SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U. COLLEGE OF ARTS

DEPARTMENT OF SANSKRIT

Course

M.A. SANSKRIT

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department:

The Department of Sanskrit was started in the year 1959. The founder Head of the Department was Sri T.K. Gopolswamy Iyengar. Founder Professors of the Department are T.K. Gopalaswamy Iyengar, Prof. E.R. Sreekrishna Sarma, Dr. V.V. Varadachari, Prof. V.A. Sarma and Sri K. Dakshinamurthy. Main objective of starting the department is propagation of Sanskrit literature, its heritage and culture in the society.

Vision

It is proposed to start **"Applied Sanskrit Studies and Comparative Literature"** in the P.G. level. In addition to this, a comprehensive study of **Dharma Sastra and Mimamsa**as a special subject at P.G level is proposed. Standard works such as Natyasastra, Abhinavabharati, etc., in original Sanskrit and studies in English like the History of Sanskrit poetics by P.V. Kane and others are to be translated into Telugu for the use and reference to students. In fact this can be a major project of the department.

Mission

To make the students to learn Indian Sanskrit heritage and to make the students to preserve the traditional Sanskrit literature against the global modernization.

CHOICE BASED CREDIT SYSTEM (CBCS):

- The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average

(CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

- Students of this course would be expected to :
- Be able to play leading role in industry, research and the public services;
- Be able to adapt and respond positively and flexibly to changing
- circumstances;
- Develop the professional skills and personal attributes to deal with complex
- issues, both systematically and creatively;
- Have the capacity for individual work and teamwork;
- Be lifelong learners with intellectual and practical skills.

PROGRAM SPECIFIC OUTCOMES:

- The students get knowledge in Sanskrit language, literature, Grammar linguistics and communication skills.
- The students get market vendor for employment and further research.
- The students acquire knowledge in values, ethics and rhetoric
- The students become more human beings with an compare to other people
- To practice Indian culture is over Indian life.

PROGRAMME OBJECTIVES:

- To trained students in Sanskrit language grammar, literature, linguistics and soft skills.
- To make the students market vendor for employment/further research.
- To make them with the skills, values, ethics and way of talking.

PROGRAMME OUTCOMES:

- To impart knowledge on Sanskrit language studies its history and verity in a global context.
- To create knowledge about Ithihasa and Puranic literature to instruct students in an advanced level of literary studies, comparative studies and translation studies.
- To make the students on par with the best Universities globally/Nationally with highly relevant and frequently updated generic electives.

- To provide the necessary environment for the students to home their literary creative, critical, translation and research abilities.
- To convert students into language trainers and personality developers.

Program Educational Objectives:

The educational objectives of our programme ensures:

- Engage themselves in successful professional practices of teaching profession
- They can prove themselves as outstanding administrators in running the institutions
- They can mould the next generation ethically strong and morally sound.
- They can promise productive citizens of the nation by imparting values incorporated in literature since ages.
- They can integrate theory and practice to address complex situations/ challenges of life

CO 3	3	2		2		3	3	2	2	2		3

Generic Elective

SANSKT:303-C	**Natyasastram Chapter I & VI only**

Objectives:

1. The work covers ancient Indian dramaturgy and histrionics, especially Sanskrit theatre. Bharata is considered the father of Indian theatrical art forms. The first chapter of the Nāṭyaśāstra gives a semi-historical and *purāṇic* account of the creation of the work. It gives an outlook of different theoretical and artistic mediums.
2. This is evident in the several deśi art forms which have evolved with regional variations based on the *mārga* set by Bharata.

3. The structural aspects of form such as lyrics, music and the language of gestures which are required to communicate the content to evoke an aesthetic experience (*rasa*) are all dealt with in detail in the Nāṭyaśāstra, i.e., it caters to both form and content. Moreover, it guarantees the fulfilment of the four-fold aspects of human-pursuit, i.e., the *puruṣārtha–s* धर्म, अर्थ, and काम, and also gives us a glimpse of the experience of Bliss (मोक्ष). Sixth chapter presents the Rasa theory.

TEXT BOOKS:

Natyasastra of Bharatamuni Edited by Pandit Kedaranath BharatiyaVidyaprakashan, Delhi, 1983

Syllabus:

Unit: I Chapter I – 1 to 42 Slokas
Unit: II Chapter I– 43 to 83 Slokas
Unit: III Chapter I – 84 to 128 Slokas
Unit: IV Chapter VI – 1 to 49 Slokas
Unit: V Chapter VI – 50 to 84 Slokas

Outcomes:

1. Students can able to understand Bharata subtly cautions connoisseurs about their responsibility of having a detached attitude while witnessing a play or any work of art in general. Emotional over-involvement and extrapolation of the incidents to everyday life will cause harm to both the art and the connoisseurs.

2. More philosophically, when the *bhava*s do not get elevated to the level of *rasa* in a connoisseur's mind due to his lack of maturity, art cannot be

enjoyed. It shows that the creation of such a great treatise was an outcome of combining different theoretical and artistic mediums.

3. Students can able to understand that Rasa is produced from a combination of विभाव (determinants), अनुभाव (consequents)and व्यभिचारिभावs (transitory states).

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U. COLLEGE OF ARTS

DEPARTMENT OF SOCIOLOGY

Course

M.A. SOCIOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

Sri Venkateswara University

Department of Sociology

M.A. Sociology (Two year Programme-Four semesters)

Choice Based Credit System (with effect from the Academic year 2016-2017)

Programme Code (MASO)

About the Department

The Department of Sociology was started in 1971, as combined Department of Anthropology and Sociology with two teaching faculty, Prof. A.S.N. Murthy and Prof. M.S. N. Reddy and became in independent Department in 1975. At present, there are 2 Professors, and 1 Assistant Professor in the Department.

The Department offers three courses: M.A., M.Phil and Ph.D.Programmes to be abreast with social demands and keeping in view the social relevance the department makes selective choices of areas for teaching, research and extension. The Departmental Library has a good collection of over 600 books and an audio system.

The course curriculum is job / career-oriented offering electives in emerging and inter-disciplinary areas like Sociology of Development and Welfare, Medical Sociology and Environmental sociology Criminology. The Department has a 'Career Guidance Cell' catering to the career prospects of the student fraternity.

The students of III semester carryout field work by staying in the field by at least ten days for collection of primary data on a specific theme individually and also apply PRA techniques. They submit a Field Report at the end of the semester. Further, they prepare and submit a dissertation after the analysis of data.

Outreach and Extension have been important foci of the department. Many activities like awareness on social problems and blood donation, organization of blood grouping

activities and lectures on spiritual and moral values, etc., are taken up as part of both curricular and non-curricular aspects.

Regarding University-community interface the Department is collaborating with NGOs like RASS, Rise and PASS and also with TirumalaTirupatiDevasthanams, SVIMS, Physiotherapy, Nursing colleges.

The Department so far has successfully guided 82 Ph.Ds and 67 M.Phils. The Department has hosted 11 National Seminars 15 International webinars and 2 international conferences. The number of Department publications are 24 books and 261 articles in National and International Journals. The Faculty of the department have attended 272 International and National Conferences / Seminars.Two gold medals have been instituted in the department Prof. ASN Murthy Memorial Gold Medal is Awarded to the best outgoing student. Prof. Sepuri Bhaskar's Mother Smt. Narayanamma Memorial Gold Medial has been instituted for the outgoing women student.

Vision

- To promote the department as an institute of Advanced studies in sociology/ Applied sociology/ Center for multi-disciplinary social research.

Mission

- To undertake Trans-disciplinary teaching, empirical research and to launch more society oriented and outreach programmes as University Social Responsibility (USR)

Program Specific Objectives

PSO 1: To inculcate theory and practical knowledge together

PSO 2: To include Scientific zeal and enable them for Sociological enquiry

PSO 3: Conjeeture of Science and Social science Research Aptitude

PSO 4: To mould them with Trans-disciplinary understanding for lifelong learning

Program Objectives

- Ability to formulate Sociological insights with 'Think Globally and act Locally basis '
- Familiarity with Sociological Imagination and Methodology
- Articulating insights of tradition and transition towards Inclusive society and Development
- Analyse and Interpret Social facts with Science based Aptitude
- Articulate Trans-disciplinary knowledge effectively and efficiently to deal with crises situation

Program Outcomes

- PO 1. Broader Theoretical base
- PO 2. Investigate Social Facts
- PO 3. Value based Evaluation
- PO4. Dissemination of knowledge
- Po 5. Apttidue for project knowledge
- PO 6. To instil Social Zeal
- PO7.New or original work
- PO8. Conglomeration of science and social science
- PO9.Change in knowledge
- PO10.Change in Attitude
- PO11.Change in Practice
- Po12.Memorize and improvize

Programme Educational Objectives

- To gain knowledge about contemporary social problems and its causes, consequences and remedial measures.
- To introduce students to the basic social processes of society, social institutions and patterns od social behaviour
- Be able to effectively engage with and apply their " sociological imagination" to think critically about the social World and which separates sociology from other social science disciplines
- To help students acquire skills that will be useful to them in their personal and professional life.
- To provide basic and advanced theoretical as well as methodological knowledge of sociology for application.

MASO 102: Sociological Research Methods and Statistics (Core)

Objectives

1. This course aims to enable the students to understand the fundamental nature of the scientific approach towards social research and apply the skills in undertaking social research.
2. To equip the students with strategies of development for different segments of society.
3. To provide ways and means of understanding and studying social reality

Syllabus:

Unit- I

Science and Scientific Method: Definition and Characteristics of Scientific Method. Applicability of Scientific method to Social Phenomena. Sociological Research: Meaning and Uses. Hypothesis: Meaning.Definition Functions and Types inter-relation between theory and research.

Unit –II

The Research Process: Major steps in Social Research. Research Design: Types of Research designs.

Unit-III

Quantitative Methods and Survey Research Sampling

Method: Types.

Probability Sampling: Simple Random Sample, Systematic Sampling Stratified Random Sampling, Multistage Cluster Sampling

Non Probability sampling: Purposive quota and snowball sampling

Collection data

Questionnaire-Advantages and limitations

Interview-interview schedule, advantages and limitations

Unit-IV

Qualitative research methods: Field Work Observation- Participant and non- participant. Case study, content Analysis.

Unit –V

Statistics- Definition Correlation and Causation.Karl Pearson's Coefficient of Correlation. Chi-Square Test- Characteristics, Degrees of freedom, Levels of Significance. Uses of Chi-Square Test.

MASO 104: Participatory Research (Core)

Objectives

1. This paper is to inspire students to undertake research in partnership with stakeholders
2. To explain the emancipatory and empowering, collaborative and reflective approaches
3. To discuss the relationship between PRA and scientific method to incorporate the results to change the practice and policy.

Syllabus

Unit-I

Origin of Participatory action research (PAR), Historical roots of Participatory Action Research,(PAR) Historical roots of Participatory Rural Appraisal (PRA), Foundations of Participatory Rural Appraisal (PRA), Principles of Participatory Rural Appraisal(PRA).

Unit-II

Participatory Action research, Conventional Research methodology differences, Participatory development, stages of Participatory development, CLTS (community led total sanitation)

Unit –III

Tools and Techniques of PRA: Mapping: Transect Walk, Village history, Social mapping, Resource mapping, Mobility map, Venn diagram (Chapati/Institutional)

Unit –IV

Ranking: Wealth/Wellbeing ranking, Pair wise ranking, Timeline, Problem analysis and problem prioritization, Hundred seed methods .

Unit-V

Voluntarism: NGOs and Development, Evaluation and Monitoring of Personal Project , Livelihoods Analysis.

First Year (IIndSemester)

MASO 201: Applied Sociology (Core)

Objectives

1. To help students develop clear understanding of key concepts in classical and contemporary sociology and how these concepts relate to some of the perennial themes in the discipline
2. To develop an appreciation of the link between sociological theory and practice
3. To help students master the art of explaining abstract material in clear, precise ways that can be easily understood even by a lay man

Syllabus:

Unit- I

Sociological Imagination-Understanding clients -communications – Research – Interpersonal skills, Critical thinking.

Unit- II

Sociologists work-What is Human services-Industries – private Organizations – Public Agencies – NGO's

Unit- III

Applied Sociologists – Man Made Disasters – Translational Role-communicating knowledge- General business skills – attention to detail – specialist knowledge in technical – commercial, industrial (or) scientific areas – Consultancy -Natural Disasters

Unit-I V

Distinguishing Academic and Applied Sociology-Creative Collaboration – Productive partnerships – professional Dent

Unit- V

Sociological practices -Clinical Sociology, social Engineering. Public Sociology, Jobs in Applied Sociology.

MASO 202: Social Demography (Core)

Objectives

1. To introduce the significance of population and its relation to society
2. To provide a theoretical knowledge of the basic concepts of population and changes
3. To enable the students to realize impact of population , changing global scenario ,awareness on population control devices and analyse prospects

Syllabus

Unit- I

Social Demography: Nature and scope, Basic concepts - Fertility, Mortality, Fecundity, Migration, Sterility, Family size, Contraception. Sources of demographic data: Census, Vital statistics, National Sample Survey.

Unit- II

Population theories: Malthusian Theory, Demographic Transition Theory, Optimum Theory of population.

Unit -III

Components of Population change: Fertility, mortality and migration. Fertility: Factors affecting fertility, causes for higher fertility in developing countries. Mortality: Crude Death Rate, Infant Mortality, causes for mortality decline in India. Migration: Types of migration, causes and consequences of migration.

Unit -IV

Population problems: Population growth in India. Causes of population explosion in India.Problems of rapid population growth in India.

Population structure and characteristics: Causes of population explosion in India. Problems of Rapid population growth.

Unit-V

Family Planning in India- Achievements and failures. Population education, Need, importance, and objectives .

MASO 203: Rural Sociology and Development (Core)

Objectives

1. This course is to help the students to understand the difference between urban and rural development
2. To analyse the dynamics of rural Indian society in the context of its socio, political and economic contradictions
3. To evaluate the problems related to development in relation to the needs and aspirations of the marginalized sections

Syllabus

Unit-I

Concept of Rural Development, Basic elements of Rural Development and change Dilemmas in development: Rural V/S Urban Development, Agriculture V/S Industrial development – Barriers to development: social, economic, political, attitudinal and behavioral

Unit-II

History of Rural Development in India. Community Development Programmes. Type of Revolution, Land reforms, area approach programmes: IRDP, IAAP, HADP, TADP, DPAP. Target Group Approach Programmes: SFDA, MFDA, DWCRA, Antyodaya MNP, DDR, NREP, IWDP, Mudra

Unit-III

Problems of rural society: Poverty, Unemployment, Under Employment, Immigration, Agrarian Crisis, Farmer Suicide, Health care Services .

Unit-IV

Current Rural Development programmes: MGNREGS, CLDP, IWMP, RWSS , (Rural water supply and sanitation) INDIRAMMA NABARD

Unit-V

Rural Development Administration: Administrative Structure and functions, Role of NGO's, GOs, AIIB and ADB

MASO 204: Extension work (Core)

Objectives

1. This paper expose the students to apply sociological theories and principles in field areas
2. To give direct experience of social institutions and social problems through field work
3. To train for creative and innovative experiences in social field using research techniques

Syllabus

Under this course, the students will be required to visit five of the Institutions mentioned below, study their structure and activities, carry out some extension work and submit a report (including some case studies) at the end of the semester:

- NGO
- Orphanages
- LeprosyHomes
- Hospitals
- WelfareHostel
- ShelterHomes
- Old ageHomes
- Other such Organizations/Institutions

Outcomes

1. After the completion of this course students will execute the theoretical knowledge and principles in field areas
2. Students will able to understand the role and importance of NGOs and other various social institutions in Field work
3. Students will able to analyze the process of socialization and group dynamics and gain Creative and Innovative experiences

MASO 205: Environmental Sociology (Compulsory foundation)

Objectives

1. This paper aims to provide the students with a comprehensive conceptual, theoretical and empirical backgrounds of interaction between Social world and Nature
2. To explore the relationship between human society and the larger natural environment
3. To prepare the students for further research in broad areas of environment and natural resource governance from sociological perspective

Syllabus

Unit – I

Definition, Nature and scope of Environmental Sociology- Branches of Ecology - Plant, Animal and Human – Nature and Nurture relationship Community social Responsibility on Perishable and Non-Perishable resources

Unit – II

Environmentalism - Tribal and Forest Livelihood – Forest policy and Tribal development – Rural Livelihood – Social, economic and Environmental issues - Environment and Urbanization - Rural indigenous community – Local culture and environmental protection

Unit – III

Population Explosion and Ecological Imbalances – Climate change – Global Warming - Disaster Management – Natural Calamities –Environmental degradation Challenges, River linking projects – Sustainable energy – New and Renewableenergy

– Biomass –Pollution – Air, water, land, soil, radiation, ozone depletion, AcidRain

Unit – IV

Environmental Activism – Environmental crises Awareness – NGOs role – Gender, Caste, Land and Water use – SHGs in Eco-protection – Wasteland, Drought and Desert area development

Unit – V

Environmental policy and Management - State and Inter National agencies – National movements on environment - Bio - diversity Act - Information Building on Solar Power – Corporate Social Responsibility (CSR) – Naturopathy –Eco-Tourism, Environmental planning for sustainable development

MASO 206 Media, Education and Society

Objectives

- To know the role of Mass Media in Higher Education
- To access the Teaching- Learning process with the use of various media
- To explore the educational broadcast towards the educational programmes

Syllabus

Unit-I: Introduction

Media: Definition, Nature, Scope, Basic concepts, components, Socio Logical approach to Mass media studies

Unit-II: Function of media and audience orientation

Function of Mass media – Manifest vs Latent functions, Mass media as an agent of social control Dysfunctional mass media

Audience orientation on Mass media – Active vs passive audience, the audio logical impact consequences of active audience, Auditions

Unit-III : Social constructionism and media

Social and Historical context- The intended message , the target audience , content analysis, the media as an agent of propaganda, Role of social media in shaping Social and Political world

Unit-IV: State and Central Governments - Higher Education

New Education Policy-2020-Roles and Responsibilities, Vision, Salient features, Recommendations, Functions, Schemes, Learning for all out comes, Andhra Pradesh state council of Higher Education (APSCHE), Transformational Reforms in Higher Education Systems

Unit-V: Educational Broadcast

Educational Broadcast- Meaning, Importance, All India Radio. Doordarshan, SwayamPrabha, Exploring Challenges for Participatory learning among students

Second Year (III rd semester)

MASO 301: Medical Sociology (Core)

Objectives

1. This course will help the students to understand the concepts of health and illness
2. To understand the social facts of health and the root causes of illness
3. To apply sociological theories, concepts, and research to experiences of health, illness, health education, public health and the intense public issues related to health

Syllabus

Unit – I

Medical Sociology - Nature and Scope – Functions of Medical sociologist - Lifestyle – Social Attitudes, Variables, class and Health – Medical Tourism

Unit – II

The Sick role - Basic needs like water, Nutrition, Hygiene and Sanitation – The Patient - Physician relationship – Labeling theory, Deviance, Stigma and Stress – Physiotherapy - Counseling

Unit – III

Methods in Socio – Medical Research - Interview Techniques – Non – directiveorunstructuredinterview–Focusedinterview–Repetitiveinterview Key informant interview – Rapid qualitative assessment techniques – Rapid rural appraisal – Rapid Epidemiological assessments – Rapid assessment using anthropological methods – RAP Methodology – Social marketing – Price – Operational research – OR in Health services – Social surveys, Case study and files study and Field study –Observation

Unit – IV

The Hospital as a social system - The Nurse practitioner – Emerging Para Medical practitioners –Health care services delivery by the state of Andhra Pradesh

Unit – V

Pain and Behavior Therapy – Welfare of the Disabled–OrganandBodydonation-Naturopathy

Second Year (IVthSemester)

MASO 401: Criminology (Core)

Objectives

1. This paper seeks to describe the students about the different types of crime and scope of criminology
2. To illustrate the causes of crime and crime rates
3. To study the crime scientifically through data on crime, trends and various theoretical approaches

Syllabus

Unit –I

Criminology concept scope, Causes and Characteristics and Types of Crime in Mega Cities of Deviance – Crime against Children, women and aged - scope of Criminology- Characteristics of crime

Unit – II

Socio and Psychological factors–Influence of T.V. Cinema and Inter Net-Politics and Crime - Human Trafficking – Cyber crimes Communal violence – Terrorism - Corruption - Reasons for not seeking Legal help- Modes of Operation of crime – Access Perception of methods and Technology - Forensic and other reasons

Unit – III

Theories of crime - Classical and Positivist theories-Radical Criminology- Labeling theory- Constitutional theories- Genetic explanations- Environmental explanations

Unit – IV

Crime prevention and HRD - Police – Public role Relationship – Crime against Poor and Marginalized – Rehabilitation of victims – Judicial Activism – Nirbhaya Act - The Toxic continuum From Incivility to Violence and the role of HRD

Unit – V

Crime control by Youth Development - Programmes in India – Self Employment – Social Entrepreneurship – Ready set Go Top Skills for Job Seekers.

MASO 403: Dissertation and Viva-Voce (Core)

Objectives

1. This paper aims at exposing students in analyzing the data
2. To understand the different variations in viva-voce
3. To understand the recent patterns in Practice

Syllabus:

The student will prepare and submit a dissertation based on the data collected under the course MASO 305 – Field work and extension after classification, tabulation, application of appropriate statistical techniques, analysis and interpretation of data. They will work under the supervision of the faculty member .at the end of the semester, the student will appear before a viva voce board as specified under the scheme of valuation and defend their work

Outcomes

1. After completion of this course students will be able to analyze data
2. Students will be able to recognize and overcome different kinds of ambiguities in the process of research
3. Students will be able to learn proper usage of examples and anecdotes and approaches for viva-voce

Academic Year 2023 – 24

Amended as per NEP-2020

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

SVU COLLEGE OF ARTS

DEPARTMENT OF TAMIL

TITILE PAGE

1.About the Department

This statement of Panambaranar an ancient, who wrote the foreword to Tolkapplyan the ancient Tamil Grammar (BC 5000) says that 'Venkatan' i.e., Tirupati was the northem boundary of the Tamil Speaking Country. Hence, it is more appropriate to establish a Tamil Department in Tirupati, the Tamil Speaking place. There is also another property to establish the Department of Tamil in S.V. University, Tirupati i.e., hundreds of hymns have been sung by Always in Tamil on this Vaishnava Temple. Thanks to the Govt. of Tamil Nadu for its liberal Good-will grant of Rs.50,000/- to establish the Department in S.V. University. The Department of Tamil of S.V. University which was a bud from 1960 to 1969, blossomed in the year 1970 as a full-fledged Post-Graduate and Research Department. With commendable pioneering spirit, Dr.N.Subbu Reddiar conceived the idea of the Post Graduate and Research Department was strengthened by sanctioning of two readers and two lecturers by the UGC. Later the Govt. of Tamil Nadu sanctioned a chair for the post of Professor. Thus, a full-pledged department was established in the IX plan the UGC was kind enough to sanction one more Professor Post to the department. Hundreds of Post graduate students received their P.G. Degree and most of them are employed in different parts of the country. The department has produced 112 Ph.Ds, 70 M.Phils and has organized 70 National Seminars, 20 UGC Major Research Projects has been completed.

2.Vision

- To uplift the literary, Socio cultural and educational standards in Rayalaseema region.
- To preserve the dignity and aesthetic values of Tamil Language and Literature.
- To spread awareness about the literary and cultural importance of Tamil Language.
- To carry out the original research for the development and betterment in the field of literature and to enrich the social and human values in the society.
- To be center of excellence in the fields of Teaching, learning and research.
- Facilities to learn Tamil language through Junior and Senior diploma are available.

3.Mission

- Inculcating the literary taste and sense and significance of language and culture through class room teaching, library and online sources.
- Provide knowledge and skill to explore and excel in the world of poetry, authoring novels etc., and thus contributing note to the Tamil Language and literature.
- Supervising the research scholars to carry out the original research for the development and betterment of literature and the values in the society.
- Almost all our research work and project (MRP) on South Indian Languages and literatures.
- We are conducting weekly seminars in the department in order to enrich the subject knowledge of the students and research scholars.

4.Choice Based Credit System (CBCS)

The choice based credit system (CBCS) allows students to choose inter disciplinary, intra-disciplinary courses and provides an opportunity for the students to choose course from the prescribed course comprising core, elective are skill based courses.

- Students of this course would be able to:
- CBCS makes education broad based and at par with global standards.
- Be able to adopt and respond positively and flexibly to the changing circumstances.
- Play a major rule in research and the public services.
- Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively.

5.programme Specific Outcomes (PSO's)

- Provide Knowledge and skill to explore and excel in the world of poetry, authoring novels

etc., and thus contributing more to the Tamil language and literature.

- Encourages students to take up research in the topic of their interest as this program

presents them with an overall view of and various facets of Tamil language.

- Develops Critical thinking and reasoning abilities of the students and transforms students

In to better humans to have a positive impact on society.

6. Programme Objectives

- To provide knowledge of Tamil Literature and grammatical text.
- Introducing various genres types and trends of Tamil literature learning grammar will help students to write, speak and use Tamil language in correct way.
- To understand the contribution of literary critics to the development of Tamil literature.
- To introduce students to the great history of Tamil literature and enable them to appreciate the intricacies of Tamil literature that had existed in the past.
- To equip students with basic grammatical knowledge so that they can read and understand poetries in a better way.
- Students will be better equipped to do comparative study of Tamil language with that of another Dravidian language.
- To introduce students to the Dravidian movements that were focused on equality untouchability casteism etc.,

7. Program Outcomes

- This program will help students to learn and demonstrate their knowledge about the rich history of Tamil literature that has played a prominent role in cultural and societal development
- This program will enable students to create, select, apply, adapt, and extend appropriate methodologies, resources while doing research and comparative study of literature of other languages with that of their own language.
- This program aims to produce scholars in Tamil language having the ability to use appropriate knowledge and skills to identify, formulate, analyze, and solve societal and cultural issues besides contributing to language development.
- This program will help students in expanding the boundaries of their knowledge on Tamil language through imparting knowledge on its literature, Grammar and History.
- This program intends to motivate students to take up research in the field of Tamil language and will improve the competencies of students in the field of research on Tamil language.
- Helps the students to gain the abilities to communicate with society at large. Such ability includes reading, writing, speaking and listening, and the ability to comprehend and write effective reports and thesis documentation, and to give and effectively respond to clear instructions.
- Improves the ability of the students to grasp/learn other languages easily as they learn linguistics as part of the program.
- Students will be provided with an understanding of the roles and responsibilities of a civilian in the society, especially the primary role of protection of the public and the public interest.
- Helps the students to extend Tamil research to interdisciplinary and collaborative programs through understanding of the interactions that Tamil literature has with the economic, social and cultural and environmental aspects of society
- This program guides students to explore the vastness of the Tamil literature and imparts the skills that are necessary to take up and excel in the field of literature.
- This program imbibes good ethics, values and morals and transforms students into better humans.
- An ability to identify and to address their own educational needs to maintain their competence and to allow them to contribute to the advancement of knowledge.

8. Programme Educational Objectives (PEO's)

- Education seeks to grow the overall personality of the learner. These include physiological intellectual, moral, social and spiritual growth. The aim of education is the acquisition of knowledge, skills and attitudes. It helps to adjust properly in one's own environment. The aims and objectives of education must be a real one that makes every student to be unique in nature. It must creat in a student enthusiasm that inspires the students to learn more for life.

SRI VENKATESWARA UNIVERSITY
TIRUPATI – 517 502
ANDHRA PRADESH

DEPARTMENT OF TLEUGU STUDIES

PROGRAMME : M.A TELUGU

PROGRAMME OBJECTIVES & OUTCOMES
COURSE OBJECTIVES & OUTCOMES

2023 – 24

ABOUT THE DEPARTMENT

The Department of Telugu was started in the Academic year 1959-60, five years after the S.V. University was founded. The Department of Telugu later renamed as "The Department of Telugu Studies" in 1981, keeping in view of the extensive and wide range of both Teaching and Research activities of the Department. The year 1984-85 was the Silver Jubilee year and 2009-2010 was the Golden Jubilee year of the Department.

The Department has been providing instruction in M.A. Telugu Language and Literature. At present the year intake of students is about 40 for Regular students for period of two years duration. The Department also introduced Self-Supporting course with strength of 40 students during the academic year 2006-07 based on the demand and job opportunities in Telugu Course.

The Department is actively engaged in teaching and research extension. The Faculty of the Department is also assisting the Directorate of Distance Education, S.V. University in Conducting M.A. Telugu Course through correspondence.

Since its inception, the Department of Telugu Studies has a steady growth and has developed to be one of the Major Department in the University and of the leading Telugu Departments among other Universities in the Country.

The curriculum of the P.G. Course in Telugu S.V. University has certain distinctive features. It provides emphasis to Language and Literature besides introducing innovative subjects like Comparative Study of South Indian Literature. The Structure of Modem Telugu, Functional Telugu, Telugu Journalism, Linguistics, Special Study of Annamacharya, Telugu Folk Literature, History of Literature, Literary Criticism both classical & Modern Andhra History and Culture, Theory of Translation, Pada Kavitha, Telugu Fiction – Novel and Shorty Story, Special Author, Official Language, Modern Telugu Poetry etc. as compulsory Optional papers.

The Department of Telugu Studies introduced Onamastics - the Study of Place Names, Surnames and Gothras, Individual Names Village Names and Street Names etc. at research level.

The Department of Telugu Studies is the first and foremost Department, which has introduced Vyavaharika Bhasha (Spoken Telugu) for drafting M. Phil. dissertations and Ph.D. Theses. The first and foremost Ph.D. thesis drafted in Telugu Spoken Language in the year 1973.

The Department is helping in the Research Programmers of other Departments of S.V. University like English, Hindi, Tamil and Urdu and other Universities of Andhra Pradesh in comparative aspects.

The Department is also giving Guidance to the students of the Department and also other candidates who are appearing for Competitive Examinations like Civil Services, APPSC, NET, JRF and AP SET Examinations.

The Department of Telugu Studies successfully completed UGC SAP Programmers of both phase – I, Phase – II and Phase – III and ASIHSS Programme during the academic year 2007.

VISION

Have an overview of all the relevant areas of Telugu Studies to be an effective Teacher and Researcher. Have acquainted with the subject knowledge including Journalism and Translation for meeting industry needs and achievements social values.

Have thorough knowledge of the History and Culture of Telugu Literature along with Folk and Regional Literature to bear an Societal challenges. Be able to work wisely, creatively and effectively for betterment of Human Kind.

The vision is to become the Centre of excellence, Research and Training in Telugu Language and Literature.

MISSION

The Department's academic and research programmes will provide the students and research scholars value based, Language and Literature education in a trusting and caring environment. The faculty strive to equip the students with research and Literature knowledge to keep pace with the changes to meet the new challenges in Modern Society.

TEL 101 - PRESCRIBED TEXTS : CLASSICAL POETRY AND DRAMA

ప్రాచీన కవిత్వం – నాటకం

Time : 3 Hours **MODEL QUESTION PAPER** **MARKS-80**

ఎ - విభాగం

క్రింది పద్యాలలో ఒక దానికి సమగ్ర వ్యాఖ్య రాయండి 1x13=13

(అ) నరునకు నాత్మ యెవ్వఁడు? ఘనంబుగ దైవిక మైన చుట్ట మె
వ్వ? రతనికిం దదీయ మగు వర్తన మేమిటి నిర్వహించు? భూ
వర! యతఁడేమి పూని యనవద్యతఁ బొందు? నెఱుంగఁ జెప్పు మీ
వరుదుగ' నన్న నక్కురుకులాగ్రణి యాతనితోడ ని ట్లనున్

(ఆ) ఓ లలితాంగి! యా తపసి యుగ్రత నింత నితాంత దుర్దమా
భీల తపో ధురంధరతఁ దేర్చుట, నా సుర రాజ్య లక్ష్మిఁ దా
నేలఁగఁ గోరి కావలయు; నిప్పుడ దీనికిఁ బ్రత్యుపాయముం
జాలఁగ నెంచి చేయఁదగు, సంశయ మంతయు మానునట్లుగన్

బి - విభాగం

I. ఈ క్రింది వాటిలో మూడిరటికి సందర్భ సహిత వ్యాఖ్యలు రాయండి 3x5=15

(1) శ్రుతము వలన శ్రోత్రియుడగు

(2) సజ్జనులు దిక్కుసూవె యీ సర్వమునకు

(3) పద పద్మములఁజిక్కి పాయదునా దృష్టి

(4) తప్పుచేసి శివుని తలపోయ ఫలమేమి?

(5) ఎవరంపగా వచ్చితి వెవ్వరి దానవు?

(6) జవదాటి ఎఱుగదీయువతీలలామంబు పతిమాట

సి - విభాగం

III. ఈ క్రింది ప్రశ్నలకు సమాధానం రాయండి 4x13=52

1. అ) కవిత్రయంలో ఎర్రనను పరిచయం చేయండి?

(లేదా)

ఆ) యక్షుని ప్రశ్నలను వివరించండి?

2. అ) మణికంధరుని తీర్థయాత్ర విశేషాలను తెలియచేయండి?

(లేదా)

ఆ) మీ పాఠ్యభాగం ఆధారంగా పింగళి సూరన కవితారీతుల్ని చేయండి?

3. అ) కాళికాంబ శతకం ద్వారా వీరబ్రహ్మం గారి తాత్త్వికతను వివరించండి?

(లేదా)

ఆ) కాళికాంబ శతకం ద్వారా వీరబ్రహ్మంగారిచ్చిన సందేశమేమిటి?

4. అ) యక్షగాన లక్షణాలను తెలిపి, మన్నారుదాస విలాసములో సమన్వయించండి?

(లేదా)

ఆ) నాటక లక్షణాలను తెలిపి 'సత్యహరిశ్చంద్రీయము'లో సమన్వయించండి?

CC : TEL 102	TITLE OF THE COURSE	L T P C 6 1 0 4
INT. Mrks: 20	GENERAL LINGUISTICS (CORE)	EXT.Mrks: 80

సామాన్య భాషా శాస్త్రం

CBCS REVISED SYLLABUS – EFFECTIVE FROM 2021-22

COURS OBJECTIVES (COs)

The aim of the course is -

1. To indroduce the General Linguistics to the Students.
2. To acquaint the Students with branches of Linguistics such as Socio - Lintuistics, Comparative Linguistics, Psycho - Linguistics and Structural Linguistics.
3. To help the Students to understand Phonology, Syntax and Phonitics.
4. To help the students to understand the services of Indian and Western Linguists regarding Linguistics.

యూనిట్ - I భాష - వృద్ధి - నిర్వచనం - భాషోత్పత్తివాదాలు - భాషాలక్షణాలు

చారిత్రక, వర్ణనాత్మక, తులనాత్మక భాషాధ్యయనం

భాషా శాస్త్ర చరిత్ర - ప్రాచ్య పాశ్చాత్య భాషా పండితుల కృషి

భాషల వర్గీకరణ - భౌగోళిక, జన్యాత్మక, రూపాశ్రిత వర్గీకరణ

యూనిట్ - II ధ్వని విజ్ఞానం - అధ్యయన విధానాలు : ఉచ్చారణ - శ్రవణ - ధ్వని

తరంగ విజ్ఞానం - వాగవయవాలు - భాషా ధ్వనుల ఉత్పత్తి - వర్గీకరణ

ఉచ్చారణ విధేయ లిపి, ఐపిఏ పట్టిక

యూనిట్ - III వర్ణ విజ్ఞానం : వర్ణం - సవర్ణం: నిర్వచనం - వర్ణ నిర్ణయ విధానం - అధ్యాంశిక వర్ణాలు

పదాంశ విజ్ఞానం : పదం - పదాంశం - సపదాంశం నిర్వచనాలు,

పదాంశ రకాలు - పదాంశ నిర్ణయ విధానం

యూనిట్ - IV వాక్యం నిర్వచనం - సన్నిహిత అవయవ విశ్లేషణ;

ధ్వని పరిణామం - కారణాలు - రకాలు

ధ్వని సూత్రాలు - పరిమితులు

అర్థపరిణామం - కారణాలు - రకాలు

యూనిట్ - V మాండలికం : నిర్వచనం, మాండలికాలు ఏర్పడే విధానం, లక్షణాలు

వ్యవహార భేదక రేఖలు - మాండలిక పదాలు, ప్రమాణ భాష

ఆధార గ్రంథాలు :

1. **'భారతీయ తత్త్వశాస్త్రం' - సర్వేపల్లి రాధాకృష్ణన్**
2. **'విశ్వదర్శనం, భారతీయ చింతన' - నండూరి రామమోహన రావు, లిఖిత ప్రచురణలు, విజయవాడ**
3. **'భారతీయ దర్శనము (బి.ఏ) - తెలుగు అకాడమి, హైదరాబాద్**
4. **'భారతీయ తత్వశాస్త్రం సులభ పరిచయం' - దేవీ ప్రసాద్ చటోపాధ్యాయ, విశాలాంధ్ర పబ్లిషింగ్ హౌస్, హైదరాబాద్**
5. **'ప్రపంచ చింతనా ధోరణులు' - తెలుగు అకాడమి, హైదరాబాద్**
6. **'భారతీయ తాత్త్విక స్రవంతి సజీవాంశాలు నిర్జీవ ధోరణులు' - దేవీ ప్రసాద్ చటోపాధ్యాయ, ప్రజాశక్తి బుక్ హౌస్, విజయవాడ**
7. **ప్రముఖుల జీవిత చరిత్రలు**

COURSE OUTCOMES (CLOs)

After the Completion of the Course the Students are able to -

1. Understand the General Linguistics.
2. Acquaint the Various branches of Linguistics.
3. Understand the Phonology, Syntax and Phonitics.
4. Understand the Services of Indian and Westren Linguists.

3. To Familiarize the students with the Political, Religious and Cultural Life Styles of Different Ages.
4. To acquaint the students with various Genres in classical Literature, Part - I

యూనిట్ - I వాఙ్మయం - సారస్వతం - సాహిత్య అధ్యయన పద్ధతులు

తెలుగు సాహిత్య చరిత్రకు ఆధారాలు.

సాహిత్య చరిత్రలోయుగాలు - యుగకర్త : యుగవిభజన పద్ధతులు.

ప్రాఙ్నన్నయ యుగం క్రీ.శ.1000 సం॥లకు ముందున్న తెలుగు భాషా

సాహిత్యాల స్థితిగతులు.నన్నయకు పూర్వం తెలుగు కవులు.

యూనిట్ - II నన్నయ ఆదికవి అనడంలో సామంజస్యం

నన్నయ భారతాంధ్రీకరణ విధానం నన్నయ కవిత్వ లక్షణాలు

నన్నయ ఇతర కృతులు - నన్నయ సమకాలికులు - నారాయణ భట్టు,

పావులూరి మల్లన, మల్లియరేచన.

యూనిట్ - III శివకవుల ప్రత్యేకత - మార్గ, దేశి, వస్తు కవిత, జానుతెనుగు - వీటి స్వరూప స్వభావాలు.

నన్నెచోడుని కుమార సంభవం - ప్రథమాంధ్ర ప్రబంధం.

పాల్కురికి సోమన కృతులు - శివకవియుగంలో ఇతర కవులు.

రంగనాథరామాయణ కర్తృత్వం - గ్రంథ ప్రాశస్త్యం - అవాల్మీక అంశాలు

ద్విపద వాఙ్మయవికాసం - ద్విపద లక్షణాలు.

యూనిట్ - IV **తిక్కన హరిహరనాథ తత్వం - తిక్కన వ్యక్తిత్వం – తిక్కన భారత రచనా వైశిష్ట్యం**

తిక్కన భారతానికి ఉత్తమాధికారి - తిక్కన రసాభ్యుచిత బంధం

తిక్కన సమకాలిక కవులు - కేతన, మంచన, మారన మొదలగు వారు.

యూనిట్ - V **ఎర్రన రచనలు - ప్రబంధ పరమేశ్వరుని సూక్తివైచిత్రి**

ఎర్రన, నాచనసోమనల కవితా తారతమ్యం

భాస్కర రామాయణ కర్తృత్వం - ఎర్రన సమకాలిక కవులు.

శ్రీనాధుని కృతులు - ఆంధ్రీకరణ విధానం - శ్రీనాధుని కవితా శైలి

పోతన భాగవతం - భక్తితత్త్వం

శ్రీనాధ, పోతనల సమకాలిక కవులు

శ్రీనాధ పోతనల కాలంనాటి సాహిత్య స్థితి గతులు.

ఆధార గ్రంధాలు :

1. **ఆంధ్ర సాహిత్య చరిత్ర** - **పింగళి లక్ష్మీకాంతం**
2. **ఆంధ్రసారస్వత చరిత్ర** - **ఖండవల్లి లక్ష్మీరంజనం**
3. **తెలుగు సాహిత్య చరిత్ర** - **దివాకర్ల వెంకటావధాని**
4. **తెలుగు సాహిత్య సమీక్ష** - **జి. నాగయ్య (మొదటి సంపుటం)**
5. **తెలుగు కావ్యావతారికలు** - **జి. నాగయ్య**
6. **తెలుగు సాహిత్య చరిత్ర** - **కొర్లపాటి శ్రీరామమూర్తి** [I to IV Volumes]
7. **తెలుగు సాహిత్యంలో చర్చనీయాంశాలు - జి.వి. సుబ్రహ్మణ్యం**
8. **సమగ్రాంధ్ర సాహిత్యం సంపుటాలు - 'ఆరుద్ర'**
9. **ఆంధ్రవిజ్ఞాన సర్వస్వం** - **3వ సంపుటం**
10. **తెలుగు సాహిత్య చరిత్ర** - **ద్వానా శాస్త్రి**
11. **తెలుగు సాహిత్య చరిత్ర** - **వి. సిమ్మన్న**

COURSE OUTCOMES (CLOs)

After the Completion of the Course the Students are able to -

1. Understand that how to study the methods of History of Literature.
2. Understand the different works of various Poets in Classical Literature, Part - I
3. Understand the Political, Religious and Cultural Life Styles analysed in classical Literature, Part - I
4. Understand the various Genres in Classical Literature, Part – I

వ్యక్తిత్వ వికాసం – భాషా నైపుణ్యములు

CBCS REVISED SYLLABUS – EFFECTIVE FROM 2021 – 22

COURSE OBJECTIVES (COs)

The aim of the course is -

1. To Promote soft skills among the students as to develop attributes that could enhance individuals interactions, earning power and job performance.
2. To inculcate potential skills in the students to communicate effectively, take initiative, solve problems, and demonstrate a positive work ethics so as to demonstrate good impresssion and positive impact.
3. To face the interviews with Confidence to secure a productive job and to sustain it with Confidence and enhanced productivity.

యూనిట్ - I వ్యక్తిత్వం నిర్మాణం : ఆదర్శ మూర్తుల - అనుకరణ పాత్ర -

విద్య ప్రాధాన్యం - కులం, జెండర్, సమాజం పాత్ర -

వ్యక్తిత్వ వికాసం : పెళ్ళి - కుటుంబం - పిల్లలు;

ఆత్మన్యూనత : పరిష్కారమార్గాలు

యూనిట్ - II నాయకత్వం యొక్క భావన - నాయకత్వం రకాలు -

నాయకత్వం లక్షణాలు - నాయకత్వం యొక్క విధులు

యూనిట్ - III సృజనాత్మకత భావన - సృజనాత్మకత కలవారి లక్షణాలు -

సృజనాత్మకత - పద్ధతులు

యూనిట్ - IV సంఘర్షణ - సంఘర్షణ యొక్క భావన -

సంఘర్షణకు ఉండే కారణాలు -

సంఘర్షణను అధిగమించే విధానాలు

యూనిట్ - V భాషా నైపుణ్యాలు : జాతీయాలు – సామెతలు;

వినే నైపుణ్యాలు : మాట్లాడే నైపుణ్యాలు; పరస్పర సంబంధాలు;

చదివే నైపుణ్యాలు : చదివే పద్ధతులు - చదివే ప్రక్రియ - చదవడంలో మెలుకువలు -

భాషా ప్రయోగ నైపుణ్యాలు

రాసే నైపుణ్యాలు : లిపి - రకాలు, లిపికీ, ధ్వనికీ ఉన్న సంబంధం; రాత రూపాలు - తెలుగు, సంస్కృత, ఆంగ్ల పదాలు; తప్పొప్పులు -మాండలిక పదాలు, ప్రామాణిక భాష

ఆధార గ్రంధాలు

1. జాన్ హోల్ట్ : పిల్లలు నేర్చుకోవడంలో ఎలా వెనుకబడతారు?
2. బి. ఎస్. రాములు : వ్యక్తిత్వ వికాసం
3. బి.వి. పట్టాభిరామ్ : లీడర్‌షిప్
4. బి.వి. పట్టాభిరామ్ &

   కె. రవికాంత్‌రావు : మూర్తిమత్వ వికాసం

COURSE LEARNING OUTCOMES (CLOs)

After Completion of the Course the Students will be able to -

1. Understandius soft skills, types of soft skills and intrapersonal skills.
2. Exhibiting different type of people skills.
3. Demonstrating oral communication skills throush effective presentations.
4. Exhibiting various modes of written communication.
5. Developing employability skills.

CC : TEL 403 A	TITLE OF THE COURSE	L T P C 6 1 0 4
INT. Mrks: 20	METHODS OF TRANSLATION (GENERIC ELECTIOVE)	EXT.Mrks: 80

అనువాద పద్ధతులు

CBCS REVISED SYLLABUS – EFFECTIVE FROM 2021 – 22

COURSE OBJECTIVES (COs)

The aim of the course is -

1. To introduce the students to the different tools, techniques, and methods of Translation.
2. To familiarize the students with the problems and challenges in translation
3. To felicitate the students to learn translations as a bridge not only between two Languages but also between two cultures.

యూనిట్ - I అనువాదం – నిర్వచనాలు; అనువాదం - సిద్ధాంతాలు; క్యాట్ ఫోర్డ్ సిద్ధాంతం, నైడా సిద్ధాంతం, న్యూయార్క్ సిద్ధాంతం.

అనువాదం : బహుళ్యవస్థ సిద్ధాంతం

యూనిట్ - II అనువాదం ప్రాధాన్యం - ప్రత్యేక ప్రతిపత్తి గల విభాగంగా అనువాదం ;

అనువాదం - శాస్త్రం - కళ

యూనిట్ - III తెలుగు అనువాదం - సంప్రదాయం - చరిత్ర -

ఉత్తమ అనువాదకుడు:లక్షణాలు,

అనువాదం ` మూల్యాంకన రీతులు

యూనిట్ - IV తెలుగులో అనువాదం జరిగేతీరు : మూల భాష - లక్ష్య భాష -

అనువాద పద్ధతులు : మూల విధేయ అనువాదం - స్వేచ్ఛానువాదం -

అనుసరణ అనువాదం - నుడికారానువాదం - అర్థాను వాదం -

భావాను వాదం - సంపూర్ణానువాదం - పాక్షికానువాదం - యంత్రానువాదం

యూనిట్ - V సాహిత్యానువాదాలు : వివిధ ప్రక్రియలు, ప్రత్యేకతలు

కవిత్వం - కథ – నాటకం ;

సాహిత్యేతరానువాదాలు : పారిభాషిక పదాలు

పరిపాలన - న్యాయ విషయాలు

అనువాద సమస్యలు : భాష సమస్యలు - సాంస్కృతిక సమస్యలు

ఆధార గ్రంథాలు

1. రాచమల్లు రామచంద్రారెడ్డి - అనువాద సమస్యలు

2. ఎస్. అక్కిరెడ్డి - అనువాద సిద్ధాంతాలు

3. బూదరాజు రాధకృష్ణ - అనువాద పాఠాలు

4. గోవిందరాజు చక్రధర్ - అనువదించడం ఎలా?

5. Bassnet MC. – Translation Studies

6. Bassnett Suson – Translation History and Culture

7. Catford J.C - A Linguistic Theory of Translation

8. Lakshmi H - Problems of Translation

9. Narasimhaiah C.D. & Srinath - Problems of Translation

COURSE LEARNING OUTCOMES (CLOs)

After Completion of the Course the Students will be able to -

1. Unverstand the different tools, techniques, and methods of Translation.
2. Understand the problems and challenges in translation
3. Understand to learn translations as a bridge not only between two Languages but also between two cultures.

DEPARTMENT OF ANTHROPOLOGY

S.V.U. COLLEGE OF SCIENCES

SRI VENKATESWARA UNIVERSITY: TIRUPATI

Revised Syllabus Amended as per National Educational Policy - 2020)

M.Sc. ANTHROPOLOGY (REGULAR) PROGRAMME

TO BE IMPLEMENTED WITH EFFECT FROM THE ACADEMIC YEAR 2023 – 24

SYLLABUS

Choice Based Credit System (CBCS)

ANTHROPOLOGY DEPARTMENT :

GENESIS :

The Department of Anthropology came into being in 1971, with the auspices of the former Vice-Chancellor Prof. Dr. D. Jagannadha Reddy. He invited a famous and reputed Anthropologist, Prof. D. P. Mukherjee to run the Department by laying a strong foundation and strengthening different sub-divisions of Anthropology.

PROGRAMMES FOR SPECIAL ASSISTANCE :

The department has been identified by the University Grants Commission, New Delhi for financial assistance through Special Assistant Programme (SAP) in the year 1992. Three phases of the SAP programme has been successfully completed. Students, research scholars and faculty have been actively involved in the research and our contributions were reckoned by the scientific community.

Further the department was also awarded "Special Assistance to Strengthen Infrastructure in Humanities and Social Sciences" (ASIHSS) by the UGC.

In appreciation of this, University Grants Commission, New Delhi has recognized this department as "Centre of Advanced Studies (CAS)" for five years (2013-18) in the Phase-1.

The thrust areas under this programme are: Bio-cultural Perspectives of Health and Disease

Biological dimensions of health and disease

Socio-cultural dimensions of health and disease.

NUMBER OF M.Phil / Ph.Ds PRODUCED :

M.Phils : 15

Ph.Ds : 86

DEPARTMENT HIGHLIGHTS:

The Department has made an immense contribution with respect to the generation of Anthropological knowledge. The only Anthropology department from south India to achieve the "Centre of Advanced Studies (CAS)" for five years (2013-18) in the Phase-1. The Department has been actively engaged in Teaching and research in all branches of Anthropology. The Department has well equipped in terms infrastructural facilities to carryout advanced research in the all the fields of Anthropology. The Department ensures that the syllabus has framed with periodical modifications to meet the emerging needs of the society.

VISION:

- Anthropology is the study of humans and its biological relatives across time and space
- To address the diversity of the human experience in its biological, cultural and historical contexts
- Provide knowledge to analyze and addresses the issues with respect to biological, social and environmental problems.
- Provides the answer to our questions about our self, our past, present and future.
- The study the ability to lower the barrier of peoples ethnocentric news of the world around them.

A degree in Anthropology will give a wide range of skills useful to many job roles, communication, research, problem solving, independent and collaborative work.

MISSION:

- To nurture the students and young researchers with latest knowledge and skills in Anthropology and its subdivisions by enabling them to ensure human welfare and to improve the quality of life of people.
- Committed to produce quality human resources upgrading the quality concerns to realize better employment potential within its disciplinary boundaries.
- To transform the department into a centre of excellence with state-of-art infrastructural facilities and also as a resource centre to provide inputs to young researchers in terms of technology.

About the programme - Courses & Specializations :

The department offers the following courses:

1. M.Sc., with specialization in Biological Anthropology (four semesters of two years duration)
2. M.Sc., with specialization in Social Cultural Anthropology (Four semesters of two years duration)
3. Ph.D., (Full time and Part-Time)

In the first two semesters, the students of the above two specializations will have common courses. In the third and fourth semesters, separate courses of respective specializations are offered.

The P.G. course will have the following components :

Class room teaching, laboratory experiments, practical's in material culture and museum objects, designing research tools, and project work. Fieldwork is mandatory part of M.Sc., Anthropology in both specializations during which the IV Semester students visit rural or tribal areas for 15 days to collect data on specific topics/ issues. Based on this, a dissertation is submitted.

CHOICE BASED CREDIT SYSTEM (CBCS):

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed. Students of this course would be expected to :

- Be able to play leading role in industry, research and the public services;
- Understand and appreciate major public concerns and issues associated with

Anthropology

- Have an understanding and grasp of international research environment where the frontiers of knowledge in Anthropology are under research;
- Be able to adapt and respond positively and flexibly to changing circumstances;
- Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively;
- Have the capacity for individual work and teamwork;

		PRACTICALS: 1. Non- Government organizations and Extension studies	4	
		MULTI DISCIPLINARY COURSE / PROJECT WORK : Field work and Dissertation , Viva-Voce	4	
		OPEN ELECTIVE: 1 Paper (For others) :1. Visual Anthropology 2. Environmental Anthropology	4	
Total credits				96
PS: Students can choose extra any number of external electives				

The course of the study and scheme of examination

Semester-I

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Introduction to Biological Anthropology	6	4	20	80	100
2.		2	Introduction to Social –Cultural Anthropology	6	4	20	80	100
3.	Compulsory Foundation	3a	Introduction to Archaeological Anthropology	6	4	20	80	100
		3b	Indian Anthropology					
		3c	Social Problems and Anthropology					
4.	Elective Foundation	4a	Economic and Political Anthropology	6	4	20	80	100
		4b	Human Ecology					
		4c	Tribal Development in Inida					
5.	Practical -I	5	Somatometry and Somatoscopy	9	4	--	100	100
6.	Practical – II	6	Archaeological Anthropology	9	4	--	100	100
	Total			**42**	**24**	**80**	**520**	**600**
7.	Audit Course: Human values and professional Ethics-I			0	0	**100**	0	0

Semester-II

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Comparative Ethnography and Indian Anthropology	6	4	20	80	100
2.		2	Principles of Genetics	6	4	20	80	100
3.	Compulsory Foundation	3a	Prehistoric India	6	4	20	80	100
		3b	Urban Anthropology					
		3c	Field work Traditions					
4.	Elective Foundation	4a	Research methods in Anthropology	6	4	20	80	100
		4b	Biology, Health and Disease					
		4c	Early Civilizations					
5.	Practical -I	5	Doing Ethnography	9	4	--	100	100
6.	Practical – II	6	Craniology and Craniometry	9	4	--	100	100
	Total			**42**	**24**	**80**	**520**	**600**
7.	Audit Course: Human values and professional Ethics-II			0	0	**100**	0	0

(Specialization- B – Biological Anthropology)

Semester-III

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Human Evolution and Fossil Evidence	6	4	20	80	100
2.		2	Human Genetics	6	4	20	80	100
3.	Generic Elective	3a	Anthropological Demography	6	4	20	80	100
		3b	Forensic Anthropology					
		3c	Epidemiology and Public Health					
4.	Practicals	4	Dermatoglyphics and Human Osteometry	9	4	---	100	100
5.	Skill Oriented Course	5	Biostatistics and computer Applications	9 (3+6)	4	10	90 (40+50)	100
6.	Open Elective	6a	Palaeo Anthropology	6	4	20	80	100
		6b	Fundamentals of Anthropology					
	Total			**42**	**24**	**90**	**510**	**600**

Semester-IV

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Biological Anthropology	6	4	20	80	100
2.		2	Human Population Genetics	6	4	20	80	100
3.	Generic Elective	3a	Human Growth, Physique and Nutrition	6	4	20	80	100
		3b	Applied Biological Anthropology					
		3c	Medical Genetics					
4.	Practicals	4	Advanced Biological Anthropology	9	4	---	100	100
5.	Multi Disciplinary course/project work	5	Filed work, Dissertation, Viva-Voce	--	4	---	100	100
6.	Open Elective	6a	Epidemiology	6	4	20	80	100
		6b	Applied Biological Anthropology					
	Total			**33**	**24**	**80**	**520**	**600**

(Specialization - B : Social Cultural Anthropology)

Semester-III

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Theories of Culture	6	4	20	80	100
2.		2	Social Anthropology of Complex Societies	6	4	20	80	100
3.	Generic Elective	3a	Ecological Anthropology	6	4	20	80	100
		3b	Applied Anthropology- Indigenous communities					
		3c	Anthropology of Religion –Sacred complexes in India					
4.	Practicals	4	Participatory Research Methods in Community Development process	9	4	---	100	100
5.	Skill Oriented Course	5	Data Management and Computer Applications	9 (3+6)	4	10	90 (40+50)	100
6.	Open Elective	6a	Anthropology & Career Promotion	6	4	20	80	100
		6b	Tribal Studies					
	Total			**42**	**24**	**90**	**510**	**600**

Semester-IV

S.No	Components of study	Title of the Course	Title of the Paper	Credits Hrs/week	No. of Credit	IA Marks	Sem End Exam Marks	Total
1.	Core	1	Structural Anthropology	6	4	20	80	100
2.		2	Developmental Anthropology	6	4	20	80	100
3.	Generic Elective	3a	Medical Anthropology	6	4	20	80	100
		3b	Culture and Management					
		3c	Anthropology of Displaced Populations					
4.	Practicals	4	Non-Governmental Organizations and Extension studies	9	4	---	100	100
5.	Multi Disciplinary course/project work	5	Filed work, Dissertation, Viva-Voce	-	4	---	100	100
6.	Open Elective	6a	Visual Anthropology	6	4	20	80	100
		6b	Environmental Anthropology					
	Total			**33**	**24**	**80**	**520**	**600**

M. Sc., Anthropology Syllabus for I , II, III & IV Semesters

(Revised Syllabus Amended as per National Educational Policy - 2020)

(With effect from the batch admitted in the academic year -2021-2022)

CHOICE BASED CREDIT SYSTEM (CBCS)

(First and Second Semesters are common for Specializations (A) Biological Anthropology (B) Social Cultural Anthropology)

SEMESTER – I

ANO : 101 - Core Theory :

INTRODUCTION TO BIOLOGICAL ANTHROPOLOGY

Course Objectives:

1. To understand the scope, relation with other branches and historical development of biological anthropology
2. To study the comparative anatomy of man and Asps
3. To understand human origins and evolution
4. To know about the race, racism and classification of major races.

Unit I: Meaning, Scope of Biological Anthropology. Relations with other Branches of Anthropology and with Biological, Social and Medical Sciences; Its historical development. Man's Place in the Animal Kingdom. Classification of Primates; Salient Feature of Primates; Primate behaviour with special reference to monkeys and apes Comparative Anatomy of Apes and Man

Unit II: Principles of Evolution – Speciation, Irreversibility, Parallelism and Convergence, Adaptive Radiation, Extinction and Theory of Orthogenesis; Theories of Organic Evolution - Lamarckism, Darwinism, Synthetic Theory.

Unit III: Human Origins and Evolution: Fossil Evidence-Pongid and Hominid, Emergence of Man: Evidences, Distribution and Pattern of Australopithecines, Homo erectus, Neandertal, Homo sapiens.

Unit IV: Race, Ethnicity and Populations: Concepts: Race, Racism; Classification of Races – Major Races of the World; Racial Criteria used for Racial Classification - Morphological,

Serological and Genetic; Racial Classification of world population – Hooton, Coon, Garn and Boyd Racial Classification India Populations – Risley, Guha and Sarkar

Course Outcomes:

a. Exposed to the basic concept, meaning and scope of Biological Anthropology
b. Explain how human being acts as the central figure of Anthropology
c. Elucidate the major divisions of Biological/ physical Anthropology
d. Know the inter-relationship between Biological Anthropology and other sciences
e. To know how Man evolved in animal kingdom
f. To understand how evolution has occurred and what are the evidences of evolution and addresses human variation and the causes of variations

ANO : 102 - Core Theory :

INTRODUCTION TO SOCIAL CULTURAL ANTHROPOLOGY

Course Objective :

1. To understand the basics about socio-cultural anthropology: its history, origin, elements and relationship to other branches.
2. To understand the basic concepts like society, culture, Institutions, social organizations and socio stratification.
3. To know the social institutions like family, marriage and kinship
4. To understand the religion, magic, animism, taboo and ancestral worship

Unit I : Social-Cultural Anthropology: Meaning, Scope and Specializations; Basic Approaches: Holistic, Comparative, Historical, Nomothetic and Idiographic; Relationship to History, Psychology, Economics, Sociology, Management, Medical and Nutritional sciences.

Unit II : Basic Concepts: Society, Culture, Community, Association, Institution, Status and Role, Social Structure, Social Organization and Social Stratification.

Unit III : Family, Marriage and Kinship: Definition of Family and Marriage; Rules, Typology; Feminist Perspectives on Family and Marriage; Marriage Rules and Patterns of Marriage in Dravidian Kinship regions (Thomas T. Trautmann); Meaning and Sociological significance of Kinship; Classification of Kin terms; Descent: Rules and Descent groups; Kinship behavior.

Unit IV : Religion and Magic: Definition; Elements of Religion: Religious Beliefs; Ceremony; Ritual and Myth; Animism; Animatism; Taboo; Totemism; Ancestral Worship; Magic and Science; Types (J. Frazer).

Course Outcomes:

a. Exposed to the basic introductory background about Socio-cultural Anthropology, its historical background and relation to other branches
b. Provides knowledge about the entire subject matter of the socio-cultural anthropology as well as its different sub-branches.
c. Exposed to social institutions
d. Know the religion beliefs, rituals and myth

ANO : 103 -3(a) – Compulsory foundation :

INTRODUCTION TO ARCHAEOLOGICAL ANTHROPOLOGY

Course Objectives :

1. To make understand meaning, scope, relation to other branches of Archeological anthropology
2. To understand Pleistocene epoch
3. To understand the tool typology and technology
4. To know above different dating methods
5. To know the cultural chronology of Paleolithic, Mesolithic and Neolithic cultures

Unit I: Meaning, definition and scope of archeological anthropology. Relationship to other Branches of Anthropology, Earth Sciences, Physical Sciences, Life Sciences and Social Sciences. Define environmental Archaeology and ethno-archaeology.

Unit II: A Brief Outline on the Origin of Earth and Life and Geological Time Scale. Pleistocene Epoch Chronology; Pleistocene - Holocene Interphase Changes, Tool Typology and Technology. Tool Families: Pebble Tools, Hand Axe-Clever Complex, Flake Tool Complex, Blade Tool Complex, Microliths and Ground and Polished Tools.

Unit III: Dating Methods: Absolute and Relative Dating: Stratigraphy, Dendrochronology, Thermo-luminescence Dating, Pollen Dating, Varve analysis, Uranium Dating, Potassium-Argon Method, and C-14 Dating.

Unit IV: Cultural Chronology - Paleolithic, Salient Features of the Lower, Middle and Upper Palaeolithic Cultures, Mesolithic and Neolithic Cultures and their Artificers.

Course Outcomes:

a. Able to define archaeological anthropology and its branches
b. Understand the geological timescale, tool typology and technology
c. The Course will explain the basic concepts and terminology used in prehistoric archaeology
d. Understand chronological and cultural determinants of Indian and European prehistory

ANO : 103- 3 (b) – Compulsory foundation : INDIAN ANTHROPOLOGY

Course Objectives :

To make understand

1. Unity and diversity in Indian society and culture
2. Basis of traditional Indian social structure and life cycle
3. Different Caste system in India
4. Major contributions of Indian Anthropologists to Anthropology

Unit- I : Unity and diversity in Indian society and culture : linguistic. Polotical , ethnic, communal and religious tensions and conflicts national integration.

Unit-II : Basis of traditional Indian social structure and life cycle: varnasharam dharma, purushartha, village : a part society : Jajmani system

Unit-III : Caste system- definition and criteria of caste system, varna and caste dominant caste Back ward castes and scheduled castes: statutory provisions.

Unit-IV : Major contributions of Indian Anthropologists M. N. Srinivas, S.C. Dube Andre Battlie and L. P. Vidyarthi.

Course Outcomes:

a. Exposed to diversified linguistic, Political , ethnic, communal and religious tensions and conflicts national integration.
b. Understand the social structure and lifecycle patterns of different past societies
c. Understand the caste and varna systems.
d. Learn the major contributions of different Indian Anthropologists to Anthropology

ANO : 103 3 (c)– Compulsory Foundation : SOCIAL PROBLEMS AND ANTHROPOLOGY

Course Objectives :

1. Aims to understand the ecology, Eco-system and adoptive tendency of the populations in contemporary situations Unity and diversity in Indian society and culture
2. To understand ecological problems
3. To know about peasantry problem and prospects

4. Aims to study urban social problems

. **Unit- I** : Ecology : Basics concepts-Ecosystem, Ecological population , Symbiosis, Niche, adaptation and Homeostasis

Unit-II : Ecological Problems: Shifting Cultivation and Ecological imbalance.

Unit-III : Peasantry : Characteristics of Peasant life. Peasant Upheavals. Indian Peasantry (problem and prospects)

Unit-IV : Urban social problems : Family, Kinship and castes in Indian Peasantry (problem and prospects)

Course Outcomes:

a. Exposed to eco-systems, symbiosis and homeostasis.
b. Know about the shifting cultivation and ecological inbalance
c. Understand the problems and perspectives of Indian peasantry
d. Understand the family, Kinship and caste system in india

ANO : 104- 4 (a) – Elective Foundation : ECONOMIC AND POLITICAL ANTHROPOLOGY

Course Objectives :

1. Aim to understand the scope and basic concepts of economic anthropology
2. To understand the economic organizations and impact of globalization in traditional societies
3. To know about meaning and scope of political organization and its basic concepts
4. To understand the political systems and local institutions

Unit I: Economic Anthropology: Definition and Scope; Social Framework; Formalist – Substantives Controversy. Basic Concepts: Economic Organization; Concept of Property; Primitive Communism; Division of Labour; Barter; Reciprocity and Redistribution; Ceremonial Exchange; Subsistence Economy and Market Economy.

Unit II: Economic Organization: Types of Traditional Economic Organization: Hunting-Gathering/Fishing/Pastoralism/Horticulture/Shifting/SettledAgriculture;Modernization of Peasant Economics. Globalization and impact of capital penetration in traditional Societies

Unit III: Political Organization: Meaning and Scope; Basic Concepts: Power and Authority; Sanction; Leadership; Law and Customary Law; Cultural background of Law; Laws in Cross-cultural Perspectives: Eskimo Law; Ifugao Law; Nuer Law and Ashanti Law.

Unit IV: Political Systems: Types: Stateless and State Systems; Band; Tribe; Chieftains; Kingship; State: Local Institutions: Panchayats (Traditional and Statutory); Decision by Consensus: F. G. Bailey; Factions: Ralph W. Nicholas.

Course Outcomes:

a. Able to learn meaning and scope of economic anthropology
b. To understand the division of labor by gender and age, exchange of goods and gifts, and to understand the market economy.
c. Able to know the historical background of Political Organization besides types and trends of Political Organization including types like i.e. Band, Tribe, Chiefdoms and State
d. To know the local institutions: panchayats (traditional and statutory)

ANO : 104 – 4 (b)- Elective Foundation : HUMAN ECOLOGY

Course Objectives :

Students to understand

1. Human ecology definition scope, and types of habitat
2. To understand human variation
3. To know human growth and development
4. Know about genetic adoptation

Unit- I : Human Ecology : Definition , Terms and concepts, Types of Habitat and Scope

Unit-II : Human Variation : Sources and Evidences, Ecological Evaluation and Adaption.

Unit-III : Human Growth, and development: An Environmental Perspective, Reactivity , Eco-Sensitivity, Adaptability of Human organism.

Unit-IV : Genetic Adaption : Differential Fertility and Mortality, Survival Indices, quality of Life and Fitness.

Course Outcomes:

a. Exposed to the various ecological settings of human habitat .
b. Know the ecological evaluation and adaptation.
c. To understand the growth and development in various eco-systems
d. Understand the Differential Fertility and Mortality, Survival Indices, quality of Life and Fitness.

ANO : 104 – 4(c)- Elective Foundation : TRIBAL DEVELOPMENT IN INIDA

Course Objective :

Students to understand

1. Concept and Definition of Tribe
2. Tribal Development Administration
3. Constitutional bodies and institutional arrangement for Tribal Development
4. Development Initiatives

To understand the tribal development during pre and post independent period.

Unit- I : Concept and Definition of Tribe : Definition and classification of Tribe; Approaches towards Tribal development during pre and post independent period, Constitutional safeguards for Schedule Tribes; Fifth & Sixth schedules.

Unit-II :Tribal Development Administration : Tribal Sub- Plan- Integrated Tribal Development Agency (ITDA). Modified Area Development Agency(MADA), Cluster, Disperse Tribal Development Plan (DTDP) and Micro project.

Unit-III : Constitutional bodies and institutional arrangement for Tribal Development National Commission for STs, Tribal Advisory Council, Tribal Welfare Department, Tribal Research Institute.

Unit-IV : Development Initiative- Implementation and Impact of R& R Act, PESA and FRA.

Course Outcomes:

a. Exposed to the various constitutional safeguard for schedule tribes.
b. To understand the various tribal sub planes.
c. To know the National Commission for STs, Tribal Advisory Council, Tribal Welfare Department
d. To understand the implementation of developmental initiatives.

SEMESTER - II

ANO : 201 – Core Theory : COMPARATIVE ETHNOGRAPHY AND INDIAN ANTHROPOLOGY

Course Objective :

1. To understand meaning, scope and major ethnological regions of the world
2. To understand peoples and cultures of India
3. To know the traditional Indian culture
4. To understand the contributions to Indian Anthropology by different anthropologists

Unit I: Ethnology and Ethnography – Meaning, Scope and Method; Major Ethnological Regions of the World.

Unit II: Peoples and Cultures of India – Ethnic and Linguistic Classifications; Caste, Tribe, Dalits and Minorities (Broad Features and Identities); The Aryan controversy; Caste, family, marriage, kinship, authority and female autonomy in South India and North India.

Unit III: Traditional Indian Culture – Hindu Religious and Philosophical Traditions; Jajmani System and agrarian economy; Joint family; India as a Cultural Region; Ethnicity and pluralism; Sanskritization; Westernization; Modernization.

Unit IV: Contributions to Indian Anthropology – V. Elwin; N. K. Bose; I. Karve; M. N. Srinivas; S. C. Dube; S. C. Sinha; C. V. Furer-Haimendorf, L.P. Vidyarthi, Milton Singer Contemporary India: Globalization and Indian culture and society

Course Outcomes:

a. To understand the major ethnological regions of the world
b. To know the ethnic and linguistic classifications
c. Able to understand the traditional Indian culture
d. To know the contributions of Indian anthropologists

ANO : 202 – Core Theory : PRINCIPLES OF GENETICS

Course Objectives :

1. Make the students to understand the meaning, scope and historical development genetics
2. To understand the biology of cell, cell division and their genetic significance
3. To understand patterns of inheritance in man
4. To know about the blood groups and their anthropological perspectives

Unit I: Meaning and Scope of Genetics; Brief History and Development of Genetics. Basic concepts and principles

Unit II: Biology of Cell: Structure, Function and Biological Significance. Cell Division: Mitosis and Meiosis and their Genetic Significance.

Unit III: Mendelian Laws of Heredity in Man. Patterns of Inheritance in Man: Autosomal dominant and recessive, Sex-linked dominant and recessive, Sex-limited and Sex- Influenced. Additive (Codominant).

Unit IV: Multiple allelism and Polygenic Inheritance with suitable examples. Blood groups and their Anthropological Perspectives. The ABO, Rh, and MN System.

Course Outcomes:

a. understand about the scope of genetics and its historical development
b. to learn the biology of cell and cell division
c. Exposed to the patterns of the inheritance
d. Know about blood groups and their anthropological perspective

ANO : 203 – 3 (a) - Compulsory Foundation : PREHISTORIC INDIA

Course Objectives :

1. To understand the pre-history of India
2. To know about the Indian Meosolithic culture in India
3. To know the Indian Neolithic culture and Harappan civilizations
4. To understand the metallic cultures and distribution of Megaliths

Unit I: Prehistory of India: Regional Distribution of Lower Paleolithic, Middle Paleolithic and Upper Paleolithic Cultures.

Unit II: Mesolithic Cultures: Climatic Changes, Typo-Technology, Habitat, Economic Activity and Socio-Religious features; Indian Mesolithic Cultures.

Unit III: Neolithic: Northern Zone, North-East Zone, Central Zone and Southern Zone; Harappan Civilization:

Unit IV: Copper and Iron age, Features and Distribution Megaliths.

Course Outcomes:

a. learn the regional distribution of lower, middle, and upper Paleolithic cultures
b. To learn the Mesolithic culture and typo- technology
c. Learn the regional distributions of Neolithic cultures
d. understand the copper and iron age
e. exposed to the distribution of megaliths

ANO : 203 -3 (b)- Compulsory Foundation : URBAN ANTHROPOLOGY

Course Objectives :

1. To understand history of urbanization
2. To know about the Urban Environment and Ecological Processes
3. To know about the Urban Ethnicity and urban development
4. Urbanization and Industrialization in India

To understand the effect of urbanization on cultural transformation of different populations.

Unit- I : History of Urbanization : Cultural process, theory-orthogenetic-Cultural Transformation Heterogenitic Cultural Transformation, Chicago School Folk – Urban Continuum, Urbanization and Urbanism.

Unit- II : Urban Environment and Ecological Processes : General Structure of Cities, Concentric Zone, Multiple Nuclei, Minor Nuclei, Slums, Suburbs and Satellites; Land use patterns ; Growth of Cities and Towns: Effects of Demographic Growth on Urbanization: Urban Communication Networks.

Unit- III : Urban Ethnicity : Concept of Ethnicity : Formation of Language, Religious and Ethnic Groups Ethnic identity Ethnic Behavior : Ethnicity among Urban Immigrants; Ethnic Conflicts and its effects on Urban Folk.

Unit- IV : Urbanization and Industrialization in India: Cultural complexity and Urban society, Urbanism and Social organization; Social Categories : caste, Kinship and other forms of Associations Life styles of Urban Folk; Urban immigrants; Regional – Linguistic Patterns of Immigrants, Structural Factors responsible for the inflow from Rural areas.

Unit- V : Urban Development : Problems and Perspectives, Urban Poverty, relevance of Anthropology to Urban Industry, Business and Corporate Sectors; Urbanization and Social Change in India.

Course Outcomes:

a. Exposed to the history of urbanization.
b. Understand the environment and ecological processes of urban
c. Understand the urbanization and industrialization on cultural complexity
d. Understand the relevance of anthropology to urban industry, Business and Corporate Sectors; Urbanization and Social Change in India.

ANO : 203 -3 (c)- Compulsory Foundation : FIELD WORK TRADITIONS

Course Objectives

1. To understand the different field work traditions
2. To Know about the different data collection methods
3. To understand the Participatory Rural Appraisal (PRA)
4. To gain the knowledge about social mobilization and extension

Unit I: Field Work Tradition in Anthropology; Approaches: Emic-Etic, Macro-Micro Methods

UNIT 2: Ethnography, Comparative Method, Genealogical Method, Case Study and Survey.

Unit III: Participatory Rural Appraisal (PRA): Conventional Research Methodology; Genesis of PRA; Critical Appraisal of PRA; Prerequisites for PRA.

Unit IV: Social Mobilization and Extension: Meaning and Nature; Development of Tourism: A Critique; Demand Driven Approach.

Course Outcomes:

a. Exposed to the various field work approaches.
b. Know the ethnography, case study and survey methods.
c. To understand the participatory rural appraisal (PRA) in India
d. Understand the developmental tourism,.

6. Madge, J. 1952. Tools of Social Science. New York: Free Press of Glencoe

ANO : 204 – 4 (a)-Elective Foundation : RESEARCH METHODS IN ANTHROPOLOGY

Course Objectives:

1. To under stand the field work traditions in anthropology
2. To familiar with research design types of research design
3. Make the students to understand different data collection techniques
4. Prepare the students to understand the usage of different statistical tools in data analysis and preparation of writing the research report.

Unit I: Field Work Tradition in Anthropology; Approaches: Emic-Etic, Macro-Micro Methods: Ethnography, Comparative Method, Participant Observation, Genealogical Method, Case Study and Survey.

Unit II: Research Design: Review of Literature, statement of the research problem; Objectives, Hypotheses, Research Questions, Conceptual Model, Types of Research Design.

Unit III: Techniques of Data Collection: (a) Primary Sources: Observation, Interview, Key Informants, Schedule and Questionnaire, Life History, Focus Group Discussion, Scaling Techniques, (b) Secondary Sources: Census, National Sample Survey, Documents and Records, Maps, National and International Reports (UNDP, World Bank, UNICEF, etc.); Archaeological Methods – Exploration, Excavation and Documentation.

Unit IV: Statistical Methods and Research Report: Sampling, Classification and Tabulation of Data, Variables, Measures of Central Tendency and Dispersion; Hypothesis Testing Statistics: t-Test and $\chi 2$ Test; Different Types of Reports. Preparation of Anthropological Research Report.

Course Outcomes:

a. To understand the fieldwork traditions in Anthropology
b. To understand the concept of research and its purpose
c. highlight the conceptual structure of a research design
d. understand the various statistical tools in the analysis and interpretation of the data

ANO : 204 – 4 (b)-Elective Foundation : BIOLOGY, HEALTH AND DISEASE

Course Objectives:

Pupils to understand

1. Reproductive Health problems and preventions
2. Nutrition, Diet, Health and Disease
3. Ecology, Biology and Disease
4. Ageing and Longevity

Unit- I : Reproductive Health of Mankind : Meaning and Definition, the Reproductive Health situation in India, Need for an integrated Reproductive Health Services Programme: Bio – Social implications in sex related diseases like STD, HIV and Aids- problems and prevention.

Unit- II : Nutrition, Diet, Health and Disease : Diet and Nutrition – Balanced diet, malnutrition, under nutrition Nutritional status and susceptibility to infectious diseases, Bio-social implications of Malnutrition in India.

Unit- III : Ecology, Biology and Disease : Malaria and Sickle –Cell Haemoglobin (HbS), and G-6-PD Deficiency: Thalassemia and Haemoglobin disorder, Ecology and Disease –Fluorosis, Filariasis ---------- etc. Pollution- water, Air, Soil, Noise – and health Hazards.

Unit- IV : Ageing and Longevity : Meaning, Processes of Ageing, Factors affecting Ageing, Socio – Cultural problems of Aged- people in india; factors influencing Longevity – Genetic, Socio – Cultural Psychological. Health status of the aged people in India.National policy for the welfare of the aged in india.

Course Outcomes:

a. Exposed to the reproductive health problems and its impact women's health
b. To know the Balanced diet, malnutrition, under nutrition Nutritional status and susceptibility to infectious diseases
c. Learn about different diseases due to pollution and health hazards
d. Understand the problems of ageing and longevity in India.

ANO : 204 –4 (c)- Elective Foundation : Early Civilizations

Course Objectives :

1. To understand the Concept of genesis Civilization
2. To learn about Early Indian Civilizations
3. To know about early civilizations of west asia
4. To know about Early Civilizations in China and South East Asia

Unit- I : Concept of Civilization, Genesis of Civilization, Factors Contributing to the Emergence of Civilization and Urbanization.

Unit- II : Early Indian Civilizations- Indus Valley and Indus Civilization Distribution; settlement patterns: Economy and Agriculture: Craft and Technology; Art and Religion, Burial Customs; Language; Racial Composition; Chronology; Origin and Decline.

Unit- III : Early Civilizations of West Asia-Mesopotamia, Sumer and Egypt.

Unit- IV : Early Civilizations in China and South East Asia-Examples from China and Thailand and Early Civilizations in New world – Mexico and Peru.

Course Outcomes:

a. Understand the Factors Contributing to the Emergence of Civilization and Urbanization.
b. To Know about the Indus valley civilizations.
c. Exposed to early civilizations of west Asia
d.To know the early civilizations in China, South east Asia and in new world.

15. Text Book for Intermediate First Year Ethics and Human Values. Board of Intermediate Education – Telugu – Akademi, Hyderabad.
16. I.C Sharma Ethical Philosophy of India. Nagin & co Julundhar.

SEMESTER - III

(SPECIALIZATION IN BIOLOGICAL ANTHROPOLOGY)

ANB : 301 -Core Theory : HUMAN EVOLUTION AND FOSSIL EVIDENCES

Course Objectives:

1. To understand the theories of human evolution through paleontological evidences
2. To understand the stages of human evolutions
3. To understand the Neanderthal Origin; Phylogeny; Extinction; Affinities; Antiquity and Cultural Life
4. To understand the spatial distributions of homo sapiens and future of human species

Unit I: Theories of Human evolution Paleontological evidence, evolutionary trends of primates prosimians to homosapiens with special reference to Dentition and limbs, Human bipadalism, Homanization processes.

Unit II: Hominid evolution. The problem of Ramapithicus and Dryopithicus. The Stages of Human Evolution Austrolopithicine stage Pithicinthropine stage - The Distribution, Antiquity and Origin; Nomenclature; Taxonomic Status; Skeletal Biology and Phylogeny; Cultural Life.

Unit III: The Neanderthals: Distribution, Taxonomy, Western European or Classical Neanderthals; The Neanderthal Collaterals: Fossil Hominids from Eastern Europe, Western Asia and Northern Africa; The Neaderthaloids and the Progressive Neanderthals; The Neanderthal Origin; Phylogeny; Extinction; Affinities; Antiquity and Cultural Life.

Unit IV: Homo sapiens: Discoveries; Distribution in Europe, Asia, Africa and Australia; Anatomical Characters; Cultural Variation and Development; Phylogenic Position. The Continuing Human Evolution and the Future of Human Species.

Course Outcomes:

a. Understand the evolutionary trends of primates, prosimianms to homosapiens
b. To know the hominid evolution
c. To know the Neanderthals distributions and extension
d. Exposed to the homo sapiens distribution and feature of human species

ANB : 302 – Core Theory : HUMAN GENETICS

Course Objectives :

1. To understand the scope and development of human genetics. Methods of studying heredity
2. To understand the human cytogenetics and prenatal diagnosis of chromosomal abnormalities
3. To understand the human biochemical genetic variations
4. To learn about structure of DNA, genetic engineering and genome project

Unit I: Human Genetics, its Meaning, Scope and Development. Difficulties in Subjecting Man for Genetic Investigations, Methods of Studying Heredity: Pedigree Method, Twin method, Population, Family, Linkage Studies, Karyotyping, Cytogenetic and Biochemical, DNA Techniques.

Unit II: Human Cytogenetics: Chromosome Nomenclature and Mapping; Methods of Studying Human Chromosomes; Numerical and Structural Chromosomal Abnormalities. Prenatal Diagnosis of Chromosomal Abnormalities. Sex Determination: Bar Body; Inactivation of X chromosome and Lyon's Hypothesis.

Unit III: Human Biochemical Genetic Variation: Red Cell and Serum Proteins and Enzymes Hb, G6PD, PGM and Tf. Haemoglobinopathies; Gene-Enzyme Hypothesis; Inborn errors of Metabolism - Protein, Carbohydrate, Lipid Metabolites, HLA System.

Unit IV: Structure of DNA, Concept of Gene and its Expression. Replication, Transcription, Translation. Genetic Code. Recombinant DNA Molecules; Genetic Engineering; Genome Project and Ethical Issues.

Course Outcomes:

a. understand the meaning and scope of human genetics
b. know methods of studying human chromosomes and chromosomal abnormalities
c. depict Inborn errors of metabolism with typical examples and human human ABO blood group system and its fundamentals
d. know the concept of "one-gene-one-enzyme hypothesis" which explains development of genetic diseases/disorders caused by defective genes controlling the functions of enzymes in metabolic pathways

ANB : 303- 3(a) - Generic Elective: - : ANTHROPOLOGICAL DEMOGRAPHY

Course Objectives :

1. To learn the definition and concept of demography, theories of population growth
2. To learn the basic demographic variables and life tables
3. To understand the factors regulating population growth
4. To understand the different demographic models

Unit I: Definition and Concept of Anthropological Demography. Population Growth: Theories – Biological and Socio-Cultural.

Unit II: Basic Demographic Variables - Age, Sex, Marriage, Sex ratio, Fertility, Mortality, Migration and Population Growth. Factors Affecting Demographic Variables - Life tables – Their Construction and Uses.

Unit III: Factors Regulating Population Growth - Fertility Rate, Birth rate, Age-Specific Fertility Rates, Net Reproductive Rate, Mortality Rate, Migration Rates, Intrinsic Rate of Natural Increase;

Unit IV: Demographic and Genetic Consequences of Family Planning and Family Welfare. Demographic Models: Mathematical and Migration Models. Demographic Studies in Anthropology.

Course Outcomes:

a. Know about the different population growth theories

b. Learn the basic demographic variables
c. Understand how the different factors regulates the population growth
d. Understand the different demographic models
e. Learn the genetic consequences of family planning

ANB : 303 - 3 (b)-Generic Elective: - : FORENSIC ANTHROPOLOGY

Course Objectives :

1. To Understand the crime types, crime scene and methods of investigation
2. To know use of Dermatoglyphics in Forensic Anthropology and Somatoscopic characters in personal identification
3. To understand the skeletal remains in Forensic Anthropology
4. To learn the Modern methods in Crime Investigation

Unit I: Meaning and Scope of Forensic Anthropology, Crime types, Crime scene, Methods of Investigation; Death- Modes of Death, Assessment of time since death

Unit II: Dermatoglyphics in Forensic Anthropology, Poroscopy, Dead body finger printing, Somatoscopic characters in personal identification; Body fluids- Blood, Semen, Nasal secretion,Sweat, Hairs and Fibers in Personal Identification. Hand Writing, Foot and Tire marks in Criminal Investigation

Unit III: Skeletal remains in Forensic Anthropology: Age, Sex and Stature estimation; Forensic Odontology, Superimposition, Facial Physiognomy

Unit IV: Modern methods in Crime Investigation: DNA Finger Printing, Iris Image, Biometry, Polygraph and Lie Detection Tests

Course Outcomes:

a. able to know about forensic anthropology, a specialized, applied branch of physical/biological anthropology which deals with the crime investigation
b. understand how dermatoglyphic, somatoscopic characteristics and body fluids helpful in crime investigation
c. know the use of skeletal remains in forensic investigations
d. know the importance of modern methods in crime investigation

ANB : 303- 3(c) - Generic Elective: - : EPIDEMIOLOGY AND PUBLIC HEALTH

Course Objectives :

1. To understand the Meaning and Scope, Methods, Rates, Indices, Genetic Epidemiology, Clinical Epidemiology
2. To understand the Complex Diseases
3. To know about human obesity and its complications
4. To learn the Major Communicable and Non-communicable diseases

UNIT I: Epidemiology: Meaning and Scope, Methods, Rates, Indices, Genetic Epidemiology, Clinical Epidemiology

UNIT II : Complex Diseases: Concept, Genetic Factors, Environmental Impact, Etiology, Diagnosis, Prevalance; Prevention and Control of Diabetics, Cardio-Vascular Diseases and HIV/AIDS

UNIT III: Human Obesity : Characteristics, Types, Reasons and Complications on Individual Health, Prevention and Control.

UNIT IV : Major Communicable and Non-communicable diseases : Global and Indian Scenario; Malaria, and Tuberculosis : Etiology, Prevalance, Prevention and Management.

Course Outcomes:

a. Exposed to the basic concepts in epidemiology with examples of epidemiology in different areas of public health.
b. Understand the global burden of health outcomes and diseases by assessing measures and interpret the prevalence, risk, rate, and odds within the context of epidemiology
c. Know about Complications of obesity on health its prevention and control

d. Understand the complex web of biological, behavioral, cultural and environmental factors towards the prevalence of communicable infections and chronic infections

ANB : 304 - Practical- : Dermatoglyphics and Human Osteometry

Unit I: Techniques and Procedures of taking Finger, and Palm.

Unit II: Finger Dermatoglyphics: Pattern Identification; Finger Ridge Counts, Total and Absolute Finger Ridge Counts; Pattern Intensity Index, Furuhata's and Dankmeijer's Indices.

Unit III: Palmar Dermatoglyphics: Configurational Areas, Palmar Patterns, Main Line Formula, Main line Index, Palmar Ridge Counts, atd Angle and Palmar Flexion Creases and types.

Unit IV: Osteometry: Take the following linear and angular measurements on Clavicle, Scapula, and Limb Bones.

Recommended Readings:

ANB : 305 - Skill Oriented Course : BIOSTATISTICS AND COMPUTER APPLICATIONS

Course Objectives :

1. To understand the concept, definition and development of biometry.
2. To understand the different statistical tools in data analysis
3. To know about the Calculation of Gene Frequencies
4. To understand the personal computer operating system

Unit I: Biometry: Concept and Definition, Development of Biometry. Data in Biological Anthropology, Variables in biological anthropology. Variables: Continuous and discontinuous variables, attributes and derived variables. Accuracy and precision of the data: Error groups.

Unit II: Statistical tools: Descriptive statistics, Paried independent sample tests Chi square test, one way analysis of variance, Correlation and regression.

Unit III: Calculation of Gene Frequencies – Autosomal Dominat, Recessive, Codominat Multiple Allelic, and Sex linked systems:

Unit IV: Inbreeding coefficient, effective population size and genetic load.

Unit V: Personal computer operating system – MS office –creating a document using word, editing and formatting text Use of computers in the analysis of the data. A note on statistical software's packages: Excel and SPSS charts and graphs and interpretation of the out put. Power point presentation.

Course Outcomes:

a. To understand the concept of research and its purpose
b. To enlighten the process of research and conceptual structure of a research design
c. Understand the disease outcomes through measurement of descriptive, analysis of variance and regression models through computer applications
d. Know the use of computers in the analysis data and power point presentation

ANB : 306 - 6(a) - Open Elective : PALEO ANTHROPOLOGY

Course Objectives :

1. To understand Pleistocene epoch
2. To understand the tool typology and technology
3. To know above different dating methods
4. To know the cultural chronology of Paleolithic, Mesolithic and Neolithic cultures

Unit I: A brief outline on the origin of earth and life and geological time scale; Pleistocene epoch chronology, Pleistocene Glaciations' of Europe, Evidences and Causes of Great Ice Age.

Unit II: Typology and technology: tool making techniques, tool types.

Unit III: Dating methods: absolute and relative dating: stratigraphy, river terraces, dendrochronology, thermoluminescence dating, pollen dating, Glacial varve analysis, potassium-argon method, fluorine dating, C-14 dating.

Unit IV: Cultural chronology: Paleolithic, Mesolithic and Neolithic cultures in India: special salient features of environment, sites and areas, typo-technology, distribution, artifacts and their physical forms. Copper, Iron age, features and distribution.

Course Outcomes:

a. understand the geological time scale and Pleistocene epoch
b. know about tool making techniques and tool types
c. gain knowledge about dating methods
d. learn about Paleolithic, Mesolithic and Neolithic cultures in India

ANB : 306 (b) - Open Elective : FUNDAMENTALS OF ANTHROPOLOGY

Course Objectives :

1. To understand the Meaning, Scope of Biological Anthropology and man placing animal kingdom
2. To understand the socio cultural anthropology
3. To know about the archeological anthropology
4. To understand the concepts of race racism and classification of races

Unit I: Meaning, Scope of Biological Anthropology. Relations with other Branches of Anthropology and with Biological, Social and Medical Sciences; Its historical development. Man's Place in the Animal Kingdom.

Unit II : Social-Cultural Anthropology: Meaning, Scope and Specializations; Basic Approaches: Holistic, Comparative, Historical, Nomothetic and Idiographic; Relationship to History, Psychology, Economics, Sociology, Management, Medical and Nutritional sciences.

Unit III: Meaning, definition and scope of archeological anthropology. Relationship to other Branches of Anthropology, Earth Sciences, Physical Sciences, Life Sciences and Social Sciences. Define environmental Archaeology and ethno-archaeology.

Unit IV: Race, Ethnicity and Populations: Concepts: Race, Racism; Classification of Races – Major Races of the World; Racial Criteria used for Racial Classification - Morphological, Serological and Genetic; Racial Classification of world population – Hooton, Coon, Garn and Boyd Racial Classification India Populations – Risley, Guha and Sarkar.

Course Outcomes:

a. Understand the meaning, scope and relation with other branches of Biological Anthropology.
b. Understand the meaning, scope and relation with other branches of Socio-Cultural Anthropology.
c. Understand the meaning, scope and relation with other branches of Archeological Anthropology
d. Exposed to race, ethnicity and racial classification

SEMESTER – IV

(SPECIALIZATION IN BIOLOGICAL ANTHROPOLOGY)

ANB : 401 – Core Theory : BIOLOGICAL ANTHROPOLOGY

Course Objectives:

1. To understand the human biology and biological anthropology

2. To understand the Variation in Modern Human Populations
3. To understand the Human Adaptability
4. To understand the Bio-Cultural Aspects of Health and Disease

Unit I: Meaning, Scope of Biological Anthropology; Human Biology and Biological Anthropology; Methods and Approaches: Anthropometric, Serological, Biochemical, Physiological and Molecular.

Unit II: Biological Variation in Modern Human Populations: Causes of Human Variation; Size, Shape of the Body, Pigmentation, Blood Groups and Natural Selection, Biochemical Variations.

Unit III: Human Adaptability: Human Ecology and Ecosystems, Human Adaptation (Biological and Cultural) to Heat, Cold and Altitude. Human Energetics. Impact of urbanization and Industrialization on Man.

Unit IV: Bio-Cultural Aspects of Health and Disease: Concepts of Health and Disease; Determinants of Health; Genetic, Communicable and Non-Communicable Diseases – Causes and Impact; Co-Evolution of People and Disease; Population Aging and its Implications.

Course Outcomes:

a. Understand the basic concept, meaning and scope of Biological Anthropology
b. Know the biological variation in modern human populations
c. Understand the human adaptability and impact of urbanization on humans
d. Bio-cultural aspects of health and disease

ANB : 403 -3(a)– Generic Elective :HUMAN GROWTH, PHYSIQUE AND NUTRITION

Course Objectives :

1. Students will be able to learn about various stages and environmental factors involved in human growth and development which help them in understanding growth monitoring of a child.
2. To know about different methods for studying growth
3. To understand analysis of Human Physique and constitution or Body composition
4. They will understand the role played by balance diet in leading a healthy

Unit I: Human Growth: Definition and Concept of Growth, Development, Differentiation and Maturation. Concept of Age and its Ascertainment: Chronological, Dental, Skeletal and Morphological. Stages of Growth: Infancy, Childhood, Juvenile, Adolescence, Adulthood and Senescence.

Unit II: Methods of Studying Growth: Cross-Sectional, Longitudinal and Semi-Longitudinal Studies and their Relative Merits and Demerits; Factors Affecting Growth: Genetic, Environmental and Hormonal. Growth Curves - Universal Curves: Lymphoid, Neural, General and Genital. Basic (Data) Curves: Distance, Velocity, Incremental and Percentile.

Unit III: Analysis of Human Physique and constitution or Body composition : Viola, Kretschemer, Sheldon and Health Carter. Human Physique and its Relation of Function, Disease and Behavior.

Unit IV: Human nutrition Basics Terms and Concept : Nutrients and Nutrition, Malnutrition, Under nutrition over nutrition and Obesity; Socio-Cultural Aspects of Nutrition; Functions and uses of Nutrients in Health and Disease. Groups at Risk. Infants growing children pregnant women and lactating mothers and aged people. Determinants of nutritional levels Anthropometric clinical sings and Biochemical diet and nutrition through diet surveys. Concept of References standards of Growth status. Secular trends of Growth and Nutrition.

Course Outcomes:

a. Know about the Differentiate the term growth, maturation and development

b. To learn the methods of studying growth and the factors affecting the growth
c. To understand the Human Physique and its Relation of Function, Disease and Behavior.
d. Know the socio-cultural aspects of nutrition and nutrients in health and diseases

7. Singh, I.P. and Bhasin, M.K. 1968 Anthropometry, Bharathi Bhavan Delhi.
8. Watson, E.H. and Lowrey, G.H. 1954. Growth and development of children. The year book publishers, Inc. Chicago, pp.296.

ANB : 403- 3 (b)– Generic Elective : APPLIED BIOLOGICAL ANTHROPOLOGY

Course Objectives :

Students will learn

1. The applications of Anthropometry
2. Relevance of forensic anthropology in crime investigations
3. Uses of bio- medical anthropology
4. Genetic counseling, genetic screening, Genetic engineering and Gene therapy

Unit I: Applications of Anthropometry: Assessment of Nutritional Status; Clinical Applications of Anthropometry; Kinanthropometry – Body Proportionality in Relation to Sports; Applications in the Fields of Defense and Air Force, Artificial Limbs, Readymade Garments, Shoe Making and Furniture Industries, etc.

Unit II: Forensic Anthropology: Definition, Aims and Scope; Establishment of Identity through Skeletal Remains – Age, Sex and Reconstruction from Skeletal Remains; Dermatoglyphics in Forensic Anthropology; Personal Identification – Identification through Somatometry and Somatoscopy; Identification through Hair and Body Fluids in Personal Identification; Blood Location, Semen, Saliva and Urine Collection and Evaluation, Medico-Legal Aspects; Questioned Paternity; DNA Finger Printing.

Unit III: Genetic and Society: Congenital Malformations; Genetic Counseling – Genetical, Medical and Social Concepts and Essential Qualities of Genetic Counseling; Genetic Screening and Prenatal Diagnosis of Genetic Diseases; Genetic Engineering. Ethical Aspects of Genetic Counseling; Human Genome Project; Treatment of Genetic Diseases and Gene Therapy.

Unit IV: Bio-Medical Anthropology: Physical Anthropological Approaches to the study of Diseases: Goiter, Kuru and Sickle-Cell Anaemia. Blood Groups and Disease Associations. Concept of Race and Racism, UNESCO Statement, Race Relations Racial Fallacies.

Course Outcomes:

a. Know about various applications of anthropometry and kinanthropometry in various fields

b. Understand about the importance of forensic anthropology in crime investigations
c. Know the importance genetic counseling, genetic screening, Genetic engineering, treatment of genetic diseases and Gene therapy
d. Learn about the human geno project

CO- Po MAPPING :

15. Surinder Nath. 1989. An Introduction to Forensic Anthropology. New Delhi: Gian Publishing House.

ANB : 403-3(c)– Generic Elective : MEDICAL GENETICS

Course Objectives :

Students will **:**

1. Understand Medical Genetics vis-à-vis Medical Sciences and Genetics
2. Understand Onset and possible causation of Genetic Disease/Syndrome defects /Disorders / and the Congenital Deformities having adverse bearing on community level
3. To know about the Genetic classification of the disease and their variations with reference to syndrome
4. To know about the society and genetic disease

Unit – I : Medical Genetics vis-à-vis Medical Sciences ad Genetics ; Anthropology and Genetics , Anthropology and Medicine (Discases) overplanting areas and their relevance; Formal Genetics and Medical Genetics: Identification and Distinguishing of their boundaries.

Unit – II : Onset and possible causation of Genetic Disease/Syndrome defects /Disorders / and the Congenital Deformities having adverse bearing on community level; methods of identification of Genetics Diseases: Pedigree Method, Twin Method, Cytogenetic, Biochemical, Molecular

Gene and Prenatal Diagnosis.

Unit – III : Genetic classification (Autosomal, sex-linked etc.,) of the disease and their variations with reference to syndrome; Racial / population variations – Epidemiology; Demographic, Socio-Cultural and Ecological dimensions of Genetic diseases, Perception knowledge and attitude towards such diseases Ethno-Medicinal aspects of Diagnosis; control and treatment.

Unit – IV : Society and Genetic Disease: knowledge, attitude and practice (KAP) and curing practices; genetic counseling approaches.

Course Outcomes:

a. Understand the overplanting areas of anthropology and genetics, anthropology and medicine (Disease)
b. Understand the different methods of identification genetic diseases
c. Know about epidemiology, socio cultural and ecological dimensions of genetic diseases control and treatment
d. Learn the knowledge, attitude and currying practices of genetic diseases

CO- Po MAPPING :

Course	PO_1 Knowledge	PO_2 Analysis	PO 3 Design	PO_4 development	PO 5 Modern tolls	PO 6 Society	PO_7 Environment	PO_8 Ethics	PO 9 Team work	PO_{10} Communication	PO_{11} Programme Management	PO_{12} Life Long Leering

5. Nussbaum, Robert L., Melinners, Roderick R. and Willard , Huntington F. 2001. Thompson and Thompson's Genetics in Medicine. Philadelphia: W.B Saunders company.
6. Thompson and Thompson's M.W. 1966 Genetics in Medicine. Philadelphia: W.B Saunders company.
7. Harper, P.S. Practical Genetic counseling.
8. Morton, N.E 1982 outlines of Genetic Epidemiology New York: S Kraager.
9. Landy, D. Culture, Disease and Healing.

Foster, G.M. et at., Medical anthropology

ANB : 404 – Practical : ADVANCED BIOLOGICAL ANTHROPOLOGY

Unit I: Serology: Techniques and Procedures in Blood Grouping of A1A2BO, Rh (D), MN Systems.

Unit II: Other Genetical Traits: Techniques and Procedures in determining the Tasting Ability to Phenyl Thio-carbamide and Identifying the Colour Blindness using the Ishihara Colour Plates.

Unit III: Techniques and Procedures of Quantitative Estimation of Haemoglobin and the Determination of Blood Pressure. Sickle cell Na2S205 slide test.

Recommended Readings :

1. Boorman, K. E., Dodd, B. and Lincoln, P. J. 1977. Blood Group Serology. Edinburgh: Churchill Livingstone.
2. Ishihara, I. Test for Colourblindness. Tokyo: Kanehara.
3. Kalmus, H. 1965. Diagnosis and Genetics of Defective Colour Vision. Oxford: Pergamon Press.
4. Race, R. R. and Sanger, R. 1975. Blood Groups in Man. Oxford: Blackwell Scientific.
5. Wiener, J. S. and Lourie J. A. 1969. Human Biology: A Guide to Field Methods. London: Academic Press.
6. Weiner, J. S. and Lourie, J. A. 1981. Practical Human Biology. London: Academic Press.
7. Yunis, J. J. (Ed). 1969. Biochemical Methods in Red Cell Genetics. New York: Academic Press.

ANB : 405 – Multi Disciplinary Course / Project work :

FIELD WORK, DISSERTATION AND VIVA VOCE

Unit I: Field Work: The Student has to undertake Field Work Programme for a Period of 15 days under the Supervision of Teachers in the Field on the Specified Research Topic chosen in consultation with the Research Supervisor concerned.

Unit II: Preparation of Dissertation: The Student has to prepare the Dissertation on the basis of Statistical Analysis of the Data collected in the Field and the same be submitted to the Department for Evaluation at least 10 days before the commencement of the Fourth Semester Examinations.

Recommended Readings :

1. Boorman, K. E., Dodd, B. and Lincoln, P. J. 1977. Blood Group Serology. Edinburgh: Churchill Livingstone.
2. Garn and Shamir. Methods of Research in Human Growth
3. Ishihara, I. Test for Colour blindness. Tokyo: Kanehara.
4. Jelliffe, D. B. 1966. The Assessment of the Nutritional Status of the Community. WHO Monograph Series No. 53. Geneva: WHO.
5. Race, R. R. and Sanger, R. 1975. Blood Groups in Man. Philadelphia: Davis.
6. Wiener, J. S. and Lourie J. A. 1969. Human Biology: A Guide to Field Methods. London: Blackwell Scientific Publications.
7. Weiner, J. S. and Lourie, J. A. 1981. Practical Human Biology. London: Academic Press.

ANB : 406-6 (a) - Open Elective : EPIDEMIOLOGY

Course Objectives :

1. To understand the Meaning and Scope, Methods, Rates, Indices, Genetic Epidemiology, Clinical Epidemiology
2. To understand the Complex Diseases
3. To know about human obesity and its complications
4. To learn the Major Communicable and Non-communicable diseases

UNIT I: Epidemiology: Meaning and Scope, Methods, Rates, Indices, Genetic Epidemiology, Clinical Epidemiology

UNIT II : Complex Diseases: Concept, Genetic Factors, Environmental Impact, Etiology, Diagnosis, Prevalance; Prevention and Control of Diabetics, Cardio-Vascular Diseases and HIV/AIDS

UNIT III: Human Obesity : Characteristics, Types, Reasons and Complications on Individual Health, Prevention and Control.

UNIT IV : Major Communicable and Non-communicable diseases : Global and Indian Scenario; Malaria, and Tuberculosis : Etiology, Prevalance, Prevention and Management.

Course Outcomes:

a. Exposed to the basic concepts in epidemiology with examples of epidemiology in different areas of public health.
b. Understand the global burden of health outcomes and diseases by assessing measures and interpret the prevalence, risk, rate, and odds within the context of epidemiology
c. Know about Complications of obesity on health its prevention and control
d. Understand the complex web of biological, behavioral, cultural and environmental factors towards the prevalence of communicable infections and chronic infections

CO- Po MAPPING :

Course	PO_1 Knowledge	PO_2 Analysis	PO 3 Design	PO_4 development	PO 5 Modern tolls	PO 6 Society	PO_7 Environment	PO_8 Ethics	PO 9 Team work	PO_{10} Communication	PO_{11} Programme Management	PO_{12} Life Long Leering

7. JH. Abramson, Z.H. Abramson. Survey Methods in Epidemiological research, Programme Evaluation and Community Medicine

ANB : 406 -6(b) - Open Elective : APPLIED BIOLOGICAL ANTHROPOLOGY

Course Objectives :

Students to understand the

1. Applications of Anthropometry
2. Forensic Anthropology its application in crime investigation
3. Genetic and Society
4. Bio-Medical Anthropology its applications

Unit I: Applications of Anthropometry: Assessment of Nutritional Status; Clinical Applications of Anthropometry; Kinanthropometry – Body Proportionality in Relation to Sports; Applications in the Fields of Defense and Air Force, Artificial Limbs, Readymade Garments, Shoe Making and Furniture Industries, etc.

Unit II: Forensic Anthropology: Definition, Aims and Scope; Establishment of Identity through Skeletal Remains – Age, Sex and Reconstruction from Skeletal Remains; Dermatoglyphics in Forensic Anthropology; Personal Identification – Identification through Somatometry and Somatoscopy; Identification through Hair and Body Fluids in Personal Identification; Blood Location, Semen, Saliva and Urine Collection and Evaluation, Medico-Legal Aspects; Questioned Paternity; DNA Finger Printing.

Unit III: Genetic and Society: Congenital Malformations; Genetic Counseling – Genetical, Medical and Social Concepts and Essential Qualities of Genetic Counseling; Genetic Screening and Prenatal Diagnosis of Genetic Diseases; Genetic Engineering. Ethical Aspects of Genetic Counseling; Human Genome Project; Treatment of Genetic Diseases and Gene Therapy.

Unit IV: Bio-Medical Anthropology: Physical Anthropological Approaches to the study of Diseases: Goiter, Kuru and Sickle-Cell Anaemia. Blood Groups and Disease Associations. Concept of Race and Racism, UNESCO Statement, Race Relations Racial Fallacies.

Course Outcomes:

a. Know about various applications of anthropometry and kinanthropometry in various fields
b. Understand about the importance of Forensic anthropology in crime investigations
c. Know about the Congenital Malformations, Genetic Counseling Genetic Screening and Prenatal Diagnosis of Genetic Diseases; Genetic Engineering. Ethical Aspects of Genetic counseling; Human Genome Project; Treatment of Genetic Diseases and Gene Therapy.
d. Understand about the importance of biological anthropology in study of various diseases

SEMESTER – III

(SPECIALIZATION IN SOCIAL CULTURAL ANTHROPOLOGY)

ANS : 301 - Core Theory : THEORIES OF CULTURE

Course Objectives :

Aimed to understand the students

1. Culture and Cultural Evolution
2. Diffusion and Diffusions

3. Culture and Personality
4. Historical Approach

Unit I: Culture and Cultural Evolution: Meaning; Culture as Adaptive System; Ideational Theory of Culture (Culture as Cognitive, Structural and Symbolic Systems). Conceptual Contributions of E. B. Tylor, B. Malinowski, A. L. Kroeber, L. White, Unilineal Evolution (L. H. Morgan and E. B. Tylor); Multilineal Evolution (J. Steward); Universal Evolution (L. White); General and Specific Evolution (Sahlins and Service).

Unit II: Diffusion and Diffusions: British School; German-Austrian School; American – Distribution School.

Unit III: Culture and Personality; Patterns of Culture (R. Bendict); Basic Personality, Model Personality (Kardiner, Linton, Cora Dubois); Selfhood (Murphy); Symbolic (G. Obeysekere)

Unit IV: Historical Approach: History and Social Anthropology; Relevance of Historical Approach; Historical Particularism (F. Boas).

Course Outcomes:

a. Understand the Conceptual Contributions of E. B. Tylor, B. Malinowski, A. L. Kroeber, L. White, Unilineal Evolution (L. H. Morgan and E. B. Tylor); Multilineal Evolution (J. Steward); Universal Evolution (L. White)
b. To know the British School; German-Austrian School; American – Distribution School of culture
c. Know the Patterns of Culture (R. Bendict); Basic Personality, Model Personality (Kardiner, Linton, Cora Dubois); Selfhood (Murphy); Symbolic (G. Obeysekere)
d. understand the historical approaches of culture

CO- Po MAPPING :

ANS : 302 - Core Theory : SOCIAL ANTHROPOLOGY OF COMPLEX SOCIETIES

Course Objectives :

Students will learn

1. Meaning and approach of complex societies
2. Peasant societies
3. Complex cultures in western societies
4. Urban anthropology and complex organizations

Unit I: Complex Societies: Meaning and Approach, Folk-Urban Continuum (R. Redfield); Great and Little Traditions (R. Redfield and Singer); Text and Context (Singer);

Unit II: Peasant Societies: Contributions of Redfield, Shanin and Eric Wolf; Peasants and Tribes; Peasants and Workers; The Image of Limited Good (G. M. Foster). Contemporary Peasant Communities.

Unit III: Complex Cultures in Western Societies: Social Class in Western Societies; Culture of Poverty (O. Lewis); Institutions in Complex Societies: Family and Kinship; Study of Culture at a Distance and National Character.

Unit IV: Urban Anthropology and Complex Organizations: Urban Anthropology: Meaning and Scope; Urban Problems and Anthropological Interventions; Urbanization and Social Change (Harshad R. Trivedi); Global problems and culture of capitalism.

Course Outcomes:

a. Learn the meaning and approach of great and little traditions
b. learn about the peasant societies and contemporary peasant societies
c. know the culture of poverty, institution and complex societies
d. understand problems of urbanization and social changes

ANS : 303-3 (a) – Generic Elective : ECOLOGICAL ANTHROPOLOGY

Course Objectives :

Students will be understand

1. Ecological Anthropology: Meaning and Scope
2. Theoretical Formulations of ecology
3. Ecological Issues
4. Environmentalism

Unit I: Ecological Anthropology: Meaning and Scope; Concepts: Ecology, Ecosystem, Homeostasis of the Ecosystem, community and Population, Habitat and Ecological Niche, Ecosystem Development (or Ecological Succession), Environment, Adaptation, Culture Core.

Unit II: Theoretical Formulations: Environmental Determinism (Meggars); Environmental Possibilism (C. Wisler, A. L. Kroeber, D. Forde); Cultural Ecology (J. Steward); Techno-Economic and Techno-Environmental Determinism (M.Harris) Cognitive Ecology (H. Conklin, C. Frake and A. Beals); Single Unified Ecology (Vayda and Rappaport); Nature-Culture Dualism; Ethno-ecology.

Unit III: Ecological Issues: Forest and Tribes; Traditional Resources Management; NTFP; Sacred Grooves. Biodiversity for Sustainable Development; Community based Conservation (CBC): Issues and Prospects; Development Projects (Hydro-electric, Irrigation Projects and

Industries) and Displacement.

Unit IV: Environmentalism: Meaning and Issues for Debate; Role of Anthropology; Ecological Protest Movements (Chipko and Narmada Bachao Andolan (NBA)); Environmental Policy and NGOs.

Course Outcomes:

a. Understand the environment and ecosystem in understanding the cultural modifications
b. Know about the cultural ecology, cognitive ecology, single unified ecology, and ethno ecology.
c. Learn issues and prospects on development projects and displacement
d. Understand Biodiversity for sustainable development
e. Know about Ecological protest movements (Chipko and Narmada Bachao Andolan (NBA));

ANS : 303-3(b) - Generic Elective : APPLIED ANTHROPOLOGY AND INDIGENOUS COMMUNITIES

Course Objectives :

Aims to understand

1. Applied and Action Anthropology
2. Social-Cultural Change–Innovation
3. Applications of Anthropology in different fields
4. Tribal Welfare – Planning and Administration

Unit I: Applied and Action Anthropology – Meaning and Scope; Similarities and Differences between Applied and Action Anthropology . Indigenous communities and applied anthropology. Indigenous rights.

Unit II: Social-Cultural Change–Innovation; Diffusion; Acculturation; Assimilation; Trans-acculturation; Socialization; Cultural Lag; Cultural Shock; Barriers to Change: Social, Cultural and Psychological Barriers; Agents of Change; Chain Reaction; Promoters of Change.

Unit III: Applications of Anthropology in – Agriculture; Public Health; Medicine and Nutrition; Industry; Education; Environment and Bio-Diversity; Administration and Planning; Poverty Eradication (Rural-Urban).

Unit IV: Tribal Welfare – Planning and Administration: History and Approaches (British, Ghurye, Area Approach/MADA; ITDP; Sub-Plan); Tribal Problems: Forest and Property Rights; Shifting Cultivation; Displacement; Education; Indebtedness and Land Alienation; Health; Tribal Movements and National Integration: Nativistic and Revitalization Movements with Examples.

Course Outcomes:

a. Know the Similarities and Differences between Applied and Action Anthropology, Indigenous communities and applied anthropology. Indigenous rights.
b. Know the process of acculturation and assimilation, socialization
c. Know about applications of Anthropology in the management of health, agriculture, education and biodiversity and poverty eradication

d. Gain the knowledge on tribal welfare, tribal problems, forest and property rights, shifting cultivation and tribal movements

ANS : 303-3 (c) – Generic Elective : ANTHROPOLOGY OF RELIGION- SACRED COMPLEX IN INDIA

Course Objectives :

1. To understand the role of sacred complexes in cultural modifications in contemporary society
2. To understand the Anthropological theories or religion
3. To know the Analytical studies on religion
4. To learn the Contemporary issues of religion

Unit – I : Anthropology of Religion : Meaning scope and relation with power and political leverage, ethic identity and other aspects of culture in traditional and modern societies; elements of religion : Ritual ceremony, myth, taboo, sacred and profane, Rites of passage; van Gennep (separation, Liminality and incorporation); Witchcarft; sacrifice (Hicks and Gwywne); purity and pollution (Pauline kolenda).

Unit – II : Anthropological theories or religion; Durkheims theory of religion; functional school of religion symbolism anthropological conceptualization of pilgrimage; sacred space; sacred time and sacred knowledge; man-nature-sprit complex and sacred complex as a dimension of Indian civilization (vidyarthi, sinha and saraswathi) conceptual contributions concerning civilization (primary-secondary of Robert redfield); universalization and parocholozation of Marriot cultural Media and cultural performance of singer.

Unit – III : Analytical studies on religion ; Mini-Readings-The imagined landscape; Patters in the construction of Hindu sacred Geography (Diana L. Eck); The issue of Right of Food among the Hindu – Notes and comments (R S Khare); Moharam (A R Saiyid); Five symbols of sikh identity (J.P.S Uberoi); Aspects of sarora ritual and Shamansism (victor tuner); Ritual Regulation of environmental relations among a new guinea people (Ray A Rapport) and Christianity in India (K.N. Sahey).

Unit – IV : Contemporary issues of religion; the logic of religious violence (M. Juergensmeyer); Secularism (Brass and Madan) and fundamentalism; Religious conversion; Religious tourism;

management and ecological issues.

Course Outcomes:

a. Know about meaning and relation with power and political leverages, ethnic identity and other aspects of culture in tradition and modern societies
b. Know the different anthropological theories of religion
c. Know the issues of right of food among by Hindus, five symbols of sikh identity, Aspects of sarora ritual and Shamansism, and Christianity in India
d. To understand Contemporary issues of religious violence, secularism and fundamentalism

ANS : 304 - Practical : Participatory Research Methods in Community Development Process

Unit I: Participatory Rural Appraisal (PRA): Conventional Research Methodology; Genesis of PRA; Critical Appraisal of PRA; Prerequisites for PRA.

Unit II: Social Mobilization and Extension: Meaning and Nature; Development of Tourism: A Critique; Demand Driven Approach.

Unit III: Tools and Techniques of PRA: Identification of the Knowledge. Interviews: Focus group Discussion; Group Interviews; Chain of Interviews; Sequence of Interviews; Ethno-history; Case Study. Mapping: Village Mapping; Social Mapping; Resource Mapping; Concept Mapping; Need Assessment (100 Seeds Method); Food Security Mapping. Ranking, Scoring and Rating: Weather Ranking; Pair-wise Ranking; Social Ranking; Wealth Ranking; Livelihood Analysis. Diagram: Venn Diagram; Seasonality Diagram Miscellaneous: Transect Walk; Problem Analysis; Time-Line. Health PRA: Seasonality; Intensity; Curative. Gender PRA: Decision-Making; Division of Labour. Micro plan.

Unit IV: Applications of Participatory Research Techniques. Note: The student has to write a record and present one PRA Technique after applying the same in Rural Context. Duplication of PRA Technique is to be avoided to the extent possible. In Case two or more Students were to apply one PRA Technique, the Context and Subject for which the Specific PRA Applied may be Suitably Different.

ANS : 305 - Skill Oriented Course : Data Management and Computer Applications

Course Objectives :

1. To understand the Data: Concept and Definition, Development of Data. Data in Anthropology and Variables
2. To know about the Personal computer operating system
3. To know the SPSS package
4. To learn the Excel

Unit I: Data: Concept and Definition, Development of Data. Data in Anthropology, Variables: Continuous and discontinuous variables, attributes and derived variables. Data collection methods; types of data, Accuracy and precision of the data, choosing appropriate scale and measurements to the data; preparing code book.

Unit II: Personal computer operating system – MS office –creating a document using word, editing and formatting text. Use of computers in the analysis of the data.

Unit III: SPSS: Getting to know SPSS, Preparing the Data, Screening and cleaning data, Manipulation of Data, preliminary analysis, Descriptive statistics: Correlation , Multiple Linear regression, one sample and two independent sample t test. Independent Chi Square Test, Logistic

Regression and Discriminant Analysis. Factor Analysis, Cluster Analysis.

Unit – IV : Excel: Introduction manage workbook options and settings : Format worksheets and work books : Customize options and views for worksheets and work books: Create Tables: Manage Table styles and options : Filter sort a Table perform operations with formulas and functions: create charts and objects: Apply custom data formats and layouts : create advanced formulas:

Course Outcomes:

a. Know about data Collection entry and management.
b. Understand the M.S. Office.
c. Exposed in using the SPSS in preparing charts and various advanced statistics
d. Understand the excel package in using data analysis

ANS : 306-6 (a) - Open Elective : ANTHROPOLOGY & CAREER PROMOTION

Course Objective :

Students will learn

1. Basic fundamental of Anthropology
2. To learn the overview of anthropology subject matter
3. To know the Indian Anthropology
4. Learn the Preparation and the art of answering questions

Unit – I : Introduction to Anthropology : Branches specializations; relation with other subjects; Anthropology in competition examinations.

Unit – II : An Overview of Anthropology subject matter

Basic concepts of definitions

Institutions and organization

Medical Anthropology

Anthropology and Development

Field work and PRA, RRA

Globalization : Anthropological theories

Unit – III : Indian Anthropology

Prehistoric protohistoric cultures Ancient Civilizations, video and post Vedic cultures

Enthenic, Linguistics classifications of Indian populations

Caste, Scs, Traditions and Socio cultural processes

Tribes and Tribal welfare; problems; Administrations; tribal and rural development

Unit – IV : Preparation and the art of answering questions

Books to be consulted

Review of questions

Scheme of valuation

Course Outcomes:

a. Understand the anthropology in competitive examinations
b. Know about participatory research appraisal
c. Exposed to the issues in tribes, tribal problems and cast populations
d. Learn the books to be consulted, review of questions and scheme of valuation

ANS : 306-6 (b) - Open Elective : TRIBAL STUDIES

Course Objectives

1. To understand the Concept of tribe, Characteristics of tribe, Tribes in India
2. To learn the Problems of tribes
3. To know the Tribal Economy
4. To understand the Tribal policies

Unit- I : Concept of tribe, Characteristics of tribe, Tribes in India: classification and distribution of tribes based on economic, cultural, linguistics and racial, Tribal situation of Orissa.

Unit- II : Problems of tribes: Land Alienation, Indebtedness, Migration, and Cultural Degradation.

Unit- III : Tribal Economy : Shifting cultivation, Forest and tribe, Deforestation and its impact on tribal, Tribal education, Problems and prospects, Tribal health, Tribal craft.

Unit- IV : Tribal policies : Fifth and Sixth Schedules Constitutional safeguards.

Course Outcomes:

a. Understand the classification and distribution of tribes
b. Know the tribal problems like Land Alienation, Indebtedness, Migration, and Cultural Degradation.
c. To know the shifting cultivation, tribal education and tribal health
d. To know the Fifth and Sixth Schedules Constitutional safeguards

SEMESTER – IV

(SPECIALIZATION IN SOCIAL CULTURAL ANTHROPOLOGY)

ANS : 401 - Core Theory : STRUCTURAL ANTHROPOLOGY

Course Objectives :

1. Students to understand structure and function
2. To know about the Social Structure and Social Organization
3. To learn the Structuralism (Levi-Straus)
4. To understand the Symbols and Meanings

Unit I: Structure and Function: Organism Analogy; Social Structure and Function (A. R.Radcliffe-Brown); Functionalism and the Theory of Needs; Institution; Primitive Exchange and Religious Motivations; Psycho-Analytical and Bio-Cultural Interpretations (B. Malinowski)

Unit II: Social Structure and Social Organization: Ideal and Real (E. R. Leech); Social Organization (R. Firth); Status and Role (S. F. Nadal)

Unit III: Structuralism (Levi-Straus): General Notion of Structuralism; Surface Structure and Deep Structure; Binary Opposition; Model; Structural Approach and Myth.

Unit IV: Symbols and Meanings: Symbols and Structure (V. Turner and M. Douglas); Interpretative Anthropology (C. Geertz); Post-Modernism.

Course Outcomes:

a. Know the social structure and function of culture
b. Understand about the ideal and real social structure and social organization
c. Know the general notion of structuralism
d. Learn the symbols and structure

ANS : 402 - Core Theory – DEVELOPMENTAL ANTHROPOLOGY

Course Objectives :

1. To understand the meaning and scope of Development Anthropology
2. To learn the various Steps in Planning Development Project
3. To know the different Agencies of Development
4. To learn the Model Project (Intensive Study)

Unit I: Development Anthropology: Meaning and Scope; Concept of Development and Sustainable Development; Relevance of Anthropological Knowledge in Role of Values and Institution in Development); Indices and Measurement of Development; Models and Theories in Development.

Unit II: Steps in Planning Development Project: Concept of Planning; The Logical Framework-Project Planning and Management Technique; Project Preparation and Defining of Goals; Process of Implementation; Monitoring and Evaluation; Social Assessment and Stake Holder Analysis.

Unit III: Agencies of Development: Role of Government Agencies; Non-Governmental

Organizations; Community Based Organizations; Peoples Participation in Development.

Unit IV: Model Project (Intensive Study): Case Studies on Forestry; Watershed Management and Irrigation (Relegoan Siddi); Resettlement (Narmada); Poverty Alleviation (Velugu); Primary Education (VECs)

Course Outcomes:

a. Know about the Concept of Development and Sustainable Development
b. Understand the steps in project preparation, goals, process of implementation and monitoring.
c. Role of government, NGOs and peoples participation in development
d. Know the watershed management and irrigation, resettlement,(Narmada) poverty Alleviation (Velugu); Primary Education (VECs)

ANS : 403- 3 (a) - Generic Elective : MEDICAL ANTHROPOLOGY

Course Objectives :

1. To understand the scope, meaning and Basic Premises in Medical Anthropology
2. To understand the Epidemiology, Ecology, culture and diseases, Infectious and non-infectious diseases
3. To understand the Ethno medicine
4. To know about the Modern Medical systems and Health care delivery services

UNIT – I

1) Meaning and scope
2) Basic Premises in Medical Anthropology
3) Central concepts
4) Major theoretical frameworks

UNIT-II

1) Epidemiology: Definition and Components of study in epidemiology, rates and ratios used in epidemiology

2) Epidemiology and Medical Anthropology.
3) Ecology, culture and diseases
4) Infectious and non-infectious diseases

UNIT-III: Ethno medicine

1. Aetiology, disease classification
2. Diagnosis and treatment : Folk methods
3. Cultural context of health and illness behavior: illness behavior – definition models of illness behavior

UNIT – IV: Modern Medical systems and Health care delivery services

1. Medical pluralism
2. Factors influencing health programmes
3. Medical practitioners and patients
4. Health Research: Anthropological methods critical medical and social economy approaches to health and illness.

Course Outcomes:

a. Exposed to the basic concepts in epidemiology with examples of epidemiology in different areas of public health.
b. Understand the etiology, control of infections and non-infections diseases
c. Understand the ethno-medicine in the management of health and illness behavior
d. Understand the modern medical systems and health care delivery services

ANS : 403-3 (b) - Generic Elective - CULTURE AND MANAGEMENT

Course Objectives :

1. To learn the Basic concepts of culture and management
2. To understand the Organization theory and comparative management
3. Understand the management and culture
4. To know the Methodological issues in cross-cultural management research

Unit :I Basic concepts : Culture; institutions, organizations, values, norms and behaviours. National character. Small groups and networks. The concept of organizational culture. Its links with cultural anthropology Organizational ethnography. Anthropology of work

Unit-II Organization theory and comparative management. Theories of organizational culture. Different anthropological traditions (cognitive, structuralist, symbolic schools) Functionalist paradigm vs. interpretive paradigm in organization theory.

Unit_III Introducing management and culture. Management in East and West. Concepts of effectiveness and efficiency: Collectivism, Individualism, Uncertainty avoidance. Decision making, Communication. Knowledge management. How culture affect management Changes in management styles Future outlook.

Unit-IV Methodological issues in cross-cultural management research. The interpretive paradigm. Ethno methodological approaches. Phenomenology and the study of organizational activities. Organizational symbolism. Integration, differentiation and fragmentation as three perspective approaches to organizational culture analysis Basic assumptions and characteristics of the three approaches. Areas of application.

Course Outcomes:

a. Know the concept of organizational culture. Its links with cultural anthropology Organizational ethnography. Anthropology of work
b. Understand the Theories of organizational culture. Different anthropological traditions
c. Know the How culture affect management Changes in management styles Future outlook.

d. To understand the Ethno methodological approaches, Organizational symbolism. Integration, differentiation and fragmentation as three perspective approaches to organizational culture.

ANS : 403-3(c) - Generic Elective: - **ANTHROPOLOGY OF DISPLACED POPULATIONS**

Course Objectives :

1. Students to know about development and displacement
2. Understand about Displacement, Resettlement and Rehabilitation
3. To know the Policy issues relating to development and displacement in India
4. To learn the Socio-Cultural effects of displacement, Socio disorganization

Unit – I : Development and Displacement ; Concept conceptual variation between displacement up-rooted, refuges, costees, evacuees, forced migration, involuntary migration; displaced populations due to various development projects in India and abroad people’s perception towards development and displacement.

Unit – II : Displacement, Resettlement and Rehabilitation: Conceptual relationship, preparation of estimates, notification and declaration Emsveration payment of compensation process of displacement, rehabilitation and resettlement, role of government and non-government agencies in the process of displacement, resettlement and rehabilitation.

Unit – III : Policy issues relating to development and displacement in India. Government Orders and Policies of states and Central Governments. Legal implications of displacement and rehabilitation.

Unit – IV : Socio-Cultural effects of displacement, Socio disorganization, process of disintegration and reintegration, occupational diversity, Ecological effects of large dama.

Course Outcomes:

a. Know the peoples perception towards development and displacement
b. Understand the role of government and non-government agencies in the process of displacement, resettlement and rehabilitation.
c. Understand policy issues relating development and displacement in legal implications of displacement and rehabilitation
d. Learn the Socio-Cultural effects of displacement, Socio disorganization, process of disintegration and reintegration.

ANS : 406 – 6(a) Open Elective : – VISUAL ANTHROPOLOGY

Course Objectives :

Students will understand

1. Concept and scope of Visual Anthropology
2. Functional and strategies of Ethnographic film
3. Problems of Method and Strategy

4. Ethnographic of film in India

Unit – I : Visual Anthropology : concept and scope; Visual Anthropology as a discipline history and Development ethnography and Film; Material expression of culture non-material structural expressions; Typology of Ethnographic film – Monographic Biographic, film complex structure Militant, Archie films of expression, film d ambiente, documentary (Exotic documentary) Scientific film.

Unit – II : Functional and strategies of Ethnographic film: scientific film and its function in ethnographic film as a preserver of vanishing cultures; Ethnographic film as a means of communication; Ethnographic film and socio-cultural anthropological research.

Unit – III : Problems of Method and Strategy; Description, Interpretation or Reproduction? Objectivity and subjectivity in Ethnographic film and the problem of reconstruction; scientific tradition and rules in making Ethnographic film; The concept of participant film as an Audi-visual counter-gift; Documentation of Human society and culture Ethical issues and Ethnographic reality; the nature of visual reality and constructed observational reality.

Unit – IV : Ethnographic of film in India; Social cultural Anthropology, Ethnology and Demology (study of popular traditions) some introductory considerations; Analysis of some Ethnographic films and still photos and critical appraisal; shooting s film script editing and commentary.

Course Outcomes:

a. Know about the concept, scope and Historical Development of visual anthropology
b. Know about the appraisal of ethnographic films in cultural context
c. Knowledge about descriptive studying of Visual data produced by Cultures
d. To understand the ethnographical films, still photos film shootings and commentary

ANS : 406 – 6(b)- Open Elective : – ENVIRONMENTAL ANTHROPOLOGY

Course Objectives :

1. To understand Concept of Eco system, hebetate ecological Niche and eco system development
2. To know about the Theoretical Formulations of ecology
3. To understand Ecological Issues
4. To learn about Environmentalism:

Unit I: Concept of Eco system, Historical background of the Idea of Eco system in Anthropology, Pioneers of the Eco system concept in Anthropology, Notable contribution on application of concept of Eco system in Anthropology, Ecological Anthropology: Meaning and

Scope; Concepts: Ecology, Ecosystem, Homeostasis of the Ecosystem, community and Population, Habitat and Ecological Niche, Ecosystem Development (or Ecological Succession), Environment, Adaptation, Culture Core.

Unit II: Theoretical Formulations: Environmental Determinism (Meggars); Environmental Possibilism (C. Wisler, A. L. Kroeber, D. Forde); Cultural Ecology (J. Steward); Techno-Economic and Techno-Environmental Determinism (M.Harris) Cognitive Ecology (H. Conklin, C. Frake and A. Beals); Single Unified Ecology (Vayda and Rappaport); Nature-Culture Dualism; Ethno-ecology.

Unit III: Ecological Issues: Forest and Tribes; Traditional Resources Management; NTFP; Sacred Grooves. Biodiversity for Sustainable Development; Community based Conservation (CBC): Issues and Prospects; Development Projects (Hydro-electric, Irrigation Projects and Industries) and Displacement.

Unit IV: Environmentalism: Meaning and Issues for Debate; Role of Anthropology; Ecological Protest Movements (Chipko and Narmada Bachao Andolan (NBA)); Environmental Policy and NGOs.

Course Outcomes:

a. Know the meaning and scope eco-system of homeostases, ecological niche and ecosystem development
b. Understand the various theoretical formulations
c. Understand Biodiversity for Sustainable Development; Development Projects (Hydro-electric, Irrigation Projects and Industries) and Displacement.
d. Exposed to the different ecological issues and environmentalism towards development

B – 244-01-04

M.SC., DEGREE EXAMINATION,

SEMESTER - I

Branch : ANTHROPOLOGY

ECONOMIC AND POLITICAL ANTHROPOLOGY

(Under C.B.C.S.)

Time: 3 Hrs **Max. Marks: 80**

Section – A

Answer any **FOUR** questions, All questions carry **equal** marks **4 x 5 = 20**

1. Property
2. Market Economy
3. Shifting cultivation
4. Power and Authority
5. Leadership
6. Panchayats
7. Factions
8. Peasants and Tribes

Section – B

Answer **ALL** questions, All questions carry **equal** marks **4 x 15 = 60**

1. What is economic Anthropology ? Explain the scope of economic Anthropology.

   OR

   Discuss controversy between formalist and substantivist.

2. Examine the salient features of economic organization of pastoralism.

   OR

   Explain the Horticultural economy.

3. Discuss the meaning and scope of Political Anthropology.

   OR

   Describe about the Eskimo law.

4. What are the difference between State and Stateless political organization.

OR

Critically examine the Nuer's law.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF BIOCHEMISTRY

Course

M.Sc. BIOCHEMISTRY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per

NEP-2020

M.Sc. BIOCHEMISTRY programme CBCS pattern (with effect from 2021-2022)

About the Department:

- The department of Biochemistry was started in 1978 to fulfil the demand and needs of the student community in general and of the Rayalaseema region in particular. The department has an independent building with in an area of 12000 s ft in two floors. The department has celebrated its silver jubilee in 2003. To its credit the department started M.Sc. Immunology in 2008. The course content is designed to cover all aspects of Biochemistry and practical orientation for biochemical methods. Further to strengthen the above, project work was introduced in the curriculum. The exhaustive training in biochemical methods and sound theoretical background is intended to make the student an appropriate candidate not only to take up teaching or pursuing doctoral research but also competent enough to work in pharmaceutical R&D and diagnostic labs, agricultural research institutions and various medical and allied institutions and industries. The department also invites Emeritus professors/ Scientists/ researchers from various institutions to deliver special lectures in order to encourage and motivate the students to take up research programme. The students who have successfully completed the M.Sc/ PhD, course have been working in India and abroad in various capacities in research institutions, biotech industries and universities.

Vision:

- To develop scientific tempo in understanding the importance of Biochemistry in the field of Life sciences, especially in Medicine, Agriculture and Environment for well being of humans.

Mission:

- By providing required training to the students of Biochemistry with latest tools, techniques and teaching methods. So as to enable them to do advanced research for finding solution to various problems encountered with respect to Human health, Agriculture and Environment.

Programme Specific Outcomes:

- after completion of the M.Sc. Immunology, the students will be able to understand the pathogenesis of various human diseases and plant diseases.
- The students will have the ability to develop innovative and efficient therapeutic regimes for human and plant diseases by applying their knowledge in molecular biology, genetics, immunology etc.
- Students will have the technical expertise to analyse and identify the causative factors to the diseases.

Programme Objectives:

- The main objective of M.Sc. Biochemistry is to impart knowledge to the students in the advanced fields of life sciences such as Biochemistry, Molecular Biology, Immunology, Biotechnology and Bioinformatics so as to enable the student to get the expertise and skills to carry out research in the fields of Medicine, Agriculture and other allied life sciences and make the learner fit to be employed in the Government sector and private sector and organizations such as research institutions, pharma and Biotech industries. The programme enables the students to procure entrepreneurship capabilities to establish research institutions and industries in the fields of Biotechnology, Medicine and other advanced fields of life sciences.

Programme Outcomes:

S.No	Program Outcomes
PO1	Students acquire knowledge in the chemistry of different biomolecules, which constitute living organisms including humans. Students also will have knowledge on the different physiological systems and their functions and disorders.
PO2	Students will get the ability and expertise to analyse the different biological, molecules, compounds at cellular and molecular level to understand their functions.
PO3	After completion of this program students will able to investigate the causative factors of various diseases and disorders, pollutants, etc
PO4	The student will enable to design innovative protocols and devices which will

	have applicability in various fields of life sciences.
PO5	Students acquire knowledge in latest techniques and tools that are used for investigating different types of problems related to plant, animal and humans.
PO6	The students will have the skills, knowledge and enthusiasm for solving different issues arising in the society scientifically.
PO7	Students will enable to understand the importance of environment and necessary to maintain pollution free environment.
PO8	To understand ethical principles, professional ethics and responsibilities and apply them to solve societal problems.
PO9	Students will have the efficiency to carry out the projects individually, as a team leader and as a team member.
PO10	Students will acquire communications skills to dissipate the scientific knowledge to the society
PO11	Students will acquire knowledge to carry out project and maintain financial requirements as per the guidelines of funding agency.
PO12	The students being lifelong learners will be enthusiastic to update their knowledge for improving the human life.

Programme Educational Objectives:

To enable the students to learn,

- Applied aspects of life sciences with specific reference to human health and diseases.
- Develop effective therapeutic, and nutritional regimes for the wellbeing of humans.
- Pursue research to improve the quality of agricultural products, reduce the use of peroxides and chemicals that effect humans' health.

M.Sc. BIOCHEMISTRY

SEMESTER-I

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH-101	Biochemical and biophysical methods	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study about the biological relevance of P^H, importance of buffers in biological system and basic principle, instrumentation and applications of microscopy and centrifugation techniques.
2. Knowledge about radioactivity measuring method and their applications in biochemical investigations.
3. To explore the theoretical principles, methodology and biochemical applications of chromatography and electrophoresis techniques.
4. To Understand the importance and applications of spectroscopy techniques in research field.

Course Content:

Unit I

Biological relevance of pH, measurement of pH, pKaof functional groups inbiopolymers such as proteins and nucleic acids. Importance of buffers in biological systems, ion selective electrodes, and oxygen electrode. Donnan membrane equilibrium. Significance of osmotic pressure in biological systems, viscosity and determination of molecular weight using viscometers.

Microscopy: Basic principles of light microscopy, phase contrast microscopy,electron microscopy, and fluorescence microscopy.

Sedimentation methods: Basic principles of centrifugation, preparative, differential and density gradient centrifugations, analytical, ultra centrifugation, applications in the determination of molecular weight, purity of biomolecules and detection of conformational changes of biomolecules. Flow cytometry.

Unit II

Radioactivity: half-life, decay constant, average life, units of radioactivity, Radioactivity measuring techniques, and correction factors. Statistics of counting operations, Radiation dose units, Roentgen, REP, REM maximum permissible dose, Dosimetry and dosimeters; radiation monitoring hazards, Biological effects of radiation, Isotope dilution technique and its application in biochemical investigations. Radioisotopes in biochemistry and medicine. RIA.

Unit III

Theoretical principles, methodology and biochemical applications of separation methods: Counter current distribution, Paper, Thin layer, Reverse phase, absorption, ion exchange, and gas chromatography, affinity chromatography, Gel filtration, HPLC.

Electrophoresis: Paper, agar, immune-electrophoresis, high voltage electrophoresis, SDS-PAGE and isoelectric focusing, Capillary electrophoresis, iso-tachophoresis, Northern blot, Southern blot, Western blot Analyses and development of blots. 2D electrophoresis, Pulse-field gel electrophoresis.

Unit IV

Spectroscopy: Electromagnetic radiations, Beer-Lamberts law principles and applications of colorimetry, spectrophotometry. Concept and biological application of UV, fluorimetry, flame photometry. AAS, AES, Infrared, ESR, NMR spectroscopy, Polarimetry, CD & ORD. Principles and applications of X-ray Diffraction. MALDI- LCMS, Biosensors.

Recommended Books

1. Principles and Techniques of practical Biochemistry. Eds. Williams and Wilson.
2. Techniques in Molecular biology Ed. Walker &Gastra, Croom Helm, 1983.
3. Principles of instrumental analysis, 2nd Ed, Holt-Sanders, 1980.
4. An introduction to spectroscopy for Biochemistry. Ed. Brown S.N., Academic press.
5. Analytical Biochemistry, Holmes and Hazel peck, Longman, 1983.

6. An introduction to practical biochemistry. David T. Plummer, Tata MacGrew-Hill.
7. Biophysical chemistry, Edshall& Wyman, Academic press Vol II & I.
8. A textbook of quantitative inorganic analysis including elementary instrumental analysis, Vogel ELBS.
9. Biochemical calculations Seigel, IH, 2nd Edit, John Wiley &sons Inc., 1983.
10. Analytical Biochemistry by Friefelder David.

Course outcomes: After the completion of this course, the student will be able to

1. Understand the principle, Instrumentation of different types of Light microscopy, electron microscopy, and techniques of Centrifugation and its applications in various fields of research.
2. Learn about basic Radioactivity principles, measurement method and its biological applications.
3. Acquire knowledge about the basics and latest developments in the instrumentation techniques of Electrophoresis (IEF, 2D PAGE) and Chromatography and their applications in various research fields.
4. Demonstrate skill to explain about principle, Bioinstrumentation and applications of spectroscopy techniques.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	-	2	2	3	3
CO_3	3	3	3	3	3	3	3	-	2	2	3	3
CO_4	3	3	3	3	3	3	3	-	2	2	3	3

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH-102	Molecular Physiology & Community Nutrition	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study the physiological aspects of circulatory and excretory system.
2. To describe the structure, function and mechanism of muscular system and nervous system.
3. To describe the importance of proteins, lipids in the maintenance of health and gives information about various methods of calculations of protein quality and their deficiency.
4. To explore the knowledge about Nutritional importance in different ages of human health.

Course Content:

Unit I

Circulatory system: Formation and composition of blood. Total and differential counts in blood. Development of erythrocytes, and leukocytes. Platelets. Plasma proteins Blood clotting mechanism. Erythrocyte Sedimentation Rate.

Circulation of blood. Cardiac cycle, Capillary and venous blood flow. Blood pressure Electrocardiogram Blood gas transport and gaseous exchange in tissues. Acid-base balance in lungs. The value of blood pH, PO2, PCO2, Measurements.

Excretory system structure and function of Nephrons. Urine formation; GFR, reabsorption and secretion. Composition. Normal Inorganic and organic constituents' abnormal constituents of urine. Acid-base balance equilibrium maintained by the Kidney.

Unit II

Muscular system: Types of Muscular tissue; structure of striated muscle fiber molecular organization of contractile systems, mechanism of muscle contraction, Regulation and energetics of contraction. Role of calcium.

Nervous system: Outlines of organization of nervous system; blood-brain barrier; Nerve growth factor. Origin of membrane potential. Mechanisms of propagation of nerve impulse of synaptic transmission. Myelin sheath – composition and function; biogenic amines amino acids and Peptides; Neurotransmitters. Transmission at cholinergic adrenergic nerve endings. Electrophysiological methods: PET, MRI, CAT, Sense organs and thermoregulators.

Unit III

Body weight and the body composition. Determination of body fat and body water. Body composition during growth and energy requirements. Measurement of energy expenditure, direct and indirect calorimetry, Respiratory quotient and BMR. Protein nutrition. Essential and non- essential amino acids. Nitrogen balance, methods of calculation of biological value of proteins protein calorie deficiency. Kwashiorkor and Marasmus. Fats as component of diet, measurement of energy value of fats. Essential fatty acids and phospholipids in nutrition.

Unit IV

Vitamins and Minerals: Sources of the vitamins, Requirement of fat-soluble and water-soluble vitamins and their deficiency symptoms. Macro and trace elements in nutrition. Deficiency symptoms and recommended dietary allowances. Special aspects of Nutrition for the infants, children, pregnant and lactating woman and in old age, Importance of Nutrition under stress conditions.

Community Nutrition and Health: Assessment of Nutritional status of community. Anthropometric measurements, clinical examination, Biophysical and Biochemical techniques.

Recommended Books

1. Harper’sBiochemistry.
2. Trace elements by Underwood.
3. Nutrition byM.S.Swaminathan.
4. The book of Human Nutrition (1996) MS. Bamji, N.PrahladRao and V.Reddy.
5. Text Book OF Medical physiology by A.C.Guyton (2001).

Course Outcomes: After the completion of this course, the student will be able to

1. Gain the knowledge about circulatory and excretory systems.
2. Know the importance of muscular and nervous system.
3. Health benefits and malnutrition of proteins and fats.
4. Know the importance of nutrition in maintenance of health and diseases.

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH-103P	Practical's related to Biochemical preparations and Analysis	06	04
End Semester Examination Marks: 100			

Course Objectives:

1. Exposure to basic reactions of biomolecules.
2. To analyse the presence of biomolecules like carbohydrates, proteins, lipids, etc. in known and unknown samples qualitatively.
3. To estimate the proteins, present in biological samples.
4. Isolation studies of biological samples.

Course Content:

PRACTICALS

BCH 103P: BIOCHEMICAL PREPARATIONS AND ANALYSIS-PRACTICALS

1. General reactions of carbohydrates. Specific reactions of different sugars: arabinose, xylose, fructose, galactose, sucrose, maltose and lactose.
2. General reactions of proteins and amino acids. Precipitation reactions of albumins and globulins.
3. General reactions of lipids and cholesterol.
4. Isolation and estimation of cholesterol frombrain.
5. Isolation and estimation of glycogen/starch.
6. Preparation of Casein from milk.
7. Crystallization of albumin.
8. Estimation of proteins in biological samples:
    a. Biuret method.
    b. Folin-Lowry method.
    c. UV method.
    d. Bradford's dye binding method.
9. Titration curve of amino acid and calculation of PK and PI value.

10. Estimation of amino acids by formal titration.
11. Estimation of amino acid by Ninhydrin method.
12. Estimation of tyrosine by Million's –reaction.
13. Identification of N-terminal group of proteins by Sanger's method.
14. Estimation of fructose in Fruit-juice.

Recommended Books

1. Practical Biochemistry by T Plummer
2. Practical Biochemistry by J Jayaraman
3. Klemir and others: practical biological chemistry.
4. A manual of laboratory techniques by NIN, Hyderabad.

Course Outcomes: After the completion of this course, the student will be able to

1. Learn safety and precautionary measures for working in a laboratory.
2. Develop skill and proficiency in preparation of laboratory reagentsand Use of handling of glass wares, minor equipment for conducting experiments
3. Acquire practical training for qualitative and quantitative analysis of biological materials/molecules and their estimation using multiple methods.
4. Gain the knowledge about isolation studies of biological samples.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	1	2	2	2	3
CO_3	3	3	3	3	3	3	3	1	2	2	2	3
CO_4	3	3	3	3	3	3	3	1	2	2	2	3

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH-104P	Practical related to Analytical Methods	06	04
End Semester Exam Marks: 100			

Course Objectives:

1. To understand the concepts of preparation of buffers.
2. The students will obtain hands-on training in basic separation techniques in biochemistry like electrophoresis, chromatography, etc.
3. To Develop competence in handing various centrifugation techniques and apply them in isolating and characterizing different biological molecules.
4. Understanding the applications of centrifugation and chromatography in biological investigations in order to create scientific interest.
5. Gain expertise in the isolation of various biomolecules and organelles.

Course Content:

PRACTICALS

BCH 104P: BIOCHEMICAL & BIOPHYSICAL METHODS

1. Effect of solvent system on the Rf value of two solutes usingTLC.
2. Separation of purines and pyrimidines by Paper Chromatography.
3. Separation of amino acids by Paper Chromatography.
4. Separation of sugars byTLC.
5. Isolation & Characterization of Brain Lipids by Solid phase extraction andTLC.
6. Separation of amino acids by Paper Electrophoresis (Demonstration).
7. Separation of amino acids by Ion-exchange Chromatography (Demonstration).
8. Separation of Serum proteins by PaperElectrophoresis.
9. Measurement of pH of a biological fluid using pH meter.
10. Absorption spectra of phenol red, amino acids and nucleicacid.

11. Verification of Beer's law and determination of molar extinction coefficient using p-nitro phenol.
12. Isolation and spectrophotometric characterization of plantpigments.
13. Isolation of Mitochondria from Rat liver by density gradient centrifugation (Demonstration).
14. Viscosity measurement of Bovine serumalbumin.
15. Measurement of inversion of sucrose by Polarimetry.
16. Measurement of refractive index of biologicalsample.
17. Dialysis.

Recommended Books:

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biologicalchemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell.
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry–Ed.AlanW. Gowenlock (Heinemann Medical Books).

Course Outcomes:

1. Learn how to standardize various biomolecules.
2. Separate biomolecules by paper chromatography and thin layer chromatography
3. Demonstrate separation of protein by electrophoresis.
4. Isolation and spectrophotometric characterization of plant pigments.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_3	3	3	3	3	3	3	1	3	3	3	3	3
CO_4	3	3	3	3	3	3	1	3	3	3	3	3

CourseCode	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH 105	Human values and professional ethics-I	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course objectives:

1. To study the Ethics and its relation with Religion, Politics, Business, Law, Medicine and Environment.
2. Gives information about Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values.
3. To understand the structure Ahimsa, Satya, Brahmacharya, Asteya and Aparigraha etc.
4. To Explore the Bhagavad Gita.
5. To know about Crime and Theories of punishment.

Course content:

Unit I

Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics- Goals- Ethical Values in various Professions.

Unit II

Nature of Values – Good and Bad, Ends and Means , Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right , ought, duty, obligation, justice, responsibity and freedom , Good behavior and respect for elders, Character and Conduct.

Unit III

Individual and Society: Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non possession) and Aparigraha (Non- stealing). Purusharthas (Cardinal virtues) – Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

Unit IV

Bhagavad Gita- (a) Niskama Karma (b) Buddhism- The Four Noble Truths- Arya astanga marga,(c) Jainism- mahavratas and anuvratas. Values Embeded in various Religions, ReligiousTolerance, Gandhian Ethics.

Unit V

Crime and Theories of punishment (a) Reformative , Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study

1. John S Mackenjie: A manual of ethics.
2. The Ethics of Management" by Larue Tone Hosmer, Richard .D. Irwin Inc.
3. Management Ethics-integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
4. Ethics in management" by S.A.Sherlekar, Himalaya Publishing House. Harold H. Titus:Ethics for Today.
5. Maitra,S.K: Hindu Ethics.
6. William Lilly : Introduction to Ethics.
7. Sinha : A Manual of Ethics
8. Manu : Manu Dharma Sastra or the Institute of Manu : Comprising the Indian System of Duties: Religious and Civil (ed.) G.C. Haughton.

9. Susruta Samhita : Tr. Kaviraj Kunjalal ,Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varanasi, Vol 1 OO, 16-20, 21-32 and 74- 77 only.

10. Caraka Samhita : Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office , Varanasi Vol 100, 16-20,21-32 and 74-77 only.

11. Ethics:Theory and Contemporary Issues, Barbara Mackinnon Wadsworth/Thomson Learning ,2001.

12. Analysing Moral Issues, Judith A. Boss, Mayfield Publishing Company ,1999.

13. An Introduction to Applied ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications. Text Book for Intermediate logic, Ethics and Human Values .Telugu Academic Hyderabad.

14. I.C.Sharma Ethical Philosophy of India, Nagin & Co Julundhar.

Course Outcomes: After the completion of this course, the student will be able to

1. Easily understand the Need and Importance of Professional Ethics- Goals- Ethical Values in various Professions.
2. Analyse the basic moral concepts- right , ought, duty, obligation, justice, responsibity and freedom.
3. Know about Purusharthas, Dharma, Artha, Kama, Moksha.
4. Understand the Four Noble Truths- Arya astanga marga, Jainism- mahavratas and anuvratas.
5. Gain the knowledge about views on Manu and Yajnavalkya.

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH-106	Cell and Biomolecules– Theory	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. To study the cell organelles in prokaryotic and eukaryotic cells.
2. Gives information about classification, physico-chemical properties of amino acids and structural organization of proteins.
3. To understand the structure, properties and biological importance of carbohydrates and lipids.
4. Explore the composition and structure of nucleic acids.

Course Content:

Unit I

Prokaryotic and Eukaryotic cells: Cell organelles Structure, Composition and functions of nucleus, mitochondria plastids, endoplasmic reticulum, Golgi, lysomes, vacuole, micro bodies, ribosomes, cytoskeleton. Biomembranes, structure and mechanisms of transport.

Cell division, cell cycle and its regulation, cell signaling, stress response, cell communication, cell adhesion, Apoptosis, Senesence, extracellular matrix, integrins.

Unit II

Origin of basic Biomolecules. Amino acids & Proteins: Classification of amino acids, acid-base properties of amino acids, chemical reactions of amino acids, non-protein amino acids, Peptide bond – Structure and conformation. Naturally occurring peptides.

Classification of proteins – purification and isolation of proteins, criteria of purity of proteins, physico-chemical properties, structural organization of proteins, Elucidation of primary structure, secondary structure,Tertiary structure Quaternary structure, Denaturation & renaturation of proteins. Outlines of Proteomics.

Unit III

Carbohydrates: Definition and classification of carbohydrates, nomenclature, Reaction of Mono- saccharides, Acid derivatives of Monosaccharides amino-sugars, Oligo saccharides, structure, properties and importance of Homo & Hetero polysaccharides.

Lipids: Classification, Physical and chemical properties of fatty acids. Characterization of natural fats & oils, structure and biological role of triaceyl glycerol, phospolipids, sphingolipids, Gangliolipids, Prosta-glandins, Thromboxanes, Leukotrienes and steroids. Killer fat (*Staphylococcu*s killer).

Unit IV

Nucleic acids: Purine and pyramidine bases, nucleosides, nucleotides, polynucleotides, Structure of nucleic acids primary secondary & Tertiary structure of DNA. DNA denaturation and renaturation kinetics

Structure of RNAs – Secondary and Tertiary structure; Analysis of stability to nucleic acid structures, Nucleic acid sequencing –Higher orders of DNA & RNA Structure, chromatin structure; Gene analysis – southern blot technique and its variance. Porphyrins; Types, chemistry and structure of porphyrins. Vitamins, structures and chemistry.

Recommended Books:

1. The biochemistry of Nucleic acids; Adams et al., Chapman and Hall, 1986.
2. Proteins: A guide to study by physical & chemical methods, Haschemeyer and Haschemeyer,
3. Proteins: Structure, function and evolution. Dickerson & Geis, 2ndEdn, Benjamin/Cummings.
4. Biochemistry - Zubay C, Addison – Wesley, 1986.
5. Biochemistry, A problem Approach, 2ndEdn. Wood, W.B. Addison Wesley1981.
6. Biochemistry, Lehninger A. H.
7. Textbook of Biochemistry West, E.S., Todd, Mason &Vanbruggen, Macmillian& Co.
8. Principles of Biochemistry White-A, Handler, PandSmith E.L. Mc Grew Hill.
9. Organic chemistry, I.L. Finar, ELBS. (1985).
10. Organic Chemistry by Morrison and Boyd (2000) PrenticeHall.
11. Fundamentals of Biochemistry by Donald Voet (1999).

Course Outcomes: After the completion of this course, the student will be able to

6. Easily understand the difference between prokaryotic and eukaryotic cells, and the concept of cell division.
7. Understand the classification, structure and biochemical reactions of aminoacidsand proteins.
8. Describe the classification, structure and biochemical reactions of carbohydrates and lipids.
9. Understand the concept of structural organization of nucleic acids.

M.Sc. BIOCHEMISTRY

SEMESTER-II

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
BCH-**201**	Energy Metabolism	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To acquire knowledge related to the intermediary metabolism and the role of TCA cycle in central carbon metabolism.
2. To learn basic concepts of Bioenergetics, the importance of high energy compounds, electron transport chain, synthesis of ATP, mechanisms of oxidative phosphorylation and photophosphorylation.
3. To understand the fundamentals of cellular metabolism of carbohydrates their association with variousmetabolic diseases.
4. To learn biosynthesis and degradation of Lipids, fattyacids and cholesterol, Metabolism of lipoproteins and Ketone bodies.

Course Content:

Unit I

Broad outlines of Intermediary metabolism, methods of investigation, in vivo studies such as analysis of excretion, Respiratory exchange, Removal of organs and perfusion studies, in vitro studies such as tissue slice techniques; Homogenates and purified enzyme systems; isotope tracer studies, use of inhibitors and antimetabolites.

Metabolism of carbohydrates: Glycolysis, Fermentation, Feeder path ways (of fructose, galactose and mannose), TCA cycle, HMP shunt, Regulation of glycolysis, pyruvate dehydrogenase complex, and TCA cycle.

Unit II

Bioenergetics: Thermodynamic principles – Chemical equilibria; free energy, enthalpy (H), entropy (S). Free energy change in biological transformations in living systems; High energy

compounds. Energy, change, oxidation-reduction reactions. Organization of electron carriers and enzymes in mitochondria. Classes of electron-transferring enzymes, inhibiters of electron transport.

Oxidative phosphorylation. Uncouplers and inhibitors of oxidative phosphorylation. Mechanism of oxidative phosphorylation. Miotrochondrial transport system. Microsomal electron transport; Photorespiration, cyclic and non-cyclic reactions; photochemical events associated with pigment system – II and I. Utilization of oxygen by oxygenases, Superoxide dismutase and catalase.

Unit III

Uronic acid pathway, metabolism of amino sugars, metabolism of glycogen, starch, sucrose, lactose, glycoproteins. Gluconeogenesis, glyoxylate cycle. Regulation of glycogen metabolism and gluconeogenesis.

Futile cycles in carbohydrate metabolism. Disorders of carbohydrate metabolism – Glycogen, lactose, Fructose.

Unit IV

Biosynthesis and degradation of fatty acids (Saturated and unsaturated) regulation, metabolism of TAG, Glycerol and sphingolipids, cholesterol, prostaglandins.

Biosynthesis and degradation of cholesterol and its regulation. Metabolism of lipoproteins and Ketone bodies.

Recommended Books:

1. Principles of Biochemistry, White. A, Handler, P and Smith.
2. Biochemistry, Lehninger A. L.
3. Biochemistry, David E. Metzler.
4. Biochemistry, LubertStryer.
5. Review of physiological chemistry, Harold A.Harper.
6. Text of Biochemistry, West andTodd.
7. Outlines of Biochemistry, Conn and Stummf.
8. Metabolic pathways –Greenberg.
9. Mitochondria, Munn.
10. Biochemistry, 2nd Edition, G. Zubay.

Course Outcomes: After the completion of this course, the student will be able to

1. Explain the broad outlines of intermediary metabolism and importance of carbohydrate metabolism in life.
2. Describe the importance of Electron transport and ATP production mechanism.
3. Gain in knowledge in Carbohydrate metabolism and their associated disorders.
4. Describe the details of lipid metabolism.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
BCH-202	Nitrogen Metabolism	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study the metabolism of proteins and aminoacids.
2. To learn about aminoacids as biosynthetic precursors.
3. To learn about biosynthesis and degradation of nucleic acids.
4. To understand the effect of toxic chemicals in the environment and concept of carcinogenicity.

Course Content:

Unit I

Metabolism of proteins and amino acids: Introduction, General metabolic reactions of amino acids. Degradation and biosynthesis of individual amino acids in animal, plant, and microbial systems.End products of amino acid metabolism – Krebs Haslett urea cycle.

Biosynthesis and Regulation of amino acids and disorders related to amino acid metabolism. Nitrogen cycle, Non-biological and biological nitrogen fixation, Nitrogenase system, Nif genes.

Unit II

Amino acids as biosynthetic precursors-Formation of creatine, seratonine, histamine, polyamines, melatonine, GABA, melanine, catecholamines. Non-ribosomal peptide synthesis-glutathione, cyclic antibiotics (gramicidin).

Unit III

Metabolism of Nucleic Acids: Biosynthesis and degradation of Purines and regulation of path ways. Biosynthesis and degradation of Pyrimidines and regulation of pathways. Interconversion of nucleotides, Metabolic disorders related to nucleic acid metabolism.

Unit IV

Toxic chemicals in the environment, Mode of entry of toxic substance, Insecticides, MIC

effects, Pesticides, biotransformation of xenobiotics, detoxification. Carcinogens in air, chemical carcinogenicity, mechanism of carcinogenicity, Environmental carcinogenicity testing.

Recommended Books:

1. Principles of Biochemistry, White. A, Handler, P andSmith.
2. Biochemistry, Lehninger A. L.
3. Biochemistry, David E.Metzler.
4. Biochemistry, LubertStryer.
5. Review of physiological chemistry, Harold A.Harper.
6. Outlines of Biochemistry, Conn and Stumpf.
7. Metabolic pathways –Greenberg.
8. Mitochondria, Munn.
9. Biochemistry, 2nd Edition, G. Zubay.
10. Environmental hazards & human health R.B. Philip
11. Toxicology – Principles & applications –Niesink& Jon devries.

Course Outcomes: After the completion of this course, the student will be able to

1. Understand the anabolic and catabolic reactions of proteins and aminoacids.
2. Gain knowledge in the importance of aminoacids as biosynthetic precursors.
3. Know the biosynthesis and degradation of purine and pyramidined and their associated disorders.
4. How toxic chemicals metabolised by the body through detoxification and the mechanism of carcinogenicity.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
BCH-203P	Practical related to Enzymology	06	04
End Semester Exam Marks: 100			

Course Objectives:

1. The lab is designed to train the students in basic techniques of Analytical Biochemistry likeestimation of enzymes from various sources, Enzyme purification and enzyme kinetics.
2. It also deals with the assay of clinically important enzymes and determinationof factor affecting enzyme activity.
3. To demonstrate the Immobilization of enzymes.

Course Content:

BCH 203P: ENZYMOLOGY PRACTICAL

1. Amylase from Saliva.
2. Urease from Horse-gram.
3. Acid phosphatase from Potato.
4. Alkaline phosphatase from Serum.
5. Cholinesterase from Blood.
6. SDH from Liver.
7. Invertase from yeast.
8. Trypsin
9. LDH from Serum (Isoenzymes).
10. Enzyme purification and enzyme kinetics (Determination of Vmax, Km and Ki).
11. Effect of pH, Temperature, Activators, Inhibitors.
12. Immobilization of enzymes (demonstration only).

Recommended Books:

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann, London)

Course Outcomes: After the completion of this course, the student will be able to

1. Learnabout estimation of various enzymes in biological sample.
2. Learn to perform assay of clinically importantenzyme: serum acid and alkaline phosphatase, serum LDH.
3. Learn aboutthe factors affecting enzymeactivity and determination of Km.
4. Demonstrate the Immobilization of enzymes.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
BCH-204P	Molecular biology Practicals	06	04
End Semester Examination Marks: 100			

Course Objectives:

The lab is designed to train the students in basic methods of molecularbiology.

1. To isolate DNA and RNA from bacterial, plant and animal cells.
2. To estimate the DNA and RNA by suitable methods.
3. Transfection studies.
4. Purity determination of DNA by UV absorption method.
5. Detection and differentiation of open circular, linear and closed covalent circular plasmid DNA by submarine gel electrophoresis.
6. Determination of melting temperature (Tm).

Course Contents:

204P: MOLECULAR BIOLOGY PRACTICALS

7. Isolation of DNA from bacterial, plant and animal cells.
8. Estimation of DNA by Diphenylamine method.
9. Isolation RNA from yeast cells.
10. Estimation of RNA BY Orcinol method.
11. Estimation of DNA and purity determination by UV absorption method.
12. Determination of melting temperature (Tm).
13. Isolation of plasmid DNA from E. coli.
14. Detection and differentiation of open circular, linear and closed covalent circular plasmid DNA by submarine gel electrophoresis.
15. Transformation of E. coli with ampicillin resistant plasmid.
16. Trasfection of M13 DNA into E. coliJM103.
17. Isolation of phageM13.
18. Isolation of single and double standard M13DNA.
19. Conjugation: Use of broad host range plasmid RP in demonstrating

conjugation transfer of plasmid bacteria.

20. Catabolite repression: Evidence of B-Galactosidase induction in presence of lactose in E .coli lac strains.

Recommended Books*:*

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T. Plummer
3. Practical Biochemistry by J. Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann Medical Books, London)

Course Outcomes: The student will be able to

1. Isolate nucleic acids from various sources.
2. Estimate the nucleic acids quantitatively.
3. Determine the melting temperature.
4. Determine the purity of DNA by UV method.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	1	3	3	3	3
CO_3	3	3	3	3	3	3	3	1	3	3	3	3
CO_4	3	3	3	3	3	3	3	1	3	3	3	3

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
BCH 205	Human values and professional ethics-II	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To study about Concept of Human Values like self introspection, self esteem, Family Values etc.
2. Gives information about Medical ethics and moral responsibility of medical practitioners.
3. To understand the Business ethics - Immoral and illegal practices and their solutions.
4. Explore the Environment ethics and Environmental health.
5. To know Ethics of media- Impact of Newspaper, Television, Movies and Internet.

Course Contents:

Unit I

Value Educattion- Defination- relevance to present day- Concept of Human Values- self introspection- Self esteem- Family Values – Components, Structure and responsibilities of family- Neutralization of anger- Adjustability- Treats of famiy life – Status Of women in family and society- Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit II

Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and Health care professionals. Euthanasia, Ethical obligation to animals, Ethics issues in relation to health care professionals and patients. Social justice in health care, Human cloning, Problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit III

Business ethics- Ethical standards of business- Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit IV

Environment ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justie and Environmental health.

Unit V

Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/ pregnancy. Ethics of media- Impact of Newspaper, Television, Movies and Internet.

Recommended Books:

1. John S Mackenjie: A manual of ethics.
2. The Ethics of Management" by Larue Tone Hosmer, Richard .D. Irwin Inc.
3. Management Ethics-integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books: NewDelhi.
4. Ethics in management" by S.A.Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today.
6. Maitra, S.K: Hindu Ethics.
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu : Comprising the Indian System of Duties:Religious and Civil (ed.) G.C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjalal ,Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II andIII, Varanasi, Vol 1 OO, 16-20, 21-32 and 74- 77 only.
11. Caraka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit SeriesOffice , Varanasi Vol 100, 16-20,21-32 and 74-77 only.

12. Ethics: Theory and Contemporary Issues., Barbara Mackinnon Wadsworth/ Thomson Learning ,2001.
13. Analysing Moral Issues, Judith A. Boss, Mayfield Publishing Company ,1999.
14. An Introduction to Applied ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Text Book for Intermediate logic, Ethics and Human Values , board of intermediate Education &Telugu Academic Hyderabad.

Course Outcomes: After the completion of this course, the student will be able to

1. Easily understand the Components, Structure and responsibilities of family and status of women in family and society.
2. To get an idea on Ethical issues in relation to health care professionals and patients and genetic engineering, Social justice in health care, Human cloning.
3. To know about Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.
4. Understand the Ethical theory, Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population.
5. Gain the knowledge about Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/ pregnancy.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	2	2	2	1	1	2	2	3	2	2	2	2
CO_2	2	2	2	1	1	2	2	3	2	2	2	2
CO_3	2	2	2	1	1	2	2	3	2	2	2	2
CO_4	2	2	2	1	1	2	2	3	2	2	2	2
CO_5	2	2	2	1	1	2	2	3	2	2	2	2

CourseCode	Semester-II, Course Title	No of Hours Per week	No of Credits
BCH 206	ENZYMOLOGY	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To study the basic concept of enzymes and their kinetics.
2. Knowledge about different types of enzyme inhibition and Chemical nature of enzyme catalysis.
3. To describe the importance of coenzymes in living organism.
4. To study the allosteric regulation of enzymes.

Course Content:

Unit I

Nomenclature and classification of enzymes according to I.U.B. Convention, specificity and active site. Fundamentals of enzyme assay – enzyme units, coupled kinetic assay. Enzyme localization, Isolation, purification and criteria of purity. Profile of enzyme purification by different separation techniques.

Elements of kinetics – Reaction rates transition state theories free energy change. Methods used in the investigation of kinetics of enzyme-catalyzed reactions – Initial velocity studies and rapid reaction techniques (Continuous flow and Stopped flow). Enzyme kinetics of single substrate reactions, study state assumption, Michales-Menten (Briggs-Haldane), Lineweavar Burk, Eadie Hofstee, and Hanes plots. Pre- steady state kinetics. Effect of pH and temperature.

Unit II

Enzyme inhibition: Types of reversible inhibitors – competitive, non-competitive, un-competitive mixed inhibition and partial inhibition. Substrate inhibition, Feedback inhibition and allostearic inhibition.

Irreversible inhibition. Bisubstrate reactions, Sequential mechanism compulsory order and random order mechanism, non-sequential mechanism, Ping-pong mechanism. Chemical nature of enzyme catalysis: General acid – base catalysis, electrostatic catalysis, covalent catalysis, intermolecular-catalysis, metal ion catalysis, and proximity and orientation.

Unit III

Mechanism of reactions catalyzed by the following enzymes – Chymotrypsin, Trypsin, Carboxypeptidase, Ribonuclease and Lysozyme.

Co-enzymes – the mechanistic role of the following co-enzymes in enzyme catalyzed reactions – Nicotinamide nucleotides, Flavin nucleotides, Co-enzymes A, Lipoic acid, Thiamine pyrophosphate, Biotin, Tetrahydrofolate and Co-enzyme B12. Modern concepts of evaluation of catalysis-catalytic RNA (Ribozyme), abzymes (catalytic antibodies), Synzymes (Synthetic enzymes), Site-directed mutagenesis.

Unit IV

Monomeric enzymes – the Serine proteases, Zymogen activation, Oligomeric enzymes – Isoenzymes (LDH) and multienzyme complexes (pyruvate dehydrogenase complex).Covalent modification (Glycogen phosphorylase, Glutamine synthase, Chymotrypsin).

Allosteary of enzyme action; Binding of ligands to proteins Co-operativity, the Hill Plot for Myoglobin and Hemoglobin, Sigmoidal kinetics: The MWC and KNF models. Significance of sigmoidal behavior. Study of ATCase a typical allostearic enzyme.

Recommended Books:

1. Enzyme structure and mechanism. Alan Fersht, Freeman & Co.1997
2. Principles of enzymology for food sciences: Whitaker Marc Dekker1972.
3. Methods in enzymology Ed. Colowick and Kaplan, Academic Pr (Continuing series)
4. Text book of Biochemistry with clinical correlations (4th edition)-Thomas M. Devlin.
5. Biological chemistry; H.R. Mehler& E.H CordesHarper&Rev.
6. Enzyme kinetics Siegel interscience – Wiley1976.
7. Biochemistry chemical reactions of living cells (2001) David E. Matzler. Vol. I.

Course Outcomes: After the completion of this course, the student will be able to

1. Distinguish the fundamentals of enzyme properties, nomenclatures, characteristics and mechanisms.
2. Describe the concepts of enzyme inhibition and mechanism of enzyme catalysis.
3. Students will acquaint with mechanism of enzyme action and various coenzymes involved in the biochemical reactions taking place in living systems.
4. Describe the concepts of co-operative behavior and allosteric regulation.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

M.Sc. BIOCHEMISTRY

SEMESTER-III

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-301	Microbial Biochemistry andGenetics	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. The objective of the course is learning and understanding the fundamentals of Microbiology like important characteristics and biology of bacteria, fungi, mycoplasma, viruses etc. and to learn basic knowledge about control methods of microorganisms and industrial application of microbes for water and sewage treatment.
2. Designed to learn nutritional requirements in microorganisms and virus classification, morphology and Methods of culturing of viruses, Isolation, purification and characterization.
3. The objectives of the course are to learn and understand the fundamentals of genetics like DNA as genetic material, chromosome and gene and understand the gene arrangement in prokaryotes and eukaryotes.
4. To learn and understand the concept of bacterial genetics and detailed information about Mutation

Course Content:

Unit I

Microorganisms and their place in the living World; Historical developments of microbiology (Spontaneous generation, Germ theory of disease and Koch's postulates). Nomenclature and broad classification of bacteria as per Bergey's manual of systematic bacteriology; General characteristics of Actinomycetes, Rickettsiae, Mycoplasms, Spirochetes. Difference between prokaryotic and eukaryotic cells. Ultra structure of bacterium and endospore. Nucleic acid and

16s RNA based classification.

Nutritional requirements in microorganisms: Modes of nutrition – phototrophy, chemotrophy, methylotrophy, organotrophy, mixotrophy, saprophytic, symbiotic and parastitic modes of nutrition. Isolation of microorganisms – Direct and indirect Methods of maintenance of culture. Growth and kinetics of bacterial cells; Normal and biphasic growth curve, batch and continuous cultures, chemostats. Preservation of cultures (glycerol stocks, freeze drying), Culture collection centers in India.

Unit II

Control of microorganisms: Fundamentals of control, control by physical and chemical agents. Antibiotics and other chemotherapeutic agents. Microbiology of Food, Water, Sewage and Biogas. Water and Sewage treatment. Food and water-borne infections, Bacteriological and Viral standards of water. Estimation of BOD and COD and their importance. Outlines of the Ames Test.

Introduction to Virology: Classification, Morphology, size, ultra structure and life cycle of some representative viruses (ØX 174, T4, SV40, λ-Phase, M13 and HIV). Methods of culturing of viruses, Isolation, purification and characterization. Biology of subviral agents – Viroids, Prions, Satellite viruses.

Unit III

Genetic material – Direct and Indirect evidences of DNA as genetic material, experimental proof. Evidences of RNA as genetic material – eg. Virus.

Chromosome - Chromosome and genes, chromosomal replication, genetic mapping of chromosomes, structure of chromatin - nucleosomes and higher orders of organization, chromosome banding, transposition in human chromosome and chromosomal abnormalities.

Gene – arrangements in prokaryotes and eukaryotes. Gene structure in eukaryotic organisms, introns, exons, pseudogenes, and gene clusters, spacers, repetitive sequences. Single and multiple copy genes in eukaryotes, eg – Histones, Alu, copia, satellite. Mapping of human genes – techniques used, assignment of important genes. Gene regulatory mechanisms and cell memory. Mechanism of recombination, extra nuclear inheritance. Non-coding explosion, cell fate determination and reprogramming. Genetic technique for Archea. New gene evolution, Tiniest genome of proteobacteria and bacteriodates.

Unit IV

Bacterial genetics – Bacterial chromosomes, plasmids – fertility, resistance, colicinogenic and other, PBR 322 and other synthetic plasmids - isolation and uses. Transposable genetic elements, transformation, transduction, and conjugation in bacteria. Linkage map of bacterial chromosome. Recombination in bacteria.

Structure of Bacteriophages and their use in the study of molecular genetics – lytic cycle-replication of T-phages, Lysogeny and its regulation. Transduction – specialized, generalized and abortive. Transfection and cosmids. Fine structure analysis of T- phages, Benzers work and concept of cistrons. Bacterial defence (CRISPR- Gene turning on)

Mutation – Types of mutations, mutagens, mechanism of mutation, Mutagenesis, induction and isolation of mutants. Haploid genetic tools. Radiation effects on human heredity. Phylogenetic inheritance. Heretability and its measurements and mapping .gene duplication and self incompatibility.

Recommended Books:

1. Microbiology by Pelczar, Chan and Krieg 5th edn. 1995 Mc Grew- Hill.
2. General Microbiology: Boyd, R.F., Times Mirror/ Mosby College, 1984.
3. A Textbook of Microbiology, R.C.Dubey and D.K.Maheswari, S.Chand Co (2001).
4. Pharmaceutical Microbiology, By Hugo and Russell, Blackwell Scientific (1987).
5. An Introduction to Viruses by S.B.Biswas, Vikas Publishing house.
6. Microbiology 4th edition, Prescott, Harley, Klein (Mc grew Hill)
7. Fundamentals of Microbiology – M. Frebisher.
8. Text book of Microbiology – William Burrows.
9. Biology of Microorganisms – Sandes T. Lyles
10. Microbial Ecology – Atlas (2001).
11. Molecular Genetics by D Friefelder
12. Cell molecular biology, Albert Bruce
13. Gene VII by Lewin
14. Molecular cloning by Maniatis and Co Vol I, II, III
15. Genetics by Gardner

Course Outcomes: After the completion of this course, the student will be able to

1. Understand the basics of microbiology like nomenclature and classification of microorganisms, understand the various biological and non-biological method to control microorganisms
2. The student will learn about different mode of nutrition in microorganisms and about viruses - Isolation, purification and characterization.
3. Understand the basics of genetics and the gene arrangement in prokaryotes and eukaryotes.
4. Gain knowledge in bacterial genetics includes the different types plasmids, recombination in bacteria, bacteriophages and bacterial defense mechanism(CRISPR) and Describe the various types of mutations and its effect.

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-302	Molecular Biology	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. The objective of the course is learning and understanding the fundamentals of DNA replication and its mechanism.
2. Complete information about RNA synthesis in prokaryotes and eukaryotes.
3. To understand the genetic code.
4. Detailed accounts on the biosynthesis and mechanism of protein synthesis.

Course Content:

Unit I

Isolation, fractionation, characterization of nucleic acids, properties of nucleic acids in solution. DNA synthesis and repair - Topology of DNA, conservative, semi conservative and discontinuous synthesis of DNA, DNA primer for DNA synthesis. DNA polymerases I, II, III – their role in DNA synthesis. DNA ligase - mechanism of its action and its role in DNA synthesis. Inhibition of DNA synthesis, fidelity of replication. Alternate lengthening of telomere. Nearest neighbor frequency analysis.

Mechanism of replication of *E. coli* DNA. Role of DNA binding proteins – Histones in Eukaryotes, SSB in prokaryotes. Replication of lambda phage DNA, phage T-7 and single stranded DNA, the rolling circle model of replication of DNA. Mitochondrial replication, transcriptional switch.

Unit II

RNA synthesis and processing: RNA polymerases in prokaryotes and eukaryotes. Molecular composition of prokaryote RNA polymerase. Mechanism of transcription. Role of various compounds on RNA polymerases. Inhibitors of RNA synthesis. Biosynthesis of prokaryotic and Eukaryotic m-RNA, r-RNA, and t-RNA.

Processing of RNA- post transcriptional modifications, capping, adenylation and splicing.

Role of the hn RNA, sn RNA and sn RNP in processing of RNA. Functions and information content of DNA methylation, Transcriptional transcript RNA, template DNA, recombination

and silencing repair in yeast, sRNA and gene regulation.

Unit III

Genetic code: General features of the code, Deciphering of the genetic code – Nirenberg and Khorana's work. Central dogma in the molecular biology and its verification.

Colinerarity of gene and protein. Wobble hypothesis and deviation from wobble hypothesis. Mitochondrial genetic code and evolution of genetic code. RNA editing and evolution.

Unit IV

Biosynthesis and mechanism of protein synthesis: Different stages and components of protein synthesis, m RNA and t RNA. Amino acid activation, protein chain initiation, elongation, and termination. Ribosomes and types, molecular components of ribosomes. Assembly and dissociation of subunits

Inhibitors of prokaryotic translation. Post – translational modification of proteins. Synthesis of secretory and membrane proteins – signal sequence hypothesis. Mechanism of translation control. Proteins local synthesis and disposal.

Recommended Books:

1. Molecular Biology of the gene by Watson.
2. Genetics by G Zubay.
3. Molecular Biology of the Cell by Albert Bruce.
4. Cell molecular Biology by Baltimore.
5. Molecular Biology by D Friefelder.
6. Molecular Genetics by D Friefelder.
7. Genes VII Benjamin Lewin (2000). Oxford Univ. Press. London.
8. Cell and Molecular Biology 2ndEdit. (2002) By P. K. Gupta, Rastogi Publ.

Course Outcomes: After the completion of this course, the student will be able to

1. The students will learn about the Possible modes of replication, and roles of helicase, primase, gyrase, topoisomerase, DNA Polymerase, DNA ligase, and Regulation of replication.
2. Learnabout the mechanism and regulation of transcription in prokaryotes

and eukaryotes.

3. Learnabout genetic code and their evolution.
4. Gain knowledge in Different stages and components of protein synthesis.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	2	1	3	2	2	3
CO_3	3	3	3	3	3	3	2	1	3	2	2	3
CO_4	3	3	3	3	3	3	2	1	3	2	2	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-303P	Practical related to Microbiology	06	04
End Semester Examination Marks: 100			

Course Objectives:

1. The lab is designed to train the students in handling of microscope.
2. It also deals with microbial techniques of isolation, purification and maintenance of microbial cultures.
3. To learn Staining techniques for bacteria and yeast.
4. To Prepare wine from Grapes.
5. Production and estimation of alcohols, citric acid, lactic acid etc..

Course Content:

BCH 303P: MICROBIOLOGY PRACTICALS

1. Handling of Microscopes: Calibration of Microscopes.
2. Sterilization techniques: Autoclaving (Moistened-heat), Oven sterilization (dry-heat), Filtration,
3. UV irradiation and Chemical.
4. Preparation of media: For Bacteria and Fungi.
5. Isolation and cultivation of pure cultures: Serial dilution, Pour plate method, Spread plate method and streak plate method.
6. Methods for the estimation of Growth (Growth rate and generation time in bacteria).
7. Staining techniques for bacteria and yeast: Gram Staining and Spore staining for bacteria; Methylene blue staining for Yeast.Antibiotic sensitivity test.
8. Starch hydrolysis assay for the identification amylase-producing microorganisms.

9. Gelatin hydrolysis assay for the identification protease-producing microorganisms.
10. Preparation of wine from Grapes.
11. Production of Alcohol from molasses and its estimation by specific gravity method.
12. Production of Citric acid and its estimation by Marrier and Boulet method.
13. Production of Lactic acid and its estimation by Barker and Summerson method.
14. Induction of mutation in bacteria using physical and chemical mutagens.
15. Water analysis for bacteria and determination of BOD and COD of water.
16. Observation of Rizobium from root nodules of ground nut plant.
17. Isolation of phages from sewage and quantification by plaque assay.

Recommended Books

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann Medical Books)

Course Outcomes: After the completion of this course, the student will be able to

1. Handle the microscope.
2. Learn Methods of sterilization and preparation of various culture media, Purification techniques.
3. Identification of isolated bacteria, and Growth curve of microorganism.

4. Learn Staining techniques for bacteria and yeast.
5. Gain knowledge in the Preparation of wine from Grapes.
6. Production and estimation of alcohols, citric acid, lactic acid etc.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-304P	Clinical biochemistry practicals	06	04
			End Semester Exam Marks: 100

Course Objectives: The lab is designed to train the students

1. To collect and maintain the biological samples for clinical assays.
2. Estimation of clinical enzymes.
3. To analyze urine sample qualitatively to identify the abnormalities.
4. Demonstration of diagnostic kits.

Course Contents:

BCH 304P: CLINICAL BIOCHEMISTRY PRACTICALS

1. Estimation of blood glucose.
2. Estimation of blood urea.
3. Estimation of creatine in serum.
4. Estimation of uric acid in serum.
5. Estimation of serum total protein.
6. Estimation of Serum albumin.
7. Estimation of Serum cholesterol.
8. Determination of SGOT.
9. Determination of SGPT.
10. Estimation of serum calcium.
11. Estimation of serum phosphate.
12. Estimation of serum bilirubin.
13. Determination of urine ascorbic acid.
14. Tests for abnormal constituents in urine.
15. Use of diagnostic kits.

Recommended Books:

1. Practical Biochemistry by T. Plummer
2. Practical Biochemistry by J. Jayaraman
3. Klemir and others: practical Biological chemistry.
4. Practical Biochemistry – Koch and Hank Dunn and Drell
5. Microbiology laboratory Manual (2001) by Aneja, K.M
6. Laboratory Manual in Microbiology by P. Gunasekaran (1996), New Age Publ.
7. Microbiology laboratory Manual (2001) by Aneja, K.M

Course Outcomes: The student will be able to

1. Collect and maintain the biological samples for clinical assay.
2. Estimate the blood and serum enzymes for diagnosis of diseases.
3. Qualitatively analyse the abnormal constituents in urine.
4. Work with diagnostic kits.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_4	3	3	3	3	3	3	3	1	3	3	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-305a	Endocrinology (Generic Elective)	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To impart knowledge on structure and hormones secreted by hypothalamus, pituitary and pineal glands.
2. To familiarize the concepts of biosynthesis and regulation of secretion of thyroid, parathyroid and calcitonin hormones.
3. To make them understand the chemistry, biosynthesis, secretion, regulation of Hormones of Pancreas and Gastro intestinal hormones.
4. To impart knowledge of Sex hormones, hcg, Miscellaneous hormones and Insect molting hormones.

Course Contents:

Unit I

History and Introduction to Endocrinology, Classification, chemistry, biosynthesis, secretion, regulation, transport and general mechanisms of actions of Hormones, bio-assay, chemical, RIA, ELISA.

Hormones of the pituitary, hypothalamus and pineal body: Growth hormone. Adrenocorticotropic hormone, Thyroid stimulating hormone, leutinizing hormone, Follicular stimulating hormone, prolactin, oxytocin, antidiuretic hormone. Their structure, storage, regulation of secretion, mechanism of action and their actions. Structure secretion and actions of hypothalamic releasing hormones and inhibitory hormones. Pineal hormones: Melatonin and serotonin.

Unit II

Hormones of the Thyroid and parathyroid gland: Iodine metabolism, Biosynthesis of thyroid hormones, regulation of secretion. Possible mechanism of action and general functions.

Metabolism at target cells and excretion.

Calcitonin and parathyroid hormone. Role of calcitonin in calcium and phosphate homeostasis in blood. Disorders of thyroid and parathyroid.

Unit III

Hormones of Pancreas and Gastro intestinal hormones: Chemistry, biosynthesis and secretion of insulin and glucagon. Actions of insulin and glucagon on Carbohydrate, lipid and protein metabolism.Gastrin, secretin, pancreozymin Cholecystokinin etc Adrenal hormones, Structure, biosynthesis metabolism, excretion and actions of adrenaline and noradrenaline.

Corticosteroids: Biosynthesis, secretion, actions, metabolism and excretion of cortisone Cortisol, corticosterone, deoxycorticosterone and aldosterone. Disorders of pancreas and adrenal glands.

Unit IV

Sex hormones (Hormones of Reproduction): Testosterone and inhibin. Estrogens, Progesterone and relaxin Human chorionic gonadotropin; Human placental lactogen, Hormonal regulation of menstrual cycle, contraceptions. Disorders associated with Gonadal hormones.

Miscellaneous hormones: Thymosin – synthesis and actions. Insect molting hormones – (ecdysone) Plant hormones – Auxins, gibberellins, ethylene, and abscissic acid, Pheromones.

Recommended Books:

1. Text book of biochemistry and human biology. Talwar G. P. Prentice Hall India.
2. Human physiology and mechanism of distance–Guyton 3rdedn. Igkushoen /Seunders.
3. Clinical Biochemistry Vols. 1 and 2: Williams et al Heinemann Medical 1978.
4. Lynchs Medical Laboratory Technology Raphael, S.S., 4thedn. Igkushoe /Saunders.
5. Text book of Endocrinology – William.
6. General endocrinology –Turner.

7. Biochemical endocrinology of the vertebrates by E. Fruden and H.Lines.
8. Foundation of modern Biochemical series, prentice Hall Inc.1971.
9. Metabolic and endocrine physiology: By Jay Teppermann.
10. Metabolic pathways –Greenberg.
11. Intermediary metabolism and its regulation –Larner.
12. Principles of Biochemistry, White, A, Handler, P and Smith.
13. Receptors and hormone action 1977.
14. Receptors and recognition series.

Course Outcomes: The student will be able to

1. Know about the mechanism of action of different hormones secreted by hypothalamus, pituitary and pineal glands.
2. Familiar with Iodine, Calcium metabolisms and disorders related to thyroid and parathyroid glands.
3. Know about the mechanism of action of insulin, glucagon and many gastro intestinal hormones.
4. Acquire knowledge on Hormonal regulation of menstrual cycle and disorders associated with Gonadal hormones.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	2	1	3	2	3	3
CO_2	3	3	3	3	3	3	2	1	3	2	3	3
CO_3	3	3	3	3	3	3	2	1	3	2	3	3
CO_4	3	3	3	3	3	3	2	1	3	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-305b	Clinical Biochemistry	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. The main objective of this skill oriented course is to learn and understand the fundamentals of clinical biochemistry, Collection and preservation of specimens and Assays of Carbohydrate Metabolism associated clinical conditions/diseases.
2. To impart knowledge of Inborn errors of amino acid metabolism, investigation of lipid metabolism and functioning of renal system.
3. To understand Clinical application of plasma enzyme assays and Disorders of Gastrointestinal Tract.
4. To acquire knowledge of biochemical aspects of Liver diseases.

Course Contents:

Unit I

Introduction to Clinical Biochemistry: Introduction and maintenance of clinical biochemistry laboratory; azards in clinical biochemistry laboratory; units; 'normal range', reference values. Factors affecting reference values quality control in laboratory – use of external and internal standards; use of WHO standards. Selection of analytical methods. Automation in clinical laboratory. Collection and preservation of specimens.

Disorders of Carbohydrate Metabolism: Importance of extra cellular glucose; blood glucose homeostasis– role of tissues and hormones; hyperglycemia and hypoglycemia. Diabetes mellitus – classification, etiology, clinical and laboratory features. Diagnosis of diabetes mellitus – glucose tolerance test, random fasting and post- prondial glucose levels, glycosuria, ketone bodies, glycosylated hemoglobin, plasma insulin. Metabolic complications – diabetic hyperglycemic coma and nonketotic coma; lactic acidosis; atherosclerosis, neuropathy. Hypolycemia – fasting and provoked; diagnosis – stimulation tests (I.V. glucagon and leucine test); extended G.T.T; hypoglycemia in children – neonatal and early infancy. Investigation of glycogen storage diseases, galactosemia, hereditary fructosuria,

lactose intolerance.

Unit II

Inborn errors of amino acid metabolism – Phenylketonuria, alkaptonuria, Hartnup's maple-syrup urine disease, Plasma proteins in health and changes in diseases; paraproteinaemias; proteinuria. Lipid metabolism: Plasma lipids and lipoproteins and their functions. Hyperlipo-proteincmias; Classification – primary and secondary. Investigation of lipoproteinemias and lipidemias.

Renal function: Glomerular and tubular functions. Tests for evaluation – concentration, dilution, excretion, clearance tests, nephritic syndrome.

Unit III

Clinical Enzymology: Plasma enzyme in diagnosis and prognosis – aminotransferases, creatine kinase, LDH, alpha amylase, phosphatases, choline esterase, glucose 6-phosphate dehydrogenase, Gama glutamyl transferase. Isozymes of LDH alkaline phosphatase. Clinical application of plasma enzyme assays in myocardial infraction, liver disease, and muscle disease.

Disorders of Gastrointestinal Tract: Gastric function. Stimulation of gastric secretion. Composition of gastric secretion. Test for gastric function – fractional test meal. Pentagastrin test, insulin stimulation tests; hyperchlorohydria, achlorohydria, achyliagastrica. Pancreatic exocrine secretion – composition.Duodenal contents – collection, examination following stimulation of pancreas; analysis; malabsorption syndrome due to intestinal disease and pancreatic dysfunction, differential diagnosis.Disaccharides deficiency.

Unit IV

Biochemical aspects of Liver disease: Bile acid metabolism and bile formation.Bilirubin metabolism: biosynthesis, transport, hepatic uptake and transport, conjugation and excretion, enterohepatic circulation. Liver function tests related to protein, carbohydrate, lipid, pigment metabolism, detoxification and excretion. Serum enzymes in liver disease. Jaundice – classification and differential diagnosis. Kermicterus. Hydrogen ion homeostasis: Blood buffers, bicarbonate-buffering system. Role of Kidney. Red cells, lungs, acidosis and alkalosis.

Recommended Books:

1. Essentials of Food and Nutrition, Vol. I & II, M. S. Swaminathan.
2. Text Book of Biochemistry with clinical correlations. Thomas M. Devlin (JohnWily).
3. Harper's Review of Biochemistry, Murray et al. (Longman).
4. Biochemical aspects of human disease – R.S. Elkeles and A.S. Tavil. (Blackwell ScientificPublications).
5. Clinical chemistry in diagnosis and treatment–JoanF.Zilva and P.R.Pannall (Lloyd-Luke Medical Books.
6. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann Medical Books, London, 1988).
7. Clinical diagnosis and management by Lab methods (John Bernard Henry, W.B. Salunders Company, 1984).
8. Clinical Biochemistry – S. Ramakrishnan and Rajiswami.
9. Chemical Biochemistry (Metabolic and clinical aspects) by W. J. Marshall & S. K. Bangert.
10. Text book of clinical Biochemistry by Tietz et al.

Course Outcomes: The student will be able to

1. Maintain clinical biochemistry laboratory, biological specimen collection for clinical assay and investigation of disorders associated with carbohydrates.
2. Learn and understand the Inborn errors of amino acid metabolism, Lipid metabolism and Renal function system.
3. Gain knowledge in clinical enzymology and Disorders of Gastrointestinal Tract.
4. Investigate the serum enzymes in liver diseases.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	3	1	3	3	3	3
CO_2	3	3	3	3	3	3	3	1	3	3	3	3
CO_3	3	3	3	3	3	3	3	1	3	3	3	3
CO_4	3	3	3	3	3	3	3	1	3	3	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-305c	Cell and Developmental Biology	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To explore the knowledge and awareness of the basic principles and concepts of Developmental Biology.
2. To familiarize with the concepts Gametogenesis, fertilization and early development.
3. To impart knowledge about Morphogenesis and organogenesis in animals and in plants.
4. To understand the concept of biomembranes and membrane transport.

Course Contents:

Unit I

Origin of cells and unicellular evolution. Prokaryotic and Eukaryotic cells: Structure, Composition and functions of nucleus, mitochondria plastids, endoplasmic reticulum, golgi, lysomes, vacuole, micro bodies, ribosomes, cytoskeleton.

Cell division, cell cycle and its regulation, cell signaling, stress response, cell communication, cell adhesion, Apoptosis, Senesence, extracellular matrix, integrins.

Unit II

Basic concepts of development: Potency, commitment, specification, induction, competence, determination and differentiation; morphogenetic gradients; cell fate and cell lineages; stem cells; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development.

Gametogenesis, fertilization and early development: Production of gametes, cell surface molecules in sperm-egg recognition in animals; embryo sac development and double fertilization in plants; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals; embryogenesis, establishment of symmetry in plants; seed formation and germination.

Unit III

Morphogenesis and organogenesis in animals: Cell aggregation and differentiation *Drosophila*, amphibia and chick; organogenesis limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development-larval formation, metamorphosis; environmental regulation of normal development; sex determination.

Morphogenesis and organogenesis in plants: Organization of shoot and root apical meristem; shoot and root development; leaf development and phyllotaxy; transition to flowering, floral meristems and floral development in *Arabidopsis* and *Antirrhinum.*

Unit IV

Biomembranes: Chemical composition of Membranes, Composition of plasma and organelle membranes of animal and plant cells. Lipids, proteins and Carbohydrates of membranes Distribution of membrane lipids. Assembly of membrane components. Molecular structure of membranes: Miscelle, and liposomes, biological membrane; Symmetry of the membrane; Membrane fluidity; fluid mosaic model of biological membranes. Nanomaterilas and their applications.

Membrane Transport: Donnan membrane equilibrium, Diffusion across cellular membranes Mediated transport; Energetics of transport systems; Passive transport anion exchange proteins; Active transport; Active transport of Na+ K+ (Sodium potassium ATPase) Ca_2+ (Ca_2+-ATPase). Active transport of sugars coupled to Phosphorylation; group translocation (Y-Glutamyl cycle). Proton motive force in bacterial transport processes. Ionophores Gap junctions; Endocytosis, Exocytosis. Nature of receptors.

Recommended Books:

1. Molecular Biology of the cells by Alberts *et al* (1994).
2. Cell and Molecular Biology (2001) by EDP de Robertis and EMF de Robertis.
3. Text Book OF medical physiology by A.C.Guyton (2001).
4. Cell and Molecular Biology 2nd Edit. (2002) By P.K.Gupta, Rastogi Publ.

Course Outcomes: The student will be able to

1. Acquire knowledge on basic concepts of Developmental Biology.
2. Gain the proficient knowledge about zygote formation, blastula formation, gastrulation and many events in early development.
3. Understand Organogenesis, limb development and regeneration in vertebrates, and post embryonic development in animals and Plant tissue culture,

Protoplast fusion and Production of transgenic plants.

4. Acquire knowledge about biomembrane concept and various membrane transport systems.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	2	2	3	2	3	3
CO_2	3	3	3	3	3	3	2	2	3	2	3	3
CO_3	3	3	3	3	3	3	2	2	3	2	3	3
CO_4	3	3	3	3	3	3	2	2	3	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-306a (Open elective)	General biochemistry	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. Gives information about classification, physico-chemical properties of amino acids and structural organization of proteins.
2. To understand the structure, properties and biological importance of carbohydrates and lipids.
3. Explore the composition and structure of nucleic acids.
4. Structure of porphyrins, Chemistry and functions of water and fat soluble vitamins.

Course Content:

Unit I

Amino acids & Proteins: Classification of amino acids, acid-base properties of amino acids, chemical reactions of amino acids, non-protein amino acids, Peptide bond –Structure and conformation. Naturally occurring peptides. Classification of proteins – purification and isolation of proteins, criteria of purity of proteins, physico-chemical properties, structural organization of proteins, Elucidation of primary structure, secondary structure, , Tertiary structure Quaternary structure, Denaturation & renaturation of proteins. Outlines of Proteomics.

Unit II

Carbohydrates: Definition and classification of carbohydrates, nomenclature, Reaction of Mono- saccharides, Acid derivatives of Monosaccharides amino-sugars, Oligo saccharides, structure, properties and importance of Homo & Hetero polysaccharides

Lipids: Classification, Physical and chemical properties of fatty acids. Characterization of natural fats & oils, structure and biological role of triaceyl glycerol, phospolipids, sphingolipids, Gangliolipids, Prosta- glandins, Thromboxanes, Leukotrienes and steroids. Killer fat (Staphylococcus killer)

Unit III

Isolation, fractionation, characterization of nucleic acids, properties of nucleic acids in solution. Structure of nucleic acids – primary – purine and pyramidine bases, nucleosides, nucleotides, polynucleotides; secondary & Tertiary structure of DNA; structure of RNAs – Secondary and Tertiary structure; Analysis of stability to nucleic acid structures. DNA denaturation and renaturation kinetics, Nucleic acid sequencing –Higher orders of DNA & RNA Structure, chromatin structure; Gene analysis – southern blot technique and its variance. Proteomics and genomics.

Unit IV

Structure of porphyrins; Protoporphyrin, porphobilinogen properties Identification of Porphyrins, Structure of metalloporphyrins – Heme, cytochromes and chlorophylls. Chemistry and functions of water and fat soluble vitamins. Circadian clock.

Recommended Books:

1. Glycoproteins by Hughes R.C., Chapman & Holl, 1983.
2. Biochemistry – Mechanisms of metabolism Cunningham, E.B., Mc Grew – Hill, 1978.
3. Nucleic acid – Chargaff & Davidson Vol. II.
4. The biochemistry of Nucleic acids; Adams et al., Chapman and Hall, 1986.
5. Proteins: A guide to study by physical & chemical methods, Haschemeyer and Haschemeyer, Wiley, New York, 1973.
6. Proteins: Structure, function and evolution. Dickerson & Geis, 2nd Edn, Benjamin / Cummings, Menlo Park, California 1983.
7. The proteins: Neurath and Hill, 3rd Edn. Academic New York, 1977.
8. Biochemistry - Zubay C, Addison – Wesley, 1986.
9. Biochemistry, A problem Approach, 2nd Edn. Wood, W.B. Addison Wesley1981.
10. Biochemistry of Lipids and Membranes - Vance D, Addison-Wesley, 1985.

Course Outcomes: After the completion of this course, the student will be able to

1. Understand the classification, structure and biochemical reactions of aminoacidsand proteins.
2. Describe the classification, structure and biochemical reactions of carbohydrates and lipids.
3. Understand the concept of structural organization of nucleic acids.
4. Describe the Structure of porphyrins, Chemistry and functions of water and fat soluble vitamins.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	2	1	3	3	1	2	2	3	3
CO_3	3	3	3	2	1	3	3	1	2	2	3	3
CO_4	3	3	3	2	1	3	3	1	2	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-306b (Open elective)	Environmental biochemistry	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To differentiate between renewable and non-renewable resources and conservation of natural resources.
2. To Describe the different types of ecosystems.
3. Explore the details about various types of environmental pollution.
4. Importance of environment in human population.

Course Contents:

Unit I

Renewable and non-renewable resources. Definition, scope and importance, need for public awareness Forest resources: Use and over-exploitation, deforestation, case studies.

Water resources, Mineral resources, Food resources, Food resources, Energy resources, Role of an individual in conservation of natural resources.

Unit II

Ecosystems, Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids.

Introduction, types, characteristic features, structure and function of the following ecosystems: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems and Biodiversity and its conservation

Unit III

Environmental Pollution Definition, Cause, effects and control measures of: Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution,

Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes, Role of an individual in prevention of pollution, Pollution case studies, Disaster management: floods, earthquake, cyclone and landslides.

Unit IV

Human Population and the Environment, Population growth, variation among nations, Population explosion –Family Welfare Programme.

Environment and human health, Human Rights, Value Education HIV/AIDS, Women and Child Welfare, Role of Information Technology in Environment and human health, Case Studies.

Reference books

1. Environmental Biochemistry - NeelimaRajvaidya, Dilip Kumar Markandey(2005).
2. EnvironmentalandEcologicalBiochemistry- P.W.HochachkaT.P.Mommsen
3. Environmental Biochemistry Hardcover – 2005 by D. K. Markandey, N.Rajvaida

Course outcomes: After the completion of this course, the student will be able to

1. Students will be able to know how to conserve natural resources for future.
2. Students will be able to describe differing types of ecosystems and their characteristic features.
3. Gain the knowledge about different types of pollution in the environment.
4. Know the Relation between human population and environment.

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
BCH-306c (Open elective)	Experimental aspects related to analytical methods	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study about the biological relevance of P^H, importance of buffers in biological system and basic principle, instrumentation and applications of microscopy and centrifugation techniques.
2. Knowledge about radioactivity measuring method and their applications in biochemical investigations.
3. To explore the theoretical principles, methodology and biochemical applications of chromatography and electrophoresis techniques.
4. To Understand the importance and applications of spectroscopy techniques in research field.

Course Contents:

Unit I

Biological relevance of pH, measurement of pH, pKa of functional groups in biopolymers such as proteins and nucleic acids. Importance of buffers in biological systems, ion selective electrodes, and oxygen electrode. Donnan membrane equilibrium. Significance of osmotic pressure in biological systems, viscosity and determination of molecular weight using viscometers.

Microscopy: Basic principles of light microscopy, phase contrast microscopy, electron microscopy, and fluorescence microscopy. Sedimentation methods: Basic principles of centrifugation, preparative, differential and density gradient centrifugations, analytical, ultra centrifugation, applications in the determination of molecular weight, purity of biomolecules and detection of conformational changes of biomolecules. Flow cytometry.

Unit II

Radioactivity: half-life, decay constant, average life, units of radioactivity, Radioactivity measuring techniques, and correction factors. Statistics of counting operations, Radiation dose units, Roentgen, REP, REM maximum permissible dose.

Dosimetry and dosimeters; radiation monitoring hazards, Biological effects of radiation, Isotope dilution technique and its application in biochemical investigations. Radioisotopes in biochemistry and medicine. RIA.

Unit III

Theoretical principles, methodology and biochemical applications of separation methods: Counter current distribution, Paper, Thin layer, Reverse phase, absorption, ion exchange, and gas chromatography, affinity chromatography, Gel filtration, HPLC.

Electrophoresis: Paper, agar, immune-electrophoresis, high voltage electrophoresis, SDS-PAGE and isoelectric focusing, Capillary electrophoresis, isotachophoresis, Northern blot, Southern blot, Western blot Analyses and development of blots. 2D electrophoresis, Pulse-field gel electrophoresis.

Unit IV

Spectroscopy: Electromagnetic radiations, Beer-Lamberts law principles and applications of colorimetry, spectrophotometry. Concept and biological application of UV, fluorimetry, flame photometry.

AAS, AES, Infrared, ESR, NMR spectroscopy, Polarimetry, CD & ORD. Principles and applications of X-ray Diffraction. MALDI- LCMS, Biosensors.

Recommended Books

1. Principles and Techniques of practical Biochemistry. Eds. Williams and Wilson.
2. Techniques in Molecular biology Ed. Walker &Gastra, Croom Helm, 1983.
3. Principles of instrumental analysis, 2nd Ed, Holt-Sanders, 1980.
4. An introduction to spectroscopy for Biochemistry. Ed. Brown S.N., Academic press
5. Analytical Biochemistry, Holmes and Hazel peck, Longman, 1983.
6. An introduction to practical biochemistry. David T. Plummer, Tata Mac Grew-Hill.
7. Biophysical chemistry, Edshall& Wyman, Academic press Vol II & I.

8. A textbook of quantitative inorganic analysis including elementary instrumental analysis, Vogel ELBS.
9. Biochemical calculations Seigel, IH, 2nd Edit, John Wiley & sons Inc., 1983.
10. Analytical Biochemistry by Friefelder David

Course outcomes: After the completion of this course, the student will be able to

1. Understand the principle, Instrumentation of different types of Light microscopy, electron microscopy, and techniques of Centrifugation and its applications in various fields of research.
2. Learn about basic Radioactivity principles, measurement method and its biological applications.
3. Acquire knowledge about the basics and latest developments in the instrumentation techniques of Electrophoresis (IEF, 2D PAGE) and Chromatography and their applications in various research fields.
4. Demonstrate skill to explain about principle, Bioinstrumentation and applications of spectroscopy techniques.

M.Sc. BIOCHEMISTRY

SEMESTER-IV

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH-401	Genetic Engineering	06	04
Sessional Marks : 20		**End Semester Examination Marks : 80**	

Course Objectives:

1. To impart knowledge about major events in the development of rDNA technology and to acquire skills on techniques of construction of recombinant DNA - Cloning vectors and isolation of gene of interest.
2. To familiarize with the concepts different operons and regulation of gene expressions in prokaryotes and eukaryotes.
3. To acquaint them with the different gene transfer methods and mappings.
4. To explain the applications of genetic engineering in biotechnology.

Course Contents:

Unit I

Cloning and amplification of DNA: Introduction, choice of the organism, use of restriction endonucleases for the production of DNA fragments. Vehicles for cloning - plasmids, phage vectors and cosmids.

RNA isolation, preparation and use of cDNAs. Screening and determination ofnucleotide sequences. Application of recombinant DNA technology. Oncogenes andtheir mode of action.

Unit II

Isolation, sequencing and synthesis of genes: Isolation of genes, sequencing of genes, synthesis of genes, Cloning of specific eukaryotic genes and their expression in bacteria. Operon model: Isolation and chemical nature of repressor. Catabolite repression and role of cAMP and cAMP receptor protein (CRP) in the expression of glucose – sensitive operons. Lac operon, His operon, Trp operon of E. coli. Stringent and relaxed control.

Regulation of gene expression in prokaryotes and eukaryotes: Transcriptional control, enzyme induction and repression. Constitutive synthesis of enzymes. Genes involved in regulation, regulatory gene, promoter gene, operator gene and structural genes. Genome imprint.

Unit III

Gene transfer methods and transgenic organisms: Gene transfer methods for animals and plants, Agro bacterium mediated gene transfer, electroporation and particle gun. Trasgenic animals, and transgenic plants.

Restriction maps and molecular genetic maps: Restriction mapping, restriction fragment length polymorphisms (RFLP) Linkage and recombination between molecular and phenotypic markers, Random amplified polymorphic DNA (RAPDs) using PCR, Chromosome walking. Organic genome engineering and cell molecular memory/ Biosensors

Unit IV

Applications of genetic engineering in biotechnology: Genome imprint, Dynamic genome engineering and cell molecular memory. Plant, animal cell and Tissue culture methods.

Biosensors: Genetically Modified Organism - Market potential, Diet, Leash, Potato, Rice BT.

Recommended Books

1. Genes and Probes, A Practical Approach Series (1995) by Hames and SJ Higgins; Oxford Univ. Press.
2. Gel Electrophoresis of Nucleic Acids, A practical Approach (1990) by D Rickwood and BD Hames.
3. Oxford Univ. Press.

Course Outcomes: The student will be able to

1. Familiar with the tools and techniques for isolation and purification of genes, vector construction.
2. Understand the mechanisms of regulation of gene expression in different operons.

3. Know the techniques for transfer and expression of cloned gene and
4. Apply the knowledge of genetic engineering in biological research.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	2	3	2	3	3
CO_3	3	3	3	3	3	3	3	2	3	2	3	3
CO_4	3	3	3	3	3	3	3	2	3	2	3	3

Course Code	Semester-IV,Course Title	No of Hours Per week	No of Credits
BCH-402	Research methodology and bioinformatics	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design.
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
4. To provide knowledge about the basics of sequence alignment and analysis.

Course Contents:

Unit I

Research Methodology: Meaning and scope, steps of Research, Article and thesis writing. Funding agencies, Project proposal preparation, Preparation of proposal, Experimental design and implementation of project, submission of progress report (year wise), statement of expenditure (SE), Utilization certificate (UC). Research ethics, Plagiarism.

Introduction of computation: Computers components, storage devices, graphic devises, concepts of hardware and software, methods and types of networks. Basics of operating systems and types python, cython, Information and Communication Technology (ICT), online methods of teaching (MOOCS).

Unit II

Bio-Statistics: Data - Data types, collection of data, classification, tabulation and

interpretation. Measures of central tendencies. Mean, median and mode. Measures of variation - Range, quartile deviation, mean deviation and standard deviation. Coefficient of variation.

Probability. Addition and multiplication theories, conditional probability and probability distributors. Binomial, poission and normal distribution. Correlation and linear regression. Regression: Regression coefficients and properties. Small sample tests- t, F and chi square tests. ANOVA - one way and two-way classifications.

Unit III

Bio-Informatics–I: Origin of bioinformatics biological data (genome projects), Disciplines of bioinformatics, transcriptomics, functional genomics, structural genomics, metabolomics, pharmaco- genomics, structure prediction, drug design and Microarrays.

Genome projects - General introduction to genome projects (rice and Mycobacterium tuberculosis genome project). Special emphasis on Human Genome Project (HGP). Science behind HGP, benefits of HGP, ELSI of HGP in use of genetic information, genetic testing standard, quality and commercialization.

Biological database - Introduction of database (DB), need, organization, search of DB. An over view of biological databases - NCBI, EMBL, DDBJ, SWISS-PROT, PDB, KEGG. Decoding of the genome (Nathan blow study), Ribosomal bar codes, Molecular signatures.

Unit IV

Bio-Informatics–II Sequence alignment - Introduction, significance of sequence alignments and use of dot matices. Pair wise and multiple sequence alignment (MSA) using Clustal programs.

Sequence analysis - concepts of sequence analysis and their importance. BLAST and FASTA. Proteomics- Introduction, principle, technique, 2-D data base. Gel analysis, post gel analysis, MALDI- TOF. Significance and applications of proteomics in modern biology.

Recommended Books

1. Statistical methods. S.P.Gupta
2. Fundamentals of mathematical statistics. S.C Gupta &Kapoor
3. Statistical methods in biological and Health Science. J. S. Milton

&J.O.Tsokan.

4. Primrose SB. Principles of Genome Analysis: a guide to mapping and sequencing DNA from different organisms. 2nd Ed. 1998. Blackwell Science: Oxford. ISBN0-632-04983-9.
5. Genome Mapping: A practical approach. Dear P (Editor). 1st Ed. 2000. Oxford University Press.
6. Developing Bioinformatics Skills. Alfonso Valencia and Blaschke. L (2005) Oreilles Publication.
7. Bioinformatics sequence, structure and data banks ed. By Des Higgins Willie Taylor (2006).
8. Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins" (Andreas D. Baxevanis, B. F. Ouellette), Paperback, 2nd ed., 470 pp., ISBN: 0471383910, Publisher: Wiley, John & Sons, Inc.,Pub.
9. David W. Mount, Bioinformatics: Sequence and Genome Analysis, 2nd edition, Cold SpringHarbor Laboratory, 2004, ISBN0-87969-687-7.
10. Introduction to Bioinformatics by T.K.Altwood and D.J Parry-Smith (Pearson Education Asia1999).

Course Outcomes: The student will be able to

1. Discuss the various steps involved in conducting research.
2. Learn to apply hypothesis testing via some of the statistical distributions.
3. Develop understanding about biological data and database search tools.
4. Acquire hands on training on various computational tools and techniques employed in biological sequence analysis.

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH-403-P	Practical related to immunology and hematology	06	04
End Semester Exam Marks: 100			

Course Objectives:

1. The lab is designed to train the students in basic techniques of immunology and electrophoresis.
2. Gain knowledge in collection of biological sample and handling of microscope.
3. To determine the blood samples like RBC and WBC count.
4. To determine the Human Blood grouping.
5. To determine the Ag and Ab reactions by immunodiffusion and immunoelectrophoresis techniques.

Course Contents:

BCH 403P: IMMUNOLOGY AND HAEMATOLOGY PRACTICALS

1. RBCcount.
2. Total WBC count.
3. WBC Differential count.
4. Erythrocyte Sedimentation Rate (ESR).
5. Packed Cell Volume (PCV).
6. Estimation of Haemoglobin(Hb).
7. Mean Cell Haemoglobin and Mean Cell RBC volume.
8. Colour Index and Volume Index of RBC.
9. Osmotic fragility of RBC.
10. Raising of antibodies to soluble antigen in rabbits.
11. Immunodiffusion.

12. Single Radial Immunodiffusion.
13. Rocket immune electrophoroesis.
14. Cross over Immunoelectrophoresis.
15. Graber and WilliamsImmunoelectrophoresis.
16. Detection of HCG by latex agglutination inhibition test.
17. Haemeagglutination tests for identification of human blood groups.
18. Detection by viral fever by slide agglutinationtests.

Recommended Books:

1. Hawk's Physiological chemistry.
2. Practical Biochemistry by TPlummer.
3. Practical Biochemistry by JJayaraman.
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell.
6. Practical Biochemistry-Sawhney(2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann, London, 1988).

Course Outcomes: The student will be able to

1. Collect the blood samples and handle the microscope.
2. Analyze the blood samples.
3. Expert in immunodiffusion and immunoelectrophoresis techniques.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_4	3	3	3	3	3	3	3	1	3	3	3	3

BCH 404P: PROJECT WORK (100 MARKS)

Marks allotted to thesis preparation-80 (40 marks for the progress performed by the student in laboratory will be awarded by project research supervisor and another 40 marks for content of the thesis). Marks allotted to viva presentation-20

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH 405a	Immunology	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide knowledge on essential features of antigens and antibodies and their types and different theories of Antibody formation.
2. To acquire knowledge on types of immunity, phagocytosis, interferons and complement system.
3. To explain the concept of hypersensitivity, auto immunity and transplantation.
4. To provide knowledge on immune deficiencies and several immunological techniques.

Course Contents:

Unit I

Introduction: Scope of Immunology, Historical background of Immunology, Biological aspects of Immunology, Self and non-self-recognition, specificity, memory of immune system.

Antigens: Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete.

Antibodies: Nature, Primary structure of immunoglobulins, light chain, heavy chain, variable

region, constant region, Hinge region; Enzymatic fragmentation of Ig. Domain structure of Ig and significance; Classification of Immunoglobulins: Types –IgG (G1, G2, G3 & G4), IgM, IgA, IgD and IgE (Origin, structural functions). Theories of Ab formation-Instructive, selective, clonal selection theories and evidences; Immunological memory.

Antibody diversity: Mini gene theory, Mutation theory, Germ line theory, Somatic recombination, V (D) J recombination, Combinatorial diversity, Junctional diversity.

Unit II

Immunity: Types: Active and passive immunity. Cell mediated immunity, humoral immunity, immune response; primary and secondary response. Phagocytosis, mechanism of phagocytosis. Interferon: Types of Interferons. Null cells: Natural Killer cells. Complement system: Nature, components of compliment.Pathways: Classical and alternative pathways. Compliment fixation tests.

Unit III

Hypersensitivity (HS): Type I: Allergies and anaphylaxis – IgE, Mast cell degranulation, biologically active agents released in reactions, Clinical manifestations.

Type II: Antibody mediated HS reactions; Mechanism, pathogenicity and cases of type II reactions; Haemolytic-disease of new born (HDN).

Type III: Immune complex mediated HS reactions: Mechanism &pathogenicity of type III reactions. Soluble immune complexes and insoluble immune complex mediated reactions. Arthus reaction, Serum sickness.

Type IV: Delayed type (or) cell-mediated HS reactions; Mechanisms and pathogenicity,Tuberculin reaction.

Type V: Stimulatory HS reactions. Mechanism and pathogenicity, Grave's disease.

Blood groups: AB, Rh system, Lewis-Luthern systems, significance, practical application of immuno methodology in blood transfusions, Erythroblastosisfetalis.

Auto immunity: Introduction, Auto recognition, classes of auto immuno diseases. (Hashimoto disease, thyrotoxicosis, Systemic lupus erythematosus, Autoimmune haemolyticanaemia, Rheumatoid arthritis).

Transplantation: Terminology, Auto graft, Isograft, Allograft, Xenograft, Immunological basis of transplantation reactions, GVH reaction, Immuno suppression, General mechanisms of Immune suppression, Immune suppression, drugs (azothioprine, methotrexate,

cyclophosphamide, cyclosporin-A, Steroids).

Unit IV

Immune Deficiencies: Introduction, primary and secondary deficiencies. T-cell, B-cell and combined immunedeficiencies, Compliment system deficiency. Acquired immuno deficiency syndrome. SCID.

Major Histocompatibility Complex: MHC in mice and HLA in man-fine structure and functions only.

Immunological techniques: Precipitin curve, Immuno diffusion, one and two dimensional, single radial immuno diffusion, Ouchterlonyimmuno diffusion.

Immuno-electrophoresis: Rocket immuno-electrophoresis; CIE, Graber and William technique.

Agglutination: Direct and Indirect, Widal test, VDRL test.

Radioimmunoassay: ELISA – Principle, Methodology and applications.

Immuno-fluorescence: Direct, indirect and Sandwich, *in situ* localization by techniques such as FISH and GISH.

Recommended Books:

1. Essential immunology- Ivan M. Roitt.
2. Introduction to Immunology – John W.Kinball.
3. Immunology – D.M. Weir.
4. Immunology – Janis Kuby.

Course Outcomes: The student will be able to

1. Gain knowledge on different types of antigens, antibodies and how different types of antibodies are produced.
2. Out line, compare and contrast the key mechanism of innate and adaptive immunity.
3. Gain knowledge on undesirable immunological reactions and their complication in health management.
4. Apply knowledge in disease diagnosis through serological tests.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_3	3	3	3	3	3	3	2	1	2	2	3	3
CO_4	3	3	3	3	3	3	2	1	2	2	3	3

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH 405b	Generic Elective**:** Applied Biochemistry	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives: This course is designed to

1. Introduce Fermentation Technology and industrial production of chemicals.
2. Importance of Enzyme Technology in industries.
3. Gain knowledge in Applications of hybridoma technology.
4. To understand the Applications of genetic engineering in biotechnology and Genetically Modified Organisms.

Course Contents:

Unit I

Fermentation Technology: Batch, continuous culture techniques, principle types of fermentors. Industrial production of chemicals- alcohol, acids (citric, lactic and acetic acids), solvents (acetone and butanol). Antibiotics (penicillin and streptomycin), Vitamins (Riboflavin and Vitamin B12), amino acids (lysine and glutamic acid), Single Cell Protein (SCP) and Biopesticides (Toxins of Bacillus thuringenesis and its mode of action).

Unit II

Enzyme Technology: Immobilization of enzymes and cells, different methods.

Industrial applications (Production of glucose from starch, Use of glucose isomerase in confectionary industry, Use of lactase in Dairy Industry, Production of invert sugar from sucrose, Use of protease in food, detergent and leather Industries, Medical applications of enzymes). Low calorie sweeteners.

Unit III

Immunotechnology: Hybridoma technique, monoclonal antibodies production, myeloma cell

lines, fusion of myeloma cells, selection of hybridomas, protoplast fusion and HAT medium. Screening, purification and application (biochemical research, clinical diagnosis and treatment) of monoclonal antibodies.

Subunit vaccines-against Herpes Simplex virus. Foot and Mouth disease, Live recombinant vaccines- attenuated (Cholera, Salmonella), Vector vaccines directed against viruses and bacteria.

Unit IV

Applications of genetic engineering in biotechnology: Genome imprint, Dynamic genome engineering and cell molecular memory. Biosensors:

Genetically Modified Organisms - Market potential, Diet, Leash, Potato, Rice BT. Intellectual property rights (IPRs).

Recommended Books:

1. Fermentation Technology (2^{nd}ed.) Standury (Pergmanpress)
2. Biotechnology: Textbook of Industrial microbiology 2nd Edit. By Crueger and Crueger (2000).
3. Principles of Gene manipulation: An Introduction to genetic Engineering (5th). R.V.Old and S. B. Primrose (Blackwell Scientific Publications).
4. Principles of Biotechnology (1985) Alen Weisman (Surrey UniversityPress).
5. Concepts in Biotechnology (1996) Ed., D.Balasubramaian, K.Dharmalingam, J.Green and K.Jayaraman.
6. Industrial Microbiology, Miller and Litsky, McGraw- Hill, 1976.
7. Industrial Microbiology, L.E.Casida, JR. New Age International (1995).
8. Industrial Microbiology (Prescott & Dunn), Ed by G.Reed, CBS Publishers.
9. Immobilized enzymes (1978) by Ichiro Chibata, Halsted PressBook.

Course Outcomes: The student will be able to

1. Gain knowledge in Fermentation Technology and industrial production of chemicals.

2. Learn Industrial application of Enzyme Technology.
3. Gain knowledge in Applications of hybridoma technology.
4. Understand the applications of genetic engineering in biotechnology and Genetically Modified Organisms.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	1	3	3	3	3
CO_3	3	3	3	3	3	3	3	1	3	3	3	3
CO_4	3	3	3	3	3	3	3	1	3	3	3	3

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH-405c	Plant Biochemistry	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives: The main objective of this course is

1. To impart students an understanding of plant biochemistry includes Structure, function and mechanisms of action of phytochromes, cryptochromes and phototropins;
2. The course includes special features of secondary plant metabolism.
3. Gain knowledge in evolutionary studies Origin of basic biological molecules.
4. To understand the Concepts of natural evolution and population genetics.

Course Contents:

Unit I

Biosynthesis, Storage, breakdown and transport; physiological effects and mechanisms of action. Structure, function and mechanisms of action of phytochromes, cryptochromes and phototropins; stomatal movement; photoperiodism and biological clocks.

Uptake, transport and translocation of water, ions, solutes and macromolecules from soil, through cells, across membranes, through xylem and phloem; transpiration; mechanisms of loading and unloading of photoassimilates.

Biosynthesis of terpenes, phenols and nitrogenous compounds and their roles. Structure and biochemical aspects of specialized plant cell organelles, cell plates, primary and secondary cell walls, plasmodesmata importance of vacuolar, characteristic of meristematic cells.

Unit: II

Role of water absorption, adsorption, conduction, transpiration, guttation water balance and stress. Role of different minerals absorption and translocation of inorganic and organic substances.

Special features of secondary plant metabolism, formation and functions of phenolic acids, tannins, lignin, flavonoid pigments, surface walls, cutin and suberin plant protective walls,

Terpenes, Embryogentics growth and development, Defence system in plants, Photosynthesis in microbes, bacteria, fungi, algae and yeast.

Unit III

Lamarck; Darwin–concepts of variation, adaptation, struggle, fitness and natural selection; Mendelism; Spontaneity of mutations; The evolutionary synthesis.

Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; Concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism.

The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of plants and animals; Stages in primate evolution including Homo.

Unit IV

Concepts of natural evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence.

Population genetics – Populations, Gene pool, Gene frequency; HardyWeinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution.

Reference books:

1. Plant Biochemistry (Fourth Edition): Hans-Walter Heldt and Birgit Piechulla
2. Plant Biochemistry - by Dr. V.Arunkumar, Dr.K.Siva Kumar, Dr. N. Senthil Kumar (2010).
3. Origin of Species – Charles Darwin
4. Evolution: The Triumph of an Idea by Carl Zimmer

Course outcomes: The student will be able to

1. Understand the Structure, function and mechanisms of action of phytochromes, cryptochromes and phototropins;
2. Gain knowledge in special features of secondary plant metabolism.
3. Know the evolutionary studies Origin of basic biological molecules.
4. Understand the Concepts of natural evolution and population genetics.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-IV,Course Title	No of Hours Per week	No of Credits
BCH 406a	Research Methodology-Open elective	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design.
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
4. To provide knowledge about the basics of sequence alignment and analysis.

Course Contents:

Unit I

Technical writing: Sentence writing, paragraph writing, story writing, review writing, various types of letters writing, critical comments writing. Project proposal preparation: Preparation of informal proposal, modified proposal and formal proposal.

Experimental design and Collection of results, submission of progress report (year wise) and submission of technical report (Format: Title page, Introduction, Aims of the proposal/research, methodology, results, references, acknowledgments, budgetary preparation). Submission of final technical Report. Patenting and intellectual property rights.

Unit II

Introduction of computation: Computers components, storage devices, graphic devises, concepts of hardware and software, methods and types of networks.

Basics of operating systems and types python, cython, Information and communication technology (ICT).

Unit III

Bio-Statistics: Data - Data types, collection of data, classification and tabulation. Measures of central tendencies. Mean, median and mode. Measures of variation - Range, quartile deviation, mean deviation and standard deviation. Coefficient of variation.

Probability. Addition and multiplication theories, conditional probability and probability distributors. Binomial, poission and normal distribution. Correlation and linear regression. Regression: Regression coefficients and properties. Small sample tests- t, F and chi square tests. ANOVA - one way and two way classifications.

Unit IV

Research Aptitude: Meaning and scope of research, steps of Research, Article and thesis writing. Funding agencies.

Project proposal preparation, Preparation of proposal, Experimental design and implementation of project, submission of progress report (year wise), statement of expenditure (SE), Utilization certificate (UC).Research ethics, Plagiarism.

Recommended Books

1. Statistical methods. S.P.Gupta
2. Fundamentals of mathematical statistics. S.C Gupta &Kapoor
3. Statistical methods in biological and Health Science. J. S. Milton &J.O.Tsokan.

Course Outcomes: The student will be able to

1. Discuss the various steps involved in conducting research.
2. Learn to apply hypothesis testing via some of the statistical distributions.
3. Develop understanding about Biological data and database search tools.
4. Acquire hands on training on various computational tools and techniques employed in Biological sequence analysis.

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH-406b	Biochemistry of diseases	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. The main objective of this skill oriented course is to learn and understand the fundamentals of clinical biochemistry, Collection and preservation of specimens and Assays of Carbohydrate Metabolism associated clinical conditions/diseases.
2. To impart knowledge of Inborn errors of amino acid metabolism, investigation of lipid metabolism and functioning of renal system.
3. To understand Clinical application of plasma enzyme assays and Disorders of Gastrointestinal Tract.
4. To acquire knowledge of biochemical aspects of Liver diseases.

Course Contents:

Unit I

Introduction to Clinical Biochemistry: Introduction and maintenance of clinical biochemistry laboratory; azards in clinical biochemistry laboratory; units; 'normal range', reference values. Factors affecting reference values quality control in laboratory – use of external and internal standards; use of WHO standards. Selection of analytical methods. Automation in clinical laboratory. Collection and preservation of specimens.

Disorders of Carbohydrate Metabolism: Importance of extra cellular glucose; blood glucose homeostasis– role of tissues and hormones; hyperglycemia and hypoglycemia. Diabetes mellitus – classification, etiology, clinical and laboratory features. Diagnosis of diabetes mellitus – glucose tolerance test, random fasting and post- prondial glucose levels, glycosuria, ketone bodies, glycosylated hemoglobin, plasma insulin. Metabolic complications – diabetic hyperglycemic coma and nonketotic coma; lactic acidosis; atherosclerosis, neuropathy. Hypolycemia – fasting and provoked; diagnosis – stimulation tests (I.V. glucagon and leucine test); extended G.T.T; hypoglycemia in children – neonatal and early

infancy. Investigation of glycogen storage diseases, galactosemia, hereditary fructosuria, lactose intolerance.

Unit II

Inborn errors of amino acid metabolism – Phenylketonuria, alkaptonuria, Hartnup's maple-syrup urine disease, Plasma proteins in health and changes in diseases; paraproteinaemias; proteinuria. Lipid metabolism: Plasma lipids and lipoproteins and their functions. Hyperlipo-proteincmias; Classification – primary and secondary. Investigation of lipoproteinemias and lipidemias.

Renal function: Glomerular and tubular functions. Tests for evaluation – concentration, dilution, excretion, clearance tests, nephritic syndrome.

Unit III

Clinical Enzymology: Plasma enzyme in diagnosis and prognosis – aminotransferases, creatine kinase, LDH, alpha amylase, phosphatases, choline esterase, glucose 6-phosphate dehydrogenase, Gama glutamyl transferase. Isozymes of LDH alkaline phosphatase. Clinical application of plasma enzyme assays in myocardial infraction, liver disease, and muscle disease.

Disorders of Gastrointestinal Tract: Gastric function. Stimulation of gastric secretion. Composition of gastric secretion. Test for gastric function – fractional test meal. Pentagastrin test, insulin stimulation tests; hyperchlorohydria, achlorohydria, achyliagastrica. Pancreatic exocrine secretion – composition.Duodenal contents – collection, examination following stimulation of pancreas; analysis; malabsorption syndrome due to intestinal disease and pancreatic dysfunction, differential diagnosis.Disaccharides deficiency.

Unit IV

Biochemical aspects of Liver disease: Bile acid metabolism and bile formation.Bilirubin metabolism: biosynthesis, transport, hepatic uptake and transport, conjugation and excretion, enterohepatic circulation. Liver function tests related to protein, carbohydrate, lipid, pigment metabolism, detoxification and excretion. Serum enzymes in liver disease. Jaundice – classification and differential diagnosis. Kermicterus. Hydrogen ion homeostasis: Blood buffers, bicarbonate-buffering system. Role of Kidney. Red cells, lungs, acidosis and alkalosis.

Recommended Books:

11. Essentials of Food and Nutrition, Vol. I & II, M. S. Swaminathan.
12. Text Book of Biochemistry with clinical correlations. Thomas M. Devlin (JohnWily).
13. Harper's Review of Biochemistry, Murray et al. (Longman).
14. Biochemical aspects of human disease – R.S. Elkeles and A.S. Tavil. (Blackwell ScientificPublications).
15. Clinical chemistry in diagnosis and treatment–JoanF.Zilva and P.R.Pannall (Lloyd-Luke Medical Books.
16. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann Medical Books, London, 1988).
17. Clinical diagnosis and management by Lab methods (John Bernard Henry, W.B. Salunders Company, 1984).
18. Clinical Biochemistry – S. Ramakrishnan and Rajiswami.
19. Chemical Biochemistry (Metabolic and clinical aspects) by W. J. Marshall & S. K. Bangert.
20. Text book of clinical Biochemistry by Tietz et al.

Course Outcomes: The student will be able to

5. Maintain clinical biochemistry laboratory, biological specimen collection for clinical assay and investigation of disorders associated with carbohydrates.
6. Learn and understand the Inborn errors of amino acid metabolism, Lipid metabolism and Renal function system.
7. Gain knowledge in clinical enzymology and Disorders of Gastrointestinal Tract.
8. Investigate the serum enzymes in liver diseases.

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
BCH-406c	Nutritional Biochemistry-Open Elective	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives: The objective of this course is

1. To learn and understand the basic concepts of nutritional biochemistry which comprises the determination of body composition and body weight and Measurement of energy expenditure by direct and indirect calorimetry.
2. To know the importance of proteins and fats in the diet to maintain health and also their malnutrition.
3. To learn nutritional significance of vitamins and minerals.
4. This course is also focus on the Special aspects of Nutrition for the infants, children, pregnant and lactating woman and in old age and community nutrition.

Course Contents:

Unit-I

Body weight and the body composition. Determination of body fat and body water. Body composition during growth and energy requirements.

Measurement of energy expenditure, direct and indirect calorimetry, Respiratory quotient and BMR. Protein nutrition.

Unit-II

Essential and non-essential amino acids. Nitrogen balance, methods of calculation of biological value of proteins protein calorie deficiency. Kwashiorkor and Marasmus.

Fats as component of diet, Energy value of fats. Essential fatty acids and phospholipids in nutrition.

Unit-III

Requirement of fat-soluble and water-soluble vitamins and their deficiency symptoms, sources of the vitamins.

Macro and trace elements in nutrition as regards to dietary sources. Deficiency symptoms and recommended dietary allowances.

Unit-IV

Special aspects of Nutrition for the infants, children, pregnant and lactating woman and in old age, Importance of Nutrition under stress conditions.

Community Nutrition and Health: Assessment of Nutritional status of community. Anthropometric measurements, clinical examination. Radiological, Biophysical and Biochemical techniques.

Course Outcomes: After completion of the course, a student will be able to

1. Determine the body composition and body weight by using various methods.
2. To describe the importance of protein and fats.
3. Gain knowledge on vitamins and minerals to maintain health.
4. Aquire knowledge on nutritional importance in different ages in the life

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF BIOCHEMISTRY

Course

M.Sc. IMMUNOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

M.Sc. BIOCHEMISTRY(IMMUNOTECHNOLOGY) programme CBCS pattern (with effect from 2016)

About the Department:

The department of Biochemistry was started in 1978 to fulfil the demand and needs of the student community in general and of the Rayalaseema region in particular. The department has an independent building with in an area of 12000 s ft in two floors. The department has celebrated its silver jubilee in 2003. To its credit the department started M.Sc. Immunology in 2008. The course content is designed to cover all aspects of Biochemistry and practical orientation for biochemical methods. Further to strengthen the above, project work was introduced in the curriculum. The exhaustive training in biochemical methods and sound theoretical background is intended to make the student an appropriate candidate not only to take up teaching or pursuing doctoral research but also competent enough to work in pharmaceutical R&D and diagnostic labs, agricultural research institutions and various medical and allied institutions and industries. The department also invites Emeritus professors/ Scientists/ researchers from various institutions to deliver special lectures in order to encourage and motivate the students to take up research programme. The students who have successfully completed the M.Sc/ PhD, course have been working in India and abroad in various capacities in research institutions, biotech industries and universities.

Vision:

- To develop scientific tempo in understanding the importance of Immunology in the field of Life sciences, especially in Medicine, Agriculture and Environment for well being of humans.

Mission:

- By providing required training to the students of Immunology with latest tools, techniques and teaching methods. So as to enable them to do advanced research for finding solution to various problems encountered with respect to Human health, Agriculture and Environment.

Programme Specific Outcomes:

- After completion of the M.Sc. Immunology, the students will be able to understand the pathogenesis of various human diseases and plant diseases.
- The students will have the ability to develop innovative and efficient therapeutic regimes for human and plant diseases by applying their knowledge in molecular biology, genetics, immunology etc.
- Students will have the technical expertise to analyse and identify the causative factors to the diseases.

Programme Objectives:

- The main objective of M.Sc. Immunology is to impart knowledge to the students in the advanced fields of life sciences such as Immunology, Biochemistry, Molecular Biology, Biotechnology and Bioinformatics so as to enable the student to get the expertise and skills to carry out research in the fields of Medicine, Agriculture and other allied life sciences and make the learner fit to be employed in the Government sector and private sector and organizations such as Research institutions, Pharma and Biotech industries. The programme enables the students to procure entrepreneurship capabilities to establish Research institutions and Industries in the fields of Biotechnology, Medicine and other advanced fields of life sciences.

Programme Outcomes:

S.No	Program Outcomes
PO1	Students acquire knowledge in the chemistry of different biomolecules, which constitute living organisms including humans. Students also will have knowledge on the different physiological systems and their functions and disorders.
PO2	Students will get the ability and expertise to analyse the different biological, molecules, compounds at cellular and molecular level to understand their functions.
PO3	After completion of this program students will able to investigate the causative factors of various diseases and disorders, pollutants, etc
PO4	The student will enable to design innovative protocols and devices which will

	have applicability in various fields of life sciences.
PO5	Students acquire knowledge in latest techniques and tools that are used for investigating different types of problems related to plant, animal and humans.
PO6	The students will have the skills, knowledge and enthusiasm for solving different issues arising in the society scientifically.
PO7	Students will enable to understand the importance of environment and necessary to maintain pollution free environment.
PO8	To understand ethical principles, professional ethics and responsibilities and apply them to solve societal problems.
PO9	Students will have the efficiency to carry out the projects individually, as a team leader and as a team member.
PO10	Students will acquire communications skills to dissipate the scientific knowledge to the society
PO11	Students will acquire knowledge to carry out project and maintain financial requirements as per the guidelines of funding agency.
PO12	The students being lifelong learners will be enthusiastic to update their knowledge for improving the human life.

Programme Educational Objectives:

To enable the students to learn,

- Applied aspects of life sciences with specific reference to human health and diseases.
- Develop effective therapeutic, and nutritional regimes for the wellbeing of humans.
- Pursue research to improve the quality of agricultural products, reduce the use of peroxides and chemicals that effect humans' health.

M.Sc. BIOCHEMISTRY(IMMUNOTECHNOLOGY)

SEMESTER-I

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
Core 1	Biochemical and biophysical methods	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study about the biological relevance of P^H, importance of buffers in biological system and basic principle, instrumentation and applications of microscopy and centrifugation techniques.
2. Knowledge about radioactivity measuring method and their applications in biochemical investigations.
3. To explore the theoretical principles, methodology and biochemical applications of chromatography and electrophoresis techniques.
4. To Understand the importance and applications of spectroscopy techniques in research field.

Course Content:

Unit I

Biological relevance of pH, measurement of pH, pKaof functional groups inbiopolymers such as proteins and nucleic acids. Importance of buffers in biological systems, ion selective electrodes, and oxygen electrode. Donnan membrane equilibrium. Significance of osmotic pressure in biological systems, viscosity and determination of molecular weight using viscometers.

Microscopy: Basic principles of light microscopy, phase contrast microscopy,electron microscopy, and fluorescence microscopy.

Sedimentation methods: Basic principles of centrifugation, preparative, differential and density gradient centrifugations, analytical, ultra centrifugation, applications in the determination of molecular weight, purity of biomolecules and detection of conformational changes of biomolecules. Flow cytometry.

Unit II

Radioactivity: half-life, decay constant, average life, units of radioactivity, Radioactivity measuring techniques, and correction factors. Statistics of counting operations, Radiation dose units, Roentgen, REP, REM maximum permissible dose, Dosimetry and dosimeters; radiation monitoring hazards, Biological effects of radiation, Isotope dilution technique and its application in biochemical investigations. Radioisotopes in biochemistry and medicine. RIA.

Unit III

Theoretical principles, methodology and biochemical applications of separation methods: Counter current distribution, Paper, Thin layer, Reverse phase, absorption, ion exchange, and gas chromatography, affinity chromatography, Gel filtration, HPLC.

Electrophoresis: Paper, agar, immune-electrophoresis, high voltage electrophoresis, SDS-PAGE and isoelectric focusing, Capillary electrophoresis, iso-tachophoresis, Northern blot, Southern blot, Western blot Analyses and development of blots. 2D electrophoresis, Pulse-field gel electrophoresis.

Unit IV

Spectroscopy: Electromagnetic radiations, Beer-Lamberts law principles and applications of colorimetry, spectrophotometry. Concept and biological application of UV, fluorimetry, flame photometry. AAS, AES, Infrared, ESR, NMR spectroscopy, Polarimetry, CD & ORD. Principles and applications of X-ray Diffraction. MALDI- LCMS, Biosensors.

Recommended Books

1. Principles and Techniques of practical Biochemistry. Eds. Williams and Wilson.
2. Techniques in Molecular biology Ed. Walker &Gastra, Croom Helm, 1983.
3. Principles of instrumental analysis, 2nd Ed, Holt-Sanders, 1980.
4. An introduction to spectroscopy for Biochemistry. Ed. Brown S.N., Academic press.
5. Analytical Biochemistry, Holmes and Hazel peck, Longman, 1983.

6. An introduction to practical biochemistry. David T. Plummer, Tata MacGrew-Hill.
7. Biophysical chemistry, Edshall& Wyman, Academic press Vol II & I.
8. A textbook of quantitative inorganic analysis including elementary instrumental analysis, Vogel ELBS.
9. Biochemical calculations Seigel, IH, 2nd Edit, John Wiley &sons Inc., 1983.
10. Analytical Biochemistry by Friefelder David.

Course outcomes: After the completion of this course, the student will be able to

1. Understand the principle, Instrumentation of different types of Light microscopy, electron microscopy, and techniques of Centrifugation and its applications in various fields of research.
2. Learn about basic Radioactivity principles, measurement method and its biological applications.
3. Acquire knowledge about the basics and latest developments in the instrumentation techniques of Electrophoresis (IEF, 2D PAGE) and Chromatography and their applications in various research fields.
4. Demonstrate skill to explain about principle, Bioinstrumentation and applications of spectroscopy techniques.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	3	-	2	2	3	3
CO_2	3	3	3	3	3	3	3	-	2	2	3	3
CO_3	3	3	3	3	3	3	3	-	2	2	3	3
CO_4	3	3	3	3	3	3	3	-	2	2	3	3

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
Core 2	Molecular Physiology & Community Nutrition	06	4
Sessional Marks: 20			End Semester Exam Marks: 80

Course Objectives:

1. To study the physiological aspects of circulatory and excretory system.
2. To describe the structure, function and mechanism of muscular system and nervous system.
3. To describe the importance of proteins, lipids in the maintenance of health and gives information about various methods of calculations of protein quality and their deficiency.
4. To explore the knowledge about Nutritional importance in different ages of human health.

Course Content:

Unit I

Circulatory system: Formation and composition of blood. Total and differential counts in blood. Development of erythrocytes, and leukocytes. Platelets. Plasma proteins Blood clotting mechanism. Erythrocyte Sedimentation Rate.

Circulation of blood. Cardiac cycle, Capillary and venous blood flow. Blood pressure Electrocardiogram Blood gas transport and gaseous exchange in tissues. Acid-base balance in lungs. The value of blood pH, PO2, PCO2, Measurements.

Excretory system structure and function of Nephrons. Urine formation; GFR, reabsorption and secretion. Composition. Normal Inorganic and organic constituents' abnormal constituents of urine. Acid-base balance equilibrium maintained by the Kidney.

Unit II

Muscular system: Types of Muscular tissue; structure of striated muscle fiber molecular organization of contractile systems, mechanism of muscle contraction, Regulation and energetics of contraction. Role of calcium.

Nervous system: Outlines of organization of nervous system; blood-brain barrier; Nerve growth factor. Origin of membrane potential. Mechanisms of propagation of nerve impulse of synaptic transmission. Myelin sheath – composition and function; biogenic amines amino acids and Peptides; Neurotransmitters. Transmission at cholinergic adrenergic nerve endings. Electrophysiological methods: PET, MRI, CAT, Sense organs and thermoregulators.

Unit III

Body weight and the body composition. Determination of body fat and body water. Body composition during growth and energy requirements. Measurement of energy expenditure, direct and indirect calorimetry, Respiratory quotient and BMR. Protein nutrition. Essential and non- essential amino acids. Nitrogen balance, methods of calculation of biological value of proteins protein calorie deficiency. Kwashiorkor and Marasmus. Fats as component of diet, measurement of energy value of fats. Essential fatty acids and phospholipids in nutrition.

Unit IV

Vitamins and Minerals: Sources of the vitamins, Requirement of fat-soluble and water-soluble vitamins and their deficiency symptoms. Macro and trace elements in nutrition. Deficiency symptoms and recommended dietary allowances. Special aspects of Nutrition for the infants, children, pregnant and lactating woman and in old age, Importance of Nutrition under stress conditions.

Community Nutrition and Health: Assessment of Nutritional status of community. Anthropometric measurements, clinical examination, Biophysical and Biochemical techniques.

Recommended Books

1. Harper'sBiochemistry.
2. Trace elements by Underwood.
3. Nutrition byM.S.Swaminathan.
4. The book of Human Nutrition (1996) MS. Bamji, N.PrahladRao and V.Reddy.
5. Text Book OF Medical physiology by A.C.Guyton (2001).

Course Outcomes: After the completion of this course, the student will be able to

1. Gain the knowledge about circulatory and excretory systems.
2. Know the importance of muscular and nervous system.
3. Health benefits and malnutrition of proteins and fats.
4. Know the importance of nutrition in maintenance of health and diseases.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_3	3	1	2	2	1	3	3	1	2	3	3	3
CO_4	3	1	2	2	1	3	3	1	2	3	3	3

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
Core 3	Practical's related to Biochemical preparations and Analysis	06	04
End Semester Examination Marks: 100			

Course Objectives:

1. Exposure to basic reactions of biomolecules.
2. To analyse the presence of biomolecules like carbohydrates, proteins, lipids, etc. in known and unknown samples qualitatively.
3. To estimate the proteins, present in biological samples.
4. Isolation studies of biological samples.

Course Content:

PRACTICALS

BIOCHEMICAL PREPARATIONS AND ANALYSIS-PRACTICALS

1. General reactions of carbohydrates. Specific reactions of different sugars: arabinose, xylose, fructose, galactose, sucrose, maltose and lactose.
2. General reactions of proteins and amino acids. Precipitation reactions of albumins and globulins.
3. General reactions of lipids and cholesterol.
4. Isolation and estimation of cholesterol frombrain.
5. Isolation and estimation of glycogen/starch.
6. Preparation of Casein from milk.
7. Crystallization of albumin.
8. Estimation of proteins in biological samples:
    a. Biuret method.
    b. Folin-Lowry method.

c. UV method.
d. Bradford's dye binding method.

9. Titration curve of amino acid and calculation of PK and PI value.
10. Estimation of amino acids by formal titration.
11. Estimation of amino acid by Ninhydrin method.
12. Estimation of tyrosine by Million's –reaction.
13. Identification of N-terminal group of proteins by Sanger's method.
14. Estimation of fructose in Fruit-juice.

Recommended Books

1. Practical Biochemistry by T Plummer
2. Practical Biochemistry by J Jayaraman
3. Klemir and others: practical biological chemistry.
4. A manual of laboratory techniques by NIN, Hyderabad.

Course Outcomes: After the completion of this course, the student will be able to

1. Learn safety and precautionary measures for working in a laboratory.
2. Develop skill and proficiency in preparation of laboratory reagentsand Use of handling of glass wares, minor equipment for conducting experiments
3. Acquire practical training for qualitative and quantitative analysis of biological materials/molecules and their estimation using multiple methods.
4. Gain the knowledge about isolation studies of biological samples.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
Core 4	Practical related to Analytical Methods	06	04
End Semester Exam Marks: 100			

Course Objectives:

1. To understand the concepts of preparation of buffers.
2. The students will obtain hands-on training in basic separation techniques in biochemistry like electrophoresis, chromatography, etc.
3. To Develop competence in handing various centrifugation techniques and apply them in isolating and characterizing different biological molecules.
4. Understanding the applications of centrifugation and chromatography in biological investigations in order to create scientific interest.
5. Gain expertise in the isolation of various biomolecules and organelles.

Course Content:

PRACTICALS

BIOCHEMICAL & BIOPHYSICAL METHODS

1. Effect of solvent system on the Rf value of two solutes usingTLC.
2. Separation of purines and pyrimidines by Paper Chromatography.
3. Separation of amino acids by Paper Chromatography.
4. Separation of sugars byTLC.
5. Isolation & Characterization of Brain Lipids by Solid phase extraction andTLC.
6. Separation of amino acids by Paper Electrophoresis (Demonstration).
7. Separation of amino acids by Ion-exchange Chromatography (Demonstration).
8. Separation of Serum proteins by PaperElectrophoresis.
9. Measurement of pH of a biological fluid using pH meter.
10. Absorption spectra of phenol red, amino acids and nucleicacid.

11. Verification of Beer's law and determination of molar extinction coefficient using p-nitro phenol.
12. Isolation and spectrophotometric characterization of plantpigments.
13. Isolation of Mitochondria from Rat liver by density gradient centrifugation (Demonstration).
14. Viscosity measurement of Bovine serumalbumin.
15. Measurement of inversion of sucrose by Polarimetry.
16. Measurement of refractive index of biologicalsample.
17. Dialysis.

Recommended Books:

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biologicalchemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell.
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry–Ed.AlanW. Gowenlock (Heinemann Medical Books).

Course Outcomes:

1. Learn how to standardize various biomolecules.
2. Separate biomolecules by paper chromatography and thin layer chromatography
3. Demonstrate separation of protein by electrophoresis.
4. Isolation and spectrophotometric characterization of plant pigments.

CourseCode	Semester-I, Course Title	No of Hours Per week	No of Credits
Elective foundation	Human values and professional ethics-I	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course objectives:

1. To study the Ethics and its relation with Religion, Politics, Business, Law, Medicine and Environment.
2. Gives information about Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values.
3. To understand the structure Ahimsa, Satya, Brahmacharya, Asteya and Aparigraha etc.
4. To Explore the Bhagavad Gita.
5. To know about Crime and Theories of punishment.

Course content:

Unit I

Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics- Goals- Ethical Values in various Professions.

Unit II

Nature of Values – Good and Bad, Ends and Means , Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right , ought, duty, obligation, justice, responsibity and freedom , Good behavior and respect for elders, Character and Conduct.

Unit III

Individual and Society: Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non possession) and Aparigraha (Non- stealing). Purusharthas (Cardinal virtues) –

Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).

Unit IV

Bhagavad Gita- (a) Niskama Karma (b) Buddhism- The Four Noble Truths- Arya astanga marga,(c) Jainism- mahavratas and anuvratas. Values Embeded in various Religions, ReligiousTolerance, Gandhian Ethics.

Unit V

Crime and Theories of punishment (a) Reformative , Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study

1. John S Mackenjie: A manual of ethics.
2. The Ethics of Management" by Larue Tone Hosmer, Richard .D. Irwin Inc.
3. Management Ethics-integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
4. Ethics in management" by S.A.Sherlekar, Himalaya Publishing House. Harold H. Titus:Ethics for Today.
5. Maitra,S.K: Hindu Ethics.
6. William Lilly : Introduction to Ethics.
7. Sinha : A Manual of Ethics
8. Manu : Manu Dharma Sastra or the Institute of Manu : Comprising the Indian System of Duties: Religious and Civil (ed.) G.C. Haughton.
9. Susruta Samhita : Tr. Kaviraj Kunjalal ,Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varanasi, Vol 1 OO, 16-20, 21-32 and 74- 77 only.
10. Caraka Samhita : Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office , Varanasi Vol 100, 16-20,21-32 and 74-77 only.

11. Ethics:Theory and Contemporary Issues, Barbara Mackinnon Wadsworth/Thomson Learning ,2001.
12. Analysing Moral Issues, Judith A. Boss, Mayfield Publishing Company ,1999.
13. An Introduction to Applied ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications. Text Book for Intermediate logic, Ethics and Human Values .Telugu Academic Hyderabad.
14. I.C.Sharma Ethical Philosophy of India, Nagin & Co Julundhar.

Course Outcomes: After the completion of this course, the student will be able to

1. Easily understand the Need and Importance of Professional Ethics- Goals- Ethical Values in various Professions.
2. Analyse the basic moral concepts- right , ought, duty, obligation, justice, responsibity and freedom.
3. Know about Purusharthas, Dharma, Artha, Kama, Moksha.
4. Understand the Four Noble Truths- Arya astanga marga, Jainism- mahavratas and anuvratas.
5. Gain the knowledge about views on Manu and Yajnavalkya.

CO_5	1	1	1	1	1	1	2	3	2	1	1	2

Course Code	Semester-I, Course Title	No of Hours Per week	No of Credits
Compulsory Foundation	Cell and Biomolecules– Theory	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. To study the cell organelles in prokaryotic and eukaryotic cells.
2. Gives information about classification, physico-chemical properties of amino acids and structural organization of proteins.
3. To understand the structure, properties and biological importance of carbohydrates and lipids.
4. Explore the composition and structure of nucleic acids.

Course Content:

Unit I

Prokaryotic and Eukaryotic cells: Cell organelles Structure, Composition and functions of nucleus, mitochondria plastids, endoplasmic reticulum, Golgi, lysomes, vacuole, micro bodies, ribosomes, cytoskeleton. Biomembranes, structure and mechanisms of transport.

Cell division, cell cycle and its regulation, cell signaling, stress response, cell communication, cell adhesion, Apoptosis, Senesence, extracellular matrix, integrins.

Unit II

Origin of basic Biomolecules. Amino acids & Proteins: Classification of amino acids, acid-base properties of amino acids, chemical reactions of amino acids, non-protein amino acids, Peptide bond – Structure and conformation. Naturally occurring peptides.

Classification of proteins – purification and isolation of proteins, criteria of purity of proteins, physico-chemical properties, structural organization of proteins, Elucidation of primary structure, secondary structure,Tertiary structure Quaternary structure, Denaturation & renaturation of proteins. Outlines of Proteomics.

Unit III

Carbohydrates: Definition and classification of carbohydrates, nomenclature, Reaction of Mono- saccharides, Acid derivatives of Monosaccharides amino-sugars, Oligo saccharides, structure, properties and importance of Homo & Hetero polysaccharides.

Lipids: Classification, Physical and chemical properties of fatty acids. Characterization of natural fats & oils, structure and biological role of triaceyl glycerol, phospolipids, sphingolipids, Gangliolipids, Prosta-glandins, Thromboxanes, Leukotrienes and steroids. Killer fat (*Staphylococcu*s killer).

Unit IV

Nucleic acids: Purine and pyramidine bases, nucleosides, nucleotides, polynucleotides, Structure of nucleic acids primary secondary & Tertiary structure of DNA. DNA denaturation and renaturation kinetics

Structure of RNAs – Secondary and Tertiary structure; Analysis of stability to nucleic acid structures, Nucleic acid sequencing –Higher orders of DNA & RNA Structure, chromatin structure; Gene analysis – southern blot technique and its variance. Porphyrins; Types, chemistry and structure of porphyrins. Vitamins, structures and chemistry.

Recommended Books:

1. The biochemistry of Nucleic acids; Adams et al., Chapman and Hall, 1986.
2. Proteins: A guide to study by physical & chemical methods, Haschemeyer and Haschemeyer,
3. Proteins: Structure, function and evolution. Dickerson & Geis, 2ndEdn, Benjamin/Cummings.
4. Biochemistry - Zubay C, Addison – Wesley, 1986.
5. Biochemistry, A problem Approach, 2ndEdn. Wood, W.B. Addison Wesley1981.
6. Biochemistry, Lehninger A. H.
7. Textbook of Biochemistry West, E.S., Todd, Mason &Vanbruggen, Macmillian& Co.
8. Principles of Biochemistry White-A, Handler, PandSmith E.L. Mc Grew Hill.
9. Organic chemistry, I.L. Finar, ELBS. (1985).
10. Organic Chemistry by Morrison and Boyd (2000) PrenticeHall.
11. Fundamentals of Biochemistry by Donald Voet (1999).

Course Outcomes: After the completion of this course, the student will be able to

6. Easily understand the difference between prokaryotic and eukaryotic cells, and the concept of cell division.
7. Understand the classification, structure and biochemical reactions of aminoacidsand proteins.
8. Describe the classification, structure and biochemical reactions of carbohydrates and lipids.
9. Understand the concept of structural organization of nucleic acids.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	2	1	3	3	1	2	2	3	3
CO_2	3	3	3	2	1	3	3	1	2	2	3	3
CO_3	3	3	3	2	1	3	3	1	2	2	3	3
CO_4	3	3	3	2	1	3	3	1	2	2	3	3

SEMESTER-II

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
Core-1	Energy Metabolism	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To acquire knowledge related to the intermediary metabolism and the role of TCA cycle in central carbon metabolism.
2. To learn basic concepts of Bioenergetics, the importance of high energy compounds, electron transport chain, synthesis of ATP, mechanisms of oxidative phosphorylation and photophosphorylation.
3. To understand the fundamentals of cellular metabolism of carbohydrates their association with variousmetabolic diseases.
4. To learn biosynthesis and degradation of Lipids, fattyacids and cholesterol, Metabolism of lipoproteins and Ketone bodies.

Course Content:

Unit I

Broad outlines of Intermediary metabolism, methods of investigation, in vivo studies such as analysis of excretion, Respiratory exchange, Removal of organs and perfusion studies, in vitro studies such as tissue slice techniques; Homogenates and purified enzyme systems; isotope tracer studies, use of inhibitors and antimetabolites.

Metabolism of carbohydrates: Glycolysis, Fermentation, Feeder path ways (of fructose, galactose and mannose), TCA cycle, HMP shunt, Regulation of glycolysis, pyruvate dehydrogenase complex, and TCA cycle.

Unit II

Bioenergetics: Thermodynamic principles – Chemical equilibria; free energy, enthalpy (H), entropy (S). Free energy change in biological transformations in living systems; High energy compounds. Energy, change, oxidation-reduction reactions. Organization of electron carriers and enzymes in mitochondria. Classes of electron-transferring enzymes, inhibiters of electron

transport.

Oxidative phosphorylation. Uncouplers and inhibitors of oxidative phosphorylation. Mechanism of oxidative phosphorylation. Miotrochondrial transport system. Microsomal electron transport; Photorespiration, cyclic and non-cyclic reactions; photochemical events associated with pigment system – II and I. Utilization of oxygen by oxygenases, Superoxide dismutase and catalase.

Unit III

Uronic acid pathway, metabolism of amino sugars, metabolism of glycogen, starch, sucrose, lactose, glycoproteins. Gluconeogenesis, glyoxylate cycle. Regulation of glycogen metabolism and gluconeogenesis.

Futile cycles in carbohydrate metabolism. Disorders of carbohydrate metabolism – Glycogen, lactose, Fructose.

Unit IV

Biosynthesis and degradation of fatty acids (Saturated and unsaturated) regulation, metabolism of TAG, Glycerol and sphingolipids, cholesterol, prostaglandins.

Biosynthesis and degradation of cholesterol and its regulation. Metabolism of lipoproteins and Ketone bodies.

Recommended Books:

1. Principles of Biochemistry, White. A, Handler, P and Smith.
2. Biochemistry, Lehninger A. L.
3. Biochemistry, David E. Metzler.
4. Biochemistry, LubertStryer.
5. Review of physiological chemistry, Harold A.Harper.
6. Text of Biochemistry, West andTodd.
7. Outlines of Biochemistry, Conn and Stummf.
8. Metabolic pathways –Greenberg.
9. Mitochondria, Munn.
10. Biochemistry, 2nd Edition, G. Zubay.

Course Outcomes: After the completion of this course, the student will be able to

1. Explain the broad outlines of intermediary metabolism and importance of carbohydrate metabolism in life.
2. Describe the importance of Electron transport and ATP production mechanism.
3. Gain in knowledge in Carbohydrate metabolism and their associated disorders.
4. Describe the details of lipid metabolism.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	2	3	2	1	3	2	2	3
CO_2	3	3	3	3	2	3	2	1	2	2	2	3
CO_3	3	3	3	3	2	3	2	1	3	2	2	3
CO_4	3	3	3	3	2	3	2	1	2	2	2	3

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
Core -2	Nitrogen Metabolism	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To study the metabolism of proteins and aminoacids.
2. To learn about aminoacids as biosynthetic precursors.
3. To learn about biosynthesis and degradation of nucleic acids.
4. To understand the effect of toxic chemicals in the environment and concept of carcinogenicity.

Course Content:

Unit I

Metabolism of proteins and amino acids: Introduction, General metabolic reactions of amino acids. Degradation and biosynthesis of individual amino acids in animal, plant, and microbial systems.End products of amino acid metabolism – Krebs Haslett urea cycle.

Biosynthesis and Regulation of amino acids and disorders related to amino acid metabolism. Nitrogen cycle, Non-biological and biological nitrogen fixation, Nitrogenase system, Nif genes.

Unit II

Amino acids as biosynthetic precursors-Formation of creatine, seratonine, histamine, polyamines, melatonine, GABA, melanine, catecholamines. Non-ribosomal peptide synthesis-glutathione, cyclic antibiotics (gramicidin).

Unit III

Metabolism of Nucleic Acids: Biosynthesis and degradation of Purines and regulation of path ways. Biosynthesis and degradation of Pyrimidines and regulation of pathways. Interconversion of nucleotides, Metabolic disorders related to nucleic acid metabolism.

Unit IV

Toxic chemicals in the environment, Mode of entry of toxic substance, Insecticides, MIC

effects, Pesticides, biotransformation of xenobiotics, detoxification. Carcinogens in air, chemical carcinogenicity, mechanism of carcinogenicity, Environmental carcinogenicity testing.

Recommended Books:

1. Principles of Biochemistry, White. A, Handler, P andSmith.
2. Biochemistry, Lehninger A. L.
3. Biochemistry, David E.Metzler.
4. Biochemistry, LubertStryer.
5. Review of physiological chemistry, Harold A.Harper.
6. Outlines of Biochemistry, Conn and Stumpf.
7. Metabolic pathways –Greenberg.
8. Mitochondria, Munn.
9. Biochemistry, 2nd Edition, G. Zubay.
10. Environmental hazards & human health R.B. Philip
11. Toxicology – Principles & applications –Niesink& Jon devries.

Course Outcomes: After the completion of this course, the student will be able to

1. Understand the anabolic and catabolic reactions of proteins and aminoacids.
2. Gain knowledge in the importance of aminoacids as biosynthetic precursors.
3. Know the biosynthesis and degradation of purine and pyramidined and their associated disorders.
4. How toxic chemicals metabolised by the body through detoxification and the mechanism of carcinogenicity.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	2	2	3	2	1	2	2	2	3
CO_2	3	3	3	2	2	3	2	1	2	2	2	3

CO_4	3	3	3	2	2	3	2	1	2	2	2	3

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
Core-3	Practical related to Enzymology	06	04
End Semester Exam Marks: 100			

Course Objectives:

1. The lab is designed to train the students in basic techniques of Analytical Biochemistry likeestimation of enzymes from various sources, Enzyme purification and enzyme kinetics.
2. It also deals with the assay of clinically important enzymes and determinationof factor affecting enzyme activity.
3. To demonstrate the Immobilization of enzymes.

Course Content:

ENZYMOLOGY PRACTICAL

1. Amylase from Saliva.
2. Urease from Horse-gram.
3. Acid phosphatase from Potato.
4. Alkaline phosphatase from Serum.
5. Cholinesterase from Blood.
6. SDH from Liver.
7. Invertase from yeast.
8. Trypsin
9. LDH from Serum (Isoenzymes).
10. Enzyme purification and enzyme kinetics (Determination of Vmax, Km and Ki).
11. Effect of pH, Temperature, Activators, Inhibitors.
12. Immobilization of enzymes (demonstration only).

Recommended Books:

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann, London)

Course Outcomes: After the completion of this course, the student will be able to

1. Learnabout estimation of various enzymes in biological sample.
2. Learn to perform assay of clinically importantenzyme: serum acid and alkaline phosphatase, serum LDH.
3. Learn aboutthe factors affecting enzymeactivity and determination of Km.
4. Demonstrate the Immobilization of enzymes.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	2	1	3	2	3	3
CO_2	3	3	3	3	3	3	2	1	3	2	3	3
CO_3	3	3	3	3	3	3	2	1	3	2	3	3
CO_4	3	3	3	3	3	3	2	1	3	2	3	3

Course Code	Semester-II, Course Title	No of Hours Per week	No of Credits
Core-4	Molecular biology Practicals	06	04
End Semester Examination Marks: 100			

Course Objectives:

The lab is designed to train the students in basic methods of molecularbiology.

1. To isolate DNA and RNA from bacterial, plant and animal cells.
2. To estimate the DNA and RNA by suitable methods.
3. Transfection studies.
4. Purity determination of DNA by UV absorption method.
5. Detection and differentiation of open circular, linear and closed covalent circular plasmid DNA by submarine gel electrophoresis.
6. Determination of melting temperature (Tm).

Course Contents:

MOLECULAR BIOLOGY PRACTICALS

7. Isolation of DNA from bacterial, plant and animal cells.
8. Estimation of DNA by Diphenylamine method.
9. Isolation RNA from yeast cells.
10. Estimation of RNA BY Orcinol method.
11. Estimation of DNA and purity determination by UV absorption method.
12. Determination of melting temperature (Tm).
13. Isolation of plasmid DNA from E. coli.
14. Detection and differentiation of open circular, linear and closed covalent circular plasmid DNA by submarine gel electrophoresis.
15. Transformation of E. coli with ampicillin resistant plasmid.
16. Trasfection of M13 DNA into E. coliJM103.
17. Isolation of phageM13.

18. Isolation of single and double standard M13DNA.
19. Conjugation: Use of broad host range plasmid RP in demonstrating conjugation transfer of plasmid bacteria.
20. Catabolite repression: Evidence of B-Galactosidase induction in presence of lactose in E .coli lac strains.

Recommended Books*:*

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T. Plummer
3. Practical Biochemistry by J. Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann Medical Books, London)

Course Outcomes: The student will be able to

1. Isolate nucleic acids from various sources.
2. Estimate the nucleic acids quantitatively.
3. Determine the melting temperature.
4. Determine the purity of DNA by UV method.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	1	3	3	3	3
CO_3	3	3	3	3	3	3	3	1	3	3	3	3
CO_4	3	3	3	3	3	3	3	1	3	3	3	3

CourseCode	Semester-II, Course Title	No of Hours Per week	No of Credits
Elective foundation	Human values and professional ethics-II	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To study about Concept of Human Values like self introspection, self esteem, Family Values etc.
2. Gives information about Medical ethics and moral responsibility of medical practitioners.
3. To understand the Business ethics - Immoral and illegal practices and their solutions.
4. Explore the Environment ethics and Environmental health.
5. To know Ethics of media- Impact of Newspaper, Television, Movies and Internet.

Course Contents:

Unit I

Value Educattion- Defination- relevance to present day- Concept of Human Values- self introspection- Self esteem- Family Values – Components, Structure and responsibilities of family- Neutralization of anger- Adjustability- Treats of famiy life – Status Of women in family and society- Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit II

Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and Health care professionals. Euthanasia, Ethical obligation to animals, Ethics issues in relation to health care professionals and patients. Social justice in health care, Human cloning, Problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit III

Business ethics- Ethical standards of business- Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit IV

Environment ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justie and Environmental health.

Unit V

Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/ pregnancy. Ethics of media- Impact of Newspaper, Television, Movies and Internet.

Recommended Books:

1. John S Mackenjie: A manual of ethics.
2. The Ethics of Management" by Larue Tone Hosmer, Richard .D. Irwin Inc.
3. Management Ethics-integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books: NewDelhi.
4. Ethics in management" by S.A.Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today.
6. Maitra, S.K: Hindu Ethics.
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu : Comprising the Indian System of Duties:Religious and Civil (ed.) G.C. Haughton.
10. Susruta Samhita: Tr. Kaviraj Kunjalal ,Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II andIII, Varanasi, Vol 1 OO, 16-20, 21-32 and 74- 77 only.
11. Caraka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit SeriesOffice , Varanasi Vol 100, 16-20,21-32 and 74-77 only.

12. Ethics: Theory and Contemporary Issues., Barbara Mackinnon Wadsworth/ Thomson Learning ,2001.
13. Analysing Moral Issues, Judith A. Boss, Mayfield Publishing Company ,1999.
14. An Introduction to Applied ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Text Book for Intermediate logic, Ethics and Human Values , board of intermediate Education &Telugu Academic Hyderabad.

Course Outcomes: After the completion of this course, the student will be able to

1. Easily understand the Components, Structure and responsibilities of family and status of women in family and society.
2. To get an idea on Ethical issues in relation to health care professionals and patients and genetic engineering, Social justice in health care, Human cloning.
3. To know about Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.
4. Understand the Ethical theory, Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population.
5. Gain the knowledge about Organ trade, human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/ pregnancy.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_5	2	2	2	1	1	2	2	3	2	2	2	2

CourseCode	Semester-II, Course Title	No of Hours Per week	No of Credits
Compulsory foundation	ENZYMOLOGY	06	04
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To study the basic concept of enzymes and their kinetics.
2. Knowledge about different types of enzyme inhibition and Chemical nature of enzyme catalysis.
3. To describe the importance of coenzymes in living organism.
4. To study the allosteric regulation of enzymes.

Course Content:

Unit I

Nomenclature and classification of enzymes according to I.U.B. Convention, specificity and active site. Fundamentals of enzyme assay – enzyme units, coupled kinetic assay. Enzyme localization, Isolation, purification and criteria of purity. Profile of enzyme purification by different separation techniques.

Elements of kinetics – Reaction rates transition state theories free energy change. Methods used in the investigation of kinetics of enzyme-catalyzed reactions – Initial velocity studies and rapid reaction techniques (Continuous flow and Stopped flow). Enzyme kinetics of single substrate reactions, study state assumption, Michales-Menten (Briggs-Haldane), Lineweavar Burk, Eadie Hofstee, and Hanes plots. Pre- steady state kinetics. Effect of pH and temperature.

Unit II

Enzyme inhibition: Types of reversible inhibitors – competitive, non-competitive, un-competitive mixed inhibition and partial inhibition. Substrate inhibition, Feedback inhibition and allostearic inhibition.

Irreversible inhibition. Bisubstrate reactions, Sequential mechanism compulsory order and random order mechanism, non-sequential mechanism, Ping-pong mechanism. Chemical nature of enzyme catalysis: General acid – base catalysis, electrostatic catalysis, covalent

catalysis, intermolecular-catalysis, metal ion catalysis, and proximity and orientation.

Unit III

Mechanism of reactions catalyzed by the following enzymes – Chymotrypsin, Trypsin, Carboxypeptidase, Ribonuclease and Lysozyme.

Co-enzymes – the mechanistic role of the following co-enzymes in enzyme catalyzed reactions – Nicotinamide nucleotides, Flavin nucleotides, Co-enzymes A, Lipoic acid, Thiamine pyrophosphate, Biotin, Tetrahydrofolate and Co-enzyme B12. Modern concepts of evaluation of catalysis-catalytic RNA (Ribozyme), abzymes (catalytic antibodies), Synzymes (Synthetic enzymes), Site-directed mutagenesis.

Unit IV

Monomeric enzymes – the Serine proteases, Zymogen activation, Oligomeric enzymes – Isoenzymes (LDH) and multienzyme complexes (pyruvate dehydrogenase complex).Covalent modification (Glycogen phosphorylase, Glutamine synthase, Chymotrypsin).

Allosteary of enzyme action; Binding of ligands to proteins Co-operativity, the Hill Plot for Myoglobin and Hemoglobin, Sigmoidal kinetics: The MWC and KNF models. Significance of sigmoidal behavior. Study of ATCase a typical allostearic enzyme.

Recommended Books:

1. Enzyme structure and mechanism. Alan Fersht, Freeman & Co.1997
2. Principles of enzymology for food sciences: Whitaker Marc Dekker1972.
3. Methods in enzymology Ed. Colowick and Kaplan, Academic Pr (Continuing series)
4. Text book of Biochemistry with clinical correlations (4th edition)-Thomas M. Devlin.
5. Biological chemistry; H.R. Mehler& E.H CordesHarper&Rev.
6. Enzyme kinetics Siegel interscience – Wiley1976.
7. Biochemistry chemical reactions of living cells (2001) David E. Matzler. Vol. I.

Course Outcomes: After the completion of this course, the student will be able to

1. Distinguish the fundamentals of enzyme properties, nomenclatures, characteristics and mechanisms.
2. Describe the concepts of enzyme inhibition and mechanism of enzyme catalysis.
3. Students will acquaint with mechanism of enzyme action and various coenzymes involved in the biochemical reactions taking place in living systems.
4. Describe the concepts of co-operative behavior and allosteric regulation.

SEMESTER-III

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Core-1	Microbial Biochemistry andGenetics	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. The objective of the course is learning and understanding the fundamentals of Microbiology like important characteristics and biology of bacteria, fungi, mycoplasma, viruses etc. and to learn basic knowledge about control methods of microorganisms and industrial application of microbes for water and sewage treatment.
2. Designed to learn nutritional requirements in microorganisms and virus classification, morphology and Methods of culturing of viruses, Isolation, purification and characterization.
3. The objectives of the course are to learn and understand the fundamentals of genetics like DNA as genetic material, chromosome and gene and understand the gene arrangement in prokaryotes and eukaryotes.
4. To learn and understand the concept of bacterial genetics and detailed information about Mutation

Course Content:

Unit I

Microorganisms and their place in the living World; Historical developments of microbiology (Spontaneous generation, Germ theory of disease and Koch's postulates). Nomenclature and broad classification of bacteria as per Bergey's manual of systematic bacteriology; General characteristics of Actinomycetes, Rickettsiae, Mycoplasms, Spirochetes. Difference between prokaryotic and eukaryotic cells. Ultra structure of bacterium and endospore. Nucleic acid and 16s RNA based classification.

Nutritional requirements in microorganisms: Modes of nutrition – phototrophy, chemotrophy,

methylotrophy, organotrophy, mixotrophy, saprophytic, symbiotic and parastitic modes of nutrition. Isolation of microorganisms – Direct and indirect Methods of maintenance of culture. Growth and kinetics of bacterial cells; Normal and biphasic growth curve, batch and continuous cultures, chemostats. Preservation of cultures (glycerol stocks, freeze drying), Culture collection centers in India.

Unit II

Control of microorganisms: Fundamentals of control, control by physical and chemical agents. Antibiotics and other chemotherapeutic agents. Microbiology of Food, Water, Sewage and Biogas. Water and Sewage treatment. Food and water-borne infections, Bacteriological and Viral standards of water. Estimation of BOD and COD and their importance. Outlines of the Ames Test.

Introduction to Virology: Classification, Morphology, size, ultra structure and life cycle of some representative viruses (ØX 174, T4, SV40, λ-Phase, M13 and HIV). Methods of culturing of viruses, Isolation, purification and characterization. Biology of subviral agents – Viroids, Prions, Satellite viruses.

Unit III

Genetic material – Direct and Indirect evidences of DNA as genetic material, experimental proof. Evidences of RNA as genetic material – eg. Virus.

Chromosome - Chromosome and genes, chromosomal replication, genetic mapping of chromosomes, structure of chromatin - nucleosomes and higher orders of organization, chromosome banding, transposition in human chromosome and chromosomal abnormalities.

Gene – arrangements in prokaryotes and eukaryotes. Gene structure in eukaryotic organisms, introns, exons, pseudogenes, and gene clusters, spacers, repetitive sequences. Single and multiple copy genes in eukaryotes, eg – Histones, Alu, copia, satellite. Mapping of human genes – techniques used, assignment of important genes. Gene regulatory mechanisms and cell memory. Mechanism of recombination, extra nuclear inheritance. Non-coding explosion, cell fate determination and reprogramming. Genetic technique for Archea. New gene evolution, Tiniest genome of proteobacteria and bacteriodates.

Unit IV

Bacterial genetics – Bacterial chromosomes, plasmids – fertility, resistance, colicinogenic and other, PBR 322 and other synthetic plasmids - isolation and uses. Transposable genetic

elements, transformation, transduction, and conjugation in bacteria. Linkage map of bacterial chromosome. Recombination in bacteria.

Structure of Bacteriophages and their use in the study of molecular genetics – lytic cycle-replication of T-phages, Lysogeny and its regulation. Transduction – specialized, generalized and abortive. Transfection and cosmids. Fine structure analysis of T- phages, Benzers work and concept of cistrons. Bacterial defence (CRISPR- Gene turning on)

Mutation – Types of mutations, mutagens, mechanism of mutation, Mutagenesis, induction and isolation of mutants. Haploid genetic tools. Radiation effects on human heredity. Phylogenetic inheritance. Heretability and its measurements and mapping .gene duplication and self incompatibility.

Recommended Books:

1. Microbiology by Pelczar, Chan and Krieg 5th edn. 1995 Mc Grew- Hill.
2. General Microbiology: Boyd, R.F., Times Mirror/ Mosby College, 1984.
3. A Textbook of Microbiology, R.C.Dubey and D.K.Maheswari, S.Chand Co (2001).
4. Pharmaceutical Microbiology, By Hugo and Russell, Blackwell Scientific (1987).
5. An Introduction to Viruses by S.B.Biswas, Vikas Publishing house.
6. Microbiology 4th edition, Prescott, Harley, Klein (Mc grew Hill)
7. Fundamentals of Microbiology – M. Frebisher.
8. Text book of Microbiology – William Burrows.
9. Biology of Microorganisms – Sandes T. Lyles
10. Microbial Ecology – Atlas (2001).
11. Molecular Genetics by D Friefelder
12. Cell molecular biology, Albert Bruce
13. Gene VII by Lewin
14. Molecular cloning by Maniatis and Co Vol I, II, III
15. Genetics by Gardner

Course Outcomes: After the completion of this course, the student will be able to

1. Understand the basics of microbiology like nomenclature and classification of microorganisms, understand the various biological and

non-biological method to control microorganisms

2. The student will learn about different mode of nutrition in microorganisms and about viruses - Isolation, purification and characterization.
3. Understand the basics of genetics and the gene arrangement in prokaryotes and eukaryotes.
4. Gain knowledge in bacterial genetics includes the different types plasmids, recombination in bacteria, bacteriophages and bacterial defense mechanism(CRISPR) and Describe the various types of mutations and its effect.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	2	3	3	1	2	2	3	3
CO_3	3	3	3	3	2	2	3	1	2	2	3	3
CO_4	3	3	3	3	2	2	3	1	2	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Core-2	Immunology	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. To provide knowledge on essential features of antigens and antibodies and their types and different theories of Antibody formation.
2. To acquire knowledge on types of immunity, phagocytosis, interferons and complement system.
3. To explain the concept of hypersensitivity, auto immunity and transplantation.
4. To provide knowledge on immune deficiencies and several immunological techniques.

Course Contents:

Unit I

Introduction: Scope of Immunology, Historical background of Immunology, Biological aspects of Immunology, Self and non-self-recognition, specificity, memory of immune system.

Antigens: Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete.

Antibodies: Nature, Primary structure of immunoglobulins, light chain, heavy chain, variable region, constant region, Hinge region; Enzymatic fragmentation of Ig. Domain structure of Ig and significance; Classification of Immunoglobulins: Types –IgG (G1, G2, G3 & G4), IgM, IgA, IgD and IgE (Origin, structural functions). Theories of Ab formation-Instructive, selective, clonal selection theories and evidences; Immunological memory.

Antibody diversity: Mini gene theory, Mutation theory, Germ line theory, Somatic recombination, V (D) J recombination, Combinatorial diversity, Junctional diversity.

Unit II

Immunity: Types: Active and passive immunity. Cell mediated immunity, humoral immunity, immune response; primary and secondary response. Phagocytosis, mechanism of phagocytosis. Interferon: Types of Interferons. Null cells: Natural Killer cells. Complement system: Nature, components of compliment.Pathways: Classical and alternative pathways. Compliment fixation tests.

Unit III

Hypersensitivity (HS): Type I: Allergies and anaphylaxis – IgE, Mast cell degranulation, biologically active agents released in reactions, Clinical manifestations.

Type II: Antibody mediated HS reactions; Mechanism, pathogenicity and cases of type II reactions; Haemolytic-disease of new born (HDN).

Type III: Immune complex mediated HS reactions: Mechanism &pathogenicity of type III reactions. Soluble immune complexes and insoluble immune complex mediated reactions. Arthus reaction, Serum sickness.

Type IV: Delayed type (or) cell-mediated HS reactions; Mechanisms and pathogenicity,Tuberculin reaction.

Type V: Stimulatory HS reactions. Mechanism and pathogenicity, Grave's disease.

Blood groups: AB, Rh system, Lewis-Luthern systems, significance, practical application of immuno methodology in blood transfusions, Erythroblastosisfetalis.

Auto immunity: Introduction, Auto recognition, classes of auto immuno diseases. (Hashimoto disease, thyrotoxicosis, Systemic lupus erythematosus, Autoimmune haemolyticanaemia, Rheumatoid arthritis).

Transplantation: Terminology, Auto graft, Isograft, Allograft, Xenograft, Immunological basis of transplantation reactions, GVH reaction, Immuno suppression, General mechanisms of Immune suppression, Immune suppression, drugs (azothioprine, methotrexate, cyclophosphamide, cyclosporin-A, Steroids).

Unit IV

Immune Deficiencies: Introduction, primary and secondary deficiencies. T-cell, B-cell and combined immunedeficiencies, Compliment system deficiency. Acquired immuno deficiency syndrome. SCID.

Major Histocompatibility Complex: MHC in mice and HLA in man-fine structure and functions only.

Immunological techniques: Precipitin curve, Immuno diffusion, one and two dimensional, single radial immuno diffusion, Ouchterlonyimmuno diffusion.

Immuno-electrophoresis: Rocket immuno-electrophoresis; CIE, Graber and William technique.

Agglutination: Direct and Indirect, Widal test, VDRL test.

Radioimmunoassay: ELISA – Principle, Methodology and applications.

Immuno-fluorescence: Direct, indirect and Sandwich, *in situ* localization by techniques such as FISH and GISH.

Recommended Books:

1. Essential immunology- Ivan M. Roitt.
2. Introduction to Immunology – John W.Kinball.
3. Immunology – D.M. Weir.
4. Immunology – Janis Kuby.

Course Outcomes: The student will be able to

1. Gain knowledge on different types of antigens, antibodies and how different types of antibodies are produced.
2. Out line, compare and contrast the key mechanism of innate and adaptive immunity.
3. Gain knowledge on undesirable immunological reactions and their complication in health management.
4. Apply knowledge in disease diagnosis through serological tests.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_3	3	3	3	3	3	3	2	1	2	2	3	3
CO_4	3	3	3	3	3	3	2	1	2	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Core-3	Practical related to Microbiology	06	04
End Semester Examination Marks: 100			

Course Objectives:

1. The lab is designed to train the students in handling of microscope.
2. It also deals with microbial techniques of isolation, purification and maintenance of microbial cultures.
3. To learn Staining techniques for bacteria and yeast.
4. To Prepare wine from Grapes.
5. Production and estimation of alcohols, citric acid, lactic acid etc..

Course Content:

MICROBIOLOGY PRACTICALS

1. Handling of Microscopes: Calibration of Microscopes.
2. Sterilization techniques: Autoclaving (Moistened-heat), Oven sterilization (dry-heat), Filtration,
3. UV irradiation and Chemical.
4. Preparation of media: For Bacteria and Fungi.
5. Isolation and cultivation of pure cultures: Serial dilution, Pour plate method, Spread plate method and streak plate method.
6. Methods for the estimation of Growth (Growth rate and generation time in bacteria).
7. Staining techniques for bacteria and yeast: Gram Staining and Spore staining for bacteria; Methylene blue staining for Yeast.Antibiotic sensitivity test.
8. Starch hydrolysis assay for the identification amylase-producing

microorganisms.

9. Gelatin hydrolysis assay for the identification protease-producing microorganisms.
10. Preparation of wine from Grapes.
11. Production of Alcohol from molasses and its estimation by specific gravity method.
12. Production of Citric acid and its estimation by Marrier and Boulet method.
13. Production of Lactic acid and its estimation by Barker and Summerson method.
14. Induction of mutation in bacteria using physical and chemical mutagens.
15. Water analysis for bacteria and determination of BOD and COD of water.
16. Observation of Rizobium from root nodules of ground nut plant.
17. Isolation of phages from sewage and quantification by plaque assay.

Recommended Books

1. Hawk's Physiological chemistry
2. Practical Biochemistry by T Plummer
3. Practical Biochemistry by J Jayaraman
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann Medical Books)

Course Outcomes: After the completion of this course, the student will be able to

1. Handle the microscope.
2. Learn Methods of sterilization and preparation of various culture media, Purification techniques.

3. Identification of isolated bacteria, and Growth curve of microorganism.
4. Learn Staining techniques for bacteria and yeast.
5. Gain knowledge in the Preparation of wine from Grapes.
6. Production and estimation of alcohols, citric acid, lactic acid etc.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	3	1	2	2	3	3
CO_3	3	3	3	3	3	3	3	1	2	2	3	3
CO_4	3	3	3	3	3	3	3	1	2	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Core-4	Practical related to Immunology and haemotology	06	04
End Semester Examination Marks: 100			

Course Objectives:

1. To perform RBC, WBC counts.
2. To estimate Hb, ESR, PCV, Mean Cell Haemoglobin, Osmotic fragility of RBC.
3. To perform different types of Immunodiffusions.
4. To demonstrate different types of Immunoelectrophoresis

Course Content:

HAEMATOLOGY PRACTICALS

1. RBC count.
2. Total WBC count.
3. WBC Differential count.
4. Erythrocyte Sedimentation Rate (ESR).
5. Packed Cell Volume (PCV).
6. Estimation of Haemoglobin (Hb).
7. Mean Cell Haemoglobin and Mean Cell RBC volume.
8. Colour Index and Volume Index of RBC.
9. Osmotic fragility of RBC.
10. Raising of antibodies to soluble antigen in rabbits.
11. Immunodiffusion.
12. Single Radial Immunodiffusion.
13. Rocket immunoelectrophoroesis.
14. Cross over Immunoelectrophoresis.
15. Graber and Williams Immunoelectrophoresis.
16. Detection of HCG by latex agglutination inhibition test.
17. Haemeagglutination tests for identification of human blood groups.
18. Detection by viral fever by slide agglutination tests.

Recommended Books:

1. Hawk's Physiological chemistry.
2. Practical Biochemistry by T Plummer.
3. Practical Biochemistry by J Jayaraman.
4. Klemir and others: practical Biological chemistry.
5. Practical Biochemistry – Koch and Hank Dunn and Drell.
6. Practical Biochemistry-Sawhney (2000)
7. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann, London).

Course Outcomes: The student will be able to

1. Perform RBC, WBC count and differential count.

2. Do all haematological tests that will be done in clinical labs.

3. Have an idea on Rocket immunoelectrophoroesis, Cross over Immunoelectrophoresis etc.

4. Do Heme agglutination tests for identification of different antigens.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_3	3	3	3	3	3	3	3	1	3	2	3	3
CO_4	3	3	3	3	3	3	3	1	3	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Generic elective-a	Molecularbiology	06	04
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. The objective of the course is learning and understanding the fundamentals of DNA replication and its mechanism.
2. Complete information about RNA synthesis in prokaryotes and eukaryotes.
3. Tounderstand the genetic code.
4. Detailed accounts on the biosynthesis and mechanism of protein synthesis.

Course Content:

Unit I

Isolation, fractionation, characterization of nucleic acids, properties of nucleic acids in solution. DNA synthesis and repair - Topology of DNA, conservative, semi conservative and discontinuous synthesis of DNA, DNA primer for DNA synthesis. DNA polymerases I, II, III – their role in DNA synthesis. DNA ligase - mechanism of its action and its role in DNA synthesis. Inhibition of DNA synthesis, fidelity of replication. Alternate lengthening of telomere. Nearest neighbor frequency analysis.

Mechanism of replication of *E. coli* DNA. Role of DNA binding proteins – Histones in Eukaryotes, SSB in prokaryotes. Replication of lambda phage DNA, phage T-7 and single stranded DNA, the rolling circle model of replication of DNA. Mitochondrial replication, transcriptional switch.

Unit II

RNA synthesis and processing: RNA polymerases in prokaryotes and eukaryotes. Molecular composition of prokaryote RNA polymerase. Mechanism of transcription. Role of various compounds on RNA polymerases. Inhibitors of RNA synthesis. Biosynthesis of prokaryotic and Eukaryotic m-RNA, r-RNA, and t-RNA.

Processing of RNA- post transcriptional modifications, capping, adenylation and splicing.

Role of the hn RNA, sn RNA and sn RNP in processing of RNA. Functions and information

content of DNA methylation, Transcriptional transcript RNA, template DNA, recombination and silencing repair in yeast, sRNA and gene regulation.

Unit III

Genetic code: General features of the code, Deciphering of the genetic code – Nirenberg and Khorana's work. Central dogma in the molecular biology and its verification.

Colinerarity of gene and protein. Wobble hypothesis and deviation from wobble hypothesis. Mitochondrial genetic code and evolution of genetic code. RNA editing and evolution.

Unit IV

Biosynthesis and mechanism of protein synthesis: Different stages and components of protein synthesis, m RNA and t RNA. Amino acid activation, protein chain initiation, elongation, and termination. Ribosomes and types, molecular components of ribosomes. Assembly and dissociation of subunits

Inhibitors of prokaryotic translation. Post – translational modification of proteins. Synthesis of secretory and membrane proteins – signal sequence hypothesis. Mechanism of translation control. Proteins local synthesis and disposal.

Recommended Books:

1. Molecular Biology of the gene by Watson.
2. Genetics by G Zubay.
3. Molecular Biology of the Cell by Albert Bruce.
4. Cell molecular Biology by Baltimore.
5. Molecular Biology by D Friefelder.
6. Molecular Genetics by D Friefelder.
7. Genes VII Benjamin Lewin (2000). Oxford Univ. Press. London.
8. Cell and Molecular Biology 2ndEdit. (2002) By P. K. Gupta, Rastogi Publ.

Course Outcomes: After the completion of this course, the student will be able to

1. The students will learn about the Possible modes of replication, and roles of helicase, primase, gyrase, topoisomerase, DNA Polymerase, DNA ligase, and Regulation of replication.

2. Learnabout the mechanism and regulation of transcription in prokaryotes and eukaryotes.
3. Learnabout genetic code and their evolution.
4. Gain knowledge in Different stages and components of protein synthesis.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**
CO_1	3	3	3	3	3	3	2	1	3	2	2	3
CO_2	3	3	3	3	3	3	2	1	3	2	2	3
CO_3	3	3	3	3	3	3	2	1	3	2	2	3
CO_4	3	3	3	3	3	3	2	1	3	2	2	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Generic elective-b	Endocrinology	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To impart knowledge on structure and hormones secreted by hypothalamus, pituitary and pineal glands.
2. To familiarize the concepts of biosynthesis and regulation of secretion of thyroid, parathyroid and calcitonin hormones.
3. To make them understand the chemistry, biosynthesis, secretion, regulation of Hormones of Pancreas and Gastro intestinal hormones.
4. To impart knowledge of Sex hormones, hcg, Miscellaneous hormones and Insect molting hormones.

Course Contents:

Unit I

History and Introduction to Endocrinology, Classification, chemistry, biosynthesis, secretion, regulation, transport and general mechanisms of actions of Hormones, bio-assay, chemical, RIA, ELISA.

Hormones of the pituitary, hypothalamus and pineal body: Growth hormone. Adrenocorticotropic hormone, Thyroid stimulating hormone, leutinizing hormone, Follicular stimulating hormone, prolactin, oxytocin, antidiuretic hormone. Their structure, storage, regulation of secretion, mechanism of action and their actions. Structure secretion and actions of hypothalamic releasing hormones and inhibitory hormones. Pineal hormones: Melatonin and serotonin.

Unit II

Hormones of the Thyroid and parathyroid gland: Iodine metabolism, Biosynthesis of thyroid hormones, regulation of secretion. Possible mechanism of action and general functions.

Metabolism at target cells and excretion.

Calcitonin and parathyroid hormone. Role of calcitonin in calcium and phosphate homeostasis in blood. Disorders of thyroid and parathyroid.

Unit III

Hormones of Pancreas and Gastro intestinal hormones: Chemistry, biosynthesis and secretion of insulin and glucagon. Actions of insulin and glucagon on Carbohydrate, lipid and protein metabolism.Gastrin, secretin, pancreozymin Cholecystokinin etc Adrenal hormones, Structure, biosynthesis metabolism, excretion and actions of adrenaline and noradrenaline.

Corticosteroids: Biosynthesis, secretion, actions, metabolism and excretion of cortisone Cortisol, corticosterone, deoxycorticosterone and aldosterone. Disorders of pancreas and adrenal glands.

Unit IV

Sex hormones (Hormones of Reproduction): Testosterone and inhibin. Estrogens, Progesterone and relaxin Human chorionic gonadotropin; Human placental lactogen, Hormonal regulation of menstrual cycle, contraceptions. Disorders associated with Gonadal hormones.

Miscellaneous hormones: Thymosin – synthesis and actions. Insect molting hormones – (ecdysone) Plant hormones – Auxins, gibberellins, ethylene, and abscissic acid, Pheromones.

Recommended Books:

1. Text book of biochemistry and human biology. Talwar G. P. Prentice Hall India.
2. Human physiology and mechanism of distance–Guyton 3rdedn. Igkushoen /Seunders.
3. Clinical Biochemistry Vols. 1 and 2: Williams et al Heinemann Medical 1978.
4. Lynchs Medical Laboratory Technology Raphael, S.S., 4thedn. Igkushoe /Saunders.
5. Text book of Endocrinology – William.
6. General endocrinology –Turner.

7. Biochemical endocrinology of the vertebrates by E. Fruden and H.Lines.
8. Foundation of modern Biochemical series, prentice Hall Inc.1971.
9. Metabolic and endocrine physiology: By Jay Teppermann.
10. Metabolic pathways –Greenberg.
11. Intermediary metabolism and its regulation –Larner.
12. Principles of Biochemistry, White, A, Handler, P and Smith.
13. Receptors and hormone action 1977.
14. Receptors and recognition series.

Course Outcomes: The student will be able to

1. Know about the mechanism of action of different hormones secreted by hypothalamus, pituitary and pineal glands.
2. Familiar with Iodine, Calcium metabolisms and disorders related to thyroid and parathyroid glands.
3. Know about the mechanism of action of insulin, glucagon and many gastro intestinal hormones.
4. Acquire knowledge on Hormonal regulation of menstrual cycle and disorders associated with Gonadal hormones.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_2	3	3	3	3	3	3	2	1	3	2	3	3
CO_3	3	3	3	3	3	3	2	1	3	2	3	3
CO_4	3	3	3	3	3	3	2	1	3	2	3	3

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Generic elective-c	Cell and Developmental Biology	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To explore the knowledge and awareness of the basic principles and concepts of Developmental Biology.
2. To familiarize with the concepts Gametogenesis, fertilization and early development.
3. To impart knowledge about Morphogenesis and organogenesis in animals and in plants.
4. To understand the concept of biomembranes and membrane transport.

Course Contents:

Unit I

Origin of cells and unicellular evolution. Prokaryotic and Eukaryotic cells: Structure, Composition and functions of nucleus, mitochondria plastids, endoplasmic reticulum, golgi, lysomes, vacuole, micro bodies, ribosomes, cytoskeleton.

Cell division, cell cycle and its regulation, cell signaling, stress response, cell communication, cell adhesion, Apoptosis, Senesence, extracellular matrix, integrins.

Unit II

Basic concepts of development: Potency, commitment, specification, induction, competence, determination and differentiation; morphogenetic gradients; cell fate and cell lineages; stem cells; genomic equivalence and the cytoplasmic determinants; imprinting; mutants and transgenics in analysis of development.

Gametogenesis, fertilization and early development: Production of gametes, cell surface molecules in sperm-egg recognition in animals; embryo sac development and double fertilization in plants; zygote formation, cleavage, blastula formation, embryonic fields, gastrulation and formation of germ layers in animals; embryogenesis, establishment of

symmetry in plants; seed formation and germination.

Unit III

Morphogenesis and organogenesis in animals: Cell aggregation and differentiation *Drosophila*, amphibia and chick; organogenesis limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development-larval formation, metamorphosis; environmental regulation of normal development; sex determination.

Morphogenesis and organogenesis in plants: Organization of shoot and root apical meristem; shoot and root development; leaf development and phyllotaxy; transition to flowering, floral meristems and floral development in *Arabidopsis* and *Antirrhinum.*

Unit IV

Biomembranes: Chemical composition of Membranes, Composition of plasma and organelle membranes of animal and plant cells. Lipids, proteins and Carbohydrates of membranes Distribution of membrane lipids. Assembly of membrane components. Molecular structure of membranes: Miscelle, and liposomes, biological membrane; Symmetry of the membrane; Membrane fluidity; fluid mosaic model of biological membranes. Nanomaterilas and their applications.

Membrane Transport: Donnan membrane equilibrium, Diffusion across cellular membranes Mediated transport; Energetics of transport systems; Passive transport anion exchange proteins; Active transport; Active transport of Na+ K+ (Sodium potassium ATPase) Ca_2+ (Ca_2+-ATPase). Active transport of sugars coupled to Phosphorylation; group translocation (Y-Glutamyl cycle). Proton motive force in bacterial transport processes. Ionophores Gap junctions; Endocytosis, Exocytosis. Nature of receptors.

Recommended Books:

1. Molecular Biology of the cells by Alberts *et al* (1994).
2. Cell and Molecular Biology (2001) by EDP de Robertis and EMF de Robertis.
3. Text Book OF medical physiology by A.C.Guyton (2001).
4. Cell and Molecular Biology 2nd Edit. (2002) By P.K.Gupta, Rastogi Publ.

Course Outcomes: The student will be able to

1. Acquire knowledge on basic concepts of Developmental Biology.
2. Gain the proficient knowledge about zygote formation, blastula formation, gastrulation and many events in early development.
3. Understand Organogenesis, limb development and regeneration in vertebrates,

and post embryonic development in animals and Plant tissue culture, Protoplast fusion and Production of transgenic plants.

4. Acquire knowledge about biomembrane concept and various membrane transport systems.

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Open elective-a	Basics of Immunology	06	04
Sessional Marks : 20		**End Semester Examination Marks : 80**	

Course Objectives:

1. To provide knowledge on essential features of antigens and antibodies and their types.

2. To acquire knowledge on types of immunity, phagocytosis, interferons and complement system.

3. To explain the concept of different types of hypersensitivity, and transplantation.

4. To provide knowledge on immune deficiencies and several immunological techniques.

Course Content:

Unit I

Introduction: Scope of Immunology, Historical background of Immunology, Biological aspects of Immunology, Self and non-self-recognition, specificity, memory of immune system. Antigens: Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete.

Antibodies: Nature, Primary structure of immunoglobulins, light chain, heavy chain, variable region, constant region, Hinge region; Enzymatic fragmentation of Ig. Domain structure of Ig and significance; Classification of Immunoglobulins: Types –IgG (G1, G2, G3 & G4), IgM, IgA, IgD and IgE (Origin, structural functions).

Unit II

Immunity: Types: Active and passive immunity. Cell mediated immunity, humoral immunity, and immune response; primary and secondary response. Phagocytosis, mechanism of phagocytosis. Interferon: Types of Interferons. Null cells: Natural Killer cells. Complement system: Nature, components of compliment. Pathways: Classical and alternative pathways. Compliment fixation tests.

Unit III

Hypersensitivity (HS), Types, clinical diseases. Blood groups: AB, Rh system, Lewis-Luthern systems, significance, practical application of immuno methodology in blood

transfusions, Erythoblastosis faetalis.

Auto immunity: Introduction, Auto recognition, classes of auto immuno diseases. Transplantation: Terminology, Auto graft, Isograft, Allograft, Xenograft, Immunological basis of transplantation reactions, GVH reaction, Immuno suppression, General mechanisms of Immune suppression, Immune suppression, drugs (azothioprine, methotrexate, cyclophosphamide, cycosporin-A, Steroids).

Unit IV

Immune Deficiencies: Introduction, primary and secondary deficiencies. T-cell, B-cell and combined immune deficiencies, Compliment system deficiency. Acquired immuno deficiency syndrome. SCID. Major Histocompatability Complex: MHC in mice and HLA in man-fine structure and functions only.

Immunological techniques. Radioimmunoassay: ELISA – Principle, Methodology and applications. Immuno-fluorescence: Direct, indirect and Sandwich, *in situ* localization by techniques such as FISH and GISH.

Recommened books

1. Essential immunology- Ivan M. Roitt.
2. Introduction to Immunology – John W. Kinball.
3. Immunology – D. M. Weir.
4. Immunology – Janis Kuby

Course Outcomes:

1. Gain knowledge on essential features of different types of antigens, antibodies.

2. Out line, compare and contrast the key mechanism of innate and adaptive immunity.

3. Gain knowledge on undesirable immunological reactions and their complications in health management and transplantation.

4. Apply knowledge in disease diagnosis through serological tests.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-III, Course Title	No of Hours Per week	No of Credits
Open elective-b	Immunotechniques	06	04
Sessional Marks : 20		**End Semester Examination Marks : 80**	

Course Objectives:

1. To acquire knowledge on antigens and antibody preparation.

2. To gain insights in Techniques used in immunology.

3. To use antisera in detection of diseases.

4. To impart knowledge on antibody immunotherapy.

Course Content:

Unit I

Methods used in immunology: Preparation of antigens and antibodies, purification of antibodies, analysis of antibodies and antigens, preparation and uses of various types of vaccines.

Unit II

Techniques used in immunology: Types of immunodiffusion methods, ELISA, RIA, Western blot analysis, Electrophoresis and Hybridization techniques, immunohistochemistry, Immunoflowcytometry, Immunofluoroscence.

Unit III

Applications of antisera in the detection of various diseases. Examples: syphilis and lyme, typhoid, streptococci infections, HIV, various types of Hepatitis

Unit IV

Antibody engineering, Catalytic antibodies, antibody immunotherapy, productions of drugs to allergies.

Recommended Books:

1. Harper’s Biochemistry (Latest edition)

2. Immunology by Carpenter (Latest edition)

3. Kubay's Immunology (Latest edition)

4. Biotechnology by RC Dubay (2001) S Chand and Company, New Delhi.

Course Outcomes: The student will be able to

1. To purify and analyse the antigens and antibodies.

2. To apply different Hybridization techniques and ELISA, RIA.

3. To detect various diseases by application of antiisera.

4. To engineer antibodies and catalytic antibodies and produce drugs to allergies.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

CO_4	3	3	3	3	3	3	2	1	2	2	3	3

SEMESTER-IV

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
Core-1	Genetic Engineering	06	04
Sessional Marks : 20		**End Semester Examination Marks : 80**	

Course Objectives:

1. To impart knowledge about major events in the development of rDNA technology and to acquire skills on techniques of construction of recombinant DNA - Cloning vectors and isolation of gene of interest.
2. To familiarize with the concepts different operons and regulation of gene expressions in prokaryotes and eukaryotes.
3. To acquaint them with the different gene transfer methods and mappings.
4. To explain the applications of genetic engineering in biotechnology.

Course Contents:

Unit I

Cloning and amplification of DNA: Introduction, choice of the organism, use of restriction endonucleases for the production of DNA fragments. Vehicles for cloning - plasmids, phage vectors and cosmids.

RNA isolation, preparation and use of cDNAs. Screening and determination ofnucleotide sequences. Application of recombinant DNA technology. Oncogenes andtheir mode of action.

Unit II

Isolation, sequencing and synthesis of genes: Isolation of genes, sequencing of genes, synthesis of genes, Cloning of specific eukaryotic genes and their expression in bacteria. Operon model: Isolation and chemical nature of repressor. Catabolite repression and role of cAMP and cAMP receptor protein (CRP) in the expression of glucose – sensitive operons. Lac operon, His operon, Trp operon of E. coli. Stringent and relaxed control.

Regulation of gene expression in prokaryotes and eukaryotes: Transcriptional control, enzyme induction and repression. Constitutive synthesis of enzymes. Genes involved in regulation, regulatory gene, promoter gene, operator gene and structural genes. Genome imprint.

Unit III

Gene transfer methods and transgenic organisms: Gene transfer methods for animals and plants, Agro bacterium mediated gene transfer, electroporation and particle gun. Trasgenic animals, and transgenic plants.

Restriction maps and molecular genetic maps: Restriction mapping, restriction fragment length polymorphisms (RFLP) Linkage and recombination between molecular and phenotypic markers, Random amplified polymorphic DNA (RAPDs) using PCR, Chromosome walking. Organic genome engineering and cell molecular memory/ Biosensors

Unit IV

Applications of genetic engineering in biotechnology: Genome imprint, Dynamic genome engineering and cell molecular memory. Plant, animal cell and Tissue culture methods.

Biosensors: Genetically Modified Organism - Market potential, Diet, Leash, Potato, Rice BT.

Recommended Books

1. Genes and Probes, A Practical Approach Series (1995) by Hames and SJ Higgins; Oxford Univ. Press.
2. Gel Electrophoresis of Nucleic Acids, A practical Approach (1990) by D Rickwood and BD Hames.
3. Oxford Univ. Press.

Course Outcomes: The student will be able to

1. Familiar with the tools and techniques for isolation and purification of genes, vector construction.
2. Understand the mechanisms of regulation of gene expression in different operons.

3. Know the techniques for transfer and expression of cloned gene and
4. Apply the knowledge of genetic engineering in biological research.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Course Code	Semester-IV,Course Title	No of Hours Per week	No of Credits
Core-2	Research methodology and bioinformatics	06	04
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design.
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
4. To provide knowledge about the basics of sequence alignment and analysis.

Course Contents:

Unit I

Research Methodology: Meaning and scope, steps of Research, Article and thesis writing. Funding agencies, Project proposal preparation, Preparation of proposal, Experimental design and implementation of project, submission of progress report (year wise), statement of expenditure (SE), Utilization certificate (UC). Research ethics, Plagiarism.

Introduction of computation: Computers components, storage devices, graphic devises, concepts of hardware and software, methods and types of networks. Basics of operating systems and types python, cython, Information and Communication Technology (ICT), online methods of teaching (MOOCS).

Unit II

Bio-Statistics: Data - Data types, collection of data, classification, tabulation and

interpretation. Measures of central tendencies. Mean, median and mode. Measures of variation - Range, quartile deviation, mean deviation and standard deviation. Coefficient of variation.

Probability. Addition and multiplication theories, conditional probability and probability distributors. Binomial, poission and normal distribution. Correlation and linear regression. Regression: Regression coefficients and properties. Small sample tests- t, F and chi square tests. ANOVA - one way and two-way classifications.

Unit III

Bio-Informatics–I: Origin of bioinformatics biological data (genome projects), Disciplines of bioinformatics, transcriptomics, functional genomics, structural genomics, metabolomics, pharmaco- genomics, structure prediction, drug design and Microarrays.

Genome projects - General introduction to genome projects (rice and Mycobacterium tuberculosis genome project). Special emphasis on Human Genome Project (HGP). Science behind HGP, benefits of HGP, ELSI of HGP in use of genetic information, genetic testing standard, quality and commercialization.

Biological database - Introduction of database (DB), need, organization, search of DB. An over view of biological databases - NCBI, EMBL, DDBJ, SWISS-PROT, PDB, KEGG. Decoding of the genome (Nathan blow study), Ribosomal bar codes, Molecular signatures.

Unit IV

Bio-Informatics–II Sequence alignment - Introduction, significance of sequence alignments and use of dot matices. Pair wise and multiple sequence alignment (MSA) using Clustal programs.

Sequence analysis - concepts of sequence analysis and their importance. BLAST and FASTA. Proteomics- Introduction, principle, technique, 2-D data base. Gel analysis, post gel analysis, MALDI- TOF. Significance and applications of proteomics in modern biology.

Core-3	Practical related to Clinical Immunology, Biostatistics and bioinformatics	06	04
End Semester Exam Marks: 100			

Course objectives:

1. To learn how to raise antibodies to soluble antigen in Rabbits.
2. To perform different types of Immunodiffusions.
3. To demonstrate different types of Immunoelectrophoreses.
4. To perform different types of slide agglutination tests.

Course content

1. Use of diagnostickits.
2. Preparation of animal to raiseantibodies.
3. Inoculation of antigen to animal to raiseantibodies
4. Collection of serum from animal and separation of antiserum fromblood.
5. Analysis of titer ofantiserum.
6. Demonstration of antigen-antibody interaction: Ouchterlonymethod
7. Direct agglutination reaction: Determination of human blood group antigens.
8. Demonstration of immunofluorescence technique
9. Purification of IgG from bovineserum

10. Rocketimmunoelectrophoresis.

11. Enzyme linked immunosorbant assay: Antibody captureassay

12. Polyacrylamide gelelectrophoresis

13. Western blot analysis.

14. Determination of antibody content by Lowrymethod.

15. Demonstration ofImmunoelectrophoresis

Course Outcomes: The student will be able to

1. Prepare Rabbit for performance of immunological studies.
2. Perform Single Radial Immunodiffusion.
3. Have an idea on Rocket immunoelectrophoroesis, Cross over Immunoelectrophoresis etc.
4. Do Heme agglutination tests for identification of different antigens.

Semester-IV: Core-4:PROJECT WORK (100 MARKS)

Marks allotted to thesis preparation-80 (40 marks for the progress performed by the student in laboratory will be awarded by project research supervisor and another 40 marks for content of the thesis). Marks allotted to viva presentation-20

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
Generic elective-a	Clinical Immunology	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1.To inculcate the etiquette to be maintained in Immunology lab.

2. To impart knowledge about different types of immunodeficiencies and autoimmune diseases.

3. To equip with the knowledge on transplantation and immunosuppression.

4. To understand the fundamentals of cancer biology , the Principles of carcinogenesis and immunotherapies.

Course Content:

Unit I

Introduction to Clinical Immunology: Introduction and maintenance of clinical Immunology/ biochemistry laboratory; hazards in clinical laboratory; units; 'normal range', reference values. Factors affecting reference values quality control in laboratory – use of external and internal standards; use of WHO standards. Selection of analytical methods. Automation in clinical laboratory. Collection and preservation of specimens. Natural Immunity, a. First Line of Defense innate / nonspecific immunity b. Adaptive / specific immunity, c. Factors associated with immunologic disease,Components of the Immune System. Immune response to various infectious diseases.

Unit II

Primary immune deficiencies, AIDS and other acquired or Secondary immune deficiencies, Auto immune diseases,

Animal model for autoimmune diseases. Proposed mechanism for induction of autoimmunity.

Treatment of autoimmune diseases.

Unit III

Transplantation, Types of grafts, Graft acceptance and rejection, Clinical manifestation of graft rejection.

General immunosuppressive therapy, immune tolerance to allografts, clinical transplantation.

Unit IV

Cancer origin and terminology, malignant transformation of cells, oncogenes and cancer induction, tumors of the immune systems, tumor antigens, tumor evasion of the immune system and cancer immunotherapy.

Psycho immunology: Psychoneuroimmunology, Immuno mediators, Immune system neuro anatomy, Neuroimmuno modulation,

References:

1. Turgons "Immunology and serology" by Mosby Latest Edition 2007
2. Immunology by Irwin Roitt Latest edition
3. Immunology by Kubay.
4. Varley's Practical clinical Biochemistry – Ed. Alan W.Gowenlock (Heinemann medical).
5. Clinical diagnosis and management by Laboratory methods (John Bernard Henry, W.B. Salunders Company, 1984).
6. Hand Book of Human stress and immunity by Glaser R and Glaser K (1994)
7. Psychoimmunology by Schedlowski M (2000).

Course Outcomes: The student will be able to

1. Maintain the Clinical Immunology lab with all required standards.

2. Gain knowledge on different types of immunodeficiencies, their treatment and about autoimmune disorders.

3. Familiar with Clinical manifestation in graft acceptance or rejection and how immunosuppressive therapy is useful.

4. To understand cancers, the mechanisms involved from theory concept, experimental, research, cancer immunotherapy and human health-care perspectives and Psycho immunology.

Course Code	Semester-IV, Course Title	No of Hours Per week	No of Credits
Generic elective-b	Applied And Molecular Immunology	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To acquaint them with the hybridoma technique and its clinical applications
2. To impart knowledge on Immobilization of enzymes.
3. To make them understand the concept of Vaccines and Subunit vaccines.
4. To impart knowledge about intellectual property rights.

Course Content:

Unit I

Immunodiagnostics and preparation of tools: Hybridoma technique, monoclonal antibodies production, myeloma cell lines, fusion of myeloma cells, selection of hybridomas, Screening, purification and application (biochemical research, clinical diagnosis nd treatment) of monoclonal antibodies

Unit II

Immobilization of enzymes, Examples and their industrial and clinical applications. Production of DNA antigens.

Unit III

Vaccines and Subunit vaccines-against Herpes Simplex virus, Foot and Mouth disease, live recombinant vaccines-attenuated (Cholera, Salmonella), Vector vaccines directed against viruses and bacteria. Purified vaccines. DNA vaccines. Antifertility vaccines.

Unit IV

Transgenic organisms and their uses, Patenting, General Agreement on Trade and Tariff {GATT} and Intellectual Property Rights.

Recommended Books:

12. Industrial Microbiology (Prescott & Dunn), Ed by G.Reed, CBS Publishers.

13. Immobilized enzymes (1978) by Ichiro Chibata, Halsted Press Book.

Course Outcomes:

1. Develop skill in production of monoclonal antibodies.

2. How better enzyme immobilization enhances its activity and their industrial and clinical applications.

3. Familiar with different types of vaccines and how they help in prevention of diseases.

4. Acquire the knowledge on IPR and procedures for patent filing.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**

Generic elective-c	Immunopharmacology	06	4
Sessional Marks: 20		End Semester Exam Marks: 80	

Course Objectives:

1. To impart knowledge about drugs, their receptors and kinetics.

2. To develop understanding about vasoactive amines and immunosuppressive drugs.

3. To extend comprehensive knowledge on Eicosanoid related compounds and NSAIDS.

4. To make them understand about drugs used in asthma.

Course Content:

Unit I

Drugs, Drug receptors, pharmacodynamics, pharmacokinetics, drug biotransformation, development and regulation of drug, Cholino and adreno receptor drugs.

Unit II

Histamines, Serotonins, vasoactive peptides and ergot alkaloids, Immunomodulation therapy, infiltration of cells and their diseases, Immunosuppressive drugs and antibodies, glucocorticoid drugs,malignancy therapy, role of TNFa, Immunoglobulin genes.

Unit III

The Eicosanoids, Prostaglandins, thromboxanes, leukotrienes and related compounds, and inhibitors of these molecules formation.

Unit IV

Nitric oxide and its immunological effects, Drugs used in asthma.

Reference Books:

Basic and Clinical pharmacology by BT Katzung, 10th Edn, McGraw Hill Edn, Oxford, 2008

Course Outcomes: The student will be able to

1. Understand about drug receptors, pharmacodynamics, pharmacokinetics, drug biotransformation.

2. Acquire knowledge on Immunomodulation therapy, malignancy therapy.

3. Gain knowledge on Prostaglandins, thromboxanes, leukotrienes and inhibitors of these molecules formation.

4.Familiar with Nitric oxide and its immunological effects.

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design.
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis.
4. To provide knowledge about the basics of sequence alignment and analysis.

Course Contents:

Unit I

Technical writing: Sentence writing, paragraph writing, story writing, review writing, various types of letters writing, critical comments writing. Project proposal preparation: Preparation of informal proposal, modified proposal and formal proposal.

Experimental design and Collection of results, submission of progress report (year wise) and submission of technical report (Format: Title page, Introduction, Aims of the proposal/research, methodology, results, references, acknowledgments, budgetary preparation). Submission of final technical Report. Patenting and intellectual property rights.

Unit II

Introduction of computation: Computers components, storage devices, graphic devises, concepts of hardware and software, methods and types of networks.

Basics of operating systems and types python, cython, Information and communication technology (ICT).

Unit III

Bio-Statistics: Data - Data types, collection of data, classification and tabulation. Measures of central tendencies. Mean, median and mode. Measures of variation - Range, quartile deviation, mean deviation and standard deviation. Coefficient of variation.

Probability. Addition and multiplication theories, conditional probability and probability distributors. Binomial, poission and normal distribution. Correlation and linear regression. Regression: Regression coefficients and properties. Small sample tests- t, F and chi square tests. ANOVA - one way and two way classifications.

Unit IV

Research Aptitude: Meaning and scope of research, steps of Research, Article and thesis writing. Funding agencies.

Project proposal preparation, Preparation of proposal, Experimental design and implementation of project, submission of progress report (year wise), statement of expenditure (SE), Utilization certificate (UC).Research ethics, Plagiarism.

2. To provide knowledge on the types of immunity and the immune organs.

3. To impart knowledge about different types of immunodeficiencies and autoimmune diseases.

4. To equip with the knowledge on transplantation and immunosuppression and tumors of the immune systems.

Course Content:

Unit I

Introduction to Clinical Immunology: Introduction and maintenance of clinical Immunology laboratory; hazards in clinical laboratory; units; 'normal range', reference values. Factors affecting reference values quality control in laboratory – use of external and internal standards; use of WHO standards. Collection and preservation of biological samples.

Unit II

Natural Immunity (a) First Line of Defense innate / nonspecific immunity (b) Adaptive / specific immunity, (c) Factors associated with immunologic disease, Components of the Immune System. Immune response to various infectious diseases

Unit III

Primary immunodeficiencies, AIDS and other acquired or Secondary immunodeficiencies, Auto immune diseases, Animal model for autoimmune diseases. Proposed mechanism for induction of autoimmunity. Rheumatoid Arthritis, Scleroderma, Vitiligo, Systemic Lupus Erythematosus, Graves' disease, Myasthenia gravis, Multiple sclerosis, Diabetes (type 1) Psoriasis, Treatment of autoimmune diseases.

Unit IV

Transplantation, Types of grafts, Graft acceptance and rejection, Clinical manifestation of graft rejection, general immunosuppressive therapy, immune tolerance to allografts, clinical

transplantation. Tumors of the immune systems, tumor antigens, tumor evasion of the immune system and cancer immunotherapy.

Recommended Books:

1. Varley's Practical clinical Biochemistry – Ed. Alan W. Gowenlock (Heinemann Medical Books).

2. Clinical diagnosis and management by Lab methods (John Bernard Henry, W.B. Salunders Company).

3. Clinical Biochemistry – S.Ramakrishnan and Rajiswami.

4. Chemical Biochemistry (Metabolic and clinical aspects) by W.J.Marshall & S.K.Bangert.

5. Text book of clinical Biochemistry by Tietz et al.

6. Turgons "Immunology and serology" by Mosby Latest Edition 2007 Immunology by Irwin Roitt Latest

7. Immunology by Kubay.

8. Hand Book of Human stress and immunity by Glaser R and Glaser K (1994).

Course Outcomes: The student will be able to

1. Maintain the Clinical Immunology lab with all required standards.

2. Out line, compare and contrast the key mechanism of innate and adaptive immunity.

3. Gain knowledge on different types of immunodeficiencies, their treatment and about autoimmune disorders.

4. Familiar with Clinical manifestation in graft acceptance or rejection and how immunosuppressive therapy is useful. And about cancer immunotherapy.

M.Sc. Immunotechnology:: Model Question paper

Semester I/II/III/IVTitle of the Paper

Time 3 Hrs **Max marks 80**

Attempt any five from part A (5 x 4=20 marks) and all from part B (4 x 15=60 marks)

PART A (5 x 4=20 marks)

1. Unit 1
2. Unit 1
3. Unit 2
4. Unit 2
5. Unit 3
6. Unit 3
7. Unit 4
8. Unit 4

PART B (4 x 15=60 marks)

9. Unit 1 a or b
10. Unit 2 a or b
11. Unit 3 a or b
12. Unit 4 a or b

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF BOTANY

Course

M.Sc. BOTANY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per

NEP-2020

About the Department

- The Department of Botany was established with a regular Post Graduate program during the year 1959 Subsequently, with the able leadership of Prof. V. S. Rama Das, the Department was recognized as a strong centre for Plant Physiology both at National and International levels, and became one of the International centres for photosynthesis research under UNEP program. So far, the Department has published nearly 2000 research papers in reputed National and International journals including Nature.
- The Department has received special assistant grants from UGC-COSIST, SAP (DRS) and DST-FIST. The Department is equipped with Fluorescence and phase contrast microscope, Leaf Chamber Analyser-3 Photosynthesis Measuring System, U.V. Visible Spectrophotometers, Gel Documentation System, PCR Machines, High Speed Centrifuge, Deep Freezers etc., The facilities include Herbarium, Library, Museum, two botanical gardens, glasshouse, fern house, two tissue culture labs, computer lab and seminar hall
- The Department has MoU with St. Laurent Institute, The George Washington University, USA (2008-2018); Yunnan Academy of Forestry, Kunming, China (2010-2020); University of of Malaysia, Kelantan (2015-2020), University of Colombo, Sri Lanka (2012-2022). The current focus of research includes Molecular Plant Physiology, Biodiversity conservation and sustainable utilization of plant resources.

Vision

- To improve Internationally recognized status of the Department through excellence in higher education and application-oriented basic research in the field of plant science
- To perceive and disseminate the importance of plant diversity, its conservation and sustainable utilization
- To inspire intellectual pursuit and experimental skills through innovative teaching and research in basic processes of Plant life.

Mission

- Development of advanced infrastructural and technological facilities to strengthen quality education and research,
- To promote and foster collaborative research with scientific institutes and industry for enhanced scientific thinking and generating new ideas.

- To expand academic activity by offering new multidisciplinary courses and updating programs to suit to a wider spectrum of students and researchers.

The CBCS permits students to:

i. Choose electives from a wide range of elective courses offered by the Departments of the University.
ii. Undergo additional courses of interest
iii. Adopt an inter-disciplinary approach in learning
iv. Make the best use of expertise of the available faculty

- Under the CBCS, the requirement for awarding a degree is prescribed in terms of number of credits to be completed by the students. One credit is equivalent to one hour of teaching (lecture or tutorial) or two hours of practical work/field work per week.
- The courses are evaluated following the grading system as followed uniformly in higher educational Institutions in India. The uniform grading system will benefit the students to move across institutions and also enable potential employers in assessing the performance of the candidates. The guidelines of UGC will be followed for computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations.

Programme Specific Outcomes

- Students acquire enhanced knowledge of the fundamental concepts of Botany and diverse groups of plants that differentiate them from each other.
- Explain the general characters, classification, external and internal morphology, reproduction, life cycles, economic importance of different phylogenic plant groups including algal forms to Angiosperms.
- Understand the principles and practices of advanced plant taxonomy and gain expertise in the field of Plant Identification
- Understand in detail the physiological and metabolic processes of plants viz Plant development and growth, absorption and translocation of water and mineral elements, transpiration, photosynthesis, respiration.
- Understand the symptoms of abiotic and biotic stress and molecular basis of tolerance and resistance respectively, and apply the knowledge in plant protection.
- Understand the genetic basis of plant traits, gene expression and interaction, regulation in controlling plant development, reproduction, metabolic processes environmental interaction and Evolution.

- Students will be able to relate the physical and chemical components of the environment to the morphological and anatomical structures and adaptation of plant populations, communities, and ecosystems.
- Understand the Phytogeographical regions of India and Plant diversity, plant resources and their management and sustainable utilization.
- Understand the advanced aspects of plant tissue culture, genetic engineering and genomics and their use in plant improvement
- Acquire practical skills to learn about microscopic plant structures and perform experiments to demonstrate physiological, ecological processes and biochemical analysis of Macromolecules and Metabolites
- Demonstrate proficiency in the experimental techniques and methods of analysis appropriate for their area of specialization viz., Pathology, Physiology, Phyoto-medicine, Mushroom cultivation, Hydrophonics and Horticulture.
- Students are well aware of the latest research and innovations in basic and applied aspects of Plant sciences
- Prepares students for further advanced studies, gain careers in academics, Research and Development, and Entrepreneurship in the plant field.

Department Objectives

- To disseminate the Knowledge of Botany (Plant Sciences) and its relevance for the welfare of modern society, as a renewable source for primary human needs and sustainable development.
- To develop knowledgeable and skilled human resource to serve in Academic and Research Institutes, and Industry.
- To generate quality research output in basic and applied aspects of plant biology
- To educate and sensitize the students to community problems and train the students to participate in extension and outreach activities as a responsible citizen.

Program Objectives

A broad, up-to-date Programme suits to both students and the future generation of research scholars,

- To impart knowledge on diverse plant groups from Microbial flora to Angiosperms, their economic and ecological importance.
- To provide comprehensive and thorough scientific knowledge of core subjects to understand developmental, structural, functional and process diversity of plant systems.
- To enable the student to understand molecular basis of fundamental life processes of plant systems.
- To develop Plant Taxonomists by imparting skills through in house and extensive field trips for .the identification of flora, to fill the current dearth of plant taxonomists.
- To train in fundamental disciplines of future-oriented plant biology research like Plant taxonomy, Pathology, plant Physiology Biochemistry and Environmental Botany.
- Considering the popularity for Natural products, Organic farming and Gardening, to train the students in skill oriented courses like Horticulture, Agriculture Biology, Gardening, Nursery, Mushroom cultivation and Hydroponics for employability and become a skilled Entrepreneur
- To make student aware of the latest research & innovations in Botany through modern education.
- To inspire the student to select research in plant biology as a profession and train them in all aspects of project work.
- To educate students to practice ethics and moral values in academics, research, use of plant resources and as a citizen

Programme Outcome

- PO1 : **Scientific knowledge:** Apply the advanced knowledge on plant diversity, their processes, environmental relationships, role in Global ecosystems, and fundamentals of other Life Sciences and Phytochemistry to solve the scientific problems of plant systems and their applications

- PO2: **Problem analysis:** Identify the problems in plant systems functioning and their applications, formulate objectives, review literature, and analysis of scientific problems in reaching conclusions using principles of Botany and other related sciences viz., Biochemistry and Biophysics.

- PO3: **Investigation:** Apply the knowledge based on research and other related investigative skills, including design of experiments, excution, data collection, analysis and interpretation to provide scientifically valid conclusions
- PO4: **Design & Development:** Plan, design and develop methodologies using plant systems to solve food, health and environmental issues taking the safety and Eco-friendly conditions.
- PO5: **Modern tool usage:** Design and select appropriate advanced tools for investigating the identified problem with an understanding of its working, applications and limitations
- PO6: The **Botanist & Society:** Asses educate and solve the problems related to societal, Health, Agriculture and Environmental safety issues using the professional skills learned
- PO7: **Environmental and sustainability:** Demonstrate the knowledge acquired for understanding the environmental issues and evolve methods for their sustainable management using plant systems
- PO8: **Ethics:** Understand ethical principles, professional ethics and responsibilities, and apply them to solve societal problems, while using plant systems and Genetic modification
- PO9: **Individual & Team work:** Function effectively as an individual / member of team/ team leader in solving different issues and efficient delivery of goods and services.
- PO10: **Communication:** Effectively communicate on various scientific problems/ issues with in society, particularly with Botanists/peer group, related scientists, academicians and administrators, and writing of reports and design of presentations.
- PO11: **Project management & finance:** Demonstrate acquired knowledge and skills and apply them to generate external funding and to manage the projects within the budget limitations
- PO12: **Lifelong learning**: Recognize the importance of continuous learning process throughout this life in view of rapid updating of Knowledge in Plant Biology and Technological changes that occur from time-to-time to reveal/manipulate plant processes.

Program Educational Objectives

- The aim of the programme is to highlight the role played by the Science of Botany in modern society and its relevance to sustainable development.
- To enable the student to understand basic principles and recent advances in Botany through modern educational tools
- To enable the students successful in NET/SLET/GATE/IFS/IAS/ARS examination and other National and Global level positions through curricular enrichment and updating.
- To train the students in Plant Taxonomy and Biodiversity analysis through field studies and hands on training
- To impart advance training in laboratory techniques and modern tools used in Botany
- To provide in-depth knowledge and skills in applied courses through participative learning for employability and entrepreneurship
- To advance education and research in Plant Biology and explore sustainable solutions for agriculture, Primary health, environment and energy sectors.

CHOICE BASED CREDIT SYSTEM – NEP 2020

(From the batch of students admitted during the academic year 2021-'22)

M.Sc. BOTANY DEGREE COURSE - SYLLABUS

SEMESTER-I

BOT-101: ALGAE, BRYOPHYTES, PTERIDOPHYTES & GYMNOSPERMS

Course Objectives

1. To create awareness on classification and description of lower plants.
2. To create the knowledge about lower plants and their utilization in different methods.
3. Economic importance of lower plants.
4. To provide basic distribution pattern and structural organization of lower plants.

UNIT- I

Phycology: Classification of Algae; Cell ultra structure; general characters; Algae in diverse habitats (Terrestrial, Fresh water, Marine water and In Association); Thallus organization (Range of thallus structure and interactions in evolution; pigmentation, reserve food and reproduction (veg,) of different groups of Cyanphyceae, Chlorophyceae, Xanthophyceae, Bacillariophyceae, Phaeophyceae & Rhodophyceae. Economic importance of Algae (Algal blooms, Algal Biofertilizers, Algae as food, Feed and Medicines; Algae in Industry; Algae as Biodiesel source; Single cell proteins.

UNIT- II

Bryophytes: Origin, Distribution, Morphology, Structure, Reproduction and Evolution of Sporophyte; Life History, Classification. Fossil Bryophytes. General account of Marchantiales, Jungermaniales and Polytrichales; Economic and Ecological importance.

Lichens: Types of Lichens, Anatomy, Biology and Ecological importance.

UNIT- III

Pteridophytes: Origin, Morphology, Anatomy and Reproduction; Classification of Pteridophytes. Evolution of Stele. Heterospory and Origin of Seed habit; Apogamy and Apospory; Ecological and economic importance, chemical factors controlling Gametophyte; Antheridia, Archegonia. Strobilus and Evolution of Sorus.

Fossil Pteridophytes: Brief account on Psilophytopsida, Psilopsida, Lycopsida, Sphanopsida and Pteropsida.

UNIT- IV

Gymnosperms: Introduction, Classification and Distribution of Gymnosperms. Structure and Reproduction in Cycadales, Ginkgoales, Coniferales, Ephedrales, Welwitschiales, and Gnetales. Evolution of Gymnosperms.

Fossil Gymnosperms: Brief account of families Pteridospermales (Lyginopteridaceae, Medulloaceae, Caytoniaceae and Glossopteridaceae) General account of Cycadeodiales and Cordaitales. Economic importance of Gymnosperms.

Course Outcomes

1. Discuss the importance of morphological structure, classification, reproduction and economic importance of Algae. Study and impart knowledge about the general Characteristics, structure, reproduction, life history and economic importance of fungi. Understand the features of Lichens.
2. Know the control measures of plant diseases. Students are able to explain about structure, classification, reproduction, life cycle and economic importance of Bryophytes.
3. Study and impart knowledge about the Structure, reproduction, life cycle, fossil, fossilization and geological time scale.
4. Students able to explain about structure, classification, reproduction, life cycle and economic importance of Gymnosperms.

Suggested Books:

1. Kumar H. D. 1988. Introductory Phycology. Affiliated East-West Press Ltd., New Delhi.
2. Morries, I. 1986. An Introduction to the Algae. Cambridge University Press, U.K
3. Puri, P. 1980. Bryophytes. Atma Ram & Sons, Delhi.
4. Round, F.E.1986. The Biology of Algae, Cambridge University Press, Cambridge.
5. Sporne, K.R.1991. The Morphology of Pteridophytes, B.I. Publishing Pvt. Ltd., Bombay.
6. Stewart, W. N. and Rathwell, G. W. 1993. Paleobotany and the evolution of Plants. Cambridge University Press.

7. Bhatnagar, S.P. and Mitra, A. 1996. Gymnosperms, new Algae International Pvt. Ltd., New Delhi.

PAPER – I (BOT-101) : ALGAE, BRYOPHYTES, PTERIDOPHYTES AND GYMNOSPERMS

CO_4	3	-	2	1	-	1	1	1	-	1	-

BOT-102: TAXONOMY OF ANGIOSPERMS

Course Objectives

1. To create awareness in Classification of Plants and its arrangements.
2. To train the students to naming (create new names) the newly identified plants.
3. Recognize the plants with the scientific names.
4. To develop skills in identifiying the pants for research work to other departments.

UNIT- I

Systems of Angiosperm classification: Historical development of Phenetic versus Phylogenetic systems of classification. Merits and demerits of Bentham and Hooker (Natural system), Engler and Prantle, Bessey, Hutchinson, Cronquist, Thorne, Dahlgren, and APG classification (Phylogenic) systems.

UNIT II

Taxonomic hierarchy, Identification and Speciation: Groups, Categories and Ranks; Species, Genus, Family and other categories; Principles used in assessing relationships; Delimitations of taxa and attribution of Rank. Plant identification and Taxonomic keys; Herbarium methodology, Important Herbaria, Botanical gardens and arboreta in India and World. Floras and Manuals; Monographs and revisions.

UNIT III

Origin and Phylogeny of Angiosperms: Origin and Evolution of Angiosperms; Angiosperms Phylogeny; Age and Place of origin, Biphyletic origin, Theories of origin; Origin of Monocots and Evolutionary lines of Angiosperms.

International code of Nomenclature for Plants: Salient features of Binomial Nomenclature, Brief history of botanical codes; Principles, Rules and Recommendation of ICN Ranks of taxa; generic names; species epithet; Typification, Nyms, Rule of Priority, Effective and Valid publication; Author citation; Retention, choice and Rejection of names. Nomen-nudum and Nomen-novo. Hortus malabaricus; General taxonomic Indices.

UNIT IV

Systematic study: Attribution of different systems of classification; orders: Magnoliales, Centospermae, Tubiflorae, Amentiferae, Helobiales and Glumiflorae.

Salient features, diversity, phylogeny of the following groups (based on APG classification):

Magnoliids (Magnoliales); Monocots (Asparagales); Commelinids (Poales); Fabids (Malphigiales); Malvids (Caryophyllales); Lamiids (Gentianales); Campanulids (Asterales).

Course Outcomes:

1. Classify the plants based on the Morphological variation for experimental work.
2. Every student able to create new name to the innovative plant species as per the rules formulated by ICN.
3. Student can help to other Scientists for identification of plants for their research fields.
4. He can learn the preparation of Herbaria for identification purpose.

Suggested Books:

1. Battacharya, B and Johri, B. M.1998. Flowering Plant taxonomy and Phylogeny. Narosa Publishing House, New Delhi.
2. Cronquist, A. 1981. An integrated system of classification of Flowering Plants. Columbia University Press, New York.
3. Davis, P.H. and Heywood, V.H. 1963. Principles of Angiosperm Taxonomy, Oliver and Boyed.
4. Gifford, E.M. and Foster, A.S. 1998. Morphology and Evolution of Vascular Plants. W.H.freemen & Co., New York.
5. Singh, Gurucharan. 2012. *Plant Systematics*: *Theory and Pactise*. Oxford & IBH. New Delhi.
6. Heywood, V.H. and Moore, D.M. (Eds.).1984. Current Concepts in Plant taxonomy. Acad. Press, London.
7. Hutchinson, J. 1973. Families of Flowering Plants (3rd Ed.) oxoford Univ. Press, New York.
8. Jeffrey, E. 1982. An introduction to plant Taxonomy. Cambridge.
9. Jones, S.B. Jr. and Luchsinger, A.E. 1986. Plant systematics (2nd Ed.). Mc Graw Hill. Book Co., New York.

BOT-103: MICROBIOLOGY

Course Objectives

1. To impart the knowledge on basic principles and techniques of microbiology.
2. To provide understanding on antigen-antibody interactions and scope of vaccines.
3. To give an insight on Fungal/Bacterial and Viral diseases to plants.
4. To describe the structure and isolation of different Viruses.

UNIT-I

Viruses: General account of Viruses: Definition, occurrence, discovery, prokaryotic & eukaryotic viruses, chemistry, symmetry, ultra structure of bacteriophage, plant and animal viruses, purification of viruses, replication-lytic and lysogenic cascades, transmission and economic importance of viruses.

Principles of immunology: Immunity**,** types, antigens, general characteristics, antibody, types, antigen & antibody interactions.

UNIT-II

Bacteria: General characters and classification of Archaea and Eubacteria, Ultra structure, Nutrition ~~and~~ reproduction, and economic importance of Eubacteria. Salient features, biological importance of harmful and useful bacteria; Reproduction and Economic importance of bacteria.

UNIT-III

Classification of Fungi: Recent trends in Classification, Phylogeny of Fungi; General account of Myxomycota; Eumycota: general account of Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina, and Deutoromycotina.

Mycology: General characters of Fungi, Cell structure, Unicellular and Multicellular organization. Cell wall composition, Nutrition (Saprobic, Biotropic and Symbiotic):

Reproduction, (Vegetative, Asexual, and Sexual); Heterothalism: Heterocaryosis and Para sexuality. Economic importance of Fungi (Food-, Industry and Medicine); fungal diseases in plants and humans, Fungi as biocontrol agents. Mycorrihizae and Mushroom cultivation.

UNIT- IV

General principles of plant pathology: infection, disease development, Symptomology and Epidemiology of plant diseases incited by Fungi, Bacteria, Viruses, Viroids and Phytoplasmas. Principles of plant disease control. Physical, chemical and biological control of plant diseases- a general account

Course Outcomes

1. Develop the skill of isolation and identification of Pathogenic and Non-Pathogenic micro-organisms.
2. To prepare different media for cultivation of industrially important microorganisms.
3. Equip with the methods to control Plant Pathogens.
4. Understands the Ag-Ab mechanism

Suggested Books

Elective Foundation

BOT-104: PLANT DEVELOPMENT AND REPRODUCTION

Course Objectives

1. Making the students acquainted with the fundamentals and present understanding of development differentiation and internal structure of root and shoot, and vascular tissue differentiation.
2. Enable the students to know present understanding of leaf development and tissue differentiation, Transition to flowering, Floral Organ differentiation and development.
3. Making the students familiar with basic and present understanding of reproductive processes: Male and female gametophyte development, gametogenesis, pollination and fertilization.
4. Making the students familiar with basic and present understanding of Endosperm, Dicot and Monocot embryo development, fruit growth and Seed Development.

UNIT I

Root and Shoot development: Organization of root apical meristem and root development. Differentiation of root; vascular tissue, root hair and Lateral roots formation. Organization of shoot apical meristem and Tissue differentiation in the shoot; xylem regeneration and Phloem differentiation; Secondary growth of root and shoot; Formation and types of wood.

UNIT II

Leaf and flower development: Leaf development and phyllotaxy; Specialized cells and tissue differentiation and organization in leaf. Transition to flowering, inflorescence and floral meristems. Floral Organ differentiation and development in *Arabidopsis* and *Antirrhinum*

UNIT III

Sexual reproduction: Microsporangium, **Microsporogenesis and Male gametophyte development:** Role of Tapetum,; Pollen storage.

Female Gametophyte and fertilization: Megasporangium, Megasporogenesis, Development and Organization of female gametophyte, ultra structure of the Embryo sac cells.

Fertilization: Pollination mechanisms and Vectors, Pollen germination, Pollen tube growth and Guidance, Pollen- Stigma Interactions, Double Fertilization

UNIT IV

Post-fertilization developments: Sexual Incompatibility, Endosperm development, types and functions, Embryogenesis- Dicot embryo development & types; Monocot embryo; Polyembryony; Apomixis; Parthenocarpy. Fruit growth and Seed Development.

Course Outcome

1. Describe the organization of shoot and root apices and development of shoot and root; Differentiation of vascular tissue and wood formation
2. Describe development and differentiation of leaf, transition to flowering and flower development
3. Describe the formation of male and female gametophytes, pollination, pollen tube germination and Double fertilization.
4. Describe development of endosperm, embryogenesis, seed and fruit development.

PRACTICAL PAPER II: BOT-104 (Plant Development and Reproduction)

Suggested Laboratory Exercises

Plant Development

1. Representative types of roots - Diarch, Triarch, polyarch types — transverse sections with double staining, ex. *Vicia*, *Ficus*, *Tinospora* (aerial root), vanda (velamen root).
2. Types of Stems: for transverse sections with double staining methods — showing Primary and Abnormal Secondary Growth. Ex. *Aristolochia*, *Citrullus*, *Cucurbita*, *Polyanthus*, *Sorghum*, *Strychnos*, *Cocculus*, *Bignonia*, *Amaranthus*, *Achyranthus*, *Piper*, *Peperomia*, *Bouganvilla*, *Boerhaavia*, *Dracaena*.
3. Maceration of wood: For observation of Individual Xylem elements with single staining.
4. Leaf types: Dorsiventral leaf, lsobilateral leaf, Xeromorphic leaves-*Muehlenbeckia*, *Nerium*, *Casuarina*, *Peperomia*, and *Ficus* leaves, *Nymphaea*, *Typha* leaves. *Sorghum* and *Saccharum* leaves for C4 anatomy.
5. Nodal anatomy — types.

Plant Reproduction

1. Study of Microsporogenesis in sections of Anthers.
2. Examination of Modes of Anther Dehiscence and collection of Pollen grains for microscopic examination (Maize, Grasses, *Cannabis sativa*, *Crotalaria*, *Tradescantia*, *Brassica*, *Petunia*, *Solanum melongena* etc.
3. Tests for Pollen Viability using stains and in vitro Germination. Pollen Germination using Hanging drop and Sitting drop cultures, Suspension culture and Surface culture.
4. Estimation of Percentage and Average Pollen tube Growth *in vitro*.
5. Study of ovules in cleared preparations; Study of Monosporic, Bisporic and Tetrasporic types of Embryo Sac development through examination of permanent stained serial sections.
6. Field study of several types of flowers with different pollination mechanisms (Wind Pollination, Thrips pollination, Bee / Butterfly Pollination, Bird Pollination).
7. Study of Nuclear and Cellular endosperm through dissections and staining.
8. Isolation of Zygotic Globular, Heart-shaped, Torpedo stage and mature embryos from suitable seeds.
9. Polyembryony in Citrus, Jamun (*Syzygium cumin*) etc. by Dissections

Suggested Books for laboratory exercises

1. Chopra, V.L. 2001. Plant breeding: Theory and Practice. Oxford IBH Pvt. Ltd. New Delhi.
2. Chopra, V.L. 2001. Plant breeding: Field Crops, Oxford IBH Pvt. Ltd., New Delhi.
3. Shivanna, K.R. and Rangaswamy, N.S. 1992. Pollen Biology: A laboratory Manual. Springer verlag, Berlin Heidelberg.
4. Shivanna, K.R. and Sawhney, V.K. (Eds.) 1997. Pollen Biotechnology for Crop Production and Improvement. Cambridge University Press, Cambridge

PRACTICAL PAPER: BOT-CPI-105-(BOT101 & BOT102) Algae, Bryophytes, Pteridophytes & Gymnosperms & Taxonomy of Angiosperms)

1. Micro preparations, culture identification, section cuttings of the members of Cyanophycaae, Cholorophyceae, Xanthophyceae, Bacillariophyceae, Phaeophyceae and Rhodophyceae. Raising and maintenance of algal cultures.
2. External and internal morphology and identification of the members in Marchantiales, Jungermaniales, Anthocrotales, Sphagnales, Funariales and Polytrichales.
3. External and internal morphology, reproductive organs, anatomy of stem, root and fructifications of Lycopsida, Sphenopsida and Pteropsida.
4. Examination of Fossils.
5. Comparative study of the anatomy of vegetative and reproductive organs of *Cycas, Thuja, Cedrus, Cupressus, Araucaria, Cryptomaria, Taxodium, Podocarpus* and *Gnetum*.
6. Study of important fossil Gymnosperms from prepared sides and specimens.

Suggested Books for Laboratory Experiments

1. Sporne, R. K. 1997v (2nd Ed). The Morphology of Gymnosperms. Hutchinson University Library.
2. Bernard Goffinet & A. Jonathan Shaw. 2008. *Bryophyte Biology*. 2nd ed. Cambridge.
3. Van den Hoek, Christian, D.Mann & H.M.Jahns *et al*. 1995. *Algae, An introduction to phycology*. Cambridge University Press.
4. Sporne K.R. 1965. *Morphology of Gymnosperms*. HUP, London.
5. Sporne K.R. 1976. *Morphology of Pteridophytes*. HUP, London.

BOT--102(Taxonomy of Angiosperms)

1. Preparation of floral diagrams, floral formulae and determination of taxonomic positions of 30 local plants up to family level.
2. Identification of genus and species following dichotomous keys (Flora of Madras Presidency by Gamble and Fischer)
3. Construction of keys for Families, Genera and Species based on morphological characters.
4. Nomenclature Exercises: Synonyms, Tautonyms, Basionyms.
5. Numerical Taxonomic Methods.
6. Botanical Study Tours, Preparation of Herbaria, Field Note Books & Tour Reports.

Suggested Books for Laboratory Experiments

1. Bailey, L.H. 1949. Manual of Cultivated Plants Macmilan, New York.
2. Bentham, G. & Hooker, J.D. Genera Plantarum, London, 3 Volumes.
3. Gamble, J.S. & Fischer. 1957. Flora of presidency of Madras. BSI, Calcutta.
4. Lawrence, G.H.M. 1951, taxonomy of vascular plants, Macmillan, New York.
5. Matew, K.M. 1983. The Flora of Tamilnadu Carnatic. Vol.1 Part 1 & 2. Tiruchirapalli.
6. Pullaiah, T. & Suryaprakash Babu, P. 1998. Flora of Andhra Pradesh. Vol. 1- 4, Scientific Publishers, New Delhi.
7. Willies, J. C. 1973. Dictionary of Flowering Plants and Ferns. 8th Ed. Cambridge Univ. Press, U. K.

PRACTICAL PAPER: BOT-PI-106 (BOT-103: Microbiology & BOT-104 : Plant Development and Reproduction)

1. Symptomology of some Diseased specimens: White rust, Downy mildew, powdery mildew, Rusts, Smuts, Ergot, Ground nut leaf spot, Red rot of Sugarcane, Wilts, Paddy Blast, Citrus canker, Bacterial blight of paddy, Angular leaf spot of Cotton, Tobacco mosaic, little leaf of Brinjal, Sesame Phyllody, Mango malformation, Canker.
2. Section cutting of infected materials of *Albugo, Peranospora, Plasmospora, Scerospora, Taphrina, Phyllochora, Claviceps, Xylaria, Peziza, Puccinia, Uromyces, Ravanelia,Ustilago, Tolyposporium, Macrophoma, Colletotrichum, Fusarium, Rhizoctonia.*
3. Sterilization methods, Preparation of media and stains, Isolation and Maintenance of cultures. Gram staining of Bacteria.

Suggested Books for Laboratory Experiments

1. Susila, S.B. and Shantharam, S. 2000. General Microbiology. Oxford & IBH Publ., New Delhi.
2. Webster, J 1985. Introduction to Fungi. Cambridge Univ. Press.
3. Willey, J. L. Sherwood, C.J. Woolverton. 2016. Prescott's Microbiology. TataMcGraw Hill.
4. Rangaswamy, G. and Madhaven, A. 1999. Diseases of Crop Plants in India (4th Ed.) Prentice hall of India Pvt. Ltd., New Delhi.

SEMESTER – II

BOT-201 : PLANT BIOCHEMISTRY AND METABOLISM

Course Objectives

1. To study the method of respiration in plants
2. To study HMP pathway in plants
3. To study importance of growth regulators
4. To study the fat metabolism in plants

UNIT I

Biochemistry of Carbohydrates and Proteins:

Carbohydrates: Classification, D and L designation, open chain and cyclic structures, epimers and anomers, maturation, reactions of carbohydrates (due to functional groups-hydroxyl, aldehyde and ketone), amino sugars, glycolysis, mono, di, tri and polysaccharides, glycosaminoglycons, glycolproteins.

Amino acids: Classification, structure stereochemistry, chemical reactions of amino acids (due to carbonyl and amino groups), pK value, peptide bond-nature and conformation.

Proteins: General properties, denaturation and renaturation, structural organization of proteins primary, secondary, tertiary and quaternary structures.

UNIT II

Respiration and Lipid Metabolism: Over view of plant respiration, Glycolysis, TCA cycle, Electron transport and ATP synthesis, Pentose Phosphate Pathway. Regulation and significance of Photo respiration. Structure and functions of Lipids, Glyoxylate cycle, Fatty acid biosynthesis; Synthesis of Membrane, Structural and storage lipids; Catabolism of lipids.

Nitrogen and Sulphur metabolism: Biological Nitrogen Fixation, Mechanism of Nitrate uptake and reduction, Ammonia assimilation; Sulphate uptake and assimilation.

UNIT – III

Thermodynamic Concepts: Free energy, Chemical potential, Redox potential.

Translocation of Water and Solutes: Plant cell water relations, Mechanism of water uptake and transport in plants; SPAC concept; Stomatal movements, Phloem transport of organic substances Phloem loading and unloading; Passive and active solute transport; Membrane transport proteins.

Fundamentals of Enzymology: General concepts, Allosteric mechanism, Mode of Enzyme action, Regulator and Active sites, Isozymes.

UNIT IV

Plant growth regulators and elicitors: Synthesis, physiological effects and mechanism of action of Auxins, Gibberellins, cytokinins, Ethylene, Abscissic acid, Brassinosteroids, Polyamines, Jasmonic acid and Salicylic acid.

Couse Outcomes

1. Explain what a Plant Physiologists does.
2. Describe how cell, tissue and whole-plant structures are related to their function.
3. Describe the physiological processes in plants, with an emphasis on water, energy, and mineral relations in higher plants.
4. Understand the fundamental processes of metabolism in plants and describe how a plant obtains and uses energy. Understanding of the functioning of plants as organisms.

Suggested Books:

BOT-202 : PHYTODIVERSITY AND CONSERVATION

Course Objectives

1. To create awareness in the biodiversity on globe.
2. To create interest in identifying the available resources in the world.
3. To inculcate interest to conserve the natural resources on the Earth.
4. To identify the endangered species in Hotspots.

UNIT I

Concept and Importance of Phytodiversity: Status in India, World Centers of Primary Diversity, Types of Biodiversity, Causes for Rarity, loss of Species, *Extinction*, Red data book, Exploration. Introduction of species, Status species-based on IUCN; and Genetic Diversity in crops, Sustainable Agriculture in Biodiversity; Global Warming and its effect on Bio diversity.

Nature of biodiversity-genetic, species and ecosystem diversity. Values of biodiversity-anthropocentric and ecocentric. Magnitude and global distribution of biodiversity. India as a mega diversity center; Agrodiversity-centers of origin; Biodiversity Act.

UNIT II

Remote Sensing applications in phytodiversity conservation Status and Analysis of Species Diversity: Remote sensing-Concept, Principles, Applications and Role in study and Identification of Phyto Diversity and Natural Resources. GIS, Application of Microwaves and Radiation; Phytogeographical regions and forest types of India.

UNIT III

Principles of Phytogeography: Concepts of Phytogeography, generic cycles, theories of Phytogeography, Phyto geographical areas in India and Plant Diversity. Continental drift, plate tectonics of World and India, Endemism, Hotspots, Species rarity and Extinction.

UNIT – IV

Strategies for Conservation of Diversity: *In situ* Conservation – Sanctuaries, National Parks, Biosphere Reserves, MPCA, MPDA, Mangroves, Coral Reefs, Sacred Groves, *Ex-situ* Conservation. Botanical Gardens. Arborata and Palmata; Herbaria, Gene Banks, Seed Banks, Traditional Role of National and International Organizations – WWF, IPGN, IUCN, NBPGR, BSI, ICAR, CSIR, DBT, DST, NGOs and Role of Indigenous people in Biodiversity conservation.

Course Outcomes

1. Students achieve knowledge on variations in living organisms.
2. They can also know the availability of natural resources on Earth.
3. Once they know the degradation of biodiversity, they will contribute to the protection of nature (Plants/Animals/Minerals/Air/Water).
4. They got awareness in endemic, threatened species and par;ticipate in protection of the Taxa.

Suggested Books:

PRACTICAL BOT-202 (PHYTODIVERSITY AND CONSERVATION)

Suggested Laboratory Exercises related to BOT- 202

1. Study of the Species Diversity in Fields and Forests.
2. Study of phytodiversity of identical areas.
3. Study of Mangroves and Sacred groves.
4. Study of Endemic, Rare, Extinct species of Seshachalam hill range.
5. Genetic Diversity of species / varieties of *Vinca*, *Oscimum*, *Gomphrena*, *Portulaca*, *Plumbago*, *Amaranthus* etc.
6. Screening of Plant species for Secondary metabolites.
7. Extraction of Plant Dyes from various parts.
8. Saponification and Iodine Number of Different Plant oils.
9. Study on Distribution of Genera and Species of Indigenous (Endemic) and World.
10. Endemic plant diversity and Distribution in India.
11. Study on Forest types of India. 12. Identification of Hotspots, National parks and Sanctuaries of India

and World. 13. Study of FCC and TCC related to remote sensing.

Compulsory Foundation

BOT-203: PLANT ECOLOGY

Course Objectives

1. To understand the geographical distribution of organisms.
2. To know the inter-relationship between population and communities.
3. To learn the management of natural resource and pollution.
4. To develop the concept of Pollution and its Control.

UNIT I

Soil, Climate and Vegetation 5 patterns: Soil profile, Types, Texture, Physical and Chemical properties, Organic matter and Micro flora- microbe interactions-Mutualism, Commensalism and parasitism.

Biomes: Concept, types, distribution of Tropical, Temperate, Alpine, Grass land, Aquatic and Desert Biomes.

UNIT II

a) Concept of Ecosystem: Earth Atmosphere system; ecosystem components; Physical and chemical sub system; Ecosystem dynamics, Energy flow, cycling nutrients, food webs, community dynamics substaturm.

b) Community Development: Succession process, quality establishment, dominance, dynamic equilibrium, climax successtion, types of succession, hydrarch, xerorch, secondary succession convergence, modification, species diversity, selection process, bioenergetics in ecological successtion.

c) Community organization and Stratification: Fresh water, horixantal, terrestrial, mountains, marine stratification, trophic structure, food chains, ecological pyramids, niche segregation, third level of organization, niche overlap, characters of niche, microclimate, niche phenology.

d) Association and interaction among organisms: Intra and inter specific association, Association, competition, predation, mutualism, insect-pant interactions, figs-fig wasps. Impact of Biota on the environment, microclimate, temperature, light intensity, and quality, moisture wind flow, gases and nutrient substratum.

UNIT III

a) Ecosystem Dynamics: Biogeochemical cycles; Water, Carbon, Nitrogen, Phosphorous and Oxygen cycles. Elements and distribution, cycling process, interaction of biotic and abiotic components. Role of decomposers; Man's interferences on the BGC Cycles.

b) Evaporation-Precipitation and Water Cycle: Parameters controlling water cycle, Hydrological cascade system; local ctcling, global evaporation, precipitation and water budget, Impact of water cycle on environment, biota, impact of man on hydrological cycle.

c) Ecosystem energetic: Productivity in ecosystem; Primary productivity, secondary productivity, factors affecting primary and secondary production.

d) Energy flow and ecosystem budgets: Light energy laws of thermodynamics, energy fixation and production, flow through food chain, energy flow-models, energetic relations of ecosystem detritus food chain, trophic interaction with microbial food web, loss of energy of different trophic levels, community food web, scale and structure of natural food webs, energetic and decomposition.

UNIT IV

Environmental Hazards and Management: Pollutants: kinds- Air, Water, Soil, Sound, Radiation, Heavy Metals and Atomic Pollution, Effects on Plants and Ecosystems, strategies for pollution waste water treatment.

Climatic Changes: Green House Gases and Global Warming; Ozone hole, Impact on Plant and Ecosystem, Restoration.

Waste management and bio-energy: Conventional, Non conventional energy resources, Environmental impacts, biogas digester, design and methanogenesis.

Course Outcomes:

1. Students will know about the factors leading to environmental degradation and their impact.
2. Develop concern about the environment protection and conservation.
3. Evolve the relation between biotic and abiotic factors in an ecosystem.
4. Understand the concepts of biome and its importance.

Suggested Books:

1. Brady, N.C. 1990. The Nature and Properties of Soils. MacMillan.
2. Chapman, J.L. and Reiss, M.J. 1988. Ecology Principles and Application. Cambridge University Press. Cambridge, U.K.
3. Hill, M.K. 1997. Understanding environmental Pollution. Cambridge University press.
4. Kormondy, E.J. 1996. Concepts of Ec1ology, Prentice-Hall of India Pvt. Ltd., New Delhi
5. Kumar, H. D. 1998. Modern Concepts of Ecology, Vikas Publishing, New Delhi.
6. Ludwig. J. and Reynolds, J. F. 1988. Statistical Ecology. A Primer on Methods and Computing. John Wiley & sons.

CO_3	3	-	2	2	1	2	1	2	2	1	2	2
CO_4	3	-	2	-	2	2	1	2	2	2	-	-

Elective Foundation

BOT – 204 : CELL BIOLOGY, GENETICS AND EVOLUTION

Course Objectives

1. To make the students to understand structure and functions of major plant cell organelles, chromatin organization, cytoskeletion and cell cycle regulation
2. To make the students to understand basis and process of inheritance of genes and their mapping in eukaryotes and microbes
3. To make the students to understand the processes of organic evolution and speciation.

Unit - I

Structural Organization of Plant Cells: Structure and Function of Cell wall, Plasmodesmata, Plasma Membrane; Structure and Functions of Endoplasmic Reticulum, Golgi Apparatus, Lysosomes, Vacuoles, Chloroplast and Mitochondria. Cytoskeleton - elements, organization and function.

Unit - II

Nucleus: Interphase Nucleus, Nuclear membrane. Nucleosome structure and levels of Chromatin organization in Chromosomes, Euchromatin and heterocromatin, Structural organization of Centromere and Telomere. Sex chromosomes in plants. Cell cycle and its regulation.

Unit – III

Eukaryotic Genetics: Mendelian principles, complementation test, Epistatic Gene interactions; Linkage and Crossing over, Gene Mapping using three point test cross, Cytoplasmic Inheritance.

Microbial genetics: Mapping of genes using Transformation, Conjugation and Transduction. Tetrad Analysis,

Mutations: Gene Mutations - Types, Physical and Chemical Mutagens, Molecular basis of Gene Mutations.

Unit - IV:

Principles of Evolution : Origin of Life, Theories of organic evolution, Synthetic theory, Natural selection, Mechanisms of Speciation. Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Hardy – Weinberg Law, factors influencing equilibrium and gene frequencies; Centres of genetic diversity, Origin and Evolution of Wheat & Maize.

Course Outcomes

1. Students will be able to describe the function and structure of major plant cell organelles and Cytoskeleton,
2. Student will be able to describe the structure of nuclear pore complex, Levels of chromatin organization and chromosomes, cell cycle regulation
3. Student will be able to Explain the process of inheritance of genes and interactions, Mapping of eukaryotic and microbial genes and mutagenesis
4. Students will be able to explain the origin of life and processes for the evolution of species and their diversity.

Suggested Readings : BOT-204

7 Stebbins, G. L., 1973. Process of Organic Evolution. Prentice – Hall Pvt. Ltd., New Delhi.

8 Tamarin, R. H. 1999. Principles of Genetics. Mc Graw Hill, New Delhi

9 De Robertis, E. D. P. and De Robertis, E.M.F. Jr. 2001. Essentials of cell and Molecular Biology, Holt lea and Febiger, New York.

10 Lodish, H, Berk, A. Zipursky, S.L., Matsudaira, P.Baltimore, D. and Dernll, J. 2000. Molecular cell Biology (4th Ed.), W. H. Freeman and Co., New York, USA.

Practical paper – II : BOT 204

Suggested laboratory exercises: Cell Biology, Genetics and Evolution

1. Determination of mitotic index.
2. Study of Chromosomal Behavior during Mitosis in root tips of Onion.
3. Study of chromosomal behavior during meiosis with special emphasis on Prophase-I using flower buds of Onion.
4. Study on the effect of Colchicine on Mitosis.
5. Study on Structural hybrids in *Rhoeo discolor*.
6. Study of problems with specific examples in Eukaryotic and Microbial Genetics
7. Genetics spotters.

Suggested Readings for Laboratory exercises BOT- 204

SEMESTER – III

BOT-301 : MOLECULAR PLANT PHYSIOLOGY

Course Objectives

1. To inculcate awareness among the students regarding Plant Production (Photosynthesis)
2. To create awareness regarding the response of plants for environmental changes.
3. To develop knowledge in identify the saline soils and environmental fluctuations.
4. To inculcate interest in Nanotechnology.

UNIT- I

Signal transduction: Overview, Receptors and G-Proteins, Phospholipid signaling, Role of cyclic nucleotides, Calcium-Calmodulin Cascade, Protein kinases, MPK and Phosphates. Specific signaling mechanisms- Two component ***sector*** regulatory system in plants, sucrose-senesing mechanism. Hormone receptors, signal transduction pathways and gene expression. Senescence: Physiological, molecular and genetic changes associated with leaf senescence and signaling.

UNIT II

Photosynthesis: Photosynthetic pigments, Photosyste 0.ms & Light harvesting complexes. Regulation of PS I and PS II activities; Photo-oxidation of Water, Oxygen evolving complex, Water oxidation clock, Mechanism of Photosynthetic electron and Proton transport; Energy spill over mechanisms; ATPase and Photophosphorylation; Rubisco activation and its mechanism of action; Light Activation of Photosynthetic enzymes; Chloroplast Protein Phosphorylation and Enzyme regulation of Photosynthetic carbon Assimilation; Mechanism of C_4 cycle and CAM Pathway.

UNIT-III

Nanotechnology: Nanotechnology in Biology, Chemical and Physical synthesis and Bio-synthesis of Nano particles. Characterization and Diversity of Nano particles; Nano sensors, Nano probes, Nano shells, Nano tubes; Application in Agriculture, Medicine and Industry; Quantam dots (Properties, Synthesis, Solubilization & Bioconjugation, Diversity, Binding specificity and application)

UNIT -IV

Stress Physiology: Concept of Stress, Plant Molecular Responses and Tolerance Mechanism to Abiotic Stress such as Water, Salt, Heavy Metal, and Temperature and cold Stresses. Heat shock proteins, LEA Proteins, miRNA involved in stress response in plants.

Molecular Physiology of Flowering: Photoperiodism, Photoinduction and Evocation; Endogenous Clocks and Regulation; Physiological Signals of Floral Induction; Genetic and Molecular analysis, Vernalization.

Course Outcomes

1. After completion of the course, the student can aware, how the plants can prepare human food and how different plants utilize efficiently the same natural sources like sunlight and Carbon dioxide and water and produce food in effective manner.
2. Students get knowledge regarding the response of the plants in stressed conditions i.e., in less or more availability of water, salts, sunlight, heat, cold and pathogens.
   They are also aware how plants can respond to environmental changes like human beings. All this knowledge will be helpful to students for production of efficient plants (Crops) in Agriculture.
3. They identify the soil types, mineral deficiency in plants and suitability of Crops to concern environmental conditions.
4. Students can understand the role and functions of Nanotechnology in Medicine, Agriculture, Urban and Environmental applications. Apart from traditional methods using to reduce pollution, they can use nano devices noval applications in reudicng the pollution.

Suggested Books:

1. Buchanan, B.B. Grussem, W. and Jones, RL. 2000. Biochemistry and Molecular Biology of Plants. American Society of Plant Physiologists, Maryland, USA.
2. Dennis, D.T. Turpin, D.H., Lefebvre, D.D. and Layzell, D.B. (Eds.) 1997. Plant Metabolism (2nd Ed.) Longman, Essex, England.
3. Galston, A.W. 1989. Life Processes in Plants. Scientific American Library, Springer-Verlag. New York, USA.
4. Hooykaas, P.J.J., Hall, M.A. and Libbeng, K.R. (Eds.). 1999 Biochemsitry and Molcular biology of plant Hormones. Elsevier, Amsterdam, The Netherlands.
5. Hopkins, W.G. 1995. Introduction to Plant Physiology. John Wiley & Sons, New York, USA.
6. Lodish, H., Berk, A., Zipursky, SL., Matsudaira, P., Baltimore, D. and Darnell, J. 2000. Molecular Cell Biology (4tt Ed.). W.H. Freeman and Company, New York, USA.
7. Moore, T.C. 1989. Biochemistry and Physiology of plant Hormones (2nd Ed.). Springer- Verlag, New York, USA.
8. Nobel, P.S. 1999. Physiochemical and Environmental Plant Physiology (2 Ed.). Academic Press, San

diego, USA.

9. Salisbury, F.B. and Ross, C.W. 1992. Plant Physiology (4th Ed.). Wadswroth Publishing Co., California, USA.
10. Singhal, G.S., Renger, G., Sopory, S.K. lrrgng K.D. and Govindje 1999. Concepts in Photobiology: Photosynthesis and Photornorphogenesis. Narosa Publishing Houses, New Delhi.

15. Subbaiah balaji, 2010. Nanobiotechnology; MJP Publishers, Chennai.
16. Chandrabhanu, T. K. and Bhatnagar, V. 2009. Nano science and Technology. Published by Campus Books international, New Delhi.

17. Charles P. Poole, Jr. Frank, J. Owens. Introduction to Nanotechnology. John Wiley & Sons Publications.
18. ODED Shoscyov & I Lan Levy. Nano Biotechnology, Bioinspired devices and materials of the future. Humana press, Totowa, New Jersey.
19. Nanobiotechnology: inorganic nanoparticles Vs Organic Nanoparticles. Elsevier.
20. Gerhard wilde. Nano standard materials. Elsevier.
21. M.N.V. Prasad, Salt stress.
22. Paras N. Prasad. Introduction to Nanomedicine and Nano bioengineering. Wiley series in.
23. Harry F. Tiffals. Medical Nanotechnology and Nanomed icine. University of Texas south western medical centre, Dallar, USA, CRC Press.

PRACTICAL - BOT-301 : MOLECULAR PLANT PHYSIOLOGY

Suggested laboratory exercises

1. Extraction and Estimation of Chlorophyll pigments.
2. Substrate Inducebility of the enzyme Nitrate Reductase.
3. Preparation of Standard Curve of Proteins and Estimation of Protein content in the Extracts of Plant materials using Lowry's or Brodfords method.
4. Preparation of Standard Curve of Glucose and Estimation of Carbohydrate in the extracts of Plant materials using Anthrone reagent.
5. Studies on hormonal regulation of senescence.
6. Effect of Salt and Water stress on the Accumulation of Proline.
7. Seed viability test using Tetrazolium chloride and Seedling vigour.
8. Temperature, Seed germination and Acid Phosphatase activity.
9. De-repression of Dwarf Characters of plants by Gibberellins.
10. Separation of Isozymes of Peroxidase by native Polyacrylamide Gel Electrophoresis.
11. Extraction and separation of soluble plant proteins by SDS PAGE.

Suggested Books for Laboratory Exercises

1. Sambrook, J., Fritsch, EF & Maniatis, T. 1989. Molecular cloning, A laboratory Manual. (2nd Ed.), Cold spring harbor laboratory press, New York.
2. Schuler, M.A. & Zielinski, R.E. 1989. Methods in plant molecular biology. Academic press Inc., San Diego, CA, USA.
3. Dixon, R.A. (Ed). 1987. Plant cell culture: A practical approach. IRL. Press, oxford.
4. Becker, J.M. Caldwell, G.A., 1990. Biotechnology- A laboratory course. Academic press, New York, USA.

BOT-302: MOLECULAR BIOLOGY AND TECHNIQUES

Course Objectives:

1. To make the students to understand the DNA structure, properties, replication, damage repair and organization of genetic material in chromosomes.
2. To make the students to understand organization, mechanism of gene expression and processing of gene products in Prokaryotes and Eukaryotes.
3. To make the students to understand mechanisms of gene expression regulation in Prokaryotes and Eukaryotes
4. To make the students to understand basic principles of microscopy and techniques for separation and analysis of nucleic acids and proteins.

UNIT – 1

Structure and Replication of DNA:

Nature of genetic material, and structure of DNA and polymorphism (A, B, and Z DNA). Biochemical and physical properties of DNA and RNA; DNA replication in prokaryotes and eukaryotes. Unit of replication, enzymes involved, replication origin and replication fork, fidelity of replication, DNA damage and repair mechanisms, Nucleosome structure and levels of Chromatin organization in Chromosomes; Cell cycle and its regulation.

UNIT – II

Gene expression:

Structure of prokaryotic and eukaryotic genes; RNA synthesis and processing: Transcription factors and machinery, formation of initiation complex, RNA polymerases, capping, elongation, and termination, RNA processing, RNA editing, splicing, and polyadenylation, RNA transport.

Protein synthesis and processing: Elucidation and features of genetic code, aminoacylation of tRNA, tRNA-identity, aminoacyl tRNA synthetase, Ribosome, formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, translational proof-reading, Post-translational modification of proteins. Secondary structure, domains, motif and folds.

UNIT – III

Regulation of gene Expression

Regulation of phage and viral gene expression Prokaryotes - Organization of Lac and Tryptophan operons; Negative and Positive Control and Attenuation mechanisms.

Eukaryotes: *Cis*-acting elements and Trans-acting factors in gene regulation

Role of Chromatin remodeling and histone code in gene expression.

DNA methylation in gene regulation and gene imprinting. RNAs in gene silencing

UNIT – IV

Techniques for analysis of Molecules:

Microscopic techniques: Resolving powers, microscopy of living cells, Scanning and Transmission Electron microscopes & specimen preparation, Image processing methods.

Molecular separation techniques; Centrifugation: Sedimentation - RCF, Differential & Density Gradient centrifugation, Chromatography- Basic Principles, Types of Chromatography.

Electrophoresis: Principles and Types of electrophoretic techniques. Spectroscopy: UV/visible and Mass spectrometry; Labeled tracers.

Course Outcomes:

1. Describe Nucleic acids structure, properties and mechanism of DNA replication and damage repair pathways, and Chromatin organization Cell Cycle regulation
2. Describe gene organization, mechanism of Transcription and Translation, and processing of gene products in Prokaryotes and Eukaryotes
3. Explain the mechanisms of regulation of gene expression in Prokaryotes and Eukaryotes.
4. Explain the basic principles of Microscopy, Nucleic acid and protein separation and identification Techniques and methods

Suggested Readings: BOT – 302

1. Adams, R. L. P., Knowler, J. T. and Leader, D. P. 1994.The Biochemistry of the Nucleic acids. Chapman & Hall.
2. Alberts, B., Bray, D., Lewis, J., Raff, M., Roberts, K., and Watson, J. D. 1999. Molecular Biology of the Cell. Garland Publishing Inc., New York.

3. Brown, T. A. 1999. Genomes 3. John Wiley & Sons, New York, USA.
4. *Watson JD, Baker TA, Bell SP, Gann A, Levine M, Losick R. 2004 Molecular biology of the Gene* (5th Ed.) Benjamin Cummings.

10. Keith Wilson and John Walker (Editors) 2005.Principles and Techniques of Biochemistry and Molecular Biology (6th Ed.) Cambridge University Press, New York.

Practical BOT-CP-302 (Molecular Biology and Techniques)

Suggested Laboratory Exercises related to 301

1. Isolation of plant DNA
2. Determination of λ max of DNA.
3. Estimation of DNA quantity by Diphenylamine method
4. Isolation of RNA
5. Determination of λ max of RNA
6. Estimation of RNA quantity by Orcenol method
7. Effect of pH and temperature on DNA and RNA
8. Determination of λ max of Proteins.
9. Estimation of Protein quantity
10. Assignments on DNA structure, Replication and Gene expression.

Suggested Books for Laboratory exercises

1. A.K. Sharma and A. Sharma, Chromosome techniques, Butterworth's Publications

2. Glick, B.R. and Thompson, J.E. 1993. Methods in Plant Molecular Biology Biotechnology. CRC Press, Boca Raton, Florida.
3. Sadasivam, S. & Manikam, A. 1992. Biochemical methods. Wiley Eastern Ltd.

Skilled Oriented Course

BOT-303A : MUSHROOM CULTIVATION

Course Objectives

1. To study methods of growing edible mushrooms and isolation of Mushroom culture and Culture maintenance.
2. To study basic mushroom substrate preparation, composting and study spawn generation techniques, inoculation methods.
3. To study method of harvesting of Mushrooms.
4. To study diseases and pests of mushrooms; disease and pest management of mushrooms.

UNIT – I

History of Mushroom, cultivation, mushroom status in Andhra Pradesh and other states of India; Biology and Ecology of mushrooms; Wild mushroom collection.

UNIT – II

Introduction to mushrooms, morphology, classification, edible mushrooms and poisonous mushrooms. Life cycle of *Valverellia* sp., *Pleauritus* sp., *Agaricus* sp., *Calocybe* sp. and *Leutinus* sp.

UNIT – III

Spawn preparation : Facilities required for spawn preparation, Preparation of spawn substrate; Preparation of pure culture, culture maintenance, storage of spawn.

UNIT – IV

Mushroom Cultivation – Conditions of mushroom cultivation, isolation, spawn production, growth media, spawn running, harvesting and storage of mushrooms. Medical and nutritional value of mushrooms. Mushrooms diseases and management.

Course Outcomes

1. An ability to know types of edible and poisonous mushrooms.
2. An ability to know method of cultivation of mushrooms.

3. An ability to have self employment.
4. Able to prepare Organic fertilizers and apply it to field level.

Suggested Books

1. Nita Bhal (2000). Hand book on Mushrooms, 2nd ed. Vol.I & II. Oxford and IBH publishing Co Pvt Ltd., New Delhi.
2. Tripathi, D.P. (2005) Mushroom Cultivation, Oxford & IBH publishing Co Pvt Ltd., New Delhi.
3. Pandey, E.K.S.K. Ghosh, 1996 A hand book on mushroom cultivation, Emkey Publications.
4. Tewari Pankaj Kapoor, S.S. (1988). Mushroom Cultivation, Mittal Publications, New Delhi
5. Tavina Rehman Borah, Akoijam Ratankumar Singh, Pampi Paul et al. (2020). Spawn production and mushroom cultivation technology, ICAR, Meghalaya.
6. V.N.Pathak, Nagendra Yadav and Maneesha Gaur (2000). Mushroom Production and Processing Technoogy / Vedams Ebooks Pvt Ltd, New Delhi.
7. Pathak, V.N. and Yadav, N (1998). Mushroom production and processing technology. Agrobios.

PRACTICAL BOT-303 IE : MUSHROOMS

Suggested laboratory exercises

1. Maintenance of mushroom cultivation labs.
2. Sterilization of substrate material
3. Spawn preparation
4. Preparation of mushroom beds
5. Treatment of Casins material
6. Process of Casins
7. Management of Spawn-run
8. Harvesting of mushrooms.

Suggested Books for laboratory exercises

1. Hand book of Mushroom Cultivation, Processing and Packaging by Eiri Staff.
2. Mushroom Cultivation in India Hardcover – 2007 by Suman and Sharma

Skilled Oriented Course

External Elective/Open Elective

BOT-304A : PLANT RESOURCE AND HUMAN WELFARE (EE)

Course Objectives

1. To understand the preparation and development of herbal formulation; Describe about herbs or natural origin drugs as raw materials for preparation of cosmetics, excipients, conventional herbal formulation and novel dosage forms like phytosomes.
2. Explain method for identification and authentication of herbal drugs; To be familiar with the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents.
3. To carryout isolation and identification of phytoconstituents; The pharmaceutical legislations and their implications in the development and marketing.
4. Acquire an understanding of the importance of plants in tribal lives; Describe rules and regulation for assessment of herbal drugs, patenting of natural products and manufacture of herbal formulations based on traditional medicinal system.

UNIT-I

Diversity of plants: Food Yielding Plants (Major & Minor crops- Cereals, Pulses, Oil seeds, Vegetables and Fibers); Wood and Timber Yielding plants and their utilization in day to day human life.

UNIT-II

Plants in Medicine: Medicinal and Aromatic Plants (Ethno medicinal or Traditional Medicinal plants); Poisonous plants; Medicinal plants used to cure human diseases, Insect bites/ Snake bites; Veterinary diseases (Live stock); plants used in Ayurvedic; Homeopathy, Allopathy, Sidha and Unani Medicines.

UNIT-III

Non wood forest products: Spices and condiments ; beverages, Sweetening's, Starch, Honey, Bio vitamins; Bamboos, Rattans, Gums, Waxes, Resins, Tannins, Dyes, Fruits, Nuts, Cork, Paper, Pulp, Rubber, Volatile oils; Petroleum substitutes.

UNIT-IV

Preparation and application of plants as Bio fertilizers (N_2 fixers; Zeevamrutham, Vermi compost); Bio pesticides (For Fungal, Bacterial and viral diseases); Bio insecticides (mosquitoes repellents; Book worms; Beatles, mushroom cultivation, plants as preservatives.

Suggested Books:

1. Economic Botany, S.N Panday, Ajanta Chadha, Vikas Publishing House Pvt Ltd.1996.
2. Economic Botany, B.P. Panday. S.Chand & Company Ltd.1984.
3. A Phyto chemical approach to Economic Botany S.D. Sabis, M.Daniel, Kalyani Publishing 1990.
4. A Text Book of Ecomonic Botany, A.V.S.S. Sambamurty, N.S Subrahmanyam Eiley Eastern Ltd. 1989.
5. Econic Botany- A Text Book of useful Plants and plant products by Algert F. Hill.
6. The Medicinal and Poisonous Plants of India by J.F.Caius Scientific Publishers Journal dept.5th Revised edition- 2003.
7. Poisonous Plans of India by R.N. Chopra. New Delhi, Indian council of Agricultural Research- 1965.
8. Plants used as Veterinary Medicine in Chittoor District of Andhra Pradesh, India Pharmaceutical biology, January-1987
9. Veterinary Medicinal Plants by Ramesh Handan-2015.
10. Veterinary Herbal medicine by Susan G. Wynn, Barbanafongene . 2016.

External Elective/Open Elective

PAPER – IV (BOT-304A) : PLANT RESOURCE AND HUMAN WELFARE

External Elective/Open Elective

(BOT-304B) : GARDENING AND NURSERY TECHNIQUES (EE)

Course Objectives

1. Analyze the greenhouses based on shape, utility, construction, covering materials and cost.
2. Study of Plant Propagation and Nursery Management.
3. Study about tissue culture methods and applications are extensively studied with application point of view
4. Knowledge Production technology of medicinal and plantation crops; Awareness of basics of fruit, ornamental and medicinal plants nurseries.

Unit-I

GARDENING AND NURSERY: Importance of Nursery, Role of Nurseries in Horticulture Development, Components of Nursery-, Layout, Physical Resources Inputs, Management, Propagation Structures, Planning and Scheduling of Nursery Activities.Garden designing with annuals, biennials and Perennials

Unit-II

PLANT PROPAGATION METHODS: Sexual Propagation - Seed Production and Seed Propagation, Methods of Breaking Dormancy; Asexual Propagation- Division and Separation, Cuttings, Grafting, Budding, Layering and Tissue Culture; Advantages and disadvantage of Sexual and asexual propagations.

Unit-III

PLANT NUTRITION AND MANAGEMENT IN NURSERY: Plant Nutrition, Macro and Micronutrients and their role, Nutrient Deficiency Symptoms in Plants; Manures and Fertilizers; Types of Growth Media and Media Preparation; Water Quality and Irrigation methods; Pest and Weed Management and Control.

Unit-IV

TYPES OF GARDENS AND NURSERIES- Types of gardens: Formal, Informal, Egyptian, Roman, Chinese, Hindu- Buddhist Mughal and Japanese. Types of Nurseries: Fruit Plant Nurseries, Vegetable Nurseries, Ornamental Plant Nurseries, Medicinal and Aromatic Plant Nurseries, Forest Plant Nursery, Hi-Tech Nurseries.

Course Outcomes

1. Provide basic knowledge about tools, equipment and growing structures used in nurseries for plant production.
2. Management practices of nursery practices record keeping, nursery standards; Plant nutrition and its management in nursery
3. Propagation by cuttings, layering, grafting, budding, specialized structures, and micropropagation; Acquire knowledge regarding the theory and practice of cultural and production techniques and methods.
4. To learn management practices for nutrition, water management, pest management, pruning and training, storage and handling, shipping.

Suggested Readings:

1. Fundamentals of Horticulture, Edmond, J.B., Sen., T.L., Andrews, F.S and Halfacre R.G, 1963. Tata McGraw Hill Publishing Co., New Delhi.
2. Introduction to Horticulture, Kumar, N. 1990. Rajyalakshmi Publications, Nagarcoil, Tamilnadu.
3. Bose T.K. & Mukherjee, D., 1972, Gardening in India, Oxford & IBH Publishing Co., New Delhi.
4. Sandhu, M.K., 1989, Plant Propagation, Wile Eastern Ltd., Bangalore, Madras.
5. Kumar, N., 1997, Introduction to Horticulture, Rajalakshmi Publications, Nagercoil. institution)
6. Randhawa, G.S. and Mukhopadhyay, A. 1986. Floriculture in India. Allied Publishers.
7. Christopher Brickell, 1992, The Royal Horticultural Society Encyclopedia of Gardening.Dorling Kinderlsey, London.
8. Plant Propagation. Principles and Practices, Hartman, HT and Kester, D.E.1976, Prentice Hall of India Pvt. Ltd. Bombay.

9. Plant Propagation. Sadhu, M.K. 1996. New Age International Publishers,New Delhi.

External Elective/Open Elective

BOT-304C : ORGANIC FARMING (EE)

Course Objectives

1. To reduce the toxicity of Chemical Fertilizers.
2. To save soil health and promote soil fertility.
3. To popularize the importance of organic fertilization.
4. To bring awareness about organic foods.

UNIT-I

Concept of organic farming: Principles, types and benefits of organic farming. Conventional farming versus Organic farming. Types of compost, Green manure, Farmyard manure, Vermicompost, Methods of compost preparation. Processing, packing and storage of vermicompost. Nutritive value of compost. Panchagavya; collection, processing, advantages and disadvantages

UNIT-II

Biofertilizers: Production, processing and storage of biofertilizers and organic preparations. Cost of production system. Benefit cost ratio. Marketing: export and import. Maintenance of records, farm management system and role of NGOs.

UNIT-III

Panchagavya – Collection, processing, advantages and disadvantages, preparation, types, maintenance, cowdung micro flora, liquid and solid Panchagavya – chemical nature of cow urine.

UNIT-IV

Vermicompost Technology : Production, types of tubs, construction of tubs, preparation, processing, watering of raw material, casting collections, drying, sieving, packing and marketing. Chemical composition of vermin compost – different species of earth worms - vermi wash and its applications.

Course Outcomes

1. Understands the importance of organic fertilizers in preventing environmental pollution.
2. Able to prepare Organic fertilizers and apply it to field level.
3. Develop the skill of preparing farmyard compost.
4. Learn the techniques of isolation and maintenance of biofertilizers.

Suggested Books:

1. Handbook of organic farming and Biofertilizers by M.K. Gupta.
2. The Organic Farmer's Business Handbook by Richard Wiswal.
3. Practical Handbook of Agricultural Science by Hanson.
4. Year Round Vegetables, Fruits and Flowers by Bob Randall.
5. Organic Management for the Professional by Howard Garrett.
6. Handbook of organic farming and Biofertilizers by M.K. Gupta.
7. Biofertilizer Technology by R. Shankara Reddy, Biofertilizer

a. Technology by Kannaiyan. S

SEMESTER – IV

BOT-401: GENOMICS AND PROTEOMICS

Course Objectives:

1. To enable the students to understand the principles of Molecular marker techniques and construction of genetic and physical maps with emphasis on plants.
2. To enable students to understand Plant genome organization, Whole genome sequencing strategies, and structural and functional annotation.
3. To enable the students to understand principles and methods of Transcriptome and Proteome analysis.
4. To enable the students to understand mechanisms of genome evolution and construction of Phylogenetic trees; the students to understand key features of Arbidopsis and rice genomes and applications of genome projects.

Unit-I

Structural Genomics: Isolation and purification of plant DNA, Generation of BAC and YAC libraries. DNA marker systems and construction of molecular genetic maps and Physical maps. DNA sequencing methods:Maxim & Gilbert, Sanger and New generation sequencing methods. Whole genome sequence alignment strategies: clone by clone and shot gum sequencing. Contig assembly strategies and finished sequences. DNA sequence data bases.

Unit-II

Genes and Transcriptomics: Genome annotation, in silico methods for gene identification and prediction of function: Experimental techniques for functional identification of genes: Insertional mutagenesis, Targeted induced local lesions (TILLING), RNA interference (RNAi) and gene knockout.

Functional genomics: Transcript profiling – DNA Micro array, Serial analysis of gene expression (SAGE) and Massively parallel signature sequencing (MPSS)

Unit-III

Proteomics: Protein sample preparation and separation techniques - 2D-analysis, Multidimensional liquid chromatography. Characterization of proteins by Mass spectrometry, protein sequencing, Protein structures, Protein data bases and In silico characterization, protein micro arrays. Methods for

protein-protein interaction analysis: yeast hybrid systems, phage display and protein complexes.

Unit-IV

Comparative genomics and Applications: DNA/protein sequence homologies - analogy, orthology and paralogy. Gene duplication and divergence, Evolution of novel genes and proteins, DNA quantities and non- coding sequences in plant genome evolution, Molecular clocks, Molecular phylogenetics and construction of phylogenetic trees and their applications.

Salient features of Arbidopsis and rice genome projects, Applications of plant genomics in agriculture and industry.

Course Outcomes

1. Explain the principles of DNA marker systems and methods for the construction of Molecular genetic and Physical maps, and their applications
2. Describe the organization of plant genomes and explain principles of DNA sequencing methods and whole genome sequence assembly strategies; Describe the organization of DNA Databases, and structural and functional annotation of finished genomes
3. Explain the principles and describe methods for Transcriptome and proteome analysis; Explain the mechanisms which underlie evolution of genomes/genes/proteins at the molecular level and Construct of Phylogenetic tree.
4. Describe Key features of Arabidopsis and rice genomes, and applications of plant genome projects result

Suggested Readings: BOT - 402.

1. Genomes, T. A. Brown (3rd Ed.), John Wiley Publications.
2. Principle of Genome analysis and Genomics, 7th edition, Primrose, S. B. Blockwilley.
3. Brown, T.A.2001. gene cloning and DNA Analysis- An introduction (5th Ed.), Blackwell Scientific Publications, Oxford, U.K.
4. Plant functional genomics, Daria Leister.
5. Gustafson, J. P. 2000. Genomes, Kluwer Academic plenum publishers, New York, USA.
6. Jolls, O. and Jornvall, H. (eds.) 2000. Proteomics in Functional Genomics. Birkhauser Verlag, Basel, Switzerland.
7. Introduction to Bioinformmatics, 2001 by T. A. Attwood & D. J. Parrys-smith, Pearson Education Asian Publishers.
8. Bioinformatics: methods and Protocols, Edited by Stephen Misener and Stephen A. Krawetz. 2000. Methods in Molecular Biology Series, Human Press.

9. Bioinformatics: A Practical guide to the analysis of genes and proteins 1998, Edited by A. D. Baxevanis and B.F.

10. Computer Applications in Biotechnology, 1998, by T. Yosida

11. Aurther, M. Lesk. 2002. Introduction to Bioinformatics. Oxford University Press, USA.

12. Durbin, R. Eddy S. R. Krogh, A., Mitchison, G. 1998. Biological Sequence Analysis: Probabilistic models of Proteins and Nucleic acids. Amazon Publications.

13. Gustafson, J. P. 2000. Genomes, Kluwer Academic plenum publishers, New York, USA.

14. Henry, R. J. 1997. Practical application of Plant Molecular Biology. Chapman & Hall, London. U.K.

15. Jolls, O. and Jornvall, H. (eds.) 2000. Proteomics in Functional Genomics. Birkhauser Verlag, Basel, Switzerland.

16. Mount, D., 2004. Bioinformatics: Sequence and Genome Analysis. (2nd Ed.) Cold Spring Harbor Laboratory Press.

Suggested Laboratory Exercises related to BOT- 401: Core practical -405p .

1) Isolation of genomic DNA; Purification and Quantification by Spectrophotometry.
2) Preparation of DNA denaturation curve
3) Determination of genome size
4) Restriction digestion of the Plant Genomic DNA.
5) Agarose Gel Electrophoresis of DNA fragments and size determination
6) PCR amplification of DNA. and RAPD analysis.
7) Isolation of plant RNA and Quantification by Spectrophotometry.
8) Solubilization and Precipitation of proteins.
9) Estimation of protein.
10) Determination of Isoelectric Point of proteins
11) Separation of proteins by SDS-PAGE and size determination
12) Problems related to genomics, proteomics and molecular evolution

Suggested Readings for Laboratory exercises BOT- 401

1. Gelvin, S.B. and Schilperoort, R. A. (Eds). 1994. Plant Molecular biology Manual, (2nd Ed.), Kluwer Academic Publishers, Dordrecht, The Netherlands.
2. Glover, D.M. and Hames, B.D. (Eds.). 1995. DNA cloning 1: A Practical approach; Core Techniques, (2nd Ed.), PAS IRL Press, Oxford.
3. Mickloss, D. A. and Freyer, G. A. 1990. DNA science. A First Course in Recombinant Technology. Cold Spring Harbour Laboratory Press, New York, USA.
4. Sambrook, J., Fritsch, EF & Maniatis, T. 1989. Molecular Cloning, A Laboratory Manual. (2nd Ed.). Cold Spring Harbor Laboratory Press, New York.
5. Schuler, M.A. & Zielinski, R.E. 1989. Methods in Plant Molecular Biology. Academic Press Inc., San Diego, CA, USA.
6. Frank H. Stephenson.2008: Caliculations in Molecular Biology and Biotechnology-A Guide to Mathematics in the Laboratory, Academic Press.

BOT-402 : PLANT BIOTECHNOLOGY

Course Objectives

1. The course would provide the students with understanding of Principles and Techniques of Plant Tissue Culture.
2. Know the concept and importance of genetically modified crops.
3. Understand the molecular mechanism of r-DNA technology.
4. To develop the skill on Cell Culture Technique.

UNIT I

Basic concept of regeneration: Concept of Cellular Totipotency and Differentiation. Fundamental aspects of Morphogenesis. Organogenesis-direct & indirect. Role of plant growth regulators and factors governing *in vitro* behavior of cultures.

Propagation and variation

Modes, stages and Application of Micropropagation. Production of Pathogen free plants and their application.. Somatic embryogenesis, role of physical and chemical factors in the induction; synthetic seeds-production and uses. Origin, Molecular basis and application of Somaclonal variation.

UNIT II

Applications of Plant Tissue culture: Production of Haploids and its significance in Crop improvement. Secondary metabolite production through Cell and Organ cultures-Hairy roots. Shikonin production. Cryo preservation, methods and *in vitro* conservation of Germplasm.

Somatic hybridization: Protoplast isolation, Fusion and culture, Hybrid selection and characterization of hybrids. Symmetric, Asymmetric hybrids and Cybrids, significant achievements and limitations of Protoplast research, production of test tube plants.

UNIT III

Principles of Gene Cloning and Analysis: Enzymology of rDNA technology**.** Cloning vectors-Plasmids, Phages, Cosmids, Phagemids and strategies of cloning, expression vectors. Bacterial

transformation and transfection. Genomic and c DNA libraries construction. Selection and analysis of cloned genes and its products.

UNIT IV

Genetic engineering of plants: Plant Gene Isolation-Transposons and T-DNA tagging and map based cloning. Ti and Ri plasmids-mechanism of T- DNA transfer; Viral and other vectors. Physical methods of gene transfer; PEG mediated gene transfer, Electroporation, Biolistics, Micro injection and other techniques. Chloroplast transformation, Production and application of transgenic plants (Drought tolerance, Golden rice, Edible Vaccines). Regulations of release and concerns of genetically modified crops; intellectual property rights.

Course Outcomes

1. Develop skill to produce tissue culture plants of economic importance.
2. Acquire knowledge on production of transgenic plants.
3. Learn the molecular technique for Crop improvement.
4. Able to establish Cell Culture systems for production of Secondary Metabolites.

Suggested Books: BOT-401

1. Bhojvani, S.S. and Razdan, M.K. 1996. Plant tissue Culture: theory and Practice. Elsevier, New York, USA.
2. Bhojvani, S.S. 1990. Plant Tissue Culture: Applications and Limitations. Elsevier, New York, USA.
3. George, E.F., Vol-I (1986) and Vol II (1993) Plant propagation by Tissue culture.
4. Kartha, K.K. 1985. Cryopreservation of plant cells and organs. CRC Press, Boac Raton, Florida, USA.
5. Razdan, M.K. 1993. An Introduction to Plant Tissue culture. (2nd Ed.). oxford IBH, New Delhi.
6. Reinert, J. Bajaj, YPS (Eds.). 1977. Applied and fundamental aspects of plant cell, tissue, and organ culture. Springer-Verlag, New York.
7. Vasil, I.K. and Thorpe, T.A. 1994. Plant cell and Tissue culture, Kluner Academic Publishers, The Netherlands.

19. Winnacker, E.L. 2003. From Genes to Clones- Introduction to Gene Technology. Panima Publishing Corporation, New Delhi.

PRACTICAL-BOT-CP-402 (PLANT BIOTECHNOLOGY)

1. Suggested Laboratory Exercises
2. Preparation of Stock solutions and Media.
3. Production of Aseptic seedlings.
4. Isolation and culture of embryos of Maize, Crotalaria, Cyamopsis etc.
5. Induction of callus and histological/cytological studies of callus.
6. Direct organogenesis and somatic embryogenesis from Tobacco explants.
7. Androgenesis and production of haploids from *Datura flower* buds.
8. Establishment of Cell cultures and determination of plating efficiency.
9. Enzymatic isolation and culture of protoplasts.
10. Fusion of protoplasts using PEG.
11. Preparation of synthetic seeds using sodium alginate. Estimation of IAA using Salkowski reagent.
12. Isolation of Genomic DNA.
13. Agarose Gel Electrophoresis of DNA and Southern Blotting.
14. Isolation of Yeast RNA and Quantification by Spectrophotometry.
15. Isolation of Plasmid DNA.
16. Restriction digestion of the plasmid DNA.
17. Ligation of DNA fragments.
18. Bacterial Transformation and Identification of Transformants.
19. Co-cultivation of the plant material (e.g. leaf discs) with *Agrobacterium* and study of GUS activity histochemically.
20. Problems related to R-DNA technology.

Suggested Books for Laboratory Exercises

1. Gamborg, O. L. & Philips, G.C. (Eds.) 1995. Plant cell, Tissue and Organ culture. Fundamental methods. Narosa publishing house, New Delhi.
2. Hall, R.D. (Ed.) 1999. Plant cell culture protocols, Humana press aInl., New Jersey, USA.

Generic/Internal Elective

BOT-403A PHYTOMEDICINE (IE)

Course Objectives

1. Study the interactions of people and plants ; Learn plant names, both scientific and local name ; Learn the structures, life cycles, and unique characteristics of the tribals.
2. Acquire an understanding of the importance of plants in our daily lives.
3. Identify local ethnobotanically useful species ; Patterns of human plant selection for food, medicine, poison, ritual and religion.
4. Physiology and biochemistry of useful plants ; Qualitative chemical analysis ; Intellectual property rights protocol.

UNIT I

Ethnobotany: Scope and importance, inter disciplinary approaches in Ethnobotany, tribals of Andhra Pradesh and their traditional usage of plants in medicine, food and other purposes. Applications of Ethnobotany. Study of medicinal plants from the following groups: Gymnosperms, Angiosperms (Ranunculaceac, Leguminosae, Apocynaceae, Asclepiadaceae, Solanaceae, Lamiaceae, Liliaceae and Zingeberaceae, etc)

UNIT II

Cultivation, Multiplication, Collection, Processing and Marketing: Macro and Micro Propagation and cultivation of medicinal plants; Multiplication of Medicinal Plants and Production of Specific Biologically Active Molecules through Tissue culture; Methods of collection, Processing, Storage, Market Potential and Trade of Plant Medicines. Adoption of GATT and TRIP, Intellectual Patent (property) Rights (IPR) & Intellectual Property Protection (IPP) for the plant medicines.

UNIT III

Phytomedicine: Systems of medicine, brief history, origin and scope of plant medicines, identification of locally available medicinal plants. Vitamins, Various secondary metabolites and Biosynthesis; Adulteration and Alternations of the Drugs. Macroscopy and microscopy of medicinally useful plant parts such as leaves, stems, underground parts, flowers, fruits and seeds (Senna, Datura, Cinnamon, Cinchona, Ginger, Clove, Fennel, Nux-vomica & Ipecacuanha).

UNIT IV

Formulations, Diagnostic features and Biological activity of Plant Medicines: Formulations and dosage forms of plant medicines; Pharmacology and Pharmacognosy; Study of the important Diagnostic Features of Active Constituents, Quality, Purity; and Pharmaceutical uses of important Plant Medicines. Biological Active Principles of Established Herbal Medicines. Herbal Cosmetics and Dietetics.

Course Outcome

1. Definition, history and scope of ethnomedicine ; Difference between folk and traditional medicines.
2. Use of some routinely used Ayurvedic drugs and formulations.
3. About drug adulteration and methods of detecting the same.
4. Phytochemical and biological screening of herbal drugs ; Preparation of some herbal formulations mentioned in the syllabus.

Suggested Books:

1. Jain, S.K. 1968. Medicinal Plants National Book Trust of India, New Delhi.
2. Jain, S.K. 1981. Glimpses of Indian Ethnobotany, Oxford and IBH Publishing Co., New Delhi.
3. Rao, P.S. Venkaiah, K. & Padmaja, R. 1999. Field guide on Medicinal Plants. A. P. Forest Department.
4. Sinha, R.K. 1997. Global Biodiversity, INA Shree Publications, Jaipur, India.

15. Trease, G.E. and Evans, W.C. 1983. Pharmacognosy. (12th Ed.), Bailine, London.

16. Wallis, T.E. 1999. Text Book of Pharmacognosy, (5th Ed.) CBS Publishers & Distributions, New Delhi.

PRACTICAL BOT- 403C : PHYTOMEDICINE

Laboratory Exercises related to BOT- 304C

1. Visits to tribal habitats and field Study of medicinal plants used by tribal people.
2. Recording medicinal practices and herbal formulations of tribal medicine.
3. Collection and identification of herbal medicinal plants. Preservation and submission of herbal medicinal samples.
4. Preparation and submission of herbal practice centre tour report. Development of medicinal plant nurseries in botanical garden.
5. Identification of important Medicinal plants and study of Morphological features of the Medicinal plant parts.
6. Field trip to study and identify locally occurring Medicinal plants.
7. Practical Methods of Cultivation, Propagation, Conservation and Protection of important Medicinal plants to develop familiarity.
8. Micro-propagation of Medicinal plants and Production of Callus from different Explants for Specific Biologically active Ingredients.
9. Practical demonstration of collection, processing and storage of Plant Medicines.
10. Microscopic study of locally available Medicinal plant parts such as leaves, stems, underground parts, flowers, fruits and seeds (Senna, Datura, Cinnamon, Cinchona,. Ginger, Clove, Fennel, Nux-vomica & Ipecauanha).
11. Demonstration of drug adulteration, identification of locally available Plant Medicines.
12. Antibiotic sensitive test of crude drugs.
13. Demonstration of drug Formulation and Herbal cosmetics.
14. Organolepitc examination and physical and chemical properties.

Suggested Books for Laboratory Experiments

1. Jain, S.K. 1968. Medicinal plants. National book trust of India, New Delhi.
2. Rao, P.S. Venkaiah, K. & Padmaja, R. 1999. Field guide on medicinal plants. A. P. Forest department.
3. Trivedi, P.C. 2002. Ethnobotany. Avishkar Publishers, Jaipur, India.
4. Document files creation using MS word. Creating document style.

5. Internet – E-mail and mail attachment i. Downloading webpage; Saving a web page; Printing the web page; Document; ii. Search engine; Image
6. Visit to genebank database; NCBI; EMBL
7. Visit to protein database; Swis prot; PDb
8. Use of literature database i. Virtual library; Agricola; Pub med
9. Use of similarity search tools: NBLAST; PBLAST

Generic / Internal Elective

PAPER – III (BOT-403A) : PHYTOMEDICINE

CO-PO Mapping Matrix/ Programme Articulation Matrix:

	PO_1 Knowledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Leering

CO_3	3	1	-	2	3	3	3	1	-	-	-	-
CO_4	3	-	1	-	1	1	2	1	1	-	-	-

Generic/Internal Elective

BOT-403B : HORTICULTURE (IE)

Course Objectives

1. To impart basic knowledge and develop skills about propagating different types of plants by seed, cuttings, budding and grafting, separation, division, layering as well as micro-propagation.
2. Deals with soil science and fertility management for horticultural crops.
3. Study of Plant Propagation.
4. Deals with seed production technology of horticultural crops.

UNIT I

Introduction, Scope and importance of Horticulture, Branches of Horticulture; Soil types and preparation and treatment; Outdoor garden types and arrangements annuals, biennials. Perennials with common examples and culture: influence of environment, training, pruning and transplanting.

UNIT II

Scope and Importance of Plant Propagation, Role of Nurseries in Horticulture Development, Types of Plant Propagation Nurseries, Physical and Financial Resources for Nursery, Mother Plants: Selection and Maintenance.

Sexual and Asexual Propagation, Seed Production and Seed Propagation, Vegetative Propagation, Cutting, Budding, Layering and Grafting in Horticultural Plants, Micro-Propagation and Hardening of Nursery Plants

UNIT III

Sanitation, Drainage; Training and Pruning in Nursery, Potting, Re-potting, De-potting and Mulching in Nursery; Plant Growth Regulators in Nursery: Types, Role, Methods of applications and preparation; Packing and Transport of Nursery Plants, Customer Services in Nursery Plants.

UNIT IV

Selection and Collection of Regional Ornamental Plants; Regional Demand and Supply Situation in Ornamental Plants; Selection and Preparation of Library Plants; Location Specific Library Plant Arrangement; Bonsai: History, styles, plant selection, pruning, nipping, wiring and maintenance.

Course Outcomes

1. Demonstrate a fundamental understanding of plant identification, selection, use and maintenance of plant material best suited for conventional and sustainable landscapes ; Demonstrate a working knowledge and appreciation of the diversity of plants, their culture and utilization.
2. To impart basic knowledge and develop skills about propagating different types of plants by seed, cuttings, budding and grafting, separation, division, layering as well as micro-propagation; Recognize and apply ethical professional practices to horticultural Crops.
3. Apply horticultural principles to the successful growth and production of horticultural plants ; Demonstrate technical competence in their concentration by identifying the majority of globally important food, and/or ornamental plants and demonstrating applications of theoretical sciences to their production, maintenance and post-harvest handling.
4. Identify and prescribe sustainable options in horticulture that benefit the environment while maintaining productivity and economic viability ; Bonsai making and maintenance.

Suggested Books:

1. Al David – A complete guide to gardens.
2. Vishnu Swarup – Garden flowers
3. Readers digest – Complete library of gardens (3 volumes) Kissan world.

PROJECT WORK – Dissertation, Viva

External Elective/Open Elective

BOT-404A: NANOBIOTECHNOLOGY (EE)

Course Objectives

1. To inculcate the awareness in the production of nano scale devices.
2. To create interest in the utilization of nano devices in medicinal and agricultural field.
3. To study the nano biofertilizers and nanobiopesticides and their applications.
4. To know the role of nanoparticles in the field of Medicines and Engineering.

UNIT I

Nanotechnology: Concepts, definition, origin, Milostones and opportunities; Preparation – Chemical synthesis (wet, Mechanical, Form-in place and Gas phase) Biological synthesis (Green and Microbial synthesis). Diversity of Metal nanoparticles (Gold, Silver, Nickle, Silicon, Cobalt, Calcium, Iron, Magnesium); Characterization; Tools and techniques (UV-Visible spectra; SEM; EDAX, TEM, AFM, FTIR AND MNR) Lithographing techniques (Photo, Electron beam and Dip-Pen methods).

UNIT II

Nanotechnology and Biometerial sciences: Generation of Bio-metals (I, II, III) General Characters; Micro and Nano fabrications; Scientific applications: nanomaterials , Nanostructures and Nano-tools (Nano-scales, dendrimers, Quantum dots) and its applications, Molecular manufacturing: Electronic, information and communication technology. Nano Biotechnology & health**:** Nanomaterial in the body (Routes of entry intestinal tract, Skin and Lungs.

UNIT III

Nano Biotechnology and Nanomedicine: Biomedical applications**;** Drug delivery; importable devices; Biomedical sensors and Biosensors; Quantum dot technology in cancer diagnosis and treatment; DNA based Nano materials; Nanoparticle probes for Bioimaging; Novel drug delivery systems; Micropheres and microcapsules; polymer therapeutics; dendrimeers; Hydrogels and Orthopedic biomaterials. Environmental Impacts: Toxic mechanisms integrated concept of risk Assessment of Nanoparticles.

UNIT IV

Nano Biotechnology in Agriculture: Nano Bio-fertilizers ($Ca^{2+,}$ $Mg^{2+,}$ Fe^{2+} & Zn Nanoparticles) Nano Pesticides; control of plant diseases; fungal diseases (Blast diseases of Rice; Smut of maize; Leaf spots of groundnut; Late blight of potato; Downy mildew of grapes); Bacterial diseses (Citrus caker, Leaf blight of rice; Blight of Bean; Spot of tomato) and Viral diseases (Tungro of rice; Sugarcane Mosoic; Yellow leaf curl of tomato; Bentch top of banana; Mosoic of ground nut) Nano boosters and applications in seed dormancy, Germination for plant growth and developments.

Course Outcomes

1. The students are able to know the production of nanoscale devices through different ways like physical, chemical and biological. Hence, he can choose the non toxic way of nano device synthesis.
2. After getting knowledge in the best way of preparation of nano devices in a cost effective and environmentally benign manner, he can utilize his knowledge in medicine as well as in improvement of Crop production by using less pesticides and less fertilizers.
3. They gain knowledge in the preparation of bio-agricultural products.
4. They can learn the applications of nano material in Medicinal and Engineering fields.

External Elective/Open Elective

BOT-404B : ETHNOBOTANY AND PLANT DRUGS (EE)

Course Objectives

1. Study the interactions of people and plants ; Learn plant names, both scientific and local name ; Learn the structures, life cycles, and unique characteristics of the tribals.
2. Acquire an understanding of the importance of plants in our daily lives.
3. Identify local ethnobotanically useful species ; Patterns of human plant selection for food, medicine, poison, ritual and religion.
4. Physiology and biochemistry of useful plants ; Qualitative chemical analysis ; Intellectual property rights protocol.

UNIT I

Ethnobotany: Scope and importance, inter disciplinary approaches in Ethnobotany, tribals of Andhra Pradesh and their traditional usage of plants in medicine, food and other purposes. Applications of Ethnobotany. Study of medicinal plants from the following groups: Gymnosperms, Angiosperms (Ranunculaceac, Leguminosae, Apocynaceae, Asclepiadaceae, Solanaceae, Lamiaceae, Liliaceae and Zingeberaceae, etc)

UNIT II

Cultivation, Multiplication, Collection, Processing and Marketing: Macro and Micro Propagation and cultivation of medicinal plants; Multiplication of Medicinal Plants and Production of Specific Biologically Active Molecules through Tissue culture; Methods of collection, Processing, Storage, Market Potential and Trade of Plant Medicines. Adoption of GATT and TRIP, Intellectual Patent (property) Rights (IPR) & Intellectual Property Protection (IPP) for the plant medicines.

UNIT III

Phytomedicine: Systems of medicine, brief history, origin and scope of plant medicines, identification of locally available medicinal plants. Vitamins, Various secondary metabolites and Biosynthesis; Adulteration and Alternations of the Drugs. Macroscopy and microscopy of medicinally useful plant parts

such as leaves, stems, underground parts, flowers, fruits and seeds (Senna, Datura, Cinnamon, Cinchona, Ginger, Clove, Fennel, Nux-vomica & Ipecacuanha).

UNIT IV

Formulations, Diagnostic features and Biological activity of Plant Medicines: Formulations and dosage forms of plant medicines; Pharmacology and Pharmacognosy; Study of the important Diagnostic Features of Active Constituents, Quality, Purity; and Pharmaceutical uses of important Plant Medicines. Biological Active Principles of Established Herbal Medicines. Herbal Cosmetics and Dietetics.

Course Outcomes

1. Definition, history and scope of ethnomedicine ; Difference between folk and traditional medicines.
2. Use of some routinely used Ayurvedic drugs and formulations.
3. About drug adulteration and methods of detecting the same.
4. Phytochemical and biological screening of herbal drugs ; Preparation of some herbal formulations mentioned in the syllabus.

Suggested Books:

External Elective/Open Elective

BOT-404C : FOREST MANAGEMENT (EE)

Course Objectives

1. To inculcate the awareness to students related to forest and its importance.

2. To create the interest among students regading regeneration of forest plants.

3. To aware the economic importance of forest.

4. To train in the methods of preservation of forest for future generation.

UNIT – I

Florestic regions - Forest types of India – Different agroclimatic zones of India – Geographical distribution of Trees – Native and Exotic trees, Endemism and Endemic Trees – Impact of Global Warming and Climatic Change on Forest Plants – Forest Degradation – Natural calamities affects the forst and bioportified trees – Biovitamins of forest, Medicinal trees.

UNIT – II

Forest Biometry – Infuence of Forest on Environment – Climate, Edaphic, Physiographic and Biotic factors – Regeneration of Forest Plants; Concept and Objectives of Regeneration – Methods of Regeneration – Advantages and Disadvantages – Preparation, Maintenance and Management of site – Factors affecting Regeneration – Natural and Artificial Regeneration – Forest Plantation

UNIT – III

Timber Harvesting – Production and Productivity of Forests – Non Wood Forest Products – Harvesting, Post Harvesting, Handling, Marketing of Agroforestry Products – Timber Yielding Trees – Apiculture - Technology used to save Forests (NDRS) – Watershed Management and Improvement of Water availiability – Forest Research Institutes and their objectives.

UNIT – IV

Forest Conservation and Protection; and Laws – Definition and Concept of Conservation – *In situ* and *Ex situ* Conservation – National Forest Policy – Forest Conservation Rules and Amendments – Quarantine Laws –

Forest Resource Exchange – Forest Fires – Prevention and Management of Social Forestry – Diseases for Forest and Controlled Measures.

Course Outcomes

1. By studying this course student get awareness regarding the forest types and distribution and natural calamities affect the forest.
2. After completion of this course, student knows how to multiply the forest through regeneration of forest trees.
3. Student well aware related to forest products, produced by the forest, hence he/she also know how to collect the products to improve economic status.
4. Once student got the knowledge on forest economy, he try to conserve the forest by learning the methods and aquaintain the information by preventing diseases to the forest from this course.

Suggested Books

1. Forest Management 2015 by Davis L.S, CBS Publishers & Distributors.
2. The Hidden Magic of Forest – Rs.849-00
3. Hand Book on Forest Biology, Rs.669-00
4. Indian Forest and Forestry by Rohit Balyani 2011, Pointer Publishers.
5. Forest Management by C.K. Sreedharam, Rs.872—00
6. A Text Book on Economic Botany by AVSS Sambamurthy, N.S.Subramanyam (1989) published by Wiley Eastern Limited, New Delhi – 2
7. Forest Trees of South India (2020) by S.G. Neginhal Notion Press Publishers.
8. The Hidden Life of the Trees: What they feel and how they communicate by Petr Woilenben and Pradip Krishen (2016) Penguin Random House India Pvt. Ltd.

DEPARTMENT OF BIOTECHNOLOGY
S.V.U. COLLEGE OF SCIENCES
SRI VENKATESWARA UNIVERSITY: TIRUPATI

Course

M.Sc. BIOTECHNOLOGY

CHOICE BASED CREDIT SYSTEM (CBCS)

THE ACADEMIC YEAR 2023 – 24

About the Department

The Department of Biotechnology was established in 1995 as a research and teaching facility under the School of Biological and Earth Sciences and is currently under the College of Sciences. Its goal has been to train manpower in the area of Biotechnology to cater the needs of the country. The department provides rich educational experience to the students that include rigorous theoretical courses and practicals to understand the concepts of biotechnology. The interdisciplinary research programme envisages performing research of national and international prominence.

Vision:

- The vision is to become a leader and Centre of excellence in technology based training and innovative research in the fields of Plant, Agriculture, Animal and Medical Biotechnology.

Mission:

- The Department's academic and research programmes offer the students and research scholars value based, technology oriented education in a trusting and caring environment. The faculty strive to equip the students with technical expertise and knowledge to keep pace with the changes in technology and meet the new challenges in Life Sciences.

No.	Programme Specific Outcomes (PSOs)
PSO1	Acquire knowledge on the fundamentals of biotechnology for sound and solid base which enables them to understand the emerging and advanced biotechnology concepts in life sciences
PSO2	Acquire knowledge in domain of biotechnology enabling their applications in industry and research

Programme Objectives

- To gain necessary knowledge and develop specialized skills in the different areas of Biotechnology.
- To think critically and creatively about the use of biotechnology to address local and global problems.
- To implement the scientific skills for development of industrial applications and entrepreneurship

Programme Outcomes

Upon completion of the M.Sc. Biotechnology programme, the candidate should be able to:

No.	Programme Outcomes (POS)
PO1	Demonstrate knowledge for in-depth analytical and critical thinking to identify, formulate and solve the issues related to Biotechnology Industry, Pharma industry, Medical or hospital related organizations, Regulatory Agencies & Academia.
PO2	Develop an ability to solve, analyze and interpret data generated from experiments done in project work or practical courses in reaching conclusions.
PO3	Apply the knowledge based on research and other related methods to investigate the problem and provide valid conclusions
PO4	Design and develop methods to measure experimental data by following ethical principles
PO5	Demonstrate skills to use modern analytical tools/ software/ equipments to design & develop experiments and analyze and solve problems in various courses of biotechnology.
PO6	Appreciate and execute their professional roles in society as biotechnology professionals, employers and employees in various industries, regulators, researchers, educators and managers.
PO7	Augment and demonstrate the knowledge acquired to address environmental issues and evolve methods for sustainable development

PO8	Adopt code of ethics in professional and social context and demonstrate exemplary professional, ethical and legal behaviours in decision making.
PO9	Execute responsibilities efficiently in solving different issues as an individual/ member of team/ team leader
PO10	Apply written and oral communication skills to communicate effectively in healthcare, industry, academia and research
PO11	Acquire basic and advance skills in in various fields of biotechnology for self-employment and entrepreneurship
PO12	Develop skills, attitude and values required for self-directed, lifelong learning and professional development.

Programme Educational Objectives (PEOs)

- To make our students competent in the field of biotechnology and its allied areas.
- To inculcate the capability to work as entrepreneurs and techno managers with strong ethics and communication skills.
- To equip the students to pursue higher education and research in reputed institutes at national and international level.
- To develop a working knowledge of biotechnology product and processes.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 101	**Structure and functions of Biomolecules**	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Semester – I

Course Objectives:

1. To explore the knowledge and awareness of the basic principles and concepts of Biomolecules.
2. To acquaint the classification of carbohydrates, proteins, lipids and nucleic acids
3. To know the characteristic features of biomolecules
4. To understand the structure and functions of biomolecules

UNIT-I

Chemistry of carbohydrates - Definition and classification of carbohydrates. Outlines of structures and properties of important mono- (Glucose & Fructose), di- (Lactose, Sucrose, Maltose) and polysaccharides (Starch, Glycogen, Cellulose, Chitin). Physical and Chemical reactions of carbohydrates. Analysis of carbohydrates- Qualitative and Quantitative.

UNIT-II

Chemistry of amino acids and proteins - Classification of amino acids, Structures of amino acids, Chemical reactions of amino acids. Peptide bond - Nature of peptide bond, pi/φ rotation. Ramachandran plot, Secondary structure predictions, helices and beta-sheets, Determination of primary structure. Proteins and their classification, properties of proteins, determination of amino acid sequences (N and C terminus) Tertiary/quaternary structure of proteins (myoglobin/ hemoglobin model). Structural organization of proteins - Outline structures and biological functions. Protein folding and significance.

UNIT-III

Chemistry of lipids - Classification of lipids, Properties of lipids, Outline structures of saturated and unsaturated fatty acids, fats and waxes, phospholipids, glycolipids, cholesterol, prostaglandins, leukotrienes. Lipids as signaling molecules. Structure and functions of, heterocyclic molecules, porphyrins and vitamins.

UNIT-IV

Chemistry of nucleic acids - Structure of purines and pyrimidines, modified bases nucleosides and nucleotides; Properties of nitrogen bases and nucleotides, Structure, variation and properties of DNA and RNA. DNA denaturation and renaturation kinetics, Determination of DNA complexity, Hyperchromacity, Tm, cot curves and their significance.

Reference Books

1. Lehninger, A. L. (2012). Principles of Biochemistry (6th ed.). New York, NY: Worth.
2. Rodwell, V., Bender, D., Botham, K. M., Kennelly, P. J., & Weil, P. A. (2015). Harpers illustrated Biochemistry (30th ed.). McGraw Hill Professional.
3. Stryer, L. (2015). Biochemistry. (8th ed.) New York: Freeman.
4. Voet, D., & Voet, J. G. (2016). Biochemistry (5th ed.). Hoboken, NJ: J. Wiley & Sons.

Course outcomes:

The student will be able to

1. Understand the classification of carbohydrates and their biochemical functions.
2. Correlate the reactions of amino acids that are basis for identification tests and biochemical pathways.
3. Know the structure of different classes of lipids and their roles in biological systems.
4. Comprehend the structure and functions of nucleic acids

CO_4	3	2	3	2	-	-	1	-	1	1	1	1		2

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 102	Advanced Tools and Techniques	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To impart knowledge about the various analytical and biophysical techniques.
2. To make the student to be able to carry out purification and characterization of various biomolecules.
3. To educate the student to characterize the separated biomolecules by electrophoresis and spectroscopic techniques.
4. To familiarize with the concepts and the techniques of Radioactivity

UNIT-I

Isolation techniques - Cell disruption techniques - sonication, french press, enzymatic, non-enzymatic techniques. Isolation of proteins - salting in/out, ammonium sulphate fractionation. Nucleic acids - polar solvents precipitation. Lipids - extraction by differential solubility. Concentration of macromolecules flash evaporation, lyophilization, pressure dialysis, reverse dialysis, hollow fiber membrane filters and reverse osmosis. Microscopic studies (principles and applications): Light, compound, phase contrast, confocal and SEM and TEM.

UNIT-II

Principles and applications of gel-filtration, ion-exchange and affinity chromatography. TLC, GLC and HPLC. Basic principles of sedimentation, Types of centrifuges -Microcentrifuge, High speed & Ultracentrifuges; Preparative centrifugation; Differential & density gradient centrifugation; Applications (Isolation of cell components); Analytical centrifugation; Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods. General principles of electrophoretic techniques. Poly Acryl amide Gel Electrophoresis. Isoelectric focusing. Isotachophoresis. 2-D Electrophoresis. Capillary electrophoresis. Agarose gel electrophoresis of DNA and RNA. Blotting techniques. DNA fingerprinting.

UNIT-III

Electromagnetic spectrum of light. Principles, instrumentation and applications of UV-Visible, infrared, Raman, fluorescence, flame photometry, atomic absorption, plasma emission, ESR, ORD, CD, NMR spectroscopy. Spectrofluorimetry and mass spectrometry, X-ray diffraction. Flow cytometry.

UNIT-IV

Radioisotope tracer techniques - Nature and types of radioactivity, Preparation of labeled biological compounds. Labeling of carbohydrates (C^{14} acetate), proteins (S^{35} methionine, I^{125} aminoacid) and nucleic acids (P^{32} dATP). Detection and measurement of radioactivity. Autoradiography, Biological uses of radioisotopes, Safety guidelines.

Reference Books

1. D. Holme & H. Peck, Analytical Biochemistry, 3rd Edition, Longman, 1998.
2. Freifelder D., Physical Biochemistry, Application to Biochemistry and Molecular Biology, 2nd Edition, W.H. Freeman & Company, San Fransisco, 1982.
3. Keith Wilson and John Walker, Principles and Techniques of Practical Biochemistry, 5th Edition, Cambridge University Press, 2000.
4. Biophysical chemistry principles and techniques by Upadyay, Upadyay and Nath (Himalaya publishing).

Course outcomes:

The student will be able to

1. Learn about various techniques for isolation and concentration of macromolecules. They will also understand the principles and applications of different Microscopes
2. Understand the techniques of chromatography, centrifugation and electrophoresis
3. Achieve a basic understanding of characterization of biomolecules by different Spectroscopic techniques
4. Familiarize with the various radioisotope tracer techniques and their role in biology. Eventually they learn safety measures in handling radio-isotopes.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 103a	Microbiology and diseases	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course objectives:

1. To impart the knowledge on discovery and classification of microorganisms
2. To develop understanding on microbial nutrition, cultivation and growth pattern of microorganisms
3. To understand the concept of gene and its transfer mechanism in microbes.
4. To know about viral, bacterial, fungal and protozoan diseases in plants and animals

UNIT - 1: Introduction to Microbiology

Discovering the microbial world. Classification of microorganisms up to order level - bacteria, algae, fungi, protozoa.

Structure of prokaryotic and eukaryotic microorganisms. General and distinctive characteristics of the major groups of microorganism bacteria, mycoplasma, chalmidae, rickettsias, actinomycetes, fungi, algae, protozoa Prions and viruses.

Isolation, cultivation and enumeration of microorganisms - direct and indirect methods, Maintenance of culture.

Outlines of characterization and identification of common bacteria, fungi, algae and protozoa.

UNIT - II: Microbial nutrition, growth and regulation

Nutritional requirements to microorganisms - Mode of nutrition - phototrophy, chemotrophy - methylotrophy organotrophy, mixotrophy, saprophytic, symbiotic and parasitic, Interaction of microbes. Growth of microorganism (bacteria) - normal and biphasic growth curve, batch and continuous cultures, chemostats, shift up and shift down. Growth determination, Microbial metabolism - energy yielding and energy requiring processes. Control of microorganisms - principles, physical and chemical

agents, Assay of antimicrobial action. Batch and continuous sterilization .of media and air. Viruses - nature, cultivation and assay methods, structure, physico-chemical properties, classification, pathogenicity, Replication of viruses. Microbes of biotechnological importance - examples of bacteria, yeast, algae and viruses.

UNIT-III: Microbial Genetics

Chemical nature of gene, Concept of gene, operon, mosaic genes/split genes. Plasmids incompatibility. Classification: copy number, control and its significance. Structure and functions of insertion elements (IS) - transposable elements. Mechanism of transposition. Catabolic transposons and their significance. Horizontal transfer of genome among the microbial community - transformation, conjugation transduction - generalized transduction, specialized transduction - cotransduction. Benzer's classical studies on II locus. Cistron complementation - Elucidation of co-linearity between DNA and protein sequence. Genetics of viruses – bacteriophage, lambda, SV 40, retroviral genome (HIV), replication, lytic and lysogenic cascades.

Unit IV: Diseases caused by microorganisms

Viral diseases: Flu, Dengue fever, Hepatitis, Bacterial diseases: Cholera, tuberculosis, anthrox, Fungal diseases: Athlets foot, Dutch Elm disease, ergotism, Protozoa diseases (Protoctista): Malaria, Sleeping sickness, dysentery and Plant Pathogens: TMV, Rust

13. Industrial Microbiology by Cassida

Course outcomes:

The student will be able to

1. Acquire the knowledge on classification and structure of different microorganisms
2. Understand the microbial techniques for isolation, cultivation and maintenance of pure cultures
3. Learn structure, function of gene and its transfer methods
4. Develop understanding on cause, spread and control of diseases caused by different microorganisms

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 103b	Molecular Plant physiology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

This course enables the students to:

1. To understand about photosynthesis and detailed mechanism involved in the CO2 fixation by plants
2. To learn about Respiration and photorespiration
3. To impart knowledge about the structure and functionality of chloroplast protein and their encoding genes.
4. To know molecular mechanism of plant hormones action and molecular aspect of growth and development processes

Unit 1: Photosynthesis**:** Anatomy of chloroplasts, photosynthetic pigments, Structure of photosystems I and II and their coding genes, Molecular oxygen evolving complex, Photolysis of water; mechanisms of electron transport; Calvin cycle and its light/dark regulation. RuBisCO activities, C3, C4 and CAM pathways.

Unit 2: Photorespiration and Respiration: Photorespiration, Gross and net photosynthesis, Glycolysis, Citric acid cycle; Electron transport and ATP synthesis; Pentose phosphate pathway, Mitochondrial ATP synthase, Engineering or genetic modification of photorespiration

Unit 3: Photo morphogenesis: Molecular structure of phyto chrome, Photo conversion, Nuclear translocation of Pfr and modification of gene expression, Family of PHY genes and multiplicity of responses. Structure and function of Cryptochromes. Photoperiodism and biological clocks.

Unit 4: Plant Hormones: Overview about various plant hormones, Molecular mechanism of plant hormones action, Hormone receptors and signal transduction,

Gene expressions at developmental stages and stresses, Phytohormone signalling in plant defense mechanism, Cross-talk and molecular aspect of growth and development processes.

Book Recommended:

Text book:

1. Plant Physiology, 5th Edition by Lincoln Taiz and Eduardo Zeiger, Sinauer Associate (2010). ISBN: 978-0878938667
2. Plant Physiology, 4th Edition, by Salisbury F. B. and Ross C. W. (2004), Wadsworth Publisher, ISBN: 9788131501658, 8131501655

REFERENCE BOOK:

1. The Molecular Life of Plants by Russell L. Jones, Helen Ougham, Howard Thomas, Susan Waaland (2012) Wiley-Blackwell. ISBN: 978-0-470-87011-2
2. Plant Hormones under Challenging Environmental Factors by Ahammed, Golam Jalal, Yu, Jing-Quan (2016) ISBN 978-94-017-7758-2

Course Outcomes:

The student will be able to

1. Explain the detailed characteristics of chloroplast and mechanism of photosynthesis

2. Engineer photorespiration as well as apply other approaches to increase plant biomass

3. Gain the proficient knowledge about structure and functionality chloroplast protein and encoding genes as well as hormonal response on plants

4. Correlate phytohormone signalling in plant defense mechanism

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PS01	PS02

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 104a	Cell Biology and Genetics	04	4
Sessional Marks: 20			End Semester Examination Marks: 80

Course objectives:

1. To know the structure and functions of prokaryotic and eukaryotic cells and understand cell membrane composition and its functions
2. To impart knowledge on organization of genetic material
3. To develop understanding on mechanism of cell division and chromosomal abnormalities
4. To gain awareness on Mendelian genetics and role of mutations in evolution

UNIT -1: Cell and Cell membrane composition

Organization of prokaryotic and eukaryotic cell. Plasma membrance - Molecular organization, current model and function, Cytoskeleton - microtubules, cilia and flagella, Structure and function of cytoskeleton. Structure and function of endoplasmic reticulum, Golgi apparatus, Structure and function of lysosomes, peroxisomes. Structure and function of mitochondria and chloroplast.

UNIT - II: Nucleus and Chromosome organization

Nucleus - structure and function of nuclear membrane, nucleolus. Eukaryotic chromosome and its high resolution organization, DNA-histone interactions - formation of chromatin fibers - Hetero/Eu chromatin - structural transition - Histone-H1-significance in regulation of expression. Polytene and lamp brush chromosomes.

UNIT - III: Cell division and chromosomal variations

Mechanism of cell division - mitiotic apparatus, cytokinesis, chromosome movement - present concept – Regulation of eukaryotic cell cycle - Over view of cell cycle. Mutation causing cell cycle control. Meiotic process - stages, chromosome pairing,

chiasma formation molecular mechanisms of recombination, synaptonemal complex. Nondysjunction, Chromosomal abnormalities - euploidy, haploidy - their fundamental and practical significance. Polypliody - induction - Aneuploidy - type and genetic significance. Tumor biology - cell to cell interaction, cell adhesion, cell transformation mechanism and oncogenesis.

UNIT IV: Principles of genetics

Mendelian genetics, Linkage and gene mapping, Quantitative genetics and problems, Hardy Weinberg Law, Sex chromosomes and sex determination. Inbreeding, Mutagenesis - Types of mutations, mutagens, Molecular mechanisms of mutations, Spontaneous, induced mutations, reversion, suppression, and analysis of mutants. Role of mutagenesis in evolution, chromosomal deletions, duplications, inversions.

REFERENCES:

1. Cell Biology - De Robertes & De Robertes

3. The cell - Hooper
4. Cell and Molecular Biology - P.K.Gupta
5. Cell Biology- Verma and Agarwal
6. Cell Biology- Rastogi
7. Cell Biology-twyn

Course outcomes:

The student will be able to

1. Differentiate prokaryotic and eukaryotic cell
2. Understand the organization of genetic material in lower and higher organisms
3. Appreciate the mechanism of mitotic and meiotic process and identify the abnormalities
4. Understand the molecular mechanisms of mutations and its importance in in evolution

CO_4	3	3	3	3	3	3	2	2	3	2	-	3	1	-

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 104b	Molecular Genetics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course objectives:

1. To know the Principles of Segregation
2. To impart knowledge on sex determination in drosophila, birds, man
3. To develop understanding on modern concept of gene and transposons
4. To gain awareness on mechanism of genetic transfer in bacteria

UNIT – I: Recapitulation of Mendelian Principles

Principles of Segregation; Laws of inheritance dominance, recessiveness, laws of segregation, Dihybrid and trihybrid ratios- laws of independent assortment-test cross and back cross. Incomplete dominance- eg: flower colour, chromosomal theory of inheritance.

Extension to Mendel's laws- Multiple allelism eg. Coat colour in rabbits, eye colour in drosophila, ABO blood groups, incompatibility and pseudoallelism

UNIT-II: XY-chromosomes

Sex determination in drosophila, birds, man. X-linked inheritance, haemophilia, colour blindness, Y-linked inheritance- holandric genes. Mechanisms of sex determination – Simple Mechanisms, The balance concept of Sex determination. Mosaics and Gynandromorphs. Sex differentiation. Sex-influenced dominance; Sex-linked inheritance- Morgan's discovery of sex linkage in drosophila. Patterns of inheritance of Sex-linked genes.

Unit- III: Gene as a unit of expression

Modern concept of gene, co-linearity of gene and polypeptide, types of genes (constitutive, structural, regulatory, luxury, overlapping, split genes etc.,)

Biology of plasmids: Types of plasmids, incompatibility grouping, control of copy

number replication of Col E1 and F plasmid.

Transposons: Transposable elements in prokaryotes and eukaryotes, types of bacterial transposons - insertional sequences, complex transposons, Mechanisms of transposition (Replicative and Non replicative), Transposable viruses and retroposons. Complex transposons-Tn10, Tn5, Tn9 and Tn3 as examples. Mechanisms, control consequences and applications of transposition by simple and complex elements.

UNIT-IV: Mechanism of genetic transfer in bacteria

Transformation, Transduction, Conjugation. Mapping of bacterial chromosome. Genetic recombination in bacteria, models and mechanism, role of rec A proteins.

Homologous Recombination, Holiday junction, gene targeting, gene disruption, FLP/FRT and Cre/Lox recombination, Rec A and other recombinases.

Viral genetics: Organisation of genome in Lambda, T4 phage, φx174 and M13.

BTH 105 P	Bio-molecules and Advanced Tools and Techniques	04	4
Sessional Marks: 20			End Semester Examination Marks: 80

Course objectives:

1. To know the technique of analysis of carbohydrates and proteins
2. To know the technique of analysis of lipids
3. To know the technique of separation of pigments and amino acids
4. To know the technique of separation of proteins and nucleic acids using electrophoresis

Practical –I: BIO-MOLECULES AND ADVANCED TOOLS AND TECHNIQUES

1. Estimation of reducing sugars by benedict's titrimetric method
2. Estimation of total carbohydrates by anthrone method
3. Estimation of proteins by Lowry and biuret methods
4. Estimation of cholesterol
5. Separation of chlorophyll pigments by paper chromatography
6. Separation of amino acids/ sugars/ lipids by thin layer chromatography
7. Ultra violet absorption spectra of nucleic acids and proteins
8. Polyacrylamide gel electrophoresis of proteins
9. Agarose gel electrophoresis of nucleic acids
10. Determination of isoelectric point of glycine

Reference Books

Practical – II: Microbiology and Cell Biology

Course objectives:

1. To know the technique of preparation of media
2. To know the skill of Isolation and enumeration of microorganisms
3. To know the technique of staining of microorganisms
4. To gain knowledge about cell division

1. General laboratory rules and regulations.
2. Preparation of culture media.
3. Isolation and enumeration of microorganisms from soil by the serial dilution-agar plating method.
4. Methodology for obtaining pure culture of microorganisms.
   a) Streak plate method.
   b) Spread plate method.
   c) Pour plate method.
5. Simple staining.
6. Grams staining.
7. Determination of bacterial growth turbidity measurements (Spectrophotometric method).
8. Antibiotic sensitivity testing by disc diffusion method
9. Mitosis in onion root tip cells: All phases (Squash method).

10. Meiosis in onion flower buds: All phases including zygotene, diplotene and diakinesis of

    Prophase I (Smear method).

Reference Books

Semester - II

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 201	Enzymes and Intermediary Metabolism	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To provide knowledge on classification, nomenclature, isolation, and purification of enzymes
2. To educate them to understand the importance of energy relationships and its transformation in living organisms
3. To explain the metabolic pathways involved in biosynthesis of macromolecules
4. To impart awareness on the types and symptoms of metabolic diseases and their inheritance

UNIT-I

Classification of enzymes and their significance - Isolation and purification of enzymes - assay of enzyme activity. Determination of KM, Vmax and K cat. Enzyme inhibition - competitive, non-competitive, uncompetitive allosteric regulation and irreversible enzyme inhibition. Enzyme action, Active site determination. Isoenzymes - detection, characterization and significance. Ribozymes, Abzymes, multicomplex and multifunctional enzymes.

UNIT-II

Bioenergetics - Free energy change in biological transformations, thermodynamic principles in biology, Redox potential, high energy compounds. Glycolysis - Biochemical steps involved in glycolytic pathway, TCA cycle and their Regulatory mechanisms. Glyoxalatye cycle, gluconeogenesis, HMP shunt, interconversion of hexoses and pentoses, amylogenesis, glycogen metabolism.

Brief account of enzymes and co-enzymes involved in biological oxidations, Organization of respiratory electron transport system. Mechanism of oxidative phosphorylation. Biological energy transducers, Chemiosmotic regeneration of ATP.

UNIT-III

Biosynthesis, degradation and regulation of saturated fatty acids. Degradation of lipids from membranes, Oxidation of unsaturated fatty acids and synthesis of UFA by enzymatic (synthesis of prostaglandin and leukotrines) and non-enzymatic (free radicals and lipid peroxidations) mechanisms. Cholesterol and ketone bodies. Metabolism and regulation. Metabolism of triglycerides, phospholipids, glycolipids.

UNIT-IV

Metabolism of amino acids and proteins - Hydrolysis of proteins, proteases, Biosynthesis of essential amino acids and their catabolism (deamination, decarboxylation, and transamination), Coordinated control of metabolism, Formation of ammonia and urea. Nitrogen fixation by bacteria. Metabolism of purines and pyrimidines, Biosynthesis and catabolism of Nucleosides and nucleotides, role of DNases and RNases on nucleic acids. Outlines of biosynthesis of porphyrins (Chlorophyll and Haeme). Inborn errors in metabolism - Phenylketonuria, Alkaptonuria, Sickle cell anaemia, Fructosaemia, galactosuria, Gaucher's and Krabbe's disease.

Reference Books

1. Principles of Biochemistry: White. A, Handler, P., and Smith.
2. Biochemistry, Lehninger A.L.
3. Biochemistry, David E. Metzler.
4. Biochemistry, Lubert Stryer.
5. Review of Physiological Chemistry: Harold A. Harper.
6. Outlines of Biochemistry, Conn and Stummf.

7. Text of Biochemistry, West and Todd.
8. Metabolic Pathways - Greenberg,
9. Biochemistry, 2na Edition, G. Zubay (1988). Practical Course
10. Practical Biochemistry - H. Varley.
11. Methods in Enzymology S.P. Colowick & N.O. Kapalan, Academic Press.
12. Methods in Biochemical analysis.

Course outcomes:

Students will be able to

1. Gain knowledge on different enzymes and their significance
2. Correlate how the living organisms exchange energy and matter with the surroundings for their survival, and store free energy in the form of energy-rich compounds
3. Recognize how the catabolic breakdown of the substances is associated with release of free energy; whereas, free energy is utilized during synthesis of biomolecules i.e., anabolic pathways
4. Apply the knowledge of metabolic pathways to biotechnological and biochemical research.

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PS01**	**PS02**

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 202	Molecular Biology	04	4
Sessional Marks: 20			End Semester Examination Marks: 80

Course Objectives:

1. To provide comprehensive background of Salient features of Nucleic acids, DNA models and its replication to the course learners.
2. To impart detailed understanding of key events of transcription and post transcriptional modifications
3. To develop understanding of translational process in protein biosynthesis in prokaryotic and eukaryotic organisms
4. To make them understand the regulation of catabolic and anabolic gene expression

UNIT-I

DNA replication - Enzymes involved in DNA replication. Accessory proteins. Structures of oriC. Replisome – oriC - accessory protein interactions - Mechanism of formation of oriC open complex. Replication initiation – elongation - Okazaki fragments synthesis and processing - Direction of replication fork movement. Termination - Nature of termination sequences - Interactions between polymerase III and ter sequences. Mode of DNA replication Messelson and Stahl experiments. Replication of single stranded DNA -ØX174. Replication of bacteriophage lambda DNA (rolling circle). Replication of closed covalent circular DNA (θ model of DNA replication). Problems associated with replication of linear DNA molecules - Structure and synthesis of telomere sequences. Cell cycle and its regulation - Interplaying of cell cycle and DNA replication.

UNIT-II

Prokaryotic RNA polymerase - σ factors: -σ 70, σ32, σ54 , σ28 promoter elements- Structural differences between E σ 70, σ54 dependent promoters - Promotor

polymerase interaction - Foot printing assays - Mapping of transcription start point (TSP). Gene structure, Upstream activating sequences and their role in regulation of transcription. Transcription elongation and termination. Eukaryotic RNA polymerases - Transcription factors – transcription. Structure and functions of RNA pol I, II and III dependent promoters. Enhancer sequences. Post transcriptional modification of RNA and its regulation, Mechanism of tissue specific transcription.

UNIT-III

Translation - Central dogma theory and flow of genetic information, Genetic code and its elucidation, Wobble hypothesis, Structure and composition of prokaryotic and eukaryotic ribosomes, Structures of mRNA and tRNA. Events of protein synthesis (amino acid activation, initiation, elongation and termination) in prokaryotes and eukaryotes. Post-translational modification of proteins, Inhibitors of translation. Protein trafficking - Concept of signal peptide - transport and membrane targeting of proteins - Sec pathway - Alternative protein transport mechanisms.

UNIT-IV

Regulation of gene expression. Constitutive and inducible gene expression, Use of mutants in gene expression. P and O site determination. Regulation of catabolic gene expression Eg: lac operon, ara operon and gal operon. Regulation of anabolic gene expression Eg: Trp and His operons. Hormonal regulation of genes.

3. Molecular Biology and Biotechnology 2na ed. J.M. Walker and E.B. Gingold. Panima Publications. PP 434.
4. Dictionary of microbiology and molecular biology. 2nd ed. 1994. Sigleton. P. and Sainsbury, D. Sciential Publication.
5. Molecular Biology of the Gene, 1S87. 4th Ed. J.D. Watson, N.H.Hopkins, J.W. Roberts, J.A. SteitzandA.M. Weiner, 2 Vol. Benjmin/Cummings.

Course outcomes:

1. Understand the biochemical composition and genome organization in living cells
2. Learn about the mechanism of tissue specific transcription and role of RNA polymerases
3. Appreciate the correlation of genetic code with protein synthesis in prokaryotic and eukaryotic cells.
4. Gain insights of mechanism of gene expression and regulations

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PS01**	**PS02**

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 203 a	Immunology	04	4
Sessional Marks: 20			End Semester Examination Marks: 80

Course Objectives:

1. To provide knowledge on the types of immunity and the immune organs
2. To demonstrate the structure of antibody types and their interaction with antigen
3. To acquaint them with the hybridoma technique and its clinical applications
4. Explain the concept of hypersensitivity, auto immunity and tumer immunology

UNIT-I

Types of immunity – innate, acquired, passive and active. Organization and structure of Lymphoid organs – bone marrow, thymus, spleen and lymph nodes. Cells of the immune System – B-Lymphocytes, T-Lymphocytes. T-cell receptor – structure and function.

Macrophages. Types of cell mediated immunity and lymphocyte activated killer cells. Clonal nature of immune response, Immunological memory. Immuno regulation. Adjuvants and immunological tolerance.

UNIT-II

Nature of antigens and antibodies. Structure and function of antibodies. Isotypes, Allotypes and Idiotypes. Antigen – antibody interactions. The generation of antibody diversity, antigen receptors on B & T lymphocytes. Major Histocompatibility Complex (MHC). Human leukocyte antigens (HLA), MHC restriction and typing. Lymphokines, effector cell mechanisms, genetic control of immune response. Complement system.

UNIT-III

Immunological techniques - ELISA, RIA, Western Blot, Immunoblot and Immuno fluorescent techniques. FACS. Hybridoma technology - production and applications of monoclonal antibodies. Antibody engineering, chimeric antibodies.

UNIT-IV

Hypersensitivity - types of hypersensitivity - immediate and delayed hypersensitivity,

autoimmune diseases, transplantation and immunity, immunity to infectious agents. Vaccines and Vaccination, types of vaccines including new generation vaccines. Tumor immunology.

Reference Books

1. Essentials of Immunology by Roit (ELBS).
2. Immunology by Roit et.al (Harper Row).
3. Text book of Immunology by S.T,Barrot (Mosby).
4. Immunology by Kubay.
5. Principles of Microbiology and Immunology by Davis et.al., (Harper).

Course outcomes:

The student will be able to

1. Out line, compare and contrast the key mechanism of innate and adaptive immunity
2. Apply knowledge in disease diagnosis through serological tests
3. Develop skill in production of monoclonal antibodies
4. Gain knowledge on undesirable immunological reactions and their complications in health management

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PS01**	**PS02**

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 203b	Cancer Biology	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

1. To understand the fundamentals of cancer biology
2. to understand the Principles of carcinogenesis
3. To gain knowledge about Principles of molecular cell biology of cancer
4. Understand the c Principles of cancer metastasis and ddifferent forms of therapy

Unit I

Fundamentals of cancer biology: Introduction to Cancer Biology, Tumor suppressor genes, modulation of cell cycle in cancer, Different forms of cancers, Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer

Unit II

Principles of carcinogenesis: Theory of Carcinogenesis, Chemical carcinogenesis, principles of physical carcinogenesis, X-ray radiation-mechanisms of radiation carcinogenesis, Diet and cancer.

Unit III

Principles of molecular cell biology of cancer: Signal targets and cancer, activation of kinases; Oncogenes, identification of oncogenes, retroviruses and oncogenes, detection of oncogenes, Oncogenes/proto oncogene activity, Growth factors related to transformation, Telomerases.

Unit IV

Principles of cancer metastasis: Clinical significances of invasion, Metastatic cascade, Basement membrane disruption, proteinase and tumor cell invasion. New molecules for cancer therapy: Different forms of therapy, chemotherapy, radiation therapy, detection of cancers, prediction of aggressiveness of cancer, advances in cancer detection. Use of signal targets towards therapy of cancer; Gene therapy

Course outcomes:

The student will be able to

1. To understand cancers, the mechanisms involved from theory concept, experimental, research and human health-care perspectives
2. To acquire the required experimental skills in cancer biology from research and human healthcare perspectives

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 204a	Research methodology, Biostatistics and Bioinformatics	04	4
Sessional Marks: 20 Marks: 80		End Semester Examination	

1. To develop understanding about principles of carcinogenesis
2. Acquire knowledge on signal targets towards therapy of cancer and Gene therapy

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PS01	PS02

CO_4	3	3	3	3	3	1	-	1	3	3	3	3	1	-

Course Objectives:

1. To choose the appropriate research design and develop appropriate research hypothesis for a research project
2. To describe the appropriate statistical methods required for a particular research design
3. To get introduced to the basic concepts of Bioinformatics and its significance in Biological data analysis
4. To provide knowledge about the basics of sequence alignment and analysis.

UNIT-I

Preparation of informal proposal, modified proposal and formal proposal. Experimental design

and Collection of results, submission of progress report (year wise) and submission of technical

report (Format: Title page, Introduction, Aims of the proposal/research, methodology,

results, references, acknowledgments, budgetary preparation). Submission of final technical report. Patenting and intellectual property rights.

UNIT-II

Brief description and tabulation of data and its graphical representation. Measures of central tendency and dispersion - mean, median, mode, range, standard deviation, variance. Simple linear regression and correlation. Types of errors and level of significance. Tests of significance – F & t tests, chi-square tests, ANOVA.

UNIT-III

Introduction to Bioinformatics – Genomics and Proteomics. Bioinformatics – Online tools and offline tools. Biological databases. Types of data bases – Gen bank, Swiss port, EMBL, NCBL, and PDB. Database searching using BLAST and FASTA.

UNIT-IV

Multiple sequence alignment and Dynamic programming. Gene and Genome annotation – Tools used. Physical map of genomes. Molecular phylogeny - Concept methods of tree construction. Protein secondary structure prediction. Protein 3D structure prediction. Protein docking. Introduction to homology modeling, Computer Aided Drug Design (CADD) in Drug discovery.

Reference Books:

1. Bioinformatics – D.Mount

6. Statistical Methods by G.W.Snedecor & W.G.Cochran.
7. Fundamentals of Biostatistics – Khan & Khanum.
8. Fundamentals of Biostatistics by U.B.Rastogi (Ame Books Ltd).

Course outcomes:

The student will be able to

1. Discuss the various steps involved in conducting research
2. Learn to apply hypothesis testing via some of the statistical distributions
3. Develop understanding about Biological data and database search tools
4. Acquire hands on training on various computational tools and techniques employed in Biological sequence analysis

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 204b	Proteomics	04	4
Sessional Marks: 20		End Semester Examination Marks: 80	

Course Objectives:

This course enables the students to:

1. To organize protein in four structural levels: Primary, Secondary, Tertiary and Quaternary, study on post translational modifications, structural determination and folding
2. Extend comprehensive knowledge about characterization, tools and techniques in determination of abundance of protein in particular tissue and its quantification.
3. Obtain information about atomic mass, amino acid sequence and basic physical and chemical properties of protein, the technology used in determining these informations.
4. Gain knowledge about the production of industrial important proteins and enzymes, designing new proteins with special functions and storage and use of proteomics database.

UNIT-I:

Protein Basics: Proteomics basics, Forces that determine protein structure and physicochemical properties, Mechanisms of protein folding, Molten globule structure, Characterization of folding pathways.

UNIT-II:

Protein isolation and profiling: Method for protein isolation and purification, Profiling by Native-PAGE, SDS-PAGE, 2-D/IEF SDS-PAGE, staining and de-staining, imaging and analysis of 1-D and 2-D gels.

UNIT III: Protein characterization: Protein sequencing using various methods, Protein identification by mass spectrometry, Determination of post translation

modification, Proteomics tools and databases, Thermal, enzymatic, physical, pressure, solvents, interactions effect on protein, Application of DSC, Protein denaturation, aggregation and gelation.

UNIT IV: Protein structure: Background and basic principles of various spectroscopic techniques used for protein structure determination, Absorption and fluorescence, Circular dichroism, FT-Raman, FT-IR, NMR, Protein crystallization and X-ray crystallography, MALLS.

Development of novel proteins**:** Basic concepts for design of a new protein, Site directed mutagenesis for specific protein function, Specific examples of novel engineered proteins. 8L

Reference Books:

1. Carl, Branden and Tooze, John. Introduction to Protein Structure, Garland Publishing (Taylor and Francis Group). New York.
2. Yada, R. Y.; Jackman, R. L.; Smith, J. L. Protein Structure-Function Relationships Blakie Academic and Professional: London
3. Clark, R. J. H and Hester, R. E. Spectroscopy of Biological Systems, John Wiley and Sons, New York
4. Nakai, S. and Modler, H. W. Food Proteins: Properties and Characterization, VCH Publishers, New York.

Course outcomes:

At the end of the course, a student should be able to:

1. Handle a proteins and its characterization.
2. Know the principles of proteome quantification.
3. Demonstrate how various types of mass spectrometers (e.g. Orbitrap, triple-quad, Q-TOF) can be used for proteome quantification, structure determination of proteins by various methods.
4. Use software tools to analyse various quantitative proteomic data types, Principles of statistical analysis of proteomic data, how quantitative proteomics can be applied in biology, clinical research and drug discovery and

designing novel proteins.

Practical –I: Enzymology, metabolism and Molecular Biology

Course Objectives:

This course enables the students to:

1. To organize protein in four structural levels: Primary, Secondary, Tertiary and Quaternary, study on post translational modifications, structural determination and folding
2. Extend comprehensive knowledge about characterization, tools and techniques in determination of abundance of protein in particular tissue and its quantification.
3. Obtain information about atomic mass, amino acid sequence and basic physical and chemical properties of protein, the technology used in determining these informations.
4. Gain knowledge about the production of industrial important proteins and enzymes, designing new proteins with special functions and storage and use of proteomics database.

1. Assay of amylase from Saliva.
2. Assay of urease from Horse-gram.
3. Assay of acid phosphatase from Potato.
4. Determination of optimal conditions for SDH activity.
5. Determination of effect of substrate concentration on SDH activity.
6. Determination of effect of enzyme concentration on SDH activity.
7. Determination of effect of temperature on SDH activity.

8. Determination of effect of P^H on SDH activity.
9. Estimation of activity of SGOT.
10. Estimation of activity of SGPT.
11. Isolation of DNA from bacterial, plant and animal cells.
12. Estimation of DNA by Diphenylamine method.
13. Isolation RNA from yeast cells.
14. Estimation of RNA by Orcinol method.
15. Estimation of DNA and purity determination by UV absorption method.
16. Determination of melting temperature (Tm).
17. Isolation of plasmid DNA from E. coli.
18. Transformation of E. coli with ampicillin resistant plasmid.

Sessional Marks: 20		End Semester Examination Marks: 80	

Practical –II: Immunology, Biostatistics and Bioinformatics

Course Objectives:

This course enables the students:

1. To gain knowledge about Determination of A, B, O and Rh blood groups in human beings
2. To gain knowledge about immunological techniques
3. Extend comprehensive knowledge about different biostatistical analysis
4. Obtain information about bioinformatic methods of analysis of proteins and nucleic acids

1. Determination of A, B, O and Rh blood groups in human beings.
2. Ouchterloney double diffusion.
3. Radial immunodiffusion.
4. Immunoelectrophoresis.
5. Enzyme Linked Immunosorbent Assay (ELISA).
6. Diagnostic test for typhoid fever by Widal test.
7. Measures of Location.
8. Measures of Dispersion.
9. Correlation Analysis.
10. Regression Analysis.
11. Student Paired t-Test.

12. X^2- Test of Independence of Attributes.
13. Introduction and use of various genome databases.
14. Sequence information resource: Using NCBI, EMBL, Genbank, Entrez, Swissprot/
15. TrEMBL, UniProt.
16. Similarity searches using tools like BLAST and interpretation of results.
17. Multiple sequence alignment using ClustalW.
18. Use of various primer designing and restriction site prediction tools.
19. Phylogenetic analysis of protein and nucleotide sequences.
20. Sequence alignments.
21. Sequence and structure visualization

SEMESTER –III

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 301	Genetic Engineering	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge about major events in the development of rDNA technology
2. To acquire skills on techniques of construction of recombinant DNA - Cloning vectors and isolation of gene of interest.
3. To familiarize with the concepts of constructing genomic DNA library and cDNA library
4. To understand the principles and applications of Polymerase Chain Reaction (PCR).

UNIT-I

Requirements and steps involved in gene cloning, Isolation of gene/DNA fragments. Purification of genes. Enzymes used in gene cloning: Restriction endonucleases – types, nomenclature and properties. DNA polymerases-I, polynucleotide kinase, DNA ligases, terminal nucleotide transferases, Reverse transcriptase, alkaline phosphatases, S_1 nucleases. Production of DNA fragments with cohesive ends and blunt ends and their significance, vectors and hosts.

UNIT-II

Vectors for construction of genomic libraries - cosmids, bacterial artificial chromosomes (BACs), yeast artificial chromosomes (YACs) - vectors for construction of cDNA libraries - lamda ZAP. Multipurpose vectors - pUC 18/19, Blue script vectors - multiple cloning site - Strategies for unidirectional deletion of cloned DNA fragments - Generation of sequence of cloned DNA fragments. Site directed

mutagenesis.

Expression vectors – structure - promoters used in expression vectors - *lac, tac, λpL*, T7 promoters and their significance in constructing expression vectors. Promoter-probe vectors – Structure promoter probe vector - Reporter genes (*lacZ*, *gf*p, gus, luciferase) and strategies used to assay promoter activity. Vectors used for cloning in to mammalian cells - SV40. Vectors - Cloning in plants by Ti and Ri vectors.

UNIT-III

cDNA synthesis - Mechanism of cDNA synthesis, Strategies used to obtain full length cDNA. 5' and 3' RACE. Chemical synthesis - solid phase synthesis of oligonulceotides - Designing of gene from amino acid sequences, *In vitro* synthesis of gene. Ligation of foreign DNA to vectors – cohesive and blunt ends methods –linkers, homopolymer tailing and adaptors.

UNIT-IV

Cloning stratergies – cloned gene transfer techniques – transformation, transfection, electroporation, lipofection, microinjection and biolistics. Screening of cloned genes and their expression – nucleic acid probes, colony and fluorescent in-situ hybridization, DNA micro array technology. PCR – concept and technology – types (real time, inverse and multiplex) and its significance. Analysis of DNA polymorphism: RFLP, RAPD, AFLP techniques. Applications of genetic engineering.

Reference Books

1. DNA replication, 2nd ed. 1991. A. Kornberg and T.A. baker. W.H. Freeman and Company, New York. Ny. PP931.
2. Gene transfer and expression protocols: Methods in Molecular Biology, Vol.7,1991. E.J. Murray Ed. Human Press, Clifton, NJ. PP 439.
3. Genes IV, 1990. B. Lewin. Oxford University Press. PP 857.
4. Microbial genetics. 1994. Freifelder, D. Springer.
5. Gene regulation, 2nd ed. 1994. D, latchman. Sciential Publication.

6. Bacterial and Bacteriophage genetics. 1994. E.A. Birge. Springerscan Publication.
7. Genetics: A molecular approach. 2nd ed. 1992. T.B. Brown. Panima Publications. PP 496.
8. Principles of Gene Manipulation. 1991. R.W. Old and S.B. Prim-Rose. 2nd ed. Blackwell Scientific.

Course outcomes:

The student will be able to

1. Familiar with the tools and techniques for isolation and purification of genes
2. Acquire knowledge on vectors for construction of genomic libraries and cDNA libraries
3. Understand the mechanism of cDNA synthesis
4. Know the techniques for transfer and expression of cloned gene and applications of genetic engineering in biological research.

PO Attainment														

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 302	Food and Industrial Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge about the principles of food preservation and processing
2. To make the student to be learn about various aspects of the Nitrogen fixation and mass production of bio fertilizers
3. To educate the student about bioenergy and its production.
4. To give insight on role of microorganisms in environment and their applications in food and dairy Industry

UNIT-I

Scope of biotechnology in the food and drink industry: Contamination of foods by pesticides, fertilizers, industrial waste and chemical contaminants. Principles under lying food spoilage - chemical, physical and physiological changes caused by microorganisms. Control measures for food poisoning. Principles of food preservation, foods produced by microorganisms. Milk and Dairy products, Cereal products, Brewing, Protein products, Food additives and ingredients, Fruits and vegetables, large scale cultivation of edible mushrooms, meat and sausage products.

UNIT-II

Nitrogen fixation and mass production of biofertilizers - diazotrophic microorganisms, Biochemical aspects of diazotrophy. Genetics of free living and symbiotic diazotrophs. Blue Green Algae and Azolla, Micorrhizae, Vermiculture, Mass cultivation of commercially valuable macro and micro algae for agar agar, alginates, single cell protein and other products.

UNIT-III

Energy and Biotechnology: Biomass, solar energy technology, Agriculture and forestry, conversion to fuel, bio fuel cells and other devices. Biogas production – design and types of biogas digesters. Production of biohydrogen. Microbial leaching, Metal transformation, accumulation and immobilization by microbes. Application of microbes in mining and petroleum industry. Microbial enhanced oil recovery. Biodegradation of xenobiotic compounds, Hazards from xenobiotics.

UNIT-IV

Materials and Biotechnology: Biomolecules production - microbial polysaccharides, organic acids, amino acids, vitamins, antibiotics, enzymes, alcohols, food flavors, significance of Agrobacterium in enhancing food quality and yield Microbial toxins. Pharmaceuticals - vaccines, hormones, diagnostics. Applications of enzymes in industry and medicine; immobilized enzymes - their preparation and applications. Use of microbes in biodegradation of organic wastes. Industrial production of fungal, bacterial and viral biopesticides.

16. Industrial microbiology, Prescott and Dunn. 1997. Ed. Gerald Reed.

Course outcomes:

The student will be able to

1. Acquire knowledge on food preservation, processing and control measures for food poisoning
2. Establish indoor and outdoor cultivation units for algal cultivation
3. Learn effective management of solid waste for energy production.
4. Appreciate the industrial role of microorganisms in production of biomolecules

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303 a	Bioprocess Engineering and Technology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge about Isolation, screening and maintenance of industrially important microbes
2. To make the student to learn about fermentation technology
3. To educate the student to gain knowledge in reaction kinetics, kinetics of enzyme catalyzed reactions
4. To familiarize with the concepts and the techniques of bio separation

UNIT-I

Isolation, screening and maintenance of industrially important microbes; microbial growth and death kinetics (an example from each group, particularly with reference to industrially useful microorganisms); Strain improvement for increased yield and other desirable characteristics.

UNIT-II

Bioreactor designs; types of fermentation and fermenters; Concepts of basic modes of fermentation – batch, fed batch and continuous; conventional fermentation v/s biotransformation; Solid substrate, surface and submerged fermentation; Fermentation economics; Fermentation media; Fermenter design - mechanically agitated; pneumatic and hydrodynamic fermenters; Large scale animal and plant cell cultivation and air sterilization: Upstream processing; media formulation; sterilization; aeration and agitation in bioprocess; Measurement and control of bioprocess parameters; Scale up and scale down process.

UNIT-III

Kinetics of Enzyme catalyzed reactions - immobilization - Kinetics of immobilized

enzyme catalyzed reactions - Kinetics of balanced growth - Transient growth kinetics. Gas-liquid mass transfer in cellular systems - Aeration – Agitation - Estimation of oxygen transfer rates.

UNIT-IV

Bioseparation - filtration, centrifugation, sedimentation, flocculation; cell disruption; Liquid-liquid extraction; Purification by chromatographic techniques; reverse osmosis and ultra filtration; drying; crystallization; Storage and packaging; Treatment of effluent and its disposal. Large scale production and purification of recombinant therapeutics (streptokinase, epidermal growth factor, insulin).

2. Biochemical engineering. 1992. James.M. Lee Prentice -Hall.
3. Biochemical engineering Fundamentals, 2ed 1986 J.E. Bailey and D.F.Oilis. Me Graw-Hill Publication.
4. Chemical Process Control: An Introduction to theory and practice. 1984.G. Stephanopoulos, Prentice-hall.
5. Modeling and controlling of fermentation Process. Ed. J.R. Leigh.
6. Biochemical Engineering by S. Aiba, AE Humphery, NF Millis, University, of Tokyo Press.
7. Chemical Engineering by JM Coulson and JF Richarson, Pergamen Press.
8. Fundamentals of Biotechnology by P. Prave, U. Faust W.Sitting and DASukatsch, VCH.
9. A Text Book on Biotechnology by HD Kumar, Affliated East West Press Private Ltd.

Course outcomes:

The student will be able to

1. Handle the axenic cultures of industrially important microbes and appreciate the relevance of microorganisms from industrial context.

2. Gain an overview on design, operations and types of fermentation systems
3. Calculate yield and production rates in a biological production process, and also interpret data
4. Apply knowledge on separation and purification of end products of fermentation

BTH 303 b	Legal, Ethical and Implications of Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination**
Marks: 80			

Course Objectives:

1. To make them understand the concept of intellectual property rights and its importance in biotechnology
2. To acquaint them to identify legal and ethical issues raised in Biotechnology
3. To make them know the social and moral implications in biotechnology research.
4. To impart knowledge on pros and cons of genetically modified foods and microbes

UNIT-I

Intellectual property rights - Definition - types -patents - copy rights-trademarks: essential requirements for IPR, procedures of filing patents-provisional and complete specifications-Pan-Co-operation treaty (PCT)-application: GATT and IPR: WTO Act - Global and Indian Biodiversity Act- Indian Patent Act and their revised versions.

UNIT-II

Legal and Ethical aspects of Biotechnology -Prenatal diagnosis - Genetic screening - Surrogate mothers and exploitation of women - designing of plants and animals- gene therapy - cloning - Manipulation of human genome -Technology transfer.

UNIT-III

Social and Moral aspects of Biotechnology -Biotechnology and International trade - Privatization and patenting of Biotechnology products - Role of Government, Industries and society in promoting, accepting and regulating the rDNA research.

UNIT-IV

Environmental and Health aspects of Biotechnology - Generally engineered organisms - Introduction of novel species and natural equilibrium - Environmental security and safety -Precautionary measures - Genetically modified foods - health safety.

Reference Books

1. Gene Cloning – Brown.
2. Concepts in Biotechnology- Balasubramanyam.D.
3. Basic Biotechnology - Colin Rotledge and Kristainsen.
4. Gene Biotechnology – Jogdand.
5. From Genes to Clones, Introduction to Gene Technology-Winnacker, Ernst.L.
6. Safety, Moral, Social and Ethical issues related to genetically modified foods - Smith J.E.
7. Molecular Biology and Biotechnology - Meyer R.A.
8. Environmental Biotechnology- Forster and wase.
9. Biotechnological Innovations in Environmental Management - Leach and Van Dam-mieras.
10. Industrial Microbiology and Biotechnology- Demain and Solomon.

Course outcomes:

The student will be able to

1. Develop awareness on types IPR and patenting process
2. Understand legal and ethical controversies in biotechnological innovations
3. Apply knowledge in providing safety of food, water and environment
4. Gain overview of GM crops and microbes and their impact on environment

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 303 c	Emerging technologies in Biotechnology	**04**	**4**
Sessional Marks: 20		**End Semester Examination Marks: 80**	

Course Objectives:

1. To impart knowledge about role of stem cells and its importance.
2. To make the student to learn about nanoscience and applications in different fields
3. To educate the student about applications of biosensors
4. To familiarize with RNAi Technology

UNIT - I

Stem cell technology: Unique properties of stem cells, embryonic stem cells, Adult stem cells: occurrence and functions, tests, cell differentiation and stem cell plasticity and transdifferntiation, medical applications of stem cells, Advantages and disadvantages of stem cell technology, Recent trends in stem cell technology.

UNIT - II

Introduction to Nanoscience: Definition of Nanoscience and its applications, Nanotechnology – History – Kinds of nanomatter, Biosynthesis of nanomaterials. Safety aspect of Nanobiotechnology. Nano biochips and devices. Biomedical applications of Nanomaterials. Nanoparticles in food and cosmetic application.

UNIT – III

The role of transducer and its applicability. Role of antibodies in biosensing; Nano biosensors applications of biosensors in medicine, food industry and environmental monitoring.

UNIT – IV

RNAi Technology: History and discovery, Cellular mechanism- dsRNA cleavage,

micro RNA, RNA induced silencing complex (RISC), activation and catalysis, transcriptional silencing, variation among organisms, biological functions, technological applications- gene knock down, functional genomics, medicine, and biotechnology

REFERENCE BOOK

4. Gregory J. Hannon, RNAi – A guide to gene silencing, Cold Spring Harbor Press, 2003.

Course outcomes:

The student will be able to

1. Acquire the knowledge about recent trends in stem cell technology and medical applications of stem cells
2. Understand the Biosynthesis of nanomaterials and biomedical applications of nanomaterials.
3. Learn role of antibodies in biosensing and applications of Nano biosensors in medicine, food industry and environmental monitoring.
4. Develop understanding on RNAi Technology and its technological applications

BTH 304 P	Genetic Engineering, Food and Industrial Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Practicals: GENETIC ENGINEERING, FOOD AND INDUSTRIAL BIOTECHNOLOGY

Course Objectives:

1. To know the technique of plasmid Isolation
2. To know the different genetic engineering techniques
3. To educate the student about different PCR techniques
4. To make the student to learn about technique of microbial enzyme production

1. Plasmid Isolation
2. Restriction digestion of DNA.
3. Elution of DNA from Agarose gel.
4. Ligation of DNA into linearized plasmid.
5. Preparation of competent Cells
6. Transformation
7. Isolation of RNA from yeast.
8. Polymerase chain reaction (PCR)
9. RFLP
10. RAPD
11. Isolation of Lactobacillus from curd.
12. Isolation of surface flora of vegetables.

13. Determination of quality of a milk sample by methylene blue reduction test.
14. Production pectinase enzyme from a pathogen.
15. Estimation of amylase activity produced by Bacillus subtilis.
16. Estimation of protein content in spirulina.
17. Estimation of vit-c from different fruit samples.

Reference Books

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 305	**Skill Oriented Course** Plant Tissue Culture	**04**	**4**
Sessional Marks: 10			**End Semester Examination Marks: 90(40+50)**

Course Objectives:

1. To impart knowledge about the organization of Plant Tissue Culture Lab.
2. To give insight of nutrient requirements and factors influencing plant tissue culture.
3. To develop skill on micropropagation of forest trees, medicinal plants and endangered plants.
4. To educate the student to learn methods to in vitro germplasm conservation and production of secondary metabolites through cell culture.

UNIT-I

Introduction to plant tissue culture: Preparatory techniques - cleaning, sterilization, sterile handling tissue culture lab requirements. Media - Composition, preparation and sterilization.

Genetic manipulation through tissue culture techniques - Concepts of differentiation and dedifferentiation. Callus - growth pattern/characteristics, Organogenesis and plant regeneration.

UNIT-II

Somatic embryogenesis. Anther, endosperm and pollen cultures, Significance and advantages of haploid plants. Production of virus-free plants by meristem tip and other tissue culture techniques.

UNIT-III

Cell culture techniques for micropropagation of elite plants - Food and fruit crops, forest trees, fiber crops, ornamental plants, medicinal plants and endangered plants. Cell culture techniques for production of useful compounds - Hairy root cultures - transformed roots using Agro bacterium rhizogenesis - Production of secondary metabolites of commercial importance - Elicitors - factors affecting their yield,

immobilized cell systems, bioreactors.

UNIT-IV

Selection of clones for nutritional, disease resistance, salt and drought resistance. Germplasm preservation by tissue technology, artificial synthetic seeds. Protoplast culture -isolation of protoplasts, culture and fusion methods, Somatic hybrids and cybrids.

PRACTICALS: PLANT TISSUE CULTURE

1. Organizing Plant tissue culture Laboratory.
2. Preparation of Tissue Culture Media.
3. Callus Induction.
4. Shoot tip culture.
5. Embryo / Endosperm Culture.
6. Organogenesis.
7. Somatic Embryogenesis.
8. Cell suspension culture.
9. Anther and Pollen cultures.

Reference Books

1. Plant tissue culture – theory and practice by Bhojwani S.S.
2. Plant cell culture – A practical approach by Dixion R.A.
3. Plant Cell, Tissue and Organ Culture, By Reinert, J. and YPS Bajaj (Springer – Verlag).
4. Plant tissue and cell culture, by Street, HE (Blackwell).
5. Introduction to Plant Biotechnology, Chawla, H. S. (2000), Enfield, NH: Science.
6. Introduction to Plant Tissue Culture, Razdan, M. K. (2003), Enfield, NH: Science.
7. Plant Biotechnology: an Introduction to Genetic Engineering, Slater, A., Scott, N. W., & Fowler, M. R. (2008), Oxford: Oxford University Press.
8. Biochemistry & Molecular Biology of Plants, Buchanan, B. B., Gruissem, W., & Jones, R. L. (2015), Chichester, West Sussex: John Wiley & Sons.

Course outcomes:

The student will be able to

1. Learn important milestones in the plant tissue culture and understand the concepts and principles of Plant tissue culture.
2. Learn different pathways of plant regeneration under in vitro conditions – organogenesis, somatic embryogenesis, synthetic seeds and applications.
3. Understand techniques of establishing cell suspension culture, techniques of virus elimination by meristem and shoot tip culture.
4. Acquire skill of propagation of elite medicinal and economically important plants and establish micropropagation unit for commercialization.

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 306 a	Bioethics	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge about intellectual property rights
2. To make the student to learn about legal and ethical aspects of Biotechnology
3. To educate the student about Social and Moral aspects of Biotechnology
4. To train students on Environmental risk assessment and food and feed safety assessment.

UNIT-I

Intellectual property rights - Definition - types -patents - copy rights-trademarks: essential requirements for IPR, procedures of filing patents-provisional and complete specifications-Pan-Co-operation treaty (PCT)-application: GATT and IPR: WTO Act - Global and Indian Biodiversity Act- Indian Patent Act and their revised versions.

UNIT-II

Legal and Ethical aspects of Biotechnology -Prenatal diagnosis - Genetic screening - Surrogate mothers and exploitation of women - designing of plants and animals- gene therapy - cloning - Manipulation of human genome -Technology transfer.

UNIT-III

Social and Moral aspects of Biotechnology -Biotechnology and International trade - Privatization and patenting of Biotechnology products - Role of Government, Industries and society in promoting, accepting and regulating the rDNA research.

UNIT-IV

Environmental and Health aspects of Biotechnology - Generally engineered organisms - Introduction of novel species and natural equilibrium - Environmental security and safety -Precautionary measures - Genetically modified foods - health

safety.

Reference Books

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 306 b	Bioinformatics	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To gain working knowledge on computational tools and methods
2. To gain knowledge about various Biological databases that provide information about nucleic acids and protein
3. To get exposed to computational methods, tools and algorithms employed for Biological Data Interpretation
4. To provide knowledge about the basics of sequence alignment and analysis.

UNIT-I

Concept of programming languages, hardware and software. The basics of operating system. Windows operating systems commands to create and handle directory and files, creation of biological data bases and MS access. MS office: introduction and facilities available, shortcut bar, customizing tool bars, starting an office file, MS word, Excel, Power point

UNIT-II

Introduction to internet and biologists: Basics on internet, getting into the internet, email, file transfer protocols, gopher, www, browsing and downloading from the sites

Networking of computers and overview of networks: Virtual library I, II, III and information networks: www, http, html, URLs, EMB net, NCBI net, Virtual tourism.

UNIT-III

Primary information resources for proteins and genes, biological databases for protein and DNA sequences, Specialized genomic resources, DDBJ, Gen Bank, and EMBL public DNA sequence databases, SWISSPORT data base, information retrieval from biological data bases, the NCBI data model, submitting the DNA sequence to the

database and updating.

Sequence Analysis: Wisconsin GCG, DNASIS, DNASTAR, CLONE Manager, packages for nucleotide sequence analysis, sequence alignment and database searching, practical aspects of multiple sequence alignment.

UNIT-IV

Phylogenetic analysis: phylogenetic models, multiple alignment procedures, (CLUSTAL, ALIGN, PHYLIP), tree building methods, trees evaluation, rooting trees, phylogenetic software. Predictive methods: Detecting regulatory elements in the DNA, Physical properties of proteins based on proteins based on sequences, differential protein structural motifs, RNA binding domains and folding classes, transcription factors and their DNA binding, protein structure predictions.

6. Primrose S & Twyman R, Principles of Gene Manipulation and Genomics, 7th Edition, Blackwell, 2006.

Course outcomes:

The student will be able to

1. Develop understanding about Biological data and database search tools
2. Acquire hands on training on various computational tools and techniques employed in Biological sequence analysis
3. Learn about pathway and enzyme databases, Sequence submission tools
4. Develop understanding on protein folding and its significance

Semester – IV

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 401	Environmental Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. Make them understand the concept, organization and energy flow in an ecosystem
2. Impart knowledge on the process of biodegradation and bioremediation
3. Equip with the knowledge on biological control and scope of bio fertilizers in agriculture
4. Educate about different types of wastes and their ecofriendly management

UNIT-I

Structure of model ecosystem - terrestrial, aquatic ecosystems - Energy flow - Degradation of ecosystem. Consequences - Ecosystem managements - Energy conservation - Alternative energy sources - Biofuels: Production of bioethanol, boibutanol from agriculture waste - Problems and perspectives - Biodiesels: mass cultivation of *Jatropa* and use of *Jatropa*, marine algae for production of biodiesel.

UNIT-II

Nature of recalcitrant compounds - Anthropogenic activities generating recalcitrant chemical waste - BHC, DDT, nitro phenols, polycyclic aromatic carbons. Biodegradation - microbial conversion of recalcitrant toxic compounds into TCA cycle intermediates eg: *Pseudomonas putida*. Bioremediation, Degradation pathways - naphthalene, BHC, and nitro phenols. Use of microbes for reconstruction of ecosystems - Genetics of biodegradation. Microbes as biosensors for detecting pollution. Superbug – cleaning of oil spills.

UNIT-III

Biological methods of pest management - Role of Juvenile hormones, pheromones and its analogues for pest management, Chromosomal manipulation and androgenesis of pest , sterile male technology, Biological control of weeds. Bacterial (BT), viral, fungal insecticides - Technology for mass production and formulation of biopesticides - Problems and prospects.

Biofertilizers - Important diazotropic, microbes - mechanism of symbiotic and asymbiotic biological nitrogen fixation - Regulation of nitrogen fixing genes (Nif genes). Manipulation of Nif genes for constitutive expression of nitrogenase - Ammonia transport and its significance. Mass production of biofertilizers - *Rhizobium, Azolla.*

UNIT-IV

Waste management - Nature and classification of agriculture, domestic and industrial waste - Recycling methods. Solid waste treatment. Biological and non-biological methods of waste water treatment. Reclamation of treated waste water.

Reference Books

1. Environmental Biotechnology: Concepts and Application by Jordening H J and Winter J.
2. Environmental Biotechnology: Theory and Application by Evans G M and Furlong J C.
3. Environmental Biotechnology by Bhattacharya B C and Banerjee R.
4. Environmental Biotechnology: Basic Concepts and Applications by Indu Shekhar Thakur.
5. Environmental Biotechnology by V Kumaresan and N Arumugam.
6. Environmental Biotechnology by Perry L McCarty and Bruce E Rittmann.
7. Textbook of Environmental Biotechnology by P K Mohapatra.
8. Environmental Biotechnology by T Srinivas.

9. Environmental Biotechnology by S K Agarwal.

Course outcomes:

The student will be able to

1. Learn the relation between biotic and abiotic factors in different ecosystem models and predict how changes in free energy availability affect ecosystems.
2. Appreciate the role of microorganisms in biodegradation and pollution detection
3. Develop skill on large scale production and applications of bio pesticides and bio fertilizers fin agriculture
4. Apply knowledge on solid waste management and reclamation of waste water

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 402	Plant Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge about transgenic plants: herbicide, pest and disease resistant, abiotic stress resistant, nutritional enhancement and traits for improved quality
2. Impart knowledge on biosynthesis of plant compounds
3. Improve understanding on the role of algae as food, feed and medicine
4. Train in identification of plant pathogens using immunological and molecular techniques

UNIT-I

Concepts and scope of plant biotechnology -Application of genetic engineering technology for crop improvement - production of transgenic plants resistant to herbicides, pathogens, pests and abiotic stresses (drought, salt, frosts); production of transgenic plants with improved yields and nutritional quality; transgenic plants for production of viral antigens.

UNIT-II

Industry and Plant Biotechnology: Biosynthesis of plant compounds – Selection of cell lines for high yields of secondary metabolites – Enzymes from plants – Food and food additives from plants – Breeding strategies for enhancing the active principles in plants.

UNIT-III

Algae as a source of food, feed, single cell proteins, biofertilizers, industrial uses of algae. Mass cultivation of commercially valuable marine microalgae for agar agar, alginates and other products of commerce and their uses. Mass cultivation of macroalgae as a source of protein and feed. Indoor and outdoor cultivation of economic important algae – Use of algae in waste water treatment.

UNIT-IV

Nutrient film culture techniques - plant diseases – Physiology of infection in plants – disease resistance in plants - phytodiagnostics based on immunological and molecular techniques. Biological control of pests and diseases of crop plants and weeds - biopesticides - predators, parasites, insect viruses, antagonistic fungi and bacteria, antifeedants, and insecticidal activities of the compounds of Botanicals.

Reference Books

1. Molecular approaches to crop improvement. 1991. Dennnis and Li Welly eds. PP. 164.

3. Plant biotechnology, 1994. Prakash and Pierik. Oxford & IBH Publishing Co.
4. Gene transfer to plants. 1995. Potrykus-l and Spangenberg, G. Des. Springer Scan.
5. Methods in Plant Molecular Biology and biotechnology, 1993. R. Bernard Click and Joh. E.; Thompson, CRC, Press, PP. 384.
6. Genetic engineering with plant viruses. 1992. T. Michale. A. Wilson and J.W. Davies. CRC Press Inc, PP 384.
7. Plant cell Biotechnology. 1988. Borocoitzka M.A. and Borocoitzka L.J. Cambridge University Press.
8. Microaigal Biotechnology. 1988. Borocotizka M.A. and Borocoitzka L.J. Cambridge University Press.
9. Algal and Cyanobacterial biotechnology, 1989. Cresswell. R.C, Rees, T.A.V. and Shah, N.Eds. Longman Scientific and Technical, Essex, London.

Course outcomes:

The student will be able to

Students will be able to

1. Develop skill in production of transgenic plants resistant to biotic and abiotic stress

2. Apply knowledge for industrial production of plant metabolites

3. Cultivate the micro and macro algae of commercial importance on large scale

4. Identify different plant pathogens and apply biological control methods

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 403 a	Animal Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. Develop understanding on the structure and functions of male reproductive system and methods of contraception
2. Make them learn the principle and methods of animal cloning
3. Provide knowledge on gene cloning and production of transgenic animals
4. Impart the knowledge on role of biotechnology in health care system

UNIT-I

Structure and function of male reproductive system - Hormonal regulation of spermatogenesis and spermatogenesis; Inhibin and androgen binding proteins; Capacitation of spermatozoa. Structure and function of female reproductive system - influence of hormones on development of ovarian follicles and oogenesis; Reproductive cycles; estrus and menstrual cycle; Ovulation, atresia and corpus luteum formation; Pregnancy and lactation; Implantation and placentation. Contraception in males and females; Hormonal and chemical; Recent advances in contraception research. Artificial insemination (AI) techniques and their development; Estrus synchronization; Semen collection, evaluation, storage, *in vitro* fertilization, Embryo transfer - ICSI and preservation of endangered species.

UNIT-II

Animal cloning and application in wild life and life stock: Overview; Challenges in human therapeutic cloning; Somatic cell nuclear transfer in humans; pronuclear early embryonic development. Nuclear transfer technology: Transfer of nuclei into eggs; development potential of transplanted nuclei; reprogramming a nucleus. Development of transgenic mice and other animal models: by injection of foreign DNA/gene into zygote; optimization of construct for *in vivo* expression. Generation of chimeric, transgenic and knockout mice and other animals and their characterization. Potential

application of transgenic animals: Models for various diseases/disorders, Production of peptides and proteins of biopharmaceutical interest (molecular pharming), transgenic fishes, transgenic poultry and transgenic insects as bioreactors.

UNIT-III

Animal cell culture: brief history of animal cell culture; cell culture media and reagents; culture of mammalian cells, tissues and organs; primary culture, secondary culture, continuous cell lines, suspension cultures. The biology of stem cells – Different types of stem cells – embryonic stem cells, fetal tissue stem cells, adult stem cells; stem cell differentiation, stem cell plasticity – Differentiation versus stem cell renewal. Isolation and propagation of embryonic stem cells; chimeras; generation of knockout mice and knock-in technology.

UNIT-IV

Application of animal cell culture for virus isolation and in vitro testing of drugs, testing of toxicity of environmental pollutants in cell culture, application of cell culture technology in production of human and animal viral vaccines and pharmaceutical proteins. Stem cell therapies: Clinical applications of stem cell therapy; Neurodegenerative diseases-Parkinson's disease, Alzeimer's, spinal cord injury, other brain syndromes; tissue systems failures - diabetes, cardiomyopathy, kidney failure, liver failure - hemophilia, lymphoma and leukemic malignancies requiring stem cell therapy.

Reference Books

1. Culture of animal cell: A Manual of Basic techniques. 3rd ed. 1994. R.I. Reshnery, Alan R. liss. Inc. New York, NY, 397.
2. Recombinant and synthetic vaccines 1994. G.P. 1 Taiwan K.V.S. Rao, V.S. Chauhan, Eds. PP. 528. Springer Scan Publication.
3. Animal Cell Biotechnology, Vol.6, 1994, R.E. Spier, J.B. Griffiths, Eds. Harcourt Brace. PP.

Course outcomes:

The student will be able to

1. Understand the organization of reproductive organs and advances in contraception research
2. Learn the techniques of In Vitro Fertilization and artificial insemination
3. Develop skill in molecular techniques for production of transgenic animals
4. Apply knowledge on molecular farming for production of vaccines and hormones

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 403 b	Applications of Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To provide understandng on different areas of biotechnology
2. Impart knowledge on the role of biotechnology in agriculture
3. Develop skill on the cell & tissue culture system for vaccine production
4. Give insight on the xenobiotic environmental pollution and methods of degradation of toxic compounds

UNIT-I

History and scope of Biotechnology, Definition of Biotechnology, Old & Modern Biotechnology, Different areas of Biotechnology.

UNIT-II

Biotechnology and Agricultural, Micro propagation, (Cell and Tissue culture) Transgenic plants, Biofertilization, organic farming, Biopesticides.

UNIT-III

Application of Biotechnology in Animal sciences, Animal cell and tissue culture, production of transgenic animals, cloning of animals (IVF & ET) cryopreservation somatic production of animals, application of human vaccines in improving productivity.

UNIT-IV

Biotechnology and Environment: Microbial agents and Biochemical methods of xenobiotic degradation, OEMs, Waste water and solid waste management.

Reference Books

1. Gene Cloning – Brown.
2. Concepts in Biotechnology- Balasubramanyam.D.
3. Basic Biotechnology - Colin Rotledge and Kristainsen.
4. Gene Biotechnology – Jogdan.
5. From Genes to Clones, Introduction to Gene.
6. Technology- Winnacker, Ernst.L.
7. Safety, Moral, Social and Ethical issues related to genetically modified foods - Smith J.E.
8. Molecular Biology and Biotechnology - Meyer R, A.
9. Environmental Biotechnology- Forster and wase.
10. Biotechnological Innovations in Environmental.
11. Management - Leach and Van Dam-mieras.
12. Industrial Microbiology and Biotechnology- Demain and Solomon.

Course outcomes:

The student will be able to

1. Acquire the knowledge on applications of plant, animal and environmental biotechnology
2. Develop skill on organic farming and preparation of bio pesticides and bio fertilizers
3. Establish and maintain cell lines for vaccine production
4. Apply knowledge on waste management and recycling for environmental protection

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PS01**	**PS02**

Course Code	Course Title	No of Hours Per week	No of Credits
BTH 403 c	Pharmaceutical Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To impart knowledge on production of pharmaceutical products by biotechnological applications
2. Provide training in clinical testing of pharmaceutical products
3. Give insight on the drug designing and development
4. Explain the comprehensive overview on the conventional and recombinant vaccines and bioethical issues

UNIT-I

Definition - History of development of Pharmaceutical Products by biotechnological methods like genetic recombinant vaccines, microbial and non-microbial products - scope of biotech products and biochemical in pharmaceutical industry. Need to design a drug, drug receptor interactions, antagonisms, biological activity, efficacy and stimulus, receptors and ion channels, ion gating co-operatively effect of solvent on drug - receptor interactions, drug docking.

UNIT-II

Methods of testing products for anti-microbial potentials, pharmacological activities and biopesticidal properties -conventional and rapid enzyme inhibitor techniques; in vivo methods - use of animals models for confirmation of in vitro properties - transgenic systems - preclinical, toxicological studies, Acute, sub acute, chronic studies. Clinical trials -definition - design - specific objectives - types of clinical trials -phase I, II & II - randomized controlled clinical trials - multicentric double blind clinical trials - pharmaceutical/drug regulations for commercializing new biotech products for human use - PDA and Indian regulations.

UNIT-III

Biotech products as medicines and pharmaceutical products: Biochemical's - enzymes like proteases - chemical like ethanol, vinegar, citric acid and glutamic acid; vitamins like B12; drugs for infection and metabolic, immunomodulatory -insulin - interferon's, B-cell growth factors, Tissue plasminagen activator. r-DNA based production of regulatory proteins, blood products, hormones, vaccines, Application of RELP in forensic, disease prognosis, genetic counseling, pedigree, and variation.

UNIT-IV

Vaccines - cell culture-based vaccines - genetic recombinant vaccines - recombinant vector-based vaccines -live and subunit - their production model - fermentation technology - expression systems - guideline for the production of genetic recombinant vaccines - Eg. Hepatitis B vaccine, HIV vaccine and other vaccines in pipeline. Application of biotechnology to Animal health and disease diagnosis, Development of kits and their application in disease diagnosis. Gene therapy, vector engineering, strategies of gene deliver, gene replacement, augmentation, gene correction, gene regulation and silencing safety and bioethical issues in biotechnology.

Reference Books

1. Biopharmaceuticals- Walsh, John Willey and Sons, New York 1998 Pharmaceutical Biotechnology- Daan J.A. Crommelin, RobestD. Sindelar, Daan JACrommelinAmazon.
2. Physical Methods to characterize Pharmaceutical Proteins- James. N.Herron, Wim Jiskoor and Daan J.A.Crommelin Amazon. Wm From clone to clinic (Developments in Biotherapy)-Daan J.A.Crommelin and H.Schellekom Amazon.Wm.
3. Hand Book of Pharmaceutical Biotechnology- Jay P.Rho, Starlonie the Haworth press.
4. Alice Sr. Bringhamtpn, NY13904 US Drug discovery, Tamas bartifai, Harold L.Dorn's The Scientific world Ltd., Newburry, U.K.

Course outcomes:

The student will be able to

1. Gain knowledge on preparation and formulations of different drugs
2. Develop skill on commercial production of pharmaceutical products for human welfare
3. Learn the techniques of drug validation and vaccine production
4. Understand the bioethical principle, values, concepts and social and judicial implications of pharmaceutical biotechnology

	PO_1	**PO_2**	**PO_3**	**PO_4**	**PO_5**	**PO_6**	**PO_7**	**PO_8**	**PO_9**	**PO_{10}**	**PO_{11}**	**PO_{12}**	**PS01**	**PS02**

PRACTICALS: ENVIRONMENTAL BIOTECHNOLOGY, PLANT BIOTECHNOLOGY

Course Objectives:

1. To impart knowledge on determination of total dissolved solids of water and
2. dissolved oxygen (DO) of water
3. Provide training in testing of biological and chemical oxygen demand of water.
4. Give insight on preparation and transformation of competent cells
5. To gain skill of *Agrobacterium tumefaciens*-mediated plant transformation

ENVIRONMENTAL BIOTECHNOLOGY

1. Determination of total dissolved solids of water.
2. Determination of dissolved oxygen (DO) of water.
3. Determination of biological oxygen demand (BOD) of water.
4. Determination of chemical oxygen demand (COD) of water.
5. Determination of total bacterial population by standard plate count technique.

PLANT BIOTECHNOLOGY

1) Preparation of competent cells of E. coli for harvesting plant transformation vector.
2) Transformation of competent cells of E. coli with plant transformation vectors.

3) Mobilization of recombinant Ti plasmid from common laboratory host (E. coli) to an *Agrobacterium tumefaciens* strain.

4) Agrobacterium tumefaciens-mediated plant transformation.

Course outcomes:

The student will be able to

1. Learn skill of determination of total dissolved solids of water and
2. dissolved oxygen (DO) of water
3. Gain skill in testing of biological and chemical oxygen demand of water.
4. Perform preparation and transformation of competent cells
5. To do *Agrobacterium tumefaciens*-mediated plant transformation

End Semester Examination Marks: 100			

Marks allotted to thesis preparation-80 (40 marks for the progress performed by the student in laboratory will be awarded by project research supervisor and another 40 marks for content of the thesis) & Marks allotted to viva presentation-20

Course Objectives:

1. To impart knowledge about the various analytical and biophysical techniques.
2. To make the student to be able to carry out purification and characterization of various biomolecules.
3. To educate the student to characterize the separated biomolecules by electrophoresis and spectroscopic techniques.
4. To familiarize with the concepts and the techniques of Radioactivity

Course outcomes:

The student will be able to

5. Acquire the knowledge on classification and structure of different microorganisms
6. Understand the microbial techniques for isolation, cultivation and maintenance of pure cultures
7. Learn structure, function of gene and its transfer methods
8. Develop understanding on cause, spread and control of diseases caused by different microorganisms

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}	PS01	PS02

BTH 406 b	Tools in Biotechnology	**04**	**4**
Sessional Marks: 20			**End Semester Examination Marks: 80**

Course Objectives:

1. To improve understanding on replication initiation point mapping.
2. To gain knowledge on use of DNA microarrays to analyze origin activation patterns
3. To build knowledge on Electron microscopic methods for identifying DNA replication intermediates.
4. To give insight on replication dynamics of gene

UNIT-I

Replication initiation point mapping: Approach and implications, purification of restriction fragments containing replication intermediates, Topological analysis of plasmid DNA replication intermediates, Analysis of telomeric DNA replication using neutral alkaline 2D gel electrophoresis, chromatin immunoprecipitation of replication factors moving with replication fork, density transfer as a method to analyze the progression of DNA replication fork, High resolution mapping of points of site specific replication, DNA replication in nucleus

UNIT-II

Chip-chip to analyze the binding of replication proteins to chromatin using oligonucleotides DNA microarrays, analyzing origin activation patterns by changing experiments. Detection of replication origins using comparative genomics and recombination ARS assay. Isolation of restriction fragments containing origin of replication from complex genomes. Application of alkaline sucrose degradation and analysis of DNA replication after DNA damage.

UNIT-III

Isolation of recombinant DNA elongation proteins *In vitro* assays for studying helicase activities, the use of two amino fluorescence to study DNA polymerase function, Single molecule observation of prokaryotic DNA replication, The FAST-HALO assay for the assessment of DNA damage for the single cell level. Electron microscopic methods for studying In vivo DNA replication intermediates.

UNIT-IV

Visualization of DNA replication sites in mammalian nuclei, measuring of DNA content by flow cytometry in Fission Yeast. Assays used to study replication check point in Fission Yeast. Use of DNA combining to study SNA replication in genus and in human cell free systems. Determining the replication dynamics of specific gene loci by single molecule analysis of replicated DNA.

Reference Books

1. DNA replication methods and protocols in Methods in Molecular Biology Edited by John N walker coedited by Soniya and Jacob Gelgard 2009. Humana press, New York.
2. General biochemistry and biophysics methods books.

Course outcomes:

The student will be able to

1. Acquire the knowledge on analysis of DNA replication to map site specific points of replication
2. Learn to apply DNA microarrays to detect replication origins
3. Understand the functions of helicase and polymerase in DNA replication
4. Acquire knowledge on sophisticated programmed of genome replication

DEPARTMENT OF CHEMISTRY

1. ANALYTICAL CHEMISTRY (Specialization)

Syllabus for M.Sc. CHEMISTRY

Choice Based Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Chemistry is one of the first six departments started during the year 1954 when the university was founded. The Department offers M.Sc. course in Chemistry with specializations in Analytical, Environmental, Inorganic, Organic and Physical Chemistry besides Self Supporting Courses in Organic and Analytical Chemistry. Choice Based Credit System is followed and the courses are categorized as per the guidelines of the statutory authorities. Ability enhancement and skill development courses are part of the curriculum. Almost 15% of the students are qualifying in National Entrance Test conducted by UGC-CSIR. Also the Department offers quality research and training experience leading to Ph.D., Degrees for the students in the areas of synthesis of pharmacologically potential molecules analogous to drugs, application of green methodologies for the synthesis of complex molecules, development of new hybrid sorbents for monitoring toxic metals in environmental samples, fabrication of novel electrochemical sensors and biosensors towards the detection of organic molecules and pollutants. Over the last sixty five years the department has trained about 650 students for their Doctoral degrees. Most of the research scholars are doing Post-Doctoral research in abroad and in India. The faculty published more than 3000 research papers in reputed National and International journals. The Department organizes National and International conferences / seminars/ workshops on regular basis. The Department has well equipped laboratories for research and teaching besides a DST funded computer lab and a Department library. All the faculty members are having individual research laboratories with internet facility.

At present the Department is flourished with 10 faculty members and most of the faculty members have Post Doctoral research and training experience abroad. Some of the faculty worked as Visiting Professors and Visiting Fellows in prestigious universities abroad. Majority of faculty members have undertaken major research projects funded by agencies like UGC, CSIR, DST, BRNS, DBT and MOES and have successfully completed the tasks with a budget outlay of Rs. 250.00 lakhs. Most of the faculty members have developed collaboration with Indian Institute of Sciences, Bangalore, Indian Institute of Chemical Technology, Hyderabad, AVRA Laboratories, EPR Laboratories, Hyderabad, Amara Raja Batteries, Tirupati, RRL, Trivandrum and Birla Institute of Technology & Science, Pilani – Hyderabad campus and have approved patents. Some of the faculty and Alumni are the recipients of JSPS Fellowship, UGC Raman Fellowship, Common wealth Academic Fellowship, State Best Teacher Award etc., Recognizing the excellence in teaching and research in the Department, the University Grants Commission and Department of Science Technology have provided funding under DRS and FIST programmes. The Alumni of the department served in coveted positions as Vice-chancellors, Registrars, CEO of pharma industries etc. The former students of the Department have established leading International pharmaceutical industries in India and abroad. Some of them are actively engaged in the manufacture of COVID 19 vaccine. The ultimate goal of the Department is to achieve excellence in fundamental research as well as the development of innovative technologies for the future.

Vision

- Impart quality education & training in the field of chemistry to enable successful careers for the post graduate students in the field of research, education & industry applications of chemical sciences.

Mission

The Department of Chemistry strives:

- To get an ideal balance between knowledge creation and knowledge dissemination in the chemical sciences with a focus to train and mentor students to become responsible scientists and scientifically literate professionals to attain National and International impact.
- To contribute to the improvement of scientific and technological literacy, and the development of critical-thinking and problem-solving skills of all students in order to compete for the world of work and responsible citizenship

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	**Scientific Problem solving skills**: Deep knowledge of the topic which can develop the problem solving skills using chemical principles.
PSO2	**Analytical skills**: Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reactions with the help of sophisticated instruments
PSO3	**Research skills**: Develop research skills through dissertation/project work in different fields of chemistry such as organic, inorganic, analytical, physical and environmental.
PSO4	**Learning skills on life processes**: Acquire advanced level of knowledge in natural products as well as biological systems from the chemistry point of view.

Program Objectives

PO1	To divulge an advance level of theoretical and practical knowledge in the major fields of Chemistry- Analytical, Environmental, Inorganic, Organic and Physical.
PO2	To engage in research projects for acquiring wide spectrum of subject knowledge and

	research experience in respective fields.
PO3	To enlighten on skill enhancement in the core chemistry with practical expertise hands this will make students employable in academia and industries
PO4	To mould as responsible citizens to serve the nation

Program Outcomes: On completion of M.Sc. Chemistry programme, graduates will be able to –

PO1	Have a firm foundation in the fundamentals and application of current chemical and scientific theories in different areas of chemistry *viz*., Analytical, Environmental, Inorganic, Organic and Physical.
PO2	Understands the background of organic reaction mechanisms, complex chemical structures, and instrumental methods of chemical analysis, molecular rearrangements and separation techniques.
PO3	Familiarize with the importance of various elements present in the periodic table, coordination chemistry and structure of molecules, properties of compounds, structural determination of complexes using theories and instruments.
PO4	Understand about the physical aspects of atomic structure, dual behavior, reaction pathways with respect to time, various energy transformations, molecular assembly in nano-level, significance of electrochemistry, molecular segregation using their symmetry.
PO5	Create awareness and sense of responsibilities towards environment and apply knowledge to solve the issues related to Environmental pollution.
PO6	Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.
PO7	Be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
PO8	Clearly communicate the results of scientific work in oral, written and electronic formats.
PO9	Explore new areas of research in both chemistry and allied fields of science and technology.

PO10	Design, analyze and carry out scientific experiments and interpret data to provide solutions to different industrial problems.
PO11	Independently carry out research to solve practical problems and present a substantial technical report.
PO12	Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self-directed learning aimed at personal development, and adapting to change academic demands of work place through knowledge/ skill development/ reskilling.

Program Educational Objectives:

At the end of the program, the student wills be able to:

PEO1	To demonstrate broad knowledge of descriptive chemistry.
PEO2	To impart basic analytical and technical skills to work effectively in various fields of chemistry.
PEO3	To motivate critical thinking and analysis skills to solve complex problems viz., analysis of data, synthetic logistics, spectroscopy, structure and modeling, team based problem solving etc.
PEO4	To demonstrate an ability to conduct experiments in the above sub disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling method
PEO5	To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
PEO6	To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment and modern instrumentation.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

***Among the Generic Elective a student shall choose any one.**

(Mandatory Core)

CHE-101	INORGANIC CHEISTRY I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Comprehend the key features of coordination compounds, Crystal Field Theory, different properties and bonding by spectroscopic techniques
- Study the polymorphic forms of non-transition elements and their synthesis and properties
- Understand the basics of reaction mechanism and the mechanistic concepts of Dissociative (Id) and Associative interchange Mechanism (Ia), Taube's classification, Trans effect and Electron Transfer Reactions
- Familiarize with the methods of synthesis of metal carbonyls and metal nitrosyls, Synergistic effect, EAN and 18-electron rule

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the key features of coordination compounds, Crystal Field Theory, magnetic properties and bonding in transition metal complexes.
CO2	To learn about the polymorphic forms of Carbon, Sulphur and Phosphorus, synthesis and properties of sulphur-nitrogen compounds, boranes, carbides, silicates and to know Wades rules.
CO3	To explain the reactivity of complexes in terms of Valence bond and Crystal Field theories, Taube's classification, Trans effect and Electron Transfer Reactions.
CO4	To gain knowledge on synthesis and structures of different metal carbonyls, synergistic effect and 18 electron rule.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	1	-	1	-	2	-	1
CO2	3	1	-	3	-	2	2	2	2	1	-	2
CO3	3	2	-	3	2	-	-	1	-	1	2	1
CO4	3	1	1	3	-	2	2	2	1	-	1	1

CHE 101: INORGANIC CHEISTRY I

UNIT-I: CO-ORDINATION COMPOUNDS **15 Hrs**

Introduction to Crystal field Theory, CFSE and its calculation, Paring energy, Splitting of 'd' orbitals in Trigonal bi pyramidal, square planar, square pyramid and pentagonal bipyramidal geometries, Jahn –Teller

effect, Application of CFT, OSSE, site Selection in Spinels, Short comings of CFT, Evidence for covalency – Nephelauxetic effect. MOT of co-ordinate bonds –M.O. Diagrams for octahedral, tetrahedral and square planar complexes. Experimental evidences for π- bonding – Crystallography, Infrared spectroscopy and Photoelectron spectroscopy.

UNIT-II: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non- transition elements special features of individual elements ; Synthesis' properties and structure of their Halides and Oxides, Polymorphism of Carbon, Phosphorus and Sulphur, Synthesis, properties and structure of boranes, Carboranes, borazines, Silicates, Carbides, Sulphur-nitrogen compounds. Electron counting in boranes, Wades rules (Poly hedral skeletal electron pair theory), Isopopoly and hetero poly acids.

UNIT-III: REACTION MECHANISMS IN COMPLEXES 15 Hrs

Reactivity of metal complexes. Inert and Labile complexes. Concept of Labile and Inert complexes in terms of Valence bond and Crystal Field theories. Taube's classification of complexes as labile and inert complexes. Dissociative (D) and Dissociative interchange Mechanism (Id) & Associative (A) and Associative interchange Mechanism (Ia). Substitution reactions in octahedral complexes- Acid Hydrolysis -factors affecting Acid Hydrolysis - Base Hydrolysis-conjugate Base Mechanisms - Anation Reactions -Substitution Reactions in Square Planar complexes- Trans effect – Mechanisms of Trans effect: polarization and π-bonding theories.Electron Transfer Reaction-Inner Sphere and outer Sphere Mechanisms- Marcus theory.

UNIT-IV: METAL πCOMPLEXES-I 15 Hrs

Nature of π bonding, Classification of π ligands, π donor ligands and π -acceptor ligands.

Metal Carbonyls: Synthesis of metal carbonyls, Structures of metal carbonyls of the types M(CO)n (M= Cr, Fe, Ni; n=4-6), $M_2(CO)n$ (M=Co, Fe, Mn; n=8-10), $M_3(CO)_{12}$ (M=Fe, Ru and Os), $M_4(CO)_{12}$ (M=Co, Rh, Ir). IR Spectraof metal carbonyls (i) Detection of bridging and terminal CO ligand, (ii) Synergistic effect, EAN and 18-electron rule. Electron counting methods (i) Oxidation state method and (ii) Neutral Atom method.

Metal Nitrosyls: Synthesis of metal Nitrosyls, bonding, Electron donation by nitric oxide, Models for NO bonding (i) Covalent model and (ii) Ionic models, Structures of metal nitrosyls (1) $[Fe_4S_3(NO)]$ (2)$[Fe_2(NO)_2I_2]$ (3) $[(\phi_3P)_2Ir(CO)Cl(NO)]^+$ (4) $[(\phi_3P)_2Ru(NO)_2Cl]$, Detection of bridging NO ligand, Applications of metal nitrosyls.

Books Suggested

1. F.A.Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999.John wiley & sons. Inc., New York.

2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, VI Edition 1993. Harper Collins College Publishers, New York.
3. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
4. Gary Wolfsburg: Inorganic Chemistry (5th Ed. (Viva Books)
5. W.L. Jolly: Modern Inorganic Chemistry (McGraw-Hill)
6. B.N Figgis: Introduction to Ligand Fields (John-Willey)
7. S.F.A. Kettle: Coordination compounds.
8. Coordination Chemistry. Bassalo & Jahnson.

(Mandatory Core)

CHE-102	Organic Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Organic Chemistry

Course Objectives:

- Classify molecules based on stereo chemical aspects study on optical and geometrical isomerism by the application of Cahn-Ingold-Prelog rules.
- Familiarize with different types of substitution reactions, able to predict products, including stereochemistry in aliphatic and aromatic nucleophilic substitution reactions, effect of neighboring group participation
- Understand thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects in reactive intermediates
- Study about occurrence, isolation, structure establishment and synthesis of natural products-terpenoids.

Course Outcomes: At the end of the course, the student will be able

CO1	To detect stereochemical structures of the molecules, stereoselective and stereocontrolled reactions.
CO2	To ascertain the stereochemistry of the products with the effect of neighbouring group participation and to familiarize the various types of aromatic substitution reactions, their mechanism and the effect of substituents.
CO3	To know the concept of isotope effects, potential energy diagrams and transition states in different intermediates
CO4	To familiarize with stereospecific synthesis of naturally occurring terpenoids and degradation products of terpenoids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	-	1	1	-	1	-	-
CO2	3	2	1	3	-	1	2		-	2	1	1
CO3	3	1	2	3	-	1	1	2	1	-	1	-
CO4	3	2	2	3	2	1	1	1	-	1	1	1

CHE102: Organic Chemistry I

UNIT-I: **Stereochemistry**

Sereoisomerism-Stereoisomers Classification – Configuration and conformation.

Molecular Three dimensional representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Dissymmetrization.

Optical isomerism: Molecular Symmetry and Chirality-Cahn-Ingold-Prelog rules R, S-nomenclature, stereoisomerism resulting from more than one chiral center, meso and pseudoasymmetric compounds - **Axial Chirality** - Stereochemistry of allenes spiranes - biphenyl derivatives and atropisomerism - **Planar chirality** - Ansa compounds and trans - Cycloalkenes - **Helicity**. Helically chiral compounds

Geometrical isomerism - E, Z - nomenclature - Physical and Chemical methods of determining the configuration of geometrical isomers-Stereoisomerism in 3, 4 and 5-membered cyclic compounds.

UNIT-II: Substitution Reactions

i) Aliphatic Nucleophilic substitutions: The S_N2, S_N1, mixed S_N1 and S_N2, SET mechanisms. Reactivity- effects of substrates, attacking nucleophiles, leaving groups and reaction medium.Common carbocation rearrangements – primary, secondary and tertiary. The neighbouring group participation (NGP) -anchimeric assistance, NGP by σ and π- bonds, phenonium ions, norbornyl and norbornenyl systems, Classical and nonclassical carbocations, NGP by halogens and heteroatoms (O,N,S)

The S_N^i and S_N2' mechanisms. Nucleophilic substitution at an allylic, and vinylic carbons.

ii. Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and $S_{RN}1$mechanisms. Reactivity - effect of substrate, structure, leaving group and attacking nucleophile. The von Richter, Sommelet - Hauser and Smiles rearrangements.

UNIT-III: Reactive intermediates

Types of reactions, types of bond cleavage mechanisms, generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes, nitrenes and arynes. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects**.**

UNIT-IV: Terpenoids

Classification of terpenoids, occurrence, isolation, general methods of structure determination. Isoprene and special isoprene rule. Structure determination and synthesis of the following representative molecules: Farnesol, Zingeberine, Cadinene and Abietic acid.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
6. Stereochemistry, P.S. Kalsi, Wiley Eastern.
7. Text book of Organic Chemistry, M.C. Murry
8. Organic Chemistry, Vol I, I.L. Finar, ELBS Eds.

(Mandatory Core)

CHE-103	Physical Chemistry I	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Acquire knowledge in Quantum Chemistry, postulates of Quantum Mechanics., Applications of Schrodinger wave equation and Born-Oppenheimer approximation
- Study on Chemical Dynamics and theories in unimolecular, chain and fast reactions and determination of reaction rates.
- Familiarize with concepts of Thermodynamics and statistical thermodynamics, Gibbs- Duhem equation and Sackur-Tetrade equation
- Know about Thermodynamic and Kinetic concept of Electrochemistry and conductance, conductivity of electrolytes

Course Outcomes At the end of the course, the student will be able to

CO1	To know the concepts such as Operator algebra, Eigen values and Eigen functions, Degeneracy, Schrodinger wave equation and the postulates of Quantum Mechanics.
CO2	To learn about theories of reaction rates, Lindemann, Lindemann-Hinshel wood, and RRKM theories.
CO3	To know about Thermodynamic concepts and entropy change in reversible process and irreversible process, Gibbs- Duhem equation, calculation of thermodynamic properties.
CO4	To study the Thermodynamic and Kinetic Derivation of Nernst Equation and the derivation of Debye-Huckle Equation and its Verification

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	3	2	1	--	1	2	---	1	1
CO2	3	1	2	3	1		1		1	1	-	1
CO3	3	-	1	3	2	1	-	1		-	2	-
CO4	3	1	2	3	-	1	1	-	2	1	-	1

CHE-103: Physical Chemistry I

UNIT-I: Quantum Chemistry-I

(A)**Introduction to Exact Quantum Mechanical Results**

Operator algebra, Eigen values and Eigen functions, Operators for momentum and energy, Degeneracy, Linear combination of Eigen functions of an operator, well behaved wave functions, Normalized and

orthogonal functions, The schrodinger wave equation and the postulates of Quantum Mechanics, (B) **Applications of Schrodinger wave equation:** Particle in one dimensional and three dimensional box, harmonic oscillator, rigid rotor, hydrogen atom and its applications. Hydrogen like wave function, hydrogen like orbitals and their representation, polar plots, contour plots and boundary diagram. (C)**Approximate Methods:** The variation Theorem, Linear variation principle, perturbation Theory (first Order and non-degenerate), Application of variation Method and perturbation theory to the helium atom, The Born-Oppenheimer approximation.

UNIT-II: Chemical Dynamics

(A)**Theories of reaction rates:** Collision theory, steric factor. Theory of Absolute Reaction Rates-Reaction coordinate, activated complex and the transition state. Thermodynamic formiulation of reacton rates.

(B) **Unimolecular reactions:** Lindemann, Lindemann-Hinshel wood, and RRKM theories. Termolecular reactions. Complex reactions-Rate expressions for opposing, parallel and consecutive reaction (all first order type) (C) **Chain reactions:** Dynamic chain, hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane, photochemical reactions- H_2-Br_2, H_2-Cl_2 reactions, Autocatalysis, H_2-O_2 reaction explosion limits. (D) **Fast Reactions:** Flow system – Temperature and pressure Jump Methods – Relaxation Techniques.

UNIT – III : Thermodynamics

(A) **Brief review of Thermodynamic concepts:** Enthalpy, entropy, free energy. Concept of Entropy – Entropy as a state function –Entropy change in reversible process and irreversible process – Temperature – Entropy diagrams – Entropy change and phase change – Entropy of mixing – Entropy and disorder. (B) **Statistical thermodynamics:** Partial molar properties: their significance and determination of partial molar properties, fugacity and its determination. Concept of distribution, thermodynamic probability and most probable Distribution, Ensemble averaging, postulates of ensemble averaging, canonical, grand canonical and micro- canonical ensembles, partition functions, translational, rotational, vibrational and electronic partition functions, Gibbs- Duhem equation, calculation of thermodynamic properties in terms of partition functions, Entropy of monatomic gases (Sackur-Tetrade equation)

UNIT-IV : Electrochemistry I

(A) **Thermodynamic and Kinetic concept of Electrochemistry**

Thermodynamic and Kinetic Derivation of Nernst Equation, Chemical and Concentration Cells with and

without Transference, Liquid Junction Potential, Derivation of the Expression for Liquid Junction Potentials-its determination and elimination, Applications of EMF Measurements: (i)Solubility product, (ii)pH Determination, (iii) Potentiometric Titrations.; (B)**Conductivity:** Theory of Electrolytic Conductance, Derivation of Debye-Huckle Equation and its Verification, Debye- Falkenhagen Effect, and Wein Effect, kohlrausch law. Calculation of Solubility of Sparingly soluble Salt from Conductance Measurements.

Conductometric Titrations : Titration of Strong Acid Vs Strong Base (HCl vs NaoH) ; Titration of Weak Acid Vs Strong Base (AcoH vs NaoH); Titration of mixture of Strong and Weak Acids vs Strong Base ; Precipitation Titrations.

Books Suggested

1. physical chemistry, P. W. Atkins (ELBS)
2. Quantum Chemistry, Ira N. Levine (Prentice Hall)
3. Atomic Structure and Chemical bond, Manas Chandra.
4. Chemical Kinetics, K.J. Laidler (Mc Graw Hill)
5. Kinetics and Mechanism of Chemical Transformations, J. Rajaraman and J. Kuriacose (Mcmilan)
6. Thermodynamics for chemists, S. Glasstone
7. Chemical thermodynamics, I.M. Klotz
8. Statistical Thermodynamics, M. Dole
9. Modern Electrochemistry, Vol. I & II, J.O. M. Bockris and A.K.N. Reddy (plen
10. An Introduction to Electrochemistry (3^{rd}ed.), S. Glasstone (Affiliated East-West).

(Compulsory Foundation)

CHE-104 (A)	General Chemistry I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on precision and accuracy, Limit of detection, Limit of determination, Sensitivity and selectivity, statistical evaluation of data
- Familiarize with principles and concepts of flame emission spectroscopy and atomic absorption spectroscopy and their applications.
- To know about ecosystem, nutrient cycle and dessert ecosystem and forest ecosystem and aquatic ecosystem.
- Gain knowledge on air pollution, water pollution, soil pollution, marine pollution, noise pollution and solid waste management.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about mean and median values, standard deviation and coefficient of variation.
CO2	To acquire knowledge on principle and instrumentation of AAS and difference between flame AAS and furnace AAS.
CO3	To know about the principle and concept of ecosystem and their functioning
CO4	To have an idea on environmental pollution and environmental impact assessment.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	-	-	2	1	1
CO2	3	2	-	3	1	-	2	1	-	1	1	-
CO3	3	3	2	3	2	1		1	2	1	1	2
CO4	3	2	1	2	3	1	1	1	-	2	1	1

CHE104-A: General Chemistry I

UNIT-I: TREATMENT OF ANALYTICAL DATA 15 Hrs

Precision and accuracy –mean and median values –Standard deviation – coefficient of variation, Types of errors: Determinate and indeterminate errors, confidence limits, significant figures, computations, minimization of errors, statistical evaluation of data –T-test ,F- test , and X^2 –test. Correlation coefficient and coefficient of determination; Limit of detection (LOQ); Limit of determination(LOD) Sensitivity and selectivity of an analytical method.

UNIT-II: FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 15 Hrs

(a) **Flame Emission Spectroscopy**: Principles, chemical reactions in flames, Interferences, evaluation methods, flame photometer and experimental technique, procedure for determinations, limitations and disadvantages. Applications

(b)**Atomic Absorption Spectroscopy: Flame AAS:** Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT-III: ECOSYSTEMS 15 Hrs

Concept of an ecosystem (Abiotic and biotic environment), structure and function of an ecosystem Producers, Consumers and decomposers. Energy flow in the ecosystem, (Nutrient cycle in the ecosystem) Ecological succession Food Chain, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems, Forest ecosystem, Grassl and ecosystem, Desert ecosystems aquatic ecosystems [ponds, streams, lakes, rivers, ocean estuaries].

UNIT-IV: ENVIRONMENTAL POLLUTION 15 Hrs

Definition a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution Solid waste management : Causes, effects and control measures of urban and industrial wastes. Environmental impact assessment.

Books Suggested

1. H.W. Willard, LL. Merritt and J.A. Dean: Instrumental Methods of Analysis
2. Vogel's Text book of Quantitative Inorganic Analysis.
3. Analytical Chemistry
4. Instrumental Methods of Analysis H. Kaur

CHE 104B	General Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To familiarize with the significance of green chemistry and assessment of the impact.
- To gain knowledge on biocatalyst in oxidation, reduction and hydrolytic reactions
- To have an idea on solvent free reactions and modern reaction techniques.
- To familiarize with the use of ionic liquids as green solvents.

Course Outcomes: At the end of the course, the student will be able

CO1	To get knowledge on green reaction conditions and their impact on environment.
CO2	To know about use of different biocatalysts as environmentally friendly reagents.
CO3	To acquire knowledge on the use of modern techniques like ultrasound, microwave etc.
CO4	To have an idea on the use of ionic liquids in different reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	-	2	1	1	-	1	-	1	1
CO2	3	1	1	3	1	-	1	1	-	1	-	1
CO3	3	3	2	3	2	1		2	-	1	1	1
CO4	3	2	1	2	3	1	1	1	1	-	1	1

CHE 104B: General Chemistry I

UNIT-I

Fundamentals and significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk hazard. An introduction to the tools of green chemistry and its fundamental principles.

Principles of Green Chemistry: Prevention of waste / by-products, Hazardous products- Designing of safer chemicals- Selection of appropriate solvents and starting materials- Use of protecting groups and catalysis- Designing of biodegradable products.

UNIT-II

Catalysis for Green Chemistry: Use of biocatalysts- Biochemical Oxidation, Biochemical Reduction, Enzyme Catalyzed Hydrolytic Process, Modified biocatalysis- transition metal catalysis- Reformatsky reaction, Wurtz reaction, Pinacol coupling, Simmons-Smith reaction,

Mukaiyama reaction, Heak reaction, Ullmann's coupling.

UNIT-III

Solvent Free Reactions: Solvent free techniques- Reactions on solid mineral supports, Phase Transfer Catalysis- C-alkylation, N-alkylation, S-alkylation, Darzen's reaction, Wittig reaction. Ultrasound assisted green synthesis- Oxidation, Reduction, Hydroboration, Bouveault reaction, Strecker reaction, Microwave assisted green synthesis- Biginelli reaction, Aza-Michael reaction, Suzuki reaction, Stille reaction, Sonogashira reaction.

UNIT-IV

Ionic liquids: Definition- Types of Ionic Liquids-Synthesis of Ionic Liquids- Selection of ionic liquids- physical properties- Application in organic synthesis- alkylation, allylation, oxidation, reduction, polymerization, hydrogenation, hydroformylation, alkoxycarbonylation, carbon-carbon bond forming reactions, alkene metathesis.

1. Trends in Green Chemistry by V.K. Ahluwalia, M. Kidwai.
2. Green Chemistry: Environment Friendly Alternatives by Rashmi Sanghi, M M Srivastava
3. Green Solvents for Organic Synthesis by V.K. Ahluwalia, Rajender S. Varma
4. Green Analytical Chemistry by Mihkel Koel and Mihkel Kaljurand

105 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Basic laboratory techniques of titration and analysis.
- Quantitative estimation of inorganic compounds through volumetric techniques.
- Calibration of volumetric apparatus and statistical analysis of the data.
- Determination of critical solution temperature of phenol-water system.

Course Outcomes: At the end of the course, the student will be able

CO1	To demonstrate mastery of basic semi-micro qualitative analysis of simple salts and interprets analytical data and will make scientific claims that are supported by the observations.
CO2	To familiarize with techniques of titration and calculation of errors.
CO3	To study the determination of critical solution temperature, eutectic composition, distribution coefficient, adsorption of different systems.
CO4	To calibrate the statistical data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CHE 105 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 105 A : Core practical I: Inorganic Chemistry

Semi Micro Qualitative Analysis

Qualitative Analysis of a mixture containing four cations including two less common cations (viz., W, Mo, Se, Te, V, Ce, Th, Zr, Li and U).

CHE 105 B : Core practical I: Physical Chemistry

1. Determination of critical solution temperature, eutectic composition and temperature of binary

system.

2. Calibration of volumetric apparatus and statistical analysis of the data.
3. Determination of critical solution temperature of phenol-water system and study the effect of electrolyte on CST.
4. Determination of Eutectic composition and temperature of binary system
5. Determination of distribution coefficient of benzoic acid between water and benzene.
6. Study the adsorption of acetic acid on charcoal and analysis of the data on the basis of Langmuir and Freundlich adsorption isotherms.
7. Determination of rate constant of acid hydrolysis of an ester and investigate the effect of catalyst concentration, reactant concentration and temperature.

CHE 106A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Identification of single organic component by systematic qualitative analysis
- Preparation of derivatives and purification process
- Single step preparations
- Calibration of spectral analysis to this structures

Identification of single organic component by systematic qualitative analysis.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the systematic procedures of analysis of organic components.
CO2	To know the conformational tests for various functional groups.
CO3	To understand the mechanisms and familiarize with methodologies to prepare biologically important molecules.
CO4	Purification of compounds by different process

Mapping of course outcomes with the program outcomes

CHE : 106 A : PRACTICAL – I : ORGANIC CHEMISTRY

Identification of single components by Qualitative Analysis method

1. Aromatic acids
2. Aromatic amines
3. Aromatic phenols
4. Aromatic estors
5. Aromatic hydrocarbons
6. Carbohydrates
7. Aromatic carobohydrates compounds

CHE : 106 B : PRACTICAL – I : GENERAL CHEMISTRY

Single step preparations

1. Preparation of aspirin
2. Preparation of p-nitroacetanilide
3. Preparation of p-bromoacetanilide

CHE 107	Human Values and Professional Ethics-I	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level Human Values and professional ethics

Course Objectives:

- Analyze values in various ethical professions
- Understand moral concepts, character and conduct multiple
- Concept of ethical values with respect to individual and society
- ethical interests at stake in areal-world situation or practice and assess own ethical values with respect to social context and problems

Course Outcomes: At the end of the course, the student will be able to

CO1	To know about the needs and importance of professional ethics.
CO2	To analyze nature of Values, basic Moral Concepts character and Conduct.
CO3	To gain knowledge on individual and society ethical values, ahimsa, satya and brahmacharya.
CO4	To understand values of Bhagavd Gita, various religions, religious tolerence, Gandhian ethics.

Mapping of course outcomes with the program outcomes

CHE 107: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS – I)

Chapter I: Definition and Nature of Ethics – Is relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics – Goals – Ethical Values in Various Professions.

Chapter II: Nature of Values – Good and Bad, Ends and Means, Actual and Potential Values, Objective and Subjective Values, Analysis of Basic Moral Concepts – Right, Ought, Duty, Obligation, Justice, Responsibility and Freedom, Good Behavior and Respect for Elders, Character and Conduct.

Chapter III: Individual and Society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possesion) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues) - Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation), Crime and

Theories of Punishment – (a) Reformative, Retributive and Deterrent, (b) Views on Manu and Yajnavalkya

Chapter IV: Bhagavd Gita – (a) Niskama Karma, (b) Buddhism – The Four Nobel Truths – Arya astanga marga, (c) Jainism - Mahavratas and Anuvratas. Values Embedded in Various Religions, Religious Tolerence, Gandhian Ethics.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
4. Harold H. Titus: Ethics for Today
5. Maitra, S.K: Hindu Ethics
6. William Lilly: Introduction to Ethics
7. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
8. Sasruta Samhita: Tr. Kaviraj Kunjanlal, Kunjanlal Brishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
9. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
10. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
11. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
12. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE - 201	Inorganic Chemistry II	L-5, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Understand magnetic properties of transition metal complexes and various reactions on ligands with respect to synthesis.
- Gain knowledge on electronic spectra of complex molecules of octahedral and tetrahedral geometry
- Understand magnetic properties viz., diamagnetism and paramagnetism and other related properties of complex molecules
- Familiarize with different catalytic reactions of complex molecules and factors effecting the reactions.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with the general methods of complex preparations and properties, nature of bonding and structural features of metal complexes.
CO2	To know about Russel-Saunders coupling, splitting of energy levels in octahedral field and differentiate between Orgel diagrams and Tanabe-Sugano diagrams.
CO3	To understand about the laws of Hunds, Curie and Weiss, magnetism and magnetic susceptibility determination by Gouy's and Farady methods.
CO4	To gain knowledge on Induced reactions, Free radical reactions, Thermal decomposition reactions, Chain reactions.

Mapping of course outcomes with the program outcomes

CO4	3	1	1	3	-	2	-	1	1	1	1	-

CHE 201: INORGANIC CHEISTRY II

UNIT – I: TRANSITION METAL II – COMPLEXES II **15 Hrs**

Transition metal π – complexes with unsaturated organic molecules – alkenes, alkynes, diene, dienyl and Cyclopentadienyl complexes and arene complexes-general methods of preparation, properties, nature of bonding and structural features – Important reactions relating to Nucleophilic and Electrophilic attack on

ligands and to organic synthesis.

UNIT – II: ELECTRONIC SPECTRA OF COMPLEXES 15 Hrs

Russel-Saunders coupling – Spectroscopic term symbols- Derivation of term symbols of p^2 and d^2 configuration, Hole Formulation, Energy ordering of terms (Hund's Rules), Splitting of energy levels and spectroscopic states in Octahedral field, Selection rules – Break – down of selection rules, Orgel diagrams, Definition and utility–Orgel Diagrams for d^1 to d^9 configurations in Octahedral and tetrahedral fields. Interpretation of electronic spectra of high spin octahedral and tetra hedral complexes of Ti(III), V(III), Cr(III), Mn(III), Mn(II), Fe(II), Fe(III), Co(III), Co(II), Ni(II) and Cu(II) complexes, Calculation of Dq and B^1 parameters for Cr(III) and Ni(II) complexes. Tanabe – Sugano diagrams, Differences between Orgel diagrams and Tanabe – Sugano diagrams, Tanabe – Sugano diagrams of d^2 to d^6 and d^8 configurations. Charge transfer spectra- LMCT and MLCT.

UNIT – III: MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES 15 Hrs

Diamagnetism and paramagnetism-orbital and spin contributions, spin-orbit coupling, Hunds third rule and Energies of J levels – Curie law and Curie – Weiss law- Ferromagnetism and antiferromagnetism – Temperature independent magnetism Magnetic susceptibility and its determination by Gouy's and Faraday methods.Calculation of magnetic moment from magnetic susceptibility, spin-only formula, Orbital contribution to magnetic moment (Oh and Td Complexes) –Paramagnetism and crystalline fields – Ti (III), V (III), VO^{2+}, Cr (III), Mn (II), Fe (III), Co(II), Ni (II) and Cu (II). Magnetic Exchange in copper acetate and other dimmers – spin cross over in complexes.

UNIT –IV: CATALYSIS 15 Hrs

Homogeneous catalysis, Metal ion catalyzed reactions – Redox potentials and processes – Mechanism of redox processes involving ligands – Factors affecting redox potentials - other types of metal catalyzed reactions – Reactions involving Ag (I) , Cu (II) and Os (VIII) – Reactions of Oxyanions – Factors affecting rate (General discussion only) – Induced reactions – Free radical reactions – Thermal decomposition of peroxy disulphate – Fe(III) $–S_2O_8$ reactions – chain reactions – H-Br reactions, H_2O_2 $–S_2O_8$reactions.

Books Suggested

1. Inorganic Chemistry principles of Structure and Reactivity 6th Edition. James E. Huheey.
2. Organometallic Chemistry: R.C. Mehrotra and Singh.
3. R. S. Drago: Structural methods in Inorganic Chemistry.
4. H. H. Willard, L. L. Merritt, Jr., J. A. Dean and F. A. Settle, Jr.: Instrumental Methods of Analysis (CBS Publishers).
5. R. L. Carlin: Magnetic Chemistry. R. L. Datta and A. Syamal: Elements of Magnetic Chemistry.

(Mandatory Core)

CHE-202	Organic Chemistry II	L-3, T-1, P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives:

- Able to recognize, classify, explain, and apply fundamental organic reactions such as E2, E1, E1CB.
- Familiar with molecular rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom.
- Provide Hantzsch-Widmann nomenclature for the three and four membered heterocycles. Be able to predict synthetic routes and chemical reactions of these heterocycles.
- Be familiar with occurrence, isolation, structural elucidation and synthesis of natural products-alkaloids

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the mechanisms of E_1, E_2 and E_{1CB} reactions, steroselectivity and synpyrolytic eliminations and use of isotopes, chemical trapping and crossover experiments.
CO2	To learn the rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom and familiarize with the limitations and applications of reactions.
CO3	To learn the synthesis of three and four membered heterocycles, mechanism of ring opening reactions and the effect of electron donating and withdrawing substituents in selectivity of ring opening reactions.
CO4	To understand the structural elucidation and synthesis of alkaloids using specific reagents.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	1	1	1	-
CO2	3	2	2	3	2	2		1	1	-	1	1
CO3	3	2	2	3	2	2	1	1	-	1	-	1
CO4	3	2	2	3	-	2	-	1	-	1	1	1

CHE- 202 : ORGANIC CHEMISTRY II

UNIT-I: Reaction mechanism-I **15 Hrs**

Electrophilic addition to carbon carbon double bond: Stereoselective addition to carbon carbon double

bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO_4 and $KMnO_4$.

Elimination reactions Elimination reactions E_2, E_1, E_{1CB} mechanisms. Orientation and stereoselectivity in E_2 eliminations. Pyrolytic syn elimination and α-elimination, elimination Vs substitution. Facors influencing the elimination reactions

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

UNIT-II: Molecular Rearrangements: **15 Hrs**

Rearrangements to electron deficient Carbon atom:

Pinacol-Pinacolone, Wagner-Meerwein, Dienone-Phenol and Demjonove Rearrngements

Rearrangements to electron deficient Nitrogen atom:

Hofmann, Curtius, Schimidt and Beckmann Rearrangements.

Rearrangements to electron deficient Oxygen atom: Baeyer-Villiger and Dakins Rearrangements

Rearrangements to electron rich Carbon atom: Favorski and Neber Rearrangements

Aromatic and Sigmatropic Rearrangements: Fries and Claisen Rearrangements

UNIT III: Three and four membered heterocycles: 15 Hrs

Systematic nomenclature (Hantzsch-Widmann system) and Replacement nomenclature for monocyclic heterocycles (Three and four membered rings). Synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes, and thietanes.

UNIT-IV: Alkaloids 15 Hrs

Occurrence, isolation, general methods of structure elucidation and physiological action, degradation, classification based on nitrogen heterocyclic ring, structure elucidation and synthesis of the following: Atropine, Papaverine and Quinine.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.

5. Modern Organic Reactions, H.O. House, Benjamin.
6. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
7. Stereochemistry, P.S. Kalsi, Wiley Eastern.
8. Text book of Organic Chemistry, M.C. Murry
9. Text book of Organic Chemistry, Fessendon and Fessendon.
10. Text book of Organic Chemistry, T.W. Solomon,
11. Organic Chemistry, Vol II, I.L. Finar, ELBS Eds.
12. Heterocyclic chemistry T.L Gilchrist, Longman Scientific Technical
13. An Introduction to the Heterocyclic compounds, R M Acheson, John Wiley.

(Mandatory Core)

CHE -203	Physical chemistry II	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Learn Angular momentum and Molecular Orbital Theory and application of Huckel theory to organic molecules.
- Know about concepts in Surface Chemistry, concept of electric double layer model and Micelles.
- Get knowledge on symmetry and group theory their use in spectroscopy, Mulliken character tables.
- Understand Irreversible Electrode phenomenon controlled potential electrolysis and polarography.

Course Outcomes At the end of the course, the student will be able

CO1	To know about Pauli Exclusion principle and Slater determinant, atomic orbitals, Simple molecular orbitals and Huckel theory of conjugated systems.
CO2	To learn Gibbs adsorption isotherm, BET equation and correlate limitations, critical micellar concentration (CMC) and factors affecting the CMC of surfactants.
CO3	To identify Relation between order of a finite group and its sub-group, conjugacy, Symmetry point group (MLS, MHS and MSS) and orthogonality theorem.
CO4	To acquire knowledge on DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, to derive equation for Tafel plots, half-wave potentials for reversible system.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	2	-	1	1	1	2	-
CO2	3	2	2	3	2	2	-	1	1	1	-	1
CO3	3	2	2	3	-		1	-	-	1	1	-
CO4	3	2	-	2	1	1	-	1	1	1	1	-

CHE-AC-203 Physical Chemistry III

UNIT-I: Quantum Chemistry-II **15 Hrs**

(A) Angular momentum: Angular momentum, Rotations and angular momentum, Eigen functions and Eigen values of angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and pauli Exclusion principle. Slater determinant. ;

(B) Molecular Orbital TheoryAtomic Orbitals, Simple Molecular Orbitals, Hybrid Atomic Orbitals, Shapes and energies of Molecular Orbital, Systems of Organic Molecules (Ex: Methane, Ethylene,

Acetylene). Huckel theory of conjugated systems, Π-bond order and charge density calculations, application of Huckel theory to ethylene, butadiene and benzene.

UNIT-II: Surface Chemistry **15 Hrs**

Surface tension, capillary action, pressure difference across curved surface, (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET adsorption isotherm, derivation of BET equation , limitations of BET equation, estimation of surface area from BET equation, Surface films on liquids. Concept of electric double layer model- Helmholtz perrin, Gouy- Chapman and stern models (no derivation)

Micells: Surface active agents, classification of surface active agents micellisation, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellisation, emulsions, reverse micelles.

UNIT-III: SYMMETRY AND GROUP THEORY **15 Hrs**

Definition of a group, rules that are set for a group, sub-group, order of a group, Relation between order of a finite group and its sub-group, conjugacy relation and class of a group, symmetry elements and symmetry operation. Symmetry point group (MLS, MHS and MSS), Schoenflies symbols - Representation of groups by matrices (representation for C_n, C_{nv}, D_{nh} etc. groups to be worked out explicitly), character of a representation, group multiplication tables, reducible - irreducible representations The great orthogonality theorem (without proof) - character tables (H_2O,NH_3) and their use in spectroscopy, Mulliken character tables.

UNIT-IV: ELECTROCHEMISTRY- II **15 Hrs**

Irreversible Electrode phenomenon: Reversibility and irreversibility, Dissolution and deposition potentials, Decomposition voltage, overvoltage, diffusion overvoltage, charge transfer overvoltage, concentration overvoltage-hydrogen and oxygen overvoltages, Tafel plots, Exchange current density and Transfer coefficient, Butler-Volmer equation for one electron transfer processes.

Polarography: Theory, classification , principle , Instrumentation of Polarography, DME, HMDE diffusion current, Ilkovic equation, DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, Millicoulometry, Equation for half-wave potentials, for reversible system when oxidant alone, reductant alone and both are present.

Books Suggested

1. P.W. Atkins: Physical Chemistry (ELBS).
2. Ira N. Levine: Quantum Chemistry (Prentice Hall).
3. R. Mcweeny: Coulson's Valence (ELBS).

4. J.O.M. Bockris and A.K.N. Reddy, Modern Electrochemistry, vol.I & II (Plenum).
5. S. Glasstone; An Introduction to Electrochemistry (3rd ed.)(Affiliated East-West).
6. V. Moroi: Micelles, theoretical and applied aspects (Plenum).
7. Maron and prutton: principles of physical Chemistry.
8. Silbey, Alberty, Bawendi. Physical Chemistry.Jhon-Wiley & Sons. 4th edition-2006.
9. D.N. Bajpai: Advanced physical Chemistry: S. Chand & Company, 1998.

(COMPULSORY FOUNDATION)

CHE-204 A	General Chemistry II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on the principles of different electro analytical methods
- Familiarize with chromatographic techniques.
- To study on biodiversity and conservation of biodiversity
- To know about natural resources and non-renewable resources

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge on ion selective electrodes, solid membrane electrodes and glass electrodes and principles of amperometric titrations.
CO2	To learn general principles and classifications of chromatographic separations and applications of TLC, GLC and HPLC.
CO3	To know about biodiversity, ecosystem diversity and conservation of biodiversity.
CO4	To acquire knowledge on natural resources related to food, water, mineral, energy and land.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2		1	-	1	1	2

CO3	3	3	2	2	1	2	-	1	-	-	1	2
CO4	3	3	2	2	2	2	1	1	-	1	1	1

CHE 204-A: General Chemistry II

UNIT-I: ELECTRO ANALYTICAL METHODS

Theory of potentiometry, calculation electrode potential at the equivalence. Finding of equivalence volume, derivative and linear titration plots. Ion-sensitive electrodes –types of ion sensitive electrodes – metal based cation and anion sensitive electrodes, solid membrane electrodes, glass electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes, Amperometric titrations - Anodic stripping voltammetry, chronoamperometry, chronopotentiometry, Cyclic Voltammetry, Differential Pulse Polarography, linear sweep voltammetry, square wave voltammetry.

UNIT-II: CHROMATOGRAPHY

General principles and classifications of chromatographic separations

Thin layer chromatography: Classification, principle, experimental technique, sample application, development of plate, retardation factor.

Gas liquid chromatography: Gas liquid chromatography - instrumentation (columns and detectors), retention time and retention volume. Chromatographic behaviour of solutes, column efficiency and resolution, column processes and band broadening, time of analysis and resolution, Van-Deemter equation.

High performance liquid chromatography: Theory and instrumentation-column performance, gradient elution, delivery system, sample introduction, separation columns, detectors and applications of HPLC.

Unit – III : Biodiversity

Conservation introduction definition genetic species and ecosystem diversity, hot spots of biodiversity, threats to biodiversity habitat loss poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India, conservation of biodiversity in – situ an ex-situ conservation of biodiversity.

Unit – IV Natural resources and non-renewable resources

An overview of natural resources and associated problems with references to a) Forest resources b) Water resources c) Mineral resources d) Food resources e) Energy resources f) Land resources.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A.Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery J. Bassett, J. Mendham and R.C. Denny. Vogel"s Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (McGraw Hill).
5. D. Midgley and K. Torrance : potentiometric Water Analysis (John Wiley).
6. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.

CHE 204B	Chemistry in Contemporary Society	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To know about quality control and impurities in Pharmaceuticals.
- To have an idea on body fluids, blood, enzymes and forensic.
- To gain knowledge on composition of milk, oil, fats etc.
- To familiarize with different types of fuels, soils and its ingredients.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in pharmaceutical chemicals
CO2	To familiarize with blood fluids, blood, enzymes and forensic
CO3	To know about fermentation, detection of purity, beverages
CO4	To acquire knowledge on gaseous fuels, soil ingredients and analysis of trace elements

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	2	2	-	1	1
CO2	3	1	2	3	1	2	1	-	2	2	1	-
CO3	3	2	2	3	1	2	2	1	-	2	1	1
CO4	3	2	3	2	1	2	1	2	-	1	1	1

CHE 204B: Chemistry in Contemporary Society

UNIT – I : PHARMACEUTICALS 15 Hrs

Pharmaceuticals : Importance of quality control, drugs and pharmaceuticals, sources of impurities in pharmaceutical chemicals, analytical quality control in finished / final products, common methods of assay.

Common drugs and their uses: Analgesics – aspirin, paracetamol; Antheimentics – mebendazole ; Antiallergies – chlorpenneramine malleate; Antibiotics-pencillin, chloromecytin; Anti-inflammatory agents-oxyphenbutazone; **Antimalarials** – primaquine phosphate; Antituberculosists – INH; Narcotics – nicotine, morphine; Expectorants – Benadryl; Sedatives – diazepam; Vitamins – B**1**, B**2**, B**6**, niacin and folic acid.

UNIT – II : FORENSIC AND BIOMEDICALS **15 Hrs**

Body fluids: Composition and detection of abnormal level of certain constituents leading to diagnosis, sample collection and preservation of physiological fluids, analytical methods for the constituents of physiological fluids (blood, urine).

Blood: Estimation of glucose, cholesterol, urea, haemoglobin and bilirubin.

Urine: Urea, uric acid, creatinine, calcium phosphate, sodium, potassium and chloride.

Enzymes: Biological significance, assay of enzymes (pepsin, tyrasinase), vitamins (thiamine ascorbic acid, vitamin A) and harmones (progesterone, oxytocin, insulin), chemical, instrumental and biological assays to be discussed wherever necessary.

Forensic : General discussion of poisons with special reference to mode of action of cyanide organophosphates and snake venom, poisonous materials such as lead, mercury and arsenic in biological materials.

UNIT – III : FOOD AND BEVERAGES **15 Hrs**

Milk and milk products : Composition, alcohol test, fermentation, dye reduction-methylene blue and resazurin tests, analysis of fat content, minerals in milk and butter, estimation of added water in milk.

Oils and fats: General composition of edible oils, detection of purity, tests for common edible oils and groundnut oil, cottonseed oil and mustard oil, tests for adulterants like argemone oil and mineral oils,

Beverages: Soft drinks, alcoholic drinks, tea, coffee and fruit juice, analysis of caffeine in coffee and tea, detection of chicory in coffee, chloral hydrate in toddy, food preservatives like benzoates, propionates, sorbates, bisulphites, artificial sweetners, like saccharin, dulcin and sodium cyclamate, flavours – vanillin, esters (fruit flavours) and monosodium glutamate, artificial food colourants-coal tar dyes and non-permitted colours and metallic salts, control of food quality – codex alimentarices, Indian standards.

UNIT – IV : FUEL AND SOIL **15 Hrs**

Fuels : Definition, classification and characteristics of fuels, sampling, determination of calorific value. Liquid fuels-determination of flash point, fire point, aniline point. Knocking of petrol and diesel – octane and cetere numbers carbon residue. **Gaseous fuels** : Coal gas, waste gas, producer gas, gober gas and blast furnace gas, calorific value determination by Junker's gas calorimeter, relatice merits of solid, liquid and gaseous fules. **Soil** : Ingradiants of soil-organic matter, nitrogen, sulphur, sodium, potassium and calcium, analysis of trace elements, copper, molybdenum, zinc and boron.

Reference Books :

CHE 205 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Separation and determination of the two component mixtures
- Preparation of metal complexes
- Familiarize with conductometric, potentiometric and redox methods of analysis
- colorometric and pHmetric methods of analysis

Course Outcomes: At the end of the course, the student will be able

CO1	To separate and determine the two component mixtures
CO2	To acquire knowledge in the preparation of metal complexes
CO3	To study the determination of cell constant and verification of Onsagar equation, strength of strong acid by Titration of a strong acid with a strong base and vice versa
CO4	To get knowledge on the applications of conductometry, potentiometry, coulometry and pHmetry.

Mapping of course outcomes with the program outcomes

CHE 205 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 205 A : Core practical I: Inorganic Chemistry

I . Quantitative Analysis:

Separation and determination of two component mixtures:

(i) Separation of Al(III) and Determination of Fe (III)

(ii) Separation of Cu(II) and Determination of Zn (II)

(iii) Separation of Ca(II) and Determination of Mg (II)

(iv) Separation of Cu(II) and Determination of Ni (II)

(v) Determination of Ferrocyanide and Ferricyanide

CHE 205 B: Core practical I: Physical Chemistry

1. Conductometry:
   (a) Determination of cell constant
   (b) Verification of Onsagar equation
   (c) Determination of dissociation constant of a weak acid
   (d) Titration of a strong acid with a strong base
   (e) Titration of a weak acid with a strong base
2. Potentiometry:
   (a) Titration of a strong acid with a strong base
   (b) Titration of a weak acid with a strong base
   (c) Redox titration
3. Coulometry: Estimation of Manganese
4. pHmetry: Strong acid, Strong base titrations.

CHE 206A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Familiarize with two component mixture separation and identification.
- Preparation of derivatives.
- Purification by components by different methods.
- Calibration of products by spectral methods.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with binary mixture separation
CO2	To gain hands-on-experience in purification of the components, preparation of derivatives.
CO3	To get knowledge about the chemical behavior of different components and mechanisms
CO4	Purification and calibration of data

Mapping of course outcomes with the program outcomes

CHE 206 A & B: Core practical I: Organic & General Chemistry

CHE-206 A : PRACTICAL – I : ORGANIC CHEMISTRY

Separation and Identification of two component organic mixture by systematic qualitative analysis.

1.Acid + Neutral 2. Base + Neutral 3. Phenol + Neutral 4. Ether insoluable component + acid / phenol / base.

CHE-206 B : PRACTICAL – I : GENERAL CHEMISTRY

Preparation of Metal Complexes:

(i) Tetra(ammine) copper (II) sulphate.

(ii) Mercury tetra(thiocyanato) cobaltate(II).

(iii) Hexa(ammine) Nickel (II) chloride.

(iv) Tris(acetylacetonato) Manganese (III) chloride.

(v) Tris (ethylenediammine) Nickel (II) thiosulpha

CHE 207	Human Values and professional ethics-II	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Human Values and professional ethics

Course Objectives:

- Gain knowledge on value education, family values and adjustability
- Develop ethics towards medical, health care professionals and ethical issues in genetic engineering
- Understand the importance of social ethics towards organ trade, human traffic king human rights violation and social disparities.
- Know about environmental ethics, ecological crises, pollution and protection of environment

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the concepts of human values, responsibilities of family values and status of women in family and society.
CO2	To acquire knowledge on different medical ethics the views of charaka and sushruta on moral responsibilities of medical practitioners.
CO3	To gain knowledge on social ethics and understand the characteristics of ethical problems in management.
CO4	To familiarize environmental ethics, ethical theory and ecological crisis.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CHE 207: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS-II)

Chapter I: Value Education – Definition – Relevance to present day – Concept of human values - Self introspection – Self-esteem. Family values-Components, Structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Chapter II: Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical

obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problem of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Chapter III: Social ethics – Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy. Ethics of media – Impact of Newspapers, Television, Movies and Internet, Business ethics – Ethical standards of business – Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, Ethical abuses and work ethics.

Chapter IV: Environmental ethics – Ethical theory, man and nature - Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and pollution, Justice and environmental health.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. Management Ethics – Integrity at work by Joseph A. Petrick and John F. Quinn, Response Books, New Delhi.
4. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
10. Sasruta Samhita: Tr. KavirajKunjanlal, KunjanlalBrishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Text Book for Intermediate First Year Ethics and Human Values, Board of Intermediate Eduction – Telugu Academy, Hyderabad.
14. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE-AC- 301	Inorganic Spectroscopy and Thermal Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Basic Inorganic Spectroscopy and Thermal Methods of Analysis

Course Objectives:

- Gain knowledge on thermal methods of analysis and principles and applications to inorganic materials.
- Familiarize with basics of Mossbauer and NQR spectroscopy.
- Learn the properties like g-factor, nuclear spin, hyperfine coupling constants.
- Study the ESR instrumentation, various applications and photoelectron spectroscopy.

Course Outcomes : At the end of the course, the student will be able

CO1	To know about TG and DTA and applications of different scanning calorimetry.
CO2	To gain knowledge on Doppler shift and chemical shift, basic principles and applications of NQR spectroscopy.
CO3	To learn zero field splitting and Kramer's degeneracy, relaxation processes, instrumentation and applications of ESR.
CO4	To know about photoelectric effect and Koopmans theorem and impart the applications of X-ray and UV photoelectron spectroscopy.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	2	-	2	-	2	1
CO2	3	2	2	3	2	2	1	2	1	2	2	1
CO3	3	2	2	3	2	2	-	2	1	2	-	-
CO4	3	2	2	3	2		1	1	-	-	2	2

CHE-AC- 301: Inorganic Spectroscopy and Thermal Methods of Analysis

UNIT –I: THERMAL METHODS OF ANALYSIS 15 Hrs

Thermo gravimetry –Principle, Factors affecting the results, instrumentation. Application with special reference to $CuSO_4 5H_2O$, $CaC_2O_4\ 2H_2O$. Different thermal analysis – principle, instrumentation, difference between TG and DTA, applications with special reference to the clays and minerals.Different scanning calorimetry –principle, and applications to inorganic materials like chlorates and perchlorates, ammonium nitrate.

UNIT –II: MOSSBAUER SPECTROSCOPY and NQR **15 Hrs**

Mossbauer spectroscopy: Basic principles, Recoil energy, Doppler shift, Chemical shift, Quadrapole effects, Magnetic effects. Instrumentation, spectral parameters and spectrum display.

Aapplication of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds, (2) Sn^{2+} and Sn^{4+} compounds.

NQR spectroscopy: Basic principles of NQR spectroscopy, quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant and applications.

UNIT –III: ELECTRON SPIN RESONANCE SPECTROSCOPY **15 Hrs**

Basic Principles, Hyper fine splitting, Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, Hamiltonian and spin densities. Zero field splitting and Kramer's degeneracy, Relaxation process and line widths. Instrumentation and Applications.The EPR spectrum of bis(salicylidimine)-copper(II) complex, study of inorganic free radicals, biological applications of Electron Spin Resonance (Study of free radicals and Iron-sulfur proteins)

UNIT –IV: PHOTO ELECTRON SPECTROSCOPY **15 Hrs**

Photoelectric effect, Koopmans's theorem, ionization energy.

X-ray photoelectron spectroscopy (ESCA): Principle, Binding energies, Chemical shift, Applications of XPES to Qualitative analysis , to surface studies and structural analysis. Ultraviolet photoelectron spectroscopy- Principle, application of UPES in studying the molecular orbitals of O_2 and N_2 molecules. Block diagram of photoelectron spectrophotometer. Sources of radiation, detectors. Auger spectra – Principle, Applications of Auger spectra to surface studies and use of Auger spectra as a finger print tool.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. J.E. Huheey, E.A. Keiter and R.L. Keiter: Inorganic Chemsitry, Principles of Structure and Reactivity (4th Ed.) (Addison-Wesley)
3. Gary Wulfsberg: Inorganic Chemistry (5th Ed. (Viva Books)
4. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
5. W.L. Jolly: Modern Inorganic Chemsitry (McGraw-Hill)
6. R.L. Carlin: Magneto-chemsitry (Springer-Verlag)
7. R.L. Dutta and A. Syamal: Elements of Magnetochemsitry (Affiliate East-West).
8. K. Hussain Reddy – Text book of Bioinorganic chemistry

(Mandatory Core)

CHE-AC 302	**Organic Spectroscopy and Applications**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands
- Study on the applications of NMR spectroscopy in ascertaining the stereochemical structures of the molecules.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	To get experience to calculate λ max values for dienes, enones, polyenes, aromatic and heteroaromatic compounds.
CO2	To familiarize with the absorption bands of the molecules with specific functional groups
CO3	To interpret the data to different types of protons and carbons present in a molecule so as to ascertain the structure of the molecule based on the data provided
CO4	To acquire knowledge about specific fragmentation rules of different molecules which are unique.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	-	1	-	2	2	1
CO2	3	2	2	3	2	2	1	-	1	2	2	1
CO3	3	2	2	3	2	2	-	1	-	2	2	2
CO4	3	2	2	3	2	2	1	2	1	2	2	-

CHE 302: CORE THEORY: ORGANIC SPECTROSCOPY AND APPLICATIONS

UNIT-I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY: 15Hrs

Various electronic transitions (185-800 nm), effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fisher-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.

UNIT – II: INFRARED SPECTROSCOPY 15Hrs

Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance, FT-IR

UNIT –III: NMR SPECTROSCOPY: 15Hrs

^{1}H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and nonequivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants.

Applications of ^{1}H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations and carbanions), E, Z isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Stereochemistry, hindered rotation, Karplus curve variation of coupling constant with dihedral angle. Simplification of complex spectra, nuclear magnetic double resonance, contact shift reagents, nuclear Overhauser effect (NOE).

^{13}C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimensional NMR spectroscopy-COSY.

UNIT-IV: MASS SPECTROMETRY 15Hrs

Introduction, ion production, type of ionization, EI, CI, FD, and FAB-factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular-ion peak, metastable peak, Mc. Lafferty rearrangement. Nitrogen rule, isotope

labeling. High resolution mass spectrometry, Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS
2. Spectroscopy of organic compounds, RM Silversteen and others, 5th Ed,John Wiley
3. Spectroscopy of organic compounds, P.S. Kalsi, Wiley, 1993.
4. NMR in chemistry-A multi nuclear introduction, William Kemp, Mc Millan, 1986.
5. Spectroscopic methods in Organic chemistry, DH Williams & I Flemmi

(Mandatory Core)

CHE-AC-303A	Organic Chemistry III	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives: Course Objectives:

- Familiarize with the applications of different reagents in organic synthesis, Mechanisms and stereochemistry.
- Study the methods of preparation and applications of organometallic reagents.
- Understand topocity, prochirality, auxillary and reagent-controlled methods in asymmetric synthesis.
- Applications of different oxidizing and reducing agents in organic synthesis with region and stereo controlled products.

Course Outcomes: At the end of the course, the student will be able to

CO1	To familiarize with the specific functions of the reagents particularly diazomethane, N-bromosuccinimide, Ziegler Natta catalyst, 1,3-dithianes and Merrifield resin in the synthesis of a variety of complex molecules.
CO2	To gain knowledge in the synthesis of different organometallic reagents and also stereo and regio specificity and selectivity of reactions with organometallic reagents
CO3	To understand diastereoselectivity, stereoselectivity and substrate controlled auxillary controlled reactions
CO4	To acquire knowledge about the reagents which causes oxidation in various compounds and also the reagents that causes selective and complete reductions to synthesize various compounds.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	1	2	2	2	2	1
CO2	3	2	2	2	2	2	1	2	1	1	2	-
CO3	3	2	2	3	2	2	-	1	-	1	-	2
CO4	3	2	2	3	2	2	1	2	1	2	2	1

CHE-AC-303A Core-Theory Organic Chemistry III

UNIT I: REAGENTS IN ORGANIC SYNTHESIS 15 Hrs

Use of the following reagents in organic synthesis: Anhydrous $AlCl_3$, Boran trifluoride,

N-Bromosuccinimide, Diazomethane, Dicyclohexylcarbodiimide, Lead tetraacetate, Zieglar-Natta catalysts, DDQ, Dithianes, Merrifield resin.

UNIT-II: ORGANOMETALLIC REAGENTS **15 Hrs**

Synthesis and applications of Grignard reagents, Organolithium, Zinc, Copper, Mercury, Palladium and Rhodium compounds in Organic Synthesis, Homogeneous catalytic hydrogenation and hydroformylation reactions

UNIT III: ASYMMETRIC SYNTHESIS **15 Hrs**

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT IV: METHODS OF ORGANIC SYNTHESIS **15 Hrs**

i). ***Oxidations:*** **(a)** Alcohols to carbonyls-Chromium (iv) oxidants-Dimethylsulfoxide oxidation, periodate xidation, Oppenauer oxidation, oxidation with manganese dioxide, oxidation with silver carbonate **(b)** Alkenes to epoxides-peroxide induced epoxidations. **(c)** Alkenes to diols-oxidation with potassium permanaganate, osmium tetraoxide, Prevost reaction **(d)** Ketones to esters-Bayer-Villiger oxidation **(e)** Oxidative bond cleavage-cleavage of alkenes by transition metals. **(f)** Oxidation of alkyl or alkenyl fragments-selenium dioxide and chromium trioxide oxidations.

ii). ***Reductions*** **:** Reduction with lithium aluminium hydride, sodium borohydride, alkoxides, bis-methoxy ethoxy aluminium hydride, Boran aluminium hydride and derivatives-catalytic,hydrogenation-dissolving metal reductions, Non-Metallic reducing agents including enzymatic and microbial reductions.

Suggested Books

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry, C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Name reactions and reagents in organic synthesis, B.P. Muway and M.G Ellord, John Wiley.
6. Principles of Organic Synthesis, R.O.C Norman and J.M Coxon, Blackie Academic & Professional.
7. Reaction Mechanism in Organic Chemistry, P.S. Kalsi, New Age International.

8. Principles of organometallic chemistry, P. Powell, ELBS.
9. Organo transition metal chemistry-Applications to organic synthesis, S.G. Davis, Pergmon.
10. Stereochemistry to Organic Compounds, D. Nasipuri, New Age International.
11. Stereochemistry, P.S. Kalsi, Wiley Eastern.

CHE-AC-303B	Physical Chemistry III	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Physical Chemistry

Course Objectives:

- Learn applications of Group Theory, symmetry criteria and symmetry restrictions
- Applications of X-ray Diffraction and Electron Diffraction on solid state chemistry
- Familiarize with the applications of Microwave spectroscopy, infrared spectroscopy and Raman spectroscopy
- Get knowledge on concept of Thermodynamics of polymer dissolution and Flory-Huggins theory of polymer solutions

Course Outcomes: At the end of the course, the student will be able to

CO1	To know the determination of Character Co-ordinate of C_2V point group based on 3N Coordinates and to learn the Mutual exclusion Principle.
CO2	To learn the Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals.
CO3	To study the rigid rotator model, stark effect, vibration-rotation spectroscopy, PQR branches, selection rules and Vibrational- rotational Raman spectroscopy.
CO4	To study the concepts on heat of dissolution, regular solution theory, Hildebrand solubility parameter, concept of Flory-Huggins theory of polymer solutions

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	1	-	1	2	1
CO2	3	2	2	2	2	2	2	-	2	2	1	-
CO3	3	2	2	3	2	2		2	-	1	1	2
CO4	3	2	2	3	1	2	1	-	1	2	-	2

CHE-AC-303B CORE-THEORY PHYSICAL CHEMISTRY III

UNIT-I Applications of Group Theory 15 Hrs

Construction of reducible and irreducible representations, Determination of Character Coordinate of C_2V point group based on 3N Coordinates. Standard reduction formula, Determination of normal modes of vibrations of SO_2, NH_3, $POcl_3$, $Ptcl_4^{2-}$, H_2O_2 molecules. Mutual exclusion Principle, Direct Product, Accidental Degeneracy and Fermi resonance Group Theory and Spectroscopy: IR Spectral activity of NH_3 molecule, selection rules, symmetry Criteria for optical activity, symmetry restrictions on dipole moments, symmetry and stereo isomerism. Prediction of IR and Raman Spectral activity of

H_2O and CO_2.

UNIT-II: X-ray Diffraction: 15 Hrs

(A) Solid State Chemistry: Dislocation of Solids, Schottky and Frenkel defects, insulaters, a, d semiconductors, Band theory of solids, solid state reactions.

(B) Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals. Index reflections, identification of unit cells from systematic absences in diffraction pattern- structure of simple lattices and X-ray intensities- structure factor and its relation to intensity and electron density- Description of procedure for X-ray structure analysis (NaCl and KCl)

(C) Electron Diffraction: Scattering intensity Vs scattering angle, Wierlequation,and its importance.Measurement techniques, Elucidation of structures of simple gas phase molecules, Low energy electron diffraction (LEED) for the study of surfaces.

UNIT-III: SPECTROSCOPHY 15 Hrs

Microwave spectroscopy: classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, intensities- stark effect.

Infrared spectroscopy: Linear harmonic oscillator, zero point energy, anharmonity, Mores potential energy diagram, fundamental and overtone transitions, hot bands and combinations bands. Vibration-rotation spectroscopy, PQR branches, selection rules, factors affecting the band positions and intensities for IR region. **Raman spectroscopy:** Classical and quantum theories of Raman effect, pure rotational, pure vibrational Raman spectroscopy, selection rules, mutual exclusion principle, resonance Raman spectroscopy and coherent antistokes Raman spectroscopy. Vibrational- rotational Raman spectroscopy.

UNIT-IV: POLYMER SOLUTIONS 15 Hrs

Thermodynamics of polymer dissolution, effect of molecular weight on solubility, solubility of crystalline and amorphous polymer, heat of dissolution, regular solution theory, Hildebrand solubility parameter, Flory-Huggins theory of polymer solutions, conformational entropy, osmotic pressure and viscosity of polymer solutions. Molecular weight determination by light scattering, ultra-centrifugation and sedimentation equilibrium method. Liquid Crystals- synthesis and applications

Books Suggested

1. F.A. Cotton : Introduction to Group theory for chemists.
2. Geroge Davidson Elsevier : Introductory Group Theory for Chemists.
3. Gurdeep Raj , Ajay Bhagi&Vinod Jain : Group Theory and Symmetry in Chemistry
4. Instrumental methods of analysis – M.H. Willard, Meritt Jr. and J.A. Dean
5. Principles of instrumental analysis – Skoog and West

6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.
7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar: Polymer Science. New Age international Publishers.

CHE AC 304	Core practical I: Analytical Chemistry- Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Analytical Chemistry- Practical.

Course Objectives:

- Gain knowledge on synthesis of inorganic complexes.
- Analysis of ores, alloys and water.
- Acquire knowledge on working principle of colorimetry.
- Estimation of metal ions by complex metric and colorimetric method.

Course Outcomes: At the end of the course, the student will be able

CO1	To know the basic principles of instrumental methods of analysis.
CO2	To gain knowledge on chemistry of alloys.
CO3	To Understand the complexity, theory and working principle of colourimetry
CO4	To familiarize with laws of colorimetric titrations.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CHE -AC -304: Core-Practical Classical Methods of Analysis Practical –I

I. Analysis of ores and alloys:

a) Brass/Bronze
b) Cement
c) Illmenite/Chalcopyrite
d) Dolamite
e) Copper and Nickel alloy

II. Water Analysis:

a) Determination of dissolved Oxygen
b) Determination of BOD of Waste water
c) Determination of COD of Waste water

d) Hardness of Water

e) Chloride, sulphates, carbonates and bicarbonates.

CHE AC 305A	Chemotherapy and Drug Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Chemotherapy and Drug Analysis

Course Objectives:

- Gain knowledge on chemotherapy and analysis of drugs.
- Analysis of drugs chemically and biologically.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the classification and synthesis of drugs.
CO2	To familiarize with the qualitative and quantitative analysis of drugs.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

CHE : AC : 305 (A) : (SKILL ORIENTED COURSE : THEORY) : CHEMOTHEROPY AND DRUG ANALYSIS

UNIT-I: Chemotherapy

Definition, History, and Evolution of Chemotherapy; Discovery, Classification, Nomenclature, Mode of action and synthesis of the following classes of compounds with special references to specific drugs mentioned under each class

i) Sulfa drugs- Sulfanilamide and Sulfamethoxazole.

ii) Antibacterials

a) Lactum group of antibiotics – Penicillin, Ampicillin and Amoxycillin.

b) Cephalosporin-C and Ciprofloxacin.

iii) Anticancer drugs – 5-Flurouracil, Methotrexate.

iv) Antifungals – Griseofulvin

v) Antimalarials – Chloroquin

UNIT-II: Chemical and Biochemical analysis of Drugs

Qualitative and Quantitative Analysis of drugs: Uses of IR, UV, GLC and HPLC methods.

Drug Assay by Biochemical Analysis – ELISA (Cortisol, alcohol, opiates).

Radio Immuno Assay (RIA) – Enalapril, Insulin; Kidney, Lungs and Liver function tests; Use of isotopes in the Bioanalysis of drugs and in drug design programmes.

Book Suggested

1. Medicinal Chemistry and Pharmaceutical Chemistry – Harikishan Singh and Kapur
2. Medicinal Chemistry and Biochemistry – R.L.Nath
3. Introduction to Medicinal Chemistry – Patrick
4. The Organic Chemistry of Drug Synthesis Vols. 1-6 - Ledneicer Top drugs top synthetic routes – John Saunders
5. Medicinal Chemistry – Ashutoshkar
6. Synthetic Organic Chemistry and Drugs – Gurideep R Chetwal
7. Biochemistry – Harper, Conn & Stumpf, Lehninger
8. Biochemistry – Western Jodd
9. Biochemistry – Cann & Stumpf
10. Bergers Medicinal Chemistry Vols. 1-5 – Manfred E. Wolf
11. Introduction to drug design – Siverman
12. Biochemical approach to Medicinal Chemistry – Thomas Nogrady
13. Prinicples of Medicinal chemistry – William Foye
14. Text book of organic medicinal and pharmaceutical chemistry – Delgrado and William A
15. Industrial Microbiology – Casida

CHE AC 305B	Instrumental Methods of Analysis	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Instrumental Methods of Analysis Practical

Course Objectives:

CHE : AC 305 (B) : PRACTICALS (SKILL ORIENTED COURSE) : Instrumental methods of analysis

1. Colorimetric Determinations:

a) Determination of manganese

b) Determination of nickel

c) Determination of iron by 1,10 Pheren-thiroline

d) Determination of chromium

e) Determination of Phosphate

f) Determination of Pesticides

g) Determination of Nitrite.

CHE AC 306 A	Spectral Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral Techniques

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands.
- Study on the applications of flame atomic absorption spectroscopy.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy.

Course Outcomes: At the end of the course, the student will able

CO1	To know the basic principles of spectroscopy.
CO2	To familiarize with the analysis of various functional groups by using different spectroscopic techniques.
CO3	To Understand the applications of AAS.
CO4	To gain knowledge about Mass spectral fragmentation of organic compounds and common functional groups.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	3	-	2	3	2	1	2	1	1
CO2	3	2	2	3	2	2	3	2	-	1	-	2
CO3	3	2	2	2	2		2	-	1	-	1	-
CO4	3	2	2	3	-	2	-	2	-	1	-	2

CHE : AC : 306(A): (OPEN ELECTIVE) SPECTRAL TECHNIQUES

UNIT – I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY 15 Hrs

Various electronic transitions (185-800nm.), Beer-Lambert Law, effect of solvent on electronic transitions , ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, Fieser-Woodward rules for conjugated dienes and carbonyl compounds

UNIT – II : INFRARED SPECTROSCOPY 15 Hrs

Instrumentation and sample handling, characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines, ketones, aldehydes, esters, amides, acids and anhydrides. Effect of hydrogen bonding.

UNIT – III:ATOMIC ABSORPTION SPECTROSCOPY: FLAME AAS: 15 Hrs

Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT –IV: MASS SPECTROMETRY 15 Hrs

Principle, instrumentation, different methods of ionization, EI, CI, FD and FAB, Mass spectra-molecular ion, base peak, meta-stable peak, nitrogen rule and Mc Lafferty rearrangement. Mass spectral fragmentation of organic compounds and common functional groups. Normal and branched alkanes, alkenes, cycloalkanes, benzene and its derivatives, alcohols and phenols, ethers, aldehydes and ketones, carboxylic acids and their derivatives , amines and nitro compounds. Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books Suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS .2.
2. Spectroscopy of organic compounds, RM Silversteen and others 5th Ed, John Wiley 1991
3. Spectroscopy of organic compounds, PS Kalsi, Wiley, 1993
4. NMR in chemistry – A Multi nuclear introduction, William Kemp, Mc Millan 1986
5. Spectroscopic methods in Organic Chemistry, DH Williams & I Flemmi TMH . 2005

CHE AC 306 B	Chromatographic Techniques	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chromatographic Techniques

Course Objectives:

- Familiarize with Classification of Chromatographic methods.
- Understand Demonstration experiment in TLC.
- Study on the applications of High-Performance Liquid Chromatography (HPLC).
- Understand the working principle of gas chromatography.

Course Outcomes: At the end of the course, the student will able to

CO1	To know the stationary and mobile phases in chromatographic techniques.
CO2	To familiarize applications of different chromatographic methods.
CO3	To Understand the principle of chromatographic techniques.
CO4	To gain knowledge on the normal phase and reverse phase.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	-	2	1	-	-
CO2	3	3	2	2	2	1	1	-	2	1	-	-
CO3	3	3	2	2	2	1	1	-	2	1	-	-
CO4	3	3	2	2	2	1	1	-	2	1	-	-

CHE AC 306 B : Chromatographic Techniques

Unit –I: Introduction - Classification of Chromatographic methods – Column chromatography-Adsorption phenomenon: Nature of adsorbents-Solvent systems-Differential migration-Separation of mixture of o-/p-nitro anilines (A demonstration experiment).

Unit –II: Thin-Layer Chromatography (TLC)-Coating materials and preparation of TLC plates-Solvents for development-Detection of compounds in TLC- R_f values in TLC-Applications of TLC in chemistry-Preparative TLC – Demonstration experiment in TLC.

Unit –III: High-Performance Liquid Chromatography (HPLC) - Application of HPLC- HPLC instrument-Stationary phases in HPLC-Normal and reversed phase HPLC: A comparison- Normal phase HPLC: Principle-Retention times in Normal and reversed phase HPLC- Reversed phase HPLC: Principle.

Unit –IV: Gas-Liquid Chromatography- Instruments for Gas-Liquid Chromatography- Gas-

Chromatographic Columns and the Stationary Phase- Application of Gas-Liquid Chromatography- Gas-Solid Chromatography.

Reference Books:

1. Analytical chemistry: G L David Krupadanam, D. Vijaya prsad, K. Varaprasad Rao, KLN Reddy, C. Sudhakar.
2. . Analytical chemistry: Skoog West Holler.
3. Modern Analytical Chemistry : David Harvey DePauw University.
4. J.G. Dick. Analytical Chemistry, Mc Grraw Hill, New Delhi, (1973).

(Mandatory Core)

CHE-AC- 401	Quality Control and General Principles	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Quality Control and General Principles

Course Objectives:

- Study on quality assurance and management
- Obtain practice on the applications of different organic reagents in analysis of inorganic compounds.
- Understand standard reduction potential, mechanism of complex formation reactions. Enzyme characteristics and applications
- Study on Equilibrium constants of oxidation and reduction reactions and the complexometric titration with EDTA.

Course Outcomes : At the end of the course, the student will be able

CO1	To diagnose problems in the quality improvement process and Explain each total quality implementation phase
CO2	To know about theoretical basis for the use of organic reagents in inorganic analysis.
CO3	To understand different types of kinetic methods and their evaluation and to determine the kinetics of enzyme
CO4	To understand the oxidation reactions with Ce (IV) sulphate solutions and applications of complexometric titrations.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	2	2	-
CO2	3	2	2	3	-	2	-	-	-	2	-	2
CO3	3	3	3	3	-	2	-	-	-	1	1	1
CO4	3	3	3	3	-		-	-	-	-	-	1

CHE AC 401: CORE THEORY: QUALITY CONTROL AND GENERAL PRINCIPLES

UNIT-I: QUALITY CONTROL IN ANALYTICAL CHEMISTRY 15 Hrs

Definition of analytical terms: Accuracy, precision, limit of detection, sensitivity, selectivity and specificity, ruggedness, principles of Ruggedness test, validating the Method as a Standard Method.

Quality assurance and management systems: Elements of quality assurance, Quality and quantity management system ISO 9000 and ISO 14000 series.

Good laboratory practices (GLP): Elements of Good Laboratory Practice, Laboratory accreditation,

GLP status in India.

UNIT-II: ORGANIC REAGENTS IN INORGANIC ANALYSIS 15 Hrs

Theoretical basis for the use of organic reagents in inorganic analysis**:** Application of the following reagents in inorganic analysis: dimethylglyoxime, salicylaldehyde, cupferron, d-benzoin, 1,10 phenanthroline, 8-hydroxy quinoline, nitron, tannin, pyridine, 8-hydroxyquinoldine, dithizone, Acetylacetone, theonyl, trifluoroacetone, 8-hydroxy quinoline, tri-M-octylphosphine oxide.

UNIT – III: KINETIC METHODS OF TRACE ANALYASIS 15 Hrs

Rate laws, Analytical use of reaction rates, First and second order reactions, relative rate of reactions. Determination of reaction rates. Analytical utility of first and pseudo first order reactions. Types of kinetic methods, differential, integral, logarithmic, extrapolation method. Evaluation of kinetic methods – Scale of Operation, Catalyzed reactions, measurement method for catalyzed reaction. Micro determination of Inorganic species like Iodine and Hg in complex materials. Determination of organic species. Kinetics of enzyme, catalyzed reactions. Michael's constant factors affecting the rate of enzyme, Catalyzed reactions, Enzyme characteristics and applications of Kinetic methods of trace analysis.

UNIT-IV:REDOX AND COMPLEXOMETRIC TITRATIONS: 15Hrs

Redox Titrations: Standard reduction potential, equilibrium constants of oxidation-reduction reactions, change of electrode potential during the titration of reductant with an oxidant. Formal potential primary standard substance. Standard solutions. Preparation and storage. Oxidations with cerium (IV) sulphate solutions. Theory and use of (i) acid-base, (ii) Oxidation-reduction (iii) Metal ion indicators.; **Complexometric titrations:** Introduction, complexones, stability constants of EDTA complexes, conditional stability constants, titration curves, types of EDTA titration's, titration of mixtures.

Books Suggested

1. Vogel's Text book of Quantitative Chemical Analysis, Basselt, Denmy, Jaffery and Merdhan, ELBS, Orientlong- Manan, 5th Ed.1990.
2. Analytical Chemistry, Gary D. Christian, John Laliley and Senes, New York, 6th Ed., 2007.
3. Fundamentals of ANALYTICAL CHEMISTRY, Skoog, West, Holler; 7th Editin 2001
4. Fundamentals of Analytical Chemistry, D.A. Skoog & D.M. West, Holf-Saunderrs, 5th Ed., 1991.
5. Principles and Methods Chemical Analysis: H.F. Walton, Prentice Hall, New Delhi.
6. Chemical Analysis, H.A. Laitinan, Mc.Graw Hill Book Company.
7. Technical methods of analysis – Griffin, Mc Graw Hill Book Co.

8. K.V.S.G Murali Krishna, An Introduction ISO 9000, ISO 1400 Series,
9. Environmental Management Quality Assurance and Good Laboratory Practices, Prof. Y. Anjaneyulu, In Now Publication, New York.
10. Quality Assurance in Analytical Chemistry – G.Kateman and F.W Pijpers, John Wiley and Sons, New York

(Mandatory Core)

CHE-AC 402	: Instrumental Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Instrumental Methods of Analysis

Course Objectives:

- Gain sound knowledge in spectroscopic methods of ICP-AES, ICP-MS, x-ray fluorescence, spectroscopic techniques and their applications.
- Chromatographic techniques like High-Performance Liquid Chromatography, Capillary Electrophoresis and Supercritical Fluid Chromatography (SFC).
- Familiarise with instrumentation, resolution and ionization sources of GCMS and LCMS.

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the working principles, instrumentation and applications of ICP-AES and ICP-MS, energy dispersive X-ray fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF).
CO2	To understand the basic principles, procedure and components of the High-Performance Liquid Chromatography (HPLC), Gel Permeation Chromatography (GPC): Capillary Electrophoresis (CE), Supercritical Fluid Chromatography (SFC).
CO3	To get knowledge on instrumentation and applications of GCMS in drug analysis and environmental samples analysis.
CO4	To improve the knowledge about coulometric techniques and their analysis of cations (As (III), Fe (II)) and anions (I^- and S^{2-}) by using I_2 liberations and Ce^{4+} liberation in solutions

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	1	-	1
CO2	3	3	3	3	3	2	-	-	-	1	1	1
CO3	3	3	3	3	3	2	-	2	-	1	1	3
CO4	3	3	2	2	-	2	-	-	-	1	1	3

CHE-402: CORE THEORY: INSTRUMENTAL METHODS OF ANALYSIS

UNIT –I SPECTROSCOPIC METHODS **15 Hrs**

Emission Spectroscopy:

(i) ICP-AES: Principles, instrumentation, AES detectors, applications in the analysis of trace and toxic metals in water, geological and industrial samples.

(ii) ICP-MS: Principles, instrumentation, quadrupole mass spectrometers, applications

Fluorescence Spectroscopy:

i) Molecular Fluorescence Spectroscopy: Principle, Theory of fluorescence, phosphorescence, relation between intensity of fluorescence and concentration, Correlation of fluorescence with molecular structure, Fluorescence quenching, Instrumentation and applications.

ii) X-ray Fluorescence Spectroscopy: Principle, energy dispersive X-ray fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF), applications.

UNIT – II: CHROMATOGRAPHIC METHODS 15 Hrs

High Performance Liquid Chromatography (HPLC): Principles, Stationary phases, Instrumentation, Solvent delivery system, sample introduction, gradient elution, columns and detectors.Partition Chromatography, adsorption chromatography, Gel permeation chromatography.

Capillary Electrophoresis: Principle, Electroosmotic flow, Instrumentation, Applications to separation of small ions, separation of Molecular Species, DNA sequencing

Supercritical-fluid chromatography: Supercritical-fluids, Instrumentation and Applications

UNIT –III: HYPHENATED TECHNIQUES 15 Hrs

Mass Spectroscopy: Principle, basic instrumentation, resolution, Ionization sources- Electron impact and Chemical ionization, Mass Analyzers- Quadrupole Mass analyzer and Time- of- Flight Analyzer.

Gas Chromatography- Mass spectrometry: Introduction, GC – MS interface, processing of GC – MS data – ion chromatogram. Quantitative measurement – sample preparation, Selected ion monitoring – Application of GC-MS for Trace constituents. Drugs analysis, Environmental analysis and others.

Liquid chromatography- Mass spectrometry – Introduction – Instrumentation – liquid chromatography – Mass spectrometer Interface – Instrumental details – Processing LC-MS data – ion chromatograms, Sample preparation – selected ion monitoring. Application of LC-MS for Drug analysis, Environmental samples and others.

UNIT- IV: ELECTRO ANALYTICAL METHODS 15 Hrs

Anodic stripping voltametry: principle, instrumentation, Hanging mercury drop electrode, application in the analysis of Pb and Cd in environmental samples, principle of cathode stripping voltametry.

Coulometric analysis: principles of coulometric analysis with constant current, coulometric analysis with controlled potential, applications of coulometric methods for the analysis of cations-As (III), Fe (II) and I- and S_2- by using I_2 liberations and Ce^{4+} liberation in solutions

Ion Selective Electrodes: types of ion selective electrodes, basic properties, potentials and construction, calibration of ion selective electrodes, ion selective electrodes with fixed membrane sites, silver, lead, cadmium, sulfide, fluoride, cyanide and glass electrodes, applications in the analysis of air and water pollutants, principles of liquid membrane, gas sensing and enzyme based electrode

Books Suggested

1. Analytical Chemistry, Gary D. Christian, John Laliley and Senes, New York, 6th Ed., 2007.
2. Analytical Chemistry Principles and Techniques, I.G. Harge, Prentice Hall.
3. Principles of Instrumental analysis, D.A. Skoog and J.L. Loacy, W.B. Saunders.
4. Handbook of Instrumental Techniques for Analytical Chemistry, F. Serlie, Prentice Hall.
5. Vogels Text book of Quantitative Chemical Analysis, Basett, Denny Jebbary, 5th Ed. ELBs 1990.
6. Instrumental Methods of Chemical Analysis, Willard Merrit, Dean, Stella Jr 6th Edition.
7. Separation methods, M.N Sastri, Himalaya Publishing Company, Mumbai

(Mandatory Core)

CHE-AC-403A	Applied and Environmental Aspects	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Environmental Aspects

Course Objectives:

- Gain sound knowledge on preparation of sampling, decomposition, separation and pre-concentration
- Experience with fertilizer analysis, pesticide analysis minerals and ores.
- Know about analysis of fuels, alloys and explosives
- Expertise with water quality monitoring

Course Outcomes: At the end of the course, the student will be able to

CO1	Have an idea about preparation of sampling, decomposition, separation and preconcentration of metal ions etc.
CO2	Gain experience on agrochemicals and fertilizers and their analysis.
CO3	Have an idea on the analysis of fuels, alloys and explosives
CO4	Experience with environmental pollution monitoring techniques.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	1	-	1
CO2	3	3	3	3	3	2	-	-	-	1	1	1
CO3	3	3	3	3	3	2	-	2	-	1	1	3
CO4	3	3	2	2	-	2	-	-	-	1	1	3

CHE : AC 403(A): (GENERIC ELECTIVE) APPLIED AND ENVIRONMENTAL ASPECTS

UNIT-I: SAMPLING AND SEPARATION METHODS 15 Hrs

Preparing the sample for analysis: Sampling, The effect of sampling uncertainties, Gross sample, determination of the size of the gross sample. Analytical sample. Preparation of laboratory sample from gross sample, Moisture in the sample, Karl-Fisher reagent for the determination of moisture content in samples.

Decomposition and dissolving the sample: Decomposition of sample by fluxes, wet digestion, dry ashing, combustion with oxygen, microwave decomposition.

Separation and pre-concentration: Extractive separation of metal ions as chelates (dithizone, oxine,

APDC, NaDDTC), Solid-phase extraction

UNIT-II: ANALYSIS OF AGRO CHEMICALS and MINERALS 15 Hrs

Soil analysis: Soil moisture, pH, total nitrogen, Phosphorus, silica, boron and metals (Cd, Cu, Fe, Mn, and zinc) in soil.

Fertilizer analysis: Analysis of Ammonical fertilizers, Phosphate fertilizers, Nitrate fertilizers

Pesticide Analysis: Analysis of organo chlorine pesticides by gas chromatography, Determination of DDT residue in vegetable and food grains. Analysis of organo phosphorous pesticides (Malathion, parathion) by spectrophotometric and chromatographic methods.

Analysis of Minerals and Ores: Limestone, Ilmenite, Chalcopylites and Beryl. Analysis of Cement, Ceramics and glass.

UNIT-III: ANALYSIS OF COMPLEX MATERIALS 15 Hrs

Analysis of Fuels: Coal, proximate and ultimate analysis, heating valves and grading of coal.

Liquid Fuels: Flash point, aniline point, octane number and carbon residue.

Analysis of Gaseous Fuels: Producer gas, Water gas, Calorific values

Analysis of alloys: German Silver, Brass, bronze, Solder, Steels containing elements such as Mo, Co, V, Cr, Si and Ni.

Aanalysis of Explosives: Introduction, Classification, Deflagrating or low explosives, Characteristics of explosives, Nitrocellulose, PETN or PENTHRIT, Di-nitrobenzene (DNB), Trinitrobenzene (TNB), Trinitrotoluene (TNT),

UNIT – IV: ENVIRONMENTAL POLLUTION MONITORING: 15 Hrs

Water Quality monitoring: Methods of **w**ater sample collection, Determination of Dissolved oxygen (D.O), Biochemical Oxygen Demand (BOD) and Chemical Oxygen Demand(COD)

Analytical methods for the determination of the following ions in water:

Anions: F^-, PO_4^{3-}, NO_3^-, NO_2^- Cations: Cr^{6+}, As^{5+}, Pb^{2+}, Hg^{2+}, Cd^{2+}

Air Quality Monitoring: Air sampling methods, Chemical analysis of the following Air pollutants**.** i) Gaseous pollutants: Carbon monoxide (CO). sulphur dioxide (SO_2), nitrogen dioxide (NO_2), Aliphatic hydrocarbons and polycyclic aromatic hydrocarbons (PAH). (ii) Particulate matter

Books Suggested

1. Analytical Chemistry, Gary D. Christian, John Laliley and Senes, New York, 6th Ed., 2007.
2. Fundamentals of ANALYTICAL CHEMISTRY, Skoog, West, Holler; 7th Editin 2001.
3. Analytical Chemistry Principles and Techniques, I.G. Harge, Prentice Hall.

4. Principles of Instrumental analysis, D.A. Skoog and J.L. Loacy, W.B. Saunders.
5. Fundamentals of Air Pollution by A.C. Strem and others, Academic Press, 1975.
6. Standard methods for the examination of water and waste water published by American public health association, 15th Ed.1981.
7. Methods of Soil Analysis, C.A. Black, Part I and II.
8. Handbook of Analytical Control of Iron and Steel Production, Harrison John Weily 1979
9. Standard methods of Chemical Analysis, Welcher.
10. Technical Methods of Analysis, Griffin, Mc Graw Hill.
11. Environmental Chemistry, Anil Kumar De, Wiley Eastern Ltd.

(Compulsory Foundation)

CHE-AC-403B	Bioinorganic, Bioorganic, Biophysical Chemistry	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Bioinorganic, Bioorganic, Biophysical Chemistry

Course Objectives:

- Highlighten metal complexes as oxygen carriers and electron transfer in biology
- Metal ion transport and storage in biological systems and importance of trace metals in biology
- Learn physiological functions of carbohydrates, lipids, enzymes classification, stereospecificity
- The basic concepts of biophysical chemistry in biochemical reactions, exergonic and endergonic reactions.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain knowledge on metallo proteins in electron transfer processes.
CO2	Know the applications of trace metal ions and metal ions as chelating agents in medicine.
CO3	Achieve and develop highly stereoselective synthesis of organic compounds and drugs by adopting environmentally.
CO4	Understand thermodynamics of biopolymer reactions and to correlate free energy and biopolymer parameters.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	1	-	1
CO2	3	3	3	3	3	2	-	-	-	1	1	1
CO3	3	3	3	3	3	2	-	2	-	1	1	3
CO4	3	3	2	2	-	2	-		-	1	1	3

CHE AC-403(B): (GENERIC ELECTIVE): BIOINORGANIC, BIOORGANIC, BIOPHYSICAL CHEMISTRY

UNIT-I: **BIO-INORGANIC CHEMISTRY- I** **15 Hrs**

Metal complexes as oxygen carriers –Heme proteins –Hemoglobin and myoglobin –Non heme proteins –hemerythrin and hemocyanin – model synthetic complexes of iron, cobalt and copper.Co-enzymes Vitamin B_{12},carboxy peptidase and superoxidedismutase.

Electron Transfer in Biology: Structure and functions of metalloproteins in electron transfer processes –catalase –peroxidose –cytochromes and iron –sulphur proteins –synthetic models.

UNIT – II: BIOINORGANIC CHEMISTRY- II: Metal ion transport and storage in biological systems**,** Metal ions in Biology, Molecular mechanism of ion transport across membranes: ionophores, photosynthesis.

Hydrolytic metalloenzymes: Carbonic anyhdrase, carboxy peptidase, calcium in control processes, calcium and muscle contraction, calcium and secretion, calcium in blood clotting mechanisms. Therapeutic uses of enzymes.

Importance of trace metals in biology: Metal ions as chelating agents in medicine, trace metal ions and metal and non-metal deficiency. Biological nitrogen fixation,in-vivo and in-vitro nitrogen fixation.

UNIT-III: BIOORGANIC CHEMISTRY

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition- Blood group substances

Lipids: Essential fatty acids-structure and function of triglycerols, Glycerophospholipids, cholesterol, bile acids prostaglandins- composition and functioning of lipoproteins

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

UNIT-IV: BIOPHYSICAL CHEMISTRY:

Standard free energy change in biochemical reactions, exergonic and endergonic reactions, hydrolysis of ATP, thermodynamics of biopolymer solutions, chain configuration of bio polymers, and calculation of average dimensions. Membrane equilibrium, ion transport through cell membrane.dialosis and its function. Structure and functions of proteins, enzymes, DNA and RNA in living systems, forces involved in bio polymer interactions, electrostatic forces, hydrophobic forces, molecular expansion, and dispersion forces.

Books Suggested

1. M.N. Hughes, The Inorganic chemistry of Biological Processes, John wiley and Sons, New York 2nd Edition, 1981.
2. A Text book of Biochemistry, A.V.S.S. Rama Rao
3. Physical chemistry by Atkenes
4. Physical chemistry by Albertz.
5. Bio physical chemistry by Van Holde
6. Bio Physics by Narayanam

7. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
8. Chemistry of Natural Products, P.S. Kalsi, Kalyani Publishers.
9. Chemistry of Organic Natural Products, O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
10. Natural products Chemistry K.B.G. Torssell, John Wiley, 1983.
11. Burger's Medicinal Chemistry, M.E. Wolff, John Wiley
12. Medicinal Chemistry, A. Kar, New Age International

CHE AC 404	Core practical I: Analytical Chemistry- Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Analytical Chemistry- Practical.

Course Objectives:

- To learn about the separation methods and flame photometric analysis of pesticide residues
- Determination of transition metal ions by polarography
- Principle, instrumentation, determination of metal ions By AAS.
- Interpretation of NMR chemical shifts and hydrogen bonding.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the common laboratory techniques including separation techniques
CO2	Polarography, atomic absorption spectroscopy in both emission and absorption mode.
CO3	Gain knowledge on implementation of gas chromatography and HPLC for separation of mixtures.
CO4	Familiarize with interpretation of data to structures by NMR.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	1	-	1
CO2	3	3	3	3	3	2	-	-	-	1	1	1
CO3	3	3	3	3	3	2	-	2	-	1	1	3
CO4	3	3	2	2	-	2	-	-	-	1	1	3

CHE AC 404: CORE PRACTICALS: <u>PRACTICAL – I-</u>

Instrumental methods of analysis- II

1. Flame Photometry**:** Determination of Na and K, Ca and Li in Water and Soil.
2. TLC/Paper chromatographic separation.
3. Determination of Pesticide residues by gas chromatographic method
4. Polarography: a) Determination of E ½ of Zn and Cd; b) Determination of amounts of Zn and Cd
5. Atomic Absorption Spectroscopy: Determination of transition metal ions (Cd, Cr, Cu, Pb, Zn etc.,) by AAS.
6. Separation of Metal ion by Solvent Extraction /Ion exchange.

II <u>DEMONSTRATION EXPERIMENTS</u>

1. IR – Interpretation of IR spectrum of alcohols, ketones, aldehydes and other standard materials

2. AAS: Demonstration of AAS – Determination of Zn, Cd, Pb, Mn, Fe and Ni in effluents using AAS.
3. Spectrofluorimetry – estimation of quinine and fluoroscene
4. Ion selective electrodes – estimation of F^-, S^{2-} and CN^- in effluents using ion selective electrode meter.
5. Polarography and Anode stripping voltametry
   a). Polarography and Anode stripping voltametry – behavior of Cd, Zn, Pb in a mixture.
   b). Determination of Pb and Cd in samples using Anode stripping voltametr
6. Gas chromatography- Determination of pesticides
7. HPLC- Determination of pesticides
8. NMR
   (a). Demonstration of NMR spectrometer and study of hydrogen bonding in a given alcohol or phenol.
   (b). Interpretation of NMR chemical shifts of ethyl benzene, ethyl alcohol
9. TGA, DTA, DSC – Demonstration of TG, DTA and DSC and study of decomposition of calcium oxalate, calcium carbonate, copper sulfate, oxalic acid.
10. pH metry
    (a). Determination of alkalinity in a colored effluent using pH metric end point.
    (b). Determination of purity of commercial HCl, H_2SO_4, H_3PO_4 and CH_3COOH using pH metric end point.

CHE AC 405A	Project Work	L-5,T-1,P-0	4Credits

Pre-requisite: Project Work

Course Objectives:

- Identification of problem
- Ability to carry out independent chemistry research with competency in research design, data gathering
- Interpretation and communication of research results through scientific publications and presentations.
- Preparation of dissertation

Course Outcomes: At the end of the course, the student will be able to

CO1	Perform experiments, collection and evaluation of data.
CO2	Interpretation of results while adhering to scientific principles of responsible and ethical behaviour.
CO3	Analysing and compiling the data and results in a chronological order in the form of dissertation.
CO4	Preparation of dissertation.

Mapping of course outcomes with the program outcomes

CHE AC 405 A : <u>PROJECT WORK</u>

CHE AC 406A	Drug Chemistry	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Drug Chemistry

Course Objectives:

- To learn about the natural products as leads for new drugs
- Determination of cardiovascular drugs
- To study Autacoids
- Interpretation of Antipyretics

Course Outcomes: At the end of the course, the student will be able to

CO1	Know about natural products.
CO2	Know Interpretation of cardiovascular drugs.
CO3	Know the Analyzing about prostaglandins.
CO4	Know the Definition, Classification, Nomenclature, Structure and Synthesis of anti-inflammatory drugs.

Mapping of course outcomes with the program outcomes

CHE : AC : 406 (A): (OPEN ELECTIVE) : DRUG CHEMISTRY

UNIT – I: NATURAL PRODUCTS AS LEADS FOR NEW DRUGS

Occurrence, Structure and therapeutic uses of Drugs acting on Central Nervous System

Morphine alkaloids (morphine, codeine, thebaine, heroin, pethidine)

Cannabinoids (9-cannabinol, Tetrahydrocannabinol)

Neuromuscular Blocking Agents (Curare, Decamethonium)

Vinca Alkaloids (Vincristin and Vinblastin), Taxol and Taxotere, podophyllotoxin, Etoposide, Teniposide.

UNIT – II: CARDIOVASCULAR DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis.

Cardiac glycosides (ex: Digoxin, Digitoxin);

Antihypertensive drugs (ex: Methyl dopa, Clonidene hydrochloride);

Antiarrhythmic agents (ex: Quinidine sulfate);

Antisympathetic drugs (ex: Propranolol hydrochloride, Verapamil hydrochloride);

Vasopressor drugs (ex: Prenylamine, Buphenine).

UNIT – III: AUTACOIDS

Definition, Occurrence, Isolation, Nomenclature, Classification, Synthesis, Biosynthesis and Stereochemical structures of Prostaglandins. Structural elucidation of PGE_1, PGE_2; Synthesis and biosynthesis of PGE_2, $PGF_{2\alpha}$. Structure and Biosynthesis of Thromboxane A2 and Prostacyclin (synthesis not expected).

UNIT – IV: ANTI-INFLAMMATORY DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis of Paracetamol, Aspirin (Antipyretic), Salol, Cinchophen, Antipyrene, Phenylbutazone, Indomethacin, Tolmetin, Ibuprofen, Diclofenac and Naproxen.

Books suggested:

1. Medicinal Chemistry by Ashitosh Kar
2 Medicinal Chemistry by D. Sriram, P. Yogeeswari
3 Medicinal Chemistry by David A. Williams, Thomas L. Lemke
4 Medicinal Chemistry by V**.** Alagarsamy
5 Biochemistry by U. Satyanarayana
6 Natural Products Chemistry and Applications by Sujata V. Bhat, B.A. Nagasampagi, S. Meenakshi
7 Medicinal Chemistry by V.K. Ahluwalia, Madhu Chopra
8 Medicinal Chemistry by Balkishen Razdar
9 Advanced Practical Medicinal Chemistry by Ashutosh Kar
10 Chemistry of Organic Natural Products by O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
11 Chemistry of Natural Products by S. V. Bhat, B.A. Nagasampagi, M. Sivakumar
12 Natural Products Chemistry by K.B.G. Torssell, John Wiley, 1983.

CHE AC 406 B	Electroanalytical Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Electroanalytical Techniques

Course Objectives:

- To learn about the classification of electroanalytical methods
- Determination of types of currents
- Principle, instrumentation, reversible and irreversible cyclic voltammograms..
- Interpretation of Ion selective electrodes

Course Outcomes: At the end of the course, the student will able to

CO1	Know how to interpret potentiometry and conductometry
CO2	Know the Interpretation of results while adhering to DC Polarography.
CO3	Know the Analysing and compiling the data and results in polarography .
CO4	Familiarize Types of ion sensitive electrodes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : AC : 406(B): (OPEN ELECTIVE) : ELECTRO ANALYTICAL TECHNIQUES

Unit I: Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glasselectrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant. Mobility of ions, Conductometric titrations.

Unit II: D.C Polarography :. Dropping mercury electrode- Instrumentation-polarogram. Types ofCurrents : Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation(derivation not necessary) and its consequences. Types of limiting Currents: Adsorption,Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

Unit III: (i) A.C. polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography(V) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms.

Unit IV: Ion selective electrodes: Ion-sensitive electrodes –types of ion sensitive electrodes –metal based cation and anion sensitive electrodes, solid membrane electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A. Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery, J. Bassett, J. Mendham and R.C. Denny. Vogel's Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (Mc Graw Hill).

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

SVU COLLEGE OF SCIENCES

DEPARTMENT OF CHEMISTRY

2. ENVIRONMENTAL CHEMISTRY (Specialization)

Syllabus for M.Sc. CHEMISTRY

Choice Based Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Chemistry is one of the first six departments started during the year 1954 when the university was founded. The Department offers M.Sc. course in Chemistry with specializations in Analytical, Environmental, Inorganic, Organic and Physical Chemistry besides Self Supporting Courses in Organic and Analytical Chemistry. Choice Based Credit System is followed and the courses are categorized as per the guidelines of the statutory authorities. Ability enhancement and skill development courses are part of the curriculum. Almost 15% of the students are qualifying in National Entrance Test conducted by UGC-CSIR. Also the Department offers quality research and training experience leading to Ph.D., Degrees for the students in the areas of synthesis of pharmacologically potential molecules analogous to drugs, application of green methodologies for the synthesis of complex molecules, development of new hybrid sorbents for monitoring toxic metals in environmental samples, fabrication of novel electrochemical sensors and biosensors towards the detection of organic molecules and pollutants. Over the last sixty five years the department has trained about 650 students for their Doctoral degrees. Most of the research scholars are doing Post-Doctoral research in abroad and in India. The faculty published more than 3000 research papers in reputed National and International journals. The Department organizes National and International conferences / seminars/ workshops on regular basis. The Department has well equipped laboratories for research and teaching besides a DST funded computer lab and a Department library. All the faculty members are having individual research laboratories with internet facility.

At present the Department is flourished with 10 faculty members and most of the faculty members have Post Doctoral research and training experience abroad. Some of the faculty worked as Visiting Professors and Visiting Fellows in prestigious universities abroad. Majority of faculty members have undertaken major research projects funded by agencies like UGC, CSIR, DST, BRNS, DBT and MOES and have successfully completed the tasks with a budget outlay of Rs. 250.00 lakhs. Most of the faculty members have developed collaboration with Indian Institute of Sciences, Bangalore, Indian Institute of Chemical Technology, Hyderabad, AVRA Laboratories, EPR Laboratories, Hyderabad, Amara Raja Batteries, Tirupati, RRL, Trivandrum and Birla Institute of Technology & Science, Pilani – Hyderabad campus and have approved patents. Some of the faculty and Alumni are the recipients of JSPS Fellowship, UGC Raman Fellowship, Common wealth Academic Fellowship, State Best Teacher Award etc., Recognizing the excellence in teaching and research in the Department, the University Grants Commission and Department of Science Technology have provided funding under DRS and FIST programmes. The Alumni of the department served in coveted positions as Vice-chancellors, Registrars, CEO of pharma industries etc. The former students of the Department have established leading International pharmaceutical industries in India and abroad. Some of them are actively engaged in the manufacture of COVID 19 vaccine. The ultimate goal of the Department is to achieve excellence in fundamental research as well as the development of innovative technologies for the future.

Vision

- Impart quality education & training in the field of chemistry to enable successful careers for the post graduate students in the field of research, education & industry applications of chemical sciences.

Mission

The Department of Chemistry strives:

- To get an ideal balance between knowledge creation and knowledge dissemination in the chemical sciences with a focus to train and mentor students to become responsible scientists and scientifically literate professionals to attain National and International impact.
- To contribute to the improvement of scientific and technological literacy, and the development of critical-thinking and problem-solving skills of all students in order to compete for the world of work and responsible citizenship

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	**Scientific Problem solving skills**: Deep knowledge of the topic which can develop the problem solving skills using chemical principles.
PSO2	**Analytical skills**: Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reactions with the help of sophisticated instruments
PSO3	**Research skills**: Develop research skills through dissertation/project work in different fields of chemistry such as organic, inorganic, analytical, physical and environmental.
PSO4	**Learning skills on life processes**: Acquire advanced level of knowledge in natural products as well as biological systems from the chemistry point of view.

Program Objectives

PO1	To divulge an advance level of theoretical and practical knowledge in the major fields of Chemistry- Analytical, Environmental, Inorganic, Organic and Physical.
PO2	To engage in research projects for acquiring wide spectrum of subject knowledge and research experience in respective fields.
PO3	To enlighten on skill enhancement in the core chemistry with practical expertise hands this will make students employable in academia and industries
PO4	To mould as responsible citizens to serve the nation

Program Outcomes: On completion of M.Sc. Chemistry programme, graduates will be able to –

PO1	Have a firm foundation in the fundamentals and application of current chemical and scientific theories in different areas of chemistry *viz*., Analytical, Environmental, Inorganic, Organic and Physical.
PO2	Understands the background of organic reaction mechanisms, complex chemical structures, and instrumental methods of chemical analysis, molecular rearrangements and separation techniques.
PO3	Familiarize with the importance of various elements present in the periodic table, coordination chemistry and structure of molecules, properties of compounds, structural determination of complexes using theories and instruments.
PO4	Understand about the physical aspects of atomic structure, dual behavior, reaction pathways with respect to time, various energy transformations, molecular assembly in nano-level, significance of electrochemistry, molecular segregation using their symmetry.
PO5	Create awareness and sense of responsibilities towards environment and apply knowledge to solve the issues related to Environmental pollution.
PO6	Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.
PO7	Be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
PO8	Clearly communicate the results of scientific work in oral, written and electronic formats.
PO9	Explore new areas of research in both chemistry and allied fields of science and technology.
PO10	Design, analyze and carry out scientific experiments and interpret data to provide solutions to different industrial problems.
PO11	Independently carry out research to solve practical problems and present a substantial technical report.

PO12	Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self-directed learning aimed at personal development, and adapting to change academic demands of work place through knowledge/ skill development/ reskilling.

Program Educational Objectives:

At the end of the program, the student wills be able to:

PEO1	To demonstrate broad knowledge of descriptive chemistry.
PEO2	To impart basic analytical and technical skills to work effectively in various fields of chemistry.
PEO3	To motivate critical thinking and analysis skills to solve complex problems viz., analysis of data, synthetic logistics, spectroscopy, structure and modeling, team based problem solving etc.
PEO4	To demonstrate an ability to conduct experiments in the above sub disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling method
PEO5	To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
PEO6	To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment and modern instrumentation.

***Among the Generic Elective a student shall choose any one.**

(Mandatory Core)

CHE-101	INORGANIC CHEISTRY I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Comprehend the key features of coordination compounds, Crystal Field Theory, different properties and bonding by spectroscopic techniques
- Study the polymorphic forms of non-transition elements and their synthesis and properties
- Understand the basics of reaction mechanism and the mechanistic concepts of Dissociative (Id) and Associative interchange Mechanism (Ia), Taube's classification, Trans effect and Electron Transfer Reactions
- Familiarize with the methods of synthesis of metal carbonyls and metal nitrosyls, Synergistic effect, EAN and 18-electron rule

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the key features of coordination compounds, Crystal Field Theory, magnetic properties and bonding in transition metal complexes.
CO2	To learn about the polymorphic forms of Carbon, Sulphur and Phosphorus, synthesis and properties of sulphur-nitrogen compounds, boranes, carbides, silicates and to know Wades rules.
CO3	To explain the reactivity of complexes in terms of Valence bond and Crystal Field theories, Taube's classification, Trans effect and Electron Transfer Reactions.
CO4	To gain knowledge on synthesis and structures of different metal carbonyls, synergistic effect and 18 electron rule.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	1	-	1	-	2	-	1
CO2	3	1	-	3	-	2	2	2	2	1	-	2
CO3	3	2	-	3	2	-	-	1	-	1	2	1
CO4	3	1	1	3	-	2	2	2	1	-	1	1

CHE 101: INORGANIC CHEISTRY I

UNIT-I: CO-ORDINATION COMPOUNDS 15 Hrs

Introduction to Crystal field Theory, CFSE and its calculation, Paring energy, Splitting of 'd' orbitals in Trigonal bi pyramidal, square planar, square pyramid and pentagonal bipyramidal geometries, Jahn –Teller effect, Application of CFT, OSSE, site Selection in Spinels, Short comings of CFT, Evidence for covalency –

Nephelauxetic effect. MOT of co-ordinate bonds –M.O. Diagrams for octahedral, tetrahedral and square planar complexes. Experimental evidences for π- bonding – Crystallography, Infrared spectroscopy and Photoelectron spectroscopy.

UNIT-II: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non- transition elements special features of individual elements ; Synthesis' properties and structure of their Halides and Oxides, Polymorphism of Carbon, Phosphorus and Sulphur, Synthesis, properties and structure of boranes, Carboranes, borazines, Silicates, Carbides, Sulphur-nitrogen compounds. Electron counting in boranes, Wades rules (Poly hedral skeletal electron pair theory), Isopopoly and hetero poly acids.

UNIT-III: REACTION MECHANISMS IN COMPLEXES 15 Hrs

Reactivity of metal complexes. Inert and Labile complexes. Concept of Labile and Inert complexes in terms of Valence bond and Crystal Field theories. Taube's classification of complexes as labile and inert complexes. Dissociative (D) and Dissociative interchange Mechanism (Id) & Associative (A) and Associative interchange Mechanism (Ia). Substitution reactions in octahedral complexes- Acid Hydrolysis -factors affecting Acid Hydrolysis - Base Hydrolysis-conjugate Base Mechanisms - Anation Reactions -Substitution Reactions in Square Planar complexes- Trans effect – Mechanisms of Trans effect: polarization and π-bonding theories.Electron Transfer Reaction-Inner Sphere and outer Sphere Mechanisms- Marcus theory.

UNIT-IV: METAL πCOMPLEXES-I 15 Hrs

Nature of π bonding, Classification of π ligands, π donor ligands and π -acceptor ligands.

Metal Carbonyls: Synthesis of metal carbonyls, Structures of metal carbonyls of the types M(CO)n (M= Cr, Fe, Ni; n=4-6), $M_2(CO)n$ (M=Co, Fe, Mn; n=8-10), $M_3(CO)_{12}$ (M=Fe, Ru and Os), $M_4(CO)_{12}$ (M=Co, Rh, Ir). IR Spectraof metal carbonyls (i) Detection of bridging and terminal CO ligand, (ii) Synergistic effect, EAN and 18-electron rule. Electron counting methods (i) Oxidation state method and (ii) Neutral Atom method.

Metal Nitrosyls: Synthesis of metal Nitrosyls, bonding, Electron donation by nitric oxide, Models for NO bonding (i) Covalent model and (ii) Ionic models, Structures of metal nitrosyls (1) $[Fe_4S_3(NO)]$ (2)$[Fe_2(NO)_2I_2]$ (3) $[(\phi_3P)_2Ir(CO)Cl(NO)]^+$ (4) $[(\phi_3P)_2Ru(NO)_2Cl]$, Detection of bridging NO ligand, Applications of metal nitrosyls.

Books Suggested

1. F.A.Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999.John wiley & sons. Inc., New York.
2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, VI Edition 1993. Harper Collins College Publishers, New York.

3. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
4. Gary Wolfsburg: Inorganic Chemistry (5th Ed. (Viva Books)
5. W.L. Jolly: Modern Inorganic Chemistry (McGraw-Hill)
6. B.N Figgis: Introduction to Ligand Fields (John-Willey)
7. S.F.A. Kettle: Coordination compounds.
8. Coordination Chemistry. Bassalo & Jahnson.

(Mandatory Core)

CHE-102	Organic Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Organic Chemistry

Course Objectives:

- Classify molecules based on stereo chemical aspects study on optical and geometrical isomerism by the application of Cahn-Ingold-Prelog rules.
- Familiarize with different types of substitution reactions, able to predict products, including stereochemistry in aliphatic and aromatic nucleophilic substitution reactions, effect of neighboring group participation
- Understand thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects in reactive intermediates
- Study about occurrence, isolation, structure establishment and synthesis of natural products-terpenoids.

Course Outcomes: At the end of the course, the student will be able

CO1	To detect stereochemical structures of the molecules, stereoselective and stereocontrolled reactions.
CO2	To ascertain the stereochemistry of the products with the effect of neighbouring group participation and to familiarize the various types of aromatic substitution reactions, their mechanism and the effect of substituents.
CO3	To know the concept of isotope effects, potential energy diagrams and transition states in different intermediates
CO4	To familiarize with stereospecific synthesis of naturally occurring terpenoids and degradation products of terpenoids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	-	1	1	-	1	-	-
CO2	3	2	1	3	-	1	2		-	2	1	1
CO3	3	1	2	3	-	1	1	2	1	-	1	-
CO4	3	2	2	3	2	1	1	1	-	1	1	1

CHE102: Organic Chemistry I

UNIT-I: **Stereochemistry**

Sereoisomerism-Stereoisomers Classification – Configuration and conformation.

Molecular Three dimensional representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Dissymmetrization.

Optical isomerism: Molecular Symmetry and Chirality-Cahn-Ingold-Prelog rules R, S-nomenclature, stereoisomerism resulting from more than one chiral center, meso and pseudoasymmetric compounds - **Axial Chirality** - Stereochemistry of allenes spiranes - biphenyl derivatives and atropisomerism - **Planar chirality** - Ansa compounds and trans - Cycloalkenes - **Helicity**. Helically chiral compounds

Geometrical isomerism - E, Z - nomenclature - Physical and Chemical methods of determining the configuration of geometrical isomers-Stereoisomerism in 3, 4 and 5-membered cyclic compounds.

UNIT-II: Substitution Reactions

i) Aliphatic Nucleophilic substitutions: The S_N2, S_N1, mixed S_N1 and S_N2, SET mechanisms. Reactivity- effects of substrates, attacking nucleophiles, leaving groups and reaction medium.Common carbocation rearrangements – primary, secondary and tertiary. The neighbouring group participation (NGP) -anchimeric assistance, NGP by σ and π- bonds, phenonium ions, norbornyl and norbornenyl systems, Classical and nonclassical carbocations, NGP by halogens and heteroatoms (O,N,S)

The S_N^i and S_N2' mechanisms. Nucleophilic substitution at an allylic, and vinylic carbons.

ii. Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and $S_{RN}1$mechanisms. Reactivity - effect of substrate, structure, leaving group and attacking nucleophile. The von Richter, Sommelet - Hauser and Smiles rearrangements.

UNIT-III: Reactive intermediates

Types of reactions, types of bond cleavage mechanisms, generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes, nitrenes and arynes. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects**.**

UNIT-IV: Terpenoids

Classification of terpenoids, occurrence, isolation, general methods of structure determination. Isoprene and special isoprene rule. Structure determination and synthesis of the following representative molecules: Farnesol, Zingeberine, Cadinene and Abietic acid.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
6. Stereochemistry, P.S. Kalsi, Wiley Eastern.
7. Text book of Organic Chemistry, M.C. Murry
8. Organic Chemistry, Vol I, I.L. Finar, ELBS Eds.

(Mandatory Core)

CHE-103	Physical Chemistry I	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Acquire knowledge in Quantum Chemistry, postulates of Quantum Mechanics., Applications of Schrodinger wave equation and Born-Oppenheimer approximation
- Study on Chemical Dynamics and theories in unimolecular, chain and fast reactions and determination of reaction rates.
- Familiarize with concepts of Thermodynamics and statistical thermodynamics, Gibbs- Duhem equation and Sackur-Tetrade equation
- Know about Thermodynamic and Kinetic concept of Electrochemistry and conductance, conductivity of electrolytes

Course Outcomes At the end of the course, the student will be able to

CO1	To know the concepts such as Operator algebra, Eigen values and Eigen functions, Degeneracy, Schrodinger wave equation and the postulates of Quantum Mechanics.
CO2	To learn about theories of reaction rates, Lindemann, Lindemann-Hinshel wood, and RRKM theories.
CO3	To know about Thermodynamic concepts and entropy change in reversible process and irreversible process, Gibbs- Duhem equation, calculation of thermodynamic properties.
CO4	To study the Thermodynamic and Kinetic Derivation of Nernst Equation and the derivation of Debye-Huckle Equation and its Verification

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	3	2	1	--	1	2	---	1	1
CO2	3	1	2	3	1		1		1	1	-	1
CO3	3	-	1	3	2	1	-	1		-	2	-
CO4	3	1	2	3	-	1	1	-	2	1	-	1

CHE-103: Physical Chemistry I

UNIT-I: Quantum Chemistry-I

(A)**Introduction to Exact Quantum Mechanical Results**

Operator algebra, Eigen values and Eigen functions, Operators for momentum and energy, Degeneracy, Linear combination of Eigen functions of an operator, well behaved wave functions, Normalized and

orthogonal functions, The schrodinger wave equation and the postulates of Quantum Mechanics, (B) **Applications of Schrodinger wave equation:** Particle in one dimensional and three dimensional box, harmonic oscillator, rigid rotor, hydrogen atom and its applications. Hydrogen like wave function, hydrogen like orbitals and their representation, polar plots, contour plots and boundary diagram. (C)**Approximate Methods:** The variation Theorem, Linear variation principle, perturbation Theory (first Order and non-degenerate), Application of variation Method and perturbation theory to the helium atom, The Born-Oppenheimer approximation.

UNIT-II: Chemical Dynamics

(A)**Theories of reaction rates:** Collision theory, steric factor. Theory of Absolute Reaction Rates-Reaction coordinate, activated complex and the transition state. Thermodynamic formiulation of reacton rates.

(B) **Unimolecular reactions:** Lindemann, Lindemann-Hinshel wood, and RRKM theories. Termolecular reactions. Complex reactions-Rate expressions for opposing, parallel and consecutive reaction (all first order type) (C) **Chain reactions:** Dynamic chain, hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane, photochemical reactions- H_2-Br_2, H_2-Cl_2 reactions, Autocatalysis, H_2-O_2 reaction explosion limits. (D) **Fast Reactions:** Flow system – Temperature and pressure Jump Methods – Relaxation Techniques.

UNIT – III : Thermodynamics

(A) **Brief review of Thermodynamic concepts:** Enthalpy, entropy, free energy. Concept of Entropy – Entropy as a state function –Entropy change in reversible process and irreversible process – Temperature – Entropy diagrams – Entropy change and phase change – Entropy of mixing – Entropy and disorder. (B) **Statistical thermodynamics:** Partial molar properties: their significance and determination of partial molar properties, fugacity and its determination. Concept of distribution, thermodynamic probability and most probable Distribution, Ensemble averaging, postulates of ensemble averaging, canonical, grand canonical and micro- canonical ensembles, partition functions, translational, rotational, vibrational and electronic partition functions, Gibbs- Duhem equation, calculation of thermodynamic properties in terms of partition functions, Entropy of monatomic gases (Sackur-Tetrade equation)

UNIT-IV : Electrochemistry I

(A) **Thermodynamic and Kinetic concept of Electrochemistry**

Thermodynamic and Kinetic Derivation of Nernst Equation, Chemical and Concentration Cells with and

without Transference, Liquid Junction Potential, Derivation of the Expression for Liquid Junction Potentials-its determination and elimination, Applications of EMF Measurements: (i)Solubility product, (ii)pH Determination, (iii) Potentiometric Titrations.; (B)**Conductivity:** Theory of Electrolytic Conductance, Derivation of Debye-Huckle Equation and its Verification, Debye- Falkenhagen Effect, and Wein Effect, kohlrausch law. Calculation of Solubility of Sparingly soluble Salt from Conductance Measurements.

Conductometric Titrations : Titration of Strong Acid Vs Strong Base (HCl vs NaoH) ; Titration of Weak Acid Vs Strong Base (AcoH vs NaoH); Titration of mixture of Strong and Weak Acids vs Strong Base ; Precipitation Titrations.

Books Suggested

1. physical chemistry, P. W. Atkins (ELBS)
2. Quantum Chemistry, Ira N. Levine (Prentice Hall)
3. Atomic Structure and Chemical bond, Manas Chandra.
4. Chemical Kinetics, K.J. Laidler (Mc Graw Hill)
5. Kinetics and Mechanism of Chemical Transformations, J. Rajaraman and J. Kuriacose (Mcmilan)
6. Thermodynamics for chemists, S. Glasstone
7. Chemical thermodynamics, I.M. Klotz
8. Statistical Thermodynamics, M. Dole
9. Modern Electrochemistry, Vol. I & II, J.O. M. Bockris and A.K.N. Reddy (plen
10. An Introduction to Electrochemistry (3^{rd}ed.), S. Glasstone (Affiliated East-West).

(Compulsory Foundation)

CHE-104 (A)	General Chemistry I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on precision and accuracy, Limit of detection, Limit of determination, Sensitivity and selectivity, statistical evaluation of data
- Familiarize with principles and concepts of flame emission spectroscopy and atomic absorption spectroscopy and their applications.
- To know about ecosystem, nutrient cycle and dessert ecosystem and forest ecosystem and aquatic ecosystem.
- Gain knowledge on air pollution, water pollution, soil pollution, marine pollution, noise pollution and solid waste management.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about mean and median values, standard deviation and coefficient of variation.
CO2	To acquire knowledge on principle and instrumentation of AAS and difference between flame AAS and furnace AAS.
CO3	To know about the principle and concept of ecosystem and their functioning
CO4	To have an idea on environmental pollution and environmental impact assessment.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	-	-	2	1	1
CO2	3	2	-	3	1	-	2	1	-	1	1	-
CO3	3	3	2	3	2	1		1	2	1	1	2
CO4	3	2	1	2	3	1	1	1	-	2	1	1

CHE104-A: General Chemistry I

UNIT-I: TREATMENT OF ANALYTICAL DATA 15 Hrs

Precision and accuracy –mean and median values –Standard deviation – coefficient of variation, Types of errors: Determinate and indeterminate errors, confidence limits, significant figures, computations, minimization of errors, statistical evaluation of data –T-test ,F- test , and X^2 –test. Correlation coefficient and coefficient of determination; Limit of detection (LOQ); Limit of determination(LOD) Sensitivity and selectivity of an analytical method.

UNIT-II: FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 15 Hrs

(a) **Flame Emission Spectroscopy**: Principles, chemical reactions in flames, Interferences, evaluation methods, flame photometer and experimental technique, procedure for determinations, limitations and disadvantages. Applications

(b)**Atomic Absorption Spectroscopy: Flame AAS:** Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT-III: ECOSYSTEMS 15 Hrs

Concept of an ecosystem (Abiotic and biotic environment), structure and function of an ecosystem Producers, Consumers and decomposers. Energy flow in the ecosystem, (Nutrient cycle in the ecosystem) Ecological succession Food Chain, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems, Forest ecosystem, Grassl and ecosystem, Desert ecosystems aquatic ecosystems [ponds, streams, lakes, rivers, ocean estuaries].

UNIT-IV: ENVIRONMENTAL POLLUTION 15 Hrs

Definition a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution Solid waste management : Causes, effects and control measures of urban and industrial wastes. Environmental impact assessment.

Books Suggested

1. H.W. Willard, LL. Merritt and J.A. Dean: Instrumental Methods of Analysis
2. Vogel's Text book of Quantitative Inorganic Analysis.
3. Analytical Chemistry
4. Instrumental Methods of Analysis H. Kaur

CHE 104B	General Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To familiarize with the significance of green chemistry and assessment of the impact.
- To gain knowledge on biocatalyst in oxidation, reduction and hydrolytic reactions
- To have an idea on solvent free reactions and modern reaction techniques.
- To familiarize with the use of ionic liquids as green solvents.

Course Outcomes: At the end of the course, the student will be able

CO1	To get knowledge on green reaction conditions and their impact on environment.
CO2	To know about use of different biocatalysts as environmentally friendly reagents.
CO3	To acquire knowledge on the use of modern techniques like ultrasound, microwave etc.
CO4	To have an idea on the use of ionic liquids in different reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	-	2	1	1	-	1	-	1	1
CO2	3	1	1	3	1	-	1	1	-	1	-	1
CO3	3	3	2	3	2	1		2	-	1	1	1
CO4	3	2	1	2	3	1	1	1	1	-	1	1

CHE 104B: General Chemistry I

UNIT-I

Fundamentals and significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk hazard. An introduction to the tools of green chemistry and its fundamental principles.

Principles of Green Chemistry: Prevention of waste / by-products, Hazardous products- Designing of safer chemicals- Selection of appropriate solvents and starting materials- Use of protecting groups and catalysis- Designing of biodegradable products.

UNIT-II

Catalysis for Green Chemistry: Use of biocatalysts- Biochemical Oxidation, Biochemical Reduction, Enzyme Catalyzed Hydrolytic Process, Modified biocatalysis- transition metal catalysis- Reformatsky reaction, Wurtz reaction, Pinacol coupling, Simmons-Smith reaction,

Mukaiyama reaction, Heak reaction, Ullmann's coupling.

UNIT-III

Solvent Free Reactions: Solvent free techniques- Reactions on solid mineral supports, Phase Transfer Catalysis- C-alkylation, N-alkylation, S-alkylation, Darzen's reaction, Wittig reaction. Ultrasound assisted green synthesis- Oxidation, Reduction, Hydroboration, Bouveault reaction, Strecker reaction, Microwave assisted green synthesis- Biginelli reaction, Aza-Michael reaction, Suzuki reaction, Stille reaction, Sonogashira reaction.

UNIT-IV

Ionic liquids: Definition- Types of Ionic Liquids-Synthesis of Ionic Liquids- Selection of ionic liquids- physical properties- Application in organic synthesis- alkylation, allylation, oxidation, reduction, polymerization, hydrogenation, hydroformylation, alkoxycarbonylation, carbon-carbon bond forming reactions, alkene metathesis.

Books suggested:

1. New Trends in Green Chemistry by V.K. Ahluwalia, M. Kidwai.
2. Green Chemistry: Environment Friendly Alternatives by Rashmi Sanghi, M M Srivastava
3. Green Solvents for Organic Synthesis by V.K. Ahluwalia, Rajender S. Varma
4. Green Analytical Chemistry by Mihkel Koel and Mihkel Kaljurand

CHE 105 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Basic laboratory techniques of titration and analysis.
- Quantitative estimation of inorganic compounds through volumetric techniques.
- Calibration of volumetric apparatus and statistical analysis of the data.
- Determination of critical solution temperature of phenol-water system.

Course Outcomes: At the end of the course, the student will be able

CO1	To demonstrate mastery of basic semi-micro qualitative analysis of simple salts and interprets analytical data and will make scientific claims that are supported by the observations.
CO2	To familiarize with techniques of titration and calculation of errors.
CO3	To study the determination of critical solution temperature, eutectic composition, distribution coefficient, adsorption of different systems.
CO4	To calibrate the statistical data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	1	2	1	2	-
CO2	3	2	2	2	-	2	1	1	-	2	2	1
CO3	3	2	1	2	2	1	-	2	1	1	2	1
CO4	3	2	2	1	2	1	-	2	2	1	1	1

CHE 105 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 105 A : Core practical I: Inorganic Chemistry

Semi Micro Qualitative Analysis

Qualitative Analysis of a mixture containing four cations including two less common cations (viz., W, Mo, Se, Te, V, Ce, Th, Zr, Li and U).

CHE 105 B : Core practical I: Physical Chemistry

1. Determination of critical solution temperature, eutectic composition and temperature of binary system.
2. Calibration of volumetric apparatus and statistical analysis of the data.
3. Determination of critical solution temperature of phenol-water system and study the effect of electrolyte on CST.
4. Determination of Eutectic composition and temperature of binary system
5. Determination of distribution coefficient of benzoic acid between water and benzene.
6. Study the adsorption of acetic acid on charcoal and analysis of the data on the basis of Langmuir and Freundlich adsorption isotherms.
7. Determination of rate constant of acid hydrolysis of an ester and investigate the effect of catalyst concentration, reactant concentration and temperature.

CHE 106A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Identification of single organic component by systematic qualitative analysis
- Preparation of derivatives and purification process
- Single step preparations
- Calibration of spectral analysis to this structures

Identification of single organic component by systematic qualitative analysis.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the systematic procedures of analysis of organic components.
CO2	To know the conformational tests for various functional groups.
CO3	To understand the mechanisms and familiarize with methodologies to prepare biologically important molecules.
CO4	Purification of compounds by different process

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	3	1	2	-	1	-	1	1	-
CO2	3	2	2	3	-	2	-	1	1	-	1	2
CO3	2	2	2	1	2	1	2	1	-	1	-	2
CO4	1	2	2	1	1	1	1	-	1	1	1	2

CHE : 106 A : PRACTICAL – I : ORGANIC CHEMISTRY

Identification of single components by Qualitative Analysis method

1. Aromatic acids
2. Aromatic amines
3. Aromatic phenols
4. Aromatic estors
5. Aromatic hydrocarbons
6. Carbohydrates
7. Aromatic carobohydrates compounds

CHE : 106 B : PRACTICAL – I : GENERAL CHEMISTRY

Single step preparations

1. Preparation of aspirin
2. Preparation of p-nitroacetanilide
3. Preparation of p-bromoacetanilide

CHE 107	Human Values and Professional Ethics-I	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level Human Values and professional ethics

Course Objectives:

- Analyze values in various ethical professions
- Understand moral concepts, character and conduct multiple
- Concept of ethical values with respect to individual and society
- ethical interests at stake in areal-world situation or practice and assess own ethical values with respect to social context and problems

Course Outcomes: At the end of the course, the student will be able to

CO1	To know about the needs and importance of professional ethics.
CO2	To analyze nature of Values, basic Moral Concepts character and Conduct.
CO3	To gain knowledge on individual and society ethical values, ahimsa, satya and brahmacharya.
CO4	To understand values of Bhagavd Gita, various religions, religious tolerence, Gandhian ethics.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	3	2	-	1	2	3	1	1	2
CO2	3	2	2	3	1	1	1	2	3	-	-	2
CO3	3	1	2	3	2	-	1	-	-	1	1	3
CO4	3	1	1	3	-	1	2	2	2	2	-	3

CHE 107: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS – I)

Chapter I: Definition and Nature of Ethics – Is relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics – Goals – Ethical Values in Various Professions.

Chapter II: Nature of Values – Good and Bad, Ends and Means, Actual and Potential Values, Objective and Subjective Values, Analysis of Basic Moral Concepts – Right, Ought, Duty, Obligation, Justice, Responsibility and Freedom, Good Behavior and Respect for Elders, Character and Conduct.

Chapter III: Individual and Society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possesion) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues) - Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation), Crime and

Theories of Punishment – (a) Reformative, Retributive and Deterrent, (b) Views on Manu and Yajnavalkya

Chapter IV: Bhagavd Gita – (a) Niskama Karma, (b) Buddhism – The Four Nobel Truths – Arya astanga marga, (c) Jainism - Mahavratas and Anuvratas. Values Embedded in Various Religions, Religious Tolerence, Gandhian Ethics.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
4. Harold H. Titus: Ethics for Today
5. Maitra, S.K: Hindu Ethics
6. William Lilly: Introduction to Ethics
7. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
8. Sasruta Samhita: Tr. Kaviraj Kunjanlal, Kunjanlal Brishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
9. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
10. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
11. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
12. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE - 201	Inorganic Chemistry II	L-5, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Understand magnetic properties of transition metal complexes and various reactions on ligands with respect to synthesis.
- Gain knowledge on electronic spectra of complex molecules of octahedral and tetrahedral geometry
- Understand magnetic properties viz., diamagnetism and paramagnetism and other related properties of complex molecules
- Familiarize with different catalytic reactions of complex molecules and factors effecting the reactions.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with the general methods of complex preparations and properties, nature of bonding and structural features of metal complexes.
CO2	To know about Russel-Saunders coupling, splitting of energy levels in octahedral field and differentiate between Orgel diagrams and Tanabe-Sugano diagrams.
CO3	To understand about the laws of Hunds, Curie and Weiss, magnetism and magnetic susceptibility determination by Gouy's and Farady methods.
CO4	To gain knowledge on Induced reactions, Free radical reactions, Thermal decomposition reactions, Chain reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	2	1	-	1
CO2	3	2	-	3	1	2	1	-	1	2	1	1
CO3	3	-	2	3	-	2	1	1	-	1		1
CO4	3	1	1	3	-	2	-	1	1	1	1	-

CHE 201: INORGANIC CHEISTRY II

UNIT – I: TRANSITION METAL II – COMPLEXES II **15 Hrs**

Transition metal π – complexes with unsaturated organic molecules – alkenes, alkynes, diene, dienyl and Cyclopentadienyl complexes and arene complexes-general methods of preparation, properties, nature of bonding and structural features – Important reactions relating to Nucleophilic and Electrophilic attack on

ligands and to organic synthesis.

UNIT – II: ELECTRONIC SPECTRA OF COMPLEXES 15 Hrs

Russel-Saunders coupling – Spectroscopic term symbols- Derivation of term symbols of p^2 and d^2 configuration, Hole Formulation, Energy ordering of terms (Hund's Rules), Splitting of energy levels and spectroscopic states in Octahedral field, Selection rules – Break – down of selection rules, Orgel diagrams, Definition and utility–Orgel Diagrams for d^1 to d^9 configurations in Octahedral and tetrahedral fields. Interpretation of electronic spectra of high spin octahedral and tetra hedral complexes of Ti(III), V(III), Cr(III), Mn(III), Mn(II), Fe(II), Fe(III), Co(III), Co(II), Ni(II) and Cu(II) complexes, Calculation of Dq and B^1 parameters for Cr(III) and Ni(II) complexes. Tanabe – Sugano diagrams, Differences between Orgel diagrams and Tanabe – Sugano diagrams, Tanabe – Sugano diagrams of d^2 to d^6 and d^8 configurations. Charge transfer spectra- LMCT and MLCT.

UNIT – III: MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES 15 Hrs

Diamagnetism and paramagnetism-orbital and spin contributions, spin-orbit coupling, Hunds third rule and Energies of J levels – Curie law and Curie – Weiss law- Ferromagnetism and antiferromagnetism – Temperature independent magnetism Magnetic susceptibility and its determination by Gouy's and Faraday methods.Calculation of magnetic moment from magnetic susceptibility, spin-only formula, Orbital contribution to magnetic moment (Oh and Td Complexes) –Paramagnetism and crystalline fields – Ti (III), V (III), VO^{2+}, Cr (III), Mn (II), Fe (III), Co(II), Ni (II) and Cu (II). Magnetic Exchange in copper acetate and other dimmers – spin cross over in complexes.

UNIT –IV: CATALYSIS 15 Hrs

Homogeneous catalysis, Metal ion catalyzed reactions – Redox potentials and processes – Mechanism of redox processes involving ligands – Factors affecting redox potentials - other types of metal catalyzed reactions – Reactions involving Ag (I) , Cu (II) and Os (VIII) – Reactions of Oxyanions – Factors affecting rate (General discussion only) – Induced reactions – Free radical reactions – Thermal decomposition of peroxy disulphate – Fe(III) $–S_2O_8$ reactions – chain reactions – H-Br reactions, H_2O_2 $–S_2O_8$reactions.

Books Suggested

1. Inorganic Chemistry principles of Structure and Reactivity 6th Edition. James E. Huheey.
2. Organometallic Chemistry: R.C. Mehrotra and Singh.
3. R. S. Drago: Structural methods in Inorganic Chemistry.
4. H. H. Willard, L. L. Merritt, Jr., J. A. Dean and F. A. Settle, Jr.: Instrumental Methods of Analysis (CBS Publishers).
5. R. L. Carlin: Magnetic Chemistry. R. L. Datta and A. Syamal: Elements of Magnetic Chemistry.

(Mandatory Core)

CHE-202	Organic Chemistry II	L-3, T-1, P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives:

- Able to recognize, classify, explain, and apply fundamental organic reactions such as E2, E1, E1CB.
- Familiar with molecular rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom.
- Provide Hantzsch-Widmann nomenclature for the three and four membered heterocycles. Be able to predict synthetic routes and chemical reactions of these heterocycles.
- Be familiar with occurrence, isolation, structural elucidation and synthesis of natural products-alkaloids

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the mechanisms of E_1, E_2 and E_{1CB} reactions, steroselectivity and synpyrolytic eliminations and use of isotopes, chemical trapping and crossover experiments.
CO2	To learn the rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom and familiarize with the limitations and applications of reactions.
CO3	To learn the synthesis of three and four membered heterocycles, mechanism of ring opening reactions and the effect of electron donating and withdrawing substituents in selectivity of ring opening reactions.
CO4	To understand the structural elucidation and synthesis of alkaloids using specific reagents.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	1	1	1	-
CO2	3	2	2	3	2	2		1	1	-	1	1
CO3	3	2	2	3	2	2	1	1	-	1	-	1
CO4	3	2	2	3	-	2	-	1	-	1	1	1

CHE- 202 : ORGANIC CHEMISTRY II

UNIT-I: Reaction mechanism-I **15 Hrs**

Electrophilic addition to carbon carbon double bond: Stereoselective addition to carbon carbon double

bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO_4 and $KMnO_4$.

Elimination reactions Elimination reactions E_2, E_1, E_{1CB} mechanisms. Orientation and stereoselectivity in E_2 eliminations. Pyrolytic syn elimination and α-elimination, elimination Vs substitution. Facors influencing the elimination reactions

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

UNIT-II: Molecular Rearrangements: **15 Hrs**

Rearrangements to electron deficient Carbon atom:

Pinacol-Pinacolone, Wagner-Meerwein, Dienone-Phenol and Demjonove Rearrngements

Rearrangements to electron deficient Nitrogen atom:

Hofmann, Curtius, Schimidt and Beckmann Rearrangements.

Rearrangements to electron deficient Oxygen atom: Baeyer-Villiger and Dakins Rearrangements

Rearrangements to electron rich Carbon atom: Favorski and Neber Rearrangements

Aromatic and Sigmatropic Rearrangements: Fries and Claisen Rearrangements

UNIT III: Three and four membered heterocycles: 15 Hrs

Systematic nomenclature (Hantzsch-Widmann system) and Replacement nomenclature for monocyclic heterocycles (Three and four membered rings). Synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes, and thietanes.

UNIT-IV: Alkaloids 15 Hrs

Occurrence, isolation, general methods of structure elucidation and physiological action, degradation, classification based on nitrogen heterocyclic ring, structure elucidation and synthesis of the following: Atropine, Papaverine and Quinine.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.

5. Modern Organic Reactions, H.O. House, Benjamin.
6. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
7. Stereochemistry, P.S. Kalsi, Wiley Eastern.
8. Text book of Organic Chemistry, M.C. Murry
9. Text book of Organic Chemistry, Fessendon and Fessendon.
10. Text book of Organic Chemistry, T.W. Solomon,
11. Organic Chemistry, Vol II, I.L. Finar, ELBS Eds.
12. Heterocyclic chemistry T.L Gilchrist, Longman Scientific Technical
13. An Introduction to the Heterocyclic compounds, R M Acheson, John Wiley.

(Mandatory Core)

CHE -203	Physical chemistry II	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Learn Angular momentum and Molecular Orbital Theory and application of Huckel theory to organic molecules.
- Know about concepts in Surface Chemistry, concept of electric double layer model and Micelles.
- Get knowledge on symmetry and group theory their use in spectroscopy, Mulliken character tables.
- Understand Irreversible Electrode phenomenon controlled potential electrolysis and polarography.

Course Outcomes At the end of the course, the student will be able

CO1	To know about Pauli Exclusion principle and Slater determinant, atomic orbitals, Simple molecular orbitals and Huckel theory of conjugated systems.
CO2	To learn Gibbs adsorption isotherm, BET equation and correlate limitations, critical micellar concentration (CMC) and factors affecting the CMC of surfactants.
CO3	To identify Relation between order of a finite group and its sub-group, conjugacy, Symmetry point group (MLS, MHS and MSS) and orthogonality theorem.
CO4	To acquire knowledge on DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, to derive equation for Tafel plots, half-wave potentials for reversible system.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	2	-	1	1	1	2	-
CO2	3	2	2	3	2	2	-	1	1	1	-	1
CO3	3	2	2	3	-		1	-	-	1	1	-
CO4	3	2	-	2	1	1	-	1	1	1	1	-

CHE-AC-203 Physical Chemistry III

UNIT-I: Quantum Chemistry-II **15 Hrs**

(A) Angular momentum: Angular momentum, Rotations and angular momentum, Eigen functions and Eigen values of angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and pauli Exclusion principle. Slater determinant. ;

(B) Molecular Orbital TheoryAtomic Orbitals, Simple Molecular Orbitals, Hybrid Atomic Orbitals, Shapes and energies of Molecular Orbital, Systems of Organic Molecules (Ex: Methane, Ethylene,

Acetylene). Huckel theory of conjugated systems, Π-bond order and charge density calculations, application of Huckel theory to ethylene, butadiene and benzene.

UNIT-II: Surface Chemistry **15 Hrs**

Surface tension, capillary action, pressure difference across curved surface, (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET adsorption isotherm, derivation of BET equation , limitations of BET equation, estimation of surface area from BET equation, Surface films on liquids. Concept of electric double layer model- Helmholtz perrin, Gouy- Chapman and stern models (no derivation)

Micells: Surface active agents, classification of surface active agents micellisation, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellisation, emulsions, reverse micelles.

UNIT-III: SYMMETRY AND GROUP THEORY **15 Hrs**

Definition of a group, rules that are set for a group, sub-group, order of a group, Relation between order of a finite group and its sub-group, conjugacy relation and class of a group, symmetry elements and symmetry operation. Symmetry point group (MLS, MHS and MSS), Schoenflies symbols - Representation of groups by matrices (representation for C_n, C_{nv}, D_{nh} etc. groups to be worked out explicitly), character of a representation, group multiplication tables, reducible - irreducible representations The great orthogonality theorem (without proof) - character tables (H_2O,NH_3) and their use in spectroscopy, Mulliken character tables.

UNIT-IV: ELECTROCHEMISTRY- II **15 Hrs**

Irreversible Electrode phenomenon: Reversibility and irreversibility, Dissolution and deposition potentials, Decomposition voltage, overvoltage, diffusion overvoltage, charge transfer overvoltage, concentration overvoltage-hydrogen and oxygen overvoltages, Tafel plots, Exchange current density and Transfer coefficient, Butler-Volmer equation for one electron transfer processes.

Polarography: Theory, classification , principle , Instrumentation of Polarography, DME, HMDE diffusion current, Ilkovic equation, DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, Millicoulometry, Equation for half-wave potentials, for reversible system when oxidant alone, reductant alone and both are present.

Books Suggested

1. P.W. Atkins: Physical Chemistry (ELBS).
2. Ira N. Levine: Quantum Chemistry (Prentice Hall).
3. R. Mcweeny: Coulson's Valence (ELBS).

4. J.O.M. Bockris and A.K.N. Reddy, Modern Electrochemistry, vol.I & II (Plenum).
5. S. Glasstone; An Introduction to Electrochemistry (3rd ed.)(Affiliated East-West).
6. V. Moroi: Micelles, theoretical and applied aspects (Plenum).
7. Maron and prutton: principles of physical Chemistry.
8. Silbey, Alberty, Bawendi. Physical Chemistry.Jhon-Wiley & Sons. 4th edition-2006.
9. D.N. Bajpai: Advanced physical Chemistry: S. Chand & Company, 1998.

(COMPULSORY FOUNDATION)

CHE-204 A	General Chemistry II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on the principles of different electro analytical methods
- Familiarize with chromatographic techniques.
- To study on biodiversity and conservation of biodiversity
- To know about natural resources and non-renewable resources

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge on ion selective electrodes, solid membrane electrodes and glass electrodes and principles of amperometric titrations.
CO2	To learn general principles and classifications of chromatographic separations and applications of TLC, GLC and HPLC.
CO3	To know about biodiversity, ecosystem diversity and conservation of biodiversity.
CO4	To acquire knowledge on natural resources related to food, water, mineral, energy and land.

CHE 204-A: General Chemistry II

UNIT-I: ELECTRO ANALYTICAL METHODS

Theory of potentiometry, calculation electrode potential at the equivalence. Finding of equivalence volume, derivative and linear titration plots. Ion-sensitive electrodes –types of ion sensitive electrodes – metal based cation and anion sensitive electrodes, solid membrane electrodes, glass electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes, Amperometric titrations - Anodic stripping voltammetry, chronoamperometry, chronopotentiometry, Cyclic Voltammetry, Differential Pulse Polarography, linear sweep voltammetry, square wave voltammetry.

UNIT-II: CHROMATOGRAPHY

General principles and classifications of chromatographic separations

Thin layer chromatography: Classification, principle, experimental technique, sample application, development of plate, retardation factor.

Gas liquid chromatography: Gas liquid chromatography - instrumentation (columns and detectors), retention time and retention volume. Chromatographic behaviour of solutes, column efficiency and resolution, column processes and band broadening, time of analysis and resolution, Van-Deemter equation.

High performance liquid chromatography: Theory and instrumentation-column performance, gradient elution, delivery system, sample introduction, separation columns, detectors and applications of HPLC.

Unit – III : Biodiversity

Conservation introduction definition genetic species and ecosystem diversity, hot spots of biodiversity, threats to biodiversity habitat loss poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India, conservation of biodiversity in – situ an ex-situ conservation of biodiversity.

Unit – IV Natural resources and non-renewable resources

An overview of natural resources and associated problems with references to a) Forest resources b) Water resources c) Mineral resources d) Food resources e) Energy resources f) Land resources.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A.Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery J. Bassett, J. Mendham and R.C. Denny. Vogel"s Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (McGraw Hill).
5. D. Midgley and K. Torrance : potentiometric Water Analysis (John Wiley).
6. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.

CHE 204B	Chemistry in Contemporary Society	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To know about quality control and impurities in Pharmaceuticals.
- To have an idea on body fluids, blood, enzymes and forensic.
- To gain knowledge on composition of milk, oil, fats etc.
- To familiarize with different types of fuels, soils and its ingredients.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in pharmaceutical chemicals
CO2	To familiarize with blood fluids, blood, enzymes and forensic
CO3	To know about fermentation, detection of purity, beverages
CO4	To acquire knowledge on gaseous fuels, soil ingredients and analysis of trace elements

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	2	2	-	1	1
CO2	3	1	2	3	1	2	1	-	2	2	1	-
CO3	3	2	2	3	1	2	2	1	-	2	1	1
CO4	3	2	3	2	1	2	1	2	-	1	1	1

CHE 204B: Chemistry in Contemporary Society

UNIT – I : PHARMACEUTICALS 15 Hrs

Pharmaceuticals : Importance of quality control, drugs and pharmaceuticals, sources of impurities in pharmaceutical chemicals, analytical quality control in finished / final products, common methods of assay.

Common drugs and their uses: Analgesics – aspirin, paracetamol; Antheimentics – mebendazole ; Antiallergies – chlorpenneramine malleate; Antibiotics-pencillin, chloromecytin; Anti-inflammatory agents-oxyphenbutazone; **Antimalarials** – primaquine phosphate; Antituberculosists – INH; Narcotics – nicotine, morphine; Expectorants – Benadryl; Sedatives – diazepam; Vitamins – B**1**, B**2**, B**6**, niacin and folic acid.

UNIT – II : FORENSIC AND BIOMEDICALS **15 Hrs**

Body fluids: Composition and detection of abnormal level of certain constituents leading to diagnosis, sample collection and preservation of physiological fluids, analytical methods for the constituents of physiological fluids (blood, urine).

Blood: Estimation of glucose, cholesterol, urea, haemoglobin and bilirubin.

Urine: Urea, uric acid, creatinine, calcium phosphate, sodium, potassium and chloride.

Enzymes: Biological significance, assay of enzymes (pepsin, tyrasinase), vitamins (thiamine ascorbic acid, vitamin A) and harmones (progesterone, oxytocin, insulin), chemical, instrumental and biological assays to be discussed wherever necessary.

Forensic : General discussion of poisons with special reference to mode of action of cyanide organophosphates and snake venom, poisonous materials such as lead, mercury and arsenic in biological materials.

UNIT – III : FOOD AND BEVERAGES **15 Hrs**

Milk and milk products : Composition, alcohol test, fermentation, dye reduction-methylene blue and resazurin tests, analysis of fat content, minerals in milk and butter, estimation of added water in milk.

Oils and fats: General composition of edible oils, detection of purity, tests for common edible oils and groundnut oil, cottonseed oil and mustard oil, tests for adulterants like argemone oil and mineral oils,

Beverages: Soft drinks, alcoholic drinks, tea, coffee and fruit juice, analysis of caffeine in coffee and tea, detection of chicory in coffee, chloral hydrate in toddy, food preservatives like benzoates, propionates, sorbates, bisulphites, artificial sweetners, like saccharin, dulcin and sodium cyclamate, flavours – vanillin, esters (fruit flavours) and monosodium glutamate, artificial food colourants-coal tar dyes and non-permitted colours and metallic salts, control of food quality – codex alimentarices, Indian standards.

UNIT – IV : FUEL AND SOIL **15 Hrs**

Fuels : Definition, classification and characteristics of fuels, sampling, determination of calorific value. Liquid fuels-determination of flash point, fire point, aniline point. Knocking of petrol and diesel – octane and cetere numbers carbon residue. **Gaseous fuels** : Coal gas, waste gas, producer gas, gober gas and blast furnace gas, calorific value determination by Junker's gas calorimeter, relatice merits of solid, liquid and gaseous fules. **Soil** : Ingradiants of soil-organic matter, nitrogen, sulphur, sodium, potassium and calcium, analysis of trace elements, copper, molybdenum, zinc and boron.

Reference Books :

1. Pharmaceutical Analysis, T. Higuchi and E.B. Hanseen, John Wiley and Sons, New York.

2. Quantitative Analysis of drugs, P.D. Sethi, 3rd edition, CBS Publishers, New Delhi, 1997.
3. Practical Clinical biochemistry methods and interpretations, R. Chawala, J.P. Brothers Medical Publishers (P) Ltd., 1995.
4. Laboratory manual in biochemistry, J. Jayaraman. New Age International Publishers, New Delhi, 1981.

CHE 205 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Separation and determination of the two component mixtures
- Preparation of metal complexes
- Familiarize with conductometric, potentiometric and redox methods of analysis
- colorometric and pHmetric methods of analysis

Course Outcomes: At the end of the course, the student will be able

CO1	To separate and determine the two component mixtures
CO2	To acquire knowledge in the preparation of metal complexes
CO3	To study the determination of cell constant and verification of Onsagar equation, strength of strong acid by Titration of a strong acid with a strong base and vice versa
CO4	To get knowledge on the applications of conductometry, potentiometry, coulometry and pHmetry.

Mapping of course outcomes with the program outcomes

CO4	3	2	2	3	2	-	1	-	1	1	-	2

CHE 205 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 205 A : Core practical I: Inorganic Chemistry

I . Quantitative Analysis:

Separation and determination of two component mixtures:

(i) Separation of Al(III) and Determination of Fe (III)

(ii) Separation of Cu(II) and Determination of Zn (II)

(iii) Separation of Ca(II) and Determination of Mg (II)

(iv) Separation of Cu(II) and Determination of Ni (II)

(v) Determination of Ferrocyanide and Ferricyanide

CHE 205 B: Core practical I: Physical Chemistry

1. Conductometry:
   (a) Determination of cell constant
   (b) Verification of Onsagar equation
   (c) Determination of dissociation constant of a weak acid
   (d) Titration of a strong acid with a strong base
   (e) Titration of a weak acid with a strong base
2. Potentiometry:
   (a) Titration of a strong acid with a strong base
   (b) Titration of a weak acid with a strong base
   (c) Redox titration
3. Coulometry: Estimation of Manganese
4. pHmetry: Strong acid, Strong base titrations.

CHE 206A & B	**Core practical I: Organic & General Chemistry**	**L-5,T-1,P-0**	**4 Credits**
Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.			
Course Objectives: • Familiarize with two component mixture separation and identification. • Preparation of derivatives. • Purification by components by different methods. • Calibration of products by spectral methods.			

Course Outcomes: At the end of the course, the student will be able	
CO1	To familiarize with binary mixture separation
CO2	To gain hands-on-experience in purification of the components, preparation of derivatives.
CO3	To get knowledge about the chemical behavior of different components and mechanisms
CO4	Purification and calibration of data

Mapping of course outcomes with the program outcomes

CO4	3	2	2	3	1	2		1	1	2	1	2

CHE 206 A & B: Core practical I: Organic & General Chemistry

CHE-206 A : PRACTICAL – I : ORGANIC CHEMISTRY

Separation and Identification of two component organic mixture by systematic qualitative analysis.

1.Acid + Neutral 2. Base + Neutral 3. Phenol + Neutral 4. Ether insoluable component + acid / phenol / base.

CHE-206 B : PRACTICAL – I : GENERAL CHEMISTRY

Preparation of Metal Complexes:

(i) Tetra(ammine) copper (II) sulphate.

(ii) Mercury tetra(thiocyanato) cobaltate(II).

(iii) Hexa(ammine) Nickel (II) chloride.

(iv) Tris(acetylacetonato) Manganese (III) chloride.

(v) Tris (ethylenediammine) Nickel (II) thiosulpha

CHE 207	Human Values and professional ethics-II	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Human Values and professional ethics

Course Objectives:

- Gain knowledge on value education, family values and adjustability
- Develop ethics towards medical, health care professionals and ethical issues in genetic engineering
- Understand the importance of social ethics towards organ trade, human traffic king human rights violation and social disparities.
- Know about environmental ethics, ecological crises, pollution and protection of environment

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the concepts of human values, responsibilities of family values and status of women in family and society.
CO2	To acquire knowledge on different medical ethics the views of charaka and sushruta on moral responsibilities of medical practitioners.
CO3	To gain knowledge on social ethics and understand the characteristics of ethical problems in management.
CO4	To familiarize environmental ethics, ethical theory and ecological crisis.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	1	2	2	2	3	1	1	1

CO3	3	2	1	3	-	2	1	2	2	3	-	1
CO4	3	1	1	3	1	2	1	1	2	3	1	1

CHE 207: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS-II)

Chapter I: Value Education – Definition – Relevance to present day – Concept of human values - Self introspection – Self-esteem. Family values-Components, Structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Chapter II: Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical

obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problem of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Chapter III: Social ethics – Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy. Ethics of media – Impact of Newspapers, Television, Movies and Internet, Business ethics – Ethical standards of business – Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, Ethical abuses and work ethics.

Chapter IV: Environmental ethics – Ethical theory, man and nature - Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and pollution, Justice and environmental health.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. Management Ethics – Integrity at work by Joseph A. Petrick and John F. Quinn, Response Books, New Delhi.
4. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
10. Sasruta Samhita: Tr. KavirajKunjanlal, KunjanlalBrishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Text Book for Intermediate First Year Ethics and Human Values, Board of Intermediate Eduction – Telugu Academy, Hyderabad.
14. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE-EC- 301	Inorganic Spectroscopy and Thermal Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Basic Inorganic Spectroscopy and Thermal Methods of Analysis

Course Objectives:

- Gain knowledge on thermal methods of analysis and principles and applications to inorganic materials
- Familiarize with basics of Mossbauer and NQR spectroscopy.
- Learn the properties like g-factor, nuclear spin, hyperfine coupling constants
- Study the ESR instrumentation, various applications and photoelectron spectroscopy.

Course Outcomes : At the end of the course, the student will be able

CO1	To know about TG and DTA and applications of different scanning calorimetry.
CO2	To gain knowledge on Doppler shift and chemical shift, basic principles and applications of NQR spectroscopy.
CO3	To learn zero field splitting and Kramer's degeneracy, relaxation processes, instrumentation and applications of ESR.
CO4	To know about photoelectric effect and Koopmans theorem and impart the applications of X-ray and UV photoelectron spectroscopy.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	2	1	-	2	1
CO2	3	2	2	3	2	2	1	-	1	2	2	2
CO3	3	2	2	3	2	2	-	1	-	2	1	2
CO4	3	2	2	3	2	-	1	1	1	-	2	1

CHE-EC- 301: Inorganic Spectroscopy and Thermal Methods of Analysis

UNIT –I: THERMAL METHODS OF ANALYSIS 15 Hrs

Thermo gravimetry –Principle, Factors affecting the results, instrumentation. Application with special reference to $CuSO_45H_2O$, CaC_2O_4 $2H_2O$. Different thermal analysis – principle, instrumentation, difference between TG and DTA, applications with special reference to the clays and minerals.Different scanning calorimetry –principle, and applications to inorganic materials like chlorates and perchlorates, ammonium nitrate.

UNIT –II: MOSSBAUER SPECTROSCOPY and NQR 15 Hrs

Mossbauer spectroscopy: Basic principles, Recoil energy, Doppler shift, Chemical shift, Quadrapole effects, Magnetic effects. Instrumentation, spectral parameters and spectrum display.

Aapplication of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds, (2) Sn^{2+} and Sn^{4+} compounds.

NQR spectroscopy: Basic principles of NQR spectroscopy, quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant and applications.

UNIT –III: ELECTRON SPIN RESONANCE SPECTROSCOPY 15 Hrs

Basic Principles, Hyper fine splitting, Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, Hamiltonian and spin densities. Zero field splitting and Kramer's degeneracy, Relaxation process and line widths. Instrumentation and Applications.The EPR spectrum of bis(salicylidimine)-copper(II) complex, study of inorganic free radicals, biological applications of Electron Spin Resonance (Study of free radicals and Iron-sulfur proteins)

UNIT –IV: PHOTO ELECTRON SPECTROSCOPY 15 Hrs

Photoelectric effect, Koopmans's theorem, ionization energy.

X-ray photoelectron spectroscopy (ESCA): Principle, Binding energies, Chemical shift, Applications of XPES to Qualitative analysis , to surface studies and structural analysis. Ultraviolet photoelectron spectroscopy- Principle, application of UPES in studying the molecular orbitals of O_2 and N_2 molecules. Block diagram of photoelectron spectrophotometer. Sources of radiation, detectors. Auger spectra – Principle, Applications of Auger spectra to surface studies and use of Auger spectra as a finger print tool.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. J.E. Huheey, E.A. Keiter and R.L. Keiter: Inorganic Chemsitry, Principles of Structure and Reactivity (4th Ed.) (Addison-Wesley)
3. Gary Wulfsberg: Inorganic Chemistry (5th Ed. (Viva Books)
4. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
5. W.L. Jolly: Modern Inorganic Chemsitry (McGraw-Hill)
6. R.L. Carlin: Magneto-chemsitry (Springer-Verlag)
7. R.L. Dutta and A. Syamal: Elements of Magnetochemsitry (Affiliate East-West).
8. K. Hussain Reddy – Text book of Bioinorganic chemistry

(Mandatory Core)

CHE-EC 302	Organic Spectroscopy and Applications	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands
- Study on the applications of NMR spectroscopy in ascertaining the stereochemical structures of the molecules.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	To get experience to calculate λ max values for dienes, enones, polyenes, aromatic and heteroaromatic compounds.
CO2	To familiarize with the absorption bands of the molecules with specific functional groups
CO3	To interpret the data to different types of protons and carbons present in a molecule so as to ascertain the structure of the molecule based on the data provided
CO4	To acquire knowledge about specific fragmentation rules of different molecules which are unique.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	-	2	2	2	2	1
CO2	3	2	2	3	2	2	1	1	-	2	2	-
CO3	3	2	2	3	2	2	-	2	1	2	2	2
CO4	3	2	2	3	2	2	2	-	2	2	2	1

CHE-EC 302: CORE THEORY: ORGANIC SPECTROSCOPY AND APPLICATIONS

UNIT-I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY: 15Hrs

Various electronic transitions (185-800 nm), effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fisher-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.

UNIT – II: INFRARED SPECTROSCOPY 15Hrs

Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance, FT-IR

UNIT –III: NMR SPECTROSCOPY: 15Hrs

^{1}H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and nonequivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants.

Applications of ^{1}H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations and carbanions), E, Z isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Stereochemistry, hindered rotation, Karplus curve variation of coupling constant with dihedral angle. Simplification of complex spectra, nuclear magnetic double resonance, contact shift reagents, nuclear Overhauser effect (NOE).

^{13}C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimensional NMR spectroscopy-COSY.

UNIT-IV: MASS SPECTROMETRY 15Hrs

Introduction, ion production, type of ionization, EI, CI, FD, and FAB-factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular-ion peak, metastable peak, Mc. Lafferty rearrangement. Nitrogen rule, isotope labeling. High resolution mass spectrometry, Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS
2. Spectroscopy of organic compounds, RM Silversteen and others, 5th Ed,John Wiley
3. Spectroscopy of organic compounds, P.S. Kalsi, Wiley, 1993.
4. NMR in chemistry-A multi nuclear introduction, William Kemp, Mc Millan, 1986.
5. Spectroscopic methods in Organic chemistry, DH Williams & I Flemmi

(Mandatory Core)

CHE-EC-303A	Organic Chemistry III	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives: Course Objectives:

- Familiarize with the applications of different reagents in organic synthesis, Mechanisms and stereochemistry.
- Study the methods of preparation and applications of organometallic reagents.
- Understand topocity, prochirality, auxillary and reagent-controlled methods in asymmetric synthesis.
- Applications of different oxidizing and reducing agents in organic synthesis with region and stereo controlled products.

Course Outcomes: At the end of the course, the student will be able to

CO1	To familiarize with the specific functions of the reagents particularly diazomethane, N-bromosuccinimide, Ziegler Natta catalyst, 1,3-dithianes and Merrifield resin in the synthesis of a variety of complex molecules.
CO2	To gain knowledge in the synthesis of different organometallic reagents and also stereo and regio specificity and selectivity of reactions with organometallic reagents
CO3	To understand diastereoselectivity, stereoselectivity and substrate controlled auxillary controlled reactions
CO4	To acquire knowledge about the reagents which causes oxidation in various compounds and also the reagents that causes selective and complete reductions to synthesize various compounds.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	2	3	2	2	3	2	1	-	1	1
CO2	3	2	2	3	2	2	3	2	2	1	1	2
CO3	3	1	1	3	-	2	-	2	1	-	2	-
CO4	3	2	2	3	1	-	1	2	1	1	-	2

CHE-EC-303A Core-Theory Organic Chemistry III

UNIT I: REAGENTS IN ORGANIC SYNTHESIS 15 Hrs

Use of the following reagents in organic synthesis: Anhydrous $AlCl_3$, Boran trifluoride, N-Bromosuccinimide, Diazomethane, Dicyclohexylcarbodiimide, Lead tetraacetate, Zieglar-Natta

catalysts, DDQ, Dithianes, Merrifield resin.

UNIT-II: ORGANOMETALLIC REAGENTS 15 Hrs

Synthesis and applications of Grignard reagents, Organolithium, Zinc, Copper, Mercury, Palladium and Rhodium compounds in Organic Synthesis, Homogeneous catalytic hydrogenation and hydroformylation reactions

UNIT III: ASYMMETRIC SYNTHESIS 15 Hrs

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT IV: METHODS OF ORGANIC SYNTHESIS 15 Hrs

i). ***Oxidations:*** **(a)** Alcohols to carbonyls-Chromium (iv) oxidants-Dimethylsulfoxide oxidation, periodate xidation, Oppenauer oxidation, oxidation with manganese dioxide, oxidation with silver carbonate **(b)** Alkenes to epoxides-peroxide induced epoxidations. **(c)** Alkenes to diols-oxidation with potassium permanaganate, osmium tetraoxide, Prevost reaction **(d)** Ketones to esters-Bayer-Villiger oxidation **(e)** Oxidative bond cleavage-cleavage of alkenes by transition metals. **(f)** Oxidation of alkyl or alkenyl fragments-selenium dioxide and chromium trioxide oxidations.

ii). ***Reductions*** **:** Reduction with lithium aluminium hydride, sodium borohydride, alkoxides, bis-methoxy ethoxy aluminium hydride, Boran aluminium hydride and derivatives-catalytic,hydrogenation-dissolving metal reductions, Non-Metallic reducing agents including enzymatic and microbial reductions.

Suggested Books

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry, C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Name reactions and reagents in organic synthesis, B.P. Muway and M.G Ellord, John Wiley.
6. Principles of Organic Synthesis, R.O.C Norman and J.M Coxon, Blackie Academic & Professional.
7. Reaction Mechanism in Organic Chemistry, P.S. Kalsi, New Age International.
8. Principles of organometallic chemistry, P. Powell, ELBS.

9. Organo transition metal chemistry-Applications to organic synthesis, S.G. Davis, Pergmon.
10. Stereochemistry to Organic Compounds, D. Nasipuri, New Age International.
11. Stereochemistry, P.S. Kalsi, Wiley Eastern.

CHE-EC-303B	Physical Chemistry III	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Physical Chemistry

Course Objectives:

- Learn applications of Group Theory, symmetry criteria and symmetry restrictions
- Applications of X-ray Diffraction and Electron Diffraction on solid state chemistry
- Familiarize with the applications of Microwave spectroscopy, infrared spectroscopy and Raman spectroscopy
- Get knowledge on concept of Thermodynamics of polymer dissolution and Flory-Huggins theory of polymer solutions

Course Outcomes: At the end of the course, the student will be able to

CO1	To know the determination of Character Co-ordinate of C_2V point group based on 3N Coordinates and to learn the Mutual exclusion Principle.
CO2	To learn the Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals.
CO3	To study the rigid rotator model, stark effect, vibration-rotation spectroscopy, PQR branches, selection rules and Vibrational- rotational Raman spectroscopy.
CO4	To study the concepts on heat of dissolution, regular solution theory, Hildebrand solubility parameter, concept of Flory-Huggins theory of polymer solutions

Mapping of course outcomes with the program outcomes

CHE-AC-303B CORE-THEORY PHYSICAL CHEMISTRY III

UNIT-I Applications of Group Theory 15 Hrs

Construction of reducible and irreducible representations, Determination of Character Co-ordinate of C_2V point group based on 3N Co-ordinates. Standard reduction formula, Determination of normal modes of vibrations of SO_2, NH_3, $POCl_3$, $PtCl_4^{2-}$, H_2O_2 molecules. Mutual exclusion Principle, Direct Product, Accidental Degeneracy and Fermi resonance Group Theory and Spectroscopy: IR Spectral activity of NH_3 molecule, selection rules, symmetry Criteria for optical activity, symmetry restrictions on dipole moments, symmetry and stereo isomerism. Prediction of IR and Raman Spectral activity of H_2O and CO_2.

UNIT-II: X-ray Diffraction: 15 Hrs

(A) Solid State Chemistry Dislocation of Solids, Schottky and Frenkeldefects, insulaters, a,d semiconductors, Band theory of solids,solid state reactions.

(B) Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals. Index reflections, identification of unit cells from systematic absences in diffraction pattern- structure of simple lattices and X-ray intensities- structure factor and its relation to intensity and electron density- Description of procedure for X-ray structure analysis (NaCl and KCl)

(C) Electron Diffraction: Scattering intensity Vs scattering angle, Wierlequation, and its importance. Measurement techniques, Elucidation of structures of simple gas phase molecules, Low energy electron diffraction (LEED) for the study of surfaces.

UNIT-III: SPECTROSCOPHY 15 Hrs

Microwave spectroscopy: classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, intensities- stark effect.

Infrared spectroscopy: Linear harmonic oscillator, zero point energy, anharmonity, Mores potential energy diagram, fundamental and overtone transitions, hot bands and combinations bands. Vibration-rotation spectroscopy, PQR branches, selection rules, factors affecting the band positions and intensities for IR region. **Raman spectroscopy:** Classical and quantum theories of Raman effect, pure rotational, pure vibrational Raman spectroscopy, selection rules, mutual exclusion principle, resonance Raman spectroscopy and coherent antistokes Raman spectroscopy. Vibrational- rotational Raman spectroscopy.

UNIT-IV: POLYMER SOLUTIONS 15 Hrs

Thermodynamics of polymer dissolution, effect of molecular weight on solubility, solubility of crystalline and amorphous polymer, heat of dissolution, regular solution theory, Hildebrand solubility parameter, Flory-Huggins theory of polymer solutions, conformational entropy, osmotic pressure and viscosity of polymer solutions. Molecular weight determination by light scattering, ultra-centrifugation and sedimentation equilibrium method. Liquid Crystals- synthesis and applications

Books Suggested

1. F.A. Cotton : Introduction to Group theory for chemists.
2. Geroge Davidson Elsevier : Introductory Group Theory for Chemists.
3. Gurdeep Raj , Ajay Bhagi&Vinod Jain : Group Theory and Symmetry in Chemistry
4. Instrumental methods of analysis – M.H. Willard, Meritt Jr. and J.A. Dean
5. Principles of instrumental analysis – Skoog and West
6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.

7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar.: polymer Science. New Age international Publishers.

CHE EC 304	Core practical I: Environmental Chemistry - Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Environmental Chemistry- Practical.

Course Objectives:

- Familiarize with the water analysis techniques to anlyse acidity and alkalinity
- Gain knowledge on BOD and COD.
- Understand the basics of soil analysis
- Determination of heavy metals in soil.

Course Outcomes: At the end of the course, the student will be able

CO1	To know the basic idea on techniques of water analysis and acidity alkalinity
CO2	To get experience with the calculations of BOD and COD
CO3	To Understand the basics of soil analysis *viz*. pH, Conducivity
CO4	To have an experience on the determination of heavy metals in soil

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	3	-	2	3	2	-	1	1	1
CO2	3	2	2	3	2	2	3	2	2	1	1	2
CO3	3	-	1	3	1	2		2	2	-	2	-
CO4	3	2	2	3	1	-	2	2	2	1	-	2

CHE : EC-304: PRACTICALS (Core & Gen.) :: WATER & SOIL ANALYSIS

Water Analysis

a. Alkalinity
b. Acidity
c. Temporary, Permanent and total hardness
d. Sulphate
e. Phosphorus
f. Nitrites
g. Cholorides
h. D.O, BOD and COD
i. Insecticides

Soil Analysis

Determination Of:

a) pH

b) Conductivity

c) Ca

d) Mg

e) Heavy metals like Cr, Pb, Cd, Zn.

CHE EC 305A	**Chemotherapy and Drug Analysis**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of Chemotherapy and Drug Analysis

Course Objectives:

- Gain knowledge on chemotherapy and analysis of drugs.
- Analysis of drugs chemically and biologically.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the classification and synthesis of drugs.
CO2	To familiarize with the qualitative and quantitative analysis of drugs.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	2	3	2	1	1	1	1
CO2	3	2	2	3	2	2	3	2	1	1	-	2
CO3												
CO4												

CHE EC 305A: (SKILL ORIENTED COURSE : THEORY) : CHEMOTHEROPY AND DRUG ANALYSIS

UNIT-I: Chemotherapy

Definition, History, and Evolution of Chemotherapy; Discovery, Classification, Nomenclature, Mode

of action and synthesis of the following classes of compounds with special references to specific drugs mentioned under each class

i) Sulfa drugs- Sulfanilamide and Sulfamethoxazole.

ii) Antibacterials

a) Lactum group of antibiotics – Penicillin, Ampicillin and Amoxycillin.

b) Cephalosporin-C and Ciprofloxacin.

iii) Anticancer drugs – 5-Flurouracil, Methotrexate.

iv) Antifungals – Griseofulvin

v) Antimalarials – Chloroquin

UNIT-II: Chemical and Biochemical analysis of Drugs

Qualitative and Quantitative Analysis of drugs: Uses of IR, UV, GLC and HPLC methods.

Drug Assay by Biochemical Analysis – ELISA (Cortisol, alcohol, opiates).

Radio Immuno Assay (RIA) – Enalapril, Insulin; Kidney, Lungs and Liver function tests; Use of isotopes in the Bioanalysis of drugs and in drug design programmes.

Book Suggested

1. Medicinal Chemistry and Pharmaceutical Chemistry – Harikishan Singh and Kapur
2. Medicinal Chemistry and Biochemistry – R.L.Nath
3. Introduction to Medicinal Chemistry – Patrick
4. The Organic Chemistry of Drug Synthesis Vols. 1-6 - Ledneicer Top drugs top synthetic routes – John Saunders
5. Medicinal Chemistry – Ashutoshkar
6. Synthetic Organic Chemistry and Drugs – Gurideep R Chetwal
7. Biochemistry – Harper, Conn & Stumpf, Lehninger
8. Biochemistry – Western Jodd
9. Biochemistry – Cann & Stumpf
10. Bergers Medicinal Chemistry Vols. 1-5 – Manfred E. Wolf
11. Introduction to drug design – Siverman
12. Biochemical approach to Medicinal Chemistry – Thomas Nogrady
13. Prinicples of Medicinal chemistry – William Foye
14. Text book of organic medicinal and pharmaceutical chemistry – Delgrado and William A
15. Industrial Microbiology – Casida

CHE EC 305B	Instrumental Methods of Analysis	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Instrumental Methods of Analysis Practical

Course Objectives:

- Familiarize with analysis of mixtures of acids and halides by potentiometry
- Study about the determination of different cations by Flame photometry

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the potentometric analysis of mixtures of acids and halides
CO2	To familiarize with the Flame photometric analysis of Na, K, and Li
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	3	3	-	2	3	2	1	1	1	-
CO2	3	2	1	3	2	2	3	2	1	-	1	2
CO3												
CO4												

CHE : AC 305 (B) : PRACTICALS (SKILL ORIENTED COURSE) : INSTRUMENTAL METHODS OF ANALYSIS

1. Colorimetric Determinations:

a. Determination of manganese

b. Determination of nickel

c. Determination of iron by 1,10 Pheren-thiroline

d. Determination of chromium

e. Determination of Phosphate

f. Determination of Pesticides

g. Determination of Nitrite.

CHE EC 306 A	Spectral Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral Techniques

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands.
- Study on the applications of flame atomic absorption spectroscopy.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy.

Course Outcomes: At the end of the course, the student will able

CO1	To know the basic principles of spectroscopy.
CO2	To familiarize with the analysis of various functional groups by using different spectroscopic techniques.
CO3	To Understand the applications of AAS.
CO4	To gain knowledge about Mass spectral fragmentation of organic compounds and common functional groups.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	3	-	2	3	2	1	-	1	1
CO2	3	2	2	3	2	2	3	2	2	1	-	2
CO3	3	2	1	2	2	--	2	1	-	1	1	-
CO4	3	2	2	3	-	2	1	-	2	1	-	2

CHE : AC : 306(A): (OPEN ELECTIVE) SPECTRAL TECHNIQUES

UNIT – I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY 15 Hrs

Various electronic transitions (185-800nm.), Beer-Lambert Law, effect of solvent on electronic transitions , ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, Fieser-Woodward rules for conjugated dienes and carbonyl compounds

UNIT – II : INFRARED SPECTROSCOPY **15 Hrs**

Instrumentation and sample handling, characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines, ketones, aldehydes, esters, amides, acids and anhydrides. Effect of hydrogen bonding.

UNIT – III:ATOMIC ABSORPTION SPECTROSCOPY: FLAME AAS: **15 Hrs**

Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT –IV: MASS SPECTROMETRY **15 Hrs**

Principle, instrumentation, different methods of ionization, EI, CI, FD and FAB, Mass spectra-molecular ion, base peak, meta-stable peak, nitrogen rule and Mc Lafferty rearrangement. Mass spectral fragmentation of organic compounds and common functional groups. Normal and branched alkanes, alkenes, cycloalkanes, benzene and its derivatives, alcohols and phenols, ethers, aldehydes and ketones, carboxylic acids and their derivatives , amines and nitro compounds. Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books Suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS .2.
2. Spectroscopy of organic compounds, RM Silversteen and others 5th Ed, John Wiley 1991
3. Spectroscopy of organic compounds, PS Kalsi, Wiley, 1993
4. NMR in chemistry – A Multi nuclear introduction, William Kemp, Mc Millan 1986
5. Spectroscopic methods in Organic Chemistry, DH Williams & I Flemmi TMH . 2005

CHE EC 306 B	Chromatographic Techniques	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chromatographic Techniques

Course Objectives:

- Familiarize with Classification of Chromatographic methods.
- Understand Demonstration experiment in TLC.
- Study on the applications of High-Performance Liquid Chromatography (HPLC).
- Understand the working principle of gas chromatography.

Course Outcomes: At the end of the course, the student will able to

CO1	To know the stationary and mobile phases in chromatographic techniques.
CO2	To familiarize applications of different chromatographic methods.
CO3	To Understand the principle of chromatographic techniques.
CO4	To gain knowledge on the normal phase and reverse phase.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	2	-	3	2	2	1	-	1	-
CO2	3	2	2	2	2	2	3	2		1	1	2
CO3	3	2	1	2	2		2	-	2	-	1	-
CO4	3	2	2	1	2	1	1	1	1	1	-	2

CHE EC 306 B : Chromatographic Techniques

Unit –I: Introduction - Classification of Chromatographic methods – Column chromatography-Adsorption phenomenon: Nature of adsorbents-Solvent systems-Differential migration-Separation of mixture of o-/p-nitro anilines (A demonstration experiment).

Unit –II: Thin-Layer Chromatography (TLC)-Coating materials and preparation of TLC plates-Solvents for development-Detection of compounds in TLC- R_f values in TLC-Applications of TLC in chemistry-Preparative TLC – Demonstration experiment in TLC.

Unit –III: High-Performance Liquid Chromatography (HPLC) - Application of HPLC- HPLC instrument-Stationary phases in HPLC-Normal and reversed phase HPLC: A comparison- Normal phase HPLC: Principle-Retention times in Normal and reversed phase HPLC- Reversed phase HPLC: Principle.

Unit –IV: Gas-Liquid Chromatography- Instruments for Gas-Liquid Chromatography- Gas-Chromatographic Columns and the Stationary Phase- Application of Gas-Liquid Chromatography- Gas-

Solid Chromatography.

Reference Books:

1. Analytical chemistry: G L David Krupadanam, D. Vijaya prsad, K. Varaprasad Rao, KLN Reddy, C. Sudhakar.
2. . Analytical chemistry: Skoog West Holler.
3. Modern Analytical Chemistry : David Harvey DePauw University.
4. J.G. Dick. Analytical Chemistry, Mc Grraw Hill, New Delhi, (1973).

(Mandatory Core)

CHE-EC- 401	Energy, Environment and Soil	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Energy, Environment and Soil

Course Objectives:

- Familiarize with fossil fuels, solar energy, geothermal energy
- Hydropower and photo-electrochemistry, hydrological cycle, water pollutants, eutrophication and greenhouse effect.
- Detection of composition of soil, biodegradation, goals of green chemistry, biocatalysis
- Soil pollution, solid waste management and disposable methods.

Course Outcomes : At the end of the course, the student will be able to

CO1	Know about nuclear fission and fusion, uses of solar energy in space heating and water heating, hydropower and water heating, hydropower and production of ethanol from indirect solar energy.
CO2	Learn physical and chemical properties of water and water complexation in natural and waste water and to understand about global warming, ozone depletion, green house effect and acid rains.
CO3	Acquire knowledge on composition of inorganic and organic contaminants in soil, soil corrosion and industrial applications of green chemistry.
CO4	Get knowledge on various methods of solid waste collection and its disposal.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	2	-	2	2	2	-	3
CO2	3	3	3	3	3	-	-	2	2	-	-	3
CO3	3	3	3	3	2	2	-		2	2	-	3
CO4	3	3	3	3	3	2	-	2	2	-		3

CHE EC-401: CORE THEORY: ENERGY, ENVIRONMENT AND SOILS

UNIT-I: Sources of Energy **15 Hrs**

Fossil fuels- Nuclear fission and fusion- Solar energy-use of solar energy in space heating and water heating- production of electricity using solar energy- solar trough collectors- power tower- solar pond- solar energy for driving vehicles- power from indirect solar energy – Hydropower- wind power- Biomass energy- production of ethanol from biomass- production of methane from biomass- photosynthesis- photo electro chemistry- Geothermal energy.

UNIT-II: Water Resources and Air **15 Hrs**

Hydrological cycle- physical and chemical properties of water-complexation in natural and waste water,-Anomalous properties-water pollutants-Types-Sources- Heavy metals- metalloids- organic – Inorganic –Biological and Radio active-Types of reactions in various water bodies including marine environment- Eutrophication- Ground water- Potable water standards.Treatment for portable water.

Air: Chemical reactions in the atmosphere – Aerosols types- Production and distribution – Aerosols and Radiation – structure and composition of atmosphere- temperature inversion – Global warning- Ozone depletion – Green house effect, "CFC"s- Acid rain.

UNIT-III: Soil and Green Chemistry **15 Hrs**

Soil: Composition of soil- lithosphere- inorganic and organic contaminants in the soil- Biodegradation-Nondegrdable waste and its effect on the environment- Bioremediation –of surface soils- Fate and transport of contaminants on soil system– Bioindicators- Soil parameters- soil destruction- Erosion- Soil conservation – Nitrogen pathways and NPK in soil .

Green Chemistry: Goals of Green chemistry- Significance and basic components of Green chemistry research - industrial applications of Green chemistry-products from natural materials- Green fuels and E-Green propellants- Zeolites- Biocatalysts.

UNIT IV: Soil pollution: **15 Hrs**

Introduction – soil pollution by industrial wastes. soil pollution by urban wastes, Radioactive pollutants and Agricultural waste- chemical and metallic pollutants-Biological agents – mining - Detrimental effects of soil pollutants – Effects of industrial pollutants- Effects of sewage and domestic wastes-Effects of heavy metals- Effects of radioactive pollutants- Effects of modern agro- technology – Diseases caused by soil pollution – solid waste management – sources and classification -public Health Aspects – methods of collection- Disposal methods – potential methods of disposal.

Books Suggested:

1. Daniel D. Chiras (1994), Environmental Science, 4th Ed.
2. Environmental Chemistry by W. Moore and J.Moore
3. Environmental chemistry by J.O.M. Bockariss
4. Environm,ental by BK SHArma
5. Environmental chemistry by SS Dara
6. Environmental chemistry by Mahajan
7. Environmental chemistry by a.K.De

(Mandatory Core)

CHE-EC 402	Water Pollution Monitoring and Environment Laws	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Water pollution monitoring and environment laws.

Course Objectives:

- Basic concepts of different water pollutants
- Different principles of water treatment.
- Biotechnology and its applications in environmental protection
- Environmental management and environmental laws

Course Outcomes: At the end of the course, the student will be able to

CO1	Acquire knowledge on disease causing agents in water.
CO2	Learn about the removal of suspended and dissolved solids present in waste water.
CO3	Understand different uses of micro-organisms in environmental protection.
CO4	Know different world life acts such as forest conversion act, water control pollution act and air prevention and control act.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	-	2	-	-	-	3
CO2	3	3	3	2	2	-	-	2	2	-	-	3
CO3	3	3	3	3	2	2	-	2	2	-	-	3
CO4	3	3	3	3	-	2	-	2	3	-	2	3

CHE EC-402: CORE THEORY: WATER POLLUTION MONITORING AND ENVIRONMENT LAWS

UNIT-I: Water pollution **15 Hrs**

Basic aspects of water-general principles of water (physical and chemical)-criteria of water quality.Types of water pollutants: sewage and domestic wastes-industrial wastes-agriculture discharges- toxic metals-oxygen demanding wastes-disease causing agents-oils- detergents and phosphates. Sampling**:** Basics of Sampling, sampling procedure, statistics, sampling and physical state, crushing and grinding, hazards waste of sampling, pre-concentration methods

UNIT-II: Waste water treatment: 15 Hrs

Basic process of water treatment- primary treatment pretreatment – sedimentation – Flotation-secondary (Biological) Treatment – Active sludge process – Trickling filters – sludge Treatment and disposal – Advanced waste water Treatment – Removal of suspended solids – Removal of dissolved solids – Nitrogen removal – phosphorous removal – Advanced Biological systems – chemical oxidation .

UNIT III: Biotechnology and its application in Environmental protection 15 Hrs

Introduction- Bio-informatics- Bio-Technology and pollution control,-Bioremediation- Biological de-odourisation- Biological purification of contaminated air-microorganisms and energy of mankind-use of microorganisms role in petroleum augmentation and recovery.

UNIT IV: Environmental Management and Important Environmental Laws: 15 Hrs

Environmental Management: Introduction-objectives-components-environmental impact assessment (EIA)-historical background-elements of EIA process-participants in EIA processes-contents of EIS-design of EIA.

Important Environmental Laws: the world life act-the forest conservation act-the water and control pollution act-air prevention& control act—the environment act-environmental quality management standard-ISO 14000 series.

Books Suggested

1. Environmental Chemistry by W. Moore and J.Moore
2. Environmental chemistry by J.O.M. Bokriss
3. Environmental by BK Sharma
4. Environmental chemistry by SS Dara
5. Environmental chemistry by Mahajan
6. Environmental chemistry by a.K.De
7. Lodge (1994) Methods of air sampling and analysis.Publications, Jaipur
8. Kudesia, V.P. (1985) Water Pollution, Pragati Prakashan
9. Elements of biotechnology by PK Gupta and Rastogi

(Mandatory Core)

CHE-EC-403A	Air Pollution, Control Methods-Noise and Thermal Pollution	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Air Pollution, Control Methods-Noise and Thermal Pollution

Course Objectives:

- Study on properties of air pollutants, air pollution sampling measurements and analysis.
- Familiarize with different control methods and adsorption of solids and liquids, gas analysis.
- Know about pollution caused by vehicle emissions and different industries.
- Get an idea on noise and thermal pollutions and their effect on human health.

Course Outcomes: At the end of the course, the student will be able to

CO1	Acquire knowledge on air pollutants, air pollution sampling measurements and analysis caused due to sulphur dioxide, carbon monoxide, nitrogen dioxide, oxidants, ozone, hydro carbons and particulate matter.
CO2	Learn about different control methods and adsorption of solids and liquids, gas analysis eluents viz., nitrogen oxides, carbon monoxide and hydrocarbons.
CO3	Understand pollution caused by vehicle emission, different industries, cement plants, steel mills and petroleum refineries.
CO4	Know about noise and thermal power project pollutions and their effect on human health.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	-	2	-	-	-	3
CO2	3	3	3	2	2	-	-	2	2	-	-	3
CO3	3	3	3	3	2	2	-	2	2	-	-	3
CO4	3	3	3	3	-	2	-	2	3	-	2	3

CHE : EC-403 (A): (GENERIC ELECTIVE): AIR POLLUTION, CONTROL METHODS-NOISE AND THERMAL POLLUTION

UNIT-I: Air Pollution **15 Hrs**

Classification and properties of air pollutants-emission sources-major emissions from global sources-importance of anthropogenic sources-behavior and fate of air pollutants photochemical smog and its effects on health-vegetation-material damage in India.

Air pollution sampling and measurement-ambient air sampling-collection of gaseous air pollutants-collection of particulate pollutants-stack sampling-analysis of air pollutants-sulphur dioxide-carbon monoxide-nitrogen dioxide-oxidants-ozone-hydro carbons and particulate matter

UNIT- II: Control methods **15 Hrs**

Sources-correction methods-particulate emission control-gravitational settling chambers-cyclone separators-fabric filters-electrostatic precipitator-wet scrubbers-control of gaseous emissions by adsorption of solids and liquids-control methods of sulphur dioxide emission, flue gasesanalysis-control method, nitrogen oxides, carbon monoxide and hydrocarbon-mobile sources.

UNIT-III: Vehicular Air Pollution: **15 Hrs**

Genesis of vehicular emissions standard- natural pollution-gasification of vehicles-point sources of air pollution – mechanism of air pollution from automobiles -automobile pollution- Indian scenario population and pollution loads of vehicles-automobile air pollution control-exhaust gas controlling treatment devices-thermal reactor-catalytic converter from automobiles-fuel tank carbonator. Air pollution from Portland cement plants-steel mills and petroleum refineries.

UNIT-IV: Noise and Thermal Polution **15 Hrs**

Noise pollution: sources-measurement of noise and indices-effect of meteorological parameters on noise propagation-noise exposure levels and standards –measurement of noise-impact of noise on human health

Thermal pollution: Introduction-definition-sources-harmful effects-toxic compounds in traces-prevention and control of thermal pollution –thermal power projects in India.

Books Suggested:

1. Environmental Chemistry by W. Moore and J.Moore
2. Environmental chemistry by J.O.M. Bockeriss
4. Environmental chemistry by Sharmar and Kaur, Krishna Publishers
6. Environmental chemistry by a.K.De
8. Henry C perkins (1974) Air Pollution, McGraw-Hill
9. Kudesia, V.P. (1985) Water Pollution, Pragati Prakashan.
10. Environmental Engineering by CS Rao
11. Environmental by BK Sharma
12. Environmental chemistry by SS Dara

(Compulsory Foundation)

CHE-EC-403B	Bioinorganic, Bioorganic, Biophysical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Bioinorganic, Bioorganic, Biophysical Chemistry

Course Objectives:

- Highlighten metal complexes as oxygen carriers and electron transfer in biology.
- Metal ion transport and storage in biological systems and importance of trace metals in biology.
- Learn physiological functions of carbohydrates, lipids, enzymes classification, stereospecificity.
- The basic concepts of biophysical chemistry in biochemical reactions, exergonic and endergonic reactions.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain knowledge on metallo proteins in electron transfer processes.
CO2	Know the applications of trace metal ions and metal ions as chelating agents in medicine.
CO3	Achieve and develop highly stereoselective synthesis of organic compounds and drugs by adopting environmentally.
CO4	Understand thermodynamics of biopolymer reactions and to correlate free energy and biopolymer parameters.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	3	3	3	2	-	2	-	3
CO2	3	3	3	3	3	2	3	-	-	-	3	3
CO3	3	3	3	3	3	3	-	2	-	2	-	3
CO4	3	3	3	3	3	3	2	2	-	3	3	3

CHE EC-403(B): (GENERIC ELECTIVE): BIOINORGANIC, BIOORGANIC, BIOPHYSICAL CHEMISTRY

UNIT-I: **BIO-INORGANIC CHEMISTRY- I** **15 Hrs**

Metal complexes as oxygen carriers –Heme proteins –Hemoglobin and myoglobin –Non heme proteins –hemerythrin and hemocyanin – model synthetic complexes of iron, cobalt and copper.Co-enzymes Vitamin $B_{12,}$carboxy peptidase and superoxidedismutase.

Electron Transfer in Biology: Structure and functions of metalloproteins in electron transfer processes –catalase –peroxidose –cytochromes and iron –sulphur proteins –synthetic models.

UNIT – II: BIOINORGANIC CHEMISTRY- II: Metal ion transport and storage in biological systems**,** Metal ions in Biology, Molecular mechanism of ion transport across membranes: ionophores, photosynthesis.

Hydrolytic metalloenzymes: Carbonic anyhdrase, carboxy peptidase, calcium in control processes, calcium and muscle contraction, calcium and secretion, calcium in blood clotting mechanisms. Therapeutic uses of enzymes.

Importance of trace metals in biology: Metal ions as chelating agents in medicine, trace metal ions and metal and non-metal deficiency. Biological nitrogen fixation,in-vivo and in-vitro nitrogen fixation.

UNIT-III: BIOORGANIC CHEMISTRY

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition-Blood group substances

Lipids: Essential fatty acids-structure and function of triglycerols, Glycerophospholipids, cholesterol, bile acids prostaglandins- composition and functioning of lipoproteins

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

UNIT-IV: BIOPHYSICAL CHEMISTRY:

Standard free energy change in biochemical reactions, exergonic and endergonic reactions, hydrolysis of ATP, thermodynamics of biopolymer solutions, chain configuration of bio polymers, and calculation of average dimensions. Membrane equilibrium, ion transport through cell membrane. dialosis and its function. Structure and functions of proteins, enzymes, DNA and RNA in living systems, forces involved in bio polymer interactions, electrostatic forces, hydrophobic forces, molecular expansion, and dispersion forces.

Books Suggested

1. M.N. Hughes, The Inorganic chemistry of Biological Processes, John wiley and Sons, New York 2nd Edition, 1981.
2. A Text book of Biochemistry, A.V.S.S. Rama Rao
3. Physical chemistry by Atkenes
4. Physical chemistry by Albertz.
5. Bio physical chemistry by Van Holde

6. Bio Physics by Narayanam
7. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
8. Chemistry of Natural Products, P.S. Kalsi, Kalyani Publishers.
9. Chemistry of Organic Natural Products, O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
10. Natural products Chemistry K.B.G. Torssell, John Wiley, 1983.
11. Burger's Medicinal Chemistry, M.E. Wolff, John Wiley
12. Medicinal Chemistry, A. Kar, New Age International

CHE EC 404	Practical I	L-5,T-1,P-0	4 Credits

Pre-requisite: Environmental Chemistry Practical I

Course Objectives:

- Conductometric methods of analysis.
- Colorimetric methods of analysis
- Interpretation of data from IR, HPLC, GC, AAS
- Determination of purity and alkanility by pH metry

Course Outcomes: At the end of the course, the student will be able

CO1	To know the basic principles of conductometry and analysis of acids and halides.
CO2	Colorometric estimation of iron and manganese.
CO3	To have an idea about working principles of IR, AAS, Spectrofluorimetry, Gas chromatography and HPLC.
CO4	Tofamiliarize with interpretation of data

Mapping of course outcomes with the program outcomes

CHE EC-404: PRACTICAL-I- INSREUMENTAL METHODS OF ANALYSIS-II

1) Conductometry:

a) Mixture of Acids

b) Mixture of Halides

2) Colorimetry:

a) Estimation of Iron

b) Manganese

c) Phosphate

d) Titration of copper Vs EDTA

DEMONSTRATION EXPERIMENTS

1 IR – Interpretation of IR spectrum of alcohols, ketones, aldehydes and other standard materials

2 AAS: Demonstration of AAS – Determination of Zn, Cd, Pb, Mn, Fe and Ni in effluents using AAS.

3 Spectrofluorimetry – estimation of quinine and fluoroscene

4 Ion selective electrodes – estimation of F^-, S^{2-} and CN^- in effluents using ion selective electrode meter.

5 Polarography and Anode stripping voltametry

(A)Polarography and Anode stripping voltametry – behavior of Cd, Zn, Pb in a mixture.

(B)Determination of Pb and Cd in samples using Anode stripping voltametr

6 Gas chromatography- Determination of pesticides

7 HPLC- Determination of pesticides

8 pH metry

(A)Determination of alkalinity in a colored effluent using pH metric end point.

(B)Determination of purity of commercial HCl, H_2SO_4, H_3PO_4 and CH_3COOH using pH metric end point.

CHE EC 405 A	Practical II:Project Work	L-5,T-1,P-0	4 Credits

Pre-requisite: Project Work

Course Objectives:

- Identification of problem by literature survey
- Carry out the problem independently
- Interpretation of data
- Communication of research results through presentations and preparation of dissertation

Course Outcomes: At the end of the course, the student will be able

CO1	To identify research problem, propose the hypothesis and to collect literature.
CO2	To perform research designs & experiments
CO3	To tabulate research results
CO4	To conclude research outcomes in the form of dissertation.

Mapping of course outcomes with the program outcomes

CHE EC- 405 A : PROJECT WORK

CHE EC 406A	Drug Chemistry	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Drug Chemistry

Course Objectives:

- To learn about the natural products as leads for new drugs
- Determination of cardiovascular drugs
- To study Autacoids
- Interpretation of Antipyretics

Course Outcomes: At the end of the course, the student will be able to

CO1	Know about natural products.
CO2	Know Interpretation of cardiovascular drugs.
CO3	Know the Analyzing about prostaglandins.
CO4	Know the Definition, Classification, Nomenclature, Structure and Synthesis of anti-inflammatory drugs.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : EC : 406 (A): (OPEN ELECTIVE) : DRUG CHEMISTRY

UNIT – I: NATURAL PRODUCTS AS LEADS FOR NEW DRUGS

Occurrence, Structure and therapeutic uses of Drugs acting on Central Nervous System

Morphine alkaloids (morphine, codeine, thebaine, heroin, pethidine)

Cannabinoids (9-cannabinol, Tetrahydrocannabinol)

Neuromuscular Blocking Agents (Curare, Decamethonium)

Vinca Alkaloids (Vincristin and Vinblastin), Taxol and Taxotere, podophyllotoxin, Etoposide, Teniposide.

UNIT – II: CARDIOVASCULAR DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis.

Cardiac glycosides (ex: Digoxin, Digitoxin);
Antihypertensive drugs (ex: Methyl dopa, Clonidene hydrochloride);
Antiarrhythmic agents (ex: Quinidine sulfate);
Antisympathetic drugs (ex: Propranolol hydrochloride, Verapamil hydrochloride);
Vasopressor drugs (ex: Prenylamine, Buphenine).

UNIT – III: AUTACOIDS

Definition, Occurrence, Isolation, Nomenclature, Classification, Synthesis, Biosynthesis and Stereochemical structures of Prostaglandins. Structural elucidation of PGE_1, PGE_2; Synthesis and biosynthesis of PGE_2, $PGF_{2\alpha}$.

Structure and Biosynthesis of Thromboxane A2 and Prostacyclin (synthesis not expected).

UNIT – IV: ANTI-INFLAMMATORY DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis of Paracetamol, Aspirin (Antipyretic), Salol, Cinchophen, Antipyrene, Phenylbutazone, Indomethacin, Tolmetin, Ibuprofen, Diclofenac and Naproxen.

Books suggested:

8. Medicinal Chemistry by Balkishen Razdar
9. Advanced Practical Medicinal Chemistry by Ashutosh Kar
10. Chemistry of Organic Natural Products by O. P. Agarwal, Vols., 1 & 2, Geol Pubs.

11. Chemistry of Natural Products by S. V. Bhat, B.A. Nagasampagi, M. Sivakumar
12. Natural Products Chemistry by K.B.G. Torssell, John Wiley, 1983.

CHE EC 406	Electroanalytical Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Electroanalytical Techniques

Course Objectives:

- To learn about the classification of electroanalytical methods
- Determination of types of currents
- Principle, instrumentation, reversible and irreversible cyclic voltammograms..
- Interpretation of Ion selective electrodes

Course Outcomes: At the end of the course, the student will able to

CO1	Ability to interpret potentiometry and conductometry
CO2	Interpretation of results while adhering to DC Polarography.
CO3	Analysing and compiling the data and results in polarography.
CO4	Familiarize Types of ion sensitive electrodes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3

CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : EC : 406(B): (OPEN ELECTIVE) : ELECTRO ANALYTICAL TECHNIQUES

Unit I: Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glasselectrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant. Mobility of ions, Conductometric titrations.

Unit II: D.C Polarography: Dropping mercury electrode- Instrumentation-polarogram. Types of Currents : Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation (derivation not necessary) and its consequences. Types of limiting Currents: Adsorption, Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

Unit III: (i) A.C. polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography(V) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms.

Unit IV: Ion selective electrodes: Ion-sensitive electrodes –types of ion sensitive electrodes –metal based cation and anion sensitive electrodes, solid membrane electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A. Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery, J. Bassett, J. Mendham and R.C. Denny. Vogel's Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (Mc Graw Hill).

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

SVU COLLEGE OF SCIENCES

DEPARTMENT OF CHEMISTRY
3. INORGANIC CHEMISTRY (Specialization)

Syllabus for M.Sc. CHEMISTRY

Choice Based Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Chemistry is one of the first six departments started during the year 1954 when the university was founded. The Department offers M.Sc. course in Chemistry with specializations in Analytical, Environmental, Inorganic, Organic and Physical Chemistry besides Self Supporting Courses in Organic and Analytical Chemistry. Choice Based Credit System is followed and the courses are categorized as per the guidelines of the statutory authorities. Ability enhancement and skill development courses are part of the curriculum. Almost 15% of the students are qualifying in National Entrance Test conducted by UGC-CSIR. Also the Department offers quality research and training experience leading to Ph.D., Degrees for the students in the areas of synthesis of pharmacologically potential molecules analogous to drugs, application of green methodologies for the synthesis of complex molecules, development of new hybrid sorbents for monitoring toxic metals in environmental samples, fabrication of novel electrochemical sensors and biosensors towards the detection of organic molecules and pollutants. Over the last sixty five years the department has trained about 650 students for their Doctoral degrees. Most of the research scholars are doing Post-Doctoral research in abroad and in India. The faculty published more than 3000 research papers in reputed National and International journals. The Department organizes National and International conferences / seminars/ workshops on regular basis. The Department has well equipped laboratories for research and teaching besides a DST funded computer lab and a Department library. All the faculty members are having individual research laboratories with internet facility.

At present the Department is flourished with 10 faculty members and most of the faculty members have Post Doctoral research and training experience abroad. Some of the faculty worked as Visiting Professors and Visiting Fellows in prestigious universities abroad. Majority of faculty members have undertaken major research projects funded by agencies like UGC, CSIR, DST, BRNS, DBT and MOES and have successfully completed the tasks with a budget outlay of Rs. 250.00 lakhs. Most of the faculty members have developed collaboration with Indian Institute of Sciences, Bangalore, Indian Institute of Chemical Technology, Hyderabad, AVRA Laboratories, EPR Laboratories, Hyderabad, Amara Raja Batteries, Tirupati, RRL, Trivandrum and Birla Institute of Technology & Science, Pilani – Hyderabad campus and have approved patents. Some of the faculty and Alumni are the recipients of JSPS Fellowship, UGC Raman Fellowship, Common wealth Academic Fellowship, State Best Teacher Award etc., Recognizing the excellence in teaching and research in the Department, the University Grants Commission and Department of Science Technology have provided funding under DRS and FIST programmes. The Alumni of the department served in coveted positions as Vice-chancellors, Registrars, CEO of pharma industries etc. The former students of the Department have established leading International pharmaceutical industries in India and abroad. Some of them are actively engaged in the manufacture of COVID 19 vaccine. The ultimate goal of the Department is to achieve excellence in fundamental research as well as the development of innovative technologies for the future.

Vision

- Impart quality education & training in the field of chemistry to enable successful careers for the post graduate students in the field of research, education & industry applications of chemical sciences.

Mission

The Department of Chemistry strives:

- To get an ideal balance between knowledge creation and knowledge dissemination in the chemical sciences with a focus to train and mentor students to become responsible scientists and scientifically literate professionals to attain National and International impact.
- To contribute to the improvement of scientific and technological literacy, and the development of critical-thinking and problem-solving skills of all students in order to compete for the world of work and responsible citizenship

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	**Scientific Problem solving skills**: Deep knowledge of the topic which can develop the problem solving skills using chemical principles.
PSO2	**Analytical skills**: Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reactions with the help of sophisticated instruments
PSO3	**Research skills**: Develop research skills through dissertation/project work in different fields of chemistry such as organic, inorganic, analytical, physical and environmental.
PSO4	**Learning skills on life processes**: Acquire advanced level of knowledge in natural products as well as biological systems from the chemistry point of view.

Program Objectives

PO1	To divulge an advance level of theoretical and practical knowledge in the major fields of Chemistry- Analytical, Environmental, Inorganic, Organic and Physical.
PO2	To engage in research projects for acquiring wide spectrum of subject knowledge and research experience in respective fields.
PO3	To enlighten on skill enhancement in the core chemistry with practical expertise hands this will make students employable in academia and industries
PO4	To mould as responsible citizens to serve the nation

Program Outcomes: On completion of M.Sc. Chemistry programme, graduates will be able to –

PO1	Have a firm foundation in the fundamentals and application of current chemical and scientific theories in different areas of chemistry *viz*., Analytical, Environmental, Inorganic, Organic and Physical.
PO2	Understands the background of organic reaction mechanisms, complex chemical structures, and instrumental methods of chemical analysis, molecular rearrangements and separation techniques.
PO3	Familiarize with the importance of various elements present in the periodic table, coordination chemistry and structure of molecules, properties of compounds, structural determination of complexes using theories and instruments.
PO4	Understand about the physical aspects of atomic structure, dual behavior, reaction pathways with respect to time, various energy transformations, molecular assembly in nano-level, significance of electrochemistry, molecular segregation using their symmetry.
PO5	Create awareness and sense of responsibilities towards environment and apply knowledge to solve the issues related to Environmental pollution.
PO6	Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.
PO7	Be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
PO8	Clearly communicate the results of scientific work in oral, written and electronic formats.
PO9	Explore new areas of research in both chemistry and allied fields of science and technology.
PO10	Design, analyze and carry out scientific experiments and interpret data to provide solutions to different industrial problems.
PO11	Independently carry out research to solve practical problems and present a substantial technical report.
PO12	Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self-directed learning aimed at personal development, and adapting to change academic

	demands of work place through knowledge/ skill development/ reskilling.

Program Educational Objectives:

At the end of the program, the student wills be able to:

PEO1	To demonstrate broad knowledge of descriptive chemistry.
PEO2	To impart basic analytical and technical skills to work effectively in various fields of chemistry.
PEO3	To motivate critical thinking and analysis skills to solve complex problems viz., analysis of data, synthetic logistics, spectroscopy, structure and modeling, team based problem solving etc.
PEO4	To demonstrate an ability to conduct experiments in the above sub disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling method
PEO5	To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
PEO6	To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment and modern instrumentation.

***Among the Generic Elective a student shall choose any one.**

(Mandatory Core)

CHE-101	INORGANIC CHEISTRY I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Comprehend the key features of coordination compounds, Crystal Field Theory, different properties and bonding by spectroscopic techniques
- Study the polymorphic forms of non-transition elements and their synthesis and properties
- Understand the basics of reaction mechanism and the mechanistic concepts of Dissociative (Id) and Associative interchange Mechanism (Ia), Taube's classification, Trans effect and Electron Transfer Reactions
- Familiarize with the methods of synthesis of metal carbonyls and metal nitrosyls, Synergistic effect, EAN and 18-electron rule

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the key features of coordination compounds, Crystal Field Theory, magnetic properties and bonding in transition metal complexes.
CO2	To learn about the polymorphic forms of Carbon, Sulphur and Phosphorus, synthesis and properties of sulphur-nitrogen compounds, boranes, carbides, silicates and to know Wades rules.
CO3	To explain the reactivity of complexes in terms of Valence bond and Crystal Field theories, Taube's classification, Trans effect and Electron Transfer Reactions.
CO4	To gain knowledge on synthesis and structures of different metal carbonyls, synergistic effect and 18 electron rule.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	1	-	1	-	2	-	1
CO2	3	1	-	3	-	2	2	2	2	1	-	2
CO3	3	2	-	3	2	-	-	1	-	1	2	1
CO4	3	1	1	3	-	2	2	2	1	-	1	1

CHE 101: INORGANIC CHEISTRY I

UNIT-I: CO-ORDINATION COMPOUNDS 15 Hrs

Introduction to Crystal field Theory, CFSE and its calculation, Paring energy, Splitting of 'd' orbitals in

Trigonal bi pyramidal, square planar, square pyramid and pentagonal bipyramidal geometries, Jahn –Teller effect, Application of CFT, OSSE, site Selection in Spinels, Short comings of CFT, Evidence for covalency – Nephelauxetic effect. MOT of co-ordinate bonds –M.O. Diagrams for octahedral, tetrahedral and square planar complexes. Experimental evidences for π- bonding – Crystallography, Infrared spectroscopy and Photoelectron spectroscopy.

UNIT-II: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non- transition elements special features of individual elements ; Synthesis' properties and structure of their Halides and Oxides, Polymorphism of Carbon, Phosphorus and Sulphur, Synthesis, properties and structure of boranes, Carboranes, borazines, Silicates, Carbides, Sulphur-nitrogen compounds. Electron counting in boranes, Wades rules (Poly hedral skeletal electron pair theory), Isopopoly and hetero poly acids.

UNIT-III: REACTION MECHANISMS IN COMPLEXES 15 Hrs

Reactivity of metal complexes. Inert and Labile complexes. Concept of Labile and Inert complexes in terms of Valence bond and Crystal Field theories. Taube's classification of complexes as labile and inert complexes. Dissociative (D) and Dissociative interchange Mechanism (Id) & Associative (A) and Associative interchange Mechanism (Ia). Substitution reactions in octahedral complexes- Acid Hydrolysis -factors affecting Acid Hydrolysis - Base Hydrolysis-conjugate Base Mechanisms - Anation Reactions -Substitution Reactions in Square Planar complexes- Trans effect – Mechanisms of Trans effect: polarization and π-bonding theories.Electron Transfer Reaction-Inner Sphere and outer Sphere Mechanisms- Marcus theory.

UNIT-IV: METAL πCOMPLEXES-I 15 Hrs

Nature of π bonding, Classification of π ligands, π donor ligands and π -acceptor ligands.

Metal Carbonyls: Synthesis of metal carbonyls, Structures of metal carbonyls of the types M(CO)n (M= Cr, Fe, Ni; n=4-6), $M_2(CO)n$ (M=Co, Fe, Mn; n=8-10), $M_3(CO)_{12}$ (M=Fe, Ru and Os), $M_4(CO)_{12}$ (M=Co, Rh, Ir). IR Spectraof metal carbonyls (i) Detection of bridging and terminal CO ligand, (ii) Synergistic effect, EAN and 18-electron rule. Electron counting methods (i) Oxidation state method and (ii) Neutral Atom method.

Metal Nitrosyls: Synthesis of metal Nitrosyls, bonding, Electron donation by nitric oxide, Models for NO bonding (i) Covalent model and (ii) Ionic models, Structures of metal nitrosyls (1) $[Fe_4S_3(NO)]$ (2)$[Fe_2(NO)_2I_2]$ (3) $[(\phi_3P)_2Ir(CO)Cl(NO)]^+$ (4) $[(\phi_3P)_2Ru(NO)_2Cl]$, Detection of bridging NO ligand, Applications of metal nitrosyls.

Books Suggested

1. F.A.Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999.John wiley & sons. Inc., New York.
2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, VI Edition 1993. Harper Collins College Publishers, New York.
3. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
4. Gary Wolfsburg: Inorganic Chemistry (5th Ed. (Viva Books)
5. W.L. Jolly: Modern Inorganic Chemistry (McGraw-Hill)
6. B.N Figgis: Introduction to Ligand Fields (John-Willey)
7. S.F.A. Kettle: Coordination compounds.
8. Coordination Chemistry. Bassalo & Jahnson.

(Mandatory Core)

CHE-102	Organic Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Organic Chemistry

Course Objectives:

- Classify molecules based on stereo chemical aspects study on optical and geometrical isomerism by the application of Cahn-Ingold-Prelog rules.
- Familiarize with different types of substitution reactions, able to predict products, including stereochemistry in aliphatic and aromatic nucleophilic substitution reactions, effect of neighboring group participation
- Understand thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects in reactive intermediates
- Study about occurrence, isolation, structure establishment and synthesis of natural products-terpenoids.

Course Outcomes: At the end of the course, the student will be able

CO1	To detect stereochemical structures of the molecules, stereoselective and stereocontrolled reactions.
CO2	To ascertain the stereochemistry of the products with the effect of neighbouring group participation and to familiarize the various types of aromatic substitution reactions, their mechanism and the effect of substituents.
CO3	To know the concept of isotope effects, potential energy diagrams and transition states in different intermediates
CO4	To familiarize with stereospecific synthesis of naturally occurring terpenoids and degradation products of terpenoids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	-	1	1	-	1	-	-
CO2	3	2	1	3	-	1	2		-	2	1	1
CO3	3	1	2	3	-	1	1	2	1	-	1	-
CO4	3	2	2	3	2	1	1	1	-	1	1	1

CHE102: Organic Chemistry I

UNIT-I: **Stereochemistry**

Sereoisomerism-Stereoisomers Classification – Configuration and conformation.

Molecular Three dimensional representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Dissymmetrization.

Optical isomerism: Molecular Symmetry and Chirality-Cahn-Ingold-Prelog rules R, S-nomenclature, stereoisomerism resulting from more than one chiral center, meso and pseudoasymmetric compounds - **Axial Chirality** - Stereochemistry of allenes spiranes - biphenyl derivatives and atropisomerism - **Planar chirality** - Ansa compounds and trans - Cycloalkenes - **Helicity**. Helically chiral compounds

Geometrical isomerism - E, Z - nomenclature - Physical and Chemical methods of determining the configuration of geometrical isomers-Stereoisomerism in 3, 4 and 5-membered cyclic compounds.

UNIT-II: Substitution Reactions

i) Aliphatic Nucleophilic substitutions: The S_N2, S_N1, mixed S_N1 and S_N2, SET mechanisms. Reactivity- effects of substrates, attacking nucleophiles, leaving groups and reaction medium.Common carbocation rearrangements – primary, secondary and tertiary. The neighbouring group participation (NGP) -anchimeric assistance, NGP by σ and π- bonds, phenonium ions, norbornyl and norbornenyl systems, Classical and nonclassical carbocations, NGP by halogens and heteroatoms (O,N,S)

The S_N^i and S_N2' mechanisms. Nucleophilic substitution at an allylic, and vinylic carbons.

ii. Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and $S_{RN}1$mechanisms. Reactivity - effect of substrate, structure, leaving group and attacking nucleophile. The von Richter, Sommelet - Hauser and Smiles rearrangements.

UNIT-III: Reactive intermediates

Types of reactions, types of bond cleavage mechanisms, generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes, nitrenes and arynes. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects**.**

UNIT-IV: Terpenoids

Classification of terpenoids, occurrence, isolation, general methods of structure determination. Isoprene and special isoprene rule. Structure determination and synthesis of the following representative molecules: Farnesol, Zingeberine, Cadinene and Abietic acid.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
6. Stereochemistry, P.S. Kalsi, Wiley Eastern.
7. Text book of Organic Chemistry, M.C. Murry
8. Organic Chemistry, Vol I, I.L. Finar, ELBS Eds.

(Mandatory Core)

CHE-103	Physical Chemistry I	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Acquire knowledge in Quantum Chemistry, postulates of Quantum Mechanics., Applications of Schrodinger wave equation and Born-Oppenheimer approximation
- Study on Chemical Dynamics and theories in unimolecular, chain and fast reactions and determination of reaction rates.
- Familiarize with concepts of Thermodynamics and statistical thermodynamics, Gibbs- Duhem equation and Sackur-Tetrade equation
- Know about Thermodynamic and Kinetic concept of Electrochemistry and conductance, conductivity of electrolytes

Course Outcomes At the end of the course, the student will be able to

CO1	To know the concepts such as Operator algebra, Eigen values and Eigen functions, Degeneracy, Schrodinger wave equation and the postulates of Quantum Mechanics.
CO2	To learn about theories of reaction rates, Lindemann, Lindemann-Hinshel wood, and RRKM theories.
CO3	To know about Thermodynamic concepts and entropy change in reversible process and irreversible process, Gibbs- Duhem equation, calculation of thermodynamic properties.
CO4	To study the Thermodynamic and Kinetic Derivation of Nernst Equation and the derivation of Debye-Huckle Equation and its Verification

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	3	2	1	--	1	2	---	1	1
CO2	3	1	2	3	1		1		1	1	-	1
CO3	3	-	1	3	2	1	-	1		-	2	-
CO4	3	1	2	3	-	1	1	-	2	1	-	1

CHE-103: Physical Chemistry I

UNIT-I: Quantum Chemistry-I

(A)**Introduction to Exact Quantum Mechanical Results**

Operator algebra, Eigen values and Eigen functions, Operators for momentum and energy, Degeneracy, Linear combination of Eigen functions of an operator, well behaved wave functions, Normalized and

orthogonal functions, The schrodinger wave equation and the postulates of Quantum Mechanics, (B) **Applications of Schrodinger wave equation:** Particle in one dimensional and three dimensional box, harmonic oscillator, rigid rotor, hydrogen atom and its applications. Hydrogen like wave function, hydrogen like orbitals and their representation, polar plots, contour plots and boundary diagram. (C)**Approximate Methods:** The variation Theorem, Linear variation principle, perturbation Theory (first Order and non-degenerate), Application of variation Method and perturbation theory to the helium atom, The Born-Oppenheimer approximation.

UNIT-II: Chemical Dynamics

(A)**Theories of reaction rates:** Collision theory, steric factor. Theory of Absolute Reaction Rates-Reaction coordinate, activated complex and the transition state. Thermodynamic formiulation of reacton rates.

(B) **Unimolecular reactions:** Lindemann, Lindemann-Hinshel wood, and RRKM theories. Termolecular reactions. Complex reactions-Rate expressions for opposing, parallel and consecutive reaction (all first order type) (C) **Chain reactions:** Dynamic chain, hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane, photochemical reactions- H_2-Br_2, H_2-Cl_2 reactions, Autocatalysis, H_2-O_2 reaction explosion limits. (D) **Fast Reactions:** Flow system – Temperature and pressure Jump Methods – Relaxation Techniques.

UNIT – III : Thermodynamics

(A) **Brief review of Thermodynamic concepts:** Enthalpy, entropy, free energy. Concept of Entropy – Entropy as a state function –Entropy change in reversible process and irreversible process – Temperature – Entropy diagrams – Entropy change and phase change – Entropy of mixing – Entropy and disorder. (B) **Statistical thermodynamics:** Partial molar properties: their significance and determination of partial molar properties, fugacity and its determination. Concept of distribution, thermodynamic probability and most probable Distribution, Ensemble averaging, postulates of ensemble averaging, canonical, grand canonical and micro- canonical ensembles, partition functions, translational, rotational, vibrational and electronic partition functions, Gibbs- Duhem equation, calculation of thermodynamic properties in terms of partition functions, Entropy of monatomic gases (Sackur-Tetrade equation)

UNIT-IV : Electrochemistry I

(A) **Thermodynamic and Kinetic concept of Electrochemistry**

Thermodynamic and Kinetic Derivation of Nernst Equation, Chemical and Concentration Cells with and

without Transference, Liquid Junction Potential, Derivation of the Expression for Liquid Junction Potentials-its determination and elimination, Applications of EMF Measurements: (i)Solubility product, (ii)pH Determination, (iii) Potentiometric Titrations.; (B)**Conductivity:** Theory of Electrolytic Conductance, Derivation of Debye-Huckle Equation and its Verification, Debye- Falkenhagen Effect, and Wein Effect, kohlrausch law. Calculation of Solubility of Sparingly soluble Salt from Conductance Measurements.

Conductometric Titrations : Titration of Strong Acid Vs Strong Base (HCl vs NaoH) ; Titration of Weak Acid Vs Strong Base (AcoH vs NaoH); Titration of mixture of Strong and Weak Acids vs Strong Base ; Precipitation Titrations.

Books Suggested

1. physical chemistry, P. W. Atkins (ELBS)
2. Quantum Chemistry, Ira N. Levine (Prentice Hall)
3. Atomic Structure and Chemical bond, Manas Chandra.
4. Chemical Kinetics, K.J. Laidler (Mc Graw Hill)
5. Kinetics and Mechanism of Chemical Transformations, J. Rajaraman and J. Kuriacose (Mcmilan)
6. Thermodynamics for chemists, S. Glasstone
7. Chemical thermodynamics, I.M. Klotz
8. Statistical Thermodynamics, M. Dole
9. Modern Electrochemistry, Vol. I & II, J.O. M. Bockris and A.K.N. Reddy (plen
10. An Introduction to Electrochemistry (3^{rd}ed.), S. Glasstone (Affiliated East-West).

(Compulsory Foundation)

CHE-104 (A)	General Chemistry I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on precision and accuracy, Limit of detection, Limit of determination, Sensitivity and selectivity, statistical evaluation of data
- Familiarize with principles and concepts of flame emission spectroscopy and atomic absorption spectroscopy and their applications.
- To know about ecosystem, nutrient cycle and dessert ecosystem and forest ecosystem and aquatic ecosystem.
- Gain knowledge on air pollution, water pollution, soil pollution, marine pollution, noise pollution and solid waste management.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about mean and median values, standard deviation and coefficient of variation.
CO2	To acquire knowledge on principle and instrumentation of AAS and difference between flame AAS and furnace AAS.
CO3	To know about the principle and concept of ecosystem and their functioning
CO4	To have an idea on environmental pollution and environmental impact assessment.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	-	-	2	1	1
CO2	3	2	-	3	1	-	2	1	-	1	1	-
CO3	3	3	2	3	2	1		1	2	1	1	2
CO4	3	2	1	2	3	1	1	1	-	2	1	1

CHE104-A: General Chemistry I

UNIT-I: TREATMENT OF ANALYTICAL DATA 15 Hrs

Precision and accuracy –mean and median values –Standard deviation – coefficient of variation, Types of errors: Determinate and indeterminate errors, confidence limits, significant figures, computations, minimization of errors, statistical evaluation of data –T-test ,F- test , and X^2 –test. Correlation coefficient and coefficient of determination; Limit of detection (LOQ); Limit of determination(LOD) Sensitivity and selectivity of an analytical method.

UNIT-II: FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 15 Hrs

(a) **Flame Emission Spectroscopy**: Principles, chemical reactions in flames, Interferences, evaluation methods, flame photometer and experimental technique, procedure for determinations, limitations and disadvantages. Applications

(b)**Atomic Absorption Spectroscopy: Flame AAS:** Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT-III: ECOSYSTEMS 15 Hrs

Concept of an ecosystem (Abiotic and biotic environment), structure and function of an ecosystem Producers, Consumers and decomposers. Energy flow in the ecosystem, (Nutrient cycle in the ecosystem) Ecological succession Food Chain, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems, Forest ecosystem, Grassl and ecosystem, Desert ecosystems aquatic ecosystems [ponds, streams, lakes, rivers, ocean estuaries].

UNIT-IV: ENVIRONMENTAL POLLUTION 15 Hrs

Definition a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution Solid waste management : Causes, effects and control measures of urban and industrial wastes. Environmental impact assessment.

Books Suggested

1. H.W. Willard, LL. Merritt and J.A. Dean: Instrumental Methods of Analysis
2. Vogel's Text book of Quantitative Inorganic Analysis.
3. Analytical Chemistry
4. Instrumental Methods of Analysis H. Kaur

CHE 104B	General Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To familiarize with the significance of green chemistry and assessment of the impact.
- To gain knowledge on biocatalyst in oxidation, reduction and hydrolytic reactions
- To have an idea on solvent free reactions and modern reaction techniques.
- To familiarize with the use of ionic liquids as green solvents.

Course Outcomes: At the end of the course, the student will be able

CO1	To get knowledge on green reaction conditions and their impact on environment.
CO2	To know about use of different biocatalysts as environmentally friendly reagents.
CO3	To acquire knowledge on the use of modern techniques like ultrasound, microwave etc.
CO4	To have an idea on the use of ionic liquids in different reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	-	2	1	1	-	1	-	1	1
CO2	3	1	1	3	1	-	1	1	-	1	-	1
CO3	3	3	2	3	2	1		2	-	1	1	1
CO4	3	2	1	2	3	1	1	1	1	-	1	1

CHE 104B: General Chemistry I

UNIT-I

Fundamentals and significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk hazard. An introduction to the tools of green chemistry and its fundamental principles.

Principles of Green Chemistry: Prevention of waste / by-products, Hazardous products- Designing of safer chemicals- Selection of appropriate solvents and starting materials- Use of protecting groups and catalysis- Designing of biodegradable products.

UNIT-II

Catalysis for Green Chemistry: Use of biocatalysts- Biochemical Oxidation, Biochemical Reduction, Enzyme Catalyzed Hydrolytic Process, Modified biocatalysis- transition metal catalysis- Reformatsky reaction, Wurtz reaction, Pinacol coupling, Simmons-Smith reaction,

Mukaiyama reaction, Heak reaction, Ullmann's coupling.

UNIT-III

Solvent Free Reactions: Solvent free techniques- Reactions on solid mineral supports, Phase Transfer Catalysis- C-alkylation, N-alkylation, S-alkylation, Darzen's reaction, Wittig reaction. Ultrasound assisted green synthesis- Oxidation, Reduction, Hydroboration, Bouveault reaction, Strecker reaction, Microwave assisted green synthesis- Biginelli reaction, Aza-Michael reaction, Suzuki reaction, Stille reaction, Sonogashira reaction.

UNIT-IV

Ionic liquids: Definition- Types of Ionic Liquids-Synthesis of Ionic Liquids- Selection of ionic liquids- physical properties- Application in organic synthesis- alkylation, allylation, oxidation, reduction, polymerization, hydrogenation, hydroformylation, alkoxycarbonylation, carbon-carbon bond forming reactions, alkene metathesis.

Books suggested:

1. New Trends in Green Chemistry by V.K. Ahluwalia, M. Kidwai.
2. Green Chemistry: Environment Friendly Alternatives by Rashmi Sanghi, M M Srivastava
3. Green Solvents for Organic Synthesis by V.K. Ahluwalia, Rajender S. Varma
4. Green Analytical Chemistry by Mihkel Koel and Mihkel Kaljurand

CHE 105 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Basic laboratory techniques of titration and analysis.
- Quantitative estimation of inorganic compounds through volumetric techniques.
- Calibration of volumetric apparatus and statistical analysis of the data.
- Determination of critical solution temperature of phenol-water system.

Course Outcomes: At the end of the course, the student will be able

CO1	To demonstrate mastery of basic semi-micro qualitative analysis of simple salts and interprets analytical data and will make scientific claims that are supported by the observations.
CO2	To familiarize with techniques of titration and calculation of errors.
CO3	To study the determination of critical solution temperature, eutectic composition, distribution coefficient, adsorption of different systems.
CO4	To calibrate the statistical data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	1	2	1	2	-
CO2	3	2	2	2	-	2	1	1	-	2	2	1
CO3	3	2	1	2	2	1	-	2	1	1	2	1
CO4	3	2	2	1	2	1	-	2	2	1	1	1

CHE 105 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 105 A : Core practical I: Inorganic Chemistry

Semi Micro Qualitative Analysis

Qualitative Analysis of a mixture containing four cations including two less common cations (viz., W, Mo, Se, Te, V, Ce, Th, Zr, Li and U).

CHE 105 B : Core practical I: Physical Chemistry

1. Determination of critical solution temperature, eutectic composition and temperature of binary

system.

2. Calibration of volumetric apparatus and statistical analysis of the data.
3. Determination of critical solution temperature of phenol-water system and study the effect of electrolyte on CST.
4. Determination of Eutectic composition and temperature of binary system
5. Determination of distribution coefficient of benzoic acid between water and benzene.
6. Study the adsorption of acetic acid on charcoal and analysis of the data on the basis of Langmuir and Freundlich adsorption isotherms.
7. Determination of rate constant of acid hydrolysis of an ester and investigate the effect of catalyst concentration, reactant concentration and temperature.

CHE 106A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Identification of single organic component by systematic qualitative analysis
- Preparation of derivatives and purification process
- Single step preparations
- Calibration of spectral analysis to this structures

Identification of single organic component by systematic qualitative analysis.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the systematic procedures of analysis of organic components.
CO2	To know the conformational tests for various functional groups.
CO3	To understand the mechanisms and familiarize with methodologies to prepare biologically important molecules.
CO4	Purification of compounds by different process

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	3	1	2	-	1	-	1	1	-
CO2	3	2	2	3	-	2	-	1	1	-	1	2
CO3	2	2	2	1	2	1	2	1	-	1	-	2
CO4	1	2	2	1	1	1	1	-	1	1	1	2

CHE : 106 A : PRACTICAL – I : ORGANIC CHEMISTRY

Identification of single components by Qualitative Analysis method

1. Aromatic acids
2. Aromatic amines
3. Aromatic phenols
4. Aromatic estors
5. Aromatic hydrocarbons
6. Carbohydrates
7. Aromatic carobohydrates compounds

CHE : 106 B : PRACTICAL – I : GENERAL CHEMISTRY

Single step preparations

1. Preparation of aspirin
2. Preparation of p-nitroacetanilide
3. Preparation of p-bromoacetanilide

CHE 107	Human Values and Professional Ethics-I	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level Human Values and professional ethics

Course Objectives:

- Analyze values in various ethical professions
- Understand moral concepts, character and conduct multiple
- Concept of ethical values with respect to individual and society
- ethical interests at stake in areal-world situation or practice and assess own ethical values with respect to social context and problems

Course Outcomes: At the end of the course, the student will be able to

CO1	To know about the needs and importance of professional ethics.
CO2	To analyze nature of Values, basic Moral Concepts character and Conduct.
CO3	To gain knowledge on individual and society ethical values, ahimsa, satya and brahmacharya.
CO4	To understand values of Bhagavd Gita, various religions, religious tolerence, Gandhian ethics.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	3	2	-	1	2	3	1	1	2
CO2	3	2	2	3	1	1	1	2	3	-	-	2
CO3	3	1	2	3	2	-	1	-	-	1	1	3
CO4	3	1	1	3	-	1	2	2	2	2	-	3

CHE 107: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS – I)

Chapter I: Definition and Nature of Ethics – Is relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics – Goals – Ethical Values in Various Professions.

Chapter II: Nature of Values – Good and Bad, Ends and Means, Actual and Potential Values, Objective and Subjective Values, Analysis of Basic Moral Concepts – Right, Ought, Duty, Obligation, Justice, Responsibility and Freedom, Good Behavior and Respect for Elders, Character and Conduct.

Chapter III: Individual and Society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possesion) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues) - Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation), Crime and

Theories of Punishment – (a) Reformative, Retributive and Deterrent, (b) Views on Manu and Yajnavalkya

Chapter IV: Bhagavd Gita – (a) Niskama Karma, (b) Buddhism – The Four Nobel Truths – Arya astanga marga, (c) Jainism - Mahavratas and Anuvratas. Values Embedded in Various Religions, Religious Tolerence, Gandhian Ethics.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
4. Harold H. Titus: Ethics for Today
5. Maitra, S.K: Hindu Ethics
6. William Lilly: Introduction to Ethics
7. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
8. Sasruta Samhita: Tr. Kaviraj Kunjanlal, Kunjanlal Brishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
9. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
10. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
11. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
12. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE - 201	Inorganic Chemistry II	L-5, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Understand magnetic properties of transition metal complexes and various reactions on ligands with respect to synthesis.
- Gain knowledge on electronic spectra of complex molecules of octahedral and tetrahedral geometry
- Understand magnetic properties viz., diamagnetism and paramagnetism and other related properties of complex molecules
- Familiarize with different catalytic reactions of complex molecules and factors effecting the reactions.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with the general methods of complex preparations and properties, nature of bonding and structural features of metal complexes.
CO2	To know about Russel-Saunders coupling, splitting of energy levels in octahedral field and differentiate between Orgel diagrams and Tanabe-Sugano diagrams.
CO3	To understand about the laws of Hunds, Curie and Weiss, magnetism and magnetic susceptibility determination by Gouy's and Farady methods.
CO4	To gain knowledge on Induced reactions, Free radical reactions, Thermal decomposition reactions, Chain reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	2	1	-	1
CO2	3	2	-	3	1	2	1	-	1	2	1	1
CO3	3	-	2	3	-	2	1	1	-	1		1
CO4	3	1	1	3	-	2	-	1	1	1	1	-

CHE 201: INORGANIC CHEISTRY II

UNIT – I: TRANSITION METAL II – COMPLEXES II 15 Hrs

Transition metal π – complexes with unsaturated organic molecules – alkenes, alkynes, diene, dienyl and Cyclopentadienyl complexes and arene complexes-general methods of preparation, properties, nature of bonding and structural features – Important reactions relating to Nucleophilic and Electrophilic attack on

ligands and to organic synthesis.

UNIT – II: ELECTRONIC SPECTRA OF COMPLEXES 15 Hrs

Russel-Saunders coupling – Spectroscopic term symbols- Derivation of term symbols of p^2 and d^2 configuration, Hole Formulation, Energy ordering of terms (Hund's Rules), Splitting of energy levels and spectroscopic states in Octahedral field, Selection rules – Break – down of selection rules, Orgel diagrams, Definition and utility–Orgel Diagrams for d^1 to d^9 configurations in Octahedral and tetrahedral fields. Interpretation of electronic spectra of high spin octahedral and tetra hedral complexes of Ti(III), V(III), Cr(III), Mn(III), Mn(II), Fe(II), Fe(III), Co(III), Co(II), Ni(II) and Cu(II) complexes, Calculation of Dq and B^1 parameters for Cr(III) and Ni(II) complexes. Tanabe – Sugano diagrams, Differences between Orgel diagrams and Tanabe – Sugano diagrams, Tanabe – Sugano diagrams of d^2 to d^6 and d^8 configurations. Charge transfer spectra- LMCT and MLCT.

UNIT – III: MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES 15 Hrs

Diamagnetism and paramagnetism-orbital and spin contributions, spin-orbit coupling, Hunds third rule and Energies of J levels – Curie law and Curie – Weiss law- Ferromagnetism and antiferromagnetism – Temperature independent magnetism Magnetic susceptibility and its determination by Gouy's and Faraday methods.Calculation of magnetic moment from magnetic susceptibility, spin-only formula, Orbital contribution to magnetic moment (Oh and Td Complexes) –Paramagnetism and crystalline fields – Ti (III), V (III), VO^{2+}, Cr (III), Mn (II), Fe (III), Co(II), Ni (II) and Cu (II). Magnetic Exchange in copper acetate and other dimmers – spin cross over in complexes.

UNIT –IV: CATALYSIS 15 Hrs

Homogeneous catalysis, Metal ion catalyzed reactions – Redox potentials and processes – Mechanism of redox processes involving ligands – Factors affecting redox potentials - other types of metal catalyzed reactions – Reactions involving Ag (I) , Cu (II) and Os (VIII) – Reactions of Oxyanions – Factors affecting rate (General discussion only) – Induced reactions – Free radical reactions – Thermal decomposition of peroxy disulphate – Fe(III) $–S_2O_8$ reactions – chain reactions – H-Br reactions, H_2O_2 $–S_2O_8$reactions.

Books Suggested

1. Inorganic Chemistry principles of Structure and Reactivity 6th Edition. James E. Huheey.
2. Organometallic Chemistry: R.C. Mehrotra and Singh.
3. R. S. Drago: Structural methods in Inorganic Chemistry.
4. H. H. Willard, L. L. Merritt, Jr., J. A. Dean and F. A. Settle, Jr.: Instrumental Methods of Analysis (CBS Publishers).
5. R. L. Carlin: Magnetic Chemistry. R. L. Datta and A. Syamal: Elements of Magnetic Chemistry.

(Mandatory Core)

CHE-202	Organic Chemistry II	L-3, T-1, P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives:

- Able to recognize, classify, explain, and apply fundamental organic reactions such as E2, E1, E1CB.
- Familiar with molecular rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom.
- Provide Hantzsch-Widmann nomenclature for the three and four membered heterocycles. Be able to predict synthetic routes and chemical reactions of these heterocycles.
- Be familiar with occurrence, isolation, structural elucidation and synthesis of natural products-alkaloids

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the mechanisms of E_1, E_2 and E_{1CB} reactions, steroselectivity and synpyrolytic eliminations and use of isotopes, chemical trapping and crossover experiments.
CO2	To learn the rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom and familiarize with the limitations and applications of reactions.
CO3	To learn the synthesis of three and four membered heterocycles, mechanism of ring opening reactions and the effect of electron donating and withdrawing substituents in selectivity of ring opening reactions.
CO4	To understand the structural elucidation and synthesis of alkaloids using specific reagents.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	1	1	1	-
CO2	3	2	2	3	2	2		1	1	-	1	1
CO3	3	2	2	3	2	2	1	1	-	1	-	1
CO4	3	2	2	3	-	2	-	1	-	1	1	1

CHE- 202 : ORGANIC CHEMISTRY II

UNIT-I: Reaction mechanism-I **15 Hrs**

Electrophilic addition to carbon carbon double bond: Stereoselective addition to carbon carbon double

bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO_4 and $KMnO_4$.

Elimination reactions Elimination reactions E_2, E_1, E_{1CB} mechanisms. Orientation and stereoselectivity in E_2 eliminations. Pyrolytic syn elimination and α-elimination, elimination Vs substitution. Facors influencing the elimination reactions

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

UNIT-II: Molecular Rearrangements: **15 Hrs**

Rearrangements to electron deficient Carbon atom:

Pinacol-Pinacolone, Wagner-Meerwein, Dienone-Phenol and Demjonove Rearrngements

Rearrangements to electron deficient Nitrogen atom:

Hofmann, Curtius, Schimidt and Beckmann Rearrangements.

Rearrangements to electron deficient Oxygen atom: Baeyer-Villiger and Dakins Rearrangements

Rearrangements to electron rich Carbon atom: Favorski and Neber Rearrangements

Aromatic and Sigmatropic Rearrangements: Fries and Claisen Rearrangements

UNIT III: Three and four membered heterocycles: 15 Hrs

Systematic nomenclature (Hantzsch-Widmann system) and Replacement nomenclature for monocyclic heterocycles (Three and four membered rings). Synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes, and thietanes.

UNIT-IV: Alkaloids 15 Hrs

Occurrence, isolation, general methods of structure elucidation and physiological action, degradation, classification based on nitrogen heterocyclic ring, structure elucidation and synthesis of the following: Atropine, Papaverine and Quinine.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.

5. Modern Organic Reactions, H.O. House, Benjamin.
6. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
7. Stereochemistry, P.S. Kalsi, Wiley Eastern.
8. Text book of Organic Chemistry, M.C. Murry
9. Text book of Organic Chemistry, Fessendon and Fessendon.
10. Text book of Organic Chemistry, T.W. Solomon,
11. Organic Chemistry, Vol II, I.L. Finar, ELBS Eds.
12. Heterocyclic chemistry T.L Gilchrist, Longman Scientific Technical
13. An Introduction to the Heterocyclic compounds, R M Acheson, John Wiley.

(Mandatory Core)

CHE -203	Physical chemistry II	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Learn Angular momentum and Molecular Orbital Theory and application of Huckel theory to organic molecules.
- Know about concepts in Surface Chemistry, concept of electric double layer model and Micelles.
- Get knowledge on symmetry and group theory their use in spectroscopy, Mulliken character tables.
- Understand Irreversible Electrode phenomenon controlled potential electrolysis and polarography.

Course Outcomes At the end of the course, the student will be able

CO1	To know about Pauli Exclusion principle and Slater determinant, atomic orbitals, Simple molecular orbitals and Huckel theory of conjugated systems.
CO2	To learn Gibbs adsorption isotherm, BET equation and correlate limitations, critical micellar concentration (CMC) and factors affecting the CMC of surfactants.
CO3	To identify Relation between order of a finite group and its sub-group, conjugacy, Symmetry point group (MLS, MHS and MSS) and orthogonality theorem.
CO4	To acquire knowledge on DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, to derive equation for Tafel plots, half-wave potentials for reversible system.

Mapping of course outcomes with the program outcomes

CO4	3	2	-	2	1	1	-	1	1	1	1	-

CHE-AC-203 Physical Chemistry III

UNIT-I: Quantum Chemistry-II **15 Hrs**

(A) Angular momentum: Angular momentum, Rotations and angular momentum, Eigen functions and Eigen values of angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and pauli Exclusion principle. Slater determinant. ;

(B) Molecular Orbital TheoryAtomic Orbitals, Simple Molecular Orbitals, Hybrid Atomic Orbitals, Shapes and energies of Molecular Orbital, Systems of Organic Molecules (Ex: Methane, Ethylene,

Acetylene). Huckel theory of conjugated systems, Π-bond order and charge density calculations, application of Huckel theory to ethylene, butadiene and benzene.

UNIT-II: Surface Chemistry **15 Hrs**

Surface tension, capillary action, pressure difference across curved surface, (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET adsorption isotherm, derivation of BET equation , limitations of BET equation, estimation of surface area from BET equation, Surface films on liquids. Concept of electric double layer model- Helmholtz perrin, Gouy- Chapman and stern models (no derivation)

Micells: Surface active agents, classification of surface active agents micellisation, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellisation, emulsions, reverse micelles.

UNIT-III: SYMMETRY AND GROUP THEORY **15 Hrs**

Definition of a group, rules that are set for a group, sub-group, order of a group, Relation between order of a finite group and its sub-group, conjugacy relation and class of a group, symmetry elements and symmetry operation. Symmetry point group (MLS, MHS and MSS), Schoenflies symbols - Representation of groups by matrices (representation for C_n, C_{nv}, D_{nh} etc. groups to be worked out explicitly), character of a representation, group multiplication tables, reducible - irreducible representations The great orthogonality theorem (without proof) - character tables (H_2O,NH_3) and their use in spectroscopy, Mulliken character tables.

UNIT-IV: ELECTROCHEMISTRY- II **15 Hrs**

Irreversible Electrode phenomenon: Reversibility and irreversibility, Dissolution and deposition potentials, Decomposition voltage, overvoltage, diffusion overvoltage, charge transfer overvoltage, concentration overvoltage-hydrogen and oxygen overvoltages, Tafel plots, Exchange current density and Transfer coefficient, Butler-Volmer equation for one electron transfer processes.

Polarography: Theory, classification , principle , Instrumentation of Polarography, DME, HMDE diffusion current, Ilkovic equation, DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, Millicoulometry, Equation for half-wave potentials, for reversible system when oxidant alone, reductant alone and both are present.

Books Suggested

1. P.W. Atkins: Physical Chemistry (ELBS).
2. Ira N. Levine: Quantum Chemistry (Prentice Hall).
3. R. Mcweeny: Coulson's Valence (ELBS).

4. J.O.M. Bockris and A.K.N. Reddy, Modern Electrochemistry, vol.I & II (Plenum).
5. S. Glasstone; An Introduction to Electrochemistry (3rd ed.)(Affiliated East-West).
6. V. Moroi: Micelles, theoretical and applied aspects (Plenum).
7. Maron and prutton: principles of physical Chemistry.
8. Silbey, Alberty, Bawendi. Physical Chemistry.Jhon-Wiley & Sons. 4th edition-2006.
9. D.N. Bajpai: Advanced physical Chemistry: S. Chand & Company, 1998.

(COMPULSORY FOUNDATION)

CHE-204 A	General Chemistry II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on the principles of different electro analytical methods
- Familiarize with chromatographic techniques.
- To study on biodiversity and conservation of biodiversity
- To know about natural resources and non-renewable resources

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge on ion selective electrodes, solid membrane electrodes and glass electrodes and principles of amperometric titrations.
CO2	To learn general principles and classifications of chromatographic separations and applications of TLC, GLC and HPLC.
CO3	To know about biodiversity, ecosystem diversity and conservation of biodiversity.
CO4	To acquire knowledge on natural resources related to food, water, mineral, energy and land.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2		1	-	1	1	2
CO2	3	-	2	3	-	2	1	-	2	1	1	1
CO3	3	3	2	2	1	2	-	1	-	-	1	2
CO4	3	3	2	2	2	2	1	1	-	1	1	1

CHE 204-A: General Chemistry II

UNIT-I: ELECTRO ANALYTICAL METHODS

Theory of potentiometry, calculation electrode potential at the equivalence. Finding of equivalence volume, derivative and linear titration plots. Ion-sensitive electrodes –types of ion sensitive electrodes – metal based cation and anion sensitive electrodes, solid membrane electrodes, glass electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes, Amperometric titrations - Anodic stripping voltammetry, chronoamperometry, chronopotentiometry, Cyclic Voltammetry, Differential Pulse Polarography, linear sweep voltammetry, square wave voltammetry.

UNIT-II: CHROMATOGRAPHY

General principles and classifications of chromatographic separations

Thin layer chromatography: Classification, principle, experimental technique, sample application, development of plate, retardation factor.

Gas liquid chromatography: Gas liquid chromatography - instrumentation (columns and detectors), retention time and retention volume. Chromatographic behaviour of solutes, column efficiency and resolution, column processes and band broadening, time of analysis and resolution, Van-Deemter equation.

High performance liquid chromatography: Theory and instrumentation-column performance, gradient elution, delivery system, sample introduction, separation columns, detectors and applications of HPLC.

Unit – III : Biodiversity

Conservation introduction definition genetic species and ecosystem diversity, hot spots of biodiversity, threats to biodiversity habitat loss poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India, conservation of biodiversity in – situ an ex-situ conservation of biodiversity.

Unit – IV Natural resources and non-renewable resources

An overview of natural resources and associated problems with references to a) Forest resources b) Water resources c) Mineral resources d) Food resources e) Energy resources f) Land resources.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A.Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery J. Bassett, J. Mendham and R.C. Denny. Vogel"s Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (McGraw Hill).
5. D. Midgley and K. Torrance : potentiometric Water Analysis (John Wiley).
6. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.

CHE 204B	Chemistry in Contemporary Society	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To know about quality control and impurities in Pharmaceuticals.
- To have an idea on body fluids, blood, enzymes and forensic.
- To gain knowledge on composition of milk, oil, fats etc.
- To familiarize with different types of fuels, soils and its ingredients.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in pharmaceutical chemicals
CO2	To familiarize with blood fluids, blood, enzymes and forensic
CO3	To know about fermentation, detection of purity, beverages
CO4	To acquire knowledge on gaseous fuels, soil ingredients and analysis of trace elements

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	2	2	-	1	1
CO2	3	1	2	3	1	2	1	-	2	2	1	-
CO3	3	2	2	3	1	2	2	1	-	2	1	1
CO4	3	2	3	2	1	2	1	2	-	1	1	1

CHE 204B: Chemistry in Contemporary Society

UNIT – I : PHARMACEUTICALS 15 Hrs

Pharmaceuticals : Importance of quality control, drugs and pharmaceuticals, sources of impurities in pharmaceutical chemicals, analytical quality control in finished / final products, common methods of assay.

Common drugs and their uses: Analgesics – aspirin, paracetamol; Antheimentics – mebendazole ; Antiallergies – chlorpenneramine malleate; Antibiotics-pencillin, chloromecytin; Anti-inflammatory agents-oxyphenbutazone; **Antimalarials** – primaquine phosphate; Antituberculosists – INH; Narcotics – nicotine, morphine; Expectorants – Benadryl; Sedatives – diazepam; Vitamins – B**1**, B**2**, B**6**, niacin and folic acid.

UNIT – II : FORENSIC AND BIOMEDICALS **15 Hrs**

Body fluids: Composition and detection of abnormal level of certain constituents leading to diagnosis, sample collection and preservation of physiological fluids, analytical methods for the constituents of physiological fluids (blood, urine).

Blood: Estimation of glucose, cholesterol, urea, haemoglobin and bilirubin.

Urine: Urea, uric acid, creatinine, calcium phosphate, sodium, potassium and chloride.

Enzymes: Biological significance, assay of enzymes (pepsin, tyrasinase), vitamins (thiamine ascorbic acid, vitamin A) and harmones (progesterone, oxytocin, insulin), chemical, instrumental and biological assays to be discussed wherever necessary.

Forensic : General discussion of poisons with special reference to mode of action of cyanide organophosphates and snake venom, poisonous materials such as lead, mercury and arsenic in biological materials.

UNIT – III : FOOD AND BEVERAGES **15 Hrs**

Milk and milk products : Composition, alcohol test, fermentation, dye reduction-methylene blue and resazurin tests, analysis of fat content, minerals in milk and butter, estimation of added water in milk.

Oils and fats: General composition of edible oils, detection of purity, tests for common edible oils and groundnut oil, cottonseed oil and mustard oil, tests for adulterants like argemone oil and mineral oils,

Beverages: Soft drinks, alcoholic drinks, tea, coffee and fruit juice, analysis of caffeine in coffee and tea, detection of chicory in coffee, chloral hydrate in toddy, food preservatives like benzoates, propionates, sorbates, bisulphites, artificial sweetners, like saccharin, dulcin and sodium cyclamate, flavours – vanillin, esters (fruit flavours) and monosodium glutamate, artificial food colourants-coal tar dyes and non-permitted colours and metallic salts, control of food quality – codex alimentarices, Indian standards.

UNIT – IV : FUEL AND SOIL **15 Hrs**

Fuels : Definition, classification and characteristics of fuels, sampling, determination of calorific value. Liquid fuels-determination of flash point, fire point, aniline point. Knocking of petrol and diesel – octane and cetere numbers carbon residue. **Gaseous fuels** : Coal gas, waste gas, producer gas, gober gas and blast furnace gas, calorific value determination by Junker's gas calorimeter, relatice merits of solid, liquid and gaseous fules. **Soil** : Ingradiants of soil-organic matter, nitrogen, sulphur, sodium, potassium and calcium, analysis of trace elements, copper, molybdenum, zinc and boron.

Reference Books :

1. Pharmaceutical Analysis, T. Higuchi and E.B. Hanseen, John Wiley and Sons, New York.

2. Quantitative Analysis of drugs, P.D. Sethi, 3rd edition, CBS Publishers, New Delhi, 1997.
3. Practical Clinical biochemistry methods and interpretations, R. Chawala, J.P. Brothers Medical Publishers (P) Ltd., 1995.
4. Laboratory manual in biochemistry, J. Jayaraman. New Age International Publishers, New Delhi, 1981.

CHE 205 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Separation and determination of the two component mixtures
- Preparation of metal complexes
- Familiarize with conductometric, potentiometric and redox methods of analysis
- colorometric and pHmetric methods of analysis

Course Outcomes: At the end of the course, the student will be able

CO1	To separate and determine the two component mixtures
CO2	To acquire knowledge in the preparation of metal complexes
CO3	To study the determination of cell constant and verification of Onsagar equation, strength of strong acid by Titration of a strong acid with a strong base and vice versa
CO4	To get knowledge on the applications of conductometry, potentiometry, coulometry and pHmetry.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	2	2	3	3	1	1	2	-	1	1	-
CO4	3	2	2	3	2	-	1	-	1	1	-	2

CHE 205 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 205 A : Core practical I: Inorganic Chemistry

I . Quantitative Analysis:

Separation and determination of two component mixtures:

(i) Separation of Al(III) and Determination of Fe (III)

(ii) Separation of Cu(II) and Determination of Zn (II)

(iii) Separation of Ca(II) and Determination of Mg (II)

(iv) Separation of Cu(II) and Determination of Ni (II)

(v) Determination of Ferrocyanide and Ferricyanide

CHE 205 B: Core practical I: Physical Chemistry

1. Conductometry:
   (a) Determination of cell constant
   (b) Verification of Onsagar equation
   (c) Determination of dissociation constant of a weak acid
   (d) Titration of a strong acid with a strong base
   (e) Titration of a weak acid with a strong base
2. Potentiometry:
   (a) Titration of a strong acid with a strong base
   (b) Titration of a weak acid with a strong base
   (c) Redox titration
3. Coulometry: Estimation of Manganese
4. pHmetry: Strong acid, Strong base titrations.

CHE 206A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Familiarize with two component mixture separation and identification.
- Preparation of derivatives.
- Purification by components by different methods.
- Calibration of products by spectral methods.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with binary mixture separation
CO2	To gain hands-on-experience in purification of the components, preparation of derivatives.
CO3	To get knowledge about the chemical behavior of different components and mechanisms
CO4	Purification and calibration of data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	1	-	3	3	1

CO4	3	2	2	3	1	2		1	1	2	1	2

CHE 206 A & B: Core practical I: Organic & General Chemistry

CHE-206 A : PRACTICAL – I : ORGANIC CHEMISTRY

Separation and Identification of two component organic mixture by systematic qualitative analysis.

1.Acid + Neutral 2. Base + Neutral 3. Phenol + Neutral 4. Ether insoluable component + acid / phenol / base.

CHE-206 B : PRACTICAL – I : GENERAL CHEMISTRY

Preparation of Metal Complexes:

(i) Tetra(ammine) copper (II) sulphate.

(ii) Mercury tetra(thiocyanato) cobaltate(II).

(iii) Hexa(ammine) Nickel (II) chloride.

(iv) Tris(acetylacetonato) Manganese (III) chloride.

(v) Tris (ethylenediammine) Nickel (II) thiosulpha

CHE 207	Human Values and professional ethics-II	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Human Values and professional ethics

Course Objectives:

- Gain knowledge on value education, family values and adjustability
- Develop ethics towards medical, health care professionals and ethical issues in genetic engineering
- Understand the importance of social ethics towards organ trade, human traffic king human rights violation and social disparities.
- Know about environmental ethics, ecological crises, pollution and protection of environment

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the concepts of human values, responsibilities of family values and status of women in family and society.
CO2	To acquire knowledge on different medical ethics the views of charaka and sushruta on moral responsibilities of medical practitioners.
CO3	To gain knowledge on social ethics and understand the characteristics of ethical problems in management.
CO4	To familiarize environmental ethics, ethical theory and ecological crisis.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	1	2	2	2	3	1	1	1
CO2	3	1	2	3	1	2	2	3	3	1	1	1
CO3	3	2	1	3	-	2	1	2	2	3	-	1
CO4	3	1	1	3	1	2	1	1	2	3	1	1

CHE 207: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS-II)

Chapter I: Value Education – Definition – Relevance to present day – Concept of human values - Self introspection – Self-esteem. Family values-Components, Structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Chapter II: Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical

obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problem of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Chapter III: Social ethics – Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy. Ethics of media – Impact of Newspapers, Television, Movies and Internet, Business ethics – Ethical standards of business – Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, Ethical abuses and work ethics.

Chapter IV: Environmental ethics – Ethical theory, man and nature - Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and pollution, Justice and environmental health.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. Management Ethics – Integrity at work by Joseph A. Petrick and John F. Quinn, Response Books, New Delhi.
4. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
10. Sasruta Samhita: Tr. KavirajKunjanlal, KunjanlalBrishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Text Book for Intermediate First Year Ethics and Human Values, Board of Intermediate Eduction – Telugu Academy, Hyderabad.
14. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE-IC-301	Inorganic Spectroscopy and Thermal Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Basic Inorganic Spectroscopy and Thermal Methods of Analysis

Course Objectives:

- Gain knowledge on thermal methods of analysis and principles and applications to inorganic materials
- Familiarize with basics of Mossbauer and NQR spectroscopy.
- Learn the properties like g-factor, nuclear spin, hyperfine coupling constants
- Study the ESR instrumentation, various applications and photoelectron spectroscopy.

Course Outcomes : At the end of the course, the student will be able

CO1	To know about TG and DTA and applications of different scanning calorimetry.
CO2	To gain knowledge on Doppler shift and chemical shift, basic principles and applications of NQR spectroscopy.
CO3	To learn zero field splitting and Kramer's degeneracy, relaxation processes, instrumentation and applications of ESR.
CO4	To know about photoelectric effect and Koopmans theorem and impart the applications of X-ray and UV photoelectron spectroscopy.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	2	1	1	2	1
CO2	3	2	2	3	2	2	2	-	2	2	2	2
CO3	3	2	2	3	2	2	1	2	-	2	1	-
CO4	3	2	2	3	2	1	1	-	1	-	2	1

CHE-IC- 301: INORGANIC SPECTROSCOPY AND THERMAL METHODS OF ANALYSIS

UNIT –I: THERMAL METHODS OF ANALYSIS 15 Hrs

Thermo gravimetry –Principle, Factors affecting the results, instrumentation. Application with special reference to $CuSO_45H_2O$, $CaC_2O_4\,2H_2O$. Different thermal analysis – principle, instrumentation, difference between TG and DTA, applications with special reference to the clays and minerals.Different scanning calorimetry –principle, and applications to inorganic materials like chlorates and perchlorates, ammonium nitrate.

UNIT –II: MOSSBAUER SPECTROSCOPY and NQR **15 Hrs**

Mossbauer spectroscopy: Basic principles, Recoil energy, Doppler shift, Chemical shift, Quadrapole effects, Magnetic effects. Instrumentation, spectral parameters and spectrum display.

Aapplication of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds, (2) Sn^{2+} and Sn^{4+} compounds.

NQR spectroscopy: Basic principles of NQR spectroscopy, quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant and applications.

UNIT –III: ELECTRON SPIN RESONANCE SPECTROSCOPY **15 Hrs**

Basic Principles, Hyper fine splitting, Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, Hamiltonian and spin densities. Zero field splitting and Kramer's degeneracy, Relaxation process and line widths. Instrumentation and Applications.The EPR spectrum of bis(salicylidimine)-copper(II) complex, study of inorganic free radicals, biological applications of Electron Spin Resonance (Study of free radicals and Iron-sulfur proteins)

UNIT –IV: PHOTO ELECTRON SPECTROSCOPY **15 Hrs**

Photoelectric effect, Koopmans's theorem, ionization energy.

X-ray photoelectron spectroscopy (ESCA): Principle, Binding energies, Chemical shift, Applications of XPES to Qualitative analysis , to surface studies and structural analysis. Ultraviolet photoelectron spectroscopy- Principle, application of UPES in studying the molecular orbitals of O_2 and N_2 molecules. Block diagram of photoelectron spectrophotometer. Sources of radiation, detectors. Auger spectra – Principle, Applications of Auger spectra to surface studies and use of Auger spectra as a finger print tool.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. J.E. Huheey, E.A. Keiter and R.L. Keiter: Inorganic Chemsitry, Principles of Structure and Reactivity (4th Ed.) (Addison-Wesley)
3. Gary Wulfsberg: Inorganic Chemistry (5th Ed. (Viva Books)
4. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
5. W.L. Jolly: Modern Inorganic Chemsitry (McGraw-Hill)
6. R.L. Carlin: Magneto-chemsitry (Springer-Verlag)
7. R.L. Dutta and A. Syamal: Elements of Magnetochemsitry (Affiliate East-West).
8. K. Hussain Reddy – Text book of Bioinorganic chemistry

(Mandatory Core)

CHE-IC 302	Organic Spectroscopy and Applications	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands
- Study on the applications of NMR spectroscopy in ascertaining the stereochemical structures of the molecules.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	To get experience to calculate λ max values for dienes, enones, polyenes, aromatic and heteroaromatic compounds.
CO2	To familiarize with the absorption bands of the molecules with specific functional groups
CO3	To interpret the data to different types of protons and carbons present in a molecule so as to ascertain the structure of the molecule based on the data provided
CO4	To acquire knowledge about specific fragmentation rules of different molecules which are unique.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	-	1	-	2	2	1
CO2	3	2	2	3	2	2	2	1	1	2	2	-
CO3	3	2	2	3	2	2	-	2	-	2	2	2
CO4	3	2	2	3	2	2	1	1	-	2	2	-

CHE-IC 302: CORE THEORY: ORGANIC SPECTROSCOPY AND APPLICATIONS

UNIT-I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY: 15Hrs

Various electronic transitions (185-800 nm), effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fisher-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.

UNIT – II: INFRARED SPECTROSCOPY 15Hrs

Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance, FT-IR

UNIT –III: NMR SPECTROSCOPY: 15Hrs

^{1}H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and nonequivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants.

Applications of ^{1}H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations and carbanions), E, Z isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Stereochemistry, hindered rotation, Karplus curve variation of coupling constant with dihedral angle. Simplification of complex spectra, nuclear magnetic double resonance, contact shift reagents, nuclear Overhauser effect (NOE).

^{13}C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimensional NMR spectroscopy-COSY.

UNIT-IV: MASS SPECTROMETRY 15Hrs

Introduction, ion production, type of ionization, EI, CI, FD, and FAB-factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular-ion peak, metastable peak, Mc. Lafferty rearrangement. Nitrogen rule, isotope labeling. High resolution mass spectrometry, Examples of mass spectral fragmentation of organic

compounds with respect to their structure determination.

Books suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS
2. Spectroscopy of organic compounds, RM Silversteen and others, 5th Ed,John Wiley
3. Spectroscopy of organic compounds, P.S. Kalsi, Wiley, 1993.
4. NMR in chemistry-A multi nuclear introduction, William Kemp, Mc Millan, 1986.
5. Spectroscopic methods in Organic chemistry, DH Williams & I Flemmi

(Mandatory Core)

CHE-IC-303A	Organic Chemistry III	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives: Course Objectives:

- Familiarize with the applications of different reagents in organic synthesis, Mechanisms and stereochemistry.
- Study the methods of preparation and applications of organometallic reagents.
- Understand topocity, prochirality, auxillary and reagent-controlled methods in asymmetric synthesis.
- Applications of different oxidizing and reducing agents in organic synthesis with region and stereo controlled products.

Course Outcomes: At the end of the course, the student will be able to

CO1	To familiarize with the specific functions of the reagents particularly diazomethane, N-bromosuccinimide, Ziegler Natta catalyst, 1,3-dithianes and Merrifield resin in the synthesis of a variety of complex molecules.
CO2	To gain knowledge in the synthesis of different organometallic reagents and also stereo and regio specificity and selectivity of reactions with organometallic reagents
CO3	To understand diastereoselectivity, stereoselectivity and substrate controlled auxillary controlled reactions
CO4	To acquire knowledge about the reagents which causes oxidation in various compounds and also the reagents that causes selective and complete reductions to synthesize various compounds.

Mapping of course outcomes with the program outcomes

CO4	3	2	2	3	2	2	-	2	1	2	2	-

CHE-IC-303A Core-Theory Organic Chemistry III

UNIT I: REAGENTS IN ORGANIC SYNTHESIS 15 Hrs

Use of the following reagents in organic synthesis: Anhydrous $AlCl_3$, Boran trifluoride,

N-Bromosuccinimide, Diazomethane, Dicyclohexylcarbodiimide, Lead tetraacetate, Zieglar-Natta catalysts, DDQ, Dithianes, Merrifield resin.

UNIT-II: ORGANOMETALLIC REAGENTS **15 Hrs**

Synthesis and applications of Grignard reagents, Organolithium, Zinc, Copper, Mercury, Palladium and Rhodium compounds in Organic Synthesis, Homogeneous catalytic hydrogenation and hydroformylation reactions

UNIT III: ASYMMETRIC SYNTHESIS **15 Hrs**

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT IV: METHODS OF ORGANIC SYNTHESIS **15 Hrs**

i). ***Oxidations:*** **(a)** Alcohols to carbonyls-Chromium (iv) oxidants-Dimethylsulfoxide oxidation, periodate xidation, Oppenauer oxidation, oxidation with manganese dioxide, oxidation with silver carbonate **(b)** Alkenes to epoxides-peroxide induced epoxidations. **(c)** Alkenes to diols-oxidation with potassium permanaganate, osmium tetraoxide, Prevost reaction **(d)** Ketones to esters-Bayer-Villiger oxidation **(e)** Oxidative bond cleavage-cleavage of alkenes by transition metals. **(f)** Oxidation of alkyl or alkenyl fragments-selenium dioxide and chromium trioxide oxidations.

ii). ***Reductions*** **:** Reduction with lithium aluminium hydride, sodium borohydride, alkoxides, bis-methoxy ethoxy aluminium hydride, Boran aluminium hydride and derivatives-catalytic,hydrogenation-dissolving metal reductions, Non-Metallic reducing agents including enzymatic and microbial reductions.

Suggested Books

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry, C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Name reactions and reagents in organic synthesis, B.P. Muway and M.G Ellord, John Wiley.
6. Principles of Organic Synthesis, R.O.C Norman and J.M Coxon, Blackie Academic & Professional.
7. Reaction Mechanism in Organic Chemistry, P.S. Kalsi, New Age International.

8. Principles of organometallic chemistry, P. Powell, ELBS.
9. Organo transition metal chemistry-Applications to organic synthesis, S.G. Davis, Pergmon.
10. Stereochemistry to Organic Compounds, D. Nasipuri, New Age International.
11. Stereochemistry, P.S. Kalsi, Wiley Eastern.

CHE-IC-303B	Physical Chemistry III	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Physical Chemistry

Course Objectives:

- Learn applications of Group Theory, symmetry criteria and symmetry restrictions.
- Applications of X-ray Diffraction and Electron Diffraction on solid state chemistry.
- Familiarize with the applications of Microwave spectroscopy, infrared spectroscopy and Raman spectroscopy.
- Get knowledge on concept of Thermodynamics of polymer dissolution and Flory-Huggins theory of polymer solutions.

Course Outcomes: At the end of the course, the student will be able to

CO1	To know the determination of Character Co-ordinate of C_2V point group based on 3N Coordinates and to learn the Mutual exclusion Principle.
CO2	To learn the Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals.
CO3	To study the rigid rotator model, stark effect, vibration-rotation spectroscopy, PQR branches, selection rules and Vibrational- rotational Raman spectroscopy.
CO4	To study the concepts on heat of dissolution, regular solution theory, Hildebrand solubility parameter, concept of Flory-Huggins theory of polymer solutions

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2	3	2	2	3	2	2	-	2	-	2	1	-
CO3	3	2	2	3	2	2	2		1	--	1	2
CO4	3	2	2	3	-	2	1	1	-	2	-	2

CHE-AC-303B CORE-THEORY PHYSICAL CHEMISTRY III

UNIT-I Applications of Group Theory 15 Hrs

Construction of reducible and irreducible representations, Determination of Character Co-ordinate of C_2V point group based on 3N Coordinates. Standard reduction formula, Determination of normal modes of vibrations of SO_2, NH_3, $POCl_3$, $PtCl_4^{2-}$, H_2O_2 molecules. Mutual exclusion Principle, Direct Product, Accidental Degeneracy and Fermi resonance Group Theory and Spectroscopy: IR Spectral activity of NH_3 molecule, selection rules, symmetry Criteria for optical activity, symmetry restrictions on dipole moments, symmetry and stereo isomerism. Prediction of IR and Raman Spectral activity of H_2O and CO_2.

UNIT-II: X-ray Diffraction: 15 Hrs

(A) Solid State Chemistry Dislocation of Solids, Schottky and Frenkeldefects, insulaters, a,d semiconductors, Band theory of solids,solid state reactions.

(B) Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals. Index reflections, identification of unit cells from systematic absences in diffraction pattern- structure of simple lattices and X-ray intensities- structure factor and its relation to intensity and electron density- Description of procedure for X-ray structure analysis (NaCl and KCl)

(C) Electron Diffraction: Scattering intensity Vs scattering angle, Wierlequation, and its importance. Measurement techniques, Elucidation of structures of simple gas phase molecules, Low energy electron diffraction (LEED) for the study of surfaces.

UNIT-III: SPECTROSCOPHY 15 Hrs

Microwave spectroscopy: classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, intensities- stark effect.

Infrared spectroscopy: Linear harmonic oscillator, zero point energy, anharmonity, Mores potential energy diagram, fundamental and overtone transitions, hot bands and combinations bands. Vibration-rotation spectroscopy, PQR branches, selection rules, factors affecting the band positions and intensities for IR region. **Raman spectroscopy:** Classical and quantum theories of Raman effect, pure rotational, pure vibrational Raman spectroscopy, selection rules, mutual exclusion principle, resonance Raman spectroscopy and coherent antistokes Raman spectroscopy. Vibrational- rotational Raman spectroscopy.

UNIT-IV: POLYMER SOLUTIONS 15 Hrs

Thermodynamics of polymer dissolution, effect of molecular weight on solubility, solubility of crystalline and amorphous polymer, heat of dissolution, regular solution theory, Hildebrand solubility parameter, Flory-Huggins theory of polymer solutions, conformational entropy, osmotic pressure and viscosity of polymer solutions. Molecular weight determination by light scattering, ultra-centrifugation and sedimentation equilibrium method. Liquid Crystals- synthesis and applications

Books Suggested

1. F.A. Cotton : Introduction to Group theory for chemists.
2. Geroge Davidson Elsevier : Introductory Group Theory for Chemists.
3. Gurdeep Raj , Ajay Bhagi&Vinod Jain : Group Theory and Symmetry in Chemistry
4. Instrumental methods of analysis – M.H. Willard, Meritt Jr. and J.A. Dean
5. Principles of instrumental analysis – Skoog and West
6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.

7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar.: polymer Science. New Age international Publishers.

CHE IC 304	Core practical I: Inorganic Chemistry - Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Inorganic Chemistry - Practical.

Course Objectives:

- Gain knowledge on synthesis of inorganic complexes – sulphates and chlorides
- Experience with the characterization techniques
- Preparation of cobaltates and ferrates
- Able to characterize the complexes

Course Outcomes: At the end of the course, the student will be able

CO1	To know the synthesis of inorganic complexes Tris thiourea Zinc (II) Sulphate, Tris thiourea Copper(I) Sulphate,Hexamine nickel (II) Chloride, Chloropentamanine cobalt (III) Chloride
CO2	To gain knowledge on characterization techniques
CO3	To get experience on the preparation of Mercury tetrakristhiocyanato cobaltate (II) Sodium trioxalato ferrate (III)
CO4	To familiarize with the characterization of complexes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	2	3		1	-	2	1	1	-	2

CHE : IC -304: PRACTICALS (Core & Gen.)

Preparation of Inorganic complexes and characterization:

a) Tris thiourea Zinc (II) Sulphate

b) Tris thiourea Copper(I) Sulphate

c) Hexamine nickel (II) Chloride

d) Chloropentamanine cobalt (III) Chloride

e) Cis potassium diaquodioxalato chromate (III)

f) Tris (acetylacetonato) manganese (III)

g) Mercury tetrakristhiocyanato cobaltate (II)

h) Sodium trioxalato ferrate (III)

i) Tetrammine Copper (II) Sulphate

j) Potassium hexathiocyanato chromate (III) tetrahydrate

CHE IC 305A	Chemotherapy and Drug Analysis	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Chemotherapy and Drug Analysis

Course Objectives:

- Gain knowledge on chemotherapy and analysis of drugs.
- Analysis of drugs chemically and biologically.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the classification and synthesis of drugs.
CO2	To familiarize with the qualitative and quantitative analysis of drugs.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	3	-	2	3	2	1	1	1	1
CO2	3	2	2	3	2	2	3	2	-	1	-	2
CO3												
CO4												

CHE IC 305A: (SKILL ORIENTED COURSE : THEORY) : CHEMOTHEROPY AND DRUG ANALYSIS

UNIT-I: Chemotherapy

Definition, History, and Evolution of Chemotherapy; Discovery, Classification, Nomenclature, Mode of action and synthesis of the following classes of compounds with special references to specific drugs mentioned under each class

a) Sulfa drugs- Sulfanilamide and Sulfamethoxazole.

b) Antibacterials

c) Lactum group of antibiotics – Penicillin, Ampicillin and Amoxycillin.

d) Cephalosporin-C and Ciprofloxacin.

e) Anticancer drugs – 5-Flurouracil, Methotrexate.

f) Antifungals – Griseofulvin

g) Antimalarials – Chloroquin

UNIT-II: Chemical and Biochemical analysis of Drugs

Qualitative and Quantitative Analysis of drugs: Uses of IR, UV, GLC and HPLC methods.

Drug Assay by Biochemical Analysis – ELISA (Cortisol, alcohol, opiates).

Radio Immuno Assay (RIA) – Enalapril, Insulin; Kidney, Lungs and Liver function tests; Use of isotopes in the Bioanalysis of drugs and in drug design programmes.

Book Suggested

1. Medicinal Chemistry and Pharmaceutical Chemistry – Harikishan Singh and Kapur
2. Medicinal Chemistry and Biochemistry – R.L.Nath
3. Introduction to Medicinal Chemistry – Patrick
4. The Organic Chemistry of Drug Synthesis Vols. 1-6 - Ledneicer Top drugs top synthetic routes – John Saunders
5. Medicinal Chemistry – Ashutoshkar
6. Synthetic Organic Chemistry and Drugs – Gurideep R Chetwal
7. Biochemistry – Harper, Conn & Stumpf, Lehninger
8. Biochemistry – Western Jodd
9. Biochemistry – Cann & Stumpf
10. Bergers Medicinal Chemistry Vols. 1-5 – Manfred E. Wolf
11. Introduction to drug design – Siverman
12. Biochemical approach to Medicinal Chemistry – Thomas Nogrady
13. Prinicples of Medicinal chemistry – William Foye
14. Text book of organic medicinal and pharmaceutical chemistry – Delgrado and William A
15. Industrial Microbiology – Casida

CHE IC 305B	Instrumental Methods of Analysis	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Instrumental Methods of Analysis Practical

Course Objectives:

- Gain knowledge on instrumental methods of analysis
- Estimation of metal ions by complex metric and colorimetric method.

Course Outcomes: At the end of the course, the student will be able

CO1	To Understand the complexity, theory and working principle of colourimetry.
CO2	To gain knowledge on analysis of organic components.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3												
CO4												

CHE : IC 305 (B) : PRACTICALS (SKILL ORIENTED COURSE) : Instrumental methods of analysis

1. Colorimetric Determinations:

a. Determination of manganese
b. Determination of nickel
c. Determination of iron by 1,10 Pheren-thiroline
d. Determination of chromium
e. Determination of Phosphate
f. Determination of Pesticides
g. Determination of Nitrite.

CHE IC 306 A	Spectral Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral Techniques

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands.
- Study on the applications of flame atomic absorption spectroscopy.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy.

Course Outcomes: At the end of the course, the student will able

CO1	To know the basic principles of spectroscopy.
CO2	To familiarize with the analysis of various functional groups by using different spectroscopic techniques.
CO3	To Understand the applications of AAS.
CO4	To gain knowledge about Mass spectral fragmentation of organic compounds and common functional groups.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	3	-	2	3	2	-	-	1	-
CO2	3	1	2	2	2	2	2	2	1	1	-	2
CO3	3	2	1	2	2	1	2	-	2	-	1	1
CO4	3	1	2	3	1	2	-	-	1	1	-	2

CHE : IC : 306(A): (OPEN ELECTIVE) SPECTRAL TECHNIQUES

UNIT – I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY 15 Hrs

Various electronic transitions (185-800nm.), Beer-Lambert Law, effect of solvent on electronic transitions , ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, Fieser-Woodward rules for conjugated dienes and carbonyl compounds

UNIT – II : INFRARED SPECTROSCOPY 15 Hrs

Instrumentation and sample handling, characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines, ketones, aldehydes, esters, amides, acids and anhydrides. Effect of hydrogen bonding.

UNIT – III:ATOMIC ABSORPTION SPECTROSCOPY: FLAME AAS: 15 Hrs

Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT –IV: MASS SPECTROMETRY 15 Hrs

Principle, instrumentation, different methods of ionization, EI, CI, FD and FAB, Mass spectra-molecular ion, base peak, meta-stable peak, nitrogen rule and Mc Lafferty rearrangement. Mass spectral fragmentation of organic compounds and common functional groups. Normal and branched alkanes, alkenes, cycloalkanes, benzene and its derivatives, alcohols and phenols, ethers, aldehydes and ketones, carboxylic acids and their derivatives , amines and nitro compounds. Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books Suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS .2.
2. Spectroscopy of organic compounds, RM Silversteen and others 5th Ed, John Wiley 1991
3. Spectroscopy of organic compounds, PS Kalsi, Wiley, 1993
4. NMR in chemistry – A Multi nuclear introduction, William Kemp, Mc Millan 1986
5. Spectroscopic methods in Organic Chemistry, DH Williams & I Flemmi TMH . 2005

CHE IC 306 B	Chromatographic Techniques	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chromatographic Techniques

Course Objectives:

- Familiarize with Classification of Chromatographic methods.
- Understand Demonstration experiment in TLC.
- Study on the applications of High-Performance Liquid Chromatography (HPLC).
- Understand the working principle of gas chromatography.

Course Outcomes: At the end of the course, the student will able to

CO1	To know the stationary and mobile phases in chromatographic techniques.
CO2	To familiarize applications of different chromatographic methods.
CO3	To Understand the principle of chromatographic techniques.
CO4	To gain knowledge on the normal phase and reverse phase.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	2	-	2	2	2	1	-	1	-
CO2	2	2	2	1	2	2	3	2	-	1	-	2
CO3	3	2	2	2	2	-	2	1	1		1	-
CO4	1	2	2	3	-	2		1	-	1	-	2

CHE IC 306 : Chromatographic Techniques

Unit –I: Introduction - Classification of Chromatographic methods – Column chromatography-Adsorption phenomenon: Nature of adsorbents-Solvent systems-Differential migration-Separation of mixture of o-/p-nitro anilines (A demonstration experiment).

Unit –II: Thin-Layer Chromatography (TLC)-Coating materials and preparation of TLC plates-Solvents for development-Detection of compounds in TLC- R_f values in TLC-Applications of TLC in chemistry-Preparative TLC – Demonstration experiment in TLC.

Unit –III: High-Performance Liquid Chromatography (HPLC) - Application of HPLC- HPLC instrument-Stationary phases in HPLC-Normal and reversed phase HPLC: A comparison- Normal phase HPLC: Principle-Retention times in Normal and reversed phase HPLC- Reversed phase HPLC: Principle.

Unit –IV: Gas-Liquid Chromatography- Instruments for Gas-Liquid Chromatography- Gas-Chromatographic Columns and the Stationary Phase- Application of Gas-Liquid Chromatography- Gas-Solid Chromatography.

Reference Books:

1. Analytical chemistry: G L David Krupadanam, D. Vijaya prsad, K. Varaprasad Rao, KLN Reddy, C. Sudhakar.
2. . Analytical chemistry: Skoog West Holler.
3. Modern Analytical Chemistry : David Harvey DePauw University.
4. J.G. Dick. Analytical Chemistry, Mc Grraw Hill, New Delhi, (1973).

(Mandatory Core)

CHE-IC- 401	Co-ordination Compounds, Organometallic Chemistry & Chemistry of Non-transition Elements	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Co-ordination Compounds, Organometallic Chemistry & chemistry of non-transition elements

Course Objectives:

- Study the organometallic chemistry of different complexes and coordinated ligands.
- Understand the mechanistic aspects of several well-known industrial catalytic processes like olefin hydrogenation, olefin oxygenation, Olefin hydroformylation and Fischer –Tropsch synthesis with an aim to gain a good knowledge on synthetic applications of Organo–Lithium, Magnesium and Aluminium compounds.
- Acquire knowledge of metal cluster compounds, various types of reactions of metal cluster compounds, isoelectronic and isolobal relationship and electron counting scheme for HNCC'S.
- Study on synthesis, properties and structures of nontransition elements

Course Outcomes : At the end of the course, the student will be able

CO1	To Gain an extensive knowledge about dinitrogen complexes of Ru(II), Os(II),Co(I), Mo(0)and dioxygen complexes of Ir(I) and Rh(I) and on cycloheptatriene and tropylium complexes of oxidative, reductive elimination reactions
CO2	To understand mechanism, stereochemical aspects and regeneration of catalyst in olefin hydrogenation (Wilkinson's catalyst), olefin oxygenation (Wacker process or Smidt reaction), Olefin hydroformylation and Fischer –Tropsch process.
CO3	To study the examples of metal complexes having metal-metal single or multiple bonds and analyse the spectroscopic evidences for the presence of metal-metal bond.
CO4	To understand the synthesis and structures of boranes, carboranes, borazines, silicates carbides, peroxo compounds and inter halogens, pseudo halides.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	-	-	-	2	-	1
CO2	3	2	2	2	-	2	-	-	-	-	1	1
CO3	3	3	3	3	2	2	-	-	-	1	-	1
CO4	3	3	3	3	-		-	-	-	1	1	1

CHE IC 401: CORE THEORY: Co-ordination Compounds, Organometallic Chemistry and Chemistry of Non-transition Elements

UNIT –I: ORGANOMETALLIC CHEMISTRY OF TRANSITION ELEMENTS:

1.Dinitrogen complexes of Ru(II) , Os (II),Co(I) and Mo(0)

2. Dioxygen complexes of Ir (I) and Rh (I)

3. Cycloheptatriene and Tropylium complexes –Oxidative addition and Reductive Elimination.

Insertion and Elimination reaction –Nucleophilic and Electrophilic attack of coordinated ligands.

UNIT –II: APPLICATIONS OF ORGANOMETALLIC COMPOUNDS 15 Hrs

Catalytic applications –Fischer –Tropsch synthesis, Olefin hydrogenation (Wilkinson catalyst).Olefin oxygenation (Wacker process or Smidt reaction) Olefin hydroformylation (Ziegler-NattaCatalysis).

Synthetic applications of Organo–Lithium, –Magnesium and Aluminium compounds.Biological applications of organometallic compounds in medicine, agriculture and horticulture.

UNIT –III: METAL-TO METAL BONDS AND METAL ATOM CLUSTERS 15 Hrs

Introduction, metal carbonyl clusters –low –nuclearity (M and M) clusters, isoelectronic and isolobal relationships, High nuclearity, carbonyl clusters (HNCC'S), Hetero stomes in metal atom clusters, electron counting scheme for HNCC'S, HNCC'S of the Fe, Ru and Os group HNCC'S of the Cu, Rh and Ir group, HNCC'S of the Ni, Pd, and Pt group. Compounds with M-M multiple bonds, Major structural types, quadruple bonds, relation of clusters to multiple bonds and one dimensional solids.

UNIT –IV: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non-transition elements, special features of individual elements: Synthesis, properties and structure of their Halides and oxides, polymorphism of carbon, Phosphorus and Sulphur. Synthesis, properties and structure of boranes, carboranes. borazines, silicates, carbides, Sulphur-nitrogen compounds, peroxo compounds of boron, carbon and sulphur, oxyacids of nitrogen, phosphorus, sulphur and halogens, inter halogens pseudo halides.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, IV Edition 1993. Harper Collins College Publishers, New York.
3. J.D. Lee, Concise Inorganic chemistry, V Edition 1996, ELBS, Chapman and Hall, London.

4. Concise Inorganic chemistry by J.D. Lee V Edition ELBS, Chapman and Hall, London.
5. Organometallic Chemistry by R.C. Mehrotra and Singh.

(Mandatory Core)

CHE-IC 402	Instrumental Methods of Analysis	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Gain sound knowledge in spectroscopic methods of ICP-AES, ICP-MS, x-ray fluorescence, spectroscopic techniques and their applications
- Chromatographic techniques like High-Performance Liquid Chromatography, Capillary Electrophoresis and Supercritical Fluid Chromatography (SFC).
- Familiarise with instrumentation, resolution and ionization sources of GCMS and LCMS.

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the working principles, instrumentation and applications of ICP-AES and ICP-MS, energy dispersive X-ray fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF).
CO2	To understand the basic principles, procedure and components of the High-Performance Liquid Chromatography (HPLC), Gel Permeation Chromatography (GPC): Capillary Electrophoresis (CE), Supercritical Fluid Chromatography (SFC).
CO3	To get knowledge on instrumentation and applications of GCMS in drug analysis and environmental samples analysis.
CO4	To improve the knowledge about coulometric techniques and their analysis of cations (As (III), Fe (II)) and anions (I- and S2-)by using I2 liberations and Ce4+ liberation in solutions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	3	3	3	3	2	-	2	-	1	1	3
CO4	3	3	2	2	-	2	-	-	-	1	1	3

CHE-IC 402: CORE THEORY: INSTRUMENTAL METHODS OF ANALYSIS

UNIT –I SPECTROSCOPIC METHODS 15 Hrs

Emission Spectroscopy:

(i) ICP-AES: Principles, instrumentation, AES detectors, applications in the analysis of trace and toxic metals in water, geological and industrial samples.

(ii) ICP-MS: Principles, instrumentation, quadrupole mass spectrometers, applications

Fluorescence Spectroscopy:

i) Molecular Fluorescence Spectroscopy: Principle, Theory of fluorescence, phosphorescence, relation between intensity of fluorescence and concentration, Correlation of fluorescence with molecular structure, Fluorescence quenching, Instrumentation and applications.

ii) X-ray Fluorescence Spectroscopy: Principle, energy dispersive X-ray fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF), applications.

UNIT – II: CHROMATOGRAPHIC METHODS 15 Hrs

High Performance Liquid Chromatography (HPLC): Principles, Stationary phases, Instrumentation, Solvent delivery system, sample introduction, gradient elution, columns and detectors.Partition Chromatography, adsorption chromatography, Gel permeation chromatography.

Capillary Electrophoresis: Principle, Electroosmotic flow, Instrumentation, Applications to separation of small ions, separation of Molecular Species, DNA sequencing

Supercritical-fluid chromatography: Supercritical-fluids, Instrumentation and Applications

UNIT –III: HYPHENATED TECHNIQUES 15 Hrs

Mass Spectroscopy: Principle, basic instrumentation, resolution, Ionization sources- Electron impact and Chemical ionization, Mass Analyzers- Quadrupole Mass analyzer and Time- of- Flight Analyzer.

Gas Chromatography- Mass spectrometry: Introduction, GC – MS interface, processing of GC – MS data – ion chromatogram. Quantitative measurement – sample preparation, Selected ion monitoring – Application of GC-MS for Trace constituents. Drugs analysis, Environmental analysis and others.

Liquid chromatography- Mass spectrometry – Introduction – Instrumentation – liquid chromatography – Mass spectrometer Interface – Instrumental details – Processing LC-MS data – ion chromatograms, Sample preparation – selected ion monitoring. Application of LC-MS for Drug analysis, Environmental samples and others.

UNIT- IV: ELECTRO ANALYTICAL METHODS 15 Hrs

Anodic stripping voltammetry: principle, instrumentation, Hanging mercury drop electrode, application in the analysis of Pb and Cd in environmental samples, principle of cathode stripping voltammetry.

Coulometric analysis: principles of coulometric analysis with constant current, coulometric analysis with controlled potential, applications of coulometric methods for the analysis of cations-As (III), Fe (II) and I- and S_2- by using I_2 liberations and Ce^{4+} liberation in solutions

Ion Selective Electrodes: types of ion selective electrodes, basic properties, potentials and construction, calibration of ion selective electrodes, ion selective electrodes with fixed membrane sites, silver, lead,

cadmium, sulfide, fluoride, cyanide and glass electrodes, applications in the analysis of air and water pollutants, principles of liquid membrane, gas sensing and enzyme based electrode

Books Suggested

1. Analytical Chemistry, Gary D. Christian, John Laliley and Senes, New York, 6th Ed., 2007.
2. Analytical Chemistry Principles and Techniques, I.G. Harge, Prentice Hall.
3. Principles of Instrumental analysis, D.A. Skoog and J.L. Loacy, W.B. Saunders.
4. Handbook of Instrumental Techniques for Analytical Chemistry, F. Serlie, Prentice Hall.
5. Vogels Text book of Quantitative Chemical Analysis, Basett, Denny Jebbary, 5th Ed. ELBs 1990.
6. Instrumental Methods of Chemical Analysis, Willard Merrit, Dean, Stella Jr 6th Edition.
7. Separation methods, M.N Sastri, Himalaya Publishing Company, Mumbai.

(Mandatory Core)

CHE-IC-403A	Instrumental Methods of Analysis	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Instrumental methods of analysis

Course Objectives:

- Gain sound knowledge in spectroscopic methods of ICP-AES, ICP-MS, x-ray fluorescence, spectroscopic techniques and their applications
- Chromatographic techniques like High-Performance Liquid Chromatography, Capillary Electrophoresis, and Supercritical Fluid Chromatography (SFC).
- Familiarise with instrumentation , resolution and ionization sources of GCMS and LCMS
- Basic principles of electro analytical techniques and their applications.

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the working principles, instrumentation and applications of ICP-AES and ICP-MS, energy dispersive X-fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF).
CO2	To understand the basic principles, procedure and components of the High-Performance Liquid Chromatography (HPLC), Gel Permeation Chromatography (GPC): Capillary Electrophoresis (CE), Supercritical Fluid Chromatography (SFC).
CO3	To get knowledge on instrumentation and applications of GCMS in drug analysis and environmental samples analysis.
CO4	To improve the knowledge about coulometric techniques and their analysis of cations (As (III), Fe (II)) and anions (I^- and S^{2-})by using I^2 liberations and Ce^{4+} liberation in solutions.

CHE-IC 403A: CORE THEORY: INSTRUMENTAL METHODS OF ANALYSIS

UNIT –I SPECTROSCOPIC METHODS 15 Hrs

Emission Spectroscopy:

(i) ICP-AES: Principles, instrumentation, AES detectors, applications in the analysis of trace and toxic metals in water, geological and industrial samples.

(ii) ICP-MS: Principles, instrumentation, quadrupole mass spectrometers, applications

Fluorescence Spectroscopy:

i) Molecular Fluorescence Spectroscopy: Principle, Theory of fluorescence, phosphorescence, relation between intensity of fluorescence and concentration, Correlation of fluorescence with molecular structure, Fluorescence quenching, Instrumentation and applications.

ii) X-ray Fluorescence Spectroscopy: Principle, energy dispersive X-ray fluorescence (EDXRF), Wavelength dispersive X-ray fluorescence (WDXRF), applications.

UNIT – II: CHROMATOGRAPHIC METHODS 15 Hrs

High Performance Liquid Chromatography (HPLC): Principles, Stationary phases, Instrumentation, Solvent delivery system, sample introduction, gradient elution, columns and detectors.Partition Chromatography, adsorption chromatography, Gel permeation chromatography.

Capillary Electrophoresis: Principle, Electroosmotic flow, Instrumentation, Applications to separation of small ions, separation of Molecular Species, DNA sequencing

Supercritical-fluid chromatography: Supercritical-fluids, Instrumentation and Applications

UNIT –III: HYPHENATED TECHNIQUES 15 Hrs

Mass Spectroscopy: Principle, basic instrumentation, resolution, Ionization sources- Electron impact and Chemical ionization, Mass Analyzers- Quadrupole Mass analyzer and Time- of- Flight Analyzer.

Gas Chromatography- Mass spectrometry: Introduction, GC – MS interface, processing of GC – MS data – ion chromatogram. Quantitative measurement – sample preparation, Selected ion monitoring – Application of GC-MS for Trace constituents. Drugs analysis, Environmental analysis and others.

Liquid chromatography- Mass spectrometry – Introduction – Instrumentation – liquid chromatography – Mass spectrometer Interface – Instrumental details – Processing LC-MS data – ion chromatograms, Sample preparation – selected ion monitoring. Application of LC-MS for Drug analysis, Environmental samples and others.

UNIT- IV: ELECTRO ANALYTICAL METHODS 15 Hrs

Anodic stripping voltammetry: principle, instrumentation, Hanging mercury drop electrode, application in the analysis of Pb and Cd in environmental samples, principle of cathode stripping voltammetry.

Coulometric analysis: principles of coulometric analysis with constant current, coulometric analysis with controlled potential, applications of coulometric methods for the analysis of cations-As (III), Fe (II) and I- and S_2- by using I_2 liberations and Ce^{4+} liberation in solutions

Ion Selective Electrodes: types of ion selective electrodes, basic properties, potentials and construction, calibration of ion selective electrodes, ion selective electrodes with fixed membrane sites, silver, lead,

cadmium, sulfide, fluoride, cyanide and glass electrodes, applications in the analysis of air and water pollutants, principles of liquid membrane, gas sensing and enzyme based electrode

Books Suggested

1) Analytical Chemistry, Gary D. Christian, John Laliley and Senes, New York, 6th Ed., 2007.
2) Analytical Chemistry Principles and Techniques, I.G. Harge, Prentice Hall.
3) Principles of Instrumental analysis, D.A. Skoog and J.L. Loacy, W.B. Saunders.
4) Handbook of Instrumental Techniques for Analytical Chemistry, F. Serlie, Prentice Hall.
5) Vogels Text book of Quantitative Chemical Analysis, Basett, Denny Jebbary, 5th Ed. ELBs 1990.
6) Instrumental Methods of Chemical Analysis, Willard Merrit, Dean, Stella Jr 6th Edition.
7) Separation methods, M.N Sastri, Himalaya Publishing Company, Mumbai.

(Compulsory Foundation)

CHE-IC-403B	Bioinorganic, Bioorganic & Biophysical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Bioinorganic, Bioorganic, Biophysical Chemistry

Course Objectives:

- Highlighten metal complexes as oxygen carriers and electron transfer in biology.
- Metal ion transport and storage in biological systems and importance of trace metals in biology.
- Learn physiological functions of carbohydrates, lipids, enzymes classification, stereospecificity.
- The basic concepts of biophysical chemistry in biochemical reactions, exergonic and endergonic reactions.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain knowledge on metallo proteins in electron transfer processes.
CO2	Know the applications of trace metal ions and metal ions as chelating agents in medicine.
CO3	Achieve and develop highly stereoselective synthesis of organic compounds and drugs by adopting environmentally.
CO4	Understand thermodynamics of biopolymer reactions and to correlate free energy and biopolymer parameters.

Mapping of course outcomes with the program outcomes

CHE AC-403(B): (GENERIC ELECTIVE): BIOINORGANIC, BIOORGANIC, BIOPHYSICAL CHEMISTRY

UNIT-I: **BIO-INORGANIC CHEMISTRY- I** **15 Hrs**

Metal complexes as oxygen carriers –Heme proteins –Hemoglobin and myoglobin –Non heme proteins –hemerythrin and hemocyanin – model synthetic complexes of iron, cobalt and copper.Co-enzymes Vitamin $B_{12,}$carboxy peptidase and superoxidedismutase.

Electron Transfer in Biology: Structure and functions of metalloproteins in electron transfer processes –catalase –peroxidose –cytochromes and iron –sulphur proteins –synthetic models.

UNIT – II: BIOINORGANIC CHEMISTRY- II: Metal ion transport and storage in biological systems**,** Metal ions in Biology, Molecular mechanism of ion transport across membranes: ionophores, photosynthesis.

Hydrolytic metalloenzymes: Carbonic anyhdrase, carboxy peptidase, calcium in control processes, calcium and muscle contraction, calcium and secretion, calcium in blood clotting mechanisms. Therapeutic uses of enzymes.

Importance of trace metals in biology: Metal ions as chelating agents in medicine, trace metal ions and metal and non-metal deficiency. Biological nitrogen fixation,in-vivo and in-vitro nitrogen fixation.

UNIT-III: BIOORGANIC CHEMISTRY

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition-Blood group substances

Lipids: Essential fatty acids-structure and function of triglycerols, Glycerophospholipids, cholesterol, bile acids prostaglandins- composition and functioning of lipoproteins

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

UNIT-IV: BIOPHYSICAL CHEMISTRY:

Standard free energy change in biochemical reactions, exergonic and endergonic reactions, hydrolysis of ATP, thermodynamics of biopolymer solutions, chain configuration of bio polymers, and calculation of average dimensions. Membrane equilibrium, ion transport through cell membrane. dialosis and its function. Structure and functions of proteins, enzymes, DNA and RNA in living systems, forces involved in bio polymer interactions, electrostatic forces, hydrophobic forces, molecular expansion, and dispersion forces.

Books Suggested

1. M.N. Hughes, The Inorganic chemistry of Biological Processes, John wiley and Sons, New York 2nd Edition, 1981.
2. A Text book of Biochemistry, A.V.S.S. Rama Rao
3. Physical chemistry by Atkenes
4. Physical chemistry by Albertz.
5. Bio physical chemistry by Van Holde

6. Bio Physics by Narayanam
7. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
8. Chemistry of Natural Products, P.S. Kalsi, Kalyani Publishers.
9. Chemistry of Organic Natural Products, O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
10. Natural products Chemistry K.B.G. Torssell, John Wiley, 1983.
11. Burger's Medicinal Chemistry, M.E. Wolff, John Wiley
12. Medicinal Chemistry, A. Kar, New Age International

CHE IC 404	Core practical I: Inorganic Chemistry - Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Inorganic Chemistry - Practical.

Course Objectives:

- To learn about the separation methods and flame photometric analysis of pesticide residues.
- Determination of transition metal ions by polarography.
- Principle, instrumentation, determination of metal ions By AAS.
- Interpretation of NMR chemical shifts and hydrogen bonding.

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the common laboratory techniques including separation techniques.
CO2	Polarography, atomic absorption spectroscopy in both emission and absorption mode.
CO3	To gain knowledge on implementation of gas chromatography and HPLC for separation of mixtures.
CO4	To Familiarize with interpretation of data to structures by NMR.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE IC 403: CORE PRACTICALS: <u>PRACTICAL – I-</u>

Instrumental methods of analysis- II

1) Flame Photometry**:** Determination of Na and K, Ca and Li in Water and Soil.
2) TLC/Paper chromatographic separation.
3) Determination of Pesticide residues by gas chromatographic method
4) Polarography:a) Determination of E ½ of Zn and Cd; b) Determination of amounts of Zn and Cd
5) Atomic Absorption Spectroscopy: Determination of transition metal ions (Cd, Cr, Cu, Pb, Zn etc.) by AAS.
6) Separation of Metal ion by Solvent Extraction /Ion exchange.

II <u>DEMONSTRATION EXPERIMENTS</u>

1. IR – Interpretation of IR spectrum of alcohols, ketones, aldehydes and other standard materials
2. AAS: Demonstration of AAS – Determination of Zn, Cd, Pb, Mn, Fe and Ni in effluents using AAS.
3. Spectrofluorimetry – estimation of quinine and fluoroscene
4. Ion selective electrodes – estimation of F^-, S^{2-} and CN^- in effluents using ion selective electrode meter.
5. Polarography and Anode stripping voltametry
6. Polarography and Anode stripping voltametry – behavior of Cd, Zn, Pb in a mixture.
7. Determination of Pb and Cd in samples using Anode stripping voltametr
8. Gas chromatography- Determination of pesticides
9. HPLC- Determination of pesticides
10. NMR
11. (a)Demonstration of NMR spectrometer and study of hydrogen bonding in a given alcohol or phenol.

    (b)Interpretation of NMR chemical shifts of ethyl benzene, ethyl alcohol.
12. TGA, DTA, DSC – Demonstration of TG, DTA and DSC and study of decomposition of calcium oxalate, calcium carbonate, copper sulfate, oxalic acid.
13. pH metry

a. (a)Determination of alkalinity in a colored effluent using pH metric end point.
b. (b)Determination of purity of commercial HCl, H_2SO_4, H_3PO_4 and CH_3COOH using pH metric end point

CHE IC 405	Project Work	L-5,T-1,P-0	4 Credits

Pre-requisite: Inorganic Chemistry Project Work

Course Objectives:

- Identification of problem
- Ability to carry out independent chemistry research with competency in research design, data gathering
- Interpretation and communication of research results through scientific publications and presentations.
- Preparation of dissertation

Course Outcomes: At the end of the course, the student will be able

CO1	Ability to perform experiments, collection and evaluation of data
CO2	Interpretation of results while adhering to scientific principles of responsible and ethical behaviour.
CO3	Analysing and compiling the data and results in a chronological order in the form of dissertation.
CO4	Preparation of dissertation.

Mapping of course outcomes with the program outcomes

CO4	3	2	2	3	2	2	-	-	-	2	-	1

CHE IC 404 / 405 : PRACTIAL II/ PROJECT WORK

CHE IC 406A	Drug Chemistry	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Drug Chemistry

Course Objectives:

- To learn about the natural products as leads for new drugs
- Determination of cardiovascular drugs
- To study Autacoids
- Interpretation of Antipyretics

Course Outcomes: At the end of the course, the student will be able to

CO1	Know about natural products.
CO2	Know Interpretation of cardiovascular drugs.
CO3	Know the Analyzing about prostaglandins.
CO4	Know the Definition, Classification, Nomenclature, Structure and Synthesis of anti-inflammatory drugs.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3

CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : AC : 406 (A): (OPEN ELECTIVE) : DRUG CHEMISTRY

UNIT – I: NATURAL PRODUCTS AS LEADS FOR NEW DRUGS

Occurrence, Structure and therapeutic uses of Drugs acting on Central Nervous System

Morphine alkaloids (morphine, codeine, thebaine, heroin, pethidine)

Cannabinoids (9-cannabinol, Tetrahydrocannabinol)

Neuromuscular Blocking Agents (Curare, Decamethonium)

Vinca Alkaloids (Vincristin and Vinblastin), Taxol and Taxotere, podophyllotoxin, Etoposide, Teniposide.

UNIT – II: CARDIOVASCULAR DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis.

Cardiac glycosides (ex: Digoxin, Digitoxin);

Antihypertensive drugs (ex: Methyl dopa, Clonidene hydrochloride);
Antiarrhythmic agents (ex: Quinidine sulfate);
Antisympathetic drugs (ex: Propranolol hydrochloride, Verapamil hydrochloride);
Vasopressor drugs (ex: Prenylamine, Buphenine).

UNIT – III: AUTACOIDS

Definition, Occurrence, Isolation, Nomenclature, Classification, Synthesis, Biosynthesis and Stereochemical structures of Prostaglandins. Structural elucidation of PGE_1, PGE_2; Synthesis and biosynthesis of PGE_2, $PGF_{2\alpha}$.

Structure and Biosynthesis of Thromboxane A2 and Prostacyclin (synthesis not expected).

UNIT – IV: ANTI-INFLAMMATORY DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis of Paracetamol, Aspirin (Antipyretic), Salol, Cinchophen, Antipyrene, Phenylbutazone, Indomethacin, Tolmetin, Ibuprofen, Diclofenac and Naproxen.

Books suggested:

1. Medicinal Chemistry by Ashitosh Kar
2. Medicinal Chemistry by D. Sriram, P. Yogeeswari
3. Medicinal Chemistry by David A. Williams, Thomas L. Lemke
4. Medicinal Chemistry by V**.** Alagarsamy
5. Biochemistry by U. Satyanarayana
6. Natural Products Chemistry and Applications by Sujata V. Bhat, B.A. Nagasampagi, S. Meenakshi
7. Medicinal Chemistry by V.K. Ahluwalia, Madhu Chopra
8. Medicinal Chemistry by Balkishen Razdar
9. Advanced Practical Medicinal Chemistry by Ashutosh Kar
10. Chemistry of Organic Natural Products by O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
11. Chemistry of Natural Products by S. V. Bhat, B.A. Nagasampagi, M. Sivakumar
12. Natural Products Chemistry by K.B.G. Torssell, John Wiley, 1983.

CHE IC 406 B	Electroanalytical Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Electroanalytical Techniques

Course Objectives:

- To learn about the classification of electroanalytical methods
- Determination of types of currents
- Principle, instrumentation, reversible and irreversible cyclic voltammograms..
- Interpretation of Ion selective electrodes

Course Outcomes: At the end of the course, the student will able to

CO1	Ability to interpret potentiometry and conductometry
CO2	Interpretation of results while adhering to DC Polarography.
CO3	Analysing and compiling the data and results in polarography.
CO4	Familiarize Types of ion sensitive electrodes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : IC : 406(B): (OPEN ELECTIVE) : ELECTRO ANALYTICAL TECHNIQUES

Unit I: Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glasselectrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant. Mobility of ions, Conductometric titrations.

Unit II: D.C Polarography :. Dropping mercury electrode- Instrumentation-polarogram. Types ofCurrents : Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation(derivation not necessary) and its consequences. Types of limiting Currents: Adsorption,Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of

mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

Unit III: (i) A.C. polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography(V) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms.

Unit IV: Ion selective electrodes: Ion-sensitive electrodes –types of ion sensitive electrodes –metal based cation and anion sensitive electrodes, solid membrane electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A. Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery, J. Bassett, J. Mendham and R.C. Denny. Vogel's Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (Mc Graw Hill).

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

SVU COLLEGE OF SCIENCES

DEPARTMENT OF CHEMISTRY
4. ORGANIC CHEMISTRY (Specialization)

Syllabus for M.Sc. CHEMISTRY

Choice Based Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Chemistry is one of the first six departments started during the year 1954 when the university was founded. The Department offers M.Sc. course in Chemistry with specializations in Analytical, Environmental, Inorganic, Organic and Physical Chemistry besides Self Supporting Courses in Organic and Analytical Chemistry. Choice Based Credit System is followed and the courses are categorized as per the guidelines of the statutory authorities. Ability enhancement and skill development courses are part of the curriculum. Almost 15% of the students are qualifying in National Entrance Test conducted by UGC-CSIR. Also the Department offers quality research and training experience leading to Ph.D., Degrees for the students in the areas of synthesis of pharmacologically potential molecules analogous to drugs, application of green methodologies for the synthesis of complex molecules, development of new hybrid sorbents for monitoring toxic metals in environmental samples, fabrication of novel electrochemical sensors and biosensors towards the detection of organic molecules and pollutants. Over the last sixty five years the department has trained about 650 students for their Doctoral degrees. Most of the research scholars are doing Post-Doctoral research in abroad and in India. The faculty published more than 3000 research papers in reputed National and International journals. The Department organizes National and International conferences / seminars/ workshops on regular basis. The Department has well equipped laboratories for research and teaching besides a DST funded computer lab and a Department library. All the faculty members are having individual research laboratories with internet facility.

At present the Department is flourished with 10 faculty members and most of the faculty members have Post Doctoral research and training experience abroad. Some of the faculty worked as Visiting Professors and Visiting Fellows in prestigious universities abroad. Majority of faculty members have undertaken major research projects funded by agencies like UGC, CSIR, DST, BRNS, DBT and MOES and have successfully completed the tasks with a budget outlay of Rs. 250.00 lakhs. Most of the faculty members have developed collaboration with Indian Institute of Sciences, Bangalore, Indian Institute of Chemical Technology, Hyderabad, AVRA Laboratories, EPR Laboratories, Hyderabad, Amara Raja Batteries, Tirupati, RRL, Trivandrum and Birla Institute of Technology & Science, Pilani – Hyderabad campus and have approved patents. Some of the faculty and Alumni are the recipients of JSPS Fellowship, UGC Raman Fellowship, Common wealth Academic Fellowship, State Best Teacher Award etc., Recognizing the excellence in teaching and research in the Department, the University Grants Commission and Department of Science Technology have provided funding under DRS and FIST programmes. The Alumni of the department served in coveted positions as Vice-chancellors, Registrars, CEO of pharma industries etc. The former students of the Department have established leading International pharmaceutical industries in India and abroad. Some of them are actively engaged in the manufacture of COVID 19 vaccine. The ultimate goal of the Department is to achieve excellence in fundamental research as well as the development of innovative technologies for the future.

Vision

- Impart quality education & training in the field of chemistry to enable successful careers for the post graduate students in the field of research, education & industry applications of chemical sciences.

Mission

The Department of Chemistry strives:

- To get an ideal balance between knowledge creation and knowledge dissemination in the chemical sciences with a focus to train and mentor students to become responsible scientists and scientifically literate professionals to attain National and International impact.
- To contribute to the improvement of scientific and technological literacy, and the development of critical-thinking and problem-solving skills of all students in order to compete for the world of work and responsible citizenship

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	**Scientific Problem solving skills**: Deep knowledge of the topic which can develop the problem solving skills using chemical principles.
PSO2	**Analytical skills**: Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reactions with the help of sophisticated instruments
PSO3	**Research skills**: Develop research skills through dissertation/project work in different fields of chemistry such as organic, inorganic, analytical, physical and environmental.
PSO4	**Learning skills on life processes**: Acquire advanced level of knowledge in natural products as well as biological systems from the chemistry point of view.

Program Objectives

PO1	To divulge an advance level of theoretical and practical knowledge in the major fields of Chemistry- Analytical, Environmental, Inorganic, Organic and Physical.
PO2	To engage in research projects for acquiring wide spectrum of subject knowledge and research experience in respective fields.
PO3	To enlighten on skill enhancement in the core chemistry with practical expertise hands this will make students employable in academia and industries
PO4	To mould as responsible citizens to serve the nation

Program Outcomes: On completion of M.Sc. Chemistry programme, graduates will be able to –

PO1	Have a firm foundation in the fundamentals and application of current chemical and scientific theories in different areas of chemistry *viz*., Analytical, Environmental, Inorganic, Organic and Physical.
PO2	Understands the background of organic reaction mechanisms, complex chemical structures, and instrumental methods of chemical analysis, molecular rearrangements and separation techniques.
PO3	Familiarize with the importance of various elements present in the periodic table, coordination chemistry and structure of molecules, properties of compounds, structural determination of complexes using theories and instruments.
PO4	Understand about the physical aspects of atomic structure, dual behavior, reaction pathways with respect to time, various energy transformations, molecular assembly in nano-level, significance of electrochemistry, molecular segregation using their symmetry.
PO5	Create awareness and sense of responsibilities towards environment and apply knowledge to solve the issues related to Environmental pollution.
PO6	Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.
PO7	Be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
PO8	Clearly communicate the results of scientific work in oral, written and electronic formats.
PO9	Explore new areas of research in both chemistry and allied fields of science and technology.
PO10	Design, analyze and carry out scientific experiments and interpret data to provide solutions to different industrial problems.
PO11	Independently carry out research to solve practical problems and present a substantial technical report.
PO12	Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self-directed learning aimed at personal development, and adapting to change academic

	demands of work place through knowledge/ skill development/ reskilling.

Program Educational Objectives:

At the end of the program, the student wills be able to:

PEO1	To demonstrate broad knowledge of descriptive chemistry.
PEO2	To impart basic analytical and technical skills to work effectively in various fields of chemistry.
PEO3	To motivate critical thinking and analysis skills to solve complex problems viz., analysis of data, synthetic logistics, spectroscopy, structure and modeling, team based problem solving etc.
PEO4	To demonstrate an ability to conduct experiments in the above sub disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling method
PEO5	To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
PEO6	To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment and modern instrumentation.

***Among the Generic Elective a student shall choose any one.**

(Mandatory Core)

CHE-101	INORGANIC CHEISTRY I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Comprehend the key features of coordination compounds, Crystal Field Theory, different properties and bonding by spectroscopic techniques
- Study the polymorphic forms of non-transition elements and their synthesis and properties
- Understand the basics of reaction mechanism and the mechanistic concepts of Dissociative (Id) and Associative interchange Mechanism (Ia), Taube's classification, Trans effect and Electron Transfer Reactions
- Familiarize with the methods of synthesis of metal carbonyls and metal nitrosyls, Synergistic effect, EAN and 18-electron rule

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the key features of coordination compounds, Crystal Field Theory, magnetic properties and bonding in transition metal complexes.
CO2	To learn about the polymorphic forms of Carbon, Sulphur and Phosphorus, synthesis and properties of sulphur-nitrogen compounds, boranes, carbides, silicates and to know Wades rules.
CO3	To explain the reactivity of complexes in terms of Valence bond and Crystal Field theories, Taube's classification, Trans effect and Electron Transfer Reactions.
CO4	To gain knowledge on synthesis and structures of different metal carbonyls, synergistic effect and 18 electron rule.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	1	-	1	-	2	-	1
CO2	3	1	-	3	-	2	2	2	2	1	-	2
CO3	3	2	-	3	2	-	-	1	-	1	2	1
CO4	3	1	1	3	-	2	2	2	1	-	1	1

CHE 101: INORGANIC CHEISTRY I

UNIT-I: CO-ORDINATION COMPOUNDS 15 Hrs

Introduction to Crystal field Theory, CFSE and its calculation, Paring energy, Splitting of 'd' orbitals in Trigonal bi pyramidal, square planar, square pyramid and pentagonal bipyramidal geometries, Jahn –Teller effect, Application of CFT, OSSE, site Selection in Spinels, Short comings of CFT, Evidence for covalency –

Nephelauxetic effect. MOT of co-ordinate bonds –M.O. Diagrams for octahedral, tetrahedral and square planar complexes. Experimental evidences for π- bonding – Crystallography, Infrared spectroscopy and Photoelectron spectroscopy.

UNIT-II: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non- transition elements special features of individual elements ; Synthesis' properties and structure of their Halides and Oxides, Polymorphism of Carbon, Phosphorus and Sulphur, Synthesis, properties and structure of boranes, Carboranes, borazines, Silicates, Carbides, Sulphur-nitrogen compounds. Electron counting in boranes, Wades rules (Poly hedral skeletal electron pair theory), Isopopoly and hetero poly acids.

UNIT-III: REACTION MECHANISMS IN COMPLEXES 15 Hrs

Reactivity of metal complexes. Inert and Labile complexes. Concept of Labile and Inert complexes in terms of Valence bond and Crystal Field theories. Taube's classification of complexes as labile and inert complexes. Dissociative (D) and Dissociative interchange Mechanism (Id) & Associative (A) and Associative interchange Mechanism (Ia). Substitution reactions in octahedral complexes- Acid Hydrolysis -factors affecting Acid Hydrolysis - Base Hydrolysis-conjugate Base Mechanisms - Anation Reactions -Substitution Reactions in Square Planar complexes- Trans effect – Mechanisms of Trans effect: polarization and π-bonding theories.Electron Transfer Reaction-Inner Sphere and outer Sphere Mechanisms- Marcus theory.

UNIT-IV: METAL πCOMPLEXES-I 15 Hrs

Nature of π bonding, Classification of π ligands, π donor ligands and π -acceptor ligands.

Metal Carbonyls: Synthesis of metal carbonyls, Structures of metal carbonyls of the types M(CO)n (M= Cr, Fe, Ni; n=4-6), $M_2(CO)n$ (M=Co, Fe, Mn; n=8-10), $M_3(CO)_{12}$ (M=Fe, Ru and Os), $M_4(CO)_{12}$ (M=Co, Rh, Ir). IR Spectraof metal carbonyls (i) Detection of bridging and terminal CO ligand, (ii) Synergistic effect, EAN and 18-electron rule. Electron counting methods (i) Oxidation state method and (ii) Neutral Atom method.

Metal Nitrosyls: Synthesis of metal Nitrosyls, bonding, Electron donation by nitric oxide, Models for NO bonding (i) Covalent model and (ii) Ionic models, Structures of metal nitrosyls (1) $[Fe_4S_3(NO)]$ (2)$[Fe_2(NO)_2I_2]$ (3) $[(\phi_3P)_2Ir(CO)Cl(NO)]^+$ (4) $[(\phi_3P)_2Ru(NO)_2Cl]$, Detection of bridging NO ligand, Applications of metal nitrosyls.

Books Suggested

1. F.A.Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999.John wiley & sons. Inc., New York.
2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, VI Edition 1993. Harper Collins College Publishers, New York.

3. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
4. Gary Wolfsburg: Inorganic Chemistry (5th Ed. (Viva Books)
5. W.L. Jolly: Modern Inorganic Chemistry (McGraw-Hill)
6. B.N Figgis: Introduction to Ligand Fields (John-Willey)
7. S.F.A. Kettle: Coordination compounds.
8. Coordination Chemistry. Bassalo & Jahnson.

(Mandatory Core)

CHE-102	Organic Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Organic Chemistry

Course Objectives:

- Classify molecules based on stereo chemical aspects study on optical and geometrical isomerism by the application of Cahn-Ingold-Prelog rules.
- Familiarize with different types of substitution reactions, able to predict products, including stereochemistry in aliphatic and aromatic nucleophilic substitution reactions, effect of neighboring group participation
- Understand thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects in reactive intermediates
- Study about occurrence, isolation, structure establishment and synthesis of natural products-terpenoids.

Course Outcomes: At the end of the course, the student will be able

CO1	To detect stereochemical structures of the molecules, stereoselective and stereocontrolled reactions.
CO2	To ascertain the stereochemistry of the products with the effect of neighbouring group participation and to familiarize the various types of aromatic substitution reactions, their mechanism and the effect of substituents.
CO3	To know the concept of isotope effects, potential energy diagrams and transition states in different intermediates
CO4	To familiarize with stereospecific synthesis of naturally occurring terpenoids and degradation products of terpenoids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	-	1	1	-	1	-	-
CO2	3	2	1	3	-	1	2		-	2	1	1
CO3	3	1	2	3	-	1	1	2	1	-	1	-
CO4	3	2	2	3	2	1	1	1	-	1	1	1

CHE102: Organic Chemistry I

UNIT-I: **Stereochemistry**

Sereoisomerism-Stereoisomers Classification – Configuration and conformation.

Molecular Three dimensional representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Dissymmetrization.

Optical isomerism: Molecular Symmetry and Chirality-Cahn-Ingold-Prelog rules R, S-nomenclature, stereoisomerism resulting from more than one chiral center, meso and pseudoasymmetric compounds - **Axial Chirality** - Stereochemistry of allenes spiranes - biphenyl derivatives and atropisomerism - **Planar chirality** - Ansa compounds and trans - Cycloalkenes - **Helicity**. Helically chiral compounds

Geometrical isomerism - E, Z - nomenclature - Physical and Chemical methods of determining the configuration of geometrical isomers-Stereoisomerism in 3, 4 and 5-membered cyclic compounds.

UNIT-II: Substitution Reactions

i) Aliphatic Nucleophilic substitutions: The S_N2, S_N1, mixed S_N1 and S_N2, SET mechanisms. Reactivity- effects of substrates, attacking nucleophiles, leaving groups and reaction medium.Common carbocation rearrangements – primary, secondary and tertiary. The neighbouring group participation (NGP) -anchimeric assistance, NGP by σ and π- bonds, phenonium ions, norbornyl and norbornenyl systems, Classical and nonclassical carbocations, NGP by halogens and heteroatoms (O,N,S)

The S_N^i and S_N2' mechanisms. Nucleophilic substitution at an allylic, and vinylic carbons.

ii. Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and $S_{RN}1$mechanisms. Reactivity - effect of substrate, structure, leaving group and attacking nucleophile. The von Richter, Sommelet - Hauser and Smiles rearrangements.

UNIT-III: Reactive intermediates

Types of reactions, types of bond cleavage mechanisms, generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes, nitrenes and arynes. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects**.**

UNIT-IV: Terpenoids

Classification of terpenoids, occurrence, isolation, general methods of structure determination. Isoprene and special isoprene rule. Structure determination and synthesis of the following representative molecules: Farnesol, Zingeberine, Cadinene and Abietic acid.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
6. Stereochemistry, P.S. Kalsi, Wiley Eastern.
7. Text book of Organic Chemistry, M.C. Murry
8. Organic Chemistry, Vol I, I.L. Finar, ELBS Eds.

(Mandatory Core)

CHE-103	Physical Chemistry I	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Acquire knowledge in Quantum Chemistry, postulates of Quantum Mechanics., Applications of Schrodinger wave equation and Born-Oppenheimer approximation
- Study on Chemical Dynamics and theories in unimolecular, chain and fast reactions and determination of reaction rates.
- Familiarize with concepts of Thermodynamics and statistical thermodynamics, Gibbs- Duhem equation and Sackur-Tetrade equation
- Know about Thermodynamic and Kinetic concept of Electrochemistry and conductance, conductivity of electrolytes

Course Outcomes At the end of the course, the student will be able to

CO1	To know the concepts such as Operator algebra, Eigen values and Eigen functions, Degeneracy, Schrodinger wave equation and the postulates of Quantum Mechanics.
CO2	To learn about theories of reaction rates, Lindemann, Lindemann-Hinshel wood, and RRKM theories.
CO3	To know about Thermodynamic concepts and entropy change in reversible process and irreversible process, Gibbs- Duhem equation, calculation of thermodynamic properties.
CO4	To study the Thermodynamic and Kinetic Derivation of Nernst Equation and the derivation of Debye-Huckle Equation and its Verification

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	3	2	1	--	1	2	---	1	1
CO2	3	1	2	3	1		1		1	1	-	1
CO3	3	-	1	3	2	1	-	1		-	2	-
CO4	3	1	2	3	-	1	1	-	2	1	-	1

CHE-103: Physical Chemistry I

UNIT-I: Quantum Chemistry-I

(A)**Introduction to Exact Quantum Mechanical Results**

Operator algebra, Eigen values and Eigen functions, Operators for momentum and energy, Degeneracy, Linear combination of Eigen functions of an operator, well behaved wave functions, Normalized and

orthogonal functions, The schrodinger wave equation and the postulates of Quantum Mechanics, (B) **Applications of Schrodinger wave equation:** Particle in one dimensional and three dimensional box, harmonic oscillator, rigid rotor, hydrogen atom and its applications. Hydrogen like wave function, hydrogen like orbitals and their representation, polar plots, contour plots and boundary diagram. (C)**Approximate Methods:** The variation Theorem, Linear variation principle, perturbation Theory (first Order and non-degenerate), Application of variation Method and perturbation theory to the helium atom, The Born-Oppenheimer approximation.

UNIT-II: Chemical Dynamics

(A)**Theories of reaction rates:** Collision theory, steric factor. Theory of Absolute Reaction Rates-Reaction coordinate, activated complex and the transition state. Thermodynamic formiulation of reacton rates.

(B) **Unimolecular reactions:** Lindemann, Lindemann-Hinshel wood, and RRKM theories. Termolecular reactions. Complex reactions-Rate expressions for opposing, parallel and consecutive reaction (all first order type) (C) **Chain reactions:** Dynamic chain, hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane, photochemical reactions- H_2-Br_2, H_2-Cl_2 reactions, Autocatalysis, H_2-O_2 reaction explosion limits. (D) **Fast Reactions:** Flow system – Temperature and pressure Jump Methods – Relaxation Techniques.

UNIT – III : Thermodynamics

(A) **Brief review of Thermodynamic concepts:** Enthalpy, entropy, free energy. Concept of Entropy – Entropy as a state function –Entropy change in reversible process and irreversible process – Temperature – Entropy diagrams – Entropy change and phase change – Entropy of mixing – Entropy and disorder. (B) **Statistical thermodynamics:** Partial molar properties: their significance and determination of partial molar properties, fugacity and its determination. Concept of distribution, thermodynamic probability and most probable Distribution, Ensemble averaging, postulates of ensemble averaging, canonical, grand canonical and micro- canonical ensembles, partition functions, translational, rotational, vibrational and electronic partition functions, Gibbs- Duhem equation, calculation of thermodynamic properties in terms of partition functions, Entropy of monatomic gases (Sackur-Tetrade equation)

UNIT-IV : Electrochemistry I

(A) **Thermodynamic and Kinetic concept of Electrochemistry**

Thermodynamic and Kinetic Derivation of Nernst Equation, Chemical and Concentration Cells with and

without Transference, Liquid Junction Potential, Derivation of the Expression for Liquid Junction Potentials-its determination and elimination, Applications of EMF Measurements: (i)Solubility product, (ii)pH Determination, (iii) Potentiometric Titrations.; (B)**Conductivity:** Theory of Electrolytic Conductance, Derivation of Debye-Huckle Equation and its Verification, Debye- Falkenhagen Effect, and Wein Effect, kohlrausch law. Calculation of Solubility of Sparingly soluble Salt from Conductance Measurements.

Conductometric Titrations : Titration of Strong Acid Vs Strong Base (HCl vs NaoH) ; Titration of Weak Acid Vs Strong Base (AcoH vs NaoH); Titration of mixture of Strong and Weak Acids vs Strong Base ; Precipitation Titrations.

Books Suggested

1. physical chemistry, P. W. Atkins (ELBS)
2. Quantum Chemistry, Ira N. Levine (Prentice Hall)
3. Atomic Structure and Chemical bond, Manas Chandra.
4. Chemical Kinetics, K.J. Laidler (Mc Graw Hill)
5. Kinetics and Mechanism of Chemical Transformations, J. Rajaraman and J. Kuriacose (Mcmilan)
6. Thermodynamics for chemists, S. Glasstone
7. Chemical thermodynamics, I.M. Klotz
8. Statistical Thermodynamics, M. Dole
9. Modern Electrochemistry, Vol. I & II, J.O. M. Bockris and A.K.N. Reddy (plen
10. An Introduction to Electrochemistry (3^{rd}ed.), S. Glasstone (Affiliated East-West).

(Compulsory Foundation)

CHE-104 (A)	General Chemistry I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on precision and accuracy, Limit of detection, Limit of determination, Sensitivity and selectivity, statistical evaluation of data
- Familiarize with principles and concepts of flame emission spectroscopy and atomic absorption spectroscopy and their applications.
- To know about ecosystem, nutrient cycle and dessert ecosystem and forest ecosystem and aquatic ecosystem.
- Gain knowledge on air pollution, water pollution, soil pollution, marine pollution, noise pollution and solid waste management.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about mean and median values, standard deviation and coefficient of variation.
CO2	To acquire knowledge on principle and instrumentation of AAS and difference between flame AAS and furnace AAS.
CO3	To know about the principle and concept of ecosystem and their functioning
CO4	To have an idea on environmental pollution and environmental impact assessment.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	-	-	2	1	1
CO2	3	2	-	3	1	-	2	1	-	1	1	-
CO3	3	3	2	3	2	1		1	2	1	1	2
CO4	3	2	1	2	3	1	1	1	-	2	1	1

CHE104-A: General Chemistry I

UNIT-I: TREATMENT OF ANALYTICAL DATA 15 Hrs

Precision and accuracy –mean and median values –Standard deviation – coefficient of variation, Types of errors: Determinate and indeterminate errors, confidence limits, significant figures, computations, minimization of errors, statistical evaluation of data –T-test ,F- test , and X^2 –test. Correlation

coefficient and coefficient of determination; Limit of detection (LOQ); Limit of determination(LOD) Sensitivity and selectivity of an analytical method.

UNIT-II: FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 15 Hrs

(a) **Flame Emission Spectroscopy**: Principles, chemical reactions in flames, Interferences, evaluation methods, flame photometer and experimental technique, procedure for determinations, limitations and disadvantages. Applications

(b)**Atomic Absorption Spectroscopy: Flame AAS:** Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT-III: ECOSYSTEMS 15 Hrs

Concept of an ecosystem (Abiotic and biotic environment), structure and function of an ecosystem Producers, Consumers and decomposers. Energy flow in the ecosystem, (Nutrient cycle in the ecosystem) Ecological succession Food Chain, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems, Forest ecosystem, Grassl and ecosystem, Desert ecosystems aquatic ecosystems [ponds, streams, lakes, rivers, ocean estuaries].

UNIT-IV: ENVIRONMENTAL POLLUTION 15 Hrs

Definition a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution Solid waste management : Causes, effects and control measures of urban and industrial wastes. Environmental impact assessment.

Books Suggested

1. H.W. Willard, LL. Merritt and J.A. Dean: Instrumental Methods of Analysis
2. Vogel's Text book of Quantitative Inorganic Analysis.
3. Analytical Chemistry
4. Instrumental Methods of Analysis H. Kaur

CHE 104B	General Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To familiarize with the significance of green chemistry and assessment of the impact.
- To gain knowledge on biocatalyst in oxidation, reduction and hydrolytic reactions
- To have an idea on solvent free reactions and modern reaction techniques.
- To familiarize with the use of ionic liquids as green solvents.

Course Outcomes: At the end of the course, the student will be able

CO1	To get knowledge on green reaction conditions and their impact on environment.
CO2	To know about use of different biocatalysts as environmentally friendly reagents.
CO3	To acquire knowledge on the use of modern techniques like ultrasound, microwave etc.
CO4	To have an idea on the use of ionic liquids in different reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	-	2	1	1	-	1	-	1	1
CO2	3	1	1	3	1	-	1	1	-	1	-	1
CO3	3	3	2	3	2	1		2	-	1	1	1
CO4	3	2	1	2	3	1	1	1	1	-	1	1

CHE 104B: General Chemistry I

UNIT-I

Fundamentals and significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk hazard. An introduction to the tools of green chemistry and its fundamental principles.

Principles of Green Chemistry: Prevention of waste / by-products, Hazardous products- Designing of safer chemicals- Selection of appropriate solvents and starting materials- Use of protecting groups and catalysis- Designing of biodegradable products.

UNIT-II

Catalysis for Green Chemistry: Use of biocatalysts- Biochemical Oxidation, Biochemical Reduction, Enzyme Catalyzed Hydrolytic Process, Modified biocatalysis- transition metal catalysis- Reformatsky reaction, Wurtz reaction, Pinacol coupling, Simmons-Smith reaction,

Mukaiyama reaction, Heak reaction, Ullmann's coupling.

UNIT-III

Solvent Free Reactions: Solvent free techniques- Reactions on solid mineral supports, Phase Transfer Catalysis- C-alkylation, N-alkylation, S-alkylation, Darzen's reaction, Wittig reaction. Ultrasound assisted green synthesis- Oxidation, Reduction, Hydroboration, Bouveault reaction, Strecker reaction, Microwave assisted green synthesis- Biginelli reaction, Aza-Michael reaction, Suzuki reaction, Stille reaction, Sonogashira reaction.

UNIT-IV

Ionic liquids: Definition- Types of Ionic Liquids-Synthesis of Ionic Liquids- Selection of ionic liquids- physical properties- Application in organic synthesis- alkylation, allylation, oxidation, reduction, polymerization, hydrogenation, hydroformylation, alkoxycarbonylation, carbon-carbon bond forming reactions, alkene metathesis.

Books suggested:

1. New Trends in Green Chemistry by V.K. Ahluwalia, M. Kidwai.
2. Green Chemistry: Environment Friendly Alternatives by Rashmi Sanghi, M M Srivastava
3. Green Solvents for Organic Synthesis by V.K. Ahluwalia, Rajender S. Varma
4. Green Analytical Chemistry by Mihkel Koel and Mihkel Kaljurand

CHE 105 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Basic laboratory techniques of titration and analysis.
- Quantitative estimation of inorganic compounds through volumetric techniques.
- Calibration of volumetric apparatus and statistical analysis of the data.
- Determination of critical solution temperature of phenol-water system.

Course Outcomes: At the end of the course, the student will be able

CO1	To demonstrate mastery of basic semi-micro qualitative analysis of simple salts and interprets analytical data and will make scientific claims that are supported by the observations.
CO2	To familiarize with techniques of titration and calculation of errors.
CO3	To study the determination of critical solution temperature, eutectic composition, distribution coefficient, adsorption of different systems.
CO4	To calibrate the statistical data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	1	2	1	2	-
CO2	3	2	2	2	-	2	1	1	-	2	2	1
CO3	3	2	1	2	2	1	-	2	1	1	2	1
CO4	3	2	2	1	2	1	-	2	2	1	1	1

CHE 105 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 105 A : Core practical I: Inorganic Chemistry

Semi Micro Qualitative Analysis

Qualitative Analysis of a mixture containing four cations including two less common cations (viz., W, Mo, Se, Te, V, Ce, Th, Zr, Li and U).

CHE 105 B : Core practical I: Physical Chemistry

1. Determination of critical solution temperature, eutectic composition and temperature of binary system.

2. Calibration of volumetric apparatus and statistical analysis of the data.
3. Determination of critical solution temperature of phenol-water system and study the effect of electrolyte on CST.
4. Determination of Eutectic composition and temperature of binary system
5. Determination of distribution coefficient of benzoic acid between water and benzene.
6. Study the adsorption of acetic acid on charcoal and analysis of the data on the basis of Langmuir and Freundlich adsorption isotherms.
7. Determination of rate constant of acid hydrolysis of an ester and investigate the effect of catalyst concentration, reactant concentration and temperature.

CHE 106A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Identification of single organic component by systematic qualitative analysis
- Preparation of derivatives and purification process
- Single step preparations
- Calibration of spectral analysis to this structures

Identification of single organic component by systematic qualitative analysis.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the systematic procedures of analysis of organic components.
CO2	To know the conformational tests for various functional groups.
CO3	To understand the mechanisms and familiarize with methodologies to prepare biologically important molecules.
CO4	Purification of compounds by different process

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	3	1	2	-	1	-	1	1	-
CO2	3	2	2	3	-	2	-	1	1	-	1	2
CO3	2	2	2	1	2	1	2	1	-	1	-	2
CO4	1	2	2	1	1	1	1	-	1	1	1	2

CHE : 106 A : PRACTICAL – I : ORGANIC CHEMISTRY

Identification of single components by Qualitative Analysis method

1. Aromatic acids
2. Aromatic amines
3. Aromatic phenols
4. Aromatic estors
5. Aromatic hydrocarbons
6. Carbohydrates
7. Aromatic carobohydrates compounds

CHE : 106 B : PRACTICAL – I : GENERAL CHEMISTRY

Single step preparations

1. Preparation of aspirin
2. Preparation of p-nitroacetanilide
3. Preparation of p-bromoacetanilide

CHE 107	Human Values and Professional Ethics-I	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level Human Values and professional ethics

Course Objectives:

- Analyze values in various ethical professions
- Understand moral concepts, character and conduct multiple
- Concept of ethical values with respect to individual and society
- ethical interests at stake in areal-world situation or practice and assess own ethical values with respect to social context and problems

Course Outcomes: At the end of the course, the student will be able to

CO1	To know about the needs and importance of professional ethics.
CO2	To analyze nature of Values, basic Moral Concepts character and Conduct.
CO3	To gain knowledge on individual and society ethical values, ahimsa, satya and brahmacharya.
CO4	To understand values of Bhagavd Gita, various religions, religious tolerence, Gandhian ethics.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	3	2	-	1	2	3	1	1	2
CO2	3	2	2	3	1	1	1	2	3	-	-	2
CO3	3	1	2	3	2	-	1	-	-	1	1	3
CO4	3	1	1	3	-	1	2	2	2	2	-	3

CHE 107: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS – I)

Chapter I: Definition and Nature of Ethics – Is relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics – Goals – Ethical Values in Various Professions.

Chapter II: Nature of Values – Good and Bad, Ends and Means, Actual and Potential Values, Objective and Subjective Values, Analysis of Basic Moral Concepts – Right, Ought, Duty, Obligation, Justice, Responsibility and Freedom, Good Behavior and Respect for Elders, Character and Conduct.

Chapter III: Individual and Society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possesion) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues) - Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation), Crime and

Theories of Punishment – (a) Reformative, Retributive and Deterrent, (b) Views on Manu and Yajnavalkya

Chapter IV: Bhagavd Gita – (a) Niskama Karma, (b) Buddhism – The Four Nobel Truths – Arya astanga marga, (c) Jainism - Mahavratas and Anuvratas. Values Embedded in Various Religions, Religious Tolerence, Gandhian Ethics.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
4. Harold H. Titus: Ethics for Today
5. Maitra, S.K: Hindu Ethics
6. William Lilly: Introduction to Ethics
7. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
8. Sasruta Samhita: Tr. Kaviraj Kunjanlal, Kunjanlal Brishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
9. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
10. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
11. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
12. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE - 201	Inorganic Chemistry II	L-5, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Understand magnetic properties of transition metal complexes and various reactions on ligands with respect to synthesis.
- Gain knowledge on electronic spectra of complex molecules of octahedral and tetrahedral geometry
- Understand magnetic properties viz., diamagnetism and paramagnetism and other related properties of complex molecules
- Familiarize with different catalytic reactions of complex molecules and factors effecting the reactions.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with the general methods of complex preparations and properties, nature of bonding and structural features of metal complexes.
CO2	To know about Russel-Saunders coupling, splitting of energy levels in octahedral field and differentiate between Orgel diagrams and Tanabe-Sugano diagrams.
CO3	To understand about the laws of Hunds, Curie and Weiss, magnetism and magnetic susceptibility determination by Gouy's and Farady methods.
CO4	To gain knowledge on Induced reactions, Free radical reactions, Thermal decomposition reactions, Chain reactions.

Mapping of course outcomes with the program outcomes

CHE 201: INORGANIC CHEISTRY II

UNIT – I: TRANSITION METAL II – COMPLEXES II **15 Hrs**

Transition metal π – complexes with unsaturated organic molecules – alkenes, alkynes, diene, dienyl and Cyclopentadienyl complexes and arene complexes-general methods of preparation, properties, nature of bonding and structural features – Important reactions relating to Nucleophilic and Electrophilic attack on

ligands and to organic synthesis.

UNIT – II: ELECTRONIC SPECTRA OF COMPLEXES 15 Hrs

Russel-Saunders coupling – Spectroscopic term symbols- Derivation of term symbols of p^2 and d^2 configuration, Hole Formulation, Energy ordering of terms (Hund's Rules), Splitting of energy levels and spectroscopic states in Octahedral field, Selection rules – Break – down of selection rules, Orgel diagrams, Definition and utility–Orgel Diagrams for d^1 to d^9 configurations in Octahedral and tetrahedral fields. Interpretation of electronic spectra of high spin octahedral and tetra hedral complexes of Ti(III), V(III), Cr(III), Mn(III), Mn(II), Fe(II), Fe(III), Co(III), Co(II), Ni(II) and Cu(II) complexes, Calculation of Dq and B^1 parameters for Cr(III) and Ni(II) complexes. Tanabe – Sugano diagrams, Differences between Orgel diagrams and Tanabe – Sugano diagrams, Tanabe – Sugano diagrams of d^2 to d^6 and d^8 configurations. Charge transfer spectra- LMCT and MLCT.

UNIT – III: MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES 15 Hrs

Diamagnetism and paramagnetism-orbital and spin contributions, spin-orbit coupling, Hunds third rule and Energies of J levels – Curie law and Curie – Weiss law- Ferromagnetism and antiferromagnetism – Temperature independent magnetism Magnetic susceptibility and its determination by Gouy's and Faraday methods.Calculation of magnetic moment from magnetic susceptibility, spin-only formula, Orbital contribution to magnetic moment (Oh and Td Complexes) –Paramagnetism and crystalline fields – Ti (III), V (III), VO^{2+}, Cr (III), Mn (II), Fe (III), Co(II), Ni (II) and Cu (II). Magnetic Exchange in copper acetate and other dimmers – spin cross over in complexes.

UNIT –IV: CATALYSIS 15 Hrs

Homogeneous catalysis, Metal ion catalyzed reactions – Redox potentials and processes – Mechanism of redox processes involving ligands – Factors affecting redox potentials - other types of metal catalyzed reactions – Reactions involving Ag (I) , Cu (II) and Os (VIII) – Reactions of Oxyanions – Factors affecting rate (General discussion only) – Induced reactions – Free radical reactions – Thermal decomposition of peroxy disulphate – Fe(III) $–S_2O_8$ reactions – chain reactions – H-Br reactions, H_2O_2 $–S_2O_8$reactions.

Books Suggested

1. Inorganic Chemistry principles of Structure and Reactivity 6th Edition. James E. Huheey.
2. Organometallic Chemistry: R.C. Mehrotra and Singh.
3. R. S. Drago: Structural methods in Inorganic Chemistry.
4. H. H. Willard, L. L. Merritt, Jr., J. A. Dean and F. A. Settle, Jr.: Instrumental Methods of Analysis (CBS Publishers).
5. R. L. Carlin: Magnetic Chemistry. R. L. Datta and A. Syamal: Elements of Magnetic Chemistry.

(Mandatory Core)

CHE-202	Organic Chemistry II	L-3, T-1, P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives:

- Able to recognize, classify, explain, and apply fundamental organic reactions such as E2, E1, E1CB.
- Familiar with molecular rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom.
- Provide Hantzsch-Widmann nomenclature for the three and four membered heterocycles. Be able to predict synthetic routes and chemical reactions of these heterocycles.
- Be familiar with occurrence, isolation, structural elucidation and synthesis of natural products-alkaloids

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the mechanisms of E_1, E_2 and E_{1CB} reactions, steroselectivity and synpyrolytic eliminations and use of isotopes, chemical trapping and crossover experiments.
CO2	To learn the rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom and familiarize with the limitations and applications of reactions.
CO3	To learn the synthesis of three and four membered heterocycles, mechanism of ring opening reactions and the effect of electron donating and withdrawing substituents in selectivity of ring opening reactions.
CO4	To understand the structural elucidation and synthesis of alkaloids using specific reagents.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	1	1	1	-
CO2	3	2	2	3	2	2		1	1	-	1	1
CO3	3	2	2	3	2	2	1	1	-	1	-	1
CO4	3	2	2	3	-	2	-	1	-	1	1	1

CHE- 202 : ORGANIC CHEMISTRY II

UNIT-I: Reaction mechanism-I **15 Hrs**

Electrophilic addition to carbon carbon double bond: Stereoselective addition to carbon carbon double

bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO_4 and $KMnO_4$.

Elimination reactions Elimination reactions E_2, E_1, E_{1CB} mechanisms. Orientation and stereoselectivity in E_2 eliminations. Pyrolytic syn elimination and α-elimination, elimination Vs substitution. Facors influencing the elimination reactions

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

UNIT-II: Molecular Rearrangements: **15 Hrs**

Rearrangements to electron deficient Carbon atom:

Pinacol-Pinacolone, Wagner-Meerwein, Dienone-Phenol and Demjonove Rearrngements

Rearrangements to electron deficient Nitrogen atom:

Hofmann, Curtius, Schimidt and Beckmann Rearrangements.

Rearrangements to electron deficient Oxygen atom: Baeyer-Villiger and Dakins Rearrangements

Rearrangements to electron rich Carbon atom: Favorski and Neber Rearrangements

Aromatic and Sigmatropic Rearrangements: Fries and Claisen Rearrangements

UNIT III: Three and four membered heterocycles: 15 Hrs

Systematic nomenclature (Hantzsch-Widmann system) and Replacement nomenclature for monocyclic heterocycles (Three and four membered rings). Synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes, and thietanes.

UNIT-IV: Alkaloids 15 Hrs

Occurrence, isolation, general methods of structure elucidation and physiological action, degradation, classification based on nitrogen heterocyclic ring, structure elucidation and synthesis of the following: Atropine, Papaverine and Quinine.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.

5. Modern Organic Reactions, H.O. House, Benjamin.
6. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
7. Stereochemistry, P.S. Kalsi, Wiley Eastern.
8. Text book of Organic Chemistry, M.C. Murry
9. Text book of Organic Chemistry, Fessendon and Fessendon.
10. Text book of Organic Chemistry, T.W. Solomon,
11. Organic Chemistry, Vol II, I.L. Finar, ELBS Eds.
12. Heterocyclic chemistry T.L Gilchrist, Longman Scientific Technical
13. An Introduction to the Heterocyclic compounds, R M Acheson, John Wiley.

(Mandatory Core)

CHE -203	Physical chemistry II	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Learn Angular momentum and Molecular Orbital Theory and application of Huckel theory to organic molecules.
- Know about concepts in Surface Chemistry, concept of electric double layer model and Micelles.
- Get knowledge on symmetry and group theory their use in spectroscopy, Mulliken character tables.
- Understand Irreversible Electrode phenomenon controlled potential electrolysis and polarography.

Course Outcomes At the end of the course, the student will be able

CO1	To know about Pauli Exclusion principle and Slater determinant, atomic orbitals, Simple molecular orbitals and Huckel theory of conjugated systems.
CO2	To learn Gibbs adsorption isotherm, BET equation and correlate limitations, critical micellar concentration (CMC) and factors affecting the CMC of surfactants.
CO3	To identify Relation between order of a finite group and its sub-group, conjugacy, Symmetry point group (MLS, MHS and MSS) and orthogonality theorem.
CO4	To acquire knowledge on DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, to derive equation for Tafel plots, half-wave potentials for reversible system.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	2	-	1	1	1	2	-
CO2	3	2	2	3	2	2	-	1	1	1	-	1
CO3	3	2	2	3	-		1	-	-	1	1	-
CO4	3	2	-	2	1	1	-	1	1	1	1	-

CHE-AC-203 Physical Chemistry III

UNIT-I: Quantum Chemistry-II **15 Hrs**

(A) Angular momentum: Angular momentum, Rotations and angular momentum, Eigen functions and Eigen values of angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and pauli Exclusion principle. Slater determinant. ;

(B) Molecular Orbital TheoryAtomic Orbitals, Simple Molecular Orbitals, Hybrid Atomic Orbitals, Shapes and energies of Molecular Orbital, Systems of Organic Molecules (Ex: Methane, Ethylene,

Acetylene). Huckel theory of conjugated systems, Π-bond order and charge density calculations, application of Huckel theory to ethylene, butadiene and benzene.

UNIT-II: Surface Chemistry **15 Hrs**

Surface tension, capillary action, pressure difference across curved surface, (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET adsorption isotherm, derivation of BET equation , limitations of BET equation, estimation of surface area from BET equation, Surface films on liquids. Concept of electric double layer model- Helmholtz perrin, Gouy- Chapman and stern models (no derivation)

Micells: Surface active agents, classification of surface active agents micellisation, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellisation, emulsions, reverse micelles.

UNIT-III: SYMMETRY AND GROUP THEORY **15 Hrs**

Definition of a group, rules that are set for a group, sub-group, order of a group, Relation between order of a finite group and its sub-group, conjugacy relation and class of a group, symmetry elements and symmetry operation. Symmetry point group (MLS, MHS and MSS), Schoenflies symbols - Representation of groups by matrices (representation for C_n, C_{nv}, D_{nh} etc. groups to be worked out explicitly), character of a representation, group multiplication tables, reducible - irreducible representations The great orthogonality theorem (without proof) - character tables (H_2O,NH_3) and their use in spectroscopy, Mulliken character tables.

UNIT-IV: ELECTROCHEMISTRY- II **15 Hrs**

Irreversible Electrode phenomenon: Reversibility and irreversibility, Dissolution and deposition potentials, Decomposition voltage, overvoltage, diffusion overvoltage, charge transfer overvoltage, concentration overvoltage-hydrogen and oxygen overvoltages, Tafel plots, Exchange current density and Transfer coefficient, Butler-Volmer equation for one electron transfer processes.

Polarography: Theory, classification , principle , Instrumentation of Polarography, DME, HMDE diffusion current, Ilkovic equation, DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, Millicoulometry, Equation for half-wave potentials, for reversible system when oxidant alone, reductant alone and both are present.

Books Suggested

1. P.W. Atkins: Physical Chemistry (ELBS).
2. Ira N. Levine: Quantum Chemistry (Prentice Hall).
3. R. Mcweeny: Coulson's Valence (ELBS).

4. J.O.M. Bockris and A.K.N. Reddy, Modern Electrochemistry, vol.I & II (Plenum).
5. S. Glasstone; An Introduction to Electrochemistry (3rd ed.)(Affiliated East-West).
6. V. Moroi: Micelles, theoretical and applied aspects (Plenum).
7. Maron and prutton: principles of physical Chemistry.
8. Silbey, Alberty, Bawendi. Physical Chemistry.Jhon-Wiley & Sons. 4th edition-2006.
9. D.N. Bajpai: Advanced physical Chemistry: S. Chand & Company, 1998.

(COMPULSORY FOUNDATION)

CHE-204 A	General Chemistry II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on the principles of different electro analytical methods
- Familiarize with chromatographic techniques.
- To study on biodiversity and conservation of biodiversity
- To know about natural resources and non-renewable resources

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge on ion selective electrodes, solid membrane electrodes and glass electrodes and principles of amperometric titrations.
CO2	To learn general principles and classifications of chromatographic separations and applications of TLC, GLC and HPLC.
CO3	To know about biodiversity, ecosystem diversity and conservation of biodiversity.
CO4	To acquire knowledge on natural resources related to food, water, mineral, energy and land.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2		1	-	1	1	2
CO2	3	-	2	3	-	2	1	-	2	1	1	1
CO3	3	3	2	2	1	2	-	1	-	-	1	2
CO4	3	3	2	2	2	2	1	1	-	1	1	1

CHE 204-A: General Chemistry II

UNIT-I: ELECTRO ANALYTICAL METHODS

Theory of potentiometry, calculation electrode potential at the equivalence. Finding of equivalence volume, derivative and linear titration plots. Ion-sensitive electrodes –types of ion sensitive electrodes – metal based cation and anion sensitive electrodes, solid membrane electrodes, glass electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes, Amperometric titrations - Anodic stripping voltammetry, chronoamperometry, chronopotentiometry, Cyclic Voltammetry, Differential Pulse Polarography, linear sweep voltammetry, square wave voltammetry.

UNIT-II: CHROMATOGRAPHY

General principles and classifications of chromatographic separations

Thin layer chromatography: Classification, principle, experimental technique, sample application, development of plate, retardation factor.

Gas liquid chromatography: Gas liquid chromatography - instrumentation (columns and detectors), retention time and retention volume. Chromatographic behaviour of solutes, column efficiency and resolution, column processes and band broadening, time of analysis and resolution, Van-Deemter equation.

High performance liquid chromatography: Theory and instrumentation-column performance, gradient elution, delivery system, sample introduction, separation columns, detectors and applications of HPLC.

Unit – III : Biodiversity

Conservation introduction definition genetic species and ecosystem diversity, hot spots of biodiversity, threats to biodiversity habitat loss poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India, conservation of biodiversity in – situ an ex-situ conservation of biodiversity.

Unit – IV Natural resources and non-renewable resources

An overview of natural resources and associated problems with references to a) Forest resources b) Water resources c) Mineral resources d) Food resources e) Energy resources f) Land resources.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A.Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery J. Bassett, J. Mendham and R.C. Denny. Vogel"s Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (McGraw Hill).
5. D. Midgley and K. Torrance : potentiometric Water Analysis (John Wiley).
6. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.

CHE 204B	Chemistry in Contemporary Society	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To know about quality control and impurities in Pharmaceuticals.
- To have an idea on body fluids, blood, enzymes and forensic.
- To gain knowledge on composition of milk, oil, fats etc.
- To familiarize with different types of fuels, soils and its ingredients.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in pharmaceutical chemicals
CO2	To familiarize with blood fluids, blood, enzymes and forensic
CO3	To know about fermentation, detection of purity, beverages
CO4	To acquire knowledge on gaseous fuels, soil ingredients and analysis of trace elements

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	2	2	-	1	1
CO2	3	1	2	3	1	2	1	-	2	2	1	-
CO3	3	2	2	3	1	2	2	1	-	2	1	1
CO4	3	2	3	2	1	2	1	2	-	1	1	1

CHE 204B: Chemistry in Contemporary Society

UNIT – I : PHARMACEUTICALS 15 Hrs

Pharmaceuticals : Importance of quality control, drugs and pharmaceuticals, sources of impurities in pharmaceutical chemicals, analytical quality control in finished / final products, common methods of assay.

Common drugs and their uses: Analgesics – aspirin, paracetamol; Antheimentics – mebendazole ; Antiallergies – chlorpenneramine malleate; Antibiotics-pencillin, chloromecytin; Anti-inflammatory agents-oxyphenbutazone; **Antimalarials** – primaquine phosphate; Antituberculosists – INH; Narcotics – nicotine, morphine; Expectorants – Benadryl; Sedatives – diazepam; Vitamins – B**1**, B**2**, B**6**, niacin and folic acid.

UNIT – II : FORENSIC AND BIOMEDICALS **15 Hrs**

Body fluids: Composition and detection of abnormal level of certain constituents leading to diagnosis, sample collection and preservation of physiological fluids, analytical methods for the constituents of physiological fluids (blood, urine).

Blood: Estimation of glucose, cholesterol, urea, haemoglobin and bilirubin.

Urine: Urea, uric acid, creatinine, calcium phosphate, sodium, potassium and chloride.

Enzymes: Biological significance, assay of enzymes (pepsin, tyrasinase), vitamins (thiamine ascorbic acid, vitamin A) and harmones (progesterone, oxytocin, insulin), chemical, instrumental and biological assays to be discussed wherever necessary.

Forensic : General discussion of poisons with special reference to mode of action of cyanide organophosphates and snake venom, poisonous materials such as lead, mercury and arsenic in biological materials.

UNIT – III : FOOD AND BEVERAGES **15 Hrs**

Milk and milk products : Composition, alcohol test, fermentation, dye reduction-methylene blue and resazurin tests, analysis of fat content, minerals in milk and butter, estimation of added water in milk.

Oils and fats: General composition of edible oils, detection of purity, tests for common edible oils and groundnut oil, cottonseed oil and mustard oil, tests for adulterants like argemone oil and mineral oils,

Beverages: Soft drinks, alcoholic drinks, tea, coffee and fruit juice, analysis of caffeine in coffee and tea, detection of chicory in coffee, chloral hydrate in toddy, food preservatives like benzoates, propionates, sorbates, bisulphites, artificial sweetners, like saccharin, dulcin and sodium cyclamate, flavours – vanillin, esters (fruit flavours) and monosodium glutamate, artificial food colourants-coal tar dyes and non-permitted colours and metallic salts, control of food quality – codex alimentarices, Indian standards.

UNIT – IV : FUEL AND SOIL **15 Hrs**

Fuels : Definition, classification and characteristics of fuels, sampling, determination of calorific value. Liquid fuels-determination of flash point, fire point, aniline point. Knocking of petrol and diesel – octane and cetere numbers carbon residue. **Gaseous fuels** : Coal gas, waste gas, producer gas, gober gas and blast furnace gas, calorific value determination by Junker's gas calorimeter, relatice merits of solid, liquid and gaseous fules. **Soil** : Ingradiants of soil-organic matter, nitrogen, sulphur, sodium, potassium and calcium, analysis of trace elements, copper, molybdenum, zinc and boron.

Reference Books :

1. Pharmaceutical Analysis, T. Higuchi and E.B. Hanseen, John Wiley and Sons, New York.

2. Quantitative Analysis of drugs, P.D. Sethi, 3rd edition, CBS Publishers, New Delhi, 1997.
3. Practical Clinical biochemistry methods and interpretations, R. Chawala, J.P. Brothers Medical Publishers (P) Ltd., 1995.
4. Laboratory manual in biochemistry, J. Jayaraman. New Age International Publishers, New Delhi, 1981.

CHE 205 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Separation and determination of the two component mixtures
- Preparation of metal complexes
- Familiarize with conductometric, potentiometric and redox methods of analysis
- colorometric and pHmetric methods of analysis

Course Outcomes: At the end of the course, the student will be able

CO1	To separate and determine the two component mixtures
CO2	To acquire knowledge in the preparation of metal complexes
CO3	To study the determination of cell constant and verification of Onsagar equation, strength of strong acid by Titration of a strong acid with a strong base and vice versa
CO4	To get knowledge on the applications of conductometry, potentiometry, coulometry and pHmetry.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	2	2	3	3	1	1	2	-	1	1	-
CO4	3	2	2	3	2	-	1	-	1	1	-	2

CHE 205 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 205 A : Core practical I: Inorganic Chemistry

I . Quantitative Analysis:

Separation and determination of two component mixtures:

(i) Separation of Al(III) and Determination of Fe (III)

(ii) Separation of Cu(II) and Determination of Zn (II)

(iii) Separation of Ca(II) and Determination of Mg (II)

(iv) Separation of Cu(II) and Determination of Ni (II)

(v) Determination of Ferrocyanide and Ferricyanide

CHE 205 B: Core practical I: Physical Chemistry

1. Conductometry:
   (a) Determination of cell constant
   (b) Verification of Onsagar equation
   (c) Determination of dissociation constant of a weak acid
   (d) Titration of a strong acid with a strong base
   (e) Titration of a weak acid with a strong base
2. Potentiometry:
   (a) Titration of a strong acid with a strong base
   (b) Titration of a weak acid with a strong base
   (c) Redox titration
3. Coulometry: Estimation of Manganese
4. pHmetry: Strong acid, Strong base titrations.

CHE 206A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Familiarize with two component mixture separation and identification.
- Preparation of derivatives.
- Purification by components by different methods.
- Calibration of products by spectral methods.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with binary mixture separation
CO2	To gain hands-on-experience in purification of the components, preparation of derivatives.
CO3	To get knowledge about the chemical behavior of different components and mechanisms
CO4	Purification and calibration of data

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	1	-	3	3	1

CO3	3	2	2	3	1	1	2	1	-	2	-	2
CO4	3	2	2	3	1	2		1	1	2	1	2

CHE 206 A & B: Core practical I: Organic & General Chemistry

CHE-206 A : PRACTICAL – I : ORGANIC CHEMISTRY

Separation and Identification of two component organic mixture by systematic qualitative analysis.

1.Acid + Neutral 2. Base + Neutral 3. Phenol + Neutral 4. Ether insoluable component + acid / phenol / base.

CHE-206 B : PRACTICAL – I : GENERAL CHEMISTRY

Preparation of Metal Complexes:

(i) Tetra(ammine) copper (II) sulphate.

(ii) Mercury tetra(thiocyanato) cobaltate(II).

(iii) Hexa(ammine) Nickel (II) chloride.

(iv) Tris(acetylacetonato) Manganese (III) chloride.

(v) Tris (ethylenediammine) Nickel (II) thiosulpha

CHE 207	Human Values and professional ethics-II	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Human Values and professional ethics

Course Objectives:

- Gain knowledge on value education, family values and adjustability
- Develop ethics towards medical, health care professionals and ethical issues in genetic engineering
- Understand the importance of social ethics towards organ trade, human traffic king human rights violation and social disparities.
- Know about environmental ethics, ecological crises, pollution and protection of environment

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the concepts of human values, responsibilities of family values and status of women in family and society.
CO2	To acquire knowledge on different medical ethics the views of charaka and sushruta on moral responsibilities of medical practitioners.
CO3	To gain knowledge on social ethics and understand the characteristics of ethical problems in management.
CO4	To familiarize environmental ethics, ethical theory and ecological crisis.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	1	2	2	2	3	1	1	1

CO4	3	1	1	3	1	2	1	1	2	3	1	1

CHE 207: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS-II)

Chapter I: Value Education – Definition – Relevance to present day – Concept of human values - Self introspection – Self-esteem. Family values-Components, Structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Chapter II: Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical

obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problem of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Chapter III: Social ethics – Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy. Ethics of media – Impact of Newspapers, Television, Movies and Internet, Business ethics – Ethical standards of business – Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, Ethical abuses and work ethics.

Chapter IV: Environmental ethics – Ethical theory, man and nature - Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and pollution, Justice and environmental health.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. Management Ethics – Integrity at work by Joseph A. Petrick and John F. Quinn, Response Books, New Delhi.
4. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
10. Sasruta Samhita: Tr. KavirajKunjanlal, KunjanlalBrishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.

13. Text Book for Intermediate First Year Ethics and Human Values, Board of Intermediate Eduction – Telugu Academy, Hyderabad.
14. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Core Theory)

CHE-OC-301	Organic Chemistry III	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives: Course Objectives:

- Familiarize with the applications of different reagents in organic synthesis, Mechanisms and stereochemistry.
- Study the methods of preparation and applications of organometallic reagents.
- Understand topocity, prochirality, auxillary and reagent-controlled methods in asymmetric synthesis.
- Applications of different oxidizing and reducing agents in organic synthesis with region and stereo controlled products.

Course Outcomes: At the end of the course, the student will be able to

CO1	To familiarize with the specific functions of the reagents particularly diazomethane, N-bromosuccinimide, Ziegler Natta catalyst, 1,3-dithianes and Merrifield resin in the synthesis of a variety of complex molecules.
CO2	To gain knowledge in the synthesis of different organometallic reagents and also stereo and regio specificity and selectivity of reactions with organometallic reagents
CO3	To understand diastereoselectivity, stereoselectivity and substrate controlled auxillary controlled reactions
CO4	To acquire knowledge about the reagents which causes oxidation in various compounds and also the reagents that causes selective and complete reductions to synthesize various compounds.

Mapping of course outcomes with the program outcomes

CHE-OC-301 Core-Theory Organic Chemistry III

UNIT I: REAGENTS IN ORGANIC SYNTHESIS 15 Hrs

Use of the following reagents in organic synthesis: Anhydrous $AlCl_3$, Boran trifluoride,

N-Bromosuccinimide, Diazomethane, Dicyclohexylcarbodiimide, Lead tetraacetate, Zieglar-Natta catalysts, DDQ, Dithianes, Merrifield resin.

UNIT-II: ORGANOMETALLIC REAGENTS **15 Hrs**

Synthesis and applications of Grignard reagents, Organolithium, Zinc, Copper, Mercury, Palladium and Rhodium compounds in Organic Synthesis, Homogeneous catalytic hydrogenation and hydroformylation reactions

UNIT III: ASYMMETRIC SYNTHESIS **15 Hrs**

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT IV: METHODS OF ORGANIC SYNTHESIS **15 Hrs**

i). ***Oxidations:*** **(a)** Alcohols to carbonyls-Chromium (iv) oxidants-Dimethylsulfoxide oxidation, periodate xidation, Oppenauer oxidation, oxidation with manganese dioxide, oxidation with silver carbonate **(b)** Alkenes to epoxides-peroxide induced epoxidations. **(c)** Alkenes to diols-oxidation with potassium permanaganate, osmium tetraoxide, Prevost reaction **(d)** Ketones to esters-Bayer-Villiger oxidation **(e)** Oxidative bond cleavage-cleavage of alkenes by transition metals. **(f)** Oxidation of alkyl or alkenyl fragments-selenium dioxide and chromium trioxide oxidations.

ii). ***Reductions*** **:** Reduction with lithium aluminium hydride, sodium borohydride, alkoxides, bis-methoxy ethoxy aluminium hydride, Boran aluminium hydride and derivatives-catalytic,hydrogenation-dissolving metal reductions, Non-Metallic reducing agents including enzymatic and microbial reductions.

Suggested Books

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry, C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Name reactions and reagents in organic synthesis, B.P. Muway and M.G Ellord, John Wiley.
6. Principles of Organic Synthesis, R.O.C Norman and J.M Coxon, Blackie Academic & Professional.

7. Reaction Mechanism in Organic Chemistry, P.S. Kalsi, New Age International.
8. Principles of organometallic chemistry, P. Powell, ELBS.
9. Organo transition metal chemistry-Applications to organic synthesis, S.G. Davis, Pergmon.
10. Stereochemistry to Organic Compounds, D. Nasipuri, New Age International.
11. Stereochemistry, P.S. Kalsi, Wiley Eastern.

(Core Theory)

CHE-OC 302	**Organic Spectroscopy and Applications**	**L-5,T-1,P-0**	**4 Credits**

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands
- Study on the applications of NMR spectroscopy in ascertaining the stereochemical structures of the molecules.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	To get experience to calculate λ max values for dienes, enones, polyenes, aromatic and heteroaromatic compounds.
CO2	To familiarize with the absorption bands of the molecules with specific functional groups
CO3	To interpret the data to different types of protons and carbons present in a molecule so as to ascertain the structure of the molecule based on the data provided
CO4	To acquire knowledge about specific fragmentation rules of different molecules which are unique.

Mapping of course outcomes with the program outcomes

CHE 302: CORE THEORY: ORGANIC SPECTROSCOPY AND APPLICATIONS

UNIT-I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY: 15Hrs

Various electronic transitions (185-800 nm), effect of solvent on electronic transitions, ultraviolet bands

for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fisher-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.

UNIT – II: INFRARED SPECTROSCOPY 15Hrs

Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance, FT-IR

UNIT –III: NMR SPECTROSCOPY: 15Hrs

^{1}H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and nonequivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants.

Applications of ^{1}H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations and carbanions), E, Z isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Stereochemistry, hindered rotation, Karplus curve variation of coupling constant with dihedral angle. Simplification of complex spectra, nuclear magnetic double resonance, contact shift reagents, nuclear Overhauser effect (NOE).

^{13}C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimensional NMR spectroscopy-COSY.

UNIT-IV: MASS SPECTROMETRY 15Hrs

Introduction, ion production, type of ionization, EI, CI, FD, and FAB-factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular-ion peak, metastable peak, Mc. Lafferty rearrangement. Nitrogen rule, isotope labeling. High resolution mass spectrometry, Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS
2. Spectroscopy of organic compounds, RM Silversteen and others, 5th Ed,John Wiley
3. Spectroscopy of organic compounds, P.S. Kalsi, Wiley, 1993.
4. NMR in chemistry-A multi nuclear introduction, William Kemp, Mc Millan, 1986.
5. Spectroscopic methods in Organic chemistry, DH Williams & I Flemmi

(Mandatory Core)

CHE-OC-303A	Inorganic Spectroscopy and Thermal Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Basic Inorganic Spectroscopy and Thermal Methods of Analysis

Course Objectives:

- Gain knowledge on thermal methods of analysis and principles and applications to inorganic materials.
- Familiarize with basics of Mossbauer and NQR spectroscopy.
- Learn the properties like g-factor, nuclear spin, hyperfine coupling constants
- Study the ESR instrumentation, various applications and photoelectron spectroscopy.

Course Outcomes : At the end of the course, the student will be able

CO1	To know the basic principles of instrumental methods of analysis.
CO2	To gain knowledge on chemistry of alloys.
CO3	To Understand the complexity, theory and working principle of colourimetry
CO4	To familiarize with laws of colorimetric titrations.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	3	-	2	3	2	-	1	1	-
CO2	3	2	2	3	2	2	3	2	2	1	-	2
CO3	3	1	-	3	-	2	-	2	1	-	1	-
CO4	3	2	2	3	2	-	1	2	-	1	-	2

CHE-OC- 303A: Inorganic Spectroscopy and Thermal Methods of Analysis

UNIT –I: THERMAL METHODS OF ANALYSIS 15 Hrs

Thermo gravimetry –Principle, Factors affecting the results, instrumentation. Application with special reference to $CuSO_4 5H_2O$, $CaC_2O_4\ 2H_2O$. Different thermal analysis – principle, instrumentation, difference between TG and DTA, applications with special reference to the clays and minerals.Different scanning calorimetry –principle, and applications to inorganic materials like chlorates and perchlorates, ammonium nitrate.

UNIT –II: MOSSBAUER SPECTROSCOPY and NQR 15 Hrs

Mossbauer spectroscopy: Basic principles, Recoil energy, Doppler shift, Chemical shift, Quadrapole effects, Magnetic effects. Instrumentation, spectral parameters and spectrum display.

Aapplication of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds,

(2) Sn^{2+} and Sn^{4+} compounds.

NQR spectroscopy: Basic principles of NQR spectroscopy, quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant and applications.

UNIT –III: ELECTRON SPIN RESONANCE SPECTROSCOPY 15 Hrs

Basic Principles, Hyper fine splitting, Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, Hamiltonian and spin densities. Zero field splitting and Kramer's degeneracy, Relaxation process and line widths. Instrumentation and Applications.The EPR spectrum of bis(salicylidimine)-copper(II) complex, study of inorganic free radicals, biological applications of Electron Spin Resonance (Study of free radicals and Iron-sulfur proteins)

UNIT –IV: PHOTO ELECTRON SPECTROSCOPY 15 Hrs

Photoelectric effect, Koopmans's theorem, ionization energy.

X-ray photoelectron spectroscopy (ESCA): Principle, Binding energies, Chemical shift, Applications of XPES to Qualitative analysis, to surface studies and structural analysis. Ultraviolet photoelectron spectroscopy- Principle, application of UPES in studying the molecular orbitals of O_2 and N_2 molecules. Block diagram of photoelectron spectrophotometer. Sources of radiation, detectors. Auger spectra – Principle, Applications of Auger spectra to surface studies and use of Auger spectra as a finger print tool.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. J.E. Huheey, E.A. Keiter and R.L. Keiter: Inorganic Chemsitry, Principles of Structure and Reactivity (4th Ed.) (Addison-Wesley)
3. Gary Wulfsberg: Inorganic Chemistry (5th Ed. (Viva Books)
4. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
5. W.L. Jolly: Modern Inorganic Chemsitry (McGraw-Hill)
6. R.L. Carlin: Magneto-chemsitry (Springer-Verlag)
7. R.L. Dutta and A. Syamal: Elements of Magnetochemsitry (Affiliate East-West).
8. K. Hussain Reddy – Text book of Bioinorganic chemistry

CHE-OC- 303B	Physical Chemistry III	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Physical Chemistry

Course Objectives:

- Learn applications of Group Theory, symmetry criteria and symmetry restrictions.
- Applications of X-ray Diffraction and Electron Diffraction on solid state chemistry.
- Familiarize with the applications of Microwave spectroscopy, infrared spectroscopy and Raman spectroscopy.
- Get knowledge on concept of Thermodynamics of polymer dissolution and Flory-Huggins theory of polymer solutions.

Course Outcomes: At the end of the course, the student will be able to

CO1	To know the determination of Character Co-ordinate of C_2V point group based on 3N Coordinates and to learn the Mutual exclusion Principle.
CO2	To learn the Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals.
CO3	To study the rigid rotator model, stark effect, vibration-rotation spectroscopy, PQR branches, selection rules and Vibrational- rotational Raman spectroscopy.
CO4	To study the concepts on heat of dissolution, regular solution theory, Hildebrand solubility parameter, concept of Flory-Huggins theory of polymer solutions

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	2	1	2	-

CO3	3	2	2	3	2	2	1	1	2	-	1	2
CO4	3	2	2	3	-	2	1	-	1	2	1	2

CHE-AC-303B CORE-THEORY PHYSICAL CHEMISTRY III

UNIT-I Applications of Group Theory **15 Hrs**

Construction of reducible and irreducible representations, Determination of Character Co-ordinate of C_2V point group based on 3N Coordinates. Standard reduction formula, Determination of normal modes of vibrations of SO_2, NH_3, $POCl_3$, $PtCl_4^{2-}$, H_2O_2 molecules. Mutual exclusion Principle, Direct Product, Accidental Degeneracy and Fermi resonance Group Theory and Spectroscopy: IR Spectral activity of NH_3 molecule, selection rules, symmetry Criteria for optical activity, symmetry restrictions on dipole moments, symmetry and stereo isomerism. Prediction of IR and Raman Spectral activity of H_2O and CO_2.

UNIT-II: X-ray Diffraction: **15 Hrs**

(A) Solid State Chemistry Dislocation of Solids, Schottky and Frenkeldefects, insulaters, a,d semiconductors, Band theory of solids,solid state reactions.

(B) Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals. Index reflections, identification of unit cells from systematic absences in diffraction pattern- structure of simple lattices and X-ray intensities- structure factor and its relation to intensity and electron density- Description of procedure for X-ray structure analysis (NaCl and KCl)

(C) Electron Diffraction: Scattering intensity Vs scattering angle, Wierlequation, and its importance. Measurement techniques, Elucidation of structures of simple gas phase molecules, Low energy electron diffraction (LEED) for the study of surfaces.

UNIT-III: SPECTROSCOPHY **15 Hrs**

Microwave spectroscopy: classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, intensities- stark effect.

Infrared spectroscopy: Linear harmonic oscillator, zero point energy, anharmonity, Mores potential energy diagram, fundamental and overtone transitions, hot bands and combinations bands. Vibration-rotation spectroscopy, PQR branches, selection rules, factors affecting the band positions and intensities for IR region. **Raman spectroscopy:** Classical and quantum theories of Raman effect, pure rotational, pure vibrational Raman spectroscopy, selection rules, mutual exclusion principle, resonance Raman spectroscopy and coherent antistokes Raman spectroscopy. Vibrational- rotational Raman spectroscopy.

UNIT-IV: POLYMER SOLUTIONS **15 Hrs**

Thermodynamics of polymer dissolution, effect of molecular weight on solubility, solubility of crystalline and amorphous polymer, heat of dissolution, regular solution theory, Hildebrand solubility parameter, Flory-Huggins theory of polymer solutions, conformational entropy, osmotic pressure and viscosity of polymer solutions. Molecular weight determination by light scattering, ultra-centrifugation and sedimentation equilibrium method. Liquid Crystals- synthesis and applications

Books Suggested

1. F.A. Cotton : Introduction to Group theory for chemists.
2. Geroge Davidson Elsevier : Introductory Group Theory for Chemists.
3. Gurdeep Raj , Ajay Bhagi&Vinod Jain : Group Theory and Symmetry in Chemistry
4. Instrumental methods of analysis – M.H. Willard, Meritt Jr. and J.A. Dean
5. Principles of instrumental analysis – Skoog and West

6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.
7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar.: polymer Science. New Age international Publishers.

CHE OC 304	Core practical I: Organic Estimations - Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Organic Chemistry - Practical.

Course Objectives:

- Estimation of phenol
- Estimation of glucose
- Estimation and percentage purity of aspirin
- Estimation and percentage purity of paracetamol

Course Outcomes: At the end of the course, the student will be able

CO1	To gain knowledge about the estimation/percent purity of different organic molecules.
CO2	To get hands-on-experience with the synthesis and determination of concentrations and purity.
CO3	To acquire knowledge in handling of toxic chemicals in estimation process.
CO4	To gain experience in the calculating the percentage purity.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3	3	2	2	3	2	1	-	2	2	1	-	2
CO4	3	2	2	3	2	-	1	2	1	2	-	2

CHE : OC : 304 : Practicals (Core & Gen.) Organic Estimations

1) Estimation of phenol
2) Estimation of glucose
3) Estimation of percentage purity of aspirin
4) Estimation of percentage purity of paracetamol.

CHE OC 305A	Chemotherapy and Drug Analysis	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Chemotherapy and Drug Analysis

Course Objectives:

- Gain knowledge on chemotherapy and analysis of drugs.
- Analysis of drugs chemically and biologically.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the classification and synthesis of drugs.
CO2	To familiarize with the qualitative and quantitative analysis of drugs.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	2	-	2	3	2	2	-	1	1
CO2	3	2	2	3	2	2	2	2	-	1	-	2
CO3												
CO4												

CHE OC 305A: (SKILL ORIENTED COURSE : THEORY) : CHEMOTHEROPY AND DRUG ANALYSIS

UNIT-I: Chemotherapy

Definition, History, and Evolution of Chemotherapy; Discovery, Classification, Nomenclature, Mode of action and synthesis of the following classes of compounds with special references to specific drugs mentioned under each class

a) Sulfa drugs- Sulfanilamide and Sulfamethoxazole.
b) Antibacterials
c) Lactum group of antibiotics – Penicillin, Ampicillin and Amoxycillin.
d) Cephalosporin-C and Ciprofloxacin.
e) Anticancer drugs – 5-Flurouracil, Methotrexate.
f) Antifungals – Griseofulvin
g) Antimalarials – Chloroquin

UNIT-II: Chemical and Biochemical analysis of Drugs

Qualitative and Quantitative Analysis of drugs: Uses of IR, UV, GLC and HPLC methods.

Drug Assay by Biochemical Analysis – ELISA (Cortisol, alcohol, opiates).

Radio Immuno Assay (RIA) – Enalapril, Insulin; Kidney, Lungs and Liver function tests; Use of isotopes in the Bioanalysis of drugs and in drug design programmes.

Book Suggested

1. Medicinal Chemistry and Pharmaceutical Chemistry – Harikishan Singh and Kapur
2. Medicinal Chemistry and Biochemistry – R.L.Nath
3. Introduction to Medicinal Chemistry – Patrick
4. The Organic Chemistry of Drug Synthesis Vols. 1-6 - Ledneicer Top drugs top synthetic routes – John Saunders
5. Medicinal Chemistry – Ashutoshkar
6. Synthetic Organic Chemistry and Drugs – Gurideep R Chetwal
7. Biochemistry – Harper, Conn & Stumpf, Lehninger
8. Biochemistry – Western Jodd
9. Biochemistry – Cann & Stumpf
10. Bergers Medicinal Chemistry Vols. 1-5 – Manfred E. Wolf
11. Introduction to drug design – Siverman
12. Biochemical approach to Medicinal Chemistry – Thomas Nogrady
13. Prinicples of Medicinal chemistry – William Foye
14. Text book of organic medicinal and pharmaceutical chemistry – Delgrado and William A
15. Industrial Microbiology – Casida

CHE OC 305B	Multistep perparations	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding the theory behind multistep preparations Practical

Course Objectives:

- Multistep preparations of biologically important organic molecules.
- Familiarize to identify the synthesized compounds by spectral methods.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in handling of toxic chemicals in multistep preparation of biologically important molecules in good percentage of yield.
CO2	To gain experience in the proposal of synthetic routes to functionalized derivatives.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3												
CO4												

CHE : OC: 305 (B) : Practicals (Skill Oriented Course) : Multistep preparations

1) Preparation of benzilic acid
2) Preparation of benzanilide
3) Preparation of o-chlorobenzoic acid
4) Preparation of symmetric tribromobenzene

CHE OC 306	Spectral Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral Techniques

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands.
- Study on the applications of flame atomic absorption spectroscopy.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy.

Course Outcomes: At the end of the course, the student will able

CO1	To know the basic principles of spectroscopy.
CO2	To familiarize with the analysis of various functional groups by using different spectroscopic techniques.
CO3	To Understand the applications of AAS.
CO4	To gain knowledge about Mass spectral fragmentation of organic compounds and common functional groups.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CHE : OC : 306(A): (OPEN ELECTIVE) SPECTRAL TECHNIQUES

UNIT – I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY 15 Hrs

Various electronic transitions (185-800nm.), Beer-Lambert Law, effect of solvent on electronic transitions , ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, Fieser-Woodward rules for conjugated dienes and carbonyl compounds

UNIT – II : INFRARED SPECTROSCOPY 15 Hrs

Instrumentation and sample handling, characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines, ketones, aldehydes, esters, amides, acids and anhydrides. Effect of hydrogen bonding.

UNIT – III:ATOMIC ABSORPTION SPECTROSCOPY: FLAME AAS: 15 Hrs

Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT –IV: MASS SPECTROMETRY 15 Hrs

Principle, instrumentation, different methods of ionization, EI, CI, FD and FAB, Mass spectra-molecular ion, base peak, meta-stable peak, nitrogen rule and Mc Lafferty rearrangement. Mass spectral fragmentation of organic compounds and common functional groups. Normal and branched alkanes, alkenes, cycloalkanes, benzene and its derivatives, alcohols and phenols, ethers, aldehydes and ketones, carboxylic acids and their derivatives , amines and nitro compounds. Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books Suggested:

1. Organic spectroscopy, W.Kemp 5th Ed, ELBS .2.
2. Spectroscopy of organic compounds, RM Silversteen and others 5th Ed, John Wiley 1991
3. Spectroscopy of organic compounds, PS Kalsi, Wiley, 1993
4. NMR in chemistry – A Multi nuclear introduction, William Kemp, Mc Millan 1986
5. Spectroscopic methods in Organic Chemistry, DH Williams & I Flemmi TMH . 2005

CHE OC 306	Chromatographic Techniques	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chromatographic Techniques

Course Objectives:

- Familiarize with Classification of Chromatographic methods.
- Understand Demonstration experiment in TLC.
- Study on the applications of High-Performance Liquid Chromatography (HPLC).
- Understand the working principle of gas chromatography.

Course Outcomes: At the end of the course, the student will able to

CO1	To know the stationary and mobile phases in chromatographic techniques.
CO2	To familiarize applications of different chromatographic methods.
CO3	To Understand the principle of chromatographic techniques.
CO4	To gain knowledge on the normal phase and reverse phase.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	-	3		2	3	2	-	-	1	-
CO2	3	2	2	3	2	2	3	2	-	1	-	2
CO3	3	2	-	2	2		2	-	-	-	1	-
CO4	3	2	2	3	-	2		-	-	1	-	2

CHE OC 306 : Chromatographic Techniques

Unit –I: Introduction - Classification of Chromatographic methods – Column chromatography-Adsorption phenomenon: Nature of adsorbents-Solvent systems-Differential migration-Separation of mixture of o-/p-nitro anilines (A demonstration experiment).

Unit –II: Thin-Layer Chromatography (TLC)-Coating materials and preparation of TLC plates-Solvents for development-Detection of compounds in TLC- R_f values in TLC-Applications of TLC in chemistry-Preparative TLC – Demonstration experiment in TLC.

Unit –III: High-Performance Liquid Chromatography (HPLC) - Application of HPLC- HPLC instrument-Stationary phases in HPLC-Normal and reversed phase HPLC: A comparison- Normal phase HPLC: Principle-Retention times in Normal and reversed phase HPLC- Reversed phase HPLC: Principle.

Unit –IV: Gas-Liquid Chromatography- Instruments for Gas-Liquid Chromatography- Gas-Chromatographic Columns and the Stationary Phase- Application of Gas-Liquid Chromatography- Gas-

Solid Chromatography.

Reference Books:

2. . Analytical chemistry: Skoog West Holler.
3. Modern Analytical Chemistry : David Harvey DePauw University.
4. J.G. Dick. Analytical Chemistry, Mc Grraw Hill, New Delhi, (1973).

(Mandatory Core)

CHE-OC- 401	Organic synthesis I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Organic synthesis

Course Objectives:

- Acquire knowledge in the applications of Boron, Phosphorus, Sulfur and Silicon reagents in organic synthesis and their special behavior.
- Study photochemical reactions of olefins, carbonyl compounds, aromatic compounds, rearrangements and stereochemistry of the products.
- Understand the concept of pericyclic reactions, determination of allowed and forbidden transitions and prediction of stereochemistry of the products.
- Study different polymer reactions, Stereospecific polymers, Thermoplastics, Fibers, Elastomers and Ion exchange resins.

Course Outcomes : At the end of the course, the student will be able to

CO1	Familiarize with the unique reactivity of Boron, Phosphorus, Sulfur and Silicon reagents
CO2	Learn about photolytic reactions of carbonyl compounds, conjugated carbonyl derivatives, olefins, conjugated dienes CO_3:To gain knowledge in the determination of allowed or forbidden of chemical reactions *viz*., cycloaddition and
CO3	Learn the methods of preparation, properties, and industrial applications of various addition and condensation
CO4	Familiarize with the unique reactivity of Boron, Phosphorus, Sulfur and Silicon reagents

Mapping of course outcomes with the program outcomes

CHE OC-401: CORE THEORY: ORGANIC SYNTHESIS-I

UNIT-I: Chemistry of Organo Boran, Phophorus, Sulfur and Silicon reagents 15Hrs

Electronic structure and bonding in Boron, Phosphorus, Sulphur and Silicon compounds-Their reactivity and applications in Organic Synthesis.

Boron Reagents-Hydroboration-Organoboranes in the formation of C-C bonds, alcohols, amines, halogen and carbonyl compounds-Free radical reactions of organoboranes.

Phosphorus Reagents- Formation of carbon-carbon double bonds-Functional group transformations –

deoxygenation reactions-reactivity as electrophiles- conversitoon of alcohols to alkyl halides, Witting reaction and nucleophiles - Corey-Winters reaction, Michaelis-Arbusov reaction-Perkow reaction and Mitsnobu reaction.

Sulphur Reagents- Sulphur ylides, stabilized and non-stabilized – Preparation and reactivity Pummerer reaction – sulphonyl carbanions-Julia reaction

Silicon reagents-Peterson's olefination, influence of trialkyl silyl reagents in electrophilic reactions, aryl silanes, alkenyl silanes, alkynyl silanes, allyl silanes.

UNIT-II: PHOTOCHEMISTRY 15Hr

Photochemical energy, photochemical excitations, Franck-Condon principle, electronic transitions, Jablonski diagram, singlet and triplet states, energy transfer in photochemical reactions - photosensitization reactions and quantum yield.

Photochemistry of carbonyl compounds - Norrish Type-I and Norrish Type-II reactions, Photo Reduction and Paterno-Buchi reaction. Photochemistry of α,β-unsaturated ketones, enones, dienones and p-benzoquinones.

Photochemistry of unsaturated systems (olefins), cis-trans isomerization and dimerization reactions, Photochemistry of conjugated dienes - 1,3-butadiene, aromatic compounds, Photoaddition (1,2- & 1,4-additions) and Photosubstitution reactions of benzene derivatives. Photo-Fries rearrangement and Barton reaction.

UNIT III: PERICYCLIC REACTIONS 15 Hrs

Molecular orbital symmetry, Frontier orbitals of ethylene, 1,3 butadiene, 1,3,5-hexatriene and allyl and pentadienyl system. Classification of pericyclic reactions. Woodward-Hoffmann correlation diagrams. FMO and PMO (Mobius Huckel) approach. Electrocyclic reactions-Conrotatory and disrotatory. 4n, 4n+2 and allyl systems. Cycloadditions-antarafacial and suprafacial additions, 4n and 4n+2 systems, 2+2 addition of ketene, 1,3 dipolar cycloadditions and cheleotropic reactions.

Sigmatropic rearrangements - Suprafacial and antarafacial shifts of H, Sigmatropic shifts involving carbon moieties, 3,3 and 5,5 Sigmatropic rearrangements. Claisen, Cope and Oxy-Cope rearrangements. Ene reaction

UNIT IV: SYNTHETHETIC POLYMERS 15 Hrs

Polymer Reactions-Addition and condensation polymerization processes- Bulk, Solution, Suspension

and Emulsion polymerization.

Stereospecific Polymers-Preparation and significance- classification of polymers based on physical properties-Thermoplastics-Thermosetting plastics-Fibers and elastomers- General applications.

Preparation of Polymers-Preparation of Polymers based on different types of monomers Industrial applications-olefin polymers-Diene polymers-nylons-Glyptal resins-Urea-formaldehyde, phenol-formaldehyde and melamine resins- Epoxy resins - Ion exchange resins.

(Mandatory Core)

CHE-OC 402	Organic Synthesis II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Organic Synthesis

Course Objectives:

- Use disconnection approach and retrosynthetic analysis and control of stereochemistry to design efficient multi-step syntheses involving different types of disconnection approaches
- Applications to synthesis complex naturally occurring compounds
- Familiarize with synthesis and pharmacological properties of antimalarials and antibiotics
- Understand structure and synthesis of proteins and nucleic acids

Course Outcomes: At the end of the course, the student will be able to

CO1	Familiarize with functionalization and interconversion of functional groups and the concept of organic synthesis by retrosynthetic approach.
CO2	Gain knowledge in the formulation of synthetic routes for naturally occurring drugs.
CO3	Understand quinoline, acridine and guanidine group of alkaloids as antimalarials and to familiarize with the role of functioning of broad spectrum antibiotics.
CO4	Acquire knowledge about the classification, properties, structure & conformation and biological functions of peptides/proteins.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	1	-	-	1	-	3
CO2	3	3	3	3	2	1	-	-	-	1	-	2
CO3	3	3	3	3	2	-	-	2	-	1	1	3
CO4	3	3	3	3	2	2	-	2	-	-	2	3

CHE OC-402: CORE THEORY: ORGANIC SYNTHESIS-II

UNIT-I: DESIGNING OF ORGANIC SYNTHESIS 15 Hrs

Disconnection Approach-Classification of organic reactions. Functionalisation and interconversion of functional groups, formation of carbon-carbon single and double bonds, general strategy, disconnection and synthon approach, retrosynthetic analysis, key intermediates and starting materials in designing a synthesis, linear and convergent synthesis, reconnections. The importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reactions, amine synthesis.

Protecting Groups-Principles of protection of alcohol, amine, carbonyl and carboxyl groups.

One Group C-C Disconnections-Alcohols and carbonyl compounds, regioselectivity. Alkene synthesis, use of acetylenic compounds in organic synthesis.

Two Group C-C Disconnections-Diels-Alder reaction, 1,3-difunctionalised compounds, unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds, Michael addition and Robinson annulation.

UNIT II: MULTI STEP SYNTHESIS 15 hrs

Multi step synthesis of some complex naturally occurring compounds involving through retrosynthetic analysis and control of stereochemistry, Longifolene, Taxol, Juvabione, Fediricamycine A.

UNIT III: ANTIMALARIALS AND ANTIBOTICS 15 hrs

Antimalarials: Synthesis and activity of Quinoline group – Quinine, Plasmoquine and Chloroquine – Acridine group – Quinacrine – Guanidine group – Paludrine.

Antibiotics: Synthesis and activity of Penicillin, Chloramphenicol and Streptomycin – Broad spectrum antibiotics – Tetracyclines, Novobiocin.

Chemotherapy: Structure – activity relationships.

UNIT-IV: BIOMOLECULES 15 Hrs

Peptides and Proteins-Methods of peptide synthesis, sequence determination, structure of oxytocin, proteins-classification, structure, conformation and properties. Nucleic acids- Nucleosides, Nucleotides, DNA and RNA, structure and conformations, replication, translation of genetic material, genetic code, gene expression, gene mutation, protein synthesis.

(Mandatory Core)

CHE-OC-403A	Heterocycles and Natural Products	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Heterocycles and Natural Products

Course Objectives:

- Familiarize with Hantzsch- Widmann nomenclature of Fused heterocycles. Synthesis and reactivity of five membered heterocycles with two hetero atoms
- Understand synthesis and reactivity of benzofused five membered and six membered heterocycles
- Gain knowledge on structural elucidation, synthesis and biosynthesis of steroids and hormones
- Familiarize with on structural elucidation, synthesis and biosynthesis of flavonoids and isoflavonoids

Course Outcomes: At the end of the course, the student will be able to

CO1	Familiarize with the synthetic routes of five membered heterocycles with two heteroatoms and to justify the site of
CO2	Acquire knowledge on the synthetic methodologies of benzofused and six membered heterocycles and the effect of
CO3	Familiarize with the structural elucidation and synthesis of naturally occurring steroids and hormones
CO4	Know about isolation, structural determination and synthesis of flavonoids and isoflavonoids.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	2	-	2	-	2	-	3

CO4	3	3	3	3	2	-	-	2	-	-	1	3

CHE : OC-403(A) : (GENERIC ELECTIVE): HETEROCYCLES AND NATURAL PRODUCTS

UNIT-I: NOMENCLATURE AND FIVE MEMBERED HETEROCYCLES 15 HRS

Systematic nomenclature (Hantzsch-Widman nomenclature) for fused and bridged heterocycles, Five membered heterocycles with two heteroatoms: Synthesis and reactions of pyrazole, imidazole, isoxazole, oxazole, isothiazole and thiazole

UNIT-II: BENZOFUSED FIVE MEMBERED AND SIX MEMBERED HETEROCYCLES

15 HRS

Benzofused five membered heterocycles: Synthesis and reactions of Benzopyrazoles, Benzimidazoles and Benzoxazoles

Six Membered heterocycles with two or more heteroatoms: Synthesis and reactions of diazines (pyridazine, pyrimidine & pyrazine) and triazines (1,2,3-, 1,2,4- 1,3,5- triazines)

UNIT-III: STEROIDS AND HORMONES 15 HRS

Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry. Isolation, structure determination and synthesis of Cholesterol (total synthesis not expected), Bile acids, Androsterone, Testosterone, Estrone, Progesterone. Biosynthesis of steroids.

UNIT-IV: FLAVONOIDS AND ISOFLAVONOIDS 15 Hrs

Occurrence, nomenclature and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Kaempferol, Quercetin, Butein, Daidzein, Biosynthesis of flavonoids and isoflavonoids: Acetate Pathway and Shikimic acid Pathway. Biological importance of flavonoids and isoflavonoids.

Reference Books:

8. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
9. Introduction to Flavonoids TA Geissman.

(Compulsory Foundation)

CHE-OC-403B	Bioinorganic, Bioorganic, Biophysical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Bioinorganic, Bioorganic, Biophysical Chemistry

Course Objectives:

- Highlighten metal complexes as oxygen carriers and electron transfer in biology.
- Metal ion transport and storage in biological systems and importance of trace metals in biology.
- Learn physiological functions of carbohydrates, lipids, enzymes classification, stereospecificity.
- The basic concepts of biophysical chemistry in biochemical reactions, exergonic and endergonic reactions.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain knowledge on metallo proteins in electron transfer processes.
CO2	Know the applications of trace metal ions and metal ions as chelating agents in medicine.
CO3	Achieve and develop highly stereoselective synthesis of organic compounds and drugs by adopting environmentally.
CO4	Understand thermodynamics of biopolymer reactions and to correlate free energy and biopolymer parameters.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	3	3	3	2	-	2	-	3
CO2	3	3	3	3	3	2	3	-	-	-	3	3
CO3	3	3	3	3	3	3	-	2	-	2	-	3
CO4	3	3	3	3	3	3	2	2	-	3	3	3

CHE AC-403(B): (GENERIC ELECTIVE): BIOINORGANIC, BIOORGANIC, BIOPHYSICAL CHEMISTRY

UNIT-I: **BIO-INORGANIC CHEMISTRY- I** **15 Hrs**

Metal complexes as oxygen carriers –Heme proteins –Hemoglobin and myoglobin –Non heme proteins –hemerythrin and hemocyanin – model synthetic complexes of iron, cobalt and copper.Co-enzymes Vitamin $B_{12,}$carboxy peptidase and superoxidedismutase.

Electron Transfer in Biology: Structure and functions of metalloproteins in electron transfer processes –catalase –peroxidose –cytochromes and iron –sulphur proteins –synthetic models.

UNIT – II: BIOINORGANIC CHEMISTRY- II: Metal ion transport and storage in biological systems**,** Metal ions in Biology, Molecular mechanism of ion transport across membranes: ionophores, photosynthesis.

Hydrolytic metalloenzymes: Carbonic anyhdrase, carboxy peptidase, calcium in control processes, calcium and muscle contraction, calcium and secretion, calcium in blood clotting mechanisms. Therapeutic uses of enzymes.

Importance of trace metals in biology: Metal ions as chelating agents in medicine, trace metal ions and metal and non-metal deficiency. Biological nitrogen fixation,in-vivo and in-vitro nitrogen fixation.

UNIT-III: BIOORGANIC CHEMISTRY

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition-Blood group substances

Lipids: Essential fatty acids-structure and function of triglycerols, Glycerophospholipids, cholesterol, bile acids prostaglandins- composition and functioning of lipoproteins

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

UNIT-IV: BIOPHYSICAL CHEMISTRY:

Standard free energy change in biochemical reactions, exergonic and endergonic reactions, hydrolysis of ATP, thermodynamics of biopolymer solutions, chain configuration of bio polymers, and calculation of average dimensions. Membrane equilibrium, ion transport through cell membrane. dialosis and its function. Structure and functions of proteins, enzymes, DNA and RNA in living systems, forces involved in bio polymer interactions, electrostatic forces, hydrophobic forces, molecular expansion, and dispersion forces.

Books Suggested

1. M.N. Hughes, The Inorganic chemistry of Biological Processes, John wiley and Sons, New York 2nd Edition, 1981.
2. A Text book of Biochemistry, A.V.S.S. Rama Rao
3. Physical chemistry by Atkenes
4. Physical chemistry by Albertz.
5. Bio physical chemistry by Van Holde

6. Bio Physics by Narayanam
7. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
8. Chemistry of Natural Products, P.S. Kalsi, Kalyani Publishers.
9. Chemistry of Organic Natural Products, O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
10. Natural products Chemistry K.B.G. Torssell, John Wiley, 1983.
11. Burger's Medicinal Chemistry, M.E. Wolff, John Wiley
12. Medicinal Chemistry, A. Kar, New Age International

CHE OC 404	Core practical I: Spectral Identification of Organic Compounds	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral identification of organic compounds

Course Objectives:

- Spectral identification of organic compounds by UV by calculating λ max values
- Identification of absorption bands by IR and ascertain to the functional groups
- Unambiguous assignment of structures by interpreting NMR values
- Predict the characteristic cleavage processes by Mass.

Course Outcomes: At the end of the course, the student will be able to

CO1	Calculate λ max values.
CO2	Ascertain functional groups.
CO3	Interpret the spectral data to the structure and stereochemistry of the molecules.
CO4	Analyse the fragmentation patern of the molecules.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE OC 403: PRACTICAL-I

Spectral identification of organic compounds by UV, IR, NMR (^{1}H & ^{13}C) & Mass spectroscopy.

DEMONSTRATION EXPERIMENTS

1 IR – Interpretation of IR spectrum of alcohols, ketones, aldehydes and other standard materials

2 AAS: Demonstration of AAS – Determination of Zn, Cd, Pb, Mn, Fe and Ni in effluents using AAS.

3 Spectrofluorimetry – estimation of quinine and fluoroscene

4 Ion selective electrodes – estimation of F^-, S^{2-} and CN^- in effluents using ion selective electrode meter.

5 Polarography and Anode stripping voltametry

(a) Polarography and Anode stripping voltametry – behavior of Cd, Zn, Pb in a mixture.

(b) Determination of Pb and Cd in samples using Anode stripping voltametr

6 Gas chromatography- Determination of pesticides

7 HPLC- Determination of pesticides

8 NMR

a). Demonstration of NMR spectrometer and study of hydrogen bonding in a given alcohol or phenol.

b). Interpretation of NMR chemical shifts of ethyl benzene, ethyl alcohol

9 TGA, DTA, DSC – Demonstration of TG, DTA and DSC and study of decomposition of calcium oxalate, calcium carbonate, copper sulfate, oxalic acid.

10 pH metry

a) Determination of alkalinity in a colored effluent using pH metric end point.

b) Determination of purity of commercial HCl, H_2SO_4, H_3PO_4 and CH_3COOH using pH metric end point

CHE OC 405	Practical II: Project Work	L-5,T-1,P-0	4 Credits

Pre-requisite: Organic Chemistry Project Work

Course Objectives:

- Identification of problem by literature survey
- Ability to carry out independently with competency in research design and synthesis
- Interpretation of spectral data to the structures of the molecules
- Communication of research results through presentations and preparation of dissertation

Course Outcomes: At the end of the course, the student will be able to

CO1	Identify the problem, to collect the literature and understanding parameters to design the problem.
CO2	Perform experiments to synthesize the molecules with desired stereochemistry adopting modern techniques.
CO3	Collect and interpretation of the data to the structures.
CO4	Presentation of the data in the form of dissertation.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	3	-	2	2	2	-	2	2	3

CO4	3	3	3	3	3	2	3	2	-	-	2	3

CHE OC 404: PRACTIAL II/ PROJECT WORK

CHE OC 406A	Drug Chemistry	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Drug Chemistry

Course Objectives:

- To learn about the natural products as leads for new drugs
- Determination of cardiovascular drugs
- To study Autacoids
- Interpretation of Antipyretics

Course Outcomes: At the end of the course, the student will be able to

CO1	Know about natural products.
CO2	Know Interpretation of cardiovascular drugs.
CO3	Know the Analyzing about prostaglandins.
CO4	Know the Definition, Classification, Nomenclature, Structure and Synthesis of anti-inflammatory drugs.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3		3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : OC : 406 (A): (OPEN ELECTIVE) : DRUG CHEMISTRY

UNIT – I: NATURAL PRODUCTS AS LEADS FOR NEW DRUGS

Occurrence, Structure and therapeutic uses of Drugs acting on Central Nervous System

Morphine alkaloids (morphine, codeine, thebaine, heroin, pethidine)

Cannabinoids (9-cannabinol, Tetrahydrocannabinol)

Neuromuscular Blocking Agents (Curare, Decamethonium)

Vinca Alkaloids (Vincristin and Vinblastin), Taxol and Taxotere, podophyllotoxin, Etoposide, Teniposide.

UNIT – II: CARDIOVASCULAR DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis.

Cardiac glycosides (ex: Digoxin, Digitoxin);

Antihypertensive drugs (ex: Methyl dopa, Clonidene hydrochloride);
Antiarrhythmic agents (ex: Quinidine sulfate);
Antisympathetic drugs (ex: Propranolol hydrochloride, Verapamil hydrochloride);
Vasopressor drugs (ex: Prenylamine, Buphenine).

UNIT – III: AUTACOIDS

Definition, Occurrence, Isolation, Nomenclature, Classification, Synthesis, Biosynthesis and Stereochemical structures of Prostaglandins. Structural elucidation of PGE_1, PGE_2; Synthesis and biosynthesis of PGE_2, $PGF_{2\alpha}$.

Structure and Biosynthesis of Thromboxane A2 and Prostacyclin (synthesis not expected).

UNIT – IV: ANTI-INFLAMMATORY DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis of Paracetamol, Aspirin (Antipyretic), Salol, Cinchophen, Antipyrene, Phenylbutazone, Indomethacin, Tolmetin, Ibuprofen, Diclofenac and Naproxen.

Books suggested:

1. Medicinal Chemistry by Ashitosh Kar
2. Medicinal Chemistry by D. Sriram, P. Yogeeswari
3. Medicinal Chemistry by David A. Williams, Thomas L. Lemke
4. Medicinal Chemistry by V**.** Alagarsamy
5. Biochemistry by U. Satyanarayana
6. Natural Products Chemistry and Applications by Sujata V. Bhat, B.A. Nagasampagi,
   S. Meenakshi
7. Medicinal Chemistry by V.K. Ahluwalia, Madhu Chopra
8. Medicinal Chemistry by Balkishen Razdar
9. Advanced Practical Medicinal Chemistry by Ashutosh Kar
10. Chemistry of Organic Natural Products by O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
11. Chemistry of Natural Products by S. V. Bhat, B.A. Nagasampagi, M. Sivakumar
12. Natural Products Chemistry by K.B.G. Torssell, John Wiley, 1983.

CHE OC 406 B	Electroanalytical Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Electroanalytical Techniques

Course Objectives:

- To learn about the classification of electroanalytical methods
- Determination of types of currents
- Principle, instrumentation, reversible and irreversible cyclic voltammograms..
- Interpretation of Ion selective electrodes

Course Outcomes: At the end of the course, the student will able to

CO1	Ability to interpret potentiometry and conductometry
CO2	Interpretation of results while adhering to DC Polarography.
CO3	Analysing and compiling the data and results in polarography.
CO4	Familiarize Types of ion sensitive electrodes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : OC : 406(B): (OPEN ELECTIVE) : ELECTRO ANALYTICAL TECHNIQUES

Unit I: Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glasselectrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant. Mobility of ions, Conductometric titrations.

Unit II: D.C Polarography: Dropping mercury electrode- Instrumentation-polarogram. Types of Currents : Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation (derivation not necessary) and its consequences. Types of limiting Currents: Adsorption, Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of

mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

Unit III: (i) A.C. polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography(V) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms.

Unit IV: Ion selective electrodes: Ion-sensitive electrodes –types of ion sensitive electrodes –metal based cation and anion sensitive electrodes, solid membrane electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A. Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery, J. Bassett, J. Mendham and R.C. Denny. Vogel's Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (Mc Graw Hill).

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

SVU COLLEGE OF SCIENCES

DEPARTMENT OF CHEMISTRY
5. PHYSICAL CHEMISTRY (Specialization)

Syllabus for M.Sc. CHEMISTRY

Choice Based Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Chemistry is one of the first six departments started during the year 1954 when the university was founded. The Department offers M.Sc. course in Chemistry with specializations in Analytical, Environmental, Inorganic, Organic and Physical Chemistry besides Self Supporting Courses in Organic and Analytical Chemistry. Choice Based Credit System is followed and the courses are categorized as per the guidelines of the statutory authorities. Ability enhancement and skill development courses are part of the curriculum. Almost 15% of the students are qualifying in National Entrance Test conducted by UGC-CSIR. Also the Department offers quality research and training experience leading to Ph.D., Degrees for the students in the areas of synthesis of pharmacologically potential molecules analogous to drugs, application of green methodologies for the synthesis of complex molecules, development of new hybrid sorbents for monitoring toxic metals in environmental samples, fabrication of novel electrochemical sensors and biosensors towards the detection of organic molecules and pollutants. Over the last sixty five years the department has trained about 650 students for their Doctoral degrees. Most of the research scholars are doing Post-Doctoral research in abroad and in India. The faculty published more than 3000 research papers in reputed National and International journals. The Department organizes National and International conferences / seminars/ workshops on regular basis. The Department has well equipped laboratories for research and teaching besides a DST funded computer lab and a Department library. All the faculty members are having individual research laboratories with internet facility.

At present the Department is flourished with 10 faculty members and most of the faculty members have Post Doctoral research and training experience abroad. Some of the faculty worked as Visiting Professors and Visiting Fellows in prestigious universities abroad. Majority of faculty members have undertaken major research projects funded by agencies like UGC, CSIR, DST, BRNS, DBT and MOES and have successfully completed the tasks with a budget outlay of Rs. 250.00 lakhs. Most of the faculty members have developed collaboration with Indian Institute of Sciences, Bangalore, Indian Institute of Chemical Technology, Hyderabad, AVRA Laboratories, EPR Laboratories, Hyderabad, Amara Raja Batteries, Tirupati, RRL, Trivandrum and Birla Institute of Technology & Science, Pilani – Hyderabad campus and have approved patents. Some of the faculty and Alumni are the recipients of JSPS Fellowship, UGC Raman Fellowship, Common wealth Academic Fellowship, State Best Teacher Award etc., Recognizing the excellence in teaching and research in the Department, the University Grants Commission and Department of Science Technology have provided funding under DRS and FIST programmes. The Alumni of the department served in coveted positions as Vice-chancellors, Registrars, CEO of pharma industries etc. The former students of the Department have established leading International pharmaceutical industries in India and abroad. Some of them are actively engaged in the manufacture of COVID 19 vaccine. The ultimate goal of the Department is to achieve excellence in fundamental research as well as the development of innovative technologies for the future.

Vision

- Impart quality education & training in the field of chemistry to enable successful careers for the post graduate students in the field of research, education & industry applications of chemical sciences.

Mission

The Department of Chemistry strives:

- To get an ideal balance between knowledge creation and knowledge dissemination in the chemical sciences with a focus to train and mentor students to become responsible scientists and scientifically literate professionals to attain National and International impact.
- To contribute to the improvement of scientific and technological literacy, and the development of critical-thinking and problem-solving skills of all students in order to compete for the world of work and responsible citizenship

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	**Scientific Problem solving skills**: Deep knowledge of the topic which can develop the problem solving skills using chemical principles.
PSO2	**Analytical skills**: Develop analytical skills such as synthesizing, separating, characterizing chemical compounds and chemical reactions with the help of sophisticated instruments
PSO3	**Research skills**: Develop research skills through dissertation/project work in different fields of chemistry such as organic, inorganic, analytical, physical and environmental.
PSO4	**Learning skills on life processes**: Acquire advanced level of knowledge in natural products as well as biological systems from the chemistry point of view.

Program Objectives

PO1	To divulge an advance level of theoretical and practical knowledge in the major fields of Chemistry- Analytical, Environmental, Inorganic, Organic and Physical.
PO2	To engage in research projects for acquiring wide spectrum of subject knowledge and research experience in respective fields.
PO3	To enlighten on skill enhancement in the core chemistry with practical expertise hands this will make students employable in academia and industries
PO4	To mould as responsible citizens to serve the nation

Program Outcomes: On completion of M.Sc. Chemistry programme, graduates will be able to –

PO1	Have a firm foundation in the fundamentals and application of current chemical and scientific theories in different areas of chemistry *viz*., Analytical, Environmental, Inorganic, Organic and Physical.
PO2	Understands the background of organic reaction mechanisms, complex chemical structures, and instrumental methods of chemical analysis, molecular rearrangements and separation techniques.
PO3	Familiarize with the importance of various elements present in the periodic table, coordination chemistry and structure of molecules, properties of compounds, structural determination of complexes using theories and instruments.
PO4	Understand about the physical aspects of atomic structure, dual behavior, reaction pathways with respect to time, various energy transformations, molecular assembly in nano-level, significance of electrochemistry, molecular segregation using their symmetry.
PO5	Create awareness and sense of responsibilities towards environment and apply knowledge to solve the issues related to Environmental pollution.
PO6	Continue to acquire relevant knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in the subject concerned. Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adoptive objective, unbiased and truthful actions in all aspects.
PO7	Be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
PO8	Clearly communicate the results of scientific work in oral, written and electronic formats.
PO9	Explore new areas of research in both chemistry and allied fields of science and technology.
PO10	Design, analyze and carry out scientific experiments and interpret data to provide solutions to different industrial problems.
PO11	Independently carry out research to solve practical problems and present a substantial technical report.
PO12	Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning throughout life, through self- paced and self-directed learning aimed at personal development, and adapting to change academic demands of work place through knowledge/ skill development/ reskilling.

Program Educational Objectives:

At the end of the program, the student wills be able to:

PEO1	To demonstrate broad knowledge of descriptive chemistry.
PEO2	To impart basic analytical and technical skills to work effectively in various fields of chemistry.
PEO3	To motivate critical thinking and analysis skills to solve complex problems viz., analysis of data, synthetic logistics, spectroscopy, structure and modeling, team based problem solving etc.
PEO4	To demonstrate an ability to conduct experiments in the above sub disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling method
PEO5	To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
PEO6	To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment and modern instrumentation.

		Total		**36**	**24**			**600**

***Among the Generic Elective a student shall choose any one.**

(Mandatory Core)

CHE-101	INORGANIC CHEISTRY I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Comprehend the key features of coordination compounds, Crystal Field Theory, different properties and bonding by spectroscopic techniques
- Study the polymorphic forms of non-transition elements and their synthesis and properties
- Understand the basics of reaction mechanism and the mechanistic concepts of Dissociative (Id) and Associative interchange Mechanism (Ia), Taube's classification, Trans effect and Electron Transfer Reactions
- Familiarize with the methods of synthesis of metal carbonyls and metal nitrosyls, Synergistic effect, EAN and 18-electron rule

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the key features of coordination compounds, Crystal Field Theory, magnetic properties and bonding in transition metal complexes.
CO2	To learn about the polymorphic forms of Carbon, Sulphur and Phosphorus, synthesis and properties of sulphur-nitrogen compounds, boranes, carbides, silicates and to know Wades rules.
CO3	To explain the reactivity of complexes in terms of Valence bond and Crystal Field theories, Taube's classification, Trans effect and Electron Transfer Reactions.
CO4	To gain knowledge on synthesis and structures of different metal carbonyls, synergistic effect and 18 electron rule.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	1	-	1	-	2	-	1
CO2	3	1	-	3	-	2	2	2	2	1	-	2
CO3	3	2	-	3	2	-	-	1	-	1	2	1
CO4	3	1	1	3	-	2	2	2	1	-	1	1

CHE 101: INORGANIC CHEISTRY I

UNIT-I: CO-ORDINATION COMPOUNDS 15 Hrs

Introduction to Crystal field Theory, CFSE and its calculation, Paring energy, Splitting of 'd' orbitals in Trigonal bi pyramidal, square planar, square pyramid and pentagonal bipyramidal geometries, Jahn –Teller effect, Application of CFT, OSSE, site Selection in Spinels, Short comings of CFT, Evidence for covalency – Nephelauxetic effect. MOT of co-ordinate bonds –M.O. Diagrams for octahedral, tetrahedral and square

planar complexes. Experimental evidences for π- bonding – Crystallography, Infrared spectroscopy and Photoelectron spectroscopy.

UNIT-II: CHEMISTRY OF NON-TRANSITION ELEMENTS 15 Hrs

General characteristics of the non- transition elements special features of individual elements ; Synthesis' properties and structure of their Halides and Oxides, Polymorphism of Carbon, Phosphorus and Sulphur, Synthesis, properties and structure of boranes, Carboranes, borazines, Silicates, Carbides, Sulphur-nitrogen compounds. Electron counting in boranes, Wades rules (Poly hedral skeletal electron pair theory), Isopopoly and hetero poly acids.

UNIT-III: REACTION MECHANISMS IN COMPLEXES 15 Hrs

Reactivity of metal complexes. Inert and Labile complexes. Concept of Labile and Inert complexes in terms of Valence bond and Crystal Field theories. Taube's classification of complexes as labile and inert complexes. Dissociative (D) and Dissociative interchange Mechanism (Id) & Associative (A) and Associative interchange Mechanism (Ia). Substitution reactions in octahedral complexes- Acid Hydrolysis -factors affecting Acid Hydrolysis - Base Hydrolysis-conjugate Base Mechanisms - Anation Reactions -Substitution Reactions in Square Planar complexes- Trans effect – Mechanisms of Trans effect: polarization and π-bonding theories.Electron Transfer Reaction-Inner Sphere and outer Sphere Mechanisms- Marcus theory.

UNIT-IV: METAL πCOMPLEXES-I 15 Hrs

Nature of π bonding, Classification of π ligands, π donor ligands and π -acceptor ligands.

Metal Carbonyls: Synthesis of metal carbonyls, Structures of metal carbonyls of the types M(CO)n (M= Cr, Fe, Ni; n=4-6), $M_2(CO)n$ (M=Co, Fe, Mn; n=8-10), $M_3(CO)_{12}$ (M=Fe, Ru and Os), $M_4(CO)_{12}$ (M=Co, Rh, Ir). IR Spectraof metal carbonyls (i) Detection of bridging and terminal CO ligand, (ii) Synergistic effect, EAN and 18-electron rule. Electron counting methods (i) Oxidation state method and (ii) Neutral Atom method.

Metal Nitrosyls: Synthesis of metal Nitrosyls, bonding, Electron donation by nitric oxide, Models for NO bonding (i) Covalent model and (ii) Ionic models, Structures of metal nitrosyls (1) $[Fe_4S_3(NO)]$ (2)$[Fe_2(NO)_2I_2]$ (3) $[(\phi_3P)_2Ir(CO)Cl(NO)]^+$ (4) $[(\phi_3P)_2Ru(NO)_2Cl]$, Detection of bridging NO ligand, Applications of metal nitrosyls.

Books Suggested

1. F.A.Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999.John wiley & sons. Inc., New York.
2. James E. Huheey, Inorganic chemistry- Principles of structure and reactivity, VI Edition 1993. Harper Collins College Publishers, New York.
3. J.D. Lee: Concise Inorganic Chemistry (Blackwell)

4. Gary Wolfsburg: Inorganic Chemistry (5th Ed. (Viva Books)
5. W.L. Jolly: Modern Inorganic Chemistry (McGraw-Hill)
6. B.N Figgis: Introduction to Ligand Fields (John-Willey)
7. S.F.A. Kettle: Coordination compounds.
8. Coordination Chemistry. Bassalo & Jahnson.

(Mandatory Core)

CHE-102	Organic Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Organic Chemistry

Course Objectives:

- Classify molecules based on stereo chemical aspects study on optical and geometrical isomerism by the application of Cahn-Ingold-Prelog rules.
- Familiarize with different types of substitution reactions, able to predict products, including stereochemistry in aliphatic and aromatic nucleophilic substitution reactions, effect of neighboring group participation
- Understand thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects in reactive intermediates
- Study about occurrence, isolation, structure establishment and synthesis of natural products-terpenoids.

Course Outcomes: At the end of the course, the student will be able

CO1	To detect stereochemical structures of the molecules, stereoselective and stereocontrolled reactions.
CO2	To ascertain the stereochemistry of the products with the effect of neighbouring group participation and to familiarize the various types of aromatic substitution reactions, their mechanism and the effect of substituents.
CO3	To know the concept of isotope effects, potential energy diagrams and transition states in different intermediates
CO4	To familiarize with stereospecific synthesis of naturally occurring terpenoids and degradation products of terpenoids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	-	1	1	-	1	-	-
CO2	3	2	1	3	-	1	2		-	2	1	1
CO3	3	1	2	3	-	1	1	2	1	-	1	-
CO4	3	2	2	3	2	1	1	1	-	1	1	1

CHE102: Organic Chemistry I

UNIT-I: **Stereochemistry**

Sereoisomerism-Stereoisomers Classification – Configuration and conformation.

Molecular Three dimensional representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Dissymmetrization.

Optical isomerism: Molecular Symmetry and Chirality-Cahn-Ingold-Prelog rules R, S-nomenclature, stereoisomerism resulting from more than one chiral center, meso and pseudoasymmetric compounds - **Axial Chirality** - Stereochemistry of allenes spiranes - biphenyl derivatives and atropisomerism - **Planar chirality** - Ansa compounds and trans - Cycloalkenes - **Helicity**. Helically chiral compounds

Geometrical isomerism - E, Z - nomenclature - Physical and Chemical methods of determining the configuration of geometrical isomers-Stereoisomerism in 3, 4 and 5-membered cyclic compounds.

UNIT-II: Substitution Reactions

i) Aliphatic Nucleophilic substitutions: The S_N2, S_N1, mixed S_N1 and S_N2, SET mechanisms. Reactivity- effects of substrates, attacking nucleophiles, leaving groups and reaction medium.Common carbocation rearrangements – primary, secondary and tertiary. The neighbouring group participation (NGP) -anchimeric assistance, NGP by σ and π- bonds, phenonium ions, norbornyl and norbornenyl systems, Classical and nonclassical carbocations, NGP by halogens and heteroatoms (O,N,S)

The S_N^i and S_N2' mechanisms. Nucleophilic substitution at an allylic, and vinylic carbons.

ii. Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and $S_{RN}1$mechanisms. Reactivity - effect of substrate, structure, leaving group and attacking nucleophile. The von Richter, Sommelet - Hauser and Smiles rearrangements.

UNIT-III: Reactive intermediates

Types of reactions, types of bond cleavage mechanisms, generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes, nitrenes and arynes. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects**.**

UNIT-IV: Terpenoids

Classification of terpenoids, occurrence, isolation, general methods of structure determination. Isoprene and special isoprene rule. Structure determination and synthesis of the following representative molecules: Farnesol, Zingeberine, Cadinene and Abietic acid.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.

2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
6. Stereochemistry, P.S. Kalsi, Wiley Eastern.
7. Text book of Organic Chemistry, M.C. Murry
8. Organic Chemistry, Vol I, I.L. Finar, ELBS Eds.

(Mandatory Core)

CHE-103	Physical Chemistry I	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Acquire knowledge in Quantum Chemistry, postulates of Quantum Mechanics., Applications of Schrodinger wave equation and Born-Oppenheimer approximation
- Study on Chemical Dynamics and theories in unimolecular, chain and fast reactions and determination of reaction rates.
- Familiarize with concepts of Thermodynamics and statistical thermodynamics, Gibbs- Duhem equation and Sackur-Tetrade equation
- Know about Thermodynamic and Kinetic concept of Electrochemistry and conductance, conductivity of electrolytes

Course Outcomes At the end of the course, the student will be able to

CO1	To know the concepts such as Operator algebra, Eigen values and Eigen functions, Degeneracy, Schrodinger wave equation and the postulates of Quantum Mechanics.
CO2	To learn about theories of reaction rates, Lindemann, Lindemann-Hinshel wood, and RRKM theories.
CO3	To know about Thermodynamic concepts and entropy change in reversible process and irreversible process, Gibbs- Duhem equation, calculation of thermodynamic properties.
CO4	To study the Thermodynamic and Kinetic Derivation of Nernst Equation and the derivation of Debye-Huckle Equation and its Verification

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	1	3	2	1	--	1	2	---	1	1
CO2	3	1	2	3	1		1		1	1	-	1
CO3	3	-	1	3	2	1	-	1		-	2	-
CO4	3	1	2	3	-	1	1	-	2	1	-	1

CHE-103: Physical Chemistry I

UNIT-I: Quantum Chemistry-I

(A)**Introduction to Exact Quantum Mechanical Results**

Operator algebra, Eigen values and Eigen functions, Operators for momentum and energy, Degeneracy, Linear combination of Eigen functions of an operator, well behaved wave functions, Normalized and

orthogonal functions, The schrodinger wave equation and the postulates of Quantum Mechanics, (B) **Applications of Schrodinger wave equation:** Particle in one dimensional and three dimensional box, harmonic oscillator, rigid rotor, hydrogen atom and its applications. Hydrogen like wave function, hydrogen like orbitals and their representation, polar plots, contour plots and boundary diagram. (C)**Approximate Methods:** The variation Theorem, Linear variation principle, perturbation Theory (first Order and non-degenerate), Application of variation Method and perturbation theory to the helium atom, The Born-Oppenheimer approximation.

UNIT-II: Chemical Dynamics

(A)**Theories of reaction rates:** Collision theory, steric factor. Theory of Absolute Reaction Rates-Reaction coordinate, activated complex and the transition state. Thermodynamic formiulation of reacton rates.

(B) **Unimolecular reactions:** Lindemann, Lindemann-Hinshel wood, and RRKM theories. Termolecular reactions. Complex reactions-Rate expressions for opposing, parallel and consecutive reaction (all first order type) (C) **Chain reactions:** Dynamic chain, hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane, photochemical reactions- H_2-Br_2, H_2-Cl_2 reactions, Autocatalysis, H_2-O_2 reaction explosion limits. (D) **Fast Reactions:** Flow system – Temperature and pressure Jump Methods – Relaxation Techniques.

UNIT – III : Thermodynamics

(A) **Brief review of Thermodynamic concepts:** Enthalpy, entropy, free energy. Concept of Entropy – Entropy as a state function –Entropy change in reversible process and irreversible process – Temperature – Entropy diagrams – Entropy change and phase change – Entropy of mixing – Entropy and disorder. (B) **Statistical thermodynamics:** Partial molar properties: their significance and determination of partial molar properties, fugacity and its determination. Concept of distribution, thermodynamic probability and most probable Distribution, Ensemble averaging, postulates of ensemble averaging, canonical, grand canonical and micro- canonical ensembles, partition functions, translational, rotational, vibrational and electronic partition functions, Gibbs- Duhem equation, calculation of thermodynamic properties in terms of partition functions, Entropy of monatomic gases (Sackur-Tetrade equation)

UNIT-IV : Electrochemistry I

(A) **Thermodynamic and Kinetic concept of Electrochemistry**

Thermodynamic and Kinetic Derivation of Nernst Equation, Chemical and Concentration Cells with and without Transference, Liquid Junction Potential, Derivation of the Expression for Liquid Junction

Potentials-its determination and elimination, Applications of EMF Measurements: (i)Solubility product, (ii)pH Determination, (iii) Potentiometric Titrations.; (B)**Conductivity:** Theory of Electrolytic Conductance, Derivation of Debye-Huckle Equation and its Verification, Debye- Falkenhagen Effect, and Wein Effect, kohlrausch law. Calculation of Solubility of Sparingly soluble Salt from Conductance Measurements.

Conductometric Titrations : Titration of Strong Acid Vs Strong Base (HCl vs NaoH) ; Titration of Weak Acid Vs Strong Base (AcoH vs NaoH); Titration of mixture of Strong and Weak Acids vs Strong Base ; Precipitation Titrations.

Books Suggested

1. physical chemistry, P. W. Atkins (ELBS)
2. Quantum Chemistry, Ira N. Levine (Prentice Hall)
3. Atomic Structure and Chemical bond, Manas Chandra.
4. Chemical Kinetics, K.J. Laidler (Mc Graw Hill)
5. Kinetics and Mechanism of Chemical Transformations, J. Rajaraman and J. Kuriacose (Mcmilan)
6. Thermodynamics for chemists, S. Glasstone
7. Chemical thermodynamics, I.M. Klotz
8. Statistical Thermodynamics, M. Dole
9. Modern Electrochemistry, Vol. I & II, J.O. M. Bockris and A.K.N. Reddy (plen
10. An Introduction to Electrochemistry (3^{rd}ed.), S. Glasstone (Affiliated East-West).

(Compulsory Foundation)

CHE-104 (A)	General Chemistry I	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on precision and accuracy, Limit of detection, Limit of determination, Sensitivity and selectivity, statistical evaluation of data
- Familiarize with principles and concepts of flame emission spectroscopy and atomic absorption spectroscopy and their applications.
- To know about ecosystem, nutrient cycle and dessert ecosystem and forest ecosystem and aquatic ecosystem.
- Gain knowledge on air pollution, water pollution, soil pollution, marine pollution, noise pollution and solid waste management.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about mean and median values, standard deviation and coefficient of variation.
CO2	To acquire knowledge on principle and instrumentation of AAS and difference between flame AAS and furnace AAS.
CO3	To know about the principle and concept of ecosystem and their functioning
CO4	To have an idea on environmental pollution and environmental impact assessment.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	-	1	-	-	2	1	1
CO2	3	2	-	3	1	-	2	1	-	1	1	-
CO3	3	3	2	3	2	1		1	2	1	1	2
CO4	3	2	1	2	3	1	1	1	-	2	1	1

CHE104-A: General Chemistry I

UNIT-I: TREATMENT OF ANALYTICAL DATA 15 Hrs

Precision and accuracy –mean and median values –Standard deviation – coefficient of variation, Types of errors: Determinate and indeterminate errors, confidence limits, significant figures, computations, minimization of errors, statistical evaluation of data –T-test ,F- test , and X^2 –test. Correlation coefficient and coefficient of determination; Limit of detection (LOQ); Limit of determination(LOD)

Sensitivity and selectivity of an analytical method.

UNIT-II: FLAME EMISSION AND ATOMIC ABSORPTION SPECTROSCOPY 15 Hrs

(a) **Flame Emission Spectroscopy**: Principles, chemical reactions in flames, Interferences, evaluation methods, flame photometer and experimental technique, procedure for determinations, limitations and disadvantages. Applications

(b)**Atomic Absorption Spectroscopy: Flame AAS:** Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT-III: ECOSYSTEMS 15 Hrs

Concept of an ecosystem (Abiotic and biotic environment), structure and function of an ecosystem Producers, Consumers and decomposers. Energy flow in the ecosystem, (Nutrient cycle in the ecosystem) Ecological succession Food Chain, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystems, Forest ecosystem, Grassl and ecosystem, Desert ecosystems aquatic ecosystems [ponds, streams, lakes, rivers, ocean estuaries].

UNIT-IV: ENVIRONMENTAL POLLUTION 15 Hrs

Definition a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution Solid waste management : Causes, effects and control measures of urban and industrial wastes. Environmental impact assessment.

Books Suggested

1. H.W. Willard, LL. Merritt and J.A. Dean: Instrumental Methods of Analysis
2. Vogel's Text book of Quantitative Inorganic Analysis.
3. Analytical Chemistry
4. Instrumental Methods of Analysis H. Kaur

CHE 104B	General Chemistry I	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To familiarize with the significance of green chemistry and assessment of the impact.
- To gain knowledge on biocatalyst in oxidation, reduction and hydrolytic reactions
- To have an idea on solvent free reactions and modern reaction techniques.
- To familiarize with the use of ionic liquids as green solvents.

Course Outcomes: At the end of the course, the student will be able

CO1	To get knowledge on green reaction conditions and their impact on environment.
CO2	To know about use of different biocatalysts as environmentally friendly reagents.
CO3	To acquire knowledge on the use of modern techniques like ultrasound, microwave etc.
CO4	To have an idea on the use of ionic liquids in different reactions.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	-	2	1	1	-	1	-	1	1
CO2	3	1	1	3	1	-	1	1	-	1	-	1
CO3	3	3	2	3	2	1		2	-	1	1	1
CO4	3	2	1	2	3	1	1	1	1	-	1	1

CHE 104B: General Chemistry I

UNIT-I

Fundamentals and significance of Green Chemistry: Discussion of the current state of chemistry and the environment and the definition of green chemistry. Assessment of the impact of chemistry in the environment and definition of risk hazard. An introduction to the tools of green chemistry and its fundamental principles.

Principles of Green Chemistry: Prevention of waste / by-products, Hazardous products- Designing of safer chemicals- Selection of appropriate solvents and starting materials- Use of protecting groups and catalysis- Designing of biodegradable products.

UNIT-II

Catalysis for Green Chemistry: Use of biocatalysts- Biochemical Oxidation, Biochemical Reduction, Enzyme Catalyzed Hydrolytic Process, Modified biocatalysis- transition metal catalysis- Reformatsky reaction, Wurtz reaction, Pinacol coupling, Simmons-Smith reaction, Mukaiyama reaction, Heak reaction, Ullmann's coupling.

UNIT-III

Solvent Free Reactions: Solvent free techniques- Reactions on solid mineral supports, Phase Transfer Catalysis- C-alkylation, N-alkylation, S-alkylation, Darzen's reaction, Wittig reaction. Ultrasound assisted green synthesis- Oxidation, Reduction, Hydroboration, Bouveault reaction, Strecker reaction, Microwave assisted green synthesis- Biginelli reaction, Aza-Michael reaction, Suzuki reaction, Stille reaction, Sonogashira reaction.

UNIT-IV

Ionic liquids: Definition- Types of Ionic Liquids-Synthesis of Ionic Liquids- Selection of ionic liquids- physical properties- Application in organic synthesis- alkylation, allylation, oxidation, reduction, polymerization, hydrogenation, hydroformylation, alkoxycarbonylation, carbon-carbon bond forming reactions, alkene metathesis.

Books suggested:

1. New Trends in Green Chemistry by V.K. Ahluwalia, M. Kidwai.
2. Green Chemistry: Environment Friendly Alternatives by Rashmi Sanghi, M M Srivastava
3. Green Solvents for Organic Synthesis by V.K. Ahluwalia, Rajender S. Varma
4. Green Analytical Chemistry by Mihkel Koel and Mihkel Kaljurand

CHE 105 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Basic laboratory techniques of titration and analysis.
- Quantitative estimation of inorganic compounds through volumetric techniques.
- Calibration of volumetric apparatus and statistical analysis of the data.
- Determination of critical solution temperature of phenol-water system.

Course Outcomes: At the end of the course, the student will be able

CO1	To demonstrate mastery of basic semi-micro qualitative analysis of simple salts and interprets analytical data and will make scientific claims that are supported by the observations.
CO2	To familiarize with techniques of titration and calculation of errors.
CO3	To study the determination of critical solution temperature, eutectic composition, distribution coefficient, adsorption of different systems.
CO4	To calibrate the statistical data

Mapping of course outcomes with the program outcomes

CHE 105 A & B: Core practical I: Inorganic & Physical Chemistry

CHE 105 A : Core practical I: Inorganic Chemistry

Semi Micro Qualitative Analysis

Qualitative Analysis of a mixture containing four cations including two less common cations (viz., W, Mo, Se, Te, V, Ce, Th, Zr, Li and U).

CHE 105 B : Core practical I: Physical Chemistry

1. Determination of critical solution temperature, eutectic composition and temperature of binary system.
2. Calibration of volumetric apparatus and statistical analysis of the data.

3. Determination of critical solution temperature of phenol-water system and study the effect of electrolyte on CST.
4. Determination of Eutectic composition and temperature of binary system
5. Determination of distribution coefficient of benzoic acid between water and benzene.
6. Study the adsorption of acetic acid on charcoal and analysis of the data on the basis of Langmuir and Freundlich adsorption isotherms.
7. Determination of rate constant of acid hydrolysis of an ester and investigate the effect of catalyst concentration, reactant concentration and temperature.

CHE 106A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Identification of single organic component by systematic qualitative analysis
- Preparation of derivatives and purification process
- Single step preparations
- Calibration of spectral analysis to this structures

Identification of single organic component by systematic qualitative analysis.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the systematic procedures of analysis of organic components.
CO2	To know the conformational tests for various functional groups.
CO3	To understand the mechanisms and familiarize with methodologies to prepare biologically important molecules.
CO4	Purification of compounds by different process

Mapping of course outcomes with the program outcomes

CHE : 106 A : PRACTICAL – I : ORGANIC CHEMISTRY

Identification of single components by Qualitative Analysis method

1. Aromatic acids
2. Aromatic amines
3. Aromatic phenols
4. Aromatic estors
5. Aromatic hydrocarbons
6. Carbohydrates
7. Aromatic carobohydrates compounds

CHE : 106 B : PRACTICAL – I : GENERAL CHEMISTRY

Single step preparations

1. Preparation of aspirin
2. Preparation of p-nitroacetanilide
3. Preparation of p-bromoacetanilide

CHE 107	Human Values and Professional Ethics-I	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level Human Values and professional ethics

Course Objectives:

- Analyze values in various ethical professions
- Understand moral concepts, character and conduct multiple
- Concept of ethical values with respect to individual and society
- ethical interests at stake in areal-world situation or practice and assess own ethical values with respect to social context and problems

Course Outcomes: At the end of the course, the student will be able to

CO1	To know about the needs and importance of professional ethics.
CO2	To analyze nature of Values, basic Moral Concepts character and Conduct.
CO3	To gain knowledge on individual and society ethical values, ahimsa, satya and brahmacharya.
CO4	To understand values of Bhagavd Gita, various religions, religious tolerence, Gandhian ethics.

Mapping of course outcomes with the program outcomes

CHE 107: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS – I)

Chapter I: Definition and Nature of Ethics – Is relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics – Goals – Ethical Values in Various Professions.

Chapter II: Nature of Values – Good and Bad, Ends and Means, Actual and Potential Values, Objective and Subjective Values, Analysis of Basic Moral Concepts – Right, Ought, Duty, Obligation, Justice, Responsibility and Freedom, Good Behavior and Respect for Elders, Character and Conduct.

Chapter III: Individual and Society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possesion) and Aparigraha (Non-stealing). Purusharthas (Cardinal virtues) - Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation), Crime and

Theories of Punishment – (a) Reformative, Retributive and Deterrent, (b) Views on Manu and Yajnavalkya

Chapter IV: Bhagavd Gita – (a) Niskama Karma, (b) Buddhism – The Four Nobel Truths – Arya astanga marga, (c) Jainism - Mahavratas and Anuvratas. Values Embedded in Various Religions, Religious Tolerence, Gandhian Ethics.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
4. Harold H. Titus: Ethics for Today
5. Maitra, S.K: Hindu Ethics
6. William Lilly: Introduction to Ethics
7. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
8. Sasruta Samhita: Tr. Kaviraj Kunjanlal, Kunjanlal Brishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
9. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
10. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
11. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
12. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE - 201	Inorganic Chemistry II	L-5, T-1, P-0	4 Credits

Pre-requisite: Understanding of graduate level chemistry

Course Objectives:

- Understand magnetic properties of transition metal complexes and various reactions on ligands with respect to synthesis.
- Gain knowledge on electronic spectra of complex molecules of octahedral and tetrahedral geometry
- Understand magnetic properties viz., diamagnetism and paramagnetism and other related properties of complex molecules
- Familiarize with different catalytic reactions of complex molecules and factors effecting the reactions.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with the general methods of complex preparations and properties, nature of bonding and structural features of metal complexes.
CO2	To know about Russel-Saunders coupling, splitting of energy levels in octahedral field and differentiate between Orgel diagrams and Tanabe-Sugano diagrams.
CO3	To understand about the laws of Hunds, Curie and Weiss, magnetism and magnetic susceptibility determination by Gouy's and Farady methods.
CO4	To gain knowledge on Induced reactions, Free radical reactions, Thermal decomposition reactions, Chain reactions.

Mapping of course outcomes with the program outcomes

CO4	3	1	1	3	-	2	-	1	1	1	1	-

CHE 201: INORGANIC CHEISTRY II

UNIT – I: TRANSITION METAL II – COMPLEXES II 15 Hrs

Transition metal π – complexes with unsaturated organic molecules – alkenes, alkynes, diene, dienyl and Cyclopentadienyl complexes and arene complexes-general methods of preparation, properties, nature of bonding and structural features – Important reactions relating to Nucleophilic and Electrophilic attack on ligands and to organic synthesis.

UNIT – II: ELECTRONIC SPECTRA OF COMPLEXES **15 Hrs**

Russel-Saunders coupling – Spectroscopic term symbols- Derivation of term symbols of p^2 and d^2 configuration, Hole Formulation, Energy ordering of terms (Hund's Rules), Splitting of energy levels and spectroscopic states in Octahedral field, Selection rules – Break – down of selection rules, Orgel diagrams, Definition and utility–Orgel Diagrams for d^1 to d^9 configurations in Octahedral and tetrahedral fields. Interpretation of electronic spectra of high spin octahedral and tetra hedral complexes of Ti(III), V(III), Cr(III), Mn(III), Mn(II), Fe(II), Fe(III), Co(III), Co(II), Ni(II) and Cu(II) complexes, Calculation of Dq and B^1 parameters for Cr(III) and Ni(II) complexes. Tanabe – Sugano diagrams, Differences between Orgel diagrams and Tanabe – Sugano diagrams, Tanabe – Sugano diagrams of d^2 to d^6 and d^8 configurations. Charge transfer spectra- LMCT and MLCT.

UNIT – III: MAGNETIC PROPERTIES OF TRANSITION METAL COMPLEXES **15 Hrs**

Diamagnetism and paramagnetism-orbital and spin contributions, spin-orbit coupling, Hunds third rule and Energies of J levels – Curie law and Curie – Weiss law- Ferromagnetism and antiferromagnetism – Temperature independent magnetism Magnetic susceptibility and its determination by Gouy's and Faraday methods.Calculation of magnetic moment from magnetic susceptibility, spin-only formula, Orbital contribution to magnetic moment (Oh and Td Complexes) –Paramagnetism and crystalline fields – Ti (III), V (III), VO^{2+}, Cr (III), Mn (II), Fe (III), Co(II), Ni (II) and Cu (II). Magnetic Exchange in copper acetate and other dimmers – spin cross over in complexes.

UNIT –IV: CATALYSIS **15 Hrs**

Homogeneous catalysis, Metal ion catalyzed reactions – Redox potentials and processes – Mechanism of redox processes involving ligands – Factors affecting redox potentials - other types of metal catalyzed reactions – Reactions involving Ag (I) , Cu (II) and Os (VIII) – Reactions of Oxyanions – Factors affecting rate (General discussion only) – Induced reactions – Free radical reactions – Thermal decomposition of peroxy disulphate – Fe(III) $–S_2O_8$ reactions – chain reactions – H-Br reactions, H_2O_2 $–S_2O_8$reactions.

Books Suggested

1. Inorganic Chemistry principles of Structure and Reactivity 6th Edition. James E. Huheey.
2. Organometallic Chemistry: R.C. Mehrotra and Singh.
3. R. S. Drago: Structural methods in Inorganic Chemistry.
4. H. H. Willard, L. L. Merritt, Jr., J. A. Dean and F. A. Settle, Jr.: Instrumental Methods of Analysis (CBS Publishers).
5. R. L. Carlin: Magnetic Chemistry. R. L. Datta and A. Syamal: Elements of Magnetic Chemistry.

(Mandatory Core)

CHE-202	Organic Chemistry II	L-3, T-1, P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives:

- Able to recognize, classify, explain, and apply fundamental organic reactions such as E2, E1, E1CB.
- Familiar with molecular rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom.
- Provide Hantzsch-Widmann nomenclature for the three and four membered heterocycles. Be able to predict synthetic routes and chemical reactions of these heterocycles.
- Be familiar with occurrence, isolation, structural elucidation and synthesis of natural products-alkaloids

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize the mechanisms of E_1, E_2 and E_{1CB} reactions, steroselectivity and synpyrolytic eliminations and use of isotopes, chemical trapping and crossover experiments.
CO2	To learn the rearrangements involving electron deficient carbon, nitrogen and oxygen atoms and electron rich carbon atom and familiarize with the limitations and applications of reactions.
CO3	To learn the synthesis of three and four membered heterocycles, mechanism of ring opening reactions and the effect of electron donating and withdrawing substituents in selectivity of ring opening reactions.
CO4	To understand the structural elucidation and synthesis of alkaloids using specific reagents.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	1	-	1	1	1	-
CO2	3	2	2	3	2	2		1	1	-	1	1
CO3	3	2	2	3	2	2	1	1	-	1	-	1
CO4	3	2	2	3	-	2	-	1	-	1	1	1

CHE- 202 : ORGANIC CHEMISTRY II

UNIT-I: Reaction mechanism-I **15 Hrs**

Electrophilic addition to carbon carbon double bond: Stereoselective addition to carbon carbon double bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO_4 and

$KMnO_4$.

Elimination reactions Elimination reactions E_2, E_1, E_{1CB} mechanisms. Orientation and stereoselectivity in E_2 eliminations. Pyrolytic syn elimination and α-elimination, elimination Vs substitution. Facors influencing the elimination reactions

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

UNIT-II: Molecular Rearrangements: **15 Hrs**

Rearrangements to electron deficient Carbon atom:

Pinacol-Pinacolone, Wagner-Meerwein, Dienone-Phenol and Demjonove Rearrngements

Rearrangements to electron deficient Nitrogen atom:

Hofmann, Curtius, Schimidt and Beckmann Rearrangements.

Rearrangements to electron deficient Oxygen atom: Baeyer-Villiger and Dakins Rearrangements

Rearrangements to electron rich Carbon atom: Favorski and Neber Rearrangements

Aromatic and Sigmatropic Rearrangements: Fries and Claisen Rearrangements

UNIT III: Three and four membered heterocycles: 15 Hrs

Systematic nomenclature (Hantzsch-Widmann system) and Replacement nomenclature for monocyclic heterocycles (Three and four membered rings). Synthesis and chemical reactions of aziridines, oxiranes, thiiranes, azetidines, oxetanes, and thietanes.

UNIT-IV: Alkaloids 15 Hrs

Occurrence, isolation, general methods of structure elucidation and physiological action, degradation, classification based on nitrogen heterocyclic ring, structure elucidation and synthesis of the following: Atropine, Papaverine and Quinine.

Books Suggested:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Modern Organic Reactions, H.O. House, Benjamin.

6. Principles of Organic Synthesis, R.O.C Norman and J. M. Coxon, Blackie Academic.
7. Stereochemistry, P.S. Kalsi, Wiley Eastern.
8. Text book of Organic Chemistry, M.C. Murry
9. Text book of Organic Chemistry, Fessendon and Fessendon.
10. Text book of Organic Chemistry, T.W. Solomon,
11. Organic Chemistry, Vol II, I.L. Finar, ELBS Eds.
12. Heterocyclic chemistry T.L Gilchrist, Longman Scientific Technical
13. An Introduction to the Heterocyclic compounds, R M Acheson, John Wiley.

(Mandatory Core)

CHE -203	Physical chemistry II	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Physical Chemistry

Course Objectives:

- Learn Angular momentum and Molecular Orbital Theory and application of Huckel theory to organic molecules.
- Know about concepts in Surface Chemistry, concept of electric double layer model and Micelles.
- Get knowledge on symmetry and group theory their use in spectroscopy, Mulliken character tables.
- Understand Irreversible Electrode phenomenon controlled potential electrolysis and polarography.

Course Outcomes At the end of the course, the student will be able

CO1	To know about Pauli Exclusion principle and Slater determinant, atomic orbitals, Simple molecular orbitals and Huckel theory of conjugated systems.
CO2	To learn Gibbs adsorption isotherm, BET equation and correlate limitations, critical micellar concentration (CMC) and factors affecting the CMC of surfactants.
CO3	To identify Relation between order of a finite group and its sub-group, conjugacy, Symmetry point group (MLS, MHS and MSS) and orthogonality theorem.
CO4	To acquire knowledge on DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, to derive equation for Tafel plots, half-wave potentials for reversible system.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	-	2	-	1	1	1	2	-
CO2	3	2	2	3	2	2	-	1	1	1	-	1
CO3	3	2	2	3	-		1	-	-	1	1	-
CO4	3	2	-	2	1	1	-	1	1	1	1	-

CHE-AC-203 Physical Chemistry III

UNIT-I: Quantum Chemistry-II **15 Hrs**

(A) Angular momentum: Angular momentum, Rotations and angular momentum, Eigen functions and Eigen values of angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and pauli Exclusion principle. Slater determinant. ;

(B) Molecular Orbital TheoryAtomic Orbitals, Simple Molecular Orbitals, Hybrid Atomic Orbitals, Shapes and energies of Molecular Orbital, Systems of Organic Molecules (Ex: Methane, Ethylene,

Acetylene). Huckel theory of conjugated systems, Π-bond order and charge density calculations, application of Huckel theory to ethylene, butadiene and benzene.

UNIT-II: Surface Chemistry **15 Hrs**

Surface tension, capillary action, pressure difference across curved surface, (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, BET adsorption isotherm, derivation of BET equation , limitations of BET equation, estimation of surface area from BET equation, Surface films on liquids. Concept of electric double layer model- Helmholtz perrin, Gouy- Chapman and stern models (no derivation)

Micells: Surface active agents, classification of surface active agents micellisation, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, thermodynamics of micellisation, emulsions, reverse micelles.

UNIT-III: SYMMETRY AND GROUP THEORY **15 Hrs**

Definition of a group, rules that are set for a group, sub-group, order of a group, Relation between order of a finite group and its sub-group, conjugacy relation and class of a group, symmetry elements and symmetry operation. Symmetry point group (MLS, MHS and MSS), Schoenflies symbols - Representation of groups by matrices (representation for C_n, C_{nv}, D_{nh} etc. groups to be worked out explicitly), character of a representation, group multiplication tables, reducible - irreducible representations The great orthogonality theorem (without proof) - character tables (H_2O,NH_3) and their use in spectroscopy, Mulliken character tables.

UNIT-IV: ELECTROCHEMISTRY- II **15 Hrs**

Irreversible Electrode phenomenon: Reversibility and irreversibility, Dissolution and deposition potentials, Decomposition voltage, overvoltage, diffusion overvoltage, charge transfer overvoltage, concentration overvoltage-hydrogen and oxygen overvoltages, Tafel plots, Exchange current density and Transfer coefficient, Butler-Volmer equation for one electron transfer processes.

Polarography: Theory, classification , principle , Instrumentation of Polarography, DME, HMDE diffusion current, Ilkovic equation, DC-Polarography, AC-Polarography, Controlled Potential Electrolysis, Millicoulometry, Equation for half-wave potentials, for reversible system when oxidant alone, reductant alone and both are present.

Books Suggested

1. P.W. Atkins: Physical Chemistry (ELBS).
2. Ira N. Levine: Quantum Chemistry (Prentice Hall).
3. R. Mcweeny: Coulson's Valence (ELBS).
4. J.O.M. Bockris and A.K.N. Reddy, Modern Electrochemistry, vol.I & II (Plenum).

5. S. Glasstone; An Introduction to Electrochemistry (3rd ed.)(Affiliated East-West).
6. V. Moroi: Micelles, theoretical and applied aspects (Plenum).
7. Maron and prutton: principles of physical Chemistry.
8. Silbey, Alberty, Bawendi. Physical Chemistry.Jhon-Wiley & Sons. 4th edition-2006.
9. D.N. Bajpai: Advanced physical Chemistry: S. Chand & Company, 1998.

(COMPULSORY FOUNDATION)

CHE-204 A	General Chemistry II	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- Gain knowledge on the principles of different electro analytical methods
- Familiarize with chromatographic techniques.
- To study on biodiversity and conservation of biodiversity
- To know about natural resources and non-renewable resources

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge on ion selective electrodes, solid membrane electrodes and glass electrodes and principles of amperometric titrations.
CO2	To learn general principles and classifications of chromatographic separations and applications of TLC, GLC and HPLC.
CO3	To know about biodiversity, ecosystem diversity and conservation of biodiversity.
CO4	To acquire knowledge on natural resources related to food, water, mineral, energy and land.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2		1	-	1	1	2

CO3	3	3	2	2	1	2	-	1	-	-	1	2
CO4	3	3	2	2	2	2	1	1	-	1	1	1

CHE 204-A: General Chemistry II

UNIT-I: ELECTRO ANALYTICAL METHODS

Theory of potentiometry, calculation electrode potential at the equivalence. Finding of equivalence volume, derivative and linear titration plots. Ion-sensitive electrodes –types of ion sensitive electrodes – metal based cation and anion sensitive electrodes, solid membrane electrodes, glass electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes, Amperometric titrations - Anodic stripping voltammetry, chronoamperometry, chronopotentiometry, Cyclic Voltammetry, Differential Pulse Polarography, linear sweep voltammetry, square wave voltammetry.

UNIT-II: CHROMATOGRAPHY

General principles and classifications of chromatographic separations

Thin layer chromatography: Classification, principle, experimental technique, sample application, development of plate, retardation factor.

Gas liquid chromatography: Gas liquid chromatography - instrumentation (columns and detectors), retention time and retention volume. Chromatographic behaviour of solutes, column efficiency and resolution, column processes and band broadening, time of analysis and resolution, Van-Deemter equation.

High performance liquid chromatography: Theory and instrumentation-column performance, gradient elution, delivery system, sample introduction, separation columns, detectors and applications of HPLC.

Unit – III : Biodiversity

Conservation introduction definition genetic species and ecosystem diversity, hot spots of biodiversity, threats to biodiversity habitat loss poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India, conservation of biodiversity in – situ an ex-situ conservation of biodiversity.

Unit – IV Natural resources and non-renewable resources

An overview of natural resources and associated problems with references to a) Forest resources b) Water resources c) Mineral resources d) Food resources e) Energy resources f) Land resources.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A.Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery J. Bassett, J. Mendham and R.C. Denny. Vogel"s Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (McGraw Hill).
5. D. Midgley and K. Torrance : potentiometric Water Analysis (John Wiley).
6. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.

CHE 204B	Chemistry in Contemporary Society	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Chemistry

Course Objectives:

- To know about quality control and impurities in Pharmaceuticals.
- To have an idea on body fluids, blood, enzymes and forensic.
- To gain knowledge on composition of milk, oil, fats etc.
- To familiarize with different types of fuels, soils and its ingredients.

Course Outcomes: At the end of the course, the student will be able

CO1	To acquire knowledge in pharmaceutical chemicals
CO2	To familiarize with blood fluids, blood, enzymes and forensic
CO3	To know about fermentation, detection of purity, beverages
CO4	To acquire knowledge on gaseous fuels, soil ingredients and analysis of trace elements

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	1	2	-	2	2	-	1	1
CO2	3	1	2	3	1	2	1	-	2	2	1	-
CO3	3	2	2	3	1	2	2	1	-	2	1	1
CO4	3	2	3	2	1	2	1	2	-	1	1	1

CHE 204B: Chemistry in Contemporary Society

UNIT – I : PHARMACEUTICALS 15 Hrs

Pharmaceuticals : Importance of quality control, drugs and pharmaceuticals, sources of impurities in pharmaceutical chemicals, analytical quality control in finished / final products, common methods of assay.

Common drugs and their uses: Analgesics – aspirin, paracetamol; Antheimentics – mebendazole ; Antiallergies – chlorpenneramine malleate; Antibiotics-pencillin, chloromecytin; Anti-inflammatory agents-oxyphenbutazone; **Antimalarials** – primaquine phosphate; Antituberculosists – INH; Narcotics – nicotine, morphine; Expectorants – Benadryl; Sedatives – diazepam; Vitamins – B**1**, B**2**, B**6**, niacin and folic acid.

UNIT – II : FORENSIC AND BIOMEDICALS **15 Hrs**

Body fluids: Composition and detection of abnormal level of certain constituents leading to diagnosis, sample collection and preservation of physiological fluids, analytical methods for the constituents of physiological fluids (blood, urine).

Blood: Estimation of glucose, cholesterol, urea, haemoglobin and bilirubin.

Urine: Urea, uric acid, creatinine, calcium phosphate, sodium, potassium and chloride.

Enzymes: Biological significance, assay of enzymes (pepsin, tyrasinase), vitamins (thiamine ascorbic acid, vitamin A) and harmones (progesterone, oxytocin, insulin), chemical, instrumental and biological assays to be discussed wherever necessary.

Forensic : General discussion of poisons with special reference to mode of action of cyanide organophosphates and snake venom, poisonous materials such as lead, mercury and arsenic in biological materials.

UNIT – III : FOOD AND BEVERAGES **15 Hrs**

Milk and milk products : Composition, alcohol test, fermentation, dye reduction-methylene blue and resazurin tests, analysis of fat content, minerals in milk and butter, estimation of added water in milk.

Oils and fats: General composition of edible oils, detection of purity, tests for common edible oils and groundnut oil, cottonseed oil and mustard oil, tests for adulterants like argemone oil and mineral oils,

Beverages: Soft drinks, alcoholic drinks, tea, coffee and fruit juice, analysis of caffeine in coffee and tea, detection of chicory in coffee, chloral hydrate in toddy, food preservatives like benzoates, propionates, sorbates, bisulphites, artificial sweetners, like saccharin, dulcin and sodium cyclamate, flavours – vanillin, esters (fruit flavours) and monosodium glutamate, artificial food colourants-coal tar dyes and non-permitted colours and metallic salts, control of food quality – codex alimentarices, Indian standards.

UNIT – IV : FUEL AND SOIL **15 Hrs**

Fuels : Definition, classification and characteristics of fuels, sampling, determination of calorific value. Liquid fuels-determination of flash point, fire point, aniline point. Knocking of petrol and diesel – octane and cetere numbers carbon residue. **Gaseous fuels** : Coal gas, waste gas, producer gas, gober gas and blast furnace gas, calorific value determination by Junker's gas calorimeter, relatice merits of solid, liquid and gaseous fules. **Soil** : Ingradiants of soil-organic matter, nitrogen, sulphur, sodium, potassium and calcium, analysis of trace elements, copper, molybdenum, zinc and boron.

Reference Books :

3. Practical Clinical biochemistry methods and interpretations, R. Chawala, J.P. Brothers Medical Publishers (P) Ltd., 1995.
4. Laboratory manual in biochemistry, J. Jayaraman. New Age International Publishers, New Delhi, 1981.

CHE 205 A & B	Core practical I: Inorganic & Physical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Inorganic & Physical Chemistry practical.

Course Objectives:

- Separation and determination of the two component mixtures
- Preparation of metal complexes
- Familiarize with conductometric, potentiometric and redox methods of analysis
- colorometric and pHmetric methods of analysis

Course Outcomes: At the end of the course, the student will be able

CO1	To separate and determine the two component mixtures
CO2	To acquire knowledge in the preparation of metal complexes
CO3	To study the determination of cell constant and verification of Onsagar equation, strength of strong acid by Titration of a strong acid with a strong base and vice versa
CO4	To get knowledge on the applications of conductometry, potentiometry, coulometry and pHmetry.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	3	1	-	2		1	1	-

CO3	3	2	2	3	3	1	1	2	-	1	1	-
CO4	3	2	2	3	2	-	1	-	1	1	-	2

CHE 205 A & B: Core practical I: Inorganic & Physical Chemistry

I . Quantitative Analysis:

Separation and determination of two component mixtures:

(i) Separation of Al(III) and Determination of Fe (III)

(ii) Separation of Cu(II) and Determination of Zn (II)

(iii) Separation of Ca(II) and Determination of Mg (II)

(iv) Separation of Cu(II) and Determination of Ni (II)

(v) Determination of Ferrocyanide and Ferricyanide

II. Physical Chemistry

1. Conductometry:
   (a) Determination of cell constant
   (b) Verification of Onsagar equation
   (c) Determination of dissociation constant of a weak acid
   (d) Titration of a strong acid with a strong base
   (e) Titration of a weak acid with a strong base
2. Potentiometry:
   (a) Titration of a strong acid with a strong base
   (b) Titration of a weak acid with a strong base
   (c) Redox titration
3. Coulometry: Estimation of Manganese
4. pHmetry: Strong acid, Strong base titrations.

CHE 206A & B	Core practical I: Organic & General Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Organic & General Chemistry practical.

Course Objectives:

- Familiarize with two component mixture separation and identification.
- Preparation of derivatives.
- Purification by components by different methods.
- Calibration of products by spectral methods.

Course Outcomes: At the end of the course, the student will be able

CO1	To familiarize with binary mixture separation
CO2	To gain hands-on-experience in purification of the components, preparation of derivatives.
CO3	To get knowledge about the chemical behavior of different components and mechanisms
CO4	Purification and calibration of data

Mapping of course outcomes with the program outcomes

CHE 206 A & B: Core practical I: Organic & General Chemistry

CHE-206 A : PRACTICAL – I : ORGANIC CHEMISTRY

Separation and Identification of two component organic mixture by systematic qualitative analysis.

1.Acid + Neutral 2. Base + Neutral 3. Phenol + Neutral 4. Ether insoluable component + acid / phenol / base.

CHE-206 B : PRACTICAL – I : GENERAL CHEMISTRY

Preparation of Metal Complexes:

(i) Tetra(ammine) copper (II) sulphate.

(ii) Mercury tetra(thiocyanato) cobaltate(II).

(iii) Hexa(ammine) Nickel (II) chloride.

(iv) Tris(acetylacetonato) Manganese (III) chloride.

(v) Tris (ethylenediammine) Nickel (II) thiosulpha

CHE 207	Human Values and professional ethics-II	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Human Values and professional ethics

Course Objectives:

- Gain knowledge on value education, family values and adjustability
- Develop ethics towards medical, health care professionals and ethical issues in genetic engineering
- Understand the importance of social ethics towards organ trade, human traffic king human rights violation and social disparities.
- Know about environmental ethics, ecological crises, pollution and protection of environment

Course Outcomes: At the end of the course, the student will be able to

CO1	To understand the concepts of human values, responsibilities of family values and status of women in family and society.
CO2	To acquire knowledge on different medical ethics the views of charaka and sushruta on moral responsibilities of medical practitioners.
CO3	To gain knowledge on social ethics and understand the characteristics of ethical problems in management.
CO4	To familiarize environmental ethics, ethical theory and ecological crisis.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CHE 207: ELECTIVE FOUNDATION (HUMAN VALUES AND PROFESSIONAL ETHICS-II)

Chapter I: Value Education – Definition – Relevance to present day – Concept of human values - Self introspection – Self-esteem. Family values-Components, Structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Chapter II: Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in

health care, human cloning, problem of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Chapter III: Social ethics – Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/pregnancy. Ethics of media – Impact of Newspapers, Television, Movies and Internet, Business ethics – Ethical standards of business – Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, Ethical abuses and work ethics.

Chapter IV: Environmental ethics – Ethical theory, man and nature - Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and pollution, Justice and environmental health.

Books for study:

1. Johns S Mackenjie: A Manual of ethics
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
3. Management Ethics – Integrity at work by Joseph A. Petrick and John F. Quinn, Response Books, New Delhi.
4. "Ethics in Management" by S.A. Shelekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed) G.C. Haughton.
10. Sasruta Samhita: Tr. KavirajKunjanlal, KunjanlalBrishagratha, Chowkamba Sanskrit Series, Vol I,II and III, Varanasi, Vol I PP, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series Office. Varanasi I, II, III Vol I PP 183-191.
12. Ethics, Theory and Contemporary Issues. Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Text Book for Intermediate First Year Ethics and Human Values, Board of Intermediate Eduction – Telugu Academy, Hyderabad.
14. I.C. Sharma Ethical Philosophy of India. Nagin& Co Julundhar.

(Mandatory Core)

CHE-PC-301	Physical Chemistry III	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Physical Chemistry

Course Objectives:

- Learn applications of Group Theory, symmetry criteria and symmetry restrictions.
- Applications of X-ray Diffraction and Electron Diffraction on solid state chemistry.
- Familiarize with the applications of Microwave spectroscopy, infrared spectroscopy and Raman spectroscopy.
- Get knowledge on concept of Thermodynamics of polymer dissolution and Flory-Huggins theory of polymer solutions.

Course Outcomes: At the end of the course, the student will be able to

CO1	To know the determination of Character Co-ordinate of C_2V point group based on 3N Coordinates and to learn the Mutual exclusion Principle.
CO2	To learn the Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals.
CO3	To study the rigid rotator model, stark effect, vibration-rotation spectroscopy, PQR branches, selection rules and Vibrational- rotational Raman spectroscopy.
CO4	To study the concepts on heat of dissolution, regular solution theory, Hildebrand solubility parameter, concept of Flory-Huggins theory of polymer solutions

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	-	2	
CO2	3	2	2	3	2	2	-	-	-	2	-	-
CO3	3	2	2	3	2	2	-	-	-		-	2
CO4	3	2	2	3	-	2	-	-	-	2	-	2

CHE-PC-301 CORE-THEORY PHYSICAL CHEMISTRY III

UNIT-I Applications of Group Theory **15 Hrs**

Construction of reducible and irreducible representations, Determination of Character Co-ordinate of C_2V point group based on 3N Coordinates. Standard reduction formula, Determination of normal modes of vibrations of SO_2, NH_3, $POCl_3$, $PtCl_4^{2-}$, H_2O_2 molecules. Mutual exclusion Principle, Direct Product, Accidental Degeneracy and Fermi resonance Group Theory and Spectroscopy: IR Spectral activity of NH_3 molecule, selection rules, symmetry Criteria for optical activity, symmetry restrictions on dipole moments, symmetry and stereo isomerism. Prediction of IR and Raman Spectral activity of H_2O and CO_2.

UNIT-II: X-ray Diffraction: 15 Hrs

(A) Solid State Chemistry Dislocation of Solids, Schottky and Frenkeldefects, insulaters, a,d semiconductors, Band theory of solids,solid state reactions.

(B) Bragg conditions-Miller Indices- Laue method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals. Index reflections, identification of unit cells from systematic absences in diffraction pattern- structure of simple lattices and X-ray intensities- structure factor and its relation to intensity and electron density- Description of procedure for X-ray structure analysis (NaCl and KCl).

(C) Electron Diffraction: Scattering intensity Vs scattering angle, Wierlequation, and its importance. Measurement techniques, Elucidation of structures of simple gas phase molecules, Low energy electron diffraction (LEED) for the study of surfaces.

UNIT-III: SPECTROSCOPHY 15 Hrs

Microwave spectroscopy: classification of molecules, rigid rotator model, effect of isotopic substitution on the transition frequencies, intensities- stark effect.

Infrared spectroscopy: Linear harmonic oscillator, zero point energy, anharmonity, Mores potential energy diagram, fundamental and overtone transitions, hot bands and combinations bands. Vibration-rotation spectroscopy, PQR branches, selection rules, factors affecting the band positions and intensities for IR region. **Raman spectroscopy:** Classical and quantum theories of Raman effect, pure rotational, pure vibrational Raman spectroscopy, selection rules, mutual exclusion principle, resonance Raman spectroscopy and coherent antistokes Raman spectroscopy. Vibrational- rotational Raman spectroscopy.

UNIT-IV: POLYMER SOLUTIONS 15 Hrs

Thermodynamics of polymer dissolution, effect of molecular weight on solubility, solubility of crystalline and amorphous polymer, heat of dissolution, regular solution theory, Hildebrand solubility parameter, Flory-Huggins theory of polymer solutions, conformational entropy, osmotic pressure and viscosity of polymer solutions. Molecular weight determination by light scattering, ultra-centrifugation and sedimentation equilibrium method. Liquid Crystals- synthesis and applications

Books Suggested

1. F.A. Cotton : Introduction to Group theory for chemists.
2. Geroge Davidson Elsevier : Introductory Group Theory for Chemists.
3. Gurdeep Raj , Ajay Bhagi&Vinod Jain : Group Theory and Symmetry in Chemistry
4. Instrumental methods of analysis – M.H. Willard, Meritt Jr. and J.A. Dean
5. Principles of instrumental analysis – Skoog and West

6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.
7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar.: polymer Science. New Age international Publishers.

(Mandatory Core)

CHE-PC 302	**Organic Spectroscopy and Applications**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of Organic Spectroscopy and Applications

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands
- Study on the applications of NMR spectroscopy in ascertaining the stereochemical structures of the molecules.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	To get experience to calculate λ max values for dienes, enones, polyenes, aromatic and heteroaromatic compounds.
CO2	To familiarize with the absorption bands of the molecules with specific functional groups
CO3	To interpret the data to different types of protons and carbons present in a molecule so as to ascertain the structure of the molecule based on the data provided
CO4	To acquire knowledge about specific fragmentation rules of different molecules which are unique.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	-	-	-	2	2	-
CO2	3	2	2	3	2	2	-	-	-	2	2	-
CO3	3	2	2	3	2	2	-	-	-	2	2	2
CO4	3	2	2	3	2	2	-	-	-	2	2	-

CHE-PC 302: CORE THEORY: ORGANIC SPECTROSCOPY AND APPLICATIONS

UNIT-I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY: 15Hrs

Various electronic transitions (185-800 nm), effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes. Fisher-Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic and heterocyclic compounds. Steric effect in biphenyls.

UNIT – II: INFRARED SPECTROSCOPY 15Hrs

Instrumentation and sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance, FT-IR

UNIT –III: NMR SPECTROSCOPY: 15Hrs

^{1}H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and nonequivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants.

Applications of ^{1}H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations and carbanions), E, Z isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Stereochemistry, hindered rotation, Karplus curve variation of coupling constant with dihedral angle. Simplification of complex spectra, nuclear magnetic double resonance, contact shift reagents, nuclear Overhauser effect (NOE).

^{13}C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants. Two dimensional NMR spectroscopy-COSY.

UNIT-IV: MASS SPECTROMETRY 15Hrs

Introduction, ion production, type of ionization, EI, CI, FD, and FAB-factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular-ion peak, metastable peak, Mc. Lafferty rearrangement. Nitrogen rule, isotope labeling. High resolution mass spectrometry, Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS

2. Spectroscopy of organic compounds, RM Silversteen and others, 5th Ed, John Wiley
3. Spectroscopy of organic compounds, P.S. Kalsi, Wiley, 1993.
4. NMR in chemistry-A multi nuclear introduction, William Kemp, Mc Millan, 1986.
5. Spectroscopic methods in Organic chemistry, DH Williams & I Flemmi

(Mandatory Core)

CHE-PC-303A	Organic Chemistry III	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of Organic Chemistry

Course Objectives: Course Objectives:

- Familiarize with the applications of different reagents in organic synthesis, Mechanisms and stereochemistry.
- Study the methods of preparation and applications of organometallic reagents.
- Understand topocity, prochirality, auxillary and reagent-controlled methods in asymmetric synthesis.
- Applications of different oxidizing and reducing agents in organic synthesis with region and stereo controlled products.

Course Outcomes: At the end of the course, the student will be able to

CO1	To familiarize with the specific functions of the reagents particularly diazomethane, N-bromosuccinimide, Ziegler Natta catalyst, 1,3-dithianes and Merrifield resin in the synthesis of a variety of complex molecules.
CO2	To gain knowledge in the synthesis of different organometallic reagents and also stereo and regio specificity and selectivity of reactions with organometallic reagents
CO3	To understand diastereoselectivity, stereoselectivity and substrate controlled auxillary controlled reactions
CO4	To acquire knowledge about the reagents which causes oxidation in various compounds and also the reagents that causes selective and complete reductions to synthesize various compounds.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	2	2	-	2	-	2	2	-
CO2	3	2	2	3	2	2	-	2	-	-	2	-
CO3	3	2	2	3	2	2	-		-	-	-	-
CO4	3	2	2	3	2	2	-	2	-	2	2	-

CHE-PC-303A Core-Theory Organic Chemistry III

UNIT I: REAGENTS IN ORGANIC SYNTHESIS 15 Hrs

Use of the following reagents in organic synthesis: Anhydrous $AlCl_3$, Boran trifluoride, N-Bromosuccinimide, Diazomethane, Dicyclohexylcarbodiimide, Lead tetraacetate, Zieglar-Natta catalysts, DDQ, Dithianes, Merrifield resin.

UNIT-II: ORGANOMETALLIC REAGENTS 15 Hrs

Synthesis and applications of Grignard reagents, Organolithium, Zinc, Copper, Mercury, Palladium and Rhodium compounds in Organic Synthesis, Homogeneous catalytic hydrogenation and hydroformylation reactions

UNIT III: ASYMMETRIC SYNTHESIS 15 Hrs

Topocity - Prochirality- Substrate selectivity - Diastereoselectivity and enantioselectivity-Substrate controlled methods-use of chiral substrates - examples

Auxiliary controlled methods-Use of chiral auxiliaries-Chiral enolates-alkylation of chiral imines – Stereoselective Diels-Alder reaction

Reagent controlled methods-Use of chiral reagents-Asymmetric oxidation-Sharpless epoxidation-Asymmetric reduction-Use of lithium aluminium hydride and borate reagents.

UNIT IV: METHODS OF ORGANIC SYNTHESIS 15 Hrs

i). ***Oxidations:*** **(a)** Alcohols to carbonyls-Chromium (iv) oxidants-Dimethylsulfoxide oxidation, periodate xidation, Oppenauer oxidation, oxidation with manganese dioxide, oxidation with silver carbonate **(b)** Alkenes to epoxides-peroxide induced epoxidations. **(c)** Alkenes to diols-oxidation with potassium permanaganate, osmium tetraoxide, Prevost reaction **(d)** Ketones to esters-Bayer-Villiger oxidation **(e)** Oxidative bond cleavage-cleavage of alkenes by transition metals. **(f)** Oxidation of alkyl or alkenyl fragments-selenium dioxide and chromium trioxide oxidations.

ii). ***Reductions*** **:** Reduction with lithium aluminium hydride, sodium borohydride, alkoxides, bis-methoxy ethoxy aluminium hydride, Boran aluminium hydride and derivatives-catalytic,hydrogenation-dissolving metal reductions, Non-Metallic reducing agents including enzymatic and microbial reductions.

Suggested Books

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. Structure and Mechanism in Organic Chemistry, C.K. Inglod, Cornell University Press.
4. Organic Chemistry, R.T Morrison and R.N. Boyd, Prentice - Hall.
5. Name reactions and reagents in organic synthesis, B.P. Muway and M.G Ellord, John Wiley.
6. Principles of Organic Synthesis, R.O.C Norman and J.M Coxon, Blackie Academic & Professional.

7. Reaction Mechanism in Organic Chemistry, P.S. Kalsi, New Age International.
8. Principles of organometallic chemistry, P. Powell, ELBS.
9. Organo transition metal chemistry-Applications to organic synthesis, S.G. Davis, Pergmon.
10. Stereochemistry to Organic Compounds, D. Nasipuri, New Age International.
11. Stereochemistry, P.S. Kalsi, Wiley Eastern.

CHE-PC- 304	Inorganic Spectroscopy and Thermal Methods of Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Basic Inorganic Spectroscopy and Thermal Methods of Analysis

Course Objectives:

- Gain knowledge on thermal methods of analysis and principles and applications to inorganic materials
- Familiarize with basics of Mossbauer and NQR spectroscopy.
- Learn the properties like g-factor, nuclear spin, hyperfine coupling constants
- Study the ESR instrumentation, various applications and photoelectron spectroscopy.

Course Outcomes : At the end of the course, the student will be able

CO1	To know about TG and DTA and applications of different scanning calorimetry.
CO2	To gain knowledge on Doppler shift and chemical shift, basic principles and applications of NQR spectroscopy.
CO3	To learn zero field splitting and Kramer's degeneracy, relaxation processes, instrumentation and applications of ESR.
CO4	To know about photoelectric effect and Koopmans theorem and impart the applications of X-ray and UV photoelectron.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	-	2	-	-	-	-	2	-
CO2	3	2	2	3	2	2	-	-	-	2	2	-
CO3	3	2	2	3	2	2	-	-	-	2	-	-
CO4	3	2	2	3	2		-	-	-	-	2	-

CHE-PC- 304: Inorganic Spectroscopy and Thermal Methods of Analysis

UNIT –I: THERMAL METHODS OF ANALYSIS 15 Hrs

Thermo gravimetry –Principle, Factors affecting the results, instrumentation. Application with special reference to $CuSO_4 5H_2O$, $CaC_2O_4\ 2H_2O$. Different thermal analysis – principle, instrumentation, difference between TG and DTA, applications with special reference to the clays and minerals.Different scanning calorimetry –principle, and applications to inorganic materials like chlorates and perchlorates, ammonium nitrate.

UNIT –II: MOSSBAUER SPECTROSCOPY and NQR **15 Hrs**

Mossbauer spectroscopy: Basic principles, Recoil energy, Doppler shift, Chemical shift, Quadrapole effects, Magnetic effects. Instrumentation, spectral parameters and spectrum display.

Aapplication of the technique to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds, (2) Sn^{2+} and Sn^{4+} compounds.

NQR spectroscopy: Basic principles of NQR spectroscopy, quadrupole nuclei, quadrupole moments, electric field gradient, coupling constant and applications.

UNIT –III: ELECTRON SPIN RESONANCE SPECTROSCOPY **15 Hrs**

Basic Principles, Hyper fine splitting, Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants, Hamiltonian and spin densities. Zero field splitting and Kramer's degeneracy, Relaxation process and line widths. Instrumentation and Applications.The EPR spectrum of bis(salicylidimine)-copper(II) complex, study of inorganic free radicals, biological applications of Electron Spin Resonance (Study of free radicals and Iron-sulfur proteins)

UNIT –IV: PHOTO ELECTRON SPECTROSCOPY **15 Hrs**

Photoelectric effect, Koopmans's theorem, ionization energy.

X-ray photoelectron spectroscopy (ESCA): Principle, Binding energies, Chemical shift, Applications of XPES to Qualitative analysis , to surface studies and structural analysis. Ultraviolet photoelectron spectroscopy- Principle, application of UPES in studying the molecular orbitals of O_2 and N_2 molecules. Block diagram of photoelectron spectrophotometer. Sources of radiation, detectors. Auger spectra – Principle, Applications of Auger spectra to surface studies and use of Auger spectra as a finger print tool.

Books Suggested

1. F.A. Cotton and G. Wilkinson, Advanced In-organic chemistry VI Edition, 1999. John wiley & sons. Inc., New York.
2. J.E. Huheey, E.A. Keiter and R.L. Keiter: Inorganic Chemsitry, Principles of Structure and Reactivity (4th Ed.) (Addison-Wesley)
3. Gary Wulfsberg: Inorganic Chemistry (5th Ed. (Viva Books)
4. J.D. Lee: Concise Inorganic Chemistry (Blackwell)
5. W.L. Jolly: Modern Inorganic Chemsitry (McGraw-Hill)
6. R.L. Carlin: Magneto-chemsitry (Springer-Verlag)
7. R.L. Dutta and A. Syamal: Elements of Magnetochemsitry (Affiliate East-West).
8. K. Hussain Reddy – Text book of Bioinorganic chemistry

CHE PC 304	Core practical I: Inorganic spectroscopy and thermal methods of analysis	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Inorganic Chemistry - Practical.

Course Objectives:

- Study on chemical kinetics of different reactions
- Flame photometry to determine different cations
- Familiarize with conductometric titrations of mixtures
- Colorometric estimation of different molecules.

Course Outcomes: At the end of the course, the student will be able

CO1	To study chemical kinetics of homogeneous solutions
CO2	To gain knowledge on the determination of different cations by flame photometry
CO3	To understand the principle and working aspects of conductometric titrations
CO4	To acquire knowledge on the implementation of colorometric estimations.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	2	3	-	-	-	2	-	1	-	2

CHE : PC-304: Practicals (Core & Gen.)

1. Chemical Kinetics:

a) Study of the kinetics of halogenations of acetone.

b) Determination of activation energy of reaction between iodide and Persulphate

c) Determination rate constant of oxidation of iodide ion by persulphate ion and study the effect of neutral salt (KCl).

2. Flame Photometry:

a) Determination of Na

b) Determination of K

c) Determination of Cu

CHE PC 305A	Chemotherapy and Drug Analysis	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Chemotherapy and Drug Analysis

Course Objectives:

- Gain knowledge on chemotherapy and analysis of drugs.
- Analysis of drugs chemically and biologically.

Course Outcomes: At the end of the course, the student will be able

CO1	To know about the classification and synthesis of drugs.
CO2	To familiarize with the qualitative and quantitative analysis of drugs.
CO3	
CO4	

Mapping of course outcomes with the program outcomes

CO4												

CHE PC 305A: (SKILL ORIENTED COURSE : THEORY) : CHEMOTHEROPY AND DRUG ANALYSIS

UNIT-I: Chemotherapy

Definition, History, and Evolution of Chemotherapy; Discovery, Classification, Nomenclature, Mode of action and synthesis of the following classes of compounds with special references to specific drugs mentioned under each class

a. Sulfa drugs- Sulfanilamide and Sulfamethoxazole.
b. Antibacterials
c. Lactum group of antibiotics – Penicillin, Ampicillin and Amoxycillin.
d. Cephalosporin-C and Ciprofloxacin.
e. Anticancer drugs – 5-Flurouracil, Methotrexate.
f. Antifungals – Griseofulvin
g. Antimalarials – Chloroquin

UNIT-II: Chemical and Biochemical analysis of Drugs

Qualitative and Quantitative Analysis of drugs: Uses of IR, UV, GLC and HPLC methods.

Drug Assay by Biochemical Analysis – ELISA (Cortisol, alcohol, opiates).

Radio Immuno Assay (RIA) – Enalapril, Insulin; Kidney, Lungs and Liver function tests; Use of isotopes in the Bioanalysis of drugs and in drug design programmes.

Book Suggested

1. Medicinal Chemistry and Pharmaceutical Chemistry – Harikishan Singh and Kapur
2. Medicinal Chemistry and Biochemistry – R.L.Nath
3. Introduction to Medicinal Chemistry – Patrick
4. The Organic Chemistry of Drug Synthesis Vols. 1-6 - Ledneicer Top drugs top synthetic routes – John Saunders
5. Medicinal Chemistry – Ashutoshkar
6. Synthetic Organic Chemistry and Drugs – Gurideep R Chetwal
7. Biochemistry – Harper, Conn & Stumpf, Lehninger
8. Biochemistry – Western Jodd
9. Biochemistry – Cann & Stumpf
10. Bergers Medicinal Chemistry Vols. 1-5 – Manfred E. Wolf
11. Introduction to drug design – Siverman
12. Biochemical approach to Medicinal Chemistry – Thomas Nogrady
13. Prinicples of Medicinal chemistry – William Foye
14. Text book of organic medicinal and pharmaceutical chemistry – Delgrado and William A
15. Industrial Microbiology – Casida

CHE PC 305B	Instrumental Methods of Analysis	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Instrumental Methods of Analysis Practical

Course Objectives:

- Familiarize with conductometric titrations of mixtures
- Colorometric estimation of different molecules

Course Outcomes: At the end of the course, the student will be able

CO1	To understand the principle and working aspects of conductometric titrations
CO2	To acquire knowledge on the implementation of colorometric estimations.
CO3

CHE : PC-305 (B) : Practicals (Skill Oriented Course)

1. Conductometry:

a) Titration of mixture of halides

b) Titration of mixture of HCl+HOAC

c) Saponification of an ester

2. Colorimetry:

a) Estimation of Manganese

b) Estimation of Iron

c) Estimation of Phosphate

d) Titration of copper Vs EDTA

CHE PC 306	Spectral Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Spectral Techniques

Course Objectives:

- Familiarize with the instrumentation of UV and visible spectroscopy, applications of identifying the structures of the molecules.
- Understand IR spectrometry and applications to ascertain the fundamental groups by observing absorption bands.
- Study on the applications of flame atomic absorption spectroscopy.
- Understand the working principle and fragmentation rules of different molecules in Mass spectroscopy.

Course Outcomes: At the end of the course, the student will able

CO1	To know the basic principles of spectroscopy.
CO2	To familiarize with the analysis of various functional groups by using different spectroscopic techniques.
CO3	To Understand the applications of AAS.
CO4	To gain knowledge about Mass spectral fragmentation of organic compounds and common functional groups.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	-	3	-	2	3	2	-	-	1	-
CO2	3	2	2	3	2	2	3	2	-	1	-	2
CO3	3	2	-	2	2	-	2	-	-	-	1	-
CO4	3	2	2	3	-	2	-	-	-	1	-	2

CHE : PC : 306(A): (OPEN ELECTIVE) SPECTRAL TECHNIQUES

UNIT – I: ULTRAVIOLET AND VISIBLE SPECTROSCOPY 15 Hrs

Various electronic transitions (185-800nm.), Beer-Lambert Law, effect of solvent on electronic transitions , ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, Fieser-Woodward rules for conjugated dienes and carbonyl compounds

UNIT – II : INFRARED SPECTROSCOPY **15 Hrs**

Instrumentation and sample handling, characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines, ketones, aldehydes, esters, amides, acids and anhydrides. Effect of hydrogen bonding.

UNIT – III:ATOMIC ABSORPTION SPECTROSCOPY: FLAME AAS: **15 Hrs**

Principle, Instrumentation – Sources of radiation (HCL and EDL), Different types of burners, Interferences- Physical, Chemical, spectral and back ground correction, and methods of minimization

GF AAS: Principle and technique –Comparison between Flame AAS and furnace AAS, Applications of AAS, Comparison between Atomic Absorption & Flame Photometry.

UNIT –IV: MASS SPECTROMETRY **15 Hrs**

Principle, instrumentation, different methods of ionization, EI, CI, FD and FAB, Mass spectra-molecular ion, base peak, meta-stable peak, nitrogen rule and Mc Lafferty rearrangement. Mass spectral fragmentation of organic compounds and common functional groups. Normal and branched alkanes, alkenes, cycloalkanes, benzene and its derivatives, alcohols and phenols, ethers, aldehydes and ketones, carboxylic acids and their derivatives , amines and nitro compounds. Examples of mass spectral fragmentation of organic compounds with respect to their structure determination.

Books Suggested:

1. Organic spectroscopy, W. Kemp 5th Ed, ELBS .2.
2. Spectroscopy of organic compounds, RM Silversteen and others 5th Ed, John Wiley 1991
3. Spectroscopy of organic compounds, PS Kalsi, Wiley, 1993
4. NMR in chemistry – A Multi nuclear introduction, William Kemp, Mc Millan 1986
5. Spectroscopic methods in Organic Chemistry, DH Williams & I Flemmi TMH . 2005

CHE PC 306	Chromatographic Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of graduate level Chromatographic Techniques

Course Objectives:

- Familiarize with Classification of Chromatographic methods.
- Understand Demonstration experiment in TLC.
- Study on the applications of High-Performance Liquid Chromatography (HPLC).
- Understand the working principle of gas chromatography.

Course Outcomes: At the end of the course, the student will able to

CO1	To know the stationary and mobile phases in chromatographic techniques.
CO2	To familiarize applications of different chromatographic methods.
CO3	To Understand the principle of chromatographic techniques.
CO4	To gain knowledge on the normal phase and reverse phase.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	-	3	-	2	3	2	-	-	1	-
CO2	3	2	2	3	2	2	3	2	-	1	-	2
CO3	3	2	-	2	2	-	2	-	-	-	1	-
CO4	3	2	2	3	-	2	-	-	-	1	-	2

CHE PC 306 : Chromatographic Techniques

Unit –I: Introduction - Classification of Chromatographic methods – Column chromatography-Adsorption phenomenon: Nature of adsorbents-Solvent systems-Differential migration-Separation of mixture of o-/p-nitro anilines (A demonstration experiment).

Unit –II: Thin-Layer Chromatography (TLC)-Coating materials and preparation of TLC plates-Solvents for development-Detection of compounds in TLC- R_f values in TLC-Applications of TLC in chemistry-Preparative TLC – Demonstration experiment in TLC.

Unit –III: High-Performance Liquid Chromatography (HPLC) - Application of HPLC- HPLC instrument-Stationary phases in HPLC-Normal and reversed phase HPLC: A comparison- Normal phase HPLC: Principle-Retention times in Normal and reversed phase HPLC- Reversed phase HPLC: Principle.

Unit –IV: Gas-Liquid Chromatography- Instruments for Gas-Liquid Chromatography- Gas-Chromatographic Columns and the Stationary Phase- Application of Gas-Liquid Chromatography- Gas-

Solid Chromatography.

Reference Books:

1. Analytical chemistry: G L David Krupadanam, D. Vijaya prsad, K. Varaprasad Rao, KLN Reddy, C. Sudhakar.
2. Analytical chemistry: Skoog West Holler.
3. Modern Analytical Chemistry : David Harvey DePauw University.
4. J.G. Dick. Analytical Chemistry, Mc Grraw Hill, New Delhi, (1973).

(Mandatory Core)

CHE-PC- 401	Electrochemistry	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Electrochemistry

Course Objectives:

- Study industrial electrochemistry, corrosion and methods of prevention
- Learn about electrochemical batteries and cells and their performance
- Study on electro kinetics and electro capillary phenomena and electrokinetic effect
- Familiarize polarography techniques and chemical passivity

Course Outcomes : At the end of the course, the student will be able to

CO1	Know the techniques of deposition of metals, throwing power simultaneous discharge of cations and methods of corrosion protection
CO2	Learn about electrochemical Batteries, fuel cells and nickel-cadmium batteries.
CO3	Understand electrical double layer systems, sedimentation potential, null points of metals and zeta potential.
CO4	Calculate electrochemical parameters; familiarize mixed ligand systems and reversible systems.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	2	-	2	-	-	1	2
CO2	3	3	3	3	2	-	-	2	-	2	-	3
CO3	3	3	3	3	3	-	-	2	-	-	-	2
CO4	3	3	3	3	-	2	-	-	-	-	-	3

CHE PC-401: CORE THEORY: **ELECTROCHEMISTRY**

UNIT-I: Industrial Electrochemistry 15 Hrs

Deposition of metals, Factors influencing physical nature of electrodeposited metals – current density, concentration of electrolyte, temperature, colloidal matter, electrolyte and basis metal. Throwing power, simultaneous discharge of cations. Separation of metals by electrolysis. Electrochemical passivity. Passivity and current density. Chemical passivity. Theories of passivity. Mechanical passivity. The corrosion of metals. Hydrogen evolution type of corrosion, corrosion in presence of depolarizer. Differential oxygenation corrosion. Methods of corrosion protection.

UNIT- II: Electrochemical Devices: 15 Hr

Batteries- their performance – characteristics – considerations in the selection and applications, Chemistry of primary batteries – Zinc – Carbon, Mercuric oxide, silver oxide and lithium cells – Solid electrolyte cells.

Chemistry of secondary batteries – Lead acid , Nickel cadmium batteries, Water activated batteries, Fuel cells – Their thermodynamics- performance

UNIT-III: Electrokinetic's and Electro capillary phenomena: 15 Hrs

Electrical double layer, Helmholtz – Perrin, Gouy – Chapman and Stern theories of electrical double layer. Lipmann equation.

Electrokinetic effect: Electro osmosis, Electrophoresis, streaming potential , sedimentation potential and their relation to zeta potential. Determination of zeta potential from electrophoresis measurements. Tiselius apparatus. Electro capillary curves, Null points of metals and their experimental determination.

UNIT-IV: **Advances in Polarography**: **15 Hrs**

(A) Polarography of Metal Complexes

Reversible, Diffusion-controlled systems, Determination of Formulae and Stability, Constants of Complexed Metal Ions, Determination of Stability Constants and Coordination Numbers of metal complexes, Calculation of Individual Complex, Stability Constants, Mixed Ligand Systems- the Method of Schaap and Mcmasters

(B) Polarography of organic compounds

Structural Effects, Nature of Electroactive group, Steric Effects, substituent Effects.

Books suggested:

1. S. Glasstone. An introduction to Electrochemistry. Affiliated East-West Press Pvt. Ltd.
2. P.T.K. Kissinger, W.R. Heinemann. Laboratory Techniques in Electro analytical Chemistry, Marsal Debber, Inc.
3. Willard, Merit. Instrumental methods of analysis, Welowarth Publiching Co.,
4. L. Antropov. Theoretical Electrochemistry. Mir Publications.
5. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.
6. V.S. Bagotsky. Fundamental of Electrochemistry. Jhon Wiley & Sons. 2nd editions-2006.
7. Introduction to polarography and allied Technique by Dr.K. Zutshi

(Mandatory Core)

CHE-PC 402	Thermodynamics, Polymers and Solid-state Chemistry	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of Thermodynamics, Polymers and Solid-state Chemistry

Course Objectives:

- To learn thermodynamic Properties of fluids, phase equilibria and flash calculations.
- Thermodynamic properties of liquids, activity and activity coefficients.
- Polymer structures, morphology and properties.
- To get knowledge on concept of solid state chemistry and super conductance.

Course Outcomes: At the end of the course, the student will be able to

CO1	Derive Gibbs Duhem equation and to calculate fugacity and chemical potential.
CO2	Calculate excess free energy and entropy, to draw Hildebrand curves and to correlate excess functions and activity coefficients
CO3	Learn morphology, Tm and Tg points and to calculate transition temperatures and to identify cross linking in polymers.
CO4	Identify magnetic properties of solids, magnetic materials, superconductors and BCS theory

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	-	-	-	1	-	3
CO2	3	3	3	2	2	-	-	-	-	-	1	3
CO3	3	3	2	2	2	-	-	-	-	2	-	2
CO4	3	3	3	2	2	-	-	-	-	2	-	1

CHE PC-402: CORE THEORY: **THERMODYNAMICS, POLYMERS AND SOLID STATE CHEMISTRY**

UNIT-I: Thermodynamic properties of fluids: 15 Hrs

Thermodynamic relationship residual properties – systems of variable composition- ideal and non-ideal behaviour – fugacity-fugacity coefficient in solutions- Phase equilibrium of low to moderate pressures- dew point-bubble point and flash calculations**.**

UNIT – II: Thermodynamic properties of 'Liquid Mixtures 15 Hrs

Activity and activity coefficients-excess free energy-excess enthalpy-excess volume-excess

entropy-relation between excess functions and activity coefficients –Application of Gibbs-Deuhem equation-regular solutions –van Laar theory and Scachard-Hildebrand theory.

UNIT-III: Polymers- structure and properties 15 Hrs

Morphology and order in crystalline polymers, configuration of Polymer chains, crystal structures and polymers, Stain induced morphology, morphology of chrystalline polymers, crystallisation and melting- polymer structure and physical properties, crystalline melting point, T_m-melting point of homogeneous series, effect of chain flexibility and other steric factors- entropy and heat of fusion, the glass transition temperature, Tg , relationship between Tm and Tg effects of molecular weight, diluents, chemical structure, chain topology, branching and cross linking.

UNIT-IV: Solid State Chemistry 15 Hrs

Magnetic properties of solids- Classification of magnetic materials, Magnetic Susceptibility, Langevin diamagnetism, Weiss theory of para magnetism. Electronic properties of metals, insulators and semiconductors: Electronic Structure of solids, Band theory, band Structure of metals, insulators and semiconductors. Electrons, holes and Excitons. The temperature dependence of conductivity of extrinsic semiconductors. Photo conductivity and photovoltaic effect –P-n-Junctions. Super conductivity: Occurence of superconductivity. Destruction of Superconductivity by magnetic fields-Meisner effect. Types of superconductors. Theories of super conductivity BCS theory.

Books suggested:

1. J.M. Pransnitz. Molecular Thermodynamics of Fluid Phase Equilibrium. Prentice. Hall
2. Kuriocose and Rajram. Thermodynamics
3. Smith and Van Ners. Chemical Thermodynamics.
4. R.C. Srivastava, Subi. K. Saha. Thermodynamics-A care course. Prentice-Hall of India Pvt, Ltd,. 3rd edition-2007.
5. Silbey, Alberty, Bawendi. Physical chemistry. Jhon-Wiley & sons. 4th edition-2006.
6. F. W. Billmeyer, Jr.: Text Book of Polymer Science. Wiley Interscience.
7. V. R. Gowariker, N. V. Viswanathan, Jayadev Sreedhar.: polymer Science. New Age international Publishers.
8. Solid State chemistry by M.G. Arora.
9. Solid State Chemistry by Wiley.

(Mandatory Core)

CHE-PC-403A	Chemical Kinetics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Chemical kinetics

Course Objectives:

- Differentiate homogeneous and heterogeneous catalysis enzyme catalysis and applications
- Learn photo chemistry, chemical excitations and rate of photochemical reactions
- To familiarize electrochemical relaxation methods, photochemical and isotope effects
- Radical photochemical reactions, theory and applications

Course Outcomes: At the end of the course, the student will be able to

CO1	Draw skrabal pH diagram and to separate unimolecular and bimolecular reactions
CO2	Study laws of photochemistry, to derive stern-volmer equation
CO3	Identify chromo potentiometry points and to investigate kinetic currents and isotopic effects
CO4	Learn photochemical thresholds, chemiluminescence

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	-	-	-	-	1	2	1
CO2	3	3	3	3		2	-	-	-	1	-	2
CO3	3	3	3	3	2	2	-	-	-	-	-	2
CO4	3	3	3	3	2	-	-	-	-	-	2	2

CHE PC-403A : (GENERIC ELECTIVE): CHEMICAL KINETICS

UNIT – I: Catalysis 15 Hrs

Homogeneous catalysis: Steady state and equilibrium treatments of acid-base catalysis. Skrabal P^H diagrams, Protolytic and Prototropic mechanism. Acidity functions, Zucker, Hammett, Bunnett and Yates hypothesis in the elucidation of the mechanism. Enzyme catalysis – influence of concentration, P^H and temperature. **Heterogeneous Catalysis:** Mechanism of interface reactions, application of transition state theories to unimolecular and bimolecular surface reactions

UNIT – II: Photochemistry: 15 Hrs

Interaction of electromagnetic radiation with matter, laws of photochemistry, Quantum yield, types of excitations, Fate of excited molecule, transfer of excitation energy, kinetics of unimolecular and bimolecular photophysical process, Stern-Volmer equation, Kinetics of photochemical reaction rate constants and life times of reactive energy states, determination of rate constants of reactions, effect of light intensity on the rate of photochemical reactions.

UNIT-III: Electrochemical relaxation methods, Photochemical methods, Isoptopic effect 15 Hrs

Electrochemical relaxation methods: Introduction , advantages of Electrochemical transient (or) relaxation techniques, application of these methods, various types of perturbation of a system, pulse polarography, chronopotentiametry, investigation of kinetic currents by chronopoptentiometry.

Photochemical methods: Introduction , phenomena of ISC, fluorescence and phosphorescence, experimental arrangement of fluorescence measurements. Example of quenching reactions.

Isotopic Effects: Equilibrium isotope effects, equilibria in solution, primary kinetic isotopic effects semiclassical treatments, Quantum-mechanical Tunneling,Reactions of the Type $H+H_2$,Transfer of H^+,H and H^- reactions of Huonium,Isotope effect with Havier atoms.

Unit-IV: Photo Chemical and Radiation Chemical Reactions 15 Hrs

Photochemical reactions photochemical primary process, reactions of electronically excited states of species, photo chemical thresholds, laws of photochemical equivalence, rotating-sector technique, multi photon excitation, photosensitization, radiation chemical primary process, chemiluminiscence**.**

Books suggested:

1. K.K. Rohatgi Mukerjee. Fundamentals of Photochemistry.
2. C. Kalidas. Principles of fast reactions techniques and Applications.
3. V. Yegnaramam, C.A. Basha And G. Prabhakar Rao : Applications of Electrochemistry.
4. Keith J.Laidler: Chemical Kinetics.
5. J. Dalton: A New System of Chemical Philosophy.
6. Chemical Kinetics:Keith J.Laider.

(Compulsory Foundation)

CHE-PC-403B	Bioinorganic, Bioorganic, Biophysical Chemistry	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Bioinorganic, Bioorganic, Biophysical Chemistry

Course Objectives:

- Highlighten metal complexes as oxygen carriers and electron transfer in biology.
- Metal ion transport and storage in biological systems and importance of trace metals in biology.
- Learn physiological functions of carbohydrates, lipids, enzymes classification, stereospecificity.
- The basic concepts of biophysical chemistry in biochemical reactions, exergonic and endergonic reactions.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain knowledge on metallo proteins in electron transfer processes.
CO2	Know the applications of trace metal ions and metal ions as chelating agents in medicine.
CO3	Achieve and develop highly stereoselective synthesis of organic compounds and drugs by adopting environmentally.
CO4	Understand thermodynamics of biopolymer reactions and to correlate free energy and biopolymer parameters.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	3	-	2	-	2	-	1	1	1
CO2	3	3	3	3	-	2	-	2	-	-	1	3
CO3	3	3	3	2	2		-	3	-	1	1	3
CO4	3	2	2	3	2	2	-		-	2	-	1

CHE PC-403(B): (GENERIC ELECTIVE): BIOINORGANIC, BIOORGANIC, BIOPHYSICAL CHEMISTRY

UNIT-I: **BIO-INORGANIC CHEMISTRY- I** **15 Hrs**

Metal complexes as oxygen carriers –Heme proteins –Hemoglobin and myoglobin –Non heme proteins –hemerythrin and hemocyanin – model synthetic complexes of iron, cobalt and copper.Co-enzymes Vitamin $B_{12,}$carboxy peptidase and superoxidedismutase.

Electron Transfer in Biology: Structure and functions of metalloproteins in electron transfer processes –catalase –peroxidose –cytochromes and iron –sulphur proteins –synthetic models.

UNIT – II: BIOINORGANIC CHEMISTRY- II: Metal ion transport and storage in biological systems**,** Metal ions in Biology, Molecular mechanism of ion transport across membranes: ionophores, photosynthesis.

Hydrolytic metalloenzymes: Carbonic anyhdrase, carboxy peptidase, calcium in control processes, calcium and muscle contraction, calcium and secretion, calcium in blood clotting mechanisms. Therapeutic uses of enzymes.

Importance of trace metals in biology: Metal ions as chelating agents in medicine, trace metal ions and metal and non-metal deficiency. Biological nitrogen fixation,in-vivo and in-vitro nitrogen fixation.

UNIT-III: BIOORGANIC CHEMISTRY

Carbohydrates: Structure and biological functions of mucopolysaccharides, glycoproteins, and glycolipids- Role of sugars in biological recognition-Blood group substances

Lipids: Essential fatty acids-structure and function of triglycerols, Glycerophospholipids, cholesterol, bile acids prostaglandins- composition and functioning of lipoproteins

Enzymes: Nomenclature and classification, properties, factors affecting enzyme catalysis, enzyme inhibition- reversible and irreversible inhibition. Uses of enzymes in food drink industry and clinical laboratories.

UNIT-IV: BIOPHYSICAL CHEMISTRY:

Standard free energy change in biochemical reactions, exergonic and endergonic reactions, hydrolysis of ATP, thermodynamics of biopolymer solutions, chain configuration of bio polymers, and calculation of average dimensions. Membrane equilibrium, ion transport through cell membrane. dialosis and its function. Structure and functions of proteins, enzymes, DNA and RNA in living systems, forces involved in bio polymer interactions, electrostatic forces, hydrophobic forces, molecular expansion, and dispersion forces.

Books Suggested

1. M.N. Hughes, The Inorganic chemistry of Biological Processes, John wiley and Sons, New York 2nd Edition, 1981.
2. A Text book of Biochemistry, A.V.S.S. Rama Rao
3. Physical chemistry by Atkenes
4. Physical chemistry by Albertz.
5. Bio physical chemistry by Van Holde
6. Bio Physics by Narayanam

7. Organic Chemistry, Vol. 2, I. L. Finar, ELBS.
8. Chemistry of Natural Products, P.S. Kalsi, Kalyani Publishers.
9. Chemistry of Organic Natural Products, O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
10. Natural products Chemistry K.B.G. Torssell, John Wiley, 1983.
11. Burger's Medicinal Chemistry, M.E. Wolff, John Wiley
12. Medicinal Chemistry, A. Kar, New Age International

CHE PC 404	Core practical I: Inorganic Chemistry - Practical	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Inorganic Chemistry - Practical.

Course Objectives:

- Learn potentiometric titrations of mixture of acids
- Determination of electrode potential by polarography
- Gain knowledge on interpretation of data from IR, AAS, HPLC and GC
- Determination of alkanility and purity by pH metry

Course Outcomes: At the end of the course, the student will be able

CO1	To perform titration of mixture of halides and to draw potentiometry curves
CO2	To learn ampherometric titrations and mixtures by polarography
CO3	To Correlation of data obtained from IR, AAS, HPLC and GC
CO4	To Determination of alkanility and purity by pH metry

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	2	3	-	-	2	-	2	-	3
CO2	3	3	3	2	3	2	-	-	-	2	3	3
CO3	3	2	3	3	2	3	-	2	-		2	3
CO4	3	3	3	2	3	3	-	2	-	2	-	3

CHE PC 403: CORE PRACTICALS: <u>PRACTICAL – I-</u>

1. Potentiometry: a) Titration of mixture of acids
   b) Titration of mixture of halides
   c) Titration of ferrous ammonium sulphate with potassium dichromate
   d) Redox titrations
   e) Solubility of Sparingly soluble salt.
   f) Formula and instability constant of a complex
   g) Dissociation constant of acetic acid

2. Polarography: a) Determination of E1/2 of Zn and Cd
   b) Determination of Zn and Cd in mixture
   c) Amperometric titration.

II DEMONSTRATION EXPERIMENTS

1. IR – Interpretation of IR spectrum of alcohols, ketones, aldehydes and other standard materials
2. AAS: Demonstration of AAS – Determination of Zn, Cd, Pb, Mn, Fe and Ni in effluents using AAS.
3. Spectrofluorimetry – estimation of quinine and fluoroscene
4. Ion selective electrodes – estimation of F^-, S^{2-} and CN^- in effluents using ion selective electrode meter.
5. Polarography and Anode stripping voltametry
6. Polarography and Anode stripping voltametry – behavior of Cd, Zn, Pb in a mixture.
7. Determination of Pb and Cd in samples using Anode stripping voltametr
8. Gas chromatography- Determination of pesticides
9. HPLC- Determination of pesticides
10. NMR
11. (a)Demonstration of NMR spectrometer and study of hydrogen bonding in a given alcohol or phenol.
12. (b)Interpretation of NMR chemical shifts of ethyl benzene, ethyl alcohol.
13. TGA, DTA, DSC – Demonstration of TG, DTA and DSC and study of decomposition of calcium oxalate, calcium carbonate, copper sulfate, oxalic acid.
14. pH metry
    a. Determination of alkalinity in a colored effluent using pH metric end point.
    b. Determination of purity of commercial HCl, H_2SO_4, H_3PO_4 and CH_3COOH using pH metric end point

CHE PC 405	Project Work	L-5,T-1,P-0	4 Credits

Pre-requisite: Physical Chemistry Project Work

Course Objectives:

- Identification of problem by literature survey
- Carry out the problem independently
- Interpretation of data
- Communication of research results through presentations and preparation of dissertation

Course Outcomes: At the end of the course, the student will be able

CO1	To identify research problems and to collect research literature
CO2	To propose hypothesis of a research problem
CO3	To perform research experiments
CO4	To analyse the data and conclude the research outcomes

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	2	2	3	2	-	-	-	3

CO3	3	3	3	2	2	3	2	3	-	2	-	3
CO4	3	3	3	3	3	3	2	2	-	2	-	3

CHE PC 405: PRACTIAL II/ PROJECT WORK

CHE PC 406A	Drug Chemistry	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of Drug Chemistry

Course Objectives:

- To learn about the natural products as leads for new drugs
- Determination of cardiovascular drugs
- To study Autacoids
- Interpretation of Antipyretics

Course Outcomes: At the end of the course, the student will be able to

CO1	Know about natural products.
CO2	Know Interpretation of cardiovascular drugs.
CO3	Know the Analyzing about prostaglandins.
CO4	Know the Definition, Classification, Nomenclature, Structure and Synthesis of anti-inflammatory drugs.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3

CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : PC : 406 (A): (OPEN ELECTIVE) : DRUG CHEMISTRY

UNIT – I: NATURAL PRODUCTS AS LEADS FOR NEW DRUGS

Occurrence, Structure and therapeutic uses of Drugs acting on Central Nervous System

Morphine alkaloids (morphine, codeine, thebaine, heroin, pethidine)

Cannabinoids (9-cannabinol, Tetrahydrocannabinol)

Neuromuscular Blocking Agents (Curare, Decamethonium)

Vinca Alkaloids (Vincristin and Vinblastin), Taxol and Taxotere, podophyllotoxin, Etoposide, Teniposide.

UNIT – II: CARDIOVASCULAR DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis.

Cardiac glycosides (ex: Digoxin, Digitoxin);

Antihypertensive drugs (ex: Methyl dopa, Clonidene hydrochloride);

Antiarrhythmic agents (ex: Quinidine sulfate);

Antisympathetic drugs (ex: Propranolol hydrochloride, Verapamil hydrochloride);

Vasopressor drugs (ex: Prenylamine, Buphenine).

UNIT – III: AUTACOIDS

Definition, Occurrence, Isolation, Nomenclature, Classification, Synthesis, Biosynthesis and Stereochemical structures of Prostaglandins. Structural elucidation of PGE_1, PGE_2; Synthesis and biosynthesis of PGE_2, $PGF_{2\alpha}$.

Structure and Biosynthesis of Thromboxane A2 and Prostacyclin (synthesis not expected).

UNIT – IV: ANTI-INFLAMMATORY DRUGS

Definition, Classification, Nomenclature, Structure and Synthesis of Paracetamol, Aspirin (Antipyretic), Salol, Cinchophen, Antipyrene, Phenylbutazone, Indomethacin, Tolmetin, Ibuprofen, Diclofenac and Naproxen.

Books suggested:

1. Medicinal Chemistry by Ashitosh Kar
2. Medicinal Chemistry by D. Sriram, P. Yogeeswari
3. Medicinal Chemistry by David A. Williams, Thomas L. Lemke
4. Medicinal Chemistry by V**.** Alagarsamy
5. Biochemistry by U. Satyanarayana
6. Natural Products Chemistry and Applications by Sujata V. Bhat, B.A. Nagasampagi, S. Meenakshi
7. Medicinal Chemistry by V.K. Ahluwalia, Madhu Chopra
8. Medicinal Chemistry by Balkishen Razdar
9. Advanced Practical Medicinal Chemistry by Ashutosh Kar
10. Chemistry of Organic Natural Products by O. P. Agarwal, Vols., 1 & 2, Geol Pubs.
11. Chemistry of Natural Products by S. V. Bhat, B.A. Nagasampagi, M. Sivakumar
12. Natural Products Chemistry by K.B.G. Torssell, John Wiley, 1983.

CHE PC 406 B	Electroanalytical Techniques	L-5,T-1,P-0	4 Credits

Pre-requisite: Understanding of Electroanalytical Techniques

Course Objectives:

- To learn about the classification of electroanalytical methods
- Determination of types of currents
- Principle, instrumentation, reversible and irreversible cyclic voltammograms..
- Interpretation of Ion selective electrodes

Course Outcomes: At the end of the course, the student will able to

CO1	Ability to interpret potentiometry and conductometry
CO2	Interpretation of results while adhering to DC Polarography.
CO3	Analysing and compiling the data and results in polarography.
CO4	Familiarize Types of ion sensitive electrodes.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	3	3	-	-	2	-	-	2	3
CO2	3	3	3	3	-	2	-	2	-	2	-	3
CO3	3	3	-	3	-	3	-	2	-	3	-	3
CO4	3	-	3	-	3	2	-	-	-	2	-	3

CHE : PC : 406(B): (OPEN ELECTIVE) : ELECTRO ANALYTICAL TECHNIQUES

Unit I: Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glasselectrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant. Mobility of ions, Conductometric titrations.

Unit II: D.C Polarography :. Dropping mercury electrode- Instrumentation-polarogram. Types ofCurrents : Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation(derivation not necessary) and its consequences. Types of limiting Currents: Adsorption, Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

Unit III: (i) A.C. polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography(V) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms.

Unit IV: Ion selective electrodes: Ion-sensitive electrodes –types of ion sensitive electrodes –metal based cation and anion sensitive electrodes, solid membrane electrodes. Liquid ion-exchange electrodes, gas sensing membrane electrodes.

Books Suggested

1. H.W. Willard, LL. Merrit and J.A. Dean: Instrumental Methods of Analysis. Affiliated East-West).
2. G.H. Jeffery, J. Bassett, J. Mendham and R.C. Denny. Vogel's Text Book of Quantitative Chemical Analysis (ELBS).
3. D.A. Skoog and D.M. West: Principles of Instrumental Analysis (Holt, Rinehart and Wilson).
4. J.G. Dick : Analytical Chemistry (Mc Graw Hill).

Course

M.Sc. ENVIRONMENTAL SCIENCES

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per

NEP - 2020

DEPARTMENT OF ENVIRONMENTAL SCIENCES

About the Department

The Centre for Environmental Sciences with sophisticated analytical instruments was established in Sri Venkateswara University in the year 1989 as a centralized instrumentation facility for analyses of chemical, physical and physico-chemical aspects of the environment undertaken by different departments of the University.

The Department of Environmental Sciences was established in 1997 with a goal to build environmental knowledge base and to promote quality education and research. Various activities have been taken up to redress the local environmental problems, to create environmental awareness and to promote environmental education with special emphasis on rural development.

Vision

- To be the Nation's premier in research and development in Environmental Sciences.
- The Department will be multidisciplinary in its approach and responsive to current environmental issues Air pollution, water pollution and global warming.
- Environmental Sciences is to contribute quality instruction and scientific expertise in the geosciences, both now and for the future, to meeting global challenges in supplies of natural resources.
- To reduce environmental pollution, developing agriculture without soil contamination, preserving aesthetic values, mitigation of natural hazards, protection of the environment and public awareness of science.

Mission

- Relevant and innovative information and communication to aid in sustainable development, management and decision making involving increasingly stressed land and water supplies.

- Technical expertise for addressing critical zone and environmental issues(including contaminant remediation, sustainable food production, soil and water quality) in rural and urban centers and the rapidly changing interfaces between them.

Course Description: Ecology and Environment, Environmental Chemistry, Environmental Toxicology and Public Health, Human Values and Professional Ethics, Energy and Environment, Environmental Pollution, Instrumental Techniques and Applications, Waste Treatment and Management, Environmental Impact Assessment, Audit And Economics, Statistics, Computer Applications and Modeling, Natural Resources Conservation, Water Resources and Watershed Management, Remote Sensing and GIS, Environmental Laws, Policies and Legislation Forest Resources and Management

Programme Specific Outcomes (PSOs)

- By knowing pollution levels in the environment best possible fresh environment can be created in different methods like afforestation, natural parks and sanctuaries etc., for human concern.
- Imparting practical knowledge about estimation of pH, Total Dissolved Solids, Hardness and Dissolved Oxygen, Chlorides and Sulphates in water samples.
- Pollution free environment for human life will be achieved.
- Applications of basic scientific principle in the evaluation of pollution by instruments.
- Environmental potentiality will be achieved. This is indirect benefits to the society.
- Discuss the solid waste collection systems, route optimization techniques and processing of solid wastes.

Programme Objectives:

- To impart the knowledge on ecology, ecosystems imbalance, impact and restoration.
- To develop population growth, regulations and dynamics in different communities.
- To inculcate ethics and lifelong learning in ecosystem imbalance, impact, control practice considering society, health and environment.

- To improve sustainable management of inorganic fertilizers, animal manures and green manures in order optimize plant productivity and to reduce nutrient losses.
- To create an awareness on Engineering Ethics and Human Values.
- To instill moral and social values and loyalty.
- To emphasize on design considerations of various unit operations and processes of water treatment facilities.
- To learn aeration, sedimentation, coagulation and flocculation processes.
- To characterize the waste and apply the knowledge of laws for municipal solid waste management, for handling of biomedical wastes and for handling of plastic wastes.
- To design composting systems, maintain and operate the aerobic and anaerobic composting process for effective organic waste recycling.
- To introduce and provide theoretical and practical education on environmental impact assessment.
- To focus on the rationale and methodology of integrated environmental impact assessment (EIA), including consideration of the relevant bio-physical, social, cultural, economic and human health aspects of development proposals, programs and policies.
- Evaluation of land use for various agricultural practices.
- To recognize how soil type and topography affects recommended agricultural, commercial and residential use and water quality at varying locations.
- To identify core environmental issues and legal and institutional responses
- To analyze the role of judiciary in environmental protection.
- To impart knowledge in sustainable forest management.

Programme Outcomes:

- Describe programmes environmental protection by implementing eco-friendly for human existence.
- By knowing pollution levels in the environment best possible fresh environment can be created in different methods like afforestation, natural parks and sanctuaries etc., for human concern.
- Imparting practical knowledge about estimation of pH, Total Dissolved Solids, Hardness and Dissolved Oxygen, Chlorides and Sulphates in water samples.
- Inform, educate, and empower people about the potential hazards of toxic substances to environmental and human health.
- They explain basic competence regarding environmental impacts arising from different energy carriers and technical solutions.
- Pollution free environment for human life will be achieved.
- Applications of basic scientific principle in the evaluation of pollution by instruments.
- Environmental potentiality will be achieved. This is indirect benefits to the society.
- Discuss the solid waste collection systems, route optimization techniques and processing of solid wastes.
- Critically examine assumptions inherent in impact assessment, examine a range of environmental impact assessments and identify and explore impact assessment fields and approaches.
- Understand requirement of oxygen for growth of organisms to break down organic matter in wastewaters.
- Rest and recreation to the public and income generation for the Government.
- Explain the conservation of the environment by adopting bio treatment for waste degradation.
- Critically examining the gap in the resource availability, use and conservation.
- Describe the management of water resources through construction of watersheds for future generations.
- Evaluating the application of RS-GIS techniques to the matrices of environment and resource management.

Program Educational Objective (PEOs):

- To impart students with strong knowledge base through syllabi courses and sessional that makes them suitable for industries, academics, research and consultancies.
- To develop students analytical, computational and research skills through assignments, weekly presentations and modeling software.
- To train the students on developing practical, efficient and cost effective solutions on problems and challenges on environmental sciences.
- To inculcate among students sensitivity towards social and corporate responsibilities

SVU COLLEGE OF SCIENCES

CHOICE BASED CREDIT SYSTEM (CBCS) (AS PER NEW UGC REGULATIONS)

The course of Study and Scheme of Examinations(With Effect from 2021-22)

M.SC. ENVIRONMENTAL SCIENCES

SEMESTER - I

S. No	Course Code	Components of Study	Title of the Paper	Contact hours	No. of Credits	I A Marks	End SEM Exam Marks	Total
1	ENV 101	Core-Theory	Ecology and Environment	6	4	20	80	100
2	ENV 102	Core-Theory	Environmental Chemistry	6	4	20	80	100
3	ENV 103	Core-Practical I	Practical – I	6	4	-	-	100
4	ENV 104	Core-Practical II	Practical – II	6	4	-	-	100
5	ENV 105	Compulsory Foundation **(Related to Subject)**	Environmental Toxicology and Public Health	6	4	20	80	100
6	ENV 106	Elective Foundation	Biodiversity and Conservation and Management	6	4	20	80	100
		Total		**36**	**24**	**80**	**520**	**600**

SEMESTER-II

S.No	Course Code	Components of Study	Title of the Paper	Contact hours	No. of Credits	I A Marks	End SEM Exam Marks	Total
1	ENV 201	Core-Theory	Energy and Environment	6	4	20	80	100
2	ENV 202	Core-Theory	Environmental Pollution	6	4	20	80	100
3	ENV 203	Core-Practical I	Practical – I	6	4	-	-	100
4	ENV 204	Core-Practical II	Practical – II	6	4	-	-	100
5	ENV 205	Compulsory Foundation **(Related to Subject)**	Instrumental Techniques and Applications	6	4	20	80	100
6	ENV 206	Elective Foundation	Environmental Laws, Policies and Legislation	6	4	20	80	100
		Total		**36**	**24**	**80**	**520**	**600**

SEMESTER-III

S.No	Course Code	Components of Study	Title of the Paper	Contact hours	No. of Credits	I A Marks	End SEM Exam Marks	Total
1	ENV 301	Core- Theory	Waste Treatment and Management	6	4	20	80	100
2	ENV 302	Core- Theory	Environmental Impact Assessment, Audit And Economics	6	4	20	80	100
3	ENV 303	Core- Practical I	Practical – I	6	4	-	-	100
4	ENV 304	Core- Theory **Skill Development**	Basics of Statistical Methods and Computer Programmes	6	4	20	20	100
5	ENV 305	Generic Elective* **(Related to Subject)**	(a) Ecotourism and Eco- Restoration (b) Occupational Health and Industrial Safety (c) Statistics, Computer Applications and Modeling	6	4	20	80	100
6	ENV 306	Open Elective* (**For other Department**)	(a) Natural Resources Conservation (b) Environmental Education	6	4	20	80	100
		Total		**36**	**24**	**80**	**520**	**600**

*** A Student is allowed to take i) one generic elective and one open elective or ii) two generic electives, to secure the minimum number of credits.**

SEMESTER-IV

S.No	Course Code	Components of Study	Title of the Paper	Contact hours	No. of Credits	I A Marks	End SEM Exam Marks	Total
1	ENV 401	Core-Theory	Water Resources and Watershed Management	6	4	20	80	100
2	ENV 402	Core-Theory	Remote Sensing and GIS	6	4	20	80	100
3	ENV 403	Core-Practical I	Practical – I	6	4	-	-	100
4	ENV 404	Core-Practical II/ Project Work	Project Work + Comprehensive Viva-Voce	6	4	-	-	100
5	ENV 405	Generic Elective* **(Related to Subject)**	(a) Disaster Mitigation and Management (b) Environmental Safety (c) Environmental Management and Sustainable Development	6	4	20	80	100
6	ENV 406	Open Elective* (**For other Department**)	(a) Forest Resources and Management (b) Global Environmental Issues	6	4	20	80	100
		Total		**36**	**24**	**80**	**520**	**600**

*** A Student is allowed to take i) one generic elective and one open elective ii) two generic electives, to secure the minimum number of credits.**

SEMESTER - I

ENV 101::ECOLOGY AND ENVIRONMENT

Course Objectives

- To impart the knowledge on ecology and structure and functions of ecosystems.
- To inculcate ethics and learning in ecosystem imbalance, health and environment.
- To analyze soil profile and its importance of ecological balance.
- To estimate the nutrients in the different soil samples.

UNIT-I

Ecology and Environment: Scope – Ecological Principles- Structure and Functions of Ecology- Ecological Factors-Environmental Science as interdisciplinary Subject – Earth, Man and Environment Relationship – Importance of biological cycles in the environment

UNIT-II

Population and Community Ecology: Population density- Population fluctuations-Population dynamics – Impact on Environment – Human population – Effect on Environment – Growth and factors affecting change in size of human population – Family Planning Methods, birth control, socio-economic methods of controlling population growth- Seed Germination and Reproductive capacity

Different communities and their occupation in different ranges in the environment and their relationship for the maintenance of eco-balance in the environment

UNIT – III

Ecosystem – Definition – Components – Structure – Types – Functions – Interrelationship of different ecosystems – Food chain – Food web – Productivity – Ecological energetics – Energy flow in the ecosystem-Ecological efficiency-Ecological Concepts of the Species-Habitat and Niche, ecological succession.

UNIT – IV

Soil Nutrients – Soil profile – Soil texture – Soil classification– Soil organic matter –Soil microbes– Biogeochemical cycles (C, N, P, K) – Ecological aspects and their importance for maintenance of eco-balance – Food production and future human existence in the environment – Eco-friendly programmes.

7. Raymond F Dasmann, **Environmental Conservation**, John Wiley & Sons (1984).
8. N.S. Subrahmanyam, A.V.S.S Sambamurty, **Ecology,** Narosa Publishing House, New Delhi.

Course Outcomes

- Provide solutions to environmental problems using appropriate tools and techniques.
- Develop both a quantitative and qualitative understanding of interactions between organisms and their consequences.
- Gain the knowledge of functions of organisms and ecosystem.
- Describe programmes environmental protection by implementing eco-friendly for human existence**.**

CO-PO Mapping

CO outcomes	PO_1 Knowledge	PO_2 Analysis	PO_3 Design	PO_4 Development	PO_5 Modern Tools	PO_6 Society	PO_7 Environment	PO_8 Ethics	PO_9 Team Work	PO_{10} Communi-cation	PO_{11} Programme Management	PO_{12} Lifelong Learning
CO1	3	2		3		2	3					3
CO2	3	3				3	3					3
CO3	3			3		3	3				3	3
CO4	2					3		3				3

ENV 102::ENVIRONMENTAL CHEMISTRY

Course Objectives

- To understand emissions and distribution of the air pollutants and particles in the atmosphere.
- To identify chemical properties and reactions of the compounds in the air.
- To understand the primary and secondary pollutants and its effects.
- To inculcate non polluted environment using green chemistry**.**

UNIT – I

Atmospheric Chemistry: Chemical reactions in the atmosphere – Aerosol types, production and distribution – Aerosols and radiation – Atmospheric turbidity and related environmental problems - Inversions – Global climate and photochemical reactions – Global warming – Greenhouse effect – Ozone depletion – Acid rain – Corrosion mechanism – Prevention – Particles in Atmosphere – Composition sources – Types and effects.

UNIT – II

Toxicological Chemistry: Introduction to toxicology and toxicological Chemistry – Toxicants – Dose-Response Relationships – Reactions of acids and bases on surfaces - Toxic chemicals in the environment – Biochemical aspects of As, Cd, Pb, Hg, CO, O_3, PAN, Pesticides, MIC and carcinogens in air.

Biotransformation of Xenobiotics: Principles – Receptor sites – absorption and storage of xenobiotics – types of biotransformations – Microsomal oxidations – Mixed function oxygenizes – conjugation – biotransformation of organochlorine and organophosphorous pesticides – Antidotal procedures in Toxicology.

UNIT – III

Soil Chemistry: Micro and Macronutrients – Inorganic and Organic contaminants in the soil – Biodegradation – Nondegradable waste and its effect on the environment –Bioremediation of surface soils – Fate and Transports of contaminants in the Vadose zone – Bioindicators – Soil parameters – Soil destruction – Erosion – Soil conservation.

UNIT – IV

Water Chemistry: Water pollutants – Types – Sources – Heavy metals – Metalloids – Organic, Inorganic, Biological and Radioactive – Types of reactions in various water bodies including marine environment – Eutrophication – Ground water – Potable water.

Green Chemistry: Introduction – Inception and Evolution – Importance of solvents – Types of catalysts and their role – Biological alternatives – Applications.

6. Thomas G Spiro and William M Stigliani, **Chemistry of the Environment,**Prentice Hall of India (2004).
7. RashmiSanghi and Srivastava M.M., **Green Chemistry,** Narosa (2006).

Course outcomes

- Demonstrate knowledge of chemical and biochemical principles of fundamental environmental processes in air, water and soil.
- Apply basic chemical concepts to analyze chemical processes involved in different environmental problems.
- By knowing pollution levels in the environment best possible fresh environment can be created in different methods like afforestation, natural parks and sanctuaries etc., for human concern.
- Acquire the knowledge to implementation of biological alternatives for protection of the environment**.**

CO-PO Mapping

CO outcomes	PO_1 Knowledge	PO_2 Analysis	PO_3 Design	PO_4 Development	PO_5 Modern Tools	PO_6 Society	PO_7 Environment	PO_8 Ethics	PO_9 Team Work	PO_{10} Communi-cation	PO_{11} Programme Management	PO_{12} Lifelong Learning

CO2	3	3				3	3					3
CO3	3			3		3	3				3	3
CO4	2					3		3				3

ENV103:: PRACTICAL – I

Course objectives

- To estimate population of flora and fauna in the ecosystem.
- To examine nutrients levels in various samples of wastewater.
- To estimate the protein, carbohydrates and nucleic acid in the different species.
- To examine the natural condition for species survival.

1. Estimation of effective population size.
2. Estimation of Species Diversity.
3. Estimation of a primary production in a water body.
4. Estimation of dust accumulated on plant parts and its effects on morphology and anatomy of plants.
5. Estimation of protein content of biological samples.
6. Determination of total carbohydrates in biological system.
7. Estimation of trace heavy metals in soil, plant and animal material.
8. Estimation of sulphates, phosphates, nitrates and chlorides in water sample.

Course outcomes

- Imparting practical knowledge about estimation of pH, Total Dissolved Solids, Hardness and Dissolved Oxygen, Chlorides and Sulphates in water samples.
- Imparting practical knowledge about estimation of pH, Total Dissolved Solids, Hardness and Dissolved Oxygen, Chlorides and Sulphates in water samples.
- Understand the environmental changes due to pollution levels.
- Examine the various ecosystems and its biodiversity.

ENV104:: PRACTICAL – II

Course objectives

1. To examine the contamination of the environment with chemical load by spectroscopic technology.
2. To analyze the concentration of the metals in the environment.
3. To inculcate the knowledge in scientific instrumentation.
4. To understand applications of organic matter in soils.

5. Determination of chromium and zinc by Spectrophotometry.
6. Multi element analysis by AAS.
7. Analysis of mercury by mercury analyzer.
8. Application of Fluorimetry.
9. Estimation of Na, K, Ca, Mg by Flame Photometry.
10. Determination of soil type and texture, pH, Hydraulic conductivity, Soil moisture, Nitrogen, Potassium, Phosphorous and Organic matter.
11. Determination of Fe^{+2}/Cr^{+6} in soil sample.

Course outcomes

- Understanding of various alkalinities present in the water sample by volumetric titration linked with theory.
- By knowing water pollution potable water can be drawn out and wastewater can be treated.
- By knowing various experiments of minerals fertility of the soil can be known which is advantage to farmers for agriculture.
- Describe the advantages of organic forming.

ENV 105 :: ENVIRONMENTAL TOXICOLOGY AND PUBLIC HEALTH

Course objectives

- To introduce the applications of environmental toxicology in the context of public health.
- To focus on the fate of chemicals in our environment and routes of exposure.
- To understand the epidemic diseases and control methods.
- To impart the knowledge in understanding of biotechnology for degradation of waste products in the environment.

UNIT - I

Environmental Degradation: Man and Environment – Man made Degradation – Deforestation – Urbanization – Industrialization – Mining – Dam building and other activities.

UNIT – II

Environmental Toxicology: Introduction of Toxicology – History and Types of Toxicology – Toxicity (LD^{50} and LC^{50}) – Hazards – Risk Benefits – Risk ratio to tolerance limits – Acceptable daily intake – Threshold Value – Pesticide Toxicology – Detoxification – Resistance and Metabolism – Pesticide – Pesticide Classification – Pest Surveillance – Pest resistance - Residue and Effect – Heavy Metal Toxicology – Toxicology of some Hydrocarbons – Industrial Toxicology and Risk Assessment.

UNIT – III

Environmental Epidemiology: Role of Epidemiological Study in evaluation of Environmental Hazards – Occupational Environmental and Health Hazards – Community Environment and Health Hazards – Microbial, Algal, Invertebrate and Alternative Toxicity Tests – Epidemiological Episodes.

UNIT - IV

Health and environmental impacts of Nanaotechnology :

Engineered Nanomaterials of Relevance to Human Health – Engineered Nanomaterials in the Body – Routes of Entry – Toxicological Health Effects Caused by Nanopartircles – Relevant Parameters in Nanoparticle Toxicology – Integrated Concept of Risk Assessment of Nanoparticles – Plant and Microbes as Nanofactories.

Public Health: Public Health Programmes – Objectives and Scope – Urban and rural Health – Sanitation – Malarial Control Measures – HIV/AIDS – Domestic and Residential Waste Disposal Studies.

Course outcomes

- Understand the role of toxicants in environment and methods used to quantify toxicity.
- Inform, educate, and empower people about the potential hazards of toxic substances
  to environmental and human health.
- By knowing the adverse health problems on human beings, safety, preventing measures can be implemented endemic and pandemic diseased can be controlled.
- Understand the toxicity of pesticide, detoxification metals on public health.

CO-PO Mapping

CO outcomes	PO_1 Knowledge	PO_2 Analysis	PO_3 Design	PO_4 Development	PO_5 Modern Tools	PO_6 Society	PO_7 Environment	PO_8 Ethics	PO_9 Team Work	PO_{10} Communi-cation	PO_{11} Programme Management	PO_{12} Lifelong Learning

CO3	3			3			3					3
CO4	2				2	3		3		2		3

ENV 106 :: BIODIVERSITY CONSERVATION AND MANAGEMENT

Course objectives

- To assess biodiversity loss and the importance of biodiversity conservation.
- To emphasis regional diversity hotspots and important conservation areas.
- To develop biotechnological methods in pollution abatement and develop eco-friendly bio-products for environmental health.
- To acquire knowledge in environmental management through biological system.

UNIT – I

Biodiversity: Definition and concept – Distribution of climatic regions of world and vegetation types – Patterns of species diversity – Species importance – Species area relationships – Theories of species diversity – Equilibrium theory – Biodiversity of tropical and temperate regions – Hot Spots of the world – Case Studies on Forests, Deserts, Coral Reef and Island Species.

UNIT – II

Measures of Biodiversity: Alfa, Beta and Gamma diversities – Indices of diversity and evenness – The Simpson Index Diversity of fully censured communities – Estimating the diversity of large community – Evenness and Equitability – Hierarchical diversity.

UNIT – III

Conservation and Management of Biodiversity: Types of conservation – In-situ and Ex-situ conservation – Concept of germ plasma preservation and gene banks – Community Biodiversity – Registers and their importance – National Biodiversity Strategy and Action Plan Programme – Protected Area Management Plan – Biodiversity Bill 2002 – Patent Act Agenda 21 – National Policies and Acts [Wild Life (Protection) Act,1972] related to biodiversity.

UNIT – IV

Environment and Biotechnology: Microbes in relation to environment – Biosensors – Environmental applications of biosensors – Biotechnological methods in pollution abatement – Biodegradation – Genetically Engineered Microbes (GEMs) in biotreatment of wastes – Eco-friendly bio-products for environmental health – Environmental biotechnology in the 21st century.

6. Chatterji, A.K., **Introduction to Environmental Biotechnology,** Prentice Hall, New Delhi (2005).

Course outcomes

- Systematically understand biodiversity and its vital role in ecosystem function.
- Understand the value of biodiversity and current threats to biodiversity.
- Describe Environment of nature.
- Explain the conservation of the environment by adopting bio treatment for waste degradation.

CO-PO Mapping

CO outcomes	**PO_1 Knowledge**	**PO_2 Analysis**	**PO_3 Design**	**PO_4 Development**	**PO_5 Modern Tools**	**PO_6 Society**	**PO_7 Environment**	**PO_8 Ethics**	**PO_9 Team Work**	**PO_{10} Communi-cation**	**PO_{11} Programme Management**	**PO_{12} Lifelong Learning**

CO3	3			2		3	2				2	3
CO4	3	2		2		3	3				2	3

SEMESTER – II

ENV 201::ENERGY AND ENVIRONMENT

Course outcomes

- To understand energy concepts for conventional and renewable energy technologies and their application.
- To provide energy production methods and consequent environmental impacts.
- To understand sources of various green energy and applications.
- To inculcate the bio-energy practices for maintain environmental quality.

UNIT – I

Basic Concepts of Energy: Energy – Definition – Forms of energy – Potential, Kinetic, Mechanical, Thermal, Electrical, Chemical and Nuclear Energy – Uses of energy – Energy Sources – Conventional and Non-conventional energy sources.

Conventional Energy Sources: Firewood – Coal – Origin and development of coal – Coal reserves in India and World – Clean coal combustion – Petroleum and Natural Gas – Composition and Classification of Petroleum – Reserves of Petroleum and Natural Gas in India and the World – Hydroelectric Power – Thermal Power – Synthetic Fuels – Consumption and management of conventional energy sources.

UNIT - II

Alternate energy Sources: Need for alternate energy sources – Renewable energy sources.

Solar Energy: Importance – Collection of Thermal Energy – Flat Plate Collector – Solar Air Collector – Solar Concentrators – Thermal Energy Storage – Non-convective Solar Pond – Photovoltaic Systems.

UNIT – III

Wind Energy: Wind Energy Conversion System – Operational Characteristics – Applications of Wind Energy.

Geothermal Energy: Basics of Geological Process – Geothermal Resources – Utilization.

Ocean Tidal and Wave Energy: Introduction – Energy Conversion Systems.

Bioenergy: Biomass, Biofuels and Biogas – Origin of Biomass – Biomass Sources – Biofuel Production Process – Gasification – Biogas.

Nuclear Energy: Need and importance – Sources of nuclear energy – Nuclear fission reactions – Fission Power – Fusion Power.

UNIT – IV

Environmental Effects associated with Energy Sources and Energy Planning: Energy Consumption in India and different parts of the World – Environmental Impact of large scale exploitation of solar, wind, hydro and ocean energy – Energy Planning and Legislation – Future Energy Options – Indo-US Nuclear Agreement.

5. Sukhatme S.P., **Solar Energy,** Tata McGraw Hill, New Delhi (1996).

Course outcomes

- Explain the key challenges and technologies in energy use, utilization of energy resources, energy conversion and environmental consequences.
- They explain basic competence regarding environmental impacts arising from different energy carriers and technical solutions.
- Enrichment of ecosystem will be achieved.
- Explain energy planning for future generations**.**

ENV 202:: ENVIRONMENTAL POLLUTION

Course objectives

To understand route way of pollutants and their impacts on the environment.

- To impart the knowledge on diseases caused by pollution.
- To understand classification of pollution, predictions and consequences of society.
- To understand safe disposal of radioactive wastes**.**

UNIT – I

Atmospheric Pollution: Sampling and analysis of SO_2, NO_X, NO_2, CO_2, fluoride, hydrocarbons and particulates – Cryogenic sampling – Impinges – Scrubbers – Adsorption – Absorption for analysis of SO_2, NO_2, CO_2, fluoride and hydrocarbons – Automobile emissions – Types and their control methods – Auto cyclic engines – Gaseous pollutant monitoring – Particulate – Ringleman Scale – Dosimetry – High volume samples – Analysis and control of particulate matter.

Indoor Air Pollution: Sources – Classification – Respirable particulates – Radon and biological contaminants – Analysis and design.

UNIT – II

Water Pollution: Sampling, analysis and prevention – Determination of pH, DO, BOD, COD, Solids, colour, turbidity, various forms nitrogen, phosphates, fluorides, sulphates, hardness, heavy metals, oil and grease, phenols, pesticides and radio nuclides.

UNIT – III

Soil Pollution: Sampling, analysis and prevention – Determination of pH – Cation exchange capacity of macro and micronutrients in soil systems.

Marine Pollution: Marine – Material addition – Natural and Anthropogenic activity – Oil pollution and effects on marine organisms – Control methods.

UNIT – IV

Noise Pollution: Sources – Noise indices – Classification of Noise loads – Effect of noise on biota and human health – Control and prevention methods.

Radioactive Pollution: Sources of Pollution – Effect of radiation on environment –Safe disposal of radioactive waste – Radiation protection and control measures – Biological dosimetry.

Thermal Pollution: Sources – Various chemical and biological reactions of water – Prevention and Control of thermal pollution.

Course outcomes

- Analyze sources of pollution, exposure pathways, fate and evaluate consequences of human exposure to pollution and its impacts to environmental quality.
- Distinguish the effect of pollutants on human health, economy and wild environments.
- Pollution free environment for human life will be achieved.
- Explain the contamination of water bodies due to discharge of untreated wastewater into the drain.

ENV 203:: PRACTICAL – I

Course objectives

- To analyze wastewater and pond water samples.
- To estimate the concentration of various metals is environment.
- To analysis of toxicants in environmental samples.
- To understand bioaccumulation of pesticides.

1. Determination of pH, Dissolved solids and suspended solids, Dissolved Oxygen, COD, BOD, Alkalinity/Acidity and hardness.
2. Production of biogas in laboratory.
3. Photovoltaic applications of solar cell.
4. Determination of the amount of pesticide/insecticide in water/vegetable samples.
5. Estimation of biochemical toxicity by AAS.
6. Estimation of the amount of NO_2 in photochemical smog samples.

Course outcomes

- **Describe the amount of pesticide/insecticide in water/vegetable samples.**
- **To find concentration levels of toxicant by use of instrumental techniques**
- **To estimate physicochemical assessments in different water samples.**
- **Explain the formation of photochemicals.**

ENV 204:: PRACTICAL – II

Course objectives

- To understand the difference of LC50 and LD50.
- To evaluate the samples like water, soil and biological.
- To examine the growth rate of fauna in different habitats.
- To assess micro and macro nutrients in the soil samples.

1. Estimation of the amount of LC_{50} of Pb in organisms.
2. Vegetation analysis: Frequency, Abundance and Density, Cover and Basal area, Important Value Index.
3. Vegetation sampling: Transects, Plot less methods.
4. Community coefficients.
5. Diversity measures: Shannon Wiener, Simpson and Brillion's Index.
6. Diversity measures of Birds fauna in different habitat conditions.

Course outcomes

- Identify the concentration of biochemical by using instrumental methods.
- Applications of scientific methods for analysis of pollution.
- Applications of basic scientific principle in the evaluation of pollution by instruments.

ENV 205: INSTRUMENTAL TECHNIQUES AND APPLICATIONS

Course objectives

- To impart the knowledge in instrumental techniques.
- To understand in the operation and care of instruments used in the chemical laboratories.
- To inculcate chromatographics in plant pigments.
- To understand value of nanotechnology.

UNIT – I

Spectroscopic Techniques: Basic principles – Beer-Lambert's Law – Salient features – Instrumentation and applications of UV-VIS Spectrophotometry – Colorimetry – Flame Photometry – Fluorimetry – Types of spectrophotometers – Use of spectroscopic techniques for trace metal analysis in environmental samples.

UNIT – II

Atomic Absorption and Emission Spectroscopy: Fundamentals of Atomic Emission and Atomic Absorption – Flame Atomic and Emission Spectroscopy – Atomic Absorption Spectrophotometer (AAS) – Principle and Instrumentation – Graphite Furnace – Flow Injection Technique – Inductively Coupled Plasma Emission Spectroscopy (ICPES) – Comparison of AAS and ICPES – Application of the AAS and ICPES for the determination of trace metals.

UNIT – III

Chromatographic Techniques: Basic principles – Paper Chromatography – Thin Layer Chromatography – Ion Exchange Chromatography – Higher Performance Liquid Chromatography – Gas Chromatography – Instrumentation and applications.

UNIT – IV

Radiochemical Techniques: Radioactivity – Carbon dating – Radioactive labeling – Tracer applications: Isotope Dilution, Neutron Activation Analysis – Radiometric Titration.

Nanomaterials for Environmental Protection: Nano technology processes – Nano Engineering materials for Pollution Prevention, Energy efficient resources and materials, Nano technology products- Nanomaterials, Nano devices and nanosystems.

Course outcomes

- Integrate a fundamental understanding of the underlining physics principles as they relate to specific instrumentation used for atomic, molecular, and mass spectrometry, magnetic resonance spectrometry and chromatography.
- Environmental potentiality will be achieved. This is indirect benefits to the society.
- Understand the analysis and level of concentration of different metals through instrumental techniques.
- Explain Nanotechnology and Nano Engineering and Nano Science.

ENV 206::ENVIRONMENTAL LAWS, POLICIES AND LEGISLATION

Course objectives

- To prevent, minimize, remedy and punish actions that threaten or damage the environment.
- To preserve and protect the nature's gifts from pollution by implementation of environmental laws and policies.
- To understand environmental public policy strategies in pollution control.
- To understand environmental laws and acts for protect and conservation of environment.

UNIT – I

Environmental Protection: Need – Issues - Problems and Awareness – International and National Efforts for Environmental Protection – Agenda 21- Environmental Ethics and Global Imperatives – Current Environmental Issues in India – Constitutional Amendments – Article 48 A & 52 A.

UNIT – II

Environmental Legislation: Scope and importance – Key concept of environmental management and approaches – Environmental legislation and punitive control – Objectives of legislation and frame work in the country – Planning and enforcement – Environmental Organizations – Information exchange and surveillance – EIA Notification in 1994 – ISO 14000 – EMS Standards.

UNIT – III

Environmental Policy in India: Need for policies- Public Policy – Economic policies – Relationship between economic development and environment – Implementing Environmental Public Policy Strategies in pollution control – Constitutional provisions in India regarding environment – Public Awareness and Participation in Environmental Management – National Land Use Policy 1988 – Industrial Policy 1991.

UNIT– IV

Environmental Laws and Acts: Environmental Laws – Need – Indian Prospective – National Committee on Environmental Planning (NCEP) – Role of Indian Judiciary in the protection of Environment : Forest Conservation Act, 1980, Indian Forest Act (Revised) 1982, Wild Life Protection Act, 1972 amended 1991, Air (Prevention and Control of pollution) Act 1981 amended 1987, The Water (Prevention and control of pollution) Act 1988, Motor Vehicle Act 1988, Hazardous Waste Management Act 1989, Biomedical Waste

Act 1999, Plastic Act 2000 – Municipal solid waste Act 1999, Public Liability Insurance Act 1992 - Biodiversity and WTO (1988) – Convention on biological diversity (1992) – Ecological, Economic, Aesthetic and other importance of Biological diversity.

Course outcomes

- Understanding judicial response to environmental issues in India.
- Acquiring the ability to evaluate the role of law and policy in conservation and management of natural resources and prevention of pollution.
- It enhances the societies support for environment's protection programmes.
- Develop the environmental quality through implementation of environmental laws and acts.

CO4	3	2		2	3	2	3				2	3

SEMESTER – III

ENV 301:: WASTE TREATMENT AND MANAGEMENT

Course objectives

- To understand purification practices for wastewater.
- To emphasize on design considerations of various unit operations and processes of water treatment facilities.
- To characterize the waste and apply the knowledge of laws for handling of various wastes and management.
- To understand the reduction of environmental pollution by recycling the waste products.

UNIT – I

Water Treatment: Different sources of water – Methods of water purification – Flocculation, Sedimentation, Sedimentation with coagulation – Jar Test – mixing basins – Clarifiers – Filtration – Types of filtration – Disinfections of water – Industrial Waste water Treatment – Tannery, Distillery, Sugar mill, Paper mill and Pulp Industry – study of effluent treatment plants.- Miscellaneous methods, Desalination, Membrane techniques – Reclamation and reuse of industrial and domestic waste water – Rain water harvesting.

UNIT – II

Sewage Treatment and Disposal: Self purifications of streams – BOD and its importance – Treatment methods – Primary, Secondary and tertiary levels – Disinfections of treated sewage effluent – Septic tank design and effluent disposal methods – Disposal on land, Sewage sickness – Disposal by dilution – Design of biological treatment units – Sludge characteristics, unit operation in sludge disposal, conventional and high rate digester – Disposal of sludge – Gas utilization.

UNIT – III

Solid Waste Management: Sources and generation of solid waste – characterization, chemical composition and classification – Dumping of garbage – Commercial, Industrial Agriculture, Mining and Power Plant discharges – Disposal Methods – Composting, incineration and others – Biomedical waste management.

Hazardous Waste Management: Cyanides, Dioxins, detergents, plastics, nylon, PCB's and others – Waste minimization methods – Monitoring and management strategies – Chemical and disaster management and risk analysis – Degradation of pesticides, detergents, plastics and polymers.

Radio Active Waste: Sources – Radiation standards by ICRP – Other standards (AERB) – Low level and High level radioactive waste management –

UNIT – IV

Recycling of Wastes: Waste types – Sources – Waste generated per capita – Composition of wastes – Recycling of waste for Industrial, Agricultural and domestic purposes – Recycling of metal Products – Reuse, Recovery – Reduction of paper, plastics etc., - Recycling of food manufacturing, beverages, apparel, leather, paper, pulp, chemical and other industries – Fly ash utilization.

5. Goel P.K., (ed), **Advances in Industrial Waste Water Treatment,**Techno Science Publications, Jaipur (1999).
6. Gilbert M Masters, **Introduction to Environmental Engineering and Science,** Prentice Hall of India Pvt. Ltd (1998).

Course Outcomes

- Describe the components of solid waste management and the laws governing it.
- Discuss the solid waste collection systems, route optimization techniques and processing of solid wastes.
- Biodegradation of waste through natural and artificial methods will be achieved.
- Evaluating solid waste management practices in urban and rural environment.
- Explain minimize and reduce waste generation through applications of 3 R's policy.

ENV 302 : ENVIRONMENTAL IMPACT ASSESSMENT, AUDIT AND ECONOMICS

Course objectives

- To introduce and provide theoretical and practical education on environmental impact assessment.
- To assess the economic burden of environmental cause.
- To focus on the rationale and methodology of integrated environmental impact assessment (EIA) including consideration of the relevant bio-physical, social, cultural, economic and human health aspects of development proposals, programs and policies.
- To understand financial impact of environmental policy.

UNIT – I

Environmental Impact Assessment: Definition – Purpose of EIA – Regulatory frame work in India – Base line data generation – Requiring and planning of field survey – Review of information required on development/industrial project – procedure for reviewing EI analysis and statement – EIA guidelines 1994 – Notification of Govt., of India – Identification of environmental risks due to developmental project activities – Preparation of on-site and off-site disaster management plans.

UNIT – II

Assessment Methodologies: Physical Environment Assessment – Flora Assessment – Plant Survey – Animal population size – Aquatic Assessment – Necessity of public participation in environmental decision making – Prediction and assessment of visual impacts of socio-economic environment.

Ecoplaning: Definition And concept – Land use policy for India – Urban and rural planning for India – Land use pattern – Cost benefit Analysis – Limits to Growth theory.

UNIT – III

Environmental Audit: Objectives – Scope – Coverage – Policy development – Defining boundaries – Goals – Policy compliance – Organization and staffing of Audit team – Resources – Approach to Audit ; (a) Pre-visit Activity (b) on-site activities – Understanding Management Systems – Assessing strengths and weaknesses – Audit evidence gathering and evaluation (c) Post Audit Activities – Audit principles – Benefits to Industry

UNIT – IV

Environmental Economics: Concepts of Economics and Scope of Environmental Economics – Economics of Pollution Control – Cost-Benefit Analysis and Evaluating Alternatives – Environmental Accounting – General Framework of Environmental Accounts.

References:

4. Eccleston C.H., **Environmental Impact Assessment – A comprehensive guide to project and strategic planning,** John Wiley and Sons (2000).
5. Murthi S, **Economic Growth and Environment,** RSBA Publishers (1998).

Course outcomes

- Explain the concepts about the Environmental Impact Assessment (EIA) and describe the environment laws, aims and the necessity of EIA.
- Critically examine assumptions inherent in impact assessment, examine a range of environmental impact assessments and identify and explore impact assessment fields and approaches.
- Understand the sustainable development and controlling environmental pollution.
- Describe the environmental economics for sustainable development.

CO-PO Mapping

CO outcomes	PO_1 Knowledge	PO_2 Analysis	PO_3 Design	PO_4 Development	PO_5 Modern Tools	PO_6 Society	PO_7 Environment	PO_8 Ethics	PO_9 Team Work	PO_{10} Communi-cation	PO_{11} Programme Management	PO_{12} Lifelong Learning

CO4	3	2		2	3	3	3				2	3

ENV 303 :: PRACTICAL – I

Course objectives

- To prepare EIA for project management and environmental statement for industries.
- To estimate the presence of sedimentary particles by scientific methods.
- To analyze environmental impact for will being of the society**.**

1. Preparation of Activity-processes Flow Diagrams.
2. Case Study analysis for EIA of a major industry.
3. Case Study analysis for EIA of a Reservoir/Land Conversion/Mining activity.
4. Preparation of Environmental Statement.
5. Estimation of BOD content in industrial waste water.
6. Estimation of degradable products from pesticides.
7. Estimation of sedimentary particles by Jar Test.
8. Calculation of mean, meridian and mode

Course outcomes

- Understand the degradation of natural resources by constructions of various projects.
- Understand requirement of oxygen for growth of organisms to break down organic matter in wastewaters.
- Describe the low cost wastewater treatment practices in water demand areas.

ENV 304 :: BASICS OF STATISTICAL METHODS AND COMPUTER PROGRAMMES

Course Objectives

- To provide an understanding on statistical concepts include measurements of location and dispersion, probability, probability distributions, sampling, estimation, hypothesis testing and multiple regression.
- To define quantity of data, organize and summarize the data.
- To provide computing ability to design for solution with appropriate requirements.
- To provide skill in computing knowledge.

UNIT-I

Sampling Distributions: Chi-Square Distribution, t-distribution, F- distribution-Statistical Inference and Hypothesis Testing- One sample tests, two sample tests, several sample tests. Applications: Case-Control Studies, Test of Association.

UNIT-II

Correlation and Regression: Karl Pearson‟s Coefficient of Correlation, Spearman‟s rank correlation coefficient, Linear Regression

UNIT-III

Object oriented programming in C++: Concepts of data abstraction, encapsulation, Introduction to objects, classes and instances, static members, inheritance, polymorphism, Overloading and information hiding – function overloading, operator overloading in C++, Memory management - constructors, overloading of constructors, copy constructors, destructors, constructors and information hiding, concepts of file handling in C++.

UNIT-IV

Object oriented Mechanism in JAVA: Class definition in JAVA, constructors, inheritance, polymorphism in JAVA, Access specifications in JAVA, Interfaces and packages in JAVA, Error and exception handling in JAVA, Building JAVA Applets and Applications in JAVA Multi threads in JAVA - introduction to threads, the thread class, the runnable interface, thread states, thread priorities, thread groups and synchronization. Graphics in JAVA.

Course outcomes

- Understand and critically discuss the issues surrounding sampling and significance.
- Describe critical mathematical problems in an easy way to solve through computer knowledge.
- Explain evaluate a computing solution that meets requirements.
- Understand computer programmesto solve statistical problems**.**

ENV 305 (a) ::ECOTOURISM AND ECORESTORATION

Course objectives

- To impart the knowledge in understanding the concepts of eco-tourism.
- To describe about the Eco-tourism and wildlife tourism in protected areas, planning and economics.
- To understand major sources of environmental degradation and its consequences on biodiversity.
- To understand soil fertility by adopting eco-restoration.

UNIT - I

Concepts of Tourism: Classification – Religious Tourism – Cultural Tourism – Heritage Tourism – Monumental Tourism – Adventure Tourism – Sustainable Tourism – Consumptive and Non-consumptive Tourism – Origin of Ecotourism – Principles of Ecotourism – Types of Ecotourism – Concepts of Ecotourism – Objectives of Ecotourism – Benefits of Ecotourism.

UNIT – II

Study of Ecosystems: Places of interest of Ecotourism – Infrastructural facilities for Ecotourism – Maintenance of Ecological Centers – Important Biosphere Reserves – Ecotourism and Conservation – Study of different Ecosystems – Rain Forest Ecotourism – Mountain Ecotourism – Polar, Islands and Coasts Ecotourism.

UNIT - III

Impact of Ecotourism: Economic Impacts – Types and Degree of Impacts from Ecotourism activities – Socio-cultural Impacts – Ecotourism related organization – Trends affecting Ecotourism – Ecotourism Research – Disasters and Ecotourism.

UNIT – IV

Environmental Degradation: Major forms of Environmental Degradation – Causes and Consequences of Environmental Degradation.

Eco Restoration: Redressing of Ecological Poverty – Population Control – Attitudinal Changes – Rational Use of Resources – Restoring Soil Fertility, Soil Health – Optimum Use of Bio Resources – Eco Solutions.

References

2. Sinha P.C., **Encyclopedia of Ecotourism, Vol I, II and III,** Anmol Publications Pvt. Ltd., New Delhi (2003)

Course outcomes

- Describe the challenging in eco-tourism and wildlife tourism.
- Understand values of wildlife and minimizing impact on natural ecosystem due to tourism.
- Rest and recreation to the public and income generation for the Government.
- Eco solutions will be achieved**.**

CO-PO Mapping

CO outcomes	**PO_1 Knowledge**	**PO_2 Analysis**	**PO_3 Design**	**PO_4 Development**	**PO_5 Modern Tools**	**PO_6 Society**	**PO_7 Environment**	**PO_8 Ethics**	**PO_9 Team Work**	**PO_{10} Communi-cation**	**PO_{11} Programme Management**	**PO_{12} Lifelong Learning**

CO2	3					3	3					2
CO3	3					2						2
CO4	3	2										2

ENV 305 (b) ::OCCUPATIONAL HEALTH AND INDUSTRIAL SAFETY

Course Objectives

To provide knowledge in understand hazardous material in industrial area.

- To understand general health education and surveillance.
- To identify unrecognized hazardous materials in and around factory.
- To create awareness on handling of hazards material.

UNIT I: Occupational Health

Hazards and Safety–Physical, Chemical and Biological hazards. Occupational Diseases and Occupationally induced illness - Prevention and Control. Health problems in different types of industries. Measures for Workers. Health Education Medical First- Aid and Management of Medical Emergencies. Epidemiological approaches. Ergonomics.

UNIT II: Industrial Safety Management Techniques

Industrial Safety Standards. Dispersion of Radioactive material and release of Toxic and inflammable materials. Work Study – Method of Study and Measurement. Measurement of Skills. Safety - Cost of Expenses. Principles and Functions in Safety Management.

UNIT III: Hazards Exposure evaluation

Sampling techniques, Personal monitoring, Biological monitoring; Threshold Limit Values (TLV), STEL; List of Industries involving Hazardous process Occupational Hazards under the First Schedule of the Factories Act,1948; Permissible Limits of certain Chemical substances in work environment under the Second Schedule of the Factories Act,1948.

UNIT IV: Hazards Control

Causes of Accident – Theory of accidents, Accident Reporting system, Safety Audit, Accident prevention, Safety Committee, Case studies on Bhopal, Chernobyl and similar disasters - Control of Hazards Substitutions, Isolation, Personal Protective Equipment (PPE).

Course outcomes

- Ability to acquire the knowledge, skills and judgment to function as an entry-level practitioner in occupational health and safety.
- Understand collect, manage and interpret information and data to identify trends and issues in the workplace.

- Explain effective communication skills and methods to clearly and briefly convey regulatory and technical information and data to designated audiences.
- Develop controlling measures of hazards.

ENV 305 (c):: STATISTICS, COMPUTER APPLICATIONS AND MODELING

Course objectives

- To assess the strengths of the conclusions and evaluating their uncertainty in the data.
- To understand importance of computer applications in business, education and research.
- To develop appropriate mathematical models to predict environmental changes.
- To understand mathematical tools used in modeling.

UNIT – I

Statistics: Introduction – Measures of central tendencies – Arithmetic Mean – Dispersion – Variance – Standard Deviation – Coefficient of Variation – Simple Correlation – Linear Regression with two variables.

Tests of significance**:** Statistical Hypothesis – Null Hypothesis – Level of Significance – Large sample Tests for means – Sampling Distribution – Standard Error – Small sample tests based on t-distribution.

UNIT – II

Fundamentals of Computers: Introduction to computers – History of evolution - Organization and working of computer – Classification of computers.

Computer Hardware: CPU, Mother Board, Disk Drives, Memory, I/O Devices, Printers and plotters – Network peripherals – Modem.

Computer Software: System Software – Compiler and Interpreter – Application Software – Operating Systems – Fundamentals of DOS, UNIX and Windows operating systems – Computer languages.

UNIT – III

Fundamentals of MS-WORD, MS-EXCEL and MS-POWER POINT.

Computer Network and Internet: Advances of networking – Computer for communication – Internet – Search machines – Sending and receiving E-mail – Downloading files.

UNIT – IV

Ecological Predictions and Mathematical Modeling: Modeling – Nature of Mathematical Models – Basic Mathematical Tools used in Modeling – Elements used in Modeling – Limitations of models – Models for ecological predictions – Lotka-Volterra Model – Leslie's Matrix Model – Air Quality Model.

Course outcomes

- Analyze data using standard statistical techniques.
- Utilize the Internet Web resources and evaluate on-line e-business system.
- Environmental analysis, forecasting of the environment can be achieved.
- Evaluate test significant for ecological predictions.

ENV 306 (a):: NATURAL RESOURCES CONSERVATION

Course objectives

- To introduce the importance of natural resources and its management.
- To integrate technical field knowledge with analytical skills to solve important natural resource management problems.
- To understand different practices of agriculture and its impact on environment and food stock.
- To understand use and exploitation of mineral and food resources daily life.

UNIT – I

Natural Resources: Definition – Importance – Classification – Human physiological socio-economic and cultural development – Human Population Explosion – Natural Resource Degradation – Concept of conservation – Value system – Equitable resource use for sustainable life system.

UNIT – II

Forest Resources: Forest cover in India and the World – Importance – Desertification – Forest Wealth – Afforestation – VanasamrakshnaSamithi in A.P. – Agroforestry – Social Forestry – Joint Forest Management Strategy for Forest Conservation.

Wild Life: Resources – Importance – Benefits – Wild life Extinction – Causes for Extinction – List of Endanger species in India and in the World – Ecological approach in wild life management – Eco Tourism – Wild Life projects in India – Sanctuaries and National Parks In India – Man and Bio sphere Programme – Aesthetic type of Conservation by TTD.

UNIT – III

Land and Soil Resources: Soil, Complexity of soil nature, regional deposits, Land use and capability classification systems, Land use Planning models and their limitations. Impacts of natural and man-made activities on land characteristics and land use planning– Soil Erosion – Loss of Soil Nutrients – Restoration of Soil Fertility – Soil Conservation Methods and Strategies in India.

Wet Land Conservation and Management – Ecological Importance of wet lands in India – Conservation Strategy and ecological Importance.

Water Resources: Rivers and Lakes In India – Water Conservation and ground water level increase - -Watershed Programme.

UNIT – IV

Mineral Resources: Use and exploitation – Environmental effects of extracting and using mineral resources – Restoration of mining lands – Expansion of supplies by substitution and conservation.

Food Resources: World Food Problems – Changes caused by agriculture – overgrazing effects of modern agriculture – Fertilizer-Pesticide problems – Water Logging – Salinity – Sustainable agriculture, life stock breeding and farming.

Course outcomes

- Application of theories and methods with interdisciplinary approach towards natural resource management.
- Critically examining the gap in the resource availability, use and conservation.
- Environment conservation and employment generation.
- Describe sustainable agriculture management.

ENV 306 (b):: GLOBAL ENVIRONMENTAL ISSUES

Course objectives

- To promote an investigation of the scientific principles behind global environmental issues.
- To develop a world which is eco-friendly and pro for sustainable development.
- To develop new dimensions to environment – human relationships.
- To develop non polluting energy resources.

UNIT - I

Global Climate Changes: Global Warming – Effect of global warming on hydrological cycle – Carbon Budget – Control Measures – Greenhouse Effect – Sources and Sinks of greenhouse gases.

UNIT - II

Atmospheric Pollution in Global Climate: Importance of stratosphere – Ozone depletion – Effect of ozone depletion on environment – Ways of protecting ozone layer – Acid Rain – Impact of acid rain on environment – Major Air Pollution Episodes.

UNIT - III

Radiation and Environment: Sources of radiation – Radioactive pollutants – Radioactive isotopes and their application – Effect of radiation on plants and animals at genetic level – Disposal of radioactive wastes – Nuclear Episodes – Radiation protection and control measures.

UNIT - IV

Future Challenges: Population stabilization - Integrated land use planning – Healthy cropland and grassland - woodland and re vegetation – Conservation of biological diversity – Control of pollution – Development of nonpolluting renewable energy systems – Recycling of waste and residues – Ecologically compatible human settlements and slum improvements – Environmental awareness and education – Updating environmental laws and new dimension to human towards environment.

4. Botkin, D.B. **Changing the Global Environment,** Academic Press, San Diago (1989).

Course outcomes

- Predicting the consequences of human actions on quality of human life and global economy.
- Developing critical thinking for shaping strategies for environmental protection and its conservation.
- Updating the global environmental laws binding on the Governments.
- Establish awareness on environment to meet future challenges.

SEMESTER-IV

ENV- 401:: WATER RESOURCES AND WATERSHED MANAGEMENT

Course objectives

- To develop an understanding of the occurrence and availability of freshwater, its uses, and problems related to water resources management.
- To learn more about managing our water resources and solve societal and environmental woes.
- To understand traditional water conservation methods and equitable use of water for sustainable development.
- To develop more rainwater conservation practices for future generations.

UNIT - I

Introduction: Hydrological Cycle – Formation and its Importance – Rain fall – Surface water – Ground water – Soil water and plant relationship.

Water Table – Water Budget – Global Water Balance and Distribution – Importance of Streams, Rivers, Lakes and Ponds.

UNIT – II

Water and Society: Water Usage – Overdrawing of Water and its consequences – Water shortage – Water Table and Depletion – Surface Water - Causes for diminishing surface water – Land subsidence – Salt water intrusion – Hydraulic gradient – Darcy's Law – Cone of depressions – Capture-zone curves – Control of ground water plumes – Factors for drought formation – Consequence of drought – Problem of irrigation water – Conflicts over water.

UNIT - III

Water Quality and Waste Water Treatment: Population explosion – Causes and Consequences –Water Quality Standards – Need for safe drinking water – Safe Drinking Water Act – Water Quality in Lakes and Reservoirs – Ground Water – Water born diseases – Water distribution and sanitary sewer systems – Sources of water pollution – Waste Water Treatment – Environmental Legislation for water conservation – Water Act 1974 – Future needs and alternate sources of water – Additional Remediation Technology.

UNIT – IV

Water Harvesting and Management: Water Resources – Indian and A.P. Scenario – Traditional Water Management System – Methods for ground water infiltration – Recharge pits for individual house plot – Watershed Management – Catchment Area Developments –

Command Area Development – Cropping Pattern – Cloud Seeding – Big Dams – Benefits and Problems – Equitable use of water resources for sustainable growth and development.

4. Eckenfelder, **Industrial Water Pollution and Control,** Wesley Publications (1997).
5. Sharma V.K., **Water Resources – Planning and Management,** Himalaya Publishing House (1985).

Course outcomes

- Understand water's importance as a precious resource.
- Provide a basic understanding of the impact of water and water-related issues in a global, economic, environmental and societal context.
- Describe the management of water resources through construction of watersheds for future generations.
- Understand value and role of the water resources for sustainable growth and development.

CO3	3	2	2	2	2	2	3				2	3
CO4	3		2	2	2	2	3		2		2	3

ENV - 402:: REMOTE SENSING AND GIS

Course objectives

- To provide background knowledge and understanding of principles of RS and RS systems.
- To enhance capacity to interpret images and extract information on the earth surface from multi-resolution imagery at multi-scale level.
- To analyze satellite data in understanding forest, water resources, agricultural and soil coverage.
- To find the degradation level of environmental parameters through remote sensing applications.

UNIT – I

Basic Concepts and Fundamentals: Remote Sensing – Basic concepts – Physics of Remote Sensing – Energy interaction with atmosphere – Energy interaction with earth surface features – Aerial photographs –Interpretation principles and techniques.

Earth Resources Satellites – IRS – Land sat satellites – SPOT, TRS Programmes – Meteorological and ocean monitoring satellites.

UNIT – II

Sensors and Scanners: Sensors – Optical – Thermal – Microwave – Sensor Characteristics – Scanners – Digital – Geocoded – Multispectral and thermal Imagers.

Microwave Remote Sensing: Basic principles – SAR, SLAR Operations – Characteristics of RADAR signals – Earth surface characteristics influencing RADAR returns – Interpretation of microwave data.

Digital Image Processing: Basic principles – Techniques – Image enhancement – Edge enhancement – Image classification – Data merging and GIS Integration – Biophysical modeling.

UNIT – III

Satellite Data Applications: Resource management – Forest, Water, Ground Water, Soil, Agricultural, Land use, Wasteland – Quantitative Estimation – Yield Estimation – Coastal Zone Changes.

GIS Applications: Fundamentals of GIS – Applications for Infrastructure, Ground Water, Land use planning, Watershed management – Rainfall, Runoff etc. – GPS types and applications.

UNIT – IV

Environmental Applications of RS and GIS: Impact Assessment – Pollution Monitoring – Land Degradation – Desertification – Industry – Mining – Ground Water – Damage Assessment – Coastal and Marine applications – Satellite System – IKONAS – QUICKBIRD – CARTOSAT – ENVISAT – TRMM – EOS Missions – Integral Earth Observation Studies – Global Change.

5. Elangovan, **GIS Fundamentals, Applications and Implications,** NIPA, New Delhi (2006).
6. Elachi C, **Introduction to Physics and Techniques of Remote Sensing,** John Wiley, New York (1978).

Course outcomes

- Laying foundations for understanding Remote Sensing and Geographic Information System as a powerful tool for geospatial analysis.
- Evaluating the application of RS-GIS techniques to the matrices of environment and resource management.
- Future predictions of the environment will be known about weather.
- Explain the damages occurred in the environment **by GIS.**

ENV - 403: PRACTICAL-I

Course objectives

- To estimate the various metals by using instrumental techniques.
- To understand the coverage of watershed development from aerial photos.
- To recognize geomorphological characters from aerial survey.

1. Determination of amount of Zn, Cu and Cr in surface water.
2. Estimation of amount of E-coli in drinking water.
3. Estimation of the amount of NO_2^-, NO_3^- in ground water samples.
4. Interpretation of drainage characteristics from aerial photographs.
5. Geo morphological Characters Appreciation from aerial photos.
6. Watershed development from aerial photos.

Course outcomes

- Analyze the multi elements in various wastewater samples.
- Understand the quality of ground water.
- Describe extend of drainage area with its hazardous characters.

ENV- 404: PROJECT WORK AND COMPREHENSIVE VIVA-VOCE

Course objectives

- To understand the concepts of project management for better execution of projects.
- To identify the different funding agencies for environmental protection.
- To develop valuable social networking which increases public participation in environmental management.

Course outcomes

- Understanding project characteristics at its various stages of implementation.
- Estimating the cost of physical and human resources and making plans to obtain the necessary resources.
- Developing young researchers with appropriate exposure and necessary training.

ENV 405 (a):: DISASTER MITIGATION AND MANAGEMENT

Course objectives

- To obtain, analyze and communicate information on risks and relief needs.
- To assess review and control the risk.
- To develop methods of risks analysis and evaluation of accidents in industrial development.
- To inculcate economic evaluation of risks after the disaster.

UNIT-I

Natural disasters: Cyclone – Tornadoes – Avalanches – Flood – Drought – Volcano – Earthquake – Fire – Landslide – Forecasting and Warning System – Disaster Education – Safety Measures – Impact on environment.

UNIT-II

Disaster Management: Pre-disaster Planning – Toning of disaster prone areas – Prioritization – Regulations – Protection measures during disaster – Post-disaster Relief Camp Organization – Survey and Assessment – Disaster Management Cycle - Vulnerability Analysis – Warning System – Legal Aspects – Case Studies for disaster management.

UNIT-III

Disaster preparedness and training: Community preparedness in natural disasters – Role of NGOs, Executives and Army for disaster reduction and mitigation in local conditions.

UNIT-IV

Risk Analysis and Assessment: Basic concepts – Purpose of risk analysis – Tools for risk assessment – Toxicology – Epidemiology **-** Exposure Modeling – Significance of risk and management – Evaluation of accidents in industrial processes – Assessment of risk to ecosystem and human health from GMOs – Psychology of risk – Economic evaluation of risks – Experiences of World Bank – Risk Communication – Frame work for sustainable development.

3. Ricci P.F. and Rowe M.D. (ed), **Health and Environmental Risk Assessment,** Pergman Paper, New York (1985).
4. Peter Calow, **Environmental Impact Assessment,** McGraw Hill Inc., New Delhi (1998).

Course outcomes

- Understand the mitigation approaches, their choices and alternatives.
- Develop foundations for hazard, risk and vulnerability assessment.
- Explain the knowledge on disaster preparedness to meet risks in natural disasters.
- Know about the economic evaluation of risks and frame work for sustainable development.

CO-PO Mapping

CO outcomes	**PO_1 Knowledge**	**PO_2 Analysis**	**PO_3 Design**	**PO_4 Development**	**PO_5 Modern Tools**	**PO_6 Society**	**PO_7 Environment**	**PO_8 Ethics**	**PO_9 Team Work**	**PO_{10} Communi-cation**	**PO_{11} Programme Management**	**PO_{12} Lifelong Learning**

CO2	3	2	2	2		2	3				2	3
CO3	3			2		3	2				2	3
CO4	3	2		2		3	3				2	3

ENV 405 (b)::ENVIRONMENTAL SAFETY

Course Objectives

- To understand control the pollutants released into the environment by human activities.
- To identify the various factors that can lead to leaks, spills and releases and their potential dangers to worker safety and environmental protection.
- To inculcate the equitable use of natural resources into a sustainable way for human existence.
- To gain knowledge in understanding of Government and NGO role for protection of environment.

UNIT-I

Scope and Importance; need for public awareness about our environment; Economic and social security; Environment impact of transportation and Mining. Environmental impact assessment (EIA) — purpose, procedure and benefits of EIA; Biodiversity and its conservation; Sustainable development. Global warming and greenhouse effect, urbanization, acid rain, ozone layer depletion, nuclear accident and holocaust.

UNIT– II

Case studies, population explosion, family welfare programmers-HIV/AIDS, women and child welfare, Environmental pollution — causes, Effects and control measures of air pollution, water pollution, soil pollution, marine pollution, noise pollution and nuclear hazards, Solid waste management-urban and industrial waste-causes, effects and control measures.

UNIT-III

Renewable and non-renewable natural resources — Forest resource, Water resource, Mineral wealth / resource, Food resource, Energy resources, Growing energy needs, renewable and non-renewable energy sources, Use of alternate energy sources, Land resource and land degradation, Role of an individual in conservation of natural resources, equitable use of resources for sustainable life styles.

UNIT-IV

Role of Government in environment protection, legal aspects of environment protection, NGO initialization, National Committee on environmental Planning (NCP), Environmental Appraisal Committee (EAC), central and state boards for prevention and control of pollution, goals of environment impact policy, case studies, Disaster management floods, earth quake, cyclone, landslides, role of individual in prevention of pollution.

5. Centre for Environmental Education (1990) - Essential learning's in Environmental education.
6. Venugopal Rao P (2006) - Principles of Environmental Science and Engineering — Prentice Hall.

Course outcomes

- Understanding judicial response to environmental issues in India.
- Acquiring the ability to evaluate the role of law and policy in conservation and management of natural resources and prevention of pollution.
- It enhances the societies support for environment's protection programmes.
- Develop the environmental quality through implementation of environmental laws and acts.

CO-PO Mapping

CO outcomes	**PO_1 Knowledge**	**PO_2 Analysis**	**PO_3 Design**	**PO_4 Development**	**PO_5 Modern Tools**	**PO_6 Society**	**PO_7 Environment**	**PO_8 Ethics**	**PO_9 Team Work**	**PO_{10} Communi-cation**	**PO_{11} Programme Management**	**PO_{12} Lifelong Learning**

ENV 405 (C): ENVIRONMENTAL MANAGEMENT AND SUSTAINABLE DEVELOPMENT

Course objectives

- To develop skill in management of environment in a global level.
- To understand the environmental knowledge into action in order to achieve particular outcomes in the way landscapes, societies and/or natural ecosystems are used and managed.
- To provide skills and an improved understanding of how firms and organisations work with sustainability issues.
- To understand sustainable environmental management by implementing policy principles.

UNIT-I: Environmental Management

Implementation of Environmental Management System-EMS definitionEnvironment Policy and components of EMS-Identification of environmental aspects and impacts

UNIT II: Management tools

Implications of Environmental Management tools for Environmental Management-Environmental legislations, institutions and policies with special reference to India-Policy responses to environmental degradation.

UNIT-II: Management requirements

Legal and other requirements-Training and awareness requirements- Application of Environmental Standards- ISO standards and history of their development.

UNIT IV: Sustainable Development

Concept of sustainable development- key principles - poverty and sustainable development Environmental management - innovation strategies for sustainable development - Governance for sustainable development.

5. Wright R.T. and Nebel B.J., **Environmental Science – Towards Sustainable Future,** Prentice Hall, New Delhi (2002).

Course outcomes

- Explain the environmental management practices.
- Ability to analyze environmental management in relation to the major principles of sustainable development.
- The ability to work effectively to create environmental management analysis outputs of professional quality, both independently and within team environments.
- Develop innovation strategies for sustainable development at local and national level.

CO2	3					3	3					2
CO3	3					2	3					2
CO4	3					2	3				2	3

ENV 406 (a)::FOREST RESOURCES AND MANAGEMENT

Course objectives

- To provide desired physical, chemical, and biological soil processes and functions on the Forests to maintain and/or improve soil productivity.
- To create basic strategies for forest management like plantation forestry, natural forest management, and agroforestry.

UNIT-I

Introduction – Forest Ecology – Basic concept and approaches to ecology – community ecology – characters used in community structure – Habitat ecology – Fresh water, marine, estuarine terrestrial ecology – desert ecology.

UNIT-II

Phytogeography: Major plant communities of the world – phytogeographical regions of the world - Soil climate – Flora and vegetation of India – Floristic regions of India – Endemism.

UNIT-III

Environmental Organizations and Agencies: National and International environmental organizations – Ministry of Environment and Forest (government) – International Agency Frame Work on environmental conservation.

UNIT-IV

Emerging concepts in conservation of forest and action plan – Conserving forest genetic resource from theory and practice – Action Plans and research need to conservation – Threats and mitigation measures.

References:

4. Ramesh B.R. and Pascal J.P., **Atlas of Endemics of the Western Ghats,** French Institute, Pondichery (1997).

Course outcomes

- Demonstrate knowledge of forest vegetation modeling and the ability to forecast its development over time using models of forest growth.
- Integrate knowledge of basic biology, physical sciences, forest and wildlife ecology, and social sciences into the stewardship of forest resources.
- Through forest management national economy will be improved.

CO-PO Mapping

CO outcomes	PO_1 Knowledge	PO_2 Analysis	PO_3 Design	PO_4 Development	PO_5 Modern Tools	PO_6 Society	PO_7 Environment	PO_8 Ethics	PO_9 Team Work	PO_{10} Communi-cation	PO_{11} Programme Management	PO_{12} Lifelong Learning
CO1	3	2	2	2		2	3				2	2
CO2	3	2				2	3					2
CO3	3					2	3			2	2	2
CO4	3				2	2	3				2	3

ENV- 406 (b): ENVIRONMENTAL EDUCATION AND SUSTAINABILITY

Course objectives

- To indentify the interconnected and interdisciplinary nature of environmental studies.
- To expand the knowledge of liberal arts for understanding the relationship between humans and their environment.
- To analyze environmental priorities and develop appropriate strategies for programme implementation.
- To understand environmental education and awareness for sustainable development.

UNIT – I

Knowledge of Environment: About the environment – Humanity-Environment relationship – Population growth – Problems – Rational use of resources – Objectives of environmental education – Guiding principles – UNESCO 1977 recommendations – Environmental programmes – Environmental education in India – Classification of environmental education programmes.

UNIT – II

Environmental Education: Environmental education at primary, secondary and tertiary level – Non-formal environmental education – Environmental education for professional level groups.

Environmental Organizations and Agencies: International Bodies, MAB, Government and Non-government (Voluntary) Organizations – Environmental administrative control – Central and State Pollution Control Boards – Department of Environment and Forests – Special Technologies.

UNIT – III

Sustainable Development: Definition, Scope and Importance – Causes of unsustainablity – Ecological footprints – Guidelines for sustainable development and reduction of poverty – Earth's ethics for sustainable living – Ethical guidelines – UN Conference on human environment – Environment and Development and Earth Summit.

UNIT – IV

Future Challenges to Society: Environmental priorities in India and strategies for action – Population stabilization – Integrated land use planning – Healthy cropland and grassland – Woodland and revegetation – Conservation of biological diversity – Control of pollution –

Development of non-polluting renewable energy systems – Recycling of waste and residues – Ecologically compatible human settlements and slum improvements – Environmental education and awareness – Updating environmental laws – Rain water harvesting and new dimensions to national security.

5. Wright R.T. and Nebel B.J., **Environmental Science – Towards Sustainable Future,** Prentice Hall, New Delhi (2002).

Course outcomes

- Demonstrating an integrative approach to environmental issues with a focus on sustainability.
- Communicating complex environmental information to both technical and non-technical audiences.
- Enriches the students with knowledge of environmental problems and appropriate solutions to overcome them.
- Describe the eco-friendly techniques to meet future challenges**.**

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF FISHERY SCIENCE AND AQUACULTURE

Course

M.Sc. AQUACULTURE

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department of Fishery Science and Aquaculture was established in the year 1997 as an offshoot of Department of Zoology with Prof. D. C. Reddy as the Founder Professor, Head and Chairman (BOS) of the Department. Initially the department offered one year PG diploma Course in Aquaculture, but, subsequently the department started offering two year M.Sc., course in Aquaculture from the Academic Year 1998. Although Prof. Reddy with his untiring efforts and help from the Colleagues of other sister departments could run the M. Sc. course in Aquaculture successfully. Prof. Reddy has developed good research facilities to carry research in the Department to offer M.Phil. and Ph.D programmes in Full-Time and Part-time. The department has excellent facilities for carrying out research in the fields of Aquaculture Biochemistry, Aquaculture Nutrition, Nanotechnology, Immun-Biology of Fish and Prawns, Probiotics in Aquaculture and Bioenergetics of fish. The University has recruited two more staff members in the year 2007. The placement record of the department is stupendous with all the students getting jobs in Aqua hatcheries/ Aqua farms/ Aqua feed companies/ Aqua laboratories throughout Andhra Pradesh and in Tamil Nadu. The NAAC Peer Team during its visit to S.V. University, Tirupati, made a special mention of the achievements in steering forward the Department of Fishery Science and Aquaculture on par with other major science departments in terms of quality of research. After the superannuation of Prof. Reddy Dr. P. Naga Jyothi shoulders the responsibility of the department and has been leading the department with her sincere efforts towards 100% placements each year. Dr. P. Naga Jyothi with her dedicated mind aims to make the department ONE OF THE BESTDEPARTMENT in the campus. The University can proudly say that the Department of Fishery Science and Aquaculture is the only department in S. V. University Campus which has been providing 100% placements to the outgoing M. Sc., Aquaculture students. Department of Fishery Science and Aquauclture having MOU with one of the best Multi National Company, (CPF India Pvt Limited) Chennai.

Vision

- Provide 100% Job security to our students
- To make the department a well-established and reputed center for Aquaculture related studies
- To promote knowledge base and make students self-reliant and useful to the society.
- Faculty involved in decision making – collective leadership. “Wisdom lies in the right perspective”.

Mission

- "To train students in Principles and Practices of Aquaculture relevant to regional and National food production programs and Provide Employment to all the outgoing students".

Choice Based Credit System (CBCS):

The Choice Based Credit System (CBCS) provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Therefore, it has been found necessary to introduce uniform grading system in the entire higher education in India. This will benefit the students to move across institutions to begin with. The uniform grading system will also enable potential employers in assessing the performance of the candidates. In order to bring uniformity in evaluation system and computation of the Cumulative Grade Point Average (CGPA) based on students' performance in examinations, the UGC has formulated the guidelines to be followed.

Students of this course would be expected to :

- Be able to play leading role in industry, research and the public services;
- Understand and appreciate major public concerns and issues associated with Aquaculture.
- Have an understanding and grasp of international research environment where the frontiers of knowledge in Aquaculture are under research;
- Be able to adapt and respond positively and flexibly to changing circumstances;
- Develop the professional skills and personal attributes to deal with complex issues, both systematically and creatively;
- Have the capacity for individual work and teamwork;
- Be lifelong learners with intellectual and practical skills.

Department Objectives:

The Department is having the following objectives:

- To expose students to updated curricula and to recent advances in the subject and enable the students to face NET, SET and other competitive examinations successfully.
- To create awareness among students about the latest streams of Aquaculture including advanced subjects like Biotechnology, Probiotics, Ornamental fish culture, Fish processing technology and Lab technology.
- To improve the quality of laboratory and field work for which Aquaculture study tours and excursions have been made compulsory so that the students can become familiar with field status of Aquaculture and surrounding study.
- To prepare students to attract and develop interest in Aquafarming, Hatcheries, Marketing, processing plants, Fisheries science and Toxicology so that the students can select Aquaculture as their career.
- The BOS in Aquaculture expects that this new framework of curriculum caters the need of enabling students of subject to accept new challenges of dynamically changing modern era.

Program Specific Outcomes

- Identify and select sources of credible information in fish Nutrition and management
- Apply and incorporate the principles of Aquaculture farming, nutrition, diseases, marketing, hatcheries and aquaculture by products and real world situations and problems

Programme Objectives

The primary objective of the program is to impart quality education in the subject of Fishery Science and Aquaculture as a basic science and its applied branches to the students

- To meet the academic to provide knowledge for sustainable aquaculture.
- To expose learners to frontier and thrust areas of Aquaculture
- To train learners for better performance in various competitive examination and in research careers.
- To enable the learners to acquire and develop self- study habits
- To facilitate Higher education & research in Aquaculture

- To provide the students an on field exposure to help them in understanding the aquaculture practices
- To provide the learners an experience in research for Aquaculture production,
- To conduct field studies and different projects of local and global interests.
- To provide effective utilization of aquatic and land resource
- Enhancing skills of rural youth commercial fish farming and increasing their entrepreneurship opportunities.
- Providing means of livelihood through commercial and industrial aquaculture.

Programme Outcomes:

S.No	Program Outcomes
PO1	Apply knowledge in Aquatic Ecology and ecosystem to understand the physical and chemical characteristics of water constituents their physico chemical and functional properties. To assess organic matter and recognize various biogeochemical cycles. Determine the dynamics of aquatic ecosystem and productivity.
PO2	Identify and understand different types of fishes and fin fish anatomy related to classification of commercially important crustaceans and mollusks up to sub class level and their salient features and distribution. Apply knowledge on shell fish anatomy and examine identification and morphology of cultivable organisms.
PO3	Design supplementary feeds applying the principles of food and feeding habits and nutrition to meet the challenges of nutritional problems. Describe fertilization and liming in aquaculture ponds, dynamics of dissolved oxygen, aeration and miscellaneous treatments to increase the production. Determination and estimation of total proteins, carbohydrates and lipids in aquatic feeds.
PO4	Know nature of ethics, values, ahimsa, crime and theories of punishment and explain Bhagavad-Gita as student, researcher and aqua technician. Know Professional and social ethics as researcher, marketing, farming, community mentor, aqua business operator and hatcheries.
PO5	Apply appropriate methods of Aquaculture systems, selection, survey and location of suitable site, Aquaculture engineering, hydrology of ponds, selection of species, restocking management and stocking. Techniques of

	post stocking management and growth. Apply soil and water characteristics and physiology of finfish and shell fish.
PO6	Discuss digestion, respiration, excretion and osmoregulation, circulatory system, neuroendocrine system and reproduction. Describe bioluminescence, mating and parental care. Describe the culture of Indian major carps, exotic carps, air breathing fishes. Locate Hatchery management, Fresh water prawn and pearl culture. Predict Aquarium fishes and management.
PO7	Communicate effectively viral and bacterial diseases in finfish and shellfish. Nutrition and environmental stress diseases information in person and with community. Microbiology and fish pathology. Acquire skills in writing research report, documentation, case studies, seminar presentations, group discussions and marketing strategies.
PO8	Describe fish immunology and immunotechnology. Social and environmental dimensions within nutrition and the life sciences. Able to demonstrate the cell biology , genetics and immunology.
PO9	Know basic structure of cell and its organelles, chromosomes, principles of physico chemical basis of heredity, genetic rationale in fish breeding, natural hybridization and cytogenetics of fishes.
PO10	Apply knowledge on chemical composition of fish and shellfish, common bacteria present in fish, handling of fish. Prepare pharmacology chromosomal engineering and hormonal manipulation of genetics, recombinant DNA and Polymerase chain reaction and gene amplification.
PO11	Develop and design fish feeds, supplementary feeds, biomolecules enzymes metabolism and bioenergetics. Identify computer application and scope of biostatics and statistical analysis in an aquaculture.
PO12	Learn new concepts of fish breeding and hatchery management, limnology, Bioinformatics in aquaculture, General Principles and practices of Aquaculture, Ornamental fish Culture, fish processing technology, marine pollution.

Program Educational Objectives:

- Exposure of students to aqua industries and modern types to acquire this knowledge and skill.
- To update the syllabus essential for appearing in NET, SET, GATE, ASRB and other competitive exams of UPSC and APPSC.
- To make aware the students to know Aquaculture practices.
- To develop trained and knowledgeable human resource for educational and research institutions and industries; to use this human resource for self-reliant India.
- To develop self-employable ability and to apply knowledge for several Aqua-based industries like farming, feed mills, processing units, it will also provide employment to other dependents.

The M.Sc. degree in Aquaculture being offered by this University provides its students with a course of study that integrates a range of learning and teaching techniques relevant to their educational development and career ambitions. This Masters programme covers the latest developments in Aquaculture and its specializations, viz., Applied Genetics, Fish Biochemistry, Aquatic Biotechnology Fishery Science and Diseases. It provides theoretical knowledge as well as training in the practical and intellectual skills to enable students to better understand and then solve some of the problems in this subject. Graduates in this programme will be induced into critical thinking, and would be able to solve complex problems in Aquaculture. The students would also be inculcated with personal and problem-solving skills that will enhance their employability prospects. Enhanced competence of students has been the key concern in designing and developing this syllabus. Careful thought has gone into selection of topics and setting their scope. Major areas of Aquaculture like Genetics, Physiology, Biochemistry, Ecology, Immunology, Cytology, Aquaculture Biotechnology and Taxonomy have been included in the syllabus only after multiple rounds of thorough discussions and intensive study. Special attention has been paid to subjects like Bioinformatics, Molecular Biology and Genetics to incorporate the latest developments in these fields.

UGC in recent had made initiatives to reorient and restructure the policies of higher education. For creating a boost to the economic growth and social development. It has recognized the need and importance of the skills in the students by bringing down the demand – supply mismatch with ready manpower as skills and knowledge. In addition to conventional disciplines, there is a need to introduce some career oriented courses where qualified students may learn certain skills and knowledge which will provide them more openings in service, industry and self-employment sectors.

Findings for the past and future trends, drivers and challenges, regional aqua feed demand break up of finfish and shellfish is show that there is a need on the major ingredients used in commercial finfish feed, to understand and evaluate the kind of ingredients that will be in demand with the increase in aquaculture production. There are also central and state governments initiatives for promoting aquaculture production and industry. restraints of the commercial aqua feed market as well as technological advancements in aquaculture industry. In view of the facts the department of Fishery Science and Aquaculture would like to establish skill development courses in Sri Venkatewara University Campus. M.Sc., Aquaculture course was started on 1997 academic year. This sector provides good employment and research opportunities for students, because aquaculture is one of the growth engine of Andhra Pradesh.

Semester - I

S. No	Components of Study	Title of the Course	Status of Paper	Title of the Paper	Credit Hrs / Week	Number of Credits	IA Marks	Semester End Marks	Total
1	Core*	**AQC 101:**	Mandatory	Concepts of Aquatic Ecology	6	4	20	80	100

- **Core papers and Generic Elective opted Paper held Practical-II**
- **Project Work – Collaboration with various Firms/Companies/Societies.**
- **Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study.**

I – SEMESTER

DEPARTMENT OF FISHERY SCIENCE AND AQUACULTURE

M. Sc. AQUACULTURE

CHOICE BASED CREDIT SYSTEM (CBCS)

(With effect from academic year 2021-22 onwards for students admitted into First Semester)

SEMESTER – I

CORE – THEORY- AQC 101: CONCEPTS OF AQUATIC ECOLOGY

Course objectives

To enable the students to

1. Understand the concepts of Aquatic Ecology
2. Acquire knowledge on the Characteristics of water and dynamics of Aquatic ecosystem
3. Understand the Aquatic vegetation
4. Acquire knowledge on Energy transfer in the ecosystem

CORE – THEORY

AQC 101 : CONCEPTS OF AQUATIC ECOLOGY

UNIT – I

1.INTRODUCTION: Definition of ecology, organism and environment; features of organism - environment relations; living and non - living environments; the ecosystem or habitat.

2.AQUATIC ECOSYSTEMS : Freshwater ecosystems - Lotic and Lentic ecosystems; Marine ecosystems - oceans and seas, zonation of the seas - rocky, sandy and muddy shores; classification of marine habitat - pelagic, benthic, neritic, oceanic, littoral and abyssal.

UNIT – II

3.PHYSICAL CHARACTERISTICS OF WATER : Light - penetration of sunlight into aquatic media, effect of light on productivity, photoperiodicity in animals; Temperature - annual temperature cycles, thermal stratification of water bodies, thermal optimum, maximum and minimum, water movements, periodic and a periodic current systems; Turbidity - causes, variations and effects.

4.CHEMICAL CHARACTERISTICS OF WATER: Atmosphere and atmospheric gases dissolved in water; Oxygen - oxygen and life, hypoxia, anoxia and hyperoxia, adaptations of animals to varying oxygen tensions; Carbon dioxide - sources of Co_2, its ecological effects; pH or hydrogen ion concentration - its significance. total hardness and total alkalinity

UNIT – III

5.BIOGEOCHEMICAL CYCLES: Nitrogen cycle; phosphorus cycle; sulfur cycle; carbon cycle; trace elements - manganese and copper.

6.ORGANIC MATTER : Aquatic vegetation – zones of aquatic vegetation; Plankton - classification of plankton, factors affecting plankton distribution, plankton counting and sampling; phytoplankton - zooplankton relationship, plankton productivity; Benthos - phytobenthos and zoo benthos.

UNIT – IV

7.PRODUCTIVITY: Concept of productivity – standing crop, rate of production and rate of removal; primary and secondary productivity; classification of water bodies on the basis of productivity.

8.DYNAMICS OF AQUATIC ECOSYSTEM : Principal steps and components – niches, trophic levels and relations; producers, consumers, decomposers and transformers; food chain and food web; pyramid of biomasses; pyramid of numbers; energy transfer in the ecosystem.

- Battish, S. K. 1992. Freshwater Zooplankton of India. Oxford & IBH Publishing Co. Pvt. Ltd. New Delhi.

Course out comes

Upon completion of the course, students will be able to

CO1.Understand the Aquatic environment and Aquatic ecosystem.

CO2.Understand the Physical and Chemical Characteristics of water.

CO3.Acquire knowledge on Importance of Biogeochemical cycles

CO4. Describe the Nature of Dynamics of Aquatic Ecosystem

CO-PO MAPPING

POS / COS	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO11	PO12

AQC 102: SYSTEMATICS AND EXTERNAL ANATOMY OF CULTIVABLE ORGANISMS

Course objective

To enable the students to

- Understand the Systematic and External Anatomy of Cultivable Organisms
- Discuss the basic structure of fishes
- Understand the classification of commercially important crustaceans and molluscs
- Acquire knowledge on morphology shell fish

CORE – THEORY

AQC 102 : SYSTEMATICS AND EXTERNAL ANATOMY OF CULTIVABLE ORGANISMS

UNIT – I

1. FIN FISH SYSTEMATICS: Classification of fishes up to subclass level; major groups of fresh water fish and their salient features and distribution.

UNIT – II

2. FIN FISH ANATOMY : Basic structure of the skin in fishes; epidermal derivatives – microridges and integumentary glands; dermal derivatives – cosmoid scales, ganoid scales, placoid scales, elasmoid, cycloid and ctenoid scales; fish age and scales; integumentary pigments; mouth and jaws; gill slits; fins – median fins and paired fins, origin of paired fins; coloration – morphology of chromatophores, pigments, physical and chemical colours, mixed colours, colour change, adaptive significance.

UNIT – III

3.SHELL FISH SYSTEMATICS: Classification of commercially important crustaceans and molluscs up to sub class level and their salient features and distribution.

UNIT – IV

4.SHELL FISH ANATOMY: External morphology of shell fish: prawn, shrimp, crab and molluscs – exoskeleton and appendages.

Suggested reading :

AQC 103A: COMPULSORY FOUNDATION- THEORY -FISH NUTIRITION AND WATER QUALITY MANAGEMENT

Course objective

To enable the students to:

- Comprehensive knowledge on nutritional requirements in aquaculture
- Know the principles and working application of supplementary feed
- Understand the properties of fertilizers and liming
- A quire knowledge on aeration in fish pond

AQC 103A : FISH NUTIRITION AND WATER QUALITY MANAGEMENT

UNIT – I

- **NUTRITION:** Importance of nutrition; nutritional requirements; nutritive needs of finfish with special reference to carps and cat fishes and shrimp and prawn; major nutrients – carbohydrates, proteins and lipids and their importance. Natural food and live feed culture: methods of collection of live feed organisms; identification, isolation and maintenance of phytoplankton and zooplankton; mass culture of spirulina and azolla, culture of rotifers (Brachionus and Moina) and artemia.
- **FOOD AND FEEDING HABITS :** Types of food – basic food, secondary food, incidental food, obligatory food; feeding habits – detritivores, scavengers, herbivores, omnivores, carnivores, surface feeders, column feeders, bottom feeders; monophagic, stenophagic and euryphagic fishes; seasonal changes in food availability and food preferences; food and feeding in relation to age; food selectivity and feeding intensity; feeding strategies; food and feeding habits of prawns, shrimps, crabs and bivalves; morphological adaptations for feeding in fishes.

UNIT – II

- **SUPPLEMENTARY FEEDS :** Supplementary feed and feed formulations; different types of feeds (dry feed, wet feed, floating feed, sinking feed and flakes); feed composition; nutrient source; feed ingredients (conventional and non-conventional, their nutritive value); water stability of feeds; use of attractants in feeds; binders; processing of feeds (importance of anabolic agents, antioxidants and mould inhibitors; anti nutritional factors); storage and quality control; determination of energy content in feeds.

- **FEEDING :** Introduction; feeding and fish production; fate of nutrients in feed; water quality and feeding rates – temporal changes; relationship to maximum feeding rate; effects of weather on maximum feeding rate; effluents from fish ponds; off-flavor.

UNIT – III

- **FERTILIZATION:** Properties of chemical fertilizers: Primary nutrients; secondary nutrients; sources of fertilizers; mixed fertilizers; solubility of fertilizers. Effects of fertilization on plants and invertebrates: Phytoplankton; zooplankton; benthos; macrophytes; water transparency as an index to fertilization; fish yield in fertilized ponds. Organic fertilizers: Sources; influence on pond ecology and fish production.
- **LIMING :** Properties of liming materials – compounds, neutralizing value, fineness; effects of liming on pond ecosystem – chemistry, production of plankton and invertebrates; fish production; liming rates for ponds; application of liming materials for ponds – selection of liming material and time of application; methods of application; residual effects of liming.

UNIT – IV

- **DYNAMICS OF DISSOLVED OXYGEN :** Introduction; diffusion; photosynthesis; respiration; diet changes in dissolved oxygen concentrations; predicting decline in dissolved oxygen concentrations; oxygen budgets of fish ponds; algal die-offs; overturns; identification of oxygen problems.
- **AERATION :** Introduction; principles of aeration; emergency aeration; supplemental or continuous aeration; destratification; practical considerations.
- **MISCELLANEOUS TREATMENTS :** Introduction; potassium permanganate; hydrogen peroxide; calcium hydroxide; reduction of pH; control of turbidity; salinity; hardness and chloride; water exchange; chlorine removal; rotenone; formalin and malachite green; methods of applying chemicals.

Suggested reading :

- Chakroff, M. 1993. Freshwater Fish Pond Culture and Management. Daya Publishing House, New Delhi.
- Pillay, T. V. R. and W. A. Dill. 1979. Advances in Aquaculture. Fishing News Books Ltd.

Course out comes

After the completion of the course, the students will be able to:

CO1.Aquire knowledge on the Importance of Nutrition

CO2.Understand the Food and Feeding Habits.

CO3.Importance of Supplementary feeds and Fertilization

CO4.Knowledge on Dynamics of Dissolved oxygen

AQC103 B: COMPULSORY FOUNDATION-THEORY- ENVIRONMENTAL MONITORING AND BIODETERIORATION

Course objective

To enable the students to

- Understand limitations for monitoring critical pollutants
- Know the role of biotechnology in environmental pollution
- Aquire knowledge on Control of bio deterioration of wood and synthetic substances in the sea
- Understand prospects of sustainable development and current environment al problems in india and their management.

AQC 103 B: ENVIRONMENTAL MONITORING AND BIODETERIORATION

UNIT-I

- Global environmental monitoring methods: Status and objectives, limitations for monitoring critical pollutants.
- Role of biotechnology in environmental pollution control: Indicator organisms, Test organisms, Monitoring organisms, Enzymes.

UNIT-II

- Coastal developmental activities-environmental issues.
- Micro and Macro fouling, corrosion of metals and alloys in the sea, effects of bio-fouling and bio deterioration on marine structures.

UNIT-III

- Protection methods against corrosion and fouling; Application of biotechnology in
- controlling the bio deterioration of wood and synthetic substances in the sea.
- Red tides: Cause character and effects on the organisms of Marine environment.

UNIT-IV

- Current Environmental Issues: Current environmental problems in India and their management. Urban waste and health: recycle of water and use; role of garden, park and reservoirs in environmental protection.
- Sustainable development: an international perspective; Retrospect and prospects of sustainable environmental development

COURSE OUT COMES

After completion of this course, students

CO1Understand the Global Environmental monitoring methods

CO2 Aquire knowledge on Coastal development activities

CO3 Creating awareness on Protection methods against corrosion and fouling

CO4 Knowledge on Current Environmental issues

CO-PO MAPPING

AQC- 104A: ELECTIVE FOUNDATION – THEORY- COASTAL AQUACULTURE

Course Objectives

To enable the students to:

Course objective

- Understand seed collections from natural resources
- Aquire knowledge on Crab culture and Lobster culture
- Understand the methods of Double cropping
- Comprehension knowledge on Oysters, pearl oysters and mussels

AQC- 104A: COASTAL AQUACULTURE

UNIT – I

1.SHRIMP HATCHERY MANAGEMENT: Seed collection from natural resources, identification of post larval stages, brood stock management, breeding by eyestalk ablation, hatchery management, larval rearing of *Penaeus monodon*. Shrimp Culture Management: Culture of *P.vannamei* and *P.mondon*

2.CRAB CULTURE: Culture of *Scylla serrata, Scylla oceanica, Scylla tranquibarica*.

3.LOBSTER FISHERY: Distribution – biology of spiny lobster – abundance of spiny lobster - culture of spiny lobster – processing and preservation of lobsters.

UNIT – II

4.CRAY FISH CULTURE: Culture of *Procambarus clarkii* – pond culture methods – double cropping.

5.MOLLUSCAN CULTURE: Oysters, pearl oysters and mussels.

UNIT – III

6.SEAWEED CULTURE: Seaweed morphology, biology, reproduction, importance of seaweeds; culture of seaweeds.

7.MARINE AND BRACKISHWATER FISH CULTURE: Culture of *Lates calcarifer, Etroplus suratensis* and *Mugil cephalus*.

UNIT – IV

8. POST HARVEST TECHNOLOGY: Harvesting methods - drainable ponds, undrainable ponds, cage and raceway farms, handling and transport; principles and importance of fish

preservation; preservation methods - traditional and advanced methods of fish preservation – sun drying, salt curing, pickling, smoking, chilling, freezing and canning.

9. PRESERVATION AND PROCESSING : Processing and preservation of fish products and byproducts – minced meat, FPC, fish meal, fish oils, fish hydrolsate, fish sauce, fish glue; sanitation in processing plants and quality control of fresh and processed fish and fishery products; IQF shrimp Freezing.

Suggested reading :

- MPEDA, **Hand Book on Aquafarming,** Shrimps, lobsters, mudcrabs (1996).
- Nandi, N. C. and S. K. Pramanik. 1994. **Crabs and crab Fisheries of Sundarban**. Hindustan Publishing Corporation.
- Pillay, T. V. R. 1988. **Aquaculture, Principles and Practices**. Fishing News Books.
- Piska, R. S. 1999. **Fisheries and Aquaculture.** Lahari Publications, Hyderabad.
- Pandian, T. J. 2001. **Sustainable Indian Fisheries.** National Academy of Agricultural Sciences.
- Sahoo, D. and S. Z. Qasim. 2002. **Sustainable Aquaculture.** APH Publishing Corporation, New Delhi – 110 002.
- MPEDA – Hand Book on Aqua farming – **Fish Processing, Quality Control & Marketing**. 1995. Kochi, India.
- Pillay, T. V. R. 1993. **Aquaculture: Principles and Practices**. Fishing News Books.

Course out comes

- Understand the Shrimp hatchery management
- A quire knowledge on Crab culture, cray fish culture and Molluscan culture
- Creating awareness on Seaweed culture
- Knowledge on Post harvest technology

CO-PO MAPPING

AQC- 104B: ELECTIVE FOUNDATION – THEORY: ORNAMENTAL FISH CULTURE

Course objective

To enable the students to

- Understand classification of ornamental fishes
- Acquire knowledge on construction and setting up fresh water aquarium and it maintenance
- Know diseases of aquarium fishes
- Understand economic s of ornamental fish culture

AQC 104 (B) : ORNAMENTAL FISH CULTURE

UNIT – I

1. Classification and characteristic features of common species of freshwater ornamental fishes.

2. Classification and characteristic features of common species of brackish water and marine ornamental fishes.

UNIT – II

3. Construction and setting up freshwater aquarium and its maintenance; aquarium plants.

4. Mass production of ornamental fishes – food and feeding habits, water quality maintenance, breeding and rearing.

UNIT – III

5. Bacterial and viral diseases of aquarium fishes – causes, symptoms and control.

6. Fungal, parasitic and nutritional deficiency diseases – causes, symptoms and control.

UNIT – IV

7. Setting up of an export oriented ornamental fish unit.

8. Economics of ornamental fish culture.

Suggested readings :

- V. K. Dey, 1986. Ornamental Fishes. MPEDA.
- R. Santhanam. 1987. A Manual of Freshwater Aquaculture, Oxford X IBH.
- V. Satyanarayana. 1996. Fish culture, Narendra Publishing House.
- P. K. Talwar and A. G. Jhingran 1991. Indian Fishes, Oxford & IBH
- J. Shammi and S. Bhatnagar. 2002. Applied Fisheries, Agrobios (India)

Course out comes

After completion of this course, students

CO1.Understand the Common species of fresh water ornamental fishes

CO2. Acquire knowledge on Mass production of ornamental fishes

CO3.Creating awareness on Diseases of aquarium fishes

CO4.Knowledge on Economics of ornamental fish culture

PRACTICALS

I – Semester

Course objective

- Understand Commercially important fin fish and shell fish
- A quire knowledge on Identification of eggs and larval forms of cultivable finfish and shellfish
- Understand the Biometric analysis Comprehension knowledge on crafts and gear, aquatic insets, aquatic weeds.

AQC105: IDENTIFICATION AND MORPHOLOGY OF CULTIVABLE ORGANISMS

- Identification of commercially important finfish – marine fishes, freshwater fishes, exotic carps, ornamental fishes, predatory fishes and weed fishes.
- Identification of commercially important shellfish – crabs, prawns and shrimps.
- Identification of eggs and larval forms of cultivable finfish and shellfish.

- Identification of fins and scales of fish; mounting of scales.
- Collection and identification of fish food organisms.
- Biometric analysis.
- Length-weight relationship.
- Dissections: (1) Digestive system (2) Reproductive system in finfish and shellfish.
- Identification of different crafts and gear.
- Identification of aquatic insects.

  Identification of aquatic weeds.

Course out comes

- Understand the commercially important cultivable organisms
- A quire knowledge on commercially important finfish and shellfishes
- Creating awareness on anatomy of finfish and shellfish
- Knowledge on Morphology of aquatic insects and weeds

Course objective

- Understand the biomolecules in aquatic animals
- A quire knowledge on Identification of physiology
- Understand the feed management
- Comprehension knowledge on feed composition.

AQC 106: FISH NUTRITION

- Estimation of total proteins, carbohydrates and lipids in fish feeds.
- Estimation of ash content.
- Estimation of inorganic ions through flame photometer.
- Estimation of fiber content in fish feeds.
- Determination of amino acid profiles through paper chromatography.
- Effect of different feeds on digestibility, FCR and FCE.
- Determination of energy contents using bomb colorimeter.
- Proximate composition of fish digestive tract.

Course out comes

- Understand the estimation of biomolecules

- A quire knowledge on techniques for estimations
- Creating awareness on intestine and gut capacity of aquatic organisms
- Knowledge on feed composition

Audit Course 106: HUMAN VALUES AND PROFESSIONAL ETHICS – I

Course objective

- Define the term ethics, Good and Bad values, Crime and Punishment
- Understand the importance good character, conduct and values embedded in various religious
- Apply knowledge on professional ethichs and correlate the concepts in addressing the ethical issues outside the class rooms
- Demonstrate knowledge of ethical values in non-class room activity internships and work and resolved the moral issues.

Audit Course 106: HUMAN VALUES AND PROFESSIONAL ETHICS – I

- Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.
- Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders.
- Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).
- Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths - Arya astanga marga, (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.
- Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study:

- John S Mackenjie: A manual of ethics.
- "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
- "Management Ethics - integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
- "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
- Harold H. Titus: Ethics for Today
- Maitra, S.K: Hindu Ethics
- William Lilly : Introduction to Ethics
- Sinha: A Manual of Ethics
- Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil(ed.) G.C.Haughton.
- Susruta Samhita: Tr.Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
- Caraka Samhita :Tr. Dr.Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
- Ethics, Theory and Contemporary Issues., Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
- Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
- An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo

Publications.

- Text book for Intermediate logic, Ethics and Human Values , board of Intermediate
- Education& Telugu Academic Hyderabad
- I.C Sharma Ethical Philosophy of India. Nagin&co Julundhar.

Course out comes

After studying the course students will able to.

CO1. Define the term ethics, good and bad values, crime and punishment and religious.

CO2.Understand the importance of good character, conduct and values embedded in various religions

CO3. Apply knowledge of Professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

CO4. Demonstrate the ability to face difficult situations in non class room activities, internships and field work and resolve them confidently.

CORE – THEORY AQC 201: PRINCIPLES OF AQUACULTURE

Course objective

To enable the students to

Describe the Principles of Aquaculture

- Identify the Design Construction of pond
- Indicate the Biological characterstics of aquaculture species
- Acquire knowledge on measurement of growth and water and soil quality parameter.

Semester – II

AQC 201 : PRINCIPLES OF AQUACULTURE

UNIT – I

1. **AQUACULTURE SYSTEMS AND METHODS:** Scope and definition; origins and growth of aquaculture; biological and technological basis; Traditional, extensive, semi - intensive and intensive culture; monoculture, polyculture, composite culture, mixed culture, monosex culture; cage culture, pen culture, raft culture, race way culture, culture in circulatory systems; warm water and cold water aquaculture; sewage – fed fish culture, integrated fish farming.

2. **SELECTION OF SITES:** Survey and location of suitable site – topography; soil characteristics; acid sulphate soils; water source; hydrometerological data.

UNIT – II

3. **AQUACULTURE ENGINEERING :** Design and construction of pond, layout and design of aquaculture farm, construction, water intake system, drainage system; aeration and aerators; recent advances in aquaculture engineering; tips for better aquaculture practices; design and construction of hatcheries.
4. **HYDROLOGY OF PONDS :** Types of ponds; sources of water – precipitation, direct run off, stream inflow, ground water inflow, regulated inflow; losses of water– evaporation, seepage, outflow, consumptive use, water budgets of embankment ponds; water budget of an excavated pond; water exchange.

UNIT – III

5. **SELECTION OF SPECIES:** Biological characteristics of aquaculture species; economic and market considerations; seed resources, collection and transportation.
6. **PRE STOCKING MANAGEMENT:** Sun drying, ploughing / tilling, desilting, liming and fertilization, eradication of weed fishes.
7. **STOCKING:** Acclimatization of seed and release; species combinations; stocking density; ratio.

UNIT – IV

8. POST STOCKING MANAGEMENT : Water and soil quality parameters required for optimum production, control of aquatic weeds and aquatic insects, algal blooms; specific food consumption, food conversion ratio (FCR), protein efficiency ratio, true net protein utilization, apparent net protein utilization, biological value of protein.

9. GROWTH : Measurement of growth; length - weight relationship; methods of determination of age in fishes and shellfish based on length data and growth checks; ponderal index; growth hormones.

Suggested reading :

- Mathew Landau. 1995. **Introduction to Aquaculture**. Daya Publishing House, New Delhi.
- Pillay, T. V. R. 1993. **Aquaculture: Principles and Practices**. Fishing News Books. Black Well Scientific Publications.
- MPEDA, 1991. **Hand Book on Shrimp Farming**, Kochi, India.
- Jhingran, V. G. 1982. **Fish and Fisheries of India**. Hindustan Publishing Corporation, New Delhi.
- Chakrabarti, N. M. 1998. **Biology, Culture and Production of Indian Major Carps**. Narendra Publishing House, New Delhi.
- Coche, A. G. and J. F. Muir. 1996. **Pond Construction and Fresh Water Fish Culture – Pond Farm Structures and Layouts – Simple Methods for Aquaculture**. FAO. Daya Publishing House, New Delhi.
- Upadhyay, A. S. 1995. **A Hand Book on Design, Construction and Equipments in Coastal Aquaculture (Shrimp Farming)**. Daya Publishing House, New Delhi.
- Wheaton, F. W. 1985. **Aquaculture Engineering**. MPEDA, Cochin.
- MPEDA 1990. **Aquaculture Engineering and Water Quality Management**. Cochin, India.

Course out comeS

After completion of this course, students will be able to:

CO1.Understand the Aquaculture systems and methods

CO2.Aquire knowledge on Aquaculture Engineering

CO3.Creating awareness on selection of species and Hydrology of ponds

CO4.Knowledge on Pre stocking Management and Post stocking management and growth.

CORE – THEORY AQC 202: PHYSIOLOGY OF CULTIVABLE ORGANISMS

Course objective

To enable the students to

- Recognize the Physiology of cultivable Organisms.
- Understand the digestion and respiration.
- Creating awareness on neuroendocrine system and reproduction.
- Knowledge on Bioluminescence, mating and parental care.

AQC 202 : PHYSIOLOGY OF CULTIVABLE ORGANISMS

UNIT – I

1. **DIGESTION:** Digestive systems, digestive enzymes, absorption and assimilation.
2. **RESPIRATION :** Respiratory organs, mechanisms of ventilation, respiratory pigments, gaseous exchange mechanism, response of the respiratory system to external changes; accessory respiratory organs.

UNIT – II

3. **EXCRETION AND OSMOREGULATION:** Mechanism of excretion – kidney structure and functions of freshwater and marine teleosts. Osmoregulation in freshwater fishes and marine fishes and salt balance.
4. **CIRCULATORY SYSTEM:** Arteries and veins; mechanical properties and regulation of cardiac activity; general properties of the cardiovascular system; effects of drugs.

UNIT – III

5. **NEUROENDOCRINE SYSTEM:** Neuroendocrine system in finfish; neuroendocrine regulation of moulting and reproduction in crustaceans.
6. **REPRODUCTION:** Reproductive cycles, sexual maturity, spawning and fecundity, gonado somatic index, fertilization, hormones and reproductive behaviour in fishes.

UNIT – IV

7. **BIOLUMINISCENCE:** Light organs – biochemistry, regulation of light emission, significance and employment of luminescence.
8. **MATING AND PARENTAL CARE :**The abyssal and pelagic eggs; attachment devices; spawning sites; nest building and other means of parental care; ovoviviparity and viviparity; types of larvae; metamorphosis; larval life and feeding habits of larvae in finfish and shellfish.

Suggested reading :

- Hoar W.S. and D. J. Randal. 1976. Fish Physiology. Vol. I to IX Academic Press, New York.
- Khanna, S. S. 1996. An Introduction to fishes. Central book depot, Allahabad.
- Lynwood S. Smith. 1999. Introduction to Fish Physiology. Narendra Publishing House, Delhi.
- Harper, A. L. 1989. Physiological Chemistry.
- Lagler, K. F., J. E. Bardach and R. R. Miller.1972. Ichthyology. John Wiley.

Course out comes

After completion of this course, students will be able to:

CO1 To Understand the metabolism of fishes and prawns

CO2 Acquire knowledge on Neuroendocrine system

CO3 Creating awareness on bioluminescence

CO4 Knowledge on fertilization and parental care

COMPULSORY FOUNDATIONAQC 203A: FRESHWATER AQUACULTURE

Course objective

To enable the students to

- Understand the culture of Indian Major carps
- Acquire knowledge on hatchery management
- Creating awareness on Fresh water pearl culture
- Knowledge on important Aquarium fishes and management

AQC 203A : FRESHWATER AQUACULTURE

UNIT – I

1. **CULTURE OF INDIAN MAJOR CARPS** – Catla, Rohu, Mrigal
2. **CULTURE OF EXOTIC CARPS** – Grass carp, common carp, silver carp, tilapia
3. **CULTURE OF AIR BREATHING FISHES** – Murrels and cat fishes

UNIT – II

HATCHERY MANAGEMENT:

4. **FISH:** Induced breeding; hypophysation of Indian Major carps; types of hatcheries - Hapa, Jar hatchery, circular hatchery (Chinese hatchery), Modern Indian hatchery system.
5. **FRESHWATER PRAWN:** Identification of post larval stages; brood stock management, breeding and Hatchery management, larval rearing.

UNIT – III

6. **FRESHWATER PRAWN CULTURE:** Seed collection from natural sources; culture of M.*rosenbergii* / *M.malcolmsonii*
7. **FRESHWATER PEARL CULTURE:** Definition and scope, origin of pearls, pearl producing molluscs; freshwater pearl culture in the World and in India; types of pearls; mantle cavity insertion, mantle tissue insertion, gonadal insertion; water quality management.

UNIT – IV

1. **AQUARIUM FISHES AND MANAGEMENT :** Identification of commercially important ornamental fishes, setting and design of freshwater aquarium; taxonomy of species; live bearing fishes; egg laying fishes; biology of ornamental fishes; physiochemical properties of water used in aquaria; aquatic plants and other structures for beauty and utility; common aquarium fish diseases and their control; preparation of supplementary feeds and mass production of ornamental fishes.

Suggested reading:

Compulsory foundation aqc 203b: capture fisheries

Course objective

- Understand crafts, gears, nets from natural resources
- Acquire knowledge on commercial reservoirs
- Understand the methods of fisheries in India.
- Comprehension knowledge on clupepods, prawns and mullets.

COMPULSORY FOUNDATION AQC 203B: CAPTURE FISHERIES

UNIT – I

1. **CRAFTS** - Introduction to fishing crafts; types of fishing crafts: indigenous crafts – coracle, sangadam, shoe dhonl, catamaran, tuticorin boats, dugout canoe, outrigger canoes, masula boats; / built up boats – Kakinada nava, Machilipatnam nava, dinghy and nauka. Materials used for construction of fishing crafts- timber,metals forsheating,metallicfitting, protection of the boat.
2. **GEAR** – types of fishing gear – disabling type, traps and barriers, filtering type, entangling type, self-fishing type, wounding gear.

   NETS – types of nets; common fishing gears for inland waters – traps, angling, cast net, stake net, hand seings, gill net. Gears for spawn collection – Midnapore type of net, murshidabad type of net, lalgola type, jaunpur type. Gamcha, - midnapore type, murshidabad type – materials used for fishing gear; preservation of fishing gears.

UNIT – II

3. **RIVERINE FISHERIES OF INDIA :** Ecology of riverine environment; different river systems and their fisheries; regulations of populations and exploitation; improvement of fish stocks; status of spawn prospecting; fisheries of major and minor carps and cat fishes.
4. **LACUSTRINE FISHERIES:** Lakes and reservoirs; development of reservoir fisheries; commercial exploitation of reservoirs; recent advances in reservoir management.

UNIT – III

5. **MARINE FISHERIES:** Marine fishery resources of India; historical background and

recent trends; problems of inshore fisheries; fishery resources of the continental shelf; exploitation and management of under exploited and unexploited resources of EEZ.

6. **PELAGIC FISHERIES:** Pelagic fishery resources of India; fisheries of oil sardine, lesser sardines, anchovies, mackerel, ribbon fishes and cephalopods.
7. **DEMERSAL FISHERIES:** Fisheries of elasmobranchs; Bombay duck, silver bellies, threadfins and other perches; flat fishes, shrimps, crabs, oysters and clams.

UNIT – IV

8. **ESTUARINE FISHERIES:** Definition; origin and classification;

types of estuaries in India and their fishery resources fisheries o brackish water lakes and backwaters; problems confronting brackish water capture fishers.

9. fisheries of clupepoids,prawns and mullets;fisheries of brackish water lakes and backwaters;problems confronting brackishwater capture fisheries.

Suggested reading:

ELECTIVE FOUNDATION AQC 204A: FISHERY ECONOMICS, EXTENSION AND ENVIRONMENTAL MANAGEMENT

Course objective

To enable the students to

- Understand the concepts of Fishery Economics
- Describe the role and responsibilities of marketing
- Knowledge on Finance of Aquaculture
- Knowledge on utility on remote sensing techniques for the identification of
- suitable grounds for aquaculture

AQC 204 A : FISHERY ECONOMICS, EXTENSION AND ENVIRONMENTAL MANAGEMENT

UNIT – I

1. **AQUACULTURE ECONOMICS :** Production economics – definition of economics and application of economic principles to aquaculture; the input-output relationship; maximum level of input; least-cost combination of inputs; maximum level of output; combination of products; economics of size; partial budget analysis.

2. **MARKET ECONOMICS:** Basic concepts in demand and price analysis; supply and demand for fish; elasticity of demand (price elasticity of demand, income elasticity of demand, cross elasticity of demand).

UNIT – II

3. **ECONOMICS AND FINANCING OF AQUACULTURE :** Economic viability; assets and liabilities; cost-return analysis; production costs-variable and fixed costs; operating income; evaluation of farm performance; sensitivity analysis; minimum farm size; gross revenue.
4. Economic feasibility of investment analysis; methods of feasibility analysis – the payback method, net present value method, average rate of return, discounting method; benefit – cost ratio; internal rate of return; cash flow analysis; socio-economic analysis; risk and insurance.
5. Economics of carp, prawn and shrimp breeding farms and production farms.
6. Role of banks, central organizations and other funding agencies in the growth and development of aquaculture.

UNIT – III

7. **FARM MANAGEMENT:** Concepts of economic principles of farm management; application of farm management principles in aquaculture.
8. **MARKETING :** Economics of fish markets; marketing and resource management; co-operatives and their importance in fish production and marketing; export oriented growth policies; fisheries projects and fish resources; institutional and management issues; planning and financing schemes for fisheries; legal and environmental issues.
9. **FISHERIES EXTENSION:** Extension education-objectives and principles; role of extension in community development; rural development strategies – programmes for weaker sections of the community; fisheries as a tool in rural development; extension strategies and methodologies; employment generation.

UNIT – IV

10. **REMOTE SENSING:** Utility of remote sensing techniques for the identification of suitable grounds for aquaculture and for obtaining data on geographical information system (GIS); role of remote sensing in the assessment of aquatic pollution.
11. **ASSESSMENT OF ENVIRONMENTAL HAZARDS AND IMPACTS OF AQUACULTURE :** Concept of clean environment; impact of fish farming on the aquatic ecosystem; impact of fish farming on socio-economic and socio cultural environment; effects of aquatic pollution on fish farming; environmental impact assessment studies (EIA); ecofriendly technologies in aquaculture.

Elective foundation aqc 204 (b) : limnology

Course objective

To enable the students to

- Acquire knowledge on dynamics of lentic and lotic environments
- Understand classification of planktons
- Know aquatic plants
- Understand artificial enrichment

ELECTIVE FOUNDATION AQC 204 (B) : LIMNOLOGY

UNIT-I

Introduction to limnology: inland water types, their identities and distribution; ponds and lakes; streams and rivers; dynamics of lentic and lotic environments.

Lakes - their origin and diversity. Famous lakes of the world and India; nature of lake environment; morphometry, physical and chemical conditions and related phenomena;

UNIT-II

Biological relations: influence of physical and chemical conditions on living organisms in inland waters. Plankton: planktonic organisms; classification of plankton;Distribution of plankton: geographic, vertical, horizontal and seasonal distribution of phytoplankton and zooplankton: seasonal changes of body form in planktonic organisms; food of planktonic organisms. Primary productivity;

UNIT-III

Aquatic plants: character, classification, zonation, seasonal relations, quantity produced chemical composition distribution in different waters, limnological role. Nekton: composition, distribution, movements. Benthos: classification; periphyton; zonation; distribution; movements and migration; seasonal changes in benthos, profundal bottom fauna.

UNIT-IV

Biological productivity: circulation of food material; classification of lakes based on productivity; laws of minimum; biotic potential and environmental resistance; quantitative relationships in a standing crop; trophic dynamics; successional phenomena; indices of productivity of lakes; artificial enrichment.Lotic environments: running waters in general; physical conditions; classification of lotic environments, biological conditions; productivity of lotic environments. influence of currents; plant growth; plankton; nekton; benthos; temporary and head waters streams; ecological succession.

- Odum, E. P. 1996. **Fundamentals of Ecology**. 3rd Edn. Natraj Publishers, Dehradun.

- Santhanam, R. and A. Srinivasan. 1994. **A Manual of Marine Zooplankton.** Oxford and IBH Publishing Co. Pvt. Ltd., New Delhi.
- Pillai, N. K. 1986. **Introduction to Planktonology**. Himalaya Publishing House, Mumbai.
- Balakrishnan Nair, N and D. M. Thampy. 1980. **A Text Book of Marine Ecology.** Mc Millan Co. of India Ltd.

Course out comes

After completion of this course, students

CO1. Understand the Limnology

CO2. Acquire knowledge on Biological relations

CO3. Creating awareness on Aquatic plants

CO4. Knowledge on Biological Productivity

CO-PO MAPPING

POS / COS	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO11	PO12
CO1	3	1	2	3	3	2	2	1	1	1	2	3
CO2	3	2	3	3	3	2	1	1	1	1	2	3
CO3	3	1	3	2	3	1	3	1	1	1	3	3
CO4	3	2	3	2	3	3	3	1	1	1	3	3

PRACTICALS

AQC 205: SOIL AND WATER CHARACTERISTICS

- Determination of temperature, pH and transparency.
- Estimation of dissolved oxygen and primary productivity.
- Estimation of carbon dioxide.
- Estimation of total ammonia – nitrogen and nitrate – nitrogen.
- Estimation of phosphates.
- Estimation of iron.
- Estimation of chlorine
- Determination of hardness.
- Estimation of organic matter and biological oxygen demand (BOD)
- Determination of salinity.
- Plankton analysis.

Course out comes

After completion of this course, students

CO1. Understand water quality parameters

CO2. Acquire knowledge on soil quality parameters

CO3. Creating awareness on Plankton analysis

CO4. Knowledge on Excretion

COURSE OBJECTIVE

To enable the students to

- Recognize the Physiology of cultivable Organisms.
- Understand the excretion and respiration
- Creating awareness on Determination of fish age.
- Knowledge on gonado somatic index and fecundity in fish

AQC 206: PHYSIOLOGY OF FINFISH AND SHELLFISH

- Effect of size, sex and salinity on oxygen consumption.
- Effect of eyestalk ablation on oxygen consumption in crab.
- Estimation of excretory ammonia.
- Collection and preservation of pituitary gland in fish

- Induced breeding in fish through hypophysation.
- Estimation of haemolymph chlorides with reference to salinity in crab.
- Effect of thyroxine on fish growth.
- Determination of fish age.
- Estimation of gonado somatic index and fecundity in fish

Course out comes

After completion of this course, students will be able to:

1.CO1 To Understand the metabolism of fishes and prawns

2.CO2 Acquire knowledge on Neuroendocrine system

3.CO3 Creating awareness on hormones

4.CO4 Knowledge on fertilization and fecundity

Audit Course 207: HUMAN VALUES AND PROFESSIONAL ETHICS – II

Course objective

- Define the term ethics, Good and Bad values, Crime and Punishment
- Understand the importance good character, conduct and values embedded in various religious
- Apply knowledge on professional ethichs and correlate the concepts in addressing the ethical issues outside the class rooms
- Demonstrate knowledge of ethical values in non-class room activity internships and work and resolved the moral issues.

Audit Course 106: HUMAN VALUES AND PROFESSIONAL ETHICS – I

- Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.
- Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders.
- Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)-Dharma

(Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).

- Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths - Arya astanga marga, (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.
- Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Books for study:

- John S Mackenjie: A manual of ethics.
- "The Ethics of Management" by Larue Tone Hosmer, Richard D. Irwin Inc.
- "Management Ethics - integrity at work' by Joseph A. Petrick and John F. Quinn, Response Books:New Delhi.
- "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
- Harold H. Titus: Ethics for Today
- Maitra, S.K: Hindu Ethics
- William Lilly : Introduction to Ethics
- Sinha: A Manual of Ethics
- Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil(ed.) G.C.Haughton.
- Susruta Samhita: Tr.Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit series, Vol I,II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
- Caraka Samhita :Tr. Dr.Ram Karan Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
- Ethics, Theory and Contemporary Issues., Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
- Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
- An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo
- **Publications.**
- Text book for Intermediate logic, Ethics and Human Values , board of Intermediate
- Education& Telugu Academic Hyderabad
- I.C Sharma Ethical Philosophy of India. Nagin&co Julundhar.

Course out comes

After studying the course students will able to.

CO1. Define the term ethics, good and bad values, crime and punishment and religious.

CO2.Understand the importance of good character, conduct and values embedded in various religions

CO3. Apply knowledge of Professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

CO4. Demonstrate the ability to face difficult situations in non class room activities, internships and field work and resolve them confidently.

H-High-3, M- Medium-2, L- Low-1

CORE – THEORY- AQC 301: MICROBIOLOGY AND FISH PATHOLOGY

Course objective

To enable the students to

- Understand the Principles and scope of Microbiology
- Classify Microbiology and Fish Pathology
- Summarize Food Microbiology, Organize Fish farming and public health techniques
- Examine Diseases and Nutritional Deficiency diseases in Aquaculture

Semester – III

CORE THEORY AQC 301 : MICROBIOLOGY AND FISH PATHOLOGY

UNIT – I

1. **INTRODUCTION TO MICROBIOLOGY:** Scope and definition; major groups of microorganisms and their characteristics; classification and identification of microorganisms; fine structure, morphology and culture characteristics of bacteria and viruses.

UNIT – II

2. **SOIL AND AQUATIC MICROBIOLOGY:** Study of role of microorganisms in soil and water; soil and water probiotics and their importance.
3. **FOOD MICROBIOLOGY:** Role of microorganism's in preservation and spoilage of fishery products and food stuffs.

UNIT – III

4.VIRAL AND BACTERIAL DISEASES IN FINFISH AND SHELLFISH: Causes, symptoms, diagnosis, prophylactic and therapeutic measures.

5. PROTOZOAN AND FUNGAL DISEASES: Causes, Symptoms, diagnosis and preventive measures.

UNIT – IV

6.CRUSTACEAN AND HELMINTH PARASITES IN FISH:

Diseases caused by isopods and learnea; diseases caused by dactylogyrus and monocoelium; trematode larvae, nematodes and fish leeches – clinical picture, symptoms and prophylaxis. **Tumours in fish** – Epitheliomas and fibroepitheliomas, epithelioma
