Program Outcomes:

ME702C- OPERATIONS RESEARCH

EFFECTIVE FROM 2023-24 (R20- Regulations 2020)

Lectures/ Week : 3 Hours Tutorials/ Week : -

Credits: 3

COURSE OBJECTIVES:

- To impart knowledge in concepts and tools of Operations Research.
- To understand mathematical models used in Operations Research.
- To apply these techniques constructively to make effective decisions.

CONTENTS:

UNIT–I

Development-definition-characteristics and phases-Types of models-Operations Research models-applications.

Allocation: Linear Programming Problem Formulation-Graphical solution- Simplex method-Artificial variable techniques: Two-phase method, Big-M method. Duality.

UNIT–II

Transportation problem: Formulation-Optimal solution, unbalanced transportation problem.

Assignment problem: Formulation- Optimal solution of Assignment problem- Travelling salesman problem.

UNIT–III

Sequencing: Introduction-Flow-Shop sequencing- n jobs through two machines – n jobs through three machines- Job shop sequencing-two jobs through 'm' machines

Replacement: Introduction- Replacement of items that deteriorate with time- when money value is not counted and counted- Replacement of items that fail completely- Group Replacement.

UNIT–IV

Theory of Games: Introduction- Terminology- Solution of games with saddle points and without saddle points. 2 x 2 games- dominance principle- m x 2 & 2 x n games- Graphical method.

Inventory models: Costs used in inventory models, Basic inventory models – deterministic and static demand.Models with price breaks - Models with restrictions. Single period models with probabilistic demand and without set up cost.

UNIT–V

Waiting lines: Introduction- Basic structure of queuing models, single server and multi server models.

PERT/CPM: Network Analysis, Program Evaluation and Review Technique (PERT), Critical Path Method (CPM).

TEXT BOOKS:

1. Vohra N. D.: Quantitative Techniques in Management, 3rd Edition, Tata McGraw Hill, 2007.
2. Pannerselvam R.: Operations Research, 2nd Edition, PHI, 2006.

REFERENCES:

1. Hamdy A Taha: Introduction to Operations Research, 6th Edition, PHI, 1999.
2. Hiller and Lieberman: Introduction to Operations Research, 7th Edition, McGraw Hill, 2001.
3. Hira and Gupta: Introduction to Operations Research, 3rd Edition, S. Chand & Company Limited, 2008.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Understand the concepts of operations research modelling approaches and solve LP engineering problems.
CO2	Formulate and solve Transportation and Assignment problems relevant to different applications.
CO3	Able to apply replacement and game theory models for practical problems.
CO4	Able to Solve inventory problems.
CO5	Able to solve waiting line and Network problems.

Mapping of Course Outcomes with Program Outcomes:

	PO1	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

ME703C AUTOMOBILE ENGINEERING

Credits: 3

Lectures/week: 3 Hrs. Sessional Marks: 20+20

End Examination Marks: 60

Unit-I

Introduction

Layout of automobile, Chassis and body – power transmission –types of engines, engine construction, turbo charging and super charging – **Lubrication System:** engine lubrication, splash and pressure lubrication systems, **Liners**- dry and Wet type, function and constructional details, **Combustion chambers:** combustion chambers for petrol and diesel engines, Arrangement of cylinders, types of valve arrangements, **Mufflers and Types**: Baffle type muffler, Wave cancellation type muffler.

Unit-II

Fuel Supply System:

S.I. Engine: Fuel supply systems, Mechanical and electrical fuel pump, carburetor: types, Air cleaners and types.

C.I. Engines: Requirements of diesel injection systems, types of injection systems, fuel pump.

Emission from Automobiles: Pollution standards National and international – Pollution Control, Techniques, Multipoint fuel injection system, Common rail diesel injection system, Gasoline direct injection system

UNIT III

Cooling System: Cooling Requirements, Air Cooling, Liquid Cooling, Thermo, water and Forced Circulation System, **Radiators**: Types, Cooling Fan, water pump, thermostat, antifreeze solutions.

Ignition System: Function of an ignition system, battery ignition system, constructional features of storage, battery, condenser and spark plug – Magneto coil ignition system, electronic ignition system using contact breaker.

Electrical System: Charging circuit, generator, starting system, lighting systems, Horn, wiper, fuel gauge – oil pressure gauge, engine temperature indicator etc.

UNIT IV

Transmission Systems:

Clutch: Function of clutch, single plate and multiple plate, and centrifugal clutches and clutch materials, fluid coupling, torque converter.

Gear box: Need, sliding type, constant and synchromesh type. Automatic transmission. Propeller shaft; need and constructional details.

UNIT V

Suspension System: Objects of suspension systems – torsion bar, shock absorber.

Braking System: Mechanical brake system, Hydraulic brake system, Pneumatic and Vacuum brakes.

Steering System: Steering mechanism, Power Steering System, Ackerman steering mechanism, Davis steering mechanism.

TEXTBOOKS:

1. Automobile Engineering : Narang G.B.S.
2. Automobile Engineering Vol. I & II : Kirpal Singh.
3. Automobile Engineering : R.K. Rajput
4. Automobile Engineering : Dr. G. Devaradjane
5. Internal Combustion Engines : V. Ganesan
6. Internal Combustion Engines : K.K. Ramalingam
7. Automobile Engineering : P.S. Gill

REFERENCES:

1. Automotive Mechanics : Heitner J.
2. I.C.Engines : Mathur M.L. & Singh R.P.
3. Fundamentals of Motor Vehicle Technology : Hillier & Pittuck
4. High Speed Combustion Engines : Heldt P.M.
5. Automotive Mechanics Services : Course W.H.
6. Motor Manuals Vol. I to VII : Judge A.W.
7. Advanced Engine Technology : Heisler

Mapping of Course Outcomes with Program Outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1			1

CO3		2				2	2	1				
CO4				1	2		2					
CO5			1		2	3	3					

ME704E Additive Manufacturing

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

UNIT-I

Introduction: Basic Principles of Additive Manufacturing (AM), AM Parts, Generic AM Process, Use of term AM, Benefits of AM, Distinction Between AM and Conventional Manufacturing Processes, Examples of AM Parts, Classification of AM Processes, Heat Sources- Lasers, Electron Beam, Electric Arc/Plasma Arc. Milestones in AM Development, AM around the World and AM Standards

UNIT-II

AM Systems: Photopolymer-Based Systems, Powder-Based Systems, Molten Material Systems, Solid Sheets. Metal Systems - Use of Substrates, Energy Density, Weight, Accuracy, Speed, Build Rate. Maintenance of Equipment, Materials Handling Issues, Design for AM.

UNIT-III

Additive Manufacturing Processes: Photopolymerization, Powder Bed Fusion Material Extrusion, Material Jetting, Sheet Lamination, Directed Energy Deposition Direct

- Write technologies, Hybrid Additive Manufacturing.

UNIT-IV

Materials for Additive Manufacturing: Introduction, Liquid-Based Material, Support Material, Powder-Based Materials-Polymer Powder Material, Metal Powder Material, Ceramic Powder Material, Composite Powder for AM Processes, Solid-Based Materials, Material issues in AM. Guidelines for Process Selection, Challenges of Selection, Pre-Processing, Part Build Time, Post- Processing to Improve Surface Quality, Dimensional Deviations, Improve Mechanical Properties, Rapid Tooling

UNIT-V

AM Software: AM Software for STL Editing, Slicing, STL Manipulation, Process Visualization and Collision, Modeling and Simulation, Manufacturing Execution System Software for AM.
Applications: Application Areas for AM-Enabled Product Development, Medical Modeling, Reverse Engineering Data, Architectural Modeling, Automotive, Aerospace.

TEXT BOOKS:

S. V. University College of Engineering:: TIRUPATI

ME704E Quality Control and Reliability

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20
End Examination Marks: 60

Unit-I

Introduction to Inspection and Quality Control, Objectives of Statistical Quality Control, Chance and Assignable Causes of variation, Control chart basic principles, Choice of control limits, Sample frequency and rational subgroups.
Control charts for variables: X and R charts and σ charts, Interpretation of control charts.

Unit-II

Process Capability Analysis: Specification limits and Control limits, Natural tolerance limits, Specifications and Process Capability, Process Capability indices, setting tolerances on assemblies and components.
Control Charts for Attributes: P chart, C chart, U chart, Sensitivity analysis of P charts, Quality Rating System.

Unit-III

Acceptance Sampling Plans for Attributes: Types of Sampling Plans, Advantages and disadvantages of Sampling Plans, Evaluation of Sampling Plans – OC, Curve, Characteristics of OC Curve, Producer risk and Consumer risk, AOQ, AQL, ATI, ASN. Multiple and Sequential sampling plans. Brief introduction to Acceptance Sampling plans for continuous production and Acceptance sampling plan for variables.

Unit-IV

Reliability: Concepts of reliability, Scope, Importance of reliability, Reliability data collection-
Failure data analysis: MTTF, MTBF, Failure rate, Hazard rate, reliability, Failure rate curve,
Types of failures – Hazard models (Exponential and Weibull).
System Reliability: Series, Parallel and Mixed configurations.
Reliability Improvement: Active and Standby redundancies, Introduction to Fault Tree Analysis, Maintainability and Availability.

Unit-V

Quality Costs: Prevention, Appraisal, Internal failure and External failure costs, Quality and Productivity, Total Quality Management, Quality function deployment, Tools for continuous quality improvement. Quality Circles: Concepts, Objectives and advantages. Introduction to Six Sigma Concept. Features of ISO 9000 quality system- Classification, Need, advantages and limitations.

ME704E Refrigeration and Air – conditioning

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT –I

Refrigeration: Cycles: Thermodynamic analysis of vapour compression, absorption, air cycle, steam jet and thermoelectric refrigeration systems. Comparison of COP and cost – Properties and selection of refrigerants – alternative refrigerants.

UNIT-II

Component parts: Reciprocating compressors – Condensers – Air cooled and Water cooled – Economical water rate – Evaporators – Defrosting – Design of towers and evaporative condensers.

UNIT-III

Refrigeration Control: Automatic and thermostatic expansion valve – Capillary tube – Compressor controls – miscellaneous controls. Testing and charging refrigeration units.

Cryogenics – liquification and purification of gases. Applications of refrigeration – dry ice, walk-in-Cooler, Water Coolers, Transportation, Food processing & Preservation, refrigerators, recent developments in refrigeration.

UNIT-IV

Air Conditioning: Basic Concepts : Fundamental functions of air conditioning – psychrometrics – air and humidity calculations – sensible heat factor – analysis of air conditioning process and cycles with psychrometric chart – Cooling load calculations.

UNIT-V

Comfort Air Conditioning: Physiological reactions to cooling – The effective temperature and its use in the determination of standards of comforts – comfort chart – comparison of domestic, industrial and commercial applications of air conditioning.

Ventilation system: Summer and winter ventilation – Ventilation of hot working spaces – industrial ventilation – air cleaning.

Controls: Automatic control of air conditioning systems – Duct work selection of fans.

TEXT BOOKS:

ME705E FINITE ELEMENT METHOD

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT – I

Basic concepts of the Finite Element Method – Introduction, How does the FEM work – Comparison of Finite Element and Finite Difference Methods. A general procedure for Finite Element Analysis – Pre – processing, Solution and Post – processing. Brief History of Finite Element Method, Examples of Finite Element Analysis

UNIT – II

Stiffness Matrices – Spring and Bar Elements – Linear spring as a Finite Element – System Assembly in global coordinates, Elastic Bar, Spar/Link/Truss Element, Strain Energy, Castigliano's Theorem, Minimum Potential Energy

UNIT – III

Method of Weighted Residuals – Approximate Solution by Ritz, Galerkin Methods – Finite Element formulation of one – dimensional problems – Derivation of Element Stiffness and Element Force Matrices – Different Approaches in FEM**:** General Steps in FEM – Direct Approach- Variational Approach – Energy approach – Weighted Residual Approach. – Solving one – dimensional (1D) engineering problems and 1D heat transfer problems – fins

UNIT – IV

Flexural elements – Introduction, Elementary Beam theory, Flexural element, Flexural element stiffness matrix, Element load vector, Work equivalent for distributed loads, Hermite shape functions. 2D elements – liner triangular, bilinear rectangular and quadrilateral elements

UNIT – V

FEA of 2D structural and heat transfer problems, Constant strain triangle (CST), Jacobian, isoparameteric and serendipity elements – Numerical integration – Gauss Quadrature – Computer implementation in FEM

TEXTBOOKS

1. Fundamentals of Finite Element Analysis by David V. Hutton
2. A first course in the Finite Element Method by Daryl L. Logan
3. An Introduction to Finite Element Method by J.N. Reddy

REFERENCES

1. Introduction to Finite Elements in Engineering by Chandrupatla T.R. and Belegundu A.D
2. Finite element procedures by Klaus – Jurgen Bathe

ME705E NANOTECHNOLOGY

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT –I

General Properties of Nano materials: Origin of nanotechnology, classification of nano materials, Fullerene, Carbon Nanotubes (CNT). Nanoparticles, Physical, Chemical, Electrical, Optical, Magnetic and mechanical properties of nanomaterials.

UNIT-II

Fullerenes and Carbon Nanotubes (CNT's): Introduction, Synthesis and Purification, Preparation of Fullerenes in the condensed phase, Transport, mechanical, physical properties of CNT's. Investigating and manipulating materials in the Nanoscale – Electron microscope, scanning probe microscopes, optical microscopes for Nanoscience and Technology, X – Ray Diffraction.

UNIT-III

Nanobiology – Interaction between Biomolecules and Nanoparticle surgaces. Different types of Inorganic materials used for the synthesis of Hybrid Nano – Bio assemblies. Nanoprobes for analytical applications.

UNIT-IV

Nanosensors: Nanosensors based on optical properties. Nanosensors based on quantum size effects. Nanobiosensors.

Nanomedicines – Developments of nanomedicines, Nanotechnology in diagnostic applications, materials for use in Diagnostic and therapeutic applications.

UNIT-V

Fabrication of nano materials – Top down approach grinding, Planeterory milling and comparison of particles and bottom up approach – Wet chemical synthesis methods, Microemulsion approach, Colloidal Nanopartciles production, Sol Gel methods, Sonochemical approach, Microwave and automization, Chemical vapour deposition methods.

TEXT BOOKS:

1. T. Pradeep, Nano: The essentials, Tata MaGraw – Hill, 2008.
2. Sulabha K Kulkarni, Nanotechnology: Principles and Practices, Capital Publishing Company, 2007.
3. W.R. Fahrner, Nanotechnology and Nanoelectronics, Springer , 2006
4. Rechard Booker and Earl Boyssen, Nanotechnology, Willey, 2006.

Reference Books

1. Gabor L. Hornyak, H.F. Tibbalas, Joydeep Datta, John J Moore Introduction to Nanoscience and Nanotechnology CRC Press.

***ME 705E* MECHANIACAL VIBRATIONS**

EFFECTIVE FROM 2022-23 (R20- Regulations 2020)

Lectures/ Week : 3 Hours Tutorials/ Week : - Credits: 3

COURSE OBJECTIVES:

- To study the basics of the vibrations of system.
- To deal with study and analysis of vibration phenomenon, control of vibration in machine parts, balancing.
- To deal with Introduction of basic terminology of noise engineering and noise control.

CONTENTS:

UNIT – I

Oscillatory motion – Harmonic motion and periodic motion – conservation of energy and Newton's second law.Theory of the single degree – of – freedom oscillator – Free vibrations – Forced vibrations – Harmonic excitation. The undamaped system – The damped system.

UNIT – II

Free vibration with viscous damping – Forced vibration with viscous damping – Logarithmic decrement – response to simple forcing functions – Steady – state response to sinusoidal forcing – Properties of the dynamic amplification factor (DAF).

UNIT – III

Vibration of two – degree – of – freedom system – free response of an undamped 2 – DOF system – Use of Rayleigh's method and fundamental natural frequency – Natural frequency and mode shape shapes of undamped spring – mass system.

UNIT – IV

Normal mode analysis of undamped multi – degree – of – freedom system – Orthogonality properties of an undamped multi – degree – of – freedom system – Orthonormal modes. Decoupling forced vibration equations – Modal damping forced vibrations.

UNIT – V

Vibration of continuous systems – Vibrating string – Longitudinal vibration of rods – Torsional vibration of rods. Approximation methods in vibration analysis.

TEXT BOOKS

1. W.T. Thomson and M.D. Dahleh, Theory of vibration with applications, Pearson Education, Inc, 2007.
2. Max Irvine, Structural dynamics, Allen and Unwin, 1980

REFERENCE BOOKS

1. Denhartog Mechanical Vibrations, John Wiley and Sons, 2008.
2. Benson H. Tongue, Principles of vibration, 1st Edition, ASME, 1993.

COURSE OUTCOMES: Upon completion of this course, students will be able to

	DISCRIPTION OF THE COURSE OUTCOME
CO1	Understand the different types of vibratory systems and solve for the natural frequency of a freely vibrating 1-DOF systems.
CO2	Analyze the responses of different vibratory systems
CO3	Analyze the vibration of 2-DOF systems.
CO4	Analyze the vibration of Multi-DOF systems.
CO5	Conduct the analysis of vibration of systems.

Mapping of Course Outcomes with Program Outcomes:

	PO1	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**
CO1	2	3	2	2	1	2	2	-	-	-	-	-
CO2	2	2	2	2	1	1	-	-	-	-	-	-
CO3	2	2	2	2	1	1	-	-	-	-	-	-
CO4	2	3	2	2	1	1	-	-	-	-	-	-
CO5	2	2	2	2	1	2	2	-	-	-	-	1

ME705E COMPOSITE MATERIALS

Lectures/Week: 3 periods

Credits: 3

Sessional marks: 20 +20

End Examination Marks: 60

UNIT – I

Basics of Composites

Introduction: Definition, Classification of Composite materials based on structure, based on matrix, Advantages of composites, Applications of composites, Functional requirements of reinforced and matrix.

UNIT – II

Manufacturing Methods

Open moulding methods Hand – lay up process, Spray – lay up process, Filament winding process Closed moulding methods: Compressive moulding, Vacuum bag moulding, pultrusion process and resin transfer moulding process.

UNIT – III

Types of reinforcements and their properties: Fibers: Carbon, Boron, Glass, Aramid, Al_2O_3 , SiC, Nature and Manufacture of glass, Carbon and aramid fibers, Comparison of fibers.

UNIT – IV

Fabrication of Polymeric Matrix Composites, Structure and Properties of Polymeric Matrix Composites Interface in Polymeric Matrix Composites, Applications.

Fabrication of Metal Matrix Composites: Solid state fabrication, Liquid state fabrication and In – situ fabrication techniques.

UNIT – V

Micromechanics of Composites: Density, Mechanical Properties: Prediction of Elastic constants, Micromechanical approach. Halpin – Tsai Equations, Transverse stresses

TEXTBOOKS

1. Composite Materials – Science and Engineering, K.K. Chawla, Springer – Verlag, NewYork, 1987
2. An introduction to Composite Materials, Hull, Cambridge, 2nd Edition, 1997
3. A textbook of Manufacturing Technology: Manufacturing Processes by R.K. Rajput, 2nd Edition
4. Fracture Mechanics by C.H. Wang , Airframes and Engines Division Aeronautical and Maritime Research Laboratory

ME707S ROBOT PROGRAMMING

Lectures/week: 1 hours | Credits: 02

Laboratory/week: 2 hours* | Continuous Assessment: 40

End Examination: 60

***Evaluation is similar to regular Practical/Laboratory Class Model/Pattern**

UNIT – I

Types of robots based on mode of control – PTP (point – to – point) and Control and Continuous path (CP) control robots.

Trajectory planning of a robot and its importance in execution of programming commands in accomplishing the given task in the world environment

UNIT – II

Robot Programming Methods – Broad classification – Online and Offline Programming

Types of programming – Manual setup – lead through programming – Computer like robot programming languages – Off line programming.

UNIT – III

Lead through programming – Powered lead through and Manual lead through – Use of Teach box or Control box in Manual programming of a robot – A robot simulator for lead through teaching

General information required or provided for teaching a robot

UNIT – IV

Robot Programming Languages – VAL, AL , and AML – Features and Applications

UNIT – V

Programming a robot in a work cell or robot cell and in Machine Vision environment

Sample Exercises/Experiments**

1. Program for PNP (Pick and Place) Activity
2. Teaching a robot to pick an object that is moving on a chute
3. Program for palletize the object
4. AL for bolt insertion task
5. Training a robot in accomplishing loading and unloading tasks in a robot or work cell
6. Programming a robot in a work cell aided by vision system
7. Programming to ensure safety of a robot in a work cell
8. Programming a robot to perform assembly and handling tasks in a robot cell

ME508S FINITE ELEMENT ANALYSIS

Lectures/week: 1 hours — Credits: 02

Laboratory/week: 2 hours* — Continuous Assessment: 40

End Examination: 60

***Evaluation is similar to regular Practical/Laboratory Class Model/Pattern**

Course Outcomes (COs):

CO 1 Able to understand the basic concepts of FEA
CO 2 Able to understand spring , line, quadratic bar and plane truss elements
CO3 Prepared to model and formulate the given physical problem by suitable Finite Elements
CO4 Ability to make use of the numerical power of MATLAB in solving the FEA problems

UNIT – I

Introduction –Steps of the Finite Element Analysis (FEA) – MATLAB Functions for FEA – Overview of MATLAB – The spring Element Basic Equations – MATLAB Functions Used – Practice Exercises

UNIT – II

The Linear Bar Element – Basic Equations – MATLAB Functions Used – Practice Exercises

UNIT – III

The Quadratic Bar Element – Basic Equations – MATLAB Functions Used – Practice Exercises

UNIT – IV

The Plane Truss Element – Basic Equations – MATLAB Functions Used – Practice Exercises

UNIT – V

The Beam Element – Basic Equations – MATLAB Functions Used – Practice Exercises

TEXTBOOKS

1. Fundamentals of Finite Element Analysis by David V. Hutton
2. Concepts and Applications of Finite Element Analysis by Robert D. Cook, David S. Malkus and Michael

   E. Plesha

3. MATLAB Guide to Finite Elements – An interactive Approach by Peter I. Kattan
4. A first course in the Finite Element Method by Daryl L. Logan
5. An Introduction to Finite Element Method by J.N. Reddy

Department of Mechanical Engineering
S. V. University College of Engineering:: TIRUPATI

MC 509A Universal Human Values

Instruction: Hours/Week: **2L:0T:0P** **Credits: 0**
Marks:100 Pre-requisites/co-requisites: None.

COURSE DESCRIPTION:

The methodology of this course is universally adaptable, involving a systematic and rational study of the human being vis-à-vis the rest of existence. It is free from any dogma or value prescriptions. This process of self-exploration takes the form of a dialogue between the teacher and the students to begin with and within the student himself/herself finally.

COURSE OBJECTIVES:

1. To develop a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. To understand (or developing clarity) the harmony in the human being, family, society and nature/existence.
3. To strengthen self-reflection and to develop commitment and courage to act.
4. To understand social responsibility of an engineer.
5. To appreciate ethical dilemma while discharging duties in professional life.

COURSE CONTENT:

UNIT I: Introduction - Need, Basic Guidelines, Content and Process for Value Education: Purpose and motivation for the course, Self-Exploration–what is it? - Its content and process; „Natural Acceptance‟ and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly - A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

UNIT II: Understanding Harmony in The Human Being - Harmony in Myself! :

Understanding human being as a co-existence of the sentient „I‟ and the material „Body‟. Understanding the needs of Self („I‟) and „Body‟ - happiness and physical facility (Sukh and Suvidha). Understanding the Body as an instrument of „I‟ (I being the doer, seer and enjoyer). Understanding the characteristics and activities of „I‟ and harmony in „I‟. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health.

UNIT III: Understanding Harmony in The Family and Society- Harmony in Human-Human Relationship: Understanding harmony in the Family - the basic unit of human interaction. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness (Ubhay-tripti); Trust **(Vishwas)** and Respect **(Samman)** as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution (Samadhan), Prosperity (Samridhi), fearlessness (**Abhay**) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society (Akhand Samaj), Universal Order (Sarvabhaum Vyawastha) - from family to world family.

UNIT IV: Understanding Harmony in The Nature and Existence - Whole Existence as Coexistence: Understanding the harmony in the Nature. Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence.

UNIT V: Implications of The Above Holistic Understanding of Harmony on Professional Ethics: Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics:

a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations.

COURSE OUTCOMES: On completion of this course, the students will be able to

1. To become more aware of themselves, and their surroundings (family, society, nature)
2. Distinguish between values and skills, happiness and accumulation of physical facilities, the Self and the Body, Intention and Competence of an individual, etc.
3. Understand the role of a human being in ensuring harmony in society and nature.
4. To become sensitive to their commitment towards what they have understood (human values, human relationship and human society)
5. Distinguish between ethical and unethical practices, and start working out the strategy to actualize a harmonious environment wherever they work.

SEMESTER I

PROGRAMME CORE

CourseCode	COPC 01
CourseName	MathematicalFoundationofComputerScience
Credits	3
Pre-Requisites	DiscreteMathematics

TotalNumberofLectures:48

COURSEOBJECTIVE
• To understand the mathematical fundamentals that is prerequisites for avariety of courseslike Data mining, Network protocols, analysis ofWeb traffic, Computer security, Softwareengineering,Computerarchitecture,operatingsystems,distributedsystems,Bioinformatics, Machinelearning.
• Todeveloptheunderstandingofthemathematicaland logicalbasistomanymodern techniques in information technology like machine learning, programming language design,and concurrency.
• Tostudyvarioussamplingandclassificationproblems.

LECTUREWITHBREAKUP	**NO. OF LECTURES**
Unit1 Probabilitymass,density,andcumulativedistributionfunctions,Parametricfamiliesof distributions,Expectedvalue,variance,conditionalexpectation,Applicationsoftheuni variateandmultivariateCentralLimitTheorem, Probabilisticinequalities,Markovchains	10
Unit2 Randomsamples,samplingdistributionsofestimators,MethodsofMomentsandMaximumLikelihood,	9
Unit3 Statistical inference, Introduction to multivariate statistical models: regression andclassificationproblems,principalcomponentsanalysis,Theproblemofoverfitting modelassessment.	8
Unit4 GraphTheory:Isomorphism,Planargraphs,graphcolouring,hamiltoncircuitsandeulercycles. Permutations and Combinations with and without repetition.Specializedtechniquestosolvecombinatorialenumerationproblems	11
Unit5 Computerscienceandengineeringapplications	10

Datamining,Networkprotocols,analysisofWebtraffic,Computersecurity, Softwareengineering,Computerarchitecture,operatingsystems,distributedsystems,Bioinformatics,Machinelearning.	
COURSEOUTCOMES	
Aftercompletion ofcourse,studentswould beableto:	
• Tounderstandthebasicnotionsofdiscreteand continuousprobability.	
• Tounderstandthemethodsofstatisticalinference,and therolethatsamplingdistributionsplayinthosemethods.	
• To be able to perform correct and meaningful statistical analyses of simple to moderatecomplexity.

4. AlanTucker, AppliedCombinatorics,Wiley

CourseCode	COPC 02
CourseName	AdvancedDataStructures
Credits	3
Pre-Requisites	UGlevelcourseinDataStructures

TotalNumberofLectures:48

COURSEOBJECTIVE
• The student should be able to choose appropriate data structures, understand theADT/libraries,anduseittodesign algorithms foraspecificproblem.
• Studentsshould beabletounderstandthenecessarymathematicalabstraction tosolveproblems.
• Tofamiliarizestudentswithadvancedparadigmsanddatastructureusedtosolvealgorithmicprobl ems.
• Student should beabletocomeupwithanalysisofefficiencyand proofsofcorrectness.

LECTUREWITHBREAKUP	**NO. OF LECTURES**
Unit1 **Dictionaries:**Definition,DictionaryAbstractDataType,ImplementationofDictionaries . **Hashing:**ReviewofHashing,HashFunction,CollisionResolutionTechniquesin Hashing,SeparateChaining,OpenAddressing,LinearProbing,QuadraticProbing,Doubl eHashing,Rehashing,ExtendibleHashing.	9
Unit2 **SkipLists:**Need forRandomizingDataStructuresand Algorithms,Searchand UpdateOperationsonSkipLists,ProbabilisticAnalysisofSkipLists,DeterministicSkip Lists	8
Unit3 **Trees:**BinarySearchTrees,AVLTrees,RedBlackTrees,2-3Trees,B-Trees,SplayTrees	9
Unit4	12
TextProcessing: StingOperations,Brute-ForcePatternMatching,TheBoyer-Moore Algorithm, The Knuth-Morris-Pratt Algorithm, Standard Tries, CompressedTries,SuffixTries,TheHuffmanCodingAlgorithm,TheLongestCommon SubsequenceProblem (LCS),ApplyingDynamicProgrammingtotheLCSProblem.	
Unit5 **ComputationalGeometry:**OneDimensionalRangeSearching,TwoDimensionalRange Searching,ConstructingaPrioritySearchTree,SearchingaPrioritySearch Tree,PriorityRangeTrees,Quadtrees,k-DTrees.	10

COURSEOUTCOMES
Aftercompletion ofcourse,studentswould beableto:
• Understandtheimplementationofsymboltable usinghashingtechniques.
• Developandanalyzealgorithmsforred-blacktrees, B-treesandSplaytrees.
• Developalgorithmsfortextprocessingapplications.
• Identifysuitabledatastructuresanddevelopalgorithmsforcomputationalgeometrypro blems.

Pre-Requisites	DataStructure,Algorithms,ComputerArchitectureandOrganization

TotalNumberofLectures:48

COURSEOBJECTIVE
• Theobjectiveofthecourseistoprovideintroductiontooperatingsystemdesignandconceptofprocess, processlifecycleandschedulingapproaches.

LECTUREWITHBREAKUP	**NO.OF LECTURES**
Unit1: Computersystem andoperatingsystem overview,Operatingsystem functionsanddesign issues,Designapproaches,Typesofadvanced operatingsystems.	10
Unit2: Processabstraction,Processmanagement,systemcalls,Threads,Symmetricmultiprocessingandmicro-kernels.	8
Unit3: Scheduling: Uniprocessor, Multiprocessor and Real time systems, concurrency, classical problems, mechanisms for synchronization:semaphores,monitors,Processdeadlockanddeadlock handlingstrategies.	10
Unit4: Memory management, Virtual memory concept, Virtual machines, I/O management,Fileanddiskmanagement,Operatingsystemsecurity.	9
Unit5: Distributed Operating system:Architecture, Design issues, Distributed mutualexclusion,Distributeddeadlockdetection,sharedmemory,Distributedscheduling.Multiprocessoroperatingsystems:architecture,operatingsystemdesignissues, threads, processsynchronization,processscheduling,memory management,reliabilityand faulttolerance.	11

COURSEOUTCOMES
Aftercompletion ofcourse,studentswouldbe:
• Understandingadvancedconceptsinoperatingsystems.
• LearningprinciplesofDistributedandmultiprocessoroperatingsystems

References:

1. Advancedconceptinoperatingsystem:M.Singhal,N.G.Shivratri
2. Operatingsysteminternalanddesignprinciples: WilliamStallings

PROGRAMME ELECTIVE-I TotalNumberofLectures:48

CourseCode	COPE 11
CourseName	Machinelearning
Credits	3
Pre-Requisites	
COURSEOBJECTIVE	
• Tolearntheconceptofhowtolearnpatternsandconceptsfromdata withoutbeingexplicitlyprogrammed invarious IOTnodes.	
• To design and analyse various machine learning algorithms and techniques with a modernoutlookfocusing onrecentadvances.	
• Exploresupervisedandunsupervisedlearningparadigmsofmachinelearning.	
• ToexploreDeep learningtechniqueand variousfeatureextractionstrategies.	
LECTUREWITHBREAKUP	**NO. OF LECTURES**
Unit1: SupervisedLearning(Regression/Classification) • Basicmethods:Distance-basedmethods,Nearest-Neighbours,DecisionTrees,NaiveBayes	10
• Linear models: Linear Regression, Logistic Regression, Generalized LinearModels • Support VectorMachines,Nonlinearityand KernelMethods • BeyondBinaryClassification:Multi-class/StructuredOutputs,Ranking	
Unit2: UnsupervisedLearning • Clustering:K-means/KernelK-means • DimensionalityReduction:PCAand kernelPCA • MatrixFactorizationandMatrixCompletion • GenerativeModels(mixturemodelsandlatentfactormodels)	9
Unit3 EvaluatingMachineLearningalgorithmsandModelSelection,IntroductiontoStatistical LearningTheory,EnsembleMethods(Boosting,Bagging,Random Forests)	9
Unit4 SparseModelingandEstimation,ModelingSequence/Time-SeriesData,DeepLearningandFeatureRepresentationLearning	9
Unit5 ScalableMachineLearning(OnlineandDistributedLearning) Aselectionfromsomeotheradvancedtopics,e.g.,Semi-supervisedLearning, ActiveLearning,ReinforcementLearning,InferenceinGraphicalModels,Introduction toBayesianLearningandInference	9
COURSEOUTCOMES	
Aftercompletion ofcourse,studentswouldbeableto:	
• Extract features that can be used for a particular machine learning approach in various IOTapplications.	
• To compare and contrast pros and cons of various machine learning techniques and to get aninsight ofwhentoapplyaparticularmachinelearning approach.	
• Tomathematicallyanalysevariousmachinelearningapproachesand paradigms.

CourseCode	COPE 22
CourseName	DigitalForensics
Credits	3
Pre-Requisites	CybercrimeandInformationWarfare, ComputerNetworks

TotalNumberofLectures:48

COURSEOBJECTIVE
• Providesanin-depthstudyofthe rapidlychangingandfascinating fieldofcomputerforensics.
• Combines both the technical expertise and the knowledge required to investigate, detectandpreventdigitalcrimes.
• Knowledge on digital forensics legislations, digital crime, forensics processes andprocedures,dataacquisitionandvalidation,e-discoverytools
• E-evidence collection and preservation, investigating operating systems and file systems,networkforensics,artofsteganographyandmobiledeviceforensics

LECTUREWITHBREAKUP	**NO.OFL ECTURES**
Unit1: **DigitalForensicsScience:**Forensicsscience,computerforensics,anddigitalforensics. **ComputerCrime:**Criminalisticsasitrelatestotheinvestigativeprocess,analysisofcyber-criminalisticsarea,holisticapproachtocyber-forensics	9
Unit2: **Cyber Crime Scene Analysis:** Discuss the various court orders etc., methods tosearchandseizureelectronicevidence,retrievedandun-retrievedcommunications,Discusstheimportanceofunderstandingwhatcourt documentswould berequired foracriminalinvestigation.	10
Unit3: **Evidence Management&Presentation:** Create and manage shared foldersusing operating system, importance of the forensic mindset, define the workloadof law enforcement, Explain what the normal case would look like, Define whoshouldbenotifiedofacrime,partsofgatheringevidence,Defineandapply probablecause.	9
Unit4: **ComputerForensics:**Prepareacase,Begininvestigation,Understandcomputerforensicsworkstationsandsoftware,Conductaninvestigation,Complete acase,Critiquea case, **Network Forensics:** open-source security tools for network forensic analysis,requirementsforpreservationofnetworkdata.	10
Unit5: **MobileForensics:**mobileforensicstechniques,mobileforensicstools. **LegalAspectsofDigitalForensics:**ITAct2000,amendmentofITAct 2008.	10

COURSEOUTCOMES
Aftercompletion ofcourse, studentswould beableto:
• Understandrelevantlegislationandcodesofethics
• Computer forensicsanddigitaldetectiveandvariousprocesses, policiesandprocedures
• E-discovery,guidelinesandstandards,E-evidence,toolsandenvironment.
• Emailandwebforensicsandnetworkforensics

Unit1: **HighPerformanceSystems,**StructureofaCompiler,ProgrammingLanguageFeatures,LanguagesforHighPerformance.	9
Unit2: **Data Dependence:** Data Dependence in Loops, Data Dependence inConditionals, Data Dependence in Parallel Loops, Program Dependence Graph.**ScalarAnalysiswithFactoredUse-DefChains:**ConstructingFactoredUse-DefChains,FUDChainsforArrays,InductionVariablesUsingFUDChains,Constant PropagationwithFUDChains,DataDependenceforScalars.Data DependenceAnalysisforArrays.	10
Unit3: Array Region Analysis,PointerAnalysis,I/O Dependence,Procedure Calls,Inter-proceduralAnalysis. **LoopRestructuring:**SimpleTransformations,LoopFusion,LoopFission,LoopReversal,LoopInterchanging,LoopSkewing,LinearLoopTransformations, Strip-Mining, Loop Tiling, Other Loop Transformations, andInter-proceduralTransformations. **OptimizingforLocality:**SingleReferencetoEachArray,MultipleReferences, GeneralTiling, FissionandFusionfor Locality.	10
Unit4: **Concurrency Analysis:** Concurrency from Sequential Loops, Concurrency fromParallelLoops,NestedLoops,RoundoffError,ExceptionsandDebuggers. **VectorAnalysis:**VectorCode,VectorCodefromSequentialLoops,VectorCodefrom ForallLoops,NestedLoops, RoundoffError,Exceptions, and Debuggers,Multi-vectorComputers.	10
Unit5: **Message-PassingMachines:**SIMDMachines,MIMDMachines,DataLayout,ParallelCodefor ArrayAssignment,RemoteDataAccess,AutomaticData Layout,MultipleArrayAssignments,OtherTopics.	10
ScalableShared-MemoryMachines: GlobalCacheCoherence,LocalCache Coherence,LatencyTolerantMachines.	

COURSEOUTCOMES
Aftercompletion ofcourse,studentswouldbe:

• Familiarwiththestructureofcompiler. • Parallelloops, datadependencyandexceptionhandlinganddebuggingincompiler.

PROGRAMME ELECTIVE- III

CourseCode	COPE31
CourseName	BigDataAnalytics
Credits	3
Pre-Requisites	DataStructure,ComputerArchitectureandOrganization

TotalNumberofLectures:48

COURSEOBJECTIVE
• Understandbigdataforbusinessintelligence.Learnbusinesscasestudiesforbigdataanalytics.Understandnosqlbigdatamanagement.Performmap-reduceanalyticsusingHadoopandrelated tools

LECTUREWITHBREAKUP	**NO. OFLECTURES**
Unit1: Whatisbigdata, whybigdata,convergenceofkeytrends, unstructureddata,industry examples of big data, web analytics, big data and marketing, fraud and bigdata, risk and big data, credit risk management, big data and algorithmic trading,big data and healthcare, big data in medicine, advertising and big data, big datatechnologies,introductiontoHadoop,opensourcetechnologies,cloudandbigdata, mobilebusinessintelligence,Crowdsourcinganalytics,interandtransfirewallanalytics .	8
Unit2: IntroductiontoNoSQL,aggregatedatamodels,aggregates,key-valueanddocumentdatamodels,relationships,graphdatabases,schemalessdatabases, materialized views, distribution models, sharding, master-slave replication, peer-peerreplication,shardingandreplication,consistency,relaxingconsistency,version stamps, map-reduce, partitioning and combining, composing map-reducecalculations.	8
Unit3: Data format, analyzing data with Hadoop, scaling out, Hadoop streaming, Hadooppipes,designofHadoopdistributedfilesystem(HDFS),HDFSconcepts,Javainterface, data flow, Hadoop I/O, data integrity, compression, serialization, Avro,file-based datastructures	9
Unit4: MapReduce workflows, unit tests with MRUnit, test data and local tests, anatomy ofMapReduce job run, classic Map-reduce, YARN, failures in classic Map-reduce andYARN, job scheduling, shuffle and sort, task execution, MapReduce types, inputformats,outputformats	10
Unit5:	13
Hbase,datamodelandimplementations,Hbaseclients,Hbaseexamples,praxis.Cassandra, Cassandra data model, Cassandra examples, Cassandra clients,Hadoop integration. Pig,Grunt,pigdatamodel,PigLatin,developingandtestingPigLatinscripts. Hive,datatypes and fileformats,HiveQLdatadefinition,HiveQLdatamanipulation,HiveQL queries.	

COURSEOUTCOMES
Aftercompletionofcourse,studentswouldbe:
• Describebig dataand usecases fromselected business domains • ExplainNoSQLbigdatamanagement • Install,configure,andrunHadoopandHDFS • Performmap-reduceanalyticsusingHadoop • UseHadoop relatedtoolssuchasHBase,Cassandra,Pig,andHiveforbigdataanalytics

CourseCode	COPE32
CourseName	RecommenderSystem
Credits **Prerequisites**	3

TotalNumberofLectures:48

COURSEOBJECTIVE
• Tolearntechniquesformakingrecommendations,includingnon-personalized,content-based,and collaborativefiltering • To automate a variety of choice-making strategies with the goal of providing affordable, personal,and high-qualityrecommendations

LECTUREWITHBREAKUP	**NO. OFLECTURES**
Unit1: **Introduction:** Overview of Information Retrieval, Retrieval Models, Search andFiltering Techniques: Relevance Feedback, User Profiles, Recommender systemfunctions,Matrixoperations,covariancematrices,Understandingratings, Applicationsofrecommendationsystems,Issueswithrecommendersystem.	9
Unit2: **Content-basedFiltering:**Highlevelarchitectureofcontent-basedsystems,Advantages and drawbacks of content based filtering, Item profiles, Discoveringfeaturesofdocuments,pre-processingandfeatureextraction,Obtainingitem features from tags, Methods for learning user profiles, Similarity based retrieval,Classification algorithms.	8
Unit3: **CollaborativeFiltering:**User-basedrecommendation,Item-basedrecommendation,Modelbasedapproaches,Matrixfactorization,Attacksoncollaborativerecommendersystems.	9
Unit4: **Hybrid approaches:** Opportunities for hybridization, Monolithic hybridizationdesign:Featurecombination, Featureaugmentation,Parallelizedhybridizationdesign:Weighted,Switching,Mixed, Pipelinedhybridizationdesign:Cascade Meta-level,Limitationsofhybridizationstrategies	8
Unit5: **EvaluatingRecommenderSystem:**Introduction,Generalpropertiesofevaluation research, Evaluation designs: Accuracy, Coverage, confidence, novelty,diversity,scalability,serendipity,Evaluationonhistoricaldatasets,Offlineevaluations. **Types of Recommender Systems:** Recommender systems in personalized websearch,knowledge-basedrecommendersystem,Socialtaggingrecommendersystems,Trust-centricrecommendations,Group recommendersystems.	14

COURSEOUTCOMES
Aftercompletionofcourse, studentswould beableto:

- Designrecommendationsystemforaparticular applicationdomain.
- Evaluaterecommendersystemsonthebasisofmetricssuchasaccuracy,rankaccuracy,diversity,productcoverage,andserendipity

CourseCode	PGPC 02
CourseName	Cyber Security
Credits	2
Pre-Requisites	Information Communication Technology

TotalNumberofLectures:48

COURSEOBJECTIVE

(a) LearnthefoundationsofCybersecurityandthreatlandscape.

(b) Toequipstudentswiththetechnicalknowledgeandskillsneededtoprotectanddefendagainstcyberthreats.

(c) Todevelopskillsinstudentsthatcanhelpthemplan,implement,andmonitorcybersecuritymechanismstoensuretheprotectionofinformationtechnologyassets.

(d) Toexposestudentstogovernance,regulatory,legal,economic,environmental,socialandethicalcontextsofcybersecurity.

(e) Toexposestudentstoresponsibleuseofonlinesocialmedianetworks.

(f))
Tosystematicallyeducatethenecessitytounderstandtheimpactofcybercrimesandthreatswithsolutionsinaglobalandsocietalcontext.

LECTUREWITHBREAKUP	**NO.OF LECTURES**
Unit1: Cyber security increasing threat landscape,Cyber security terminologies-Cyberspace,attack, attack vector, attack surface, threat,risk, vulnerability, exploit, exploitation,hacker., Non-state actors, Cyber terrorism,Protection of end user machine, CriticalIT and National Critical Infrastructure,Cyberwarfare,CaseStudies.	10
Unit2: Cyber crimes targeting Computer systemsandMobiles-datadiddlingattacks,spyware, logic bombs, DoS, DDoS, APTs,virus, Trojans, ransomware, data breach.,Online scams and frauds- email scams,Phishing,Vishing,Smishing,Onlinejobfraud,Onlinesextortion,Debit/credit card fraud, Online payment fraud,Cyberbullying,websitedefacement,Cyber-squatting,Pharming,Cyberespionage,Cryptojacking,Darknet-illegaltrades,drug trafficking, human trafficking., SocialMedia Scams & Frauds-impersonation,identitytheft,jobscams,misinformation,fake newscyber crime against persons -cyber grooming, child pornography, cyberstalking.,SocialEngineeringattacks,CyberPolicestations,Crimereporting procedure,Casestudies.	10
Unit 3: Cybercrimeandlegallandscapearound the world, IT Act,2000 and itsamendments.LimitationsofITAct,2000.Cybercrimeandpunishments,Cyber Laws and Legal and ethical aspectsrelated to new technologies- AI/ML, IoT,Blockchain,	10

Darknet and Social media,CyberLawsofothercountries,CaseStudies.	
Unit4: Defining data, meta-data, big data, non-personaldata.Dataprotection,Dataprivacy and data security, Personal DataProtection Bill and its compliance, Dataprotection principles, Big data securityissuesandchallenges,Dataprotectionregulations of other countries- GeneralData Protection Regulations(GDPR),2016PersonalInformationProtectionandElectronicDocumentsAct(PIPEDA).,Social media- data privacy and securityissues.	8
Unit5: Cyber security Plan- cyber security policy,cyber crises management plan., Businesscontinuity,Riskassessment,Typesofsecurity controls and their goals, Cybersecurity audit and compliance, Nationalcybersecuritypolicyandstrategy.	10

COURSEOUTCOMES

Oncompletionofthecoursethestudentshould beable to

(a) Understandthecybersecuritythreatlandscape.

(b) Developadeeperunderstandingandfamiliaritywithvarioustypesof cyberattacks,cybercrimes,vulnerabilitiesandremediesthereto.

(c) Analyseandevaluateexistinglegalframeworkandlawsoncybersecurity.

(d) Analyse and evaluate the digital payment systemsecurity and remedial measuresagainstdigitalpaymentfrauds.

(g) Analyseandevaluatetheimportanceofpersonaldataitsprivacyandsecurity.

(h))
Analyseandevaluatethesecurityaspectsofsocialmediaplatformsandethical aspectsassociatedwithuseofsocialmedia.

(i) Analyseandevaluatethecybersecurityrisks.

(j) BasedontheRiskassessment,plansuitablesecuritycontrols,auditandcompliance.

(k) Evaluateandcommunicatethehumanroleinsecuritysystemswithanemphasiso nethics,socialengineeringvulnerabilitiesandtraining.

(l) Increaseawarenessaboutcyber-attackvectorsandsafetyagainstcyber-frauds.

(m) Takemeasuresforself-cyber-protectionaswellassocietalcyber-protection.

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING: TIRUPATI
DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Dr. Ch Chengaiah Ph.: 0877-2249900
Professor & Chairman, BoS (PG).

05-06-2023,
Tirupati.

To
The Registrar.
S.V. University,
Tirupati.

"Through the Dean Faculty of Engineering"

Sir,

Sub: SVUCE- Dept. of EEE - Submission of Scheme of instructions and Syllabus - M.Tech (Power Systems) - R23 Regulation – W.e.f. ACY 2023-24 - Reg.

Ref: 1. SVUCE/ Dean/ JBOS M.Tech/ (PG)/2023.Dated.11/04/2023
2. CII (B)/Joint BoS (PG) Meeting/Engg/2022 Dated.18.05.2023.

*****

With reference to the subject cited, the Joint Board of Studies meeting was held on 02/06/2023 and as per the Dean Faculty of Engineering instructions individual Board of Studies meeting was held in the Department of Electrical and Electronics Engineering on the same day.

However, based on Internal and External members discussions and suggestions the scheme of instructions and syllabus are prepared and approved the same for M.Tech (Power Systems) Program with effect from the Academic Year 2023-24 onwards.

In this connection, herewith I am submitting the Scheme of Instructions and Syllabus of the M.Tech (Power System) program. This is for your kind information.

Thanking You, Sir

Yours faithfully,

Professor & Head of the Department of
Electricals and Electronics Engg.,
S.V.U. COLLEGE OF ENGINEERING
TIRUPATI - 517 502

Dr. Ch Chengaiah
Professor & Chairman, BoS (PG).
Electrical & Electronics Engineering

CHAIRMAN
B.O.S. (P.G.)
Dept. of E.E.E.

Encl: 1. Resolution of M.Tech BoS(PG) meeting
2. Scheme of Instructions of the M.Tech (Power System) program } → in Book form
3. Syllabus of the M.Tech (Power System) program

Copy to The Dean, Faculty of Engineering for information.
Copy to file.

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING::TIRUPATI
DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

Date: 02.06.2023

RESOLUTION

1. It is resolved to approve the Scheme of instructions and Syllabus for M.Tech (Power Systems) Curriculum to be implemented for the Academic year 2023-24, as per NEP / AICTE / UGC Guidelines.

2. It is resolved to authorize BOS Chairman to carryout minor modifications for the Scheme of instructions and Syllabus if necessary.

Instruction:

1. Evaluation of Dissertation Project work Phase – II : Review after 8-10 weeks (20 marks) and Continuous Guide Evaluation (40 marks) and End Semester Examination (40 marks).
2. Student must submit their project work on or before the last working day/Instruction day of the IV Semester of the Program. Otherwise Rs. 1,000/- penalty for late submission will be levied to extend submission up to three months. In case of failure of the said condition the penalty amount will be doubled up to the completion of the course.

M.TECH – I SEMESTER

SYLLABUS

(R23 REGULATIONS)

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING
M.TECH: POWER SYSTEMS - FIRST SEMESTER - SYLLABUS

PSPC 01: COMPUTER METHODS IN POWER SYSTEMS

Instruction Hours/week: 4(L) **Credits: 4**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Power System Network Matrices: Graphs, Incidence matrices, Primitive network, formation of Bus admittance matrix by singular transformations, direct inspection method for determination of Y_{BUS}, Formation of Bus impedance matrix - Addition of a branch and Addition of a link. Simple problems.

UNIT-II

Load Flow Studies: Load flow problem, Gauss-Seidel method, Newton Raphson method, Decoupled and Fast decoupled load flow methods, Comparison of load flow methods.

UNIT-III

Fault Analysis: Short circuit (Symmetrical - 3-phase fault, Unsymmetrical - SLG, LL, LLG faults) calculations using Bus impedance matrix, Fault Impedance Matrix, Fault Currents and Fault Voltages.

UNIT-IV

Power System Security Analysis: Factors affecting Power system security, Security state diagram, contingency analysis - Sensitivity factors - Generator Outage Shift factor (GOSF) and Line Outage Shift Factor (LOSF).

UNIT-V

Voltage Stability: Voltage collapse and prevention of voltage collapse, Voltage stability analysis - P-V curve method, V-Q curve method and Modal analysis.

Text Books:

1. Computer methods in Power System Analysis by Stagg and El Abiad, Mc.Graw Hill Book Company.
2. L.P. Singh , “Advanced Power System Analysis and Dynamics”, New Age International, 2006
3. A.J. Wood, “Power generation, operation and control”, John Wiley, 1994.

References:

1. J.J. Grainger &W.D. Stevenson, “Power system analysis ”, McGraw Hill ,2003
2. Arthur. R. Bergen & Vijay Vittal , “Power System Analysis” ,Pearson , 2000
3. P.M. Anderson, “Faulted power system analysis” , IEEE Press , 1995

Course outcomes-

Students will be able to:

1. Find the bus admittance and bus impedance matrices of the given power system network.
2. Perform power flow studies using various load flow methods.
3. Calculate fault currents and voltages during fault conditions.
4. Assess the power system security using GOSF and LOSF methods.
5. Analyze voltage stability using PV, QV and Modal Analysis.

PSPC 02- INTERCONNECTED POWER SYSTEM OPERATION AND CONTROL

Instruction Hours/week: 4(L) **Credits: 4**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Unit Commitment: Introduction, constraints in unit commitment, thermal unit constraints, unit commitment solution methods, priority-list methods, Dynamic-Programming solution, forward DP Approach, Lagrange relaxation solution.

State Estimation: Power System State Estimation, Weighted Least Square Estimation, State Estimation of an AC Network.

UNIT-II

Load Frequency Control: Necessity of keeping frequency constant, definition of control area, single area control, block diagram representation of an isolated power system, steady state analysis, dynamic response, uncontrolled case, load frequency control of 2-area system, uncontrolled case and controlled case, tie-line bias control

UNIT-III

Generation with Limited Energy Supply: Introduction, take-or-pay fuel supply contract, composite generation production cost function, solution by gradient search techniques, hard limits and slack variables, fuel scheduling by linear programming

UNIT-IV

Hydro thermal Coordination: Introduction, long range hydro scheduling, short-range hydro-scheduling, hydroelectric plant models, scheduling problems, types of scheduling problems, scheduling energy, the short term hydro-thermal scheduling problem, short term hydro scheduling, gradient approach, pumped storage hydro plants, dynamic programming solution to the hydrothermal scheduling problem.

UNIT-V

Interchange of Power and Energy: Introduction, economy interchange between interconnected utilities, inter-utility economy energy evaluation, interchange evaluation with unit commitment, multiple-utility interchange transactions, types of interchange, capacity interchange, diversity interchange, emergency power interchange, inadvertent power exchange, power pools, transmission effects and issues, problems

Text Books:

1. Power Generation Operation and Control, Allen J. Wood, Bruce F.Wollenberg, 2nd ed. John Wiley & Sons Inc. 2006.
2. Electrical Energy Systems Theory, O.I.Elgerd, Tata McGraw-Hill Publishing Company Ltd, 2nd edition.
3. Modern Power System Analysis, I.J. Nagrath & D.P. Kothari, TMH,3rd edition, 9th reprint, 2007

Course outcomes-

Students will be able to:

1. Acquire knowledge on unit commitment, load frequency control, optimum operation, scheduling and coordination of hydrothermal plants, economic generation and power and energy interchange.
2. Solve unit commitment, load frequency control, hydrothermal and fuel scheduling and economy interchange problems using various solution methods.
3. Select and apply appropriate methods to operate inter connected power systems most economically and at constant frequency by optimum utilization of fuels at different loads.

PSPC 03: AI APPLICATIONS TO POWER SYSTEMS

Instruction Hours/week: 4(L) **Credits: 4**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Introduction to AI: Definition, Applications, Components of an AI program, production system. Problem Characteristics, Overview of searching techniques. Knowledge representation: knowledge representation issues; and overview, Representing knowledge using rules; procedural versus declarative knowledge, Logic programming, forward versus backward reasoning, matching, Control Knowledge.

UNIT-II

Artificial Neural Networks: Biological Neuron, Neural Net, Use of neural nets, applications, perception, idea of single layer and multilayer neural nets, Back propagation, Hopfield nets, supervised and unsupervised learning.

UNIT-III

Introduction to classical sets – properties, Operations and relations; Fuzzy sets, Membership, Operations, Properties, Fuzzy relations, Cardinalities, Membership functions.
Fuzzy logic system components: Fuzzification, Inference engine, Defuzzification to crisp sets – Defuzzification methods.

UNIT-IV

Genetic Algorithms – Genetic Algorithm versus Conventional Optimization Techniques, Genetic representations and Selection Mechanisms; Genetic Operators – Different types of crossover and mutation operators.
Particle Swarm Optimization - Particle Swarm Optimization Bird flocking and fish Schooling, anatomy of a particle, equations based on velocity and positions, PSO topologies, control parameters.

UNIT-V

Applications of AI Techniques: ANN – Load flow, Economic load Dispatch, Load forecasting. Fuzzy Logic – Single area and two area load frequency control, Speed control of DC Motor. GA and PSO – GA and PSO algorithms for solving ELD problems.

Text Books:

1. Artificial Intelligence Techniques in Power Systems (Energy Engineering), by Kelvin Warwick, Arthur Ekwue, Rag Aggarwal, 1997.
2. AI Application Areas n Power Systems, Iraj Dabbaghchi, American Electric Power Richard D. Christie, Gary W. Rosenwald and Chen – Ching Liu, University of Washington.
3. J M Zurada , "An Introduction to ANN", Jaico Publishing House
4. Timothy Ross, "Fuzzy Logic with Engg. Applications", McGraw. Hill
5. Golding, "Genetic Algorithms", Addison-Wesley Publishing Com
6. Rajasekharan and Pai, "Neural Networks, Fuzzy logic – Genetic Algorithms –Synthesis and Applications" PHI Publications.
7. Xin-She Yang, "Recent Advances in Swarm Intelligence and Evolutionary Computation", Springer International Publishing, Switzerland, 2015.

Course outcomes-

Students will be able to:

1. Learn the concepts of artificial neural networks and Fuzzy Logic.
2. Acquire the knowledge of GA and PSO.
3. Use the Soft Computing Techniques for Power System problems.
4. Apply GA and PSO to Power System optimization problems.

PROGRAM ELECTIVE- I

PSPE 01.1: REACTIVE POWER CONTROL AND MANAGEMENT

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

The Steady State Reactive Power Control in Electrical Transmission Systems: Basics of Reactive Power Control, uncompensated transmission lines, compensated transmission lines, passive shunt compensation, series compensation

UNIT-II

Reactive Power Compensation and The Dynamic Performance of Transmission System: Introduction, passive shunt compensation, Static compensators, Synchronous condenser, characteristics, comparison of compensations.

UNIT-III

Principles of Static Compensators: Introduction, Compensator applications, properties and types of static compensators, Thyristor Controlled Reactor (TCR) and types of compensation, Thyristor Switched Capacitor (TSC), SVC Schemes/Configurations, Fixed Capacitance (FC).

UNIT-IV

Demand Side Management: Load patterns – basic methods load shaping – power tariffs- KVAR based tariffs penalties for voltage flickers and Harmonic voltage levels.
Distribution side Reactive power Management: System losses –loss reduction methods – examples – Reactive power planning – objectives –Economics Planning capacitor placement – retrofitting of capacitor banks.

UNIT-V

User Side Reactive Power Management: KVAR requirements for domestic appliances – Purpose of using capacitors – selection of capacitors – deciding factors – types of available capacitor, characteristics and Limitations.

Reactive power management in electric traction systems and arc furnaces: Typical layout of traction systems – reactive power control requirements – distribution transformers- Electric arc furnaces – basic operations- furnaces transformer –filter requirements –remedial measures –power factor of an arc furnace.

Text Books:

1. Reactive Power Control in Electrical Power Systems by T. J. E. Miller
2. Reactive power Management by D.M. Tagare, Tata McGraw Hill,2004. (Units IV to V)

Course outcomes-

Students will be able to:

1. Understand the significance of reactive power control in power system and principles of various controllers.
2. To know about the importance of reactive power management and various management techniques employed in power system networks

PSPE 01.2: ENERGY AUDITING AND MANAGEMENT

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

System approach and End use approach to efficient use of Electricity, Electricity tariff types.
Energy auditing: Types and objectives - audit instruments, ECO assessment and Economic methods, Specific energy analysis-Minimum energy paths-consumption models- Case study

UNIT-II

Electric motors-Energy efficient controls and starting efficiency-Motor Efficiency and Load Analysis-Energy efficient /high efficient Motors-Case study, Load Matching and selection of motors Variable speed drives; Pumps and Fans-Efficient Control strategies- Optimal selection and sizing-Optimal operation and Storage-Case study, Transformer Loading/Efficiency analysis, Feeder/cable loss evaluation- case study

UNIT-III

Reactive Power Management-Capacitor Sizing-Degree of Compensation-Capacitor Losses-Location-Placement-Maintenance -Case study, Peak Demand controls- Methodologies-Types of Industrial Loads-Optimal Load scheduling-case study, Lighting- Energy efficient light sources-Energy conservation in Lighting Schemes, Electronic ballast-Power quality issues-Luminaries, case study

UNIT-IV

Cogeneration-Types and Schemes-Optimal operation of cogeneration plants-case study, Electric loads of Air conditioning & Refrigeration, Energy conservation measures- Cool storage Types-Optimal operation case study

UNIT-V

Electric water heating-Geysers-Solar Water Heaters, Power Consumption in Compressors, Energy conservation measures, Electrolytic Process, Computer Controls- software-EMS

Text Books:

1. Anthony J. Pansini, Kenneth D. Smalling, .Guide to Electric Load Management., Pennwell Pub; (1998)
2. Howard E. Jordan, .Energy-Efficient Electric Motors and Their Applications., Plenum Pub Corp; 2ndedition (1994)
3. Giovanni Petrecca, .Industrial Energy Management: Principles and Applications., The Kluwerinternational series -207,1999

Course outcomes-

Students will be able to:

1. Acquire the background required for engineers to meet the role of energy managers and to acquire the skills and techniques required to implement energy management
2. Identify and quantify the energy intensive business activities in an organization
3. Able to perform Basic Energy Audit in an Organization

PSPE 01.3: SMART GRID TECHNOLOGIES

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Introduction to Smart Grid: Evolution of Electric Grid, Concept of Smart Grid, Definitions, Need of Smart Grid, Functions of Smart Grid, Opportunities and barriers of smart grid, difference between conventional and smart grid, Concept of Robust & Self Healing Grid Present development & International policies in Smart Grid, Case study of Smart Grid.

UNIT-II

Smart Grid Technologies: Introduction to Smart Meters, Real Time Prizing, Smart Appliances, Automatic Meter Reading (AMR), Outage Management System (OMS), Plug in Hybrid Electric Vehicles (PHEV), Vehicle to Grid, Smart Sensors, Home & Building Automation, Smart Substations, Substation Automation, Feeder Automation, Geographic Information System (GIS), Phase Measurement Unit (PMU).

UNIT-III

Microgrids and Distributed energy Resources: Concepts of Microgrid, need and applications of Microgrid, formation of Microgrid, Issues of interconnection, protection & control of micro-grid, plastic and organic solar cells, Thin film solar cells, Variable speed wind generation, fuel cells, micro-turbines, Captive power plants, Integration of renewable energy sources.

UNIT-IV

Power Quality Management in Smart Grid: Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

UNIT-V

Information and Communication technology for smart grid: Advanced Metering Infrastructure (AMI), Home Area Network (HAN), Neighborhood Area, Network (NAN), Wide Area Network (WAN), Bluetooth, ZigBee, GPS, Wi-Fi, Wi-Max based communication, Wireless Mesh Network, Basics of CLOUD Computing & Cyber Security for Smart Grid, Broadband over Power line (BPL), IP based protocols

Text Books:

1. Ali Keyhani, “Design of smart power grid renewable energy systems”, Wiley IEEE, 2011
2. Clark W. Gellings, “The Smart Grid: Enabling Energy Efficiency and Demand Response”, CRC Press, 2009
3. Janaka Ekanayake, Nick Jenkins, Kithsiri Liyanage, “Smart Grid: Technology and Applications”, Wiley 2012
4. Stuart Borlase, “Smart Grid: Infrastructure, Technology and solutions “CRC Press.
5. A. G. Phadke, “Synchronized Phasor Measurement and their Applications”, Springer.
6. S. Chowdary, S.P. Chowdhury, P. Crossley, “Microgrids and Active Distribution Networks”, Institution of Engineering and Technology.
7. A. Keyhani, M.N. Marwali, M. Dal, “Integration of Green and Renewable Energy in Electric Power Systems”, Wiley.

Course Outcomes-

Students will be able to:

1. Appreciate the difference between smart grid & conventional grid.
2. Apply smart metering concepts to industrial and commercial installations.
3. Formulate solutions in the areas of smart substations, distributed generation and wide area measurements.
4. Come up with smart grid solutions using modern communication technologies.

PSPE 01.4: FACTS AND CUSTOM POWER DEVICES

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Transmission line connections, Power flow in parallel lines, Mesh systems, Stability considerations, Relative importance of controllable parameters, Basic types of FACTS controllers, Shunt controllers, Series controllers, Combined shunt and series controllers, Benefits of FACTS.

UNIT-II

Static versus passive VAR compensator, Static shunt compensators: Static VAR Compensation (SVC) and Static Synchronous Compensation (STATCOM), Operation of Thyristor- Switched Capacitor (TSC), Thyristor Controlled Reactor (TCR) and Static Synchronous Compensation (STATCOM), Comparison between SVC and STATCOM.

UNIT-III

Static series compensation: Thyristor Switched Series Capacitor (TSSC), Static Synchronous Series Compensator (SSSC) – Thyristor Controlled Voltage Reactor (TCVR) and Thyristor Controlled Phase Angle Reactor (TCPAR) principle of Operation, Gate-Controlled Series Capacitor (GCSC), Thyristor Switched Series Capacitor (TSSC) and Static Synchronous series compensators operation (SSSC).

UNIT-IV

Sub Synchronous Resonance (SSR) and its damping, Unified Power Flow Controller Circuit, Arrangement Operation of Unified Power Flow Controller (UPFC), Introduction to interline power flow controller (IPFC).

UNIT-V

Power quality problems in distribution systems, passive filters, active filtering – shunt , series and hybrid, Voltage swells , sags, flicker, unbalance and mitigation of these problems by power line conditioners, IEEE standards on power quality.

Text Books:

1. N.G. Hingorani, L. Gyugyi, “Understanding FACTS: Concepts and Technology of Flexible
2. Padiyar, “FACTS Controllers in Power Transmission and Distribution”, New Age International Publishers, 2007
3. X P Zhang, C Rehtanz, B Pal, “Flexible AC Transmission Systems- Modeling and Control”, Springer Verlag, Berlin, 2006
4. AC Transmission Systems”, IEEE Press Book, Standard Publishers and Distributors, Delhi, 2001.
5. K.S. Suresh kumar, S. Ashok, “FACTS Controllers & Applications”, E-book edition, Nalanda Digital Library, NIT Calicut,2003

Course outcomes-

Students will be able to:

1. Acquire knowledge about the fundamental principles of Passive and Active Reactive Power Compensation Schemes at Transmission and Distribution level in Power Systems.
2. Learn various Static VAR Compensation Schemes like Thyristor/GTO Controlled Reactive Power Systems, PWM_Inverter based Reactive Power Systems and their controls.
3. To develop analytical modeling skills needed for modeling and analysis of such Static VAR Systems.

PROGRAM ELECTIVE- II

PSPE 02.1: DYNAMICS OF SYSTEM THEORY

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Controllers: Introduction to controllers – Need for controllers – Types of Controllers – Proportional, Integral and Derivative Controllers – Transfer function of controllers - PI, PD, PID Controllers – Design of controllers using frequency domain analysis – Controllers applications in Systems.

UNIT-II

State Space Analysis: Mathematical Modeling of Physical systems, solutions of state equations – Homogeneous and Non-homogeneous – state transmission matrix (STM) – Computation of STM, Controllability and observability time invariant linear systems.

UNIT-III

Nonlinear Systems - Different techniques of linearizing non-linear systems – behaviour of nonlinear systems - Common physical non linearities - Describing functions for various types of non-linearities – describing function analysis of nonlinear control systems – singular points of non-linear systems.

UNIT-IV

Pole placement technique: Pole placement technique by state feedback for linear SISO time, invariant system – Theory of high-gain feedback-advantages – Pole placement technique along with high-gain feedback control – state observers – Full order and reduced order observer.

UNIT-V

Stability Analysis: Concept of Stability, Definitions in the sense of Lyapunov, Lyapunov stability theorem - Different methods of constructing Liapunov functions for linear and non-linear continuous systems.

Text Books:

1. Gopal, M., „Modern Control Systems Theory", Wiley Eastern Ltd., 1993.
2. Ogata, K., „Modern Control Engineering", Prentice Hall of India, 4th edition , 2003.
3. Kuo, B.C., „Automatic Control Systems", Prentice Hall of India, 1999. Thomas Kailath, "Linear Systems", Prentice Hall Inc., Englewood Cliffs, N.J. 1980.

Course outcomes-

Students will be able to:

1. To learn linear system modeling, analysis and design so as to obtain the ability to apply the same to engineering problems in a global perspective
2. Design observers and controllers for linear systems
3. Acquire Knowledge of continuous time linear systems modeling, analysis and design.
4. Know the stability analysis using Lyapunov methods

PSPE 02.2: PULSE WIDTH MODULATION FOR PE CONVERTERS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Fundamental Concepts of PWM: Fundamental Concepts of PWM, Evaluation of PWM Schemes, Double Fourier Integral Analysis of a Two-Level Pulse Width- Modulated Waveform, Naturally Sampled Pulse Width Modulation Sine-Sawtooth Modulation, Sine-Triangle Modulation, PWM Analysis by Duty Cycle Variation, Sine-Sawtooth Modulation, Sine-Triangle Modulation

UNIT-II

Regular Sampled Pulse Width Modulation: Fundamental Concepts of PWM, Evaluation of PWM Schemes, Sawtooth Carrier Regular Sampled PWM, Symmetrical Regular Sampled PWM, Asymmetrical Regular Sampled PWM, direct Modulation

UNIT-III

Modulation of One Inverter Phase Leg: Double Fourier Integral Analysis of a Two-Level Pulse Width- Modulated Waveform, Naturally Sampled Pulse Width Modulation, PWM Analysis by Duty Cycle Variation, Regular Sampled Pulse Width Modulation, Integer versus Non-Integer Frequency Ratios

UNIT-IV

Modulation of Single-Phase Voltage Source Inverters: Topology of a Single-Phase Inverter Three-Level Modulation of a Single-Phase Inverter Analytical Calculation of Harmonic Side band Modulation, Switched Pulse Position, Continuous Modulation, Discontinuous Modulation Losses, Switched Pulse Sequence, Discontinuous PWM

UNIT-V

Zero Space Vector Placement Modulation Strategies: Space Vector Modulation, Principles of Space Vector Modulation, SVM Compared to Regular Sampled PWM, Phase Leg References for Space Vector Modulation Naturally Sampled SVM, Analytical Solution for SVM, Harmonic Losses for SVM, Placement of the Zero Space Vector, Discontinuous Modulation, 1200 Discontinuous Modulation, 600 and 300 Discontinuous Modulation

Text Books:

1. D. Grahame Holmes, Thomas A. Lipo, “Pulse width modulation of Power Converter: Principles and Practice”, John Wiley & Sons, 03-Oct-2003
2. J Ned Mohan, Undeland, Robbins, “Power electronics: converters, applications, and design” (John wiley and Sons 2003)

Course outcomes-

Students will be able to:

1. Learn different types of PWM schemes and their applications
2. Asses the THD for different types of PWM schemes
3. Choose suitable PWM scheme for different topologies of power electronic circuits

PSPE 02.3: HIGH POWER CONVERTERS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

High-Power Switching Devices: Gate Turn-Off (GTO) Thyristor, Gate-Commutated Thyristor (GCT), Insulated Gate Bipolar Transistor (IGBT), Other Switching Devices, Operation of Series-Connected Devices Main Causes of Voltage Unbalance, Voltage Equalization for GCTs, Voltage Equalization for IGBTs

UNIT-II

Two-Level Voltage Source Inverters: Introduction, Sinusoidal PWM, Modulation Schemes, Harmonic Content Over-modulation, Third Harmonic Injection PWM, Space Vector Modulation Switching States, Space Vectors, Dwell Time Calculation, Modulation Index Switching Sequence, Spectrum Analysis, Even-Order Harmonic Elimination, Discontinuous Space Vector Modulation

UNIT-III

Cascaded H-Bridge Multilevel Inverters: Introduction, H-Bridge Inverter Bipolar Pulse-Width Modulation, Unipolar Pulse-Width Modulation, Multilevel Inverter Topologies, CHB Inverter with Equal dc Voltage, H-Bridges with Unequal dc Voltages, Carrier Based PWM Schemes, PWM Schemes, Staircase Modulation

UNIT-IV

A **Diode-Clamped Multilevel Inverters:** Three-Level Inverter, Converter Configuration, Switching State, Phase-Shifted Multicarrier Modulation, Level-Shifted Multicarrier Modulation, Comparison Between Phase- and Level-Shifted Commutation, Space Vector Modulation, Inverter Output Waveforms and Harmonic Content, Even-Order Harmonic Elimination, Neutral-Point Voltage Control, Causes of Neutral-Point Voltage Deviation, Effect of Motoring and Regenerative Operation.

UNIT-V

Other Space Vector Modulation Algorithms: Discontinuous Space Vector Modulation, SVM Based on Two-Level Algorithm, High-Level Diode-Clamped Inverters, Four- and Five-Level Diode-Clamped Inverters, Carrier-Based PWM, NPC/H-Bridge Inverter: Inverter Topology, Modulation Scheme, Waveforms and Harmonic Content

Text Books:

1. Bin Wu," High Power Converters and AC Drives (IEEE Press 2008)
2. By Dorian O Neacsu, "Power Switching Converters: Medium and High Power"
3. Handbook on Energy Audit and Environment Management, Y P Abbi and Shashank Jain, TERI,2006
4. Handbook of Energy Audits Albert Thumann, William J. Younger, Terry Niehus, 2009

Course outcomes-

Students will be able to:

1. Learn the characteristics of GTOs, IGBTs and use them in practical systems
2. Knowledge of working of multi-level VSIs, DC-DC switched mode converters, cyclo-converters and PWM techniques and the ability to use them properly
3. Acquire knowledge of power conditioners and their applications
4. Ability to design power circuit and protection circuit of PSDs and converters.

PSPE 02.4: MICRO-CONTROLLER AND APPLICATIONS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Overview of Architecture & Microcontroller Resources: Architecture of a microcontroller – Microcontroller resources – Resources in advanced and next generation microcontrollers – 8051 microcontroller – Internal and External memories – Counters and Timers – Synchronous serial-cum asynchronous serial communication - Interrupts.

UNIT-II

8051- Microcontrollers Instruction Set: Basic assembly language programming – Data transfer instructions – Data and Bit manipulation instructions – Arithmetic instructions – Instructions for Logical operations on the test among the Registers, Internal RAM, and SFRs – Program flow control instructions – Interrupt control flow.

UNIT-III

Real Time Control Interrupts: Interrupt handling structure of an MCU – Interrupt Latency and Interrupt deadline – Multiple sources of the interrupts – non-maskable interrupt sources – Enabling or disabling of the sources – Polling to determine the interrupt source and assignment of the priorities among them – Interrupt structure in Intel 8051. TIMERS: Programmable Timers in the MCU's – Free running counter and real time control – Interrupt interval and density constraints.

UNIT-IV

Systems Design Digital and Analog Interfacing Methods: Switch, Keypad and Keyboard interfacings – LED and Array of LEDs – Keyboard-cum-Display controller (8279) – Alphanumeric Devices – Display Systems and its interfaces – Printer interfaces – Programmable instruments interface using IEEE Bus – Interfacing with the Flash Memory – Interfaces – Interfacing to High Power Devices – Analog input interfacing

UNIT-V

Real Time Operating System for Microcontrollers: Real Time operating system – RTOS of Keil (RTX51) – Use of RTOS in Design – Software development tools for Microcontrollers. 16-BIT MICROCONTROLLERS: Hardware – Memory map in Intel 80196 family MCU system – IO ports – Programmable Timers and High-speed outputs and input captures – Interrupts – instructions. ARM 32 Bit MCUs: Introduction to 16/32 Bit processors – ARM architecture and organization – ARM / Thumb programming model – ARM / Thumb instruction set – Development tools.

Text Books:

1. Raj Kamal, "Microcontrollers Architecture, Programming, Interfacing and System Design" – Pearson Education, 2005.
2. Mazidi and Mazidi, "The 8051 Microcontroller and Embedded Systems" – PHI, 2000.
3. Microprocessors and Microcontrollers, Architecture, Programming and System Design, Krishna Kant, PHI Learning PVT. Ltd.
4. Steve Furber "Arm system-on-chip Architechture",2nd edition, Pearson publication.

References:

1. A.V. Deshmuk, "Microcontrollers (Theory & Applications)" – WTMH, 2005.
2. John B. Peatman, "Design with PIC Microcontrollers" – Pearson Education, 2005.
3. Microcontroller Programming, Julio Sanchez, Maria P. Canton, CRC Press.
4. The 8051 Microcontroller, Ayala, Cengage Learning.
5. Microprocessors, Nilesh B. Bahadure, PHI Learning PVT. Ltd.

Course outcomes-

Students will be able to:

1. Distinguish types of computers & microcontrollers,
2. Use 8-Bit, 16- Bit & 32-Bit advanced Microcontrollers.
3. Develop Real time Applications of Microcontrollers & Demonstrate RTOS for Microcontrollers.
4. Translate Hardware applications using Microcontrollers.

PSCP 01: COMPUTER METHODS IN POWER SYSTEMS LAB

Instruction Hours/week: 3(P) **Credits: 1.5**
Sessional Marks: 40 **Semester-End Examination: 60**

S.No	EXPERIMENTS
1	Formation of Incidence Matrices.
2	Formation of Ybus by using Singular Transformation method.
3	Formation of Ybus by using Direct Inspection method.
4	Formation of Bus Impedance Matrix.
5	Load Flow Analysis by using Gauss-Siedel Method.
6	Load Flow Analysis by using Newton-Raphson Method.
7	Fault analysis for Single line to Ground fault.
8	Fault analysis for Three phase to Ground fault.
9	Generation outage Sensitivity Factor.
10	Line Outage Sensitivity Factor.
11	PV Curve.
12	QV Curve.
13	Load Flow Analysis by using Decoupled Methods.

Note: Any **Ten** Experiments are to be conducted.

PSCP 02: AI APPLICATIONS TO POWER SYSTEMS LAB

Instruction Hours/week: 3(P) **Credits: 1.5**
Sessional Marks: 40 **Semester-End Examination: 60**

S.No	EXPERIMENTS
1	Program to Generate XOR Function using Mc-culloch pits Neuron Model
2	Program to Generate Different Activation Function of Neuron Model
3	Load flow analysis using Neural Network
4	State Estimation Using Neural Network
5	Contingency Analysis Using Neural Network
6	Speed Control of DC Motor Using Fuzzy Logic.
7	Single Area Load Frequency Control using Fuzzy Logic Controller.
8	Two Area Load Frequency Control using Fuzzy Logic Controller.
9	Maximization of SinX function using Genetic Algorithm.
10	Economic Load Dispatch solution without system losses using Genetic Algorithm
11	Economic Load Dispatch solution considering system losses using Genetic Algorithm
12	Economic Load Dispatch Solution using PSO

Note: Any **Ten** Experiments are to be conducted.

PGMC 01: RESEARCH METHODOLOGY AND IPR

Instruction Hours/week: 3(L) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.

UNIT-II

Effective literature studies approaches, analysis, Plagiarism, Research ethics.

UNIT-III

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

UNIT-IV

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT. Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

UNIT-V

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

References:

1. Stuart Melville and Wayne Goddard, “Research methodology: an introduction for science & Engineering students”
2. Wayne Goddard and Stuart Melville, “Research Methodology: An Introduction”
3. Ranjit Kumar, 2nd Edition , “Research Methodology: A Step by Step Guide for beginners”
4. Halbert, “Resisting Intellectual Property”, Taylor & Francis Ltd ,2007.
5. Mayall , “Industrial Design”, McGraw Hill, 1992.
6. Niebel , “Product Design”, McGraw Hill, 1974.
7. Asimov , “Introduction to Design”, Prentice Hall, 1962.
8. Robert P. Merges, Peter S. Menell, Mark A. Lemley, “Intellectual Property in New Technological Age”, 2016.
9. T. Ramappa, “Intellectual Property Rights Under WTO”, S. Chand, 2008

Course outcomes-

At the end of this course, students will be able to

1. Understand research problem formulation.
2. Analyze research related information
3. Follow research ethics
4. Understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
5. Understand that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
6. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

M.TECH – II SEMESTER

SYLLABUS

(R23 REGULATIONS)

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

M.TECH: POWER SYSTEMS - SECOND SEMESTER - SYLLABUS

PSPC 04: ADVANCED POWER SYSTEM PROTECTION

Instruction Hours/week: 4(L) **Credits: 4**

Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

General philosophy of protection - Classification and Characteristic function of various protective relays, basic relay elements and relay terminology - Development of relaying scheme

Numerical Protection: Introduction - Block diagram of numerical relay - Sampling theorem - Correlation with a reference wave - Least Error Squared (LES) technique

UNIT-II

Static Relays: Fundamentals of static relays, Basic Block diagram and principle, Advantages of Static Relays, Types of static relays, Static Over-current relays, Differential relays, Percentage Differential relays, distance relays, characteristics of static relays.

UNIT-III

Amplitude Comparators: Circulating current type and opposed voltage type, rectifier bridge comparators, Instantaneous comparators.

Phase Comparators: Coincidence circuit type, block spike phase comparator, techniques to measure the period of coincidence, Integrating type, Rectifier Phase comparators.

UNIT-IV

Digital Protection of power system apparatus – protection of generators – Transformer protection – magnetizing inrush current – Application and connection of transformer differential relays – transformer over current protection Bus bar protection - line protection - distance protection–long EHV line protection - Power line carrier protection.

UNIT-V

Microprocessor Based Protective Relays: Over current relays – Impedance relays – Directional relay – Reactance relay (Block diagram and flowchart approach).

Basic elements of Digital Protection: Historical Developments in digital protection, performance and operational characteristics of digital protection, basic structure of digital relays, components of digital relay, signal conditioning subsystem, conversion subsystem, digital relay subsystem

Text Books:

1. A.G. Phadke and J. S. Thorp, “Computer Relaying for Power Systems”, Wiley/Research studies Press, 2009
2. A.T. Johns and S. K. Salman, “Digital Protection of Power Systems”, IEEE Press,1999
3. Gerhard Zeigler, “Numerical Distance Protection”, Siemens Publicis Corporate Publishing, 2006
4. S.R.Bhide “Digital Power System Protection” PHI Learning Pvt.Ltd.2014
5. Electrical Power Systems – C.L. Wadwa
6. Lewis Blackburn, J., ‘Protective Relaying – Principles and Applications’, Marcel Dekkar, INC, New York, 2006.
7. Power System Protection with Static Relays – by TSM Rao, TMH.
8. Power system protection & switchgear by Badri Ram & D N viswakarma, TMH.

Course outcomes-

Students will be able to:

1. Learn the importance of static Relays
2. Apply appropriate comparator
3. Learn about digital Protection

PSPC 05: ELECTRICAL POWER DISTRIBUTION SYSTEMS

Instruction Hours/week: 4(L) **Credits: 4**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Distribution of Power, Management, Power Loads, Power System Loading, Short-term & Long-term Load Forecasting, Technological Forecasting. Urban/Rural Distribution, Energy Management and tariffs – Revenue improvement – issues in multi-year tariff and availability based tariff.

UNIT-II

Power Factor Correction, Calculation of Optimum Number of Switches, Capacitors, Optimum Switching Device Placement in Radial Distribution Systems, Sectionalizing Switches – Types, Benefits, Bellman's Optimality Principle.

UNIT-III

Distribution Management System (D.M.S.)-Need, advantages, functions, Distribution Automation: Definition, Restoration / Reconfiguration of Distribution Network-Different Methods and Constraints. Interconnection of Distribution, Control & Communication Systems, Remote Terminal Units, Energy efficiency in electrical distribution & Monitoring

UNIT-IV

SCADA: Introduction, Block Diagram, SCADA Applied To Distribution Automation. Common Functions of SCADA, RTU and Data Communication, Communication media and protocols for Distribution systems- IEC 61850 and IEEE 802.3 standards, Advantages of Distribution Automation through SCADA

UNIT-V

Remote Metering-Automatic Meter Reading and its implementation, Maintenance of Automated Distribution Systems, Difficulties in Implementing Distribution Automation in Actual Practice. AI techniques applied to Distribution Automation.

Text Books:

1. M.K. Khedkar, G.M. Dhole, "A Text Book of Electrical power Distribution Automation", University Science Press, New Delhi
2. A.S. Pabla, "Electric Power Distribution", Tata McGraw Hill Publishing Co. Ltd., Fourth Edition.
3. Anthony J Panseni, "Electrical Distribution Engineering", CRC Press.
4. James Momoh, "Electric Power Distribution, automation, protection & control", CRC Press

Course outcomes-

Students will be able to:

1. Knowledge of power distribution system
2. Study of Distribution automation and its application in practice
3. To learn SCADA system

PSPC 06: WIND AND SOLAR ENERGY SYSTEMS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Renewable Energy System: Introduction to Renewable Energy System**,** Sources of Renewable Energy System**,** Solar and Wind Power in Power System**:** History and current status, characteristics of solar and wind power generation, Network Integration issues.

UNIT-II

Generators and power electronics for wind turbines: Power in wind, availability, Types of wind turbines, Construction features of wind turbines, rotor design considerations, power extraction by turbine, Integration of wind energy converters to electrical networks, applications of wind energy.

UNIT-III

Solar Radiation and its measurements: Introduction, Solar radiation and its measurements, Estimation of average solar radiation.
Solar Energy Collectors: Introduction, Types Characteristics and principles of different types of collectors and their efficiencies, Advantages and Disadvantages

UNIT-IV

Solar Energy Storage: Introduction, Methods of Energy Storage Systems, Solar Ponds. Pumped Energy Storage, Compressed Energy Storage, Storage Batteries.
Applications of Solar Energy: Introduction, Solar Photo-Voltaic cells, PV array and PV module, Maximum power point tracking system.

UNIT-V

Renewable energy integrated with Grid: Introduction, Integration of Wind Energy and solar energy with Power Systems Grid, Impact on Power Quality, Power Electronics and solutions System modeling, Technologies.

Text Books:

1. Thomas Ackermann, Editor, "Wind power in Power Systems", John Willy and sons ltd.2005
2. G.D.Rai "Non-Conventional Energy sources", Khanna Publishers, Newdelhi,1999
3. Patel M.R "Wind and solar Power Systems, Design, Analysis and Operation", CRC Press, New York, Second Edition, 2005.
4. Siegfried Heier, "Grid integration of wind energy conversion systems", John Willy and sons ltd., 2006.
5. K. Sukhatme and S.P. Sukhatme, "Solar Energy". Tata MacGraw Hill, Second Edition, 1996.

Course outcomes-

Students will be able to:

1. Acquire the knowledge on the principles of wind energy generation and solar energy generation.
2. Realize wind energy and solar energy impact on power and voltage quality.
3. Solve the problems related to issues associated with wind and solar energy.

PROGRAM ELECTIVE- III

PSPE 03.1: POWER QUALITY ISSUES AND MITIGATION

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT –I

Electric power quality phenomena- Introduction to Power Quality, IEC and IEEE definitions - power quality disturbances-voltage fluctuations – sags - swells – transients – unbalance - waveform distortion - power frequency variations.

UNIT–II

Transients – origin of transients - classifications of transients – capacitor switching transient – lightning transients - load switching transients – impact on users – protection against transients – mitigation of transients.

UNIT–III

Voltage Variations – Voltage Sags – Magnitude & Duration – types – Sources of Sags – Estimation of Voltage sag performance: Transmission and Utility distribution system, Effect of Sag on AC Motor Drives, Single – Phase Domestic and Office loads, mitigation of Voltage Sag. Origin of Long and Short interruption – influence on various equipments –Mitigation of interruption.

UNIT –IV

Harmonics – Introduction to harmonics - sources of harmonics – definitions & standards – impacts - calculation and simulation –harmonic power flow - mitigation and control techniques – filtering – passive and active.

UNIT–V

Power Quality Mitigation Techniques: Harmonics filters: passive, Active and hybrid filters – Customer power device: Load compensation using DSTATCOM, Voltage regulation using DSTATCOM, protecting sensitive loads using DVR, UPQC: Status of application of customer power devices.

Text Books:

1. G.T. Heydt, " Electric Power Quality", Stars in a Circle Publishers.
2. M.H. Bollen, " Understanding Power Quality Problems", Wiley – IEEE Press.
3. J. Arrillaga, B.C. Smith, N.R. Waston & AR Wood, " Power System Harmonic Analysis", John Wiley.
4. Bollen, M.H.J., 'Understanding Power Quality Problems: Voltage sags and interruptions', IEEE Press, New York, 1999.
5. Arrillaga, J, Watson, N.R., Chen, S., 'Power System Quality Assessment', Wiley, New York, 1999.
6. Heydt, G.T., 'Electric Power Quality', Stars in a Circle Publications, Indiana, 1991.
7. RC Dugan, 'Electrical Power Systems Quality', Mc-Graw Hill.

Course Outcomes: At the end of this course, students will demonstrate the ability to

1. Understand the basic concepts of power quality.
2. Understand the basic concepts of voltage variations and transients
3. Understand different harmonics in power systems
4. Understand the working of Power quality conditioners.

PSPE 03.2: RESTRUCTURED POWER SYSTEMS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Introduction to restructuring of power industry: Deregulation of power industry, unbundling of electric utilities, Issues involved in deregulation, Deregulation of various power systems – Fundamentals of Economics: Consumer behavior, Supplier behavior, Market equilibrium, short and long run costs, Various costs of production – Market models: Market models based on Contractual arrangements, Comparison of various market models, Market Mechanism.

UNIT-II

Power System Operation in Competitive Environment: Role of the independent system operator, Operational planning activities of ISO: ISO in Pool markets, ISO in Bilateral markets, Operational planning activities of a GENCO: GENCOs in Pool and Bilateral markets, market participation issues, competitive bidding.

UNIT-III

Transmission congestion management: Definition of Congestion, reasons for transfer capability limitation, Importance of congestion management, Features of congestion management –Classification of congestion management methods –Calculation of ATC -Non – market methods –Market methods –Nodal pricing –Inter zonal and Intra zonal congestion management –Price area congestion management –Capacity alleviation method.

UNIT-IV

Ancillary service management and pricing of transmission network: Introduction of ancillary services –Types of Ancillary services –Classification of Ancillary services –Load generation balancing related services –Voltage control and reactive power support devices –Black start capability service -ancillary service –Co-optimization of energy and reserve services -International comparison Transmission pricing –Principles –Classification –Role in transmission pricing methods –Marginal transmission pricing paradigm –Composite pricing paradigm –Merits and demerits of different paradigm.

UNIT-V

Power market development in India: Institutional structure in Indian Power sector, generation, transmission and distribution utilities. SO, & LDCs. PFC, REC, ERCs, traders, Power Exchanges and their roles. Availability based tariff, Open access, Industry structure and regulatory framework, market development, RE policies, RPO, Tariff policies. Policy changes, regulatory changes, Critical issues / challenges before the Indian power sector.

Text Books:

1. Steven Stoft, "Power system economics: designing markets for electricity", John Wiley and Sons, 1st edition, 2002.
2. Kankar Bhattacharya, Jaap E. Daadler, Math H.J. Boolen, "Operation of restructured power systems", Springer, 1st edition, 2001.
3. Mohammad Shahidehpour, Muwaffaq Alomoush, "Restructured electrical power systems: operation, trading and volatility", CRC Press; 1st edition, 2017.
4. Loi Lei Lai: Power System Restructuring and Deregulation: Trading, Performance and Information Technology, John Wiley & Sons, Pvt. Ltd., 1st edition, 2001.

Course outcomes-

Students will be able to:

1. Understand the basic reasons and motivations for restructuring worldwide.
2. Understand the roles and responsibilities of different entities in electricity market.
3. Explore issues like congestion management, Transmission pricing, Ancillary Services.
4. Understand the power market scenarios in India.

PSPE 03.3: POWER APPARATUS AND DESIGN

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Principles of Design of Machines -Specific loadings, choice of magnetic and electric loadings, Real and apparent flux densities, temperature rise calculation, Separation of main dimension for DC machines, Induction machines and synchronous machines
Design of Transformers-General considerations, output equation, emf per turn, choice of flux density and current density, main dimensions, leakage reactance and conductor size, design of tank and cooling tubes

UNIT-II

Separation of main dimension for DC machines, Induction machines and synchronous machines, Heating and cooling of machines, types of ventilation, continuous and intermittent rating

UNIT-III

General considerations, output equation for induction machines, Choice of specific electric and magnetic loadings, efficiency, power factor, Number of slots in stator and rotor, Elimination of harmonic torques

UNIT-IV

Design of stator and rotor winding, slot leakage flux, Leakage reactance, equivalent resistance of Magnetizing current, efficiency from design data

UNIT-V

Types of alternators, comparison, specific loadings, output co-efficient, design of main dimensions, Introduction to Computer Aided Electrical Machine Design Energy efficient machines.

Text Books:

1. Clayton A.E, "The Performance and Design of D.C. Machines", Sir I. Pitman & sons, Ltd.
2. M.G. Say, "The Performance and Design of A.C. Machines ", Pitman
3. Sawhney A.K, "A course in Electrical Machine Design", DhanpatRai & Sons, 5th Edition

Course outcomes-

Students will be able to:

1. To give a systematic approach for design and analysis of all rotating machines under both transient and steady state conditions with the dimensions and material used.
2. Ability to design all types of transformers and special machines.

PSPE 03.4: ADVANCED DIGITAL SIGNAL PROCESSING

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Discrete time signals, Linear shift invariant systems-Stability and causality. Sampling of continuous time signals-Discrete time Fourier transform- Discrete Fourier series- Discrete Fourier transform, Z Transform-Properties of different transforms

UNIT-II

Linear convolution using DFT, Computation of DFT Design of IIR digital filters from analog filters, Impulse invariance method, Bilinear transformation method

UNIT-III

FIR filter design using window functions, Comparison of IIR and FIR digital filters, Basic IIR and FIR filter realization structures, Signal flow graph representations Quantization process and errors, Coefficient quantization effects in IIR and FIR filters

UNIT-IV

A/D conversion noise- Arithmetic round-off errors, Dynamic range scaling, Overflow oscillations and zero Input limit cycles in IIR filters, Linear Signal Models

UNIT-V

All pole, All zero and Pole-zero models, Power spectrum estimation- Spectral analysis of deterministic signals, Estimation of power spectrum of stationary random signals

Text Books:

1. Sanjit K Mitra, "Digital Signal Processing: A computer-based approach ", Tata Mc Grow-Hill Edition1998
2. Dimitris G. Manolakis, Vinay K. Ingle and Stephen M. Kogon, "Statistical and Adaptive Signal Processing", Mc Grow Hill international editions. -2000

Course outcomes-

Students will be able to:

1. Knowledge about the time domain and frequency domain representations as well analysis of discrete time signals and systems
2. Study the design techniques for IIR and FIR filters and their realization structures.
3. Acquire knowledge about the finite word length effects in implementation of digital filters.
4. Knowledge about the various linear signal models and estimation of power spectrum of stationary random signals
5. Design of optimum FIR and IIR filters

PSPE 04.1: ELECTRIC AND HYBRID VEHICLES

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

History of hybrid and electric vehicles, Social and environmental importance of hybrid and electric vehicles, Impact of modern drive-trains on energy supplies, Basics of vehicle performance, vehicle power source characterization, Transmission characteristics, Mathematical models to describe vehicle performance

UNIT-II

Vehicle mechanics, roadway fundamentals, laws of motion, vehicle kinetics, dynamics of vehicle motion, propulsion power, velocity and acceleration, propulsion system design Basic concept of hybrid Electric drive Tains, Introduction to various hybrid drive-train topologies, Power flow control in hybrid drive-train topologies.

UNIT-III

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Introduction Motor drives configuration and control of Permanent Magnet Motor Drives Configuration and control of Switch Reluctance, Motor drives, drive system efficiency

UNIT-IV

Matching the electric machine and the internal combustion engine (ICE) Sizing the propulsion motor, sizing the power electronics Selecting the energy storage technology, Communications, supporting subsystems

UNIT-V

Introduction to energy management and their strategies used in hybrid and electric vehicle, Classification of different energy management strategies Comparison of different energy management strategies Implementation issues of energy strategies

Text Books:

1. Iqbal Husain, “Electric and Hybrid Vehicles Design Fundamentals”, CRC Press.
2. Mehrdad Ehsani, Yimin Gao, Sebastien, Ali Emadi, “Modern Electric, Hybrid Electric and Fuel Cell Vehicles”, CRC Press

Course outcomes-

Students will be able to:

1. Acquire knowledge about fundamental concepts, principles, analysis and design of hybrid and electric vehicles.
2. To learn electric drive-in vehicles and traction

PSPE 04.2: INDUSTRIAL POWER ELECTRONICS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT – I

Basic power electronic drive system, components. Different types of loads, shaft-load coupling systems. Stability of power electronic drive,
Introduction to overvoltage conditions and protection, practical overvoltage protection in naturally and forced commutated circuits, overcurrent fault conditions, over current protection, gate protection, heat sinks.

UNIT – II

Modeling of DC machine, Conventional methods of D.C. motor speed control, single phase and three phase converter fed D.C motor drive. Power factor improvement techniques, four quadrant operation. steady-state analysis of the three-phase converter-controlled DC motor drive.

UNIT – III

Chopper fed drives, input filter design. Braking and speed reversal of DC motor drives using choppers, multiphase choppers, steady-state analysis of chopper-controlled DC motor drive, closed-loop operation, dynamic simulation of the speed-controlled DC motor drive.

UNIT – IV

Conventional methods of induction motor speed control. Solid state controllers for Stator voltage control, soft starting of induction motors, Rotor side speed control of wound rotor induction motors. Voltage source and Current source inverter fed induction motor drives – d-q axis modeling and vector control.

UNIT – V

Speed control of synchronous motors, field-oriented control, load commutated inverter drives, switched reluctance motors and permanent magnet motor drives. Introduction to design aspects of machines.

Text Books:

1. P.C Sen, 'Thyristor DC Drives', John Wiley and Sons, New York, 1991.
2. R. Krishnan, 'Electric Motor Drives – Modeling, Analysis and Control', Prentice-Hall of India Pvt. Ltd., New Delhi, 2003.
3. Bimal K. Bose, 'Modern Power Electronics and AC Drives', Pearson Education (Singapore) Pvt. Ltd., New Delhi, 2003.
4. M D Singh, K B Khanchandani, "Power Electronics", Tata Mcgraw-Hill Publishing company limited, New Delhi,2008.

Course Outcomes:

Upon completion of the course, the students will be able to

1. Understand and analyze dc and ac motors supplied from different power converters.
2. Simulate and study motor characteristics with different converter configurations
3. Design and implement a prototype drive system.

PSPE 04.3: SCADA SYSTEM AND APPLICATIONS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

SCADA: Introduction to SCADA, Line diagram of SCADA system, Data acquisition systems, Evolution of SCADA, Monitoring and supervisory functions, Communication technologies,

UNIT-II

SCADA COMPONENTS: Industries SCADA System Components, Schemes- Remote Terminal Unit (RTU), Intelligent Electronic Devices (IED), Programmable Logic Controller (PLC), Communication Network, SCADA Server, SCADA/HMI Systems

UNIT-III

SCADA ARCHITECTURE: SCADA architectures, Various types of technique and applications, advantages and disadvantages of each system, single unified standard architecture -IEC 61850

UNIT-IV

SCADA COMMUNICATION: Schematic diagram of SCADA Communication system, various industrial communication technologies, wired and wireless methods and fiber optics, Open standard communication protocols

UNIT-V

SCADA APPLICATIONS: Utility applications, Transmission and Distribution sector operations, monitoring, analysis and improvement, Industries - oil, gas and water, Case studies, Implementation, Simulation Exercises

Text Books:

1. Stuart A. Boyer: "SCADA-Supervisory Control and Data Acquisition", Instrument Society of America Publications, USA, 2004.
2. Gordon Clarke, Deon Reynders: "Practical Modern SCADA Protocols: DNP3, 60870.5 and Related Systems", Newnes Publications, Oxford, UK, 2004.
3. William T. Shaw, "Cybersecurity for SCADA systems", PennWell Books, 2006.
4. David Bailey, Edwin Wright, "Practical SCADA for industry", Newnes, 2003.
5. Michael Wiebe, "A guide to utility automation: AMR, SCADA, and IT systems for electric power", PennWell 1999.

Course outcomes-

Students will be able to:

1. Describe the basic tasks of Supervisory Control Systems (SCADA) as well as their typical applications
2. Acquire knowledge about SCADA architecture, various advantages and disadvantages of each system
3. Knowledge about single unified standard architecture IEC 61850
4. To learn about SCADA system components: remote terminal units, PLCs, intelligent electronic devices, HMI systems, SCADA server

PSPE 04.4: EMBEDDED SYSTEMS

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**
Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

Introduction: Processor embedded into system, Embedded Hardware Units, Embedded Software in a system, Embedded system-on-Chip (SOC), Design process, Classification of embedded systems

UNIT-II

8051 and Advanced Processor architecture, Memory Organization and Real- World Interfacing: 8051 architecture, Real world interfacing, Introduction to advanced architecture, Processor and memory organization, Instruction-level-parallelism, Performance matrices, Processor selection, Memory selection

UNIT-III

Devices and Communication buses for Devices and network: I/O types and examples, serial communication devices, Parallel device ports, Wireless devices, Timer and Counting devices, Watch dog timer, real time clock

UNIT-IV

Device Drivers and Interrupts service Mechanism. Programmed I/O Busy- Approach with interrupt service mechanism, ISR concept, Interrupt sources, Interrupt handling mechanism, multiple interrupts, DMA, Device driver programming

UNIT-V

Real-Time- Operating systems: OS Services, Process management, Timer functions, Event functions, Memory management, Real- time Operating systems, Basic design using an RTOS. Introduction to Real time Operating Systems: Windows CE, OSEK, Linux 2.6.X and RT Linux

Text Books:

1. Raj Kamal, “Embedded Systems” (T M H), 2008.
2. Peter Marwedel, “Embedded System Design” – Springer Verlog, 2006.
3. Jane W. S. Liu, “Real time Systems”, -Pearson Education, 2000

Course outcomes-

Students will be able to:

1. Program embedded system with 8051 as processor.
2. Understand different types of communication through, parallel ports, wireless
3. Understand significance of device drivers and interrupt mechanism
4. Understand features of different types of real time OS.

PSCP 03: POWER SYSTEM PROTECTION LAB

Instruction Hours/week: 3(P) **Credits: 1.5**
Sessional Marks: 40 **Semester-End Examination: 60**

S.No	EXPERIMENTS
1	Fault Analysis by using the Symmetrical and Unsymmetrical fault MATLAB Simulink model.
2	Transmission fault detection by using Wavelet applications MATLAB Simulink model.
3	Working with Transformer Differential relay model JND, 040
4	Pickup test for Differential Relay.
5	Transformer protection using the Differential Relay for Zone trip fault.
6	Transformer Out Zone (or) Non- Trip faults.
7	Operation of Electromechanical type Earth Fault Relay.
8	Operation of Electromechanical type Over Voltage Relay.
9	Percentage Differential Relay.
10	Micro Controller Based Over Current Relay.
11	Micro Controller Based Over / Under Voltage Relay.

Note: Any **Ten** Experiments are to be conducted.

PSCP 04: WIND AND SOLAR ENERGY SYSTEMS LAB.

Instruction Hours/week: 3(P) **Credits: 1.5**
Sessional Marks: 40 **Semester-End Examination: 60**

S. No	EXPERIMENTS
1	IV & PV characteristics of series and parallel combination of PV module.
2	IV & PV characteristics of PV module with varying the radiation and temperature level.
3	Effect of shading on output power of module.
4	Effect of variation in tilt angle on PV module power.
5	Simulation of IV – PV Curves.
6	Modeling & Simulation of wind turbine generator in MATLAB Simulink.
7	Power Equation simulation for wind turbine.
8	Evaluation of Tip Speed ratio at different wind speed.
9	Evaluation of the efficiency of charge controller.
10	Evaluation of co-efficient of performance of wind turbine.

Note: All the **Ten** Experiments are to be conducted.

PSVAC01: ELECTRICAL SAFETY AND MANAGEMENT

Instruction Hours/week: 3(L) & 1(T) **Credits: 3**

Sessional Marks: 40 **Semester-End Examination: 60**

UNIT-I

INTRODUCTION TO ELECTRICAL SAFETY, SHOCKS AND THEIR PREVENTION: Terms and definitions, objectives of safety and security measures, Hazards associated with electric current, and voltage, principles of electrical safety, Primary and secondary electrical shocks, possibilities of getting electrical shock and its severity, shocks due to flash/ Spark over's, prevention of shocks, safety precautions against contact shocks, flash shocks, burns, approaches to prevent Accidents.

UNIT-II

ELECTRICAL SAFETY IN RESIDENTIAL, COMMERCIAL AND AGRICULTURAL INSTALLATIONS: Wiring and fitting – Domestic appliances – water tap giving shock – shock from wet wall – fan firing shock – multi-storied building – Temporary installations – Agricultural pump installation – Do's and Don'ts for safety in the use of domestic electrical appliances

UNIT-III

ELECTRICAL SAFETY IN HAZARDOUS AREAS: Hazardous zones – class 0,1 and 2 – spark, flashovers and corona discharge and functional requirements –Specifications of electrical plants, equipments for hazardous locations – Classification of equipment enclosure for various hazardous gases and vapours – classification of equipment/enclosure for hazardous locations.

UNIT- IV

ELECTRICAL SAFETY DEVICES: Fire Extinguishers: Fundamentals of fire-initiation of fires, types; extinguishing techniques, prevention of fire, types of fire extinguishers, fire detection and alarm system; CO2 and Halogen gas schemes; foam schemes.

UNIT-V

SAFETY DURING INSTALLATION OF PLANT: Introduction, preliminary preparations, preconditions for start of installation work, during, risks during installation of electrical plant and equipment, safety aspects during installation, field quality and safety during erection, personal protective equipment for erection personnel.

SAFETY MANAGEMENT OF ELECTRICAL SYSTEMS: Principles of Safety Management, Management Safety Policy, Safety organization, safety auditing, Motivation to managers, supervisors, employees.

Text Books:

1. Rao, S. and Saluja, H.L., "Electrical Safety, Fire Safety Engineering and Safety Management", Khanna Publishers, 1988.
2. Pradeep Chaturvedi, "Energy Management Policy, Planning and Utilization", Concept Publishing Company, 1997.

Reference Books:

1. Cooper.W.F, "Electrical safety Engineering", Newnes-Butterworth Company, 1978.
2. John Codick, "Electrical safety hand book", McGraw Hill Inc., New Delhi, 2000.
3. Nagrath, I.J. and Kothari, D.P., "Power System Engineering", Tata McGraw Hill, 1998.
4. Wadhwa, C.L., "Electric Power Systems", New Age International, 2004.

Course outcomes:

At the end of the course, students will be able to

1. Understand the necessity of electrical safety
2. Know about Hazardous zones
3. Apply different safety measures to various machines and equipment
4. Understand the electrical management principles

PSMPS00: MINI-PROJECT WITH SEMINAR

Instruction Hours/week: 1(L) & 2(P) **Credits: 2**
Sessional Marks: 40 **Semester-End Examination: 60**

Mini-Project with Seminar course is a project-based learning methodology in Power System Analysis

Course outcomes: Students will be able to**:**

1. Know the meaning of research problem, Sources of research problem Approaches of investigation of solutions for research problem.
2. Understand effective literature studies approaches, analysis Effective technical writing.
3. Learn how to write an assessment report and preparation of documentation and presentation.
4. Know the criteria characteristics of good research problem.
5. Acquire the knowledge of comprehensive analysis in Electrical Power Network.

M.TECH – III SEMESTER

COURSE INSTRUCTIONS

(R23 REGULATIONS)

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING
M.TECH: POWER SYSTEMS - THIRD SEMESTER - SYLLABUS

PGOE01: OPEN ELECTIVE COURSE (MOOCS)

Instruction Hours/week: 3(L)-MOOCS (12 weeks) **Credits: 3**

Sessional Marks: 00 **Semester-End Examination: 100**

Instructions of the course: The Students can undergo Open Elective Course work (12 week's duration) from the day of commencement of Second semester class work through online (MOOCS)/ NPTEL and can select the subjects that are not covered in the Curriculum. However, the obtained pass certificate should be submitted on or before the last working day of the III - Semester Course work without fail and result will be reflected in III - Semester Marks MEMO. Otherwise, the results will be reflected in supplementary mode.

PSPD01: DISSERTATION PROJECT WORK PHASE-I

Instruction Hours/week: 24(P) **Credits: 12**

Sessional Marks: 20+40 **Semester-End Examination: 40**

Instructions of the course: The Students will acquire knowledge about research problem, sources of research problem Approaches of investigation of solutions for research problem and understand effective literature studies approaches and analysis.

Scheme of Evaluation of Dissertation project work Phase – I: Review after 6 – 8 weeks (20 marks), Continuous Guide Evaluation (40 marks) and End Semester Evaluation (40 marks). – Total Marls: 100 marks.

M.TECH – IV SEMESTER

COURSE INSTRUCTIONS

(R23 REGULATIONS)

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING
M.TECH: POWER SYSTEMS - FOURTH SEMESTER - SYLLABUS

PSPD02: DISSERTATION PROJECT WORK PHASE – II AND VIVA-VOCE

Instruction Hours/week: 32(P) **Credits: 16**

Sessional Marks: 20+40 **Semester-End Examination: 40**

Instructions of the course: The Student will be able to analyze and solve the problem with programmable code/Simulink to obtain appropriate solution, how to write a assessment report and preparation of project work/documentation and presentation of results.
The student must publish the work in a reputed reviewed UGC approved journal.

Scheme of Evaluation of Dissertation project work Phase – II:

1. Review after 8-10 weeks (20 marks) and Continuous Guide Evaluation (40 marks) and End Semester Examination (40 marks).
2. Student must submit their project work on or before the last working day/Instruction Day of the IV Semester of the Program. Otherwise Rs. 1,000/- penalty for late submission will be levied to extend submission up to three months. In case of failure of the said condition the penalty amount will be doubled up to the completion of the course work.

IE11C OPERATIONS PLANNING AND CONTROL
M. Tech I- SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

Unit -I

OPC is a system approach—types of production and OPC functions. Forecasting: Forecasting Methods — Qualitative Methods — Quantitative methods— moving average and exponential smoothing methods for different data patterns. Forecast errors, Tracking signal.

Unit -II

Mass Production Management Principles of flow lines, Assembly line balancing, approach to line balancing — RPW, COMSOAL, Integer, and Dynamic programming formulations. Introduction to transfer lines.Production Planning Linear programming formulations for static demand cases, Product Mix Decisions. Chance- constrained programming models.

Unit -III

Aggregate Production Planning Production planning under dynamic conditions strategies, costs involved Heuristic methods, linear production, and inventory programs. Aggregate production planning — HMMS model, search decision, parametric production planning, management coefficient models. Disaggregation — hierarchical planning, mathematical programming formulations. Master Production Schedule.

Unit -IV

Operations Scheduling Flow shop sequencing and job scheduling. Periodic review models. Continuous review models, lot size models with dynamic demand, and inventory models of spare parts.

Unit -V

Materials Requirement Planning (MRP) Introduction. Inventory in a manufacturing environment. Principles of MRP, MRP processing logic. MRP systems, and MRP-II,Jut-In-Time manufacturing: set-up reduction, stable MPS, and Kanban control.

COURSE OUTCOMES:

From this course, students will be able to

1. Describe Forecasting principles and techniques for short-range and long-range planning
2. Analyse Production requirements for each product and plan the shop floor activities
3. Elaborate Work station loading and scheduling of paths to avoid bottlenecks for smooth production
4. Design Solution for product mix decision using OR techniques.
5. Analyse optimal job sequences to achieve the minimum makespan with maximum production

REFERENCES

1. Montgomery, Operations Research in Production Planning, Scheduling and Inventory Control — Prentice Hall, N.J
2. Buffa, E.S., Operations Management — John Wiley & Sons.
3. Elsyod and Boucher Analysis of Production Systems, Prentice Hall, N.J,ISE Series
4. Burbridge, Production Planning — Heinemann Publishers, 1971.

IE12C WORK SYSTEM DESIGN
M. Tech I- SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Method study: Purpose of work-study-Objectives, applications, Method study definition & basic procedure selection of job, Various recording techniques like outline process charts, flow charts, Man machine charts, Two handed process charts, sting diagram, flow diagram, Multiple activity chart, Simo, Cycle-graphs and chrono-cycle graphs, Critical examination, development and maintenance of improved methods.

UNIT-II

Micro motion studies: Use of fundamental hand motions- principles of motion economy and work place layout, Process planning and design of jigs and fixtures. Applications of method study in office and other diverse functional areas for development and implementation of work systems.

UNIT-III

Ergonomics-Introduction to ergonomics and human engineering, physical basis of mans Perception of his environment. Anthropometry and work design, studies on human psycho sensorial processes for design of work systems.

UNIT-IV

Work Measurement-Work measurement objectives and techniques, time study and rating systems, allowances, standard and allowed time, production norms, production study, activity sampling development of synthetic and standard data, application of work study in non — traditional areas like hospitals, public utilities, etc.

UNIT-V

Principles of predetermined motion time systems (PMTS). The MTM system, its history and development, basic motions and their control characteristics, simultaneous and combined motions, limiting motions, learning curve concepts, application of PMTS & MTM.

COURSE OUTCOMES:

At the end of the course student will be able to

1. Apply the work study procedures and analyse the methods using various recording techniques.
2. Use principles of motion economy and apply the method study in diverse functional areas for development and implementation of work systems.
3. Understand the concept of anthropometry and work system for ergonomic design of work systems
4. Estimate the standard time for a given task using different work measurement systems.
5. Apply the concepts of learning curves, PMTS & MTM to reveal the existence of ineffective time.

REFERENCES

1. Mundel, Motion and Time Study,PHI,1973
2. Niebel, Motion and Time Study. USA Edition
3. Barnes, Motion and Time Study — Design and Measurement of Work.
4. Hank Book of industrial Engineers by H.BMaynard
5. Work study and Ergonomics - S.K. Sharma and Savita Sharma
6. Workstudy – Suresh Dalela

IE13C FACILITIES PLANNING
M. Tech I- SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Facilities Planning: Definition, Significance, Objectives and process of facilities planning — strategic facilities planning; Relationship between product, process and schedule design and facilities planning. Activity relationships and space requirements planning personnel requirements.

UNIT-II

Material Handling: Definition, principles, system design and selection of equipment, unit load concepts. Basic layout types — Immer, Nadler, Muther Apple James and Ree's approaches to plant layout. Modular design concept. Production Line balancing.

UNIT-III

Computer Aided Layout: CRAFT, COFAD, PLANET, CORELAP, ALDEP. Planning for receiving and shipping, storage and ware housing, manufacturing, office planning, facility services and non — manufacturing functions.

UNIT-IV

Quantitative Approaches to facilities Planning: Deterministic models - single and multi - facility location models. Location - Allocation problems - quadratic assignment problem. Warehouse layout models. Plant location problems. Conveyor models. Storage models.

UNIT-V

Probabilistic models: Conveyor models, waiting line models simulation models and storage models Evaluation, selection, implementation and maintenance of the Facilities plan.

COURSE OUTCOMES:

1. Able to know the concept of facilities planning that aid in design of Product, Process and schedule design.
2. Able to design Material handling equipment for industrial and non-industrial purpose.
3. Able to analyse handling, receiving and shipping of goods using computer aided layout software.
4. Able to solve Problems of ware house, conveyor and allocation models using Quantitative approach.
5. Able to simulate the waiting line models, storage models and conveyor models using simulation software.

IE14C APPLIED PROBABILITY AND STATISTICS
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING
Common to Industrial Engineering & Production Engineering
(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to probability: Probability, sample space — axioms of probability, Random variables — Discrete and Continuous — Expectations — Moment Generating functions. Conditional probability — Bayer's theorem — Independent Events.

UNIT-II

Discrete distributions: Binomial, Hyper geometric, Gama, Students t, Chi-square, Weibell distributions. Bivariate random variables and their distributions (with specific reference to bivariate normal distributions only). Conditional distributions — Covariance, Correlation coefficient — Regression of the mean.

UNIT-III

Functions of random variables: Probability distribution of functions of random variables their joint probability distribution.

Sampling: Sampling Distribution — Law of Large Numbers — Central Limit theorem.

UNIT-IV

Estimation: Point Estimation, Interval Estimation and Confidence Intervals. (Maximum Likelihood Estimation), Bayesians Estimation.

Testing of Hypothesis: Simple hypothesis and the Neyman — Pearson lemma — Composite hypothesis — goodness of fit tests.

UNIT-V

Analysis of variance: One way classification — Randomized, complete block designs

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the basic concept of probability.
2. Explain random variables for discrete and continuous probability estimation.
3. Define sampling theory, apply it to predict the event, and analyze the statistical distributions.
4. Analyse different Estimations and Testing of hypothesis
5. Apply the concepts of analysis of variance for the Correlation between the observed and experimental values.

REFERENCES

1. Ian F. Blake, An introduction to Applied Probability — John Wiley & Sons
2. Milton, J.S., Arnold, Jee C., Probability and Statistics in the Engineering andComputing Sciences — Mc Grawhill, 2003.

IE14C FINANCIAL MANAGEMENT AND CONTROL
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Goals and functions of Finance; Concepts in Valuation, Time Value of Money. Principles of Capital budgeting generating of cash flows. Evaluation of investment proposals — Capital rationing and mathematical programming of Capital Budgeting.

UNIT-II

Cost of capital for specific sources of financing and weighted average cost of capital. Evaluation of Risky investments — Generation of information needed to evaluate risky investments when cash flows are independent, sequential decisions and decision trees. Abandonment problems evaluation of projects under firm risk concepts.

UNIT-III

Working capital management — factor, principles short term Vs. long term financing, liquidity of assets and evaluation of alternative ways of financing on the liquidity of firms. Management of Cash and marketable securities management of cash lock box and concentration banking cash management, models of Bumol, Miller and Off, Management of accounts receivable credit collection policies, Evaluating credit applicant, inventory control and financial manager.

UNIT-IV

Cost accounting — Elements of cost, types of methods of costing. Overhead charges and allocation, standard costing and budgetary control/marginal costing. Cost variances — methods of calculating variances. Material, Labour, Expenses and indirect expenses preparation of cost sheets and their usages.

UNIT-V

Tools of financial analysis — financial ratio analysis, Funds flow analysis and financial forecasting, analysis of operating and financial leverage.

COURSE OUTCOMES:

At the end of the course student will be able to

1. Analyse the time value of money, and evaluate the investment proposals and use of different capital budgeting methods.
2. Interpret financial data for the purpose of constructing risk assessment and evaluation of projects under firm risk.
3. Take both long-term and short-term financing decisions and understand the management of Cash and marketable securities management.
4. Understand the several methods of costing, preparation of cost sheets and their usages methods.
5. Apply the tools of financial analysis methods to measure the operating efficiency of business.

REFERENCES

1. Vanhorne, James. C. Financial Management and Policy — Pearson Education.
2. Pandey, I. M., Financial Management
3. Humpton, Financial Decision Making (Concepts, problems and cases) —PHI.
4. Humpton, Hand book of financial decisions —PHI.

IE14C HUMANRESOURCEMANAGEMENT

M.Tech I SEMESTER

INDUSTRIAL ENGINEERING

(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT

UNIT-I

Introduction: Definition of personnel management, concept of labour, organisation and function of the personnel department, personnel policies.

Organisational objectives, functions, relationships, organisational structure of formal and organisations, job design.

UNIT-II

Man power planning: Man power forecasting, mobility and promotion problems, job analysis and job description.

Selection: Developing sources, methods of recruitment, alternative selection policies, application blanks and qualification card, interviews, psychological testing.

UNIT-III

Training: The nature of training, objectives in training, types of training, requirements of effective trainingconventionaltrainingtechniques,grouptraining,organisationdevelopment,evaluatingtraining effectiveness.

Performanceappraisal: Traditional performance appraisal systems, appraisal programs.

UNIT-IV

Wage and Salary Administration: Factors affecting compensation policy – equity and compensation -comparable value, job evaluation, job evaluating systems- simple ranking- job grading-point systems factor comparison system ,effects of job evaluation on human relations, Expectancy theory and compensation, variable compensation, supplementary compensations.

UNIT-

Human Factor Management: Human factors in management behavioural models, motivation, Maslow's hierarchy of needs theory-hygiene approach to motivation, expectancy theory, reinforcement theory McClelland's needs theory, motivational techniques.

Leadership: Definition, trait approaches to leadership, leadership behaviour and styles, situational approach to leadership.

Communication and Counselling: Nature and importance of communications, channels and structure, communication process, Management by objectives, counselling.

COURSE OUTCOMES:

At the end of the course student will be able to

1. Understand concepts of personnel management and organisational structure of formal and organisations identify the importance of human resources.
2. Understand different tools used in planning of human resource needs and select suitable personnel.
3. Understand the effective training techniques and performance appraisal systems for organisational development
4. Establish and maintain an equitable wage and salary system using Wage and salary administration concepts.
5. Understand the concepts of Human factors in management behavioural models, leadership behaviour and importance of communications

REFERENCES

5. Kapoor, N.D., Introduction to Commercial & Industrial Law, Sultan Chand &Sons.

IE14C EXPERTSYSTEMSIN MANUFACTURING
M. Tech I SEMESTER
Common to Industrial Engineering & Production Engineering

(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Artificial Intelligence & Expert Systems, (Knowledge based systems); Definition — Justification — Structure Knowledge acquisition; Knowledge base, Inference engine, User interface, Explanatory module, Forward and backward chaining

UNIT-II

Knowledge representation and inferencing. Building expert systems Suitability of task, architecture, hardware, software, personnel- Expert system building tools language, shells.

UNIT-III

Commercial software for manufacturing applications in CAD, CAPP, MRP, CAM, MRP II, Adaptive control of devices, Robotics, Process control, Fault diagnosis, Failure analysis etc.;

UNIT-IV

Linking expert systems to other software such as DBMS, MIS, MDB, Process control and office- automation.

UNIT-V

Case studies of typical applications in process planning, tool selection, cutting toolselection, part classification, inventory control, facilities planning, etc.

Course Outcomes:

At the end of the course student will be able to

1. Understand the Knowledge based systems in solving real-time problems.
2. Develop the expert systems
3. Apply expert system software for manufacturing applications
4. Link the expert systems to other software.
5. Solve the problems in the field of machining, inventory control, process planning with the help of expertsystems.

IE15C DESIGNFORMANUFACTURING
M. Tech I SEMESTER
Common to Industrial Engineering & Production Engineering

(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Design philosophy-steps in design process-general design rules for manufacturability-basic principles of designing for economical production- creativity in design.

Machining processes: Overview of various machining processes-general design rules for machining- dimensional tolerance and surface roughness-Design for machining- ease – redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

UNIT-II

Metal casting: Appraisal of various casting processes, selection of casting process- general design considerations for casting-casting tolerance-use of solidification, simulation in casting design-product design rules for sand casting.

UNIT-III

Metal joining: Appraisal of various welding processes, factors in design of welding – general design guidelines- pre and post treatment of welds-effects of thermal stresses in weld joints-design of brazed joints. Forging: Design factors for forging–closed die forging design — parting lines of dies — drop forging die design — general design recommendations.

UNIT-IV

Extrusion & Sheet metal work: Design guide lines extruded sections-design principles for punching, blanking, bending, deep drawing-Keeler Goodman forging line diagram – component design for blanking.

UNIT-V

Plastics: Viscous elastic and creep behaviour in plastics-design guidelines for plastic components-design considerations for injection moulding – design guidelines for machining and joining of plastics.

COURSEOUTCOMES:

1. Design components for machining
2. Simulate the casting design and choose the best casting process for a specific product.
3. Evaluate the effect of thermal stresses in weld joints
4. Design components for sheet metal work by understanding in depth the sheet metal processes and their formation mechanisms
5. Design plastic components form machining and joining and selecting a proper processes for different joining cases

REFERENCES:

1. Design for manufacture,Johncobert,AdissonWesley.1995
2. Design for Manufacture by Boothroyd,

IE15C MARKETINGMANAGEMENT
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Marketing System, role of scientific marketing analysis. Marketing models, their uses and limitations.

UNIT-II

Product Decisions: How to introduce new product**-** the generation of product idea, product research, developing utility measures for product research. Product evaluation (Break**-** even analysis). Product development (application of PERT/CPM).

Purchasing Decisions: Purchasing under fluctuating prices purchasing with quantity discounts. Pricing

UNIT-III

Decisions: Objectives in setting market price and the policies adopted in setting market price for a certain product. Strategic pricing analysis (Decision trees in pricing analysis).

UNIT-IV

Advertising Decisions: Sales response to advertising, joint optimization of price advertising and quality, Game theory models in advertising. Media advertising allocation model.

UNIT-V

Promotional Decisions: Spatial allocation of selling expenses, sales men recruitment and selection, application of dynamic programming to promotional effort, Branch-switching analysis.

Distribution Decisions: Distribution Systems, Ware housing problems.

COURSEOUTCOMES:

1. State the role and functions of marketing within a range of organizations.
2. Describe key marketing concepts, theories and techniques for analysing a variety of marketing situations.
3. Use written formats to communicate marketing outcomes.
4. Apply the introduced conceptual frame works, theory and techniques to various marketing contexts.
5. Synthesise ideas into a marketing plan.

REFERENCES:

1. Phillips Kotler, Marketing Management Analysis, Planning & Control.
2. Phillips Kotler, Marketing Management—A Model Building Approach.
3. King, Analytical Methods in Marketing.
4. Station, Fundamentals of Marketing.
5. Montgomery, Management Science applied to Marketing.

IE15C SYSTEMDYNAMICS
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Mental models for traditional management their strengths and weaknesses; Synthesizing concept of traditional management, feedback control, and computer simulation.

UNIT-II

Physical and information flows Causality and its interpretation- Causal loop diagrams and flow diagrams- Decisions and Policies- Level and rate configurations- Principles of modelling- Behavioural characteristics of low order systems.

UNIT-III

Smoothing of information- Exponential delays- Response characteristics of smoothing and delay functions. Simulation of system dynamics models

UNIT-IV

Some applications of system dynamics methodology to policy design problems in industrial economic social, environmental, and technological systems, etc.

UNIT-V

Comparison of system dynamics with popular social science modelling paradigms such as operations research economics and cross- impact theory.

COURSEOUTCOMES:

1. Understand mental models for traditional management and synthesizing concept of traditional management.
2. Able to develop Causal loop diagrams and flow diagrams
3. Analyse the Response characteristics of smoothing and delay functions
4. Apply the system dynamics methodology to policy design problems
5. Able to compare the system dynamics popular social science modelling paradigms.

8. Mohapatra, P.K.J.,P. Mandal, and Bora, M.C., Lecture Notes on System Dynamics.
9. System Dynamics An International Journal of Policy Modelling, System Dynamics Society of India.
10. System Dynamics Review, System Dynamics Society, M.I.T.

IE15C ENTERPRISE RESOURCE PLANNING
M.Tech I SEMESTER
Common to Industrial Engineering & Production Engineering
(Programme Elective- II)
Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to ERP: Enterprise – An Overview, Integrated Management Information, Business Modelling, Integrated Data Model

UNIT-II

ERP and Related Technologies Business Processing Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management (SCM), Customer Relationship Management (CRM), MIS - Management Information System, DSS - Decision Support System, EIS - Executive Information System.

UNIT-III

ERP Manufacturing Prospective: MRP - Material Requirement Planning, BOM - Bill of Material, MRP - Manufacturing Resource Planning, DRP - Distributed Requirement Planning, PDM - Product Data Management

UNIT-IV

ERP Modules Finance, Plant Maintenance, Quality Management, Materials Management

UNIT-V

Benefits of ERP Reduction of Lead-Time, On-time Shipment, Reduction in Cycle Time, Improved Resource Utilization, Better Customer Satisfaction, Improved Supplier Performance, Increased Flexibility, Reduced Quality Costs, Improved Information Accuracy and Design-making Capability

COURSE OUTCOMES:
At the end of the course student will be able

1. To understand the basic concept of enterprise resource planning (ERP).
2. To analyse the related technologies of business processing reengineering.
3. To apply the concept of MRP 1, MRP 2, BOM, DRP and PDM.
4. To develop the ERP models.
5. To understand the ERP reduction of timings and benefits.

REFERENCE:

1. Enterprise Resource Planning - Alexis Leon, Tata McGraw Hill.
2. Enterprise Resource Planning – Diversified by Alexis Leon, TMH.
3. Enterprise Resource Planning - Ravi Shankar & S. Jaiswal ,Galgoti

IE16L INDUSTRIAL LAB – I
M.TECH I SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-1.5

COURSE CONTENT:

LISTOF EXPERIMENTS:

1. Draw two handed process charts for Bolt, Washer & Nut assembly.
2. Performance rating
3. Standard time calculation.
4. Development of OC curves.
5. Pin board study.
6. Inventory control system.
7. Productivity measurement
8. Ergonomic design
9. Random number generation

COURSE OUTCOMES:

1. To develop two handed process charts for Bolt, Washer & Nut assembly.
2. To evaluate performance rating and standard time.
3. To develop OC curves for a sampling study.
4. To understand and analyse the inventory control systems, and random number generation
5. To understand the concept of productivity measurement and ergonomic design.

IE17L SIMULATION LAB – I
M.TECH I SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-3

COURSE CONTENT:

LISTOF EXPERIMENTS:

1. Simplex Method
2. Two Phase Method
3. Big M-Method.
4. Transportation Model
5. Queuing Model
6. Sequencing model
7. Assignment model
8. P-system, Q-system Inventory Models
9. PERT
10. Make or buy decision

COURSE OUTCOMES:

At the end of the course student will be able to

1. To apply the simplex, big M, two-phase methods.
2. To simulate the transportation model, queuing model, sequencing model.
3. To solve P-system, Q-system optimization problems.
4. To apply the PERT for a project duration estimation
5. To solve make or buy decision problems.

IE18C RESEARCH METHODOLOGY AND IPR
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.

UNIT-II

Effective literature studies approaches, analysis, Plagiarism, Research ethics.

UNIT-III

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

UNIT-IV

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT. Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

UNIT-V

New Developments in IPR: Administration of Patent System. New developments in IPR, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

COURSE OUTCOMES:

At the end of this course, students will be able to

1. Understand research problem formulation.
2. Analyse research related information
3. Follow research ethics
4. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
5. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

IE21C ADVANCED OPERATION RESEARCH
M.Tech I SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Non - linear Programming: Classical Optimisation techniques and Kuhn Tucker theory — One dimensional minimization — Unconstrained and Constrained minimisation methods – Quadratic programming.

UNIT-II

Stochastic programming — Geometric programming problem and applications.

UNIT-III

Dynamic Programming: Characteristics of dynamic programming problems — single and multi — stage models — Practical applications to inventory and Cargo loading problems.

UNIT-IV

Multi — criteria Optimization: Introduction to multi criteria optimization — Methods of solution. Goal programming and applications.

UNIT-V

Meta Hemistich — genetic Algorithms, Simulated Annealing, Tabu search, Ant Colony Optimization algorithms.

COURSE OUTCOMES:

At the end of the course student will be able

1. To solve classical optimization problems
2. To apply stochastic programming and geometric programming concepts for solving of problems.
3. To solve constrained and Unconstrained and cargo loading problems by dynamic programming.
4. To apply multi criteria and goal programming for different applications.
5. To understand and apply heuristic algorithms for solving of problems.

REFERENCES:

2. Rao, S.S., Optimisation theory and practice — PHI.
3. Hiller & Liberaman, Operations Research — Tata McGrawhill,7t Edition,2002.

IE22CQUALITY CONTROL AND RELIABILITY
M.TECH I SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-1

Basic Concepts: Definitions of quality, Quality of design, Quality of conformance, and Quality of performance, Dimensions of quality, Quality characteristics, Quality control, Statistical quality control and cost of quality.

Fundamentals of Probability and Statistics: Events, Sample space, Probability rules, Dependent and Independent events, Statistical tools in quality control, Concept of variation, Graphical tools for data representation and analysis, Discrete and continuous probability distributions and their applications in quality control, numerical problems

UNIT-2

Control charts for Variables: Variation, Causes of variation, Objectives of control charts, Choice of variable, Subgroup size and sub grouping, frequency of sampling, control limits. Process capability analysis, Relationship of a process in control to specification limits, Variable charts - X bar chart, R chart, σ chart, revision of control limits and RPI, Introduction to custom chart and moving range charts, numerical problems.

UNIT-3

Control charts for Attributes: Control charts for fraction nonconforming (p chart, np chart) and nonconformities (c chart and u chart) with variable and constant sample size, Choice between variables and attributes control charts, revision of control limits, numerical problems.

Failure Data Analysis : Introduction, Failure Data, Quantitative measures, MTTF, MTBF, Bathtub Curve, Mean Life, Life Testing, numerical problems, Introduction to Failure Mode and Effect Analysis.

UNIT-4

Acceptance Sampling: Fundamentals of acceptance sampling, Sampling methods, OC Curves and their characteristics, AQL, IQL, LTPD, AOQ/AOQL. Types of acceptance sampling-Single, Double, Multiple, and Sequential sampling plans, Average Total Inspection, comparison amongst sampling plans, numerical problems

UNIT-5

System Reliability: Definition, Series, parallel and mixed configuration, Block diagram concept, r-out-of-n structure solving problems using mathematical models. Difficulty in achieving reliability, Methods for improving reliability during design, Different techniques available to improve reliability, Reliability-Cost trade off, Prediction and Analysis, numerical problems.

Maintainability and Availability: Introduction, Techniques available to improve maintainability and availability, trade-off among reliability, maintainability and availability, Simple problems

COURSE OUTCOMES:

At the end of the course student will be able to

1. To understand basic concepts of quality control.
2. To apply the control charts of variables (X bar ,P bar charts) for different applications.
3. To apply the control charts of attributes (C bar ,N bar charts) and **conduct Failure Analysis**
4. To apply acceptance sampling plans for quality control.
5. Understand the concepts of reliability management, and **Maintainability and Availability:**

IE23C SUPPLY CHAIN MANAGEMENT
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
Development of SCM concepts and Definitions – key decision areas – strategic. Supply Chain Management and Key components, External Drivers of Change. Dimensions of Logistics – The Macro perspective and the macro dimension – Logistic system analysis.

UNIT-II
Sourcing strategy: Manufacturing management – make or buy decision – capacity management – Materials Management – choice of sources – procurement planning.

UNIT-III
Distribution strategy: Choice of Market – network design – warehouse designed operation and distribution planning – transportation – packaging.

UNIT-IV
Inventory Strategy: Demand forecasting – inventory planning – planning of stocking facilities – warehouse location allocation. Warehouse design and operations – inventory norms.

UNIT-V
Channels of Distribution – Customer Service Strategy: Identification of Service needs, cost of services – revenue Management.

COURSE OUTCOMES:
At the end of the course student will be able to learn the

1. To understand the concept of SCM and Logistic system analysis.
2. To apply the concepts of manufacturing management and materials management.
3. To develop distribution strategies for market choices warehouses.
4. To develop inventory strategies
5. To understand the channels of distribution.

REFERENCES:

1. Supply Chain Management Strategy, Planning and operation — Sunil Chopra and Peter Meindl.
2. Designing and Managing the Supply Chain: Concepts, Strategies and Case Studies by David Simchi-Levi, Philip Kaminsky and Edith Simchi-Levi
3. Supply Chain Management: Strategy, Planning, and Operation by Sunil Chopra and Peter Meindl 4. Supply Chain Logistics Management by Donald Bowersox, David Closs and M. Bixby Cooper
4. The Handbook of Logistics and Distribution Management: Understanding the Supply Chain by Alan Rushton, Phil Croucher and Peter Baker

IE23C SYSTEM SIMULATION
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
Modelling: Discrete- event and process representations, High- level and low- level languages.

UNIT-II
Input Modelling: fitting distributions to data, selecting distributions without data, non stationary arrival processes, multi variate input models.

UNIT-III
Output Analysis: point and interval estimation for means, probabilities and quintiles.

UNIT-IV
Experiment Design: terminating vs. steady-state simulation, determining number of reps/batches for fixed precision, initial bias mitigation, use of common random numbers and antithetic variates.

UNIT-V
Variety Generation: pseudorandom number generators, inverse cdf transformation, non stationary arrival processes, multivariate input models Using Simulation in Research: experiment within an experiment approach

COURSE OUTCOMES:
At the end of the course student will be able to
1. To understand about the modelling and types of modelling languages.
2. To develop models with multi variety inputs
3. To perform output analysis.
4. To create the experiments designs.
5. To generate random numbers for Simulation

2. A. M. Law and W. D. Kelton (2000), Simulation Modeling and Analysis, 3rd Ed., McGraw Hill International - Industrial Engg. Series.

IE23C PROJECT MANAGEMENT
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Basics of Project Management: Introduction, Need for Project Management, Project Management Knowledge Areas and Processes, The Project Life Cycle, The Project Manager (PM), Phases of Project Management Life Cycle, Project Management Processes, Impact of Delays in Project Completions, Essentials of Project Management Philosophy, Project Management Principles

UNIT-II

Project Identification and Selection: Introduction, Project Identification Process, Project Initiation, Pre-Feasibility Study, Feasibility Studies, Project Break-even point

Project Planning: Introduction, Project Planning, Need of Project Planning, Project Life Cycle, Roles, Responsibility and Team Work, Project Planning Process, Work Break down Structure (WBS)

UNIT-III

Organisational Structure and Organisational Issues: Introduction, Concept of Organisational Structure, Roles and Responsibilities of Project Leader, Relationship between Project Manager and Line Manager, Leadership Styles for Project Managers, Conflict Resolution, Team Management and Diversity Management, Change management

UNIT-IV

Project Performance Measurement and Evaluation: Introduction, Performance Measurement, Productivity, Project Performance Evaluation, Benefits and Challenges of Performance Measurement and Evaluation, Controlling the Projects

UNIT-V

Project Execution and Control: Introduction, Project Execution, Project Control Process, Purpose of Project Execution and Control

COURSE OUT COMES:

At the end of the course, students will be able to

1. Understand the project principles and project life cycles as to avoid the project delays and the design stage itself to arrive at the Break-even point
2. Analysis the project planning, the role and responsibility of the team work in the assignment of jobs
3. understand the Organization structure, responsibilities and role of leaders and team management
4. Analyse the Process of Implementation of Performance Measurements For Better Productivity And Project Process Control
5. Execute And Control Of Projects

IE15C INTELLIGENT MANUFACTURING SYSTEMS
M TECH I SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT I:
Computer integrated manufacturing systems – structure and functional areas of CIM system - AD, CAPP, CAM, CAQC, ASRS and advantages of CIM Manufacturing communication systems – MAP/TOP OSI model, data redundancy, top-down and bottom-up approach, volume of information. Intelligent manufacturing – system components, system architecture and data flow, system operation.

UNIT II:
Components of knowledge-based systems – basic components of knowledge based systems, knowledge representation, comparison of knowledge representation schemes, interference engine, knowledge acquisition Machine learning – concept of artificial intelligence, conceptual learning, and artificial neural networks -biological neuron, artificial neuron, types of neural networks, applications in manufacturing.

UNIT III:
Automated process planning – variant approach, generative approach, expert systems for process planning, feature recognition, phases of process planning knowledge Based System for Equipment Selection (KBSES) – Manufacturing system design, equipment selection problem, modelling the manufacturing equipment selection problem, problem solving approach in KBSES, structure of the KBSES.

UNIT IV:
Group technology: models and algorithms – visual method, coding method, cluster analysis method, matrix formation – similarity coefficient method, sorting-based algorithms, bond energy algorithm, cost-based method, cluster identification method, extended ci method.

UNIT V:
Knowledge-based group technology - group technology in the automated manufacturing system, structure of knowledge-based system for group technology (KBSGT) – data base, knowledge base, clustering algorithm.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Describe the performance of manufacturing systems.
2. Derive the systemic approach for designing and implementing manufacturing systems.
3. Analyze new procedures to improve productivity and existing manufacturing systems.
4. Explain and Analyze online collaboration tools to work in complex teams
5. Understand the group technology in automated manufacturing systems.

4. YagnaNarayana, "Artificial neural networks" , PHI,2009.

IE24C PRODUCTIVITYENGINEERINGMANAGEMENT
M.TECH II SEMESTER
(Programme Elective Course – III)
Common to Industrial Engineering & Production Engineering

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Basic definitions and Scope-Significance of Productivity in economic development. Productivity measurement at nation level. Benefits of higher productivity at firm level. Diversity of productivity concepts.

UNIT-II

Productivity measurement models—Partial Productivity models, the multi—factor productivity Computers for productivity measurement. Productivity Evaluation Productivity Models, Total Model. Expression for Total Productivity change, the Productivity Evaluation Tree.

UNIT-III

Productivity Planning—Long and Short Term Productivity models Causes of flow productivity in companies — various strategies for productivity improvement. The Analytical Productivity Model.

UNIT-IV

Productivity Management at Enterprise level—Productivity Improvement Techniques—Technology based, Materials based, Product based, employee based and cost based. Productivity in service industries

UNIT-V

Case Studies, R&D Productivity, Evaluation of R&D, productivity, Technology Transfer.

COURSE OUTCOMES:

At the end of the course student will be able to learn the

1 Analyse the significance of productivity measurement at national level and firm level
2 Implement the Productivity measurement models.
3 develop Productivity Planning
4 apply Productivity Improvement Techniques
5 Carryout case studies of productivity improvement for entrepreneurship development and technology transfer

REFERENCES

2. Scott, Sink, D., Productivity Management Planning, Measurement and evaluation, control and Improvement.

IE24C LOGISTICS ENGINEERING & MANAGEMENT
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Logistics: Nature & Concepts – Evolution – Importance – Advantage – Objectives – Components – Functions – Supply Chain Management: Nature & Concepts – Value chain – Functions & Contribution – Effectiveness – Framework – Outsourcing – 3 PLs – 4 PLs – Bull whip effect – SC Relationships – Conflict resolution – Harmonious relationship – Customer Service: Nature & Concepts – Importance – Components – Cost – Gap analysis – Strategic management – Case Study.

UNIT-II

Information: Position of Information in L&SCM – Logistical Informational Systems – Operational Logistical Informational Systems – Integrated Information Technology Solution for L&SCM – Emerging L&SCM – Demand Forecasting: Nature & Components – Impact of forecast on L&SCM – Effective forecasting – Techniques – Selection – Principles – Inventory: Concepts – Types – Functions – Elements – Inventory management – ABC analysis – ABC-VED matrix – Materials Requirement Planning – Distribution Requirement Planning – Just in Time System – Prerequisites – Case study

UNIT III

Transportation: Introduction – Position of transportation in L&SCM – Elements of transportation cost – Modes – Multimodal transport – Containerization – Selection of transportation modes – Transportation decision – Transportation network: routing & scheduling – Warehousing & Distribution Centers

UNIT IV

Protective Packaging: Introduction – Concepts – Functions – Forms – Problems – Policy – Order Processing: Introduction – Concepts – Functions – Elements – Significance – Materials Handling: Introduction – Concept – Objective- Principles – Equipments – Considerations – Purchasing & Sourcing Management: Introduction – Nature – Scope – Importance – Trends – Contemporary sourcing & supplier management – Case study.

UNIT-V

Organization: Introduction – Evolutionary trends of L&SCM – Principles – Factors.
Performance Measurement: Introduction – Dimensions – Basic tools – Impediments to improve performance – Case Study.

COURSE OUTCOMES:

At the end of the course student will be able to learn the

1. To understand the basic fundamentals of logistics nature and concepts.
2. Develop Logistical Informational Systems
3. Develop Transportation network
4. Apply the basic concept of protective packaging and material handling
5. Apply the L&SCM tools to improve performance of organisation.

IE24C SERVICE ENGINEERING & MANAGEMENT
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction Strategic service vision, service concepts and strategy, Understanding services, focus on customers, customer service management; Design and delivery of the services, Managing capacity and demand, Service quality and productivity, Globalization of services, Service Network; IT Enabled services, Design and operation of systems for e-Business

UNIT-II

Business Process Management - process analysis, reengineering, process measurement and effectiveness

UNIT-III

Management science application in services- Applications of inventory models, location analysis, queuing theory, operations scheduling, economic analysis, decision models, utility theory, simulation modelling, performance evaluation with data envelopment analysis, AHP and productivity models, evaluation of the dynamics of enablers, inhibitors and results

UNIT-IV

Management Control systems -control processes, performance measurement, variations in management control and modern control systems, management control of projects, management control of reliability; BPO and Services marketing

UNIT-V

Applications of Technology management, Benchmarking, Customer relationship management, Data mining and Knowledge management

COURSE OUTCOMES:
At the end of the course student will be able to learn the

1. To analysis the concept of strategic service vision.
2. To create the business process management and effectiveness of measurements.
3. To apply the management science application in services.
4. To remember the management control systems with their applications.
5. To understand the concept of application of technology management.

IE24C ENERGY MANAGEMENT
M.TECH II SEMESTER
Common to Industrial Engineering & Production Engineering
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Principles of energy management. Managerial organization, Functional areas for i) manufacturing industry, ii) Process industry, iii) Commerce, iv) Government, Role of Energy manager in each of these organizations. Initiating, Organizing, and managing energy management programs.

UNIT-II

Energy Audit: Definition and concepts. Types of energy audits, Basic energy concepts, Resources for plant energy studies. Data gathering, Analytical techniques. Energy Conservation: Technologies for energy conservation, Design for conservation of energy materials, Energy flow networks.

UNIT-III

Alternative Energy Sources: **Solar Energy** – Types of devices for Solar Energy Collection.
Solar Energy Collection: Flat plate and concentrating collectors – Classification of concentrating collectors – Orientation and Thermal analysis – Advanced collectors.
Solar Applications: Solar heating/cooling techniques – Solar distillation and drying - Photovoltaic energy conversion.

UNIT-IV

Wind Energy: Sources and potentials – Horizontal and Vertical axis windmills – Performance characteristics.
Solar Energy Storage: Different methods – Sensible, Latent heat and Stratified storage – Solar Ponds.

UNIT-V

Bio-Mass: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of biogas, utilization for cooking.
Geothermal Energy: Resources, types of wells, methods of harnessing the energy, potential in India.
Ocean Energy: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles.

COURSE OUTCOMES:

At the end of the course student will be able to learn the

1. To remember the principles of energy management.
2. To analysis the energy audit.
3. To understand the basic concepts of Alternate energy sources.
4. To understand the basic concepts of alternate energy sources (wind , solar).
5. To understand the basic concepts of biomass , geothermal and ocean energies.

REFERENCES:

1. Energy Management Hand Book / W.C. Turner (Ed)

5. Energy Management / W.R.Murthy and G.Mc.Kay / BS Publication
6. Management / H.Koontz and CyrillDonnel / McGraw Hill.

IE25L INDUSTRIAL ENGINEERING LAB-II
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-1.5

COURSE CONTENT:

LIST OF EXPERIMENTS:

1. Sales forecasting.
2. Control charts for Variables.
3. Control charts for Attributes.
4. Development of Bill of Materials for MRP.
5. Draw SIMO charts for Ball Point Pen assembly.
6. Determine cycle time using MTM
7. Draw flow process charts for Activities by taking a case study.
8. Determine percentage utilization using work sampling.

COURSE OUTCOMES:

At the end of the course student will be able to

1. Predict future demand using forecasting techniques.
2. Apply the control charts for checking allowable limits.
3. Prepare the BOM for MRP.
4. Apply the concepts of MTM, SIMO charts and work sampling.
5. Draw flow process chart and conduct work sampling study.

IE26L SIMULATION LAB – II
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-1.5

COURSE CONTENT:

LIST OF EXPERIMENTS:

1. PERT Model
2. Transportation Model
3. Queuing Model
4. Sequencing Problem
5. Assignment Problem.
6. DOE by Taguchi design.
7. DOE by Response surface methodology.
8. Single response Optimization.
9. Multi response Optimization.
10. Layout optimization

COURSE OUTCOMES:

At the end of the course student will be able

1.To apply the PERT for a project duration estimation.
2.To simulate the transportation model, queuing model, sequencing model.
3. To develop DOE by Taguchi and Response surface methodology.
4.To solve the single and multi-response optimization problems.
5. To solve layout optimization problems.

IE27C LEADERSHIP QUALTIES FOR ENGINEERS
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to Leadership Roles, functions and characteristics of a leader, evolution and growth of leadership, Leadership traits and ethics, Attitude, Behavior, Personality traits and leadership, Types and Styles of leadership, Leader vs Manager, Essential qualities of an effective leader.

UNIT-II

Leadership and Management (Nature, Scope and Significance of Management, Levels of Management, Functions: Planning, Organizing, Staffing, Directing and Controlling, Skills: Conceptual, Human and Technical, Roles: Interpersonal, Informational and Decisional, difference between a leader and a manager)

UNIT-III

Types of Leaders, Leadership styles: Traditional, Transactional, Transformational, Inspirational and servant leadership and Emerging issues in leadership: Emotional Intelligence and leadership, Trust as a factor, Gender and Leadership.

UNIT-IV

Personality: Concept and Definition, Determinants of personality, Personality traits, Personality characteristics in organizations: Self-evaluation, Locus of control, Self-efficacy, Self-esteem, Self-monitoring: Positive and negative Impact.

UNIT-V

Self-Discovery (Awareness of personal values, beliefs and vision that motivates behavior, Personal SWOT, Trust: Openness, confidentiality, blind spot and unknown part of personality, Self-disclosure, seeking feedback, self-reflection, introspection and self-management.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. To understand the leadership roles.
2. To apply the concepts of Leadership and Management.
3. To understand and apply the concepts of Leadership styles.
4. Inculcate and apply personality development aspects.
5. To inculcate and create awareness.

REFERENCES:

1. Organisational Behaviour , M.Parikh and R.Gupta , Tata McGraw Hill Education Private Limited
2. Organisational Behavior, D. Nelson, J.C Quick and P. Khandelwal, Cengage Publication.

IE27C STRESS MANAGEMENT
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Value Added Course)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Meaning and nature of stress: Difference between eustress and distress; Frustration, conflict and pressure; Meaning of stressors; common stressors at work place: Stressors unique to age and gender. Stress and Memory; Stress and Other Cognitive Variables; Stressful environmental conditions on performance.

UNIT-II

Behavioural aspects of Stress: Adaptive and Maladaptive Behaviour; Individual and Cultural Differences: Sources of Stress- Across the Lifespan; College and Occupational Stress.

UNIT-III

Stress and Work performance: Role of communication in managing stress and work performance: Emotional regulation and coping; Emotional intelligence and conflict management: Emotional Basis and Stress; Stress and Conflict in Relationships. Stress intervention – interpersonal, Management Standards and Management Competencies.

UNIT-IV

Strategies of Stress Management: Prevention of stress Challenging Stressful Thinking; Problem Solving; Emotional and cognitive coping styles: Strategies of Synthesis and Prevention: Resilience and Stress; Optimal functioning; Making changes last; Small changes and large rewards.

UNIT-V

Preparing for the Future: Care of the Self: Nutrition and Other Lifestyle Issues: Stress reduction practices: Time management; Exercise; Relaxation techniques; yoga; meditation.

COURSE OUTCOMES:

1. To understand the cognitive variables of stress and Learn Managing Work-Life Balance
2. Preparing for better future by reducing the stress.
3. To understand the nature and consequences of stress
4. To understand the impact of stress on work.
5. To recognize the stressors, Adaptive and Maladaptive behavior

5. Dutta, P,K, (2010) Stress management Himalaya, Himalaya Publishing House
6. Lee, K. (2014). Reset: Make the Most of Your Stress: Your 24-7 Plan for Well-being. Universe Publishing.

IE27C UNIVERSAL HUMAN VALUES
M.TECH II SEMESTER
INDUSTRIAL ENGINEERING
(Value Added Course)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to Value Education : Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education) Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations.

UNIT-II

Harmony in the Human Being : Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health.

UNIT-III

Harmony in the Family and Society: Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.

UNIT-IV

Harmony in the Nature/Existence : Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence.

UNIT-V

Implications of the Holistic Understanding – a Look at Professional Ethics : Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession.

COURSE OUTCOMES:

1. To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.

2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way.

3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.

REFERENCES:

1. JeevanVidya: EkParichaya, ANagaraj, JeevanVidyaPrakashan, Amarkantak, 1999.

3. The Story of Stuff (Book).
4. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi
5. Small is Beautiful - E. F Schumacher.
6. Slow is Beautiful - Cecile Andrews
7. Economy of Permanence - J C Kumarappa 8. Bharat Mein Angreji Raj – PanditSunderlal.

IE28M: MINI PROJECT WITH SEMINAR

Instruction Hours/ Week: (L-T-P-C): 1-0-2-2

COURSE OUTCOMES:

At the end of this course, students will be able to

1. Apply emerging technology in processes and systems
2. Analyse the results
3. Deduct conclusions from results
4. Prepare report/document
5. Present effectively

CONTENT:

The students are required conduct experimental work/mathematical modelling/simulation on software packages etc. And collect relevant for analysis, and deduct the conclusions from results. Finally, the student should prepare the report and give seminar on project.

Semester III & IV
PE33ED and PE41D Dissertation Work

Phase–I, Phase–II and Viva-Voce

GUIDELINES FOR DISSERATION PHASE-I AND DISSERATION PHASE-II:

1. The dissertation is a yearlong activity; to be carried out and evaluated in two phases i.e. Phase–I in sem-3andPhase–II in sem-4.

2. The dissertation may be carried out in department laboratories/ industry.

3. After multiple interactions with guide and based on comprehensive literature survey, the student shall identify the domain and define dissertation objectives.

4. Phase–I evaluation: A committee comprising of guides of respective specialization shall assess the progress/ performance of the student based on report, presentation and Q&A. In case of unsatisfactory performance, committee may recommend repeating the Phase-I work.

5. During phase – II: Student is required to continue Phase-1 as per the schedule and thesis (combined phase-1&2) should be submitted at end of sem-4. Accomplished results/contributions/innovations should be published in reputed journals/ conferences/Patents.

6. Phase – II evaluation: Guide, committee with external examiner shall assess the progress/performance of the student based on report, presentation and Q&A. In case of unsatisfactory performance, committee may recommend for extension or repeating the work.

COURSE OUTCOMES:

At the end of this course, students will be able to

1. Synthesize knowledge and skills previously gained and applied to anin-depth study and execution of new technical problem.
2. Select different methodologies to carry out the selected project work.
3. Deduct conclusions from results
4. Prepare report/document
5. Present effectively

PE11C ADVANCED MANUFACTURING PROCESSES
M.TECH I SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT - I

Abrasive jet machining: Elements of the process, mechanics of metal removal process parameters, economic considerations, applications and limitations, recent developments.

Ultrasonic machining: Elements of the process, machining parameters, the effect of parameters on surface finish and metal removal rate, mechanics of metal removal process parameters, economic considerations, applications, and limitations.

UNIT - II

Electrochemical Processes: Fundamentals of electrochemical machining, metal removal rate in ECM, Tool design, Surface finish, and accuracy economics aspects of ECM.

Wire EDM Process: General Principles and applications of Wire EDM, Mechanics of metal removal, Process parameters, and selection of tool electrode and dielectric fluids, methods of surface finish, and machining accuracy.

UNIT - III

Electron Beam Machining: Generation and control of electron beam for machining, theory of electron beam machining, Principle, advantages, and limitations, comparison of thermal and non-thermal processes.

Plasma Arc Machining: Principle, machining parameters, the effect of machining parameters on surface finish and metal removal rate, applications, limitations

UNIT - IV

Laser Beam Machining: Principle, the effect of machining parameters on surface finish, applications, and limitations.

Surface Processing Operations: Plating and Related Processes, Conversion Coatings, Physical Vapor Deposition, Chemical Vapour Deposition, Organic Coatings, Porcelain Enamelling and other Ceramic coatings, Thermal and Mechanical Coating Processes.

UNIT - V

Processing of Ceramics: Applications, characteristics, Classification. Processing of particulate ceramics, Powder preparations, consolidation, drying, sintering, hot compaction, area of application, and finishing of ceramics. Processing of Composites: Composite Layers, Particulate and fiber-reinforced composites, Elastomers, Reinforced plastics, MMC, CMC, and Polymer matrix composites.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the Abrasive jet and ultrasonic machining process, applications, recent development, and limitations.
2. Analyze the influence of process parameters on the out responses of electrochemical and wire EDM processes.
3. Explain the Electron Beam and Plasma Arc machining with their principles, applications, and limitations.
4. Know the laser beam application for machining and understand the various surface process operations.
5. Understand and apply the various processing techniques to fabricate ceramic materials and composites for different applications.

PE12C ADVANCED MATERIAL TECHNOLOGY
M.TECH I SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Introduction of advanced materials: Principle of material for engineering applications and their manufacturability. Selection of Materials: Classification of materials, properties required in engineering materials

UNIT-II

Metallic Materials: Fundamental of metallic materials; Crystal structure of metals and alloys Strengthening mechanisms -Phase diagrams- Heat treatment processes -iron-carbon equilibrium diagrams-Advanced Steels and cast irons-Transformation hardening in steels TTT diagrams. Non-Ferrous Materials and High-Temperature Materials: Structure, physical metallurgy, manufacturability, and properties of Al, Mg, and Ti alloys.

UNIT-III

Composite Materials: Definition, Classification, Types of matrices & reinforcements, characteristics & selection, Fiber composites, laminated composites, particulate composites, pre-pregs, sandwich construction. Fabrication methods of in-situ, ex-situ, and Nano composites.

UNIT-IV

Mechanics of Composites: Introduction, Evaluation of the four elastic moduli – Rule of mixture, ultimate strengths of a unidirectional lamina. Hooke's law for different types of materials, number of elastic constants, Two – dimensional relationship of compliance & stiffness matrix. Hooke's law for two-dimensional angle lamina, engineering constants – angle lamina, Invariants, Theories of failure.

UNIT-V

Smart Materials: Introduction to smart materials. Principles, mechanisms, piezoelectric, magnetostrictive, electrostrictive, magnetorheological, electrorheological materials, smart gels. Shape memory alloys and Applications.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the Principle and Classification of engineering materials and their properties
2. Elaborate the phase diagrams of metallic materials and their properties
3. Analyze the Classification of composite materials along with their characteristics
4. Derive ultimate strengths of the unidirectional lamina and theories of failures in composites
5. Explain the Principle and mechanism of smart materials and their applications

REFERENCES:

7. Smart Materials Fabrication and Materials for Micro-Electro-Mechanical Systems: Volume 276 (MRS Proceedings)" by George C Johnson and A Peter Jardine

PE13C ADDITIVE MANUFACTURING
M.TECH I SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Introduction: Introduction to Prototyping, Traditional Prototyping Vs Rapid Prototyping (RP), Need for time compression in product development, Usage of RP parts, Generic RP process, Distinction between RP and CNC and other related technologies, Classification of RP, Need for RP software, MIMICS, Magics, SurgiGuide, 3-matic, 3D-Doctor, Sim plant, Velocity2, VoXim, Solid View, 3DView, etc., Preparation of CAD models, Problems with STL files, STL file manipulation, RP data formats: SLC, CLI, RPI, LEAF, IGES, HP/GL, CT, STEP.

UNIT-II

Rapid Prototyping (RP) Processes: Photo polymerization RP Processes: Stereo lithography (SL), SL resin curing process, SL scan patterns, Micro stereo lithography, Applications of Photo polymerization Processes.

Powder Bed Fusion RP Processes: Stereo lithography (SL), SL resin curing process, SL scan patterns, Micro stereo lithography, Applications of Photo polymerization Processes.
Extrusion-Based RP Processes: Fused Deposition Modelling (FDM), Principles, Plotting and path control, Applications of Extrusion-Based Processes.
Printing RP Processes: 3D printing (3DP), Research achievements in printing deposition, technical challenges in printing, Printing process modeling, Applications of Printing Processes.
Sheet Lamination RP Processes: Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC), Gluing, Thermal bonding, LOM and UC applications.
Beam Deposition RP Processes: Laser Engineered Net Shaping (LENS), Direct Metal Deposition (DMD), Processing-structure-properties, relationships, Benefits and drawbacks

UNIT-III

Rapid tooling: Conventional Tooling Vs. Rapid Tooling, Classification of Rapid Tooling, Direct, and Indirect Tooling Methods, Soft and Hard Tooling methods

UNIT-IV

Reverse engineering: Reverse Engineering (RE) Methodologies and Techniques, Selection of RE systems, RE software, RE hardware, RE in product development

UNIT-V

Errors in RP processes and applications: Pre-processing, processing, post-processing errors, Part building errors in SLA, SLS, etc., Design, Engineering Analysis and planning applications, Rapid Tooling, Reverse Engineering, Medical Applications of RP.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the prototyping, TP vs. RP, RP classification, RP needs and solid view 3D view, and preparation of CAD models.
2. Describe Rapid Prototyping (RP) Processes with their principles, applications, Processing-structure-properties, relationships, Benefits, and drawbacks.
3. Select the rapid tooling methods with Soft and Hard Tooling methods
4. Understand the Reverse Engineering (RE) Methodologies and Techniques.
5. Analyze errors in RP processes and analyze applications of RP in the medical field.

PE14C APPLIED PROBABILITY AND STATISTICS
M.TECH I SEMESTER
COMMON TO INDUSTRIAL ENGINEERING & PRODUCTION ENGINEERING
(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to Probability: Probability, sample space — axioms of probability, Random variables — Discrete and Continuous — Expectations — Moment Generating functions. Conditional probability — Bayer's theorem — Independent Events.

UNIT-II

Discrete Distributions: Binomial, Hyper geometric, Gama, Students t,Chisquare, Weibell distributions. Bivariate random variables and their distributions (with specific reference to bivariate normal distributions only). Conditional distributions — Covariance, Correlation coefficient — Regression of the mean.

UNIT-III

Functions of Random Variables: Probability distribution of functions of random variables their joint probability distribution.

Sampling: Sampling Distribution — Law of Large Numbers — Central Limit theorem.

UNIT-IV

Estimation: Point Estimation, Interval Estimation, and Confidence Intervals. (Maximum Likelihood Estimation), Bayesians Estimation.

Testing of Hypothesis: Simple hypothesis and the Neyman — Pearson lemma — Composite hypothesis — goodness of fit tests.

UNIT-V

Analysis of Variance: One way classification — Randomized, complete block designs.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the basic concept of probability.
2. Explain random variables for discrete and continuous probability estimation.
3. Define sampling theory, apply it to predict the event, and analyze the statistical distributions.
4. Analyse different Estimations and Testing of hypothesis
5. Apply the concepts of analysis of variance for the Correlation between the observed and experimental values.

PE14C OPERATIONS PLANNING AND CONTROL
M.TECH I SEMESTER
COMMON TO INDUSTRIAL ENGINEERING & PRODUCTION ENGINEERING
(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
OPC is a system approach—types of production and OPC functions.
Forecasting: Forecasting Methods — Qualitative Methods — Quantitative methods— moving average and exponential smoothing methods for different data patterns. Forecast errors, Tracking signal.

UNIT-II
Mass Production Management Principles of flow lines, Assembly line balancing; approach to line balancing — RPW, COMSOAL, Integer, and Dynamic programming formulations. Introduction to transfer lines.

Production Planning Linear programming formulations for static demand cases, Product Mix Decisions. Chance- constrained programming models.

UNIT-III
Aggregate Production Planning Production planning under dynamic conditions strategies, costs involved, Heuristic methods, linear production, and inventory programs. Aggregate production planning — HMMS model, search decision, parametric production planning, management coefficient models. Disaggregation- hierarchical planning, mathematical programming formulations. Master Production Schedule.

UNIT-IV
Operations Scheduling Flow shop sequencing and job scheduling. Periodic review models. Continuous review models, lot size models with dynamic demand, and inventory models of spare parts.

UNIT-V
Materials Requirement Planning (MRP): Introduction. Inventory in a manufacturing environment. Principles of MRP, MRP processing logic. MRP systems, and MRP — II, Jut-In-Time manufacturing: set-up reduction, stable MPS, and Kanban control.

COURSE OUTCOMES:

From this course, students will be able to

1. Describe Forecasting principles and techniques for short-range and long-range planning
2. Analyze Production requirements for each product and plan the shop floor activities
3. Elaborate Work station loading and scheduling of paths to avoid bottlenecks for smooth production
4. Design Solution for product mix decision using OR techniques.
5. Analyse Optimal job sequences to achieve the minimum makespan with maximum production

REFERENCES

2. Buffa, E.S., Operations Management — John Wiley & Sons.
3. Elsyod and Boucher Analysis of Production Systems, Prentice Hall, N.J,ISE Series
4. Burbridge, Production Planning — Heinemann Publishers, 1971.

PE14C ADVANCED CASTING TECHNOLOGY
M TECH I SEMESTER
PRODUCTION ENGINEERING
(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Moulding Materials Sand — Silica, Zircon, Chromite, Olivine sands; Binders —Bentonite, cement, sodium silicate, Ethyl silicate, plaster of Paris, carbohydrates, setting oils, synthetic resins; Additives — Coal dust, wood flour, silica flour; Mould and core coatings; Moulds auxiliary materials; Parting agents, core paste, exothermic, insulating sleeve materials; Sand testing and controls.

UNIT-II

Furnaces Design features of Arc and Induction furnaces, heat treatment furnaces including salt bath furnaces and induction heating

UNIT-III

Principles of Casting Design Basic concepts of Engg. Analysis of metal fabrication with particular reference to casting processes. Factors influencing the production of engg., castings to customers' specifications, attempt making. Chvorinov's rule, design of running and feeding systems; factors affecting the engineering design of castings. Functional design, freezing range alloys in metallic and non—metallic moulds, grain refinement, modification, various types of defects in non—ferrous alloys, influence of form and environment.

UNIT-IV

Non-ferrous foundry metallurgy Properties of liquid metals, their significance in foundry practice, oxidation, solution of gases in metals, fluidity, hot tear, shrinkage and solidification Mechanisms of pure metals, Eutectic and long range freezing alloys — some advances in die casting including Acurad process — some features of steel foundry practice, specification of moulding material, Foundry practice of non-ferrous metals and alloys.

UNIT-V

Foundry Mechanization and management General principles and objectives, Plant layout Mechanization foundries, selection of equipment, operation and flow process charts.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Identify materials for moulding, additives, coating, and the methods of sand controls.
2. Analyze different furnaces for metal melting and design a suitable furnace depending on materials.
3. Explain the concepts related to the casting processes and the factors influencing the design process for metals and alloys.
4. Describe the properties of liquid metals and their compositions and attain the various alloys depending upon the temperature, Iron-carbon diagram.
5. Understand the principles of mechanization of foundries with their layouts and purchase of suitable plant layouts.

PE14C EXPERTSYSTEMSIN MANUFACTURING

M. Tech I SEMESTER

Common to Industrial Engineering & Production Engineering

(Programme Elective- I)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Artificial Intelligence & Expert Systems, (Knowledge based systems); Definition — Justification — Structure Knowledge acquisition; Knowledge base, Inference engine, User interface, Explanatory module, Forward and backward chaining

UNIT-II

Knowledge representation and inferencing. Building expert systems Suitability of task, architecture, hardware, software, personnel- Expert system building tools language, shells.

UNIT-III

Commercial software for manufacturing applications in CAD, CAPP, MRP, CAM, MRP II, Adaptive control of devices, Robotics, Process control, Fault diagnosis, Failure analysis etc.;

UNIT-IV

Linking expert systems to other software such as DBMS, MIS, MDB, Process control and office- automation.

UNIT-V

Case studies of typical applications in process planning, tool selection, cutting tool selection, part classification, inventory control, facilities planning, etc.

COURSEOUTCOMES:

At the end of the course student will be able to

1. Understand the Knowledge based systems involving real-time problems.
2. Develop the expert systems
3. apply expert system software for manufacturing applications
4. Link the expert systems to other software.
5. Solve the problems in the field of machining, inventory control, process planning with the help of expert systems.

PE15C ROBOTICS
M TECH I SEMESTER
PRODUCTION ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Fundamentals of robotics – Automation and robotics, Robot Anatomy, Four common robot configurations – SCARA robot – kinematic joints – prismatic, revolute, twisting and revolving Robot wrist motions – YPR motions– Robot work volumes – Robot characteristics – Spatial resolution, Accuracy, Repeatability.

UNIT-II

Control Systems and components – Basic control systems components and models – Mathematical models, transfer function – Block diagrams, Characteristic equations – Controllers – Proportional control, Integral control, Proportional and Derivative (PD) control, Proportional and Integral (PI) control and PID Control. Stability and speed of response of a robot arm.

UNIT-III

Drive systems and sensors –Servo-controlled and non-servo-controlled robots. Powering of the robot arm – Hydraulic, Pneumatic, and Electric drives – Robot joint control design. Types of sensors – Contact and non–contact type sensors – Position sensors – velocity sensors – force sensors – torque sensors – Tactile sensors – proximity and range sensors – Vision sensors.

UNIT-IV

Trajectory planning of a robot arm – cubic polynomials – Trajectory planning and robot controller. Robot end–effectors – grippers and tools – Mechanical grippers – types of gripper mechanisms – gripper force analysis – vacuum grippers – magnetic grippers – Remote Centre Compliance (RCC) device.

UNIT-V

Robot arm kinematics – Homogeneous transformation matrix – DH matrix – Forward and Inverse kinematics of 2R and 3R robot manipulators, Robot Programming methods – Offline and online programming – Manual programming, Lead through programming, robot programming languages—industrial applications of robots.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the fundamentals of robotics and its anatomy.
2. Analyze Robot Configuration and its controls.
3. Describe the Principles of robot programming and handle with a typical robot, control systems & sensors.
4. Analyze the Construction and working of robot components.
5. Design automatic manufacturing cells with robotic controls, robot kinematics, and programming.

PE15C DESIGN FOR MANUFACTURING
M TECH I SEMESTER
COMMON TO INDUSTRIAL ENGINEERING & PRODUCTION ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Design philosophy-steps in design process-general design rules for manufacturability-basic principles of designing for economical production-creativity in design.

Machining Processes: Overview of various machining processes-general design rules for machining- dimensional tolerance and surface roughness-Design for machining – ease – redesigning of components for machining ease with suitable examples. General design recommendations for machined parts.

UNIT-II

Metal Casting: Appraisal of various casting processes, selection of casting process, -general design considerations for casting-casting tolerance-use of solidification, simulation in casting design-product design rules for sand casting.

UNIT-III

Metal Joining: Appraisal of various welding processes, factors in the design of weldments – general design guidelines-pre and post-treatment of welds-effects of thermal stresses in weld joints-design of brazed joints. Forging: Design factors for forging – closed die forging design – parting lines of dies – drop forging die design – general design recommendations.

UNIT-IV

Extrusion & Sheet Metal Work: Design guidelines extruded sections-design principles for punching, blanking, bending, deep drawing-Keeler Goodman forging line diagram – component design for blanking.

UNIT-V

Plastics: Visco elastic and creep behaviour in plastics-design guidelines for plastic components-design considerations for injection moulding – design guidelines for machining and joining of plastics.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Perceive the principles and steps for designing products for economical production.
2. Simulate the casting design and choose the best casting process for a specific product.
3. Evaluate the effect of thermal stresses in weld joints and accessibility of welding processes.
4. Design components for sheet metal work by understanding the design guidelines and principles of sheet metal processes.
5. Design plastic parts for machining, joining, and selecting a proper method for different joining cases.

IE15C ENTERPRISE RESOURCE PLANNING
M.Tech I SEMESTER
Common to Industrial Engineering & Production Engineering
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to ERP: Enterprise – An Overview, Integrated Management Information, Business Modeling, Integrated Data Model

UNIT-II

ERP and Related Technologies Business Processing Reengineering (BPR), Data Warehousing, Data Mining, On-line Analytical Processing (OLAP), Supply Chain Management (SCM), Customer Relationship Management (CRM), MIS - Management Information System, DSS - Decision Support System, EIS - Executive Information System.

UNIT-III

ERP Manufacturing Prospective: MRP - Material Requirement Planning, BOM - Bill Of Material, MRP - Manufacturing Resource Planning, DRP - Distributed Requirement Planning, PDM - Product Data Management

UNIT-IV

ERP Modules Finance, Plant Maintenance, Quality Management, Materials Management

UNIT-V

Benefits of ERP Reduction of Lead-Time, On-time Shipment, Reduction in Cycle Time, Improved Resource Utilization, Better Customer Satisfaction, Improved Supplier Performance, Increased Flexibility, Reduced Quality Costs, Improved Information Accuracy and Design-making Capability

COURSE OUTCOMES:

At the end of the course student will be able

1. To understand the basic concept of enterprise resource planning (ERP).
2. To analyse the related technologies of business processing reengineering.
3. To apply the concept of MRP 1, MRP 2, BOM, DRP and PDM.
4. To develop the ERP models.
5. To understand the ERP reduction of timings and benefits.

REFERENCE BOOKS:

1. Enterprise Resource Planning - Alexis Leon, Tata McGraw Hill.
2. Enterprise Resource Planning – Diversified by Alexis Leon, TMH.
3. Enterprise Resource Planning - Ravi Shankar & S. Jaiswal ,Galgotia

PE15C INTELLIGENT MANUFACTURING SYSTEMS
M TECH I SEMESTER
PRODUCTION ENGINEERING
(Programme Elective- II)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT I:
Computer integrated manufacturing systems – structure and functional areas of CIM system - AD, CAPP, CAM, CAQC, ASRS and advantages of CIM Manufacturing communication systems – MAP/TOP OSI model, data redundancy, top-down and bottom-up approach, volume of information. Intelligent manufacturing – system components, system architecture and data flow, system operation.

UNIT II:
Components of knowledge-based systems – basic components of knowledge based systems, knowledge representation, comparison of knowledge representation schemes, interference engine, knowledge acquisition Machine learning – concept of artificial intelligence, conceptual learning, and artificial neural networks -biological neuron, artificial neuron, types of neural networks, applications in manufacturing.

UNIT III:
Automated process planning – variant approach, generative approach, expert systems for process planning, feature recognition, phases of process planning knowledge Based System for Equipment Selection (KBSES) – Manufacturing system design, equipment selection problem, modelling the manufacturing equipment selection problem, problem solving approach in KBSES, structure of the KBSES.

UNIT IV:
Group technology: models and algorithms – visual method, coding method, cluster analysis method, matrix formation – similarity coefficient method, sorting-based algorithms, bond energy algorithm, cost-based method, cluster identification method, extended ci method.

UNIT V:
Knowledge-based group technology - group technology in the automated manufacturing system, structure of knowledge-based system for group technology (KBSGT) – data base, knowledge base, clustering algorithm.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Describe the performance of manufacturing systems.
2. Derive the systemic approach for designing and implementing manufacturing systems.
3. Analyse new procedures to improve productivity and existing manufacturing systems.
4. Explain and Analyse online collaboration tools to work in complex teams
5. Understand the group technology in automated manufacturing systems.

4. Yagna Narayana, "Artificial neural networks", PHI, 2009.

PE16L PRODUCTION ENGINEERING LAB –I
M TECH I SEMESTER

PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-3

COURSE CONTENT:

LIST OF EXPERIMENTS:

1. Inspection of drill JIG.
2. Simulation of CNC programming, using XL turning m/c
3. Simulation of CNC programming, using milling m/c
4. Screw thread measurement using profile projector
5. Straightness testing by using the Wedge method.
6. Study of Measuring Instruments
7. Sine bar
8. Sand analysis

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Perform Drill jig inspection.
2. Write CNC programming for turning and milling
3. Understand the working of measuring instruments
4. Perform profile and straightness measurements.
5. Utilize the sine bar and sand analysis for the casting process.

PE17L CAD LAB

M TECH I SEMESTER

Instruction Hours/ Week: (L-T-P-C): 0-0-3-3

COURSE CONTENT:

1) Modeling and analysis of machine parts using modeling and simulation packages.
2) Minimum of four exercises in structural and thermal analysis is to be carried out.
3) A case study has to be done by the each student.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the commands of CAD and CAE software's.
2. Able to analyse the structural problems and their solutions using CAE.
3. Able to analyse the thermal problems and their solutions using CAE..
4. Able to analyse manufacturing problems and simulation using the CAE software.
5. Able to apply CAD tools for design and manufacturing applications.

PE18C RESEARCH METHODOLOGY AND IPR
M.TECH I SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.

UNIT-II

Effective literature studies approaches, analysis, Plagiarism, Research ethics.

UNIT-III

Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

UNIT-IV

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT. Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

UNIT-V

New Developments in IPR: Administration of Patent System. New developments in IPR, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

COURSE OUTCOMES:

At the end of this course, students will be able to

1. Understand research problem formulation.
2. Analyze research related information
3. Follow research ethics
4. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
5. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

PE21C COMPUTER INTEGRATED MANUFACTURING
M.TECH II SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Introduction: Scope of computer-integrated manufacturing, Product cycle, and Production automation.

Group Technology: Role of group technology in CAD/CAM integration, Methods for developing part families, Classification and coding, Examples of coding systems, Facility design using group technology, Benefits of GT.

UNIT-II

Computer Aided Process Planning: Role of Process Planning, Approaches to process planning- Manual, Variant, Generative approach; Examples of Process planning systems - CAPP, DCLASS, CMPP; Criteria for selecting a CAPP system, Benefits of CAPP.

UNIT-III

Integrative Manufacturing Planning and Control: Role of integrative manufacturing in CAD/CAM integration, Overview of production control - Forecasting, Master production schedule, Rough – Cut Capacity planning, MRP, Capacity Planning, Order release, Shop-floor control, Quality assurance, Manufacturing Planning, and control systems; Cellular manufacturing, JIT manufacturing.

UNIT-IV

Computer-Aided Quality Control: Terminology in quality control, Contact inspection methods, Non-contact inspection methods, Computer aided testing, and Integration of CAQC with CAD/CAM.

UNIT-V

Computer Integrated Manufacturing Systems: Types of manufacturing systems, Machine tools and related equipment, Material handling systems, Computer control systems, CIMS Benefits.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Define the scope of integrated manufacturing in production.
2. Different Approaches of the planning process in CAPP and their benefits
3. Design a manufacturing cell and cellular manufacturing system
4. Understand the Importance of inspection methods in CAQC
5. Explain types of manufacturing systems and material handling in CIM

PE22C CUTTING TOOL DESIGN AND PRECISION MACHINE TOOL DESIGN STRATEGIES
M.TECH II SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 3-1-0-4

COURSE CONTENT:

UNIT-I

Cutting tool geometry – Tool terminology – Tool signature/nomenclature of single point cutting tool – Tool geometry in ASA, ORS, and NRS systems – Functional angles – true rake and inclination angle – Deformation of metals during cutting – Basic mechanics of metal cutting process – Mechanism of chip formation – Orthogonal cutting and Oblique cutting – Thin zone model and thick zone model – Types of chip – Chip curl – Chip breakers.

UNIT-II

Thin zone model – Merchant analysis – Kinematics of chip –Calculation of metal cutting strain – Measurement of Cutting forces – Dynamometry – Merchant theory and Lee and Shaffer theory – Friction in metal cutting – Effect of friction. Cutting tool materials – Coating of cutting tools – chemical vapor deposition and physical vapor deposition methods.

UNIT-III

Thermal aspects of machining and cutting temperatures and Acoustic Emission (AE) in metal cutting. Cutting fluids – Basic forms of wear in metal cutting – Adhesive, Abrasive and solid–state diffusion. Tool wear and Tool failure – crater wear and flank wear – wear land – Tool life equation – Variables affecting tool life—the economics of machining.

UNIT-IV

Fundamentals of drilling and grinding – Power of drilling – Theory of grinding – Cutting tool design – Types – single point and multi–point cutting tools – Design of a single point turning tool – strength and rigidity criteria – Design of multi–point cutting tools – Profile milling cutters, Drills, Broach and design of Form tools.

UNIT-V

Developments in cutting tool materials for high-speed machining, Introduction to micromachining, Differences between macro cutting and micro cutting, characteristics of micro cutting – size effect, minimum chip thickness, the specific power consumption, etc.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Describe cutting tool geometry and mechanism of chip formation.
2. Understand and explain merchant theory, Lee and Shaffer's theory
3. Understand the practical aspects of tool wear and tool life and their influence on economics
4. Analyze different types of tools and their applications
5. Describe macro and micro cutting and their characteristics.

7. B.L Juneja G.S.Sekhon — Fundamentals of Metal Cutting and MK tools, New Age India Pvt. Ltd. Publishers.

PE23C AUTOMATION IN MANUFACTURING
M.TECH II SEMESTER
PRODUCTION ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Types and strategies of automation, pneumatic and hydraulic components, circuits, automation in machine tools, mechanical feeding and tool changing, and machine tool control.

UNIT-II

Automated Flow Lines: Methods of part transport, transfer mechanism, buffer storage, control function, design, and fabrication considerations.
Analysis of automated flow lines - General terminology and analysis of transfer lines without and with buffer storage, partial automation, and implementation of automated flow lines.

UNIT-III

Assembly System And Line Balancing: Assembly process and systems, assembly line, line balancing methods, ways of improving line balance, flexible assembly lines.

Automated Material Handling And Storage Systems: Types of equipment, functions, analysis, and design of material handling systems, conveyor systems, automated guided vehicle systems. Automated storage and retrieval systems; work in process storage, interfacing handling and storage with manufacturing.

UNIT-IV

Adaptive Control Systems: Introduction, adaptive control with optimization, adaptive control with constraints, application of adaptive control in machining operations. Consideration of various parameters such as cutting force, temperatures, vibration and acoustic emission in the adaptive controls systems.

UNIT-V

Automated Inspection: Fundamentals, types of inspection methods and equipment, Co-ordinate Measuring Machines, Machine Vision.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the various types of automation systems.
2. Solve the line balancing problems in the various flow line systems with and without the use of buffer storage
3. Analyze the different automated material handling, storage and retrieval systems, and automated inspection systems.
4. Utilization of Adaptive Control principles and implementing the same online inspection and control
5. Understand the fundamentals of automation inspection methods.

2. Computer Control of Manufacturing Systems / Yoram Coren/Tata McGraw-Hill edition
3. CAD / CAM/ CIM /P. Radhakrishnan, S.Subrahmanyam, V.Raju/New Age International Publishers
4. Automation / W. Buekinsham, 3rd Edition/PHI Publications

PE23C METAL FORMING TECHNOLOGY
PRODUCTION ENGINEERING
M.TECH SEMESTER II
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
Characteristics of presses types of crank drives, eccentric, knuckle joint, rocker arm, non—geared and geared fly wheel type number of suspensions, use of counterbalances, etc. Types of friction screw presses — 3 wheels, 4 — wheel Vincent, percussion, Belta drive, electric and hydraulic screw drives.

UNIT-II
Input-output balance diagrams of these drives. Characteristics and stroke rating of these machines. Horizontal forge machine, press frame design, guides.

UNIT-III
Fundamental theories of plasticity and mechanics of plastic deformation equations, methods for solution of problems in metal formation processes.

UNIT-IV
Fluid power in metal forming and related machine tools. Introduction of symbols, pumps, accumulators, and valves. Classification of hydraulic presses extrusion, forging, and deep drawing presses — design features — choice of fluid in hydraulic presses.

UNIT-V
Column design in hydraulic presses. Comprehensive design analysis of a deep drawing press and extrusion press. Hammers for hammer forgings. Classification based on action, stands, controls, and power medium. Theoretical principles involved in estimating the efficiency of a hammer, number of strokes, and power variation during — a play hammer.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand Metal forming fundamentals and applications.
2. Analyze Metal forming mechanics.
3. Understand plastic deformation takes place in Metal forming
4. Application of Fluid hydraulics in Metal forming
5. Design analysis of presses and Explain hammer forging and its efficiency

REFERENCES

1. Row., Metal Forming Technology
2. Crane, Press Working of Metals, John Weliy & Sons, 1957

PE23CQUALITY CONTROL AND RELIABILITY
M.TECH I SEMESTER
PRODUCTION ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Basic Concepts: Definitions of quality, Quality of design, Quality of conformance, and Quality of performance, Dimensions of quality, Quality characteristics, Quality control, Statistical quality control and cost of quality.

Fundamentals of Probability and Statistics: Events, Sample space, Probability rules, Dependent and Independent events, Statistical tools in quality control, Concept of variation, Graphical tools for data representation and analysis, Discrete and continuous probability distributions and their applications in quality control, numerical problems

UNIT-II

Control charts for Variables: Variation, Causes of variation, Objectives of control charts, Choice of variable, Subgroup size and sub grouping, frequency of sampling, control limits. Process capability analysis, Relationship of a process in control to specification limits, Variable charts - X bar chart, R chart, σ chart, revision of control limits and RPI, Introduction to custom chart and moving range charts, numerical problems.

UNIT-III

Control charts for Attributes: Control charts for fraction nonconforming (p chart, np chart) and nonconformities (c chart and u chart) with variable and constant sample size, Choice between variables and attributes control charts, revision of control limits, numerical problems.

Failure Data Analysis : Introduction, Failure Data, Quantitative measures, MTTF, MTBF, Bathtub Curve, Mean Life, Life Testing, numerical problems, Introduction to Failure Mode and Effect Analysis.

UNIT-IV

Acceptance Sampling: Fundamentals of acceptance sampling, Sampling methods, OC Curves and their characteristics, AQL, IQL, LTPD, AOQ/AOQL.

Types of acceptance sampling-Single, Double, Multiple, and Sequential sampling plans, Average Total Inspection, comparison amongst sampling plans, numerical problems.

UNIT-V

System Reliability: Definition, Series, parallel and mixed configuration, Block diagram concept, r-out-of-n structure solving problems using mathematical models. Difficulty in achieving reliability, Methods for improving reliability during design, Different techniques available to improve reliability, Reliability-Cost trade off, Prediction and Analysis, numerical problems.

Maintainability and Availability: Introduction, Techniques available to improve maintainability and availability, trade-off among reliability, maintainability and availability, Simple problems

COURSE OUTCOMES:

At the end of the course student will be able to

1. To understand basic concepts of quality control.
2. To apply the control charts of variables (X bar ,P bar charts) for different applications.
3. To apply the control charts of attributes (C bar ,N bar charts) and **conduct Failure Analysis**
4. To apply acceptance sampling plans for quality control.
5. Understand the concepts of reliability management, and **Maintainability and Availability:**

5. Srinath, L.S., Concepts in Reliability Engineering — Prentice Hall India.

PE23C FINITE ELEMENT METHOD
M.TECH II SEMESTER
PRODUCTION ENGINEERING
(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Overview of FEM: Basic concepts – Historical background – General applicability of methods – one-dimensional heat transfer, fluid flow, solid bar under axial load – Engineering applications of finite element method– general procedure in FEM – comparison of FEM and other solutions methods.

UNIT-II

Approximate methods of Analysis: Methods of Weighted residuals – point collocation – Collection of sub-regions – least squares -Galerkin method, - Rayleigh`s method, Rayleigh-Ritz method, Ritz method, FDM

Discretization of Domain: Introduction to the discretization of Domain – Basic element shapes – Discretization process –Types of elements and sizes – Finite representation of bodies – Node Numbering scheme –Automatic mesh generation methods.

UNIT-III

Interpolation Methods: Introduction to interpolation polynomials – Polynomial forms of interpolation functions –Simplex, complex and multiplex elements – interpolation polynomial in terms of nodal degrees of freedom – Selection of order of interpolation polynomial – Convergence requirements – linear interpolation polynomials in terms of global co-ordinates - interpolation polynomials in terms of local co-ordinates.

UNIT-IV

Higher Order and Iso Parametric Elements: Higher order one-dimensional elements – Higher order elements in terms of natural co-ordinates - Higher order elements in terms of interpolation polynomials, One-Dimensional elements, and two-dimensional elements using classical interpolation polynomials – comparative studies of elements – Iso parametric elements - shape function in co-ordinate transformation –continuity and compatibility – Numerical integration

UNIT-V

Applications in Solid Mechanics: Introduction - Plane stress – Plain strain rectangular element – Iso parametric formulation –Axis- metric stress analysis

Applications in Heat Transfer: Introduction – One-dimensional heat conduction: quadratic element – One-dimensional heat conduction with convection

Applications in Fluid Mechanics: Introduction – Governing equation for incompressible flow: Rotational and Irrotational.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand the General procedure of FEM and its applications
2. Elaborate on different analysis methods of FEM
3. Describe polynomial forms of interpolation
4. Evaluate high-order one-dimensional elements and iso parametric elements
5. Analyze the various applications of FEM in engineering.

REFERENCES:

1. Finite element method in Engineering – SS. Rao, Edition 4, Elsevier Publications, 2004

5. Finite Element Procedures, Klaus-Jurgen Bathe, Prentice Hall Professional, Revised Edition.1995.

PE24C ADVANCED WELDING PROCESSES
M.TECH II SEMESTER
PRODUCTION ENGINEERING
(Programme Elective Course – IV)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
General survey and Classification of welding processes. Conventional gas welding and cutting. Manual metal arc welding. Electrode coverings and their functions. Continuous processes based on the above.

UNIT-II
Submerged arc welding — types of fluxes and their compounding Wire and strip electrodes. Gas-shielded welding TIG and MIG and MAG/ CO_2 processes. Consideration of shielding gases, electrode polarity, current setting, metal transfer, and arc length control. Plasma welding and cutting processes. Equipment maintenance, application of the above.

UNIT-III
Electrical power sources for welding; General characteristics of transformer, transformer—rectifier, and motor generator sets. Use of pulsed currents. Pressure welding processes Solid phase bonding, friction welding, and ultrasonic welding.

UNIT-IV
Explosive welding, Diffusion bonding, and adhesive bonding. Resistance welding Spot, Seam and projection welding, Flash and upset butt welding.

UNIT-V
Brazing and soldering: Electron Beam, Laser, and Infrared Welding. Principles, Operational details, process controls, and application of the above processes.

COURSE OUTCOMES:
At the end of the course, students will be able to

1. Understand the different weldability testings for different metals.
2. Describe the different types of welding and its applications.
3. Explain the electric power sources for welding and pressure welding processes.
4. Understand the different types of bondings and their advantages.
5. Distinguish between brazing and soldering and their applications.

6. Advanced Welding Systems. Vol.1; Vol.2 and 3 by Jean Cornu, USA Edition.

PE24C OIL HYDRAULICS AND PNEUMATICS
M.TECH II SEMESTER
PRODUCTION ENGINEERING
(Programme Elective Course – IV)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I
Introduction
Functional requirements of power transmission, different types of power transmission systems and their combinations; Fundamentals of oil hydraulics and pneumatics, Control functions of oil hydraulic systems; Comparison between Mechanical, Oil Hydraulic, Pneumatic, and Electrical power transmission systems; Advantages, disadvantages, and Applications of Oil Hydraulic and Pneumatic power transmissions.

UNIT-II
System Components
Hydraulic & Pneumatic Symbols as per ISO/ANSI, Properties and selection of hydraulic fluids, Filtration, Hydraulic Reservoirs, Accumulators, Intensifiers or Pressure Boosters, Seals, and Packing.

UNIT-III
Oil Hydraulic Pumps and Actuators
Construction, the working Principle and operation of rotary & reciprocating pumps like Gear, Vane, Generated-Rotor, Screw, Axial Piston, Radial Piston, Pump characteristics, Specifications and selection of pumps; Linear actuators like Ram type, Telescopic, and Single acting/double acting, types of their constructions, types of mountings, cylinder materials, cushioning of hydraulic cylinders, Rotary actuators, specifications, sizing and selection of pumps and actuators.

UNIT-IV
Control Valves
Construction, working Principle, and operation of Direction control valves, Flow control valves, and Pressure control valves, including Check, Pressure relief, Compound Pilot operated Pressure Relief, Safety, Sequence, Pressure Reducing, Unloading, and Counterbalance valves—different types of center positions of DCVs, Methods of actuation of DCVs.
Hydraulic and Pneumatic Controllers used in Feedback Control systems
Construction, working Principle, and operation of Proportional and Servo control valves, including Servo-type DCV-like nozzle valves, flapper-type valves, mechanical servo valves, single and double stage servo valves; Applications of servomotor systems in feedback control systems.

UNIT-V

Hydraulic Circuits

Reciprocation, quick return, sequencing, flow control circuits, synchronizing circuits, accumulator circuits, industrial circuits like press circuits, machine tool circuits, forklift, earth mover circuits- design and selection of components.

Pneumatic circuits

Compressed air production and distribution, pneumatic control components, examples of application including electro-pneumatic and hydro-pneumatic controls.

COURSE OUTCOME:

At the end of the course, students will be able to

1. Analyze the functional requirements of a power transmission system for a given application.
2. Understand the system components of Hydraulic and pneumatic symbols.
3. Design an appropriate hydraulic or pneumatic circuit, and develop a circuit diagram.
4. Describe the control valves and Hydraulic and pneumatic controller and their applications.
5. Design the hydraulic and pneumatic circuit and its selection.

REFERENCES:

5. The Analysis & Design of Pneumatic Systems by B. W. Anderson, John Wiley.
6. Control of Fluid Power Analysis and Design by Mc Clay Donaldson, Ellis Horwood Ltd.
7. Hydraulic and Pneumatic Controls: Understanding made Easy, K.Shanmuga Sundaram, S.Chand & Co Book publishers, New Delhi, 2006 (Reprint 2009)

PE24C PRODUCTIVITYENGINEERINGMANAGEMENT
M.TECH II SEMESTER
Common to Industrial Engineering & Production Engineering

(Programme Elective Course – III)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Basic definitions and Scope - Significance of Productivity in economic development. Productivity measurement at nation level. Benefits of higher productivity at firm level. Diversity of productivity concepts.

UNIT-II

Productivity measurement models—Partial Productivity models, the multi—factor productivity Computers for productivity measurement. Productivity Evaluation Productivity Models, Total Model, Objectives Matrix. Expression for Total Productivity change, the Productivity Evaluation Tree.

UNIT-III

Productivity Planning- Long and Short Term Productivity models—Causes of low productivity in companies — various strategies for productivity improvement. The Analytical Productivity Model.

UNIT-IV

Productivity Management at Enterprise level—Productivity Improvement Techniques—Technology based, Materials based, Product based, employee based and cost based. Productivity in service industries

UNIT-V

Case Studies, R&D Productivity, Evaluation of R&D, productivity, Technology Transfer.

COURSEOUTCOMES:

At the end of the course student twill be able to

1. Analyze the significance of productivity measurement at national level and firm level
2. Implement the Productivity measurement models.
3. Develop Productivity Planning
4. Apply Productivity Improvement Techniques
5. Carryout case studies of productivity improvement for entrepreneur ship development and technology transfer.

PE24C ENERGY MANAGEMENT

M.TECH SEMESTER II

Common to Industrial Engineering & Production Engineering

(Programme Elective Course – IV)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction: Principles of energy management. Managerial organization, Functional areas fori) manufacturing industry, ii) Process industry, iii) Commerce, iv) Government, Role of Energy manager in each of these organizations. Initiating, Organizing, and managing energy management programs

UNIT-II

Energy Audit: Definition and concepts. Types of energy audits, Basic energy concepts, and Resources for plant energy studies. Data gathering, Analytical techniques. Energy Conservation: Technologies for energy conservation, design for conservation of energy materials, and Energy flow networks. Critical assessment of energy usage. Formulation of objectives and constraints, Synthesis of alternative options, and technical analysis of options. Process integration.

UNIT-III

Economic Analysis: Scope, Characterization of an investment project. Types of depreciation, Time value of money. Budget considerations, Risk analysis.

UNIT-IV

Alternative Energy Sources:

Solar Energy – Types of devices for Solar Energy Collection – Thermal Storage System – Control Systems-

Wind Energy – Availability – Wind Devices – Wind Characteristics – Performance of Turbines and Systems.

UNIT-V

Bio-Mass: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation, and economic aspects.

Geothermal Energy: Resources, types of wells, methods of harnessing the energy, potential in India.

Ocean Energy: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Describe the principles and functional area of energy management.
2. Learning the basics of energy auditing with applications in different sectors.
3. Evaluate risk analysis and decision estimations in budget.
4. Identify opportunities for increasing the rational use of alternative energies.
5. Analyze the biomass system, conversion, and utilization.

6. Management / H.Koontz and Cyrill Donnel / McGraw Hill
7. Rai G.D. : Non-conventional Energy Sources, Standard Publishers Distributors

PE25L PRODUCTION ENGINEERING LAB –II
M.TECH II SEMESTER
PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-1.5

COURSE CONTENT:

LIST OF EXPERIMENTS:

1. Measurement of cutting forces using lathe tool dynamometer.
2. Measuring cutting forces using a drill dynamometer
3. To determine the major & minor flank angle of a particular screw by using the tool makers microscope.
4. To arrange the dividing head for differential indexing, to divide a circular part into a number of parts, using differential indexing.
5. Surface roughness measurement by using Talysurf
6. Measurement of cutting forces in milling
7. Spur gear measurement
8. Welding
9. To write a manual part program for the profile turning cycle to the given dimensions for a typical part.
10. To write the manual part program for the drilling operation

COURSE OUTCOMES:

At the end of the course student will be able to

1. Measure cutting forces using a dynamometer for the lathe, drilling, and milling machines, and arrange differential indexing.
2. The major and minor flank angles of the screw by using a toolmakers microscope
3. The surface roughness using Talysurf and Spur gear measurement
4. Perform welding and analysis
5. Part programming for the given typical part and manual part programming for the drilling operation

PE26L CAM LAB

M.TECH II SEMESTER

PRODUCTION ENGINEERING

Instruction Hours/ Week: (L-T-P-C): 0-0-3-1.5

COURSE CONTENT:

LIST OF EXPERIMENTS:

1. Preparation of process planning.
2. CNC programming using G & M codes for the given work piece & also shows the simulation using CNC lathe software.
3. Simulation & execution of a part program for a given component using CNC milling.
4. Fabrication of a component using CNC Lathe.
5. Fabrication of a component using CNC machining center.

Note: Conduct at least 8 Exercises in the above topics.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Define the preparation o process planning.
2. Write a Program for a CNC lathe using G&M codes
3. Analyze the simulation of the CNC lathe process and execute a part program.
4. Write a Program for CNC milling using G&M codes
5. Analyze the simulation of CNC milling and execute a part program for a given component.

PE27C LEADERSHIP QUALTIES FOR ENGINEERS

M.Tech II Semester

Common to Industrial Engineering & Production Engineering

(Value Added Course)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to Leadership Roles, functions and characteristics of a leader, evolution and growth of leadership, Leadership traits and ethics, Attitude, Behavior, Personality traits and leadership, Types and Styles of leadership, Leader vs Manager, Essential qualities of an effective leader.

UNIT-II

Leadership and Management (Nature, Scope and Significance of Management, Levels of Management, Functions: Planning, Organizing, Staffing, Directing and Controlling, Skills: Conceptual, Human and Technical, Roles: Interpersonal, Informational and Decisional, difference between a leader and a manager)

UNIT-III

Types of Leaders, Leadership styles: Traditional, Transactional, Transformational, Inspirational and servant leadership and Emerging issues in leadership: Emotional Intelligence and leadership, Trust as a factor, Gender and Leadership.

UNIT-IV

Personality: Concept and Definition, Determinants of personality, Personality traits, Personality characteristics in organizations: Self-evaluation, Locus of control, Self-efficacy, Self-esteem, Self-monitoring: Positive and negative Impact.

UNIT-V

Self-Discovery (Awareness of personal values, beliefs and vision that motivates behavior, Personal SWOT, Trust: Openness, confidentiality, blind spot and unknown part of personality, Self-disclosure, seeking feedback, self-reflection, introspection and self-management.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. To understand the leadership roles.
2. To apply the concepts of Leadership and Management.
3. To understand and apply the concepts of Leadership styles.
4. Inculcate and apply personality development aspects.
5. To inculcate and create awareness.

REFERENCES:

1. Organizational Behaviour, M.Parikh and R.Gupta , Tata McGraw Hill Education Private Limited

2. Organizational Behavior, D. Nelson, J.C Quick and P. Khandelwal, Cengage Publication.

PE27C STRESS MANAGEMENT

M.Tech II Semester

Common to Industrial Engineering & Production Engineering

(Value Added Course)

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Meaning and nature of stress: Difference between eustress and distress; Frustration, conflict and pressure; Meaning of stressors; common stressors at work place: Stressors unique to age and gender. Stress and Memory; Stress and Other Cognitive Variables; Stressful environmental conditions on performance.

UNIT-II

Behavioural aspects of Stress: Adaptive and Maladaptive Behaviour; Individual and Cultural Differences: Sources of Stress- Across the Lifespan; College and Occupational Stress.

UNIT-III

Stress and Work performance: Role of communication in managing stress and work performance: Emotional regulation and coping; Emotional intelligence and conflict management: Emotional Basis and Stress; Stress and Conflict in Relationships. Stress intervention – interpersonal, Management Standards and Management Competencies.

UNIT-IV

Strategies of Stress Management: Prevention of stress Challenging Stressful Thinking; Problem Solving; Emotional and cognitive coping styles: Strategies of Synthesis and Prevention: Resilience and Stress; Optimal functioning; Making changes last; Small changes and large rewards.

UNIT-V

Preparing for the Future: Care of the Self: Nutrition and Other Lifestyle Issues: Stress reduction practices: Time management; Exercise; Relaxation techniques; yoga; meditation.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. To understand the cognitive variables of stress and Learn Managing Work-Life Balance
2. Preparing for better future by reducing the stress.
3. To understand the nature and consequences of stress
4. To understand the impact of stress on work.
5. To recognize the stressors, Adaptive and Maladaptive behavior

PE27C UNIVERSAL HUMAN VALUES

M.Tech II Semester

Common to Industrial Engineering & Production Engineering

Instruction Hours/ Week: (L-T-P-C): 3-0-0-3

COURSE CONTENT:

UNIT-I

Introduction to Value Education : Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education) Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfil the Basic Human Aspirations.

UNIT-II

Harmony in the Human Being : Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health.

UNIT-III

Harmony in the Family and Society: Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.

UNIT-IV

Harmony in the Nature/Existence : Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfillment among the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence.

UNIT-V

Implications of the Holistic Understanding – a Look at Professional Ethics : Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession.

COURSE OUTCOMES:

1. To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS.'
2. To ensure sustained happiness and prosperity which are the core aspirations of all human beings
3. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of existence.
4. To develop a holistic perspective of Universal Human Values and movement towards value-based living in a natural way.
5. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.

IE28M MINI PROJECT WITH SEMINAR

Instruction Hours/ Week: (L-T-P-C): 1-0-2-2

COURSE CONTENT:

The students are required conduct experimental work/mathematical modelling/simulation on software packages etc. And collect relevant for analysis, and deduct the conclusions from results. Finally, the student should prepare the report and give seminar on project.

COURSE OUTCOMES:

At the end of this course, students will be able to

1. Apply emerging technology in processes and systems
2. Analyze the results
3. Deduct conclusions from results
4. Prepare report/document
5. Present effectively.

Semester III & IV
PE33ED and PE41D Dissertation Work

Phase–I, Phase–II and Viva-Voce

GUIDELINES FOR DISSERATION PHASE-I AND DISSERATION PHASE-II:

1. The dissertation is a yearlong activity; to be carried out and evaluated in two phases i.e. Phase–I in sem-3andPhase–II in sem-4.

2. The dissertation may be carried out in department laboratories/ industry.

3. After multiple interactions with guide and based on comprehensive literature survey, the student shall identify the domain and define dissertation objectives.

4. Phase–I evaluation: A committee comprising of guides o respective specialization shall assess the progress/ performance of the student based on report, presentation and Q&A. In case of unsatisfactory performance, committee may recommend repeating the Phase-I work.

5. During phase – II, student is required to continue Phase-1 as per the schedule and thesis (combined phase-1&2) should be submitted at end of sem-4. Accomplished results/contributions/innovations should be published in reputed journals/ conferences/Patents.

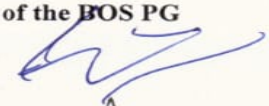
6. Phase – II evaluation: Guide, committee with external examiner shall assess the progress/performance of the student based on report, presentation and Q&A. In case of unsatisfactory performance, committee may recommend for extension or repeating the work.

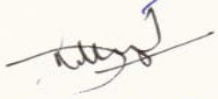
COURSE OUTCOMES:

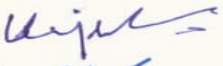
At the end of this course, students will be able to

1. Synthesize knowledge and skills previously gained and applied to anin-depth study and execution of new technical problem.
2. Select different methodologies to carry out the selected project work.
3. Deduct conclusions from results
4. Prepare report/document
5. Present effectively

S.V.U. COLLEGE OF ENGINEERING :: TIRUPATI







DEPARTMENT OF MECHANICAL ENGINEERING

SVUCE/MED/Minutes/2023 Dt. 02.06.2023

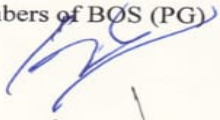
A meeting of the Joint Boards of Studies (PG) of all PG programmes in all the disciplines of Engineering is conducted at 10-30 A.M. on 02-06-2023 (Friday) in Room No. 200 online/offline mode to consider and discuss M.Tech. R-23 regulations, scheme and syllabus of all PG programmes for the Academic Year 2023-2024.

BOARD OF STUDIES (PG) MEETING RESOLUTION

Members of the BOS PG

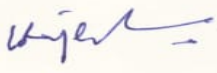
1. Prof. P. Venkataramaiah : 
   Chairman
2. Prof V. Diwakar Reddy : 
   Head &, Ex-Officio Member
3. Sri K. Rajesh Babu : 
4. Dr. K. Dharma Reddy : 
5. Dr. Hema Pothur : 
6. Prof. G. Prasanthi : Attended Online
   Dept. of Mechanical Engineering
   JNTU, Anantapur
7. Dr. N. Venkaiah :
   Dept. of Mechanical Engineering
   Indian Institute of Technology,
   Tirupati

MINUTES



After the meeting of Joint Boards of Studies (PG), the Board of studies of Mechanical engineering meeting is conducted from 1-30 PM on 02-06-2023 (Friday) in committee hall of mechanical engineering.

It is resolved to consider M. Tech. R-23 regulations, scheme and syllabus of two PG programmes:



1) Industrial engineering

2) Production engineering for the Academic Year 2023-2024.

The members of BOS (PG)

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING
DEPARTMENT OF CIVIL ENGINEERING

M.Tech Degree Program (CBCS)

Curriculum & Syllabi for Environmental Engineering

(w.e.f 2023-24)

MAY, 2023

EE11C ADVANCED WATER TREATMENT

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT –I

WATER QUALITY AND CRITERIA: Water quality criteria and standards for different uses-drinking, irrigation, industrial and construction. Water quality indices, physical, chemical and physicochemical unit operations and processes -Typical treatment flow sheet of surface and underground water.

AERATION: Aeration, solubility of gases-two film theory, aeration methods, design of different aeration systems-sprinkler, cascade and mechanical.

UNIT –II

SEDIMENTATION: Different types of settling, settling column analysis, settling velocity and design principles of sedimentation tank, Tube settlers.

COAGULATION AND FLOCCULATION: Theory and mechanism of chemical coagulation and flocculation, determination of optimum coagulant doses, Chemical feed system. Theory of flocculation – orthokinetic and perikinetic, G and Gt factor, Hydraulic and mechanical mixing arrangements, design of different types of flash mixing and flocculator units.

UNIT –III

FILTRATION : Theory of filtration, Filter media-characteristics, hydraulics of flow through porous media, slow sand filtration, rapid sand filtration, precoat filtration, direct filtration of water, their design, back washing of filters – design of backwash ,Operational and maintainence problems.

DISINFECTION : Mechanism of disinfection, Factors affecting the disinfection process. Common disinfectants.Chemistry of chlorination, Chlorine handling and dosing, Ozonation, U.V. Disinfection-design criteria.

UNIT –IV

OTHER TREATMENT METHODS:

Adsorption- Definition ,factors affecting adsorption, isotherms. Removal of taste and odour, colour, iron and manganese, fluorides,arsenic,nitrates and desalination of water.

INDUSTRIAL WATER TREATMENT: Boiler feed water-Softening , Ion – exchange and reverse osmosis, Water stabilization, process water for food processing industries.

UNIT –V

WATER PLANT WASTE MANAGEMENT: Need for sludge management, Characteristics and quantities of water processing sludges, Design of water – treatment sludge thickners.Application of pressure filtration and centrifugation for dewatering of sludges. Alum recovery practices. Ultimate disposal of dewatered sludges.

LAYOUT AND HYDRAULIC DESIGN OF WATER TREATMENT PLANTS

Reference Books :

1. Montgomery, water treatment principles and design, Johnwiley and sons, Newyork.
2. Warren Viessman, Jrand Mark J. Hammer, Water Supply and Pollution Control by Harper & Row Publishers, New York.

3.Hazard S. Peavy, Donald R. Rowe and George Tchobanoglous, (1985). Environmental Engineering, McGraw-Hill Book Company, New York.

4J.RWeber (1972), Physicochemical Processes for Water Quality Control,John Wiley and Sons,USA.

Course Outcomes

After completion of course students are

1. Able to assess water quality parameters and aeration methods of water treatment
2. Able to design primary sedimentation tank and clariflocculator
3. Able to plan and design suitable filtration units and disinfection methods for drinking water treatment
4. Capable of applying appropriate advanced water treatment techniques.
5. Able to manage water treatment plant sludges and carry hydraulic design of Water treatment plant.

EE12C AIR POLLUTION AND CONTROL

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

GLOBAL EFFECTS: Acid Rains, Green house effect and Ozone layer depletion.

POLLUTION SOURCES: Anthropogenic and Natural sources of Air pollutants. Types of Air pollutants. Properties of Air pollutants-Particulates, Carbon monoxide, Oxides of sulphur, Nitrogen Oxides, Hydrocarbons.

AIR POLLUTION SAMPLING AND MEASUREMENT –Devices for sampling, Different sampling methods, Sampling of Particulate Matter and Sampling of stack gas. Analysis of air pollutants Sulphur Dioxide, Nitrogen Oxides, Carbon Monoxide, Oxidants and Ozone, Hydrocarbons, Particulate Matter.

UNIT – II

EFFECTS OF AIR POLLUTANTS:

Effects of Carbon monoxide, Particulate Matter, Sulphur Dioxide, Oxides of Nitrogen, Hydrocarbon and photochemical oxidants on human beings. Effects on vegetation - Necrosis, Epinasty, Abscission and Chlorosis. Effects of Arsenic, Fluorine and Lead on animals. Effects of Air pollutants on metals, building materials, paints, textiles, electrical Materials, paper, leather, rubber and economy.

UNIT – III

METEOROLOGICAL ASPECTS OF AIR POLLUTANT DISPERSION:

Wind direction and speed, Temperature, Atmospheric stability, mixing height, Precipitation, Humidity, Solar radiation, Visibility, Inversions and plume behavior. The Gaussian Dispersion Model, Diffusion coefficients, Box model and Puff model.

UNIT - IV

AIR POLLUTION CONTROL METHODS:

CONTROLL OF PARTICULATE MATTER-General methods of control - Zoning - Town planning. Control of particulate matter –Gravity settling chambers, Cyclones, Inertial seperators, scrubbers, bag- filter, Electrostatic Precipitators.

REMOVAL OF GASEOUS MATTER–Control of Sulphur Dioxide by Reinluft process and Westvaco process; Control of $NO_X$by combustion modification, post-flame treatment;VOCs control by adsorption, combustion, condensation and process modification.

BIOMONITORING AND PHYTOREMEDIATION.

UNIT - V

AIR QUALITY AND EMISSION STANDARDS – Ambient Air Quality Standards (2015)

AUTOMOBILE POLLUTION:

Sources, emissions from diesel and petrol engines, Bharat V standards, catalytic convertors, Management of automobile pollution.

AIR POLLUTION AND LEGISLATION: Air Pollution Control Act, 1981, and Environment (Protection) Act, 1986.

Reference Books :

1. Crawford, M (1976). Air Pollution Control Theory, McGraw-Hill, New York.
2. H.C.Perkins (1974). Air Pollution, Mc-Graw Hill, Tokyo.
3. Wark, Kenneth and Cecil F. Warner (1976). Air Pollution : Its Origin and Control, Dun-Dunnelley, New York.

Course Outcomes (COs)

After completion of course student can able to

1. Describe the global effects of air pollution, air pollutants characteristics and sampling methods of air pollutants.
2. Capable of recognizing the effects caused by different air pollutants on human beings, animals, plants and materials.

3. Apply the meteorological aspects of air pollutants dispersion in the different dispersion modeling.
4. Capable of applying advanced technologies to reduce air pollution.
5. To manage automobile pollution and evaluate their efficiency

EE13C ENVIRONMENTAL MICROBIOLOGY

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

GENERAL: Importance of Microorganisms. Classification of Microorganisms based on nutrition and metabolic activity

PROCARYOTIC ANDEUCARYOTIC MICRO ORGANISMS:

BACTERIA: Distribution, cytology, forms, size, cell structure,chemical composition, metabolism and classification.

FUNGI : Classification, identification, terminology and cultivation, chemical composition

ALGAE : Classification, identification, culture media, metabolism,pigments.

HIGHER FORMS : Protozoa - identification, classification,metabolism,nutrition. Rotifers; crustaceans; worms and larvae.

UNIT – II

STUDY OF MICROORGANISMS: stains and staining.

STUDY OFMICROSCOPES: ordinary, dark field, reflectance and electron microscopes.

GROWTH PATTERN OF MICROORGANISMS: Growth curve, food-microorganism relationship, aerobic-anaerobic growth, temperature,types of culture media, inhibitory media, Fungi media, Algae media, Protozoa media and isolation of microorganisms.Estimation of bacterial numbers.

NUTRITIONAL REQUIREMENTS FOR GROWTH: Required elements, organic growth factor requirements, Carbon source, Nitrogen source, control of synthetic reaction, energy source and selective effect of nutrients.

CONTROL OF MICROORGANISMS: Pattern of death, heat, disinfection, oxidizing agents, surfactants, heavy metals, Antimetabolites and Antibiotics,and PH.

UNIT – III

QUANTATIVE MEASUREMENT OF GROWTH:

Measurement of usable substrate,Measurement of oxygen uptake, Measurement of biomass,relationships between X and S.

ENZYMES AND GENETICS : Enzymes - Nature of enzymes, mode of action, effect of temperature, pH, salts and heavy metals on enzyme activity; Colloidal nature of enzyme, extracellular and intracellular enzymes, hydrolytic enzymes, oxidation-reduction enzymes, classification of enzymes. Genetics.

MICROBIOLOGY OF WATER: Bacterial content of various types of water sources - water borne diseases, differentiation of fecal and non-fecal coli forms, M.P.N. and other microbiological tests on water.

UNIT – IV

MICROBIOLOGY OF WASTEWATER:Aerobic and anaerobic metabolism.

CENTRAL PATHWAYS OF METABOLISM:Embden Meyerhof pathway, Tricarboxylic Acid Cycle(TCA),Hexose Monophosphate (HMP) pathway,Entner-Douderoff pathway.

AEROBIC METABOLISM-Metabolism of carbohydrates, metabolism of proteins, metabolism of lipids, metabolism of nucleic acids, metabolism of hydrocarbons.

ANAEROBIC METABOLISM-Fermentation of sugars-Formation of pyruvate from Glyceraldehyde 3-phosphate, formation of lactic acid,Decarboxylation of pyruvate, Formation of butanediol, Formation of butyric acid and butanol, Formation of propionic acid,Formation of glycerol. Fermentation of non carbohydratesubstrates.Anaerobic digestion process.

UNIT – V

MICROBIOLOGY OF COMPOSTING:Microorganisms involved in composting process.

MICROBIOLOGY OF AIR: Types of microorganisms, Air-borne diseases, control of air-borne diseases.

SOIL MICROBIOLOGY: Types of microorganisms, distribution,Bioremediation.

References Books:

1. R.E.McKiney, (1977), Microbiology for Sanitary Engineers, McGraw Hill, New York.
2. Anthony F.Gaudy and Elizabeth T.Gaudy (1980), Microbiology for environmental scientists and engineersMcGraw Hill publishers,Tokyo.
3. Michael J.Pelczar,JR.Chan, E.C.S. and Noel R. Krieg (2004) ,Microbiology,McGraw Hill, Inc., New York.
4.Ralph Mitchel and JiDonguGu (2010).Environmental Microbiology.Johnwiley and sons.Canada.

Course Outcomes (COs)

After completion of course student can able to

1. Classify the different types of microorganisms and use microscope and cultures suitably.
2. Analyze microbial growth kinetics
3. Understand salient aspects of enzymatic relationships and microbiology of water, wastewater and soil
4. Apply microbiological principles in air pollution control and composting
5. Able to control air borne disease due to microorganisms in the air and able to carry out composting process

EE14C ENVIRONMENTAL CHEMISTRY

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT – I

REACTION KINETICS : The rate law – Order of reactions ,Zero and First order reactions, second order reactions, Pseudo first order reactions– half life and its relationship to the rate constant – Factors affecting rate of reactions.

RECTORS-BATCH, CONTINUOUS, PLUG FLOW, PROCESS SELECTION

Reactors- mass balance analysis- batch, completely mixed and plug flow reactors – process selection Solution equilibrium – Le Chatlier principle -Activity and activity coefficients –Ion activity coeffs – solubility of salts – oxidation-reduction reactions - complex formation, solubility product,LCD for solubility determination, Oxidation-Reduction equillibria.

UNIT – II

CHEMICAL THERMODYNAMICS AND EQUILIBRIUM: Heat and work-Energy-Enthalpy, Free energy and its relationship to the equilibrium constant, calculation of change free energy at standard and ambient conditions. Entropy, Free energy.

EQUILIBRIUM PROCESSES : Volatilization – Air – water equilibrium – Henry's constant with units for a gas dissolving in a liquid – Dimensionless Henrry's constant for species transferring from a liquid to a gas.

UNIT – III

ACID – BASE EQUILIBRIUM: Hydrogen ion concentration (pH) – acids and bases and their equilibrium constants, PC-PH diagram: Log concentration Diagram – The carbonate system, alkalinity, and buffering capacity – Hydrolysis of salts and gases.

CHEMISTRY OF ORGANICS: Major groups of organic compounds – Difference between organics and inorganics – Organic compounds generally encountered in industrial wastewater –

Biodegradable and non - biodegradable organics. Hydrocarbons, Alcohols, Aldehydes, ketones and Acids, Carbohydrates, detergents, fats of organics.

UNIT –IV

NUCLEAR CHEMISTRY-Atomicstructure-stable and radioactive nuclidesnuclear reactions-Nuclear Fission-Nuclear fusion-Effect of Radiation on man, safety of nuclear reactors.

SURFACE AND COLLOIDAL CHEMISTRY-Properties of colloids, environmental significance, colloidal dispersion in liquids and air, EDL Theory, destabilization of colloids, Adsorption at solid-liquid interfaces.

UNIT-V

TREATMENT OF COOLING WATER: Water stabilization, Langumuir saturation Index, Caldwell-Lawrence diagrams, water softening- Chemical precipitation ,split treatment and Ion exchange process.

BIOCHEMISTRY-Biodegradation of carbohydrates, protein, fats and oils, biochemical pathways, Energetics and bacterial growth, enzymes.

Reference Books :

1. Sawyer, C.N., P.L.Mc Carty, and G.F.Parkin, (1994). Chemistry for Environmental Engineering,McGraw Hill, New York.
2. De, A.K. (1994). Environmental Chemistry, Wiley Eastern Limited, New Delhi.
3. Warner Stumn and James J. Morgen (1996). Aquatic Chemistry, 3rd ed., Wiley-Interscience series of tests and monographs.
4. Larry D. Benefield and Joseph F. Judkins. Jr. and Barron L.Weand (1981). Process Chemistry for water and waste water treatment, Printice Hall Inc.

Course Outcomes (Cos)

After completion students are

1. Able to apply principles of reaction kinetics and solution equillibrium

2. Able to apply the enthalpy and its relation with equilibrium constant

3. Able to find acid base equilibrium constants and capable of classifying organic and inorganic compounds.

4. able to understand surface and nuclear chemistry processes

5. To understand principles of softening and biochemistry.

EE14C ENVIRONMENTAL QUALITY AND POLLUTION MONITORING TECHNIQUES

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

INTRODUCTION- Importance of Quantativemeasurements,Character of Environmental Engineering and science problems,standards methods of analysis, scope of a course in analysis of environmental samples, expression of results. Gravemetric methods for solids analysis in water and wastewater.

UNIT-II

TITRAMETRIC METHODS

Determination of acidity, alkalinity,hardness, chloride and residual chlorine.

UNIT-III

INSTRUMENTAL METHODS

Optical methods of analysis, electrical methods of analysis,chromatographic methods,AAS,UV-VIS. Material characterization techniques- SEM, TEM, XRD, FTIR, thermal analysis- working principles and applications. Determination of nitrogen and phosphate.

UNIT-IV

BIOLOGICAL METHODS AND MICROBIOLOGY

Biochemical oxygen demand MPN test for microbial pollution Plate counts Confirmatory test.

UNIT-V

AIR POLLUTION ANALYSIS

Sampling techniques for air pollution measurements, analysis of particulates like PM_{10}, $PM_{2.5}$, $PM_{1.0}$ and common chemical air pollutants like VOC, Hydrocarbons, oxides of nitrogen and sulphur.

Course Outcomes

After completion of course student can

1. Able to do the gravimetric methods for solids analysis
2. Able to apply the different titrametric methods for pollution monitoring
3. Able to use the different instrumental methods for pollution monitoring.
4. Able to apply the different biological methods for pollution monitoring
5. Able to use the different air analysis methods of pollution monitoring

EE14C RURAL WATER SUPPLY AND ONSITE SANITATION SYSTEMS

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

Rural Water Supply: Issues of rural water supply –Various techniques for rural water supply-merits- National rural drinking water program- rural water quality monitoring and surveillance-operation and maintenance of rural water supplies

UNIT-II

Low Cost Water Treatment: Introduction – Epidemiological aspects of water quality- methods for low cost water treatment - Specific contaminant removal systems for contaminants like nitrites ,fluoride and arsenic

UNIT-III

Rural Sanitation: Introduction to rural sanitation- Community and sanitary latrines - Planning of wastewater collection system in rural areas- Treatment and Disposal of wastewater - Compact and simple wastewater treatment units and systems in rural areas- stabilization ponds – Pit latrines-dry latrine-wet latrine-septic tanks - Imhoff tank- soak pits- low cost excreta disposal systems-Effluent disposal.

UNIT-IV

Industrial Hygiene And Sanitation: Occupational Hazards- Schools- Public Buildings-Hospitals- Eating establishments- Swimming pools – Cleanliness and maintenance and comfort-Industrial plant sanitation.

UNIT-V

Solid Waste Management: Disposal of Solid Wastes- Composting- land filling- incineration-Biogas plants - Rural health - Other specific issues and problems encountered in rural sanitation.

ANIMAL WASTE DISPOSAL

Sanitary way of dung storage. Bio-gas plants – Classification, operation and maintenance problems.

2. Park, J.E., and Park, K., Text Book of Preventive and Social Medicine, BanarsidasBhanot, 1972

3. Wright, F.B., Rural Water Supply and Sanitation, E. Robert Krieger Publishing Company, Huntington, New York, 1977

4. Juuti, P., Tapio S. K., and Vuorinen H., Environmental History of Water: Global Views on Community Water Supply and Sanitation, IWA Publishing (Intl Water Assoc), 2007

5.WB Mannual –onsite sanitation systems.

6.WHO Mannual

Course Outcomes

After completion of the course student can

1. Able to apply various techniques for rural water supply
2. Able to plan low cost water treatment methods for rural areas.
3. Able to understand the salient aspects of rural sanitation and design wastewater treatment units
4. Able to frame water sanitation plan for industry, hospitals, swimming pools and eating places.
5. Able to manage rural solid wastes and animal waste.

EE14C ECOLOGICAL ENGINEERING AND STREAM ECOLOGY

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

INTRODUCTION TO ECOSYSTEMS

Development and evolution of ecosystems – Principles and concepts – Energy flow and material cycling – productivity – Classification of ecotechnology – ecological engineering- Classification of systems – Structural and functional interactions of environmental systems – Mechanisms of steady-state maintenance in open and closed systems.

UNIT-II

MODELING AND ECOTECHNOLOGY

Modeling and ecotechnology – Classification of ecological models – Applications- Ecological economics- Self-organizing design and processes.

UNIT-III

FLUVIAL ECOSYSTEM

Introduction To Fluvial Ecosystems: Fluvial Ecosystem Diversity- The Water Cycle – Stream flow- Flow Variation- The Stream Channel- Sediments and their Transport- Fluvial Processes along the River Continuum

UNIT-IV

STREAM WATER CHEMISTRY

Dissolved Gases -Major Dissolved Constituents of River Water-Variability in ionic concentrations -The dissolved load -Chemical classification of river water-The Bicarbonate Buffer System-Influence of Chemical Factors on the Biota-Variation in ionic concentration-Salinization - Effects of acidity on stream ecosystems

UNIT-V

WATER QUALITY

Water quality models – Historical development – Non point source pollution- Mass balance equation – Streeter - Phelps Equation – Modification to Streeter – Phelps Equation – Waste load allocations – Dissolved oxygen in Rivers and estuaries; Lake Water Quality Models; Models for Nitrogen, Bacteria, Phosphate and toxicants - Ground Water Quality Modeling - Contaminant solute transport equation, Numerical methods- legislations for water quality.

1. Tebutt T.H.Y., Principles of Water Quality Control, 5th Ed., Pergamon Press, 1998

2. Thomann V. R., and Mueller A. J., Principles of Surface Water Quality Modelling and Control, Prentice Hall, 1997

3. Welch, E.D., Ecological Effects of Wastewater, Cambridge University Press, 1992

4. Frank R. Spellman and Joanne Drinan, Stream Ecology and Self Purification: An Introduction, 2nd Ed., CRC Press, 2001

Course Outcomes

After completion of course student can able to

1. Understand concepts of ecology
2. Explain the different types of ecological models
3. Understand the fluvial ecosystem
4. Use aspects of water chemistry for stream ecology
5. Apply suitable models for water quality assessment.

EE15C CLIMATE CHANGE

L / week : 3Hrs **Sessional Marks : 40**

University Exam : 3 Hrs **End Exam Marks : 60**

UNIT-I

Earth's Climate System: Introduction-Climate in the spotlight - The Earth's Climate Machine – Climate Classification - Global Wind Systems – Trade Winds and the Hadley Cell – The Westerlies - Cloud Formation and Monsoon Rains – Storms and Hurricanes – The Hydrological Cycle – Global Ocean Circulation – El Nino and its Effect - Solar Radiation –The Earth's Natural Green House Effect – Green House Gases and Global Warming – Carbon Cycle.

UNIT-II

Observed Changes And Its Causes: Observation of Climate Change – Changes in patterns of temperature, precipitation and sea level rise – Observed effects of Climate Changes – Patterns of Large Scale Variability – Drivers of Climate Change – Climate Sensitivity and Feedbacks – The Montreal Protocol – UNFCCC – IPCC –Evidences of Changes in Climate and Environment – on a Global Scale and in India – climate change modeling.

UNIT-III
