papulosum; papillomas; adenomas; carcinomas; hepatoma and melanosarcomas.

7.**NUTRITIONAL DEFICIENCY DISEASES:** Metabolic disturbances; vitamin deficiency; gastritis and enteritis; aflatoxins in feed.

1. **ENVIRONMENTAL STRESS DISEASES:** Lack of oxygen; gas bubble disease; pH; acidosis and alkalosis; intoxications; hydrocyanic acid, free chlorine, metals, phenol and temperature, disturbances.
2. Fish farming and public health; techniques of curative baths and mass injections.

Course out comes

After completion of this course, students

CO1 Understand the Characteristics of bacteria and viruses

CO2 Acquire knowledge on Aquatic Microbiology

CO3 Creating awareness on Diseases in finfish and shellfish

CO4 Knowledge on Parasites in fishes, Nutritional deficiency diseases and Environmental stress diseases

CO-PO MAPPING

POS / COS	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO11	PO12

H-High-3, M- Medium-2, L- Low-1

CORE – THEORY AQC 302: FISH IMMUNOLOGY

Course objective

To enable the students to

- A quire knowledge on fish immunity
- Understand the structure and functional aspects, Immunoglobulin
- Know the principles and working application of Immuno diffusions
- Comprehensive knowledge on Immunising fish

AQC 302 : FISH IMMUNOLOGY

UNIT – I

1. **IMMUNE SYSTEM IN FISH:** Innate & acquired immunity- Advanced, primitive and unique features; specific and non-specific defence mechanisms.
2. **LYMPHOID SYSTEM IN FISH :** Stem cells, thymus, spleen, head, kidney and other lymph glands; lymphocyte subpopulation in fish

UNIT – II

3. Antigen - Types - Heptanes, Ag - Ab interactions
4. **IMMUNOGLOBULIN:** IgM structure and functional aspects; other Igs; Ig mediated immunity; antibody diversity.
5. **COMPLEMENT SYSTEM :** Classical & alternative

UNIT – III

6. **NON IG MEDIATED HUMORAL IMMUNITY:** Antigrowth factors, antienzymes, lysins, complement (properdin path way); agglutinins and opsonins.
7. **CRUSTACEAN IMMUNE SYSTEM**
8. **CELL MEDIATED IMMUNITY:** MHS class I & II, allograft rejection; anaphylactic hypersensitivity; delayed type hypersensitivity, lymphokines. Antibody probes in diagnosis of fish diseases & immunodiagnostic kits.

UNIT – IV

9. **IMMUNOTECHNOLOGY:** Immunodiffusions, immuno electrophoresis, radio immunoassay, ELISA, MLR, Hybridoma technique, immunoblotting.
10. **CONCEPT OF IMMUNISING FISH:** Vaccines and immunostimulants in fish adjuvants; features of vaccine development; vaccine delivery systems; identification of disease problems and potential vaccines; case study describing vaccination for furunculosis; commercial considerations. Management of aquacultural practices through immunological approach.

suggested readings :

GENERIC ELECTIVE – THEORY AQC 303A: CELL BIOLOGY AND GENETICS

Course objective

To enable the students to

- Ac quire knowledge on physic chemicals basis of heredity
- Understand the principles of genetic rationale in fish breeding
- Ac quire knowledge on Natural hybridization in fishes and Genetic diversity in fishes
- Knowledge on sex chromosomes in fishes

AQC 303A: CELL BIOLOGY AND GENETICS

UNIT – I

1. STRUCTURE OF PROKARYOTIC AND EUKARYOTIC CELLS: ultra-structure of animal cell;cell differentiation in animal cells. Structural organization of plasma membrane; membrane protein, cytoskeletal proteins; types of cell functions – transport of nutrients, osmosis and active transport.

2.CELL ORGANELLES: Organization and functions of endoplasmic reticulum, golgi complex, lysosomes, mitochondria, ribosomes, nucleus, and vacuoles.

UNIT – II

3. CHROMOSOMES: Structural organization, nucleosomes, chromonema, euchromatin, heterochromatin, centromere, kinetochore, telomeric organization.

4. Cell cycle, mitosis and meiosis; cell senescence and death.

UNIT – III

1. **PRINCIPLES AND PHYSICO CHEMICAL BASIS OF HEREDITY:** Phenotype and genotype, chromosomal basis of heredity; Mendel's laws of inheritance, **mutations** – types of mutations,molecular basis of mutation and its importance, chemical and physical mutagens, site directed mutagenesis.
2. **GENETIC RATIONALE IN FISH BREEDING**: Random genetic drift, inbreeding, measures to prevent random genetic drift and inbreeding; selective breeding programmes - selection of species and traits, choice of breeding strategy, methods of selection and evaluation of selection response, impacts of selective breeding programmes on aquaculture productivity.

UNIT – IV

7. Natural hybridization in fishes, consequences and evolutionary impacts of hybridization; artificial hybridization – hybridization in Indian carps and Chinese carps. Genetic diversity in fishes – natural genetic variation in fishes, stock concept, measuring genetic variation, importance of genetic diversity; threats to fish genetic diversity – fishing pressure, physical modification of habitat and pollution load, introduction of exotic fishes; genetic management of natural fish populations – goals and tasks and conservation approaches.

8. CYTOGENETICS OF FISHES : Chromosome preparation, staining of chromosomes, chromosome banding techniques (NOR banding, C-banding,G and R banding, Fluroscence *insitu* hybridization), trends in karyotype evolution, sex chromosomes in fishes.

Suggested reading :

GENERIC ELECTIVE AQC 303B: BIOINFORMATICS IN AQUACULTURE

Course objective

To enable the students to

- Understand bioinformatics applications in aquaculture
- Acquire knowledge on application of genetic maps
- Comprehensive knowledge on automated tools for phylogenetics analysis
- Understand applications of microarray technology

AQC 303 B: BIOINFORMATICS IN AQUACULTURE

UNIT - I

1. BIOINFORMATICS AN OVERVIEW: Definition and objectives of bioinformatics, major bioinformatics databases, data integration and data analysis, molecular biology and bioinformatics, central dogma of molecular biology, important definitions related to central dogma and overview of bioinformatics applications.

2. INFORMATION SEARCH AND DATA RETRIEVAL: Introduction, tools for web search, data retrieval tools, data mining of biological data bases.

UNIT – II

3. GENOME ANALYSIS AND GENE MAPPING: Genome analysis, gene mapping, sequence assembly problem, genetic mapping and linkage analysis, physical maps, cloning the entire genome, genome sequencing, applications of genetic maps.

4. TOOLS FOR SIMILARITY SEARCH AND SEQUENCE ALIGNMENT: Fasta, Blast, Filtering and gapped BLAST, PSI – BLAST, Comparison of running time for various programmes.

UNIT – III

5. ALIGNMENT OF PARIS OF SEQUENCES: Introduction, biological motivation of alignment problems, methods of sequence alignments, using scoring matrices, measuring sequence detection efficiency.

6. ALIGNMENT OF MULTIPLE SEQUENCES : Introduction, methods of multiple sequence alignment, evaluating multiple alignments; phylogenetic analysis – methods of phylogenetic analysis, tree evaluation, problems in phylogenetic analysis, automated tools for phylogenetic analysis.

UNIT – IV

7. GENE IDENTIFICATION AND PREDICTION: Introduction, basis of gene prediction, pattern recognition, gene prediction methods, other gene prediction tools.

8. GENE EXPRESSION AND MICROARRAYS: Introduction, working with DNA microarrays, clustering gene expression profiles, data sources and tools 2for microarray analysis, applications of microarray technology.

9. GENERAL APPLICATIONS OF BIOINFORMATICS IN AQUACULTURE.

Suggested readings :

H-High-3, M- Medium-2, L- Low-1

PRACTICALS

AQC 304: MICROBIOLOGY AND FISH DISEASES

- Preparation and sterilization of microbial media.
- Quantitative determination of microorganisms by dilution plate technique.
- Staining methods of microorganisms.
- Antibiotic sensitivity.
- Isolation and characterization of intestinal pathogens.
- Measurement of the size of the cell.
- Collection and Preservation of Diseased Fish.
- External & Internal examination of diseased finfish and shellfish.
- Maceration and squash preparation of organs and microscopic observation.
- Identification of disease causing microbes.
- Identification of various diseases in finfish and shellfish
- Preparation of chromosomes from gill epithelium
- Observation of chromosomes from fish tissues.
- Preparation of chromosomes from scale and fin epithelium.
- Induction of ploidy variations in different tissues of fish.
- Chromosomal banding techniques.
- Observation of meiotic chromosomes from testis.
- Isolation of DNA from yeast.
- Isolation of RNA from yeast.
- Raising antibodies to fish antigen.
- Immunoelectrophoresis.
- Double immunodiffusion.

AQC: 305 SKILL DEVELOPMENT COURSE- FISH NUTRITION TECHNOLOGY

THEORY

Course objective

To enable the students to

- Provide knowledge for sustainable aquaculture
- Provide the students on field exposure to help them in understanding the Aquaculture practices. Effective utilization of aquatic and land resources.
- Provide the learners an experience in research for Aquaculture production.
- Enhancing skills of rural youth commercial fish farming and increasing their entrepreneurship opportunities, Providing means of livelihood through ommercial and industrial aquaculture.

UNIT-I: FISH NUTRITION AND FEED TECHNOLOGY 4 Credits

Module I: Nutritional requirements of cultivable fish and shellfish. Forms of feeds: wet feeds, moist feeds, dry feeds, mashes, pelleted feeds, floating and sinking pellets. Feed additives: binders, antioxidants, enzymes, pigments, growth promoters, feed stimulants. Feed storage, use of preservatives and antioxidants.

Module II: Feed evaluation - feed conversion ratio, feed efficiency ratio, protein efficiency ratio, net protein utilization and biological value.

Module III: Feeding devices and methods. Non-conventional feed ingredients and anti-nutritional factors. Digestive enzymes, feed digestibility. Factors affecting digestibility. Nutritional deficiency diseases.

UNIT- II: FEED MANAGEMENT&ECONOMICS 4 Credits

Module I: Feed Manufacture: Feed formulation and processing, On-farm feed manufacture, Commercial feed manufacture, Feed storage

Module II: Feeding Practices: Supplementary feed–theory and practice, Complete diet - theory and practice, Feeding methods and scheduling, ration size, feed performance and economics. culture and use of different live feed in shellfish hatcheries, Aquarium fish feeds

Module III: Introduction to fisheries economics, Farm production economics – production functions in capture and culture fisheries; Costs and returns – breakeven analysis of fish production system; factors of production, marginal cost and return, law of diminishing marginal return, returns to scale, economies of scale and scope, Revenue, profit maximization, measurement of technological change, farm planning and budgeting.

PRACTICALS

4 Credits

- Cultivable importance of fish & Shell fish Species
- Practices on pre-stocking and post stocking management.
- Analysis of water and soil samples.
- Design and layout of fresh water and brackish water farms, fish and shrimp hatcheries
- Visit to farms and hatchery.
- Estimation and calculations of production costs of fish/shrimp farm.
- Different types of filters.
- Determination of Temperature, pH, Turbidity.
- Total Alkalinity and total Hardness.
- Dissolved Oxygen
- Estimation of soil organic carbon
- Estimation of nitrogen in soil.
- Proximate composition analysis of feed ingredients and feeds.
- Preparation of artificial feeds using locally available feed ingredients.
- Estimation of FCR from feeding trials and preparation of feeding table.
- Estimation of growth parameters from feeding trials
- Collection, identification and isolation of live food organisms using various techniques
- Supplementary feeds Identification:

Course Outcome:

On successful completion of the course, students will be able to:

CO1 Employment in specific area, Expand research ability

CO2 Get the knowledge of different types of Aquaculture practices

CO3 Build up capability in self-employment and income generation

CO4 Apply for various Governments, Non-Government Schemes for establishing an independent aquaculture farm.

OPEN ELECTIVE - AQC 306 (A): FISH PROCESSING TECHNOLOGY

Course objective

To enable the students to

1. Understand the Chemical composition of fish and shell fish
2. Know the principles and working application of fish preservations and package
3. Ac quire knowledge on different types of aquaculture freezers
4. Knowledge on processing of low cost fish and by products.

OPEN ELECTIVE - AQC 306: FISH PROCESSING TECHNOLOGY

UNIT-I

Chemical composition of fish and shellfish: moisture, protein, fat, carbohydrates, ash etc. Microbiology of fresh and processed fish: Morphology of bacteria: growth and reproduction of bacteria: effect of environmental factors like temperature, pH, oxygen, moisture, etc.

UNIT-II

Common bacteria present in fish; identification and isolation. Bacteria of sanitary significance. **Handling of fish:** spoilage of fish and shellfish; effect of temperature on fish spoilage, use of ice;

UNIT - III

Solid carbon dioxide and liquid nitrogen in fish preservations; containers for packaging and transportation of fish, handling on board fishing vessels and on shore; use of chemical preservatives and irradiation in extending shelf life of fish and shell fish.

Canning: Principles of canning; canning materials; handling and preparation of fish and shellfish for canning; spoilage of canned fish; chemical and microbiological spoilage and their prevention.

Curing: Salting of fish-principles and practices; pickling; smoked fish; spoilage of cured fish.

UNIT-IV

Freezing of fish: Techniques of freezing; different types of freezers; changes during freezing and storage of fish; effects of freezing on proteins, lipids and bacteria, spoilage of frozen fish and shellfish; denaturation of proteins, lipid hydrolysis; fat oxidation, protection of frozen fish; glazing and wrapping; use of anti-oxidants; thawing of frozen fish, double freezing of fish; storage, transportation and distribution of frozen fish, industrial methods of freezing fish and shellfish; production and freezing of fish fillets, minced meat and fish fingers.

Byproducts: processing of low cost fish, minced meat, fish oil, fish meal, fish sausages, isinglass, glue, fish silage, chitosan, chitin pearl essence, alginates, agar and corals.

Text Books:

Course out comes

After completion of this course, students

CO1 Understand the Chemical composition of fish and shell fish

CO2 Acquire knowledge on Common bacteria present in fish

CO3 Creating awareness on fish preservation and packaging

CO4 Knowledge on Freeing of fish and by products

CO-PO MAPPING

POS / COS	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO11	PO12

AQC 306 (B): POLLUTION AND TOXICOLOGY

Course objective

To enable the students to

- Ac quire knowledge on methods of toxicity testing factors
- Understand marine environment sewage pollution
- Understand Heavy metal pollution
- Verify Oil pollution ,biological impacts

AQC 306 (B): POLLUTION AND TOXICOLOGY

UNIT-I

Marine Pollution-definition- role of GESAMP- major pollutant- sources, transport path, dynamics. Toxicology- lethal and sub lethal effects of pollutants to marine organismsbioconcentration, bioaccumulation and biomagnifications- methods of toxicity testingfactors influencing toxicity-synergistic and antagonistic effects- role of microcosms and mesocosms.

UNIT II

Sewage pollution industrial, agricultural and domestic impact on marine environment, treatment methods. Detergents- composition- eutrophication and ecological significance- Plastics and Litter source and impact in the marine environment.

UNIT III

Heavy Metal pollution- sources, distribution, fate- analytical approaches; Pesticide pollution classification, sources, distribution, fate and ecological impacts with special reference to marine fishes, birds and mammals.

UNIT- IV

Oil Pollution- composition, sources, biological impacts on fishes, birds, mammals, treatment techniques. Thermal pollution- sources - uses of waste heat role of biocides, chlorine ecological impacts. Radioactive pollution- sources (natural and artificial) biological effects of radiation.

Environmental monitoring methods for critical pollutants-objectives status limitations biological indicators - natural bioaccumulations (mussel watch water quality assessment. Use of analytical instruments AAS, ICP, GLC, Spectrofluorometer for analyzing Petroleum hydrocarbon, Pesticides, Heavy metals etc.

H-High-3, M- Medium-2, L- Low-1

CORE – THEORY: AQC 401: AQUACULTURE BIOTECHNOLOGY

Course objective

To enable the students to

- Understand structure and replication of DNA
- Acquire knowledge on Hormonal manipulation of genetic sex
- Comprehensive knowledge on techniques of analyzing the PCR in biotechnology and genetic engineering
- Acquire knowledge on Bioactive compounds from marine organisms and Cryopreservation of gametes.

Semester – IV

AQC 401 : AQUACULTURE BIOTECHNOLOGY

UNIT – I

1. Structure and replication of DNA: Principles of DNA isolation; DNA blotting

2. DNA : Transcription and translation

UNIT – II

3. CHROMOSOMAL ENGINEERING: Genome manipulation, polyploidy, gynogenesis, androgenesis, method of chromosomal manipulation, Induction of ploidy and evaluation.

Hormonal manipulation of genetic sex, strategy of sex reversal, management of hormone treatment, biological effects of sex reversal, integrated approach. Transgenic fish, candidate genes for transfer, making gene constructs, mechanism of gene transfer, characterization of transgenic fish, potential hazards and benefits.

UNIT – III

5. Recombinant DNA and gene cloning – cloning vectors for recombinant DNA, restriction enzymes for cloning, cloning in bacteria and eukaryotes, construction and screening of genomic and cDNA libraries.

6. Polymerase chain reaction and gene amplification - basic PCR and its modifications; applications of PCR in biotechnology and genetic engineering- DNA polymorphism, DNA fingerprinting, Nucleotide probes, mapping and gene sequencing: RAPD, RFLP. DNA bar-coding.

UNIT – IV

A) PHARMACOLOGY: Prospects – Bioactive compounds from marine organisms: Biomedical potential of marine natural products isolation and mode of action. Eicosonoids and related compounds from marine algae. Antitumour and cytotoxic compounds from marine organisms.

B) Cryopreservation of gametes: Implications of cryopreservation in Aquaculture. Bioremediation: Types of bioremediation and their importance; Role of Probiotics in Aquaculture.

- Ranga and Shammi . 1999. **Fish Biotechnology**

Course out comes

After completion of this course, students

CO1 Understand the Structure and replication of DNA

CO2 Acquire knowledge on Chromosomal Engineering

CO3 Creating awareness on Recombinant DNA and gene cloning

CO4 Knowledge on Pharmacology

CO-PO MAPPING

POS / COS	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO11	PO12

H-High-3, M- Medium-2, L- Low-1

CORE – THEORY: AQC 402: ESSENTIALS OF BIOCHEMISTRY

Course objective

To enable the students to

- Acquire knowledge on structure and function of biomolecules
- Understand enzyme classification and their factors
- Attain knowledge on vitamins and minerls
- Understand bioenergetics models and energy budget

AQC 402: ESSENTIALS OF BIOCHEMISTRY

UNIT – I

1. BIOMOLECULES

A brief account of structure and function of protein, lipid and carbohydrate.

UNIT – II

2. ENZYMES

Nomenclature and classification; chemical nature of enzymes; coenzymes, properties of enzymes, factors affecting enzyme activity.

UNIT – III

3. METABOLISM

Interconversions of protein, lipid and carbohydrates; A general account of vitamins and minerals and their importance.

UNIT – IV

4. BIOENERGETICS

Definition and scope; bioenergetics model; structure of an energy budget; components of the energy budget – measurement of components; faecal losses – the absorption efficiency; excretory loses– the assimilation efficiency; metabolic loses; effects of environmental factors on metabolism – temperature, salinity, oxygen and other abiotic factors; examples of energy budgets.

Suggested readings :

- Furton, H. S. and S. Simonds. 1958. **General Biochemistry.** John Wiley and Sons, New York.
- Murray et. al. 2002. **Harper's Biochemistry** 25th Edn, Mc Grew Hill.
- Nelson, D. L. and Cox, M. M. 2000. **Lehninger Principles of Biochemistry.** MacMillan Worth Publishers.
- Robert J. Wootton. 1991. **Ecology of Teleostean Fishes.** Chapman & Hall.
- Sibly, R.M. and Calow, P.1986. **Physiological Ecology of Animals.** Blackwell, Oxford.

Course out comes

After completion of this course, students

CO1 Understand the Biomolecules

CO2 Acquire knowledge on Enzymes

CO3 Creating awareness on Metabolism

CO4 Knowledge on Bioenergetics

GENERIC ELECTIVE AQC 403 A : COMPUTER APPLICATIONS, INFORMATION TECHNOLOGYAND BIOSTATISTICS IN AQUACULTURE

Course objective

To enable the students to

- Understand the classification of computers
- Knowledge on computer application
- Understand the scope of Biostatistics in aquaculture
- Understand the statistical analysis in research

AQC 403 A : COMPUTER APPLICATIONS, INFORMATION TECHNOLOGYAND BIOSTATISTICS IN AQUACULTURE

UNIT- I

1.INTRODUCTION TO COMPUTER

History of computers, classification of computers, computer generations; Input, output processing and storage devices – Floppy disk, hard disk, CD-ROM, DVD. Operating system – types of operating systems – MS DOS, WINDOWS; MS – ACCESS, FOXPRO.

UNIT- II

2.COMPUTER APPLICATIONS

Computer Graphics – graphic generation methods, uses of computer graphics, graphic forms; Internet access tools, Web searching, e-mail, File Transfer Protocol 9 FTP); Word processing and presentation software MS- WORD and MS- POWERPOINT, MS – EXCEL; Use of commonly available statistical packages, such as SPSS ANOVA etc.

UNIT – III

3. INTRODUCTION AND SCOPE OF BIOSTATISTICS

Definition and scope, collection, tabulation and presentation of data; measures of central tendency – mean, median and mode; measures of dispersion, mean deviation, standard deviation, co- efficient of variation; curve fitting; correlation and regression.

UNIT – IV

4. STATISTICAL ANALYSIS:

Normal probability distribution and its applications; students t- test; correlation coefficient; regression co-efficient; F-distribution; X^2 distribution; analysis of variance (ANOVA);Probit analysis.

Suggested readings :

- **Computers Today** by Suresh K. Basandra 1999. Published by Galagotia Publications, Pvt. Ltd., New Delhi.
- **Microsoft Office**, by Setultz, 1997.
- **Database Processing** by D. M. Kroenke, Galgotia Publications, 1990.
- **Introduction to Biostatistics** – By Sokal-Rohlf (2nd Edn) Freeman International Editor 1973.
- **Bio-Statistics** – **An introductory Text-**Goldstein, A The Macmillan Co., New York, 1971.
- **Statistical Analysis in Biology** by Mather, K Chapman and Hall, London, 1972.
- **Probit Analysis** by Finney, D. J. S. Chand & Co., Ltd., New Delhi.
- **Biostatistics** by Lewis Alvin 1971. Affiliated East West Press Pvt., Ltd., New Delhi.
- 9. **Statistical methods in Biology** by Bailey Norman T. J. 1965. The English Language Book Society & The English University Press Ltd.

Course out comes

After completion of this course, students

CO1 Understand the Introduction to computer

CO2 Acquire knowledge on Computer applications

CO3 Creating awareness on Introduction and scope of biostatistics

CO4 Knowledge on statistical analysis

CO-PO MAPPING

H-High-3, M- Medium-2, L- Low-1

THEORY: AQC 403: B: AQUACULTURE ENGINEERING

Course objective

To enable the students to

- To learn the basic aspects of successful farm designing for effective management and optimum yield
- Students will learn about design and construction of Freshwater fish farm and brackish water shrimp farm
- Students will get an understanding of design and construction of Fish hatchery and Shrimp hatchery
- Students will get an understanding of design and construction of culture systems like Cages and Rafts, Pens and Enclosures, and Raceway Farms

UNIT – I

1. **Planning and Aquaculture Development:** Priorities, resources, technology, human resources, legal and environmental factors and organization of aquaculture.
2. **Selection of Sites for Aquaculture:** Criteria for site selection of fresh water and brackish water farms - land based and open water farms; quantity and quality of water, sources of pollution and conflicts.
3. **Farm/hatchery standards and bio-security measures**: Sanitary and Phyto-Sanitary (SPS) measures; Better Management Practices (BMP's)

UNIT – II

8. **Freshwater Fish Farm** - Design and construction: Layout of farm, size of the farm, division of the farm area; size, shape and depth of ponds; dike design, pond bottom and harvesting sump; water supply and drainage system of pond – pipes, sluice, monk, turn-down pipe; aerators and method of construction.
9. **Brackish water Shrimp Farm** - Design and construction: Layout designs, design of water management systems, design of water control structures, design of peripheral and internal dikes, water supply and drainage, method of construction.

UNIT – III

10. **Fish Hatchery -** Design, construction: Criteria for site selection of hatchery and nursery; Design and construction of Jar hatchery and Chinese hatchery system.
11. **Shrimp Hatchery** - Design and construction: Site selection and facilities required –

maturation tanks, spawning tanks, larval rearing tanks, live food culture tanks, water storage and filtration tank, aeration, seawater supply and piping system; Lay-out and construction.

UNIT – IV

12. **Cages and Rafts:** Design and construction.
13. **Pens and Enclosures:** Design and construction
14. **Raceway Farms:** Design and construction.

PRACTICALS

AQC 404: BIOTECNOLOGY AND BIO CHEMICAL ESTIMATATIONS

- DNA Electrophoresis.
- Estimation of DNA by Diphenylamine reaction.
- Determination RNA by orcinol method.
- Separation of protein through Electrophoresis (PAGE).
- Separation of eyestalk peptides through HPLC.
- Absorption spectrum of DNA.
- Calculation of mean, median mode.
- Calculation of standard deviation and coefficient of variation.
- Calculation of Correlation co-efficient.
- Fitting of regression lines.
- Application of F-test.
- 12.Diagrammatic representation of statistical data.
- Estimation of protein lipid and total carbohydrates in fish tissues
- Estimation of amino acids and free fatry acids in fish tissues
- Estimation of oxidative enzymes in fish tissues
- Estimation of digestive enzymes in fish tissues
- Estimation of RNA and DNA in fish tissues.

AQC 405: PROJECT WORK/ DISSERTATION

Course objective

To enable the students to

- Effective utilization of aquatic and land resource
- Providing means of livelihood through commercial and industrial aquaculture.
- Provide knowledge for sustainable aquaculture.
- Provide the students on an field exposure to help them in understanding the Aquaculture practices.

AQC 405: PROJECT WORK/ DISSERTATION

Each student will be under the guidance of a Faculty member and the students will put in 80 hours of field oriented research work which mainly consists of visiting to the field for sample collection and analysing in the laboratory. Data collected is compiled and submitted as a dissertation to the Department. During Viva Voce the student has to present his work to the panel of examiners.

Course out comes

After completion of this course, students

CO1 Reproduce knowledge on aquaculture farming

CO2 Acquire knowledge on culture and diseases identification

CO3 Creating awareness on self – employment

CO4 Knowledge on aquaculture by products

AQC 406 (A) : GENERAL PRINCIPLES AND PRACTICES OF AQUACULTURE

Course objective

To enable the students to

- Understand types of culture systems in aquaculture
- Acquire knowledge on aquatic weeds
- Understand induced breeding and seed fish production
- Determined culture of Indian major carps

AQC 406 A : GENERAL PRINCIPLES AND PRACTICES OF AQUACULTURE

UNIT – I

1.Definition of Aquaculture: Types of culture, pond preparation and selection of species for culture.

2. Control of aquatic weeds and predators; management of fish ponds.

UNIT – II

3. Induced breeding and seed fish production in carps; transport of seed fish and breeders.

4. Food and feeding in fish - live feed and artificial feeds.

5. Measurement of growth : Length - weight relationship; determination of age in fishes; growth hormones

UNIT – III

6. Culture of Indian major carps and air breathing fishes.

7. Culture of shrimp and prawn.

8. Integrated fish farming; aquarium fish and their maintenance.

UNIT – IV

9. Bacterial and viral diseases of fish - causes, symptoms diagnosis and control measures.

10. Protozoan and fungal diseases and their control.

Suggested readings :

- Santhanam, R. et.al. 1990. **A Manual of Fresh Water Aquaculture** Oxford & IBH Publishing Co. Pvt. Ltd., New Delhi.
- Khanna, S. S. 1997. **An Introduction to Fishes**. Central Book Depot, Allahabad.
- Pillay, T. V. R. 1993. **Aquaculture : Principles and Practices**. Fishing News Books
- Jhingran, V. G. 1982. **Fish and Fisheries of India**. Hindustan Publishing Corporation, New Delhi
- MPEDA 1990. **Aquaculture Engineering and Water Quality Management**. Cochin, India.

H-High-3, M- Medium-2, L- Low-1

AQC 406 (B): Fish Breeding and Hatchery Management

Course objective

To enable the students to

- Understand the life cycle of important shell fishes
- Know Induced maturation in penaeus monodon by eye stalk ablation
- Knowledge on reproductive hormones in crustaceans
- Understand health management hatcheries

AQC 406B: Fish Breeding and Hatchery Management

UNIT-I

Natural seed resources, site selection and collection methods. Life cycle of important shellfish (Penaeus monodon, P. vannamei, Macrobrachium rosenbergii, Scylla serrata, lobster, edible, oyster, pearl oyster, fresh water mussel, holothurians, sea horse, horse-shoe carb, Sepia, Loligo, cray fish etc.).

UNIT-II

Sexual maturity and breeding seasons of different species. Maturation stages of Macrobrachium rosenbergii and Penaeus monodon Induced maturation in Penaeus monodon by eye stalk ablation;

UNIT-III

Reproductive physiology. Reproductive harmones in crustaceans; Brood stock management of Penaeus monodon, P. vannamei and Macrobrachium rosenbergii.

UNIT-IV

Breeding and hatchery management of Penaeus monodon and Macrobrachium rosenbergii. Breeding and hatchery management of crabs and bivalves. Food and feeding of larval stages of important shellfishes. Health management in hatcheries.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC 101 - Paper – I – CONCEPTS OF AQUATIC ECOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Lotic and lentic Ecosystems

2. Zonation of the Sea

3. Thermal Optimum

4. Hypoxia

5. Sulphur Cycle

6. Phytobenthos and Zoobenthos

7. Standing Crop

8. Pyramid of biomasses

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss indetail ecosystem with all features

(OR)

(b) Write a detailed account on Marine Ecosystem

10. (a) Discuss in detail the physical characterization of water

(OR)

(b)Answer the following

i. Adaptations of animals to varying oxyen tensions

ii. p^H concentration of water

11. (a) Illustrate the Nitrogen cycle and explain the trace elments

(OR)

(b)Discuss indetail the zones of aquatic vegetarian

12. (a) Write a detailed account on productivity

(OR)

(b)Narrate the different steps involved in the dynamics of Aquatic Ecosystem

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 102 - Paper – II – SYSTEMATICS AND EXTERNALANATOMY OF CULTIVABLE ORGANISMS

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Microridges
2. Scales in bony fishes
3. Chondrichthyes classification
4. Major groups of fresh water fish
5. Decapods classification
6. Commercially important molluscs
7. Morphology of shrimps
8. Appendages of Molluscs

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Classify the fishes upto sub-class level. Add a note on major groups of freshwater fishes.

(OR)

(b) Describe the salient features and distribution of freshwater fishes.

10. (a) Write a detailed notes on the basic structure of the skin in fishes. Add a note an dermal derivatives of skin.

(OR)

(b)Explain the morphology of chromatophores and their significance in fishes

11. (a) Describe the classification of commercially important crustaceans in

detail

(OR)

(b)Classify the mollusca upto sub-class level. Add a note on commercially important mollusks.

12. (a) Explain the appendages of prawns in detail. Add a note on its exoskeleton.

(OR)

(b)Give a detailed description on the external morphology of carbs. Add a note on their exoskeleton and appendages.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 103 A - Paper – III – FISH NUTRITION AND WATER QUALITY MANAGEMENT

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Zooplankton
2. Morphological adaptations for feeding in fishes
3. Detritivores
4. Off - flavor
5. Macrophytes
6. Liming rates for ponds
7. Algal die - offs
8. Destratification

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Define the important of nutrition and narrate nutritional needs of finishes.

(OR)

(b) Write a detailed account on food and feeding habits of prawns, shrimps and crabs.

10. (a) Discuss in detail different types of feeds.

(OR)

(b)Write a detailed note on feeding and fish production in relation to fate of nutrients in feed

11. (a) Discuss in detail the properties of chemical fertilizers in Aquaculture

(OR)

(b)Answer the following

i. Application of limiting material for ponds

ii. Residual effects of liming

12. (a) Discuss in detail oxygen budgets of fish pond

(OR)

(b)Define Aeration and explain the principles of aeration.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 103 B - Paper – IV ENVIRONMENTAL MONITORING AND BIODETERIORATION

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Indicator Organisms

2. Test Organisms

3. Monitoring Organisms

4. Macro fouling

5. Corrosion of metals

6. Red tides

7. Urban waste

8. Recycle of water

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Describe the global environmental monitoring methods

(OR)

(b) Give an account on the limitations for monitoring critical pollutants

10. (a) Give an account on the roll of biotechnology in environmental pollution control

(OR)

(b)Describe the costal development activities

11. (a) Give an account on micro and macro fouling

(OR)

(b) Describe the corrosion of metals and alloys in the sea

12. (a) Give an account on application of biotechnology in controlling the bio deterioration

(OR)

(b)Describe the Environmental monitoring methods for critical pollutants

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 104 A - Paper – IV – COASTAL AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Eyestalk Ablation

2. Lobster culture

3. Cray Fish double cropping

4. Mussels

5. Sea weeds importance

6. Mugic Cephalus

7. Handling & transport of fish

8. Sanitation in Processing Plants

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Describe the culture of P. Monodon

(OR)

(b) Give an account on the culture of Scylla Serrata

10. (a) Give an account on the culture of Procambarus Clarkii.

(OR)

(b)Describe the Culture of Edible Oysters

11. (a) Give an account on culture of Seaweeds

(OR)

(b) Describe the culture methods of Lates Calcarifer

12. (a) Give an account of Fish Preservation methods

(OR)

(b)Describe the different types of Fish products & Byproducts.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 104 B - Paper –IV – ORNAMENTAL FISH CULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Types of Ornamental fishes
2. Marine ornamental fishes
3. Transport of Ornamental fishes
4. Aquarium plants
5. Bacterial diseases
6. Ornamental fishes in india
7. Control measures of Bacterial diseases
8. Fungal diseases of ornamental fishes

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail the classification and characteristic features of common species of brackish water ornamental fishes

(OR)

(b)Discuss in detailed in construction and setting up of fresh water aquarium and its maintenance

10. (a) Describe the mass production of ornamental fishes

(OR)

(b) Discuss in detail:

i. Food and feeding in ornamental fishes

ii. Water quality maintenance

11. (a) Discuss in detail causes and symptoms of viral diseases of

aquarium fishes

(OR)

(b) Give a detailed account on aquarium fish and its maintenance

12. (a) Discuss in detail setting up of an export oriented ornamental fish unit.

(OR)

(b) Give a detailed account Economics of ornamental fish culture.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 104 B - Paper –IV – ORNAMENTAL FISH CULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Types of Ornamental fishes
2. Marine ornamental fishes
3. Transport of Ornamental fishes
4. Aquarium plants
5. Bacterial diseases
6. Ornamental fishes in india
7. Control measures of Bacterial diseases
8. Fungal diseases of ornamental fishes

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail the classification and characteristic features of common species of brackish water ornamental fishes

(OR)

(b)Discuss in detailed in construction and setting up of fresh water aquarium and its maintenance

10. (a) Describe the mass production of ornamental fishes

(OR)

(b) Discuss in detail:

i. Food and feeding in ornamental fishes

ii. Water quality maintenance

11. (a) Discuss in detail causes and symptoms of viral diseases of

aquarium fishes

(OR)

(b) Give a detailed account on aquarium fish and its maintenance

12. (a) Discuss in detail setting up of an export oriented ornamental fish unit.

(OR)

(b) Give a detailed account Economics of ornamental fish culture.

.

II – SEMESTER

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 106 - Paper – I – HUMAN VALUES AND PROFESSIONAL ETHICS - I

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 100 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Moral Imagination

2. Nature of values

3. Tolerance

4. Civic virtues

5. Empathy

6. Autonomy

7. Satkdryavdda

8. Niskamma Karma

9. Reformative

10. Compensation

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

11. (a) Write an essay on nature and subject – matter of Ethics.

(OR)

(b) Write an essay on definition, characteristics, importance and types of values.

12. (a) Are Values in nature subjective or objective - discuss

(OR)

(b)Define good and bad and elucidate characteristics of good and bad

13. (a) Write an essay on justice, responsibility and freedom in human values

(OR)

(b)Define and describe Brahmacyarya, Aparigraha, and Moksha

14. (a) Write an essay on the Five Great Vows (Mahavratas) of Jainism

(OR)

(b)Define and describe Aparigraha, Dharma and Artha

15. (a) Explain the Impact of Religion on Values and Behaviour at work place.

(OR)

(b) What is the purpose of Criminal Justice? Write briefly on Reformative and Retributive theories of punishment.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 201 - Paper – I – PRINCIPLES OF AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Raft Culture

2. Integrated fish farming

3. Advances in Aqua engineering

4. Embankment ponds

5. Seed resources

6. Stocking density

7. Algal blooms

8. Ponderal Index

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Write a detailed note on origin and growth of aquaculture.

(OR)

(b).Explain the soil characterization and water sources for site selection

10. (a) Write a detailed account on the design and construction of harcheries

(OR)

(b)Describe in detail water budget of an excavated pond

11. (a) Write a note on biological characteristics of aquaculture species

(OR)

(b)Describe in detail different types of pre stocking management

12. (a) Discuss in detail the following

i. Apparent net protein utilization

ii. Biological value of protein

(OR)

(b)Explain the methods of determination of age in fishes shell - fishes.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 202 - Paper –II – PHYSIOLOGY OF CULTIVABLE ORGANISMS

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Absorption and assimilation
2. Respiratory pigments
3. Osmoregulation in marine fishes
4. Arteries and veins
5. Reproduction in crustaceans
6. Spawning
7. Significance of Juminescence
8. Viviparity.

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Explain various digestive enzymes in different cultivable organisms.

(OR)

(b).Write a detailed note on response of the respiratory system to external changes

10. (a) Describe the mechanism of excretion in fresh water and marine teleost's

(OR)

(b)Discuss in detail about the mechanical properties and regulation of cardiac activity.

11. (a) Write an essay on neuroendocrine regulation of mounting in crustaceans

(OR)

(b)Give an account on hormones and reproductive behavior in fishes

12. (a) Explain the biochemistry and regulation of light emission

(OR)

(b)Narrate an account on larval life and feeding habits of larvae in shellfish

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 203 A - Paper –III – FRESH WATER AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Carp fishes
2. Breathing fishes
3. Types of Hatcheries
4. Larval rearing
5. Pearl producing mollusus
6. Water quality management
7. Egg laying fishes
8. Aquarium fish diseases

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail the culture of Indian major carps.

(OR)

(b).Describe the culture of different exotic carps in detail

10. (a) Discuss in detail about Hypophysation of major carps in detail

(OR)

(b)Explain in detail the breeding and hatchery management along with larval rearing

11. (a) Write a detailed account on fresh water prawn culture

(OR)

(b)Discuss in detail on fresh water pearl culture in India and also in the world

12. (a) Write a detailed note on identification of commercial ornamental fishes and its Biology

(OR)

(b)Discuss in detail the preparation of supplementary feeds and mass production of ornamental fishes.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 204 A - Paper –IV – FISHERY ECONOMICS, EXTENSION AND ENVIRONMENTAL MANAGEMENT

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Aquatic ecosystem
2. Export policies
3. Input output relationship
4. Coast – return analysis
5. GIS
6. Community development
7. Price elasticity of demand
8. Risk and insurance

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Give an account on the input – output relationship in Aquaculture

(OR)

(b).Give a detailed account on market economics in relation to suppy and demand for fish

10. (a) Describe the economics of prawn and shrimp breeding farms

(OR)

(b)Give an account on the role of banks in the growth and development of aquaculture

11. (a) Describe the fisheries as a tool in rural development

(OR)

(b)Describe the planning and financing schemes for the development of fisheries

12. (a) What is the role of remote sensing in the assessment of aquatic pollution

(OR)

(b)Describe the eco friendly technologies used in aquaculture

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 204 B - Paper –III – LIMINOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Ponds and lakes
2. Lentic environment
3. Plankonic organisms
4. Aquatic plants
5. Nekton
6. Benethos
7. Limnological role
8. Streams and rivers

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail the types of Inland water

(OR)

(b).Describe the Dynamic of lentic and lotic environments

10. (a) Discuss in detail the origin and diversity of lakes in India

(OR)

(b)Explain in detail the Physical and chemical conditions of lakes

11. (a) Write a detailed account on Influence of physical and conditions on living organisms in Inland waters

(OR)

(b)Discuss in detail on seasonal distribution of phytoplankton and zooplankton

12. (a) Write a detailed note on food of planktonic organisms

(OR)

(b)Discuss in detail the classification and zonation of aquatic plants..

III – SEMESTER

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 207 - Paper – I – HUMAN VALUES AND PROFESSIONAL ETHICS - II

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 100 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Moral Imagination

2. Nature of values

3. Tolerance

4. Civic virtues

5. Empathy

6. Autonomy

7. Satkdryavdda

8. Niskamma Karma

9. Reformative

10. Compensation

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

11. (a) Write an essay on nature and subject – matter of Ethics.

(OR)

(b) Write an essay on definition, characteristics, importance and types of values.

12. (a) Are Values in nature subjective or objective - discuss

(OR)

(b)Define good and bad and elucidate characteristics of good and bad

13. (a) Write an essay on justice, responsibility and freedom in human values

(OR)

(b)Define and describe Brahmacyarya, Aparigraha, and Moksha

14. (a) Write an essay on the Five Great Vows (Mahavratas) of Jainism

(OR)

(b)Define and describe Aparigraha, Dharma and Artha

15. (a) Explain the Impact of Religion on Values and Behaviour at work place.

(OR)

(b) What is the purpose of Criminal Justice? Write briefly on Reformative and Retributive theories of punishment.

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 301 - Paper –I – MICROBIOLOGY AND FISH PATHOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Major groups of micro organisms
2. Viruses characteristics
3. Probiotics
4. Food Stuffs
5. Dactylogyresis
6. Tumores in fishes
7. Aflatoxins in feed
8. Mass injections

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Define micro organisms and explain the classification and identification of micro organisms.

(OR)

(b).Discuss indetail the characterization of bacteria with details of its culture

10. (a) Illustrate the role micro organisms in soil and water its importance

(OR)

(b)Explain the role of micro organisms in preservation and spoilage of fish products.

11. (a) Illustrate the bacterial diseases in fish and Shell fishes

(OR)

(b)Discuss in detail the diagnosis and preventive measures of protozoan diseases in fishes

12. (a) Discuss in detail Helminth parasites in fishes?

(OR)

(b)Answer the following

i. Fish farming and public health

ii. Gas buble disease

iii.Trematode larve

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 302 - Paper –II – FISH IMMUNOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Acquired immunity
2. Lymph glands
3. Antigen
4. Antibody diversity
5. Antigrowth factors
6. Lymphokines
7. ELISA
8. Potential Vaccines

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail specific and non specific defence mechanisms

(OR)

(b).Illustrate Lymphoid system in fish

10. (a) Write a detailed account on structure and functional aspects of immunoglobulin

(OR)

(b)Describe in detail classical and alternative complement system.

11. (a) Write a detailed account on Antigrowth factors and Antienzymes

(OR)

(b)Describe in detail crustaceans immune system

12. (a) Answer the following
    i. Immunodiffusions
    ii. Immunoblotting

iii. Radio immune assay

(OR)

(b) Discuss in detail management of aqua cultural practices with reference to immunological approach

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 303 - Paper –III – CELL BIOLOGY AND GENETICS

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Active Transport
2. Ribsomes
3. Mitosis and Meiosis
4. Cell senescence
5. Phenotype and Genotype
6. Genetic Drift
7. Sex Chromosmes in fishes
8. Menodel's laws of inheritance

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Explain Structural organization of plasma membrane

(OR)

(b).Write a note on structure and functions of mitochondria

10. (a) Explain the events involved in cell cycle

(OR)

(b)Discuss in detail the structural organization of chromosomes.

11. (a) What is mutation? Explain molecular mechanisms of mutation

(OR)

(b) Explain in detail the selective breeding procedures in aquaculture

12. (a) Explain the genetic biodiversity in fishes

(OR)

(b) Write a note on types of chromosomal banding techniques

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 305 B- Paper –III – BIOINFORMATICS IN AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Genome analysis
2. Genome mapping
3. Linkage analysis
4. Fasta
5. BLAST
6. Phylogenetic analysis
7. Microarray analysis
8. Data mining

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Explain major bioinformatics databases

(OR)

(b).Write a note on Central dogma of molecular biology

10. (a) Explain the Genetic mapping and linkage analysis

(OR)

(b)Discuss in detail the Tools for similarity search and sequence alignment

11. (a) Describe the methods of sequence alignment using scoring matrices

(OR)

(b) Explain in detail the methods of multiple sequence alignment

12. (a) Discuss the problems in phylogenetic analysis

(OR)

(b) Write a note on General applications of Bioinformatics in aquaculture

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 305 - Paper –IV – SKILL DEVELOPMENT PROGRAMME

(CBCS with effect from 2021-2022)

Time : 2 hours Maximum : 50 Marks

PART – A

Answer any **FIVE** questions. Each question carries 10 marks.

(Marks : 5x10=50)

1. Explain Nutritional requirements of cultivable fish and shellfish
2. Write a note on supplementary feeds in feed technology
3. Write briefly about feed evaluation
4. Describe feeding devices and methods in feed technology
5. What are the factors effecting digestibility
6. Discuss feed manufacture and storage
7. Explain commercial feeds in aquaculture
8. Describe feeding methods and add a note on aquarium fish feeds
9. Discuss fishery economics
10. Explain scope of farm planning and budgeting.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

THIRD SEMESTER - OPEN ELECTIVE

AQC: 306 (A) – Paper IV (A) FISH PROCESSING TECHNOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours
Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Moisture in shell fish
2. Microbiology of fresh fish
3. Bacteria in fish
4. Spoilage of fish
5. Fish preservation
6. Spoilage of canned fish
7. Types of freezers
8. Agar and corals

PART – B
(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail the morphology, growth and reproduction of Bacteria in fishes.

(OR)

(b) Write an essay on the chemical compos ion of shell fishes

10. (a)Discuss in detail the identification and isolation of bacteria in fishes.

(OR)

(b)Write different aspects associate in Handling of fishes

11. (a) Write a detailed account on chemical preservative using in fishes

(OR)

(b) Write a essay on curing of fishes in detail

V – SEMESTER

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 306 B - Paper – IV – POLLUTION AND TOXICOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Biomagnifications
2. Eutrophication
3. Pesticide pollution
4. Thermal pollution
5. GESAMP
6. Bioaccumulation
7. Microcosms
8. Detergents

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Describe the sources dynamics of Marine pollution

(OR)

(b) Give an account on the lethal and sub lethal effects of pollutants to marine organisms

10. (a) Give an account on the Sewage pollution

(OR)

(b)Describe the Plastics and Litter source and impact in the marine environment

11. (a) Give an account on sources and distribution of heavy metal pollution

(OR)

(b) Describe the sources and composition of oil pollution

12. (a) Give an account on uses of waste heat role of biocides of thermal pollution

(OR)

(b)Describe the Environmental monitoring methods for critical pollutants

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 401 - Paper –I – AQUACULTURE BIOTECHNOLOGY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. DNA blotting
2. What is translation
3. Gynogenesis
4. Characeristics of transgenic Fish
5. C DNA libraries
6. DNA barcoading
7. Eicosonids
8. Probiotics in Aquaculture

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Write a detailed note on the principles of DNA isolation

(OR)

(b).Explain the process involved in protein synthesis and compare it with prokaryotes and eukaryotes.

10. (a) Discuss in detail Genome manipulation

(OR)

(b)Define transgenic fish and discuss potential hazards and benefits.

11. (a) Write a detailed account on Recombinant DNA and gene cloning?

(OR)

(b) Discuss in detail DNA polymorphism and DNA fingerprinting.

12.(a) Write a detailed note on Bio active components from marine organisms

(OR)

(b)Discuss in detail types and importance of Bioremediation.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 402 - Paper –II – ESSENTIALS OF BIOCHEMISTY

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Types of carbohydrates
2. Note on proteins
3. Coenzymes
4. Role of enzymes
5. Role of minerals
6. βoxidation pathway
7. Energy budget
8. Examples of abiotic factors

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Write a detailed account on structure and functions of proteins

(OR)

(b).Explain Lipids - Discuss its structure and functions in detail

.

10. (a) Describe in detail the nomenclature and classification of enzymes

(OR)

(b)Illustrate the chemical nature and properties of enzymes.

11. (a) Discuss in detail the metabolism of carbohydrates

(OR)

(b)Give a detailed account on the role of vitamins and minerals in Metabolism

12. (a) Write a detaild note on environmental factors on metabolism

(OR)

(b) Define Bioenergetics and illustrate its model in detail

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 403 - Paper –III – COMPUTER APPLICATIONS, INFORMATION TECHNOLOGY AND BIOSTASTISTICS IN AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Hard Disk
2. FOXPRO
3. Internet access tools
4. MS - EXCEL
5. Presentation of data
6. Curve fitting
7. Correlation coefficient
8. Probit analysis

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Write an account on input, output processing and storage devices

(OR)

(b) Explain MS DOS and WINDOWS in detail.

10. (a) Discuss in detail the salient features of computer graphics and their applications

(OR)

(b) What are the advantages of SPSS and ANOVA in aquaculture

11. (a) Write an essay on measures of central tendency

(OR)

(b)Explain the correlation and regression in detail

12. (a) Describe the student t – test and add a note on regression co – efficent

(OR)

(b) Give an account on F – distribution X^2 distribution.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 403 B - Paper –II – AQUACULTURE ENGINEERING

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Layout of farm
2. Internal dikes
3. Jar hatchery
4. Spawning tanks
5. Filtration tank
6. Cages and Rafits
7. Raceway farms
8. Piping system

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Write a detailed account on Design and construction of freshwater fish farm

(OR)

(b).Explain the drainage system of freshwater fish ponds

.

10. (a) Describe in detail the Design and construction of Brackish water shrimp farm

(OR)

(b)Illustrate the Designer and construction of fish hatchery

11. (a) Discuss in detail the Design and construction of Shrimp hatchery

(OR)

(b)Give a detailed account on the seawater supply and piping system

12. (a) Write a detailed note on Design and construction of pens and enclosuers

(OR)

(b) Define raceway farms

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 406 (A) - Paper –IV – GENERAL PRINCIPLES AND PRACTICS OF AQUACULTURE

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Types of culture
2. Fish ponds
3. Transport of breeders
4. Artificial feeds
5. Air breathing fishes
6. Fish farming in India
7. Control measures of Bacterial diseases
8. Fungal diseases of fishes

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail selection of species for culture

(OR)

(b)Discuss in detail control of aquatic weeds and predators.

10. (a) Describe the transport of seed fish and explain seed fish production seed fish production in carps

(OR)

(b) Discuss in detail:

i. Food and feeding in fish

ii. Growth hormones in fishes

11. (a) Discuss in detail culture of shrimp and prawn

(OR)

(b) Give a detailed account on aquarium fish and its maintenance

12. (a) Discuss in detail different viral diseases in fishes and its diagnosis and control

(OR)

(b) Give a detailed account on protozoan diseases in fishes and its control measure.

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION

Branch XV – Aquaculture

AQC- 406 (B) - Paper –IV Fish Breeding and Hatchery Management

(CBCS with effect from 2021-2022)

Time : 3 hours Maximum : 80 Marks

PART – A

Answer any **FOUR** questions. Each question carries 5 marks.

(Marks : 4x5=20)

1. Penaeus monodon
2. Pearl oyster
3. Cray fish
4. Eye stalk ablation
5. Brood stock management
6. Health management in hatcheries
7. Macrobrachium rosenbergii
8. Fresh Water mussel

PART – B

(4X15=60)

Answer **ALL** questions. Each question carries 15 marks

9. (a) Discuss in detail site selection and collection methods of Natural seed

(OR)

(b)Discuss in detail Life cycle of *Penaeus varnamei*.

10. (a) Describe the Maturation stages of Macrobrachium rosenbergii

(OR)

(b) Discuss in detail the Induced maturation in *Penaeus monodon* by eye stalk ablation.

11. (a) Discuss in detail Reproductive hormones in crustaceans

(OR)

(b) Give a detailed account on Breeding and hatchery management of crabs

12. (a) Discuss in detail Food and feeding of larval stages of important shellfishes

(OR)

(b) Give a detailed account on Life cycle of edible oyster.

SRI VENKATESWARA UNIVERSITY: TIRUPATI
S.V.U COLLEGE OF SCIENCES
DEPARTMENT OF GEOGRAPHY

Course
M.Sc. GEOGRAPHY

Choice Based Credit System (CBCS)
Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department of Geography, Sri Venkateswara University was established in the year 1972. Geography s a unique discipline integrating subjects from social sciences, Sciences and Technology which unfolds the hidden relations of society in space. Initially, Geographical knowledge was constructed around the physical basis of Geography and in course of time Geographical studies have expanded their focus on to human relations. As the time passed, the innovations in various fields of knowledge have had a definite impact on the subject and it started gearing itself up to face the new challenges. At end of the 20th century, the departments in the field of information Technology (IT) had a decisive influence in the making the subject relevant. In fact, the subject is redlining itself to face the challenges of globalization. Today, the subject is restructuring itself by integrating the new technologies. Geographical Information System (GIS), Remote Sensing, Photogrammentry etc., in course of time may emerge as the most important spatial science. The Revision of syllabus under CBCS system is suitable for the Research and Employment of the Students.

The department Received Grants under BSR and SAP Schemes. The Grants utilizing for strengthen the teaching and research facilities such as establishment of Remote Sensing and GIS laboratories with latest software's and other infrastructural facilities like power supply, LCD Projectors, water supply, Department Library and the strengthening of the existing cartographic lab. In this Department 48 M.Phil and 49Ph.D Degrees were awarded, more than 40 books are published in national and International.

Vision

- The Department of Geography will promote academic. Research, Employment, community development.
- We will provide a rigorous educational experience through innovative teaching, Research Programmes and employment opportunities in IT Industry.
- We will increase our visibility as a research department through faculty scholarship, research grant activities, international collaborations and fellowships for research scholars
- To update curriculum for competitive Examinations, Research linkage with Industries.

Mission

- To provide educators with effective and relevant professional development, support, and materials focusing on geographic concepts, content, and pedagogy.
- To educate legislators and education decision-makers at the local, state and national levels about the relevance of geography in the 21st century and to motivate and inspire action within the context of curriculum design, professional development, connections between elementary, secondary, and university systems, and professional associations.
- To cultivate awareness among parents of students and the public at large of the importance of geo-literacy and to actively engage citizens in the development of geo-literacy and the institutional structures that will support this mission.

Programme Specific Outcomes

- Compare and discusses the formation of large scale landforms involving both exogenous and endogenous processes.
- Know how human, physical and environmental components of the world interact.

Programme Outcomes

- To understand the concept of place and how it is connected to people's sense of belonging to the physical environment, landscape and culture.
- The main outcome is students can able to select different projection for different geographical areas.
- Explain the importance of advanced cartography in map making and presenting.
- Acquire good knowledge about different procedure of map making and various projection system of map making by developing broad knowledge about latitude, longitude, meridians, parallels etc.
- Obtain the knowledge on fundamentals of atmospheric phenomena, global climate systems and climate change.
- Understand the atmosphere and climate are a critical part of the earth system, and climatic variability and change are central to the issue of current and future global environmental change.
- With the sound knowledge on the process, principles, effecting factors, techniques of Remote sensing student can understand interpretation of the data in much more accurate.
- Explain the elements of weather maps and analyse and interpret the weather maps
- Students can able to understand how to represent the data through different diagrams and graphs
- Students will demonstrate an understanding of current research within the breadth of geography, as well as more in depth knowledge of research in their specialty areas.

- Students will develop a solid understanding of the concepts of “space," “place” and “region” and their importance in explaining world affairs. To Provide a comprehensive introduction to basic concepts and key theoretical approaches in economic geography To Introduce economic geography as a dynamic, diverse and contested body of knowledge
- To enable you to apply this knowledge to key social and economic issues in the context of economic globalization

M.Sc. Geography 2021-22

SEMESTER - I

Sl. No	Components of Study	Title of the course	Title of the Paper	Contact hours	No. of Credits	IA Marks	End SEM Marks	Total
1.	Core Theory **(Mandatory)**	GEG - 101	Geomorphology	6	4	20	80	100
2.		GEG - 102	Cartography	6	4	20	80	100
3.	Compulsory foundation **(opt - 1)**	GEG – 103(A)	Economic Geography	6	4	20	80	100
		GEG – 103(B)	Human Geography					
		GEG – 103(C)	Environmental Geography					
4.	Elective foundation **(Opt - 1)**	GEG – 104(A)	Oceanography	6	4	20	80	100
		GEG – 104(B)	Computer Basics for Geography					
		GEG – 104(C)	Regional Geography of Andhra Pradesh					
5.	Practical - 1	GEG – 105	Map Projections	8	4	---	100	100
6.	Practical - 2	GEG – 106	Techniques of Mapping and map analysis	8	4	---	100	100
	TOAL			**40**	**24**	**80**	**520**	**600**
7.	AUDIT COURSE		Human Values and Professional Ethics- I	0	0	100	0	0

SEMESTER - II

Sl. No	Components of Study	Title of the course	Title of the Paper	Contact hours	No. of Credits	IA Marks	End SEM Marks	Total
1.	Core	GEG - 201	Climatology	6	4	20	80	100
2.	**(Mandatory)**	GEG - 202	Geographical Thought	6	4	20	80	100
3.	Compulsory Foundation **(Opt - 1)**	GEG – 203(A)	Principles of Remote Sensing	6	4	20	80	100
		GEG – 203(B)	Geography of Tourism					
		GEG – 203(C)	Industrial Geography					
4.	Elective foundation **(Opt - !)**	GEG – 204(A)	Physical Geography of India	6	4	20	80	100
		GEG – 204(B)	Regional Geography of India					
		GEG – 204(C)	Social and Cultural Geography					
5.	Practical - 1	GEG – 205	Interpretation of Topographical (S.O.I., U.S and O.S) and Weather Maps	8	4	---	100	100
6.	Practical - 2	GEG – 206	Research Techniques		4	---	100	100

7.	AUDIT COURSE		Human Values and Professional Ethics- II	0	0	100	0	0

SEMESTER - III

Sl. No	Components of Study	Title of the course	Title of the Paper	Contact hours	No. of Credits	IA Marks	End SEM Marks	Total
1.	Core **(Mandatory)**	GEG – 301	Urban Geography	6	4	20	80	100
2.		GEG – 302	Geographical Information System (GIS)	6	4	20	80	100
3.	Generic Electives **(Opt - 1)**	GEG – 303(A)	Agricultural Geography	6	4	20	80	100
		GEG – 303(B)	Transport geography					
		GEG – 303(C)	Disaster Management Studies					
4.	Practical	GEG – 304	Geographical Information System (GIS)	8	4	---	100	100
5.	Skill Oriented Course **(Mandatory Theory & practical)**	GEG – 305	GPS Survey and Report	Theory (2)+ Practical's(4)	4	10	90 (40+50)	100
6.	Open Elective **(Opt - 1)**	GEG – 306 (A)	Regional Geography of Andhra Pradesh	6	4	20	80	100
		GEG – 306 (B)	Geographical Information System (GIS) & Global Positioning System (GPS) and Applications					
	TOAL			**24**	**24**	**90**	**510**	**600**

SEMESTER - IV

Sl. No	Components of Study	Title of the course	Title of the Paper	Contact hours	No. of Credits	IA/Viva Marks	End SEM Marks	Total
1.	Core **(Mandatory)**	GEG – 401	Regional Planning	6	4	20	80	100
2.		GEG – 402	Advanced Remote Sensing	6	4	20	80	100
3.	Generic Electives **(Opt - 1)**	GEG – 403(A)	Water and Soil Resources Management	6	4	20	80	100
		GEG – 403(B)	Political Geography					
		GEG – 403(C)	Research in Geographical Studies					
4.	Practical	GEG = 404	Remote Sensing Applications	8	4	---	100	100
5.	Multi Disciplinary course/Project Work	GEG – 405	Project Work and Viva Voce	0	4	20	80	100
6.	Open Elective **(Opt - 1)**	GEG – 406 (A)	Regional Geography of India	6	4	20	80	100
		GEG – 406 (B)	Principles of Remote Sensing					
Total				**32**	**24**	**100**	**500**	**600**

SEMESTER – I

CORE THEORY – 1

GEOMORPHOLOGY

Learning Objectives

- To show the landforms, landscape evolution, various land forming processes with respect to time, climate and tectonic regimes, the course shall further convey an understanding on land forming processes with different Geomorphic agents and processes on different temporal and spatial magnitude.
- To understand the concept of place and how it is connected to people's sense of belonging to the physical environment, landscape and culture.
- To understand the fundamental concepts of spatial interaction and diffusion, which explain how human activities are influenced by the concept of distance.
- To exposed to the nature of physical systems such as geomorphologic processes and natural hazards.
- To read and interpret information on different types of physical features maps.
- To learn how human, physical and environmental components of the world interact.
- To Examine Earth's plate tectonic framework. Explain the relationship between earthquakes and volcanoes

Learning Outcomes

After the completion of the course, Students will be able to

- Explain principal terms, definitions and theories in geomorphology.
- Explain the interior structure of the earth and geological time scale.
- Assess the cause and effect of disturbances in/on the earth.
- Explain different theories and models for landscape evolution with time.
- Describes the landform and landform processes in different climatic zones and tectonic regimes.
- Compare and discusses the formation of large scale landforms involving both exogenous and endogenous processes.
- Know how human, physical and environmental components of the world interact.

P.T.O

SYLLABUS

Unit I Nature, Definition, Scope and recent trends in Geomorphology: Rocks Origin, Classification and distribution, Interior of the Earth. Geological time -scale.

Unit II Earth movements: Epierogenic and Orogenic earth movements. Theories of continental drift , Apostasy and plate tectonics. earthquakes, volcanoes and their distribution.

Unit III Geomorphic agents and Processes: Weathering, Erosion, Mass wasting. Concept of cycle of erosion, Davis and Penck concepts in the evolution of Landforms.

Unit IV Geomorphic Processes: Erosional and depositional landforms made by a) rivers, b) Glaciers, c) wind, d) underground water, e) waves & currents.

Suggested Readings:

- Dayal, P. : A Text book of Geomorphology. Shukla Book depot, Patna, 1996.
- Monkhouse, F.J. : Principles of Physical Geography, Hodder and Stoughton, London, 1960.
- Sparks, B.W. : Geomorphology, Longmans, London, 1960.
- Strahler, A.N. and Strahler, A.H. : Modern Physical Geography : John Wiley & Sons, Revised edition 1992.
- Thornbury, W.D.Principles of Geomorphology, Wiley Eastern, 1969.
- Wooldridge, S.W. and Morgan, R.S. : The Physical Basis Geography– An outline of Geomorphology, Longman Green & Co, London, 1959.

CORE - THEORY-2

GEG 102: CARTOGRAPHY

Learning Objective

- To apprise the students to various aspects of cartography.
- To introduce the basic concepts and key theoretical approaches in Advanced Cartography.
- To describes the art and science of map making and map analysis.
- To teach the representation and conversions of scales.
- To provide the knowledge on map design, layout, lettering, toponomy, drawing surface and equipment.
- To give the clear picture on the changing process of map making from analogue to digital.

Learning Outcomes

After the completion of the course, Students will be able to

- Explain the importance of advanced cartography in map making and presenting.
- Acquire good knowledge about different procedure of map making and various projection system of map making by developing broad knowledge about latitude, longitude, meridians, parallels etc.
- Developing their quantitative application in geographical study which gives more accuracy in any geographical enquiry which can further helps students in conducting research activities.
- Perform map layout and map interpretation for any geographical area.
- Acquire knowledge of different method of surveying and map making by using proper tools and technique and can apply this knowledge in future research works.

P.T.O

SYLLABUS

Unit I Cartography –Definition. Cartography is a science of human communication; Scales – Methods of representation & conversions; Map projections –classification and choice of projections. Merits and demerits of cylindrical, conical, zenithal and conventional projections.

Unit II Semiology – Kinds of symbols– Mapping qualitative and quantitative point, Line and Area symbols. Types of maps and their uses. Topographical maps: Elements of topographical maps, scales and numbering of Toposheets.

Unit III Map design and layout – Theory of visual perception constraints and Restrictions in map design. Lettering and Toponomy. Mechanics of map construction: Drawing surfaces – Drawing Equipment.

Unit IV Mapping the qualitative and quantitative data. Thematic mapping; concept of map base, map compilations & generalizations. Concepts of Geographical Information System (GIS).

Suggested Readings

- Khan, Z.A. : Text book of practical geography, concept, New Delhi, 1998.
- Monkhouse, F.J. & Wilkinson, H.R. : Maps and Diagrams, Methuen, London, 1994
- Steers, J.A. : Map Projections, University of London Press, London Burrough,P.A. : Principles of geographic information systems for land resource assessment, Oxford University Press, New York, 1986.
- Fraser Taylor D.R. : Geographic Information Systems, Pergaman Press, Oxford, 1991.
- Star J and J. Estes : Geographic information systems. An introduction, Prentice Hall, Englewood Cliff, New Jersy, 1994.
- Misra, R.P. and Rames, A.: Fundamentals of Cartography, Mcmillan Co., New Delhi, 1986.
- Robinson, A.H. et al.: Elements of Cartography, John Wiley & Sons, U.S.A., 1995.
- Sarkar, A.K., Practical Geography : A systematic approach; Oriental Longman, Calcutta, 1997.
- Singh, R.L. and Dutt, P.K. Elements of Practical Geography, Kalyani publishers, New Delhi, 1979.

COMPULSORY FOUNDATION (OPT - 1)
GEG 103(A): ECONOMIC GEOGRAPHY

Learning Objectives

- To acquire knowledge about the concepts of resources, classification, models of natural resource processes, their use and misuse, conservation and management of resources for sustainable development
- To Provide a comprehensive introduction to basic concepts and key theoretical approaches in economic geography
- To Introduce economic geography as a dynamic, diverse and contested body of knowledge
- To enable you to apply this knowledge to key social and economic issues in the context of economic globalization
- To encourage to think about policy options for overcoming inequality and uneven development in
- the globalizing world.

Learning outcomes

After the completion of the course, Students will be able to

- Explain the importance of economic geography in analyzing the societies and economies work.
- Explain and apply key concepts and theoretical approaches in economic geography.
- Discuss and critically evaluate these concepts and theoretical approaches.
- Students will become sensitized to concept of resources.
- Students will become sensitized the classification of resources.
- Learn about use and misuse of resources.
- Will learn conservation methods and techniques.
- Showing an awareness and responsibility for the environment.
- Apply these concepts and theoretical approaches to key social and economic issues in the context of global economy.
- Discuss policy options for overcoming inequality and uneven development in the globalizing world.

P.T.O

SYLLABUS

Unit I Scope, content and recent trends in economic geography, relation of economic geography with economics and other branches of social sciences, classification of economies; sectors of economy (Primary, secondary and tertiary).

Unit II Natural resources: Nature and classification – renewable and non - renewable, biotic and abiotic, conservation of resources, changing nature of economic activities; mining, forestry, agriculture, industry, trade and transport.

Unit III Agricultural Resources: Spatial distribution of major food and cash crops of the world (rice, wheat, coffee, tea).Minerals resources- Classification of minerals (ferrous and non- ferrous).Major industries: Iron and Steel, Textiles, ship - building and their distribution

Unit IV Industrial location theory– Alfred Weber: Geographical factors in the development of major industries. Industrial policy of state and central government.

Suggested Readings:

- Boesch, H. : A Geography of World Economy, D. Van Nostrand Co., New York, 1964.
- Chapman, J.D. : Geography and Energy, Longman, London, 1989.
- Gregor, H.F. : Geography of Agriculture, Prentice Hall, New Jersey, USA, 1970.
- Griggs, D.B. : The Agricultural Systems of the World, Cambridge University Press, New York, 1974.
- Hartshome, T.N. and Alexander, J.W. : Economic Geography, Prentice Hall, New Delhi, 1988.
- Jones, C.F. and Darkenwald, G.G. : Economic Geography, McMilan Co., New York, 1975.
- Millar E.: Geography of Manufacturing, Prentice Hall, New York, 1962.
- Raza, M. and Agrawal, Y. : Transport Geography of India, Concept, New Delhi, 1986.
- Smith, D.M. : Industrial Location – An Economic Geographical Analysis, John Willey, New York, 1971.
- Thomas, R.S. : The Geography of Economic Activities, McGraw Hill, New York, 1962.

CO_4	3	3	1	1	3	3	3	1	1	3	3	3

103 (B): HUMAN GEOGRAPHY

Learning Objective

- To apprise the students to various aspects of human resources and their importance.
- Provide a comprehensive introduction to basic concepts and key theoretical approaches in Population.
- To describe Describes migration and its impact on the regional human resources.

Learning Outcomes

After the completion of the course, Students will be able to

- Apprise the students to various aspects of human resources and their importance.
- Illustrate basic concepts and key theoretical approaches in population.
- Describes migration and its impact on the regional human resources.

SYLLABUS

UNIT I Definition, nature, origin and scope of human geography. Origin and evolution of human settlements.

UNIT II The patterns of population distribution of the world and India. Factors affecting the patterns of population distribution. Population Density.

UNIT III Trends of population growth of the world and India in the 20th century. Theories of population: Malthusian theory and Demographic Transition Theory.

UNITIV: Migration: Definition, types of migration internal and external, causes and Consequences of Migration, theories of migration – Lees theory. Problems and prospects of population growth; population policy and planning in India.

Suggested Redings :

- Garnier, B.J: Geography of population, Long man group ltd., London, 1966
- Bogue Donald.: Principles of Demography,JohnWiley and Sons, Newyark 1969.
- Chandana R.C,: A Geography of population – Concepts , concepts, determinants, Kalyani publishers, NewDelhi, 1986.
- Clark, John,I(E.d): Geography and population :Approaches and applications, Pergman press ltd. Oxford 1984.
- Mamoria, C.B.India's population problem, Kithab mahal, New Delhi,1981.
- Srinivasan, K.Basic demographic techniques and applications, Sage publications , New Delhi ,1998.
- Zelinsky Wilbur, A prologue of population of population Geography, prentice Hall , 1966.

CO_4	3	3	3	3	3	3	3	-	2	2	3	3

GEG 103 (C): ENVIRONMENTAL GEOGRAPHY

Learning objectives:

- To create the environmental aptitude among students.
- To familiarize the students with concepts, issues, approaches about physical and social environment.
- To acquainted with contemporary environmental problems and challenges.
- To provide knowledge on Ecosystem, Biomes, food chain and hydrological cycle.

Learning Outcomes

After the completion of the course, Students will be able to

- Gain the knowledge on environmental aptitude
- Familiarize with concepts, issues, approaches about physical and social environment.
- Acquainted with contemporary environmental problems and challenges.
- Familiarized the knowledge on Ecosystem, Biomes, food chain and hydrological cycle.

SYLLABUS

UNIT I Nature, Scope and Significance of Environmental Studies; Concepts of Ecology, Ecological balance and the need for Ecological Approach.

UNIT II Concepts of Ecosystem : Structure, Classification and functioning of the ecosystem, Biomes, food web, food pyramid, Nutrient cycle, hydrological cycle.

UNIT III Impact of population growth on ecosystem. Agriculture, green revolution, HYV and pesticides. Man's impact on land, mining, coastal areas and transport.

UNIT IV Environmental impact assessment, Environmental reconstruction, management and planning, the need for interdisciplinary approach. The Role of GIS and Remote Sensing in Environmental Management.

Suggested Readings

- Turk. : Introduction to Environment Studies, Sanndora, 1980.
- Detwyler : Man's Impact on Environment, 1971.
- Strahler & Strahler, Geography of Man's Environment Wiley, 1977.
- Bennet : Man and Earth's Ecosystem, Wiley, 1975.
- Leopoid and Lune (Ed) : A procedure for evaluating environmental impact.
- Savindra Singh : Environmental geography– Prayagpustak Bhavan, Allahabad, 2000.
- Dikshit, R.D.: Geography and Teaching of the environment, geography department, Poona University, 1984.
- Agarwal, D.P. Man and Environment in India through ages, Book & Books, 1992.
- Gaur, R. : Environment and Ecology of Early Man in Northern India, R.B. Publication Corporation, 1987. Hoyt, J.B. Man and the Earth, Prentice Hall, U.S.A.; 1992.
- Singh, S. : Environmental Geography, Prayag Publications, Allahabad, 1991.
- Smith, R.L. : Man and his Environment : An Ecosystem approach, Harper & Row, London, 1992.

CO_4	3	3	3	3	3	3	3	1	2	2	2	3

GEG 104(A): OCEANOGRAPHY

Learning objectives:

- To develop the understanding about concepts associated with hydrosphere with context to oceanic relief, surfaces and their distribution on earth.
- To provide the knowledge about physical principles, characteristics, oceanic deposits.
- To develop knowledge on the ocean currents and their movemental impact. .

Learning Outcomes

After the completion of the course, Students will be able to

- Examine and compare the different ocean and water bodies with their distinct oceanic bottom relief, circulation system and marine deposits
- Improve the knowledge on Coral reefs and their formation theories..

SYLLABUS

UNIT 1 Oceanography – nature, scope and development, distribution of land and Water.Relief of Ocean Basins – Hypsometry. The Continental Shelf, The Continental Slope, the Deep Sea Plains, Submarine Canyons – Characteristics, Origin and Distribution. General features of Bathymetry bottom relief of Pacific, Atlantic and Indian Ocean.

UNIT II Ocean water: Distribution of temperature, composition of salinity, density of sea level.

UNIT III Ocean currents: origin, causes and characterises; Atlantic, Indian, Pacific Ocean. Tides and waves.

UNIT IV Ocean deposits: sources, types and distribution of ocean deposits. Coral reefs: formation types, factors of growth.

Suggested Readings:

- Davis, R.J.A. 1986, Oceanography – An Introduction of the Marine Environment, Win C. Brown, Iowa.
- King, C.A., Oceanography for Geographers, Edward Arnold Pub.
- Murray, S.J., 1913, Ocean, A General account of the Science of the sea, Thorton Butter Worth, London.
- Siddhartha, K. 1999, Oceanography, A Brief Introduction, Kisalaya Pub. Pvt. Ltd., New Delhi..
- Singh, S. 2002, Physical Geography, Prayag Pub., Allahab6.Sharma & Vatal :
- Oceanography for Geographers Chaitanya Publishing House, Allahabad.
- Lal.D.S. Oceanography, chaitanya Publishing House, Allahabad,1994

CO_3	3	3	3	3	3	3	1	3	3	3	3	3
CO_4	3	3	3	3	3	3	1	3	3	3	3	3

GEG 104 (B): COMPUTER APPLICATIONS IN GEOGRAPHY

Learning objectives:

- To develop the understanding about concepts associated computer applications and geographical relevance.
- To provide the knowledge about principles, characteristics of various computer programmes.
- To develop knowledge on how to use computers for geographical representations.

Learning Outcomes

After the completion of the course, Students will be able to

- Understand computer concepts and principles.
- Examine and compare the different computer programmes and usage of computers to geographical studies
- Improve the knowledge on computer net workings

SYLLABUS

UNIT I Introduction to computers , Definition, origin and Evolution, Characteristics, Limitations and Elements of Computers, Hard ware and Software.

Unit II M.S Office: M.S word and word processing – parts of word processecing, Moving and copying Window Toolbars, Creating, saving and closing Document- opening and editing of document text and Paragraph forming, Appling bullets and numbering, Creation of Table.

Unit III M.S.Excel: Features of M.S Excel-Spread sheet/work sheet, parts of M.S.Excel window Insertion and deletion of worksheet. Entering and editing date in work sheet. Different type of Function available in M.S.Excel -Templates, Charts, Graphs. Understanding Website and LAN

Unit IV Representation of Geographical Data Base: Rain fall, Temperature, Population, Crop Yielding, Land use and Land Cover. Tables, Graphs, Diagrams, Maps and PPT presentation.

Suggested Readings:

- Fundamentals of Computer(First Edition- 2009) Publisher: McGraw-Hill by Balaguruswamy
- Computer Fundamentals(Fourth Edition- 2007) Publisher: BPB Publications by Pradeep Sinha and Priti Sinha.
- Computer Fundamentals(First Edition-2010) Publisher: Pearson by Anita Goel
- Introduction to Computers (First Edition 2008) Publisher : Cengage Learning By Gary B.Shelly, Thomas J.Cashman and Misty E. Vermaat
- Fundamentals of Computers and Programming with C by A. K. Sharma DhanpatRai publications
- Computer Networks (4th Edition) by Andrew S. Tanenbaum
- Operating System Concepts, (6th Edition) by Abraham Silberschatz, Peter Baer Galvin, Greg Gagne

CO_4	3	3	3	2	1	3	3	1	2	2	3	3

GEG 104(C): REGIONAL GEOGRAPHY OF ANDHRA PRADESH

Learning objectives:

- To acquaint the students with re- organization of Andhra Pradesh and its newphysical, climate and drainage aspects. .
- To obtain the knowledge of demographic, irrigation and major crops.
- To understand Andhra Pradesh mineral and industrial aspects with transportation.
- To improve knowledge on the transportation and communication aspects of Andhra Pradesh

Learning Outcomes

After the completion of the course, Students will be able to

- Understand re- organization of Andhra Pradesh and its new physical, climate and drainage aspects. .
- Obtain the knowledge of demographic, irrigation and major crops.
- Understand Andhra Pradesh mineral and industrial aspects with transportation.
- Improved knowledge on the transportation and communication aspects of Andhra Pradesh

SYLLABUS

UNIT I: Re-organization of Andhra Pradesh Act -2014 Location and physical setting Major Physiographic Divisions– Soils, Vegetation, and Drainage – Climate Regions and their Characteristics.

UNIT II Population Distribution; Density, growth and problems. Agriculture Types. Irrigation and power; Multipurpose Projects, Major food grain crops.(Paddy, Jower and Ragi), major Commercial Crops (Cotton, Groundnut and Mango).

UNIT III Mineral Resources: Iron ore, Limestone and Petroleum, Industries: Iron and Steel, Cotton and IT. Industrial Regions and Special Economic Zones (SEZ) Andhra Pradesh.

UNIT IV Transportation and Communication – Road, Rail, Water (special reference to coastal Transport) and Air Transport. Communication net work in Andhra Pradesh.

Suggested Readings:

- Take from 401, 4, 5 from old syllabus.
- Structure, growth and prospects of Industries in Andhra Pradesh. Lotus publications, Varanasi-1989.
- Regional Geography of Andhra Pradesh– Telugu Academy.
- Andhra Pradesh year book -2010 -2015.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}

CO_4	3	3	3	3	2	3	2	1	2	2	2	3

Practical – 1

GEG 105: MAP PROJECTIONS

Learning Objective

- To apprise the students about the art and science of map making and representation.
- To explains the usage of different types of projections
- To focus on the importance of scale and projection in the process of representing the earth surface

Learning Outcomes:

After the completion of the course, Students will be able to

- Explain the concept of map, scale and projection
- Student can explain the purpose of projection
- The main outcome of this course is students can able to select different projection for different geographical areas.

SYLLABUS

Unit I Introduction to Map projections; Zenithal Projections: Equi -distant; Equal area, Stereo graphics, Gnomonic.

Unit II Cylindrical Projections: Equi -distant, Equal area, Mercator, UTM, Gall's Projection

Unit III Conical Projections: One standard parallel, Two standard parallel; Bonne's, Polyconic.

Unit IV: International map projection: Sinusodial, interrupted. Sinusoidal Molweides; Interrupted – Molweides projections.

Suggested Readings

- Khan, Z.A. : Text book of practical geography : concept; New Delhi, 1998.
- Misra, R.P. and Ramesh, A. : Fundamentals of Cartography, Concept, New Delhi, 1989.
- Singh, R.L. : Map work and practical geography; central book depot; Allahabad, 1972.
- Steers, J.A. : Map projections, University of London Press, London

Practical – 2

GEG 106: TECHNIQUES OF MAPPING AND MAP ANALYSIS

Learning Objective

- To apprise the students about the Terrain mapping techniques
- To project the representation of the landforms by using contour lines
- To explains the methods of slope analysis
- To develop the knowledge on the thematic maps
- To Understand the data representation through the diagrammatic form and log graphs

Learning Outcomes

After the completion of the course, Students will be able to

- Students can able to Represent the landforms with contour lines
- Student can perform profiles which are drawn from landforms through contours
- Student can represent the slope analysis models
- Students can able to understand how to represent the data through different diagrams and graphs

SYLLABUS

. UNIT I	Interpolation of contours. Landforms represented by contours. Profiles: Serial, Superimposed, Projected, Composite.
UNIT II	Slope Analysis: Smith's and Wentworth's Methods.
UNIT III	Thematic mapping: Dot method, Isopleths and Iso –Chromatic method; Choropleth and Choro-Chromatic methods; Flow method.
UNIT IV	Bar Diagrams: Simple, Compound, Superimposed, Graphs: Trilinear, Semi log;Log-log., Diagrams -Pyramid, Pie. Hyther-graph, Climo-graph, Ergo-graph, Band–graph. Frequency polygon.

Suggested Readings

- Misra, R.P. and Ramesh, A. : Fundamentals of Cartography, concept, New Delhi,1989.
- Monkhouse, F.J.H.R. and Wilkinson: Maps and diagrams; Methuen and Co.,London,1984.
- Peter Toyne & Peter Newby, T.: Techniques in human geography; MacMillan,London, 1972.
- john Byogott: An introduction to map work and practical geography, universityTutorial press Ltd., London .

Audit Course

HUMAN VALUES AND PROFESSIONAL ETHICS – I

Unit I	Definition and Nature of Ethics – its relation to Religion, Politics, Business, Law, Medicine and Environment. Need and Importance of Professional Ethics-Goals – Ethical Values in various Professions.
Unit II	Nature of Values-Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders, Character and Conduct.
Unit III	Individual and society: Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non Possession) and Aparigraha (Nonstealing).Purusharthas (Cardinal virtues)- Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desires), Moksha (Liberation).
Unit IV	Bhagavad Gita – (a) Niskama karma. (b) Buddhism – The Four Noble Truths – Arya astanga marga, (c) Jainism – Mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.
Unit V	Crime and Theories of punishment – (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

Suggested Readings:

- John S Mackenjie: A Manual of ethics.
- "The Ethics of Management": by Larue Tone Hosmer, Richard D. IrwinInc.
- "Management Ethics – integrity at work" by Joseph A. Petrick and John F. Quinn, Response Books: NewDelhi.
- "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
- Harold H. Titus: Ethics for Today.
- Maitra, S.K: Hindu Ethics.
- William Lilly: Introduction to Ethics.
- Sinha: a Manual of Ethics.
- Manu: Manu Dharma Sastra or the institute of Manu: Comprising the Indian system of Duties: Religious andCivil(ed) G.C. Haughton.
- Susruta Samhita: Tr. Kaviraj Kunjanal, Kunjanal Brishagratha, Chowkamba Sanskrit Series. Vol. I,II,III,Varanasi VOL. I OO, 16-20, 21-32, and 74-77 only.
- Caraka Samita: Tr. Dr. Ram Karan Sharma and Vaidya Bhagavan Dash, Chowkamba Sanskrit Series Office,Varanasi. I,II,III VOL. I, PP 183-191.
- Ethics, Theory and Contemporary issues, Barbara Mackinnon, Wads Worth/Thomson Learning 2001.
- Analyzing Moral issues, Judith A. Boss, Mayfield Publishing Company ,1999.
- An Introduction to Applied Ethics (Ed.) John H. piet and Ayodhya Prasad, Cosmo Publications.
- Text book for Intermediate logic, Ethics and Human Values, Board of Intermediate Education & TeluguAcademic Hyderabad.
- I.C Sharma Ethical Philosophy of India. Nagin & Co. Julundha

SEMESTER – II

CORE THEORY-1

GEG 201: CLIMATOLOGY

Learning Objective

- To introduce to the students the fundamentals of atmospheric phenomena, global climate systems and climate change.
- The atmosphere and climate are a critical part of the earth system, and climatic variability and change are central to the issue of current and future global environmental change.
- To grasp the techniques for modeling the climate, covering both theoretical and technical aspects.
- To understand the dynamics of the atmosphere and the overall climatologically system.
- To be able to analyse and interpret climatic data and classification of climate

Learning Outcomes

After the completion of the course, Students will be able to

- Obtain the knowledge on fundamentals of atmospheric phenomena, global climate systems and climate change.
- Understand the atmosphere and climate are a critical part of the earth system, and climatic variability and change are central to the issue of current and future global environmental change.
- Grasp the techniques for modeling the climate, covering both theoretical and technical aspects.
- Understand the dynamics of the atmosphere, the ocean and the overall climatologically system.
- Able to analyze and interpret climatic data and classification of climate

P.T.O

SYLLABUS

UNIT I Nature and scope of climatology. Composition and structure of the Atmosphere – Insulation – heat balance, green house effect – vertical and Horizontal, distribution of Temperature.

UNIT II Atmospheric Pressure – Pressure gradient – Pressure belts – vertical and Horizontal distribution of pressure – winds – monsoons and cyclones.

UNIT III Water vapor- Humidity – Relative, absolute and specific humidity – condensation and types, cloud types, types of Rainfall – Koppen's and Thornthwaite's scheme of climatic classification.

UNIT IV Theories of Climatic changes – Astronomical or Orbital Theory, Continent Displacement Theory. Micro Climates – agro climate, urban climate, global warming, heat Island, health hazards. Weather Forecasting - Problems and Prospects of weather Forecasting in India.

Suggested Readings

- Crittch Field, J.H. : General Climatology, Prentice Hall, India, New Delhi, 1993.
- Lal, D.S. : Climatology, Chaitanya Publishing House, Allahabad, 1986.
- Garrison, T. : Oceanography – An introduction to Marine Science. Books / Cole, Pacific Groue, USA,2001.

CO_4	3	3	3	2	2	3	2	1	2	2	2	3

CORE THEORY-2

GEG 202: GEOGRAPHICAL THOUGHT

Learning Objective

- To acquaint the students with the Geographical philosophy. and the Methodology and historical development of geography as a professional field.
- The idea is to address the spirit and purpose of the changing geographies and to what we as geographers contribute towards knowledge production.
- To developing critical thinking and analytical approaches and Students will acquire an understanding of and appreciation for the contributions of the eminent geographers to the subject.
- To provide the knowledge on the quantitative revolution in the geographical studies.

Learning Outcomes

After the completion of the course, Students will be able to

- Understand the evolution of geography over the decades.
- Students will demonstrate an advanced understanding of the historical development of geographical studies.
- They can understand the major current philosophical and theoretical debates in geography.
- Students will demonstrate an understanding of current research within the breadth of geography, as well as more in depth knowledge of research in their specialty areas.
- Students will develop a solid understanding of the concepts of “space," “place” and “region” and their importance in explaining world affairs.
- Improve knowledge on the quantitative revolution in the geographical studies.

P.T.O

SYLLABUS

UNIT I Ancient Geography – Contributions of Greeks and Romans Medieval Geography– contributions of Arab Geographers, Modern Geography– Contribution of Immanuel Kant, Alexander Von Humboldt and Carl Ritter.

UNIT II Contributions of German Geographers : Friedrich Ratzel, Ferdinand Von Ritchthofen, Albrecht Penck and Alfred Hettner and French geographers: Vidal de la blache, Elisee Reclus, Jean Brunhes and Emmanual de Martonne. Asian geographers with special reference to Indian geographers

UNIT III Dualism in Geography-Systematic and regional Geography. Determinism and Possibilism; Geography as a natural science and social science.

UNIT IV Quantitative revolution– causes and consequences. Behavioral geography. Laws, Theories and Models in Geography.

Suggested Readings

- Dikshit, R.D. (ed.) : The Art & Science of Geography – Integrated Readings, Prentice Hall of India, New Delhi, 1994.
- Hartshome, R. : Perspective on nature of Geography, Rand MeNally & Co., 1959.
- Husain, M. : Evolution of Geographic thought, Rawat Pub., Jaipur, 1984.
- Minshull, R. : The Changing nature of Geography, Hutchinson University Library, London, 1970.

COMPULSORY FOUNDATION (OPT - 1)
GEG 203(A): PRINCIPLES OF REMOTE SENSING

Learning Objective

- To focus on history and evolution of Remote sensing.
- To explains the principle involved in remote sensing i.e. the Electromagnetic spectrum, reflection, refraction, diffusion, absorption and interaction with earth's atmosphere.
- To give the technical knowledge of satellite system.
- To provide knowledge on the platforms and instruments used for remote sensing.
- To give light on Areal Remote sensing and satellite Remote sensing.
- To explains about the specifications of sensors.

Learning Outcomes

After the completion of the course, Students will be able to

- Understand the principles of remote sensing and its techniques.
- Student will be able to know the apply the technique of remote sensing in varies fields.
- Student can apply the knowledge in getting authentic data by performing pre and post analysis in aerial remote sensing.
- Student will analysis the changes on earth surface with the image interpretation and visual interpretation techniques.
- With the sound knowledge on the process, principles, effecting factors, techniques of Remote sensing student can understand interpretation of the data in much more accurate.

	PO_1	PO_2	PO_3	PO_4	PO_5	PO_6	PO_7	PO_8	PO_9	PO_{10}	PO_{11}	PO_{12}

CO_4	3	3	2	2	2	3	1	1	2	1	1	2

P.T.O

SYLLABUS

UNIT I Introduction to Remote Sensing: History, Development and Principles. Stages in Remote sensing Process. Energy Sources and Radiation Principles-Energy Interaction in the Atmosphere. Atmospheric Windows. Energy Interaction with Earth Surface features. Electromagnetic Spectrum. Spectral reflectance patterns of Earth surface features in different wavelengths.

UNITII Thermal Remote Sensing: Thermal sensors and characteristics, Interpretation of thermal images, Emissivity conservation, Thermal inertia considerations, Factors effecting analysis of thermal images. Estimation of land surface temperature.

UNITII Microwave Remote Sensing: Microwave Remote Sensing and its advantages. Active and passive systems. Platforms and sensors. Active Microwave systems: Basic principles of radar, radar equation, Resolution, Range, Phase and Angular measurements, Microwave scattering and its measurement, Relationships between scene and sensor parameters. Imaging systems, Imagery – their characteristics and interpretation.

UNIT-IV. Satellite Remote Sensing: Types of Satellites, Orbits: Types of Orbits, and Orbital Characteristics. Platforms: types of Platforms in Remote sensing. Sensors-Definition,Types of Sensors in Remote sensing. Scanning mechanism. Resolutions: Definition, Spectral, Spatial, Temporal and Radiometric resolutions of Satellites. Characteristics of Indian Remote Sensing Satellites(I.R.S)

Suggested Readings

- American Society of Photogrammetry : Manual of Remote Sensing, ASP, Falls Church, V.A. 1983.
- Barrett, E.C. and L.F. Curtis : Fundamentals of Remote Sensing and Air Photo Interpretation, Mcmillan, New York, 1992.
- Compbell, J. : Introduction of Remote Sensing, Guilford, New York, 1989.
- Curran, Paul, J. : Principles of Remote Sensing, Longman, London, 1985.
- Leuder D. : Aerial Photographic Interpretation: Principles and Application, McGraw Hill, New York, 1959.
- Rao D.P. (eds.) : Remote Sensing for Earth Resources, Association of Exploration Geophysicist, Hyderabad, 1998.
- Thomas M. Lillesand and Ralph W. Kefer, Remote Sensing and Image Interpretation. John Wiley & Sons, New York, 1994.

GEG 203(B): GEOGRAPHY OF TOURISM

Learning objectives:

- To provide introduction on Scope and subject matter of Tourism, Types of tourism. Tourism environment and Heritage.
- To give Knowledge on tourism and economic importance.
- To provide Understanding on Tourism and its Impact on Human Resources development.
- To provide knowledge on infrastructural and facilities development for tourism.

Learning Outcomes

After the completion of the course, Students will be able to

- Understand the evolution of tourism geography over the decades.
- Students will demonstrate understanding of the tourism and economic importance.
- They can understand the tourism impact on the HRD.
- Students will develop a concrete understanding of tourism and infrastructural need.

SYLLABUS

UNIT-I Tourism: Definition, nature and Scope Tourism. Types of tourism. Tourism environment and Heritage

UNIT-II Economic important of Tourism. status of national and the state of Andhra Pradesh in Tourism Development.

UNIT-III Human resource Development due to tourism -Apprenticeship, Training in Institutions of Computer Technology. Tourism as service based smokeless and non - export industry in India.

UNIT-IV Infrastructural development of Tourism and recreation - Accommodation, Food Facilities,Travel and Transport (palace on wheels), Drinking water, sanitation, security, banking, marketing and foreign exchange. Planning and policies of Tourism in India and Andhra Pradesh

Suggested Ridings:

- Kaul,C.N; Dynamics of Tourism . A trilogy in three volumes sterling publishers1985.
- Alister mathuson and Geefry hall – Tourism: Economic, Physical and social impact- longman, 1982.
- Chib, som ,N.-perspectives on Tourism in India.
- Bukart,A.J. and Medilik , S- Tourism: past , present and feature.
- Norval , A.j . The tourist Industry.
- PILLAI,R.N.- Tour and Pligrimage in India.
- Ram ACHARYA- Tourism and cultural heritage of India.
- KAUL.S.N –Tourism in India: all tourist Guide and Reference book 1977.
- Negi J.M.S. Tourism and hotelring : A world wide industry 1982, New Delhi :Gitanjali. Publication
- Bhatia ,A.K, - Tourism development :Principal and practices.

GEG203(C): INDUSTRIAL GEOGRAPHY

Learning objectives:

- To develop the understanding about industrial Geography.
- To familiarize the students with industrial location theories, in industrial geography.
- To provide knowledge on industrial classification.
- To enhance knowledge on industrial regions and imbalances in India.

Learning Outcomes

After the completion of the course, Students will be able to

- Understanding about industrial Geography.
- Can familiarize the students with industrial location theories, in industrial geography.
- Improve the knowledge on industrial classification.
- Enhance knowledge on industrial regions and imbalances in India.

SYLLABUS

UNIT I Definition, Nature and scope of industrial Geography, significance of Industrial Geography, Industries; Introduction and definition.

UNITII Major geographical factors for industrial locations. Theories of Industrial location: August Losch and Isard.

UNITIII Classification of Industries: Resource based, agro based, Information Technology (IT). Multitasked: Small scale and large scale industries.

UNIT IV Industrial Regions: Industrial development in India, Industrialization in Andhra Pradesh. Regional imbalances.

Suggested Readings:

- Israd,W.: Introduction to regional sciences.Prentice Hall .
- Smith,D.M. : Industrial location, willay international edition -1971
- Alexander J.N.:Economic Geograpy. Prentice Hall.
- Estall,R.C.& industrial activity and Economic Geography, R.O.Buchanan Hatchinson university libraray, London
- SINHA,B.N. industrial geography of India
- Thoman ,Concling and yeats:The Geography of Economic activity, M.c graw Hill company.

CO_4	3	3	3	3	3	3	3	1	3	3	3	3

GEG204(A): PHYSICAL GEOGRAPHY OF INDIA

Learning objectives:

- To develop the understanding about physical features of Indian Geography.
- To familiarize the students with physiography, Drainage, Climate, soil and natural vegetation of India.

Learning Outcomes

After the completion of the course, Students will be able to

- Conceptualize the elements of physical features of Indian geography.
- Visualize and recognize the major topographical, geological, soil and natural vegetation regions of India.
- examine the various issues, problems and challenges associated with these physical regions.

SYLLABUS

UNIT I Physiography: Major Physiographic Divisions of India; Extra- Peninsula: Its Structure Relief and the Evidences Regarding its Present Day Evolution; Evolution, Structure and Relief; of Peninsula, Indo Gangetic Plain, Western Coast, Eastern Coast and Islands.

UNIT II Drainage System: Himalayan and peninsular drainage - The Indus, Brahmaputra, Ganga the Godavari and Krishna River Systems; differences between the Himalayan and Peninsular Drainage.

UNIT III Climate: Origin and Mechanisms of Indian Monsoon - Classical and Modern Views of origin; Effects of El-Nino and La-Nina on Indian Monsoon. Koppen's and Thornthwaite classification of Indian Climate.

UNIT IV Soils and Forest: classification, erosion and conservation; Saline and Alkaline Soils - measures of reclamation; Problems and developmental programs of Indian Forestry.

Suggested Readings:

- Spate, O.H.K., & Learrmonth, A.T.A., India & Pakistan, London.
- Puri, G.S., Indian forest Ecology, New Delhi.
- Ray Chaudhary, S.P. Land and soil, New Delhi
- The Gazetteer of India Vo 1,.1
- Krishnan, M.B. : Geology of India, Higginbothams, Madras.
- Das, P.K., The Monsoon, New Delhi
- Wadia, D.N., Geology of India, London.
- Memoria, C.B. : Economic and Commercial Geography of India, Shirlal Agarwaland Co., Agra, 1991.
- Alam, S.M. : Planning atlas of Andhra Pradesh.
- Khullar: India, A comprehensive Geography. Kalyani Publishers , New Delhi.1989.

CO_3	1	1	3	3	3	2	3	1	3	3	3	3
CO_4	3	3	1	3	3	3	3	1	3	3	3	3

GEG204(B): REGIONAL GEOGRAPHY OF INDIA

Learning objectives:

- To conceptualize the regional approaches and to examine regional differentiation in the study of Indian Geography.
- To expose to historical, economic, cultural, social and physical characteristics of India.
- To provide an introduction to the regions of the India in terms of both their uniqueness and similarities. .

Learning Outcomes

After the completion of the course, Students will be able to

- Developed the art of regionalization technique while focusing about diversity of Indian region.
- visualized and recognized about regional identities and socio-cultural dimension of regionalization to address the issues and concern needed for regional planning.

SYLLABUS

UNIT I Location and Regional Geographical Setting; Region; Development and Types- formal region, nodal region, functional region. Regionalization – Causes, methods and techniques used for regionalization.

Unit: II Mineral Resources – Coal, Iron ore and petroleum. Industries: Iron and Steel, Oil refinery and Paper industries; Industrial Regions of India.

Unit III Agriculture – Agriculture Types, Systems and Productivity. Regionalization of Agriculture - methods and techniques used in the analysis of crop combination regions. Agricultural policies in India

Unit IV Population; Distribution, Density growth and problems, population policies in India; Irrigation; Multipurpose projects. Power – Hydral, Thermal, Solar and Wind

Suggested Readings

- Spate, O.H.K., & Learrmonth, A.T.A., India & Pakistan, London.
- Puri, G.S., Indian forest Ecology, New Delhi.
- Ray Chaudhary, S.P. Land and soil, New Delhi
- The Gazetteer of India Vo 1,.1
- Krishnan, M.B. : Geology of India, Higginbothams, Madras.
- Das, P.K., The Monsoon, New Delhi
- Wadia, D.N., Geology of India, London.
- Memoria, C.B. : Economic and Commercial Geography of India, Shirlal Agarwal and Co., Agra, 1991.

CO_4	3	1	3	3	1	3	2	1	3	3	3	3

GEG204(C): SOCIAL AND CULTURAL GEOGRAPHY

Learning objectives:

- To understand the theoretical emergence of social geography, social well being, gender issues, social differentiation and regional dimensions of sociological changes.
- To demographic, social and cultural attributes of Earth such as migration, social relations and cultural identity

Learning Outcomes

After the completion of the course, Students will be able to

- Assess the casual role of Geography in production of different social groups and shaping of their unique features.
- Evaluate the emerging social spaces, stratification, social well being, and issues of social justice through spatial perspective.

SYLLABUS

UNIT I Social Geography – Nature and Scope – Social Structure and processes – concept of space and place – social well being – quality of life – social exclusion and inclusion.

UNIT II Ethnicity, tribe, dialect, language, caste and religion - Spatial distribution- World and India.

UNIT III Cultural Geography- Nature and scope; culture complex and regions; cultural heritage, interactions, diffusion, ecology and imperialism.

UNIT IV India's Cultural Setting: Historical perspective of Indian culture; Racial, linguistic, ethic diversities and religious minorities; Inter-regional, intra-regional and international migration and associated problems; Health indicators.

Suggested Readings:

- Robestein J.H. & Robert S. Barren (1990) the cultural Landscape An Introduction to Human Geography, Prentice Hall of India Pvt. Ltd. New Delhi – 1.

Practical - 1

GEG 205: INTERPRETATION OF TOPOGRAPHICAL(S.O.I., U.S and O.S) AND WEATHER MAPS

Learning objectives

- To provide understanding and interpretation Skills of different Topographical maps.
- To improve the knowledge on Indian weather maps and Interpretation skills.

Learning Outcomes

After the completion of the course, Students will be able to

- Explain the elements, scale and numbering of Topographical maps
- Analyse and interpret the physical and cultural features from Indian, U.S and O.S Toposheets.
- Explain the elements of weather maps and analyse and interpret the weather maps

SYLLABUS

UNIT I	Indian Topographical Maps – Introduction, Numbering, importance, and usage
UNIT II	Interpretation of physical features and cultural features Survey of India (SOI).
UNIT III	Interpretation of physical features, cultural features U.S. and O.S. Toposheets.
UNIT IV	Interpretation of Weather maps (India): elements and interpretation.

Suggested Readings

- John Bygott : An introduction to map work and practical geography, UniversityTutorial Press Ltd., London, 1974.
- Mishra, R.P. and Ramesh, A. : Fundamentals of Cartography, Concept, New Delhi,1989.
- Singh, R.L.: Map work and practical geography, control Book depot, Al lahabad,1972.

Practical - 2

GEG 206: RESEARCH TECHNIQUES

Learning objectives

- To provide an understanding for the student on statistical concepts to include measurements of location and dispersion, and correlation analysis.
- To calculate and apply measures of location and measures of dispersion -- grouped and ungrouped data cases.
- To sensitize the different Research and agricultural techniques.

Learning outcomes:

After the completion of the course, Students will be able to

- Keeping in view the nature of data and purpose of study and to make a rational choice amongst listed various statistical methods.
- Students shall know how to organize, manage, and present data.
- Understand and use different research techniques in their researches and day to day needs.
- Use different agricultural methods in their research and needed situations.

SYLLABUS

UNIT I Frequency Distribution, Measures of Central Tendency; Arithmetic Mean, Median, Mode

UNIT II Measures of dispersion: Mean deviation, Quartile deviation, Standard deviation, Correlation- Rank Correlation

UNIT III Network analysis: Alfa, Beta, Gama, Eta, Theta indices, Centrality,Connectivity and shortest path matrix analysis.

UNIT IV Nearest neighbor distance analysis, Crop combination and Drainage basin Morphometry

Suggested Readings

- Aslam Mahmood–Statistical Methods in Geographical Studies, Publication, New Delhi, 1977.
- Cole, J.P. & King, DAM – Quantitative Methods in Geography, John Wiley andSons, New York, 1968.
- Gregory, K.J. and Walling, D.E. Drainage basin form and process: AGeomorphologic approach; Amold; London 1973.
- Peter Davis: Science in geography, Science Series– 3, Data description and presentation, Oxford University Press, London, 1975.
- Peter Toyne and Peter Newby, T.: Techniques in Human geography, MacMillan, London, 1972.
- Singh Jasbir and Dhillon, S.S. : A gricultural geography, TATA Mc Graw Hill,New Delhi, 1984.
- Singh, R.L. Mapwork and practical geography, central book depot, Allahabad,1972.
- Singh, R.L. Elements of Practical Geography, Kalyani Publishers, 1992.
- Toyni, P. and Newby, Techniques of Map, Longman, London, 1965

Audit Course

HUMAN VALUES AND PROFESSIONAL ETHICS – II

Unit I Value Education –Definition – relevance to present day – Concept of Human Values – Self introduction – Self esteem. Family Values – Components, structure and responsibilities of family Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit II Medical ethics- views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit III Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions, Characteries of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit IV Environmental ethics- Ethical theory, man and nature – Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justice and environmental health.

Unit V Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities Feminist ethic, surrogacy/pregnancy. Ethics of media- Impact of Newspapers, Television Movies and Internet.

Suggested Readings:

- John S Mackenjie: A Manual of ethics.
- "The Ethics of Management": by Larue Tone Hosmer, Richard D. IrwinInc.
- "Management Ethics – integrity at work" by Joseph A. Petrick and JohnF. Quinn, Response Books: New Delhi.
- "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
- Harold H. Titus: Ethics for Today.
- Maitra, S.K: Hindu Ethics.
- William Lilly: Introduction to Ethics.
- Sinha: a Manual of Ethics.
- Manu: Manu Dharma Sastra or the institute of Manu: Comprising the Indian system of Duties: Religious and Civil(ed) G.C. Haughton.
- Susruta Samhita: Tr. Kaviraj Kunjanal, Kunjanal Brishagratha, Chowkamba Sanskrit Series. Vol. I,II,III, Varanasi VOL. I OO, 16-20, 21-32, and 74-77 only.
- Caraka Samita: Tr. Dr. Ram Karan Sharma and Vaidya Bhagavan Dash, Chowkamba Sanskrit Series Office, Varanasi. I,II,III VOL. I, PP 183-191.
- Ethics, Theory and Contemporary issues, Barbara Mackinnon, Wads Worth/Thomson Learning 2001.
- Analyzing Moral issues, Judith A. Boss, Mayfield Publishing Company ,1999.
- An Introduction to Applied Ethics (Ed.) John H. piet and Ayodhya Prasad, Cosmo Publications.
- Text book for Intermediate logic, Ethics and Human Values, Board of Intermediate Education & Telugu Academic Hyderabad.
- I.C Sharma Ethical Philosophy of India. Nagin& Co. Julundhar.

SEMESTER – III
CORE THEORY-1
GEG 301: URBAN GEOGRAPHY

Learning objectives:

- To deal with the concept of urban settlements and evolution of urban population and to provide concept of Urban studies.
- To explain the cause and effects of growth in urban population.
- To explain the theories involved in classifications of towns and relationship between townsand cities and their population.
- To understand patterns of World urbanization with reference to India

Learning out comes:

After the completion of the course, Students will be able to

- Learn the concept of urban settlements and evolution of urban population and to provide concept of Urban studies.
- Understand the cause and effects of growth in urban population
- Explains the theories involved in classifications of towns and relationship between towns and cities and their population.
- Distinguish patterns of Worldurbanization with reference to India**.**

P.T.O

SYLLABUS

UNIT I Urban Geography : Definition, Nature and scope. Urban growth, structure and slums. Urban settlements - Impact of the Industrial revolution on location, spacing and size of urban settlements

UNIT II Origin and evolution of cities: Ancient, Medieval and Modern cities. Primate city, Metropolis; Megalopolis and Conurbation, The concept of Smart Cities and Satellite towns, Patterns of towns and city's.

;.

UNIT III Urban Hierarchy, Rank– size relationship, Nearest Neighbor analysis– classification of towns with special reference to functional classification. Urban Morphology - Theory's: Concentric Zone, Multiple-nuclei, Central Place and Sector Theory.

UNIT IV Rural – urban relationships, rural - urban fringe, urban decay, urban sprawl urban renewal. The concept of city – region: Urban Um-land and hinter land; Pattern of world urbanization with special reference to India and Andhra Pradesh.

Suggested Readings

- Johnson, J.H., Urban Geography. An Introductory Analysis, Pergaman Press, Oxford, 1967.
- Murphy, R. : The American City : an Urban Geography McGraw Hill, 1966.
- Dickinson, R.E. : City and Region, Routledge and Kegen, Paul Ltd., London, 1964
- Mayer and Cohen : Readings in Urban Geography, Central Book Depot., Allahabad.

CORE THEORY-2

GEG 302: GEOGRAPHICAL INFORMATION SYSTEM (GIS)

Learning objectives:

- To understand the evolution of GIS.
- To focus on collection, analyzing, interpretation andresenting the data related to Earth.
- To explains the types of data collection with respective to time and terrain and Data base management and retrieving the data from different sources.
- To provides the theoretical knowledge on the Modeling surfaces and integration of Remote sensing with GIS.
- To provide knowledge on GIS applications in different sectors.

Learning Outcomes:

After the completion of the course, Students will be able to

- Understand the evolution of GIS**.**
- focus on collection, analyzing, interpretation andresenting the data related to Earth.
- Differentiate the types of data collection with respective to time and terrain and Data base management and retrieving the data from different sources**.**
- Improve knowledge on the Modeling surfaces and integration of Remote sensing with GIS.
- Develops knowledge on GIS applications in different sectors.

P.T.O

SYLLABUS

UNIT I GIS: Definitions and Development – Computer Components of GIS (Hardware and Software) – General Data Base concepts of Spatial and Non - spatial data - Elements of Spatial data - Sources of Spatial data – Data quality for GIS – Errors and Error variations in GIS.

UNIT II GIS Data Management: Data Base Management Systems (DBMS) Data BaseModels. Data input methods – Spatial Data structures: Raster data and Vector data – Structures – GIS Data Analysis: Spatial measurementmethods Reclassification – Buffering – Overlay Analysis.

UNIT III Modeling Surfaces: Co- or di na tes, Generation of DEM, DTM and TIN models – Spatial Interpolation – GIS output generation – Integration of Remote Sensing and GIS. Network Analysis.

UNIT IV GIS applications: GIS as a Decision Support System – GIS as a Land Information System – GIS as a Disaster Management and Emergency Response System - Resource management applications - Facility Management application – Urban Management application.

Suggested Readings

- Aronoff S. Geographic Information System : A Management Perspective, DDLPublication, Ottawa. 1989.

GENERIC ELECTIVE (Opt-1)

GEG-303(A): AGRICULTURAL GEOGRAPHY

Learning objectives:

- To focus on evolution of Agriculture through at the different ages and approaches.
- To understand the concepts and importance of determinants in different cropping patterns.
- To understand agricultural location theories also the problem and prospects of Indian Agriculture .

Learning Outcomes:

After the completion of the course, Students will be able to

- Know evolution of Agriculture through at the different ages and approaches.
- Understand the concepts and importance of determinants in different cropping patterns.
- Differentiate the Determinants of Agriculture
- Understand agricultural location theories also the problem and prospects of Indian Agriculture .

SYLLABUS

UNIT I Nature, Scope, significance and development of Agricultural Geography. Approaches to the study of agricultural geography; Origin and evolution ofagriculture.

UNIT II Determinants of agriculture – Physical, Socio -economic, technological andpolitical; concepts and methods of land use classification.

UNIT III Concepts and methods of Agriculture: Crop combination; Crop concentration; Crop diversification; agricultural productivity; agricultural typology.

UNIT IV Agricultural location theory – Von Thunen and its modifications. Concepts of agricultural region and agricultural regionalization. Whittlesey's agricultural systems of the world. Agricultural regions of India. Green revolution, HYV; Problems and prospects of Indian agriculture.

Suggested Readings

- Bayliss Smith,T.P.: The Ecology of Agricultural Systems. Cambridge University Press, London, 1987.
- Berry, B.J.L. et al. : The Geography of Economic Systems. Prentice Hall, NewYork, 1976.
- Dyson, T. : Population and Food – Global Trends and Furure Prospects. Routledge,London, 1996.

GEG-303(B) TRANSPORT GEOGRAPHY

Learning objectives:

- To focus on evolution and development of transport through at the different ages and approaches.
- To understand the concepts and importance of determinants of transport patterns.
- To understand transport theories also the problem and prospects of Indian transport .

Learning Outcomes:

After the completion of the course, Students will be able to

- Know evolution and development of Transport through at the different ages and approaches.
- Understand the concepts and importance of determinants in different transport patterns.
- Differentiate the Determinants of transport and trade.
- Understand transport theories also the problem and prospects of Indian transport. .

P.T.O

SYLLABUS

UNIT I Nature, scope, significance and development of transport geography. Factors for development of transport system; economic, social, cultural and institutional. Different types of Transportation-their merits and demerits Factors controlling the cost of transport.

UNIT II Transport: Structure, accessibility and flow models; network structure, graph theoretic measures, measurement of accessibility, models of network change, linear programming and gravity models.

UNIT III Theories related to freight route structure. Bases of spatial interaction, Complementarily, intervening opportunities and transferability. Patterns of movement

UNIT IV Transport policy and planning in India. Urban transport: growth and problem of urban transportation. Environmental degradation: vehicular pollution and congestion alternatives to the transport system in mega cities.

Suggest Readings:

GEG-303(C) DISASTER MANAGEMENT STUDIES

Learning objectives:

- To develop the skill of understanding about natural calamities and disaster and also realize the consequences as well as preparedness.
- To create awareness on human and natural disasters
- To understand classification of disasters and its impacts

Learning Outcomes:

After the completion of the course, Students will be able to

- Develop the skill of understanding about natural calamities and disaster and also realize the consequences as well as preparedness.
- Improve awareness on human and natural disasters
- Understand classification of disasters and its impacts and management of disasters

SYLLABUS

UNIT I: Disaster: Meaning and Concept, types of Disasters. Natural disasters: Earthquakes Hazardous effects, Volcanic eruptions – Hazardous effects.Certain case studies.

UNIT II: Cyclones and floods : cyclone related parameters and effects on land and sea-damage assessment. Causes of flood and food prone area analysis –damage assessment. Certain case studies.

UNIT III (a) Droughts and desertification: Types of droughts – factors influencing droughts – land use and groundwater level changes – delimiting drought prone areas.

(b)Main induced disasters: Deforestation and environmental degradation,urbanization, industrial development and environmental pollution. Types of pollution : air pollution, water pollution, soil pollution and noise pollution.

UNIT IV Disaster management: Pre and post disaster operations of Earthquakes, cyclones, floods, droughts, forest fires. The role of Remote Sensing and GIS in disaster management studies.

Suggested Readings

CO_5	2	2	3	1	1	2	2	3	2	2	2	2

PRACTICAL

GEG-304: GEOGRAPHICAL INFORMATION SYSTEM(GIS)

Learning objectives:

- To acquaint knowledge the about especially Geographic Information System (GIS) softwares.
- To develop the skill of geo-referencing and creation of different data files.
- To improve the practical knowledge on attribute data and linkage.
- To develop the skill on analysis methods of GIS.

Learning Outcomes:

After the completion of the course, Students will be able to

- Acquaint knowledge the about especially Geographic Information System (GIS) softwares.
- Develop the skill of geo-referencing and creation of different data files.
- Improve the practical knowledge on attribute data and linkage.
- Develop the skill on analysis methods of GIS.

SYLLABUS

UNIT I GIS Capabilities

UNIT II Introduction to ARC GIS Software

(a) Arc Map, (b)Arc Catalogue.(c) Arc Tool box, (d)Table of Contents,(e)Arc Scan

UNIT III Geo-Referencing.

UNIT IV Creation of File Geo data base, Personal Geo -data base, shape file. – Data Base generation – Spatial data generation – Digitization (Polygon, line and point) and Non -spatial data.

UNIT –V Attribute data base and linkage of data Base.

UNIT VI GIS-Analysis Methods

(a) Buffering, (b) Map overlay,(c) Interpolation, (d) Contours,(e), Slope, (f) DEM

Suggested Readings

- Ian Heywood et al. An Introduction to Geographical Information Systems,Addison Wesley Longman Ltd. 1998.
- Mishra, H.C.; GIS Handbook, GIS India, Hyderabad, 1996.
- Peter A. Burrough and Rachael A. McDonnell; Principles of GeographicalInformation Systems; Oxford University Press, New York, 1998.
- Star J and J. Estes; Geographic Information Systems; An Introduction, PrenticeHall, Englewood Cliff, New Jersey, 1994.

SKILL ORIENTED COURSE

(MANDATORY THEORY & PRACTICAL)

GEG-305: GLOBAL POSITIONING SYSTEM (GPS) DIGITAL SURVEY AND REPORT

Learning objectives:

- To develop the skill of understanding GPS and Survey.
- To create awareness on post processing of GPS data and collection of data from GPS survey.
- To develop skill of report writing by using GPS data and software and hardware.

Learning Outcomes:

After the completion of the course, Students will be able to

- Develop the skill of understanding GPS and Survey.
- Generate awareness on post processing of GPS data and collection of data from GPS survey.
- Develop skill of report writing by using GPS data and software and hardware.

SYLLABUS

(THEORY)

UNIT-I Global Positioning System (GPS) - Basic concept, system architecture, space segment, user segment; GPS Signals:- Signal structure, selective availability; GPS coordinate frames Time references: Geodetic and Geo centric coordinate systems, world geodetic 1984 (WGS 84), GPS time.

UNIT-II GPS Applications - Field Data collection, Navigation, Aviation, Marine, Rail, Roads and highways, Space, Survey mapping, Defense, Agriculture, Environment.

(PRACTICAL)

UNIT III Introduction to GPS systems: Hardware, Software. Field procedures of GPS.

UNIT IV GPS surveying. Data collection procedures: Point, Line and Area data collection. Post processing of the GPS data. GPS and GIS integrations output preparation. Report.

Suggested Readings:

- Bailey, T. and Gatrell, A. C. (1995): Interactive Spatial Data Analysis. Longman ,Harlow.
- Dorling, D. and Fairborn, D. (1997): Mapping. Ways of Representing the World. Longman, Harlow.
- Fraser Taylor, D.R. (1980): The Computer in Contemporary Cartography. John Wiley and Sons, New York.
- Fraser Taylor, D.R. (ed.) (1983): Graphic Communication and Design in Contemporary Cartography. John Wiley and Sons, New York.
- Kanetkar, T.P. and Kulkarni, S.V. (1967): Surveying and Levelling, Part II, A.V.G. Prakashan, Poona.
- Keates, J.S. (1973): Cartographic Design and Production, Longman Group Ltd.
- Mailing, D.H. (1973): Co-ordinate Systems and Map Projections. George Philip and Sons Ltd.
- Rhind, B. and Adams, T. (ed.) (1983): Computers in Cartography. British Cartographic Society, London.

CO_5	2	2	2	1	1	2	2	3	2	2	2	2

OPEN ELECTIVE (OPT - 1)

GEG 306(A): REGIONAL GEOGRAPHY OF ANDHRA PRADESH

Learning objectives:

- To develop the understanding about physical features of Andhra Pradesh..
- To familiarize the students with physiography, Drainage, Climate, soil and natural vegetation of Andhra Pradesh.
- To visualise the population, mineral and transportation structures in Andhra Pradesh

Learning Outcomes:

After the completion of the course, Students will be able to

- Develop the understanding about physical features of Andhra Pradesh..
- Familiarize the students with physiography, Drainage, Climate, soil and natural vegetation of Andhra Pradesh.
- Visualise the population, mineral and transportation structures in Andhra Pradesh

SYLLABUS

UNIT I: Re-organization of Andhra Pradesh Act -2014 Location and physical setting – Major Physiographic Divisions– Soils, Vegetation, and Drainage – Climate Regions and their Characteristics.

UNIT II Population Distribution; Density, growth and problems. Agriculture Types. Irrigation and power; Multipurpose Projects, Major food grain crops.(Paddy, Jower and Ragi), major Commercial Crops (Cotton, Groundnut and Mango).

UNIT III Mineral Resources: Iron ore, Limestone and Petroleum, Industries: Iron and Steel, Cotton and IT. Industrial Regions and Special Economic Zones (SEZ) Andhra Pradesh.

UNIT IV Transportation and Communication – Road, Rail, Water (special reference to coastal Transport) and Air Transport. Communication net work in Andhra Pradesh

Suggested Readings:

- Take from 401, 4, 5 from old syllabus.
- Structure, growth an d prospects of Industries in Andhra Pradesh. lotuspublications, Varanasi - 1989.
- Regional Geography of Andhra Pradesh – Telugu Academy.
- Andhra Pradesh year book -2010-2015

GEG306 (B): GEOGRAPHICAL INFORMATION SYSTEM

(GIS) & GLOBAL POSITIONINGSYSTEM (GPS) AND APPLICATIONS

Learning objectives:

- To understand the evolution of GIS and GPS.
- To focus on collection, analyzing, interpretation andresenting the data related to Earth.
- To explains the types of data classification in GIS.
- To provides the theoretical knowledge on the Modeling surfaces and integration of Remote sensing with GIS.
- To provide knowledge on GIS and GPS applications in different sectors.

Learning Outcomes:

After the completion of the course, Students will be able to

- Understand the evolution of GIS**.**
- Focus on collection, analyzing, interpretation andresenting the data related to Earth.
- Differentiate the types of data
- Improve knowledge on the Modeling surfaces and integration of Remote GPS with GIS.
- Develop knowledge on GIS and GPS applications in different sectors.

SEMESTER – IV

CORE THEORY-1

GEG 401: REGIONAL PLANNING

Learning objectives:

- To apprise the concept of Region and its planning.
- To explains the types of regions and regional hierarchy.
- To explains the types of regional planning and planning process.
- To the people participation in planning process and role of Panchayat Raj system
- To explain the resource based and physiographic based regional planning.

Learning Outcomes:

After the completion of the course, Students will be able to

- Acquire a solid base of knowledge in the principles and practices Regional planning.
- The skills necessary for the effective practice of planning, including its purpose, meaning elements of plans; adoption, administration, and implementation of plans.
- Develop the values necessary for the effective practice of planning, including problem-solving skills; research skills; written, graphical, and oral skills; computational skills.
- Learn the values and ethical standards affecting the practice of planning.

CO_4	3	3	3	3	3	3	2	1	2	2	3	3

P.T.O

SYLLABUS

UNIT I Regional Planning: Definition, Nature and scope. Concept of Region; Changing concept of the region from an inter -disciplinary view – point; concepts of regionalism and regionalization. Types of Regions: Formal and functional, uniform and Nodal, single purpose and composite regions, regional hierarchy and special purpose regions.

UNIT II Types of Planning- Sectoral, Temporal; short term, long term and Multilevel planning and planning process. Government planning polices.

UNIT III Decentralized Planning: Peoples participation in the Planning process; Panchayathi Raj system. Theories of development- Spatial and Non spatial.

UNIT IV Physical resource and special purpose regions: River valley regions, hilly and tribal regions, drought prone regions, Special Economic Zones and metropolitan regions.

Suggested Readings

- Sundaram, K.V. : Urban and Regional Planning, Vikas Publishing house, NewDelhi, 1977.

CORE THEORY-2

GEG 402: ADVANCED REMOTE SENSING

Learning objectives:

- To give broad knowledge on photogrammetry, Principle, process, platforms and techniques and Aerial photographs.
- To provide knowledge on software and hardware required for digital image processing, image enhancement and restoration techniques.
- To understand the application of remote Sensing and Photogrammetry in various fields of study.

Learning Outcomes:

After the completion of the course, Students will be able to

- Demonstrate knowledge of the foundations and theories of Photogrammetry, aerial photography and remote sensing.
- Acquire knowledge of physical geography and the methods and techniques for observing, measuring, recording and reporting on geographic phenomena.
- Demonstrate their competence to work individually and as a team to develop and present a client-driven GIS solution.
- Prepared to apply their skills in professional careers.

P.T.O

SYLLABUS

UNIT I Photogrammetry : Introduction; Geometric elements of vertical photographs; scales of Aerial photographs; scale distortions; Flight planning; Relief displacement; parallax measurement; Orthophotography and rectification – principles and procedures.

UNIT II Digital Image Processing: Introduction to digital image processing; Image processing system characteristics: Hardware and Software; Image restoration Techniques: Restoring line dropouts, Restoring periodic line striping, Restoring line offsets, Filtering random noise; Radiometric corrections and Geometric corrections in image processing.

UNIT III Image Enhancement Techniques: Contrast enhancement, Density slicing, Edge enhancement, Merging data sets, Synthetic stereo images; Digital mosaics. Information extraction techniques: Principal – component (P.C) transformation analysis, Ratio images, Multispectral classification, Change -detection images.

UNIT IV Remote Sensing Applications to Geographical Studies: Land use/Land cover mapping; water resources; Geomorphological, waste land studies, Urban and Regional Planning.

Suggested Readings:

- American Society of Photogrammetry : Manual of Remote Sensing, ASP, FallsChurch, V.A. 1983.
- Barrett, E.C and L.F. Curtis : Fundamentals of Remote Sensing and Air PhotoInterpretation, Mcmillan, New York, 1992.

GENERIC ELECTIVE (Opt-1)

GEG-403(A): WATER AND SOIL RESOURCES MANAGEMENT

Learning objectives:

- To apprise the students to various water resources related aspects and hydrological cycle.
- To focus on ground water and soil specifications.
- To develop skill of water and soil management and to study on some case studies .

Learning Outcomes:

After the completion of the course, Students will be able to

- Apprise the students to various water resources related aspects and hydrological cycle.
- Focus on ground water and soil specifications.
- Develop skill of water and soil management and to study on some case studies.

SYLLABUS

UNIT I Water as a focus of geographical interest, Inventory and distribution of world's water resources (Surface and Subsurface); World Hydrological cycle- precipitation and its Measurement, water balance studies.

UNIT II Groundwater: Origin, Occurrence and Vertical distribution; water quality: Physical, biological and chemical properties for irrigation, domestic and industrial purposes.

UNIT III Water Resources Management: conjunctive use of surface and ground water resources; watershed management. Methods of irrigation. Water harvestingtechniques: Formation of new Check dams, tanks, Perculation tanks/Pits and Counter trenches etc.

UNIT IV Soils: Process of soil formation and soil development. Soil profiledevelopment. Properties of soil – Physical, morphology, texture, structure and chemical properties. Soil erosion – degradation and conservation. Management of saline and alkaline soils.

Suggested Readings

- Dakshinamur thy, C. et al., Water Resources of India and their utilization in Agriculture, Indian Agriculture Research Institute, New Delhi, 1973.
- Bunting, B.T. : The Geography of Soils; Hutchinson, London, 1973.
- Foth, H.D and Turk, L.M. : Fundamentals of Soil Science s, John Wiley, New York,1972.

GENERIC ELECTIVE (Opt-1)

GEG-403(B): POLITICAL GEOGRAPHY

Learning objectives:

- To explain the historical evolution, of discipline of Political Geography..
- To help to understand about theoretical models related to geopolitics and geo- strategy.
- To provide the knowledge about political attributes that evolved with territorial structure and geographic influence like state, nation, boundary, elections, and frontier of world in general and India in particular.

Learning Outcomes:

After the completion of the course, Students will be able to

- Apprise the Students will be able to critically examine the geographical bases of political studies.
- Able to evaluate and correlate different theories with contemporary geopolitical and geo-strategic issues.

P.T.O

SYLLABUS

UNIT I Definition, Nature and scope of political geography. Influence of location, size and shape in political Geography.

UNIT-II Geographic elements and the state: influence of physical, Human and Economic elements. Geo-strategic Theories: Mahan, Mackinder and Spykman.

UNIT-III Themes in Political geography : State, Nation, Land locked state, and Nation Building :Formation of Frontiers and boundaries, classification of boundaries. colonialism, De colonialism, Neo colonialism, federalism and other forms of Governance.

UNIT-IV Geopolitical significance of India and the Indian Ocean, maritime boundaries. The Changing political map of India, unity in diversity, centripetal and centrifugal forces, stability and instability. International disputes.

Suggested readings:

- Prescott, J.R.V: Political Geography, Methuen, London, 1972.
- Gohen,S.B:Geogrphy of Political in a devide world , Open university press,U.K.1973.
- Sukhwal,B.L. : India -A Political Geography, Ahmadabad, 1971.

GENERIC ELECTIVE (Opt-1)

GEG-403(C): RESEARCH IN GEOGRAPHICAL STUDIES

Learning objectives:

- To explain the historical evolution, of research in Geographical studies.
- To help to understand about ethics, methods and factors in geographical research.
- To provide the knowledge about forms of research and design.
- To illustrate research methods and data collection.
- To acquaint research analysis and report writing.

Learning Outcomes:

After the completion of the course, Students will be able to

- Explain the historical evolution, of research in Geographical studies..
- Understand about ethics, methods and factors in geographical research.
- Improve the knowledge about forms of research and design.
- Illustrate research methods and data collection.
- Acquaint research analysis and report writing.

P.T.O

SYLLABUS

UNIT I — Research: Meaning, definitions, objectives, characteristics, types, Research ethics approaches, significance, research and scientific methods, criteria of research, Recent trends in Geographical Studies: physical and human geography. Review of literature, review of literature.

UNIT II — Forms of Research: Research problems: selecting the research Problem, defining the problem. Research paper, Article, Workshop, Seminars, Conference and Symposia. Research design: Meaning, need important concepts and development relating to research design.

UNIT III — Research methodology: Data collection and methods. Sampling methods: Random Sampling, stratified sampling. Collection of Primary data: Observation method, interview method, Case study method, questionnaire and secondary data.

UNIT IV — Hypothesis: Basic concepts concerning testing of hypothesis. limitations of the tests of hypothesis. Interpretation procedure. Report writing - significance of report writing, different steps in report writing, layout of the research report, types of reports, conclusion, findings and suggestions. Bibliography, appendices, Plagiarism.

Suggested Readings:

- Gilbert, N. 2001: Researching Social Life, Sage, London.
- Flowerdew, R. and D. Martin 2005: Methods in Human Geography: A Guide for students doing a research project, Prentice Hall, New York.
- Clifford, N.J. and G. Valentine 2003: Key methods in Geography, Sage, London.
- Leedy, P. D. and J.E. Ormrod 2001: Practical Research: Planning and Design.

PRACTICAL

GEG 404: REMOTE SENSING APPLICATIONS

Learning objectives:

- To explain practical knowledge on Remote sensing applications...
- To help to understand Visual and digital interpretation of satellite Images.
- To illustrate interpretation of Aerial photos.
- To acquaint knowledge on allocation of RS in different fields and sectors.

Learning Outcomes:

After the completion of the course, Students will be able to

- Explain practical knowledge on Remote sensing applications...
- Understand Visual and digital interpretation of satellite Images.
- Illustrate interpretation of Aerial photos.
- Acquaint knowledge on allocation of RS in different fields and sectors.

SYLLABUS

UNIT I Techniques of Visual Interpretation;

UNIT II Marginal Information of Satellite Imageries

UNIT III Interpretation of Satellite Imageries: Visual Interpretation; WaterResources, Lineaments, Land use / Land cover – Landforms – WasteLand. Digital Image Interpretation- Subset Supervised classification and Un- Supervised classification change Detection.

UNIT IV Aerial photo interpretation

- Vision test – Stereo Test with Stereoscopes
- Interpretation of Physical Features
- Interpretation of Cultural Features

Suggested Readings

- Curran, Paul, J. : Principles of Remote Sensing: Longman, London, 1985.
- Gautam N.C. et al. Space Technology and Geography; National RemoteSensing Agency, Hyderabad, 1994.
- Thomas M. Lillesand and Ralph, W. Keffer; Remote Sensing and imagesinterpretation, John Willey & Son s, New York, 1994.

MULTI DISCIPLINARY COURSE/PROJECT WORK

GEG 405: INTERNSHIP PROJECT WORK AND VIVA VOCE

Learning objectives:

- To help to understand geo spatial technologies applications in different geographical areas.
- To assist to select the project and completing project and report writing.

Learning Outcomes:

After the completion of the course, Students will be able to

- Develop geo spatial technologies applications in different geographical areas.
- Understand Selection of the project, complete the project and report writing.

SYLLABUS

- The students of M.Sc. Geography 4th Semester have to collaborate with various firms/ Companies/ Research organizations /NGOs and complete internship on Geospatial techniques
- The students of M.Sc. Geography 4th Semester may have to be selected a specific theme/topic for a Project Work based on the internship completed. The students may select some of the following themes for their project.

Land Evaluation	**h**. Health Studies
Land-use / Land cover Analysis	**i**. Infrastructure Studies
Water Sources	**j**. Vegetation Studies
Slope Studies	**k**. Transportation net work
Climatic Change	**l**. Cropping pattern
Settlement Studies	**m**. Urban studies etc
Agriculture Studies	

- GIS, GPS & RS methods have to be used with appropriate primary and secondary data.
- The students should follow the research guidelines by reading Research Methodology beforetaking up the Project Work.
- The Project should be around 50 pages including photos, references and tables.
- Project work must include quality maps, diagrams and flowcharts.
- The project report should include followings:

Title of the project	**f**) Data sources
Introduction	**g**) Materials and Method,
Review of literature	**h**) Results & Discussion
Study Area	**i**) Conclusion
Objectives	**j**) Appendices
	k) Bibliography

Above work has to be done with the consultation of the staff-in-charge. Viva-Voice would be conducted at the semester end.

Suggested Readings:

- Archer J.E. &dalton T.H. (1968): The fields work in Geography, E.t. Batsford Ltd., London.
- Haring, Lloyed (1975): Scientific Geographic Research W C. Brow Company USA.
- Johnes, P.A. (2008): Field Work in Geography, Longman.
- Kothari C.R (1996): Research Methodology, Vishwas Prakashan, New Delhi

➢ Misra R.P. (1991): Research Methodology in Geography, concept pub. New Delhi.

OPEN ELECTIVE (OPT - 1)

GEG 406(A): REGIONAL GEOGRAPHY OF INDIA

Learning objectives:

- To explain practical knowledge on Regional aspects of India...
- To help to understand Indian mineral resources and their distribution..
- To illustrate Indian agriculture and cropping techniques.
- To acquaint knowledge on allocation of RS in different fields and sectors.

Learning Outcomes:

After the completion of the course, Students will be able to

- Explain practical knowledge on Remote sensing applications...
- Understand Visual and digital interpretation of satellite Images.
- Illustrate interpretation of Aerial photos.
- Acquaint knowledge on allocation of RS in different fields and sectors.

SYLLABUS

Unit I India: Location and Regional Geographical Setting of India**;** Development of Regional Studies; concept of region; Types of Region - formal region, nodal region, functional region. Regionalization-process, methods and techniques used for regionalization of formal regions and functional regions.

Unit I India: Mineral Resources – Coal, Iron ore and petroleum, Industries: Iron and Steel, Oil refinery and Paper industries; Industrial Regions of India.

Unit III Indian Agriculture – Green Revolution in Indian agriculture. Agriculture Types; Irrigation and Power; Multipurpose Projects. Major food grain crops; Rice and Wheat; Major commercial crops – Coffee and Tea. Regionalization of Agriculture - methods and techniques used in the analysis of crop combination regions, agricultural productivity regions.

Unit IV India: Population Distribution; Density growth problems, over population and population policies in India; Transportation and types and trade in regional context.

Suggested Readings

- Spate, O.H.K., & Learrmonth, A.T.A., India & Pakistan, London.
- Puri, G.S., Indian forest Ecology, New Delhi.
- Ray Chaudhary, S.P. Land and soil, New Delhi

OPEN ELECTIVE (OPT - 1)

GEG 406(B): PRINCIPLES OF REMORE SENSING

LearningObjective

- To provide knowledge on history and evolution of Remote sensing
- To explains the principle involved in remote sensing i.e. the Electromagnetic spectrum, reflection, refraction, diffusion, absorption and interaction with earth's atmosphere.
- To provide knowledge on the platforms and sensors and instruments used for remote sensing
- To explain about the specifications remote sensing different satellites

Learning Outcomes

After the completion of the course, Students will be able to

- Develop knowledge on history and evolution of Remote sensing
- Explains the principle involved in remote sensing i.e. the Electromagnetic spectrum, reflection, refraction, diffusion, absorption and interaction with earth's atmosphere.
- Understand knowledge on the platforms and sensors and instruments used for remote sensing
- Illustrate about the specifications remote sensing different satellites.

P.T.O

SYLLABUS

UNIT I Introduction to Remote Sensing: History, Development and Principles Stages in Remote sensing Process..Stages in Remote Sensing Process. Energy Sources and Radiation Principles-Energy Interaction in the Atmosphere. Atmospheric Windows. Energy Interaction with Earth Surface features. Electromagnetic Spectrum. Spectral reflectance patterns of Earth surface features in different wavelength

UNIT II Aerial Remote Sensing - History and Types of Aerial Photographs Scales of Aerial Photographs Geometry of Aerial Photographs, Scale Distortions Photographic Resolution Aerial Photo interpretation Techniques-Photo recognition ,Photo Interpretation Equipment.

UNIT III Satellite Remote Sensing: Types of Satellites, Orbits: Types of Orbits, and Orbital characteristics Platforms: types of Platforms in Remote sensing .Sensors-Definition, Types of sensors in Remote sensing. Scanning mechanism. Resolutions: Definition, Spectral ,Spatial, Temporal and Radiometric resolutions of Satellites.

UNIT IV Characteristics of Indian Remote Sensing Satellites(I.R.S),LANDSAT ,etc Principles of Image Interpretation: Elements of Image Interpretation, Digital Image Processing. Applications in Land use Land Cover Mapping and Urbanisation

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF GEOLOGY

Course

M.Sc. GEOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

Sri Venkateswara University offers M.Sc., Geology programme, under Choice Based Credit System (CBCS). The CBCS enables the students to select choice of subjects as per her /his interest and requirement. Acquiring knowledge in the related discipline is advantageous to the students. The CBCS program is framed in such a way that to impart more Knowledge in the field of Geological sciences.

Geology is an inter-disciplinary subject which enables to understand the earth processes and its treasures. It incorporates inputs from almost all science disciplines. Geologists are mainly involved in the exploration and extraction of natural resources viz., minerals, rocks, fossil fuel and water. In the fast growing world geologists will have to play a vital role in building the nation. Geologists can also engage in geological research, which has immense potential in the current scenario.

Vision of the Department

- The Geology department of the University seeks to provide the highest levels of education through continuous revision and expansion of our educational, research, and outreach programs in order to produce well-trained, competent, academic and professional geoscientists capable of responding to societal needs.

Mission of the Department

- The Geology Department will develop in each student, critical thinking, enthusiasm, initiative and the necessary skills to become lifelong students of Earth Sciences. Emphasis will be placed on learning basic concepts and techniques through research, in an environment that promotes the development of professionals with social, cultural and humanistic sensibility as well as profound ethical values. In this way, the department will contribute to the

enrichment of science and society through the creation and dissemination of new knowledge through scientific research.

Program Specific Outcomes (PSOs)

- Learn the essential properties of Earth's components, including its core, mantle, asthenosphere, lithosphere, atmosphere, hydrosphere, and biosphere and also demonstrate mastery of the conceptual framework for understanding earth system processes and the development of earth's features overtime.
- Acquiring geologic data in the field, laboratory, satellites and big data from data banks, analyzing and interpreting the data through application of scientific method.
- Capable of applying advanced and current concepts and methods of the geosciences to formulate and solve complex geological problems.
- Students are capable of understanding the impact of a geo-engineering solution in global and societal context.
- Apply knowledge and techniques from allied fields, including mathematics, chemistry, physics, biology, geoengineering, and computing, to solve geological constraints in societal context.

Program Objectives

- **Education and Training:** Provide an excellent preparation for a career in professional practice in industrial or environmental Earth Sciences, research in Geosciences, and specialist areas of other physical and natural sciences.
- **Communication Skills:** Skills to communicate in written, numerical, graphical and verbal forms, in ways that are appropriate to different audiences and indifferent situations, ranging from scientific and industry reports, to group and individual oral presentations, and from blogs and outreach articles, to news articles and essays.

- **Critical Thinking:** Acquire an understanding of the concept in geology and related disciplines and an ability to understand, integrate, and extend it so that all fundamental geological concepts are accessible.

- **Problem Solving:** Skills to recognise and articulate a problem and then apply appropriate conceptual frameworks and methods to solve it.

- **Analytical Reasoning:** A broad knowledge base in geology and related disciplines such as chemistry, physics, biology and mathematics needed to provide insight into these Earth processes

- **Research – Related Skills:** Develop a research design, which has an appropriate problem related to earth sciences but may incorporate some scientific methods, ability to plan and write a research paper.

- **Self and Time Management:** Time management skills are developed through interaction with the assessment process for submission of continuous assessment material.

- **Leadership and Team Work:** Ability to contribute effectively to team objectives and interact productively with others both in project-related settings and in meetings.

- **Scientific Reasoning:** Develop a systematic understanding of both core areas and advanced topics in the study of the Earth and view the Earth from new and challenging perspectives of time, space, process and pattern.

- **Digital Literacy:** Ability of advanced Word skills and advanced GIS, statistics, databases, spreadsheets, digital drawing through online workbooks and workshops

- **Moral and ethical values:** The degree to which every student engages with these themes will vary but it is important that all think especially about ethical issues.

- **Life – long Learning:** Ability to blend academic and practical skills and to transfer such skills to other domains of one's life and work.

Program Outcomes (POs)

- To develop an in-depth knowledge and skills in qualitative and quantitative research methods through laboratory, field and web modes of learning.

- Recognize the need for sustainable use of earth resources, and value environmental, indigenous and other community perspective on geological activities.

- Apply geological knowledge and critical thinking skills to identify a problem and to describe a strategy for handling.

- Synthesize geological data on arrange of spatial and temporal scales to make interpretations that allow for scientific uncertainty.

- Work effectively and professionally in multidisciplinary teams as a member and a leader and be able to manage and analyze complex ethical issues.

Program Educational Objectives (PEOs)

- Creative, innovative educators and learning facilitators, who master geological Science, have the ability to use information technology to keep up with developments in geological science.

- Reviewers of geological problems, both experimentally and/or literature studies and publish the results in scientific forums and journals.

- Examiner of problems related to the earth sector (extraction, mitigation, and conservation) factual and applicable, providing solutions to these earth problems conceptually.

- Planning and implementing staff in the exploration-production/extraction industry, and mitigation and conservation of geological resources.

- Entrepreneurs whose business fields are related to commodities or equipment in the extraction, mitigation, and conservation of geological resources.

- Staff to heads of agencies related to regulation, supervision, and policy makers in the extraction, mitigation and conservation of geological resources.

SRI VENKATESWARA UNIVERSITY:: TIRUPATI
SVU COLLEGE OF SCIENCES

	Total			42	24	120	480	600

Note:

1) ***Students have to Choose One Paper under Generic Elective.***

2) ***The project work shall be evaluated at the end of the IV semester with 80 marks for the report and 20 marks for the Viva-Voce with a maximum of 100 marks.***

I SEMESTER

CORE: GEO.101

CRYSTALLOGRAPHY AND MINERALOGY

Course Learning Objectives:

1. To give students the description of elements of crystallography, crystal structures, symmetry and symmetry functions of different crystal systems and respective minerals.
2. To identify the mineralogical composition of geological materials in order to help to reveal their origin and evolution.
3. Describe the concepts of optical phenomena in thin sections of minerals.
4. Aims to provide knowledge on the structural, chemical identification of the common rock forming minerals and demonstrative how minerals make up Igneous and Metamorphic rocks.

UNIT – I:

Elements of crystallography – Derivation of the 32 crystal classes - Hermann – Maugin symbols -Twinning in crystals – X-ray crystallography.

UNIT – II:

General principles of optics: Refringence – Birefringence, pleochroism, Extinction and measurements of extinction angles, Optical ellipsoids (a) Fresnel's ellipsoid and (b) Fletchers indicatrix, optic axial angle and optic sign, Interference figures – Uniaxial and Biaxial figures, and optic anomalies.

UNIT – III:

Structure of silicates - Isomorphism and Polymorphism - Structure, Chemistry, physical and optical characters and paragenesis of the following mineral groups: Quartz, Feldspars, Feldspathoids, Aluminium silicates, Garnet, Epidote, Olivine, Pyroxene, Amphibole, and Mica.

UNIT – IV:

Structure, chemistry, physical and optical characters and paragenesis of the following Ore minerals: Iron, Aluminium, Copper, lead, and Zinc - Study of the following minerals: Beryl, Apatite, Sphene, Tourmaline, Talc and Spinel.

Course Outcomes

1. Students will be able to describe crystal structures, crystal symmetry and twinning
2. Students will learn the use of X-ray crystallography to determine the arrangement Atoms in a crystal.
3. Students will be able to identify the mineralogical composition of geological materials by studying some of the optical properties and techniques in order to reveal their origin and evolution.
4. Students will get thorough knowledge about the physical chemical and optical Characteristics of minerals could lead to the discovery of new uses for Earth's mineral resources.

1. Paul F. Kerr, 1959: Optical Mineralogy; McGraw-Hill Inc., U.S.
2. A.N Winchell, 2011: Elements of Optical Mineralogy: An Introduction to Microscopic Petrography, Nabu Press.
3. F.C. Phillips, 2011: An Introduction to Crystallography; Read Books Publ.
4. F.D. Bloss, 1961: An Introduction to the methods of Optical Crystallography; Harcourt School.
5. R.C. Emmons, 1959: The Universal stage; Geological Society of America.
6. W.E. Ford, 1932: Dana's Text Book of Mineralogy; CBS Publishers.
7. Keith Frye, 1974: Modern Mineralogy; Prentice-Hall Inc.
8. W.A. Deer, R.A. Howie, J. Zussman, 2013: An Introduction to Rock-forming minerals, Mineralogical Society of Great Britain & Ireland.

PRACTICAL:

1. Crystallography: Identification of crystal models of 32 crystal classes and their crystals.
2. Megascopic Identification of rock forming minerals.
3. Microscopic Identification of rock forming minerals.
4. Determination of Optic axial angle (2V).
5. Determination of Optic orientation (Z^C).
6. Determination of extinction angle. Determination of Anorthite content of the Plagioclase.

CORE: GEO.102

IGNEOUS PETROLOGY

Course Learning Objectives

1. Knowledge on origin, physical and chemical characteristics and types of magma.
2. To impart knowledge on igneous processes, formation, structures, textures and classification of Igneous rocks – historic perspective and the IUGS system.
3. To understand the Bowen's reaction series and its application to petrogenesis of Igneous rocks by different magmatic processes.
4. To understand the phase equilibrium and crystallization of Uni, Binary and Tertiary systems.
5. To understand the physical and chemical processes that produce the different Igneous rocks types and their petrogenesis and distribution in the earth's crust and mantle.

UNIT – I: Introduction to Magmas - Origin, characteristics and types of magma – Physical Properties of Magma – Bowen's Reaction Principle – Magmatic differentiation: Partial Melting, Fractional crystallization, Volatile transport, Liquid immiscibility, Magma mixing and Assimilation.

UNIT – II: Introduction to Igneous Petrology – Formation of Igneous rocks - Structures and Textures of Igneous rocks - Classification of Igneous rocks: Mode and Norm, CIPW Classification, IUGS system, The Irvine – Baragar classification.

UNIT – III: Gibbs Phase Rule – Lever Rule - Phase Equilibria in Igneous Systems; Phase Rule to the One (Uni) Component Systems – Two (Bi) Component Systems; Binary System with complete Solid Solution, Binary Eutectic System, Binary Peritectic Systems, The Alkali Feldspar System – Three (Tri) Component Systems; Di-Ab-An, Di-Fo-Si, Di-Fo-An, and Fo-An-Si.

UNIT – IV: Petrogenetic Significance of Igneous textures - Petrography and Petrogenesis of major Igneous rock types with examples of Ultramafic, Komatite, Basalt, Anorthosite, Layered intrusions, Granites, Alkaline rocks, Carbonatites, Lamprophyres, Ultramafic related rocks, Pegmatites and Kimberlites.

Course Outcomes

1. Acquire knowledge on the evolution of magma by different processes takes place from origin to emplacement with respect to different tectonic settings.
2. Explain Igneous processes, formation, structures, classification and significance of texture in explaining rock history.
3. Obtain knowledge on the crystallizing phase equilibrium of multi component magma system.

4. Identify different Igneous rocks both in hand specimens and thin sections in terms of their petrogenesis by studying the petrographic characteristics.

CO3	H	H	H	H	H	H	M	M	H	M	M	L
CO4	H	H	H	H	H	H	M	M	H	M	M	L

Textbooks/Reference Books:

1. Carmichael, Ian S. E, Turner, Francis J and Verhoogen, John, 1974: Igneous petrology, McGraw-Hill, New York.
2. John, D. Winter, 2001: An Introduction to Igneous and Metamorphic Petrology, Prentice Hall Inc.
3. Ronald, D. Frost and Carol, D. Frost, 2014: Essentials of Igneous and Metamorphic Petrology, Cambridge University Press.
4. Myron, G. Best, 2003: Igneous and metamorphic petrology, 2nd edition, Blackwell Publishing Company.
5. Hughes, C.J., 1982: Igneous petrology, Elsevier Science Publishing Company.
6. Chatterjee, S.C., 1974: Petrography of the igneous and metamorphic rocks of India, McMillan Co. Of India, Madras.
7. D.W. Hyndman, 1986 – Petrology of Igneous and Metamorphic rocks, 2nd Edition, McGraw-Hill Co., New York.
8. Francis, J. Turner and Verhoogen, 2004: Igneous and metamorphic Petrology, CBS Publishers.
9. Philpotts A.R. and J. Jay Ague, 2009: Principles of igneous and metamorphic petrology, 2nd edition, Cambridge University Press.

PRACTICAL:

1. Megascopic and microscopic examination of igneous rocks.
a) Different types of granites, pegmatites, syenites, anorthosites, dunites, peridotites, pyroxenites, basalts, andesites, rhyolites, trachytes, phonolites, kimberlites, dolerites, lamprophyres.
2. Modal analysis of some important igneous rocks and their classification.
3. Calculation of CIPW Norm
4. Variation diagrams: Harker and Niggli
5. Discriminate diagrams of Pearce and Cann.

COMPULSORY FOUNDATION: GEO.103a

STRUCTURAL GEOLOGY

Course Learning Objectives

1. To understand how earth's rocks deform at different levels of the lithosphere and develop basic appreciation of rock deformation at different conditions and scales to understand the difference between brittle and ductile deformation regimes.
2. To study the diverse and types of structures in the field to uncover information about the history of deformation (strain) in the rocks to understand the stress field, with emphasis on the regional geology.
3. To understand the tectonic aspects and characteristic features of plutons and to understand the origin of cleavage, schistosity, lineation and their relation to major structures.
4. To understand the Shear zones and their characteristics and textural features typical of Shear zones

UNIT – I: Concept of Stress and Strain: Analyses of Stress and Stress ellipsoid; Analyses of Strain and Strain ellipsoid - Types of Deformation - Mechanics of Plastic Deformation. – Factors controlling behaviour of Materials – Failure by Rupture; Experimental data, Relation of Rupture to Stress, Relation of Rupture to Strain.

UNIT – II: Description of Folds – Nomenclature of Folds – Fold Systems – Recognition of Folds – Mechanics of Folding – Description and Classification of Faults; Criteria for recognition of Faults; Mechanics of Faulting - Normal Faults - Thrust Faults – Strike-Slip Faults – Causes of Folding and Faulting.

UNIT – III: Geometric and Genetic classification of Joints - Unconformities – Salt Domes – Tectonic aspects of Plutons - Emplacement of Large Plutons – Introduction to Cleavage and Schistosity; Terminology for Cleavage and Schistosity; Origin of Cleavage; Relation of Cleavage and Schistosity to Major Structures – Nature of Lineation; Relation of Lineation to Major Structures and Origin.

UNIT – IV: Shear Zones – General Characteristics; Geometries; Types of Shear Zones; Mylonites and Types of Mylonites; Strain in Shear Zones; Crystallographic Preferred Fabrics; Foliation Patterns; Mica Fish; Rotation of Inclusions; Pressure Shadows and Types of Pressure Shadows; Geometry of Fibres; Determining Sense of Shear from Pressure Shadows and Fibres; Porphyroclasts and Porphyroblasts.

Course Outcomes:

1. Able to demonstrate a basic understanding of stress, strain, rheology of earth's lithosphere and comprehends how to describe and classify brittle and ductile structures.
2. Able to describe, identify and analyze the folds, faults and joints and their effects on outcrop pattern.

3. Measure, plot and interpret structural field data and can relate these to geological Maps and knows how to read geological maps and geological cross-section.
4. Obtain knowledge of shear zone characteristics and textures which are usually highly Mineralized zones.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	H	M	H	M	M	H	M	M	L
CO2	H	M	H	H	H	H	H	M	H	M	M	L
CO3	H	M	H	H	H	H	H	M	H	M	M	L
CO4	H	M	H	H	H	H	H	M	H	M	M	L

Textbooks/Reference Books:

1. Badgley, P.C. 1965: Structural and Tectonic principles, Harper & Row; First Edition
2. Bayly B. 1992, Mechanics in Structural geology, Springer Verlag.
3. Billings M.P. 1968: Structural geology, printice-Hall of India, Private Ltd., New Delhi.
4. George, H. Davis and Stephen, J. Reynolds 1996: Structural geology of rocks and region, 2nd Edition, John Wiley & Sons, Inc. New York.
5. Blen, A Van Dar Pluijm and Stephen Marshak 1955: Earth Structure, 2nd Edition, W. W. Norton & Company.
6. Gass, I.G, Peter, J. Smith and Wilson. R.C.L., 1971: understanding the Earth, Artemis Press.
7. Hobbs, B.E, Means, W.D. and Williams P.F., 1976: An outline of Structural geology. John Wiley & Sons, Inc, New York.
8. Ramsay, J.G., 1967: Folding and fracturing of rocks. Mcgraw-Hill, New York, USA.

PRACTICAL:

1. Structural Problems concerning Dip and strike and Three point problems
2. Estimation of thickness – Depth of ore body.
3. Determination of Throw/Heave/Stratigraphic separation etc., related to faults.
4. Preparation and interpretation of Geological maps and sections
5. Preparation of contour diagrams.
6. Recording and plotting of field data.

COMPULSORY FOUNDATION: GEO.103b

FUNDAMENTALS OF GEOPHYSICS

Course Learning Objectives

1. To understand the interrelationship between geology and geophysics
2. To know how geophysics helps to explain geodynamical features of the earth
3. To understand the general and exploration geophysics
4. Basic concepts of geophysical methods and integrated approach

UNIT –I

Gravity methods: Gravity potential and field due to different simple bodies and structures - Field procedure - Bouguer gravity anomalies, interpretations & field-cases - Applications of the gravity method.

UNIT - II

Magnetic methods: Magnetic properties of rocks, geomagnetic field, field procedure, measurement of magnetic anomalies, interpretation - Applications of the magnetic method - Seismic method: Seismic waves and wave propagation, Wave attenuation and amplitude - Seismic refraction surveying, layered earth refraction studies - Seismic reflection surveying

UNIT – III

Electrical method: Self potential, earth resistivity, different arrays, profiling & sounding techniques, interpretation & field cases - Induced polarization - Telluric & electromagnetic methods - Ground Penetrating Radar (GPR).

UNIT – IV

Subsurface geophysical methods, Borehole logging: Drilling and its effects on the formations - The measurement of strata dip, borehole inclination and diameter - The self-potential log, Resistivity logs, Radioactivity logs, The sonic log, The temperature log.

Course Outcomes

1. Get knowledge on fundamentals and relationship between geology and physics
2. Acquire knowledge on how geophysics helpful in understanding and explaining the geodynamical features of the earth.
3. Understanding the basic concepts of geophysical methods such as gravity, magnetic, electrical and other sub-surface geophysical methods and integrated approach

Textbooks/Reference Books:

1. El Arabi H. Shendi, 2007; Introduction of Geophysics
2. Lowri,W., 2007: Fundamentals of Geophysics, Cambridge University Press.
3. Dobrin, M.B and Savit,C.H.,1988. Introduction to Geophysical Prospecting, McGraw-Hill.
4. Grant, F.S.and West,G.F.,1965. Interpretation Theory in Applied Geophysics, McGraw Hill, New York.
5. Murthy, L.Y.R. and Mishra, D.C., 1989. Interpretation of Gravity Magnetic Anomalies in Space and Frequency Domain, AEG publication, Hyderabad, India
6. Nettleton, L.L., 1976. Gravity and Magnetics in Oil Prospecting, McGraw Hill.
7. Parasnis, D.S., 1966. Mining Geophysics, Elsevier.
8. Patra, H.P. and Mallick, K., 1980. Geosounding Principles Vol. I Time layering Geoelectric Soundings. Amsterdam: Elsevier.
9. Telford, W.M., Geldart, L.P.and Sheriff, R.E.,1990.Applied Geophysics Cambridge
10. Alan, E. Mussett, Khan, M.A. 2000. Looking in to the earth: An introduction to geological geophysics, Cambridge University Press.
11. Telford, W.M., Geldart, L.P. and Sheriff, R.E., 1990. Applied geophysics. Cambridge University Press.

PRACTICAL:

1. Interpretation of gravity anomaly curve in terms of depth and shape of the object.
2. Determination of palaeopoles using palaeomagnetic data.
3. Interpretation of magnetic anomaly data.
4. Plotting of VES curve & ERT data and its interpretation.
5. Interpretation of S.P. anomalies & I.P. data.
6. Interpretation of seismic velocity of the layer and depth of the body using seismic refraction data and Interpretation of seismic profile data.
7. Well log interpretation and correlation
8. Determination of the epicentre distance of an earthquake and interpretation of Travel–Time curves.

COMPULSORY FOUNDATION: GEO.103c

MICROPALAEONTOLOGY AND OCEANOGRAPHY

Course Learning Objectives

1. To give the students basic knowledge of microfossils and their geological applications. It will provide an extended basis for more advanced studies in palaeontology and stratigraphy of basin developments.
2. To gain knowledge about the (palaeo) environmental and (palaeo) climatic meaning. Skills development on methods and techniques of biostratigraphy and palaeobiology, applied to the microfossils.
3. To know the techniques in Applying Micropaleontology in hydrocarbon exploration
4. To give an overview of the science of oceanography and how it is practiced to integrate all specific concepts of oceanography into a multidisciplinary analysis of the Earth

UNIT - I

Definition and scope of the subject; Relationship of micropaleontology with ocean sciences; Modern field and laboratory techniques in the study of microfossils (collection, sampling and processing techniques, scanning electron microscopy and mass spectrometry); A brief account of the concepts and methods for the development of micropaleontological indicators useful in reconstruction of history of past, environmental changes and biostratigraphic correlation.

UNIT - II

Types of Microfossils - Calcareous Microfossils: (i) Foraminifera - Planktic foraminifera, their modern biogeography, outline of morphology, significance in Cenozoic oceanic biostratigraphy and paleoceanographic, paleoclimatic interpretations; Benthic foraminifera - their brief morphology and application in bottom water paleoceanography and paleobathymetric reconstructions; Larger foraminifera, their outline of morphology and application in Indian stratigraphy; (ii) Calcareous nannofossils - outline of morphology, modern biogeography and their application in oceanic biostratigraphy and paleoceanographic, paleoclimatic reconstructions; (iii) Ostracoda - outline of morphology and wall structure, their significance in environmental studies and oceanic biostratigraphy; (iv) Pteropoda - a brief introduction, application of pteropods in reconstruction of the Quaternary oceanography and climate; A brief introduction of calpionellids and calcareous algae.

UNIT - III

Siliceous Microfossils: Radiolaria, diatoms and silicoflagellate; outline of morphology, modern biogeography, their environmental significance and application in biostratigraphy - Phosphatic Microfossils: Conodonts; outline of morphology, paleoecology, geological significance and biological affinities; Stratigraphic significance of conodonts with special

reference to India - Application of Micropaleontology in hydrocarbon exploration - Determination and correlation of paleofacies by microfossils - Interpretation of sea floor tectonism from micropalaeontological evidence.

UNIT - IV

History of development of oceanography - Sampling of modern ocean biogenic flux including sediment trap sampling - Methods of measuring properties of sea water - Temperature and salinity distribution (horizontal and vertical) in ocean waters - Dissolved gases in sea water; factors affecting the concentration of gases in sea water - Carbon dioxide equilibria, precipitation and dissolution of carbonates – Biological, chemical, physical interactions in the oceans - Oxygen minimum layer in the ocean - concept of thermohaline circulation; formation of bottom waters - water masses of the world oceans.

Course Outcomes

1. Obtain knowledge of the main systematic groups of microfossils, its distribution and (palaeo) environmental and (palaeo) climatic meaning. Skills development on methods and techniques of biostratigraphy and palaeobiology, applied to the microfossils
2. Application of knowledge and understanding: Collect, organize and analyze descriptive data of microfossils and associated sedimentary materials using adequate concepts, methodologies and techniques.
3. Acquire knowledge in applying the micropalaeontological techniques in the exploration of hydrocarbons.
4. Get knowledge on the principles involved in the generation of waves and tides and evaluate their effects on coastal processes and marine ecosystems. Summarize the major physical and chemical properties of seawater and how each affects marine life.

2. Arnold (2002): Quaternary Environmental Micropaleontology (Ed. Simon K. Haslett), Oxford
3. B.U. Haq and, A. Boersma (1998). Introduction to Marine Micropaleontology, Elsevier.
4. P.R. Pinet (1992): Oceanography: An introduction to the Planet Oceans, West Pub, Co
5. Bignot, G. (1985): Elements of Micropalaeontology; Graham and Trotman Ltd., London.
6. David Tolmazin (1985): Elements of Dynamic Oceanography, Allen and Unwin
7. Grant Gross, M. (1977): Oceanography; A view of the Earth, Prentice Hall.
8. John Houghton (1997): Global Warming, Cambridge Univ. Press.
9. Jones, T.P. and Rowe, T.P. (1999): Fossil plants and spores, Modern

Techniques, Geological Soc. of London.

PRACTICAL:

1. Techniques of separation of microfossils from matrix;
2. Types of microfossils - calcareous, siliceous, phosphatic and organic walled microfossils; SEM applications in micropaleontology;
3. Study of surface ultra structures of foraminifera;
4. Study of important planktic foraminifera useful in surface water, paleoceanography and oceanic biostratigraphy;
5. Study of larger benthic foraminifera useful in Indian stratigraphy with special reference to Cenozoic petroliferous basins of India;
6. Important palynomorphs of Cretaceous and Paleogene age.
7. Depth biotopes and estimation of palaeo depth of the ocean using benthic foraminiferal assemblages;
8. Identification of modern and ancient surface water mass with the help of planktic foraminiferal assemblages;
9. Identification of benthic foraminifera characteristic of Low oxygen environment; Identification of Planktic foraminifera characteristic of warm and mixed layer, thermocline and deep surface water of the modern oceans;
10. Study of modern surface water, mass assemblages of planktic foraminifera from Indian Ocean, Atlantic Ocean and Pacific Ocean.

ELECTIVE FOUNDATION: GEO. 104a

GEOMORPHOLOGY

Course Learning Objectives

1. To understand the processes that shape the landforms around us and how these depend on climate, tectonic regime outline.
2. To understand and apply geomorphological concepts to problems of slope instability and try to identify the factors responsible for landslide occurrences in various environments and techniques to minimize the mass wasting.
3. To know the evolution of landforms and depositional and erosional landforms of various geological agents.
4. Application of geomorphological concepts in economically important projects.

UNIT – I: Historical background of geomorphology –Fundamentals of geomorphic concepts –Geomorphic significance of weathering; soils and its profile, formation of soils – Mass wasting and its geomorphic significance; creep, solifluction, patterned ground, earth flows, mud flows, debris avalanches, landslides, subsidence forms

UNIT – II: Evolution of landforms; endogenous and exogenous forces, role of lithology, peneplanation, rejuvenation of landforms – Fluvial geomorphic cycle; streams and valleys, valley development, classification of valleys – Drainage patterns and their significance; types of drainage patterns – Morphometric analysis of the drainage basin.

UNIT – III: Depositional and erosional landforms; Fluvial, Aeolian, Glacial, and Coastal – Karst topography - Topography of Ocean floors; geomorphic features on continental shelves and slopes, submarine canyons, classification of sea valleys – Topography of Deep sea floors – Theories and origin of Barrier Reefs and Atolls.

UNIT – IV: Introduction to Paleogeomorphology; Relict land forms – Buried land forms – Exhumed land forms – Application of Geomorphology to Hydrology, Economic geology, Engineering projects and Oil Exploration.

Course Outcomes

1. Able to explain conceptual approaches in geomorphology.
2. Able to describe land forms and land forming processes in different climate zones and tectonic regimes.
3. Able to explain different theories and models for landscape evolution.
4. Obtain knowledge in recognizing and minimizing the mass wasting.
5. Able to apply geomorphological concepts in economically important projects

CO – PO Mapping:

7. Kale, V.S., and Gupta, A. (2005): Introduction to Geomorphology. Orient Blackswan Pvt. Ltd.

PRACTICAL:

1. Study of topographic sheets and preparation of physiographic description of an area
2. Study of soil profile of any specific area
3. Study of contour-variations and elevations on toposheets.
4. Identification, classification and preparation of drainage basin map on toposheet.
5. Morphometric analysis of the drainage basin:
    a. Linear aspects
    b. Aerial aspects and
    c. Relief aspects.
6. Calculation of slope and preparation of slope map of a basin

ELECTIVE FOUNDATION: GEO.104b

METEOROLOGY AND CLIMATE CHANGE

Course Learning Objectives

1. To produce graduates who possess quantitative, scientific reasoning skills that can be applied to atmospheric problems.
2. To understand the skills for interpreting and applying atmospheric observations and knowledge of the atmosphere and its evolution.
3. Learn explain short- and medium-term weather forecasts based on sound meteorological principles.
4. To understand the physical basis of the natural greenhouse effect and the way various human activities are increasing emissions of the natural greenhouse gases.
5. To understand and explain the causes of climate change

UNIT - I

Meteorology: branches and applications - Energy spectra of sun and earth, long wave radiation, Global radiation balance, Solar energy - Atmosphere: Composition and structure of atmosphere, Layered structure of atmosphere – influences of air temperature, Surface temperature, daily cycle of temperature, annual cycle of temperature - Precipitation processes.

UNIT - II

El Nino: Introduction, upwelling. El Nino, La Nina events and consequences: Detection and prediction of El Nino - Weather forecasting: Persistence, trends, climatology, analog and numerical weather prediction methods - Forecasting surface features: Anti cyclone, cyclone, cold front and warm.

UNIT - III

Climate Change: Introduction, definition - Classification of climate; - Climatic changes through geological time, Assessing climate change, Human intervention on climate change - Greenhouse effect, greenhouse gases, Climatic change and global warming, Kyoto protocol.

UNIT - IV

Causes of climate change: Ocean circulation pattern, Changes in compositions of atmosphere, Changes in solar radiation - Impact of climate change: Rising of CO_2, impact on atmospheric circulation & weather pattern – biosphere – hydrosphere – Sea level changes, Adaptation provinces.

Course Outcomes

1. Possess scientific reasoning skills that can be applied to atmospheric problems and learn to explain short- and medium-term weather forecasts based on sound meteorological principles.

2. Explore El Nino impact and interpret weather forecasting.
3. Appraise climate change and predict it from geological records.
4. Explore impact of climate change.

Textbooks/Reference Books:

7. Rev. Fr. S. Ignacimuthu (2010): Environmental Studies, MJP, Publishers,
8. Travis Hudson (2012): Living with Earth-An Introduction to Environmental Geology, PHIL earning Private Ltd.

PRACTICAL:

1. Calculate average precipitation for given catchment area using various methods.
2. Calculate Potential evapotranspiration of a meteorological station
3. Calculate Runoff for given catchment area using empirical formula
4. Compute optimum number of rain gauges for given catchment area.

CO – PO Mapping:

COMPULSORY FOUNDATION: GEO.104c

ENERGY RESOURSES

Course Learning Objectives

1. To understand the basics of renewable energy sources like Solar, Wind, Wave, Coal, Petroleum and Atomic energy.
2. To assess the formation and distribution of reserves of Sources of Energy
3. To develop skill to characterise the energy resources based on feasibility

UNIT – I

Historical perspective of the Energy and its use – Principles of Renewable Energy – Solar Radiation and Green house Effect – Solar Water Heating - Solar Thermal Applications – Hydropower – Wind Resource and Wind Power Technology - Biomass Resources from Photosynthesis – Bioenergy Technologies - Wave Power; Tidal-current and Tidal-range Power - Types of geothermal source - Applications, Exploration, Distribution of geothermal energy - Geothermal sources in India: Future scenario

UNIT – II

Coal: Physical, chemical and optical properties of coal - Changes in properties of coal with metamorphism - Classification of coal in terms of Rank, Grade and Type – Petrology and Palynology of Coal - Conditions of formation of coal and coal seams - Industrial utilization of coal - Coal resources of India.

UNIT – III

Petroleum: Composition and physical characteristics of petroleum, fuels and other by-products of petroleum -Source rock types and examples – Origin and migration of petroleum – Entrapment of petroleum– seal rocks; structural traps; stratigraphic traps – petroleum resources and reserves – Petroliferous basins of India - exploration and exploitation of petroleum.

UNIT – IV

Concept of atomic energy - Radioactive minerals - Mode of occurrence and association of atomic minerals in nature - Geochemical abundance of radioactivity in crustal rocks, Productive geological horizons of atomic minerals in India - Nuclear raw material resources of India - Usage of nuclear energy.

Course Outcomes

1. Explain about Renewable Energy resources and importance.
2. Able to understand the types and its characteristics of energy resources
3. Analyse the potential of energy sources and their scope and limitations.

Textbooks/Reference Books:

1. John Twidell and Tony Weir, 2015: Renewable Energy Resources, Routledge.
2. Renu Dhupper, 2015: Textbook of Energy Resources and Management, CBS Publishers.
3. Andrew, L. Simon, 1975: Energy Resources, Elsevier Inc.
4. Kothari, D.P. et. al., 2011: Renewable Energy Sources and Emerging Technologies, Prentice Hall, India.
5. Navani J.P., and Sapra Sonal, 2015: Non-conventional Energy Resource; S. Chand & Company.

PRACTICAL:

1. Megascopic characterization of banded coals;
2. Proximate analysis of coals;
3. Completion of outcrops in the given maps and calculation of coal reserves;
4. Microscopic examination of polished coal pellets (identification of minerals in coal)
5. Megascopic and Microscopic study of cores and well cuttings;
6. Study of geological maps and sections of important oilfields of India;
7. Calculation of reserves
8. Section correlation and identification of hydrocarbon prospect
9. Panel and Fence diagrams or energy resources.

CO – PO Mapping:

PRACTICAL SYLLABUS

PRACTICAL I – GEO.105P:

CRYSTALLOGRAPHY AND MINERALOGY & STRUCTURAL GEOLOGY/FUNDAMENTALS OF GEOPHYSICS/MICROPALEONTOLOGY AND OCEANOGRAPHY

Course Objectives:

1. To understand 32 crystal classes and their crystals.
2. To study different rock forming minerals and perceive their implications
3. To determine the optical properties of the crystals
4. To study different structural maps and their interpretation
5. To identify topographic and structural aspects
6. To prepare the structural maps and reports

Course Outcomes: Students will be able to:

1. Identify various crystal forms shown by minerals belonging to different crystal system.
2. Demonstrate how the crystal structure of minerals affects the external morphology and physical properties of a mineral (e.g. crystal symmetry, crystal habit).
3. Understands the importance of minerals to society and to the study of the Earth.
4. Explain how the properties of chemical elements and their bonds regulate the structure and composition of minerals.
5. Determine of strike and dip, Borehole problems and apparent dip, plunge and pitch of linear structures.
6. Prepare and Interpret of geological maps and Reports

CRYSTALLOGRAPHY AND MINERALOGY

1. Crystallography: Identification of crystal models of 32 crystal classes and their crystals.
2. Megascopic Identification of rock forming minerals.
3. Microscopic Identification of rock forming minerals.
4. Determination of Optic axial angle (2V).
5. Determination of Optic orientation (Z^C).
6. Determination of extinction angle
7. Determination of Anorthite content of the Plagioclase

STRUCTURAL GEOLOGY

1. Structural Problems concerning Dip and strike
2. Estimation of thickness – Depth of ore body.
3. Determination of Throw/Heave/Stratigraphic separation etc., related to faults.
4. Preparation and interpretation of Geological maps and sections
5. Preparation of contour diagrams.
6. Recording and plotting of field data

FUNDAMENTALS OF GEOPHYSICS:

1. Interpretation of gravity anomaly curve in terms of depth and shape of the object.
2. Determination of palaeopoles using palaeomagnetic data.
3. Interpretation of magnetic anomaly data.
4. Plotting of VES curve & ERT data and its interpretation.
5. Interpretation of S.P. anomalies & I.P. data.
6. Interpretation of seismic velocity of the layer and depth of the body using seismic refraction data and Interpretation of seismic profile data.
7. Well log interpretation and correlation
8. Determination of the epicentre distance of an earthquake and interpretation of Travel–Time curves.

MICROPALEONTOLOGY AND OCEANOGRAPHY

11. Techniques of separation of microfossils from matrix;
12. Types of microfossils - calcareous, siliceous, phosphatic and organic walled microfossils; SEM applications in micropaleontology;
13. Study of surface ultra structures of foraminifera;
14. Study of important planktic foraminifera useful in surface water, paleoceanography and oceanic biostratigraphy;
15. Study of larger benthic foraminifera useful in Indian stratigraphy with special reference to Cenozoic petroliferous basins of India;
16. Important palynomorphs of Cretaceous and Paleogene age.
17. Depth biotopes and estimation of palaeo depth of the ocean using benthic foraminiferal assemblages;
18. Identification of modern and ancient surface water mass with the help of planktic foraminiferal assemblages;

19. Identification of benthic foraminifera characteristic of Low oxygen environment; Identification of Planktic foraminifera characteristic of warm and mixed layer, thermocline and deep surface water of the modern oceans;
20. Study of modern surface water, mass assemblages of planktic foraminifera from Indian Ocean, Atlantic Ocean and Pacific Ocean.

PRACTICAL II – GEO.106P:

IGNEOUS PETROLOGY AND GEOMORPHOLOGY/METEOROLOGY AND CLIMATE CHANGE/ENERGY RESOURCES

Course objective:

1. To identify various Igneous and metamorphic rocks in hand specimen and in petrological thin section.
2. To understand the petrological data and their interpretation
3. To understand different landform features and their analysis to interpret the genesis and tectonic evolution
4. To analyse the morphometric parameters of the basin

Course Outcomes:

Students will be able to:

1. Differentiate rocks based on the physical, chemical and optical characteristics
2. Interpret chemical data, textural data and structural data of different rock types.
3. Analyse different geomorphic features from topographic maps and elevation models
4. Prepare the soil profile of the area
5. Estimate the morphometric parameters of the drainage

IGNEOUS PETROLOGY

1. Megascopic and microscopic examination of igneous rocks.

a) Different types of granites, pegmatites, syenites, anorthosites, dunites, peridotites, pyroxinites, basalts, andesites, rhyolites, trachytes, phonolites, kimberlites, dolerites, lamprophyres.

2. Modal analysis of some important igneous rocks and their classification.
3. Calculation of CIPW Norm
4. Variation diagrams: Harker and Niggli
5. Discriminate diagrams of Pearce and Cann.

GEOMORPHOLOGY

1. Study of topographic sheets and preparation of physiographic description of an area
2. Study of soil profile of any specific area
3. Study of contour-variations and elevations on toposheets.
4. Identification, classification and preparation of drainage basin map on toposheet.
6. Morphometry analysis of the drainage basin:

a. Linear aspects

b. Aerial aspects and

c. Relief aspects.

7. Calculation of slope and preparation of slope map of a basin

METEOROLOGY AND CLIMATE CHANGE

1. Calculate average precipitation for given catchment area using various methods.
2. Calculate Potential evapotranspiration of a meteorological station
3. Calculate Runoff for given catchment area using empirical formula
4. Compute optimum number of rain gauges for given catchment area.

ENERGY RESOURCES

1. Megascopic characterization of banded coals;
2. Proximate analysis of coals;
3. Completion of outcrops in the given maps and calculation of coal reserves;
4. Microscopic examination of polished coal pellets (identification of minerals in coal)
5. Megascopic and microscopic study of cores and well cuttings;
6. Study of geological maps and sections of important oilfields of India;
7. Calculation of reserves
8. Section correlation and identification of hydrocarbon prospect
9. Panel and Fence diagrams or energy resources

PRACTICAL III – GEO.107P:

GEOLOGICAL FIELD SURVEY AND TRAINING PROGRAMME

Course objective:

1. To identify various Igneous and metamorphic rocks in hand specimen
2. To understand the association of the rocks and their structural aspects
3. To identify different landform features and associated structural features
4. To understand mapping techniques and interpretation of field data

Course Outcomes: Students will be able to:

1. Differentiate rocks based on the physical characteristics
2. Interpret geological maps.
3. Recognize different geomorphic features
4. Prepare the soil profile of the area
5. Carry out mapping in different geological terrains, different types of data collection

Exercises

1. Identification and petrogenetic studies of minerals and rocks in the field.
2. Study of attitude of geological formations in the field.
3. Identification of folds, faults, unconformities and joint systems of the geological formations in the field.
4. Identification and study of various landforms in the field.
5. Observation of profiles of various soils in the field.
6. Preparation of field report (draft) incorporating the above said geological characteristics in the field.

Audit Course:

HUMAN VALUES AND PROFESSIONAL ETHICS – I

Course Learning Objectives

1 To provide Human Values and Ethics relating to Religion, Business, Law, Media and Environment.

2 To provide in depth knowledge about the Moral and ethical values to interpretation in their day to day activities of life.

UNIT – I

Definition and Nature of Ethics - Its relation to Religion –Politics –Business Law - Medicine and Environment - Need and Importance of Professional Ethics – Goals – Ethical Values In various Professions.

UNIT – II

Nature of Values - Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values - Analysis of basic moral concepts: rights, ought, duty, obligation, justice, responsibility and freedom, Good behaviour and respect for elders, Character and Conduct.

UNIT – III

Ahimnsa (Non-Violence), Satya (Trub), Brahmacharya (Celibacy), Asteya (Non Possession) and Aparigraha (Non- stealing), Purusharthas (Cardinal virtues), Dharma (Righteousness), Artha (Wealth), Kama (Fulfillment Bodily Desire), Moksha (Liberation).

UNIT – IV

Bhagavad Gita - Niskama karma. (b) Buddhism; The Four Noble Truths – Aryaastanga marga, (c) Jainsim - mahavratas and anuvratas - Values Embedded in Various Religions, Religious Tolerance, Gandhain Ethics.

UNIT – V

Crime and Theories of punishment - (a) Reformative, Retributive and Deterrent (b) Views on manu and Yajnavalka.

Course Outcomes

1 After completion of this course the students will be able to know the importance of Ethics and Human Values in various professions.

2 Students also will get in depth knowledge and understanding of moral values and ethical code of the Indian Society. Especially embedded in various scriptures.

Textbooks/Reference Books:

1. Join, S. Mackenjie: A manual of ethics.
2. "The Ethics of Management" by Larue Tone Hosmer, Richard D Irwin Inc.
3. "Management Ethics – Integrity at work' by joseph A. Petrick and John F. Quinn, Response Books: New Delhi.
4. "Ethics in Management" by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H Titus: Ethics for Today
6. Maitra. S.K. Hindu Ethics
7. William. Lilly: Introduction of Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manava Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed.) G.C. Haughton.
10. Susruta Samhita: Tr.Kaviraj Kunjanlal, Kunjalal Brishagratha, Chowkamba Sanskrit Series, Vol I, II & III, Varanasi, Vol 100, 16-20, 21-32 and 74-77 only.
11. Charaka Samhita: Tr. Dr. Ram Karam Sarma and Vaidya Bhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
12. Ethics: Theory and Contemporary Issues, Barbara Mackinnon, Wardsworth/Thomson Learning 2001.
13. Analyzing Moral Issue, Judith, A Boss, Mayfield, Publishing Company, 1999.
14. An Introduction to Applied Ethics (Ed) John H Piet and Ayodyha Prasad, Cosmo Publications.
15. Text Book for Intermediate logic, Ethics and Human Values, board of Intermediate Education & Telugu Academic Hyderabad.
16. I.C., Sharma Ethical Philosophy of India Nagin & Co, Jalandhar.

H: High; M: Medium; L: Low

II SEMESTER

CORE: GEO.201

SEDIMENTARY PETROLOGY

Course Learning Objectives

1. Aim is to study ‘’Sediments’ to derive information on the depositional conditions which acted to deposit rock unit.
2. To establish the relation of the individual rock units in a basin to understand the evolution of the sedimentary sequences.
3. To learn different sedimentary environments.

UNIT- I:

History of Sedimentology – Nature and Origin of Sedimentary Rocks – Sedimentary Processes: Subaerial Weathering Processes and Products, Submarine Weathering Processes and Products – Fundamentals of Fluid Flow – Particle Transport by Fluids – Particle Transport by Sediment Gravity Flows.

UNIT – II

Sedimentary Textures: Grain Size, Particle Shape, Fabric – Sedimentary Structures: Internal Organization and Structure of Beds, Bedding Plane Markings and Structures, Deformed and Disturbed Bedding, Stromatolites and Other Biogenic Structures, Diagenetic Structures.

UNIT – III

Petrogenesis of Sedimentary Rocks: Texture, Structure and Petrography of Clastic, Volcaniclastic, Conglomerates, Breccias, Sandstone and Shale – Non-Clastic: Limestone - Sedimentary Environment and Facies: Concept - Sedimentary Facies association methods – Characteristics of Continental-Desert, Fluvial, Glacial, Lacustrine and Deltaic Environments - Marine Littoral and Barrier complex Depositional Environment.

UNIT – IV

Basin Analysis, Tectonics and Sedimentation: Mechanisms of Basin Formation, Plate tectonics and Basins, Techniques of Basin Analysis, Applications of Basin Analysis – Sedimentary Basins of India.

Course Outcomes

1 Able to identify different sedimentary rocks in both hand specimens and thin section and derive information on the depositional conditions and environments.

2 Able to study the sequence of sedimentary rock strata and describe the tectonic framework of sedimentation to understand the earth’s history including palaeoclimatology and history of life.

CO – PO Mapping:

2. Lindholm, R., (1988) A practical approach to Sedimentology. Blackwell publication.
3. Gary Nicols, (2009): Sedimentology and Stratigraphy, 2nd Edn., Wiley-Blackwell.
4. Pettijohn, F.J., (1975) Sedimentary rocks. Harper and Row Publ., New Delhi
5. Selley, R.C.,(2000) Applied sedimentology, 2nd Edn., Academic Press,
6. Sengupta, S.M, (2007), Introduction to Sedimentology, CBS Publishers & Distributors, New Delhi.
7. Sam Boggs. Jr. (2009): Petrology of Sedimentary Rocks, 2nd Edn. Cambridge University Press.
8. Sam Boggs, Jr. (2006): Principles of Sedimentology and Stratigraphy, 4th Edn., Prentice Hall, New Jersey.
9. Donald. R. Prothero, and Fred Schwab (2014): Sedimentary Geology, 3rd Edn, W.H. Freeman & Company, New York.

PRACTICAL:

1. Megascopic study of sedimentary rocks and their identification through characteristic features.
2. Granulometric analysis of unconsolidated sediments and interpreting their modes of transport, and environments of deposition.
3. Petrographic study of clastic and non-clastic rocks and interpreting textural properties, depositional environments and diagenesis.
4. Separation and analysis of heavy minerals from unconsolidated sediments and understanding provenance.
5. Construction of facies succession and depositional models with facies characteristics

CORE: GEO.202

STRATIGRAPHY AND PALAEONTOLOGY

Course Learning Objectives

1. To make the students to understand basic principles and nomenclature of Stratigraphy methods of Stratigraphy correlation and geological time scale.
2. To know the classification, lithology, structures of major stratigraphic units with economic importance.
3. Major stratigraphic boundary problems with reference to India.
4. To acquire skills on identification, classification and documentation of palaeobiota.
5. Acquire knowledge on morphology, classification and evolutionary trends of invertebrate fossils.
6. Describe evolutionary, separation and classification of different microfossils and application of micropalaeontological techniques in hydrocarbons exploration.

UNIT-I:

Recent developments in stratigraphic classification - stratigraphic nomenclature-lithostratigraphy, biostratigraphy and chronostratigraphy - Archaean cratonic nucleii of Peninsular India (Dharwar, Singhbhum, and Aravalli cratons) - Proterozoic mobile belts (Central Indian Tectonic Zone, Aravalli-Delhi and Eastern Ghats).

UNIT- II:

Brief account of classification, lithology, structures and fossil content with economic importance of Archaean, Puranas - Phanerozoic stratigraphy of India, Tertiary, Siwaliks and Indo-Gangetic alluvium - Concept of sequence stratigraphy - Rates of sediment accumulation - Unconformities.

UNIT- III:

Fossil record and geological time scale - Modes of preservation of fossils and concept of taphonomy; evolutionary trends in Trilobites, Gastropods, Mollusca, Cephalopoda, Brachiopoda, and Echinodermata – Micropaleontology: methods of preparation of microfossils - Morphology of microfossil groups (Foraminifera, Ostracoda) - Gondwana plant fossils and their significance.

UNIT- IV:

Applications of paleontological data in stratigraphy, paleoecology and paleoclimatology - Environmental significance of fossils - Use of microfossils in interpretation of sea floor tectonism - Application of micropaleontology in hydrocarbon exploration - Oxygen and Carbon isotope studies of microfossils and their use in paleoceanographic and paleoclimatic interpretation.

COURSE OUTCOMES

1. Students would have acquired comprehensive knowledge on principles of Stratigraphy, correlation methods classification of stratigraphic units, tectonic framework of India and Geological timescale.
2. Ability to give an account of various stratigraphic units and give stratigraphic column distribution in India, fossil content and economic importance of given geological formation.
3. Apply standard stratigraphic codes while preparing geological reports
4. Describe morphology, classification, evolutionary trends of Invertebrate fossils with geological and geographic distribution and paleoecological and paleo-enviromental relevance.
5. Ability to identify, classify and describe the morphology of the invertebrate fossils and plant fossils.
6. Application of fossils in establishing the age of the rock unit, correlation with other area, and Use of fossil in finding mineral deposits.
7. Ability to apply micropalaeotological techniques in hydrocarbon exploration.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO7	H	M	H	H	M	H	M	H	H	M	M	L

TEXTBOOKS/REFERENCE BOOKS:

1. Krumbein, W.C. & solss, L.L., 1951; stratigraphy and Sedimentation; W.H.Freeman and company.
2. Carl, O. Dunbar & John Rodgers., 1957: Principles of Stratigraphy; John Wiley.
3. M.S. Krishnan, 2012: Geology of India & Burma; CBS Publishers
4. Wadia, D.N., 1953: Geology of India, ST. Martin's Press Inc., New York.
5. Ravindra Kumar, 1985: Fundamentals of Historical Geology and stratigraphy; New Age Publishers
6. R.C. Mehdiratta: Geology of India, Pakistan, Bangladesh & Burma.
7. Purana basins of peninsular India – published by geological society of India, Bangalore.
8. Gondwana of India, Special volume Published by Gondwana society of India.
9. Geo karnataka , Centenary Volume, Published by Mysore geological department.

PRACTICAL:

Stratigraphy practical:

1. Study of rocks in Hand specimens from Precambrian terrain of India.
2. Showing boundaries of the Precambrian terrains of India on map.
3. Stratigraphic and Palaeogeographic maps with special reference to India.
4. Identification of stratigraphic rocks in hand specimen.
5. Preparation of lithology and their correlation, correlation problems.

Palaeontology practical:

1. Morphological descriptions, systematics and illustrations of representative fossils belonging to Trilobita, Gastropoda, Bivalvia, Cephalopoda, Brachiopoda, and Echinodermata.
2. Interpretation of palaeoclimate and palaeoenvironment based on fossil data
3. Biostratigraphic zonal assignment.
4. Identification of source reservoir and facies with fossil data.

COMPULSORY FOUNDATION: GEO.203a

GEOCHEMISTRY AND ISOTOPE GEOLOGY

Course Learning Objectives

1. This course first lays out the basic principles and techniques of modern geochemistry understanding processes in aqueous systems and the behaviour of trace elements in magmatic systems.
2. Introduces radiogenic and stable isotope geochemistry and illustrates their application to such diverse topics as determining geologic time, ancient climates. The focus then broadens to the formation of the solar system, the Earth, and the elements themselves.

UNIT- I:

Definition, scope and development of geochemistry - Geochemical classification of elements; Goldschmidt's classification of elements - Fractionation of elements in minerals/rocks - Geochemical principles - Geochemical cycle – Meteorites: classification, mineralogy, age and origin.

UNIT-II:

Chemical composition and characteristics of atmosphere, lithosphere, hydrosphere - Fick's laws of diffusion and activity composition relation (Roult's and Henry's law) - Application of trace elements in petrogenesis - Principles of equilibrium and Rayleigh fractionation - REE patterns, Eh and pH diagrams and mineral stability

UNIT- III:

Cosmic abundance of elements - Geochemical evolution of the earth - Distribution of major, minor and trace elements in crust and mantle - Mantle reservoirs - Geochemistry of water and water-rock interaction.

UNIT-IV:

Isotope geology: Isotopes and the periodic table - Stable Isotopes: Oxygen Isotopes, Sulfur Isotopes, Carbon Isotopes – Radioactivity and geochronology and brief outline of Rb-Sr, K-Ar and radiocarbon (C^{14}) systems.

Course outcomes

1. Understand the behavior of elements in a geochemical context and relate this knowledge to how elements redistribute within the Earth.
2. Learn to interpret and explain interactions between Earth reservoirs.
3. Understand and interpret the major processes that form and modify the Earth's crust and mantle.
4. Use isotopes to trace geological processes and age date specific events.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	H	H	H	H	M	H	M	M	L
CO2	H	H	M	H	H	H	M	M	H	M	M	L
CO3	H	M	M	H	M	H	H	H	H	M	H	L
CO4	H	M	M	M	M	H	M	H	H	M	M	L

Textbooks/Reference Books:

1. Manson, B. and Moore, C.B. 1991: Introduction to Geochemistry, Willey Eastern.
2. Krauskopf, K.B., 1967: Introduction to Geochemistry. McGraw Hill.
3. Faure. G., 1986: Principles of Isotope geology. John Wiley.
4. Henderson, P., 1987: Inorganic Geochemistry, Pergamon Press.
5. Arthur H. Brownlow, 1979. Geochemistry. Prentice-Hall, Inc. Englewood Cliffs, N.J

PRACTICAL:

1. Methods of the chemical analysis of rocks and minerals.
    a. Spectrophotometric methods
    b. Flame photometric methods
    c. Titrimetric methods.
2. Chemical analysis of water samples.
3. Graphical representation of water analyses data and classification of natural waters.
4. Classification of groundwater for use in drinking, irrigation and industrial purposes.
5. Estimation of organic matter of soils and water.

COMPULSORY FOUNDATION: GEO.203b

MARINE GEOLOGY

Course Learning Objectives

1. To introduce the basic knowledge on ocean environment and processes associated in it.
2.To understand the Ocean floor tectonics
3. To develop skills to classify Coastal morphology
4. To estimate the sediments and marine deposits

UNIT – I

History of Marine Geology ,Waves, tides, currents, turbidity currents, long shore currents, rip currents, circulation - Wave Action: wave reflection, refraction and diffraction – Seiche and tsunamis – Coastal Zone Morphology (Estuaries, deltas, bays, raised beaches, features of wave erosion and deposition, tombolos, mudbanks) – Deep sea Morphology (Continental shelf, Continental slope, abyssal plains, seamounts, guyots, fracture pattern.

UNIT – II

Littoral processes – Evolution of headlands and bays – Beaches – Raised and sunken features – Evolution and classification of sea coasts and shore lines: Terrestrial, lacustrine, Shallow marine, deep sea - Siliciclastic versus carbonate sedimentation - Deep ocean silica burps - shelf-to-basin transport phenomena turbidities and gravity flows – Submarine groundwater discharge.

UNIT – III

Causes of marine regression and transgression – Description of important regressions and transgressions in the geological past – Eustasy – Origin and distribution of ocean basins – Palaeoceanography - Ocean floor tectonics: Characteristics of Oceanic Plate – Geologic processes along Oceanic Plate boundaries – Seafloor Spreading – Evidence – lithospheric plates – Divergent plate boundaries – Trenches as convergent plate boundaries – Subduction zones– Transform fault boundaries.

UNIT – IV

Marine sedimentation – Sources, types and distribution of marine sediments – Transport of sea bottom sediment – Rate of deposition – Mineral resources: Marine phosphorite, glauconite, barium sulphate concretions, Polymetallic nodules– Gas hydrates – Beach placers: Terrigenous, Biogenic and Chemical Types – Placer Deposits - Distribution of temperature, salinity and density - Coastal zone regulation in India – India as Pioneer Investor in Seabed mining

Course Outcomes

1. Explain different types of the world oceans and their fundamental properties;
2. Classify and explain the physiographic provinces of the oceans
3. Understand the physical and other geological processes going on in the world ocean
4. Interpret the various types of data and manage the coastal environments.

Textbooks/Reference Books:

1. King, C.A.M., (1975): Introduction to Marine Geology and Geomorphology. Edward Arnold, London.
2. Radhakrishnan, V., (1996): General Geology, V.V.P. Publishers, Tuticorin.
3. Seabold, E. and Berger, W.H., (1982): The Sea Floor, Springer Verlag.
4. Kuenen, Ph. H., 1950. Marine Geology. John Wiley and Sons.
5. Shepard, F.P., (1978): Geological Oceanography, Heinmann, London.
6. Harper and Row. Kurekian, K.K., 1990: Ocean, Prentice Hall. New Jersey.
7. Svedrup, J.F., (1969): The Ocean, A Scientific American book, W.H. Freeman and company, San Francisco.
8. Kennett, J.P. (1982): Marine Geology. Prentice Hall., New Jersey.
9. Weisberg, C.P. (1979): Oceanography. McGraw Hill., New York.

PRACTICAL:

1. Beach profile measurements.
2. Mechanical analysis of sediments and calculation of statistical parameters.
3. Analysis of Bathymetric charts.
4. Study of topographic features of ocean floor
5. Estimation of sedimentation rates
6. Determination of physical and textural properties of marine sediments.

CO – PO Mapping:

COMPUTER APPLICATIONS AND GEOSTATISTICS

Course Learning Objectives

1. To introduce the basic knowledge of Computer applications and statistics related to Geology
2. To understand various methods to store and analyze the geological data using computer applications
3. To develop skills to interpret the geological data based on statistical methods
4. To estimate the quantity of geological resources to assess the economic importance.

UNIT – I

Documentation in MS Word - Working with basic formulas and tables in MS Excel - Preparation of presentation in MS Power Point – Image manipulation and drawing

UNIT – II

Database Management Systems – open source software's used in earth sciences

UNIT – III

Statistical applications:

Frequency Distribution, frequency curve and its characteristics – Mean, Median and Mode, Relationship between mean, median and mode - Cumulative frequency: Characteristics of cumulative frequency curve, Applications of cumulative Frequency curves.

UNIT - IV

Variance, Standard Deviation, Covariance, Coefficient of variation, Skewness and kurtosis - Binomial distribution: Characteristics, Approximating, uses. Sampling - Simple Random sampling, Restricted Random sampling – Grid sampling, Stratified sampling, Cluster sampling.

Course Outcomes

1. Comprehend the database related to field geological data
2. Prepare and Interpret graphical and pictorial data
3. Exposure to some selected software's related to geology

Textbooks/Reference Books:

1. D. D. Sharma, 2002: Geostatistics with applications in Earth Sciences, Capital Publishing Company, New Delhi.
2. Saroj, K. Pal, 1998: Statistics for Geoscientists, Concept Publishing Company.
3. Rajaraman, V. 2014: Introduction to Computers; PHI Learning.
4. Rons Mansfield, 2001: Working in MS Office, McGraw Hill.
5. Singh, M.P.: Computer Fundamentals, Foundation Publishing House.

PRACTICAL:

1. Calculation of mean; median and mode;
2. Calculation of Variance, Standard Deviation, Covariance, Coefficient of variation, Skewness and kurtosis.
3. Calculations using Formulas in Excel
4. Preparation of Graphs in Excel
5. Working with animations in Power point
6. Preparation of project / paper presentation in Power point

ELECTIVE FOUNDATION: GEO.204a

REMOTE SENSING AND GIS

Course Learning Objectives

1. To learn basics of aerial remote sensing and its applications.
2. To understand the physics of electromagnetic spectrum and learn satellite remote sensing.
3. To learn characteristic features of Multi spectral remote sensing present satellites of world and application of Remote Sensing for important economically deposits.
4. To have training in GIS components models and applications.

UNIT- I:

Basic concepts and fundamentals of aerial photography - Scale of photography, Aerial cameras, factors influencing image quality, side lap and overlap, mosaicing of Aerial photographs, stereoscopy, estimation of dip and slope - Aerial photo interpretation for Geology; Techniques of interpretation; Recognition elements, Convergence of evidence for interpretation of Geology.

UNIT- II:

Basic concepts and fundamentals of Remote sensing - Electromagnetic energy and its sources - Interaction of EM radiation with atmosphere - Interaction of EM radiation with earth's surface - Atmospheric windows - different spectral regions useful for Remote sensing.

UNIT- III:

Sensors – platforms, Multispectral Remote sensing in Micro wave regions, Remote sensing in Thermal infrared regions, remote sensing satellites and their pay load characteristics - Application of remote sensing for gold, diamond and groundwater exploration.

UNIT- IV:

GIS: Hardware and software in GIS – spatial and non spatial data, Raster and vector data structures – Data conversions - Comparison of raster and vector data - Elements of GIS: Data capture, Verification and processing, data storage - Data base management systems: Types, merits and demerits - Data manipulation analysis and spatial modelling – Output format and generation.

Course Outcomes

1 Develop knowledge in basics of Remote Sensing interpretation keys and applications.
2 Formulate the relationship between EMR and satellite Remote Sensing.
3 Application for Remote Sensing for important economic deposits.
4 Operate GIS data model and demonstrate GIS techniques for various applications.
5 Apply RS and GIS techniques to analyze the various geological materials.

CO - PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

7. Burrough, P.A., 1986: Principles of Geographic Information System for Land resource assessment, Oxford University Press, New York

PRACTICAL:

1. Aerial photo interpretation: Scale, height and slope from the aerial photos; study of inclined and vertical photographs.
2. Interpretation of satellite images – False colour composites.
3. Visual image interpretation and extraction of thematic layers.
4. Identification of structures and lineaments.
5. Study of land use and land cover and demarcation of drainage basin.
6. Identification of Rock types and minerals.
7. GIS software's – ARC INFO, ARC-GIS, ILWIS etc.,
8. Preparing data sets for input in GIS environment.
9. Analysis and manipulation of data in GIS.
10. Integration of spatial and temporal data.

ELECTIVE FOUNDATION: 204b

ENVIRONMENTAL GEOLOGY

Course Learning Objectives

1. To understand natural hazards and its impacts
2. To prepare students towards environmental concerns, issues, and impacts of climate change
3. To find the ways to deal with environmental problems associated mainly various types of pollutants
4. To apply the knowledge for efficient environmental decision-making, management and sustainable development.

UNIT – I: Fundamental concepts of Environmental Geology – Internal structure of the Earth – Plate tectonics and Environmental Geology – Rocks and Minerals – Ecology and Geology: Ecology for Geologists, Geology and Biodiversity, Ecological Restoration - Hazards, Disasters, and Natural Processes – Evaluating Hazards: Linkages, Disaster Prediction and Risk Assessment – The Human response to Hazards – Global Climate and Hazards – Population Increase, Land Use Change and Natural Hazards.

UNIT – II: Earthquakes: Magnitude and Intensity, Plate Boundary Earthquakes, Earthquake Processes, Earthquake Shaking, Earthquake Cycle, Earthquakes Caused by Human Activity, Earthquake Risk and Prediction – Tsunami: Effects of Tsunamis and Linkages to other Natural Hazards, Minimizing the Tsunami Hazard – Volcanic Activity: Volcanism and Volcanoes, Volcanic Features, Volcanic Hazards – Forecasting Volcanic Activity.

UNIT – III: Rivers and Flooding: Streams and Rivers, Sediments in Rivers – River Velocity, Discharge, Erosion, and Sediment Deposition, Effects of Land use Changes, Channel Patterns and Flood Plain Formation, River Flooding, Urbanization and Flooding, Nature and Extent of Flood Hazards, Adjustments to Flood Hazards – Landslides: Slope Processes and Types of Landslides, Slope Stability, Human use and Landslides, Minimizing the Landslide Hazard – Coastal Hazards: Coastal Processes, Coastal Erosion, Coastal Hazards and Engineering Structures, Human Activity and Coastal Erosion, Perception of adjustment to Coastal Hazards.

UNIT – IV: Water Pollution: An Overview of Water Pollution, Water Pollutants, Surface water Pollution and Treatment, Groundwater Pollution and Treatment, Water Quality Standards, Wastewater Treatment – Air Pollution: Historical Overview, Public Health Importance of Air Pollution, Sources and Types of Air Pollutants, Industrial Air Pollution, Risk Assessment, Air Pollution Prevention and Control - Mineral Resources and Environment: Minerals and Human use, Geology of Mineral Resources, Environmental Impact of Mineral Development, Recycling Mineral Resources.

Course Outcomes

1. Explain different aspects of environment and local, regional and global environmental problems.
2. Classify and explain the environmental pollution and disaster control technologies
3. Prepare, interpret and implement environment projects

***Text Books/Reference Books*:**

14. Subramanian,V. (2002) A Textbook in Environmental Science, Narosa Publishing House, New Delhi
15. Valdiya, K.S. (1987) Environmental Geology – Indian Context. McGraw Hill Publ.

PRACTICAL:

1. Study the nature of river flooding and construction of Hydrographs
2. Study of flood prone areas in river basins from maps
3. Study of coastal regions of India from satellite images
4. Procedure to estimate the earthquake magnitude by graphical method
5. Study of plate boundaries, seismic and volcanic zones from maps
6. Map drawing and interpretation of seismic zones in India
7. Study of soil types and soil erosion in India from maps
8. Analyses procedures for a few elements and compounds of water.

GEMOLOGY

Course Learning Objectives

1. To learn origin, classification, and gemstone resources and their stratigraphic units in India.
2. To learn and examine the nature, quality and rarity of the gemstones
3. To understand the physical and optical properties of gemstones
4. To give an idea about the gemstone testing instruments
5. To gain knowledge and to provide skills to become a successful gemmologist

UNIT – I: Introduction to Gemology – Relation to Mineralogy and Crystallography - Lithological association of Gemstones in India–What is a Gem: Precious and Semi-Precious Stones–Gem- bearing stratigraphic Units in India – Gemstone Resources of India.

UNIT – II: Criteria for recognition of gemstones – Virtues of gemstones; Colours, Optical Properties, Hardness, Fractures, Inclusions, Zoning, Brittleness, Pleochroism, Clarity, Amenability for cutting and polishing – 4 C's – Processing of gemstones – Styles of Cutting; Cabochon cut, Rose cut, Brilliant cut, zircon cut, step, trap or emerald cut and mixed cuts.

UNIT – III: Determination of various physical properties in the laboratory: Hardness, Specific gravity, Reflectivity and Reflectance, Dispersion, Lustre, Streak – Measurement of Refractive index – Colour distinction - Enhancement and treatments – enhancement methods: coloured and colourless impregnation, Dyeing, Bleaching and its identification - Methods of treatment – Laser drilling, Irradiation, Heat treatment, Surface modifications, Diffusion treatment and its identification – Composites; Types, Classification and Identification.

UNIT – IV: Uses of gemstones in jewellery, medicine, health and customs –Important Gem Species: Diamond, Corundum, Ruby, Beryl, Chrysoberyl, Cat's Eye, Alexandrite, Topaz, Spinel, Garnets, Tourmaline, Peridot, Zircon, Varieties of Quartz Group – Sphene, Feldspar, Lapis Lazuli - Synthetic Gems.

Course Outcomes

1. The course is focussed on a comprehensive learning in gemology
2. Understands the formation, classification and properties to final the grading and evaluation.
3. Knowledge in order to identify original gemstones and stimulants
4. Acquire skills which will be useful to them in gem industry

Textbooks/Reference Books:

1. Karanh, R.V. (2000): Gem and gem industry in India, Memoir 45, Geological Society of India, Banglore.
2. Anderson, B.W (1990): Gem testing (10th edition), Butterworth Scientific, London.

15. Dorling Kindersley, (1994): Read, P. Gemmology. Butterworth Heinemann,
16. O' Donoghue, M. (1999): Identification of Gemstones.

PRACTICAL:

1. Megascopic Identification of Gem Minerals: Physical and Optical properties:
2. Megascopic Identification of polished or finished Gemstones.
3. Microscopic studies of some important gem minerals using petrological microscope.
4. Determination of Refractive Index, and distinction between natural and synthetic gemstones.
5. Distribution and Occurrence of Gemstones with special reference to Andhra Pradesh.
6. Gem cutting and polishing techniques.

PRACTICAL I – GEO.205P:

SEDIMENTARY PETROLOGY & GEOCHEMISTRY AND ISOTOPE GEOLOGY/MARINE GEOLOGY/COMPUTER APPLICATIONS AND GEOSTATISTICS

Course objective:

1. To identify various sedimentary rocks in hand specimen and in petrological thin section.
2. To analyse the unconsolidated sediments through granulometric studies
3. To understand different depositional environment and correlation of different sections
4. To identify methodologies for water sample collection and analysis
5. To differentiate the suitability of water for various purposes

Course Outcomes: Students will be able to:

1. Differentiate sedimentary rocks based on physical and granulometric studies
2. Identify different depositional environments.
3. Interpret the water analysis and conclude the suitability of water
4. Suggest the remedial measures for the suitability of water

SEDIMENTARY PETROLOGY

1. Megascopic study of sedimentary rocks and their identification through characteristic features.
2. Granulometric analysis of unconsolidated sediments and interpreting their modes of transport, and environments of deposition.
3. Petrographic study of clastic and non-clastic rocks and interpreting textural properties, depositional environments and diagenesis.
4. Separation and analysis of heavy minerals from unconsolidated sediments and understanding provenance.
5. Construction of facies succession and depositional models with facies characteristics

GEOCHEMISTRY AND ISOTOPE GEOLOGY

1. Methods of the chemical analysis of rocks and minerals.
    - Spectrophotometric methods
    - Flame photometric methods
    - Titrimetric methods.
2. Chemical analysis of water samples.
3. Graphical representation of water analyses data and classification of natural waters.
4. Classification of groundwater for use in drinking, irrigation and industrial purposes.
5. Estimation of organic matter of soils and water.

MARINE GEOLOGY:

1. Beach profile measurements.
2. Mechanical analysis of sediments and calculation of statistical parameters.
3. Analysis of Bathymetric charts.
4. Study of topographic features of ocean floor
5. Estimation of sedimentation rates
6. Determination of physical and textural properties of marine sediments.

COMPUTER APPLICATIONS AND GEOSTATISTICS:

1. Calculation of mean; median and mode;
2. Calculation of Variance, Standard Deviation, Covariance, Coefficient of variation, Skewness and kurtosis.
3. Calculations using Formulas in Excel
4. Preparation of Graphs in Excel
5. Working with animations in Power point
6. Preparation of project / paper presentation in Power point

PRACTICAL II – GEO.206P:

STRATIGRAPHY AND PALAEONTOLOGY & REMOTESENSING AND GIS/ENVIRONMENTAL GEOLOGY/GEMOLOGY

Course objective:

1. To understand stratigraphic rocks and their depositional setting
2. To study the boundary problems of the Precambrian terrain
3. To study the Morphological characters of various fossils
4. To analyse the palaeoclimate and palaeoenvironment based on fossil data
5. To introduce the knowledge of studying satellite imagery and its interpretation in terms of geologic features on ground
6. To provide exposure to the GIS tool

Course Outcomes: Students will be able to:

1. Identify different rocks from Precambrian terrain of India.
2. Understand the problems associated with the Precambrian-Cambrian boundary
3. Differentiate fossils based on the fossil data
4. Apply the palaeontological information to make palaeobiological interpretation
5. Identify and interpret the terrain features on satellite image and topographic sheet
6. Apply the integrated knowledge of remote sensing, GIS, GPS

STRATIGRAPHY AND PALAEONTOLOGY

1. Study of rocks in Hand specimens from Precambrian terrain of India.
2. Showing boundaries of the Precambrian terrains of India on map.
3. Stratigraphic and Palaeogeographic maps with special reference to India.
4. Identification of stratigraphic rocks in hand specimen.

5. Preparation of lithology and their correlation, correlation problems.
6. Morphological descriptions, systematics and illustrations of representative fossils belonging to Trilobita, Gastropoda, Cephalopoda, Brachiopoda, and Echinodermata.
7. Interpretation of palaeoclimate and palaeoenvironment based on fossil data
8. Biostratigraphic zonal assignment.
9. Identification of source reservoir and facies with fossil data.

REMOTESENSING AND GIS

1. Aerial photo interpretation: Scale, height and slope from the aerial photos; study of inclined and vertical photographs.
2. Interpretation of satellite images – False colour composites.
3. Visual image interpretation and extraction of thematic layers.
4. Identification of structures and lineaments.
5. Study of land use and land cover and demarcation of drainage basin.
6. Identification of Rock types and minerals.
7. GIS software's – ARC INFO, ARC-GIS, ILWIS etc.,
8. Preparing data sets for input in GIS environment.
9. Analysis and manipulation of data in GIS.
10. Integration of spatial and temporal data.

ENVIRONMENTAL GEOLOGY

1. Study the nature of river flooding and construction of Hydrographs
2. Study of flood prone areas in river basins from maps
3. Study of coastal regions of India from satellite images
4. Procedure to estimate the earth quake magnitude by graphical method
5. Study of plate boundaries, seismic and volcanic zones from maps
6. Map drawing and interpretation of seismic zones in India
7. Study of soil types and soil erosion in India from maps
8. Analysis procedures for a few elements and compounds of water

GEMOLOGY:

1. Megascopic Identification of Gem Minerals: Physical and Optical properties:
2. Megascopic Identification of polished or finished Gemstones.
3. Microscopic studies of some important gem minerals using petrological microscope.
4. Determination of Refractive Index, and distinction between natural and synthetic gemstones.
5. Distribution and Occurrence of Gemstones with special reference to Andhra Pradesh.
6. Gem cutting and polishing techniques.

PRACTICAL III – GEO.207P:

Course objective:

1. To identify various sedimentary rocks in hand specimen
2. To recognise the gradation of sediments and their structural aspects
3. To identify stratigraphic sequences of the geological formations.
4. To understand collection procedures of sediments, fossil data and water samples
5. To carry out the ground truth verification of the sampling stations and test sites

Course Outcomes: Students will be able to:

1. Differentiate sedimentary rocks based on the physical characteristics
2. Interpret the sediments at its in-situ conditions
3. Recognize different stratigraphic sequences
4. Collect the samples in the field as per the guidelines for laboratory analysis
5. Prepare the field report based on the ground truth verifications

Exercises

GEOLOGICAL FIELD SURVEY AND TRAINING PROGRAMME

1. Identification of Sedimentary rock formations and study of sedimentation processes in the Sedimentary basins.
2. Study of sorting or gradation process of the sediments.
3. Identification of various stratigraphic sequences of the geological formations.
4. Identification, study and collection of shell organisms in the coastal areas.
5. Collection of water samples from various sources and also rock samples for geochemical analysis in the laboratory.
6. Ground truth verification of thematic maps prepared based on the satellite data.
7. Preparation of field report (draft) incorporating the above said geological characteristics in the field.

AUDIT COURSE:

HUMAN VALUES AND PROFESSIONAL ETHICS – II

Course Learning Objectives

1. To provide the knowledge about the value oriented education, Medical ethics, family values and ethics and Moral code of Indian society.
2. To provide the business ethics, environmental and social ethics followed and practiced in Indian society.

UNIT – I

Value Education: Definition, Relevance to present day – Concept of Human Values: Self introspection, Self esteem - Family values: Components, Structure and responsibilities of family - Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society - Caring for needy and elderly – Time allotment for sharing ideas and concerns.

UNIT – II

Medical ethics: Views of Charaka, Sushruta and Hippocrates on moral responsibility of medical practitioners - Code of ethics for medical and healthcare professionals – Euthanasia - Ethical obligation to animals - Ethical issues in relation to health care professionals and patients - Social justice in health care, human cloning, problems of abortion - Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

UNIT – III

Business ethics: Ethical stands of business, Immoral and illegal practices and their solutions - Characterizes of ethical problem in management, ethical theories, causes of unethical behaviour, ethical abuses and work ethics.

UNIT – IV

Environmental ethics: Ethical theory, Man and nature, Ecological crisis, Pest control, Pollution and waste - Climate change, Energy and population, Justice and environmental health.

UNIT – V

Social ethics: Organ trade, Human trafficking, Human rights violation and social disparities - Feminist ethics: Surrogacy/pregnancy, Ethics of media, Impact of Newspapers, Television, Movies and Internet.

Course Outcomes

1 After completion of this course the students will be able to follow and practice good behaviour with human values and moral support to their elderly family members.

2 They also aware and get knowledge about medical ethics how the doctors will behave with patients, what type of ethics should be followed by business people. They also get in through knowledge about the protection of environment social ethics like family ethics, the role of print and electronic media in prevention and protection of Human rights in Indian society.

Textbooks/Reference Books:

III SEMESTER

CORE: GEO.301

METAMORPHIC PETROLOGY

Course Learning Objectives

1. to propane knowledge on metamorphic processes, kinds of metamorphism, classification nomenclature, structures and textures of metamorphic rocks.
2. Metamorphic grades, zones, facies and facies series. Mineralogical phase rule and phase diagram.
3. Contact and Regional metamorphic facies and their mineral assemblages and genesis of granulites and charnockites.
4. Metamorphic differentiation processes and origin of migamtites and study the classic regional metamorphic regions of the world and paired metamorphic belts.
5. Mineralization associated with metamorphic processes.

UNIT – I: Introduction to Metamorphism – Limits of Metamorphism - Metamorphic processes - Kinds of Metamorphism - Agents of Metamorphism. - Classification and Nomenclature of Metamorphic rocks. - Structures and Textures of Metamorphic rocks.

UNIT – II: Grades and Zones of Metamorphism – Concepts, Classification and Description of Metamorphic Facies – Mineralogical Phase Rule – Graphical Representation of Metamorphic Mineral Parageneses; Compositional Plotting, ACF, AKF, AFM phase diagrams

UNIT – III: Contact Metamorphic Facies: Hornfels, Sanidinite – Regional Metamorphic Facies: Zeolite, Greenschist, Blueschist, Amphibolite, Granulite, Ecologite – Genesis of Granulites and Charnockites - Anatexis and Origin of Migmatites - Regional Metamorphism and Paired Metamorphic Belts.

UNIT – IV: Metamorphic Reactions in Carbonate Rocks: Metamorphism of Siliceous Dolomitic Limestones, Formation of Wollastonite - Metamorphism of Pelitic Rocks – Metamorphism of Ultramafic Rocks – Metamorphism of Mafic Rocks

Course Outcomes

1. Identify metamorphic minerals in thin section and interpret met textures and able to comment on met grade and types of metamorphism.
2. Describe identify and classify metamorphic rocks in hand samples based on mineral assemblages and textures.
3. Plotting quantitative and qualitative mineral and mineral to infer the metamorphic conditions and processes study of metamorphic rocks on chemical system.
4. Establish relation between metamorphism and plate tectonics.
5. Establish metamorphic reaction principles of economically important ores and minerals associated with metamorphic processes.

12. D.W. Hyndman, 1986 – Petrology of Igneous and Metamorphic rocks, 2nd Edition, McGraw-Hill Co., New York.

Practical:

1. Megascopic and microscopic examination of metamorphic rocks.
   a. Different types of schists, gneisses, amphibolites, granulites, eclogites, slates, marbles and quartzites.
   b. Arranging metamorphic rocks according to the facies of metamorphism.
2. Construction and interpretation of ACF diagrams.
3. Construction and interpretation of AKF and AFM diagrams.

CORE: GEO.302

ECONOMIC GEOLOGY AND MINERAL ECONOMICS

Course Learning Objectives

1. Various processes of formation of economic mineral deposits
2. To understand the genetic controls exerted by physical and chemical processes on ore formation in various geological settings through geological time scale.
3. Geology, mineralogy, occurrence genesis and distribution of metalliferous deposits with case studies.
4. Geology, occurrence genesis and distribution of coal petroleum and other industrial minerals.

UNIT- I:

Processes of formation of mineral deposits – magmatic concentration, metasomatism, hydrothermal process, sedimentation, residual and mechanical concentration, oxidation, supergene enrichment, sublimation, evaporation.

UNIT- II:

Ore deposition - physical and chemical controls of ore fluids and their migration - Metallogenic epochs and provinces with special reference to India - Classification of mineral deposits; UNFC Classifications - Mineralization through geological time scale.

UNIT- III:

Geology, nature of occurrence, mineralogy, genesis and distribution of the following ore deposits with case studies of Iron, Chromite, Copper, Pb-Zn and Bauxite - Geology, nature of occurrence, genesis and distribution of Coal and Petroleum deposits - Magnesite deposits - Mica deposits - Baryte deposits - Asbestos deposits - Mineral resources of Andhra Pradesh.

UNIT – IV

Mineral economics and its concepts - Tenor, grade and specification - Strategic, critical and essential minerals – National mineral policy.

Course Outcomes

1 This course has links directly with industry and share the knowledge about a wide range of ore deposits.
2 Offers a detailed study of origin of economic mineral deposits its identification properties and distribution in India.
3 Comprehensive knowledge in reflection light optic and ore textures.
4 Acquire practical knowledge on microchemical techniques for identification ores and estimation of ore reserves.

CO-PO Mapping:

CO4	H	H	H	M	H	H	M	M	H	M	L	L

Textbooks/Reference Books:

1. Mead L. Jenson, Bateman, A. M. 1981: Economic Mineral deposits – John Wiley, New York.
2. Krishna Swamy, S. and Sinha, R.K. 1988: India's Mineral resources – Oxford & IBH, New Delhi.
3. K.V.G.K. Gokhale, 1973: Ore deposits of India, Thompson Press (India) Publ.
4. R.K. Sinha & N.L. Sharma. 2019: Mineral Economics, 4th Edn, Oxford & IBH, New Delhi.
5. Paul Ramdohr, 1970: Ore minerals and their intergrowth, Elsevier
6. R.L. Stanton, 1972: Ore petrology, McGraw-Hill Book Company, New York.
7. Charles, F. Park, Jr., and Roy, A. MacDiarmid, 1964: Ore deposits, W.H. Freeman & Co.

PRACTICAL:

1. Megascopic study of structures and fabrics of different Ore minerals and Industrial minerals.
2. Mineralogical and textural studies of common Ore minerals Under Ore microscope and their paragenetic significance.
3. Microchemical techniques for identification of Ores.
4. Exercises on mine sampling and determination of tenor and estimation of Ore reserves.
5. Analyze data on mineral production, use and export.

GENERIC ELECTIVE: GEO.303a

WATERSHED MANAGEMENT

Course Learning Objectives

1. To provide basics of watershed management
2. To apply the mitigation techniques of land erosion
3. To develop water harvesting techniques based on the terrain conditions
4. To implement the approach of people's participation in watershed management

UNIT-I

INTRODUCTION OF WATERSHED

Objectives of watershed development - Characteristics of watershed – Principles of watershed – Effects of watershed on community – Delineating the watershed – Basic data on watersheds –Need for watershed development – Watershed development programmes in India – Watershed Atlas

UNIT-II

EROSION, DEGRADATION and LAND MANAGEMENT

Types and Factors affecting erosion - Effects and control methods of erosion - Estimation of soil loss due to erosion - Universal soil loss equation –Degradation agents – Impact of the degradation of watersheds– Land use and land capability studies - Management of Agricultural, Forest, Grassland and wild land - Reclamation of saline and alkaline soils.

UNIT-III

WATER HARVESTING: Concept of Rainwater harvesting - water harvesting structures - Guidelines for construction of harvesting structures – Success stories of water harvesting structures –Role of peoples participation in construction and management of harvesting structures– Rain water harvesting from roof top

UNIT-IV

PLANNING AND MANAGEMNT

Elements of watershed management – Planning and Implementation of watershed Management activities – Multidisciplinary approach for watershed management – Impact of watershed Management.

Course Outcomes

1. Explain the importance of watershed management
2. Classify and explain the different water harvesting techniques
3. Use modern tools for land erosion control
4. Develop or improve the people's participatory approach for sustainable development and management of watersheds.

CO –PO Mapping:

CO1	H	H	H	H	H	H	M	M	H	M	M	L
CO2	H	H	H	H	H	H	M	M	H	M	M	L
CO3	H	H	H	H	H	H	M	M	H	M	M	L
CO4	H	H	H	H	H	H	M	M	H	M	M	L

Textbooks/Reference Books:

1. Rajora, R., (1998), Integrated Watershed Management, Rewat Publications, New Delhi.
2. Tideman, E.M., (1996): Watershed Management: Guidelines for Indian Conditions, Omega Scientific Publishers, New Delhi.
3. Lal. S., (2004), Watershed Development, Management and Technology, Mangal Deep Publications.
4. Paranjape, S. et. al., (1998), Watershed Based Development: A Source Book, Bharat Gyan Vigyan Samathi, New Delhi.
5. Suresh, R., (2002), Soil and Water Conservation Engineering, Standard Publishers and Distributers, Delhi.
6. Kakade, B.K., (2002), Soil and Water Conservation Structures in Watershed Development Programs, BAIF Development Research Foundation, Pune.

PRACTICAL:

1. Delineation of Watershed boundary and micro watershed boundaries of study area using toposheets
2. Watershed coding as watershed atlas of India

3. Quantitative analysis of watershed characteristics and parameters
4. Water budgeting of watersheds
5. Determination of infiltration rate from a controlled plot experiment
6. Calculation of Runoff using SCS-CN method.

GENERIC ELECTIVE: GEO.303b

PHOTOGRAMMETRY

Course Learning Objectives

1. To provide basics of photogrammetry and its application in geological surveying
2. To apply the techniques of photo interpretation
3. To perform basic computations of distance and heights of the objects
4. To implement the GPS based survey approach

UNIT – I

Basic concept of Photogrammetry – Principle – Types of photographs – Geometric elements of aerial photographs– Scale –Planning & Execution of Photographic Flights– Aerial mosaics -Stereoscopy–Determination of horizontal ground length, direction and angles from photo coordinates - Relief and Tilt Displacement on vertical aerial photographs –Elements of aerial photo interpretation..

UNIT – II

Introduction to Analytical Photogrammetry: Image measurements, Control points, Collinearity condition, Coplanarity condition, Space resection by collinearity, Space intersection by collinearity, Analytical Stereo model, Analytical Interior Orientation, Analytical Relative Orientation, Analytical Absolute Orientation, Analytical Self-calibration.

UNIT – III

Principles of digital photogrammetry –Digital Terrain Model generation – Image correlation – Image matching – Digital Orthophoto generation - Image measurements, Orientation procedures, Epipolar geometry,–DEM quality assessment –Applications of Digital photogrammetry in GIS –Link between GIS and Digital Photogrammetry.

UNIT - IV

Establishing horizontal & vertical controls, Ground control surveys by GPS, Pass Points for Aerotriangulation, Sequential construction of Strip model from Independent models, Aerotriangulation by simultaneous Transformations, Bundled Adjustment by GPS control, Triangulation with Satellite images, Computational strategies for triangulation - Principles of LIDAR and its applications.

Course Outcomes

1. Explain the importance of photogrammetry and its relationship to land surveying and mapping
2. Classify and prepare maps on different scales
3. Use stereoscope to interpret the elements on the aerial photographs

Textbooks/Reference Books:

1. Wilfried Linder, 2006: Digital Photogrammetry – A Practical course, 2nd Edition, Springer.
2. Paul, R. Wolf and Bon A. Dewitt, 2000: Elements of Photogrammetry (3ed), McGraw Hill
3. Morris M. Thompson, Editor-in-Chief, 1966: Manual Photogrammetry
4. J. Chris. McGlone, Edward, M. Mikhail, James, S. Bethel, 2004: Manual of Photogrammetry, American Society for Photogrammetry and Remote Sensing, Bethesda, MaryLand, USA.

PRACTICAL:

1. Testing stereo vision
2. Use of lens stereoscope and mirror stereoscope
3. Visual interpretation of aerial photographs
4. Stereoscopic viewing of stereo-pairs
5. Determination of vertical exaggeration
6. Use of parallax bar for height calculation from aerial photographs
7. Calculation of scale of the photographs Marking principal point and conjugate principal point on the stereopairs.

GENERIC ELECTIVE: GEO.303c

DIMENSIONAL STONES AND CONSTRUCTION MATERIALS

Course Learning Objectives

1. To introduce the knowledge on dimensional stones and construction materials
2. To classify dimensional stones and construction materials
3. To inquire suitability of the dimensional stones of construction materials

UNIT – I

Dimensional Stones: Criteria for selection of Dimensional Stones, Importance of Dimensional Stones in Archaeological Monuments – Dimensional Stone: Indian Scenario – Granite Industry in India – Dimensional Stones through Geological Time Scale – Granite Trade in South India.

UNIT – II

Dimensional Stone Varieties – Characteristics of Dimensional stone –Distribution of Dimensional Stones in India –Distribution of Dimensional Stones in Andhra Pradesh – Export and Import Qualities.

UNIT – III

Construction Materials: Varieties of Construction Materials – Ornamental and Construction Materials in Indian History – Distribution of Building Materials in Andhra Pradesh – Conservation of Commercial Rock Deposits/Monumental/Building Stones.

UNIT – IV

Engineering properties of rocks, Behaviour of rock on application of stresses: Stress and its type; Strain and its type Application of Strain and stress curve; Mohr's Circle and Stress Transformation.

Course Outcomes

1. Explain the distribution of dimensional stones and occurrence of construction materials
2. Classify dimensional stones and construction materials
3. Assess the suitability of various dimensional stones and construction materials

Textbooks/Reference Books:

1. Blyth, F.G.H. and Defreites, M.A., 1984: A Geology for Engineers
2. Krynine, D.P. and Judd, W.R., 1957: Principles of Engineering Geology.
3. Bell, F.G., 1999: Geological Hazards, Routledge, London.
4. Vikram, K., 1986: Directory of Dimensional Stones.
5. Raman, P.K., Mineral Resources of Andhra Pradesh.
6. Information Dossier on Regional Evaluation of Dimension Stone Granite in Andhra Pradesh, 1999: Geological Survey of India, OPAP.

PRACTICAL:

1. Prepare Charts of various dimensional stones found in India
2. Examine Physico-Mechanical Properties of dimensional stones
3. Prepare Charts on Environmental impact of mining for dimensional stones with all remedial measures.
4. Preparation of rock sample for testing in laboratory
5. Grading of fine aggregates
6. Grain size distribution of fine aggregate
7. Grain size distribution of coarse aggregate
8. Determination of crushing value of coarse aggregate

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	M	L	M	H	M							
CO2	M	L	M	M	M							
CO3	M	L	M	M	M							
CO4	H	L	H	H	H							

H: High; M: Medium; L: Low

SKILL ORIENTED COURSE: GEO.305

SURVEYING AND FIELD GEOLOGY

Course Educational Objectives

1. To provide basic knowledge on chain, compass, plane table, theodolite, other field equipment and Aerial photographs
2. To analyze the Measurement techniques, aerial photographs and equipment used in land surveying
3. to design and problem solving skills in surveying using surveying equipments and techniques.
4. To demonstrate knowledge and understanding of the geological report

UNIT- I: Scales, Measurement of distances with the survey instruments - Chain survey: Principles, offsets, cross staff, obstacles in chaining Compass Survey - Prismatic Compass - Surveyors' compass: Traverse with chain and compass–Methods of plane tabling, the two point problems, and the three point problems.

UNIT- II: Principles of leveling, Different type of level, Classification of leveling - Measurement of angles, Heights and Distances using Theodolite - Traverse survey with the Theodolite – Principle of Total station; Measurement of Distance, Area, Height, Angles, Gradients, Traversing, Contouring using Total station - Applications of using Total Station

UNIT- III: General basics of field geology - Field equipment and Safety – Introduction to field observations at different scales – The Field Notebook - Plotting Geological features on a Base map – Recording Palaeontological Information, Structural Information, Features of Sedimentary rocks, Igneous rocks and Metamorphic rocks.

UNIT- IV: Mapping geological features on Aerial Photographs – Geological mapping with the Alidade and Plane Table – Making a geological map from Aerial photographs – Preparing Geological reports - Making a Geological Map – Recording Numerical data and use of instruments in the field – Photography and Sampling.

Course Outcomes

1 Understand the use of different surveying instruments, field equipment, aerial photographs and their use.
2 Compute the area and earthwork for different works by using surveying instruments
3 Analyze surveying techniques, tools, survey data and geological reports
4 Prepare contour maps, geological maps and reports
5 Solve survey issues using proper survey and interpretation.
6 Use appropriate modern tools in surveying and mapping

CO –PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	H	H	H	M	M	H	M	M	L
CO2	H	H	H	H	H	H	M	M	H	M	M	L
CO3	H	H	H	H	H	H	M	M	H	M	M	L
CO4	H	H	H	H	H	H	M	M	H	M	M	L
CO5	H	H	H	H	H	H	M	M	H	M	M	L
CO6	H	H	H	H	H	H	M	M	H	M	M	L

Textbooks/Reference Books:

1. T.P. Kanetkar and S.V. Kulkarni: Surveying & Levelling, Vol. I, R Agor Books.
2. B.C. Punmiya, 2017: Surveying and Levelling, McGraw-Hill Education.
3. Robert, R. Compton, 1962: Manual of field geology, John Wiley & Sons, New York.
4. Frederick, H. Lahee, 1961: Field geology, McGraw-Hill Company, New York.

PRACTICAL:

Surveying

1. Plotting of area using Cross staff
2. Determination of area by radiation method using compass
3. Longitudinal and cross–sectioning of a road profile using levelling instrument
4. Measurement of heights and distances using theodolite
5. Determination of areas using theodolite
6. Contouring using total station

Field geology

1. Identification of the rocks and their outcrop pattern in the field
2. Measurement of attitude of beds in and around engineering project site / mining area.
3. Identification of the landforms and geological information using toposheets of an engineering project site / mining area.

OPEN ELECTIVE: 308a

EARTH SYSTEM PROCESSES

Course Learning Objectives

1. To explore the fundamental interactions of the geosphere, hydrosphere, atmosphere and biosphere.
2. The unit is designed to provide a strong scientific foundation for understanding and contextualizing studies of the environment, human impacts and sustainable practice and management of resources.

UNIT – I

Introduction to various branches of Earth Sciences - Solar System: Origin of Solar system, Meteors and Meteorites - Age of the Earth –Earth Dynamics: Interior of the Earth, Composition of the Earth, Seismic waves, Plate Tectonics, Landslides, Volcanoes.

UNIT – II

Sea waves, Tides, Ocean currents - Geological work of seas and oceans - Tsunami and its causes, Warning system and mitigation.

UNIT – III

Hydrogeology: Hydrological cycle, Aquifers – Groundwater fluctuations and Groundwater composition - Glaciology: Glacier types, Different types of glaciers, Landforms formed by glacier - Rock, Mineral, Batholiths, Dyke, Sill, Folds, Faults, Joints, Unconformity.

UNIT – IV

Structure and composition of atmosphere, Atmospheric circulation, Green house effect and global warming, Carbon dioxide sequestration - Geological work of wind –Steps to maintain clean and pollution free atmosphere with governing laws, precautionary measures against disasters.

Course Outcomes

1. The interaction between the Earth's spheres, relevant processes and environmental changes.
2. Knowledge and understanding Recapitulate processes in the different spheres.
3. Describe the connections and feedback between the Earth's spheres. Explain theconnection between Earth System processes and global environmental changes.

4. A basic understanding of the Earth as a holistic system knowledge of the main components of the Earth system and their interactions
5. The interactions between biological, chemical, and physical processes that shape and define the Earth System.

CO – PO Mapping:

Textbooks/Reference Books:

1. Holme's Principles of Physical Geology. (1992): Chapman & Hall.
2. Emiliani, C, (1992): Planet Earth, Cosmology, Geology and the Evolution of Life and Environment, Cambridge University Press.

OPEN ELECTIVE: 308b

MEDICAL GEOLOGY

Course Learning Objectives

1. To provide knowledge and skills on the interpretation of the geological impact on geographical distribution of diseases in the environment, and on human and animal health
2. To understand the basics of minerals and their influence on human health, flora and fauna.
3. To assess the occurrence of various elements and its cyclic movement through the abiotic-biotic environment

UNIT-I

General characteristics of tropical, subtropical environments - Rock weathering and soil formation - Weathering and formation of secondary minerals - Chemistry of weathering of ultra-basic rocks - Fundamental Relationship of Public Health and Geological Processes - Environmental Biology - Natural Distribution and Abundance of Elements - Anthropogenic Sources - Uptake of Elements on Chemical and Biological Perspective and its functions - Geological Impacts on Nutrition.

UNIT-II

Radon in Air and Water, Arsenic in Groundwater and the Environment - WHO and BIS Standards for drinking water - Fluoride in Natural Waters, soils, sediments, plants - Bioavailability of fluoride, Dental fluorosis, Skeletal fluorosis, Water Hardness and Health Effects, Geochemical basis for tropical endomyocardial fibrosis (EMF) - Effect of water hardness on urinary stone formation 58 (urolithiasis) - Types of stones: Calcium oxalate, Calcium phosphate, Uric acid, Magnesium ammonium phosphate stones, Cysteine.

UNIT-III

The iodine cycle in the environment - Iodine in drinking water, Iodine in food, Iodine Deficiency Disorders (IDD), Endemic cretinism, Goitrogens - The nitrogen cycle, Nitrate as fertilizers and environment, Nitrogen loading in rice fields, Nitrates from human and animal wastes, Nitrates and Methemoglobinemia, Nitrates and cancer - Bioavailability of Elements in Soil - Selenium Deficiency and Toxicity in the Environment - Natural Aerosolic Mineral Dusts and Human Health - Animals and Medical Geology - The Impact of Micronutrient Deficiencies in Agricultural Soils and Crops on the Nutritional Health of Humans.

UNIT-IV

Environmental Toxicology; Environmental Epidemiology, Environmental Medicine, Environmental Pathology, Speciation of Trace Elements - Techniques and Tools of GIS in Human Health Studies, Investigating Vector - Borne and Zoonotic Diseases with Remote

Sensing and GIS - Mineralogy of Bones, Inorganic and Organic Geochemistry Techniques - Histochemical and Microprobe Analysis in Medical Geology.

Course Outcomes

1. Explain about relationship of human Health and Geological Processes.
2. Able to understand the importance of the Water quality standards and impact of micronutrient deficiencies in soils and crops on human health
3. Analyse the interaction of abundance of elements and geological effects.

Textbooks/Reference Books:

H: High; M: Medium; L: Low

PRACTICAL I – GEO.304P:

METAMORPHIC PETROLOGY, ECONOMIC GEOLOGY AND MINERAL ECONOMICS & WATERSGED MANAGEMENT/COMPUTER APPLICATIONS AND GEOSTATISTICS/DIMENSIONAL STONES AND CONSTRUCTION MATERIALS

Course objectives:

1. To identify various metamorphic rocks in hand specimen.
2. To provide the basic knowledge on Ore minerals and Industrial minerals.
3. To understand different ore sampling and differentiation
4. To analyse the watershed analysis and water budget of the basin

Course Outcomes: Students will be able to:

1. Differentiate metamorphic rocks and their facies
2. Interpret processes of formation, mode of occurrence and uses of ore minerals.
3. Estimate ore reserves and analyse the ore samples
4. Prepare the watershed maps and coding as per watershed atlas

METAMORPHIC PETROLOGY:

1. Megascopic and microscopic examination of metamorphic rocks.
    a. Different types of schists, gneisses, amphibolites, granulites, eclogites, slates, marbles and quartzites
2. Arranging metamorphic rocks according to the facies of metamorphism.
3. Construction and interpretation of ACF diagrams.
4. Construction and interpretation of AKF and AFM diagrams.

ECONOMIC GEOLOGY AND MINERAL ECONOMICS:

1. Megascopic study of structures and fabrics of different Ore minerals and Industrial minerals.
2. Mineralogical and textural studies of common Ore minerals Under Ore microscope and their paragenetic significance.
3. Microchemical techniques for identification of Ores.
4. Exercises on mine sampling and determination of tenor and estimation of Ore reserves.
5. Analyze data on mineral production, use and export

WATERSHED MANAGEMEN:

1. Delineation of Watershed boundary and micro watershed boundaries of study area using toposheets
2. Watershed coding as watershed atlas of India
3. Quantitative analysis of watershed characteristics and parameters
4. Water budgeting of watersheds
5. Determination of infiltration rate from a controlled plot experiment

6.Calculation of Runoff using SCS-CN method

PHOTOGRAMMETRY:

1. Testing stereo vision
2. Use of lens stereoscope and mirror stereoscope
3. Visual interpretation of aerial photographs
4. Stereoscopic viewing of stereo-pairs
5. Determination of vertical exaggeration
6. Use of parallax bar for height calculation from aerial photographs
7. Calculation of scale of the photographs Marking principal point and conjugate principal point on the stereopairs.

DIMENSIONAL STONES AND CONSTRUCTION MATERIAL:

1. Prepare Charts of various dimensional stones found in India
2. Examine Physico-Mechanical Properties of dimensional stones
    a. Prepare Charts on Environmental impact of mining for dimensional stones with all remedial measures.
3. Preparation of rock sample for testing in laboratory
4. Grading of fine aggregates
5. Grain size distribution of fine aggregate
6. Grain size distribution of coarse aggregate
7. Determination of crushing value of coarse aggregate

PRACTICAL II – GEO.306P:

Surveying and Field Geology

Course objectives:

1. To provide the basic knowledge on surveying equipments
2. To estimate the area of the area, height of the objects and distance between two objects.
3. To understand the topographic sheets and geological features in the field
4. To analyse the geological considerations in the construction area

Course Outcomes: Students will be able to:

1. Determine the area of the plot , heights of the objects and distances between two objects
2. Interpret the survey data
3. Analyse the geological conditions of the engineering site and mining area
4. Prepare the contour maps and identify landforms in the construction site

Practical Syllabus

1. Plotting of area using Cross staff
2. Determination of area by radiation method using compass
3. Longitudinal and cross–sectioning of a road profile using levelling instrument
4. Measurement of heights and distances using theodolite
5. Determination of areas using theodolite
6. Contouring using total station
7. Identification of the rocks and their outcrop pattern in the field
8. Measurement of attitude of beds in and around engineering project site / mining area.
9. Identification of the landforms and geological information using toposheets of an engineering project site / mining area.

PRACTICAL III - GEO.307P:

GEOLOGICAL FIELD SURVEY AND TRAINING PROGRAMME

Course objective:

1. To identify various metamorphic rocks in hand specimen
2. To recognise the occurrence of the economic minerals
3. To suggest suitable sites for rainwater harvesting sites.
4. To understand mining procedures and processes

Course Outcomes: Students will be able to:

1. Differentiate metamorphic rocks based on the physical characteristics
2. Recognize association and occurrence of economic minerals
3. Identify and Justify the suitable sites for rainwater harvesting sites
4. Suggest the requirement of mining equipment
5. Prepare the field report based on the ground truth verifications

Exercises

1. Observation of metamorphism in the geological formations.
2. Identification and study of Para and Ortho metamorphic activity in the metamorphic rocks.
3. Study of association and occurrence of economic minerals in the mining areas.
4. Identification of various Rain water Harvesting structures and their impact studies in a basin.
5. Field visit to quarry of dimensional stone mining areas to understand the mining procedures and processes.
6. Field exposure to latest equipments in the mining areas.
7. Preparation of field report (draft) incorporating the above said geological characteristics in the field.

IV SEMESTER

CORE: GEO.401

HYDROGEOLOGY AND ENGINEERING GEOLOGY

Course Learning Objectives

1. To provide the basics of hydrological properties of rock, aquifers, source of groundwater pollution and artificial recharge structures
2. To analyze the quality of water
3. To design the groundwater movement
4. To conduct groundwater investigations, to insist on the management of groundwater and methods of groundwater recharge
5. Role of geologist in engineering projects geological consideration for the selection of sites for major engineering projects.

UNIT – I

Precipitation, Runoff, Infiltration, Evaporation, Transpiration- Hydrological properties of rocks- Origin, Occurrence and Vertical Distribution of Ground water – Classification of aquifers - Geological Formations as Aquifers – Springs - Darcy's Law, Cone of Depression – Hydrographs - Water Table Contour Maps - Dispersion of Groundwater Tracers - Water Quality Standards: Analyses and Interpretation.

UNIT - II

Groundwater Exploration: Surface and Subsurface Geological, and Geophysical Methods of Groundwater Exploration - Hydrogeomorphic Mapping using various Remote Sensing Techniques - Artificial Recharge of Groundwater - Conjunctive use of Surface and Ground water.

UNIT – III

Role of geologist in the engineering projects - Engineering properties of rocks - physical characters of building stones, concrete and other aggregates –Rock as a Construction material – Geological consideration for the construction of dam and Reservoir sites -Types of dams, remedial measures for failure of dams and reservoirs - Case histories of some major dams: Nagarjuna Sagar, Srisailam and Bhakranangal.

UNIT – IV

Geological considerations in the selection of tunnels.–tunnelling – remedial measures for failure of dams and reservoirs–Influence of geological conditions on foundations and design of buildings - Geological considerations for the construction of roads/ highways and bridges - seismicity in India - geological consideration for earthquake resistant structures - Problems of groundwater in engineering projects.

Course Outcomes

1. Apply the knowledge of geological formations and the hydrological properties of rocks
2. Analyze the suitability of water for domestic, irrigation and industrial purposes Conduct geological and geophysical investigations and give recommendations for drilling of borewells.
3. Explain causes of pollution of groundwater give remedial measures to the society.
4. Use modern methods and appropriate techniques to carrying out geophysical studies and artificial recharge methods
5. Students will get critical knowledge on evaluation of geological condition at the major engineering project sites.

CO – PO Mapping

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

12. Blyth., Geology of Engineers (ELBS)
13. Sathya Narayanswami, B.S., Engineering Geology (Dhanpat Rai & Co.)
14. Rangwala, S.C., Engineering Materials

PRACTICAL:

1. Simple numerical problems related to: determination of permeability, Groundwater flow, Well hydraulics etc.
2 Preparation and interpretation of water level contour maps and depth to water level maps.
3. Study, preparation and analysis of hydrographs for differing groundwater conditions
4. Water potential zones of India (map study).
5. Graphical representation of chemical quality data and water classification (C-S and Trilinear diagrams).
6. Topomap study on topographic environment for ideal site and route selection for (i) Dams (ii) Reservoirs (iii) Canal alignment (iv) Check dams (v) Flood water storage, (vi) Ghat roads
7. Preparation of Merits, demerits & remedial measures based up on geological cross sections of project sites
8. Identification of building stones and rock metal and study for physical and engineering properties

CORE: GEO.402

MINERAL EXPLORATION AND ORE BENEFICIATION

Course Learning Objectives

1. Knowledge on energy resources and guides to locate ore bodies.
2. To enhance knowledge on various methods of exploration.
3. Knowledge on geophysical methods for ore reserve estimation
4. To impart knowledge on Ore beneficiation processes and techniques.

UNIT – I:

Conservation of minerals - Renewable and non-renewable resources - Guides to locate ore bodies: Physiographic, Lithologic, Mineralogical and Structural guides.

UNIT- II:

Stages of Exploration; Scope, Objectives and Methods of Prospecting - Regional Exploration: Geological, Geochemical and Geobotanical Methods - Geologic aspects of Drilling - Types of Drills - Drilling methods: Planning, Selection of Sites, Angle and Direction of Bore-holes.

UNIT – III

Methods of sampling - Weighting of samples and calculation of average grades - Mathematical and Statistical Methods - Ore Reserve Estimation - Geophysical Methods: Ground and Airborne Surveys; Gravity, Magnetic, Electrical and Seismic Methods of Mineral Exploration.

UNIT - IV

Ore Deposition - Physical and Chemical Controls of Ore fluids and their migration - Metallogenic Epochs and Provinces with Special reference to India – Ore beneficiation Processes - Physical Concentration Methods – Pre-treatment Processes: Drying, Calcination, Roasting, Agglomeration – Extraction via Flotation: Heap Leach Process, Smelting.

Course Outcomes

1 This course linked to industry and acquires knowledge on techniques to locate ore bodies, methods for mineral exploration and geologic aspects of drilling.
2 Acquire knowledge on geophysical methods for Ore reserve estimation.
3. Acquire knowledge on Ore beneficiation processes and techniques.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	H	H	H	M	M	H	M	M	L
CO2	H	H	H	H	H	H	M	M	H	M	M	L
CO3	H	H	H	H	H	H	M	M	H	M	M	L

Textbooks/Reference Books:

1. Gokhale, K.V.G.K., and Rao, T.C., 1978: Ore deposits of India, Thompson Press, India.
2. Paul Ramdohr, 1970: Ore minerals and their intergrowth, Elsevier
3. R.L. Stanton, 1972: Ore petrology, McGraw-Hill Book Company, New York.
4. Lindgre, W: Ore deposits Stratabound Stratiform ore deposits, McGraw hill scientific company

PRACTICAL:

1. Preparation of Geological cross section based on Borehole data;
2. Laying down of stripping boundary on geological cross sections;
3. Calculation of geological and mineable ore reserves, mineable waste, and grade.
4. Interpretation of remote sensing data for mineral exploration.
5. Preparation of mineral maps of India,
6. Graphical representation of production, export and import of important minerals.

GENERIC ELECTIVE: GEO.403a

MINING GEOLOGY

Course Learning Objectives

1. To make students conversant with prevailing Mineral policies and acts
2. To understand different approaches of mineral exploration using different methods
3. To develop the capability to identify ore minerals and also design process flow charts in mineral processing.

UNIT- I

Mines and Minerals (Regulations and development) - Act ,1957 – National Mineral Policy - Mining Lease –Prospecting license – Renewal – Royalty and dead rent – Mineral concession rules (1960) – Certification of approval.

UNIT - II

Drilling: Percussion Drills, Rotary Drills, Miscellaneous Drilling methods, Drill Sampling, Accuracy of Sole Hole Sampling, Bore Hole Problems, Bore Hole Logging, Preservation and Sampling cares

UNIT – III

Mining methods: Classification of mining methods, Alluvial mining, Open cast mining or quarrying, Underground mining – Coal mining methods: Longwall advancing, Longwall retreating, Horizon mining, Strip mining and Miscellaneous mining.

UNIT - IV

Geochemical Prospecting: Metallic Mineral Deposits, Geochemical Field Techniques, Techniques used in Geobotanical Survey, Geochemical methods for Petroleum and Natural Gases Exploration – Ore Dressing: Crushing, Grinding, Sizing, Concentration; Washing and Scrubbing, Gigging, Tabling, Magnetic Separation, Electrostatic Separation – Flow Sheets: Chromite Gold, Copper and Lead and Zinc.

Course Outcomes

1. Confirm mining rules and regulations
2. Able to determine suitable mining methods
3. Analyse different ores and ore beneficiation processes.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	M	H	H	M	M	H	M	L	L
CO2	H	H	H	M	H	H	M	M	H	M	L	L
CO3	H	H	H	M	H	H	M	M	H	M	L	L

Textbooks/Reference Books:

1. Abbas & Abbasi - Reneawable Energy Resources & their Implication. (Prentice Hall India)
2. Arogyaswamy, R.N.P. (1994): Course in Mining Geology. Oxford IBH– New Delhi.
3. Gupta, H.K., and Rastogi, B.K. (1976). Elements of Mining Technology Dhanbad publishers, Dhanbad.
4. Mckinstry, H.E. (1980). Mining Geology, Prentice Hall, N.Y.
5. R.W. Marjoribanks (1997). Geological methods in Mineral Exploration and Mining, Chapman & Hall, London.

PRACTICAL:

1. Identification of anomaly
2. Concept of weighted average in anomaly detection
3. Geological cross-section
4. Models of reserve estimation
5. Study of existing mine plans and sketches

GENERIC ELECTIVE: GEO. 403b

DIGITAL IMAGE PROCESSING

Course Learning Objectives

1. To introduce the concepts of image processing and basic analytical methods to be used in image processing
2. To familiarize students with image enhancement and restoration techniques
3. To develop the capability to use GPS and DGPS instruments and technology

UNIT – I

Digital Number/pixel value - Image Rectification - Types of errors (Geometric, Radiometric and Atmospheric errors) – Corrections (Geometric, Radiometric and Atmospheric) – Image resampling – Resampling techniques - Computation of radiance and reflectance

UNIT – II

Image Registration - Image Enhancements, Spatial Enhancement, Radiometric Enhancement, Spectral Enhancement, Principal Component Analysis – Image Classifications: Digital Supervised classification, Unsupervised classification - Reclassification Processing and Feature Extraction – Data merging.

UNIT – III

Basic concepts of Global Navigational Satellite Systems (GNSSs) – Principle of GPS – Components of GPS - Source of GPS Errors and biases, Advantages and disadvantages of GPS surveying – GPS positioning types – Absolute positioning- Applications of GPS

UNIT – IV

Differential positioning – DGPS Measuring Techniques (Static, Rapid Static, Kinematic, Real Time Kinematic), Application of DGPS.

Course Outcomes

1. Analyze images in the frequency domain using various transforms.
2. Evaluate the techniques for image enhancement and image restoration.
3. Use GPS and DGPS techniques to various projects

Textbooks/Reference books:

15. Seigal, B.S. and Gillespie, A.R., 1980: Remote sensing in Geology, John Wiley & Sons, 1980.

PRACTICAL:

1. Reading and Displaying satellite data from BIL, BSQ and BIP Formats
2. Generating False Colour Composite (FCC)
3. Extracting area of Interest (AOI)
4. Generating Histogram of various bands
5. Georeferencing the base image
6. Geometric correction of satellite image
7. Enhancement using different Filtering techniques,
8. Unsupervised Classification and Supervised Classification
9. Change detection study

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

GENERIC ELECTIVE: GEO. 403c

WATER RESOURCES MANAGEMENT

Course Learning Objectives

1. To introduce the fundamentals of groundwater flow
2. To learn the hydraulics of various types of wells
3. To develop the skills to conduct groundwater investigations
4. To understand the impacts of seawater intrusion

UNIT- I:

Hydrologic cycle; Hydrological properties of rocks - Types of Aquifers: Unconfined, Confined, Semi Confined & Perched-Groundwater movements: Sub surface movement, Base flow, Effluent flow and influent flow - Darcy's law, Reynold's number, Laminar flow and turbulence flow.

UNIT - II

Pumping test: Objectives, layout of the test and measurements - Pumping Tests Methods, Estimation of T & S by Theis, Jacob and Theis Recovery, Methods, Specific Capacity Method by Slither's Method

UNIT - III

Water level fluctuation: Water Table fluctuations and causative factors; Water table and Piezometric surface and its fluctuations - Water Table Contour maps - Well types, drilling methods

UNIT - IV

Surface investigation of groundwater - Subsurface investigation of groundwater - Artificial recharge of groundwater: Concept and methods - Saline water intrusion in aquifers: Saline water intrusion, Ghyben – Herzberg relation between fresh and saline water, Prevention and control of salt water intrusion in the coastal aquifers.

Course Outcomes

1. Explain the distribution of groundwater
2. Estimate the yield of the wells
3. Assess the quantity and quality of groundwater

Textbooks/Reference Books:

1. Groundwater Hydrology by Todd, D.K. John Wiley & Sons. New York.
2. Hydrogeology by Karanth, K.R., Tata McGraw Hill Publ Co New Delhi.
3. Ground water assessment, Development and Management by Karanth K.R. Tata, McGraw Hill Publ. Co. New Delhi.
4. Keller, E.A., 1978. Environmental Geology. Bell and Howell, USA.

20. Tolman, C. (1972). Groundwater, McGraw Hill Book Company.
21. Walton, W.C. (1970). Groundwater Resource Evaluation, McGraw Hill Book Company.

PRACTICAL:

1. Problems on Hydrological properties of rocks
2. Finding groundwater flow direction
3. Prepare groundwater level contours
4. Calculation of drawdown
5. Calculate yield of a well
6. Calculation of lag time

CO – PO Mapping:

MULTIDISCIPLINARY COURSE: GEO. 405

ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT

Course Learning Objectives

1. To impart knowledge on concept of environmental impact assessment
2. To prepare the database for planning and management of EIA
3. To develop the skills to prepare mitigation measures
4. To understand the Various Acts related to Environment audit

UNIT - I

Concept and Scope of EIA – Elements and methodologies of EIA – Classification of environmental parameters – Public participation in environmental decision making process – Planning and management of EIA – Criteria for the selection of EIA methodology

UNIT- II

Procurement of relevant soil quality data, impact prediction, assessment of impacts significance, Identification and incorporation of mitigation measures

UNIT- III

Procurement of relevant Air, Wild life and other Ecosystem quality data, impact prediction, assessment of impacts significance, Identification and incorporation of mitigation measures

UNIT - IV

Need of Environmental audit – Importance of environmental legislation – Classification of environmental audit – Audit data and report - The Air Act – The Environmental Protection Act – The water Act – Wild life Act - Case studies.

Course Outcomes

1. Explain and evaluate the EIAM report
2. Estimate the cost benefit ratio of a project
3. Assess the risks and impacts of a project
4. Identify suitable EIA methodology

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H	H	H	H	H	H	M	M	H	M	M	L

OPEN ELECTIVE: GEO.407a

FUEL GEOLOGY

Course Learning Objectives

8. To impart knowledge about the origin, composition and accumulation of petroleum; reservoir rock types and reservoir traps.
9. To know geology of oil bearing basins of India, position of oil and gas in India and future prospects and economic scenario.
10. To educate about the coal characteristics, geographical distribution of coal and detailed geology of coal fields of India.
11. To enlighten about the occurrence and association of atomic minerals, methods of prospecting and Nuclear power stations country and future prospects.

UNIT- I:

Petroleum: Composition – nature - origin: inorganic and organic theories - migration (primary and secondary) and accumulation of oil and gas - Geographic locations - petroleum reservoir rocks - Reservoir rock types, Geological age of reservoir rocks - Reservoir traps - Classification of traps, anticlinal theory - Structural traps caused by folding, faulting and fracturing.

UNIT- II:

Primary stratigraphic traps - Fluid traps, Salt domes, Salt plugs, Cap rocks and association traps: Origin, reservoir conditions - Oil bearing basins of India - Geology of the productive oil fields of India - Position of oil and natural gas in India - Future prospects and economic scenario.

UNIT- III:

Coal: Definition, origin, sedimentology of coal bearing strata - Rank, grade and type of coal - Chemical characterization: Proximate and ultimate analysis - Coal forming epochs in the geologic past - Geological and geographical distribution of coal in India - Detailed geology for important coal fields in India.

UNIT- IV:

Atomic minerals: Mode of occurrence and association of atomic minerals in nature - Atomic minerals as source of energy - Methods of prospecting and productive geological horizons in India - Nuclear power stations of country and future prospects - Atomic fuels and environment.

Course Outcomes

1. The course offers a detailed study about natural fuels like coal and petroleum their formation and distribution especially in sedimentary basins.
2. Students shall benefit to have basic ideas about formations, nomenclature in constitution of coal working detail of distribution of coals and coal industry in India, Sufficient idea offormation and entrapment of oil and gas.
3. Get elaborate knowledge about occurrence of atomic minerals in nature, methods of prospecting, atomic fuels and environment.

NATURAL HAZARDS AND DISASTER MANAGEMENT

Course Learning Objectives

1. To understand the origin and types of disasters
2. To Compare hazards, disasters and associated natural phenomena and their interrelationships, causes and their effects
3. To build skill to respond to disasters

UNIT - I

Natural Hazard - definition - Earth's processes: catastrophic geological hazards: study of floods, Landslides, Earthquakes, Volcanism and avalanches – with a view to assess the magnitude of the problem, prediction and perception of the hazards - Laws and regulations towards hazard management.

UNIT - II

Earthquakes: Definition - seismic waves, intensity and magnitude, Richter scales, Seismograph, seismogram, seismicity in Indian region, mitigation measures and management, Preparation of seismic hazard map – **Tsunamis:** Causes, General characteristics, Predictability, effects, Possible Risk Reduction Measures – **Volcanoes:** Definition, types, mitigation measures and management - **Avalanche:** Definition, types, mitigation - **Flood:** Definition, causes, vulnerable zones in India, Mitigation measures and management

UNIT - III

Coastal Hazards: Introduction, Coastal Processes, Coastal erosion, mitigation measures and management - **Landslides:** Types, Causes and mechanism, Vulnerable zones in India, mitigation measures and management – **Cyclone:** Definition, Causes, Vulnerable zones in India, mitigation measures and management - **Soil erosion:** Soil formation, Soil classification, Factors influencing Soil erosion, Hazards of Soil erosion – **Drought:** Types, Mitigation Measures.

UNIT - IV

Pre-planning for a Disaster: Internal Actions, External Actions – Eliminating, minimizing and shifting risks – Developing an Action plan – Developing the written plan – Effective Communication – Selecting the right people – Training for Success – Media control - Shareholder factor – **After a Disaster**; Minimizing the Damage – Governmental reactions – Disaster Preparedness Assessments.

Course Outcomes

1. Identify the natural and environmental disasters, its causes and apply preventive measures.
2. Adopt the laws and regulations towards hazard management
3. Able to prepare controls of mitigating toward natural disasters.

Textbooks/Reference Books:

1. K. S. Valdiya, 2013: Environmental Geology, McGraw Hill Education (India)
2. D. Collins Larry, R. and Schneid Thomas, D., 2000: Disaster Management and Preparedness, Taylor and Francis.
3. Goel, S.L. and Kumar Ram, 2000: Disaster Management, Deep and Deep Publications.
4. Living with Risk: A global review of disaster reduction initiatives, 2004 Vision, United Nations.
5. Parasuraman, S., 2004: India Disasters Report: Towards a Policy Initiatives, Oxford University Press.

CO – PO Mapping:

POs → COs↓	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	M	L	M	H	M							
CO2	M	L	M	M	M							
CO3	M	L	M	M	M							
CO4	H	L	H	H	H							

H: High; M: Medium; L: Low

PRACTICAL I – GEO.404P:

HYDROGEOLOGY AND ENGINEERING GEOLOGY, MINERAL EXPLORATION AND ORE BENEFICIATION & MINING GEOLOGY / DIGITAL IMAGE PROCESSING / WATER RESOURCES MANAGEMENT

Course objective:

1. To determine the hydrogeological aspects of aquifers
2. To estimate the ore reserves, mineable waste, and grade.
3. To understand the topographic sheets and mining plans
4. To analyse the remote sensing data and suitability of building stones

Course Outcomes: Students will be able to:

1. Prepare and analysis of hydrographs
2. Interpret the topographic sheets remote sensing data for mineral exploration.
3. Analyse the water quality data and mining plans
4. Prepare the mining plans and geological reports for engineering constructions

HYDROGEOLOGY AND ENGINEERING GEOLOGY

1. Simple numerical problems related to: determination of permeability, Groundwater flow, Well hydraulics etc.
2. Preparation and interpretation of water level contour maps and depth to water level maps.
3. Study, preparation and analysis of hydrographs for differing groundwater conditions
4. Water potential zones of India (map study).
5. Graphical representation of chemical quality data and water classification (C-S and Trilinear diagrams).
6. Topomap study on topographic environment for ideal site and route selection for (i) Dams (ii) Reservoirs (iii) Canal alignment (iv) Check dams (v) Flood water storage, (vi) Ghat roads
7. Preparation of Merits, demerits & remedial measures based up on geological cross sections of project sites
8. Identification of building stones and rock metal and study for physical and engineering properties

MINERAL EXPLORATION AND ORE BENEFICIATION:

1. Preparation of Geological cross section based on Borehole data;
2. Laying down of stripping boundary on geological cross sections;
3. Calculation of geological and mineable ore reserves, mineable waste, and grade.
4. Interpretation of remote sensing data for mineral exploration.

5. Preparation of mineral maps of India,
6. Graphical representation of production, export and import of important minerals.

MINING GEOLOGY:

1. Identification of anomaly
2. Concept of weighted average in anomaly detection
3. Geological cross-section
4. Models of reserve estimation
5. Study of existing mine plans and sketches

DIGITAL IMAGE PROCESSING:

1. Reading and Displaying satellite data from BIL, BSQ and BIP Formats
2. Generating False Colour Composite (FCC)
3. Extracting area of Interest (AOI)
4. Generating Histogram of various bands
5. Georeferencing the base image
6. Geometric correction of satellite image
7. Enhancement using different Filtering techniques,
8. Unsupervised Classification and Supervised Classification
9. Change detection study

WATER RESOURCES MANAGEMENT:

1. Problems on Hydrological properties of rocks
2. Finding groundwater flow direction
3. Prepare groundwater level contours
4. Calculation of drawdown
5. Calculate yield of a well
6. Calculation of lag time

PRACTICAL II – GEO.406P: GEOLOGICAL FIELD SURVEY AND TRAINING PROGRAMME

Course objectives:

1. To provide basic knowledge on yield test of a bore well
2. To identify suitable sites for the construction of bridge , dam and other construction sites
3. To understand mining procedures and processes
4. To suggest suitable mining operations in open cast and underground mining

Course Outcomes: Students will be able to:

1. Select pumping wells and observation wells for yield test
2. Identify and Justify the suitable sites for construction of an engineering structures
3. Analyze the mining operations
4. Prepare the field report based on the ground truth verifications

Exercises

1. To carryout yield test of a bore well in the field.
2. Collection of water level data of various wells in the field.
3. Visit to a dam or a bridge or any other major engineering structures to understand the geological conditions in and around the engineering structures.
4. Visit to open cast or underground ore forming rock mining areas to understand the mining operations.
5. Preparation of field report (draft) incorporating the above said geological characteristics in the field.

MODEL QUESTION PAPER

(*Revised syllabus w.e.f. 2021 – 2022 for campus students*)

M.Sc. DEGREE EXAMINATION – 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER I - GEO.101: CRYSTALLOGRAPHY AND MINEROLOGY

Time: 3hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Twinning in crystals.
2. Symmetrical Elements.
3. Optical Anomalies.
4. Birefringence.
5. Chain Silicates.
6. Polymorphism.
7. Petrogenesis of Iron
8. Explain physical properties of Tourmaline

SECTION – B

Answer ALL questions. All Questions carry equal marks ***4 X 15 = 60 M***

9. a) Derivation of 32 crystal classes

(or)

b) What is twinning in crystals? Explain types of twinning in crystal systems.

10. a) Describe and briefly explain uniaxial and biaxial figures.

(or)

b) Briefly explain Fresnel's ellipsoid with neat sketch.

11. a) Describe briefly the silicate structures with neat sketches.

(or)

b) Physical and optical properties of pyroxene Group.

12. a) Briefly explain the physical, chemical characters and petrogenesis of the Lead and Zinc ore minerals.

(or)

b) Briefly explain the physical, chemical characters and petrogenesis of the Copper ore minerals.

.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER II – GEO.102: IGNEOUS PETROLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Bowen's Reaction Principles
2. Fractional Crystallization
3. Columnar Joints
4. Irvine – Baragar Classification
5. Gibbs Phase Rule
6. Lever Rule
7. Komatite
8. Kimberlites

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Describe the Origin, characteristics and types of magma

   OR

   b) Explain the Magmatic differentiation processes

10. a) Describe briefly the Igneous rock classifications

    OR

    b) Describe the textures of Igneous rocks with neat sketches

11. a) Describe the application of phase rule to the Unicomponent system

OR

b) Explain the phase equilibrium in the Di-Fo-Si system.

12. a) Give a note on Petrogenetic Significance of Igneous textures

OR

b) Explain the petrography and petrogenesis of Basalt

.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.103a: STRUCTURAL GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Stress ellipsoid
2. Types of Deformation
3. Recumbent and Isoclinal Folds
4. Types of faults on the basis of Rake of the net slip
5. Genetic classification of Joints
6. Types of Schistosity
7. Types of Shear zones
8. Porphyroclasts

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain in detail the Mechanics of Plastic deformation

   OR

   b) Discuss the Experimental data on Failure by Rupture

10. a) Describe the nomenclature of folds with neat sketches

    OR

    b) Explain the Criteria for recognition of faults in the field

11. a) Define Unconformity and Explain different types of Unconformities with sketches

    OR

b) Discuss relation of Cleavage and Schistosity to major structures

12. a) Explain how to Determine Sense of Shear from Pressure Shadows and Fibres

OR

b) Describe the Foliation patterns in shear zones

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER III - GEO 103 b: FUNDAMENTALS OF GEOPHYSICS

Time: 3 hrs **Max.Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Gravity potential
2. The law of Universal Gravitation
3. Seismic waves
4. Brief note on Geomagnetism
5. Electromagnetic Noise
6. Briefly explain the Electrical Properties
7. Define Apparent Polar Wandering
8. Self-Potential log.

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Enumerate the Interpretation of Gravity Anomalies

OR

b) Explain the Seismic Reflection Surveying

10. a) Write a note on Bouguer gravity anomalies. Describe the applications of Gravity method

OR

b) Give a brief account on Magnetic Surveying Instruments

11. a) Explain in detail the Vertical Electrical Sounding (VES) Method with neat sketch

OR

b) Explain the Constant separation traversing interpretation method with diagram

1. a) Explain in detail the drilling and its effects on the formations

OR

b) Give an account on Resistivity and Radioactivity logs.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER III - GEO 103c: MICROPALAEONTOLOGY AND OCEANOGRAPHY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Scope of Micropalaeontology
2. Sampling techniques of Microfossils
3. Brief morphology of Benthic Foraminifera
4. Application of Foraminifera in Paleobathymetric reconstruction.
5. Brief morphology of Radiolaria
6. Conodonts
7. Salinity in ocean waters
8. History of development of Oceanography

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Give a brief note on the field and laboratory techniques in the study of microfossils

OR

b) Write a brief note on the concepts and methods useful in the environmental changes and Biostratigraphic correlation

10. a) Discuss the significance of Foraminifera in oceanic biostratigraphy interpretations.

OR

b) Give an outline of morphology and wall structure of Ostracoda and environmental significance.

11. a) Discuss the modern biogeography of Diatoms and application in biostratigraphy

OR

b) Explain the application of microfossils in hydrocarbon exploration

12. a) Brief the history of development of Oceanography and explain the methods of measuring properties of sea water.

OR

b) Explain the concept of Thermohaline and formation of bottom waters.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.104a: GEOMORPHOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Fundamentals of Geomorphic Concepts
2. Describe the formation of Soils
3. Explain Valley formation and Valley development
4. Role of lithology in evolution of landforms
5. Fluvial erosional land forms
6. Origin of Barrier Reefs and Atolls
7. Write a note on Buried land forms
8. Significance of Geomorphology in Economic Geology

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain the Geomorphic significance of Weathering and describe major soil groups

   OR

   b) Describe Mass Wasting and its significance in geomorphology

10. a) Give a brief note on Fluvial Geomorphic Cycle

    OR

    b) Explain types of Drainage Patterns with neat sketches

11. a) Explain the depositional features of Glaciers with neat sketches

    OR

b) Describe in detail the topography of Deep Sea Floors

12. a) Define Palaeogeomorphology and describe its characteristic features

OR

b) Give a detailed account on Application of Geomorphology to Oil Exploration

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER IV - GEO 104b: METEOROLOGY AND CLIMATE CHANGE

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Define Meteorology and explain scales in Meteorology
2. Energy Spectra of Sun and Earth
3. Composition of Atmosphere
4. El Nino
5. Climatology
6. Green House effect
7. Changes in Solar Radiation
8. Sea level changes

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain the branches of Meteorology and its applications

   OR

   b) Give a detailed note on Earth's Radiation Balance

10. a) Define El Nino and explain its events and consequences

    OR

    b) Explain the Weather Forecasting methods

11. a) Explain the effects classification of Climate

OR

b) Give an account on Climatic changes through geological time

12. a) Explain the causes of Climatic change

OR

b) Give a detailed note on impact of climate change

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FIRST SEMESTER

SUBJECT: GEOLOGY

PAPER III - GEO 104 c: ENERGEY RESOURCES

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. nergy and its Uses
2. Solar Radiation
3. Impact of metamorphism on Coal
4. Physical and Optical properties of Coal
5. Composition and Physical characteristics of Petroleum
6. Origin of Petroleum
7. Geochemistry of Uranium
8. Usage of Nuclear Energy

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Give an account on Hydropower energy and technology

   OR

   b) Explain the Wind resource and Wind power technology

10. a) Explain in detail the classification of Coal

    OR

    b) Describe in detail the Coal resources of India

11. a) Explain the effects of geological agents on the properties of Reservoir rocks

    OR

b) Give an account on Entrapment of Petroleum

12. a) Give an account on geochemical abundance of radioactivity in crustal rocks

OR

b) Give a detailed note on nuclear raw material resources of India

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER I – GEO.201: SEDIMENTARY PETROLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Brief note on Origin of Sedimentary Rocks
2. Fundamentals of Fluid Flow
3. Explain factors to determine the Shape of the grains in Sedimentary rocks
4. Ripple Marks
5. Classification of Sandstones
6. Concept of Sedimentary facies
7. Sediments of Tide dominated Shelves
8. Mechanisms of Basin formation

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Describe the Sedimentary processes

   OR

   b) Explain the process of Particle Transport by Sediment Gravity Flows.

10. a) Explain the techniques used in Measuring the Size of the Siliciclastic grains

    OR

    b) Describe the classification of Sedimentary rocks based on Stratification and Bedforms.

11. a) Explain the Diagenesis of Carbonate Sedimentary rocks

    OR

    b) Explain in detail the Depositional Environment of Fluvial Systems

12. a) Explain the Depositional setting, Sedimentary processes and Sediment characteristics of Carbonate deposits

OR

b) Give a Brief note on Sedimentary Basins in India

MODEL QUESTION PAPER

(Revised Syllabus w.e.f.2021-2022 for campus Students)

M.Sc., DEGREE EXAMINATION-2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER II – GEO.202: STRATIGRAPHY AND PALAEONTOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Lithostratigraphy
2. Biostratigraphy
3. Economic importance of Vindhyans
4. Indo-Gangetic alluvium
5. Concept of Taphonomy
6. Mode of preservation of fossils
7. Uses of microfossils
8. Palaeoclimatic interpretation

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9 a) Give an account of recent developments in stratigraphic classification and it's nomenclature

(OR)

b) Write an essay on Archaean cratonic nuclei of Peninsular India

10 a) Brief an account of classification, lithology, structures and it's fossil content with economic importance of Cuddapahs

(OR)

b) Write an essay on phanerozoic Stratigraphy of India

11 a) Describe the morphological characters and time range of evolutionary trends in Trilobites

(OR)

b) Briefly explain the fossil record and geological time scale

12 a) Write an essay on role of foraminifera in hydrocarbon exploration

(OR)

b) Give an account of environmental significance of fossils and trace fossils

.

MODEL QUESTION PAPER

(Revised Syllabus w.e.f.2021-2022 for campus Students)

M.Sc., DEGREE EXAMINATION-2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.203a: GEOCHEMISTRY AND ISOTOPE GEOLOGY

Time: 3 hrs **Max. Marks:80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks 4 X 5 = 20 M

1. Scope of Geochemistry
2. Geochemical principles
3. Structure of Atmosphere
4. Applications of Trace elements
5. Cosmic abundance of elements
6. Mantle reservoirs
7. Sulfur Isotopes
8. Dating method of K-Ar

SECTION – B

Answer ALL questions. All questions Carry equal Marks 4 x 15 = 60 M

9. (a) What are Meteorites? Give a detailed account on the classification and mineralogy of Meteorites.

Or

(b) Describe the Geochemical classification of elements.

10. (a) Explain the structure, composition and characteristics of atmosphere.

Or

(b) Write an essay on principles of equilibrium Rayleigh fractionations.

11. (a) Give an account of Geochemical evolution of Earth?

Or

(b) Briefly explain the distribution of major, minor and trace elements in crust and mantle.

12. (a) What are stable Isotopes? Describe the carbon and sulfur Isotopes. Add a note on its importance in the Geological studies.

Or

(b) What is radioactivity? Write a detailed note on Rb-Sr and K-Sr systems.

MODEL QUESTION PAPER

(Revised Syllabus w.e.f.2021-2022 for campus Students)

M.Sc., DEGREE EXAMINATION-2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.203b: MARINE GEOLOGY

Time: 3 hrs **Max. Marks:80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Turbidity currents
2. Features of Wave erosion
3. Evolution of Beaches
4. Evolution of terrestrial shorelines
5. Sea-floor Spreading
6. Trenches
7. Types of Marine sediments
8. Gas Hydrates

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. (a) Explain the coastal zone morphology.

   Or

   (b) Describe the Deep sea morphology

10. (a) Explain the Evolution of Headlands and Bays

    Or

(b) Describe the evolution and classification of Sea coasts.

11. (a) Explain in detail the causes of marine transgression and regression

Or

(b) Describe the origin and distribution of Ocean basins

12. (a) Write an essay on marine mineral resources

Or

(b) Explain the coastal zone regulations in India

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.203c: COMPUTER APPLICATIONS AND GEOSTATISTICS

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks 4 X 5 = 20 M

1. what is mail merge
2. write four short cuts in word
3. What are types of Databases
4. Name some open source software used in Geology
5. Mean
6. Median
7. Standard Deviation
8. Sampling plan

SECTION – B

Answer ALL questions. All questions Carry equal Marks 4 x 15 = 60 M

9. a) List the steps for formatting of text and tables MS Word.

OR

b) Explain the steps to prepare a chart in Excel using with assumed monthly rainfall data of two rain guage stations for ten years

10. a) Discuss the characteristic properties of a database

OR

b) Write the uses of some software's used in geological investigations

11. a) What are the characteristics of a frequency curve? Applications of cumulative frequency curves

OR

b) Define a frequency distribution. Write the importance of frequency distribution

12. a) Differentiate the Skewness and Kurtosis

OR

b) Write the characteristics of grid sampling and stratified sampling

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.204a: REMOTESENSING AND GIS

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Side lap and overlap.

2. Mosaic.

3. EMR.

4. Atmospheric Windows.

5. Remote sensing satellites.

6. Active and Passive remote sensing.

7. Raster and Vector data.

8. Elements of GIS.

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain aerial photography, mosaicing of aerial photographs, and stereoscopy.

(OR)

b) Recognition elements of Aerial photographs with reference to geology.

10. a) Interaction of EM radiation with atmosphere.

(OR)

b) Explain briefly about the atmospheric window regions useful for remote sensing.

11. a) Give a detail account of different remote sensing platforms and their limitations .

(OR)

b) Applications of Remote sensing techniques in Ground water Exploration.

12. a) Explain various kinds of GIS data.

(OR)

b) Give an account of open source GIS software's and their applications.

MODEL QUESTION PAPER

(Revised Syllabus w.e.f.2021-2022 for campus Students)

M.Sc., DEGREE EXAMINATION-2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.204b: ENVIRONMENTAL GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Concept of Environmental geology
2. Ecology for geologists
3. Earthquake magnitude
4. Types of volcanoes
5. Effects of landuse changes due to rivers
6. Types of landslides
7. Water pollutants
8. Sources of air pollutants

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. (a) Describe in detail the relationship of Geology and Biodiversity

   Or

   (b) Write an essay on global climatic changes and hazards.

10. (a) Explain the earthquake processes, risk and mitigation measures.

    Or

    (b) What is Tsunami? Explain its prediction and hazards

11. (a) Describe the river flooding and Geomorphological changes

Or

(b) Write in detail about the coastal hazards

12. (a) Explain the water pollution processes and waste water treatment

Or

(b) Explain industrial air pollution, risk assessment and measures of control

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

SECOND SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.204c: GEMOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Scope of Gemology

2. What is a Gem?

3. Describe Importance of colours in Gemstones

4. Discuss the presence of inclusions in Gemstones

5. Impregnation in gemstones

6. Physical properties of gemstones

7. Polymorphs of Carbon

8. Medicinal uses of Gems

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Write an essay on distribution of Gemstones in India

(OR)

b) Give an account of Gem- bearing stratigraphic Units in India

10. a) Briefly explain the Virtues of gemstones

(OR)

b) Discuss about Processing of gemstone

11. a) Write an essay on Determination of various physical properties in the laboratory

(OR)

b) Explain Enhancement methods

12. a) Write about Mineral Chemistry, structures and colour variations in Diamond

(OR)

b) Uses of gemstones in jewellery, medicine, health and customs

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER I – GEO.301: METAMORPHIC PETROLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Limits of Metamorphism
2. Kinds of Metamorphism
3. Mineralogical Phase Rule
4. Zones of Metamorphism
5. Contact Metamorphic Facies
6. Blueschist Facies
7. Describe Formation of Wollastonite
8. Role of CO_2 in Very low-grade Metamorphism of Mafic rocks

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Describe the role of Agents in Metamorphism

   OR

   b) Describe the textures of metamorphic rocks with neat sketches

4. a) Explain the classification and description of Metamorphic Facies.

   OR

   b) Describe the construction and plotting of mineral paragenesis in ACF diagram

5. a) Describe the Contact metamorphic Facies

OR

b) Explain the genesis of Granulites

12. a) Explain the Metamorphism of ultramafic MgO-SiO_2-CO_2-H_2O System.

OR

b) Explain the Metamorphism of Pelites at Very-low and Low-Grade metamorphism

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER II – GEO.302: ECONOMIC GEOLOGY AND MINERAL ECONOMICS

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Sublimation.

2. Mechanical concentration.

3. Metallogenic epochs.

4. Objectives of UNFC Classification.

5. Copper deposits of Andhra Pradesh.

6. Economic significance of Mangampeta.

7. Objectives of National Mineral Policy.

8. Tenor and Grade.

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Classification of mineral deposits with reference to Bateman

(OR)

b) Briefly explain about oxidation and supergene enrichment process with a neat diagram.

10. a) Give a detailed account of UNFC Classification.

(OR)

b) Give a brief note on Mineralization through geological timescale.

11. a) Explain briefly about chromite deposits of India.

(OR)

b) Nature of occurrence, genesis and distribution of Coal and Petroleum deposits in India.

12. a) Explain the role of essential minerals in mineral economics of a country .

(OR)

b) History of National Mineral Policy and its importance.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.303a: WATERSHED MANAGEMENT

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Four objectives of Watershed management
2. Principle of watershed
3. Types of erosion
4. Control methods of erosion
5. Advantages of Rainwater harvesting structures
6. Types of harvesting structures
7. Elements of Watershed management
8. Impact of watershed management

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Discuss the Characteristics of watershed management

   OR

   b) Explain the importance of watershed management

10. a) What is a soil loss equation and discuss in detail

    OR

    b) List the degradation agents of watersheds.

11. a) Write the selection criteria of check dams with neat sketch

    OR

    b) Discuss the role of harvesting structures in groundwater resources

12. a) Discuss the significance of planning and implementation of watershed management

OR

b) Write the multidisciplinary approach of watershed management

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.303b: PHOTOGRAMMETRY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Types of Photographs
2. Stereoscopy
3. Collinearity condition
4. Image measurements
5. Image maching
6. Epipolar Geometry
7. Explain GPS
8. Pass points for Aerotriangulation

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Note on basic concepts of Photogrammetry. Explain planning and Execution of Photographic flights.

   OR

   b) Describe in detail the elements of aerial photo interpretation.

10. a) Explain Collinearity and Coplanarity conditions in Photogrammetry

    OR

    b) Give a brief note on various analytical orientations

11. a) Define Digital photogrammetry. Explain the generation of Digital Orthophoto.

    OR

    b) Discuss the applications of Digital Photogrammetry in GIS.

12. a) Describe the Ground control surveys by GPS.

OR

b) Write an essay on principles of LIDAR and its applications.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.303c: DIMENSIONAL STONES AND CONSTRUCTION MATERIALS

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Meaning of Dimensional stones
2. Types of natural stones
3. Dimensional stones in Rayalaseema Region
4. Some examples of Dimensional stones
5. Conservation of commercial rock Deposits
6. Construction Materials
7. Stress and Strain in Rocks
8. Stress curve

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x15 = 60 M***

9. (a) Write an essay on criteria for selection of Dimensional stones.

Or

(b) Describe the importance of Dimensional stones Archaeological monuments.

10. (a) Briefly explain the various types of the Dimensional stones in Andhra Pradesh and Telangana

Or

(b) Write an essay on export and import qualities of Dimensional stones in India.

11. (a) Briefly explain the Ornamental and Construction materials in Indian History.

Or

(b) Distribution of Building Materials in Andhra Pradesh.

12. (a) Explain the Engineering Properties and Behaviour of the Rocks.

Or

(b) Write an essay on Mohr's circle and Stress Transformation.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.305: SURVEYING AND FIELD GEOLOGY

Time: 3 hrs **Max. Marks: 40**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks 4x 3 =12M

1. Types of scales
2. Principle of surveying
3. Classification of levelling
4. Scale in theodolite
5. Basic field kit for geologists
6. List of uses with clinometer
7. Elements of aerial photographs
8. Importance of geological report

SECTION – B

Answer ALL questions. All questions Carry equal Marks 4 x 7 = 28 M

9. a) What are the sources of errors in chain survey? What precautions would guard against them?

OR

b) Enlist the obstructions in a compass survey and explain the methods to overcome them.

10. a) How would you set up plane table at a station? Explain the various steps of setting.

OR

b) Explain in detail the temporary adjustments of a dumpy level

11. a) Write the uses of field kit for geologist. Discuss the procedure of sampling Procedure and field note preparation.

OR

b) List the basic elements to be noted and measured in the field for various geological surveys.

12. a) What is a base? Discuss the structural elements useful in geological projects

OR

b) Discuss the scale of aerial photographs and their applications

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

THIRD SEMESTER

SUBJECT: GEOLOGY

PAPER V – GEO.308a: EARTH SYSTEM PROCESSES

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Meteorites
2. Seismic waves
3. Sea waves
4. Tsunami
5. Land form
6. Unconformity
7. Global warming
8. Atmosphere

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Write an essay on classification and types of Meteorites

(OR)

b) Describe the theory of Plate tectonics

1. a) Explain in detail the geological work of seas

(OR)

b) Define Tsunami. Explain its causes and mitigation measures

2. a) Define a fault, write an essay on the classification of faults

(OR)

b) Define a glacier. Discuss the types and geological activities of glaciers

12. a) Write an essay on global warming and its mitigation.

(OR)

b) Write an account of the composition and structure of atmosphere

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER V - GEO.308b: MEDICAL GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Natural distribution of elements
2. Rock weathering and soil formation
3. Skeletal fluorosis
4. Effect of water hardness on human health
5. Iodine cycle in drinking water
6. Nitrates and its health effects
7. Environmental medicine.
8. Mineralogy of bones

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain the weathering processes and products. Give a note on fundamental relationship between human health and geological processes

OR

a) Write an essay on natural distribution and abundance of elements

10. a) Explain the Geochemical basis for tropical endomyocardial fibrosis (EMF)

OR

b) Discuss the WHO and BIS standards of drinking water of Radon, Arsenic and Fluoride

11. a) Explain the Iodine cycle and give a note on Iodine Deficiency Disorders

OR

b) Write an essay on Bioavailability of elements in soils.

12. a) Give a note on techniques and tools in GIS on human health studies

OR

b) Explain the Histochemical and Microprobe Analysis in Medical Geology

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER I – GEO.401: HYDROGEOLOGY AND ENGINEERING GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Infiltration and Transpiration
2. Darcy's law
3. Vertical Electrical Sounding
4. Well logging
5. Physical characters of Building stones
6. Types of Dams
7. Briefly explain seismicity in India
8. Geological considerations for the construction of Bridges

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Explain the hydrological properties of rocks

(OR)

b) Describe in detail the occurrence and vertical distribution of groundwater

10. a) Explain the Electrical Resistivity method of groundwater exploration

(OR)

b) Discuss the characteristic features of Conjunctive use of groundwater

11. a) Describe the engineering properties of rocks

(OR)

b) Discuss the geological considerations for the selection of site for the dam construction

12. a) Discuss the geological conditions for the foundation and design of buildings

(OR)

b) Give a detailed note on problems of groundwater in engineering projects

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER II – GEO.402: MINERAL EXPLORATION AND ORE BENEFICIATION

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Renewable resources
2. Mineralogical guides to locate resources
3. Objectives of mineral exploration.
4. Describe types of drills
5. Methods of sampling
6. Magnetic method of mineral exploration
7. Ore controls and guides
8. Physical and chemical controls of ore fluids.

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Write an essay on conservation of minerals

   Or

   b) Explain the role of structural guides to locate the mineral resources

10. a) Briefly explain the Geobotanical methods of surface and sub surface explorations on different scales.

    Or

    b) Give a detailed an account of various types of drilling

11. a) Write a detailed note on seismic methods of mineral exploration

    Or

    b) Write an essay on calculations of statistical method

12. a) Write an essay on metallogenic epochs and provinces with special reference to India.

    Or

    b) Briefly explain the Ore beneficiation processes

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.403a: MINING GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Definition of mining.
2. Mining lease and regulations.
3. Rotary Drills
4. Bore hole logging.
5. Alluvial mining.
6. Longwall Advancing.
7. Washing and Scrubbing
8. Magnetic Separation.

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. (a) Write an essay on Mineral Concession Rules, 1960.

Or

(b) Briefly explain the National Mineral Policy in India.

10. (a) Write an essay on various types of drilling methods.

Or

(b) Explain briefly about Drill sampling, Preservation and Sample cares

11. (a) Explain in detail the Open cast mining methods

Or

(b) Write an essay on Coal mining methods

12. (a) Discuss about the various types of Geochemical prospecting methods

Or

(b) Give an account on Ore dressing processes

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.403b: DIGITAL IMAGE PROCESSING

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Atmospheric errors
2. Reflectance
3. Spatial Enhancement
4. Supervised classification
5. Principle of GPS
6. Absolute positioning
7. Source of GPS errors
8. DGPS kinematic measuring

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. (a) Explain the process of Image Rectification

Or

(b) Describe the image resampling techniques

10. (a) Give in detail the image enhancement techniques

Or

(b) Describe in detail the various image classifications

11. (a) Explain Basic concepts of Global Navigational Satellite Systems

Or

(b) Explain the components of GPS and its applications

12. (a) Describe the DGPS measuring techniques

Or

(b) Write an essay on applications of DGPS

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER III – GEO.403c: WATER RESOURCES MANAGEMENT

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Confined and unconfined aquifers
2. Effluent and Influent flows
3. Methods of pumping tests
4. Yield of a well
5. Differentiate water levels and water table
6. Factors influencing the water level fluctuation
7. Why saline water intrusion occurs
8. List the types of rainwater harvesting structures

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Discuss the hydrological properties of rocks

   OR

   b) How many types of aquifers are present and their characteristics?

10. a) Explain the procedure of Theis recovery test

    OR

    b) Explain the procedure of specific capacity method by Slither's method

11. a) What is a Peizometric head? Discuss the factors affecting the Peizometric head

    OR

    b) What are the types of wells and Discuss different drilling methods?

12. a) Discuss various surface investigation methods for groundwater

OR

b) Write the prevention and control methods of salt water intrusion in coastal aquifers.

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER IV – GEO.405: ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Elements of Environmental Impact Assessment and management
2. Concept of EIAM
3. Significance of Soil data in EIAM studies
4. Assessment of impact on soils
5. Significance of Air quality data in EIAM studies
6. Mitigation measures of impact on ecosystem
7. Environmental audit data
8. Air Act

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Classification of environmental parameters in EIA studies

OR

b) Explain the role of public participation in environmental decision making process

10. a) Write the procedure for the Identification and incorporation of mitigation measures in case of Soil quality

OR

b) Write the procedure for impact prediction and assessment of impact's significance done in case of water quality

11. a) Write the procedure for impact prediction and assessment of impact's significance done in case of Air quality

OR

b) Write the procedure for impact prediction and assessment of impact's significance done in case of Ecosystems

12. a) Discuss the classification of environmental audit in detail

OR

b) Write a note on Water act and Environmental protection act

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER V – GEO.407a: FUEL GEOLOGY

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Origin of Petroleum
2. Geographic locations of Petroleum
3. Origin of cap rocks
4. Salt domes
5. Hydrocarbon evaluation
6. Coal petrology
7. Radioactive minerals
8. Occurrence of atomic minerals

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) Write an essay on surface and subsurface occurrence of petroleum and gas

(OR)

b) Describe the migration and accumulation of oil and gas

10. a) Describe various types of stratigraphic traps with neat sketch

(OR)

b) Enumerate the geology of the oil fields in India

11. a) Write an essay on preparation of coal for industrial propose

(OR)

b) Discuss about Indian coal reserves and production of coal in India

12. a) Write a detailed note on Atomic fuels and environment

(OR)

b) Give an account of productive geological horizons of atomic minerals of India

MODEL QUESTION PAPER

(*Revised Syllabus w.e.f. 2021-2022 for Campus Students)*

M.Sc. DEGREE EXAMINATION - 2022

FOURTH SEMESTER

SUBJECT: GEOLOGY

PAPER V - GEO.407b: NATURAL HAZARDS AND DISASTER MANAGEMNET

Time: 3 hrs **Max. Marks: 80**

SECTION – A

Answer any FOUR of the following questions. All questions carry equal marks ***4 X 5 = 20 M***

1. Earthquake Magnitude and Intensity
2. Define Avalanche. Explain the causes of Avalanche.
3. Tsunami
4. Seismic waves and Richter Scale
5. Coastal processes
6. Define Flood and explain its causes
7. Pre-planning for a Disaster
8. Media control in an emergency and Disaster preparedness plan

SECTION – B

Answer ALL questions. All questions Carry equal Marks ***4 x 15 = 60 M***

9. a) List out and Briefly describe different geological hazards

   OR

   b) Discuss the Governing Laws and Regulations towards Hazard Management

10. a) Define Earthquake. Explain its causes, mitigation measures and management

    OR

    b) Define Volcano and explain mitigation measures and management in Volcanic Regions.

11. a) Define Avalanche. Explain its types and mitigation measurements to control the disaster.

OR

b) Discuss causes of Coastal erosion and its mitigation measures and management

12. a) Explain the Pre-planning measures for a disaster management

OR

c) Discuss in detail how to minimize the damage after a disaster.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF HOME SCIENCE

Course

M.Sc. FOOD SCIENCE NUTRITION AND DIETETICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department of Home Science established in the year 1963 as first of its kind in the state of Andhra Pradesh and celebrated golden jubilee in the year 2013. Ms Dorothy M. Pearson, a Canadian Home Scientist was largely instrumental to start the post graduate programmes in Home Science at Sri Venkateswara University, Tirupati. The committed founder stalwarts and the successive faculty members with immense foresight established the pioneering activities of teaching, research and extension in the department. The department from its inception has thrived to offer new insights through academic reforms and outreach activities. The commitment of the faculty has contributed practice based teaching, action research, technology development and extension outreach activities for the development of students. The department stocks eight patents of which two patents awarded. The Ministry of food processing granted 10 crores for the establishment Food testing laboratory with NABL accreditation.

Department Vision

To be a premiere centre for excellence in higher education in the areas of specialization fostering nurturing and building careers for students and to be an apex body playing a pivotal role in planning and monitoring community development.

Department Mission

Empowering students in capacity building skills through teaching, research and extension activities in making socially responsible citizens along with employability.

Department Objectives

- Enable the students to understand the interrelation of Food and Health,
- To foster knowledge across the life span in inter connected Human Development factors to become efficient counselors and early childhood educators
- Develop sensitivity towards the community problems and train the students in Extension and outreach activities.
- To focus on training students in application of techniques to process and preserve the food.

Program Specific Outcomes

S No	Program Specific Outcomes
PSO1	Identify and select sources of credible information in Nutrition and dietetics.
PSO2	Apply and incorporate the principles of nutrition and dietetics in community, hospital and real world situations and problems.

Programme Objectives

- To provide human resource in the field of Food Science, Nutrition and dietetics to cater the needs of the Community at local, regional and National levels.
- To give skill and hands on experience in the thrust areas of the programme and prepare students for research.
- To give training both in theory and practical for higher studies and competitive exams.
- To facilitate by giving quality education for employability, entrepreneurship and skill development.
- To inculcate the corporate social responsibility by profession and personal development there by developing the community by various curriculum and co-curricular activities.
- To conduct field studies, Internship and project work as part of curriculum for developing data base for interventions and further studies and help policy makers to improve the health status of the population in the community.

Programme Outcomes

After successful completion of the program, the student is able to:

S. No	Program Outcomes
PO1	Apply knowledge in Food science nutrition and dietetics to understand the chemical components- nutrients and non-nutrient constituents their physico chemical and functional properties, spoilage, processing, preservation, packaging of different foods. To assess nutritional status of individuals in various life-cycle stages and determine nutrition-related problems and diseases by applying knowledge of metabolism and nutrient functions, food sources, and physiologic systems in community, hospital, and in any situations.
PO2	Identify and understand different problems related to food science, food microbiology, food adulteration and nutritional problems in different stages of life in health and disease- its consequences and dietary management and apply knowledge to tackle these problems.
PO3	Design food products applying the principles of food science and nutrition to meet the challenges of nutritional problems.
PO4	Conduct research in different fields of nutrition using human and animal models, designing new food products, food service establishments.
PO5	Apply appropriate techniques to design, process, preserve, analyze and authenticate the different components of foods and food products.
PO6	Function effectively in different facets as dietitian, quality control systems, food analysts, research and development, food product designing, different food service establishments, and policymaking
PO7	Communicate effectively Nutrition information in person and with community. Acquire skills in writing research report, documentation, case studies, seminar presentations, group discussions, and marketing strategies.
PO8	Describe social and environmental dimensions within nutrition and the life sciences. Able to demonstrate the National and International food laws, regulations and safety standards in application of food additives to ensure safe food.
PO9	Know Professional and social ethics as researcher, dietitian, community mentor, food

	business operator.
PO10	Apply knowledge of Nutrition and food science for sustainable development of the society in terms of socio cultural aspects, attitudes, and practice balanced diet in health and disease, food quality and safety regulations, food adulteration, food safety and hygiene.
PO11	Develop and design their own food business plan in terms of food business operators and food service establishments.
PO12	Learn new concepts of Nutrition science in global perspective and prepare themselves for lifelong learning process.

Programme Educational Objectives (PEO)

To enable students to:

- Understand the relationships between Food Science, Nutrition and Metabolism.
- Gain knowledge on fundamental science involved in Food science, food processing and preservation, food quality, developing diet plans for different age groups and disease conditions.
- Acquire skills in applying knowledge of Food science, Nutrition, and therapeutic nutrition in community and human health.
- Interpret nutritional research through informed knowledge of food science, nutrition and diet therapy in community and health.

CHOICE BASED CREDIT SYSTEM (C.B.C.S), SYLLABUS AND SCHEME OF EXAMINATION

(WITH EFFECT FROM THE ACADEMIC YEAR 2021)

M.SC., FOOD SCIENCE NUTRITION AND DIETETICS (FSND)

I SEMESTER

S.No	Components of the Study	Title of the course	Title of the paper	Credit Hrs/ Week	No. of credit	IA Marks	Sem End Exam Marks	Total
1	Core	FSND 101	Food Chemistry and Analysis	6	4	20	80	100
2	Core	FSND 102	Clinical Nutrition and Dietetics-I	6	4	20	80	100
3	Compulsory Foundation	FSND 103 -A	Food Science and Experimental Foods	6	4	20	80	100
		FSND 103- B	Baking Technology	6	4	20	80	100
4	Elective Foundation	FSND 104 -A	Community Nutrition	6	4	20	80	100

7	FSND 107: Human Values and Professional Ethics-I (Audit course)*			0	0	100	0	0

***Audit Course- Zero Credit under Self Study**

FSND 101: FOOD CHEMISTRY AND ANALYSIS
(COMMON TO M.SC. FOOD SCIENCE NUTRITION & DIETETICS AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES

-To enable the students to:

1. Acquire knowledge on chemical composition of different foods.
2. Understand the physical, chemical, and functional properties of foods.
3. Know the principles and working applications of different analytical techniques associated with food.
4. Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CORE –THEORY

UNIT-I: Water Chemistry and Dispersed Systems

- Water chemistry – Structure of Water, Free, Bound and Entrapped Water.
- Water Activity and Relative Vapour pressure– Definition and measurement, factors affecting water activity, Moisture sorption isotherms, Hysteresis and Moisture Determination.
- Dispersions- Food as dispersed systems, Liquid dispersions.
- Colloids- Definition, Characteristics of Colloids, Gels, Emulsions, Foams.

UNIT-II: Carbohydrates and Lipids

- Carbohydrates – Classification , Structure, Physico – Chemical properties of
- Monosaccharide's-Pentoses, and Hexoses,
- Oligosaccharides – Di Saccharides-Maltose, Lactose, Sucrose – Crystallisation of sugars, Polysaccharides – Starch-Amylose and Amylopectin- Gelatinisation of starches and Hydrolysis of starch, Cellulose and Pectin- Structure and properties.
- Lipids – Nomenclature, classification – Milk fats, Animal fats, Vegetable fats.
- Physical properties – Crystallization, Plasticity
- Chemical properties – Thermal decomposition, Chemistry of Frying, Hydrogenation, Inter esterification, Rancidity of fats.

UNIT-III: Proteins and Amino Acids

- Proteins and amino acids – Classification, Structure, Physical properties.
- Functional properties –
    - Protein Denaturation
    - Protein hydration, Solubility,
    - Interfacial properties,
    - Emulsification and foaming, Gelation,
    - Dough formation.

UNIT-IV: Food Analysis

- Introduction to food analysis- Methods of sampling, Determination of Total ash, Principles and methods of chemical analysis
- Carbohydrates – Qualitative and Quantitative analysis of starch and sugars.
- Proteins – Electrophoresis, Micro-Kjeldahl method.
- Fats – Analysis of solid and liquid fats, Rancidity.
- Determination of Vitamin and Minerals – Vitamin-C, Iron, Phosphorus, Calcium.
- Basic principles and applications of spectroscopy- UV, UV- visible, AAS, AES.
- Chromatography- principles and applications of Chromatography- HPLC, GC/ MS and LC/ MS.

3. Ranganna S. (2019). Handbook of analysis and quality control for fruits and vegetables, 2nd edition. Tata McGraw Hill.
4. Nielsen S.S. (2002). Introduction to the chemical analysis of foods, CBS Publishers and Distributers, Pvt. Ltd.

COURSE OUTCOMES

-After completion of this course, students will be able to:

CO1 Acquire knowledge on the physico chemical properties of compounds in foods.

CO2 Apply the functional properties of foods in processing and preservation.

CO3 Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CO4 Describe the chemical components and their functions in Food applications.

FSND 102: CLINICAL NUTRITION AND DIETETICS-I

COURSE OBJECTIVES

-To enable the students to:

1. Understand the concepts of nutrition, its relation to health.
2. Describe the role and responsibilities of Dietitian in Hospital.
3. Apply Knowledge related to Therapeutic modification of diets and diet planning.
4. Plan and prepare diet for different diseases conditions.

CORE THEORY

UNIT- I: Diet Counseling and Therapeutic Diets

Dietician and Diet Counseling

- Dietetics, Dietician: Definition, types, role and responsibilities of dietician.
- Diet counseling: Theories and Approaches to counseling- Reality Theory, Cognitive- Behavioral approach, Directive and non-directive Counseling.
- Counseling strategies: Individual and Group counseling.
- Motivation and Intervention model in diet counseling.
- Activities that facilitate behavioral change.

Therapeutic Diets

- Definitions: Normal diets, Therapeutic modifications of the normal diets.
- Principles in planning therapeutic diets, use of food guides and food exchange systems.
- Progressive diets: Routine/Regular hospital diets, Liquid diets, Soft diets
- Special feeding methods: Enteral and Parenteral Nutrition, Types, methods and formulation of feedings.

UNIT -II: Dietary Management in Metabolic Disorders

- Diabetes Mellitus: classification, Etiology, symptoms, Diagnosis, complications, Glycemic index and load, Dietary management of Diabetics, hypoglycemia.
- Inborn Errors of Metabolism Phenylketonuria (PKU), Maple syrup urine disease (MSUD), Galactosemia, Tyrosinemia, Homosystinuria.
- Overweight and Obesity: Classification, Etiology, assessment, factors affecting weight gain, Consequences. Management of Obesity- Dietary and Lifestyle Modifications, Preventive Aspects.

UNIT -III: Dietary Management in

- Physiologic/Metabolic Stress: Phases of stress, Consequences, Dietary management in stress, stress relieving foods.
- Surgery: Pre and post-operative dietary management.
- Febrile Conditions: Types, metabolic changes, Dietary management in fever.
- Burns: classification, causes, assessment, complications, Dietary management.
- Cancer: Types, etiology, symptoms, Diagnosis, nutrition therapy and Dietary management.
- HIV/AIDS: Pathogenesis, stages, etiology, symptoms, diagnosis, Dietary management.

UNIT-IV: **Food and Drug Interactions**

- Risk factors for food and drug interactions.
- Effect of food on drug therapy.
- Effect of drug on food and nutrition.
- Modifications of drug action by food and nutrition.
- Effect of drug on nutritional status.

REFFERENCES

1. Whitney NE, Cataldo BC, Rolses RS. (1987). Understanding Normal and Clinical Nutrition" West Pub.Company. St Paul, New Yok, Los Angeles, San Fransisco.
2. Mahan, L.K. and Escott-Stump, S. (2000): Krause's Food Nutrition and Dietherapy, 10th Edition, W.B. Saunders Ltd.

5. Davidl. Katzwolters Kluwer/LippinCottWilliams and Wilkins. (2007). Nutrition in Clinical Practice, Second Edition.

COURSE OUTCOMES

- After completion of this course, students will be able to:

CO1 Apply the concepts of Therapeutic nutrition in different diseases.

CO2 Modification of the diets appropriate to the patients in different diseases.

CO3 Planning and preparation of diets for different disease conditions.

CO4 Able to provide Diet counselling.

FSND 103-A: FOOD SCIENCE AND EXPERIMENTAL FOODS

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

-To enable the students to:

1. Acquire knowledge on Plant and Animal foods composition, processing and preservation of nutritive values.
2. Understand the principles of cookery of different foods and methods of evaluation.
3. Apply knowledge about different processing techniques on nutritive quality of foods.
4. Apply skills in standardisation of foods using different processing techniques.

COMPULSORY FOUNDATION- THEORY

UNIT I: Foods of Plant Origin

- Cereals and Millets: Structure, Composition and functional properties.
- Pectin and Gums: Functional role in food products and its applications.
- Baking process: Cereal flours, Flour mixes dough and batter, Leavening agents, role of ingredients in baking process.
- Pulses and Legumes: Composition, anti-nutritional factors, Effect of cooking.
- Vegetables and Fruits: Classification, Composition, Pigments and Flavors constituents - Cooking effect, Browning reaction.

UNIT II: Foods of Animal Origin

- Milk: Composition, Kinds of milk and Functional properties of Milk.
- Egg: Structure, composition and Functional properties of eggs.
- Meat and Poultry: Structure, Muscle composition,Heat-induced changes in meat,Tenderness – Tenderizers.
- Fish and Marine foods: Classification and Composition and cooking.

UNIT III: Starch, Sugars and Fats

- Starch: Characteristics, Gelatinization, Factors affecting gelatinization, modified food starches-Applications.
- Sugars: Types of sugars and sugar syrups, Crystallization of sugars, Sugar cookery and applications.
- Fats and oils: Sources, Composition, Absorption, Functional properties of fat-Melting point, Smoke point and flash point.

UNIT IV: Sensory Evaluation

- Sensory Attributes of food quality and its characteristics.
- Requirements to conduct sensory evaluation- Sensory panel, Preparing and Presenting Samples for Testing, Panel booth.
- Sensory Tests – Analytical and Affective Tests.

8. Norman N Potter.(2007).*Food Science*, Fifth edition, An Aspen Publication, Mariland.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Acquire knowledge on the functional properties of Plant and Animal foods.

CO2 Standardize the weights and measures of various food items.

CO3 Demonstrate the role of ingredients in cookery.

CO4 Apply different techniques in evaluation of food.

CO-PO Mapping

H-High-3, M- Medium-2, L- Low-1

FSND 103-B: BAKING TECHNOLOGY

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES:

To enable the students to:

1. Understand the concept and technology of baking.
2. Learn the role of different ingredients in baking process
3. Familiarize with processing techniques of various bakery products
4. Develop skills in organizing and maintenance of a baking industry.

GENERIC ELECTIVE - THEORY

UNIT-I: Bakery Industry

- Introduction, current status, growth rate, and economic importance of Bakery Industry in India.
- Baking: Principles, baked foods, Baking temperatures, Knowledge and working of various types of oven, baking equipment; Roasting: Principles of roasting, roasting equipment;
- Formulations, processing (mixing, fermentation, rounding, proofing, sheeting, moulding, baking, depanning etc.), equipments, packaging, storage and quality testing of bakery products

UNIT-II: Baking Technology

- Types and grades of wheat flour, Wheat flour proteins and importance of gluten in manufacture of bakery products.
- Role of ingredients in bakery products- sugars, fats, leavening agents, additives and other ingredients.
- Types of Bakery Products and Technology for their Manufacture – dough and batters; Dough rheology.

UNIT-III: Bakery Products

- Hard wheat Products: bread- Ingredients, various types of bread, equipments and types of mixing methods, preparation of bread, Product quality characteristics, faults and corrective measures of bread.

- Soft wheat Products: cookies, crackers, biscuits– Ingredients, types, equipments, method of preparation, Product quality characteristics, faults and corrective measures.
- Ingredient used in Cake Making, types and varieties, equipments, cake making methods, Product quality characteristics, faults and corrective measures of cakes.
- Other bakery products: using very hard wheat. Pizza, pastry and its types.

UNIT- IV: Modified Bakery Products

- Modified bakery products: high fiber, low sugar, low fat, gluten free bakery products.
- Decoration of baked foods – Icing and Fillings, its types and applications in bakery. Role of other ingredients used in icing and fillings.
- Staling and Nutrient Losses in Bakery Products.

5. Vaclavik, V. A., Christian, E. W., & Campbell, T. (2008). *Essentials of food science* (Vol. 42). New York: Springer.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Acquire knowledge on bakery industry and products.

CO2 Comprehend the technology of processing of bakery products.

CO3 Demonstrate the skills in various types of bakery items.

CO4 Comprehend the technology of processing in handling the bakery.

CO-PO Mapping

Course	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2

H-High-3, M- Medium-2, L- Low-1

104-A: COMMUNITY NUTRITION

(Common to all Specializations of M.Sc. Home Science and MS Food Technology Course)

COURSE OBJECTIVES

-To enable the students to:

1. Know about nutrients in food and their functions.
2. Understand the consequences of deficiency of taking nutrients.
3. Apply skills for planning diets for nutritional disorders.
4. Apply the techniques to assess the nutritional status of different age groups.

ELECTIVE FOUNDATION – THEORY

UNIT-I: Food Composition - Grouping

- Food Groups – Classification – food composition
- Nutritive values of different foods, Functions of foods and nutrients – cereal grains, millets, pulses, nuts and oil seeds fruits and vegetables, milk and milk products, meat, egg, poultry and fish, spices and condiments.
- Menu planning– Definition, Principles, Factors affecting menu planning

UNIT-II: Assessment of Nutritional Status of the Community

- Need - Methods of Assessment - (a) Direct Methods - (i) Diet Surveys (ii) Anthropometric Assessment - (iii).clinical and (iv). Biochemical Assessment.
- (b) Indirect Methods - Vital Statistics - Merits and Demerits of methods -
- Nutrition surveys - longitudinal and cross sectional - Family, individual and institutional surveys - Techniques for assessment of age - use of reference standards for the assessment of nutritional status.

UNIT- III: Major Nutrition Problems of the Community

- Nutrition Through Life Span – Infancy, Early and late childhood, Adolescence, Adulthood and Ageing – Nutritional requirements and Recommended Dietary Allowances (RDA)– Justification for special needs during periods of growth and development, pregnancy and lactation – significance of breast feeding .
- Malnutrition and under nutrition- PEM/CED, obesity- deficiencies vit-A, iron /iodine - Etiology –Symptoms - Government programmes to eradicate PEM,

vitamin-A, Iron and Iodine deficiencies – Principles of planning diets for different conditions of malnutrition .

UNIT-IV: Strategies to Combat Malnutrition

- Food security – Definition – Management of food insecurity - -Food Fortification and enrichment.
- Food Assistance and Food Supplementation - Policies and Programmes of the Government - Governmental Policies and Programmes - Food Assistance and Food Supplementation Programmes - Public Distribution System (PDS) - Food For Work (FFW), Special Nutrition Programme (SNP), School Lunch Programme (SLP), Mid Day Meal Programme (MMP), Balawadi Nutrition Programme (BNP), Integrated Child Development Services (ICDS).
- Nutrition Education - Importance - Approaches Media and Methods.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Know the nutritional problems of the community.

CO2 Acquire knowledge about food groups, RDA and steps in planning a diet.

CO3 Skills in planning and calculating nutritive values for different nutritional disorders.

CO4 Understand the skills in assessing the nutritional status by different methods for different age groups.

CO-PO Mapping

H-High-3, M- Medium-2, L- Low-1

104-B: NUTRITION DURING LIFE SPAN

(Common to all Specializations of MSc Home Science and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Gain knowledge on the importance of nutrition during life span.
2. Enlighten the principles and working applications during dietary modifications.
3. Comprehensive knowledge on analysing the nutritional requirements.
4. Apply Computational skills in the Nutritional allowances during life span.

ELECTIVE FOUNDATION –THEORY

UNIT-I:Nutrition during Pregnancy & Lactation:

- Nutrient requirement during pregnancy, intake and gaps, prenatal and antenatal nutritional importance, metabolic adjustments in pregnancy.
- Nutrition intervention and pregnancy outcome, Nutritional management, problems and Complications.
- Nutritional requirements during lactation, physiology of milk production, effects of lactation on Nutrition composition of Human-Milk,
- Factors affecting breast milk quality and comparative advantages & disadvantages of breast and formula feeding.

UNIT-II:Nutrition during Infancy & Early child hood period:

- Nutritional requirements, concerns and overall development during Infancy.
- Need for infant formulae, types of infant formulae, care in Preparation, and importance of preparation of weaning foods.
- Home prepared versus commercial weaning foods, Feeding problems-Lactose and cow's milk protein intolerance.
- Pre-school children: Age, growth & development, nutrient requirements, Intake and gaps. Effects of Macro & Micro nutrient malnutrition on physical and mental development.

UNIT-III: Nutrition during School-going children & Adolescents:

- Dietary patterns and factors to be considered. Implications of childhood obesity and other nutritional concerns. Healthy food choices during childhood.

- Growth during adolescence, nutritional requirements, hormonal influences, age of menarche-factors affecting, physiological problems and nutritional issues in adolescence.
- Nutritional requirements and RDA. Behavioural characteristics and feeding problems.

UNIT-IV: Nutrition during adulthood and old age:

- Nutritional requirements for adult man and woman. Nutritional concerns, RDA, nutritional guidelines and work efficiency. Physiological changes in aging, effects of aging on nutritional health.
- Modification in diet, feeding old people. Nutritional concerns in old age and their management.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Acquire knowledge on nutritional requirements at various stages.

CO2 Apply the knowledge of nutrition during planning and preparation of diet.

CO3 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO4 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

CO-PO Mapping

105 – PRACTICAL I FOOD CHEMISTRY AND ANALYSIS AND FOOD SCIENCE AND EXPERIMENTAL FOODS/BAKING TECHNOLOGY

101 - FOOD CHEMISTRY AND ANALYSIS

COURSE OBJECTIVES

- To enable the students to:

1. Acquire hands on experience in qualitative and quantitative analysis of different foods.
2. Develop Skill in nutrient analysis of foods

PRACTICALS:

1. Volumetric analysis of Acids and Bases
2. Determination of Moisture
3. Qualitative analysis of Carbohydrates, Hydrolysis of Starch.
4. Determination of starch and sugars
5. Qualitative analysis of Proteins and Amino acids
6. Estimation of proteins - Micro-Kjeldahl method
7. Qualitative analysis of fats and oils.
8. Determination of fat in solid and liquid foods.
9. Determination of Total ash
10. Estimation of Calcium
11. Estimation of Phosphorus
12. Estimation of Iron
13. Estimation of Vitamin C

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CO2 Describe the chemical components and their functions in Food applications.

103 A – FOOD SCIENCE AND EXPERIMENTAL FOODS

COURSE OBJECTIVES

- To enable the students to:

1. Acquire skill in effect of cookery on physical, chemical and sensory properties of foods.
2. Understand the application of standardization and experimentation on different food groups

PRACTICALS:

1. Standardization of weights and measures of various foods
2. Starch cookery- Structure, gelatinization and factors affecting gelatinization
3. Baking –Determination of gluten content, Preparation of plain cake and evaluation by subjective and objective methods.
4. Pulse cookery – effect of different cooking methods
5. Vegetable and fruit – Effect of time, temperature, media and cooking methods on pigments, Enzymatic Browning- Preventive measures.
6. Sugar cookery- stages of sugar cookery and its application in Indian sweet making, fondant preparation.
7. Fats and oils – Smoke points, oil absorption and mayonnaise preparation.
8. Milk cookery - factors affecting milk cookery- Temperature, pH, acid, base, coagulation factor.
9. Egg and Meat cookery – Egg white foams, methods of cooking egg and Meat, role of tenderizers in meat cooking.
10. Sensory Evaluation of food- preparation of score card, threshold tests, sensory testing.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Demonstrate the role of ingredients in cookery.

CO2 Apply different techniques in evaluation of food.

103 B BAKING TECHNOLOGY

COURSE OBJECTIVES - To enable the students to:

1. Develop skill in formulation, standardization and evaluation techniques in bakery products.
2. Understand the concepts in the baking process.

PRACTICALS:

1. Introduction of tools and equipments of bakery products.
2. Determining the gluten content.
3. Preparation of Biscuits and Cookies.
4. Preparation of Doughnuts and Muffins.
5. Preparation of Bread and Bun.
6. Preparation of Pizza.
7. Preparation of various Types of Cakes.
8. Preparation of Filling and Icings.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Demonstrate the skills in preparation of various types of bakery items.

CO2 Develop the skill and comprehend the technology of processing in handling the bakery.

106 – PRACTICAL II CLINICAL NUTRITION AND DIETETICS -I AND COMMUNITY NUTRITION/NUTRITION DURING LIFE SPAN

102– CLINICAL NUTRITION AND DIETETICS – I

COURSE OBJECTIVES

- To enable the students to:

1. Apply Knowledge related to Therapeutic modification of diets and diet planning.
2. Plan and prepare diet for different diseases conditions.

PRACTICALS:

1. Planning and preparation of Progressive Diets
    a. Clear Fluid Diet.
    b. Full Fluid Diet,
    c. Soft Diet,
    d. Regular Diet,
2. Therapeutic Adaptations of Normal Diet
    a. High and Low-calorie diet,
    b. High and Low Protein Diet.
    c. Low fat and Low Cholesterol Diet.
    d. High and Low Fiber Diet,
    e. Sodium Restricted Diet,
    f. Low Carbohydrate Diet.
3. Preparation of case study analysis and reports
4. Planning and preparation of diets for Diabetes- Type-I, II, Gestational Diabetes.
5. Planning and preparation of diets for Overweight and Obesity
6. Planning and preparation of pre and post-operative diets
7. Planning and preparation of diets for febrile conditions
8. Planning and preparation of diets for burns
9. Planning and preparation of diets for Cancer
10. Planning and preparation of diets for HIV/AIDS

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Planning and preparation of diets for different disease conditions.

CO2 Able to provide Diet counselling.

104 A COMMUNITY NUTRITION

COURSE OBJECTIVES

- To enable the students to:

1. Apply the techniques to assess the nutritional status of different age groups.
2. Apply skills for planning diets for nutritional disorders.

PRACTICALS:

1. Assessment of Nutritional Status using Anthropometry,
2. Assessment of Nutritional Status using Dietary method
3. Planning of Diets for Different Nutritional Deficiencies like PEM, Anemia, Vit-A.
4. Planning and Preparation of Programmes for Significant Days like Breast Feeding Week, Nutrition Week, World Food Day.
5. Study of the following through visits
   - Govt School Lunch Programme
   - ICDS Programme
   - Anganwadi Training Centers.
6. School Lunch Programme at Sri Venkateswara University Laboratory Nursery School.
7. Community Nutrition Programme Planning - Introduction, Identification of problem, nutritional assessment, analysis of causes, resources, constraints, selection of interventions, setting a strategy, implementations, evaluation of the programme

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Skills in planning and calculating nutritive values for different nutritional disorders.

CO4 Understand the skills in assessing the nutritional status by different method different ag

groups.

104 B NUTRITION DURING LIFE SPAN

COURSE OBJECTIVES

- To enable the students to:

1. Apply Computational skills in the Nutritional allowances during life span.
2. Develop skill in planning and preparation of diets for different age groups.

PRACTICALS:

1. Planning and preparation of diet for pregnant women.
2. Planning and preparation of diet for lactating women.
3. Planning and preparation of weaning foods.
4. Planning and preparation of diet for pre-school child.
5. Planning and preparation of diet for school going child.
6. Planning and preparation of diet for adolescent.
7. Planning and preparation of diet for adult.
8. Planning and preparation of diet for old age.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO2 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

FSND 107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

(REVISED SYLLABUS WITH EFFECT FROM 2021 ONWARDS)

COURSE OBJECTIVES

-To enable the students to:

1. Define the term 'ethics', 'good and bad values', crime and punishment and religious tolerance.
2. Understand the importance of good character, conduct and values embedded in various religions.
3. Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.
4. Demonstrate knowledge of ethical values in non-class room activities, internships and field work and resolve the moral issues. .

AUDIT COURSE- THEORY

Unit-I:

- Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment.
- Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

Unit-II:

- Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom.
- Good behavior and respect for elders, Character and Conduct.

Unit-III:

- Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha(Non- stealing).
- Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires). Moksha(Liberation).

Unit-IV:

- Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths – AryaAstangamarga, (c) Jainism- mahavratas and anuvratas.
- Values Embedded in Various Religions, Religious Tolerance, Gandhian Ethics.
- Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Define the term 'ethics', 'good and bad values', crime and punishment and religious tolerance.

CO2 Understand the importance of good character, conduct and values embedded in various religions.

CO3 Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

CO4 Demonstrate the ability to face difficult situations in non-class room activities, internships and field work and resolve them confidently.

SEMESTER- II

FSND 201: NUTRITIONAL BIOCHEMISTRY

COURSE OBJECTIVES

- To enable the students to:

1. Understand the metabolism of nutrients in human physiology.
2. Acquire knowledge on factors affecting digestion, absorption of nutrients.
3. Create awareness on enzymes and its role in nutrient metabolism.
4. Apply skills in analyzing enzymes and its metabolites.

CORE THEORY

UNIT- I: Metabolism of Carbohydrates and Lipids

- Carbohydrates: Functions, digestion and absorption of carbohydrates. Carbohydrate metabolism- Glycolysis, Glycogenolysis, glycogenesis and Gluconeogenesis.
- Lipids: Functions, digestion and absorption of lipids. □oxidation of fatty acids and Cholesterol Metabolism. Lipids of biological significance - Lipoproteins and prostaglandins in health and disease.

UNIT- II: Proteins and Amino Acids

- Functions, digestion and absorption of proteins.
- Metabolism of amino acids - Amino Acid decarboxylation, Tran's peptidation. Urea cycle, creatine and Creatinine - biosynthesis.
- Nucleic acid - DNA, RNA, Bases - Purines and Pyrimidines, Synthesis of Nucleic Acids - Steps of replication - Initiation, Elongation and Termination. Protein biosynthesis.
- Enzymes – Classification, structure, functions of enzymes; factors affecting enzyme activity.
- Integration of metabolism of carbohydrates, fats and proteins, Electron Transport Chain (ETC), Oxidative Phosphorylation.

UNIT-III: Vitamins

- Fat Soluble Vitamins A, D, E and K: Absorption, Transportation, Metabolism, physiological and biochemical functions
- Absorption, Transportation, Metabolism, physiological and biochemical functions of Water-Soluble Vitamins-Thiamine, Riboflavin, Niacin, Pyridoxine, Folic acid, Pantothenic acid, Vitamin C.

UNIT- IV: Minerals and Trace elements

- Absorption, Transportation, Metabolism, Physiological and biochemical functions, of Calcium, Phosphorus, Iron, Iodine, Zinc, Sodium, Potassium,Chloride and Flourine
- Electrolytes.

8. Jayaraman, J. (1981). Laboratory Manual in Biochemistry," New Age International Publishers.

COURSE OUT COMES - After completion of this course, students will be able to:

CO1 Understand the metabolism of food and nutrients in humans.

CO2 Know metabolism of nutrients in healthy and disease individuals.

CO3 Acquire skills in Qualitative and quantitative estimation of metabolites in biological fluids.

CO4 Know Skills in analysing enzymes and its metabolites.

CO-PO Mapping

.

FSND 202: CLINICAL NUTRITION AND DIETETICS-II

COURSE OBJECTIVES

- To enable the students to:

1. Understand the dietary principles for various diseases.
2. Comprehend knowledge in Dietary modifications for the management of diseases.
3. Application of principals in preparation and service of diets to the patients.
4. Able to assess the case studies and construct the diet charts.

CORE THEORY

UNIT- I: Dietary Management in Gastro Intestinal Tract Disorders

- Diseases of the Upper Gastro intestine - Gastro Esophageal Reflux Disease (GERD), Esophagitis, Hiatal Hernia.
- Diseases of the Stomach: Gastritis, Peptic Ulcer, Dumping syndrome.
- Diseases of intestine: Inflammatory bowel disease, Celiac disease, Irritable bowel syndrome, Short bowel syndrome
- Common GI problems: Diarrhea, constipation, Flatulence, Food sensitivities.

UNIT- II: Dietary Management in Disorders of Hepato –Bilary Tract

- Disorders of liver: Hepatitis, Hepatic Steatosis, Cirrhosis, Hepatic encephalopathy.
- Gallbladder Disorders**:** Chollelithiasis, Cholecystitis.
- Disorder of pancreas: pancreatitis.

UNIT- III: Dietary Management in –

- Cardiovascular Disorders **-**Dyslipidemia, Atherosclerosis, Coronary Heart disease (CHD), Hypertension (HT), Congestive Heart Failure, Angina pectoris, myocardial infraction (MI), Rheumatic Heart Disease (RHD).

- Renal Disorders-Nephrotic syndrome, glomerular nephritis, renal failure, Nephrolithiasis, urinary tract infection, dialysis.

UNIT-IV: Dietary Management in -

- Neurological Disorders –Migraine syndrome, Alzheimer's disease, Parkinson's disease.
- Musculoskeletal and Rheumatic Disorders- Osteoporosis, Osteoarthritis, Rheumatoid Arthritis, Gout.

6. ShubhanginiA.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Mecgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

- After the completion of the course, the students will able to:

CO1 Apply the concepts of threupatic modification of diets for the diseases.

CO2 Calculate nutrients and modifiy diets for the diseases.

CO3 Skills in Planning and preparation of diets for different disease conditions.

CO4 Able to know patient Diet service management and counselling.

FSND 203-A: FOOD MICROBIOLOGY AND SAFETY

(COMMON TO MSC FOOD SCIENCE NUTRITION & DIETETICS AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Obtain knowledge about important genera of microorganisms associated with food.
2. Acquaint food contaminants and their sources.
3. Understand the various factors associated with growth, food spoilage and food-borne diseases of different microorganisms.
4. Demonstrate the use of standard methods and procedures for the microbiological analysis of food.

COMPULSORY FOUNDATION- THEORY

UNIT- I: Introduction to Food Microbiology

- Classification and growth of microorganism, factors affecting microbial growth.
- General characteristics, structure, classification, morphological characteristics, cultural characteristics of bacteria, fungi, virus, protozoa, and algae.
- Role of Harmful and beneficial microorganisms in food.

UNIT -II: Food Contamination and Spoilage

- General principles underlying spoilage: causes of spoilage, classification of foods based on spoilage and changes caused by microorganisms.
- Sources of contamination and types of spoilages among plant origin foods:
  - Cereals, Legumes, nuts and oil seeds
  - Fruits and Vegetable products
  - Spices and condiments

UNIT- III: Food Contamination and Spoilage of Animal origin and Processed Foods

- Sources of contamination and types of spoilages among :
  - Milk and Milk products
  - Eggs, poultry and Meat
  - Fish and Other sea foods

- Sugars and sugar products
- Processed foods

UNIT- IV: Food Borne Diseases and Food Safety

- Food borne diseases – Food Infection and Intoxication Sources of infection of food by pathogenic organisms and physiological action, Signs and symptoms of various Bacterial Food-borne poisoning and Non-bacterial food-borne poisoning.
- Food safety: concept, factors affecting food safety, biological hazards.
- Applications of Food Microbiology- probiotics, prebiotics, microbial enzymes, fermentation process.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Identify the important genera and factors associated with food spoilage.

CO2 Elucidate the food contaminants in different types of food commodities.

CO3 Describe the characteristics of food borne diseases, infections and intoxications and their identification.

CO4 Demonstrate the use of standard methods and procedures for the microbiological analysis of food.

H-High-3, M- Medium-2, L- Low-1

FSND 203--B: NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

- To enables the students to:

1. Understand the emergency situations in natural and manmade disasters.
2. Gain knowledge on nutrition surveillance and treatment in emergencies.
3. Knowledge on planning nutrition relief and rehabilitation in emergencies.
4. Explain concepts on Epidemiology and its application in planning programs during emergencies.

GENERIC ELECTIVE- THEORY

UNIT-I: Disasters

- Natural/Manmade disasters resulting in emergency situations:Famine, drought, flood, earthquake, cyclone, war, civil and political emergencies, Factors giving rise to emergency situation in these disasters.
- Nutritional problems in emergencies in vulnerable groups: Causes of malnutrition in emergency situations, Major deficiency diseases in emergencies, Protein – Energy Malnutrition / Starvation / Under Nutrition, Specific Nutrient deficiencies - Energy, Vitamins, Minerals
- Communicable disease: Surveillance and treatment.Control of communicable diseases in emergencies – Role of immunization and sanitation.

UNIT-II: Assessment

- Assessment and surveillance of Nutritional status in emergency affected populations: Scope of assessment of malnutrition in emergencies,

Indicators of malnutrition. Clinical signs for screening acute malnutrition, Anthropometric assessment of nutritional status.

- Indicators and cut-offs indicating seriously abnormal nutrition situation: Weight for height based indices, MUAC, social indicators.
- Organization of nutritional surveillance and individual screening.

UNIT-III: Nutritional Relief and Rehabilitation

- Assessment of food needs in emergency situations, Food distribution strategy – Identifying and reaching the vulnerable group – Targeting Food Aid.
- Mass and Supplementary Feeding, Therapeutic Feeding, Special foods/rations for nutritional relief, Local production of special foods, Local foods in rehabilitation
- Organisation of mass feeding/general food distribution, Feeding centers, Transportation and food storage, Sanitation and hygiene, Evaluation of feeding programmes, Household food security and nutrition in emergencies
- Public nutrition approach to tackle nutritional problems in emergencies

UNIT-IV: Nutritional Epidemiology

- Introduction to Epidemiology – types of epidemiology, collection of epidemiological data, secondary routine date, Descriptive epidemiology, Cross sectional Analysis, prevalence and incidence, risk factors, risks and odds, relative and attributable risks
- Principles of Nutritional Epidemiology, Measurement issues, Measurement of disease, Occurrence and Measurement of association, Exposure and outcome, Socio demographic and Psycho social variables.
- Design and Planning of Nutritional Epidemiological studies – assessing and supplying And Evaluating Epidemiological studies – Discussion of selected case studies.

5. ShubhanginiA.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Macgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Acquire knowledge in nutritional problems in natural and man made disasters.

CO2 Assess the nutritional status in emergency and plan surveillance and treatment to the affected.

CO3 Acquire knowledge on nutrition epidemiology.

CO4 Plan and Execute nutrition rehabilitation in emergencies.

H-High-3, M- Medium-2, L- Low-1

FSND 204-A: RESEARCH METHODOLOGY

(Common to All branches of Home Science and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Get awareness about terms like 'variables', 'hypothesis', research 'and recognize the purpose of doing research.
2. Understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
3. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
4. Develop a research proposal in the appropriate scientific style.

ELECTIVE FOUNDATION-THEORY

UNIT – I : Research Purpose and Types

- Research – Significance, meaning, objectives, Approaches,
- Research process, Criteria of good research, Variable- types
- Types of Research: Historical, descriptive, experimental, case study, survey research, participatory research, Fundamental, applied and action, exploratory research.
- Research hypothesis-Characteristics of good hypothesis.
- Research Design – Meaning, Need, Concepts, Principles and Types of research design

UNIT – II: Research Problem and Sample design

- Definition and Identification, Necessity and Selection of Research problem, Technique involved in defining the research problem.

- Population and Sample – Implications, Steps, Criteria and Characteristics of a good design
- Sampling Methods : *Probability sampling*- Simple random, systematic random sampling, two Stages and multi stage sampling, cluster sampling and *Non-probability sampling* - Purposive, quota and volunteer sampling / Snowball Sampling.

UNIT –III : Methods of Data Collection

- Primary and Secondary Data, Selection of appropriate method for data collection
- Different Methods and techniques of data collection - Interview, Observation, Social mapping, Participatory assessment Techniques, Observation check list, Questionnaire, Interview schedule, Group discussions, Case studies

UNIT –IV: Measurement Scales

- Measurement in Research, Measurement Scales, Sources of Error in Measurement, Tests of Sound Measurement,Technique of Developing Measurement Tools, Scaling, Meaning of Scaling,Scale Classification Bases,Important Scaling Techniques.

- Research Proposal – Preparation.

8. Sharma S.R. (1994). *"Statistical methods in Educational Research"*, Anmol Publications Pvt. Ltd., New Delhi.

COURSE OUTCOMES - After studying the course, students will able to:

CO1. Define terms like 'variables', 'hypothesis' ,research'and state the purpose of doing research

CO2. Understand different types of search and can compare the advantages and dis-advantages of each type of research

CO3. Critically know the procedures for identifying an ideal sample for scientific research.

CO4. Prepare a research proposal in the appropriate scientific style .

204 -B: STATISTICS AND COMPUTER APPLICATIONS

(Common to All branches of Home Science and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Get awareness about the scope of statistics in research.
2. Understand the concepts of inferential statistics like t-test, chi-square, Correlation and Variance.
3. Critically apply knowledge of application of statistics in data analysis.
4. Apply skills in using computer applications for data analysis

ELECTIVE FOUNDATION-THEORY

UNIT- I: Statistics

- Statistics: Meaning, Definition and Scope, limitations – Role of statistics in Research
- Descriptive Statistics: Classification and tabulation of data, Graphic and diagrammatic presentation of data, measurement of central tendency, variation and dispersion, Normal distribution, Frequency distribution, histogram, frequency polygons, curve ogive
- Levels of Significance

UNIT – II: Inferential statistics

- 't' test for large samples (mean and proportions) and small samples
- Chi square test for significance and association
- Analysis of variance-one way, two way

- Correlation, coefficient of correlation, rank correlation

UNIT – III: Computer Applications I

- Introduction to Computer-Block diagram, PC and its components, Memory capacity, Physical storage of data, various devices, Hardware and software operating- DOS commands for file handling.
- MS Office and its component – Word and its applications/ creating documents, editing spell check, auto correct and print preview, creating tables and sorting data in tables, mail merge and its usage.

UNIT – IV: Computer Applications II

- MS Excel for data analysis - Work sheet and its structure, data entry, editing, Sorting filtering and copying.
- Statistical functions in Excel – Data analysis park for performing descriptive statistics, t-test, ANOVA, Correlation and regression.
- Graphs in Excel – Various types of graphs, editing graphs.

COURSE OUTCOMES - After studying the course, students will able to:

CO1. Define terms like 'frequency distribution', 'Variance' , 'Correlation' and its scope in research data

CO2. Understand different types of statistics that are used in research data.

CO3. Critically know the calculations of different statistics of research data.

CO4. Apply skills in using computer applications for data analysis.

205 – PRACTICAL I NUTRITIONAL BIOCHEMISTRY AND FOOD MICROBIOLOGY AND SAFETY/NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

201 – NUTRITIONAL BIOCHEMISTRY

COURSE OBJECTIVES

- To enable the students to:

1. Acquire skills in analyzing the biochemical parameters in blood and serum.
2. Appraise the normal and abnormal levels of biochemical parameters in different conditions.

PRACTICALS:

1. Estimation of Blood glucose.
2. Estimation of Serum Proteins by Biuret
3. Estimation of Serum Triglycerides.
4. Estimation of Serum Cholesterol.
5. Estimation of Serum Iron
6. Estimation of Haemoglobin
7. Microscopic Examination of Blood Smear for types of blood cells.
8. Estimation of Packed cell volume in the blood.
9. Estimation of Serum Calcium.
10. Normal and abnormal urine analysis.

COURSE OUTCOMES - After studying the course, students will able to:

CO1 Acquire skills in Qualitative and quantitative estimation of metabolites in biological fluids.

CO2 Know Skills in analysing the biochemical levels and its relation to normal and abnormal conditions.

203-A FOOD MICROBIOLOGY AND SAFETY

COURSE OBJECTIVES

- To enable the students to:

1. Demonstrate the use of standard methods and procedures for the microbiological analysis of food.
2. Understand the techniques for identification, isolation and confirmation of microbes in fresh and processed foods.

PRACTICALS:

1. Laboratory safety rules and precautions
2. Familiarization with Instruments used in Microbiological Lab, their principles and working.
3. Sterilization methods
4. Sampling techniques
5. Isolation techniques
6. Various types of media preparation and Methods of sterilization of media
7. Microbial Staining Techniques
8. Microbial examination of fresh food products: Identification, isolation and confirmation
9. Microbial examination of processed foods: Identification, isolation and confirmation.
10. Detection of E.coli from food sample

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Skill development in standard methods and procedures for the microbiological analysis of food.

CO2 Acquaint with skill of preparing and sterilization techniques of media.

203-B NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

COURSE OBJECTIVES

- To enable the students to:

1. Explain concepts on Epidemiology and its application in planning programs during emergencies.
2. Skill development in rapid assessment techniques.

PRACTICALS:

1. Collection of epidemiological data-a hands on experience.
2. Selection and Rapid assessment of nutritional status in a community.
3. Case study approach on causative factors and management of communicable diseases.
4. Planning and formulation of nutrient dense foods.
5. Survey on adherence to immunization schedule and vaccines.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Acquire knowledge on nutrition epidemiology procedures.

CO2 Plan and Execute nutrition rehabilitation in emergencies.

206 – PRACTICAL II CLINICAL NUTRITION AND DIETETICS AND RESEARCH METHODOLOGY/STATISTICS AND COMPUTER APPLICATIONS

202 – CLINICAL NUTRITION AND DIETETICS – II

COURSE OBJECTIVES

- To enable the students to:

1. Application of principals in preparation and service of diets to the patients.
2. Able to assess the case studies and construct the diet charts.

PRACTICALS:

1. Planning and preparation of diets for Upper gastro intestinal disorders-Gastritis, Peptic Ulcer
2. Planning and preparation of diets for Lower gastro intestinal disorders- Celiac Disease Diarrhea, constipation
3. Planning and preparation of diets for Liver- Hepatitis, Hepatic Steatosis, Cirrhosis
4. Planning and preparation of diets for Hypertension, Atherosclerosis, Coronary Heart disease
5. Planning and preparation of diets for Nephrotic syndrome, glomerular nephritis
6. Planning and preparation of diets for Nephrolithiasis,
7. Planning and preparation of diets for dialysis
8. Planning and preparation of diets for Alzheimer's disease, Parkinson's disease
9. Planning and preparation of diets for Osteoporosis, Osteoarthritis, Rheumatoid Arthritis, Gout
10. Preparation of Diet charts.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Skills in Planning and preparation of diets for different disease conditions.

CO2 Able to know patient Diet service management and counselling.

204-A RESEARCH METHODOLOGY

COURSE OBJECTIVES

- To enable the students to:

1. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
2. Develop a research proposal in the appropriate scientific style.

PRACTICALS

1. Identification of different variables in specialization of study.
2. Framing of hypothesis-Null and alternate Hypothesis
3. Preparation of schedule/questionnaire.
4. Preparation of research proposal
5. Study of an article in a journal-Abstract, Methodology, Results and Bibliography

COURSE OUTCOMES - After studying the course, students will able to:

CO1 Critically know the procedures for identifying an ideal sample for scientific research.

CO2 Prepare a research proposal in the appropriate scientific style.

204-B STATISTICS AND COMPUTER APPLICATIONS

COURSE OBJECTIVES

- To enable the students to:

1. Critically apply knowledge of application of statistics in data analysis.
2. Apply skills in using computer applications for data analysis

PRACTICALS

1. Graphic and diagrammatic presentation of data.
2. Calculation of Averages- Arithmetic mean, mode and median.
3. Calculation of Standard deviation and 't' test for large and small samples.
4. Calculation of Correlations.
5. Calculation of chi square to find out significance of association.

COURSE OUTCOMES - After studying the course, students will able to:

CO1 Critically know the calculations of different statistics of research data.

CO2 Apply skills in using computer applications for data analysis

FT-207: HUMAN VALUES AND PROFESSIONAL ETHICS - II

(Revised Syllabus with effect from 2021 onwards)

COURSE OBJECTIVES

- To enable the students to:

1. Associate the terms 'value education' 'self-introspection' and 'self-esteem' which are the core aspirations of all human beings.
2. Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.
3. Apply the knowledge to assess issues and problems in each profession and correlate the concepts in addressing the ethical issues while choosing and joining a profession.
4. Develop all round and well balanced personality of the students and shapes them to become morally finer, socially responsible and physically fit persons of the society.

AUDIT COURSE- THEORY

UNIT-I:

- Value Education- Definition - relevance to present day - Concept of Human Values -self introspection – Self-esteem - Family values-Components, structure and responsibilities of family.
- Neutralization of anger - Adjustability - Threats of family life - Status of women in family and society - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

UNIT-II:

- Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and health care professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients.
- Social justice in health care, human cloning, problems of abortion. Ethical issues

in genetic engineering and Ethical issues raised by new biological technology or knowledge.

UNIT-III:

- Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions.
- Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

UNIT-IV:

- Environmental ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste.
- Climate change, Energy and population, Justice and environmental health.

Unit-V:

- Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics. Surrogacy/pregnancy.
- Ethics of media- Impact of Newspapers, Television, Movies and Internet.

7. Ethics, Theory and Contemporary Issues. Barbara Mackinnon Wadsworth/Thomson Learning, 2001.
8. Analyzing Moral.Issues, Judith A. Boss. May Field Publishing Company - 1999.
9. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad. Cosmo Publications
10. Text Book for Intermediate First Year Ethics and Human Values. Board of

Intermediate Education- Telugu ~ Akademi, Hyderabad.

COURSE OUTCOMES

-After studying the course, students will able:

CO1 Associate the terms 'value education' 'self-introspection' and 'self-esteem' which

are the core aspirations of all human beings.

CO2 Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.

CO3 Apply the knowledge to assess issues and problems in each profession like medical, business , environment and social ethics and ethics of media and correlate the concepts in addressing the ethical issues while choosing and joining a profession.

CO4 Apply skills for anger management, care of elderly, environmental protection and

thereby develop well balanced personality and will contribute to society as morally finer, socially responsible and physically fit persons.

****Internship is mandatory**

*****Open Elective – Offered by Department to other Department students**

Note: Interested student may register for MOOCS with the approval of DDC

FSND- 301: FOOD PROCESSING AND PRESERVATION TECHNOLOGY

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

-To enable the students to:

1. Understand the principles and scope of food processing and preservation.
2. Get an overview on various techniques/methods in food processing and preservation.
3. Acquire knowledge of emerging technologies and their applications in food processing and preservation.
4. Equip with skills required for process and preserve various food products.

CORE THEORY

UNIT- I: Food Processing and Preservation – An Introduction

- Need, Purpose, Principles and Methods of food processing and preservation. Definitions
- Traditional Methods of food processing and preservation.
- Preservatives and Additives –Definitions, Classification, applications, permissible limits and safety aspects.

UNIT-II: Methods of Food Processing and Preservation

- Processing and preservation by Heat - Principles of thermal processing, blanching, pasteurization, UHT processing, thermal sterilization, canning, extrusion.
- Processing and preservation by Cold- Refrigeration and freezing, methods of freezing, effect on quality of foods.
- Processing and preservation by Drying and Dehydration -Types, Methods and their suitability for different food products.
- Processing and preservation by Concentration – Types, Methods and their suitability for different food products.

UNIT- III: Processing and Preservation by Fermentation

- Definition, types, Importance, Technology, Benefits and Limitations.
- Processing and preservation of fermented foods – Cereal and pulse products, Fruits and Vegetables, Milk products, meat products, Beverages.

UNIT- IV: Advanced Food Processing Technologies

- Irradiation, High Pressure Processing, Pulse Electric Field, Microwave, Ohmic Heating, Reverse Osmosis, Ultra Filteration and Membrane Processing.
- Minimal Processing, Edible Coatings and Films, Encapsulation, Nano technology Hurdle Technology, Artificial Intelligence (AI) Technologies and Advanced Robotics in Food Industry.

REFERENCES

7. Rama swamy,H. and Marcote,M. (2005).Food processing- principals and applications, CRC Press, Newyork

COURSE OUTCOMES -After the completion of the course, the students will be able to:

CO1 Conceptualize principles of traditional and novel food processing and preservation technology.

CO2 Understand the applications and limitations of food processing and preservation technology.

CO3 Comprehend the functions and applications of food preservatives and additives.

CO4 Apply appropriate technologies to process and preserve the foods to extend their shelf life.

CO4	H		H	H	H	M		L	H		H	H	H	H

H-High-3, M- Medium-2, L- Low-1

FSND 302: ADVANCES IN HUMAN NUTRITION

COURSE OBJECTIVES

- To enable the students to:

1. Know the advance concepts of nutrition of Brain, Immunity and Sports.
2. Understand the concepts of dietary management in endemic nutrition problems.
3. Create knowledge on the dietary management during emergencies.
4. Planning and preparation of foods in special needs like space, high altitudes and low temperatures.

CORE THEORY

UNIT-I: Nutrition, Brain and Behaviour

- Brain – Structure, composition and functions and neurological tests-EEG, PET, MRI.
- Neurotransmitters- Nutrient precursors of neurotransmitters – Tryptophan, tyrosine, choline and lecithin
- Role of neurotransmitters in Brain function
- Role of Nutrients on Brain growth and development

UNIT-II: Nutrition and Immunity

- Innate and Acquired immunity – Primary and secondary immune response, Active and Passive, Antigen, Antibody Cell mediated immunity, Humoral immunity-Formation, maturation and activation of B and T cells, Immune effectors system-cytokines complement system, K cells and NK cells, Cell mediated effectors response,
- Role of nutrients in immunity
- Effect of malnutrition on immunity

UNIT-III: Endemic Nutrition Problems and their Management

- Flurosis – Aetiology, prevalence, symptoms and nutritional management
- Iodine deficiency disorders - Aetiology, prevalence, symptoms and nutritional management
- Osteoporosis - Aetiology, prevalence, symptoms and nutritional management.

UNIT-IV: Principles of Nutrition and management systems in Disasters and Emergencies and Special Environments.

Nutrition in Disasters

- Disaster management –Natural and Man made Disasters.
- Assessment of food needs in emergency situations.
- Food distribution strategy – Identifying and reaching the vulnerable group
- Targeting Food Aid.
- Mass and Supplementary Feeding / Special foods/rations for nutritional relief
- Food and Nutrition security
- Nutrition in Special needs-High altitudes and Low temperatures.
- Space nutrition.

7. Dr.M. Swami Nathan. (2010). Food and Nutrition Volume-2 Second Edition the Bangalore Printing and Publishing Co Ltd Bangalore 560018.

COURSE OUT COMES

- After the completion of the course students will be able to:

CO1 Acquire knowledge on advanced nutrition concepts and management

CO2 Demonstrate and apply the concepts and designing foods for brain, immunity and sports.

CO3 Skills to manage the diet in emergency situations.

CO4 Present knowledge on designing foods for special needs.

CO-PO Mapping

H-High-3, M- Medium-2, L- Low-1

FSND 303 -A: NUTRITION ASSESSMENT TECHNIQUES

COURSE OBJECTIVES

- To enable the students to:

1. Understand the methods of nutritional status assessment.
2. Apply knowledge on assessment techniques of protein quality in diets
3. Plan nutrition research using animal models.
4. Design nutrition research using Human models.

GENERIC ELECTIVE- THEORY

UNIT-I: Assessments of Nutritional Status

i. **Direct methods**: Anthropometric, Biochemical, Clinical, Dietary assessments.

- Anthropometric assessment: Introduction, Definition, Methods of measurements, Standardizations Classification of Nutritional status.
- Biochemical assessment: Need for Biochemical test, Interpretation of biochemical test, Types of test.
- Clinical assessments: Assessment of clinical signs in various disorders.
- Dietary Assessments: Types of Diet surveys, methods of Diet surveys, analysis and interpretation, problems in Diet surveys and solutions.

ii. **Indirect method**: Vital statistics and other Records

UNIT-II: Methods of Estimation of Protein Quality

- Protein efficiency ratio (PER), Digestibility co efficient, Biological value (BV), Net Protein Utilization (NPU), Net protein Ratio (NPR), Chemical score, protein Digestibility corrected Amino Acid Score (PDCAAS), Net Dietary Protein Calories Percent (NDPCP).

UNIT-III: Growth studies: Animal Models

- Role of animal models in nutrition research; need for extrapolation of animal research results to human populations; Maintenance of animal laboratory; maintenance of records; Principles of formulation of diets- classification and composition.
- Growth and development of rats- role of different protein levels of the diet protein sources of the diet- body weight changes- feeding techniques- calculation of PER.
- Biological Assays with animal models: metabolic and balance studies: (for protein quality): Biological value- formulation of objectives, composition of diets- collections of urine and fecal, food intake assessment, determination of food and urine and fecal nitrogen – calculations of endogenous nitrogen – digestibility co-efficient (DC) and Biological value (BV).

UNIT-IV: Growth and Metabolic Studies with Human Subjects

- Principles, objectives.
- Growth studies with infants on feeding different protein sources. (case study experiences and report of research studies)
- Growth studies with preschool children, school children and adolescents: Effect of supplementation
- Nitrogen balance studies, in growing children, adolescents and adults- Procedure for conducting metabolic and balance studies and interpretation of results.

6. Mayanard, L.A and J.K. Loosli. (1992). Animal Nutrition, 5th edition McGraw Hill book company, New York

COURSE OUTCOMES - After the completion of the course students will be able to:

CO1 Assess nutritional status using ABCD techniques.

CO2 Apply advance research techniques in dietary assessment.

CO3 Do nutrition research using animal models.

CO4 Design nutrition research using human models.

CO-PO MAPPING

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

H-High-3, M- Medium-2, L- Low-1

FSND 303-B: PUBLIC HEALTH NUTRITION

COURSE OBJECTIVES

- To enable the students to:

1. Gain insight into the public health problems and their implications.
2. Acquire skills in organizing and evaluating nutrition projects in the community.
3. Appreciate the national and international contribution towards nutrition improvement in India.
4. Apply different assessment techniques for nutritional screening.

GENERIC ELECTIVE-THEORY

Unit- I: Public Health Nutrition – An Overview

- Concept and importance of public health nutrition
- Public health issues and problems
- Health care system in India
- Role of public nutritionist in health care delivery

Unit-II: Strategies to combat Public Health Problems

- Improving food and nutrition security - Green White and Blue revolution
- Nutrition education - Principles of planning –, where, when, whom, Kitchen garden, food fortification, food enrichment, PDS, PHC

Unit-III: Nutrition Intervention programmes

- National Nutrition Policy Preschool feeding programme, ICDS, MDM, SNP, WNP, ANP, BNP, NNAPP, FNB, NIDDCP
- National Program for Prevention of Blindness due to Vitamin A Deficiency

Unit-IV: Strategies to combat malnutrition

- International organizations concerned with food and nutrition: FAO, WHO, UNICEF, CARE, AFPRO, CWS, CRS World Bank and others.
- National organizations concerned with Food and Nutrition: ICMR, ICAR, CHEB, CSWB, SSWB
- Economics of Nutrition: Malnutrition and its economic consequences; Economics in Nutrition – Food security, food production and food pricing.

9. Preventive and Social Medicine, K Park, BansaridasBhanot Publishing House.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Demonstrate systematic knowledge and understanding of the commonly occurring nutritional problems.

CO2 Gain awareness on the basic nutrition intervention programmes by national and international organizations.

CO3 Describe the various strategies to combat malnutrition.

CO4 Apply different assessment techniques for nutritional screening.

304 PRACTICAL

301 FOOD PROCESSING AND PRESERVATION TECHNOLOGY

COURSE OBJECTIVES:

To enable the students to**:**

1. Equip practical skills in different processing and preservation techniques of foods
2. Understand the planning and preparation of foods in special needs.

PRACTICALS:

1. Market survey of processed and preserved foods and to study the methods of processing, preservation, Additives and preservatives used, shelf life, cost and form of availability.
2. Preservation of food by traditional methods using sugar, salt and turmeric powder etc.
3. Preservation by using Chemical preservatives.
4. Preparation of Jams, Jellies, fruit Juices, Squashes, Sauces and bottling – Shelf life study.
5. Pickling with a variety of foods - Shelf life study.
6. Drying and dehydration of foods.
7. Refrigeration, Freezing and freeze drying of foods.
8. Extrusion processing.
9. Processing and preservation of fermented products.
10. Visits to different commercial food processing units and Industries.

302 ADVANCES IN HUMAN NUTRITION

PRACTICALS:

1. Planning and preparation of Brain foods.
2. Demonstration of Electroencephalogram (EEG)
3. Identification of various immune cells by morphology – Leishman staining, Giemsa staining, Differential counts, Total counts.
4. Planning and preparation of antioxidant rich foods.
5. Iodine testing in salt and Flourine testing in water.
6. Demonstration of BMD and DEXA.
7. Planning and preparation of calcium rich diets for Osteoporosis.
8. Assessment of household food and nutrition security and calculation of Hunger Index.
9. Planning and preparation foods for Astronauts.
10. Planning and Preparation of foods for High altitudes and Low temperatures.

REFERENCES:

1. Rama swamy,H. and Marcote,M. (2005).Food processing- principals and applications, CRC Press, Newyork

2. Whitney and Sharon RadyRolfes. (1999). Understanding Nutrition" (8th edition) An International Thomson Publishing Company, Albnay, New York, USA, Wadsworth Publishing Company

Course outcomes: After studying the course, students will able to:

CO1: Apply of appropriate technologies to process and preserve different foods to extend the shelf life.

CO2: Demonstrate and present the skills in designing foods for special needs.

FSND 305: INSTITUTIONAL FOOD SERVICE MANAGEMENT (SKILL ORIENTED COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Understand the different types and management of food services and exposure to the dietary department in a hospital setting.
2. Acquire knowledge on finance, personnel management, duties and responsibilities of dietitians.
3. Gain skills to act in a variety of capacities in clinical, administrative, and community settings.
4. Apply skills on quantitative food production and planning diet plans for different diseases by placing in hospitals.

SKILL ORIENTED COURSE- THEORY

UNIT-I: Introduction to food service Industry, management and types of Food service establishments.

- Principles, functions and types of food service management.
- Need and importance
- Tools of Management.

- Management of resources.
- Laboratory support services in food safety.

UNIT-II: Financial and Personnel Management

- Definition and scope of financial management.
- Cost concept, cost control and pricing.
- Book keeping and accounting.
- Personnel Management - Recruitment, selection and Induction, Job analysis, description Monitoring work employee facilities and benefits, Inservice Training. Skills required to operate and manage food service system.

PRACTICALS:

1.Visit to a Fast-food Center.

2.Visit to a Railway Canteen.

3. Visit to a Hostel.

4. Visit to a Hospital Canteen.

5. Visit to a Star Hotel.

6. Quality Control in various stages of Food Service.

7. Layout design of Food Service establishment and principles of Food Service.

INTERNSHIP:

1. A full time 45 days internship in a multi-specialty hospital under a registered dietitian during the semester wherein the student should undergo training in dietary department and should understand the duties of dietitian and working of dietary department.

2. The student should report 3 case studies on any diseases and should submit a report on internship and case study for evaluation.

3. Internship Report

A Report to be maintained and submitted for evaluation- the contents of the report should contain Hospital- History, Organization, Departments, Functions, types of feeds, supervision

and preparation of feeds, Schedule & Services with emphasis to dietary department, Case Study–3disease with teaching aids, Internship Outcome.

CONTENTS OF THE REPORT

- Hospital-History, Dietary department.
- Nutritional status and Diagnostic tests
- Drawing-up of patients prescription
- Discharge diet plans and follow-up where possible
- Acceptability and compliance
- Preparation of teaching aids
- Monitoring patients progress for any 3 diseases

COURSE OUTCOMES

- After completion of this course, students will be able to:

CO1 Gain knowledge in management of food service establishments.

CO2 Knowledge on skills in finance and personnel management.

CO3 Acquire skills in planning diets for different diseases.

CO4 Apply skills as a competent Dietitian

CO-PO Mapping

H-High-3, M- Medium-2, L- Low-1

FSND 306-A: FUNDAMENTALS OF FOOD, NUTRITION AND HEALTH

COURSE OBJECTIVES - To enable the students to:

1. Gain knowledge on foods, food groups, balanced diet for different age groups.
2. Understand the importance of macro and micronutrients in daily diet.
3. Comprehend knowledge on deficiency symptoms of different nutrients.
4. Apply skills to assess nutritional problems in community.

OPEN ELECTIVE- THEORY

UNIT-I: Food Composition

- Food groups – Classification – food composition and nutritive values of different foods, Functions of foods. Balanced Diet, RDA for all age groups.

UNIT-II: Macronutrients

- Carbohydrates: Definition, classification, food sources, Function in human body, Recommended Daily Allowance (RDA) and importance of fibre.
- Fats and Oils: Definition, classification, saturated and unsaturated fatty acids, cholesterol, Food sources, requirements, RDA and biological functions.
- Protein: Definition, classification, essential and non-essential amino acids, protein quality, supplementary value of protein, food sources, RDA and functions.

UNIT-III: Micronutrients

- Vitamins: Definition, classification
- Fat soluble Vitamins (A, D, E,K)- Functions, sources, RDA, Deficiency diseases and symptoms.
- Water soluble Vitamins (B complex and C): Functions, sources, RDA, Deficiency diseases and its symptoms.
- Macro minerals: Calcium, phosphorous, sodium, potassium, chloride- sources, biological functions, factors affecting availability, Deficiency diseases and symptoms.
- Micro minerals:Copper, zinc, Iron, Iodine and fluorine in human nutrition, biological functions, factors affecting availability, Deficiency diseases and symptoms.

Unit - IV: Major Nutritional Problems of the Community:

- Malnutrition - PCM, Obesity, micronutrient malnutrition, government programs to eradicate PCM, Vitamin-A, Iron and Iodine deficiencies, principles of planning diets for different conditions of malnutrition.

REFERENCES

4. Nutrient Requirements and Recommended Dietary Allowance for Indians A Report of the Expert Group of Indian Council Medical Research.2010.

COURSE OUT COMES

- After studying the course, students will able to:

CO1 Acquire knowledge on food groups and functions of food.

CO2 Gain knowledge on importance of macro and micronutrients in different age groups.

CO3 Identify signs and symptoms of different nutrient deficiencies.

CO4 Apply skills to assess nutritional problems in community.

FSND 306-B: DYNAMICS IN FOOD PREPARATION

COURSE OBJECTIVES

- To enable the students to:

1. Learn the principles of safe food preparation and food pyramid.
2. Understand the role of foods in cookery.
3. Apply knowledge about effect of cooking on nutrients.
4. Estimate the effects of cooking on Nutrients.

OPEN ELECTIVE- THEORY

UNIT-I: Introduction

- Definitions in food science.
- Composition and functions of foods.
- Food pyramid.
- Principles of safe food preparation.

UNIT-II: Cooking Process

- Objectives of Cooking.
- Preliminary preparations.

- Cooking methods- Moist heat methods, Dry heat methods; Fat as medium of cooking, Microwave cooking.
- Effect of cooking on Nutrients.

UNIT-III: Cooking Equipments

- Types of cooking equipments- Grill, Boiler, Oven and Microwave. Mechanical processing equipments- Vegetable Peeler, Chopper, Mixer, Slicing machine and mincing equipment.
- Non cooking equipment: Refrigerator.

UNIT-IV: Role of foods in Cookery

- Role of cereals, pulses, fats/oils, milk and milk products, flesh foods, sugars, vegetables, fruits and spices in cookery.

	Total				24			600

***Generic Elective- Students has to Choose One**

****Open elective –Offered by Department to other department Students.**

NOTE: Interested Students may Register for MOOCS with the approval of DDC.

SEMESTER- IV

FSND 401: FOOD SAFETY STANDARDS AND QUALITY CONTROL (Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

-To enable the students to:

1. Understand the current food safety standards rules and regulations.
2. Gain knowledge on desirable and undesirable constituents and contaminants in foods.
3. Critically explains on subjective and objective methods.
4. Develop skills for quality analysis and quality assurance of food quality

CORE THEORY

UNIT-I: **Food Quality, Assessment and evaluation.**

- Definition and Physico Chemical attributes.
- Subjective methods; Sensory/ Organoleptic evaluation-Difference, Preference and Scoring tests.
- Objective methods of evaluation.
- Chemical methods of evaluation.
- Microbial methods of evaluation.

UNIT-II: Food quality Standards

- Food Safety Standards Authority of India (FSSAI)- Rules and Regulations- Food products Standards and additive regulations, Prohibition and sales regulations, Packaging and Labelling regulations, Alchoholic beverages Regulations, Fortification food regulations, Food / Health supplements and Nutraceutical regulations and Organic food regulations.
- Food Licensing and Registration system
- International Food Safety Standards- ISO, CODEX, HACCP- Principles.

UNIT-III: Food Contaminants

- Food contaminants- Definition, Classification- Physical, Chemical, Biological Contaminants
- Unintentional /Undesirable constituents-Naturally occurring contaminants, Heavy metals, pesticide residues, products of microbial growth, Health hazarads.
- Intentional/ Desirable constituents-chelating agents, acids, bases, buffer systems and salts; stabilizers, thickners, polyhydrocalcinols, anticaking, firming, clarifying and bleaching agents; antioxidants, non- nutritional sweeteness, antimicrobial agents, Gases and propellants.

UNIT-IV: Food contaminants and Standards of Quality

- Contaminants and quality standards in Milk and Milk products
- Contaminants and quality standards Fruit and Vegetable products
- Contaminants and quality standards Meat, Poultry, Eggs and Fish
- Contaminants and quality standards Fats and Oils
- Contaminants and quality standards Spices and Condiments.

- Contaminants and quality standards Water and Beverages.
- Contaminants and quality standards Food grains and Flours
- Contaminants and quality standards of Sweeteners- Sugar, Jaggery, Honey.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Gain knowledge in current rules and regulations of food safety standards and quality assurance.

CO2 Identify the contaminants and additives in foods.

CO3 Select the appropriate analytical technique when presented with a problem.

CO4 Demonstrate practical proficiency in a food quality analysis.

FSND- 402: FOOD PRODUCT DEVELOPMENT AND MARKETING

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Illustrate the new product categories in food market and their characteristics.
2. Elucidate the process of new food product development in food industry.
3. Exemplify various specialty food products and their applications.
4. Acquire the skill to design and development of new food product and analyse the quality of the product.

CORE THEORY

UNIT- I: New Food Products

- New food product: Definition, Characteristics, Need for New food product development.

- Classification of new food products: Line extensions - Repositioning of existing products - New form of existing product - Reformulation - New packaging - Innovative products - Creative products and Value added products.

UNIT-II: New Food product development

In Food Industry

- Ideation/Idea generation, Consumer research, Product design and Formulation.
- Process development: Prototype development and scale up.
- Quality assessment of new developed products: Evaluation-Shelf Life Testing.
- Packaging and labeling.

In Food ingredient and service Industry

- Characteristics, Consumers and Costumers, market places.
- Development of products for food service and ingredient industries.
- Quality and Safety of the products.

UNIT-III: Food Product Commercialization and Marketing

- Costing and Pricing, Test Market, Advertising and promotions, Product launching, Product life cycle.
- Entrepreneurship, concept, Types, qualities and functions of an entrepreneur.
- Ethics and Intellectual property/ Patents in food product development.

UNIT-IV: Food Products with reference to

- Health foods, Medical foods, Therapeutic foods, Herbal foods, Fortified foods.
- Infant foods, Geriatric foods, Sports drink.
- Functional foods, Designer foods and Nutraceuticals.
- Probiotics, Prebiotic and Symbiotics.

7. Oickle, J.G. (1990).*New Product Development and Value Added*, Food Development Division Agriculture, Canada.

COURSE OUTCOMES - After the completion of the course, the students will be able to:

CO1 Apply a product development process to generate ideas, develop concept to test market.

CO2 Design food and nutritional label of food products.

CO3 Demonstrate the skills to conduct the organoleptic evaluation of food product.

CO4 Work collaboratively with a team in food product development.

FSND 403-A: NUTRITION FOR HEALTH AND FITNESS

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Define the concepts of Health, Nutrition, physical activity, physical fitness and methods of evaluation.
2. Understand the Energy metabolism pathways during physical activity.
3. Describe the role of macronutrients in physical performance, weight management and obesity.
4. Explains the nutritional needs in different sports and the role of national agencies.

GENERIC ELECTIVE-THEORY

UNIT-I: Physical Fitness and its Evaluation

- Definitions- Nutrition, Health, Physical activity and Physical Fitness.
- Health benefits of Physical activity and Recommendations,
- Components of physical fitness to overall health-Cardiovascular Fitness, Muscular strength, Muscular Endurance, Flexibility, and Body composition.
- Assessment criteria of age specific fitness and health status- Evaluation of physical fitness- FITT Principles-Talk test, Target heart rate, Borg scale.

UNIT-II: Energy Metabolism in Physical Activity and Weight Management.

- Aerobic and Anaerobic metabolic pathways-ATP-Creatine Phosphate pathway(ATP-CP), Creatine Phosphate(CP), Lactic acid cycle, Glycolysis, Krebs cycle(TCA), Gluconeogenesis.
- Energy requirements and assessment of energy expenditure based on physical activity, Carbohydrate Loading.
- Special conditions- Weight management and Obesity-Dietary modifications-Restricted energy and fat diets, Low glycemic diets, Formula diets and meal replacement programs.

UNIT-III: Nutritional and Physical Performance

- Nutritional Requirements during Exercise- Carbohydrate, Fat, Protein-Recommendations- Before, During and After exercise.
- Carbohydrate utilization during exercise, Role of protein and fat in daily training and competitive performance.
- Vitamins and Minerals-Importance and Recommendations.
- Fluid–Recommendations, Importance and Consequences of Fluid balance. Hydration in pre, during and post exercise.

UNIT-IV: Sports Nutrition

- Classification of sports events and RDA for sports person.
- Nutritional requirements and special needs of sports person, pre, during, post sports events, water and electrolyte balance, ergogenic aids.
- Endurance and fatigue in sports performance.

- Assessment-Kinanthropometry**:** Definition; Introduction; Body size and proportion; Somatotyping; Circumferences; Skinfold measurement sites and determining body composition; Applications. Role of National agencies towards improvements of sports performance.

COURSE OUTCOMES

- After completion of this course, students will be able to:

CO1 Gain knowledge on concepts of physical activity and physical fitness.

CO2 Describe the energy metabolism pathways in physical activity.

CO3 List the role of macronutrients in physical performance.

CO4 Demonstrate the importance of nutrients in Sports.

CO-PO Mapping

FSND 403-B: GERIATRIC NUTRITION

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

- To enable the students to:

1. Understand the physiological changes and theories of ageing.
2. Gain knowledge on importance and consequences of diet in elderly.
3. Create awareness on degenerative diseases, life style genesis and its management through diet.
4. Able to explain government programs and policies for elderly.

GENERIC ELECTIVE- THEORY

UNIT-I: Changes in Ageing

- The process of Ageing – Physiological biochemical and body compositional changes – Theories of ageing. Socio-cultural and psychological aspects of ageing – Health seeking behaviour of the elderly.

UNIT-II: Nutritional requirements

- Food and Nutritional needs of the elderly – Dietary management – Special problem of women – menopausal, post-menopausal. Problems; Early nutrition and nutrition and health in later years.

UNIT-III: Diseases of Ageing

- Chronic degenerative diseases and nutrition and health problems of the elderly – their etiology – genesis life style and living condition, management, prevention and control.

UNIT-IV: Programmes

- Policies and programmes of the government and NGO sectors pertaining to the elderly – old age homes – Day care and recreation centers – their need and scope.

6. ShubhanginiA.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Mecgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Acquire knowledge on process of ageing.

CO2 Describe diet plans for different disease conditions in elder people.

CO3 Illustrate the available government benefits for elder people.

CO4 Plan diet according to recommendations for elder people.

404 PRACTICAL FOOD SAFETY AND QUALITY CONTROL AND FOOD PRODUCT DEVELOPMENT

401 FOOD SAFETY STANDARDS AND QUALITY CONTROL

COURSE OBJECTIVES

- To enable the students to:

1. Understand the techniques of qualitative and Quantitative analysis of quality of different foods.
2. Develop skills in identifying the techniques of identifying adulterants in foods.

PRACTICALS:

Assessment of quality parameters and adulterants in different foods

1. Survey of label information of foods in market

2. Cereals, Pulses and Flours – Label information, detection of adulterants
3. Fats and oils – Label information, Adulterant tests, Iodine number and FFA Value
4. Fruit and vegetable products – Label information, Acidity , TSS, Sugars
5. Coffee and Tea, Honey – Label information, Detection of Adulterants
6. Milk and milk products- Label information, COB test, Acidity, MBRT, Detection of adulterants.
7. Spices and Condiments- Label information, Detection of adulterants.
8. Determination of different Preservatives
9. Determination of different Colors
10. Document preparation for the approval of FSSAI.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1: Acquire techniques in assessing the quality of foods

CO2: Understand the methods of identifying the adulterants in foods

402 FOOD PRODUCT DEVELOPMENT AND MARKETING

COURSE OBJECTIVES

- To enable the students to:

1. Acquire practical skill in developing and analyzing a food product.
2. Develop skill in different stages of product development

PRACTICALS:

New Food Product Development and Marketing

1. Ideation.
2. Concept Development.
3. Market research.
4. Formulation and Standardization.
5. Acceptability studies.
6. Shelf life Studies.

7. Costing and Pricing.
8. Food and Nutrition labeling and packaging.
9. Development of Product Promotion strategies.
10. Test Marketing.

2. https://www.fssai.gov.in
3. Man, C.M.D. and Jomes, A.A.(1994).*Shelf life Evaluation of Foods*, Blackie Academic and Professional, London.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1: Develop skills in Product development

CO2: Gain Knowledge in different stages of product development and evaluation

405: TECHNOLOGY OF PACKAGING

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

COURSE OBJECTIVES

To enable the students to:

1. Provide knowledge on packaging and packaging materials
2. An overview of the scientific and technical aspects of food packaging.
3. Enable the students to understand the regulations of packaging and packaging material testing.
4. Apply skills of new innovations in food packaging to improve product stability and/or to extend the product shelf-life.

MULTI- DISCIPLINARY COURSE-THEORY

UNIT- I: Introduction and Types of Packaging

- Principles of food packaging, Functions of packaging; Type of packaging materials- Paper and Paperboard, types of paper, Glass, Metal and Plastic- Thermosets and Thermoplastics.
- Selection of packaging material for different foods. Methods of packaging and packaging equipment.
- Packaging-Food Interactions**:** Factors affecting flavor absorption, the role of the food matrix, the role of differing packaging materials, Flavor modification and sensory quality.

UNIT- II: Food Packaging System

- Active and Intelligent Packaging Techniques**:** Active packaging techniques, intelligent packaging techniques, Consumers towards and novel packaging.
- Aseptic Packaging Technology**-**advances, systems and its food applications, packaging for high pressure processing.
- Oxygen, ethylene and other scavengers**:** Oxygen scavenging technology, Selecting the right type of oxygen scavenger, Ethylene scavenging technology, Carbon dioxide and other scavengers.

PRACTICALS:

1. Classification of various packages based on material and rigidity.
2. Measurement of thickness of packaging materials.
3. Measurement of basic weight and grammage of paper and paperboards.
4. Measurement of water absorption of paper and paper boards (Cobb Test).
5. Measurement of grease resistance of papers.
6. Drop test, Box compression test.
7. Measurement of grease resistance of papers.
8. Head space analysis of packaged food.

4. F. A. Paine and H. Y. Paine (1992) *A Handbook of Food Packaging*, 2nd edn Blackie Academic and Professional, London.

COURSE OUTCOMES

- After the completion of the course, the students will able to:

CO1 Exposure about packaging, packaging materials and packaging methods.

CO2 Comprehend the overview of the scientific and technical aspects of food packaging

CO3 Acquire knowledge on regulations of packaging and testing.

CO4 Apply skills of new innovations in food packaging to improve product stability and/or to extend the product shelf-life.

CO4		H	H		H			M	M	M	H	H	H	H

H-High- 3, M- Medium- 2, L- Low- 1

FSND406-A: CHILD GROWTH AND DEVELOPMENT

COURSE OBJECTIVES - To enable the students to:

1. Know the terms growth , development and stages of development across life span
2. Understand the characteristics of children at different stages of childhood
3. Explain the different developments like physical, cognitive, language and social development during childhood.
4. Apply knowledge to understand normal development and developmental delays during childhood.

OPEN ELECTIVE -THEORY

UNIT-I: Foundations of Development

- Understanding the terms Child, Growth, Development, Child Development, Human Development, and Developmental tasks.
- Principles of Child Development and Factors influencing growth and Development of Children.

- Determinants of Development - Role of Heredity and Environment in Development
- Stages of Development across life span and domains of development.

UNIT-II: Infancy

- Infancy – Characteristics
- Sensory- Motor activities
- Language Development
- Socio-emotional development.

Unit-III: Early Childhood

- Early Childhood Period –Characteristics
- Physical Development
- Cognitive development
- Emotional and Social development

UNIT-IV: Middle Childhood

- Middle/ Late Childhood Period-Characteristics
- Physical development
- Cognitive development.
- Emotional and Social development

8. Prasad, J. and Prakash, R. (1996). Education of handicapped children, problems and solution. Kanishka publication distribution. New Delhi.

COURSE OUTCOMES

- After completion of the course, students will able to:

CO1 Define the terms growth and development, and stages of development across life span

CO2 Understand the characteristics of of children at different stages of childhood.

CO3 Critically explain different developments like physical, cognitive, language and social development during childhood

CO4 Apply knowledge to understand normal development and developmental delays during childhood to assess all round development during childhood

FSND 406-B: DISASTER MANAGEMENT

COURSE OBJECTIVES

- To enable the students to:

1. Know about natural disasters: manmade disasters; chemical hazards; National and International strategies to mitigate disaster management.
2. To understand natural disasters (like floods, drought, cyclone, earthquakes, global warming etc); Nuclear disasters; Biological disasters;.
3. Explain the efforts made by the NGOs, Community based organizations and local administration in disaster management.
4. Discriminate disaster responses of Armed forces and Police.

OPEN ELECTIVE- THEORY

UNIT-I: Natural Disasters

- Meaning and nature of natural disasters, their types and effects.

- Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches, Volcanic eruptions, Heat and cold Waves.
- Climatic Change: Global warming, Sea Level rise, Ozone Depletion.

UNIT-II: Man Made Disasters

- Nuclear disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution, water pollution.
- Deforestation, Industrial wastewater pollution, road accidents, rail accidents, air accidents, sea accidents.

UNIT-III: Chemical Hazards

- Release of Toxic chemicals.
- Sedimentation processes.
- Global Sedimentation Problems.
- Regional Sedimentation Problems, Sedimentation and Environmental Problems.

UNIT-IV: Disaster Management

- Efforts to mitigate Natural Disasters at National and Global levels.
- International Strategy for Disaster reduction.
- Concept of disaster management, National Disaster Management framework; financial arrangements
- Role of NGOs, Community-based organizations, and Media. Central, State, District and local Administration; Armed forces in Disaster response
- Disaster response: Police and other organizations.

REFERENCES

3. Routledge. and Sharma, V.K. (2001). *Disaster management*. National Centre for Disaster Management, India.

Course Outcomes –

After the completion of the course, the students will be able to:

CO1 Gain in-depth knowledge about natural disasters; manmade disasters; chemical hazards: disaster management.

CO2 Design and administer a schedule for collection of Information regarding the roles of NGOs, Community based organizations , central state, District and local Administration, Police and armed forces, in Disaster management.

CO3 Illustrate the efforts made by the NGOs, Community based organizations and local administration in disaster management.

CO4 Discriminate disaster responses of Armed forces and Police.

Table. 1.1.1. Details of Courses Addressing Local, National, Regional and Global Developmental Needs (2021-22)

I. Local Needs:

Programme Name	Programme Code	Course Name	Course Code	Year of Introduction

DEPATMENT OF HOME SCIENCE

1.1.2. Minutes of the Board of Studies Meeting.

Venue: HOD Chamber **Date: 03-04-2021**
Time: 11.00 AM

Members present:

S.NO	Name of the Faculty Member	Designation

1		**BOS Chairman**
2		**HOD Home Science**
3		**Member**
4		**Member**
5		**Member**

Agenda: **1.** Finalization of syllabus for M. Sc Home Science for its introduction from the Academic year 2021-2022.

2. Any other item

.

Resolutions:

1. The M.Sc. zoology syllabus prepared as per Outcome Based Education (OBE) has been discussed and by following the suggestions/Improvements were incorporated as suggested by members of BOS and External Experts.

2. Under National Educational Policy (NEP), skill development and multidisciplinary courses were introduced at III and IV semester, respectively.

3. Course curriculum contents were discussed at length and M.Sc. Zoology programme syllabus was drafted.

Based on the above considerations, the BOS members unanimously resolved to approve and recommended the Revised Syllabus with effect from the Academic Year 2021-2022.

Signatures:

Field visit Project Report (2021-2022)

Name of the Student :

Register Number :

Course : M.Sc. Home Science

Certified that this is the Bonafide Field visit project carried out by the candidate during 17, & 18th February, 2022 by students of Department of Biotechnology, Sri Venkateswara University, Tirupati for the Academic year 2021-2022.

Faculty Member In-charge

Head of the Department/ Co-Ordinator

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

Table. 1.3.1. Courses which address Professional Ethics, Gender, Human values, Environment and sustainability into the curriculum.

A. Professional Ethics:

Programme Name	**Programme Code**	**Course Name**	**Course Code**	**Year of Introduction**	**Description of the course addressing Professional Ethics**
M Sc Food Science		Human Values and	FSND 107	2021	Definition and Nature of Ethics- Its

Nutrition and Dietetics		Professional Ethics-I			relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.
M Sc Food Science Nutrition and Dietetics		Human Values and Professional Ethics-II	FSND	2021	Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and health care professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.
M Sc Food Science Nutrition and Dietetics		Food Product Development	FSND 402	2021	Ethics and Intellectual property/ Patents in food product development.

B. Gender:

Programme Name	Programme Code	Course Name	Course Code	Year of Introduction	Description of the course addressing Gender issues

M Sc Food Science Nutrition and Dietetics		Community Nutrition	FSND 104A	2021	Nutrition Through Life Span – Infancy, Early and late childhood, Adolescence, Adulthood and Ageing – Nutritional requirements and Recommended Dietary Allowances (RDA)– Justification for special needs during periods of growth and development, pregnancy and lactation – significance of breast feeding.
M Sc Food Science Nutrition and Dietetics		Nutrition during life span	FSND 104B	2021	Nutritional requirements for adult man and woman. Nutritional concerns, RDA, nutritional guidelines and work efficiency. Physiological changes in aging, effects of aging on nutritional health.

C. Human Values:

Programme Name	Programme Code	Course Name	Course Code	Year of Introduction	Description of the course addressing

					Human Values
M Sc Food Science Nutrition and Dietetics		Human Values and Professional Ethics-I	FSND 107	2021	Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom. Good behavior and respect for elders, Character and Conduct.

D. Environment & Sustainability:

Programme Name	**Programme Code**	**Course Name**	**Course Code**	**Year of Introduction**	**Description of the course addressing Professional Ethics**

Table. 1.3.2. Number of value added courses for imparting transferable and life skills offered due to the last five years (10).

Table.1.3.3. Average Percentage of students enrolled in the courses under 1.3.2 above (10).

I / II / III / IV / V years:

Name of the Programme	Name of the value added course offered (With 30 or more contact hours)	Course Code	Year of offering	Number of times offered during the year	Duration of the Course	Number of students enrolled in the year	Number of students completed the course in the year
M Sc Food Science Nutrition and Dietetics	Food Microbiology and Safety	FSND 203-A	2021	Once	II - semester	55	Not yet completed
	Research Methodology	FSND 204-A	2021	Once	II - semester	55	Not yet completed
	Statistics and Computer Applications	FSND 204-B	2021	Once	II - semester	55	Not yet completed
	Food Safety Standards and Quality Control	FSND 401	2021	Once	IV - semester	55	Not yet completed
	Food Product Development and Marketing	FSND 402	2021	Once	IV - semester	55	Not yet completed

---

1.1.3. Average Percentage of Courses having focus on Employability / Entrepreneurship / Skill development during the last five years (10)

1.2.1. Percentage of New Courses introduced of the Total number of courses across all programmes offered during the last five years (30)

S.	Course	Title of the Course	Years of	Activities/Content with direct bearing on

No.	Code		Introduction	Employability/Entrepreneurship /Skill development
1	FSND 101	Food Chemistry and Analysis	2021	I. Acquire knowledge on chemical composition physical, chemical, and functional properties of Water, carbohydrate, Protein and Fats. II. Understand the principles and working applications of different analytical techniques associated with food. III. Perform skills in qualitative and quantitative estimation of nutrients in different foods. IV. This course gives an hands on experience which will help student to become food analyst at local, regional, national and global levels.
2	FSND 102	Clinical Nutrition and Dietetics-I	2021	I. Understand the concepts of nutrition and its relation to health. II. Describe the role and responsibilities of Dietitian in Hospital. III. Apply Knowledge related to Therapeutic modification of diets and Plan and prepare diet for different diseases conditions. IV. This will help the students to get placements in hospitals and also start their own diet and nutrition clinics.
3	FSND 103 -A	Food Science and Experimental Foods	2021	I. Acquire knowledge on Plant and Animal foods composition, and processing techniques on nutritive quality of foods. II. Understand the principles of cookery of different foods and methods of evaluation. III. This course is prerequisite for skill development in Food Product development. IV. Standardization and experimentation on different foods leading to physical, chemical and sensory changes can be understood leading to become food research analyst in industries at local, regional, national levels.
4	FSND 103- B	Baking Technology	2021	I. The process of baking and role of different ingredients for different baked products in this course will help the students to develop skills as entrepreneurs. II. The concepts and knowledge on process of baked products supply chain helps students for employability in baking industries.
5	FSND 104 -A	Community Nutrition	2021	I. Understand about nutrients in food, their functions and consequences of deficiency. II. Apply skills for planning diets for nutritional disorders like PEM, Iron, Vitamin A and Iodine. III. Develop the knowledge of techniques to assess the nutritional status of different age groups. IV. Acquire knowledge on government programs to prevent nutritional disorders according to regional and national needs.
6	FSND 104 -B	Nutrition during Life span	2021	I. Acquire knowledge on the importance of nutrition during life span. II. Enlighten the principles and working applications during dietary modifications and menu planning.

				III.	Comprehensive knowledge on analyzing the nutritional requirements.
				IV.	Evaluate diets for comparison with RDA and formulate dietary interventions to address nutritional deficiencies.
7	FSND 105	Practical I 101+103-A/103-B	2021	I.	Develop skills in quantitative and qualitative analysis of foods.
				II.	Apply skills in standardization of foods using different processing techniques.
				III.	Acquire skills in processing, preparation and evaluation of bakery products.
8	FSND 106	Practical II 102+104-A/104-B	2021	I.	Acquire hands on experience in Therapeutic modifications of diet for different diseases by planning, preparing and evaluating.
				II.	Acquire community assessment skills in terms of anthropometry, dietary, clinical and biochemical for various disorders and planning programs for important days.
				III.	Apply Computational skills in the Nutritional allowances during life span.
9	FSND 107	Human Values and Professional Ethics-I	2021		
10	FSND 201	Nutritional Bio chemistry	2021	I.	Understand the metabolism of nutrients such as carbohydrates, proteins, lipids, minerals and vitamins in human physiology.
				II.	Acquire knowledge on factors affecting digestion, absorption of nutrients.
				III.	Create awareness on enzymes and its role in nutrient metabolism.
				IV.	Gain knowledge on role of vitamins and minerals as coenzymes in metabolism.
11	FSND 202	Clinical Nutrition and Dietetics-II	2021	I.	Understand the concepts of dietary principles for various diseases.
				II.	Comprehend knowledge in Dietary modifications for the management of diseases.
				III.	Application of principals in preparation and service of diets to the patients.
				IV.	Able to assess the case studies and construct the diet charts.
12	FSND 203- A	Food Microbiology and Safety	2021	I.	Acquire knowledge about important genera of microorganisms associated with food.
				II.	Acquaint with food contaminants and their sources.
				III.	Understand the various factors associated with growth, food spoilage and food-borne diseases of different microorganisms.
				IV.	Gain knowledge on the characteristics of food borne diseases, infections and intoxications and their identification.
13	FSND 203 B	Nutrition in Emergencies And Disaster Management	2021	I.	Understand and assess the emergency situations related to food and Nutrition in natural and manmade disasters.
				II.	Acquire knowledge on nutrition surveillance and treatment in emergencies.
				III.	Gain Knowledge on planning nutrition relief and rehabilitation in emergencies.
				IV.	Develop skills in Nutritional epidemiological studies.

14	FSND 204 A	Research Methodology	2021	I. Understand the concept of doing research about terms like 'variables', 'hypotheses, and 'research '. II. Gain knowledge on different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research. III. Critically gain knowledge to select a sample by using different sampling methods like probability and non-probability sampling. IV. Develop a research proposal in the appropriate scientific style.
15	FSND 204 B	Statistics and Computer Applications	2021	I. Understand about the scope of statistics in research. II. Acquire knowledge on the concepts of inferential statistics like t-test, chi-square, Correlation and Variance. III. Gain knowledge on basics in computer and its application in statistics. IV. Develop skill in computing statistics by using statistical software.
16	FSND 205	Practical I 201+203-A/203-B	2021	I. Develop skill and hands on experience in analysis of biochemical parameters in blood and serum. II. Demonstrate and develop skills in the use of standard methods and procedures for the microbiological analysis of food. III. Develop skill in planning and Execution of nutrition epidemiological and rehabilitation studies in emergencies.
17	FSND 206	Practical II 202+204-A/204-B	2021	I. Explain concepts on Epidemiology and its application in planning programs during emergencies. II. Critically apply knowledge of application of statistics in data analysis. III. Apply skills in using computer applications for data analysis
18	FSND 207	Human Values and Professional Ethics-II	2021	
19	FSND 301	Food Processing and Preservation Technology	2021	I. Understand the principles and scope of food processing and preservation. II. Get an overview on various techniques/methods in food processing and preservation. III. Acquire knowledge of emerging technologies and their applications in food processing and preservation. IV. Acquaint knowledge on advanced food preservation technologies.
20	FSND 302	Advances in Human Nutrition	2021	I. Appraise the advance concepts of nutrition of Brain, Immunity and Sports. II. Understand the concepts of dietary management in endemic nutrition problems. III. Create knowledge on the dietary management during emergencies. IV. Understand the process and relation of

				immunity and nutrition
21	FSND303-A	Nutrition Assessment Techniques	2021	I. Understand the methods of nutritional status assessment like Anthropometry, Biochemical, Clinical and Dietary. II. Apply knowledge on assessment techniques of protein quality in diets III. Understand and Plan nutrition research using animal models. IV. Design nutrition research using Human models.
22	FSND303-B	Public Health Nutrition	2021	I. Acquire insight into the public health problems and their implications. II. Develop skills in organizing and evaluating nutrition projects in the community. III. Appreciate the national and international contribution towards nutrition improvement in India. IV. Apply different assessment techniques for nutritional screening.
23	FSND 304	301+302	2021	I. Equip with skills required for process and preserve various food products. II. Planning and preparation of foods in special needs like space, high altitudes and low temperatures.
24	FSND 305	Institutional Food Service Management(T)+Practicals (P)	2021	I. Gain knowledge on the different types and management of food services and exposure to the dietary department in a hospital setting. II. Acquire knowledge on finance, personnel management, duties and responsibilities of dietitians. III. Gain skills to act in a variety of capacities in clinical, administrative, and community settings. IV. Develop skills on quantitative food production and planning diet plans for different diseases by placing in hospitals.
25	FSND306-A	Fundamentals of Food, Nutrition and Health	2021	I. Gain knowledge on foods, food groups, balanced diet for different age groups. II. Understand the importance of macro and micronutrients in daily diet. III. Comprehend knowledge on deficiency symptoms of different nutrients. IV. Develop skills and hands on experience to assess nutritional problems in community.
26	FSND306-B	Dynamics in Food Preparation	2021	I. Learn the principles of safe food preparation and food pyramid. II. Understand the role of foods in cookery. III. Apply knowledge about effect of cooking on nutrients. IV. Estimate the effects of cooking on Nutrients.
27	FSND 401	Food Safety Standards and Quality Control	2021	I. Understand the current food safety standards rules and regulations. II. Gain knowledge on desirable and undesirable constituents and contaminants in foods. III. Critical analysis on subjective and objective methods of quality of food. IV. Develop skills for quality analysis and assurance of food.
28	FSND	Food Product	2021	I. Illustrate the new product categories in food

	402	Development and Marketing		market and their characteristics. II. Elucidate the process of new food product development in food industry. III. Exemplify various specialty food products and their applications. IV. Acquire the skill to design and development of new food product and analyze the quality of the product.
29	FSND 403-A	Nutrition for Health and Fitness	2021	I. Define the concepts of Health, Nutrition, physical activity, physical fitness and methods of evaluation. II. Understand the Energy metabolism pathways during physical activity. III. Describe the role of macronutrients in physical performance, weight management and obesity. IV. Explains the nutritional needs in different sports and the role of national agencies.
30	FSND 403-B	Geriatric Nutrition	2021	I. Understand the physiological changes and theories of ageing. II. Gain knowledge on importance and consequences of diet in elderly. III. Create awareness on degenerative diseases, life style genesis and its management through diet. IV. Acquaint with the government programs and policies for elderly.
31	FSND 404	401+402	2021	
32	FSND 405	Technology of Packaging(T+P)	2021	I. Provide knowledge on packaging and packaging materials II. An overview of the scientific and technical aspects of food packaging. III. Enable the students to understand the regulations of packaging and packaging material testing. IV. Apply skills of new innovations in food packaging to improve product stability and/or to extend the product shelf-life.
33	FSND 406-A	Child Growth and Development	2021	I. Know the terms growth, development and stages of development across life span II. Understand the characteristics of children at different stages of childhood III. Explain the different developments like physical, cognitive , language and social development during childhood. IV. Apply knowledge to understand normal development and developmental delays during childhood.
34	FSND 406-B	Disaster Management	2021	I. Know about natural disasters: manmade disasters; chemical hazards; National and International strategies to mitigate disaster management. II. To understand natural disasters (like floods, drought, cyclone, earthquakes, global warming etc); Nuclear disasters; Biological disasters III. Explain the efforts made by the NGOs, Community based organizations and local administration in disaster management.

				IV. Discriminate disaster responses of Armed forces and Police.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

First Semester

(CBCS for the students admitted from 2021-22 onwards)

Paper-I: FSND - 101: FOOD CHEMISTRY AND ANALYSIS

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Differentiate free, bound and entrapped water.
2. What are emulsions? Explain.
3. What is Pectin and write the properties.
4. Write the principle and application of Electrophoresis.
5. Explain the Chemistry of frying in foods.
6. Explain the hydrogenation of fats.
7. What are Amylose & Amylopectin and draw the structure.
8. Write any two identification tests of amino acids.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks: 4x15=60

9. (a). Describe the determination of moisture in foods.

(or)

(b).Write the characteristics of colloids.

10. (a).Discuss the physical & chemical properties of lipids.

(or)

(b). Give the classification and discuss the physico- chemical properties of carbohydrates

11. (a).Explain the chemistry of hydration and dough formation of proteins.

(or)

(b). Classify proteins with suitable examples and write about protein denaturation.

12. (a).Explain the principle and estimation of protein by microkjeldahl method.

(or)

(b). Write the principle and applications of GC/ MS.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc(Home Science) Degree Examination

First Semester

(Specialization 'A'; Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper-II: FSND:102- CLINICAL NUTRITION AND DIETETICS-I

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Describe the role of a dietitian.
2. Write about Galactosemia.
3. Enlist diet counseling objectives
4. Explain directive counseling method.
5. Define TPN. Explain the mode of TPN.
6. Write about glycemic index of foods.
7. Write about the uses of Food Exchange Lists in planning therapeutic diet.
8. General principles of routine hospital diet.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks: 4x15 =60

9. (a). What are the professional qualifications and requirements of dietitians?

(or)

(b). Write about the therapeutic modifications of Normal diet.

10. (a)Explain the principles and modification of diet in Diabetes Mellitus.

(or)

(b). Explain the principles and modification of diet in Obesity.

11. (a). Explain Etiology Clinical symptoms Dietary management of HIV.

(or)

(b). Explain the principles and modification of diet in Burns

12. (a). Explain the effect of drugs on nutritional status of an individual.

(or)

(b). Explain the effect of drugs on food intake, digestion and absorption.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

First Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper-III: FSND 103-A: FOOD SCIENCE AND EXPERIMENTAL FOODS

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time: 3 hours Max Marks: 80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks 4x5=20

1. Write about the composition of dough and Batters.
2. What are leavening agents?
3. Explain the structure of egg.
4. Write about the classification of poultry.
5. Explain in detail about the crystallization of sugars.
6. Define rancidity in fats.
7. Write about sensory attributes of foods.
8. Write about the requirements for subjective evaluation.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a). Describe the factors affecting gelatinization.

(or)

(b).Write the classification of vegetables? Explain about the pigments and flavour constituents present in the vegetables.

10. (a).Write in detail about the kinds of milk.

(or)

(b).Give the structure of muscle and explain the post mortem changes occurred in meat.

11. (a). What are the raw materials used in confectionery and discuss their role?

(or)

(b).Explain the functional properties of fat and their use in food preparations.

12. (a).Explain in detail about the sensory testing procedures and tests.

(or)

(b). Write about the panel and selection criteria for different types of panel in sensory evaluation.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc(Home Science) Degree Examination

First Semester

(CBCS for the students admitted from 2021 onwards)

Paper:III- FSND103-B: BAKING TECHNOLOGY

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time: 3 hours Max Marks: 80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks: Marks: 4x5=20

1. Write the economic importance of bakery industry.
2. Principal of Baking.
3. Write the types of wheat flour.
4. Differentiate dough and batter.
5. Briefly write about cookies preparation procedure.
6. List down the hard and soft wheat bakery products.
7. Write the types of fillings and icings.
8. Short note on gluten free bakery products

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks:4x15 =60

9. (a) Explain the various equipment used in bakery processing and its importance.

(Or)

(b) Discuss the importance of packaging and quality factors of bakery products.

10. (a) Enumerate the importance of various ingredient used in bakery.

(Or)

(b) Explain various rheological properties associated with bakery items.

11. (a) Explain in detail about bread processing and its types.

(Or)

(b) Discuss about common faults and Corrective measures in bread and cakes.

12. (a) Write the common reasons for nutrient losses in bakery products.

(Or)

(b) Explain in detail about various decorative items in bakery and its preparation.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

(Common to all Specializations of M.Sc Home Science and MS Food Technology Course)

First Semester

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV 104-A: COMMUNITY NUTRITION

Time : 3hours Max.Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Classification of foods.
2. Write a short note on Recommended dietary allowances.
3. Define Vital Statistics.
4. Write short note on Nutritional assessment.
5. Significance of breast feeding.
6. Clinical symptoms of Vitamin A & C deficiencies.
7. Mid-Day Meal programme.
8. What is Public distribution system.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks: 4x15 =60

9. (a) Explain about food groups, food composition and nutritive value of different foods.

(or)

(b) Define meal planning, principles and factors affecting meal planning.

10. (a).Describe briefly the methods of anthropometric measurements in altering nutritional status of the community.

(or)

(b). Explain the advantages and dis advantages of the Biochemical method of assessment of nutritional status.

11. (a) Discuss physiological changes that occur during pregnancy and state the nutritional requirements during pregnancy.

(or)

(b). State the RDA for an adolescent girl. Plan a menu and give justification.

12. (a) Discuss about food security, food fortification and enrichment.

(or)

(b) Write in detail about ICDS.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

First Semester

(CBCS for the students admitted from 2021-22 onwards)

Paper: 104-B: NUTRITION DURING LIFE SPAN

(Common to all Specializations of M Sc Home Science and MS Food Technology Course)

Time: 3 Hrs Max: 80 Marks

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

2. Write the effects of lactation on nutritional composition of Human milk.
3. What are the factors that affect the breast milk quality?
4. Explain the need for infant formulae.
5. Discuss the importance of nutrition for Pre-school children.
6. Write the nutritional issues in Adolescence.
7. Discuss the Nutritional requirements for School-going children.
8. Write the effects of aging on nutritional health.
9. Explain the nutritional concerns in old age and their management pregnancy outcome.

Part – B

Answer all questions

Each question carry equal marks (4X15 = 60 Marks)

10. (a). Explain about Nutritional intervention and pregnancy outcome & write the advantage and disadvantages of breast and formulae feeding.

    (Or)

    (b). Discuss about the nutritional requirements during pregnancy and lactation? Write about common complications and problems.

11. (a).What are the effects of macro & micro nutrient malnutrition on physical and mental health?

    (Or)

    (b). Discuss about various types of Infant formulas and common problems during infancy.

12. (a). Explain the importance of nutritional requirement and RDA and discuss the importance of implications of child obesity.

    (Or)

(b). Write in detail about various physiological problems during adolescence.

13. (a).Discuss the modification in diet, feeding old people. Nutritional requirement for adult man and woman.

(Or)

(b). Explain the principles to be considered while planning and preparation of diets of elderly.

Model Question paper

M.Sc., (Home Science) Degree Examination

Second Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper-I: FSND: 201- NUTRITIONAL BIOCHEMISTRY

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Describe Essential Amino Acids.
2. What is Glycogenolysis?
3. Write the Classification of enzymes.
4. What is the function of thyroid hormones?
5. Describe Biochemical classification of vit- A deficiency.
6. Write about the functions & RDA-of Thiamine & Riboflavin.
7. Write a note on ketone bodies..
8. What is the relationship between calcium and phosphorus?

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks:4x15

=60

9.(a) .Describe the TCA Cycle.

(or)

(b). Enumerate the cholesterol metabolism in the sequential order.

10.(a). Discuss the function of Lipoproteins and prostaglandins in health and disease.

(or)

(b). Explain the mechanisms of hormonal action and enumerate the role of any two hormones in human metabolism.

11.(a).Write out the fat soluble vitamins and explain the physiological functions of any two vitamins.

(or)

(b).Describe the role of Iron, Folic Acid and Vitamin B_{12} in human nutrition.

12.(a).Write the sources and physiological functions and metabolism of Iodine.

(or)

(b).Discuss requirements and deficiency symptoms of Calcium, Phosphorus and Vitamin D.

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

Second Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper:II- FSND: 202- CLINICAL NUTRITION AND DIETETICS-II

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. List down the Risk factors for Cardiovascular Disorders.
2. What are the Dietary Principles for Gout?
3. Write the types of Diarrhea and the dietary management.
4. Write about Glomerulonephritis.
5. What is the etiology of peptic ulcer?
6. Write the dietary management for Osteoporosis.
7. Describe the GERD.
8. What is GFR?

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks:4x15 =60

9.(a). Describe the dietary management of Inflammatory bowel disease.

(or)

(b). Explain the principles of diet in constipation and Flatulence. Describe their dietary management.

10.(a).Describe the dietary management of Cirrhosis of liver.

(or)

(b).What is cholecystitisandchollelithiasis. Describe their etiology, diagnosis and dietary Management?

11.(a).Write the role of n-3 and n-6 fattly acids in prevention of coronary heart diseases.

(or)

(b).Explain the need and nutritional requirements during dialysis.

12.(a). What are the nutritional considerations in Alzheimer's disease?

(or)

(b). Explain the etiology of Rheumatic Disorders and write the Nutritional consideration In Rheumatoid Arthritis.

Model Question paper

M.Sc (Home Science) Degree Examination

Second Semester

(Specialization 'A'; Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021 onwards)

Paper:III- FSND: 203-A FOOD MICROBIOLOGY & SAFETY

(Common Paper to MSc. Food Science Nutrition and Dietetics and MS Food Technology)

Time: 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Role of Microorganism in food industry.
2. Write the general Characteristics of bacteria.
3. Describe the different types of food spoilage.
4. How cereals and cereal products are contaminated.
5. Write the contamination sources of milk.
6. Describe the common spoilages in fish.
7. Write a short note on food borne infections.
8. How microbiology and food safety is related.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks 4x15 =60

9. (a) Explain the factors affecting microbial growth.

(or)

(b) Discuss about classification, morphological and cultural characteristics of viruses.

10. (a)Write the principles underlying food spoilage and discuss the common spoilages in fruits

and vegetables.

(or)

(b). Describe the common food spoilages and common microbial spoilages in cereals and cereal products.

11. (a). Discuss the sources of contamination and spoilages in flesh foods.

(or)

(b). Enumerates the spoilages and sources of contamination in sugars and processed foods.

12. (a) Discuss in detail about various food borne intoxications with examples.

(or)

(b) Write in detail about food microbiology applications.

Model Question paper

M.Sc., (Home Science) Degree Examination

Fourth Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

FSND 203-B: NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Famine.
2. Immunization.
3. MUAC.
4. Nutritional surveillance.
5. Targeting Food Aid.
6. Special foods/rations for nutritional relief.
7. Epidemiological data.
8. Psycho socio variables.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks: 4x15 =60

9.(a). Discuss the causes of malnutrition in emergency situations and major deficiency diseases in emergencies.

(or)

(b).What are the communicable diseases that occur during emergencies? Discuss in detail about any one disease treatment and control.

10.(a). Discuss in detail about the nutritional assessment and surveillance in emergency affected
populations.

(or)

(b). Write about methods of organizational surveillance and individual screening during emergencies.

11.(a). Write in detail about the assessment of food needs in emergency situations.

(or)

(b). Discuss in detail about the food storage and house hold food security in emergencies.

12.(a). What is Nutritional epidemiology? Discuss in detail about design and planning of nutritional epidemiological studies.

(or)

(b). Discuss in detail about types of epidemiology and collection of epidemiological data.

Model Question paper

M.Sc., (Home Science) Degree Examination

Second Semester

(Common to All branches of Home Science and MS Food Technology Course)

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV: FSND 204-A:RESEARCH METHODOLOGY

Time:3 hrs Max:80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Define research. Enumerate the significance of research.
2. Explain the need and features of a good research design.
3. Write about Quota and snow ball sampling.
4. Describe case study as a research technique.
5. What is meant by primary and secondary data?
6. Give an account of Nominal scale.
7. What is Social mapping?
8. Write about Observation check list.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a).Write in detail about types of research.

(Or)

(b).Write about the types of research design.

10.(a).Explain in detail about the definition , identification and selection of research problem.

(Or)

(b). Define qualitative research and explain the types of qualitative research.

11.(a). What is data? Explain in detail different methods of data collection.

(Or)

(b). Describe in detail about the Observation and Interview methods of data collection.

12.(a). What are Measurement scales? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing a research proposal.

.

M.Sc., (Home Science) Degree Examination

Second Semester

(Common to All branches of Home Science and MS Food Technology Course)

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV: FSND 204-B: STATISTICS AND COMPUTER APPLICATIONS

Time:3 hrs Max: 80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Frequency distribution.
2. Histogram.
3. Rank correlation.
4. Mean.
5. File handling.
6. Computer software.
7. What is data analysis?
8. Descriptive statistics.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a). What is a *t*-test? When it is used and for what purpose(s)? Explain by means of examples. (Or)

(b). In a test given to two groups of students, the marks obtained were as follows: *First Group* 18 20 36 50 49 36 34 49 41 *Second Group* 29 28 26 35 30 44 46 Examine the significance of difference between mean marks obtained by students of the above two groups. Test at five per cent level of significance.

10. (a). 200 digits were chosen at random from a set of tables. The frequencies of the digits were: Digit 0 1 2 3 4 5 6 7 8 Frequency 18 19 23 21 16 25 22 20 21 Calculate χ^2.(Or)

(b). What is Chi-square text? Explain its significance in statistical analysis.

11.(a). What is data? Explain in detail the data processing and analysis in computers.

(Or)

(b). Describe in detail about the PC and its components.

12.(a). What is an excel sheet? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing different graphs in computers.

Paper-I:FSND 301: FOOD PROCESSING AND PRESERVATION TECHNOLOGY

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the traditional methods of food preservation.
2. Write about the need and purpose of food processing.
3. Explain the Process of blanching of fruits &Vegetables.
4. Define Thermal death time and thermal Death Rate.
5. Explain the importance of fermentation.
6. Give a short notes on extrusion.
7. What are the intermediate moisture foods?
8. Write the advantages and disadvantages of Irradiation.

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks: 4x15 =60

9. (a)Explain in detail about the principles & methods of food processing and preservation.

(or)

(b).What is food preservative? Classify the preservatives with examples? Describe their functional applications in foods.

10.(a). Write in detail about processing of wine and explain.

(or)

(b).Write the role of fermentation in bread making?

11.(a). Explain the process of ohmic heating &Discuss the role of it in food processing.

(or)

(b). What is meant by nanotechnology & Explain its applications in foods?

12.(a). What are the various methods of preservation using low temperatures?

(or)

(b).What are the various methods of preservation using high temperatures?

Paper-IIFSND - 302: ADVANCES IN HUMAN NUTRITION

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the composition and functions of the brain.
2. Describe the role of folic acid in brain growth and development.
3. What is the effect of malnutrition on immunity?
4. Write about role of NK cells in immunity.
5. What are the iodine deficiency disorders?
6. Define osteoporosis and write the etiological factors.
7. Write the consequences of high fluorine content in water.
8. What are the dietary requirements for astronauts?

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks: 4x15 =60

9. (a). Explain the role of neurotransmitters in brain function.

(or)

(b).Describe the role of essential nutrients on brain growth and development.

10. (a). Discuss in detail about the acquired immunity.

(or)

(b).Illustrate the importance of the nutrients in bringing immunity.

11. (a). What are the symptoms of fluorosis and describe the measures of nutritional Management?

(or)

(b). Write the dietary principles and management in Osteoporosis.

12. (a). Write about the nutrition management systems during Disasters.

(or)

(b). What are the nutrient requirements and dietary modifications at low temperature conditions ?

Paper-III SND303-A: NUTRITION ASSESSMENT TECHNIQUES

Time : 3 hours MaxMarks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write short note on in- vivo and in -vitro techniques.
2. Briefly discuss about immunological studies.
3. What is the role of animal models in nutrition research?
4. Classify the formulation diets and give the principles.
5. How the population survey is carried out to assess dietary intakes of nutrients?
6. What are the techniques of measuring body composition?
7. Mention about ethics in nutrition research.
8. What is the role of computer applications in nutrition research?

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks: 4x15 =60

9. (a) Describe in detail about the metabolic and bioavailability studies.

(or)

(b).Differentiate between longitudinal and cross sectional studies with examples.

10. (a).What are the measures to be taken to maintain the animal laboratory in good condition?

(or)

(b).How the effect of supplementation can be studied to assess the growth and development?

11. (a).Explain the methods of protein quality estimation.

(or)

(b). Describe in detail about the nutrient balance studies.

12. (a).What are the techniques of collecting biological fluids from Human Nutrition Research ?

(or)

(b).Explain the collection and analytical techniques of food samples.

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Public health problems.
2. Green revolution
3. PDS.
4. Vitamin A deficiency.
5. BNP.
6. Food fortification.
7. Food security.
8. Food Pricing.

SECTION- B

Answer ALL questions

Each Question carries 15 Mark Marks 4x15 =60

9.(a). Write about concept and importance of public health Nutrition.

(or)

(b). Discuss the role of public health nutritionist in health care delivery.

10.(a). Discuss in detail how green and blue revolutions helped in improving food and nutrition security in India.

(or)

(b).What is nutrition education? Discuss in detail the principles and factors affecting nutrition education?

11.(a). What are national nutrition intervention programs in India? Write about the most success program in India in terms of planning, implementation and evaluation.

(or)

(b). Discuss in detail about ICDS and NIDDCP.

12.(a). Discuss in detail about the role of international organizations in combating malnutrition globally.

(or)

(b). Discuss the status of malnutrition in India and role of ICMR in combating malnutrition.

DEPARTMENT OF HOME SCIENCE

Course

M.Sc. HUMAN DEVELOPMENT AND CHILD WELFARE

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

SRI VENKATESWARA UNIVERSITY COLLEGE OF SCIENCES
DEPARTMENT OF HOME SCIENCE
CHOICE BASED CREDIT SYSTEM (C.B.C.S) SYLLABUS
(WITH EFFECT FROM THE ACADEMIC YEAR 2021 -2022 onwards)
M. Sc. HUMAN DEVELOPMENT AND CHILD WELFARE (HDCW)

About the Department

The Department of Home Science established in the year 1963 as first of its kind in the state of Andhra Pradesh and celebrated golden jubilee in the year 2013. Ms Dorothy M. Pearson, a Canadian Home Scientist was largely instrumental to start the post graduate programmes in Home Science at Sri Venkateswara University, Tirupati. The committed founder stalwarts and the successive faculty members with immense foresight established the pioneering activities of teaching, research and extension in the department. The department from its inception has thrived to offer new insights through academic reforms and outreach activities. The commitment of the faculty has contributed practice based teaching, action research, technology development and extension outreach activities for the development of students. The department stocks eight patents of which two patents awarded. The Ministry of food processing granted 10 crores for the establishment Food testing laboratory with NABL accreditation.

Vision

To be a premiere centre for excellence in higher education in the areas of specialization fostering nurturing and building careers for students and to be an apex body playing a pivotal role in planning and monitoring community development.

Mission

The Department of Home Science is committed to empower the students in capacity building skills through teaching, research and community oriented extension activities, thereby widening the scope for self development and Employability and preparing themas socially useful and responsible citizens.

Department Objectives:

- Enable the students to understand the interrelation of Food and Health.
- To foster knowledge across the life span in inter connected Human Development factors to become efficient counselor and early childhood educator.
- Develop sensitivity towards the community problems and train the students in extension and out reach activities.
- To focus on training students in application of techniques to process and preserve the food.

The department of Home Science has been adopting the systematic procedure for development, revision and implementation of the curriculum for four different post-graduate programmes offered viz., **Food Science Nutrition and Dietetics (FSND), Human Development and Child Welfare (HDCW), Extension Management and Communication Technology (EMCT) and Food Technology (FT)** . Following the regulations of the S.V University all the academic programmes are structured keeping in mind the aspirations of the students and changing trends in higher education. The learning out comes of each course are framed such that they help students to gain theoretical knowledge as well as skills to meet local, national and global trends. The curriculum of each course has practicals, field visits, visit to institutions and a mandatory internship programme, which focus on imparting essential skills and hands-on experience and experiential learning thereby can excel when they get employment in Government and Non-Government Organizations to work individually as well as in teams. The cross cutting issues namely, technology, gender, child rights, human values and professional ethics are incorporated in core theories and electives to enable the students to lead a purposeful and independent life filled with moral and ethical values . Majority of the courses offered across all programmes do focus on nurturing employability/entrepreneurship/skill development. The outcomes of each programme have the emphasis on commitment to the contribution to the interest of the society as a whole and perform well in their careers.

The academic programmes, research and extension activities are planned and executed meticulously so as to reflect the vision and mission of the Department, focusing on the empowerment of students through quality education by updating syllabus with current trends and

providing appropriate knowledge and skills compete at the global level. The Department through motivated staff always strives towards reaching proficiency through teaching and community oriented extension programmes.

Human Development and Child Welfare (HDCW) programme has been contextualized and embedded in the broader perspective of life span development. HDCW is unique in its interdisciplinary focus on individuals and families over a lifespan, especially in the stages of pre-natal period, early childhood , late childhood , adolescence, adulthood and late adulthood . It also focuses on education , management and rehabilitation of children with developmental challenges and about organization and management of centers for human welfare.

Programme Specific Outcomes (PSO)

After completion of this programme the students will able to;

PSO1.	Apply skills, knowledge and goal setting toward employment in the fields of **early childhood education** as pre-school teachers, pre-school coordinators and pre-school teacher trainers , as **special educators** in schools and colleges, as **counsellors** inschools and mental health institutions, and as **supervisors and extension officers** in Government and Non-government organizations catering to the welfare of children. The students also can establish centres for human welfare – crèche, Play centres,guidance and counselling centres, foster cares and day care centres for both children and elderly citizens.
PSO2.	The students of HDCW play an important role in protecting the wellness of individuals and communities. By working to design programs and implement interventions, they help to ensure that people are able to access the resources they need in order to reach their full potential. They help parents and community in early identification of developmental delays and behavior disorders among children and can suggest suitable referral services.

Human Development and Child Welfare (HDCW) specialization has the following programme objectives.

Programme Objectives

To enable the students to:

- Know about holistic development of individuals and families over the lifespan period with a special focus on early foundation years.
- Understand the reasons for behavioral and psychological problems among people and role of counselling in solving problems.
- Explain about importance of interventions for early developmental delays to improve physical, cognitive and psycho-social wellbeing of children, and role of parents and community .
- Prepare schedules to collect data through interview and case study approaches and understand reasons for problems related to lifespan development.
- Plan suitable Teaching Learning Materials (TLM) based on appropriate approaches to teach pre-school children for all round development. Explain appropriate educational strategies that support learning of differently abled students.
- Distinguish and can explain the problems related to children, family and society . Gains knowledge about different child welfare programmes and organizations catering to the welfare of children.
- Communicate effectively and accurately, using written, visual, and verbal means to present class reports, research reports and pre-school teaching practice. Develop skills in verbal and non-verbal communication in preparation and presentation of IEC while working with children and communities to disseminate information related to human development aspects.
- Estimate normal and delayed mile stones of development among children . Assess impact of different parenting styles on children's behaviour and explore reasons for problem behaviour .
- Apply knowledge of ethical principles in the context of counselling practice , research and psychological testing .

- Appraise different Government and non-government programmes and services for rehabilitation of children, indigent families and elderly.
- Plan activities and programmes to promote all round development among normal pre-schools children and also for management of special children. Practice counseling skills for professional and personal development.
- Create goal setting toward employment in the fields of early childhood education as pre-school teachers, pre-school coordinators and pre-school teacher trainers , as special educators in schools and colleges and as counsellors. Apply skills, knowledge in schools and mental health institutions in Government and Non-government organizations catering to the welfare of children.

Programme Outcomes (PO)

After successful completion of the program, the student is able to:

S.No	Programme Outcomes
PO No. 1	**Apply knowledge of theory and research for holistic development of** individuals and families over the lifespan period with a special focuses on early foundation years.
PO No. 2	Identify, understand and **solve the behavioural and psychological problems** with a mastery of counselling skills thereby increase students' control over the decisions that affect their lives both within and outside the household.
PO No. 3	Capable to **design,** implement and evaluate interventions for early developmental delays to improve physical, cognitive and psycho-social wellbeing of children, their parents and elderly people.
PO No. 4	Utilize theory based knowledge and methods to address real life problems and to collect data, analyze and understand **solutions for problems** related to lifespan development.

PO No. 5	Create suitable teaching learning materials, select and **apply appropriate approaches** to teach pre-school children for all round development. Apply research **innovations and appropriate educational strategies** that support learning of differently abled students.
PO No. 6	Able to employ critical thinking to resolve the problems efficiently related children, family and society either **independently** or with the support of concerned authorities. Ability to guide and lead needy people in the **community/work setting** in the right direction
PO No. 7	**Communicate effectively** and accurately, use written, visual, and verbal means to present class reports, research reports and pre-school teaching practice. Develop skills in verbal and non-verbal communication in preparation and presentation of IEC while working with children and communities to disseminate information related to human development aspects.
PO No. 8	**Demonstrate understanding of knowledge** related to normal and delayed mile stones of development of children , impact of different parenting styles on children's behaviour and reasons for problem behaviour and responsibilities as **Human Development Expert** to disseminate same to parents , teachers and significant others in the community.
PO No. 9	Demonstrate **ethical** principles in the context of counselling practice and psychological testing by following unbiased and truthful actions in all aspects of assessments and maintaining confidentiality of case studies while doing documentation and publication.
PO No.10	Understand the availability of Government and non-government programmes and services for rehabilitation of children , indigent families and elderly and through intervention programmes provide **sustainable** solutions and build resilient families and communities.
PO No.11	**Demonstrate knowledge and understanding of management of pre-schools,** welfare institutions for children and needy people/elderly, education of special children and counseling practice, with innovative, appropriate, advanced techniques, skills, and

	modern psychological tools with an understanding of limitations.
PO No. 12	Recognize the need for self-motivated **life-long learning** for the holistic development for meeting their professional and personal needs in varying environment and changing contexts.

Programme Educational Objectives (PEO)

To enable students to:

- Describe the distinctive growth and development of individuals from conception to late adulthood, as well as to understand developmental challenges through scientific measures and to provide stimulating environment and intervention for needy people for their optimum development.
- Create suitable teaching learning materials, select and apply appropriate approaches to teach pre-school children for all round development. Apply research innovations and appropriate educational strategies that support learning of differently abled students, understand the availability of Government and Non-government programmes and services for rehabilitation of children, indigent families and elderly.
- Facilitate the students to work professionally and efficiently in academics, research, curriculum development, management of institutions and welfare programmes, training, extension and community services related to human development.
- Develop effective skills in counseling with theoretical background and provide intervention by learning to deal with personal and family issues through scientific measures like psychological tests, case study approach, research methodologies and practical sessions on promotion of counseling skills.
- Apply the skills knowledge and goal setting toward employment in the fields of early childhood education as pre-school teachers, pre-school coordinators and pre-school teacher trainers, as special educators in schools and colleges, as counsellors in schools and mental health institutions, and as supervisors and extension officers in Government and Non-government organizations catering to the welfare of children.

DEPARTMENT OF HOME SCIENCE

M. Sc. HUMAN DEVELOPMENT AND CHILD WELFARE

CHOICE BASED CREDIT SYSTEM (CBCS)

(With effect from academic year 2021 – 2022 onwards)

SEMESTER – I

HDCW 101: ADVANCED STUDY OF HUMAN DEVELOPMENT - I

COURSE OBJECTIVES:

To enable the students to:

1. Know the terms 'child development', 'human development', genes, chromosomes, 'Gene engineering' and pre-diagnostic tests.
2. Describe the developmental tasks of children from infancy to adolescence period.
3. Relate different domains of child development and critically apply knowledge to explain milestones of physical, emotional, social and cognitive development of children from infancy to adolescence period.
4. Assess physical, social, emotional and cognitive development of children from early childhood to adolescent period

CORE –THEORY

UNIT – I Biological foundations of Human Development

- Human development – Basic concepts and issues. Genetic foundation- Genes; chromosomes.
- Role of Heredity and Environment on development. Heredity and environment correlations-Epigenetic view
- Pre-Natal Development– Genetic and environmental determinants – chromosomal and Gene linked abnormalities
- Pre-natal Diagnostic tests,. Gene engineering and Genetic Counseling
- Course of Pre-natal development
- Perspectives of Lifespan Development

UNIT – II Development During Early Years

- Infancy and babyhood -Assessing the infant development -New born reflexes, Needs and Developmental tasks.
- Milestones of development during Infancy and baby hood. – Physical, Social, Emotional, Language and Cognitive development.
- Early Childhood years – Needs and development tasks
- Milestones of development during Early childhood– Physical, Social, Emotional, Language and Cognitive development.

UNIT– III Late childhood

- Late childhood - Needs and developmental tasks – Physical, social, emotional and cognitive development during Late Childhood years.
- Moral Development and reasoning during school age
- Peer relationship
- Determinants of Puberty – Psychological implications of early and late maturation.

UNIT – IV Adolescence

- Adolescence - Definition, Needs and developmental tasks- Physical and Physiological changes, Emotional Maturity –Socio emotional development in Adolescence
- Peer relationship
- Moral Development and reasoning during adolescence
- Parent- Adolescent relationship – Attachment and conflict.
- Challenges and Problems of Adolescents

2. PRACHI Journal
3. Psycho Lingua
4. Indian Journal of Psychology

COURSE OUTCOMES

After completion of the course, students will be able to:

CO1 Define the terms ‘child development’, ‘human development’, genes, chromosomes and pre-natal diagnostic tests.

CO2 Explain the developmental tasks of children from infancy to adolescence.

CO3 Apply the knowledge of milestones of physical, emotional, social and cognitive development of children from infancy to adolescence to relate development process at different stages.

CO4 Assess different developments like physical, social, emotional and cognitive development of children from early childhood to adolescent period using simple tests and adjustment problems among adolescents using a standardized scale.

CO_PO Mapping

Course outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	3		3	2	3		3		3	3	2	3	3	2

H-High (3), M- Medium (2), L- Low (1)

HDCW 102 -CURRICULUM FOR EARLY YEARS

COURSE OBJECTIVES:

To enable the students to:

1. Understand the terms 'ECE', 'ECCE' and 'ECD'
2. Infer the importance of curriculum in early child hood education.
3. Critically explain the importance of emergent literacy , numeracy , creativity and readiness for children's all round development
4. Plan ECE programmes according to different pedagogies and prepare teaching, learning materials for effective implementation of ECE programme.

CORE - THEORY

UNIT-I Early Childhood Education-Literacy and Numeracy

- Definitions of ECE, ECCE, and ECD - Need for ECCE-Importance of Brain development and stimulation during early years. Objectives of pre – school education
- Curriculum for ECCE- Curriculum -Definition, Importance, Indicators of effective curriculum
- Literacy and language Development–Informal talk, Storytelling- Importance - Elements of story –Methods and techniques of storytelling
- Numeracy- Pre –number concepts- categorization, Classification, sequential thinking, seriation and activities to promote problem solving and reasoning during early years.

UNIT-II Curriculum for ECCE -Creativity, Dramatization and Science Skills

- Creativity- Definition- Importance- Stages in creativity- Different Creative activities and their functions –Role of teacher in fostering creative activities.
- Dramatization-Importance -Types of dramatic play-Role of teacher
- Science Skills –Exploring with multiple senses- Aesthetic experiences- Appreciating nature - Topics for Science experience – Role of teacher

UNIT-III Curriculum for ECCE -School Readiness, Music and Play

- School Readiness Concept- Ready children, Ready school and Ready Family.
- Music – Importance — Criteria for selection of songs. − Creating environment for musical growth. − Developmental stages in musical activities − simple musical instruments useful in nursery school –Role of teacher
- Play-definition- Mile stones of play, Types of play and values of play. Promoting pro-social behavior in class room.

UNIT-IV Programme Planning and Pedagogical Approaches in ECE Programme Planning

- Need and importance of programme planning in ECE
- Principles of Programme planning, Long term and Short term, Planning – Yearly plan, Weekly schedule and Daily routine
- Pedagogical Approaches for Curriculum to Pre-school Education- Theme Based Approach, Activity based approach.
- Pedagogical Approaches -Developmentally Appropriate Approach, Project Method and integrated approach.

Course Outcomes

After completion of the course, students will able to:

CO1 Realize the significance of brain development during early years and importance of play during pre-school age.

CO2 Describe the importance of curriculum and activities to promote literacy and numeracy among pre-school children.

CO3 Critically explain the importance of different curricular aspects for children's all round development.

CO4 Plan a day's activities and weekly activities for pre-school children and prepare different teaching, learning materials for effective implementation of ECE programme.

HDCW 103-A: FAMILY DYNAMICS

COURSE OBJECTIVES:

To enable the students to:

1. Know about the terms "Family" "Family life cycle" 'Single family' and 'family crisis'.
2. Understand the changing pattern of Indian family and ethics in family research.
3. Critically explain the laws related marriage and family and role of family counselling centre in providing marital counselling.
4. Assess issues in family like marital adjustments and family crisis through schedules and case study methods.

COMPULSORY FOUNDATION –THEORY

UNIT- I Family

- Family -Definition-Family as component of social system; and as an Institution - Functions of family.
- Different stages of family life cycle, Developmental tasks during family lifecycle- Role expectations at various stages.
- Traditional Indian family -Impact of social change on family and changing patterns in Indian families-Factors influencing, Advantages and disadvantages of changing family patterns.
- Different approaches to family studies -Current issues for research in Indian family -Ethics in family research.
- Theories of family-Functionalism theory, Conflict theory and Symbolic interaction theory.

UNIT-II Family Interactions

- Marital adjustments-Areas of adjustment- Factors influencing marital adjustment, marital adjustment over life cycle. Marital stability and marital quality-Positive and negative dimensions.

- Family communication.-Role of communication in family relationships.
- Factors affecting family interactions- Strategies for improving family communication and interpersonal relations.

UNIT –III Family Variations and Family under Stress

- Family Variations -Dual career families and Women headed Families, Single parent or Binuclear families, Child less families, Divorced families and adaptive families.
- Family as an institution under stress- Family crisis-Disorganized and Re-organized families
- Family resilience and protective factors for promotion of family resilience. - Family counseling centers.
- Family Therapy-Behavioural Family Therapy, Communication Family Therapy.

UNIT-IV Acts and policies related to Marriage and Family

- Hindu Marriage Act, Special Marriage Act
- Dowry prohibition Act
- Domestic violence Act
- P.N.D.T (Pre-Natal Diagnostic Technique Act – 1994).Regulation and Prevention of Misuse.
- National policies and programs for family welfare- Janani Surakshya Yojana, National Health Policy.

HDCW103-B: GENDER ISSUES IN HUMAN DEVELOPMENT ANDFAMILY RELATIONS

COURSE OBJECTIVES:

To enable the students to:

1. Know about the gender related concepts
2. Understand the theories and gender issues in human development
3. Critically explain the role of values and ethics in family relations.
4. Assess the gender differences in three generations and role of gender in media.

COMPULSORY FOUNDATION –THEORY

UNIT I Concept of gender

- Gender and its biological and socio-cultural connections.
- Importance of gender differences in human development.
- Gender theories- gender orientation theory of Sandra Bem,
- Gender schema theory, theory of ego development and gender.

UNIT II Gender issues in family

- Demographic challenges to family ecology,
- Gender issues in family involvement and cohesiveness (socialization, family roles, responsibilities and family adjustment)
- Impact of gender roles,
- Responsibilities and socialization practices.

UNIT III Role of Values and ethics in family relations

- Working towards family solidarity and social well being
- Role of values and ethics in the promotion of happy family life.

- Role of family in the process of socialization of the children.

UNIT IV Trends in gender role orientation

- Changing trends in gender role orientation,
- Socio- economic and cultural impact on family and society.
- Gender sensitization
- Importance of gender equality

H-High(3), 2- Medium(2), L- Low(1)

HDCW 104- A: COMMUNITY NUTRITION

(Common to all specializations of M.Sc., Home Science and M.S Food Technology)

COURSE OBJECTIVES

To enable the students to:

1. Know about nutrients in foods and their functions
2. Understand the consequences of deficiency of taking nutrients.
3. Comprehend knowledge on the role of nutrients in different stages of human life and methods nutritional assessment.
4. Identify the signs and symptoms of different nutrient disorders in community.

ELECTIVE FOUNDATION – THEORY

UNIT-I Food Composition - Grouping and Menu Planning:

- Food Groups – Classification – food composition, properties, characteristics and nutritive values of different foods, Functions of foods and nutrients – cereal grains, millets, pulses, nuts and oil seeds fruits and vegetables, milk and milk products, meat, egg, poultry and fish, spices and condiments.
- Nutrition Through Life Span – Infancy, Early and late childhood, Adolescence, Adulthood and Ageing – Nutritional requirements and Recommended Dietary Allowances (RDA)– Principles of menu planning appropriate to age and stage of life span.

- Justification for special needs during periods of growth and development, pregnancy and lactation – significance of breast feeding –

Unit – II Assessment of Nutritional Status of the Community:

- Need - Methods of Assessment –
- Direct Methods - (i) Diet Surveys (ii) Anthropometric Assessment - (iii).clinical and (iv). Biochemical Assessment
- (b) Indirect Methods - Vital Statistics - Merits and Demerits of methods -
- Nutrition surveys - longitudinal and cross sectional - Family, individual and institutional surveys - Techniques for assessment of age - use of reference standards for the assessment of nutritional status.

Unit – III Major Nutrition Problems of the Community:

- Malnutrition and under nutrition- PEM/CED, obesity- deficiencies vit-A, iron /iodine - Etiology –Symptoms –
- Government programmes to eradicate PEM, vitamin-A, Iron and Iodine deficiencies –
- Principles of planning diets for different conditions of malnutrition

Unit – IV Strategies to Combat Malnutrition:

- Food security – Definition – Management of food insecurity - -Food Fortification and enrichment.
- Food Assistance and Food Supplementation - Policies and Programmes of the Government - Governmental Policies and Programmes.
- Food Assistance and Food Supplementation Programmes - Public Distribution System (PDS) - Food For Work (FFW), Special Nutrition Programme (SNP), School Lunch Programme (SLP), Mid Day Meal Programme (MMP), Balawadi Nutrition Programme (BNP), Integrated Child Development Services (ICDS).
- Nutrition Education - Importance - Approaches Media and Methods

COURSE OUTCOMES

After completion of this course, students will be able to:

CO1 Know the nutritional problems of the community.

CO2 Acquire knowledge about food groups, RDA and steps in planning a diet.

CO3 Apply skills in planning and calculating nutritive values for the foods and recipes.

CO4 Identify the signs and symptoms of different nutrient disorders in community.

H-High(3), M- Medium(2), L- Low(1)

HDCW 104-B: NUTRITION DURING LIFE SPAN

(Common to all specializations of M.Sc., Home Science and M.S Food Technology)

COURSE OBJECTIVES

- To enable the students to:

1. Gain knowledge on the importance of nutrition during life span
2. To do computation of nutrient allowances during life span.
3. Enlighten the principles and working applications during dietary modifications.
4. Comprehensive knowledge on analysing the nutritional requirements.

ELECTIVE FOUNDATION – THEORY

UNIT-I: Nutrition during Pregnancy & Lactation:

- Nutrient requirement during pregnancy, intake and gaps, prenatal and antenatal nutritional importance, metabolic adjustments in pregnancy.
- Nutrition intervention and pregnancy outcome, Nutritional management, problems and Complications.
- Nutritional requirements during lactation, physiology of milk production, effects of lactation on Nutrition composition of Human-Milk,
- Factors affecting breast milk quality and comparative advantages & disadvantages of breast and formula feeding.

UNIT-II: Nutrition during Infancy & Pre-school children:

- Nutritional requirements, concerns and overall development during Infancy.
- Need for infant formulae, types of infant formulae, care in Preparation, and importance of preparation of weaning foods.
- Home prepared versus commercial weaning foods, Feeding problems-Lactose and cow's milk protein intolerance.

- Pre-school children: Age, growth & development, nutrient requirements, Intake and gaps. Effects of Macro & Micro nutrient malnutrition on physical and mental development.

UNIT-III: Nutrition during School-going children & Adolescence:

- Dietary patterns and factors to be considered. Implications of childhood obesity and other nutritional concerns. Healthy food choices during childhood.
- Growth during adolescence, nutritional requirements, hormonal influences, age of menarche-factors affecting, physiological problems and nutritional issues in adolescence.
- Nutritional requirements and RDA. Behavioural characteristics and feeding problems.

UNIT-IV: Nutrition during adulthood and old age:

- Nutritional requirements for adult man and woman. Nutritional concerns, RDA, nutritional guidelines and work efficiency. Physiological changes in aging, effects of aging on nutritional health.
- Modification in diet, feeding old people. Nutritional concerns in old age and their management.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Acquire knowledge on nutritional requirements at various stages.

CO2 Apply the knowledge of nutrition during planning and preparation of diet.

CO3 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO4 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

HDCW-105: Practical –I -Advanced Study of Human Development (101) + Family Dynamics (103-A)/ Gender Issues in Human Development and Family Relations (103-B)

101-Advanced Study of Human Development

COURSE OBJECTIVES:

1. Acquire skills to assess physical, social, emotional and cognitive development of children from early childhood to adult period
2. Assessment of adjustment problems among adolescents using standardized schedules.

PRACTICALS

1. Observation of infants.
2. Recording all round development of children below 5 years
3. Assessment of cognitive development during late childhood years.
4. Assessment of social development during late childhood years.
5. Assessment of Emotional Maturity during adolescence.
6. Assessment of adjustment problems during adolescence.
7. Preparation/collection of materials for infant stimulation.

COURSE OUT COMES

1. Assess skills to assess physical, social, emotional and cognitive development of children from early childhood to adult period
2. Assessment of adjustment problems among adolescents using standardized schedules.

103-A FAMILY DYNAMICS

COURSE OBJECTIVES:

To enable students to**:**

1. Acquire skills to assess family relationships and also communication patterns in a family.
2. Assess issues in families like marital adjustments and family crisis through schedules and case study methods.

PRACTICALS

1. Assessment of Family relationships
2. Assessment of developmental tasks at different stages of family
3. Assessment of communication patterns in families
4. Case studies of marital disharmony- divorce
5. Assessment of marital adjustment in families
6. Case studies of women headed families
7. Collecting tools to study family dynamics

COURSE OUT COMES

After completion of course students will be able to :

C01 – Apply skills to assess family relationship and communication patterns in a family

C01 – Analyze the reasons for family crisis and utilize the knowledge while providing Counseling to couples and families.

103-B GENDER ISSUES IN HUMAN DEVELOPMENT AND FAMILY RELATIONS

COURSE OBJECTIVES:

To enable;

1. Apply the skills to assess the gender differences in three generations and gender in media.
2. Assessment of gender socialization practices by parents and gender role orientation among adolescents

PRACTICALS:

1. Gender analysis of mass media content, books, television and films.
2. Interview children and parents to study gender socialization practices.
3. Administering gender role orientation scale to adolescents /women interpreting the results.
4. Case study of three-generation families to identify the differences in the gender orientation roles and responsibilities.
5. Case studies for gender role performance.

Course Outcomes:

1. Apply the skills to assess the gender differences in three generations and gender in media.
2. Assessment of gender socialization practices by parents and gender role orientation among adolescents

HDCW-106: PRACTICAL –II- CURRICULUM FOR EARLY YEARS (102) + COMMUNITY NUTRITION (104-A)/NUTRITION DURING LIFE SPAN (104-B)

102-CURRICULUM FOR EARLY YEARS

COURSE OBJECTIVES:

To enable students to;

1. Plan ECE programme according to pedagogies and prepare teaching learning materials for effective implementation for ECE programme.
2. Prepare materials to promote literacy and numeracy for pre-school children and know about different creative activities for young children.

PRACTICALS

1. Observation of a day's Programme in Nursery School/ Anganwadi center.
2. Planning a week programme based on Theme approach.
3. Planning a day's programme based on Developmentally appropriate approach.
4. Preparation / collection of materials for teaching emergent literacy for pre-school children (Story books, Picture cards etc).
5. Preparation/ collection of materials for teaching Numeracy for pre-school children.
6. Planning Creative activities for pre-school children.

Practical Outcomes:

1. Plan a day's activities and weekly activities for pre-school children and prepare different teaching learning materials for effective implementation of ECE programme.
2. Prepare materials to promote literacy and numeracy for pre-school children and plan different creative activities for young children.

104 –A COMMUNITY NUTRITION

COURSE OBJECTIVES

- To enable the students to:

1. Apply the techniques to assess the nutritional status of different age groups.
2. Apply skills for planning diets for nutritional disorders.

PRACTICALS:

1. Assessment of Nutritional Status using Anthropometry,
2. Assessment of Nutritional Status using Dietary method
3. Planning of Diets for Different Nutritional Deficiencies like PEM, Anemia, Vit-A.
4. Planning and Preparation of Programmes for Significant Days like Breast Feeding Week, Nutrition Week, World Food Day.
5. Study of the following through visits
   - Govt School Lunch Programme
   - ICDS Programme
   - Anganwadi Training Centers.
6. School Lunch Programme at Sri Venkateswara University Laboratory Nursery School.
7. Community Nutrition Programme Planning - Introduction, Identification of problem, nutritional assessment, analysis of causes, resources, constraints, selection of interventions, setting a strategy, implementations, evaluation of the programme

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Skills in planning and calculating nutritive values for different nutritional disorders.

CO4 Understand the skills in assessing the nutritional status by different method different age

groups.

104 -B NUTRITION DURING LIFE SPAN

COURSE OBJECTIVES

- To enable the students to:

1. Apply Computational skills in the Nutritional allowances during life span.
2. Develop skill in planning and preparation of diets for different age groups.

PRACTICALS:

1. Planning and preparation of diet for pregnant women.
2. Planning and preparation of diet for lactating women.
3. Planning and preparation of weaning foods.
4. Planning and preparation of diet for pre-school child.
5. Planning and preparation of diet for school going child.
6. Planning and preparation of diet for adolescent.
7. Planning and preparation of diet for adult.
8. Planning and preparation of diet for old age.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO2 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

HDCW 107: HUMAN VALUES AND PROFESSIONAL ETHICS - I
(AUDIT COURSE)

COURSE OBJECTIVES

To enable the students to:

1. Define the term 'ethics' , 'good and bad values', crime and punishment and religious tolerance.
2. Understand the importance of good character, conduct and values embedded in various religions.
3. Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room .
4. Demonstrate knowledge of ethical values in non-class room activities, internships and field work and resolve the moral issues.

Unit-I Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment. Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

Unit-II Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom. Good behavior and respect for elders, Character and Conduct.

Unit-III Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)- Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment Bodily Desires). Moksha (Liberation).

Unit-IV Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths – AryaAstangamarga, (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Religious Tolerance, Gandhian Ethics.

Unit-V Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

COURSE OUTCOMES:

After studying the course, students will able to:

CO1 Define the term ‘ethics’, ‘good and bad values’, crime and punishment and religious tolerance.

CO2 Understand the importance of good character, conduct and values embedded in various religions.

CO3 Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

CO4 Demonstrate the ability to face difficult situations in non-class room activities, internships and field work and resolve them confidently.

II SEMESTER

DEPARTMENT OF HOME SCIENCE

M. Sc. HUMAN DEVELOPMENT AND CHILD WELFARE

CHOICE BASED CREDIT SYSTEM (CBCS)

(With effect from academic year 2021-22 onwards)

HDCW 201: QUALITY STANDARDS IN ECE CENTERS

COURSE OBJECTIVES:

To enable the students to:

1. Identify Government, private and voluntary Initiatives that are offering ECE.
2. Understand principles of quality standards and the ideal requirements for establishing a pre-school.
3. Explain Personal and professional competencies of ECCE Educator and qualities of ECE supervisors.
4. Plan a day's activities for pre-school children, prepare Teaching Learning Materials and participate as student teacher in S.V.U Laboratory nursery school

CORE -THEORY

UNIT I Quality Standards in ECCE Centres

- Early childhood Initiatives – Government, Private and Voluntary Initiatives.
- Quality Standards – Importance - Principles of Quality Standards, Key domains of Quality Standards in India-
- Quality Assurance in ECE –Process quality and Structural quality
- ECCE in National Educational Policy 2020

UNIT II Infrastructure / Physical Environment

- Ideal requirements for establishment of a preschool - Location, Site and Building plan, Rooms, Ventilation etc – Indoor and outdoor Space requirements.
- Other Facilities- Sanitary, Storage and Drinking water .
- Learning/ Activity corners – reading and story book corner , Dramatic play corner , puzzles and blocks corner , creative corner, science corner and music corner.
- Essential learning and Play Materials – outdoor and indoor- Selection and Maintenance of Equipment
- Promotion of Child Friendly Environment –Significance, characteristics and aspects of child friendly schools

UNIT III ECCE Educator and Other personnel

- Personal and professional competencies of ECCE Educator.
- Role of teacher in different Philosophies- Montessori, Reggio Emilia and Froebel's kindergarten.
- Goals of Student Teacher, Common problems of student teachers.
- Other Personnel in ECCE Centers-Supportive staff , helper, cook , driver etc

UNIT IV Supervision and Monitoring in ECE Centers

- Supervision-Need and Purpose in ECE setting- Principles of effective supervision.
- Monitoring- Meaning and need for monitoring in ECE
- Records and Registers in ECE center – need and importance – Types of records and registers-Child related , staff and School related.
- Home School relationship – Home visits, PTA meetings and Informal meetings

COURSE OUTCOMES:

After studying the course, students will able to:

CO1 Locate pre-schools run by Government, private and voluntary Initiatives at local, Level and gain knowledge of different initiatives at District, state and national levels.

CO2 Explain principles of quality standards and the ideal requirements for establishing a pre-school.

CO3 Apply knowledge to become a competent of ECCE Educator and Supervisor to monitor pre-schools.

CO4 Plan a day's activities for pre-school children, prepare Teaching Learning Materials (TLM) and to demonstrate skills of good pre-school teacher and

Pre-school coordinator.

HDCW 202: THEORIES OF HUMAN DEVELOPMENT AND BEHAVIOR

COURSE OBJECTIVES

To enables the students to:

1. Describe the meaning of 'theory', characteristics of theory and different theoretical approaches to human development.
2. Understand the role of unconsciousness in usage of 'defense mechanisms' , stages in cognitive development and role of learning in determining behavior .
3. Relate principles of different theories, and explain the reasons for mal adaptive behavior.
4. Apply the knowledge of theories to understand the behavior of individuals and also in extending counseling.

CORE –THEORY

Unit - I Introduction to Theory and Psycho-Dynamic Theories

- Definition, Relation between concept, Theory and Hypothesis – Inductive and deductive reasoning, Characteristics of a theory, Functions of a theory.
- Major theoretical approaches to Human Development
- Freud's Psychoanalytical theory, key concepts of psycho analytical theory, Structural model of personality. Psycho-sexual stages of personality development.
- Defense mechanisms-Definition -Different defenses - Contribution and criticism of Freudian theory.

Unit - II Psycho-Social and Cognitive theories

- Psycho-social theory of Erickson – concept and basis of development, Psycho-social stages of life.
- Cognitive Development Theories- Piaget's theory of Cognitive Development - concepts, cognitive mechanism, cognitive structure and different stages of cognitive development.
- Howard Gardner's Multiple Intelligence theory.

Unit - III Behavioural and Ecological Systems Theories

- Basic learning Principles – Pavlov Classical conditioning theory.
- Behavioural approach of Watson. Operant conditioning by Skinner and Thorndike.
- Social-Learning theory by Albert Bandura
- Ecological Systems theory of Urie Bronfrenbrenner.

Unit – IV Moral, Attachment and Self Theories

- Kohlberg's theory of Moral Development-
- Chomsky's theory of Language Development- Key Principles of Chomsky's Model of Language Acquisition-
- Vygotsky Sociocultural Theory of Cognitive Development
- Bowlby's Attachment theory-The Stages of Attachment-factors that influence attachment.
- Abraham Maslow's self-actualization theory-The Hierarchy of Needs-Characteristics of a self-actualized person.

COURSE OUTCOMES

After completion the course, students will able to

CO1 Describe the meaning of a 'theory', characteristics of theory and different theoretical approaches to human development.

CO2 Understand principles of Freud's, Erickson's, Bandura and Allport's personality theories, learning theories of Pavlov and Watson's , cognitive development theories of Piaget and Gardner's multiple intelligence theory, Kohlberge and Piaget's theories of moral development and theories of language and attachment .

CO3 Relate principles of different theories, and explain the reasons for maladaptive behavior.

CO4 Apply the knowledge of theories to understand the behavior of individuals and also in extending counseling.

High-(3), Medium -(2), Low -(1)

HDCW 203 -A : PARENT AND COMMUNITY EDUCATION

COURSE OBJECTIVES

To enable the students to:

1. Know about the concept of parenting, need for parent education in difficult circumstances
2. Identify different child rearing practices and different parenting styles adopted by parents
3. Explain critically about impact of different parenting styles on children's behavior
4. Develop educational materials and apply skills to plan, conduct and organize parent education programmes in community and PTA meetings in school.

CORE -THEORY

UNIT-I Parent Education - Approaches

- Setting goals of parent education – Broad goals and specific goals
- Theoretical approaches to parent education- Dreikur's Democratic approach , Berne's Transactional analysis , Skinner's behaviour Modification approach and Ginott's Humanistic approach.

- Formulating curricula for parent education –Parent Initiated, Teacher Initiated and Action Oriented Curricula.
- Need and Importance of parent education in India.

UNIT-II Parent Education -Methods

- Methods of parent education in Preschool settings- Direct and Indirect, Basic approaches to communication – Group – Mass and mini group, Individual approach, Multimedia approach, Distance and home approach.
- Planning, organizing and evaluation of group educational programmes.
- Role of teacher as parent educator- Importance of Parent Teacher Association (PTA) meetings.
- Parent involvement in community programmes.

UNIT-III Parent Education – Child Rearing Practices

- Importance of Child rearing practices- Role of culture and environment in child rearing practices
- Changing role of parents in parenting. -Role of father in child rearing.
- Parenting Styles -democratic, authoritative, authoritarian- Impact of parenting styles on children's behaviour

UNIT-IV Special Target groups for Parent Education –

- Strategies and Management skills for parents to deal with normal children and children of developmental delays and disabilities.
- Strategies and Management skills for Parents of Economically and socially disadvantaged children
- Strategies and Management skills for Parents of - Developmentally challenged Children- Physically challenged and Mentally challenged children,
- Strategies and Management skills for Parents of Adopted children.- Single parent- Father headed and mother headed families- Dual career parents.

COURSE OUTCOMES

After completion of the course, students will able to:

CO1 Know about the concept of parenting, need for parent education in difficult circumstances.

CO2 Identify different child rearing practices and different parenting styles adopted by Parents.

CO3 Explain critically about impact of different parenting styles on children's behavior.

CO4 Developing educational materials and apply skills to plan, conduct and organize parent education programmes in community and PTA meetings in school.

CO-PO Mapping

HDCW 203-B: INFANT DEVELOPMENT AND STIMULATION

COURSE OBJECTIVES

To enable the students to:

1. Know the terms 'child rearing practices', 'stimulation' and identifies the importance of attachment during infancy period.
2. Understand the importance of culture, role of father and grandparents in child rearing practices.
3. Apply knowledge of stimulation activities for physical, language, cognitive and social development of infants.
4. Plan stimulating activities for infants and prepare them using indigenous materials.

GENERIC ELECTIVE - THEORY

UNIT I New Born and Infant Development

- New born behavior
- New born capacities
- Sleeping Patterns of new born
- Early deprivation and enrichment-impact on Infant's development

UNIT II Child Care Practices

- Importance of child rearing practices
- Role of environment in child rearing
- Types of child rearing-role of culture
- Child care Practices –Massage, Bathing Toilet Training and
- Sleeping patterns
- Role of father's in child rearing

UNIT III Stimulation

- Stimulation - Definition, Importance, Early experiences and developmental consequences, Family and environmental stimulation.
- Stimulation to nurture holistic development
- Activities for physical development

- Activities for social and emotional developments
- Activities for language development
- Activities for cognitive development

UNIT IV Early Interaction

- Early interaction, a beginning in attachment formation
- Course of attachment –
- Attachment theory
- Dyadic versus multi caring
- Supportive care – Role of grandparents,
- Role of child care centres

JOURNALS

1. Journal of Pediatrics
2. Journal of Abnormal Child Psychology
3. Journal of Child Development

COURSE OUTCOMES

After completion of P the course, students will able to:

CO1 Define the terms 'child rearing practices', 'stimulation' and identifies the importance of attachment during infancy period.

CO2 Understand the importance of culture, role of father and grandparents in child rearing practices.

CO3 Apply knowledge of stimulation activities for physical, language, cognitive and social development of infants

CO4 Plan stimulating activities for infants and prepare them using indigenous materials

H-High(3), M- Medium(2), L- Low(1)

HDCW 204-A: RESEARCH METHODOLOGY

(Common to All branches of Home Science and MS Food Technology Course)

COURSE OBJECTIVES

To enable the students to:

1. Get awareness about terms like 'variables', 'hypothesis', research 'and recognize the purpose of doing research.
2. Understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
3. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
4. Develop a research proposal in the appropriate scientific style.

ELECTIVE FOUNDATION-THEORY

UNIT – I : Research Purpose and Types

- Research – Significance, meaning, objectives, Approaches,
- Research process, Criteria of good research, Variable- types
- Types of Research: Historical, descriptive, experimental, case study, survey research, participatory research, Fundamental, applied and action, exploratory research.
- Research hypothesis-Characteristics of good hypothesis.
- Research Design – Meaning, Need, Concepts, Principles and Types of research design

UNIT – II: Research Problem and Sample design

- Definition and Identification, Necessity and Selection of Research problem, Technique involved in defining the research problem.
- Population and Sample – Implications, Steps, Criteria and Characteristics of a good design

- Sampling Methods : *Probability sampling* **-** Simple random, systematic random sampling, two Stages and multi stage sampling, cluster sampling and *Non-probability sampling* - Purposive, quota and volunteer sampling / Snowball Sampling.

UNIT –III : Methods of Data Collection

- Primary and Secondary Data, Selection of appropriate method for data collection
- Different Methods and techniques of data collection - Interview, Observation, Social mapping, Participatory assessment Techniques, Observation check list, Questionnaire, Interview schedule, Group discussions, Case studies.

UNIT –IV: Measurement Scales

- Measurement in Research, Measurement Scales, Sources of Error in Measurement, Tests of Sound Measurement, Technique of Developing Measurement Tools, Scaling, Meaning of Scaling, Scale Classification Bases, Important Scaling Techniques
- Research Proposal – Preparation.

PRACTICALS

1. Identification of different variables in specialization of study.
2. Framing of hypothesis-Null and alternate Hypothesis
3. Preparation of schedule/questionnaire.
4. Preparation of research proposal
5. Study of an article in a journal-Abstract, Methodology, Results and Bibliography

8. Sharma S.R. (1994). *"Statistical methods in Educational Research"*, Anmol Publications Pvt. Ltd., New Delhi.

COURSE OUTCOMES

After studying the course, students will able to:

CO1. Define terms like 'variables', 'hypothesis', research'and state the purpose of doing research

CO2. Understand different types of search and can compare the advantages and dis-advantages of each type of research

CO3. Critically know the procedures for identifying an ideal sample for scientific research.

CO4. Prepare a research proposal in the appropriate scientific style.

CO-PO Mapping

HDCW 204-B: STATISTICS AND COMPUTER APPLICATIONS

(Common to All branches of Home Science and MS Food Technology Course)

COURSE OBJECTIVES

To enable the students to:

1. Get awareness about the scope of statistics in research.
2. Understand the concepts of inferential statistics like t-test, chi-square, Correlation and Variance.
3. Critically apply knowledge of application of statistics in data analysis.
4. Know about the application of computers in research process.

ELECTIVE FOUNDATION-THEORY

UNIT- I: Statistics

- Statistics: Meaning, Definition and Scope, limitations – Role of statistics in Research
- Descriptive Statistics: Classification and tabulation of data, Graphic and diagrammatic presentation of data, measurement of central tendency, variation and dispersion, Normal distribution, Frequency distribution, histogram, frequency polygons, curve ogive
- Levels of Significance

UNIT – II: Inferential statistics

- 't' test for large samples (mean and proportions) and small samples
- Chi square test for significance and association
- Analysis of variance-one way, two way
- Correlation, coefficient of correlation, rank correlation

UNIT – III: Computer Applications I

- Introduction to Computer-Block diagram, PC and its components, Memory capacity, Physical storage of data, various devices, Hardware and software operating- DOS commands for file handling.

- MS Office and its component – Word and its applications/ creating documents, editing spell check, auto correct and print preview, creating tables and sorting data in tables, mail merge and its usage.

UNIT – IV: Computer Applications II

- MS Excel for data analysis - Work sheet and its structure, data entry, editing, Sorting filtering and copying.
- Statistical functions in Excel – Data analysis park for performing descriptive statistics, t-test, ANOVA, Correlation and regression.
- Graphs in Excel – Various types of graphs, editing graphs

8. Sharma S.R. (1994). *"Statistical methods in Educational Research"*, Anmol Publications Pvt. Ltd., New Delhi.

COURSE OUTCOMES

After studying the course, students will able to:

CO1. Define terms like 'frequency distribution', 'Variance' , 'Correlation' and its scope in research data

CO2. Understand different types of statistics that are used in research data.

CO3. Critically know the calculations of different statistics of research data.

CO4. Know the use of computer applications in research process.

CO-PO Mapping

PRACTICAL –I HDCW 205 QUALITY STANDARDS IN ECE (201) + PARENT AND COMMUNITY EDUCATION (203-A)/INFANT DEVELOPMENT AND STIMULATION (203-B)

201-QUALITY STANDARDS IN ECE

COURSE OBJECTIVES:

This course helps the students to;

1. Apply skills to evaluate personal and professional qualities of a pre school teacher.
2. Plan a day' s activities for pre school children, prepare teaching learning materials.

PRACTICALS

1. Observation of indoor and outdoor equipment in a pre-schools of different sectors
2. Evaluation of pre-school teacher/ Student teacher using a scale
3. Observation of records and registers maintained in a pre-school
4. Student Teacher participation in a pre-school
    - Planning programme
    - Preparation of Audio-Visual Aids
    - Implementation of programme
    - Evaluation of Student Teacher's Participation

Course Outcomes:

After studying the course ,student will able to ;

CO1: Plan a day's activities for pre-school children based on theme approach and developmentally appropriate approach.

CO2: Prepare teaching learning(TL) material and demonstrate skills which helps to to establish pre-schools as entrepreneurs and to serve as pre-school teachers and coordinators in Government and Non-government organizations.

203-A PARENT AND COMMUNITY EDUCATION

COURSE OBJECTIVES:

This course helps the students to;

1. To plan and prepare education materials for parent education programme.
2. To conduct parent education programme and evaluate.

PRACTICALS

1. Planning, Organizing and Evaluation of PTA meeting in urban, rural, slum areas
2. Preparing an interview schedule to study the knowledge and attitudes of parents on child care practices
3. Assessment of child rearing practices adopted by parents
4. Assessment Adolescents perception of parenting styles adopted by their parents
5. Sensitizing parents on behavioural problems and management techniques.

6.Preparation of educational material for community participation

COURSE OUTCOMES:

After studying the course ,student will able to ;

1. To plan ,prepare education materials for parent education programme.
2. To plan ,conduct and evaluate parent education programmes

203-B INFANT DEVELOPMENT AND STIMULATION

COURSE OBJECTIVES:

This course helps the students to;

1. To plan stimulation activities for infants.
2. To prepare infant stimulation materials using indigenous materials..

PRACTICALS

- Observation of Infants
- Preparation/collection of materials for infant stimulation.
- Assessment of child rearing practices in different religions
- Development of infant stimulation materials for
    - Physical development
    - Social development
    - Language development
    - Cognitive development
- Assessment of role of grandparents in child rearing practices

COURSE OUTCOMES:

After studying the course ,student will able to ;

1. To plan stimulation activities for infants.

To prepare infant stimulation materials using indigenous materials

\

PRACTICAL –II HDCW 206 THEORIES OF HUMAN DEVELOPMENT AND BEHAVIOUR (202) + REASEARCH METHODOLOGY (204-A)/STATISTICS AND COMPUTER APPLICATION (204-B)

202-THEORIES OF HUMAN DEVELOPMENT AND BEHAVIOUR

COURSE OBJECTIVES:

This course helps the students to;

1. Apply the knowledge of theories to understand the behavior of individuals.
2. Explain the reasons for maladaptive behavior by assessment , analyzation and comparison of different personalities.

PRACTICALS

1. Assessment of personality using a standardized scale
2. Analyzing Film/ TV/ Book/ characters –Assessment of usage of various defense mechanisms by characters.
3. Analyzing Film/ TV/ Book/ characters –Analyzing Humanistic perspective of any character striving to reach maximum potential.
4. Analyzing Film/ TV/ Book/ characters –Social cognitive perspective –Analyzing an instance where characters have observed, evaluated and imitated the behavior.
5. Comparisons of different personality theories .

COURSE OUTCOMES:

After studying the course ,student will able to ;

1. Assess personality of individuals using different techniques.

2. Apply skills of personality theories in counselling when they join as a counsellors in schools, colleges and mental health institutions.

204-A RESEARCH METHODOLOGY

COURSE OBJECTIVES

- To enable the students to:

1. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
2. Develop a research proposal in the appropriate scientific style.

PRACTICALS

1. Identification of different variables in specialization of study.
2. Framing of hypothesis-Null and alternate Hypothesis
3. Preparation of schedule/questionnaire.
4. Preparation of research proposal
5. Study of an article in a journal-Abstract, Methodology, Results and Bibliography

COURSE OUTCOMES - After studying the course, students will able to:

CO1 Critically know the procedures for identifying an ideal sample for scientific research.

CO2 Prepare a research proposal in the appropriate scientific style.

204-B STATISTICS AND COMPUTER APPLICATIONS

COURSE OBJECTIVES

- To enable the students to:

1. Critically apply knowledge of application of statistics in data analysis.
2. Apply skills in using computer applications for data analysis

PRACTICALS

1. Graphic and diagrammatic presentation of data.
2. Calculation of Averages- Arithmetic mean, mode and median.
3. Calculation of Standard deviation and 't' test for large and small samples.
4. Calculation of Correlations.
5. Calculation of chi square to find out significance of association.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1 Critically know the calculations of different statistics of research data.

CO2 Apply skills in using computer applications for data analysis.

HDCW 207- HUMAN VALUES AND PROFESSIONAL ETHICS - II

(AUDIT COURSE)

COURSE OBJECTIVES

To enable the students to:

1. Associate the terms 'value education' 'self-introspection' and 'self-esteem' which are the core aspirations of all human beings.
2. Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.
3. Apply the knowledge to assess issues and problems in each profession and correlate the concepts in addressing the ethical issues while choosing and joining a profession.
4. Develop all round and well balanced personality of the students and shapes them to become morally finer, socially responsible and physically fit persons of the society.

AUDIT COURSE - THEORY

Unit - I Value Education

- Definition - relevance to present day - Concept of Human Values - self introspection – Self-esteem - Family values-Components, structure and responsibilities of family- Neutralization of anger - Adjustability - Threats of family life - Status of women in family and society - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

Unit - II Medical ethics

- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia,

Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion.

- Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit - III Business ethics

- Ethical standards of business-Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit – IV Environmental ethics

- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justice and environmental health.

Unit – V Social ethics

- Organ trade. Human trafficking. Human rights violation and social disparities, Feminist ethics. Surrogacy/pregnancy. Ethics of media- Impact of Newspapers, Television, Movies and Internet.

7. Text Book for Intermediate First Year Ethics and Human Values. Board of Intermediate Education- Telugu ~ Akademi, Hyderabad.
8. I.C Sharma Ethical Philosophy of India. Nagin& co Julundhar

COURSE OUTCOMES

After completion of the course, students will able:

CO1 Associate the terms 'value education' 'self-introspection' and 'self-esteem' which are the core aspirations of all human beings.

CO2 Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.

CO3 Apply the knowledge to assess issues and problems in each profession like medical, business, environment and social ethics and ethics of media and correlate the concepts in addressing the ethical issues while choosing and joining a profession.

CO4 Apply skills for anger management, care of elderly, environmental protection and thereby develop well balanced personality and will contribute to society as morally finer, socially responsible and physically fit persons.

H-High(3), M- Medium(2), L- Low(1)

SEMESTER III

HDCW 301: CHILD STUDY TECHNIQUES

COURSE OBJECTIVES

To enable the students to:

- Recognize the concepts of of IQ, Personality and Psychological tests
- Understand about different types of Psychological tests and about reliability and validity of Psychological tests
- Apply knowledge to use tests of intelligence and Projective Techniques to measure the intelligence and personality of individuals.
- Assess the physical, psychomotor, social and Cognitive development / intelligence of children using different standardized tools.

CORE -THEORY

UNIT I Child Study

- Psychological Tests – Nature, Characteristics and Uses of Psychological Tests – Significance of child study techniques,
- Types of Psychological tests
- Approaches to child study techniques

UNIT II Assessment Techniques

- Assessment – Definition, Functions of assessment, Domains of assessment, Stages of Assessment.
- Scale construction- Standardization through scientific methods- Item analysis, Reliability- types and Validity - types

- Norms and Interpretation of Test scores
- Importance of rapport in Testing.
- Ethical issues in assessment

UNIT III Assessment of Physical and Cognitive abilities

- Assessment of Physical Development -Gesell's Motor development schedule and anthropometric measurements-reference standards
- Assessment of Mental Ability-Raven's Progressive Matrices Test, Seguin Form Board Test, Wechsler's Scale of Intelligence, Alexander Pass a- long test
- Paper Pencil Test- Draw a Person Test

UNIT IV Assessment of Personality–Direct, projective techniques and Alternative assessment techniques

- Personality Assessment - Meaning, types of personality tests- Direct and projective techniques.
- Direct Techniques-Cattle 16PF
- Projective techniques- Rorschach Ink Blot Test, Children's Anxiety picture Test, and Word Association Test
- Alternative Assessment Techniques-Alternative Assessment Techniques – Observation, anecdotal records, Portfolio, Interview, Case Study, Check lists and Rating Scales.

JOURNALS

1. Journal of Psychometry
2. PRACHI Journal
3. Psycho Lingua
4. Indian Psychological Review

COURSE OUTCOMES

After completion of the course, students will able to:

CO1 Define the concepts of IQ, Personality and Psychological tests

CO2 Explain about types of psychological tests and also about methods of obtaining reliability and validity of psychological tests

CO3 Apply knowledge to use tests of intelligence to measure the intelligence and Projective Techniques to assess personality of individuals.

CO4 Assess the physical, psychomotor, social and Cognitive development / intelligence of children using different Psychological tools.

H-High(3), M- Medium(2), L- Low(1)

HDCW 302: CHILDREN WITH DEVELOPMENTAL CHALLENGES

COURSE OBJECTIVES

To enable the students to:

1. Define the terms 'disability', 'impairment', 'handicapped' and 'Juvenile delinquency'.
2. Understand the classification of children with developmental challenges and explain causes for various impairments like visual, hearing impairment, speech and language disorders among children and legislations for their welfare.
3. Apply knowledge of principles of assessment of children with disabilities to plan for their management.
4. Assess the characteristics of gifted children, children with speech disorders and children with learning disability in local elementary school using simple assessment tests.

COMPULSORY FOUNDATION -THEORY

UNIT I Developmentally Challenged - Classification

- Definition and concepts of children with developmental challenges/ disabilities/ impairments, delays and handicapped.
- Classification of children with developmentally challenged
- Professionals working for developmentally challenged children
- Current status of Disabilities in Indian context

UNIT II Differently Abled Children

- Gifted children-Definition, Screening and Identification, Characteristics, Educational programmes.
- Mentally Challenged -Definition and classification, Causes, Identification, Characteristics, Contemporary educational provisions.
- Learning disability – Definition, Causes, Identification, types of educational

approaches.

- Autism Spectrum Disorder- Definition, Causes, Characteristics, Identification, types of educational approaches.
- Attention Deficit Hyperactive Disorder-Definition, Causes, Characteristics, Identification, types of educational approaches.

UNIT III Children with Impairments

- Visual impairment- Definition, classification, Causes, Characteristics, Educational consideration for the visually impaired children.
- Hearing impairment- Definition, classification, Causes, Characteristics, Methods of educating learning impaired.
- Children with Physically challenged- Definition, classification, problems, adaptive equipment, early intervention.
- Speech and language disorders-Nature, classification of speech disorders. Language disorders- Causes, Identification, Characteristics-Management.

UNIT IV Emotional or Behavioural Disorders among Children

- Behaviour problems - Nature of behavioural problem, types, characteristics--Management of children with behaviour problems.
- Juvenile Delinquency, Abused/ neglected children -Characteristics and causes.
- Policies, Government Provisions, concessions and facilities, legislations and programmes for developmentally challenged children.

HDCW 303-A : ORGANISATION AND MANAGEMENT OF CHILD WELFARE INSTITUTIONS

COURSE OBJECTIVES

To enables the students to:

1. Define the 'concept of 'child welfare' 'integrated approach' and 'supervision'.
2. Understand the need for effective communication skills with children, personnel and parents to manage institutions catering to child welfare.
3. Critically explain the national and international organizations working for child welfare
4. Apply knowledge as supervisors to monitor different child welfare institutions.

GENERIC ELECTIVE- THEORY

UNIT- I History

- Child welfare-concept- Goals-History of child welfare in India.
- Charter of children's rights
- Liberation of child labour and changing philosophy and concept of programs and services for children.
- Integrated approach to child welfare- Meaning and Importance

UNIT-II National and International Organization

- Organization catering to child welfare-Principles, objectives and significance of institutions,

- Government and voluntary organizations for children in India.-National organizations-I.C.C.W, CSWB, NIPCCD, NCERT, ICSW, National Society for children, Balbhavan Society - Functions and services.
- NGO's -RASS, Action Aid, S.O.S.
- International Organizations for child welfare - UNICEF, WHO, FAO, CARE.

UNIT- III Administration and Management of Child Welfare Institutions

- Development of effective communication skills with children, personnel, parents and other adults
- Management, of child Welfare institutes-Administration, organization structure of institutions – creches and pre-schools.
- Administration, organization structure of Day care centres, home for destitute, play centres, hobby centres and recreation centres.

UNIT-IV Monitoring and Supervision of Child Welfare Institutions

- Supervision -Definition, types; importance, objectives, Principles of Supervision of child welfare organizations.
- Supervisory styles -Responsibilities and qualities of supervisors
- Monitoring -Need for monitoring-Steps in monitoring of an organization.
- Evaluation- Purpose-Steps in evaluation-Development of evaluation schedule.

JOURNALS

1. Social Welfare
2. Yojana
3. Balak
4. Indian Journal of Extension Education.

COURSE OUTCOMES

After completion of the course, students will able to

CO1 Define the 'concept of 'child welfare' 'integrated approach' and supervision.

CO2 Understand the need for effective communication skills with children, personnel and parents to manage institutions.

CO3 Explains the objective of the national and international organizations like I.C.C.W, CSWB, NIPCCD,
NCERT, ICSW, UNICEF, WHO, FAO and CARE.

CO4 Apply knowledge to monitor child welfare institutions like - crèches, pre-schools, day care centres, and orphanages. Home for destitute, play centres, hobby centres and recreational centres.

HDCW 303-B: CHILD AND HUMAN RIGHTS

COURSE OBJECTIVES

This course helps the students to:

1. Define the concept of 'human rights', 'child rights' and 'women rights'.
2. Identify and classify different types of human rights.
3. Critically explains demographic distribution of children in difficult circumstances.
4. Articulate different issues faced by women in India.

GENERIC ELECTIVE - THEORY

UNIT-I Definition and Evolution of Rights

- Human rights
- Child rights
- Women's rights
- Charter
- Convention
- Policy

UNIT-II Status of Indian Children

- Demographic distribution
- Gender disparities (infanticide, foeticide, girl child)
- Children in difficult circumstances
- Children of prostitutes, child prostitutes, Child labour, street children, refugee children, Abused and neglected children
- Child trafficking

UNIT-III Status of Women

- Status of women in India
- Forms of violation of women's rights
- Violence against women in home, works places and society.
- Sexual harassment, rape
- Health and nutrition based deprivations

- Crime against women
- Political discrimination

UNIT-IV Classification of Human Rights

- Moral rights
- Legal rights
- Civil and political rights
- Social emotional and cultural rights
- International convention of Human rights and Advocacy for Human Rights

PRACTICAL – HDCW-304 CHILD STUDY TECHNIQUES (301) + CHILDREN WITH DEVELOPMENTAL CHALLENGES (302)

301- CHILD STUDY TECHNIQUES

COURSE OBJECTIVES

This course helps the students to;

1.Assess the intelligence of children using standardized tests.

2.Apply skills to assess personality using projective techniques.

PRACTICALS

1. Assessment of physical and motor development of infants & toddlers
2. Anthropometric Assessment of psycho-motor development of infants & toddlers
3. Development of scales/ checklist
4. Standardization of scales/tools in terms of reliability and validity
5. Assessment of Intelligence of children using Intelligence tests
6. Assessment of personality by using inventory

COURSE OUTCOMES

After studying the course, students will able to ;

CO1. Assess the intelligence of children using Alexander's Pass-A-long Test, Raven's Progressive Matrices Test , Seguin Form Board Test and Draw- a -person test and calculate I.Q of sample children.

CO2. Apply skills to assess personality using projective techniques.

302- CHILDREN WITH DEVELOPMENTAL CHALLENGES

COURSE OBJECTIVES

This course helps the students to;

1. Students understand the method of collecting case studies from the institutions catering to the needs of children with special needs.

2. Apply skills to assess gifted children, children with speech disorders and children with learning disability in local elementary school using simple assessment tests.

PRACTICALS

1. Institutional visits to collect case studies of the following.
    a) Mentally Challenged
    b) Hearing Impaired
    c) Visual impaired
    d) Orthopedically handicapped
    e) Socially maladjusted
2. Identification of the following challenges in school age children.
    a) Gifted
    b) Speech disorders
    c) Learning disabled
3. Institutional visit to plan and implement intervention programmes for any one type of challenged.

COURSE OUTCOMES

After studying the course, students will able to ;

CO1: Students acquire the skills of collecting information from institutions catering to the needs of Children with special needs.

CO2: Students identify gifted children, children with speech disorder by using check list from local Schools.

HDCW 305 –LIFE SKILLS
(SKILL ORIENTED COURSE)

Marks (T=50+P= 50)

COURSE OBJECTIVES:

To enable the students to:

1. Define different life skills essential for positive and adaptive behaviour
2. Infer the importance of effective communication to maintain inter-personal and intra-personal communication
3. Critically explain about emotional intelligence and strategies to cope up with stress and emotions
4. Apply knowledge related to Life skills in personal and professional life.

SKILL ORIENTED COURSE -THEORY

Unit I Life Skills – Meaning and Significance

- Life skills -Definitions WHO- Core Life Skills -Decision Making, Problem Solving, Critical Thinking, Effective Communication Skills, Creative Thinking, Interpersonal relationships, Self-awareness, Empathy, Coping with Stress and Emotions.
- Categories of Life Skills - Social skills and Negotiation skills, Thinking skills and Coping Skills.

Social Skills and Negotiation Skills

- Self-awareness – Definition, Need, SWOT Analysis – Jo-Hari Window - strategies to improve Self-awareness.
- Empathy – Difference between Empathy and Sympathy, Strategies to improve empathy skills for improving negotiations

- Effective Communication and Interpersonal relationships – Types of communication – Verbal, Non-verbal communications, Effective Communication: Assertiveness, Effective Listening, Barriers of Communication,

Unit II. Thinking Skills

- Problem Solving – Defining a problem, steps in problem solving skills, Analytical thinking.
- Critical Thinking and Creative Thinking –Definition and Strategies for developing critical and creative thinking.
- Decision Making -Importance, steps in Decision Making- Six Thinking Hats for decision making.

Coping Skills

- Emotional Skills –Emotional intelligence –concept and areas -Characteristics of an emotionally intelligent person.
- Coping with Emotions – Positive and Negative emotions – Strategies for Management of emotions.
- Coping with Stress – Reasons and effects of stress, Strategies for coping up with stress.

PRACTICALS

1. Listening skills -Exercises for Probing-listening- Understanding and Interpreting
2. Speaking Skills – Preparing videos and assessment of speaking skills
3. Non-Verbal Communication- Mono acting
4. SWOT Analysis
5. Jo-Hari Window exercise
6. Six Thinking Hats for Decision making exercise
7. Empathy games
8. Problem solving exercises

INTERNSHIP

- One month to Two months internship in any institute during the semester wherein the student should undergo training to get hands-on -experience .
- Internship Report - A Report to be maintained and submitted for evaluation- The contents of the report should contain the skills learnt, Tools used for assessment , Practice sessions report and Internship Outcome.

COURSE OUTCOMES

After studying the course, students will able to

CO1 Define different life skills essential for positive and adaptive behaviour

CO2 Infer the importance of effective communication to maintain inter-personal and intra-personal communication

CO3 Critically explain about strategies to cope up with stress and emotions by using knowledge of emotional intelligence.

CO4 Apply knowledge related to Life skills in personal and professional life

HDCW 306-A: FUNDAMENTALS OF FOOD, NUTRITION AND HEALTH

COURSE OBJECTIVES:

To enable the students to:

1. Know about foods, food groups, balanced diet for different age groups.
2. Understand the importance of macro and micronutrients in daily diet.
3. Apply comprehend knowledge on deficiency symptoms of different nutrients.
4. Apply skills to assess nutritional problems in community.

OPEN ELECTIVE- THEORY

UNIT-I Food Composition

- Food groups – Classification –
- food composition and nutritive values of different foods,
- Functions of foods.
- Balanced Diet,
- RDA for all age groups.

UNIT-II Macronutrients

- Carbohydrates: Definition, classification, food sources, Function in human body, Recommended Daily Allowance (RDA) and importance of fiber.
- Fats and Oils: Definition, classification, saturated and unsaturated fatty acids, cholesterol, Food sources, requirements, RDA and biological functions.
- Protein: Definition, classification, essential and non-essential amino acids, protein quality, supplementary value of protein, food sources, RDA and functions.

UNIT-III Micronutrients

- Vitamins: Definition, classification
- Fat soluble Vitamins (A, D, E, K) - Functions, sources, RDA, Deficiency diseases

and symptoms.

- Water soluble Vitamins (B complex and C): Functions, sources, RDA, Deficiency diseases and its symptoms.
- Macro minerals: Calcium, phosphorous, sodium, potassium, chloride- sources, biological functions, factors affecting availability, Deficiency diseases and symptoms.
- Micro minerals: Copper, zinc, Iron, Iodine and fluorine in human nutrition, biological functions, factors affecting availability, Deficiency diseases and symptoms.
- **Unit - IV: Major Nutritional Problems of the Community:**
- Malnutrition - PCM, obesity, micronutrient malnutrition,
- Government programmes to eradicate PCM, vitamin-A, iron and iodine deficiencies,
- Principles of planning diets for different conditions of malnutrition.

- Monographs and other publications by ICMR, WHO, FAO, UNICEF and UNESCO, Nutrition Foundation of India.
- Indian Journal of Nutrition and dietetics, Coimbatore, India.

COURSE OUTCOMES

After completion of this course, students will be able to:

CO1	Acquire knowledge on food groups and functions of food.
CO2	Gain knowledge on importance of macro and micronutrients in different age groups.
CO3	Identify signs and symptoms of different nutrient deficiencies.
CO4	Illustrate the nutritional problems in community.

HDCW 306- B: DYNAMICS IN FOOD PREPARATION

COURSE OBJECTIVES

To enable the students:

1. Learn the principles of safe food preparation and food pyramid.
2. Understand the role of foods in cookery.
3. Apply knowledge about effect of cooking on nutrients.
4. Able to differentiate different cooking equipment and role of different food items in cookery.

OPEN ELECTIVE- THEORY

UNIT-I: Introduction

- Definitions in food science.
- Composition and functions of foods.
- Food pyramid.
- Principles of safe food preparation.

UNIT-II: Cooking Process

- Objectives of Cooking.
- Preliminary preparations.
- Cooking methods- Moist heat methods, Dry heat methods; Fat as medium of cooking, Microwave cooking.
- Effect of cooking on Nutrients.

UNIT-III: Cooking Equipments

- Types of cooking equipments- Grill, Boiler, Oven and Microwave. Mechanical processing equipments- Vegetable Peeler, Chopper, Mixer, Slicing machine and mincing equipment.
- Non cooking equipment: Refrigerator.

UNIT-IV: Role of foods in Cookery

- Role of cereals, pulses, fats/oils, milk and milk products, flesh foods, sugars, vegetables, fruits and spices in cookery.

4. Shubhangini A.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Mecgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

After completion of this course, students will be able to:

CO1 Acquire knowledge on Food Pyramid.

CO2 Identify Role of foods on Cookery.

CO3 Gain knowledge on methods of Cooking.

CO4 Estimate the effects of cooking on Nutrients.

SEMESTER IV

HDCW 401: GUIDANCE AND COUNSELLING IN HUMAN DEVELOPMENT

COURSE OBJECTIVES

To enable the students to:

1. Describe and differentiate the terms the terms 'guidance' and 'counseling'
2. Understand the qualities and skills of a good counselor and different approaches to counseling
3. Critically explain therapies, techniques of counseling, process of counseling and ethics in counseling
4. Apply counseling skills and cognitive therapies to practice counseling process.

CORE -THEORY

UNIT-I Guidance and Counselling

- Guidance– Meaning, Definition, Nature – Need for guidance-Principles of guidance and Functions of guidance .
- Types of guidance – Educational, Vocational, Personal, and Social guidance.
- Individual and Group Guidance -Advantages and limitations of guidance.
- Counselling - Meaning, Definition, Relationship and difference between guidance and counseling, Need for counseling .
- Individual and Group counselling –Merits and Limitations.

UNIT-II Counselling Process

- Counselling -Elements of counseling **-**Counsellor- Characteristics, qualities of a good counselor, Skills -Attending, Active listening -SOLER-Empathy, Probing, Responses- EISPU- Professional ethics in counseling.
- Preparation for counselling-Pre-counselling interview- Physical setting, Privacy-Counselling relationship.

- Counselling Process- Stages in Counselling process
- Variables affecting the counselling process-Characteristics of the client, Characteristics of the counsellor- Personal and professional variables .

UNIT-III Approaches and Therapies to Counseling –I

- Directive , Non-directive and Eclectic counseling
- Psychoanalytic approach - Psycho- therapy –Key techniques -Demerits of psycho-therapy,
- Cognitive Behavioural Counseling - Meaning , Core Principles- Rational Emotive Behaviour therapy (REBT)-Goals-Role of counsellor
- Cognitive Behaviour Therapy (CBT)- Meaning- Cognitive restructuring or reframing, journaling and thought records, Relaxation and stress reduction techniques.
- Comparison of REBT and CBT- Limitations

UNIT-IV Approaches and Therapies to Counseling-II

- Behavioristic approach –Behaviour modification techniques – Systematic Desensitization, Reinforcement, Modeling, Shaping and token economy-merits and -demerits of behavior therapy
- Humanistic approach- Carl Roger's self-theory,–Personality Development and the Self-Concept-Ideal Self vs. Real Self.
- Therapy based on humanistic approach -Client centered therapy –Techniques-Genuineness and congruence, Unconditional positive regard, Empathetic understanding-Benefits of Client-Centered Therapy
- Transactional Analysis (TA) - Ego states of personality-Parent, adult, child-Goals - Role of counsellor. Benefits of Transactional Analysis Psychotherapy.

PRACTICALS

1. Visit to local counselling/ Child Guidance clinic and observation of cases
2. Analysis of real self and Ideal self using Semantic Differential Scale
3. Practice of Counselling skills -SOLER
4. Practice of Counselling skills -EISPU
5. ABC functional analysis using work sheets
6. Analyzing and reframing emotions using 'Thought Record Sheet

HDCW402: ADVANCED STUDY OF HUMAN DEVELOPMENT-II

COURSE OBJECTIVES

To enable the students to:

1. Describe developmental tasks of early adulthood, middle adulthood, and late adulthood.
2. Understand the physical, physiological and psychological changes during different stages of adult hood.
3. Explain adjustments and problems during early, middle and late adulthood.
4. Assess needs, adjustments and problems during different stages of adulthood using questionnaires and case study methods.

CORE -THEORY

UNIT – I Early Adulthood

- Adulthood-Stages - demography on adult population in India
- Early Adulthood-Characteristics and Developmental tasks
- Adult growth and development-Biological, cultural and developmental perspective
- Adjustments – Vocational, Sexuality and marital adjustment
- Parenthood – Adjustment to parenthood – factors affecting adjustment to parenthood

UNIT – II Middle Adulthood

- Middle Adulthood**-** Characteristics and Developmental tasks
- Adjustment – Personal, Social and Vocational
- Role of family – Maintenance of family relations and Friendship
- Parenting adult offspring and their marriage, Health and Disease, Menopause in Women, Adult sexuality; Work and Career development

UNIT – III Late Adulthood

- Late Adulthood-Characteristics and Developmental tasks
- Physical, Physiological and Psychological changes
- Social relationship and family adjustment- Adjustment to retirement and singlehood

- Work and Retirement; Alternative life styles and Leisure time activities;

UNIT – IV Elderly

- Elderly-Characteristics and changes in cognitive abilities and Creativity
- Physical aspects of aging; Health and disease
- Mental health during elderly- Institutional living in the context of Indian culture
- Changes in family life cycle and social relationship-Problems of elderly and coping up strategies
- Safety issues during elderly-Death, dying and bereavement

LEARNING EXPERIENCES

1. Assessment of roles, responsibilities and satisfaction during young adulthood - case study.
2. Assessment of marital adjustment among young adults
3. Problems of adjustment during middle adulthood – case study.
4. Assessment of needs and problems of elderly.
5. Case study of elderly man and woman.
6. Visit to old age home – report and evaluation.

HDCW 403-A: REHABILITATION AND MANAGEMENT OF CHILDREN WITH DEVELOPMENTAL CHALLENGES

COURSE OBJECTIVES

To enable the students to:

1. Describe the terms 'rehabilitation', 'community based rehabilitation', normalization integration, mainstreaming and inclusion.

2. Understand the role of government, voluntary organizations and community in management of children with developmental challenges.

3. Explain rehabilitation of children with developmentally challenges through multi-disciplinary approach

4. Apply practical skills in developing schedule and collecting case studies of children with developmental challenges

GENERIC ELECTIVE - THEORY

UNIT-I Early Identification of Children with Developmental Challenges

- Early identification of Children with Developmental Challenges- Concept, Need,
- Steps in assessment process – Identification, screening, diagnosis, programme
- Early Intervention – Types of early intervention and Linking assessment with intervention process.
- Intervention -Planning, placement, monitoring and evaluation.

UNIT-II Rehabilitation of Children with Developmental Challenges

- Rehabilitation –Definition and Concept-Vocational, educational and recreational rehabilitation of the children with developmental challenges
- Vocational, educational and recreational rehabilitation of Mentally challenged,

visually impaired, Hearing impaired children, and children with Learning disability.

- Vocational, educational and recreational rehabilitation of Orthopedically challenged children and Autism spectrum disorder
- Vocational, educational and recreational rehabilitation of Children with Social and emotional problems .

UNIT-III Management of Children with Developmental Challenges

- Management of Children with Developmental Challenges - Role of parents, Role of schools- Role of Government, Voluntary organizations and community .
- Concepts of Normalization and Integration, Mainstreaming and Inclusion, Special schools, Resource rooms, Individualized Family Service Plan (IFSP) and Individualized Education Programme (IEP)- parent – Teacher partnership.
- Multidisciplinary team approach -Services provided by different experts and their role.
- Therapeutic interventions- Clinical assessment, Physio therapy, occupational therapy, special education, speech therapy, hydro therapy play therapy and behaviour modification.

UNIT-IV Community Based Rehabilitation Services

- Definition, Basic concepts of community based rehabilitation and objectives.
- Sectors and Roles for the development of community based rehabilitation
- Essential ingredients for sustainability which CBR programmes
- Community based Rehabilitation- steps - Situation analysis, Planning and designing.
- Implementation of Community based rehabilitation management - monitoring and Evaluation. Community based rehabilitation management matrix.

H-High(3), M- Medium(2), L- Low(1)

HDCW 403-B: GERONTOLOGY

COURSE OBJECTIVES

To enable the students to:

1. Define stages of late adulthood, understand the characteristics of old age
2. Describe theoretical perspectives of aging and aging process,
3. Explain problems faced by elderly.
4. Apply knowledge to assess needs and problems of elderly at home and in institutions

GENERIC ELECTIVE - THEORY

UNIT I Process of Ageing

- Process of Ageing; Old age - definition, characteristics, needs.
- Demographic profile of elderly in India.

UNIT II Research trends in ageing

- Theories related to ageing
- interest's, attitudes, needs, mental health of elderly.
- Role of interplay of cultural forces family interactions.
- Economic, social, cultural forces.

UNIT III Problems faced by Elderly.

- Psychological,
- Physiological,
- Social, emotional problems - Causes, strategies for coping maintained positive mental health.

UNIT IV Welfare programmes for elderly -

- Role of Government and non-government agencies,
- Policy towards Elderly –
- Human right prospective.

JOURNALS:

1. Helpage India, Research and Development Journal (Quarterly), New Delhi.
2. Journal of Gerontology
3. Journal of Social Welfare

COURSE OUTCOMES

After completion of the course, students will able to:

CO1 Understand the concept of aging, changes/changing life style and adjustment pattern that takes place during late adulthood

CO2 Learn theoretical perspectives of aging and aging process, research trends and Methodological issues in Gerontology

CO3 Explain about welfare services for elderly.

CO4 Assess different types of problems during elderly and provide coping up strategies to maintain Positive mental health.

PRACTICAL- HDCW:404 GUIDANCE AND COUNSELLING IN HUMAN DEVELOPMENT (401) + ADVANCED STUDY OF HUMAN DEVELOPMENT –II (402)

404- GUIDANCE AND COUNSELLING IN HUMAN DEVELOPMENT

COURSE OBJECTIVES

This course helps the students to;

1. Students apply skills in assessment of behavior problems among children, analysis of self and vocational interests using checklist and scales.

2. They apply counseling skills to practice to counseling process.

PRACTICALS

1. Visit to local counselling/ Child Guidance clinic and observation of cases
2. Analysis of real self and Ideal self using Semantic Differential Scale
3. Practice of Counselling skills -SOLER
4. Practice of Counselling skills -EISPU
5. ABC functional analysis using work sheets
6. Analyzing and reframing emotions using 'Thought Record Sheet.

COURSE OUTCOMES

After studying the course, students will able to;

Co1: Students assess behavior problems among children, understand their vocational interest and congruence between real self and ideal self.

Co2 : Practice of counseling process using different models, gives hands-on experience to serve as Counselors in mental health institutions.

402- ADVANCED STUDY OF HUMAN DEVELOPMENT –II

COURSE OBJECTIVES

This course helps the students to;

1. Apply skills to assess the problems and adjustments during late childhood period.
2. Collect case studies from elderly people.

PRACTICALS

1. Assessment of roles, responsibilities and satisfaction during young adulthood - case study.
2. Assessment of marital adjustment among young adults
3. Problems of adjustment during middle adulthood – case study.
4. Assessment of needs and problems of elderly.
5. Case study of elderly man and woman.
6. Visit to old age home – report and evaluation.

COURSE OUTCOMES

After studying the course, students will able to;

CO1: Assess needs, adjustments and problems during different stages of adulthood using schedules and questionnaires.

CO2: Apply skills to collect data using case study method.

HDCW-405: HUMAN RESOURSE MANAGEMENT

COURSE OBJECTIVES:

To enable the students to:

1. Know the meaning of Human resource management, human resource development and human resource planning.
2. Understand the importance of Human Resource Management and HR manager to the organization and employees.
3. Critically explain the functions of Human resource management.
4. Apply the skills in administering tests in selection and recruitment of staff.

MULTI -DISCIPLINARY- THEORY

UNIT-I Human Recourse Management

- Human Resource Management- Definition and Concept- Importance of Human Resource management - for the Organization, for the employees and Importance for the society.
- HR Manager -Essential Functions and Role of HR manager
- Objectives of Human Resource Management-Societal, Organizational, Functional and personnel objectives.
- Human Resource Planning and Human Resource Development - Meaning, Objectives and factors influencing.

UNIT-II Human Resource Functions

- Human Resource Functions -Job Analysis, Job description, job specification, recruitment, selection, placement and induction and socialization.
- Job Analysis- Meaning, Techniques of Job Analysis-Steps involved - Method to be Adopted to Collect the Information- Observation, Interview method, Questionnaires, Checklists, Group discussion etc.,-Advantages of job analysis and problems.

- Selection and Recruitment -Selection methods- Types and uses of tests- Aptitude and interest tests, Personality tests, Vocational inventory. -Steps in selection process- Situational and stress Interview -Reference checks and background verification-hiring decision.
- Placement and induction -Definition- Importance and objectives - Induction Process, -Difference between placement and induction-Principles-Benefits and problems.

PRACTICALS

1. Job analysis through Questionnaires- Development of questionnaires
2. Assessment of Personality using standard questionnaires
3. Assessment of Aptitude Using standard tests
4. Assessment of vocational interests using inventory
5. Development of Interview schedule for Assessing Strengths and Weaknesses
6. STAR Approach for Facing an Interview
7. Group discussion- Practice.

COURSE OUTCOMES:

After completion of the course, students will be able to:

CO1: Define the terms Human Resource Management, human resource development and human resource planning.

CO2: Understand the importance of Human Resource Management and HR manager to the organization and employees .

CO3: Critically explain the functions of Human resource management.

CO4: Apply the skills in administering tests in selection and recruitment of staff .

HDCW 406-A: CHILD GROWTH AND DEVELOPMENT

COURSE OBJECTIVES

To enable the students to:

1. Know the terms 'growth' , 'development' and stages of development across life span
2. Understand the characteristics of children at different stages of childhood
3. Explain different developments like physical, cognitive, language and social development during childhood.
4. Apply knowledge to understand normal development and developmental delays during childhood.

OPEN ELECTIVE - THEORY

Unit -I Foundations of Development

- Understanding the terms Child, Growth, Development, Child Development, Human Development, and Developmental tasks.
- Principles of Child Development and Factors influencing growth and Development of Children.
- Determinants of Development - Role of Heredity and Environment in Development
- Stages of Development across life span and domains of development.

Unit - II Infancy

- Infancy – Characteristics
- Sensory- Motor activities
- Language Development
- Socio-emotional development.

Unit - III Early Childhood

- Early Childhood Period –Characteristics
- Physical Development
- Cognitive development
- Emotional and Social development

Unit - IV Middle Childhood

- Middle/ Late Childhood Period-Characteristics
- Physical development
- Cognitive development.
- Emotional and Social development

COURSE OUTCOMES

After completion of the course, students will able:

CO1 Define the terms growth and development, and stages of development across life span

CO2 Understand the characteristics of children at different stages of childhood.

CO3 Critically explain different developments like physical, cognitive , language and social development during childhood

CO4 Apply knowledge to understand normal development and developmental delays during childhood to assess all round development during childhood

HDCW 406-B: DISASTER MANAGEMENT

COURSE OBJECTIVES

To enable the Student to:

1. Know about natural disasters: manmade disasters; chemical hazards; National and International strategies to mitigate disaster management.
2. Understand natural disasters (like floods, drought, cyclone, earthquakes, global warming etc); Nuclear disasters; Biological disasters;.
3. Illustrate the efforts made by the NGOs, Community based organizations and local administration in disaster management.
4. Discriminate disaster responses of Armed forces and Police.

OPEN ELECTIVE - THEORY

UNIT I Natural Disasters

- Meaning and nature of natural disasters, their types and effects.
- Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches, Volcanic eruptions, Heat and cold Waves,
- Climatic Change: Global warming, Sea Level rise, Ozone Depletion

UNIT II Man Made Disasters-

- Nuclear disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution,
- water pollution, deforestation, Industrial wastewater pollution, road accidents, rail accidents, air accidents, sea accidents.

UNIT III Chemical Hazards:

- Release of Toxic chemicals
- Sedimentation processes
- Global Sedimentation Problems
- Regional Sedimentation Problems, Sedimentation and Environmental Problems.

UNIT IV Disaster Management-

- Efforts to mitigate Natural Disasters at National and Global levels.
- International Strategy for Disaster reduction.
- Concept of disaster management, National Disaster Management framework; financial arrangements
- Role of NGOs, Community-based organizations, and Media. Central, State, District and local Administration; Armed forces in Disaster response
- Disaster response: Police and other organizations.

3. Routledge. and Sharma, V.K. (2001). *Disaster management*. National Centre for Disaster Management, India.

COURSE OUTCOMES

After completion of the course, Students will be able to:

CO1 Gain in-depth knowledge about natural disasters; manmade disasters; chemical hazards: disaster management.

CO2 Design and administer a schedule for collection of Information regarding the role of NGOs, Community based organizations, central state, District and local Administration, Police and armed forces, in Disaster management

CO3 Illustrate the efforts made by NGOs, Community based organizations and local administration in disaster management.

CO4 Discriminate disaster responses of Armed forces and policies

MODEL QUESTION PAPER

M.Sc. (HOME SCIENCE) DEGREE EXAMINATION

First Semester

(Specialization 'B' – Human Development & Child Welfare

(CBCS with effect from academic year 2021 – 2022 onwards)

HDCW 101 – ADVANCED STUDY OF HUMAN DEVELOPMENT-I

Time: 3 Hrs **Max: 80 Marks**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Write the importance of brain development during early years.
2. Enumerate the reflexes of a neonate.
3. Give an account of mile stones related to physical development during infancy and babyhood.
4. Write a short note on genes and chromosomes.
5. Explain the social developments during late childhood years.
6. Write about language development during early childhood years.
7. Write short notes on Peer relationships during adolescence.
8. Write about the concept of Gene engineering.

Part – B

Answer all questions

Each Question carries 15 Marks (4x15 =60 Marks)

9. (a) Discuss about genetic and chromosomal abnormalities during pre-natal period.

(Or)

(b) Explain in detail the interaction of heredity and environment on all-round development of children.

10. (a) Explain the language, emotional and cognitive development during infancy.

(Or)

(b) Describe the social and emotional developments during early childhood years.

11. (a) Write about the needs and characteristics of late childhood years.

(Or)

(b) What is puberty? Discuss the impact of onset of early and late puberty on child's Development.

12. (a) Define adolescence. Explain the physical and physiological changes during adolescence.

(Or)

(b) Discuss about Challenges during Adolescence.

First Semester

(Specialization 'B' – Human Development& Child Welfare)

(CBCS with effect from academic year 2021 – 2022 onwards)

HDCW 102 – CURRICULUM FOR EARLY YEARS

Time: 3 Hrs **Max Marks: 80**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Differentiate and explain the terms ECE, ECCE and ECD.
2. Explain the significance of ECE.
3. Define curriculum and explain the indicators of effective curriculum.
4. Explain the importance of music in ECE curriculum.
5. Write about short term planning in ECE.
6. Write a short note on pre-number concepts.
7. Explain developmentally appropriate curriculum.
8. Enumerate values of play in ECE curriculum.

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. a) Describe the need and scope for early childhood education.

(Or)

b) Explain the importance of Brain development and stimulation during pre-school age.

10. a) Discuss the language experiences that can be provided in an ECE center.

(Or)

b) Write short notes on the following in ECE and explain the role of teacher in implementing the activities.

i) Readiness Programme ii) Science experience

11. a) Describe the objectives of ECE.

(Or)

b) Explain about principles of programme planning.

12. a) Write in detail a lesson plan based on theme based approach for 5 year old children.

(Or)

b) Explain about developmentally appropriate approach for early childhood education.

HDCW 103-A: FAMILY DYNAMICS

Time: 3 hrs **Maximum Marks: 80**

PART- A

Answer any FOUR questions (4x5=20 Marks)

Each question carries equal marks

1. Write about different types of families.
2. What is family counseling centre ?
3. Write a short notes on Hindu marriage Act.
4. Explain about problems faced by Dual career families.
5. Write about Janani surakshya yojana scheme.
6. Explain the factors that influence the family interaction.
7. Discuss the advantages and disadvantages of changing family patterns in India.
8. Write a short note on marital stability.

PART-B

Answer all questions

Each question carry equal marks **(4x15=60 Marks)**

9. (a) Enumerate the functions of family.

Or

(b) Discuss the impact of social change on Indian families.

10. (a) Describe about stages of family life cycle. Discuss role expectations during different stages of family life cycle.

Or

(b) Explain about behavioural family therapy.

11. (a) Explain the factors that influence the marital adjustments.

Or

(b) Define communication? Discuss the role of communication in family relations.

12. (a) Give an account on National policies for family welfare.

Or

(b) Explain about Domestic Violence Act in India.

HDCW- 104- A: COMMUNITY NUTRITION

(Common to all specializations of M.Sc., Home Science and M.S Food Technology)

Time: 3 hours **Max Marks:80**

Part- A

Answer any FOUR of the Following

Each question carries 5 marks (4 x5=20Marks)

1. Describe classification of foods with functions.
2. Write a short note on recommended dietary allowances.
3. Vital statistics.
4. Nutritional assessment.
5. Significance of breast feeding.
6. Clinical symptoms of Vitamin A&C deficiencies.
7. Describe about Mid-Day Meal programme.
8. Public distribution system.

Part- B

Answer ALL questions

Each Question carries 15 Marks (4x15=60 Marks)

9. (a) Explain about food groups, food composition and nutritive values of different foods.

(or)

(b) Define meal planning, principles and factors affecting meal planning.

10. (a) Describe briefly the methods of anthropometric measurements in altering nutritional status of the community.

(or)

(b) Explain the advantages and dis advantages of the Bio-chemical method of assessment of nutritional status.

11. (a) Discuss physiological changes that occur during pregnancy and state the nutritional requirements during pregnancy.

(or)

(b) State the RDA for an adolescent girl. Plan a menu and give justification.

12. (a) Discuss about food security, food fortification and enrichment.

(or)

(b) Write in detail about ICDS.

(Common to all specializations of M.Sc., Home Science and M.S Food Technology)

Time: 3 Hrs **Max: 80 Marks**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Write the effects of lactation on nutritional composition of Human milk.
2. What are the factors that affect the breast milk quality?
3. Explain the need for infant formulae.
4. Discuss the importance of nutrition during Pre-school children.
5. Write the nutritional issues in Adolescence.
6. Discuss the Nutritional requirements in School-going children.
7. Write the effects of aging on nutritional health.
8. Explain the nutritional concerns in old age and their management pregnancy outcome.

Part – B

Answer all questions

Each question carry equal marks (4X15 = 60 Marks)

9. (a). Explain about Nutritional intervention and pregnancy outcome & write the advantage and disadvantages of breast and formulae feeding.

(Or)

(b). Discuss about the nutritional requirements during pregnancy and lactation? Write about common complications and problems.

10. (a).What are the effects of macro & micro nutrient malnutrition on physical and mental health?

(Or)

(b). Discuss about various types of Infant formulas and common problems during infancy.

11. (a). Explain the importance of nutritional requirement and RDA and discuss the importance of implications of child obesity.

(Or)

(b). Write in detail about various physiological problems during adolescence.

12. (a).Discuss the modification in diet, feeding old people. Nutritional requirement for adult man and woman.

(Or)

(b). Explain the principles to be considered while planning and preparation of diets.

Time: 3 Hrs **Max Marks: 80**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Write about importance of quality in ECE center.
2. Explain about indoor and outdoor space in an ideal nursery school.
3. Write about the method of provision of child friendly environment in ECE.
4. Enumerate principles selection of equipment for a pre school.
5. Write a short notes on goals of student teacher.
6. Give an account of Importance of Home visits in ECE.
7. Write about the role of other personnel in ECCE services.
8. Meaning and need for monitoring in ECCE services.

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. a) Explain the method of establishing quality assurance in ECE.

(Or)

b) Describe the principles of quality standards in ECE services.

10. a) Explain the method of establishment of child friendly environment in a nursery school.

(Or)

b) Give the ideal requirements for establishment of a pre-school.

11. a) Write the personnel and professional competencies of ECCE educator.

(Or)

b) Discuss the common problem of Student Teacher.

12. a) Define supervision. Enumerate the principles of effective supervision.

(Or)

b) Explain about different records and registers maintained in a pre school.

Time: 3 Hrs **Max Marks: 80**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Write about the meaning and functions of theories.
2. What is meant by inductive and deductive reasoning?
3. Enumerate different defense mechanisms according to Freud's theory.
4. Explain Skinners operant conditioning theory.
5. Describe Chomsky's language theory.
6. Enumerate the characteristics of a self-actualized person.
7. Write about key principles of classical conditioning.
8. Write about stages of attachment in Bowlby's theory.

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. (a) Describe Erikson's psycho-social theory.

(Or)

(b) Explain Freud's Psycho-analytic theory.

10. (a) Describe the cognitive development theory of Jean Piaget.

(Or)

(b) Write in detail about Gardener's Multiple intelligence theory.

11. (a) Explain Ecological Systems theory of Urie Bronfrenbrenner.

(Or)

(b) Describe Social-Learning theory by Albert Bandura.

12. (a) Write about Kohlberg's theory of Moral Development.

(Or)

(b) Explain in detail about the self-actualization theory of Abraham Maslow.

Time: 3 hrs **Max Marks: 80**

PART- A **(5x4=20 Marks)**

Answer any four questions

Each question carry equal marks

1. Explain the need for parent education.
2. Explain the role of father in child rearing.
3. Write about the need for parent education in India.
4. Write a note on parent initiated curriculum for parent education.
5. Give an account of problems faced by single parent families.
6. Enumerate the goals of parent education.
7. Explain the importance of parents involvement in community education programme.

8. Write a short note on changing role of parents.

Part-B (15x4=60 Marks)

Answer all questions

Each question carry equal marks

9. (a) Explain the theoretical approaches to parent education

(Or)

(b).Discuss the direct and indirect methods of parent education

10. (a) Explain the various steps involved in parent education programme.

(Or)

(b) Discuss the various parenting styles and its impact on children's behaviour

11. a) Describe criteria to evaluate the parent education programme

(Or)

(b) Explain steps involved in conducting Parent Teacher Association (PTA) meeting in a preschool

12. (a) Discuss and differentiate the strategies and management skills for parents to deal with normal children and children of developmental delays and disabilities.

(Or)

(b) Discuss about strategies for management of Physically challenged and mentally challenged children.

HDCW 204- A : RESEARCH METHODOLOGY

(Common to All branches of Home Science and MS Food Technology Course)

Time:3 hrs Max: 80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Define research. Enumerate the significance of research.
2. Explain the need and features of a good research design.
3. Write about Quota and snow ball sampling.
4. Describe case study as a research technique.
5. What is meant by primary and secondary data?
6. Give an account of Nominal scale.
7. What is Social mapping?
8. Write about Observation check list.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a).Write in detail about types of research.

(Or)

(b).Write about the types of research design.

10.(a).Explain in detail about the definition , identification and selection of research problem.

(Or)

(b).Define qualitative research and explain the types of qualitative research.

11.(a). What is data? Explain in detail different methods of data collection.

(Or)

(b). Describe in detail about the Observation and Interview methods of data collection.

12.(a). What is Measurement scales? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing a research proposal.

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

MODEL QUESTION PAPER

M.Sc. (HOME SCIENCE) DEGREE EXAMINATION

Second Semester

(CBCS with effect from academic year 2021 – 2022 onwards)

HDCW 204-B : Statistics and Computer Applications

(Common to All branches of Home Science and MS Food Technology Course)

Time:3 hrs Max: 80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Frequency distribution.
2. Histogram.
3. Rank correlation.
4. Mean.
5. File handling.
6. Computer software.
7. What is data analysis?
8. Descriptive statistics.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a). What is a *t*-test? When it is used and for what purpose(s)? Explain by means of examples.

(Or)

(b). In a test given to two groups of students, the marks obtained were as follows: *First Group* 18 20 36 50 49 36 34 49 41 *Second Group* 29 28 26 35 30 44 46 Examine the significance of difference between mean marks obtained by students of the above two groups. Test at five per cent level of significance.

10. (a). 200 digits were chosen at random from a set of tables. The frequencies of the digits were: Digit 0 1 2 3 4 5 6 7 8 Frequency 18 19 23 21 16 25 22 20 21 Calculate χ^2.

(Or)

(b). What is Chi-square text? Explain its significance in statistical analysis.

11.(a). What is data? Explain in detail the data processing and analysis in computers.

(Or)

(b). Describe in detail about the PC and its components.

12.(a). What is an excel sheet? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing different graphs in computers.

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

MODEL QUESTION PAPER

M.Sc. (HOME SCIENCE) DEGREE EXAMINATION

Third Semester

(Specialization 'B' – Human Development & Child Welfare)

(CBCS with effect from academic year 2021 – 2022 onwards)

HDCW 301 – CHILD STUDY TECHNIQUES

Time: 3 Hrs **MaxMarks: 80**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20Marks)

1. Write the significance of child study techniques.
2. Discuss the ethical issues in assessment.
3. Explain the importance of rapport in testing.
4. Write about rating scales.
5. Meaning of projective techniques? Write about word association test.
6. Explain about validity and types of validity.
7. Give an account of Seguin form board as assessment technique.
8. Discuss the functions of psychological tests.

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. a) Explain about cattle's 16 PF test.

(Or)

b) Write about different approaches to child study techniques.

10. a) What is assessment? Explain the stages of assessment.

(Or)

b) Discuss the steps in Construction of scale.

11. a) Write in detail about Alexander pass-a-long test.

(Or)

b) What is intelligence? Discuss about Wechsler's scale of intelligence.

12. a) Write about uses of projective techniques and explain about Rorschach ink blot test.

(Or)

b) Discuss about Good Enough draw a person test.

SRI VENKATESWARA UNIVERSITY:: TIRUPATI

M.Sc. (HOME SCIENCE) DEGREE EXAMINATION

Second Semester

(Specialization 'B' – Human Development & Child Welfare)

(CBCS with effect from academic year 2021 – 2022 onwards)

HDCW 302 – CHILDREN WITH DEVELOPMENTAL CHALLENGES

Time: 3 Hrs **Max Marks: 80**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Differentiate between Impairment and Disability. Give any three definitions of developmental challenges.
2. Write about management of services for children with behaviour problems.
3. Write about the characteristics of gifted children.
4. Define Learning Disability. Explain the causes for learning disability among children.
5. Define visual impairment and write the causes for visual impairment.
6. What are the early intervention programmes for children in crippled condition?
7. Explain the causes of juvenile delinquency.
8. Enumerate the policies and legislations for children with developmental challenges.

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. (a) Classify children with developmental challenges and give an account of professionals working for developmentally Challenged children.

(Or)

(b) Explain the current statistics of children with developmental challenges.

10. (a) Define and classify mentally challenged – Discuss the characteristics of children with mental challenges.

(Or)

(b) How will you identify children with learning disability. Explain different types of education approaches available for children with learning disability.

11. (a) Define hearing Impairment – Explain causes and classification of hearing impairment.

(Or)

(b) Describe the method of identification of children with speech and language disorders. Discuss the management techniques.

12. (a) Explain the characteristics of children in difficult circumstances. Discuss the causative factors for it.

(Or)

(b).Enumerate the government provisions, concessions and facilities for children with developmental Challenges.

HDCW 303-A: ORGANIZATION AND MANAGEMENT OF CHILD WELFARE INSTITUTIONS

Time: 3 Hrs **Max: 80 Marks**

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Explain the concept of programmes and services for children.
2. Write short notes on NCERT and NIPCC.
3. Give and account of functions and services of RASS.
4. Define supervision and enumerate the objectives of supervision in child welfare.
5. Write short notes on ICCW.
6. What are the functions and services of CARE.
7. Write short notes on organization structure of p.re – school.
8. Write the principles and objectives of UNICEF

Part – B

Answer all questions

Each question carry equal marks (4X15=60 Marks)

9. (a) Explain about the importance of integrated approach for child welfare programme.

(Or)

(b) Write about the charter of children's right.

10. (a) Give an account of existing government organizations for children in India.

(Or)

(b) Explain the services and functions provided by the voluntary organizations in India.

11. (a) Write in detail the principles, objectives and significance of any two international organizations related to child welfare.

(Or)

(b) Discuss about the administration, organization and management of crèche and home for destitute.

12. (a) How important is supervision in child welfare institutions? Discuss the roles and responsibilities of supervisor and do's and don'ts for supervision

(Or)

(b) Discuss different methods of development of effective communication skills with children, personnel and parents?

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF HOME SCIENCES

Course

M.Sc. EXTENSION MANAGEMENT AND COMMUNICATION TECHNOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

- The Department of Home Science established in the year 1963 as first of its kind in the state of Andhra Pradesh and celebrated golden jubilee in the year 2013. Ms Dorothy M. Pearson, a Canadian Home Scientist was largely instrumental to start the post graduate programmes in Home Science at Sri Venkateswara University, Tirupati. The committed founder stalwarts and the successive faculty members with immense foresight established the pioneering activities of teaching, research and extension in the department. The department from its inception has thrived to offer new insights through academic reforms and outreach activities. The commitment of the faculty has contributed practice-based teaching, action research, technology development and extension outreach activities for the development of students. The department stocks eight patents of which two patents awarded. The Ministry of food processing granted 10 crores for the establishment Food testing laboratory with NABL accreditation.

Department Vision

- To be a premiere centre for excellence in higher education in the areas of specialization fostering nurturing and building careers for students and to be an apex body playing a pivotal role in planning and monitoring community development.

Department Mission

- Empowering students in capacity building skills through teaching, research and extension activities in making socially responsible citizens along with employability.

Department Objectives

- Enable the students to understand the interrelation of Food and Health,
- To foster knowledge across the life span in inter connected Human Development factors to become efficient counselors and early childhood educators
- Develop sensitivity towards the community problems and train the students in Extension and outreach activities.
- To focus on training students in application of techniques to process and preserve the food.

Programme Specific Outcomes

- To raise the standard of living of the rural people by helping them in right use of their resources
- To train the students in extension techniques and communication technologies to enable them to transfer Home science information and technologies to rural families in such a way that people understand and adopt new ideas and improved methods for better family living.

Programme Objectives

Theprimaryobjectiveoftheprogramistoimpartqualityeducationinthesubjectof Extension Management and Communication Technology as a basic science and its applied branches to the students

- To provide strong foundation in Home Science Extension Management and Communication Technology and to endow the communication skills among students.
- To develop knowledge about recent trends in extension education at regional, national and global levels.
- To develop understanding on community development, panchayat raj and rural welfare.
- To provide deep understanding about policies and programmes for woman, children and youth in rural areas.
- To provide skills in participatory rural appraisal (PRA) techniques and understanding of transfer of technology.
- To conduct field studies and different projects of local and regional needs.

Programme Outcomes

- **(KB) A knowledge base for Home science**: Knowledge and competence in Sociology, Psychology, Education and Home science subjects appropriate to the Extension Education programmes
- **(PA) Problem analysis:** An ability to use appropriate knowledge and skills to identify and solve problems in community in order to reach the objectives and goals of Extension.
- **(Inv.) Investigation:** An ability to identify the needs and problems, prioritize, and develop a programme for community development.
- **(Des.) Design:** An ability to design solutions for different types of problems associated with different areas of Home science
- **(Tools) Use of PRA tools in Home science:** An ability to select and use of the PRA tools in Home science, and application of appropriate technologies necessary for conducting extension programmes in the community.
- **(Team) Individual and team work:** An ability to work effectively as a member and leader in the teams to meet the specific nutrition and health needs of the rural community.
- **(Comm.) Communication skills:** An ability to communicate effectively in the dissemination of Home science knowledge to society.
- **(Prof.) Professionalism:** An understanding of the roles and responsibilities of the professional Home scientist in society.
- **(Impacts.)** An ability to analyze social, economic, cultural and health aspects of the society.

- **(Ethics): Ethics and Equity:** An ability to apply ethical principles, professional ethics, norms of Home science Extension education and equity.
- **(Econ.): Economics and Project management:** An ability to appropriately incorporate economics and project management in research work and to understand their limitation.
- **(LL) Life-long learning:** An ability to identify and to address their own educational in a changing world in ways sufficient to maintain their competence and to allow them to contribute to the advancement of knowledge.

Program Educational Objectives

- To produce competent graduates in the core areas of Extension management and communication technology with adequate, analytical capabilities and practical knowledge to attend to the current challenging tasks and to absorb futuristic trends.
- To provide strong foundation in Home science and endow with communication skills.
- To keep the students abreast with the modern and latest technologies
- To enhance the knowledge and skills continually throughout their career and to make them capable to adopt in diverse environment.
- To imbibe leadership qualities among the students to take up challenging roles in their career by ensuring professional ethics with higher sense of social responsibility.

* Generic Elective – Student has to choose any one Paper

** Open Elective - Offered by Department to other Department students

Note: Interested student may register for **MOOCS** with the approval of DDC

SEMESTER – I

EMCT 101: COMMUNICATION AND MEDIA PREPARATION

COURSE OBJECTIVES

The Course helps the students to:

1. Understand Communication –Recent trends in Instructional technology : Extension literature
2. Analyze the role of different factors influencing and effecting communication process- Dyad setting small group and mass communication
3. Evaluate the Planning, Preparation and use of different teaching aids in teaching different groups of people and in different learning situations.

CORE –THEORY

UNIT- I: Communication:

- Communication**:** Meaning, definition, and importance of communication, scope of communication, principles of communication.
- Key elements of communication:
  1. Communicator.
  2. Message.
  3. Treatment of message
  4. Channel
  5. Audience. Basic principles of information processing: Encoding and Decoding.
- Functions of Communication: Information, Instructive persuasive and Integrative.
- Factors affecting fidelity of communication, Barriers to Communication -Social, Cultural and Psychological barriers and how to overcome them.
- Models of Communication: Shannon - Weaver's Model. Westley Maclean's model. Leagan's Model and Berlo's Model. Feedback and its importance in Extension.

UNIT- II Types of Communication:

- Verbal Communication; Non-verbal communication; Small group communication; Public Communication; Dyadic Communication.
- Mass Communication and Interpersonal Communication;
- Problems in Communication.
- Organizational Communication - Concept and process.
- Patterns of communication in an organization - Downward Communication, Up-ward Communication, Cross Communication, Horizontal Communication.

UNIT-III Methods of Extension Teaching:

- Classification of teaching methods according to form and use.
- Different extension teaching methods; scope, advantages, limitations.
- Factors governing in the selection and use of the methods.
- Recent trends in Instructional technology, Community Study, simulations and games;
- Multi-media approach and Role playing.

UNIT- IV Audio-Visual Aids:

- Role of audio-visual aids in Home Science Communication; Classification of Audio-visual aids, Planning; Preparation and use of different types of audio-visual aids; Merits and limitations; Factors influencing selection and use of audio-visual aids.
- Extension Literature - Simple writing for rural home makers, style, readability and utility: leaflet, Pamphlet, Folder, Circular letter, Newsletter and Bulletin.
- Audio-Visual materials and Equipment Projectors: Overhead projector, still projector - Slides, Films, Tape recorders, epidiascope, Radio, Film Projector, Television Laptops, Power Point Projection.

PRACTICALS:

1. Students will participate in simulation aspects and experiences to know the role of different factors influencing and effecting communication process in Dyad setting, small group and mass communication situation.
2. Planning, conducting and evaluation of different teaching methods.
3. Planning and preparation and use of different teaching aids.
4. Provision of experience for having variety of teaching techniques and aids in teaching different groups of people and in different learning situations.
5. Giving opportunity to use audio-visual equipment such as films, slides, opaque and Overhead projector.
6. Preparation of simple literature for rural families.

3. Journal of Home Economics
4. Journal of Nutrition Education
5. Indian Journal of Adult Education
6. Experiment in Education
7. Journal of Educational Research and Programming.
8. Khadi Gramodyog.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO1. Gain Complete knowledge about communication; Extension teaching methods; recent trends in Instructional technology

CO2. Understand how to plan; prepare and use of different teaching aids in teaching different groups of people and in different learning situations

CO3.Analyze the role of different factors influencing and effecting communication process- Dyad setting small group and mass communication

CO4. Evaluate the Planning, Preparation and use of different teaching aids in teaching different groups of people and in different learning situations.

EMCT 102- EXTENSION EDUCATION IN COMMUNITY DEVELOPMENT

COURSE OBJECTIVES

The course helps the students to:

1. Know about extension education; historical review and recent trends in extension education.
2. Develop understanding on community development and panchayat raj system.
3. Acquire skill to study the community by using PRA techniques.
4. Sensitize students to develop the skill of critical analysis on various approaches of extension education.

CORE –THEORY

UNIT- I Extension Education:

- Concept Meaning, Objectives and Principles of Extension Education and Home Science Extension Education
- Historical review of Extension Education in India and Abroad; Role and qualities of an Extension worker;
- Integration between Teaching, Research and Extension;
- Role and Functions of Extension Educator.
- Qualities of extension educator;
- Role of Home Science in National Development, Home science extension personnel involved.

UNIT-II Community Development and Panchayat Raj:

- Meaning, Principles, Objectives, Scope and Philosophy of community development in India.
- Historical review of community development in India.
- Evolution of Panchayat Raj set up and functions at the central, state, District, Block and village level.
- Three tier system and the principle of Democratic decentralization;
- Problems of the community development and Panchayat Raj.
- Factors affecting community development work.

UNIT- III Community Participation:

- Meaning, Importance, Factors influencing community participation.
- Measures to improve community participation.
- Recent extension approaches: Rapid Rural Appraisal (RRA).
- Participatory Rural Appraisal (PRA),

- Child-to-child approach.
- Woman-to-Woman approach,

UNIT- IV - Five Year Plans and Social Welfare:

- Current five year plans - National and state approaches to Nutrition.
- Women and child welfare.
- Contributions of National and International Agencies for the development and Welfare of Women and Children.

PRACTICALS:

1. Visit to Blocks and villages to learn the setup and functions.
2. Visit to a nearby village to study the ongoing rural Development programmes through PRA technique.
3. Observation of the activities of Home-Science Extension workers.
4. Survey of the Problems faced by the women extension functionaries in carrying on their Day-to-day activities.
5. Planning and implementation of Nutrition education programmes through -
   a) Child-to-child approach.
   b) Woman-to-Woman approach
   c) Action plays.

EMCT 103: a) DYNAMICS OF RURAL SOCIETY

COURSE OBJECTIVES

The course helps the students to:

1. Know about social structure; characteristics of rural people; rural social problems - social institutions.
2. Understand the social change and the policies and programmes for social welfare and rural development.
3. Learn the factors affecting social change.
4. Gain insight about the welfare policies and programmes for rural society.

CORE –THEORY

UNIT- I Social Structure:

- Characteristics of rural people - Basic concept, society, community
- Rural-urban associations, Institutions - primary, secondary groups.
- Social structure and rural development.

Unit-II- Rural Social Problems

- Rural Social Problems – Poverty
- Population explosion
- Unemployment
- Malnutrition
- Illiteracy
- Social inequality.

UNIT- III Social Institutions

- Social Institutions: Meaning, purpose, general characteristics
- Types of social institutions – family
- Marriage, caste, class and their changing trends in the society.

UNIT- IV Social Change

- Social Change Meaning, nature and types, directions of social change.
- Impact of urbanization and industrialization on rural community.
- Role of women in Social change, factors affecting Social change.

PRACTICALS

1. Visit to the village to study about rural social structure.
2. Analysis of rural social problems in the village.
3. Studying about the functions of rural social institutions.
4. Study the functioning of women's organizations, youth clubs and farmers organizations.
5. Identification of women leaders in the villages and their role in decision making.

EMCT 103: b) DYNAMICS OF GROUP BEHAVIOUR

COURSE OBJECTIVES

The course helps the students to:

1. Know about the meaning characteristics, types and functions of groups.
2. Understand the group dynamics and group behavior.
3. Learn the factors affecting group management.
4. Gain insight about the team building, stress and conflict management.

CORE –THEORY

Unit- 1- Groups

- Meaning, characteristics, types and functions of groups.
- Stages and process of group formation.
- Group norms and structure

Unit-II- Group behavior

- Understanding individual, interpersonal and human behavior and its different dimensions
- Feeling, perception and assumptions that intervene in interpersonal interactions
- Group structure

Unit-III- Group Dynamics

- Group dynamics: Cooperation
- Competition
- Communication,
- Group pressure
- Group cohesiveness
- Leadership

Unit-IV- Group Management

- Managing group
- Team building
- Conflict management
- Stress management
- Active listening and feedback

PRACTICALS

1. Visit to village to understand the individual and group behavior
2. Analyze the group dynamics and leadership.
3. Analyze the group management, stress management and conflict management.
4. Identifying the role of communication in team building, conflict management and stress management.
5. Conducting focus group discussions and small group meetings.

EMCT 104: COMMUNITY NUTRITION

(COMMON TO ALL THE SPECIALIZATIONS OF M. SC HOME SCIENCE AND MS FOOD TECHNOLOGY)

COURSE OBJECTIVES

The course helps the students to:

1. Know about nutrients in food and their functions.
2. Understand the consequences of deficiency of taking nutrients.
3. Comprehend knowledge on the role of nutrients in different stages of human life and methods of nutritional assessment.
4. Learn the community level problems and policies.

ELECTIVE FOUNDATION – CORE THEORY

UNIT-I: Food Composition - Grouping and Menu Planning:

Food Groups – Classification – food composition, properties, characteristics and nutritive values of different foods, Functions of foods and nutrients – cereal grains, millets, pulses, nuts and oil seeds fruits and vegetables, milk and milk products, meat, egg, poultry and fish, spices and condiments.

Nutrition Through Life Span – Infancy, Early and late childhood, Adolescence, Adulthood and Ageing – Nutritional requirements and Recommended Dietary Allowances (RDA)– Principles of menu planning appropriate to age and stage of life span.

Justification for special needs during periods of growth and development, pregnancy and lactation – significance of breast feeding –

Unit – II: Assessment of Nutritional Status of the Community:

Need - Methods of Assessment - (a) Direct Methods - (i) Diet Surveys (ii) Anthropometric Assessment - (iii).clinical and (iv). Biochemical Assessment (b) Indirect Methods - Vital Statistics - Merits and Demerits of methods -Nutrition surveys - longitudinal and cross sectional - Family, individual and institutional surveys - Techniques for assessment of age - use of reference standards for the assessment of nutritional status.

Unit – III: Major Nutrition Problems of the Community:

Malnutrition and under nutrition- PEM/CED, obesity- deficiencies vit-A, iron /iodine - Etiology – Symptoms - Government programmes to eradicate PEM, vitamin-A, Iron and Iodine deficiencies.

Principles of planning diets for different conditions of malnutrition

Unit – IV: Strategies to Combat Malnutrition:

Food security – Definition – Management of food insecurity - Food Fortification and enrichment-.

Food Assistance and Food Supplementation - Policies and Programmes of the Government - Governmental Policies and Programmes.

Food Assistance and Food Supplementation Programmes - Public Distribution System (PDS) - Food For Work (FFW), Special Nutrition Programme (SNP), School Lunch Programme (SLP), Mid Day Meal Programme (MMP), Balawadi Nutrition Programme (BNP), Integrated Child Development Services (ICDS)

Nutrition Education - Importance - Approaches Media and Methods

PRACTICALS

1. Assessment of Nutritional Status using Anthropometry,
2. Assessment of Nutritional Status using Dietary method
3. Assessment of Nutritional Status using Clinical methods
4. Planning of and preparation of diet during pregnancy and lactation period
5. Planning of and preparation of diet during preschool & Elementary age
6. Planning of and preparation of diet during Adolescence
7. Planning of and preparation of diet during old age
8. Planning of Diets for Different Nutritional Deficiencies like PEM, Iron, Vit-A.
9. Planning and Preparation of Programmes for Significant Days like Breast Feeding Week Nutrition Week, World Food Day.
10. Study of the following through visits
    - Govt School Lunch Programme
    - ICDS Programme
    - Anganwadi Training Centers.
11. School Lunch Programme at Sri Venkateswara University Laboratory Nursery School.
12. Preparation of Visual Aids for Nutrition Education, and Method Demonstration on a Nutrition Recipe.

COURSE OUTCOMES:

After studying the course, students will be able to:

CO 1. Know the nutritional problems of the community.

CO 2. Acquire knowledge about food groups, RDA and steps in planning a diet.

CO 3. Skills in planning and calculating nutritive values for the foods and recipes.

CO 4 .Identify the signs and symptoms of different nutrient disorders in commun.

104-B: NUTRITION DURING LIFE SPAN

(Common to all Specializations of MSc Home Science and MS Food Technology Course)

COURSE OBJECTIVES

To enable the students to:

1. Gain knowledge on the importance of nutrition during life span.
2. Enlighten the principles and working applications during dietary modifications.
3. Comprehensive knowledge on analysing the nutritional requirements.
4. Apply Computational skills in the Nutritional allowances during life span.

ELECTIVE FOUNDATION –THEORY

UNIT-I:Nutrition during Pregnancy & Lactation:

- Nutrient requirement during pregnancy, intake and gaps, prenatal and antenatal nutritional importance, metabolic adjustments in pregnancy.
- Nutrition intervention and pregnancy outcome, Nutritional management, problems and Complications.
- Nutritional requirements during lactation, physiology of milk production, effects of lactation on Nutrition composition of Human-Milk,
- Factors affecting breast milk quality and comparative advantages & disadvantages of breast and formula feeding.

UNIT-II:Nutrition during Infancy & Early child hood period:

- Nutritional requirements, concerns and overall development during Infancy.
- Need for infant formulae, types of infant formulae, care in Preparation, and importance of preparation of weaning foods.
- Home prepared versus commercial weaning foods, Feeding problems-Lactose and cow's milk protein intolerance.
- Pre-school children: Age, growth & development, nutrient requirements, Intake and gaps. Effects of Macro &Micro nutrient malnutrition on physical and mental development.

UNIT-III: Nutrition during School-going children & Adolescents:

- Dietary patterns and factors to be considered. Implications of childhood obesity and other nutritional concerns. Healthy food choices during childhood.

- Growth during adolescence, nutritional requirements, hormonal influences, age of menarche-factors affecting, physiological problems and nutritional issues in adolescence.
- Nutritional requirements and RDA. Behavioural characteristics and feeding problems.

UNIT-IV: Nutrition during adulthood and old age:

- Nutritional requirements for adult man and woman. Nutritional concerns, RDA, nutritional guidelines and work efficiency. Physiological changes in aging, effects of aging on nutritional health.
- Modification in diet, feeding old people. Nutritional concerns in old age and their management.

COURSE OUT COMES

After completion of this course, students will be able to:

CO1 Acquire knowledge on nutritional requirements at various stages.

CO2 Apply the knowledge of nutrition during planning and preparation of diet.

CO3 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO4 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

EMCT-105- PRACTICAL - I

(EMCT 101+103A/ 103B)

COMMUNICATION AND MEDIA PREPARATION +DYNAMICS OF RURAL SOCIETY / DYNAMICS OF GROUP BEHAVIOR PRACTICALS

EMCT 101-COMMUNICATION AND MEDIA PREPARATION

OBJECTIVES:

1. Evaluate the Planning, Preparation and use of different teaching aids in teaching different groups of people and in different learning situations.
2. To evaluate the Planning, Preparation and use of different teaching aids in teaching different groups of people and in different learning situations

PRACTICALS:

1. Students will participate in simulation aspects and experiences to know the role of different factors influencing and effecting communication process in Dyad setting, small group and mass communication situation.
2. Planning, conducting and evaluation of different teaching methods.
3. Planning and preparation and use of different teaching aids.
4. Provision of experience for having variety of teaching techniques and aids in teaching different groups of people and in different learning situations.
5. Giving opportunity to use audio-visual equipment such as films, slides, opaque and overhead projector.
6. Preparation of simple literature for rural families.

OUTCOMES:

1. Analyze the role of different factors influencing and effecting communication process-Dyad setting small group and mass communication
2. Evaluate the Planning, Preparation and use of different teaching aids in teaching different groups of people and in different learning situations.

EMCT 103A-DYNAMICS OF RURAL SOCIETY

OBJECTIVES:

1. Learn the factors affecting social change.
2. Gain insight about the welfare policies and programmes for rural society.

PRACTICALS:

1. Visit to the village to study about rural social structure.
2. Analysis of rural social problems in the village.
3. Studying about the functions of rural social institutions.
4. Study the functioning of women's organizations, youth clubs and farmers organizations.
5. Identification of women leaders in the villages and their role in decision making.

OUTCOMES:

1. Learn the factors affecting social change.
2. Analyze the factors affecting social change.

EMCT 103B- DYNAMICS OF GROUP BEHAVIOR

OBJECTIVES:

1. Learn the factors affecting group management.
2. Gain insight about the team building, stress and conflict management.

PRACTICALS:

1. Visit to village to understand the individual and group behavior
2. Analyze the group dynamics and leadership.
3. Analyze the group management, stress management and conflict management.
4. Identifying the role of communication in team building, conflict management and stress management.
5. Conducting focus group discussions and small group meetings.

OUTCOMES:

1. Learn the factors affecting group management.
2. Analyze the process of team building, stress management and conflict management.

EMCT -106- PRACTICAL -II

(EMCT 102+104A/ 104B) EXTENSION EDUCATION IN COMMUNITY DEVELOPMENT +COMMUNITY NUTRITION / NUTRITION DURING LIFE SPAN PRACTICALS

EMCT 102-EXTENSION EDUCATION IN COMMUNITY DEVELOPMENT

OBJECTIVES:

1. Acquire skill to study the community by using PRA techniques.
2. Sensitize students to develop the skill of critical analysis on various approaches of extension education.

PRACTICALS:

1.Visit to Blocks and villages to learn the setup and functions.

2. Visit to a nearby village to study the ongoing rural Development programmes through PRA technique.
3. Observation of the activities of Home-Science Extension workers.
4. Survey of the Problems faced by the women extension functionaries in carrying on their Day-to-day activities.
5. Planning and implementation of Nutrition education programmes through -
   a) Child-to-child approach.
   b) Woman-to-Woman approach
   c) Action plays.

OUTCOMES:

1. Acquire skill to study the community by using PRA techniques.
2. Sensitize students to develop the skill of critical analysis on various approaches of extension education

EMCT 104A-COMMUNITY NUTRITION

OBJECTIVES:

1. Comprehend knowledge on the role of nutrients in different stages of human life and methods of nutritional assessment.
2. Learn the community level problems and policies.

PRACTICALS:

1. Assessment of Nutritional Status using Anthropometry,
2. Assessment of Nutritional Status using Dietary method
3. Assessment of Nutritional Status using Clinical methods
4. Planning of and preparation of diet during pregnancy and lactation period
5. Planning of and preparation of diet during preschool & Elementary age
6. Planning of and preparation of diet during Adolescence
7. Planning of and preparation of diet during old age
8. Planning of Diets for Different Nutritional Deficiencies like PEM, Iron, Vit-A.
    a. Planning and Preparation of Programmes for Significant Days like Breast Feeding Week Nutrition Week, World Food Day.
9. 10.Study of the following through visits
    - Govt School Lunch Programme
    - ICDS Programme
    - Anganwadi Training Centers.
10. School Lunch Programme at Sri Venkateswara University Laboratory Nursery School.
11. Preparation of Visual Aids for Nutrition Education, and Method Demonstration on a
    - Nutrition Recipe.

OUTCOMES:

1. Skills in planning and calculating nutritive values for the foods and recipes.
2. Identify the signs and symptoms of different nutrient disorders in communication.

EMCT 104 B -NUTRITION DURING LIFE SPAN

COURSE OBJECTIVES –

To enable the students to:

1. Apply Computational skills in the Nutritional allowances during life span.
2. Develop skill in planning and preparation of diets for different age groups.

PRACTICALS:

1. Planning and preparation of diet for pregnant women.
2. Planning and preparation of diet for lactating women.
3. Planning and preparation of weaning foods.
4. Planning and preparation of diet for pre-school child.
5. Planning and preparation of diet for school going child.
6. Planning and preparation of diet for adolescent.
7. Planning and preparation of diet for adult.
8. Planning and preparation of diet for old age.

COURSE OUTCOMES-

After completion of this course, students will be able to:

CO1 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO2 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

EMCT 107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

AUDIT COURSE
(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)
COURSE OBJECTIVES

This course helps the students to:

1. Define the term 'ethics', 'good and bad values', crime and punishment and religious tolerance.

2. Understand the importance of good character, conduct and values embedded in various religions.

3. Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

4. Demonstrate knowledge of ethical values in non-class room activities, internships and field work and resolve the moral issues.

AUDIT COURSE - THEORY

Unit-I: Definition and Nature of Ethics

- Definition and Nature of Ethics its relation to Religion, Politics, Business, Legal, Medical and Environment.
- Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

Unit-II:Nature of Values

- Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values.
- Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom.
- Good behavior and respect for elders, Character and Conduct.

Unit-III:

- Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha(Non- stealing).
- Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha (Wealth), Kama(Fulfillment Bodily Desires). Moksha (Liberation).

Unit-IV:

- Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths – AryaAstangamarga.
- Jainism- mahavratas and anuvratas.
- Values Embedded in Various Religions, Religious Tolerance. Gandhian Ethics.

Unit-V: Crime and Theories of punishment-

- Reformative, Retributive and Deterrent.
- (b) Views on manu and Yajnavalkya.

15. Text Book for Intermediate First Year Ethics and Human Values. Board of Intermediate Education- Telugu ~ Akademi, Hyderabad.
16. I.C Sharma Ethical Philosophy of India. Nagin& co Julundhar

COURSE OUTCOMES:

After studying the course, students will able to;

CO1. Define the term 'ethics', 'good and bad values', crime and punishment and religious tolerance.

CO2. Understand the importance of good character, conduct and values embedded in various religions.

CO3. Apply knowledge of professional ethics and correlate the concepts in addressing the Ethical issues outside the class room.

CO4. Demonstrate the ability to face difficult situations in non-class room activities, internships and field work and resolve them confidently.

COURSE: 201- COMMUNITY ORGANIZATION AND LEADERSHIP

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The Course helps the students to;

1. Know about community organization; Process of Community organization; basic rural Institutions; leadership;
2. Understand how to organize voluntary organizations of people and utilize them for rural development.
3. Analyze different patterns of leadership; techniques of identification of leaders; steps to organize youth clubs; Role of Panchayat in developing rural women.
4. Design the criteria for identifying leaders and appraise the ongoing programmes in the locality.

CORE –THEORY

UNIT-I Community Organization:

- Concept, meaning and scope of community organization
- Principles of community organization.
- Identifying the roles of individuals in the community.
- Role and qualities of community organizer.

Unit- II Basic Rural Institutions:

- Basic rural Institutions: School, Panchayat and Co-operative.
- Voluntary Organizations: MahilaMandals, Youth clubs, Farmer's clubs, and others- How to organize the above and utilize them for rural development.
- Skills and Techniques**:** Tools, Techniques and skills involved in community organization, skills in co-ordination and public relations.

UNIT-III Leadership:

- Concept, definition, roles and characteristics, function of a leader
- Determinants of effectiveness in leadership function (Ten `A's).
- Factors determining effectiveness of a leader, the bases of power for leadership
- Theories of leadership.
- Types of patterns of leadership, techniques of identification of leaders, training for leadership
- Methods of developing leadership and use of leaders for rural Development

UNIT- IV Rural Youth and Women:

- Rural youth: Youth group; social profile of youth; basic needs of young people; youth service schemes - National Service Scheme (NSS), Nehru Yuva Kendra, Rural Youth Clubs - Objectives, steps to organize a youth club.
- Rural Women: Classification, Role of women in Agriculture, Decision making of Rural women; Employment opportunities for Rural Women; Role of Panchayat in developing rural women

PRACTICALS:

1. Study of the community organization in the locality.
2. Study of the leadership patterns, especially among women, in a rural area.
3. Developing criteria for identifying leaders.
4. Observation and study of ongoing programmes.

10. Journal of Community guidance and research.

COURSE OUTCOMES:

After studying the Course, students will be able to;

CO1.Gain Complete Knowledge about community organization; Basic rural Institutions; Leadership; Voluntary organizations: Youth clubs.

CO2. Understand how to organize voluntary organizations of people and utilize them for rural development.

CO 3. Evaluate the role of Panchayats in developing rural women; youth and also the ongoing programmes in the locality.

CO4. Analyze different patterns of leadership; techniques of identification of leaders.

EMCT 202- ENTREPRENEURIAL DEVELOPMENT AND EMPOWERMENT OF WOMEN

COURSE OBJECTIVES

The course helps the students to:

1. Know about entrepreneurship development; status of women entrepreneurs in India; problems and concerns of women entrepreneurs.
2. Understand about the strategies for empowering women; rights of women; National Policy for empowerment of Women.
3. Realize the role of entrepreneurship in economic development.
4. Analyze the institutional support of entrepreneurship.

CORE –THEORY

UNIT- I Entrepreneurship and Development:

- Concept, Motivating factors of entrepreneurship.
- Traits and growth of entrepreneurship, Entrepreneurship and economic development.
- Women Entrepreneurs: Profile and Status of Women entrepreneurs in India, Problems and concerns of Women entrepreneurs.
- Schemes of Assistance to Entrepreneurs from Governmental and Non-Governmental Agencies.

UNIT- II Entrepreneurial Support Systems

- Self Help Groups (SHG), Association of Women Entrepreneurs of Karnataka (AWEK)
- National Alliance of Young Entrepreneurs (NAYE),
- The Working Women's Forum (WWF)
- Centre for Entrepreneurship Development (CED)
- Self-Employed Women's Association (SEWA)
- Khadi and Village Industries Corporation (KVIC).
- National Women's Development Corporation (NWDC)
- Entrepreneurial Development Institute (EDI)
- National Institute of Small Industry Extension Training (NISIET).

UNIT-III: Business Plan

- **Business Plan for Entrepreneurs**: Components of business plan, Development of business plan, Project Idea, Product Idea Scan, Technology.
- Marketing concept , Manufacturing, Money and Capital requirements,
- Finalizing the business and starting the enterprise.

UNIT-IV Women Empowerment

- Women Empowerment : Concept, Perceptions, Problems in empowering women, Strategies for empowering women,
- Rights of Women, National Policy for empowerment of Women.
- Women and Economic Development : Concept, economic contributions of women
- Women and Employment, Women in Rural Development, Women in Agriculture
- Empowerment of women and Economic development.

PRACTICALS:

1. Collecting case studies of women entrepreneurs.
2. Visit to enterprise run by women entrepreneurs and regional entrepreneurship support system.
3. Visit to Entrepreneurial Development Cell (Campus/Mahila University).
4. Preparation of Project proposal for a selected enterprise.

2. Entrepreneurship Development
3. Yojana
4. Economic and Political Weekly
5. Social Welfare
6. Kurukshetra
7. Journal of Rural Development
8. Rural Development Digest

COURSE OUTCOMES:

After studying the course; students will be able to;

CO1. Gain knowledge about entrepreneurship development and factors influencing entrepreneurship development; prospects and problems of women entrepreneurs.

CO 2. Understand the project management; preparation of project proposal and project report.

CO3- Analyze the institutional support of entrepreneurship and the agencies promoting entrepreneurship.

CO4 Evaluate the role of entrepreneurship in economic development.

COURSE - EMCT 203-A) EDUCATIONAL TECHNOLOGY

COURSE OBJECTIVES

The course helps the students to:

1. Know about teaching learning process; forms and levels of teaching and learning; curriculum design and development.
2. Understand about the genesis and trends in modern education; evaluation of instructional effectiveness; ICT; video production and multimedia presentations.
3. Design a course curriculum; Preparation of lesson plans of selected topics.
4. Prepare and use of different instructional material; Exercises on teaching learning strategies; construction of competency based question paper and seminar organization.

COMPULSORY FOUNDATION –THEORY

UNIT-I Teaching Learning Process

- Teaching Learning Process: Meaning and characteristics of Teaching and Learning; Maxims of Teaching; Meaning and scope of Educational Technology.
- Stages, forms and levels of Teaching and Learning.
- Motivation: Concept, importance and techniques.

UNIT-II Teaching Learning Strategies and Curriculum Design

- Curriculum design and development; Lesson planning: concept and methodology;
- Teaching learning strategies**:** Microteaching, programmed instruction, simulation, role-play, team teaching, experiential learning, traditional media
- ICT, Video production and multimedia presentations.

UNIT-III Trends in Modern Education

- Genesis and trends in modern education.
- Management of formal and non-formal education in India.
- Vocationalization of Education; Distance education;
- Guidance and Counseling.

UNIT-IV

- Evaluation of Instructional effectiveness
- Competency based question paper
- Reliability and validity of question papers

PRACTICALS:

1. Designing a course curriculum; Preparation of lesson plans of selected topics.
2. Preparation and use of different instructional material.
3. Conducting selected teaching lessons; Exercises on teaching learning strategies; Reading and speech exercises; Construction of competency based question paper and seminar organization.

REFERENCES:

1. Kemp Jerrold, E.(1985). *Planning and Producing Audio Visual Materials*.

4. Robert Heinich(1990). *Instructional Media*. MacMillan.
5. VedanayagamEG.(1988). *Teaching Technology for College Teachers*. Sterling Publ.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO1. Gain knowledge on designing a course curriculum; preparation of lesson plans; and visual aids.
CO2. Develop different instructional materials; exercises on teaching learning strategies; construction of competency based question paper.
CO3- Evaluation of instructional effectiveness; ICT; video production and multimedia presentations.
CO 4- Enhance the skill of construction of competency based question paper and seminar organization

203- B) TECHNOLOGY TRANSFER AND MANAGEMENT

COURSE OBJECTIVES

The course helps the students to:

1. Know about Technology meaning and concept, systems of transfer of appropriate technology.
2. Understand the appropriateness of communication media in the system of technology transfer.
3. Analyze the constraints in transfer of technology.
4. Gain insight about the agencies and departments involved in the transfer of technology.

CORE –THEORY

UNIT- I Technology

- Technology- Meaning and concepts of Appropriate technology.
- Transfer of technology- meaning and concepts.
- Systems of transfer of technology- Knowledge generating system (KGS)
- Knowledge disseminating system (KDS)
- Knowledge consuming system (KCS)
- Input supplying agencies systems (ISAS)

Unit-II- Communication Media

- New communication strategy for transfer and adoption of Agriculture technology.
- Appropriateness of communication media in the system of technology transfer.
- Extension training in transfer of technology.

UNIT- III Agencies and Departments involved in TOT

- Agencies involved in TOT.
- Extension professional in TOT.
- Role of key communicators or local leaders in TOT.
- Private and public partnership in TOT.
- Role of ICAR, SAU, and government and non-government organizations involved in TOT.

UNIT- IV Constraints

- Constraints in Transfer of technology
- Analysis of transfer of technology
- Attributes of technology and its relation in TOT process.

PRACTICALS

1. Analysis on use of TOT in rural areas.
2. Visit to the village and identification of key communicators or local leaders in adoption of TOT.
3. Visit to TOT centres of ICAR , case studies of Public-Private partnerships.
4. Analysis of print and electronic media and their role in TOT.
5. Visit to a NGO to study the systems of Transfer of technology.

EMCT 204: RESEARCH METHODOLOGY AND STATISTICS (COMMON TO ALL SPECIALIZATIONS OF M.SC. HOME SCIENCE AND MS FOOD TECHNOLOGY)

COURSE OBJECTIVES-

To enable the students to:

1. Identify the terms like 'variables', 'hypothesis', research and inferential statistics in scientific research.
2. Understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
3. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
4. Comprehend the application of inferential statistics and perform simple calculations of t-test, chi-square test and correlation.

ELECTIVE FOUNDATION - THEORY

UNIT – I: Research Purpose and Types

- Research – Significance, meaning, objectives, Approaches,
- Research process, Criteria of good research, Variable- types
- Types of Research: Historical, descriptive, experimental, case study, survey research, participatory research, Fundamental, applied and action, exploratory research.
- Research hypothesis-Characteristics of good hypothesis.
- Types of research design

UNIT –II: Methods of Data Collection and Sampling

- Different Methods and techniques of data collection: Interview, Observation, Social mapping, Participatory assessment Techniques, Data Gathering Instruments, Observation check list, Questionnaire, Interview schedule , Measurement scales.
- Sampling Methods :*Probability sampling*- Simple random, systematic random sampling, two Stages and multi stage sampling, cluster sampling and *Non-probability sampling* - Purposive, quota and volunteer sampling / Snowball Sampling.
- Research Proposal – Preparation.

UNIT- III: Statistics

- Statistics: Meaning, Definition and Scope, limitations – Role of statistics in Research
- Descriptive Statistics: Classification and tabulation of data, Graphic and diagrammatic presentation of data, measurement of central tendency, variation and dispersion, Normal distribution, Frequency distribution, histogram, frequency polygons.

UNIT – IV: Inferential Statistics

- Level of significance and normal curve.
- 't' test for large samples (mean and proportions) and small samples
- Chi square test for significance and association
- Analysis of variance-one way, two way
- Methods of Correlation- coefficient of correlation, rank correlation.

PRACTICALS:

1. Identification of different variables in specialization of study.
2. Framing of hypothesis-Null and alternate Hypothesis
3. Preparation of schedule/questionnaire.
4. Preparation of research proposal
5. Study of an article in a journal-Abstract, Methodology, Results and Bibliography
6. Graphic and diagrammatic presentation of data.
7. Calculation of Averages- Arithmetic mean, mode and median.
8. Calculation of Standard deviation and 't' test for large and small samples.
9. Calculation of Correlations.
10. Calculation of chi square to find out significance of association.

COURSE OUTCOMES-

After studying the course, students will able to:

CO1 Define terms like 'variables', 'hypothesis', research' and state the purpose of doing research

CO2 Understand different types of search and can compare the advantages and dis- advantages of each type of research.

CO3 Critically know the procedures for identifying an ideal sample for scientific research.

CO4 Able to prepare a research proposal in the appropriate scientific style and can perform simple calculations of t-test, chi-square test and correlation.CO-PO Mapping

EMCT-205 PRACTICAL- I (201 + 203A / 203B) COMMUNITY ORGANIZATION AND LEADERSHIP + EDUCATIONAL TECHNOLOGY/ TECHNOLOGY TRANSFER AND MANAGEMENT PRACTICALS

COMMUNITY ORGANIZATION AND LEADERSHIP

COURSE OBJECTIVES

The Course helps the students to;

1. Know about community organization; Process of Community organization; basic rural Institutions; leadership;
2. Understand how to organize voluntary organizations of people and utilize them for rural development.
3. Analyze different patterns of leadership; techniques of identification of leaders; steps to organize youth clubs; Role of Panchayat in developing rural women.
4. Design the criteria for identifying leaders and appraise the ongoing programmes in the locality.

PRACTICALS:

1. Study of the community organization in the locality.
2. Study of the leadership patterns, especially among women, in a rural area.
3. Developing criteria for identifying leaders.
4. Observation and study of ongoing programmes.

COURSE OUTCOMES:

After studying the Course, students will be able to;

CO1.Gain Complete Knowledge about community organization; Basic rural Institutions; Leadership; Voluntary organizations: Youth clubs.

CO2. Understand how to organize voluntary organizations of people and utilize them for rural development.

CO 3. Evaluate the role of Panchayats in developing rural women; youth and also the ongoing programmes in the locality.

CO4. Analyze different patterns of leadership; techniques of identification of leaders.

EDUCATIONAL TECHNOLOGY

COURSE OBJECTIVES

The course helps the students to:

1. Know about teaching learning process; forms and levels of teaching and learning; curriculum design and development.
2. Understand about the genesis and trends in modern education; evaluation of instructional effectiveness; ICT; video production and multimedia presentations.
3. Design a course curriculum; Preparation of lesson plans of selected topics.

Prepare and use of different instructional material; Exercises on teaching learning strategies; construction of competency-based question paper and seminar organization

PRACTICALS:

1. Designing a course curriculum; Preparation of lesson plans of selected topics.
2. Preparation and use of different instructional material.
3. Conducting selected teaching lessons; Exercises on teaching learning strategies; Reading and speech exercises; Construction of competency-based question paper and seminar organization.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO1. Gain knowledge on designing a course curriculum; preparation of lesson plans; and visual aids.

CO2. Develop different instructional materials; exercises on teaching learning strategies; construction of competency-based question paper.

CO3- Evaluation of instructional effectiveness; ICT; video production and multimedia presentations.

CO 4- Enhance the skill of construction of competency-based question paper and seminar organization.

TECHNOLOGY TRANSFER AND MANAGEMENT

COURSE OBJECTIVES

The course helps the students to:

1. Know about Technology meaning and concept, systems of transfer of appropriate technology.
2. Understand the appropriateness of communication media in the system of technology transfer.
3. Analyze the constraints in transfer of technology.
4. Gain insight about the agencies and departments involved in the transfer of technology.

PRACTICALS

1. Analysis on use of TOT in rural areas.
2. Visit to the village and identification of key communicators or local leaders in adoption of TOT.
3. Visit to TOT centres of ICAR , case studies of Public-Private partnerships.
4. Analysis of print and electronic media and their role in TOT.
5. Visit to a NGO to study the systems of Transfer of technology.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO1. Gain knowledge about the Technology meaning and concept, systems of transfer of appropriate technology.

CO2. Understand the appropriateness of communication media in the system of technology transfer.

CO3. Analyze the constraints in transfer of technology.

CO4. Learn about the agencies and departments involved in the transfer of technology.

EMCT-206 PRACTICALII

(202 + 204 A / 204 B)

ENTREPRENEURIAL DEVELOPMENT AND EMPOWERMENT OF WOMEN + RESEARCH METHODOLOGY/ STATISTICS AND COMPUTER APPLICATION PRACTICAL

COURSE OBJECTIVES

The course helps the students to:

1. Know about entrepreneurship development; status of women entrepreneurs in India; problems and concerns of women entrepreneurs.
2. Understand about the strategies for empowering women; rights of women; National Policy for empowerment of Women.
3. Realize the role of entrepreneurship in economic development.
4. Analyze the institutional support of entrepreneurship.

PRACTICALS:

1. Collecting case studies of women entrepreneurs.
2. Visit to enterprise run by women entrepreneurs and regional entrepreneurship support system.
3. Visit to Entrepreneurial Development Cell (Campus/Mahila University).
4. Preparation of Project proposal for a selected enterprise.

COURSE OUTCOMES:

After studying the course; students will be able to;

CO1. Gain knowledge about entrepreneurship development and factors influencing entrepreneurship development; prospects and problems of women entrepreneurs.

CO 2. Understand the project management; preparation of project proposal and project report.

CO3- Analyze the institutional support of entrepreneurship and the agencies promoting entrepreneurship.

CO4 Evaluate the role of entrepreneurship in economic development.

RESEARCH METHODOLOGY

COURSE OBJECTIVES

To enable the students to:

1. Identify the terms like 'variables', 'hypothesis',research and inferential statistics in scientific research.
2. Understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
3. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
4. Comprehend the application of inferential statistics and perform simple calculations of t-test, chi-square test and correlation.

PRACTICALS:

1. Identification of different variables in specialization of study.
1. Framing of hypothesis-Null and alternate Hypothesis
2. Preparation of schedule/questionnaire.
3. Preparation of research proposal
4. Study of an article in a journal-Abstract, Methodology, Results and Bibliography
5. Graphic and diagrammatic presentation of data.
6. Calculation of Averages- Arithmetic mean, mode and median.
7. Calculation of Standard deviation and 't' test for large and small samples.
8. Calculation of Correlations.
9. Calculation of chi square to find out significance of association.

COURSE OUTCOMES-

After studying the course, students will able to:

CO1 Define terms like 'variables', 'hypothesis',research'and state the purpose of doing research

CO2 Understand different types of search and can compare the advantages and dis- advantages of each type of research.

CO3 Critically know the procedures for identifying an ideal sample for scientific research.

CO4 Able to prepare a research proposal in the appropriate scientific style and can perform simple calculations of t-test, chi-square test and correlation.CO-PO Mapping.

CORE –THEORY

EMCT- 207- HUMAN VALUES AND PROFESSIONAL ETHICS – II
(WITH EFFECT FROM ACADEMIC YEAR 2021- 22 ONWARDS)
AUDIT COURSE
COURSE OBJECTIVES

This course helps the students to:

1. Associate the terms 'value education' 'self-introspection' and 'self-esteem' which are the core aspirations of all human beings.
2. Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.
3. Apply the knowledge to assess issues and problems in each profession and correlate the concepts in addressing the ethical issues while choosing and joining a profession.
4. Develop all round and well-balanced personality of the students and shapes them to become morally finer, socially responsible and physically fit persons of the society.

AUDIT COURSE- THEORY

Unit-I:Value Education

Value Education- Definition - relevance to present day - Concept of Human Values - self introspection – Self-esteem - Family values-Components, structure and responsibilities of family- Neutralization of anger - Adjustability - Threats of family life - Status of women in family and society - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

Unit-II:Medical Ethics

Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and healthcare professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit-III: Business Ethics

Business ethics- Ethical standards of business- Immoral and illegal practices and their solutions. Characteristics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

Unit-IV: Environmental Ethics

Environmental ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste, Climate change, Energy and population, Justice and environmental health.

Unit-V: Social Ethics

Social ethics - Organ trade. Human trafficking. Human rights violation and social disparities, Feminist ethics. Surrogacy/pregnancy. Ethics of media- Impact of Newspapers, Television, Movies and Internet.

COURSE OUTCOMES:

After studying the course, students will able;

CO1. Associate the terms ‘value education’ ‘self-introspection’ and ‘self-esteem’ which

are the core aspirations of all human beings.

CO2. Understand the importance of ethics in different fields like medical, business , environment and social ethics and ethics of media.

CO3. Apply the knowledge to assess issues and problems in each profession like medical, business , environment and social ethics and ethics of media and correlate the concepts in addressing the ethical issues while choosing and joining a profession.

CO.4. Apply skills for anger management, care of elderly, environmental protection and thereby develop well balanced personality and will contribute to society as morally finer, socially responsible and physically fit persons.

EMCT: 301: MANAGERIAL SKILLS FOR EXTENSION PROFESSIONALS (WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The course helps the students to:

1. Know about the conceptualization of management process and its major functions, managerial skil1; nature and importance for extension professionals.
2. Develop understanding about strategic planning: importance; steps and techniques in management; motivation techniques in organizational climate.
3. Learn creative problem solving techniques; stress management practices; and time management practices.
4. Develop skills regarding organizational management.

CORE - THEORY

UNIT-I Management Process

- Conceptualization of management process and its major functions;
- Management problems in extension organizations;
- Managerial skill, nature and importance for extension professionals.

UNIT-II Strategic Planning

- Strategic planning: importance, steps and techniques;
- Management by objective as applicable to extension organizations;
- Techniques of transactional analysis for improving interpersonal communication.

UNIT-III Problem Solving Techniques

- Creative problem solving techniques;
- Stress management practices;
- Total Quality Management (TQM);
- Time management practices;
- Management Information System.

UNIT-IV Motivation Techniques

- Motivation techniques in organizational climate
- Resource management: concept and methods

- Team building: process and strategies
- Mobilization and empowerment skills and SHGs formulation.

PRACTICALS

- Visit to the Extension Organizations and observation of the activities of Home-Science Extension personnel.
- Visit to the nearby SHGs and preparing a report on functioning of SHGs.
- Visit to selected village to study DWCRA, CMEY, SGSY, etc.
- Visit to study the functioning of KVKs.

FIELD PLACEMENT (MANDATORY)

- Survey of nearby village to study the socio-economic conditions; needs and problems of rural people specially the women and children.
- Identification of problems, prioritizing and preparing the Action Plan.
- Use of various training methodologies in rural areas- Lesson plans, Demonstrations, PRA technique, Role-play, Drama, Focus Group discussions etc for knowledge dissemination.
- Identifying the Agencies involved in rural development
- Use of extension teaching methods in the transfer of technologies to the rural families;
- Organizing groups and provides training on income generating activities and improve the standard of living of the rural people.

COURSE OUTCOMES

After studying the course, students will be able to;

CO 1. Gain Knowledge on management process; strategic planning and its importance; steps and motivation techniques used in organizations.

CO 2. Understand the motivation techniques and team building process in Management.

CO 3. Learn creative problem solving techniques; stress management practices; and time

management practices.

CO4. Develop skills regarding organizational management.

EMCT 302 -TRAINING AND DEVELOPMENT

COURSE OBJECTIVES

The course helps the students to:

1. Know about the concept of training, goals of training; learning and types of learning, factors affecting learning among adults.
2. Understand the types and methods of learning; current trends in training methodologies; training strategies and designs.
3. Acquire skills in developing; selection and use of different training methods- case study; role play; and brain storming; etc.
4. Analyze the roles of a trainer; competencies of trainers; and trainer- trainee perceptions.

CORE –THEORY

UNIT- I: Training and Development:

- Concept of learning and types of learning, factors affecting learning among adults.
- Types and methods of learning, learning paradigms- learning knowledge, attitudes, skills, practices, values experiential, reflective learning, literative learning.
- Concept of training: Goals of training – self- development, action learning, transformation and organizational development, enhancing organizational effectiveness, team spirit.

UNIT- II:Training Methodologies:

- Current trends in training methodologies, organizational development approach, and competency-based training.
- Participatory training methodologies – aspects, advantages, limitations, implications for training process.
- Training administration**:** policies, guidelines, authority.

UNIT- III:Trainer and Trainee Interface:

- Roles of a trainer, counselor, coach, partner, facilitator, teacher, advisor, model, expert.
- Competencies of a trainer- attitudes, behavior traits – combining competencies of trainers, trainer – trainee perceptions.
- Factors affecting, implications on training, building and developing assertive skills.

UNIT- IV:Training Process:

- Different phases of training, conceptual models of training, systems approach to training: inputs, process, out puts.
- Training strategies and Designs: Training need assessment, planning training programmes, organizational environment, Training facilities and other resources.

- Training methods and interaction styles: Classification of training methods, their importance, uses and limitations- selecting, appropriate methods to suit situations and circumstances.
- Case study, role play, psychodrama, sensitivity, buzz group, group discussion, transactional analysis, business games etc.
- Evaluation types- evaluation for guiding, checking and monitoring for action.
- Frame work for evaluating training programmes, internal and external indicators.

PRACTICALS

1. Designing training programmes for different developmental goals.
2. Developing skills in selection and use of different training methods- case study, role play, psychodrama, buzz group, group discussion, transactional analysis, process work, micro labs, business games etc.
3. Organizing and conducting training programmes.
4. Evaluating training programmes
5. Visit to training and development organizations.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO 1. Gain knowledge on designing and evaluation of training programmes for different target groups.
CO 2. Develop the training modules for specific target groups and application of training methods and techniques.
CO3. Acquire skills in developing; selection and use of different training methods-
CO4. Analyze the roles of a trainer; competencies of trainers; and trainer- trainee perception

EMCT 303 A): RURAL DEVELOPMENT AND ADMINISTRATION

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The Course helps the students to:

1. Know about administration in Extension and Rural Development: Coordination and Supervision in Rural Development Administration.
2. Understand the purpose and principles of Administration; Human Relation in Extension Administration:
3. Analyze the recent ongoing Rural Development Programmes in Gram Panchayat.
4. Evaluate the training and visit system; KVKs.

GENERIC ELECTIVE - THEORY

UNIT- I Administration:

- Meaning, Nature and purpose of administration in Extension and rural development.
- The principles of administration and organization.
- Human relation in extension administration.

UNIT-II Coordination:

- Meaning and importance, methods of bringing about co-ordination in Extension work, factors influencing co-ordination.
- Delegation of Authority and responsibility.
- Supervision**:** Importance, Principles, differences between supervision and control, Techniques of supervision
- Development of code of Ethics
- Competencies needed by extension personnel.

UNIT-III Rural Development Administration:

- The rural development administrative setup
- Functions
- Recent Rural Development Programmes: Objectives achievements and constraints.
- Integrated Rural Development Programme (IRDP), Development of Women and Children in Rural Areas (DWCRA), Training of Rural Youth for Self Employment (TRYSEM), Integrated Child Development Service (ICDS), Swarnajayanthi Gram Swarojgar Yojana (SGSY), Jahawar Gram Samridhi Yojana (JGSY) Employment Assurance Scheme (EAS), Million Wells Scheme (MWS), Ganga Kalyan Yojana (GKY) Prime Minister Rojgar Yojana (PMRY), Watershed Development Programme (WSDP), Krishi Vignanakendra (KVK), Beti bachaobetipadao, Maternity benefit scheme, Digital India, Skill India, Sukanya Samridhi yojana.

UNIT- IV Training

- Meaning, Need, Types and principles of Extension training.
- Training of different personnel.
- Agencies offering training for different personnel.
- Training and Visit System (T&V): Objectives of the T &V System, Basic assumption,
- Monitory and Evaluation, Organizational structure.

PRACTICALS:

1. Study the set up at different levels and function of different departments.
2. Visit to a near by Gram Panchayat to study the on young Rural Development programme.
3. Visit to nearby agencies offering Training.
4. Visit to selected village to study DWCRA, SHG, CMEY, SGSY, etc.,
5. Visit to a Village to study the functioning of NGOs.
6. Visit to nearby KVK to study its functioning

EMCT 303 B) - PRINCIPLES OF GUIDANCE AND COUNSELING (WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The course helps the students to:

1. Develop knowledge about the concept; purpose; functions and role of guidance; types of services in guidance programme, counseling and counseling theories.
2. Understand the group guidance and counseling; concept; characteristics; Individual v/s group techniques.
3. Assess the guidance programmes and counseling process in school and out of school settings.
4. Analyze the content of semi-structured, use of standard test of study habits and attitudes (SSHA) for analyzing the study habits and attitudes.

GENERIC ELECTIVE- THEORY

UNIT- I Guidance:

- Meaning, scope, purpose, functions and role of guidance, principles underlying guidance, Historical development of guidance.
- Types of services in a guidance programme:
  - Appraisal service - observation, interview, autobiography. Cumulative record, test data, socio-metric techniques.
  - **Informational service-**purpose, types, principles and material involved career planning and placement service.

UNIT- II Counseling:

- Meaning, purpose, scope, functions and role of counseling, principles underlying counseling, types of counseling, Historical development of counseling.
- Expectations and goals of counseling
- Roles and functions of counselor
- Characteristics of counselor and counselee
- Qualities of a good counselor
- Factors facilitating counseling relationships.

UNIT- III Counseling Theories:

- Directive, Non-directive, & Eclectic,
- Trait-factor and behavioral counseling.
- Role of non-verbal communication in counseling.

UNIT- IV Group Guidance and Counseling:

- Concept, characteristics, individual vs group techniques;
- Similarities and differences;
- Advantages and limitations.
- General principles for evaluation of guidance and counselling programme.

PRACTICALS

1. Identification of human potential.
2. Analysis of the content of semi-structured Autobiography.
3. Use of standard test of study habits and attitudes(SSHA) for analyzing, the study habits and attitudes.
4. Construction and use of Johari window technique to study the interpersonal perception.
5. Assessment of decision making styles.
6. Analysis of decision making grid.
7. Demonstration of the use of Differential Aptitude Test battery.

H: High-3 M: Medium-2 L: Low-1

PRACTICALS:

1. Survey of nearby village to study the socio-economic conditions; needs and problems of rural people specially the women and children.
2. Identification of problems, prioritizing and preparing the Action Plan.
3. Use of various training methodologies in rural areas- Lesson plans, Demonstrations, PRA technique, Role-play, Drama, Focus Group discussions etc for knowledge dissemination.
4. Identifying the Agencies involved in rural development
5. Study the role and functions of extension personnel.
6. Use extension teaching methods in the transfer of technologies to the rural families;
7. Organizing groups and provide training on income generating activities and improve the standard of living of the rural people.

EMCT -304 PRACTICAL

(301 + 302)

MANAGERIAL SKILLS FOR EXTENSION PROFESSIONALS &TRAINING AND DEVELOPMENT PRACTICAL

MANAGERIAL SKILLS FOR EXTENSION PROFESSIONALS

COURSE OBJECTIVES

The course helps the students to:

1. Know about the conceptualization of management process and its major functions, managerial skil1; nature and importance for extension professionals.
2. Develop understanding about strategic planning: importance; steps and techniques in management; motivation techniques in organizational climate.
3. Learn creative problem solving techniques; stress management practices; and time management practices.
4. Develop skills regarding organizational management.

PRACTICALS

- Visit to the Extension Organizations and observation of the activities of Home-Science Extension personnel.
- Visit to the nearby SHGs and preparing a report on functioning of SHGs.
- Visit to selected village to study DWCRA, CMEY, SGSY, etc.
- Visit to study the functioning of KVKs.

COURSE OUTCOMES

After studying the course, students will be able to;

CO 1. Gain Knowledge on management process; strategic planning and its importance;

steps and motivation techniques used in organizations.

CO 2. Understand the motivation techniques and team building process in Management.

CO 3. Learn creative problem solving techniques; stress management practices; and time management practices.

CO4. Develop skills regarding organizational management.

TRAINING AND DEVELOPMENT PRACTICAL

COURSE OBJECTIVES

The course helps the students to:

1. Know about the concept of training, goals of training; learning and types of learning, factors affecting learning among adults.
2. Understand the types and methods of learning; current trends in training methodologies; training strategies and designs.
3. Acquire skills in developing; selection and use of different training methods- case study; role play; and brain storming; etc.
4. Analyze the roles of a trainer; competencies of trainers; and trainer- trainee perceptions.

PRACTICALS

1. Designing training programmes for different developmental goals.

2. Developing skills in selection and use of different training methods- case study, role play, psychodrama, buzz group, group discussion, transactional analysis, process work, micro labs, business games etc.

3. Organizing and conducting training programmes.

4. Evaluating training programmes

5. Visit to training and development organizations

COURSE OUTCOMES:

After studying the course, students will be able to;

CO 1. Gain knowledge on designing and evaluation of training programmes for different target groups.

CO 2. Develop the training modules for specific target groups and application of training methods and techniques.

CO3. Acquire skills in developing; selection and use of different training methods-

CO4. Analyze the roles of a trainer; competencies of trainers; and trainer- trainee perceptions

EMCT 305 – NGO MANAGEMENT

(SKILL ORIENTED COURSE)

(With effect from academic year 2021-22 onwards)

Marks (T=50+P= 50)

COURSE OBJECTIVES:

The course helps the students to:

1. Know about specific knowledge on project and NGO management.
2. Understand the basic concepts and principles involved in managing NGOs.
3. Enhance skills and techniques of Project evaluation / Resource mobilization.
4. Gain insight on project proposal writing and maintenance of records.

SKILL ORIENTED COURSE - THEORY

UNIT- I NGO Management:

- Management- meaning, definition.
- NGOs- meaning, definition, concept, types, functions.
- Approaches and models. Legal framework for establishing NGOs.
- Role of NGOs in Community development.

UNIT – II Project Management in NGOs:

- Project management in NGOs – concept meaning and types of projects.
- Project implementation and management, Identification and formulation of detailed project reports.
- Monitoring and evaluation (PERT and CPM). PRA tools and techniques.
- SWOC (Strength, weaknesses, opportunities and challenges) analysis.

PRACTICALS

1. Visit to the NGO-PASS, Tirupati to study the objectives and functions and to know about the beneficiaries, implementation of various projects of PASS.
2. Visit to the NGO- RASS, Tirupati to study the objectives and functions and projects of RASS.
3. Visit to NGO- Old Age homes, Tirupati and to study the reasons for joining old age homes. Collecting the case studies.
4. Visit to Family Counseling centres, Drug de-addiction centres, health and family care centres, Tirupati
5. Visit to DRDOs- SHGs, KVKs and the training centres for women and children.

INTERNSHIP (MANDATORY)

TEXT BOOKS

1) Clark John. (1991). Voluntary Organizations: Their Contribution to Development. London: Earth Scan.

2) Jain R.B. (1995). NGO's in Development Perspective. New Delhi: Vivek Prakasan

3) Sakararan and Rodrigues. (1983). *Handbook for the Management of Voluntary Organization.* Madras: Alfa

REFERENCES

5. Jack Rothman, John John E. Tropman. (2001). *Strategies of Community Intervention*. Illinois: P.E. Peacock.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO1. Gain knowledge about project and NGO management.

CO2. To enhance skills and techniques of Project evaluation / Resource mobilization

CO3. Enable the students to gain first-hand exposure of working in theNGOs

CO4. Provide an opportunity to develop a right work attitude, self-confidence, interpersonal skills and ability to work as a team in a real organizational setting.

EMCT 306 A): FUNDAMENTALS OF FOOD, NUTRITION AND HEALTH

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The course helps the students to:

1. Gain knowledge on foods, food groups, balanced diet for different age groups.
2. Understand the importance of macro and micronutrients in daily diet.
3. Comprehend knowledge on deficiency symptoms of different nutrients.
4. Apply skills to assess nutritional problems in community.

OPEN ELECTIVE - THEORY

UNIT-I: Food Composition

- Food groups – Classification – food composition and nutritive values of different foods, Functions of foods.
- Balanced Diet, RDA for all age groups.

UNIT-II: Macronutrients

- Carbohydrates: Definition, classification, food sources, Function in human body, Recommended Daily Allowance (RDA) and importance of fibre.
- Fats and Oils: Definition, classification, saturated and unsaturated fatty acids, cholesterol, Food sources, requirements, RDA and biological functions.
- Protein: Definition, classification, essential and non-essential amino acids, protein quality, supplementary value of protein, food sources, RDA and functions.

UNIT-III: Micronutrients

- Vitamins: Definition, classification
- Fat soluble Vitamins (A, D, E, K) - Functions, sources, RDA, Deficiency diseases and symptoms.
- Water soluble Vitamins (B complex and C): Functions, sources, RDA, Deficiency diseases and its symptoms.
- Macro minerals: Calcium, phosphorous, sodium, potassium, chloride- sources, biological functions, factors affecting availability, Deficiency diseases and symptoms.
- Micro minerals: Copper, zinc, Iron, Iodine and fluorine in human nutrition, biological functions, factors affecting availability, Deficiency diseases and symptoms.

Unit - IV: Major Nutritional Problems of the Community:

- Malnutrition - PCM, obesity, micronutrient malnutrition, government programmes to eradicate PCM, vitamin-A, iron and iodine deficiencies
- Principles of planning diets for different conditions of malnutrition.

4. Nutrient Requirements and Recommended Dietary Allowance for Indians A Report of the Expert Group of Indian Council Medical Research.2010.

COURSE OUTCOMES:

After studying the course, students will be able to

CO 1. Acquire knowledge on food groups and functions of food.

CO 2 .Gain knowledge on importance of macro and micronutrients in different age groups.

CO 3. Identify signs and symptoms of different nutrient deficiencies.

CO 4. Illustrate the nutritional problems in community.

FSND 306 B: DYNAMICS IN FOOD PREPARATION

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

To enable the students to:

1. Learn the principles of safe food preparation and food pyramid.
2. Understand the role of foods in cookery.
3. Apply knowledge about effect of cooking on nutrients.
4 . Able to differentiate different cooking equipments and role of food items in cookery.

OPEN ELECTIVE - THEORY

UNIT-I: Introduction

- Definitions in food science.
- Composition and functions of foods.
- Food pyramid.
- Principles of safe food preparation.

UNIT-II: Cooking Process

- Objectives of Cooking.
- Preliminary preparations.
- Cooking methods- Moist heat methods, Dry heat methods; Fat as medium of cooking, Microwave cooking.
- Effect of cooking on Nutrients.

UNIT-III: Cooking Equipments

- Types of cooking equipments- Grill, Boiler, Oven and Microwave. Mechanical processing equipments- Vegetable Peeler, Chopper, Mixer, Slicing machine and mincing equipment.
- Non cooking equipment: Refrigerator.

UNIT-IV: Role of foods in Cookery

- Role of cereals, pulses, fats/oils, milk and milk products, flesh foods, sugars, vegetables, fruits and spices.

COURSE OUTCOMES:

After completion of the course, students will able to :

CO1 Acquire knowledge on Food Pyramid.

CO2 Estimate the effects of cooking on Nutrients.

CO3 Gain knowledge on methods of Cooking.

CO4 Identify Role of foods on Cookery.

EMCT 401 -COMMUNICATION TECHNOLOGIES IN EXTENSION

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES:

The course helps the students to:

1. Know about communication systems- interpersonal; organizational; public and mass communication.
2. Understand the concept; scope and relevance of media systems trends and techniques.
3. Analyze the definite role of advertising in modern marketing system.
4. Evaluate media systems in inter-relation of advertising and mass media systems and types of advertisements

CORE - THEORY

UNIT-I:Communication Systems:

- Types of communication systems- concept, functions and significance, interpersonal, organizational, public and mass communication.
- Elements, characteristics and scope of mass communication.
- Mass communication- models and theories; role of gatekeepers and opinion leaders.
- Visual communication- elements of visual design- colour, line form, texture and space;

UNIT-II: Traditional Media

- Traditional media: role in enhancing cultural heritage, co-existence with modern media systems and applicability in education and entertainment- puppetry, folk songs, folk theatre, fairs.
- Print media: books, newspapers, magazines, leaflets and pamphlets.
- Electronic media- radio, television, video, and computer based technologies.

UNIT-III: Media systems: Trends and Techniques

- Concept, scope and relevance of media in society.
- Functions reach and influence of media.
- Contemporary issues in media- women and media, human rights and media, consumerism and media.
- Outdoor media; exhibition, fairs and kiosks.
- Techniques of preparation of effective advertisements for various media.

UNIT-IV: Multimedia Applications

- Multimedia Applications- Definition, types and functions.
- Advantages of Digital Multimedia.
- Multimedia System- International media- email, internet, teleconferencing, video conferencing, LCD Projector, video disc technology, virtual reality.

PRACTICALS

1. Planning and use of differentcommunication approaches.
2. Practical hands on experience in recent advances in print, electronicand new media.
3. Report on Multi media and emerging technologies, internet radio and web television.
4. Report on **impact** of new media on traditional media.
5. Online and netE-newspapers and editions, blogs, search engines, video logs, citizen journalism.
6. Evaluation of e-journals - advantages and disadvantages.

COURSE OUTCOMES:

After studying the course, students will be able to;

CO 1. Gain knowledge about the communication systems; relevance of media in society; role and functions of communication systems.

CO 2. Understand the role of advertising in modern marketing systems; preparation and evaluation of media systems in advertising.

CO3. Analyze the definite role of advertising in modern marketing system; Media planning and scheduling; selection of media; ethics in mass media.

CO4.Analyze the Multimedia System- International media- email, internet, teleconferencing etc.,

402: PARTICIPATORY PROGRAMME MANAGEMENT

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES:

The Course helps the students:

1. To know in detail about Programme planning in Extension; Programme Implementation; Programme Evaluation; Documentation.
2. To understand the importance of Programme Planning; the Preparation of plan of work; Purpose, types and tools of Evaluation; Programme planning and implementation.
3. To appraise ProgrammeEvaluation; documentation in Programme implementation.
4. To design and administer a schedule for collection of data : Analysis of data; Develop a Plan of work;

CORE -THEORY

UNIT- I Programming Planning:

- Meaning and importance of Participatoryproramme management in Extension
- Meaning and importance of programme planning
- Principles of Programme Planning
- Programme development cycle and its components; Identifying felt needs of people; Collection of baseline data.
- Plan of work: Components of a plan of work - Techniques of developing a plan of work
- Factors to be considered in preparing the plan of work.

UNIT- II Programme Implementation:

- Factors responsible for the successful conduct of the programme,
- Use of effective teaching methods.
- Role of officials and non-officials in programme-building.

UNIT-III Programme evaluation:

- Concept, Definition, meaning, purpose of evaluation
- Types of evaluation, built-in evaluation, self-evaluation, and external evaluation.
- Techniques of evaluation: Criteria of evaluation, tools of evaluation - interview schedule, observation schedule, rating scale, attitude, scale, score card, checklist, records, etc.
- Follow up: Need for follow up. Methods of follow up, making the programme self-sustaining.

UNIT- IV Documentation:

- Need for reporting and recording in extension.
- Procedures involved aspects to be stressed.
- Records and requisites to be maintained in programme planning and implementation.

PRACTICALS:

1. Preparation of a schedule to collect data.
2. Administration of the schedule and collection of data.
3. Analysis of data, location of needs and problems, fixing priorities and setting up objectives.
4. Developing a plan of work based on the needs located.
5. Discussion with field personnel - their experiences.
6. Developing evaluation techniques to be used.
7. Arranging for suitable follow up.
8. Conducting training programme for women.

EMCT 403 - A) EXTENSION MANAGEMENT

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES:

The course helps the students to:

1. Know about administration and management; process of management and organizational climate.
2. Understand the qualities and functions of extension personnel; Problems and issues of extension management in India.
3. Critical appraisal of management of various extension organizations
4. Analyze the management skills of extension personnel.

GENERIC ELECTIVE- THEORY

UNIT-I Administration and Management

- Concept of administration and management;
- Principles and theories of administration and management;
- Schools of management thoughts; Meaning, nature and scope of extension Management.

UNIT-II Process of Management

- Process of management: planning, organizing, staffing, directing-
- Communicating, co-ordination, controlling.
- Monitoring and evaluation.

UNIT-III Organizational Climate

- Organizational climate behaviour and development;
- Management by Objective (MBO).

UNIT-IV Extension System

- Qualities and functions of extension personnel;
- Extension system of ICAR, SAUs and state departments;
- Problems and issues of extension management in India;
- Critical appraisal of management of various extension organizations.

EMCT 403- B) SCIENCE AND TECHNOLOGY FOR RURAL WOMEN

(WITH EFFECT FROM ACADEMIC YEAR 2021-22)

COURSE OBJECTIVES:

The course helps the students to:

1. Know about the Science and Technology for rural development; Energy saving devices- application of solar energy; bio-gas etc.,
2. Understand about the application of Science and Technology in Home science.
3. Appraise the safe water supply methods suitable for rural areas; health- hygiene and environmental sanitation.
4. Assess the agencies involved in research and application of Science and Technology.

GENERIC ELECTIVE- THEORY

UNIT- I

Appropriate Technology:

- Concept, meaning and importance of appropriate technology
- Science and Technology for rural development
- Appropriate technology Vs. traditional technology.

UNIT- II Application of Technology

- Application of Science and Technology in the Home Science
- Fuels used in the home - conventional and alternative - consumption patterns and trends in energy consumption - Conservation of energy through labour saving devices in the home.
- Biogas - Composition - Principles - types of plants - advantages, schemes for assistance.
- Solar devices for cooking, heating and cooling, schemes for popularizing solar devices.
- Smokeless chulahs - hay box and Janata refrigerator .

UNIT-III Health, Hygiene & Environmental sanitation

- Health, Hygiene and environmental sanitation.
- Safe water supply - methods suitable for rural areas.
- Water purification devices, pot chlorination of wells, sanitary toilets and Soak pit.

UNIT- IV Agencies involved

- The various governmental and non-governmental agencies involved in research and application of science and technology for rural development
- Department of Science and Technology (DST), Department of Indian Institutions of Technologies, Agricultural Universities, Krishi VignanKendras (KVK's) and private organizations.

PRACTICALS

1. Visit to units where biogas is in application.
2. Visit and Demonstration or use of Solar Cooker, Dyers, water heater and smokeless chulahs.
3. Study the activities of KVK's and Agricultural Universities.
4. Visit to Units for safe water supply and sanitary arrangements.
5. Use and care of selected labour saving equipment.

EMCT-404 Practicals

(401 + 402)

COMMUNICATION TECHNOLOGIES IN EXTENSION+ PARTICIPATORY PROGRAMME MANAGEMENT PRACTICALS

COMMUNICATION TECHNOLOGIES IN EXTENSION

COURSE OBJECTIVES:

The course helps the students to:

1. Know about communication systems- interpersonal; organizational; public and mass communication.
2. Understand the concept; scope and relevance of media systems trends and techniques.
3. Analyze the definite role of advertising in modern marketing system.
4. Evaluate media systems in inter-relation of advertising and mass media systems and types of advertisements.

PRACTICALS

1. Planning and use of different communication approaches.
2. Practical hands on experience in recent advances in print, electronic and new media.
3. Report on Multi media and emerging technologies, internet radio and web television.
4. Report on impact of new media on traditional media.
5. Online and netE-newspapers and editions, blogs, search engines, video logs, citizen journalism.
6. Evaluation of e-journals - advantages and disadvantages

COURSE OUTCOMES:

After studying the course, students will be able to;

CO 1. Gain knowledge about the communication systems; relevance of media in society; role and functions of communication systems.

CO 2. Understand the role of advertising in modern marketing systems; preparation and evaluation of media systems in advertising.

CO3. Analyze the definite role of advertising in modern marketing system; Media planning and scheduling; selection of media; ethics in mass media.

CO4.Analyze the Multimedia System- International media- email, internet, teleconferencing etc.,

PARTICIPATORY PROGRAMME MANAGEMENT

COURSE OBJECTIVES:

The Course helps the students:

1. To know in detail about Programme planning in Extension; Programme Implementation; Programme Evaluation; Documentation.
2. To understand the importance of Programme Planning; the Preparation of plan of work ; Purpose, types and tools of Evaluation; Programme planning and implementation.
3. To appraise Programme Evaluation; documentation in Programme implementation.
4. To design and administer a schedule for collection of data : Analysis of data; Develop a Plan of work;

PRACTICALS:

1. Preparation of a schedule to collect data.
2. Administration of the schedule and collection of data.
3. Analysis of data, location of needs and problems, fixing priorities and setting up objectives.
4. Developing a plan of work based on the needs located.
5. Discussion with field personnel - their experiences.
6. Developing evaluation techniques to be used.
7. Arranging for suitable follow up.
8. Conducting training programme for women.

COURSE OUTCOMES:

After studying the Course, students will be able to;

CO1. Attain Knowledge about the Importance and Principles of Programme Planning; Programme Development cycle; plan of work; Programme implementation:

CO2.Understand designing and administering a schedule for collection of data; Analysis of data; Develop a plan of work.

CO3. Evaluation techniques to be used, could able to conduct a training programme for women, children, youth etc.

CO 4. Design and administer a schedule for collection of data : Analysis of data; Develop a Plan of work;

EMCT 405 LOCAL GOVERNMENT IN ANDHRA PRADESH

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

MARKS (T=50+P= 50)

COURSE OBJECTIVES:

This course helps the students to:

1. Know about local government in Andhra Pradesh.
2. Understand the urban and rural local government, composition, powers and functions.
3. Evaluate committee systems in urban and rural local governments.
4. Assess people's participation in developmental programmes.

MULTI-DISCIPLINARYCOURSE - THEORY

UNIT – I Introduction

- Meaning, Nature, Scope, and importance of Local government.
- Evolution of local government in Andhra Pradesh.
- Salient features of 73rd and 74 amendment act with reference to A.P.
- Urban Local Government in A.P. – Composition, Powers and functions after 74th Constitutional Amendment Act.
- Rural Local Government in A.P. – Composition, Powers and functions after 73rd Constitutional Amendment Act.

UNIT-II Peoples Participation in Local Government

- People's participation in Developmental programmes in A.P.
- Bureaucracy in Urban and Rural Local Government in A.P.
- Source of Finance to local Government in A.P.
- State control and supervision over local Government.

PRACTICALS

1. Visit to panchayat office to observe and analyze the existing development programmes and to know the functions of panchayat.

2. Visit to Mandal office to study the ongoing development programmes for women and children.

3. Preparing a report on role of officials at village, mandal, and district level for implementation of various programmes.

4. Analyze the special programmes for poor and preparing a report on the existing programmes at village level.

5. Interaction with village women for assessing the extent of utilization of various schemes and programmes.

EMCT - 406. A) CHILD GROWTH ANDDEVELOPMENT

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES:

To enable the students to:

1. Know the terms growth , development and stages of development across life span
2. Understand the characteristics of children at different stages of childhood
3. Explain the different developments like physical, cognitive , language and social development during childhood.
4. Apply knowledge to understand normal development and developmental delays during childhood.

OPEN ELECTIVE - THEORY

Unit I -Foundations of Development

- Understanding the terms Child, Growth, Development, Child Development, Human Development, and Developmental tasks.
- Principles of Child Development and Factors influencing growth and Development of Children.
- Determinants of Development - Role of Heredity and Environment in Development
- Stages of Development across life span and domains of development.

Unit II- Infancy

- Infancy – Characteristics
- Sensory- Motor activities
- Language Development
- Socio-emotional development.

Unit III - Early Childhood

- Early Childhood Period –Characteristics
- Physical Development
- Cognitive development
- Emotional and Social development

Unit IV - Middle Childhood

- Middle/ Late Childhood Period-Characteristics
- Physical development
- Cognitive development.
- Emotional and Social development

EMCT-406 B): DISASTER MANAGEMENT

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

COURSE OBJECTIVES

The course helps the students to:

1. Know about natural disasters: manmade disasters; chemical hazards; National and International strategies to mitigate disaster management.
2. Understand natural disasters (like floods, drought, cyclone, earthquakes, global warming etc); Nuclear disasters; Biological disasters;.
3. Illustrate the efforts made by the NGO s, Community based organizations and local administration in disaster management.
4. Discriminate disaster responses of Armed forces and Police.

OPEN ELECTIVE - THEORY

UNIT I Natural Disasters

- Meaning and nature of natural disasters, their types and effects.
- Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches, Volcanic eruptions, Heat and cold Waves,
- Climatic Change: Global warming, Sea Level rise
- Ozone Depletion.

UNIT II Man Made Disasters-

- Nuclear disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution, water pollution,
- Deforestation, Industrial waste, water pollution,
- Road accidents, rail accidents, air accidents, sea accidents.

UNIT III Chemical Hazards:

- Release of Toxic chemicals, Sedimentation processes, Global Sedimentation Problems
- Regional Sedimentation Problems

- Sedimentation and Environmental Problems.

UNIT IV Disaster Management-

- Efforts to mitigate Natural Disasters at National and Global levels. International Strategy for Disaster reduction.
- Concept of disaster management, National Disaster Management framework; financial arrangements
- Role of NGOs, Community-based organizations, and Media.

M.Sc(Home Science) Degree Examination

First Semester

(Specialization 'C' ; Extension Management & Communication Technology)

(CBCS for the students admitted from 2021-22 onwards)

EMCT 101-COMMUNICATION AND MEDIA PREPARATION

Time: 3Hours. **Max Marks : 80**

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Define communication
2. Write about different functions of communication
3. Write about Berlo's model of communication briefly
4. What is the role of audio – Visual aids in Home science communication
5. Give an account of problems in communication
6. Write shot notes on feed back in Extension
7. Classify the extension teaching methods and give examples
8. What is meant by "Treatment of message"?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15=60 Marks

9. (a).List the key elements of communication and explain each of them with suitable examples

(or)

(b).Describe the group methods of extension teaching

10. (a)What are the models of communication- Explain diagrammatically

(or)

(b)Discuss your view- points for improving communication methods in Home science Extension

11. (a).Classify audio-visual aids and explain the merits and demerits of audio- visual aids

(or)

(b). Describe the recent trends in instructional technology

12.(a).Classify and describe the teaching methods according to form and use

(or)

(b).Describe the role of print media in Extension communication.

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a).What is coordination? Discuss the factors influencing coordination?

(Or)

(b).Write notes on DWCRA.

10. (a).What is training? Explain the need for training extension personnel and mention the agencies offering training

((Or)

(b).Write about the role of ICDS in women and child welfare. Critically analyze its strengths and weakness.

11. (a).What is supervision? Discuss about the importance and principles of supervision in Rural Development programmes.

(Or)

(b). Write briefly about PMRY programme.

12. (a).Discuss briefly the nature and purpose of administration in Rural Development programmes.

(Or)

(b).Write notes on

i) Factors influencing coordination

ii) Delegation of authority and responsibility

THIRD SEMESTER

(Specialization 'C' ; Extension Management & Communication Technology)

(Under CBCS students admitted from 2021 – 2022 onwards)

EMCT- 303. b) – PRINCILES OF GUIDANCE AND COUNSELLING

Time: 3hrs Marks: 80

PART - A

Answer any **Four** questions

All questions carry equal marks **(4X5=20)**

1. Examine the implications of directive counseling.
2. What type of guidance programmes can be given in a school?
3. Briefly explain the elements in facilitating counseling relationship.
4. Compare individual with group counseling
5. Explain why socio-metric devices are necessary in guidance and counseling Programme.
6. What are the basic principles of guidance programme?
7. What are the goals of counseling?
8. Explain the merits and demerits of client-centred approach.

S ECTION- B

Answer ALL questions

Each Question carries 15 Mark 4x15=60 Marks

9. (a).Write in detail the examples on the uses of psychological tests in counseling.

(Or)

(b).Discuss the appraisal and informational services that a guidance programme can offer.

10. (a).How the counselor perform his role?

i)as change agent ii) as generalist iii) as specialist in a special school

(Or)

(b)Critically evaluate any two counseling theories.

10. (a).Family counseling is increasingly recommended. Discuss why?

(Or)

(b) Compare and contrast between -

i. counseling and psychoanalysis ii.counseling and psychiatry

11. (a).What is non-verbal communication? Discuss the role of non-verbal behaviour in counseling.

(Or)

(b). Discuss the nature of career planning at the college level.

EMCT- 402 – PARTICIPATORY PROGRAMME MANAGEMENT

Time: 3hrs Marks: 80

PART - A

Answer any **Four** questions

All questions carry equal marks **(4X5=20)**

1. Define programme. Enumerate any eight principles of a programme planning.
2. What are needs? How do you convert unfelt needs into felt needs?
3. What are techniques of evaluation? Explain any one of them.
4. Write briefly on Follow-up in extension.
5. What is the purpose of scoring in research studies and explain?
6. Explain the role of non-officials in programme building.
7. Diagramatically write the programme development cycle.
8. Explain the need for reporting in extension work.

S ECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9.(a).Discuss the general problems faced in the data collection based on your practical

(Or)

(b).What is the importance of programme planning in extension and what are the techniques of developing a plan of work? Explain.

10.(a).Present a plan of work for a short term project on 'AIDS Awareness.'

(Or)

(b).What is interview schedule and what are the points to be considered while preparing interview schedule.

11.(a).What is monitoring and evaluation? Explain briefly the evaluation in programme planning process.

(Or)

(b)What is the need for 'Plan of work' in programme planning? Mention the techniques of developing a plan of work.

12. (a). Write about the different types and purposes of evaluation with suitable example.

(Or)

(b).Develop an attitude scale to measure attitudes of rural women about 'Girl Child Education.'

Time: 3hrs Marks: 80

PART - A

Answer any **Four** questions

All questions carry equal marks **(4x5=20)**

1. Need for Extension Management.
2. Briefly discuss the Models of Management.
3. What is Scalar Principle?
4. Give the line and staff function?
5. What are the barriers of communication?
6. What are the elements of planning?
7. Explain the need for leadership in an organization.
8. What is monitoring and evaluation.

S ECTION- B

Answer ALL questions

Each Question carries 15Marks 4x15 =60 Marks

9. (a).What is Training? Explain the need and methods of training for Human Resource Development?

(Or)

(b). Explain different types of evaluation methods.

10. (a).What is meant by controlling? Discuss modern techniques of Management Controlling

(Or)

(b).Explain about the delegation of authority and responsibility.

11. (a).Discuss about need for Budgeting and Auditing.

(Or)

(b).Define Leadership? Discuss briefly the different theories and styles and leadership.

12. (a).What is meant by extension management? Explain the principles of extension management.

(Or)

(b).What is supervision? Explain how the principles of supervision is essential for efficiency of personnel.

EMCT-403 b)– SCIENCE AND TECHNOLOGY FOR RURAL WOMEN

Time: 3hrs Marks: 80

PART - A

Answer any **Four** questions

All questions carry equal marks **(4X5=20)**

1. Explain the concept of appropriate technology for rural development.
2. Bring out the need for safety education to rural mass.
3. List out the merits and demerits of soak-pit?
4. Explain the working mechanism of smokeless chulahs.
5. How does the solar energy serve as an alternate energy source?
6. Suggest ways to improve the health and hygiene of rural women.
7. Write short note on Janata refrigerator.
8. List out the significance of Hay Box.

S ECTION- B

Answer ALL questions

Each Question carries 15Marks 4x15=60 Marks

9. Write an essay on Appropriate technology Vs. Traditional technology.

(Or)

Give an account on KVK and DST.

10. (a).Discuss the favour rendered by any three agencies in the field of science and Technology for the welfare of rural mass.

(Or)

(b).Explain the role of private organizations in introducing technology for the benefit of rural community.

11. (a).Enumerate the principles of Biogas and the type of plants and their merits.

(Or)

(b). Bring out the alternate use of sources of energy and their use.

12. (a).Discuss the role of agricultural universities in motivating the rural mass to utilize the improvised technology for better living.

(Or)

(b).Explain the role of government agencies in rural development.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF HOME SCIENCE

Course

M.S. FOOD TECHNOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department of Home Science established in the year 1963 as first of its kind in the state of Andhra Pradesh and celebrated golden jubilee in the year 2013. Ms Dorothy M. Pearson, a Canadian Home Scientist was largely instrumental to start the post graduate programmes in Home Science at Sri Venkateswara University, Tirupati. The committed founder stalwarts and the successive faculty members with immense foresight established the pioneering activities of teaching, research and extension in the department. The department from its inception has thrived to offer new insights through academic reforms and outreach activities. The commitment of the faculty has contributed practice-based teaching, action research, technology development and extension outreach activities for the development of students. The department stocks eight patents of which two patents awarded. The Ministry of food processing granted 10 crores for the establishment Food testing laboratory with NABL accreditation.

Vision

To be a premiere centre for excellence in higher education in the areas of specialization fostering nurturing and building careers for students and to be an apex body playing a pivotal role in planning and monitoring community development.

Mission

The Department of Home Science is committed to empower the students in capacity building skills through teaching, research and community oriented extension activities, thereby widening the scope for self development and Employability and preparing them as socially useful and responsible citizens

The academic programmes, research and extension activities are planned and executed meticulously so as to reflect the vision and mission of the Department, focusing on the empowerment of students through quality education by updating syllabus with current trends and providing appropriate knowledge and skills compete at the global level. The Department through motivated staff always strives towards reaching proficiency through teaching and community oriented extension programmes.

Department Objectives

The Department is having the following objectives:

- Enable the students to understand the interrelation of food and health.
- To foster knowledge across the life span in inter connected Human development factors to become efficient counselors and early childhood educators.
- Develop sensitivity towards the community problems and train the students in Extension and out reach activities.
- To focus on training students in application of techniques to process and preserve the food.

The department of Home Science has been adopting the systematic procedure for development, revision and implementation of the curriculum for four different post-graduate programmes offered viz., Food Science Nutrition and Dietetics (FSND), Human Development and Child Welfare (HDCW), Extension Management and Communication Technology (EMCT) and Food Technology (FT) . The learning out comes of each course are framed such that they help students to gain theoretical knowledge as well as skills to meet local, national and global trends. The curriculum of each course has practicals, field visits, visit to institutions and a mandatory internship programme, which focus on imparting essential skills and hands-on experience and experiential learning thereby can excel when they get employment in Government and Non-Government Organizations to work individually as well as in teams. The cross cutting issues namely, technology, gender, child rights, human values and professional ethics are incorporated in core theories and electives to enable the students to lead a purposeful and independent life filled with moral and ethical values . Majority of the courses offered across all programmes do focus on nurturing employability/entrepreneurship/skill development. The outcomes of each programme have the emphasis on commitment to the contribution to the interest of the society as a whole and perform well in their careers.

Program Specific Outcomes (PSOs)

- Identify and select sources of credible information and technologies in Food science and Food technology
- Apply and incorporate the principles of Food science and technology in Food industry, Food research, Food quality and Community.

Programme Objectives:

- To provide the theoretical and practical knowledge with regard to the various aspects of food i.e., science, Technology, microbiology and quality control measures involved in food products as well as their preservation techniques.
- To identify, Understand and analyse the difficulties related to food technology and make the students to take proper decisions for the same.
- To make the students learn about concepts in designing and developing of new food products to meet the current demands of consumers as well as industries.
- To enable the students to get scientific knowledge through different food technology papers so that they can enhance their skills towards research and development.
- To acquire the knowledge through different aspects such as unit operations in food processing, food packaging, preservation methods, dairy processing and bakery, confectionery, meat, poultry and fish processing and preservation methods.
- To strengthen the students skills to work in different groups as well as an individual while they enter into the food industries, institutions, research and quality control laboratories, academic institutions and governmental agencies.
- To provide effective interpersonal skills by conducting seminars and Presentations in each paper.
- To attain the knowledge with regard to government policies and regulations of food quality and safety.
- To facilitate the student to understand the personal and professional ethics towards the role of food technologist in the whole process of food product development.
- To make the students to find the solutions for the problems occurred in industries by applying effective technologies in developing of by products as well as value added foods.
- To assist the students towards entrepreneur through new food product development by conducting market research, shelf life studies and test marketing of food products.
- To gain the knowledge and skills related to Academic, research, employee and entrepreneurial roles in the broad field of food technology for their holistic development.

Programme Outcomes:

- Demonstrate and apply comprehensive knowledge and understanding gained in food Science, food chemistry, microbiology, Technology of various foods and food products, food processing, Food product development quality control and Community nutrition in an integrated manner to the development, processing, and preservation of safe, nutritious, and high-quality foods.
- Identify, Understand and analyze problems related to food technology and make suitable decisions to find an appropriate solution for the same as identify the factors responsible for food spoilage, food contaminants and adulterants and the methods to detect and control the same.
- Design and develop food products by apply the concepts of Food Technology in creative manner to meet the needs and demands of the customers and industry. Formulate and develop tailor made products as per the needs of customers such as specialty foods.
- Students develop a scientific knowledge with a sense of enquiry through various food technology papers. Able to strengthen research skills in order to meet the global challenges associated within all aspects of the food science and technology to develop their capacity to undertake research into the science of foods from farm to fork.
- Demonstrate knowledge in various aspects of food and its application in food industry, concept of unit operations in food processing, conventional and advanced methods of food science, processing, preservation, methods of packing, post-harvest practices bakery and confectionery, meat, poultry and fish processing, food fermentation, dairy processing so as to develop food products. Able to Utilize advanced instruments and technologies to process and analyze food products and to solve food safety and quality related problems.
- Able to work as individual as well as in teams with others from different backgrounds and confident to work in diverse socio-cultural settings with multicultural groups and teams in food industries, institutions, food research and quality control laboratories, academic institutions and governmental agencies as well as an entrepreneur.
- Able to communicate orally and in writing related to discipline-specific, technical and non-technical aspects with effective interpersonal skills. seminars and Presentations in each paper enhances their confidence, ability to express themselves & presentation skills. Can effectively communicate scientific knowledge to meet the needs of industry and the consumer for the production and marketing of safe and quality foods.

- Have knowledge in regulations governing on legal, safety, security and health issues and Able to follow food laws, regulations and safety standards in application of food additives preservatives etc. and apply the principles of Hazard Analysis and Critical Control Points (HACCP) to ensure safe food processing.
- Understand and apply personal and professional ethics and responsibilities of food technologist in product development, quality, documentation and publications.
- Find solutions for industrial and societal problems by effective utilization of byproducts, developing value added foods and transfer of technologies for sustainable development.
- Screen business ideas, conduct market research, acceptability, quality control, shelf life studies and test market of the food products to avoid risks in commercialization of food products.
- Acquire ability to gain knowledge and skills which are necessary throughout their life as professionals seeking to expand their career prospects into a wide range of Academic, research, employee and entrepreneurial roles in the broad field of food technology for their holistic development.

Programme Educational Objectives (PEOs)

To enable students to:

- Understand the methods and techniques of production, processing, preservation, packaging and labeling, safety and quality assurance of different foods.
- Gain knowledge in development of new food products and evaluation in terms of physical, chemical, microbiological, safety attributes, sensory and shelf life.
- Acquire skills in food formulations, processing, preservation and evaluation of foods for their safety with reference to standards nationally and globally.
- Apply of food processing and preservation technologies in research and food industry

DEPARTEMNT OF HOME SCIENCE

M S FOOD TECHNOLOGY

CHOICE BASED CREDIT SYSTEM (CBCS)

(With effect from academic year 2021-22 onwards)

SEMESTER I

FT-101: FOOD CHEMISTRY AND ANALYSIS

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

COURSE OBJECTIVES –

To enable the students to:

1. Acquire knowledge on chemical composition of different foods.
2. Understand the physical, chemical, and functional properties of foods.
3. Know the principles and working applications of different analytical techniques associated with food.
4. Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CORE –THEORY

UNIT-I: Water Chemistry and Dispersed Systems:

- Water chemistry – Structure of Water, Free, Bound and Entrapped Water.
- Water Activity and Relative Vapour pressure– Definition and measurement, factors affecting water activity, Moisture sorption isotherms, Hysteresis and Moisture Determination.
- Dispersions- Food as dispersed systems, Liquid dispersions.
- Colloids- Definition, Characteristics of Colloids, Gels, Emulsions, Foams.

UNIT-II: Carbohydrates and Lipids

- Carbohydrates – Classification, Structure, Physico – Chemical properties ofMonosaccharide's-Pentoses, and Hexoses,Oligosaccharides – Di Saccharides-Maltose, Lactose, Sucrose –Crystallisation of sugars.Polysaccharide's – Starch-

Amylose and Amylopectin- Gelatinisation of starches and Hydrolysis of starch.Cellulose and Pectin- Structure and properties.

- Lipids – Nomenclature, classification – Milk fats, Animal fats, Vegetable fats.
- Physical properties – Crystallization, Plasticity
- Chemical properties – Thermal decomposition, Chemistry of Frying, Hydrogenation, Inter esterification, Rancidity of fats.

UNIT-III: Proteins and Amino Acids

- Proteins and amino acids – Classification, Structure, Physical properties.
- Functional properties-
    - Protein Denaturation, Protein hydration, Solubility.
    - Interfacial properties,
    - Emulsification and foaming, Gelation
    - Dough formation.

UNIT-IV: Food Analysis

- Introduction to food analysis- Methods of sampling,
- Determination of Total ash, Principles and methods of chemical analysis
- Carbohydrates – Qualitative and Quantitative analysis of starch and sugars.
- Proteins – Electrophoresis, Micro-Kjeldahl method.
- Fats – Analysis of solid and liquid fats, Rancidity.
- Determination of Vitamin and Minerals – Vitamin-C, Iron, Phosphorus, Calcium.
- Basic principles and applications of spectroscopy- UV, UV- visible, AAS, AES.
- Chromatography- principles and applications of Chromatography- HPLC, GC/ MS and LC/ MS.

4. Nielsen S.S. (2002). Introduction to the chemical analysis of foods, CBS Publishers and Distributers, Pvt. Ltd.

Course Out comes- After completion of this course, students will be able to:

CO 1 Acquire knowledge on the physico chemical properties of compounds in foods.

CO 2 Apply the functional properties of foods in processing and preservation.

CO 3 Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CO 4 Describe the chemical components and their functions in Food applications.

High-3, Medium-2, Low-1

FT-102: CEREAL GRAINS, LEGUMES AND OILSEED TECHNOLOGY

COURSE OBJECTIVES-

To enable the students to:

1. Know the structure and composition of cereal grains, pulses and oil seeds.
2. Learn Post harvest technology and processing of cereals, pulses and oilseeds
3. Understand the mechanism of the equipment, Machinery and tools required for processing of cereals, pulses and oilseeds
4. Prepare and evaluate Traditional and commercially processed foods with cereals, pulses and oilseeds

CORE-THEORY

UNIT-1: Cereals and Millets

- Structure and Composition of Cereals and Millets.
- Milling Technology - Small scale, large scale, Turbo milling process.
- Parboiling,Popping, flaking, Malting and Fermentationprocess of cereal grains.
- Biproducts, Breakfast cereals and RTE foods, Enrichment, Fortification.
- Physico chemical changes during soaking, germination, heating and malting.
- Value addition and Health benefits of millets.

UNIT- II: Pulses and Legumes

- Structure and Composition of Pulses and Legumes.
- Milling Technology - General Milling of Pulses and Legumes. Soaking and Germination. Products, Biproducts and Value-added products.
- Soya bean – Processing, soya isolates, soya concentrates and soya products.

UNIT-III: Nuts and Oil Seeds

- Structure and Composition of Nuts and Oil seeds.
- Milling Technology – Processing, Extraction, Refining and Hydrogenation of Nuts and oilseeds.
- Biproducts and Value-added products of nuts and oil seeds.

UNIT-IV: Post Harvest Technology

- Post harvest losses, spoilage, causative factors, prevention and control measures.
- Equipment- machinery and tools required for processing of cereals, legumes, nuts and oil seeds.
- Quality control standards for Cereals, Legumes, Nuts and Oil seeds.

COURSE OUTCOMES –

After the completion of the course, the students will able to:

CO1 Gain knowledge about basic composition and structure of cereal grains, pulses and oil Seeds.

CO2 An in-depth understanding of the science and technology associated with Post-harvest technology and processing of cereals, pulses and oilseeds.

CO3 Able to operate and handle the equipment, Machinery and tools required for processingof cereals, pulses and oilseeds.

CO4 Prepare various food products including the by-products of cereal grains, pulses andoil Seeds.

High-1, Medium-2, Low-3

FT-103-A: FOOD SCIENCE AND EXPERIMENTAL FOODS

(COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES –

To enable the students to:

1. Acquiree on Plant and Animal foods composition, processing and preservation of nutritive values.
2. Understand the principles of cookery of different foods and methods of evaluation.
3. Apply knowledge about different processing techniques on nutritive quality of foods.
4. Apply skills in standardisation of foods using different processing techniques.

COMPULSORY FOUNDATION- THEORY

UNIT-I: Foods of Plant Origin

- Cereals and Millets: Structure, Composition and functional properties.
- Pectin and Gums: Functional role in food products and its applications.
- Baking process: Cereal flours, Flour mixes dough and batter, Leavening agents, role of ingredients in baking process.
- Pulses and Legumes: Composition, anti-nutritional factors, Effect of cooking.
- Vegetables and Fruits: Classification, Composition, Pigments and Flavors constituents - Cooking effect, Browning reaction.

UNIT-II: Foods of Animal Origin

- Milk: Composition, Kinds of milk and Functional properties of Milk.
- Egg: Structure, composition and Functional properties of eggs.
- Meat and Poultry: Structure, Muscle composition, Heat-induced changes in meat, Tenderness – Tenderizers.
- Fish and Marine foods: Classification and Composition and cooking.

UNIT-III: Starch, Sugars and Fats

- Starch: Characteristics, Gelatinization, Factors affecting gelatinization, modified food starches-Applications.
- Sugars: Types of sugars and sugar syrups, Crystallization of sugars, Sugar cookery and applications.
- Fats and oils: Sources, Composition, Absorption, Functional properties of fat-Melting point, Smoke point and flash point.

UNIT-IV: Sensory Evaluation

- Sensory Attributes of food quality and its characteristics.
- Requirements to conduct sensory evaluation- Sensory panel, Preparing and Presenting Samples for Testing, Panel booth.
- Sensory Tests – Analytical and Affective Tests.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO 1. Acquire knowledge on the functional properties of Plant and Animal foods.

CO 2. Standardize the weights and measures of various food items.

CO 3. Demonstrate the role of ingredients in cookery.

CO 4. Apply different techniques in evaluation of food.

High-3, Medium-2, Low-1

FT 103-B: BAKING TECHNOLOGY

(COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES:

To enable the students to:

1. Understand the concept and technology of baking.
2. Learn the role of different ingredients in baking process
3. Familiarize with processing techniques of various bakery products
4. Develop skills in organizing and maintenance of a baking industry.

GENERIC ELECTIVE - THEORY

UNIT-I: Bakery Industry

- Introduction, current status, growth rate, and economic importance of Bakery Industry in India.
- Baking: Principles, baked foods, Baking temperatures, Knowledge and working of various types of oven, baking equipment; Roasting: Principles of roasting, roasting equipment;
- Formulations, processing (mixing, fermentation, rounding, proofing, sheeting, moulding, baking, depanning etc.), equipments, packaging, storage and quality testing of bakery products

UNIT-II: Baking Technology

- Types and grades of wheat flour, Wheat flour proteins and importance of gluten in manufacture of bakery products.
- Role of ingredients in bakery products- sugars, fats, leavening agents, additives and other ingredients.
- Types of Bakery Products and Technology for their Manufacture – dough and batters; Dough rheology.

UNIT-III: Bakery Products

- Hard wheat Products: bread- Ingredients, various types of bread, equipments and types of mixing methods, preparation of bread, Product quality characteristics, faults and corrective measures of bread.
- Soft wheat Products: cookies, crackers, biscuits– Ingredients, types, equipments, method of preparation, Product quality characteristics, faults and corrective measures.
- Ingredient used in Cake Making, types and varieties, equipments, cake making methods, Product quality characteristics, faults and corrective measures of cakes.
- Other bakery products: using very hard wheat. Pizza, pastry and its types.

UNIT- IV: Modified BakeryProducts

- Modified bakery products: high fiber, low sugar, low fat, gluten free bakery products.
- Decoration of baked foods – Icing and Fillings, its types and applications in bakery. Role of other ingredients used in icing and fillings.
- Staling and Nutrient Losses in Bakery Products.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Acquire knowledge on bakery industry and products.

CO2 Comprehend the technology of processing of bakery products.

CO3 Demonstrate the skills in various types of bakery items.

CO4 Comprehend the technology of processing in handling the bakery.

High-3, Medium-2, Low-1

104-A: COMMUNITY NUTRITION

(COMMON TO ALL SPECIALIZATIONS OF M SCHOME SCIENCEAND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES-

To enable the students to:

1. Know about nutrients in food and their functions.
2. Understand the consequences of deficiency of taking nutrients.
3. Apply skills for planning diets for nutritional disorders.
4. Apply the techniques to assess the nutritional status of different age groups.

ELECTIVE FOUNDATION – THEORY

UNIT-I: Food Composition - Grouping

- Food Groups **–** Classification – food composition
- Nutritive values of different foods, Functions of foods and nutrients – cereal grains, millets, pulses, nuts and oil seeds fruits and vegetables, milk and milk products, meat, egg, poultry and fish, spices and condiments.
- Menu planning– Definition, Principles, Factors affecting menu planning

UNIT – II: Assessment of Nutritional Status of the Community:

- Need - Methods of Assessment - (a) Direct Methods - (i) Diet Surveys (ii) Anthropometric Assessment - (iii).clinical and (iv). Biochemical Assessment
- (b) Indirect Methods - Vital Statistics - Merits and Demerits of methods -
- Nutrition surveys - longitudinal and cross sectional - Family, individual and institutional surveys - Techniques for assessment of age - use of reference standards for the assessment of nutritional status.

UNIT – III: Major Nutrition Problems of the Community:

- Nutrition Through Life Span – Infancy, Early and late childhood, Adolescence, Adulthood and Ageing – Nutritional requirements and Recommended Dietary Allowances (RDA)– Justification for special needs during periods of growth and development, pregnancy and lactation – significance of breast feeding –

- Malnutrition and under nutrition- PEM/CED, obesity- deficiencies vit-A, iron /iodine - Etiology –Symptoms - Government programmes to eradicate PEM, vitamin-A, Iron and Iodine deficiencies – Principles of planning diets for different conditions of malnutrition

UNIT – IV: Strategies to Combat Malnutrition:

- Food security – Definition – Management of food insecurity - -Food Fortification and enrichment-.
- Food Assistance and Food Supplementation - Policies and Programmes of the Government - Governmental Policies and Programmes - Food Assistance and Food Supplementation Programmes - Public Distribution System (PDS) - Food For Work (FFW), Special Nutrition Programme (SNP), School Lunch Programme (SLP), Mid Day Meal Programme (MMP), Balawadi Nutrition Programme (BNP), Integrated Child Development Services (ICDS) -
- Nutrition Education - Importance - Approaches Media and Methods

COURSE OUT COMES:

After completion of this course, students will be able to

CO 1 Know the nutritional problems of the community.

CO 2 Acquire knowledge about food groups, RDA and steps in planning a diet.

CO 3 Skills in planning and calculating nutritive values for different nutritional disorders.

CO 4 Understand the skills in assessing the nutritional status by different methods for different age groups.

High-1, Medium-2, Low-3

104-B:NUTRITION DURING LIFE SPAN

(COMMON TO ALL SPECIALIZATIONS OF M SC HOME SCIENCE AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES

To enable the students to:

1. Gain knowledge on the importance of nutrition during life span
2. To do computation of nutrient allowances during life span.
3. Enlighten the principles and working applications during dietary modifications.
4. Comprehensive knowledge on analysing the nutritional requirements.

COMPULSORTY FOUNDATION THEORY

UNIT-I:Nutrition during Pregnancy& Lactation:

- Nutrient requirement during pregnancy, intake and gaps, prenatal and antenatal nutritional importance, metabolic adjustments in pregnancy.
- Nutrition intervention and pregnancy outcome, Nutritional management, problems and Complications.
- Nutritional requirements during lactation, physiology of milk production, effects of lactation on Nutrition composition of Human-Milk,
- Factors affecting breast milk quality and comparative advantages & disadvantages of breast and formula feeding.

UNIT-II:Nutrition during Infancy &Early Child hood period:

- Nutritional requirements, concerns and overall development during Infancy.
- Need for infant formulae, types of infant formulae, care in Preparation, and importance of preparation of weaning foods.
- Home prepared versus commercial weaning foods, Feeding problems-Lactose and cow's milk protein intolerance.
- Pre-school children: Age, growth & development, nutrient requirements, Intake and gaps. Effects of Macro & Micro nutrient malnutrition on physical and mental development.

UNIT-III: Nutrition For School-going children &Adolescents:

- Dietary patterns and factors to be considered. Implications of childhood obesity and other nutritional concerns. Healthy food choices during childhood.
- Growth during adolescence, nutritional requirements, hormonal influences, age of menarche-factors affecting, physiological problems and nutritional issues in adolescence.
- Nutritional requirements and RDA. Behavioural characteristics and feeding problems.

UNIT-IV: Nutrition during adulthood and old age:

- Nutritional requirements for adult man and woman. Nutritional concerns, RDA, nutritional guidelines and work efficiency. Physiological changes in aging, effects of aging on nutritional health.
- Modification in diet, feeding old people. Nutritional concerns in old age and their management.

COURSE OUT COMES

After completion of this course, students will be able to:

CO1 Acquire knowledge on nutritional requirements at various stages.

CO2 Apply the knowledge of nutrition during planning and preparation of diet.

CO3 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO4 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

High-1, Medium-2, Low-3

PRACTICAL-1: FT-105: FOOD CHEMISTRY AND ANALYSIS & FOOD SCIENCE AND EXPERIMENTAL FOODS/ BAKING TECHNOLOGY

FT-101: FOOD CHEMISTRY AND ANALYSIS

COURSE OBJECTIVES

1. Know the principles and working applications of different analytical techniques associated with food.
2. Comprehensive knowledge on techniques of analysing the nutrient components in foods.

PRACTICALS:

1. Volumetric analysis of Acids and Bases
2. Determination of Moisture
3. Qualitative analysis of Carbohydrates, Hydrolysis of Starch.
4. Determination of starch and sugars
5. Qualitative analysis of Proteins and Amino acids
6. Estimation of proteins - Micro-Kjeldahl method
7. Qualitative analysis of fats and oils.
8. Determination of fat in solid and liquid foods.
9. Determination of Total ash
10. Estimation of Calcium
11. Estimation of Phosphorus
12. Estimation of Iron
13. Estimation of Vitamin C

COURSE OUT COMES

CO 1 Perform skills in qualitative and quantitative estimation of nutrients in different foods.

CO 2 Describe the chemical components and their functions in Food applications.

FT-103-A: FOOD SCIENCE AND EXPERIMENTAL FOODS

COURSE OBJECTIVES

- Acquire Knowledge on different processing techniques on nutritive quality of foods.
- Knowledge on standardisation of foods for different processing techniques.

PRACTICALS:

1. Standardization of weights and measures of various foods
2. Starch cookery- Structure, gelatinization and factors affecting gelatinization
3. Baking –Determination of gluten content, Preparation of plain cake and evaluation by subjective and objective methods.
4. Pulse cookery – effect of different cooking methods
5. Vegetable and fruit – Effect of time, temperature, media and cooking methods on pigments, Enzymatic Browning- Preventive measures.
6. Sugar cookery- stages of sugar cookery and its application in Indian sweet making, fondant preparation.
7. Fats and oils – Smoke points, oil absorption and mayonnaise preparation.
8. Milk cookery - factors affecting milk cookery- Temperature, pH, acid, base, coagulation factor.
9. Egg and Meat cookery – Egg white foams, methods of cooking egg and Meat, role of tenderizers in meat cooking.
10. Sensory Evaluation of food- preparation of score card, threshold tests, sensory testing.

COURSE OUT COMES

CO 1 Demonstrate the role of ingredients in cookery.

CO 2 Apply different techniques in evaluation of food.

FT 103-B: BAKING TECHNOLOGY

COURSE OBJECTIVES:

1. To understand the concept and role of ingredients in technology of baking.
2. Familiarize with processing techniques of various bakery products.

PRACTICALS:

1. Introduction of tools and equipment's of bakery products.
2. Determining the gluten content.
3. Preparation of Biscuits and Cookies.
4. Preparation of Doughnuts and Muffins.
5. Preparation of Bread and Bun.
6. Preparation of Pizza.
7. Preparation of various Types of Cakes.
8. Preparation of Filling and Icings.

COURSE OUTCOMES -

CO1 Acquire knowledge on bakery industry and handling the bakery products.

CO2 Demonstrate the skills in various types of bakery items.

PRACTICAL-II: FT-106: CEREAL GRAINS, LEGUMES AND OILSEED TECHNOLOGY & COMMUNITY NUTRITION/ NUTRITION DURING LIFE SPAN

FT-102: CEREAL GRAINS, LEGUMES AND OILSEED TECHNOLOGY

COURSE OBJECTIVES

- To gain knowledge on various processing techniques of cereals, legumes and oilseeds
- To acquire knowledge in various food applications and product preparations.

PRACTICALS:

1. Market survey on cereals, legumes, nuts, oil seed grains and their products.
2. Effect of Soaking, germination and malting process of Cereals on Physical and functional properties.
3. Popping and flaking.
4. Fermentation processing of cereals and pulses.
5. Flour Analysis.
6. Baking- Bread and biscuit making and evaluation of physical and chemical attributes.
7. Effect of Soaking, germination and malting process of Pulse and legume on Physical and functional properties.
8. Preparation and evaluation of peanut butter.
9. Preparation and evaluation of ready to eat breakfast foods.
10. Visit to food industry.

COURSE OUTCOMES

CO1 Able to identify and handle various processing techniques.

CO2 Hands on experience in product preparations.

FT-104-A: COMMUNITY NUTRITION

COURSE OBJECTIVES

1. To Understand the consequences of deficiency and menu planning.

2. To gain knowledge about the different methods of nutritional assessment.

PRACTICALS:

1. Assessment of Nutritional Status using Anthropometry,
2. Assessment of Nutritional Status using Dietary method
3. Planning of Diets for Different Nutritional Deficiencies like PEM, Anemia, Vit-A.
4. Planning and Preparation of Programmes for Significant Days like Breast Feeding Week, Nutrition Week, World Food Day.
5. Study of the following through visits
   - Govt School Lunch Programme
   - ICDS Programme
   - Anganwadi Training Centers.
6. School Lunch Programme at Sri Venkateswara University Laboratory Nursery School.
7. Community Nutrition Programme Planning - Introduction, Identification of problem, nutritional assessment, analysis of causes, resources, constraints, selection of interventions, setting a strategy, implementations, evaluation of the programme

COURSE OUT COMES

CO 1 Acquire knowledge about food groups, RDA and steps in planning a diet.

CO 2 Skills in planning and calculating nutritive values for the foods and recipes.

.

FT-104-B: NUTRITION DURING LIFE SPAN

COURSE OBJECTIVES -

1. To acquire knowledge on principles and working applications during dietary modifications..
2. To enable the comprehensive knowledge on analyzing the nutritional requirements.

PRACTICALS:

1. Planning and preparation of diet during pregnancy.
2. Planning and preparation of diet during lactation.
3. Planning and preparation of weaning foods.
4. Planning and preparation of diet for pre-school children.
5. Planning and preparation of diet for school going children.
6. Planning and preparation of diet during adolescence.
7. Planning and preparation of diet for adults.
8. Planning and preparation of diet for old age.

COURSE OUT COMES-

CO1 Assess and compare diet and nutritional requirements relative to age, developmental and disease status.

CO2 Evaluate nutrition products for composition, quality, and appropriateness of use and formulate dietary interventions to address nutritional deficiencies.

FT-107: HUMAN VALUES AND PROFESSIONAL ETHICS – I

(REVISED SYLLABUS WITH EFFECT FROM 2021-22 ONWARDS)

AUDIT COURSE

COURSE OBJECTIVES

- This course helps the students to:

1. Define the term 'ethics' , 'good and bad values', crime and punishment and religious tolerance.
2. Understand the importance of good character, conduct and values embedded in various religions.
3. Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.
4. Demonstrate knowledge of ethical values in non-class room activities, internships and field work and resolve the moral issues.

AUDIT COURSE-THEORY

UNIT-I:

- Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment.
- Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

UNIT-II:

- Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom.
- Good behavior and respect for elders, Character and Conduct.

UNIT-III:

- Ahimsa (Non- Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya (Non-possession) and Aparigraha(Non- stealing).
- Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires). Moksha(Liberation).

UNIT-IV:

- Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths – AryaAstangamarga, (c) Jainism- mahavratas and anuvratas.
- Values Embedded in Various Religions, Religious Tolerance, Gandhian Ethics.
- Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

9. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad. Cosmo Publications
10. Text Book for Intermediate First Year Ethics and Human Values. Board of Intermediate Education- Telugu ~ Akademi, Hyderabad.

COURSE OUTCOMES:

After studying the course, students will able to:

CO1 Define the term ‘ethics’, ‘good and bad values’, crime and punishment and religious tolerance.

CO2 Understand the importance of good character, conduct and values embedded in various religions.

CO3 Apply knowledge of professional ethics and correlate the concepts in addressing the ethical issues outside the class room.

CO4 Demonstrate the ability to face difficult situations in non-class room activities, Internships and field work and resolve them confidently.

DEPARTEMNT OF HOME SCIENCE

M S FOOD TECHNOLOGY

CHOICE BASED CREDIT SYSTEM (CBCS)

(WITH EFFECT FROM ACADEMIC YEAR 2021-22 ONWARDS)

SEMESTER II

FT-201: FRUIT AND VEGETABLE TECHNOLOGY

COURSE OBJECTIVES

To enable the students to:

1. Attain an overview on the classification and composition of fruits and vegetables
2. Acquaint with the post-harvest handling technologies of fruits and vegetables to reduce postharvest losses and their value addition.
3. Equip with the knowledge of processing and preservation of fruits and vegetables.
4. Impart the expertise in Production and manufacture of fruits and vegetable based food products and preserves.

CORE –THEORY

UNIT-I: Fruits and Vegetables

- Production and processing scenario of fruits and vegetables in India and world.
- Morphology, Structure, Classification of fruits and vegetables; Composition and Nutritive value of fruits and vegetables: Maturity Indices and standards for fruits and vegetables; Methods of maturity determination.
- Standards and specifications for fresh fruits and vegetables of Indian origin.

UNIT-II: Post Harvest Handling of Fruits and Vegetables

- Importance and scope of post harvest management, Factors affecting post harvest losses.
- Post-harvest physiological and biochemical changes in fruits and vegetables; Ripening of climacteric and non-climacteric fruits.
- Physiological post harvest problems - Chilling injury and disease; Prevention of post harvest diseases and infestation.

UNIT-III: Storage, Transportation and Handling

- Methods and storage practices- Controlled atmosphere storage, Modified atmosphere packaging, Hypobaric storage, Pre cooling and Cold storage, Zero energy cool chamber; Commodity pretreatments - Chemicals, Coatings, Prepackaging, Vapor Heat Treatment.
- Post Harvest Handling operations; Cleaning: Cleaning and washing of fruits and vegetables, types of cleaners, screens, types of screens, rotary screens, vibrating screens, machinery for cleaning of fruits and vegetables (air cleaners, washers). Sorting and grading: Sorting, grading, methods of grading- Size grading, color grading, specific gravity grading.

UNIT-IV: Fruit and Vegetable Products

- **Fruit Products:** Definition-Manufacturing Process-Quality Standards and Specifications of:

  Fruit Beverages, Jams, Jellies, Marmalades, Puree, Concentrates, Preserves, Candied Fruits, Bars, Toffees, Dehydrated Fruits.
- **Vegetable Products:** Definition-Manufacturing Process-Quality Standards and Specifications of: Vegetable Products-Pickles, Chutneys, Sauces, Tomato juice, Tomato puree, Paste, Ketchup, Sauce, Soup, Dehydrated vegetables.

4. Shrivastava, A. K. (2004). *Agrirulcture and Food*, 1st edition, APH publishing corporation, New Delhi.

COURSE OUTCOMES

- After the completion of the course, the students will able to:

CO1 Application of Post-Harvest handling technologies to reduce the postharvest losses.

CO2 Learn the processing and preservation methods to prevent the spoilage of Fruit &vegetables.

CO3 Develop various Fruits & vegetables based products and preserves

CO4 Assess the quality of fruit and vegetables and their products.

High- 3, Medium- 2, Low- 1

FT- 202: DAIRY TECHNOLOGY

COURSE OBJECTIVES

- To enable the students to:

1. Impart the knowledge of milk grading and their composition.
2. Illustrate the technologies of processing of milk and milk products.
3. Provide in-depth knowledge in various unit operations and developments in dairy processing.
4. Demonstrate the manufacturing of various dairy products and exemplify the quality of dairy products.

CORE-THEORY

UNIT-I: Milk Processing

- Milk - Definition, Structure, Composition, Factors affecting composition of milk.
- Collection and Transportation of milk - Reception, Sampling techniques, grading of milk, clarification, chilling at procurement site, Storage and Transportation.
- Processing - Homogenization, Pasteurization, sterilization, UHT processing of Milk.
- Cleaning and sanitization of equipments - cleaning methods and sanitization methods in dairy processing.

UNIT-II: Milk &Milk Products

- Types of Market Milk - Whole milk, Low fat milk, Toned and Double toned milk, Skimmed milk, Condensed milk, concentrated milk, Fortified and Double fortified milk, flavored milk.
- Fat-Rich Dairy Products - Definition, composition, standards and method of manufacture of Cream, Butter, Ghee, and butter oil.
- Traditional Indian Dairy Products - Standards and method of manufacture of Khova, Khova based sweets, chenna, chenna based sweets, panner, and kheer.
- Evaporated products -Standards, types and method of manufacture of Condensed and Dried Milks.

UNIT-III: Fermented, Frozen and By products of Milk

- Cheese - Definition, standards and classification of cheese, Manufacture of different varieties of cheese.
- Fermented Milk products - Types of starter cultures, Role of starters in the preparation of various fermented milks and Types of fermented products – dahi and yoghurt preparation.
- Ice cream - Definition, classification and composition and standards of ice cream and other frozen desserts, Stabilizers and emulsifiers-their classification.
- By products utilization - Various types of by-products, utilization of dairy by-products, processing and its application.

UNIT-IV: Advanced Technologies in Milk & Whey Processing

- Membrane techniques - classification and characteristics of filtration processes, types of membrane processing,applications of Ultra filteration, Mono filteration, Micro filteration, Reverse osmosis, ion exchange and electrodialysis processes.
- Application of Stabilizers, emulsifiers, immobilized enzymes and developments in dairyBio-technology.

5. Edgar, S., & Axel, M. (2017). *Milk and dairy product technology*. Routledge.

COURSE OUTCOMES –

After the completion of the course, the students will be able to:

CO1. Gain knowledge of milk composition, types and grades of milk.

CO2. Comprehend the technology of processing of milk and milk products.

CO3. Apprehend the manufacturing and quality analysis of different dairy products.

CO4. Perceive hygiene and sanitation practices in dairy industry.

High-3, Medium-2, Low-1

FT-203-A: FOOD MICROBIOLOGY AND SAFETY

(COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES –

To enable the students to:

1. Obtain knowledge about important genera of microorganisms associated with food.
2. Acquaint food contaminants and their sources.
3. Understand the various factors associated with growth, food spoilage and food-borne diseases of different microorganisms.
4. Demonstrate the use of standard methods and procedures for the microbiological analysis of food.

COMPULSORY FOUNDATION- THEORY

UNIT-I: Introduction to Food Microbiology

- Classification and growth of microorganism, factors affecting microbial growth.
- General characteristics, structure, classification, morphological characteristics, cultural characteristics of bacteria, fungi, virus, protozoa, and algae.
- Role of Harmful and beneficial microorganisms in food.
- UNIT-II:Food Contamination and Spoilage
- General principles underlying spoilage: causes of spoilage, classification of foods based on spoilage and changes caused by microorganisms.
- Sources of contamination and types of spoilages among plant origin foods:
  - Cereals, Legumes, nuts and oil seeds
  - Fruits and Vegetable products
  - Spices and condiments

UNIT-III:Food Contamination and Spoilage of Animal origin and Processed Foods

- Sources of contamination and types of spoilages among :
  - Milk and Milk products
  - Eggs, poultry and Meat
  - Fish and Other sea foods
  - Sugars and sugar products
  - Processed foods

UNIT-IV: Food Borne Diseases and Food Safety

- Food borne diseases – Food Infection and Intoxication Sources of infection of food by pathogenic organisms and physiological action, Signs and symptoms of various Bacterial Food-borne poisoning and Non-bacterial food-borne poisoning.
- Food safety: concept, factors affecting food safety, biological hazards.
- Applications of Food Microbiology- probiotics, prebiotics, microbial enzymes, fermentation process.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Identify the important genera and factors associated with food spoilage.

CO2 Elucidate the food contaminants in different types of food commodities.

CO3 Describe the characteristics of food borne diseases, infections and intoxicationsand their identification.

CO4 Demonstrate the use of standard methods and procedures for the microbiological analysis of food.

High-3, Medium-2, Low-1

FT203-B: NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

(COMMON TO M.SC FOOD SCIENCE NUTRITION & DIETETICS AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES

- To enables the students to:

1. Understand the emergency situations in natural and manmade disasters.
2. Gain knowledge on nutrition surveillance and treatment in emergencies.
3. Knowledge on planning nutrition relief and rehabilitation in emergencies.
4. Explain concepts on Epidemiology and its application in planning programs during emergencies.

GENERIC ELECTIVE- THEORY

UNIT-I: Disasters

- Natural/Manmade disasters resulting in emergency situations: Famine, drought, flood, earthquake, cyclone, war, civil and political emergencies, Factors giving rise to emergency situation in these disasters.
- Nutritional problems in emergencies in vulnerable groups: Causes of malnutrition in emergency situations, Major deficiency diseases in emergencies, Protein – Energy Malnutrition / Starvation / Under Nutrition, Specific Nutrient deficiencies - Energy, Vitamins, Minerals
- Communicable disease: Surveillance and treatment.Control of communicable diseases in emergencies – Role of immunization and sanitation.

UNIT-II: Assessment

- Assessment and surveillance of Nutritional status in emergency affected populations: Scope of assessment of malnutrition in emergencies, Indicators of malnutrition. Clinical signs for screening acute malnutrition, Anthropometric assessment of nutritional status.
- Indicators and cut-offs indicating seriously abnormal nutrition situation: Weight for height based indices, MUAC, social indicators.
- Organization of nutritional surveillance and individual screening.

UNIT-III: Nutritional Relief and Rehabilitation

- Assessment of food needs in emergency situations, Food distribution strategy – Identifying and reaching the vulnerable group – Targeting Food Aid.
- Mass and Supplementary Feeding, Therapeutic Feeding, Special foods/rations for nutritional relief, Local production of special foods, Local foods in rehabilitation
- Organisation of mass feeding/general food distribution, Feeding centers, Transportation and food storage, Sanitation and hygiene,Evaluation of feeding programmes, Household food security and nutrition in emergencies
- Public nutrition approach to tackle nutritional problems in emergencies

UNIT-IV: Nutritional Epidemiology

- Introduction to Epidemiology – types of epidemiology, collection ofepidemiological data, secondary routine date, Descriptive epidemiology, Cross sectional Analysis, prevalence and incidence, risk factors, risks and odds, relative and attributable risks
- Principles of Nutritional Epidemiology, Measurement issues, Measurement of disease, Occurrence and Measurement of association, Exposure and outcome, Socio demographic and Psycho social variables.
- Design and Planning of Nutritional Epidemiological studies – assessing andsupplyingAndEvaluating Epidemiological studies – Discussion of selected case studies.

REFERENCES

5. ShubhanginiA.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Mecgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

- After completion of this course, students will be able to:

CO1 Acquire knowledge in nutritional problems in natural and man made disasters.

CO2 Assess the nutritional status in emergency and plan surveillance and treatment to the affected.

CO3 Acquire knowledge on nutrition epidemiology.

CO4 Plan and Execute nutrition rehabilitation in emergencies.

CO-PO Mapping

204-A: RESEARCH METHODOLOGY

(COMMON TO ALL SPECIALIZATIONS OF M SC HOME SCIENCE AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES –

To enable the students to:

1. Get awareness about terms like ‘variables’, ‘hypothesis’, research ‘and recognizethe purpose of doing research.
2. Understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
3. Critically apply knowledge to select a sample by using different sampling methods like probability and non-probability sampling.
4. Develop a research proposal in the appropriate scientific style.

ELECTIVE FOUNDATION -THEORY

UNIT – I: Research Purpose and Types

- Research – Significance, meaning, objectives, Approaches,
- Research process, Criteria of good research, Variable- types
- Types of Research: Historical, descriptive, experimental, case study, survey research, participatory research, Fundamental, appliedand action, exploratory research.
- Research hypothesis-Characteristics of good hypothesis.
- Research Design – Meaning, Need, Concepts, Principles and Types of research design

UNIT – II: Research Problem and Sample design

- Definition and Identification, Necessity and Selection of Research problem, Technique involved in defining the research problem.
- Population and Sample – Implications, Steps, Criteria and Characteristics of a good design
- Sampling Methods : *Probability sampling*- Simple random, systematic random sampling, two Stages and multi stage sampling, cluster sampling and *Non-probability sampling* - Purposive, quota and volunteer sampling / Snowball Sampling.

UNIT –III : Methods of Data Collection

- Primary and Secondary Data, Selection of appropriate method for data collection
- Different Methods and techniques of data collection - Interview, Observation, Social mapping, Participatory assessment Techniques, Observation check list, Questionnaire, Interview schedule, Group discussions, Case studies.

UNIT –IV: Measurement Scales

- Measurement in Research, Measurement Scales, Sources of Error in Measurement, Tests of Sound Measurement,Technique of Developing Measurement Tools, Scaling,Meaning of Scaling,Scale Classification Bases,Important Scaling Techniques
- Research Proposal – Preparation.

COURSE OUTCOMES

- After studying the course, students will able to:

CO1. Define terms like ‘variables’, ‘hypothesis’, research’ and state the purpose of doing research

CO2. Understand different types of search and can compare the advantages and dis-advantages of each type of research

CO3. Critically know the procedures for identifying an ideal sample for scientific research.

CO4. Prepare a research proposal in the appropriate scientific style .

204-B: STATISTICS AND COMPUTER APPLICATIONS

(COMMON TO ALL SPECIALIZATIONS OF M SC HOME SCIENCE AND MS FOOD TECHNOLOGY COURSE)

COURSE OBJECTIVES

To enable the students to:

1. Get awareness about the scope of statistics in research.
2. Understand the concepts of inferential statistics like t-test, chi-square, Correlation and Variance.
3. Critically apply knowledge of application of statistics in data analysis.
4. Know about the application of computers in research process.

ELECTIVE FOUNDATION -THEORY

UNIT- I: Statistics

- Statistics: Meaning, Definition and Scope, limitations – Role of statistics in Research
- Descriptive Statistics: Classification and tabulation of data, Graphic and diagrammatic presentation of data, measurement of central tendency, variation and dispersion, Normal distribution, Frequency distribution, histogram, frequency polygons, curve ogive
- Levels of Significance

UNIT – II: Inferential statistics

- 't' test for large samples (mean and proportions) and small samples
- Chi square test for significance and association
- Analysis of variance-one way, two way
- Correlation, coefficient of correlation, rank correlation

UNIT – III: Computer Applications I

- Introduction to Computer-Block diagram, PC and its components, Memory capacity, Physical storage of data, various devices, Hardware and software operating- DOS commands for file handling.

- MS Office and its component – Word and its applications/ creating documents, editing spell check, auto correct and print preview, creating tables and sorting data in tables, mail merge and its usage.

UNIT – IV: Computer Applications II

- MS Excel for data analysis - Work sheet and its structure, data entry, editing, Sorting filtering and copying.
- Statistical functions in Excel – Data analysis park for performing descriptive statistics, t-test, ANOVA, Correlation and regression.
- Graphs in Excel – Various types of graphs, editing graphs

High-1, Medium-2, Low-3

PRACTICAL-1: FT-205: FRUIT AND VEGETABLE TECHNOLOGY & DAIRY TECHNOLOGY/ FOOD MICROBIOLOGY AND SAFETY

FT-201: FRUIT AND VEGETABLE TECHNOLOGY

COURSE OBJECTIVES:

- To enable the students on various fruit and vegetable processing techniques.
- To attain practical knowledge in production and preparation of products.

PRACTICALS:

1. Physical tests
    - Check for Firmness of fruits and vegetables by Penetrometer.
    - Estimation of Pigments- Chlorophyll.
2. Chemical tests
    - Estimation of total soluble solids (TSS).
    - Estimation of pH and acidity of products.
3. Ripening of fruits and vegetables by using chemicals- Ethylene.
4. Biochemical changes in fruits and vegetables-estimation of catalase, peroxidase enzymes.
5. Preparation and evaluation of pectin products
6. Vegetable and fruit Maturity Indexes at post harvesting stage
7. Fruit Juice/Pulp Extraction, Concentration and Evaluation & RTS preparation.
8. Tomato Ketchup, Sauce, Culinary Paste
9. Visits to ripening and packaging houses.
10. Visits to fruit and vegetable processing industries.

COURSE OUTCOMES:

CO1 Learn the processing and preservation methods to prevent the spoilage of Fruit & vegetables.

CO2 Develop various Fruits & vegetables based products and preserves.

FT-203-A: FOOD MICROBIOLOGY AND SAFETY

COURSE OBJECTIVES

- Acquire knowledge on laboratory techniques to identify microorganisms in food.
- Creating awareness on role and significance of microbial inactivation, adaptation and environmental factors (i.e., aW, pH, temperature) on growth and response of microorganisms in various environments.

PRACTICALS:

1. Laboratory safety rules and precautions
2. Familiarization with Instruments used in Microbiological Lab, their principles and working.
3. Sterilization methods
4. Sampling techniques
5. Isolation techniques
6. Various types of media preparation and Methods of sterilization of media
7. Microbial Staining Techniques
8. Microbial examination of fresh food products: Identification, isolation and confirmation
9. Microbial examination of processed foods: Identification, isolation and confirmation.
10. Detection of E.coli from food sample

COURSE OUT COMES:

CO1 Apply techniques to identify different microorganisms in foods.

CO2 Compare the role and significance of microbial inactivation, adaptation and environmental factors (i.e., aw, pH, temperature) on growth and response of microorganisms in various environments.

FT-203-B: NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

COURSE OBJECTIVES -

1. To gain knowledge on nutrition surveillance and treatment in emergencies.
2. To know the concepts on Epidemiology and its application in planning programs during emergencies.

PRACTICALS:

1. Collection of epidemiological data-a hands on experience.
2. Selection and Rapid assessment of nutritional status in a community.
3. Case study approach on causative factors and management of communicable diseases.
4. Planning and formulation of nutrient dense foods.
5. Survey on adherence to immunization schedule and vaccines.

COURSE OUT COMES -

CO1 Acquire knowledge in nutritional problems in natural and man made disasters.

CO2 Assess the nutritional status in emergency and plan and Execute nutrition rehabilitation in emergencies.

PRACTICAL-1: FT-206 : DAIRY TECHNOLOGY & 204-A: RESEARCH METHODOLOGY/204-B: STATISTICS AND COMPUTER APPLICATIONS

FT-202:DAIRY TECHNOLOGY

COURSE OBJECTIVES:

- To acquire knowledge of milk grading and processing of milk and milk products.
- To demonstrate the manufacturing of various dairy products and exemplify the quality of dairy products.

PRACTICALS:

1. Physical test - Organoleptic evaluation of milk.
2. Analysis of milk composition – Fat and SNF.
3. Chemical tests- temperature, pH, acidity, COB, Phosphatase test.
4. Microbiological test – MBRT.
5. Preparation of ghee from cream and butter.
6. Preparation of Khoa from cow, buffalo and concentrated milk.
7. Preparation of Paneer from cow, buffalo and mixed milk.
8. Preparation of fermented milk products.
9. Product development with bi-products of milk.
10. Visit to Dairy plant.

COURSE OUTCOMES -

CO1 Gain knowledge of milk composition, types and grades of milk.

CO2 Apprehend the manufacturing and quality analysis of different dairy products.

FT-204-A: RESEARCH METHODOLOGY

COURSE OBJECTIVES -

1. To understand different types of research like experimental, survey, applied, action research etc., and differentiate advantages and disadvantages each type of research.
2. To acquire knowledge in developing a research proposal in the appropriate scientific style.

PRACTICALS

1. Identification of different variables in specialization of study.
2. Framing of hypothesis-Null and alternate Hypothesis
3. Preparation of schedule/questionnaire.
4. Preparation of research proposal
5. Study of an article in a journal-Abstract, Methodology, Results and Bibliography

COURSE OUTCOMES -

CO1. Understand different types of search and can compare the advantages and dis-advantages of each type of research

CO2. Critically know the procedures for identifying an ideal sample for scientific research and able to prepare a research proposal in the appropriate scientific style .

FT- 204-B: STATISTICS AND COMPUTER APPLICATIONS

COURSE OBJECTIVES -

1. To understand the concepts of inferential statistics like t-test, chi-square, Correlation and Variance.
2. To gain knowledge of application of statistics in data analysis.

PRACTICALS

1. Graphic and diagrammatic presentation of data.
2. Calculation of Averages- Arithmetic mean, mode and median.
3. Calculation of Standard deviation and 't' test for large and small samples.
4. Calculation of Correlations.
5. Calculation of chi square to find out significance of association.

COURSE OUTCOMES -

CO1. Define terms like 'frequency distribution', 'Variance' , 'Correlation' and its scope in research data

CO2. Critically know the calculations of different statistics of research data.

.

FT-207: HUMAN VALUES AND PROFESSIONAL ETHICS - II

(REVISED SYLLABUS WITH EFFECT FROM 2021-22 ONWARDS)

AUDIT COURSE

COURSE OBJECTIVES:

This course helps the students to;

1. Associate the terms ‘value education’ ‘self-introspection’ and ‘self-esteem’ which are the core aspirations of all human beings.
2. Understand the importance of ethics in different fields like medical, business, environment and social ethics and ethics of media.
3. Apply the knowledge to assess issues and problems in each profession and correlate the concepts in addressing the ethical issues while choosing and joining a profession.
4. Develop all round and well balanced personality of the students and shapes them to become morally finer, socially responsible and physically fit persons of the society.

AUDIT COURSE-THEORY

UNIT-I:

- Value Education- Definition - relevance to present day - Concept of Human Values - self introspection – Self-esteem - Family values-Components, structure and responsibilities of family.
- Neutralization of anger - Adjustability - Threats of family life - Status of women in familyand society - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

UNIT-II:

- Medical ethics- Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and health care professionals. Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients.
- Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

UNIT-III:

- Business ethics- Ethical standards of business-Immoral and illegal practices and their solutions.
- Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics.

UNIT-IV:

- Environmental ethics- Ethical theory, man and nature- Ecological crisis, Pest control, Pollution and waste.
- Climate change, Energy and population, Justice and environmental health.

UNIT-V:

- Social ethics- Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics. Surrogacy/pregnancy.
- Ethics of media- Impact of Newspapers, Television, Movies and Internet.

9. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad. Cosmo Publications
10. Text Book for Intermediate First Year Ethics and Human Values. Board of Intermediate Education- Telugu ~ Akademi, Hyderabad.

Course Outcomes -After studying the course, students will able ;

CO1 Associate the terms 'value education' 'self-introspection' and 'self-esteem' which are the core aspirations of all human beings.

CO2 Understand the importance of ethics in different fields like medical, business , environment and social ethics and ethics of media.

CO3 Apply the knowledge to assess issues and problems in each profession like medical, business , environment and social ethics and ethics of media and correlate the concepts in addressing the ethical issues while choosing and joining a profession.

CO4 Apply skills for anger management, care of elderly, environmental protection and thereby develop well balanced personality and will contribute to society as morally finer, socially responsible and physically fit persons.

CO-PO Mapping

SEMESTER III

FT- 301: FOOD PROCESSING AND PRESERVATION TECHNOLOGY (COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Understand the principles and scope of food processing and preservation.
2. Get an overview on various techniques/methods in food processing and preservation.
3. Acquire knowledge of emerging technologies and their applications in food processing and preservation.
4. Equip with skills required for process and preserve various food products.

CORE-THEORY

UNIT-I: Food Processing and Preservation – An Introduction

- Need, Purpose, Principles and Methods of food processing and preservation. Definitions
- Traditional Methods of food processing and preservation.
- Preservatives and Additives –Definitions, Classification, applications, permissible limits and safety aspects.

UNIT-II: Methods of Food Processing and Preservation

- Processing and preservation by Heat - Principles of thermal processing, blanching, pasteurization, UHT processing, thermal sterilization, canning, extrusion.
- Processing and preservation by Cold- Refrigeration and freezing, methods of freezing, effect on quality of foods.
- Processing and preservation by Drying and Dehydration -Types, Methods and their suitability for different food products.
- Processing and preservation by Concentration – Types, Methods and their suitability for different food products.

UNIT-III:Processing and Preservation by Fermentation

- Definition, types, Importance, Technology, Benefits and Limitations.
- Processing and preservation of fermented foods – Cereal and pulse products, Fruits and Vegetables, Milk products, meat products and Beverages.

UNIT-IV:Advanced Food Processing Technologies

- Irradiation, High Pressure Processing, Pulse Electric Field, Microwave, Ohmic Heating, Reverse Osmosis, Ultra Filteration and Membrane Processing.
- Minimal Processing, Edible Coatings and Films, Encapsulation, Nano technology Hurdle Technology, Artificial Intelligence (AI) Technologies and Advanced Robotics in Food Industry.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Conceptualize principles of traditional and novel food processing and preservation technology.

CO2 Understand the applications and limitations of food processing and preservation technology.

CO3 Comprehend the functions and applications of food preservatives and additives.

CO4 Apply appropriate technologies to process and preserve the foods to extend their shelf life.

High-3, Medium-2, Low-1

FT-302: LIVE STOCK AND SEA FOOD TECHNOLOGY

COURSE OBJECTIVES-

To enable the students to:

1. Understand the grades, structure, composition and nutritional quality of various livestock and seafood
2. Comprehend the slaughtering, carcass processing, post-mortem changes.
3. Illustrate the processing technology of meat, poultry, fish and eggs.
4. Develop skills in value addition of meat, fish and poultry products.

CORE-THEORY

UNIT-I:Meat and Meat Products Technology:

- Present Status of Meat Industry in India and Abroad.
- Judging &grading oflive meat animals (Buffalo, Sheep, Goat, Pigs).
- Stunning, slaughtering and dressing operations of food animals - Cattle, Buffalo, Sheep, Goat, Pigs, Rabbits and Poultry.
- Structure, Chemical composition and nutritive value of muscle of food animals including poultry – Proportion of muscular tissues in different meat animals- Associative connective tissues- Muscle fiber.

UNIT-II: Meat Processing and preservation

- Conversion of muscle into meat- Post mortem changes in meat -Rigor mortis- Protein denaturation- Proteolysis-Physico-chemical properties of meat - Factors influencing meat quality- PSE and DFD meat- Pre rigor processing.
- Principles of Meat Preservation – Moisture Control – Temperature Control- Direct microbial inhibition.
- Modern processing techniques for Meat Processing- Concept of meat emulsification- Comminution- Restructuring- Retort pouch Processing-Value Added and Processed Meat Products

UNIT-III: Egg and Poultry Products Technology:

- Preservation and maintenance of egg – Egg cleansing – Oil treatment – Cold storage- Thermo stabilization- Immersion in liquids – Value Added Egg Products.
- Candling and Grading of eggs.
- Pre slaughter handling, transportation and primary and secondary processing of poultry.

- Evaluation and grading of dressed carcasses of various food animals including poultry.
- Processing and preservation of poultry meat products.

UNIT-IV: Sea Food Technology

- Present status of Fish, Shrimp and Prawns processing in India.
- Classification of Fish, Commonly cultivated fish, shrimp and prawns.
- Selection, Grading and Procurement of fish, Shrimp and Prawns– Shipboard operations.
- Factors affecting the quality of fish, Shrimp and Prawns.
- Processing and preservation of fish and Other products
- Value Added Sea Food Products.

Course Outcomes- After the completion of the course, the students will able to:

CO1 Acquire knowledge of the structure, composition, nutritional quality of various, livestock and seafood.

CO2 Understand the slaughtering, carcass processing methods used for processingmeat.

CO3 Gain an insight of the concept and methods of processing technology of meat, poultry and fish.

CO4 Prepare various value-added products of egg, meat, poultry and sea foods.

High-3, Medium-2, Low-1

FT-303-A: TECHNOLOGY OF SPICES, CONDIMENTS AND PLANTATION CROPS

COURSE OBJECTIVES

- To enable the students to:

1. Identify various spices, condiments and plantation crops.
2. Learn post-harvest technologies and processing of spices, condiments and plantation crops.
3. Illustrate various value added products of spices, condiments and plantation crops.
4. Perceive Standards, specifications, packaging and Quality control measures of spices, condiments and plantation crops.

GENERIC ELECTIVE -THEORY

UNIT-I: Introduction

- Commercial value of Spices, Condiments, plantation crops and theirproducts in global market.
- History, definition, classification and composition of spices, condimentsand Plantain crops.
- Classification of Spices and condiments-based on parts used, aromatic origin, family and mixed: major and minor spices
- Post-Harvest Technology of spices, condiments and Plantain crops.
- Quality control measures of spices, condiments and plantation crops.

UNIT-II: Spices and condiments

- Production technologies and processing of Major - Pepper, Cardamom, Ginger, Red and Green Chilli, Turmeric and Minor Spices- Cumin, Coriander, Cinnamon, Fenugreek, Garlic, Nutmeg, Clove, Mint, Vanilla.
- Sources, Processing of Flavoring agents and extracts, Flavoring components and concentrates.
- Value added products of spices and condiments.

UNIT-III: Plantation crops-A

- Coffee:Bean processing – Grading, blending, roasting of seeds, grinding, brewing; Coffee varieties & processing - Decaffeinated Coffee, Instant Coffee, extraction, Dehydration, Aromatization; Plant and machinery for coffee processing.

- Tea**:** Tea processing- leaves gathering, Grading, leaf processing; Types of tea& processing - dust tea, black tea, green tea, Oolong tea, Instant tea; Plant layout and machinery for tea processing.

UNIT-IV: Plantation crops - B

- Cocoa – Production, Composition, Grading, Processing, Cocoa Products (cocoa mass, cocoa powder, cocoa butter, cocoa-based beverages, malted beverages, cocoa liquor)
- Coconut – Production, Composition, Grading, Post-Harvest Technology, Processing and Products (coconut milk, desiccated coconut).
- Cashew nut Harvesting and Processing

7. NIIR board of consultants and engineers. The complete book on spices and condiments, Asia pacific business press, New Delhi.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Gain an in-depth knowledge on spices, condiments and plantation crops.

CO2 Apply post-harvest and processing technologies to improve the quality and safety of spices, condiments and plantation crops.

CO3 Recommend Standards, specifications, packaging and Quality control measures of spices, condiments and plantation crops.

CO4 Able to prepare various value added products of spices, condiments and plantation crops.

CO-PO Mapping

High-3, Medium-2, Low-1

FT-303-B: BASIC FOOD ENGINEERING

Course Objective

To enable the students to:

1. Understand the basic Principles of food engineering.
2. Describe the types and properties of Refrigeration systems
3. An insight of agro processing equipments like pasteurizer, spray drier and sealing equipments.
4. Enumerate processing equipments and maintenance of processing equipments

GENERIC ELECTIVE- THEORY

UNIT-I: Basic Principles of Food Engineering

- Engineering properties of food materials: physical, thermal, aerodynamic, mechanical, optical and electromagnetic properties.
- Units, Dimensions and Conversions: Unit Operations, design of food process equipments, elements of measuring instruments- machine elements and electrical elements.

UNIT-II: Basics of Vapor Compression Cycle:

- Properties of steam and Moist air- Boilers operation, Pressure vessels.
- Evaporators-Types of Evaporators Boiler house and workshop.

UNIT-III: Refrigeration and Freezing in Food Industry

- Parts and Functions of a Refrigerator. Refrigeration Cycle. Types of Refrigerants. Concept of Refrigerator Load (one ton, etc.).
- Cryogenic Freezing and Individual Quick Freezing (IQF)

UNIT-IV: Plant Designs

- Plant designs process designs development and general design considerations. Process economics: Economic feasibility of projects using order of magnitude cost estimates plant and equipment cost estimations, product cost estimations; batch vs continuous operations.
- Factors to be considered for location and layout of food plants. Regulatory requirements of food industries.

4. Rao, M.A, S.S.H. Rizvi and A.K. Datta. 2005. Engineering Properties of Food, 3rd edn. Taylor and Francis

COURSE OUTCOMES

- After the completion of the course, the students will able to:

CO1 Ability to apply principles of food engineering in industry.

CO2 Able to operate Food processing equipments

CO3 Acquaint with refrigeration system and material handling.

CO4 Gain an insight of agro processing equipments and handling techniques.

High- 3, Medium- 2, Low- 1

PRACTICALS: FT-304: FOOD PROCESSING AND PRESERVATION TECHNOLOGY + LIVE STOCK AND SEA FOOD TECHNOLOGY

FT- 301: FOOD PROCESSING AND PRESERVATION TECHNOLOGY

COURSE OBJECTIVES:

- To acquire knowledge of emerging technologies and their applications in food processing and preservation.
- To demonstrate various processing techniques and products of various foods.

PRACTICALS:

1. Market survey of processed and preserved foods and to study the methods of processing, preservation, Additives and preservatives used, shelf life, cost and form of availability.
2. Preservation of food by traditional methods using sugar, salt and turmeric powder etc.
3. Preservation by using Chemical preservatives.
4. Preparation of Jams, Jellies, fruit Juices, Squashes, Sauces and bottling – Shelf life study.
5. Pickling with a variety of foods - Shelf life study.
6. Drying and dehydration of foods.
7. Refrigeration, Freezing and freeze drying of foods.
8. Extrusion processing.
9. Processing and preservation of fermented products.
10. Visits to different commercial food processing units and Industries.

COURSE OUTCOMES:

CO1 Understand the applications and limitations of food processing and preservation technology.

CO2 Application of appropriate technologies to process and preserve the foods to extend their shelf life.

FT-302: LIVE STOCK AND SEA FOOD TECHNOLOGY

COURSE OBJECTIVES-

1. To understand the grades, structure, composition and nutritional quality of various livestock and seafood
2. To develop skills in processing and preparation of value addition products of meat, fish and poultry.

PRACTICALS:

1. Tests for determination of physico- chemical quality of meat and meat products:
    a. pH, Extract Release Volume (ERV)
    b. Meat Swelling capacity, Total Volatile Basic Nitrogen (TVBN),
    c. Picric acid turbidity, Dye reduction capacity.
2. Determination of Nitrate in meat
3. Test for presence of poly phosphates
4. Determination of total volatile bases in frozen fish
5. Determination of moisture in dried fish
6. Determination of sodium chloride in dried fish
7. Determination of Ash insoluble in dilute hydrochloric acid.

COURSE OUTCOMES-

CO1 Acquire knowledge of the structure, composition, nutritional quality of various, livestock and seafood.

CO2 Process and Preparation of various value-added products of egg, meat, poultry and sea foods.

FT - 305: FOOD INDUSTRY MANAGEMENT

(SKILL ORIENTED COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Provide hands on experience with regard to different areas in food industries.
2. Acquaint and gain knowledge related to production, unit operations, quality control and marketing aspects of food industry.
3. Gain knowledge associated with basic process requirements, documentation and maintenance of a food industry.
4. Emphasize the prominence of food plant sanitation, food safety, standards, laws and regulation in food industry.

SKILL ORIENTED COURSE -THEORY

UNIT-I: Food Industry –An overview

- Introduction, Status of Global food industry, Indian food industry.
- Components of Food Industry – Agriculture, Food processing, Food distribution, Regulation, Financial services, research and Development, marketing.
- Scope for Expansion, Future priorities in Food Production, challenges.
- Government initiatives - MOFPI, objectives and functions, schemes for Infrastructure development, technology up-gradation & modernization, human resources development and R&D.

UNIT-II: Food Industry Maintenance

- Maintenance - staff and plant operators; Preventive maintenance; Guidelines for good maintenance & safety precautions; Work place improvement through '5S'.
- Book keeping, Record maintenance, Audit Check List Preparation of HACCP based SOP checklists for Maintenance and sanitation.
- Wastewater and solid waste treatment: - Waste-types-solid and liquid waste characterization, physical, chemical, biological, aerobic, anaerobic, primary, secondary and tertiary (advanced) treatments.
- Handling customer and complains - types of complains, handling customer complains, evaluation and solution of problem, report making, CAPA.

PRACTICALS:

1. Enlist the various components of food industry, their functions and responsibilities.
2. Identification of challenges in raw material procurement in food industry and find out probable solutions.
3. Identification of challenges in food production and find out probable solutions in food industry.
4. Identification of challenges in food safety and quality control and find out probable solutions in food industry.
5. Maintenance of HACCP in Food Industry – GMP, GHP, CIP.
6. Drawing layouts of various food processing units.

INPLANT TRAINING -

Students are required to take up an internship of minimum of 45 days in any food industry, quality control department, quality control laboratories, research and development department, Nutraceutical industry, Marketing department, Production unit. At the end of internship students are required to submit a hard-bound report. A report on the training which is required to submit consists of:

1. A general overview of the plant.
2. The products & raw material sources of the plant.
3. Detail description of different processing.
4. Scheduling of plant operations.
5. Unit operations in the Industry
6. Quality Control
7. Marketing.
8. A certificate of internship issued by the Industry/Institution.

- A viva will be conducted after submission of the report and presentation of a seminar.

6. Dietary guidelines for Indians- a manual. National institute of nutrition. Hyderabad. 2011.
7. David L. Kartz. (2008). Nutrition in Clinical Practice. Lippincott Williams and Wilkins. USA.

COURSE OUT COMES

-Upon completion of this course, students will be able to:

CO1 Acquire knowledge on food groups and functions of food.

CO2 Gain knowledge on importance of macro and micronutrients in different age groups.

CO3 Identify signs and symptoms of different nutrient deficiencies.

CO4 Illustrate the nutritional problems in community.

FT – 306-B: DYNAMICS IN FOOD PREPARATION

COURSE OBJECTIVES

- To enable the students to:

1. Learn the principles of safe food preparation and food pyramid.
2. Gain knowledge on cooking methods and effect of cooking on nutrients.
3. Apply knowledge about effect of cooking on nutrients.
4. Able to differentiate different cooking equipment and role of different food items in cookery.

OPEN ELECTIVE- THEORY

UNIT-I: Introduction

- Definitions in food science.
- Composition and functions of foods.
- Food pyramid.
- Principles of safe food preparation.

UNIT-II: Cooking Process

- Objectives of Cooking.
- Preliminary preparations.
- Cooking methods- Moist heat methods, Dry heat methods; Fat as medium of cooking, Microwave cooking.
- Effect of cooking on Nutrients.

UNIT-III: Cooking Equipments

- Types of cooking equipments- Grill, Boiler, Oven and Microwave. Mechanical processing equipments- Vegetable Peeler, Chopper, Mixer, Slicing machine and mincing equipment.
- Non cooking equipment: Refrigerator.

UNIT-IV: Role of Foods in Cookery

- Role of cereals, pulses, fats/oils, milk and milk products, flesh foods, sugars, vegetables, fruits and spices in cookery.

REFERENCES

1. Srilakshmi,B.(2001).*Food Science*, 2nd edition New Age International (P) Ltd., Publishers, Bangalore, Chennai & Hyderabad.
2. Swaminathan, M.(1979).*Food science and Experimental foods*. Ganesh & Co., Madras.

4. ShubhanginiA.Joshi. (2010). Nutrition and Dietetics Third Edition Tata Mecgraw Hill Education Private Limited New Delhi.

COURSE OUT COMES

- After completion of the course, students will able to:

CO1 Acquire knowledge on Food Pyramid.

CO2 Identify role of foods on cookery.

CO3 Gain knowledge on methods of Cooking.

CO4 Estimate the effects of cooking on Nutrients.

SEMESTER IV

FT- 401: FOOD SAFETY STANDARDS AND QUALITY CONTROL (COMMON TO MS FOOD TECHNOLOGY AND M.SC FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Understand the current food safety standards rules and regulations.
2. Gain knowledge on desirable and undesirable constituents and contaminants in foods.
3. Critically explains on subjective and objective methods.
4. Develop skills for quality analysis and assurance of food quality.

CORE - THEORY

UNIT-I: **Food Quality, Assessment and evaluation**

- Definition and Physico Chemical attributes.
- Subjective methods; Sensory/ Organoleptic evaluation -Difference, Preference and Scoring tests.
- Objective methods of evaluation.
- Chemical methods of evaluation.
- Microbial methods of evaluation.

UNIT-II: Food quality Standards

- Food Safety Standards Authority of India (FSSAI)- Rules and Regulations- Food products Standards and additive regulations, Prohibition and sales regulations, Packaging and Labelling regulations, Alchoholic beverages Regulations, Fortification food regulations, Food / Health supplements and Nutraceutical regulations and Organic food regulations.
- Food Licensing and Registration system
- International Food Safety Standards- ISO, CODEX, HACCP- Principles.

UNIT-III: Food Contaminants

- Food contaminants- Definition, Classification- Physical, Chemical, Biological Contaminants.
- Unintentional /Undesirable constituents-Naturally occurring contaminants.Heavy metals, pesticide residues,products of microbial growth, Health hazards.
- Intentional/ Desirable constituents-chelating agents,acids,bases,buffer systems and salts; stabilizers,thickners,polyhydrocalcinols,anticaking,firming,clarifyingand bleaching agents; antioxidants, non- nutritional sweeteners, antimicrobial agents, Gases and propellants.

UNIT-IV: Food contaminants and Standards of Quality

- Contaminants and quality standards in Milk and Milk products,
- Contaminants and quality standards Fruit and Vegetable products,
- Contaminants and quality standards Meat, Poultry, Eggs and Fish,
- Contaminants and quality standards Fats and Oils,
- Contaminants and quality standards Spices and Condiments,
- Contaminants and quality standards Water and Beverages,
- Contaminants and quality standards Food grains and Flours,
- Contaminants and quality standards of Sweeteners- Sugar, Jaggery, Honey.

7. https://www.fssai.gov.in

COURSE OUTCOMES

- After completion of this course, students will be able to:

CO1 Gain knowledge in current rules and regulations of food safety standards and quality assurance.

CO 2 Identify the contaminants and additives in foods.

CO 3 Select the appropriate analytical technique when presented with a problem.

CO 4 Demonstrate practical proficiency in a food quality analysis.

High-3, Medium-2, Low-1

FT- 402: FOOD PRODUCT DEVELOPMENT AND MARKETING (COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES - To enable the students to:

1. Illustrate the new product categories in food market and their characteristics.
2. Elucidate the process of new food product development in food industry.
3. Exemplify various speciality food products and their applications.
4. Acquire the skill to design and development of new food product and analyse the quality of the product.

CORE –THEORY

UNIT-I: New Food Products

- New food product: Definition, Characteristics, Need for New food product development.
- Classification of new food products: Line extensions - Repositioning of existing products - New form of existing product - Reformulation - New packaging - Innovative products - Creative products and Value added products.

UNIT-II: New Food product development

In Food Industry

- Ideation/Idea generation, Consumer research, Product design and Formulation.
- Process development: Prototype development and scale up.
- Quality assessment of new developed products: Evaluation-Shelf Life Testing.
- Packaging and labeling.

In Food ingredient and service Industry

- Characteristics, Consumers and Costumers, market places.
- Development of products for food service and ingredient industries.
- Quality and Safety of the products.

UNIT-III: Food Product Commercialization and Marketing

- Costing and Pricing, Test Market, Advertising and promotions, Product launching, Product life cycle.
- Entrepreneurship, concept, Types, qualities and functions of an entrepreneur.
- Ethics and Intellectual property/ Patents in food product development.

UNIT-IV: Food Products with reference to

- Health foods, Medical foods, Therapeutic foods, Herbal foods, Fortified foods.
- Infant foods, Geriatric foods, Sports drink.
- Functional foods, Designer foods and Nutraceuticals.
- Probiotics, Prebiotic and Symbiotics.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Apply a product development process to generate ideas, develop concept to test market.

CO2 Design food and nutritional label of food products.

CO3 Demonstrate the skills to conduct the organoleptic evaluation of food product.

CO4 Work collaboratively with a team in food product development.

FT –403-A: NUTRITION FOR HEALTH AND FITNESS

(COMMON TO MS FOOD TECHNOLOGY AND M.SC. FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVES

- To enable the students to:

1. Define the concepts of Health, Nutrition, physical activity, physical fitness and methods of evaluation.
2. Understand the Energy metabolism pathways during physical activity.
3. Describe the role of macronutrients in physical performance, weight management and obesity.
4. Explains the nutritional needs in different sports and the role of national agencies.

GENERIC ELECTIVE -THEORY

UNIT-I: Physical Fitness and its Evaluation

- Definitions- Nutrition, Health, Physical activity and Physical Fitness.
- Health benefits of Physical activity and Recommendations,
- Components of physical fitness to overall health-Cardiovascular Fitness, Muscular strength, Muscular Endurance, Flexibility, and Body composition.
- Assessment criteria of age specific fitness and health status- Evaluation of physical fitness- FITT Principles-Talk test, Target heart rate, Borg scale.

UNIT-II: Energy Metabolism in Physical Activity and Weight Management.

- Aerobic and Anaerobic metabolic pathways-ATP-Creatine Phosphate pathway (ATP-CP), Creatine Phosphate(CP), Lactic acid cycle, Glycolysis, Krebs cycle(TCA), Gluconeogenesis.
- Energy requirements and assessment of energy expenditure based on physical activity, Carbohydrate Loading.
- Special conditions- Weight management and Obesity-Dietary modifications-Restricted energy and fat diets, Low glycemic diets, Formula diets and meal replacement programs.

UNIT-III: Nutritional and Physical Performance

- Nutritional Requirements during Exercise- Carbohydrate, Fat, Protein-Recommendations- Before, During and After exercise.
- Carbohydrate utilization during exercise, Role of protein and fat in daily training and competitive performance.
- Vitamins and Minerals-Importance and Recommendations.
- Fluid–Recommendations, Importance and Consequences of Fluid balance. Hydration in pre, during and post exercise.

UNIT-IV: Sports Nutrition

- Classification of sports events and RDA for sports person.
- Nutritional requirements and special needs of sports person, pre, during, post sports events, water and electrolyte balance, ergogenic aids.
- Endurance and fatigue in sports performance.
- Assessment-Kinanthropometry**:** Definition; Introduction; Body size and proportion; Somatotyping; Circumferences; Skinfold measurement sites and determining body composition; Applications.
- Role of National agencies towards improvements of sports performance.

COURSE OUTCOMES

- Upon completion of this course, students will be able to:

CO1 Gain knowledge on concepts of physical activity and physical fitness.

CO2 Describe the energy metabolism pathways in physical activity.

CO3 List the role of macronutrients in physical performance.

CO4 Demonstrate the importance of nutrients in Sports.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

High-3, Medium-2, Low-1

FT 403-B: UNIT OPERATIONS IN FOOD INDUSTRY

COURSE OBJECTIVES:

To enable the students to:

1. Understand the principle of Unit operation in food industry.
2. Learn important preliminary operations in food processing industries.
3. Impart knowledge on Safety, sanitation and Effluent Treatment in food industry.
4. Know the different pre and post processing operations as storage and packaging foods etc.

GENERIC ELECTIVE- THEORY

UNIT-I: Food Industry

- Plant and machinery for different types of Food Industries and processing Units of
  1. Cereals, Pulses and legumes, 2. For oil seeds, 3.Sugars and sugar products, 4. Vegetables and Fruits, 5.Milk and Milk products, 6.Eggs, poultry and meat products, 7.Fish and Sea foods, 8.Beverages, 9.Spices and condiments, etc.
- Management Systems In Food Industry at different Stages and for different components like, power supply electricity - water, procurement of raw material - Storage - product production - preservation.

UNIT-II: Mechanical Operations

- Size reduction: Introduction, Grinding and Cutting – Equipments.
- Filtration: Definition –filter media – Principles of cake filtration, Specific cake resistance. Types of membranes.
- Mixing of liquids and solids (powder), mixing equipment, mixing index and mixing time, Agitation and blending, types of agitators, power consumption in mixing.

UNIT-III: Material Handling

- Belt conveyor: Principle of operation, characteristics. Chain conveyor: Principle of operation, advantages, disadvantages. Screw conveyor: Principle of operation, inclined and vertical screw conveyors
- Bucket elevator: Principle, classification, operation, advantages, disadvantages. Pneumatic conveying system: Types, air/product separators. Gravity conveyor design considerations, capacity and power requirement.

UNIT-IV Food Safety & Sanitation

- Safety and Sanitation - Safety and Hygienic practices, Hazards and Risks- Industrial Effluent Treatment.
- ISO 14000: Introduction, various standards among 14000 series, certification and its importance, CIP & COP.

REFFERENCES

1. D. G. Rao, Fundamentals of food engineering, Prentice-Hall of India, New Delhi, 2010
2. R. Paul Singh and Dennis R. Heldman, Introduction to Food Engineering, 4th Edition, Academic Press, 2009.
3. Z. Berk, Food Process Engineering and Technology, Food Science and Technology, 1st Edition, International Series, Elsevier, 2009.
4. J.M. Smith, H.C. Van Ness and M.M. Abbott. 2005. Introduction to Chemical Engineering Thermodynamics, 7th Ed. McGraw-Hill, Inc., NY, USA.

COURSE OUTCOMES

- After the completion of the course, the students will able to:

CO1 Understand and comprehend the principle of unit operations in food industry

CO2 Operate important preliminary operations in food processing industries

CO3 Choose suitable packaging materials for different foods.

CO4 Identify the suitable unit operations for a specific purpose.

CO-PO Mapping

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	**3**				**3**							**3**	**3**	**3**

High- 3, Medium- 2, Low- 1

PRACTICALS: FT-404: FOOD SAFETY STANDARDS AND QUALITY CONTROL

+ FOOD PRODUCT DEVELOPMENT AND MARKETING

FT- 401: FOOD SAFETY STANDARDS AND QUALITY CONTROL

COURSE OBJECTIVES

- Gain knowledge on subjective and objective methods.
- Learn the methods of contaminants in food for quality assurance.

PRACTICALS:

Assessment of quality parameters and adulterants in different foods

1. Survey of label information of foods in market
2. Cereals, Pulses and Flours – Label information, detection of adulterants
3. Fats and oils – Label information, Adulterant tests, Iodine number and FFA Value
4. Fruit and vegetable products – Label information, Acidity , TSS, Sugars
5. Coffee and Tea, Honey – Label information, Detection of Adulterants
6. Milk and milk products- Label information, COB test, Acidity, MBRT, Detection of adulterants.
7. Spices and Condiments- Label information, Detection of adulterants.
8. Determination of different Preservatives
9. Determination of different Colors
10. Document preparation for the approval of FSSAI.

COURSE OUTCOMES

CO1 Select the appropriate analytical technique when presented with a problem.

CO2 Demonstrate practical proficiency in a food quality analysis.

FT- 402: FOOD PRODUCT DEVELOPMENT AND MARKETING

COURSE OBJECTIVES:

- Exemplify various speciality food products and their applications.
- Acquire the skill to design and development of new food product and analyse the quality of the product.

PRACTICALS:

New Food Product Development and Marketing

1. Ideation.
2. Concept Development.
3. Market research.
4. Formulation and Standardization.
5. Acceptability studies.
6. Shelflife Studies.
7. Costing and Pricing.
8. Food and Nutrition labeling and packaging.
9. Development of Product Promotion strategies.
10. Test Marketing.

COURSE OUTCOMES

CO1 Demonstrate the skills to conduct the organoleptic evaluation of food product.

CO2 Work collaboratively with a team in food product development.

FT-405: TECHNOLOGY OF PACKAGING

(COMMON TO MS FOOD TECHNOLOGY AND M.SC., FOOD SCIENCE NUTRITION & DIETETICS COURSE)

COURSE OBJECTIVE

To enable the students to:

1. Provide knowledge on packaging and packaging materials
2. An overview of the scientific and technical aspects of food packaging.
3. Enable the students to understand the regulations of packaging and packaging material testing.
4. Knowledge of the new innovations in food packaging to improve product stability and/or to extend the product shelf-life.

MULTI DISCIPLINARY COURSE

UNIT- I: Introduction and Types of Packaging

- Principles of food packaging, Functions of packaging; Type of packaging materials- Paper and Paperboard, types of paper, Glass, Metal and Plastic- Thermosets and Thermoplastics.
- Selection of packaging material for different foods. Methods of packaging and packaging equipment.
- Packaging-Food Interactions**:** Factors affecting flavor absorption, the role of the food matrix, the role of differing packaging materials, Flavor modification and sensory quality.

UNIT- II: Food Packaging System

- Active and Intelligent Packaging Techniques**:** Active packaging techniques, intelligent packaging techniques, Consumers towards and novel packaging.
- Aseptic Packaging Technology-advances, systems and its food applications, packaging for high pressure processing.
- Oxygen, ethylene and other scavengers**:** Oxygen scavenging technology, Selecting the right type of oxygen scavenger, Ethylene scavenging technology, Carbon dioxide and other scavengers.

PRACTICALS:

1. Classification of various packages based on material and rigidity.
2. Measurement of thickness of packaging materials.
3. Measurement of basic weight and grammage of paper and paperboards.
4. Measurement of water absorption of paper and paper boards (Cobb Test).
5. Measurement of grease resistance of papers.
6. Drop test, Box compression test.
7. Measurement of grease resistance of papers.
8. Head space analysis of packaged food.

4. F. A. Paine and H. Y. Paine (1992) *A Handbook of Food Packaging*, 2nd edn Blackie Academic and Professional, London.

Course Outcomes- After the completion of the course, the students will able to:

CO1 Exposure about packaging, packaging materials and packaging methods.

CO2 Comprehend the overview of the scientific and technical aspects of food packaging

CO3 Acquire knowledge on regulations of packaging and testing.

CO4 Able to utilize some of the new innovations in food packaging to improve product stability and/or to extend the product shelf-life.

High- 3, Medium- 2, Low- 1

FT-406-A: CHILD GROWTH AND DEVELOPMENT

COURSE OBJECTIVES

-To enables the students to:

1. Know the terms growth , development and stages of development across life span
2. Understand the characteristics of children at different stages of childhood
3. Explain the different developments like physical, cognitive, language and social development during childhood.
4. Apply knowledge to understand normal development and developmental delays during childhood.

OPEN ELECTIVE –THEORY

UNIT-I: Foundations of Development

- Understanding the terms Child, Growth, Development, Child Development, Human Development, and Developmental tasks.
- Principles of Child Development and Factors influencing growth and Development of Children.
- Determinants of Development - Role of Heredity and Environment in Development
- Stages of Development across life span and domains of development.

UNIT-II: Infancy

- Infancy – Characteristics
- Sensory- Motor activities
- Language Development
- Socio-emotional development.

UNIT-III: Early Childhood

- Early Childhood Period –Characteristics
- Physical Development
- Cognitive development
- Emotional and Social development.

UNIT-IV: Middle Childhood

- Middle/ Late Childhood Period-Characteristics
- Physical development
- Cognitive development.
- Emotional and Social development

8. Prasad, J. and Prakash, R. (1996). Education of handicapped children, problems and solution. Kanishka publication distribution. New Delhi.

COURSE OUTCOMES-

After completion of the course, students will able:

CO1 Define the terms growth and development, and stages of development across life span

CO2 Understand the characteristics of children at different stages of childhood

CO3 Critically explain different developments like physical, cognitive , language and social development during childhood

CO4 Apply knowledge to understand normal development and developmental delays during childhood to assess all round development during childhood

FT406-B: DISASTER MANAGEMENT

COURSE OBJECTIVES

- To enable the students to:

1. Know about natural disasters: manmade disasters; chemical hazards; National and International strategies to mitigate disaster management.
2. Understand natural disasters (like floods, drought, cyclone, earthquakes, global warming etc); Nuclear disasters; Biological disasters;.
3. Illustrate the efforts made by the NGOs, Community based organizations and local administration in disaster management.
4. Discriminate disaster responses of Armed forces and Police.

OPEN ELECTIVE- THEORY

UNIT-I: Natural Disasters

- Meaning and nature of natural disasters, their types and effects.
- Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches, Volcanic eruptions, Heat and cold Waves.
- Climatic Change: Global warming, Sea Level rise, Ozone Depletion.

UNIT-II: Man Made Disasters

- Nuclear disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution, water pollution.
- Deforestation, Industrial wastewater pollution, road accidents, rail accidents, air accidents, sea accidents.

UNIT-III: Chemical Hazards

- Release of Toxic chemicals.
- Sedimentation processes.
- Global Sedimentation Problems.
- Regional Sedimentation Problems, Sedimentation and Environmental Problems.

UNIT-IV: Disaster Management

- Efforts to mitigate Natural Disasters at National and Global levels.
- International Strategy for Disaster reduction.
- Concept of disaster management, National Disaster Management framework; financial arrangements

- Role of NGOs, Community-based organizations, and Media. Central, State, District and local Administration; Armed forces in Disaster response
- Disaster response: Police and other organizations.

3. Routledge. and Sharma, V.K. (2001). *Disaster management*. National Centre for Disaster Management, India.

COURSE OUTCOMES

- After the completion of the course, the students will be able to:

CO1 Gain in-depth knowledge about natural disasters; manmade disasters; chemical hazards: disaster management.

CO2 Design and administer a schedule for collection of Information regarding the roles of NGOs, Community based organizations , central state, District and local Administration, Police and armed forces, in Disaster management.

CO3 Illustrate the efforts made by the NGO's, community based organization and local administration in disaster management.

CO4 Discriminate disaster responses of Armed forces and police.

Model Question paper

M.Sc., (Home Science) Degree Examination

First Semester

(Specialization: MS Food Technology)

(CBCS for the students admitted from 2021-22 onwards)

Paper-I: FT - 101: FOOD CHEMISTRY AND ANALYSIS

(Common paper for MS Food Technology and M.Sc.Food Science Nutrition and Dietetics)

Time: 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Differentiate free, bound and entrapped water.
2. What are emulsions? Explain.
3. What is Pectin and write the properties.
4. Write the principle and application of Electrophoresis.
5. Explain the Chemistry of frying in foods.
6. Explain the hydrogenation of fats.
7. What are Amylose & Amylopectin and draw the structure.
8. Write any two identification tests of amino acids?

SECTION- B

Answer ALL questions

Each Question carries 15 MarksMarks: 4x15 =60

9.(a). Describe the determination of moisture in foods.

(or)

(b).Write the characteristics of colloids.

10. (a).Discuss the physical & chemical properties of lipids?

(or)

(b). Give the classification and discuss the physico- chemical properties of carbohydrates

11.(a).Explain the chemistry of hydration and dough formation of proteins.

(or)

(b). Classify proteins with suitable examples and write about protein denaturation.

12. (a).Explain the principle and estimation of protein by microkjeldahl method ?

(or)

(b). Write the principle and applications of GC/ MS.

M.Sc (Home Science) Degree Examination

First Semester

(Specialization: MS Food Technology)

(CBCS for the students admitted from 2021-22 onwards)

Paper-II: FT- 102: CEREAL GRAINS, LEGUMES AND OIL SEED TECHNOLOGY

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the Physico chemical properties of cereal and millets?
2. Explain small scale milling process of cereals?
3. Explain about products, biproducts and value added products of pulses and legumes?
4. Write a short note on germination?
5. Briefly explain about the various extraction methods of oil seeds?
6. Draw the structure of any oil seed and write its composition?
7. Write the causative factors of post harvest losses?
8. Mention the Machinery and its function for processing of legumes.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a).Give an detailed account on turbo milling process of cereals and millets.

(or)

(b). Write the principle of baking and explain the role of ingredients in baking?

10. (a).Explain the physico chemical properties and composition of pulses and legumes?

(or)

(b).Discuss the processing of soya isolates and concentrates??

1. (a).Discuss about refining and hydrogenation of nuts and oil seeds?

(or)

(b). Explain the value added products of nuts and oil seeds?

2. (a).Discuss about post harvest losses at various stages?

(or)

(b).Write in detail about quality control standards of cereals, millets and pulses?

SRI VENKATESWARA UNIVERSITY: TIRUPATI

Model Question paper

M.Sc (Home Science) Degree Examination

First Semester

(Specialization: MS Food Technology)

(CBCS for the students admitted from 2021-22 onwards)

Paper-III:FT-103-A: FOOD SCIENCE AND EXPERIMENTAL FOODS

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

Time:3 hours Max Marks: 80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks 4x5=20Marks

1. What are leavening agents and write its importance in baking process?
2. Classify fruits and vegetables and write its nutrient composition?
3. Explain the structure of egg?
4. Explain the functional properties of milk?
5. What are modified food starches? Explain.
6. Describe different types of sugars and sugar syrups?
7. Define sensory evaluation and write the requirements for it?
8. Write the factors should be considered in selecting sensory panel for evaluation?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9.(a). Write the composition of pulses and legumes and explain the different methods to decrease the anti-nutritional content present in pulses?

(or)

(b).Discuss in detail about various pigments and flavor constituents present in fruits and vegetables?

10.(a).Write in detail about the composition and kinds of milk ?

(or)

(b).Draw the structure of muscle and explain the post mortem changes occurred in meat?

11.(a). What is gelatinization? Explain about various factors that affect gelatinization process?

(or)

(b).Explain the different functional properties of fats and their applications in food?

12. (a).Explain in detail about analytical tests in food evaluation ?

(or)

(b). Discuss about sensory attributes and explain the affective tests?

M.Sc(Home Science) Degree Examination

First Semester

(CBCS for the students admitted from 2021 onwards)

Paper:III- FT: 103-B: BAKING TECHNOLOGY

(Common to MSc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time: 3 hours Max Marks: 80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks: Marks: 4x5=20

1. Write the economic importance of bakery industry.
2. Principal of Baking.
3. Write the types of wheat flour.
4. Differentiate dough and batter.
5. Briefly write about cookies preparation procedure.
6. List down the hard and soft wheat bakery products.
7. Write the types of fillings and icings.
8. Short note on gluten free bakery products

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks:4x15 =60

9. (a) Explain the various equipments used in bakery processing and its importance.

(Or)

(b) Discuss the importance of packaging and quality factors of bakery products.

10. (a) Enumerate the importance of various ingredient used in bakery.

(Or)

(b) Explain various rheological properties associated with bakery items.

11. (a) Explain in detail about bread processing and its types.

(Or)

(b) Discuss about common faults and Corrective measures in bread and cakes.

12. (a) Write the common reasons for nutrient losses in bakery products.

(Or)

(b) Explain in detail about various decorative items in bakery and its preparation.

First Semester

(Specialization: MS Food Technology)

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV:104-A: COMMUNITY NUTRITION

(Common to MS Food Technology and all three specializations of Home Science)

Time: 3 hours Max Marks:80

Part- A

Answer any FOUR of the Following.

Each question carries 5 marks (4 x5=20Marks)

1. Describe classification of foods with functions.
2. Write a short note on recommended dietary allowances.
3. Define Vital Statistics
4. Write short note on Nutritional assessment
5. Significance of breast feeding
6. Clinical symptoms of Vitamin A & C deficiencies
7. Describe Mid-Day Meal programme.
8. What is Public distribution system

Part- B

Answer ALL questions

Each Question carries 15 Marks (4x15=60 Marks)

9. (a) Explain about food groups, food composition and nutritive value of different foods.

(or)

(b) Define meal planning, principles and factors affecting meal planning.

10. (a).Describe briefly the methods of anthropometric measurements in altering nutritional

status of the community.

(or)

(b).Explain the advantages and disadvantages of the Biochemical method of assessment of nutritional status.

11. (a) Discuss physiological changes that occur during pregnancy and state the nutritional requirements during pregnancy.

(or)

(b). State the RDA for an adolescent girl. Plan a menu and give justification.

12. (a) Discuss about food security, food fortification and enrichment.

(or)

(b) Write in detail about ICDS.

Paper:FT 104-B: NUTRITION DURING LIFE SPAN

(Common to all specializations of M Sc Home Scienceand MS Food Technology course)

Time: 3 Hrs Max: 80 Marks

Part – A

Answer any four questions

Each question carry equal marks (4X5=20 Marks)

1. Write the effects of lactation on nutritional composition of Human milk.
2. What are the factors that affect the breast milk quality?
3. Explain the need for infant formulae.
4. Discuss the importance of nutrition during Pre-school children.
5. Write the nutritional issues in Adolescence.
6. Discuss the Nutritional requirements in School-going children.
7. Write the effects of aging on nutritional health.
8. Explain the nutritional concerns in old age and their management pregnancy outcome.

Part – B

Answer all questions

Each question carry equal marks (4X15 = 60 Marks)

9. (a). Explain about Nutritional intervention and pregnancy outcome & write the advantage and disadvantages of breast and formulae feeding.

(Or)

(b). Discuss about the nutritional requirements during pregnancy and lactation? Write about common complications and problems.

10. (a).What are the effects of macro & micro nutrient malnutrition on physical and mental health?

(Or)

(b). Discuss about various types of Infant formulas and common problems during infancy.

11. (a). Explain the importance of nutritional requirement and RDA and discuss the importance of implications of child obesity.

(Or)

(b). Write in detail about various physiological problems during adolescence.

12. (a).Discuss the modification in diet, feeding old people. Nutritional requirement for adult man and woman.

(Or)

(b). Explain the principles to be considered while planning and preparation of diets of elderly.

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the classification and composition of Vegetables?
2. Write about methods of maturity determination?
3. What are the factors affecting the Post harvest losses?
4. Differentiate between climacteric and non-climacteric fruits?
5. Describe methods of grading Size grading and specific gravity grading?
6. Explain the Zero energy cool chamber?
7. What are the defects in Fruit Preserve and Candied Fruit?
8. Define blanching and write the different methods of blanching?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9.(a). Production and processing scenario of fruits and vegetables in India.

(or)

(b).Explain the maturity indices and standards of fruits and vegetables?

10.(a). Post-harvest physiological and biochemical changes in fruits and vegetables.

(or)

(b).Write in detail about Prevention of post harvest diseases and infestation?

11.(a).Enumerate the unit operations in fruit and vegetable processing industry.

(or)

(b).Write about Controlled atmosphere storage, Modified atmosphere packaging, Hypobaric storage?

12.(a).Explain the manufacturing process of jam and write the quality standards?

(or)

(b). Explain the manufacturing process of pickles and write the quality standards?

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the definition and composition of milk?
2. Types of pasteurization?
3. What is fortified and double fortified milk?
4. Write the Processing of cream?
5. Briefly discuss about fermented milk products?
6. List down stabilizers and emulsifiers used in ice creams?
7. Discuss the application of immobilized enzymes in dairy processing?
8. Explain the importance of membrane processing in milk industry?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a). Give a detailed account on UHT processing and aseptic packaging of milk?

(Or)

(b).Explain about: milk reception, chilling, homogenization, storage and transport of milk?

10. (a). Enumerate the manufacturing process of Butter, ghee and butter oil?

(or)

(b). Write the definition, standards and method of manufacturing of khova, paneer and chenna?

11. (a). Define cheese? Write the classification and manufacturing process of cheese.

(or)

(b). Write the importance of dairy by product, their process and applications with examples.

12. (a). Enumerate the types of membrane processing and its applications with examples?

(or)

(b).Write in detail about ultra filteration, mono and micro filteration in whey processing.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

Model Question paper

M.Sc (Home Science) Degree Examination

Second Semester

(CBCS for the students admitted from 2021-22 onwards)

Paper-III: FT- 203-A: FOOD MICROBIOLOGY AND SAFETY

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

Time: 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Role of Micro organism in food industry.
2. Write the general Characteristics of bacteria?
3. Describe the different types of food spoilage?
4. How cereals and cereal products are contaminated?
5. Write the contamination sources of milk?
6. Describe the common spoilages in fish?
7. Write a short note on food borne infections?
8. How microbiology and food safety is related?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a) Explain the factors affecting microbial growth?

(or)

(b) Discuss about classification, morphological and cultural characteristics of viruses?

10. (a)Write the principles underlying food spoilage and discuss the common spoilages in fruits and vegetables.

(or)

(b). Describe the common food spoilages and common microbial spoilages in cereals and cereal products.

11. (a). Discuss the sources of contamination and spoilages in flesh foods.

(or)

(b). Enumerates the spoilages and sources of contamination in sugars and processed foods?

12. (a) Discuss in detail about various food borne intoxications with examples?

(or)

(b) Write in detail about applications of food microbiology.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

Model Question paper

M.Sc., (Home Science) Degree Examination

Fourth Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

FT- 203-B: NUTRITION IN EMERGENCIES AND DISASTER MANAGEMENT

(Common to M.Sc Food Science Nutrition & Dietetics and MS Food Technology Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Famine.
2. Immunization.
3. MUAC.
4. Nutritional surveillance.
5. Targeting Food Aid.
6. Special foods/rations for nutritional relief.
7. Epidemiological data.
8. Psycho socio variables.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks: 4x15 =60

9.(a). Discuss the causes of malnutrition in emergency situations and major deficiency diseases in emergencies.

(or)

(b).What are the communicable diseases that occur during emergencies? Discuss in detail about any one disease treatment and control.

10.(a). Discuss in detail about the nutritional assessment and surveillance in emergency affected populations.

(or)

(b). Write about methods of organizational surveillance and individual screening during emergencies.

11.(a). Write in detail about the assessment of food needs in emergency situations.

(or)

(b). Discuss in detail about the food storage and house hold food security in emergencies.

12.(a). What is Nutritional epidemiology? Discuss in detail about design and planning of nutritional epidemiological studies.

(or)

(b). Discuss in detail about types of epidemiology and collection of epidemiological data.

M.Sc., (Home Science) Degree Examination

Second Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV: 204-A-RESEARCH METHODOLOGY

(Common to all specializations of M Sc Home Scienceand MS Food Technology course)

Time:3 hrs Max: 80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Define research. Enumerate the significance of research.
2. Explain the need and features of a good research design.
3. Write about Quota and snow ball sampling.
4. Describe case study as a research technique.
5. What is meant by primary and secondary data?
6. Give an account of Nominal scale.
7. What is Social mapping?
8. Write about Observation check list.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a).Write in detail about types of research.

(Or)

(b).Write about the types of research design.

10.(a).Explain in detail about the definition , identification and selection of research problem.

(Or)

(b).Define qualitative research and explain the types of qualitative research.

11.(a). What is data? Explain in detail different methods of data collection.

(Or)

(b). Describe in detail about the Observation and Interview methods of data collection.

12.(a). What is Measurement scales? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing a research proposal.

SRI VENKATESWARA UNIVERSITY::TIRUPATI

M.Sc., (Home Science) Degree Examination

Second Semester

(Specialization 'A': Food Science Nutrition and Dietetics)

(CBCS for the students admitted from 2021-22 onwards)

Paper-IV: 204-B – Statistics and Computer Applications

(Common to all specializations of M Sc Home Scienceand MS Food Technology course)

Time:3 hrs Max: 80 Marks

SECTION- A

Answer any four questions

Each question carry equal marks Marks:4X5=20

1. Frequency distribution.
2. Histogram.
3. Rank correlation.
4. Mean.
5. File handling.
6. Computer software.
7. What is data analysis?
8. Descriptive statistics.

SECTION- B

Answer all questions

Each question carry equal marks Marks: 4 X 15=60

9. (a). What is a *t*-test? When it is used and for what purpose(s)? Explain by means of examples.

(Or)

(b). In a test given to two groups of students, the marks obtained were as follows:*First Group* 18 20 36 50 49 36 34 49 41 *Second Group* 29 28 26 35 30 44 46 Examine the significance of difference between mean marks obtained by students of theabove two groups. Test at five per cent level of significance.

10. (a). 200 digits were chosen at random from a set of tables. The frequencies of the digits were: Digit 012345678Frequency 18 19 23 21 16 25 22 20 21 15Calculate χ^2 .(Or)

(b). What is Chi-square text? Explain its significance in statistical analysis.

11.(a). What is data? Explain in detail the data processing and analysis in computers.

(Or)

(b). Describe in detail about the PC and its components.

12.(a). What is an excel sheet? Explain its significance in statistical analysis?

(Or)

(b). Explain in detail about the steps in preparing different graphs in computers.

Paper-I: FT- 301: FOOD PROCESSING AND PRESERVATION TECHNOLOGY

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Define food additive and write its classification?
2. Write about the principles of food preservation?
3. Explain the Process of blanching and its types?
4. Write a note on canning process?
5. Explain the fermentation technology and its advantages?
6. Write the fermentation process for cereals and pulse products.
7. Explain the applications of advanced robotics in food processing?
8. Write the advantages and disadvantages of Irradiation process?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a) Enumerate the different methods of food processing and preservation ?

(or)

(b).Explain the applications, permissible limits and safety aspects of food additives?

10.(a). Write the principles of thermal processing and Explain the Pasteurization, UHT processing?

(or)

(b). Discuss the types and methods of food preservation by concentration?

11.(a).Write the role of fermentation in bread making.

(or)

(b). Explain in detail about the process of fermentation of milk and meat products?

12.(a).Explain the following: (A) High Pressure processing (B) Artificial Intelligence

(or)

(b).Give a detailed note on Edible Coatings, Films and its applications in food?

Paper-II:FT-302: LIVESTOCK AND SEA FOOD TECHNOLOGY

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write short notes on present status of meat and fish industry in India?
2. Various stunning methods during slaughtering?
3. What is rigor mortis?
4. Explain the protein denaturation of meat?
5. Write the composition of egg?
6. Write about the process of thermo stabilization in egg preservation?
7. Write the selection criteria of fish for processing?
8. Explain factors affecting the quality of fish and prawns?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15=60 Marks

9. (a).Explain the structure and chemical composition of meat?

(Or)

(b).Explain the evaluation and grading of dressed carcass of meat animals?

10.(a).Explain the factors influencing meat quality and write the principles of meat preservation?

(Or)

(b).Enumerate the modern processing techniques of meat?

11.(a)Describe the storage, processing and preservation of eggs.

(Or)

(b).Write the processing and preservation of poultry meat products.

12.(a).Explain the shipboard operations involved in processing of fish and sea foods.

(Or)

(b).Write in detail about processing and preservation of fish and sea food products.

Paper-III: FT-303-A:TECHNOLOGY OF SPICES, CONDIMENTS AND PLANTATION CROPS

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Write the classification of spices? Give examples.
2. Write short notes on global market of spices and condiments?
3. A brief note on processing of flavoring components?
4. Value added products of spices and condiments?
5. Give the classification of plantation cops with suitable examples?
6. Write about Aromatization, Dehydration in coffee Processing?
7. Write the composition of Cocoa?
8. Explain the processing of coconut?

SECTION- B

Answer ALL questions

Each Question 15 Mark 4x15=60 Marks

9. (a). Give a detailed classification of Spices and condiments based on parts used, aromatic origin and family.

(or)

(b).Explain the post harvest technologies and quality parameters of spices and condiments?

10.(a).Describe the production and processing techniques of major spices ?

(or)

(b).Explain the extraction methods of flavoring agents?

11. (a).Write in detail about coffee bean Processing?

(or)

(b).Describe the different types of tea and its processing?

12.(a).Explain the post harvest technology of cocoa bean processing and its products.

(or)

(b).Enumerate the cashew nut harvesting and processing?

Time: 3 hours Max Marks: 80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks: Marks: 4x5=20

1. Enumerate the basic principles of food engineering?
2. Discuss in detail on unit dimension and conversions.
3. What are the properties of steam and moist air?
4. Describe about pressure vessels and evaporators?
5. What are the different types of refrigeration systems?
6. What do you mean by cryogenic freezing?
7. What are the Factors to be considered for designing a plant layout?
8. Explain about Regulatory requirements of food industries?

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a). Discuss in detail on unit dimension and conversions?

(or)

(b). Write a note on Engineering properties of food materials?

10.(a).Enumerate the working, operation and maintenance of graders and evaporators?

(or)

(b). Explain the properties and operation of vapor compression cycles?

11.(a).Write in detail about Refrigeration Cycle and types of Refrigerants?

(or)

(b).Explain about boiler house, workshop and its operation?

12.(a). What are the Factors to be considered for location and layout of food plants?

(or)

(b). Design a blue drawing and layout of a food processing industry?

Time: 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Differentiate between subjective Evaluation and objective Evaluation
2. Write about triangle test.
3. Define organic foods as per FSSAI.
4. Write arethe powers of Food inspectors.
5. Write about lead toxicity
6. What are stabilizers?
7. What are common adulterants in milk?
8. How adulterants can be detected in Honey.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks 4x15 =60

9.(a). Write an account of methods of objective evaluation to assess the Food quality

(or)

(b). Write the most common microbial tests of food evaluation.

10. (a).Describe about the rules and regulations Packaging and Labelling.

(or)

(b). Discuss about the International Food Standards CODEX and HACCP principles.

11.(a).Write a short notes on desirable constituents of anticaking agents and propellants.

(or)

(b). Classify the food contaminants based on the type in food with examples.

12.(a).Describe the methods of identifying the common contaminants in fats and oils.

(or)

(b).What are the major contaminants in meat, poultry, Eggs and fish ? How can they be eliminated during Preservation and storage.

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Define new food product?Write the characteristics of a new product.
2. Explain the need of developing new products at an industrial level?
3. Howto design a new product development? Explain.
4. What are the specific characteristics should be considered while designing a product for nutritional and health needs?
5. Write a brief note on test marketing and its types?
6. Write the procedure to apply and receive the patent for new product?
7. Differentiate pre and probiotics with suitable examples?
8. Define Health foods?Write the specifications to be followed in designing a health food.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks 4x15 =60 Marks

9. (a).Classify the differentnew food products emerging into the food marketing.

(or)

(b).What are the variousfactors affecting new food product development designing.

10.(a).Explain in detail about the different phases in product design and Formulation?

(or)

(b).Enumerate the shelf life testing procedures in new product development.

11.(a).Describe costing and pricing? Explain the process of food product commercialization and marketing.

(or)

(b).Discuss the concept, types and qualities of entrepreneurship?

12.(a).Write about the characteristics and specifications for therapeutic and value added foods?

(or)

(b).Give a detailed note on functional foods and Neutraceuticals?

Paper-III:FT- 403-A:NUTRITION FOR HEALTH AND FITNESS

(Common to MS Food Technology and M.Sc. Food Science Nutrition & Dietetics Course)

Time : 3 hours Max Marks:80

SECTION- A

Answer any FOUR of the Following

Each question carries 5 marks Marks: 4x5=20

1. Define the cardiac and muscle endurance.
2. What is BORG Scale?
3. Write briefly glycolysis energy pathway.
4. What is BMI? How do you assess the BMI?
5. How do you calculate protein requirements for different levels of exercise?
6. Write the importance of vitamins in exercise.
7. Write pre fluid requirements for an athlete.
8. Write the importance of Ergogenic foods in sports performance.

SECTION- B

Answer ALL questions

Each Question carries 15 Marks Marks 4x15 =60

9.(a).Explain about the interrelationship between physical fitness and health

(or)

(b). How do you assess fitness using FITT principle.

10.(a). Explain in detail the fat metabolism before, during and after exercise.

(or)

(b). Explain how the anaerobic energy cycles contribute energy during heavy exercise.

11.(a). Write the role of macro nutrients in supporting physical activity.

(or)

(b).What is the adverse health effects of dehydration or hypo hydration?

12. (a).Describe the assessment of nutritional status of sports person.

(or)

(b).What is Kinanthropometry, explain different measurements.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF MATHEMATICS

Course

M.Sc. MATHEMATICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

PROGRAMME: M.Sc.,(MATHEMATICS & APPLIED MATHEMATICS)
SRI VENKATESWARA UNIVERSITY::TIRUPATI
S.V.U.COLLEGE OF SCIENCES
DEPARTMENT OF MATHEMATICS

About the Department:

The Department of Mathematics of Sri Venkateswara University was one among the first six departments started in September1954. The department had the good fortune of being lead by the renowned Indian Mathematician Prof. R. Vaidyanatha Swamy followed by Prof. M.V. SubbaRao, Prof D.P. Banerjee, Prof. K. Sitaram and Prof. P. V. Arunachalam. The department has made many studies and established a multi-dimensional growth in the fields of Semi Group theory, Number theory, Geometry, Graph theory, Approximation theory, Forecasting, Fluid Dynamics, Differential Equations and Theoritical Computer Sciences.

Vision of the Mathematics Department:

- Imparting quality mathematical education and inculcating the spirit of research through innovative teaching and Research methodologies.
- To achieve high standards of excellence in generating and propagating knowledge in mathematics
- To provide an environment where students can learn, become competent users of mathematics and understand the use of mathematics in other disciplines.

Mission of the Mathematics Department:

- To emerge as a global centre of learning academic excellence and innovative research.
- To pursue collaborative programs with highly reputed National and International institutions.

Program Specific Outcomes:

- To develop problem – solving skills and apply them independently to problems in pure and applied mathematics.
- To assimilate complex mathematical ideas and argument.
- To develop abstract mathematical thinking.
- To improve own learning and performance.

Programme Objectives:

- Develop the knowledge, skills and attitudes necessary to pursue further studies in mathematics.
- Become confident in using mathematics to analyze and solve problems in real life situations.
- Able to apply knowledge of mathematical methods in solving, interpreting the solutions of problems.
- Formulate & design appropriate mathematical model in a variety of areas of mathematics.
- Able to develop a mathematical tool for solving real world problems.
- Build the capacity to investigate and apply mathematics to find solutions in a variety of contexts related to Science, Technology, Business and Industry.
- Apply the knowledge of mathematics in understanding concepts like weather, forecasting, earthquakes & Tsunami's...etc, and finds the suitable method to solve the problem.
- Understand the values, Professional ethics and responsibilities. Deal any situation in their personal and professional life without fear.
- Function effectively and work meritoriously as a team member and lead multidisciplinary teams in high quality programs by mathematical analysis.
- Develop abilities to communicate, present their reports and design effectively on various issues.
- Acquires skills in drafting & managing projects and in generating funds.
- Recognize the importance of learning process to understand day to day technology changes and developments.

Program Out Comes (PO) :

Students are expected to know or able to do by the time of graduation. At the end of the programme, the students will be to:

- Apply the knowledge of Mathematics in all the fields of learning including higher research and its extensions.
- Equip the student with skills to analyse problems, formulate the hypothesis, evaluate and draw reasonable conclusions.
- Investigate and apply mathematical problems and solutions in a variety of contexts related to science, technology, business and industry.
- Able to design and develop mathematical experiments to solve environment problems like global pollution, aerosol particles weather and virus in atmosphere.
- Utilize Number Theory in the field of Cryptography that helps in hiding information and maintaining secrecy in military information, transmission, computer password and e-commerce. Facilitate the study of groups in crystallography in chemistry and Lie symmetry groups in physics.
- To interpret the data like dosage of medicine, nutritious food to children and effectiveness of new drugs and survival rate of cancer parents under certain treatments etc.
- Illustrate solutions using numeric or graphical or programming methods.
- Imbibe high standards in life by understanding the values and ethics in their life..
- Investigate and solve unfamiliar math problems and allow to think on unsolved mathematical problems.
- Imbibe effective, scientific / technical communications in both oral and write.
- Acquire knowledge in designing Mathematical models .Also generate funds through various research projects..
- Ability to think, acquire knowledge and skills through logical reasoning and develop a habit of self- learning throughout life.

Program Educational Objectivess:

- Apply their knowledge in modern industry or secure acceptance in high quality post graduate program in mathematics
- Development in their chosen profession and / or progress toward an advanced degree.
- The trust and respect to others as effective and ethical team members.
- Graduates will become effective collaborators and innovators, leading or participating in effort to address social, technical and business challenges.

- Promote the culture of interdisciplinary research among all disciplines and applied mathematics.
- Explore the emerging areas of science and engineering like Nonlinear dynamic, computational mathematics and cryptography.
- Plan, analyze and investigate engineering problems using contemporary design and simulation tools.

PROGRAMME: M.Sc.,(MATHEMATICS & APPLIED MATHEMATICS)
SRI VENKATESWARA UNIVERSITY::TIRUPATI
S.V.U.COLLEGE OF SCIENCES
DEPARTMENT OF MATHEMATICS

Instructions for evaluation:-Each theory subject is evaluated for 100 Marks out of which 80 Marks through end examination and internal assessment would be for 20 Marks. The minimum marks for qualifying in theory subject shall be 40%.

1. End Examination Question Paper Pattern is as follows:

Section A&B	Questions	Units of the Syllabus	Marks
A	Questions 1 To 8 (four short answer Questions, TWO from each unit)	Form UNIT-I to UNIT-IV	4x5=20
B	Questions 9.(a) & (b) or 10 .(a) &(b)	Form UNIT-I	15
B	Questions 11. (a) &(b) or 12.(a) &(b)	From UNIT-II	15
B	Questions 2. (a) &(b) or 14.(a) &(b)	From UNIT-III	15
B	Questions 15(a) &(b) or 16(a) &(b)	From UNIT-IV	15
Total:			80

Procedure to evaluate internal examinations:

Theory:

Internal Examinations –I &II	20 marks

The pattern for the internal examination: 20 marks will be divided into descriptive (two out of four questions each carries 4 marks and two questions each carries 6 marks for each question with internal choice & 60 minutes duration).

***Note 1: If the final marks are in fraction, it shall be rounded off to the next number**

- If the student is absent for the internal examination, no re-exam shall be conducted If the student failed to attend both the internal examinations, his/her aggregate marks shall be considered zero.

- **Note:** Final internal semester marks shall be awarded as average of two internal examinations.

Example:

Marks obtained in first internal: 20
Marks obtained in second internal: 20
Final internal semester Marks: (20+20) = 40/2=20

Practical/Lab:

*Continuous assessment/ Day to day work	End examination	Total
20 marks	80M (50T+30P)	100M

*Continuous assessment format given below.

Note: For practical courses, there shall be a continuous evaluation during the semester for 20 sessional marks and end examination shall be for
50 T+30P marks. Day-to-day work in the laboratory shall be evaluated for 20 marks by the concerned laboratory teacher based on the regularity/record/viva. Both day to day evaluation and two internal should be finalized by 20 marks. The end examination shall be conducted by the concerned laboratory teacher and external examiner in the subject nominated by the university.

- Internal marks will be awarded by internal examiner only.

Open elective eligibility criterion:

For all branches of B.SC/BA/B.Com without mathematics background

(Submit Degree certificate Xerox).

FIRST SEMESTER

MA 101 ALGEBRA

Algebra is one of the broad areas of Mathematics together with Number theory Geometry and analysis. Algebra is applicable to all mathematical domains.

Course objectives:

1. To introduce action and conjugation of G-sets, the basic structures of Algebra such as groups, cyclic groups
2. To develop working knowledge on Sylow's theorems
3. Provide information on Ideals and homomorphism.
4. Discuss U.F.D, E.D and polynomial Rings.

UNIT –I:
Cyclic groups - Conjugacy and G-Sets, Permutation groups-Cyclic decomposition-Alternating Group A_n -Simplicity of A_n .
(Section 4 of Chapter 4, Sections 4 of Chapter 5, Sections 1, 2 and 3 of chapters 7).

UNIT –II:
Structure Theory of Groups: Direct Products –Finitely generated abelian groups -Invariants of a finite abelian group –Sylow theorems –group of orders p2, pq.
(Section 1,2,3,4 and 5 of Chapter 8).

UNIT – III:
Ideals and Homomorphism's: Ideals – Homomorphism's –Sum and direct sum of ideals – Maximal and prime ideals – Nilpotent and nil ideals –Zorn's Lemma
(Chapter 10)

UNIT – IV:
Unique Factorization domains and Euclidean Domains: Unique factorization domains-Principal ideal domains-Euclidean domains, Polynomial rings over UFD.
(Chapter 11)

Scope and standard in the book **"Basic Abstract Algebra" by P.B. Bhattacharya, S.K. Jain and S.R. Nagpaul, Cambridge University Press, Reprint 1997.**

References:

(1) Topics in Algebra, by I.N. Herstein
(2) Commutative algebra, by Zariski and Samuel Affiliated East-West Press.
(3) Abstract Algebra – Ronald. Solomon.
(4) A First course in 'ABSTRACT ALGEBRA' seventh edition by John B. Fraleigh, Pearson Education.
(5) Abstract algebra by David S. Summit, Richard .M.Forte, Wiley publication, 3rd edition.
(6) Introduction to rings and modules by C.Musli, Narosa Publications.
(7) A first course in abstract algebra by John B Fraleigh.
(8) Basic algebra by Jacobson.Nathan , Vol 1, Hindustan Publishing corporation 1991 .

Course outcomes: After completing this course the student will be able to

1. Identify the concept of action and conjugation.
2. Explain the applications of Sylow's theorems
3. Understand homomorphism and ideals in Rings.
4. Understand U.F.D, E.D and Polynomial Rings

MA 102 Real Analysis

(Common with the paper AMA 102 of Branch 1(B) Applied Mathematics)

This course covers Riemann-Stieltjes Integral, Sequences and Series of Functions, Functions of Several Variables, Improper Integrals, Fourier series, Maxima and Minima.

Course Objectives:

1) Acquire knowledge on Riemann-Stieltjes Integration and Differentiation.
2) Discuss Uniform Convergence, Continuity Integration and Differentiation
3) Learn comparison Tests
4). Understand the concept of functions of several variables.

UNIT –I:

The Riemann –Stieltijes Integral : Definition and Existence of the integral properties of the integral, integration and Differentiation, Integration of vector valued function, Rectifiable curves.

UNIT – II:

Sequence and series of functions : Discussions of main problem, uniform convergence, uniform convergence and continuity, Uniform convergence and Integration, Uniform convergence and Differentiation, Equicontinuous families of functions, The stone – Weistrass theorem .

Scope and standard as in Chapters 6, sections 7.1 to 7.26 of chapter 7 of Walter Rudin" Principles of Mathematical Analysis" 3rd edition 1976, Nc. Graw hill International student edition.

UNIT – III:

Improper Integrals: Introduction, Integration of unbounded functions with finite limit of Integration, comparison tests for convergence at $\propto$, infinite Range of Integration.

Fourier series: Trigonometrically series, some preliminary theorems, the Main theorem, intervals other than $-[-\Pi, \Pi]$

UNIT-IV:

Functions of Several Variables : Explicit and Implicit functions, Continuity, Partial derivations, differentiability, partial derivatives of higher order, differentials of higher order, function of functions, change of variables, Taylor's theorem, Extreme values, Maxima and Minima, functions of several variables.

Scope and standard as in chapters 11, 12 and 15 of **Mathematical Anlaysis by " S.C. Malik 1994" Wiley Eastern limited**

Reference:

(1) Mathematical Analysis- A modern Approach to Advanced Calculus Narosa Book Distributors Pvt LTD- New Delhi
(2) Real Analysis - Golden Math Series By N.P. Bali.
(3) A course of Mathematical Analysis by Shanti Narayan -.K. Mittal , S-Chand & Company LTD-New Delhi

Course Outcomes:

1. Understand the concepts of Riemann Stieltijes integration and Differentiation.
2. Understand Uniform Convergence and continuity.
3. Learn comparision tests at and infinity.
4. Analyze the concept of functions of several variables.

MA 103 A: ORDINARY DIFFERENTIAL EQUATIONS

(Common with paper AMA 103 of Branch I (B) Applied Mathematics)

This course introduces fundamental knowledge in mathematics that is applicable in the engineering aspects.

Course objectives :

1. To study boundary value problems.
2. To find solutions of power series and second order linear equations.
3. To provide knowledge on Special functions -Legendre polynomials and properties of Bessel functions
4. To know the method of successive approximation and Picard's theorem.

UNIT –I:
Oscillation Theory and boundary value problems: Qualitative properties of solutions –The Sturm comparison theorem-Eigen values, Eigen functions and the vibrating string.

UNIT – II:
Power series solutions: Series solutions of first order equations –Second order linear equations-Ordinary points-Regular singular points- Gauss's hyper geometric equation.

UNIT – III:
Some special functions of Mathematical Physics :Legender polynomials – properties of Legendre polynomials –Bessel functions –The gamma function- Properties of Bessel functions.

UNIT-IV:
The existence and uniqueness of solutions : The method of successive approximations-Picard's theorem-systems. The second order linear equations.

Scope and standard as in sections 22 to 24 of Chapter 4 (excluding Appendix A), Sections 26 to 30 of Chapter 5, Sections 32 to 35 of Chapter 6 (Excluding Appendices) and sections 55 to 57 of Chapter 11 of **" Differential Equations with Applications and Historical notes" by George F. Simmons, (1992) Tata McGraw Hill Publications**

References:

1. Advanced Differential Equations, M.D. Raisinghania , S. Chand Publications
2. Differential Equations" Ross, Shepley L Wieley India Pvt LTD.
3. Engineering Mathematics y Bali NP, SatyanarayanaBhavanari, kelkar, University Science Press, New Delhi 2012.
4. An introduction to O.D.E by Earl.A.Coddington , Prentice Hall of India Private Limited, New Delhi 1991.
5. Theory of ODE by Sam Sundaram, Narosa Publications

Course outcomes: From this course students will be able to

1. Learn boundary value problems, Eigen values and Eigen functions
2. Solve the second order linear questions.
3. Apply knowledge on special functions of Mathematical Physics.
4. Understand the method of successive approximation and solve the problems related to Picard's theorem.

MA 103 B: Linear Algebra

Course Objective:

1. To study Systems of Linear Equations.
2 .To introduce the notions of abstract vector spaces and linear transformations.
3. To know the Direct-sum decompositions cyclic decomposition, Rational and Jordan forms.
4. To study Bilinear Forms.

UNIT –I:

Linear Equations:

Systems of Linear Equations, Matrices and Elementary Row Operations, Row-Reduced Echelon Matrices.

UNIT –II:

Vector Spaces & linear transformations:

Vector Spaces, Subspaces, Bases and Dimension, Ordered basis and coordinates. Linear transformations, Rank-NullityTheorem, The algebra of linear transformations, Isomorphism, Matrix representation of linear transformations, Linear Functionals, Annihilator, Double dual, Transpose of a linear transformation. Characteristic Values and Characteristic Vectors of linear transformations.

UNIT –III:

Direct-sum decompositions:

Direct-sum decompositions –Invariant Direct sums. The primary decomposition theorem – cyclic subspaces and annihilators –cyclic decomposition, Rational and Jordan forms

UNIT –IV:

Bilinear Forms:

Bilinear Forms –Symmetric Bilinear Forms –Skew-Symmetric Bilinear Forms –Groups Preserving Bilinear Forms.

Text books:

1. K. Hoffman, R. Kunze, Linear Algebra, Prentice Hall of India, (2015).
2. Gilbert Strang, Introduction to Linear Algebra, Wellesley-Cambridge Press, (2009).

4. S. Kumaresan, Linear Algebra: A Geometric Approach, Prentice Hall India, (2009).
5. M. Artin, Algebra, Pearson Education India, (2010).

Course outcomes: After completing this course the student will be able to

1. Solve the system of linear equations
2. Understand the concept of vector space, basis, dimension and linear Transformation
3. Explain the direct sum decompositions
4. Understand the Bilinear forms.

MA 104 A: NUMERICAL METHODS
(Common with paper AMA 104 of Branch I (B) Applied Mathematics)

Course objectives:

1. To provide suitable Numerical Methods, for obtaining Roots of algebraic and transcendental equations.
2. To study of different methods of Interpolation and approximation.
3. To solve system of equations by suitable methods.
4. To study the various methods of Numerical integration.

UNIT-I:
Solutions of Algebraic and Transcendental Equations: Introduction - Bisection method – Method of False position - Newton Raphson –method solutions of non linear equations – Method of iteration.
[Above topics are from 2.1 to 2.7, 2.12 of Chapter-2 of the Text Book]

UNIT-II:
Interpolation And Approximation: Introduction - Lagrange Interpolation - Newton Divided Differences - Finite Difference Operators - Interpolating Polynomials using finite differences- Gregory- Newton forward difference interpolation- Backward difference interpolation - Stirling and Bessel interpolation - Spline interpolation – cubic splines. Finite differences- newton's formulae for interpolation- central interpolation formulae –gauss central difference formulae- strilling formula- bessels formula – legrange's interpolation formula.
[Above topics are from 3.1, 3.3, 3.6, 3.7, 3.7.3, 3.9.1, 3.10, 3.13 of Chapter-3 of the Text Book]

UNIT-III:
Direct methods – matrix inversion method -Gauss Elimination Method - Gauss – Jordan Method – eigen value problems –Iterative Methods
[Above topics are from 6.3.1 to 6.3.4 , 6.3.7 and 6.4 of Chapter-6 of the Text Book]

UNIT-IV:
Numerical integration: Trapezoidal rule- Simpsons rules – numerical solution of ODEs by Picard – Euler - Modified Euler – Runge-Kutta methods.
[Above topics are from.4.1 to 5.4.3 of Chapter- 5 and 7.1 to 7.5 of Chapter- 7of the Text Book]

Text Book:
Scope and standard as in chapters 2,3,5,6 and 7 of "**Introductory methods for Numerical Analysis by S.S.Sastry fourth edition**".

Reference Book:
1. An Introduction to Numerical Analysis by Kendall E. Atkinson.

2. Information Technology and Numerical methods fot Atul Kahate
3. Theory and problems in Numerical Methods with programs in C and C++.
4. Numerical Methods and computing by Ward Cheney and David Kincaid
5. Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar, R. K. Jain, New Age International (p) Limited, Publishers, 5th Edition

Course Learning Outcomes:

From this Course Students are able to

1. Solve Algebraic and Transcendental polynomial equations.
2. Understand Interpolation.
3. Solve system of equations by matrix inversion method and iterative method...etc.
4. Analyze and evaluate the accuracy of area, volume by Numerical methods.

CO3	2	3	3	3	1				1	1		
CO4	3	3	2	2	2				1	1		

MA 104 B: LATTICE THEORY

The course mainly designs with the aim of introducing the Lattice theory and Boolean algebra, the portion of lattice theory discuss modular, distributive lattice.

Course Objectives:

1. To study the Partly Ordered Sets.
2. To discuss Lattices.
3. To analyze Complete Lattices.
4. To explain distributive and modular lattices.

UNIT-I

Partly Ordered Sets: Set Theoretical Notations, Relations, Partly Ordered Sets, Diagrams, Special Subsets of a Partly Ordered Set, Length, Lower and Upper Bounds, The Minimum and Maximum Conditions, The Jordan–Dedekind Chain Condition, Dimension Functions.
(Sections 1 to 9 of Chapter 1)

UNIT-II

Lattices in General: Sub Lattices, Ideals, Bound Elements of a Lattice, Atoms and Dual Atoms, Complements, Relative Complements, Semi Complements, Irreducible and Prime Elements of a Lattice, The Homomorphism of a Lattice, Axiom Systems of Lattices.
(Sections 10 to 21 of Chapter 2)

UNIT-III

Complete Lattices: Complete Lattices, Complete Sub Lattices of a Complete Lattice, Conditionally Complete Lattices, Compact Elements and Compactly Generated Lattices, Sub Algebra Lattice of an Algebra, Closure Operations, Galois Connections, Dedekind Cuts, Partly Ordered Sets as Topological Spaces.
(Sections 22 to 29 of Chapter 3)

UNIT-IV

Distributive and Modular Lattices: Distributive Lattices, Infinitely Distributive and Completely Distributive Lattices, Modular Lattices, Characterization of Modular and Distributive Lattices by their Sub lattices, Distributive Sub lattices of Modular Lattices, The Isomorphism Theorem of Modular Lattices, Covering Conditions, Meet Representation in Modular and Distributive Lattices.
(Sections 30 to 36 of Chapter 4)

PRESCRIBED BOOK:

Introduction to Lattice Theory, Gabor Szasz, Academic press.

REFERENCE BOOK:

Lattice Theory, G. Birkhoff, Amer, Math. Soc.

Course Learning Outcome(s): From this course students are able to

1. Know Partly Ordered Sets.
2. Understand Lattices as Algebraic structures
3. Study complete Lattices.
4. Compare the distributive and modular lattices

MA 105: COMPLEX ANALYSIS
(Common with paper AMA 105 of Branch I (B) Applied Mathematics)

Complex analysis, traditionally known as the theory of functions of a complex variable, is the branch of mathematical analysis that investigates functions of complex numbers.

Course Objectives :

1. To define analytic functions and derivative rules for complex functions.
2. To introduce Mobius transformations and explain its applications.
3. To evaluate definite integrals using Cauchy integral formula.
4. To understand power series and expansion of analytic function**.**

UNIT –I:
Differentiation: Analytic Functions: Derivative Rules for Differentiating Complex Functions- The Cauchy-Riemann Equations –Analytic Functions-Geometrical Interpretation of Arg $f^{1}(z)$ and $\left|f^{1}(z)\right|$ - Conformal Mapping –The Mapping w = $\frac{az+b}{cz+d}$ - Conformal Mapping of the Extended Plane.

UNIT – II:
Mobius Transformations: The Group Property of Mobius Transformations – The Circle – Preserving Property of Mobius Transformations-Fixed points of a Mobius Transformation-Invariance of Cross Ratio-Mapping of a circle onto a Circle –Symmetry Transformations.

UNIT – III:
Complex Integrals: Cauchy Integral Theorem: Rectifiable Curves-Complex Integrals-The Case of Smooth Curves-Cauchy's Integral Theorem-The Key Lemma proof of Cauchy's Integral Theorem-Application to the Evaluation of Definite Integrals Cauchy's Integral Theorem for a system of Contours. Cauchy's Integral Formula –Morera's Theorem – Cauchy's Inequalities.

UNIT-IV:
Power Series: The Cauchy-Hadamard Theorem – Taylor Series. The Uniqueness Theorem for Power series-Expansion of an Analytic Function in a power series –Liouvill'es Theorem. The Uniqueness Theorem for Analytic functions-A Points and Zeros-Weirstrass' Double Series Theorem-Substitution of One Power Series into Another- Division of Power series.

Scope and Standard as in Chapters 3,5,7,8 and 10 of **" Introductory Complex Analysis" by Richard A. Silverman Dover Publications, Inc. (1972). New York.**

References: 1 Complex Variables - . Schaum outline series, 2/E by Speigel
2. An Introductions to Complex Analysis, by C.L. Siegel: North Holland,

Course outcomes:

1. Decide when and where a given function is analytic .

2. Understand the Mobius Transformation.
3. Describe basic properties of complex integration and having the ability to compute such integrals.
4. Understand Power series and expansion of analytic function.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	1	1	2	2				1	1		
CO2	1	2	2	3	2				1	1

CO4	1	3	1	2	2				1	1		

MA 106: DISCRETE MATHEMATICS
(Common with paper AMA 106 of Branch I (B) Applied Mathematics)

The aim of the discrete mathematics is the study of mathematical structure that are fundamentally discrete rather than continuous.

Course Objectives:

1. To learn Normal Forms-Disjunctive-Conjunctive Principal Disjunctive, Principal Conjunctive Normal Forms.
2. Understand predicate calculus.
3. To study the Algebraic systems such as Lattices,Boolean Algebra and Boolean functions
4. To introduce basic concepts of graph theory

UNIT –I:
Normal Forms-Disjunctive-Conjunctive Principal Disjunctive, Principal Conjunctive Normal Forms –Ordering and Uniqueness of Normal Forms. The theory of Inference for the statement Calculus-Rules of inferences – Consistency of Premises-Automatic Theorem proving (Sections 1.3 and 1.4 of Chapter 1)

UNIT – II:
The predicate calculus-Inference Theory of the Predicate Calculus(Sections 1.5 and 1.6 of Chapter 1)

UNIT – III:
Lattices and Boolean Functions: Lattices as partially Ordered sets-Lattices as Algebraic Systems –Boolean Algebra-Boolean Functions- Minimization. (Sections 4.1, 4.2, 4.3 and 4.4 of Chapter 4)

UNIT-IV:
Finite – State Machines-Basic Concepts of Graph Theory –Basic Definitions-Paths-Reach ability, and Connectedness-Matrix Representation of Graphs-Trees (Section 4.6 of Chapter 4 and Section 5.1 of Chapter)

Scope and Standard as in the book **" Discrete Mathematical Structures With Applications To Computer Science" by Tremblay, J.P&Manohar, R-Published by McGraw-Hill International Edition -1987 Edition**

References: 1. Discrete Mathematics & Graph Theory by BhavanariSatyanarana& Kuncham Syam Prasad, PHI Publications, New Delhi, Second Edition, 2014.
2. Mathematical Foundation of Computer Science, by Bhavanari Satyanarayana, T.V. Pradeep Kumar, SK. Mohiddin Shaw, BS Publications, Hyderabad.2016.

Course Outcomes:

1. Use standard Normal Forms-Disjunctive-Conjunctive Principal Disjunctive
2. Discuss Inference Theory of the Predicate Calculus
3. Understand Lattices and Boolean Functions.
4. Understand basic concepts of graph theory.

CO4	3	1	2	2	1				1	1		

Audit Course: Human Values and Professional Ethics – I
(Common with paper of Branch I(B) Applied Mathematics)

Course objectives:

The main objectives of promotion of Ethics and Human values are as under:

1. To create awareness, conviction & commitment to values for improving the quality of life through education, and for advancing social and human well being.

Unit – I

Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment.Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

Unit- II

Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders.

Unit- III

Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).

Unit – IV

Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths - Aryaastangamarga, (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.

Unit – V

Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

15. Text book for Intermediate logic, Ethics and Human Values , board of Intermediate
16. Education & Telugu Academic Hyderabad
17. I.C Sharma Ethical Philosophy of India. Nagin&coJulundhar.

Course outcomes:

1. Morals, Values and Ethics, Integrity, Work Ethic, Service Learning, Civic Virtue, Respect for others, Living Peacefully, Caring, Sharing, Honesty, Courage, Cooperation, Commitment, Empathy, Self Confidence character, Spirituality, Case study.
2. Human values are the virtues that guide us to take into account the human element when we interact with other human beings.
3. It will be used for respect, acceptance, consideration, appreciation, listening, openness, affection, empathy, and love towards other human beings.

SECOND SEMESTER (EVEN)

MA 201 GALOIS THEORY

Galois Theory plays an important role in the development of modern mathematics and it has large applications in computer science.

Course objectives:

1. Discuss extension fields and algebraic extensions.
2. To study the Normal and Separable Extensions
3. To introduce Galois Theory and understand applications of Galois Theory.
4. To study the roots of polynomials and Ruler & compass constructions.

UNIT –I:
Algebraic Extensions of Fields: Irreducible polynomials and Eisensteins Criterion-Adjunction of roots- Algebraic extensions- Algebraically closed fields.

UNIT – II:
Normal and Separable Extensions: Splitting fields- Normal extensions- Multiple roots-Finite fields- Separable extensions.

UNIT – III:
Galois Theory: Automorphic groups and fixed fields- Fundamental theorem of Galois Theory-Fundamental theorem of Algebra.

UNIT-IV:
Applications: Roots of unity and Cyclotomic polynomials- Polynomials solvable by radicals- Ruler and compass constructions.

Syllabus and Scope and Standard as in **"Basic Abstract Algebra" by P.. Bhattacharya, S.K. Jain and S.R. Nagpaul, Cambridge University Press, Reprint 1997**. Sections15.1, 15.2, 15.3 and 15.4 of chapter 15, Sections 16.1, 16.2, 16.3, 16.4and 16.5of chapter 16,Sections 17.1, 17.2 and 17.3 of chapter 17 and Sections 18.1, 18.3 and 18.5 of Chapter 18.

Reference:

1. Topics in Algebra by I.N. Herstein.
2. Field and Galois Theory-Howie. J.M
3. Galois Theory II Edition-Steven.H. Weintraub
4. Fields and Galois Theory-J.S. Milne.
5. Galois theory by Joseph Rotman, Second Edition 1998 Springer Publisher.
6. Algebra by Artinn, 1991 PHI
7. Abstract Algebra by David S summit and Richard M Forte , Wiley publications, 3rd edition

Course outcomes:

1. Apply the knowledge on polynomials solvable by radicals, Extension field.
2. Understand the normal and separable extensions.
3. Study the roots of polynomials specially quintic polynomials which is the cause to develop Galois theory.
4. Solve the problems on cyclotomic polynomials.

CO/PO	PO

MA 202: PARTIAL DIFFERENTIAL EQUATIONS

(Common with paper AMA 202 of Branch I (B) Applied Mathematics)

This course is designed to strengthen the fundamental knowledge of P.D.Es which lead to understand the real world problems.

Course Objectives:

1. To provide methods to find solutions of O.D.Es and P.D.Es
2. To find integral surface passing through given surface.
3. To explain methods to solve Linear P.D.Es with constant and Variable coefficients.
4. To discuss the boundary value problems and Laplace's Equation.

UNIT –I:
Differential Equations in more than two variables: Methods of solutions of dx/P =dy/Q = dz/R-Orthogonal trajectories of a system of curves on surface-Pfaffian differential forms and equations in Three variables. (Sections 3, 4, 5 and of Chapter 1)

UNIT – II:
Partial Differential Equations of the First order: Partial Differential equations-Origins of first order partial differential equations-Cauchy's problems for first order equations-Linear equations of first order-Integral surfaces passing through a given curve –Surfaces orthogonal to a given system of surfaces-Charpit's method.(Sections 1,2,3, 4,5,6 and 10 of Chapter 2)

UNIT – III:
Partial Differential Equations of the Second order: The Origin of second order equations – Linear partial differential with constant coefficients-Equations with variable coefficients. (Sections 1, 4 and 5 of Chapter 3)

UNIT-IV:
Laplace's Equations : Elementary solution of Laplace's equation-Families of equipotential surfaces-Boundary value problems – Separation of variables.(Sections 2,3,4 and 5 of Chapter 4)

Scope and Standard as in **"Elements of Partial Differential Equations" by IAN Sneddon** Chapter 1: Section 1 to 6, Chapter 2: Sections 1,2,4,5,6,10 Chapter 3: Sections 1,4,5, chapter 4: Sections 2,3,4,5, Chapter 5: Sec2, Chapter 6: Section 3 and 4.

Reference:

1. Ordinary and Partial Differential Equations by M.D. Raisinghania.
2. Advanced Differential Equations by M.D.Raisinghania, S. Chand Company Limited, New Delhi, 2021.
3. An elementary course to P.D.E by T.Amarnath, Second Edition, Narosa publishing house.

Course outcomes:

Students will be able to

1. solve Pfaffian differenrial equations and find orthogonal trajectories of a curve. Analyze the origin of first order PDEs and Integral surfaces passing through a given curve
2. Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit's method.
3. Apply various methods to solve Partial Differential Equations of the Second order.
4. Obtain equipotential surfaces using Laplace's equation.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12

CO4	2	3	2	3	1				1	1		

MA 203 A: TOPOLOGY
(Common with paper AMA 203 of Branch I (B) Mathematics)

Topological concepts play important role in the development of modern mathematics and it has large applications in theoretical physics.

Course Objectives:

1. To study basic concepts of Metric spaces.
2. Introduce the basic definitions and standard examples of topological spaces.
3. Define and illustrate a variety of topological properties such as compactness, connectedness and separation axioms.
4. To study the Hausdorff space and normal spaces.

UNIT –I:
Metric spaces:-open sets-closed sets- convergence-completeness and Baire's theorem-Continuous mappings – Cauchy's Inequality and MinKowskisInequality- Euclidean and Unitary Spaces

UNIT – II:
Topological Spaces, definition & examples-open bases and open sub bases- compact spaces

UNIT – III:
Product of spaces - Tychonoff's theorem and loally compact spaces-compactness for Metric spaces.

UNIT-IV:
Separation $-T_1$ space and Hausdorff spaces –completely regular spaces and Normal spaces –Urysohn's lemma- Tietze extension theorem-Urysohn's imbedding theorem –Connected spaces.

Articles 9 to 13,16,17,18,21 to 29 and 31 of Chapters II, III, IV, V and VI of **Introduction to Topology and Modern Analysis" by G.F. Simmons of MC Graw Hill Publishing company, Ltd**.

Reference:

1. 'Topology' by K.ChandraSekharaRao, Narosa Publications.
2. "Topology" by J.P. Chauhan, J.N. Sharma, Krishna Publications.
3. "General Topology" by M.G. Murdeshwar, new age International publications.

Course Outcomes:

Upon completion of this course, the student will be able to:

1. Understand to construct topological spaces from metric spaces and using general properties of neighborhoods, open sets, closed sets, basic and sub-basis.
2. Understand Topological Spaces, definition & examples.
3. Know the concepts connectedness, compactness, and Hausdorff property and their general characteristics.
4. Understand the Countability axioms, the separation axioms and normal spaces. And also the classical theorems such as the Uryshon lemma, the Tietze extension theorem.

CO4	2	1	3	2	1				1	1		

MA 203 (B): SEMIGROUP THEORY

Course Objectives:

1. Introduce basic definitions and examples of semi groups and semi Lattices.
2. Discuss free semi groups and lattices of equivalences.
3. Explain Ree's theorem& primitive Idempotents.
4. Analyze O-simple semi groups and free semi groups with Illustrations.

UNIT-I
Basic definitions – Homogenic Semigroups – Ordered sets- Semi lattices and lattices – Binary relations0- Equivalences- Congruences.

UNIT-II
Free Semi groups Ideals and – Rees Congruences. Lattices of equivalences and congruences – Green's equivalences. The structure of D.Classes – regular semigruops.

UNIT-III
Simple and Q-Simple semi groups. Principle factors, Rees's Theorem, Primitive idempotents.

UNIT-IV
Congruences on completely O-Simple semi groups. The Lattice of Congruences on a completely O-Simple semi groups. Finite Congruences, free semi groups.

Text Book :

An Introduction to Semi group Theory by J.M. Howie (1976), Academic Press, (Content of the Syllabus : Chapters-I, II and III).

Course Out comes:

1. Understand semi groups with the properties.
2. Explain the structure of D.Classes – regular semigruops.
3. Obtain proofs of Rees's Theorem.
4. Know the congruences on completely O-Simple semi groups

MA 204: (A) ADVANCED COMPLEX ANALYSIS
(Common with paper AMA 204(A) of Branch I (B) Applied Mathematics)

Course Objectives:

1. To explain Laurent Series, poles and singular points.
2. To understand Residue theorem and its applications.
3. To discuss Laplace's equation, Harmonic functions and Dirichlet problem.
4. To analyse infinite product and Partial Fraction Expansions.

UNIT –I:
Laurent Series-Singular Points: Laurent Series-Laurent's Theorem-Poles and Essential Singular points-Behavior at an Essential Singular point. Picard's Theorem-Behavior at infinity.

UNIT – II:
The Residue Theorem and its Applications: The Residue Theorem-Residues at infinity-Jordan's Lemma-Evaluation of Definite Integrals – The Argument principal-The Theorems of Rouche and Hurwitz-Local Behavior of Analytic Mappings-The Maximum Modulus principle and Schwarz's Lemma.

UNIT – III:
Harmonic Functions: Laplace's Equations-Conjugate Harmonic Functions-Poisson's integral. Schwartz's Formula-The Dirichlet problem.
Conformal Mapping: General Principles of Conformal Mapping –Mapping of the Upper Half-Plane onto a Rectangle –The Schwarz-Christoffel Transformation.

UNIT-IV:
Infinite product and Partial Fraction Expansions: Preliminary Results- Infinite Products-Weierstrass' Theorem –Mittage – Leffer's Theorem – The gamma Functions –Cauchy's Theorem on Partial Fraction Expansions.

Scope and Standard as in **"Introductory Complex Anlaysis" by Richard A. Silverman, Dover Publications, Inc. New York (1972)** Chapter 11 to 15.

Reference:

1. Fundamentals of Complex Analysis- Edward B. Saff, Arthur David Snider, Pearson Education
2. Foundations of Complex Analysis by S. Ponnusamy- Narosa Publications.

Course Outcomes:

1. To learn Laurent Series-Singular Points.
2. Explain the basic properties of complex integration and compute such integrals.

3. Learn topics of contemporary Advanced complex analysis in particular spaces of holomorphic functions, entire functions, harmonic functions and conformal mapping functions.
4. Understand the Infinite product and Partial Fraction Expansions.

CO/PO	PO

CO4	2	3	3	1	1				1	1		

MA 204 :(B): NON LINEAR ANALYSIS
(Common with paper AMA 204 (B) of Branch I (B) Mathematics)

Course Objectives:

1. Analyse and describe Fixed point theory, Banach's Contraction Principle, Schavder's theorem, Krasnoselski's theorems and its applications.
2. Define linear operators, normed spaces.
3. Explain Spectoral theorem and properties of bounded linear operators.
4. To study the Compact Linear operators in normed spaces and their Spectrums

UNIT-I

Fixed point theory and Applications: Banach's Contraction principle (Theorem 4.1.1 of text Book 1) – its applications (Theorem 8.1.1 and Theorem 8.2.4 of text book 1. Schavder's fixed point theorem (Theorem 4.3.10 of text book 1)- its application (Theorem 8.1.3 of text book 1). Krasnoselskii's fixed point theorem (Theorem 4.3.16 of text book 1) – its application to integral equations (theorem 8.2.3 of text book 1)

UNIT-II

Approximation Theory: Approximation in Normed spaces- Uniqueness, strict convexity-uniform approximation- chebyshev polyamines- Approximation in Hilbert space-splines. (Chapter 6 of text book 2)

UNIT-III

Spectral Theory of Linear Operators in Normed Spaces : Spectral Theory in Finite Dimensional Normed Spaces- Basic concepts spectral properties of Bounded linear operators-Further properties of Resolvent and spectrum- Use of Complex Analysis in spectral Theory – Banach algebras –Further properties of Banach algebras. (Chapter 7 of text book 2)

UNIT-IV

Compact Linear operators in Normed spaces and their Spectrums : Compact linear operators on Normed Spaces- Further of Compact linear operators –Spectral properties of compact linear operators on normed spaces – Further spectral properties of compact linear operators –Operator equations involving compact linear operators –Further theorems of fredholm type – Fredholm alternative (Chapter 8 of text book 2)

Text Book:

1. **Mohan C. Joshi and Remendar K. Bose – Some topics in Nonlinear functional Analysis, Wiley Eastern Limited 1985, New Delhi.**
2. **2.Ervin Kreyszig:- Introductory Functional Analysis with Applications, John Wiley & sons. Inc., 1978, New York**.

Course Outcomes:

1) Explain fixed point theory and its applications by well known theorems.
2) Analyse the approximations in Normed spaces.
3) Use of complex analysis in spectral theory and Banach algebras.
4) Evaluation of spectral theory in normed spaces.

CO/PO	PO

CO4	2	2	3	2	1				1	1		

MA 205: MEASURE AND INTEGRATION
(Common with paper AMA 205 of Branch I(B) Applied Mathematics)

Course Objectives

1. To acquire basic knowledge of measure Theory.
2. To understand the Riemann integtal and lebesgue integral of a bounded function.
3. To analyze the differentiation of monotone functions of bounded variation.
4. To study the Classical Banach Spaces.

UNIT –I :
Lebesgue Measure: Introduction, Outer measure, Measurable sets and Lebesgue measure, a non measurable set, Measurable functions, Little wood's three principles

UNIT – II:
The Lebesgue Integral: The Riemann integral, the Lebesgue integral of a bounded function over a set of finite measure, the integral of a non negative function, the general Lebesgue integral , convergence in measure.

UNIT – III:
Differentiation and Integration: Differentiation of Monotone functions –Functions of bounded variations-Differentiation of an integral – Absolute continuity –Convex functions.

UNIT-IV:
The Classical Banach Spaces: The $\boldsymbol{L^P}$Spaces, The MinKowski and Holder inequalities, Convergence and completeness, Approximation in $\boldsymbol{L^P}$,Bounded linear functional on the $\boldsymbol{L^P}$Spaces.

Syllabus and Scope and Standard as in **" Real Analysis" by H.L. Royden, Prentice Hall of India private limited, New Delhi,2001-Third edition**. Chapter 3, Chapter 4, Chapter 5, and Chapter 6.

Reference:

1. Principles of Mathematical Analysis, Third Edition by Walter Rudin.
2. A Real Analysis by H.L.ROYDEN, III ED., Peasion publishers.
3. Measure theory by P.R. HALMOS, 1974. Spingerverlag.
4. Measure theory by V.I.BOGACHVE, 1997, Spingerverlag.

Course Outcomes:

To document insight in modern theory of integration as a tool in advanced analysis and in statistics.

1. Compute Lebesgue measures.

2. Compute Lebesgue integrals of bounded functions over a set of finite measure
3. Solving the Differentiation and Integration of Monotone functions.
4. Understand the L^P Spaces, the MinKowski and Holder inequalities, Convergence and completeness

206: MATHEMATICAL STATISTICS
(Common with the paper AMA 206 of Branch I(B) Applied Mathematics)

Course objectives:

1. To introduce basic concepts of statistics and the probability set functions.
2. To study the Binomial, Poisson, Gamma, chi-square, normal distribution.
3. Explain stochastic convergence
4. To explain the objective of Point estimation-Measures of quality of estimations.

UNIT –I :
The probability set function –Random variables –The probability density function –The distribution function-Mathematical expectations-Some special mathematical expectations – Chebyshev inequality. Conditional probability –Marginal and conditional distributions-The Correlation coefficient-Stochastic Independence.

UNIT – II: The Binomial, Poisson, Gamma, chi-square normal distribution. Distributions of functions of Random variables –Sampling theory- Transformation of Variables of Discrete type-Transformation of Variables of the continues type.

UNIT – III:
The t and F Distributions – Distribution of order statistics –The moment –generating function Technique-The Distribution of X and Limiting distribution –Stochastic convergence-Limiting moment generating function-The central limit theorem –Some theorems on Limiting Distribution.

UNIT-IV:
Point estimation-Measures of quality of estimations-confidence intervals for means-confidence intervals for difference of Means-confidence intervals for variances.
A Sufficient statistics for a parameters- The Rao –Blackwell theorem-The Rao Cramer's inequality.
Syllabus and Scope as in **" Introduction to Mathematical Statistics" by Robert V. Hogg Allen T. Craig, Macmillan publishing co., Inc., New York -1978,** section 1.4,1.5,1.6,1.7,1.9,1.10,1.11, of chapter 1, chapter 2, sections 3.1 to 3.4 of chapter 3, sections 4.1 to 4.4, 4.6 to 4.8 of chapter 4, chapter 5, sections 6.1 to 6.5 of chapter 6, section 10.1, 10.2 chapter 10, section 11.1 of chapter 11.

References : 1. Mathematical Statistics by J.N. Kapur, H.C. Saxena- S. Chand Publications

4. Probability and Statistics for engineers and scientists by Walpole Myers and Keying ye, ninth edition, Pearson Publications

Audit Course –II :HUMAN VALUES AND PROFESSIONAL ETHICS – II

(Common with paper of Branch I(B) Applied Mathematics)

Unit – I

Value Education – Definition – relevance to present day - Concept of Human Values – self introspection – Self esteem, Family values –Components, structure and responsibilities of family- Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit – II

Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and health care professionals, Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit -III.

Business ethics – Ethical standards of business-Immoral and illegal practices and their solutions.Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics

Unit - IV.

Environmental ethics-Ethical theory man and nature-Ecological crisis, Pest control, Pollution and Waste,Climate change, Energy and Population, Justice and Environmental health.

Unit - V.

Social ethics-Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/Pregnancy. Ethics of media-Impact of Newspapers, Television, Movies and Internet.

Books for study:

1. John S Mackenjie: A manual of ethics.
2. “The Ethics of Management” By Larue Tone Hosmer, Richard D. Irwin Inc.
3. “Management Ethics – integrity at work’ by Joseph A. Petrick and John F. Quinn,Response Books: New Delhi.
4. “Ethics in Management: by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics

10. SusrutaSamhita: Tr.KavirajKunjanlal, KunjalalBrishagratha, Chowkamba Sanskrit series, Vol I, II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. CarakaSamhita: Tr.Dr.Ram Karan Sarma and VaidyaBhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
12. Ethics, TheoryandContemporarty Issues, Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.

13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
14. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Text book for Intermediate logic, Ethics and Human Values, board of Intermediate Education & Telugu Academic Hyderabad.
16. I.C Sharma Ethical Philosophy of India. Nagin& co Julundhar.

THIRD SEMESTER (ODD)

MA 301: COMMUTATIVE ALGEBRA

This course enables the students to acquire knowledge on algebra to analyse real world problems.

Course objectives:

1. To explain the operations on ideals and modules
2. To introduce the concepts of A.C.C and D.C.C in ideals and modules
3. To provide knowledge on Noetherian rings and their properties.
4. To understand decompostion theorem and uniqueness theorem.

UNIT –I:

Ideals and Modules, Operations on submodules, the isomorphism theorems, rings homomorphism and residue class rings. The order of a subset of a module, operations on ideals, prime and maximal ideals and primary ideals.

UNIT – II:

Finite conditions, composition series and direct sums.

UNIT – III:

Noetherian rings: Definitions, the Hillbert basis theorem, Rings with descending chain conditions, Primary rings and alternative method for studying the rings with d.c.c.

UNIT-IV:

The Lasker –Noetherian decomposition theorem-Uniqueness theorems, Applicationas to Zero –divisors and nilpotent elements and applications to the intersection of the powers of an ideal.

Standard and treatment as in section 1 to 12 Chapter III and section 1 to 7s chapter IV of the text book **" COMMUTAVIVE ALGEBRA" By Zariski and Samuel, D. Van NostranedCo.Inc .Princeton**

Reference : 1. Topics in Algebra- I.N. Hierstein
2. Lectures in Abstract Algebra- Nathan Jacobson.
3. Introduction to rings and modules by C Musli, Narosa Publications.
4. Basic algebra by Jacobson nathan volume 1 , Hindustan Publishing Corporation 1991
5. Introduction to commutative Algebra by M.F.Atiyah, Macdonald.
6. Basic algebra by P B Bhattacharya, S K Jain and S R Nagpaul, Cambridge University Press, Reprint 1997.

Course outcomes:

1. To understand the ideals, Modules and operations on them.
2. To learn the structures of composition series with ACC and DCC
3. To study the theoretical properties of Noetherian rings
4. Explain decomposition theorem and applications.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	3	2	3	3				1	1

CO3	3	3	1	1	2				1	1		
CO4	2	3	2	3	1				1	1		

MA 302: FUNCTIONAL ANALYSIS
(Common with paper AMA 302 of Branch I (A) Applied Mathematics)

Functional analysis is one of the primary branches of mathematics mainly dealing with a variety of metrics' and linear operators.

Course Objectives:

1) Define and illustrate several normed spaces.
2) Introduce linear operators and derive their properties.
3) Elaborate basic theorems like open and closed mapping theorem, implicit function theorem and spectral theorem.

UNIT –I :
The definitions and some examples –continuous –linear transformations-the Hahn-Banach Theorem.

UNIT – II:
Natural imbedding of N in N**-Open mapping theorem –Conjugate of an Operator.

UNIT – III:
Definition and Simple Properties –Orthogonal Complements- Orthonormal sets – Conjugate spaces-Adjoint of an Operator.

UNIT-IV:
Self adjoint operators –Normal and Unitary Operators-Projection –Spectral theorem.

Scope and Standard as in Sections 46 to 51 of Chapter 9, section 52 to 59 of chapter 10, section 62 of chapter 11 of **"Introduction to Topological and Modern analysis by G.F. Simmons McGraw Hill Book Company**.

References:

1. "Foundations of Functional Analysis" by S. Ponnyusamy-Narosa Publications
2. "Text book of Functional Analysis – A Problem oriented Approach" by V.K. Krishnan-Prentice Halls of India Publishers
3. "Functional Analysis" by B.V. Limaye New age International Publishers

Course Outcomes:

1) Work with different distance metrics and normed spaces,understand continuous linear transformations and the Hahn-Banach Theorem.
2) Comprehend the Open mapping theorem and Closed graph theorem.
3) Construct orthonormal sets and conjugate spaces.
4) Understand the relevance of self-adjoint operators, normal, unitary operators and projections.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	3	2	3	2	2				1	1

CO3	2	2	1	2	3				1	1		
CO4	2	3	1	3	1				1	1		

Generic Elective

MA 303(A): DIFFERENTIAL GEOMETRY

(Common with paper AMA 303(A) of Branch I (A) Applied Mathematics)

The aim of the course is to provide knowledge of the geometry of curves and surfaces. The course integrates concepts from different parts of mathematics, such as linear algebra, calculus and differential equations. It also provides intuitive examples for many concepts in linear algebra, calculus and differential equations. These examples are fundamental to physics and mechanics: they play a role in our understanding of the movements of particles and the theory of relativity.

Course Objectives:

1. Define surfaces and their properties
2. Explain local intrinsic properties of a surface
3. Study geodesic equations of conformal mapping
4. Discuss lines of curvature and parallel surfaces

UNIT –I :

The Theory Space Curves: Introductory remarks about space curves –Definitions –Arc length-Tangent, normal, and binormal –Curvature and torsion of a curve given as the intersection of two surfaces –Contact between curves and surfaces-Tangent surface, involutes and evolutes.(Sections 1 to 7 of Chapter 1).

UNIT – II:

The Metric: Local Intrinsic Properties of a Surface: Definitions of a Surface- Curves on a surface-Surfaces of revolution –Helicoids- Metric-Direction Coefficients-Families of curves –Isometric correspondence –Intrinsic properties. (Sections 1 to 9 of Chapter 11).

UNIT – III:

Geodesics-Canonical Geodesic Equations-Normal Property of geodesics –Existence theorems-Geodesic parallels-Geodesic curvature-Gauss-Bonnet theorem –Gaussian curvature-Surfaces of constant curvature –Conformal mapping-Geodesic mapping (Sections 10 to 20 of Chapter 11).

UNIT-IV:

The second Fundamental Form: Local non – intrinsic properties of a surface: The second fundamental form-principal curvatures –Lines of curvature -Developables associated with space curves-Developables associated with curves on surfaces –Minimal surfaces-Ruled surfaces-The fundamental equations of surface theory –Parallel surfaces. (Sections 1 to 10 Chapter III).

Scope and Standard as in Sections and chapters as specified above of the book **"An Introduction to Differential Geometry" of T.J Willmore, Oxford University Press, Thirteenth Impression, 1997.**

References: 1. A first course in Differential Geometry- D. Soma sundaram – Narosa Publications.

Course Outcomes: After completing this course, students should be able to

1. Define space curves , curvature and torsion of a curve.
2. Parameterize surfaces and isometric correspondence.
3. Understand geodesic curves and conformal mapping.
4. calculate and analyse curvature of surfaces in different settings.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	2	3	3	3				1	1		
CO2	1	2	2	1	2				1	1		
CO3	2	3	3	1	3				1	1		
CO4	1	1	2	3	2				1	1		

MA 303 (B): ALGEBRAIC CODING THEORY

Course Objectives:

1. To develop the knowledge among students about coding and decoding.
2. Explain linear codes and reliability of IMLD.
3. Hamming codes and extended Golay coad of
4. Introduce cylic coads and polynomial Encoding and Decoding.

UNIT –I :

Introduction to Coding Theory: Introduction –Basic Assumptions- Correcting and Detecting Error Patterns-Information Rate-The Effects of Error Corrections and Detection-Finding the Most Likely Codeword Transmitted-Some Basic Algebra-Weight and Distance –Maximum Likelihood Decoding-Reliability of MLD-Error-Detecting Codes-Error-Correcting Codes.

UNIT – II:

Linear Codes: Two Important Subspaces-Independence, Basis, Dimension-Matrices-Bases for C= < S > and C?-Generating Matrices and Encoding-parity –Check Matrices-Equivalent Codes- Distance of a Linear Code-Cosets-MLD for Linear Codes- Reliability of IMLD for Linear Codes.

UNIT – III:

Perfect and Related Codes- Some Bounds for Codes-Perfect Codes-Hamming Codes-Extended Codes-The Extended Golay Code- Decoding the Extended Golay Code- The Golay Code –Reed-Mullar Codes-Fast Decoding for RM (1,m)

UNIT-IV:

Cyclic Linear Codes; Polynomials and Words – Introduction to Cyclic Codes-Polynomial Encoding and Decoding –Finding Cyclic Codes-Dual Cyclic Codes.

Scope and Standard as in Sections 1.1 to 1.12 of Chapter 1, sections 2.1 to 2.12 of Chapter 2, sections 3.1 to 3.9 of chapter 3, sections 4.1 to 4.5 of chapter 4 and sections **"Coding Theory the Essentials: by D.G. Hoffman, D.A Leonard, C.C. Lindner, K.T. Phelps, C.A. Rodger, J.R. Wall**, Monographs and text books in pure and Applied Mathematics.

References: 1. Algebraic coding theory and Applications Longo. G. Hartmenn C.R. Springer publications
2. Introduction to coding theory by J.H. Vanlint, Springer publications.
3. Introduction to Algebraic and combinatorial coding theory, Academi press,INC. Newyork,1977.
4. The Theory of ERROR Correcting codes by N.J.A.Sloane, Vol I&V,North – Holland Amsterdam,1977.

Course Out comes:

1.Analyse Error detecting and error correcting codes.

2. Understand and apply algorithms in applications like sending messages without errors.

3. Use bounds for different types of codes.

4.Understand the polynomial encoding and decoding.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	3	2	2	1				1	1

CO4	2	3	2	3	1				1	1		

MA 304: CLASSICAL MECHANICS

(Common with paper AMA 304 of Branch I (B) Applied Mathematics)

Course Objectives:

1) To provide basic knowledge in mechanics to solve a mechanical problem.

2) To understand the concepts of Lagrange's equation and Hamiltonian principle.

3) To discuss Hamilton's equations of motion and principle of least action.
4) To understand canonical transformations.

UNIT –I:

D'Alembert's Principle and Lagrange's Equations: Some Definitions-Classification of Dynamical System-Some Examples of Constraints Virtual Displacement-Principle of Virtual Work –Generalised Force in Holonomic System-Mathematical Expression for the principle of Virtual work-D'Alember's principle-Lagrange's Equations for a Holonomic system-Velocity-dependent potential –Lagrange's Equations of Motion for conservative , Non-holonomic system-physcial Significance of 1 –Harmonic Oscillator.

UNIT – II:

Variational Principle and Lagrange's Equations:Variational Principle-Calculus of Variations-Hamilton Principle-Derivation of Hamilton's Principle from Lagrange's Equations-Derivation of Lagrange's Equations from Hamilton's Principle –Extension of Hamilton's Principle –Hamilton's Principle for Non-conservative, Non-holonomic System –Generlised Force in Dynamic system-Hamilton Principle for Conservative-Non holonomic System -Lagrange's Equations for Non –conservative –Holonomic System – Cyclic or lgnorable Coordinates –Conservation Theorem-Conservation of Linear Momentum in Lagrangian Formulation-Conservation of Angular Momentum in Lagrangian Formulation –Conservation of Angular Momentum –Conservation of Energy in Lagrangian Formulation.

UNIT – III:

Hamilton's Equations of Motion: Derivation of Hamilton's Equations of Motion (using Lagrange's Equations)-Routh's Procedure-Equations of Motion-Derivation of Hamilton's Equations from Hamilton's Principle –Principle of Least Action-Distinction between Hamilton's Principle and Principle of Least Action.

UNIT-IV:

Canonical Transformations: Canonical Coordinates and Canonical Transformations –The necessary and Sufficient Condition for a Transformation to be Canonical –Examples of Canonical Transformations-Properties of Canonical Transformulations- Infinitesimal Contact Transformation-Relation between Infinitesimal Contact Transformation and Poissson's Bracket-Hamilton Jacob Theory –Hamilton-Jacobi equations for Hamilton's Principle Function.

Syllabus and treatment as in the Book **" Classical Mechanics" by C.R. MONDAL Prentice Hall of India Private Limited, New Delhi, 110001,2001**, Chapter 1,2,4 and 5.

References: 1. Classical Mechanics by Goldstein Herbert, Charles P Poole, John safiko- Pearson India

2. Introduction to Classical Mechanics by Takwale R. Puranik P, Mc. GrawHill Education

Course Outcomes:

1) Understand D' Alembert's Principle and simple applications of the Lagrangian Formulation.
2) Derive the Lagrange's Equation from Hamilton's Principle.
3) Study the concept of the Equations of Motion and the Equivalent One-Dimensional Problems.
4) Distinguish the concept of the Hamilton Equations of Motion and the Principle of Least Action.

CO/PO	PO

SKILL DEVELOPMENT COURSE

MA 305: MAT-LAB
(Common with paper AMA 305 of Branch I (B) Mathematics)

Course Objectives:

1. Getting started with MATLAB
2. To create Matrices.
3. To learn 2D and 3D Plotting Techniques.
4. To know how to write programs to solve algebraic & Transcendental Equations

UNIT-I (Basics of MATLAB)

Getting Started with MATLAB- Different windows-Mathematical Operators and Mathematical functions-Creating matrices and arrays- Matrix algebra-Linear algebra concepts-plotting techniques- 2-D plotting-Subplot- 3-D plotting

UNIT-II (MATLAB Programming)

M-files-Script files-Relational operators-conditional statements-Numerical solutions to algebraic and transcendental equations- Solution of Simultaneous Algebraic Equations

Syllabus and treatment as in the Book:

1.Getting Started with MATLAB – A Quick Introduction for Scientists and Engineers, RudraPratap, Oxford University Press.

2. Engineering Problem solving with MATLAB, D.M.Etter, Printice-Hall

References:

1.. MATLAB Programming for Engineers. (4th ed.), Stephen J. Chapman, Cl Engineering.

2. MATLAB: Demystified -Basic Concepts and Applications, K KSarma, Vikas Publishing House Pvt Lt.

Course Outcomes:

1. Understand the mathematical operations & functions.
2. Write a program to addition & multiplication matrices.
3. Understand the 2-D plotting and 3-D plotting techniques.
4. Solve algebraic and transcendental equations.

MATLAB Practicals:

1. Basic 2D-plots

2. Basic 3D-plots

3. Bi-section method

4. False position method

5. Newton Raphson method

6. Creation and operations on Matrices

7. Gauss Elimination method

8. Gauss Jordan method

Open Elective (Other Departments)

MA 306 A: BUSINESS MATHEMATICS -1
(Common with paper AMA 306 of Branch I(A) Applied Mathematics)

Course Objectives:

1. To understand the basic concepts of Mathematics.
2. To calculate percentages- profit and loss.
3. To solve Linear equations.
4. To understand Conversion of one Number System to Another.

Unit - I
Number- H.C.F. and L.C.M. of Numbers - Decimal Fractions.

Unit - II
Surds and Indices – Percentage - Profit and loss.

Unit - III
Linear Equations in Two Variables – Ratio and Proportion- Variation.

Unit -IV
Number System: Types of Number Systems – Conversion of Decimal Number to Binary Number and Vice versa -Conversion of Decimal numbers to Octal numbers and Vice versa - Conversion of Hexadecimal number into Decimal number and Vice versa - Binary Arithmetic.

Scope and Standard Treatment as in Chapters 1,2,3,9,10,11,31,12 o**f"OBJECTIVEARITHMETIC" , by R.S.AGGARWAL , S.Chand and Company.**
Scope and Standard Treatment as in Chapter 1 of "**BUSINESS MATHEMATICS**", **by P.R.VITTAL , MARGHAM PUBLICATIONS.**

Course Outcomes:

1. Apply the knowledge in mathematics (algebra, matrices, calculus) in solving business problems.
2. Analyse and demonstrate mathematical skills required in mathematically intensive areas in Economics and business.
3. Explain the concepts and use equations, formulae and mathematical expressions and relationships in a variety of contexts
4. Understand The Binary Octal , Octal, Decimal and Hexadecimal Systems.

CO/PO	PO

MA 306 B: Fundamentals of Mathematical Statistics

(Common with paper AMA B 306 of Branch I (A) Applied Mathematics)

Course Objectives

1. To introduce basic concepts of statistics and Correlation
2. To know the significance of regression lines.
3. Importance of test of significance.
4. To enable to solve linear equations by Matrix method etc

Unit - I

Correlation analysis: measuring and significance of correlation –types of correlation; important methods of Studying correlation –scatter diagram methods, Karl Pearson's coefficient of correlation, and Rank correlation Coefficient –Coefficient of Determination.

Unit -II

Regression analysis: Meaning and significance of regression lines, regression equations, Coefficient of regression, standard error of the estimate.

Unit - III

Test of Significance: (small sample sets only) –t, X2 and F tests and their applications

Unit - IV

Elements of matrix algebra: Elementary operations –rank of matrix –inverse of a matrix – solutions of linear equations by matrix method and Cramer's rule.

References:

1. Gupta, S.P.Statistical Methods

2. Hooda R.P Statistical for business Economics, Macmillan,New Delhi.

3. Statistical Methods Concepts, applications and computation by Aggarwal YP Sterling Publications.

Course outcomes:

1. To learn the fundamental concepts of statistics and correlation analysis
2. To analyse regression lines.
3. To explain tests of significance
4. To solve liner equations by matrix methods

CO4	2	3	2	3	1				1	1		

FOURTH SEMESTER (EVEN)

MA 401: NUMBER THEORY

(Common with the paper AMA 401 of Branch (B) Applied Mathematics)

Identify and apply various properties of and relating to the integers including the Well-Ordering Principle, primes, unique factorization, the division algorithm and greatest common divisors.

Course Objectives:

1. Identify certain Arithmetical Functions and their properties
2 . Explain the averages Arithmetical Functions.
3. Understand the concept of a congruence and use various results related to Congruence including the Chinese Remainder Theorem.
4 Discuss Quadratic Residues and its properties.

UNIT –I :

Arithmetical Functions and Dirichlet Multiplication: Introduction-The Mobius function μ (n)-The Euler totient function $\emptyset$ (n) –A relation connection $\emptyset$ and μ -A product formula for $\emptyset$ (n) - The Dirichlet product of arithmetical functions –Dirichlet inverses and the Mobius inversion formula-The Mangoldt function Λ(n) –Multiplicative functions-Multiplicative functions and Dirichlet multiplication-The inverse of a completely multiplicative function-Liouville's Function λ(n)-the divisor functions $\sigma_{\propto}$(n) – Generalized convolutions –Formal power series –The Bell series of an arithmetical function –Bell series and Dirichlet multiplications –Derivatives of arithmetical functions-The Selberg identity .

UNIT – II:

Averages of Arithmetical Functions : Introduction –The big oh notation Asymptotic equality of functions-Euler's summation formula –Some elementary asymptotic formulas-The average order of d(n)-The average order of the divisor functions $\sigma_{\propto}$(n)-The average order of $\emptyset$ (n) -An application to the distribution of lattice points visible from the origin-The average order of μ (n) and of Λ(n) - Another identity for the partial sums of a Dirichlet product.

UNIT – III:

Congruences: Definition and basic properties of congruences-Residue classes and complete residue systems-Linear congruences –Reduced residue systems and the Euler-Fermat theorem- Polynomial congruences modulo p.Langranage's theorem-Applications of Lagarange's theorem-Simultaneous linear congruences – The Chinese remainder theorem – Applications of the Chinese remainder theorem –Polynomial congruences with prime power moduli- The Principle of cross-classification- A decomposition property of reduced residue systems.

UNIT-IV:

Quadratic Residues and the Quadratic Reciprocity Law: Quadratic residues-Lengendre's symbol and its properties –Evaluation of (-1|p) and (2|p) –Gauss' lemma-The quadratic reciprocity law –Applications of the reciprocity law –The Jacobi symbol

Primitive Roots: The exponent of a number mod m. Primitive roots –Primitive roots and reduced residue systems –The nonexistence of primitive roots mod 2^{α} for $\propto \geq 3$.

Scope and Standard as in chapter 2, Chapter 3, Chapter 5, Sections 9.1 to 9.7 of Chapter 9 and Sections 10.1 to 10.3 of chapter 10 **by Tom. M. Apostal , " Introduction to Analytical Number Theory" Springer International Student Edition .**

Course outcomes:

1. Understand arithmetical Functions.
2. Use functions $\Phi(n)$, $Ц(n)$, $\Lambda(n)$.
3. Understand the definitions of congruences, residue classes and least residues
4. Apply legendary polynomial and application of reciprocity law.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	2	3	3	3				1	1

CO3	2	3	2	1	2				1	1		
CO4	3	1	1	1	1				1	1		

MA 402: BANACH ALGEBRA

Course Objectives:

1. To study Algebraic, Topological fields and the structure of Banach Algebra.
2. To discuss properties of Gelfand mapping.
3. To emphasize on applications of commutative C*-algebras.
4. To study the fixed point theorem and its applications.

UNIT –I :
Definition and some examples –Regular and Singular elements- Topological divisors of zeros. Spectrum –formula for the spectral radius –Radical and Semi-simplicity

UNIT – II:
Gelfand mapping – Applications of the formula r(x) = lim $\|x^n\|^{1/n}$ –Involutions in Bnach algebras –GelfandNeumark Theorem.

UNIT – III:
Ideals in C (X) and Banach stone theorem –Stone $C\hat{}$ech compactification- CommutativeC^* algebras.Connectivity –Blocks-Application Construction of Reliable communications Networks.

UNIT-IV:
Fixed points theorems and some applications to analysis –Boolean algebras, Boolean Rings, and Stone's theorem.

Text Book : Scope and Standard as in Sections 64 to 66of Chapter 12, Sections 67 to 69 of chapter 12, sections 70 to 73 of Chapter 13, sections 74 to 76 of chapter 14, one an d three of Appendices of **" Introduction to Topology and Modern analysis" by G.F. Simmons McGraw Hill book Company**

Reference Books:
(1) W. Arveson, introduction to C algebras, springs-Verlay 1976
(2) KehezhuAn introduction to Operator Algebras, CRC Press Inc. 1993
(3) T.W. Padmer, Banch Algebra Vol 1, Cambridge University Press 1994

Course Outcomes:

1. Understand different types of Banach Algebras with examples.
2. Know the essence of Gelfand mapping
3. Understand the Application of Commutative C*- algebras.
4. Derive the applications of Banach Algebra in analysis, Fourier series,Boolean Algebras and other significant areas of mathematics.

CO/PO	PO

Generic Elective

MA 403(A) GRAPH THEORY
(Common with the paper AMA 403(A) of Branch (B) Applied Mathematics)

Course Objectives:

1. To introduce the fundamental concepts of graph theory
2. To Study the properties of Trees and Connectivity.
3. To explain Eulerian graphs and Hamiltonian graphs
4. To apply Euler Tours and Hamilton cycles in real life .

UNIT –I:
Graphs &Subgraphs: Graphs and simple Graphs-Isomorphism-Incidence and adjacency Matrices-Sub graphs-Vertex Degrees-Paths ad connection –Cyles-Shortest path-Problem-Sperner's Lemma

UNIT – II:
Trees: Trees-Edges and Bonds-Cut vertices, cayley's Formula –Applications-Connected problem

UNIT – III:
Connectivity-Connectivity –Blocks-Application Construction of Reliable communications Networks.

UNIT-IV:
Euler Tours and Hamiltonian Cycles: Euler Tours – Hamilton cycles Application –Chinese Postman Problem –Travelling Salesman Problem .

Scope and standard as in chapters 1 to 4 **" Graph Theory with application" J.A. Bondy and U.S.R. Murthy, M.C. Millan Press**

Rererences : 1. Discrete Mathematics & Graph Theory, by SatyanarayanaBhavanari, K. Syam Prasad, PHI Pvt Ltd, New Delhi Second Edition,2014
2. Mathematical Foundation of Computer Science by SatyanarayanaBhavanari, T. V. Pradeep Kumar, Sk. Mohiddin Shaw, BS Publications, Hyderabad,2016.
3 .Graph Theory with applications to Engineering and Computer Science – NarsinghDeo
4. First look at Graph Theory- John Clark Derek Allaw Holton.
5. Introduction to Graph Theory- Robin . J. Wilson
6. Introduction to Graph Theory- Douglas B. West
7. Graph theory with applications to engineering and computer science by

Narsing Deo, PHI
8. Discrete mathematics for computer scientists and Mathematics by J.L.Mott, A.Kandel and T.P.Baker, Prentice Hall of India

Course outcomes:

1. Able to define basic concepts of graphs
2. Utilize the Algorithms to find the shortest path, Optimal tree from a given graph.
3. construct reliable communication network.
4. Understand the concepts of practical problems like Chinese postman problem and travelling salesman problem

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	2	3	1	2				1	1

CO3	3	2	3	1	3				1	1		
CO4	3	1	1	2	3				1	1		

MA 403 (B) APPROXIMATION THEORY
(Common with the paper AMA 403 (B) of Branch I (B) Applied Mathematics)

Course Objectives:

Main objective to teach students many important results on several useful topics including metric spaces.

1) To learn about metric spaces, normed linear spaces, innerproduct spaces, convexity.
2) Describe the existence and unicity of best approximation, characterization of the solution.
3) Description of Algorithms like Polya's Algorithm and Weierstrass Theorem.
4) Discretization Errors in general and Algebraic Polynomials.

UNIT –I :
Nomenclature-Metric spaces-Normed linear space-Inner product spaces-convexity

UNIT – II:
Existence and Unicity of Best approximation-Convex functions-System of Equations with one unknown –Characterization of the solution –The special case n=n+1.

UNIT – III:
Polya's Algorithm-Ascent Algorithm –Descent Algorithm –Interpolation-Weierstrass Theorem.

UNIT-IV:
General linear Families –The Unicity Problem –Discretization Errors: General and Algebraic Polynomials-Markoff and Bernstein inequalities –Remes Algorithm.

Scope and standard as in sections 1 to 7 of chapter 1, sections 1 to 8 of chapter 2, sections 1 to 8 of chapter 3 of **"Introduction to Approximation Theory, E.W. Cheney, "McGraw Hill Book Company.**

References: 1. Fundamentals of Approximation Theory by H.N. Mhaskar-Narosa Publications
2. Approximation theory and methods, M.j.d. Powell , Cambridge University Press

Course Outcomes:

1) Know the Basic concepts of Metric spaces And Normed Linear space.

2) Knows existence and uniqueness theorems for the best approximations in various Banach spaces.
3) Knows Bernstein's lethargy theorem and its practical and theoretical implications.
4) Be able to use and analyze the basic methods for polynomial approximations.

MA 404: OPERATIONS RESEARCH FOR INDUSTRY AND COMMUNITY DEVELOPMENT

(Common with the paper AMA 404 of Branch (B) Applied Mathematics)

Course Objectives:

1) To understand Linear Programming Methods
2) To solve Linear programming problem through Dynamic Programming.
3) To introduce game theory.
4) To analyze Critical path method and program Evaluation and Review Technique.

UNIT –I :

Linear programming: Graphical Method-Simplex Method-Big M Method-Two phase method -Transportation Problem-(Sections 2.4 and 2.5.1, 2.5.2, 2.5.4 of chapter 2,sections 3.2, 3.3 and 3.4 of chapter 3).

UNIT – II:

Dynamic programming : Introduction –Capital Budgeting problem –Reliability improvement problem –Stage coach problem –Optimal subdividing problem –Solution Linear programming Problem through Dynamic Programming (Chapter 8)

UNIT-III:

Game Theory: Introduction -Game with Pure Strategies-Game with Mixed Strategies – Dominance property-Graphical Methods for 2xn and mx2 Games –Linear programming approach to Game Theory (Chapter 12)

UNIT-IV:

Project Management: Guidelines for Network Construction –Critical Path Method (CPM) –Program Evaluation and Review Technique (PERT) (Sections 10.3,10.4 and 10.6 of Chapter 10)

Scope and standard as **"OPERATIONS RESEARCH" By pannerselvam, R. published by Prentice Hall of India, New Delhi, 2002Edition,**

References: 1. Introduction to Management Sceicne " Operation Research" by Manmohan . P.K. Gupta, Kantiswarup, Sultan Chand & Sons Publishing house.

2. Operations Research –Theory and Applications by J.K. Sharma- Macmillan Publishers, India.
3. Operations Research –by Gupta, Prem Kumar, Hira S. Chand Publishers

Course Outcomes:

1) Formulate some real life problems into Linear Programming Problems.
2) Understand Dynamic Programming.
3) Solve the problems of Game with pure Strategies and Mixed Strategies.
4) Construct Reliable Networks.

MULTI DISCIPLINARY COURSE /PROJECT WORK

MA 405: COMPUTER ORIENTED NUMERICAL METHODS
(Common with paper AMA 405 of Branch I (A) Applied Mathematics)

Course objectives:

1. To provide the knowledge of the C-Language.
2. To make use of commands and operations.
3. To familiarize the ways of solving complicated mathematical problems numerically.
4. To learn writing programs in C to solve integral and Differential Equations

UNIT-I:

Fundamentals of C language:

Fundamentals of C language:

Constants, Variables, and Data Types –Operators and Expressions –Decision making and Branching: Introduction – Decision making with if Statement –Simple if Statement –The if Else Statement –Nesting of if Else Statements –The Else if Ladder –The Switch Statement – The Operator –The Go to Statement Decision making and loops: The WHILE Statement – the DO Statement –the FOR Statement –Jumps in LOOPS, Arrays: One dimensional arrays –Two dimensional arrays –Multidimensional arrays.

UNIT –II:

Numerical Integration – Trapezoidal rule – Simpson's rules – Numerical solution by ODEs by Picard – Euler modified method – Range-Kutta Methods.

.

1. Scope and Standard Programming in ANSI C" by E. Balaguruswamy(Sixth edition) Mc. Graw Hill Edition, India.

2. Scope and standard books Information Technology and Numerical methods fot Atul Kahate

Reference:

1. Numerical Methods: Problems and solutions, M.K. Jain, R.K. Jain, SRK Iyengar-New age International Publications

2. Let us "C"- Kanetkar BPB Publications

3. The "C" Programming Language- Kerghan, Brian W, Riechie Dennis M PHI Publisher.

Course outcomes:

1. Gain Knowledge in C-Language
2. Able to use commands and operations of C.
3. Solve integration and ODE problems by numerical methods
4. Write the programming to solve problems in numerical methods.

Practicals:

1. Trapezoidal rule

2. Simpson's $1/3^{rd}$ rule

3. Simpson's $3/8^{th}$ rule

4. Picard's Method

5. Euler method

6. Modified Euler method

7. Range-Kutta Method

8. Milne's Simpson's method

.

Open Elective (Other Departments)

MA 406: BUSINESS MATHEMATICS-II

(Common with paper AMA 406 of Branch I (B) Applied Mathematics)

Course Objectives:

1. To understand the basic concepts of Mathematics
2. To have a proper understanding of alligations and mixtures.
3. To solve algebraic Quadratic equations.
4. To understand the given data with data interpretation.

UNITI

Time and Work – pipes &cisterns-Time and distance

UNIT-II

Alligation or Mixture- Simple Interest – Compound Interest

UNIT-III

Algebraic Quadratic equations – series-Arithmetic and Geometric Progressions

UNIT-IV

Data Interpretation- Pie chart-Bar Diagram-Line graphs

1.Scope and Standard Treatment as in Chapters 15,16,17,20,21,22,32,33,41,42,43. of**"OBJECTIVEARITHMETIC" , by R.S.AGGARWAL , S.Chand and Company**.
2.Scope and Standard Treatment as in Chapter 1 of "**BUSINESS MATHEMATICS**", **by P.R.VITTAL , MARGHAM PUBLICATIONS.**

References:

3. Quick Arithmetic by **Ashish Aggarwal S.Chand**
4. **Quantitative Aptitude for competitive Examinations bu Dr. R.S. Aggarwal**

Course Outcomes:

- Able to solve problems on Time and work, Distance
- Understand the mixtures and also learn to calculate the Simple interest and compound interest.
- Find roots of Algebraic equations and sum and terms of given series.
- Analyse the data from charts and graphs..

CO/PO	PO

CO4	1	2	3	3	1				1	1		

MA 406(B): BASIC MATHEMATICS FOR SOCIAL SCIENCES (EE)

(Common with paper AM 406 (B) of Branch I(A) Mathematics)

Course Objectives:

1. Understand the basic concepts of a vector space and linear transformations.
2. Study Taylor and Maclaurin's series.
3. Discuss methods of integration to find length,area and volume of regions.
4. Introduce the Numerical Techniques to find roots of equations and solutions of linear equations.

UNIT –I :

Linear Algebra : Matrices-Rank of a matrix, Elementary transformations of a matrix, Inverse of a Matrix, System of linear equations, Linear transformations, Eigen values and Eigen vectors. Vector Analysis-Definition of a vector, Vector addition, Vector manipulation – Scalar product, Vector ; Orthogonal components manipulation-Scalar product, Vector product; Orthogonal components of a vector, Differentiation of vectors.

UNIT – II:

Differential Calculus : Limits and Continuity, Differentiation of functions, Successive differentiation, Leibnitz's theorem for nth derivative, Taylor's and Maclaurin's series, Applications to maxima and minima of functions, partial differentiation, Euler's theorem.

UNIT – III:

Integral Calculus: Introduction, Integration –by substitution, by parts, by partial fractions: Definite integrals, Applications to areas, length, and volumes.
Differential Equations: Equations of 1 st order and 1st degree.

UNIT-IV:

Numerical Methods –I Computer arithmetic, Representation of numbers, computer errors in representing numbers, Finding roots of equations-Bisection, Newton, and Secant methods; Interpolation and Numerical differentiation- Polynomial interpolation, Newton-Gregory forward interpolation, Backward differences; Numerical integration-Trapezoidal and Simpson's rules Elements of matrix algebra-elementary operations – rank of matrix-inverse of a matrix-solutions of linear equations by matrix method and Cramer's rule .

5. Linear algebra by K.Hoffman and R.Kunze 2nd edition,Pearson Education Taiwan ltd.
6. Numerical Methods:Problems and solutions M.K.Jain, R.K.Jain, SRK.Iyengar, Newage International publications

Course Out comes:

1. Understand the concepts of vector spaces with bases, algebra of Transformations and orthogonal components.
2. Understand the concepts of Limit, continuity &differentiation of functions.
3. Apply Integrals to find areas, length & volume of regions.
4. Apply the numerical Techniques to solve differential equations &Algebraic equations.

SRI VENKATESWARA UNIVERSITY::TIRUPATI
S.V.U.COLLEGE OF SCIENCES
DEPARTMENT OF MATHEMATICS

(Syllabus common for SV University College and affiliated colleges offered P.G. Courses in SVU Area)

(Revised Scheme of Instruction and Examination, Syllabus etc., with effect from the Academic Years 2021-22 for I and II Semesters and 2022-23 for III and IV Semesters)

M.Sc. APPLIED MATHEMATICS

SCHEME OF INSTRUCTION AND EXAMINATION

FIRST SEMESTER (ODD)

AMA101: METHODS OF APPLIED MATHEMATICS

Course Objectives:

1. To study Fourier series and Fourier Transforms
2. To know applications of finite Fourier Transforms .
3. To understand the applications of Sylow's Theorems.
4. To discuss the algebraic structures U.F.D, E.D and polynomial rings.

UNIT I:

Fourier Transforms : Dirichlet conditions – Fourier integral formula –The (Complex) Fourier transform – Fourier sine and cosine transforms-Relationship of Fourier and Laplace transforms –Some useful results for direct applications-Linearity property of Fourier transforms –Change of scale property –Shifting property—Modulation theorem – Convolution or Falting-The convolution or Falting theorem for Fourier transforms – Parseval's identity for Fourier transforms Rayleigh's theorem of Plancherel's theorem – Relation between the Fourier transforms of the derivatives of a function –Multiple Fourier transforms-Applications of Fourier transforms to Boundary value problems. (Chapter 4)

UNIT-II

Finite Fourier Transforms: Fourier Series –The finite Fourier sine transform-The finite Fourier cosine transforms –Relation between the finite Fourier transforms of the derivations of a function –Multiple finite Fourier transforms –Applications of finite Fourier transforms to boundary value problems-Special case of boundary value problem (Chapter 5)

Scope and standard as in **" Integral Transforms" by Raisinghania, published by S. Chand & Co., New Delhi, 1995 Editon.**

ALGEBRA:
UNIT: III
Structure Theory of Groups : Conjugacy and G-Sets, Normal series, Sovable groups, Simplicity of A_n, Sylow theorems.
(Sections 4 of Chapter 5, Sections 1 and 2 of Chapter 6, Section 3 of Chapter 7 and Sections 4 of Chapter 8)

UNIT IV : UNIQUE FACTORIZATION AND EUCLIDEAN DOMAINS:
Unique factorization domains-Principal ideal domains-Euclidean domains-Polynomial rings over UFD(chapter 11)

Scope and standard as in **"Basic Abstract Algebra" by Bhattacharya , P.B. Jain, S.K. and Nagpul S.R, Cambridge University Press, 1997 Reprint**

References: 1. Topics in Algebra – I.N. Herstein

Course outcomes:
1. Expand a function in a Fourier series and able to know under what conditions such an expansion is valid.
2. Aware of the connection between integral transforms (Fourier and Laplace) and be able to use the latter to solve mathematical problems relevant to the physical sciences.
3. Understand the applications of Sylow theorems.
4. Describe Unique Factorization and Euclidean Domains.

	PO

AMA 102 Real Analysis

(Common with the paper MA 102 of Branch 1(B) Mathematics)

This course covers Riemann-Stieltjes Integral, Sequences and Series of Functions, Functions of Several Variables, Improper Integrals, Fourier series, Maxima and Minima.

Course Objectives:

1) Acquire knowledge on Riemann-Stieltjes Integration and Differentiation.
2) Discuss Uniform Convergence, Continuity Integration and Differentiation
3) Learn comparison Tests
4) Understand the concept of functions of several variables.

UNIT –I :

The Riemann –Stieltijes Integral : Definition and Existence of the integral properties of the integral, integration and Differentiation, Integration of vector valued function, Rectifiable curves.

UNIT – II:

Sequence and series of functions : Discussions of main problem, uniform convergence, uniform convergence and continuity, Uniform convergence and Integration, Uniform convergence and Differentiation, Equicontinuous families of functions, The stone – Weierstrass theorem .

Scope and standard as in Chapters 6, sections 7.1 to 7.26 of chapter 7 of Walter Rudin" Principles of Mathematical Analysis" 3rd edition 1976, Nc. Graw hill International student edition.

UNIT – III:

Improper Integrals: Introduction, Integration of unbounded functions with finite limit of Integration, comparison tests for convergence at a $\propto$, infinite Range of Integration.

Fourier series: Trigonometrically series, some preliminary theorems, the Main theorem intervals other than - $[-\Pi, \Pi]$

UNIT-IV:

Functions of Several Variables : Explicit and Implicit functions, Continuity, Partial derivations, differentiability, partial derivatives of higher order, differentials of higher order, function of functions, change of variables, Taylor's theorem, Extreme values, Maxima and Minima, functions of several variables.

Scope and standard as in chapters 11, 12 and 15 of **Mathematical Anlaysis by " S.C. Malik 1994" Wiley Eastern limited**

Reference :

(1) Mathematical Analysis- A modern Approach to Advanced Calculus Narosa Book Distributors Pvt LTD- New Delhi
(2) Real Analysis - Golden Math Series By N.P. Bali.
(3) A course of Mathematical Analysis by Shanti Narayan -.K. Mittal , S-Chand & Company LTD-New Delhi

Course Outcomes:

1. Understand the concepts of Riemann Stieltijes integration and Differentiation.
2. Understand Uniform Convergence and continuity.
3. Learn comparision tests at a and infinity.
4. Analyze the concept of functions of several variables.

CO/PO	PO

CO4	1	3	3	2	1				1	1		

AMA 103 A: ORDINARY DIFFERENTIAL EQUATIONS

(Common with paper MA 103 of Branch I(B) Mathematics)

This course introduces fundamental knowledge in mathematics that is applicable in the engineering aspects.

Course objectives:

1. To study boundary value problems.
2. To find solutions of power series and second order linear equations.
3. To provide knowledge on Special functions -Legendre polynomials and properties of Bessel functions
4. To know the method of successive approximation and Picard's theorem

UNIT –I :
Oscillation Theory and boundary value problems: Qualitative properties of solutions –The Sturm comparison theorem-Eigen values, Eigen functions and the vibrating string.

UNIT – II:
Power series solutions: Series solutions of first order equations –Second order linear equations-Ordinary points-Regular singular points- Gauss's hyper geometric equation.

UNIT – III:
Some special functions of Mathematical Physics :Legender polynomials – properties of Legender polynomials –Bessel functions –The gamma function- Properties of Bessel functions.

UNIT-IV:
The existence and uniqueness of solutions: The method of successive approximations-Picard's theorem-systems. The second order linear equations.

Scope and standard as in sections 22 to 24 of Chapter 4 (excluding Appendix A), Sections 26 to 30 of Chapter 5, Sections 32 to 35 of Chapter 6 (Excluding Appendices) and sections 55 to 57 of Chapter 11 of **" Differential Equations with Applications and Historical notes" by George F. Simmons, (1992) Tata McGraw Hill Publications**

References:

1. Advanced Differential Equations, M.D. Raisinghania , S. Chand Publications

4. An introduction to O.D.E by Earl.A.Coddington , Prentice Hall of India Private Limited, New Delhi 1991.
5. Theory of ODE by Sam Sundaram, Narosa Publications

Course outcomes: From this course students will be able to

1. Learn boundary value problems, Eigen values and Eigen functions
2. Solve the second order linear questions.
3. Apply knowledge on special functions of Mathematical Physics.
4. Understand the method of successive approximation and solve the problems related to Picard's theorem.

AMA 103 B: Viscous Flows

Course objectives:

1. To introduce and explain fundamentals of Fluid Mechanics, which is used in the applications of Aerodynamics, Hydraulics, Marine Engineering, Gas dynamics etc.

2. To give fundamental knowledge of fluid, its properties and behavior under various conditions of internal and external flows.

3. To determine the losses in a flow system, flow through pipes, boundary layer flow and flow past immersed bodies.

UNIT – I:
General theory of stress and rate of strain –Nature of stresses –Transformation of stress components –Nature of Strain Transformation of rates of strain –Relation between stress and rate of strain.

UNIT – II:
Fundamental equations of the flow of viscous incompressible fluids –The equation of continuity -conservation of momentum –the energy equation – conservation of energy –the equations of state –perfect gases –the fundamental equations in cylindrical coordinate – equation of continuity –equations of motion –the energy equation.

UNIT –III:
Laminar flow of viscous incompressible fluids –similarity of flows –The Reynold's number –Viscosity from the point of view of the kinetic energy –Flow between parallel flat plates – couttee flow –plane Poiseuille flow –steady flow through a pipe –the Hagen Poiseuille flow –flow between two co-axial cylinders –Flow between two concentric Rotating cylinders – Applications of the parallel flow theory –The measure of viscosity –Hydro dynamics of bearing Lubrication –Steady flow around a sphere –the theory of very slow motion – unsteady motion os a flat plate

UNIT – IV:
The Laminar Boundary layer –properties of Navier-Stokes equations - Boundary layer concepts –The Boundary layer equations in two dimensional flow –The Boundary layer along a Flat plate –Blasius solution – Shearing stress and boundary layer thickness - Boundary layer as a surface with pressure Gradient –Momentum Integral theorems for the boundary layer –The Von Karman Integral relation.

Course Outcomes: From this course students will be able to

1. Employ Bernoulli's equation for real flow and deduce expressions for orifice meter and Venturimeter.

2. Establish Hagen Poisueille's equation for laminar flow through pipe and parallel plates.

3. The course provides the student with knowledge about: - Formulating and solving problems in fluid mechanics where viscosity and heat conductivity are of importance, in particular at high Reynolds numbers where the boundary layer approximation applies. - Primary focus is on the laminar flow regime. Briefly about stability and transition to turbulence. –

4.Quantitative methods for classical cases, such as Stokes problems, stagnation point flow, Blasius and Falkner-Skan problems, and integral methods for other boundary layers with pressure gradient and possible separation

Standard and treatment as in Articles 4.1 to 4.5 of chapter 4, Articles 5.1 to 5.6, Articles 8.1 to 8.8 of Chapter 8 and Articles9.1 to 9.5a of chapter 9 of **"FOUNDATIONS OF FLUID MECHANICS" by S.W.Yuvan, Prentice Hall of India Pvt.ltd. New Delhi,1969**.

AMA 104 A: NUMERICAL METHODS
(Common with paper AMA 104 of Branch I (B) Applied Mathematics)

Course objectives:

1. To provide suitable Numerical Methods, for obtaining Roots of algebraic and transcendental equations.
2. To study of different methods of Interpolation and approximation.
3. To solve system of equations by suitable methods.
4. To study the various methods of Numerical integration.

UNIT-I:
Solutions of Algebraic and Transcendental Equations: Introduction - Bisection method – Method of False position - Newton Raphson –method solutions of non linear equations – Method of iteration.
[Above topics are from 2.1 to 2.7, 2.12 of Chapter-2 of the Text Book]

UNIT-II:
Interpolation And Approximation: Introduction - Lagrange Interpolation - Newton Divided Differences - Finite Difference Operators - Interpolating Polynomials using finite differences- Gregory- Newton forward difference interpolation- Backward difference interpolation - Stirling and Bessel interpolation - Spline interpolation – cubic splines. Finite differences- newton's formulae for interpolation- central interpolation formulae –gauss central difference formulae- strilling formula- bessels formula – legrange's interpolation formula.
[Above topics are from 3.1, 3.3, 3.6 ,3.7, 3.7.3,3.9.1,3.10, 3.13 of Chapter-3 of the Text Book]

UNIT-II:
Direct methods – matrix inversion method -Gauss Elimination Method - Gauss – Jordan Method – eigen value problems –Iterative Methods
[Above topics are from 6.3.1 to 6.3.4 , 6.3.7 and 6.4 of Chapter-6 of the Text Book]

UNIT-IV:
Numerical integration: Trapezoidal rule- Simpsons rules – numerical solution of ODEs by Picard – Euler - Modified Euler – Runge-Kutta methods.
[Above topics are from.4.1 to 5.4.3 of Chapter- 5 and 7.1 to 7.5 of Chapter- 7of the Text Book]

Text Book:
Scope and standard as in chapters 2,3,5,6 and 7 of "**Introductory methods for Numerical Analysis by S.S.Sastry fourth edition**".

Reference Book:
1. An Introduction to Numerical Analysis by Kendall E. Atkinson.
2. Information Technology and Numerical methods fot Atul Kahate
3. Theory and problems in Numerical Methods with programs in C and C++.
4. Numerical Methods and computing by Ward Cheney and David Kincaid
5. Numerical Methods for Scientific and Engineering Computation by M. K. Jain, S. R. K. Iyengar, R. K. Jain, New Age International (p) Limited, Publishers, 5th Edition

Course Learning Outcomes:
From this Course Students are able to
1. Solve Algebraic and Transcendental polynomial equations.
2. Understand Interpolation.
3. Solve system of equations by matrix inversion method and iterative method...etc.
4. Analyze and evaluate the accuracy of area, volume by Numerical methods.

AMA 104 B: BOUNDARY VALUE PROBLEMS

Course objectives:

To learn series solution of some wellknown differential equations, Legendre & Chebysheve polynomials, Fourier &Hankel transforms, linear programming problems and basics of probability.

UNIT-I:

Stability of linear and weakly non-linear systems, continuous dependence and stability properties of linear, non-linear and weakly non-linear systems. Two dimensional systems. (chapter III of text book-1)

UNIT-II:

Stability by Liapunov second method, Autonomous systems, quadratic forms, Krasovski'sMethod. Construction of Liapunov functions for linear systems with constant coefficients. Selection of total energy function as a Liapunov Function, Stability based on first approximation (Chapter V of text book-1)

UNIT-III:

Mathematical Models in Population Dynamics: Introduction, single species Models, Two species Lotka volterra Models, Multi species Models. (chapter VI of text book-1)

UNIT-IV:

Analysis and Methods of non-linear differential equations, Existence theorem, extremal solutions, upper and lower solutions. Existence via upper and lower solutions, Monotone iterative Method and Method of quasilinearlization, Bihari's inequality, Application of Bihari's integral inequality. Non-linear variation of parameters formula Alekseev's formula. (Chapter VI of text book-2)

Text Books:

1. M.Rama Mohan Rao, Ordinary Differential equations, Theory methods and applications, Affiliated East-West Press Pvt.Ltd., New Delhi. (1980).

2. V.Lakshmikantam, S.G.Deo and V.Raghavendra, Text book of ordinary differential equations (second edition) Tata Mc Graw Hill, New Delhi. (1997)

Course Outcomes:

After completing this course the students would be able to:

1. Use the knowledge of Legendre and Chebyshev polynomials.
2. Apply Fourier and Hankel transforms in engineering problems.

3. Solve boundary value problems.
4. Understand the probability theory.

AMA 105: COMPLEX ANALYSIS

(Common with paper MA 105 of Branch I (B) Mathematics)

Complex analysis, traditionally known as the theory of functions of a complex variable, is the branch of mathematical analysis that investigates functions of complex numbers.

Course Objectives:

1. To define analytic functions and derivative rules of complex functions.
2. To introduce Mobius transformations and explain its applications.
3. To evaluate definite integrals using Cauchy integral formula.
4. To understand power series and expansion of analytic function**.**

UNIT –I :

Differentiation: Analytic Functions : Derivative Rules for Differentiating Complex Functions- The Cauchy-Riemann Equations –Analytic Functions-Geometrical Interpretation of Arg $f^1(z)$ and $\left|f^1(z)\right|$ - Conformal Mapping –The Mapping w = $\frac{az+b}{cz+d}$ - Conformal Mapping of the Extended Plane.

UNIT – II:

Mobius Transformations: The Group Property of Mobius Transformations – The Circle – Preserving Property of Mobius Transformations-Fixed points of a Mobius Transformation-Invariance of Cross Ratio-Mapping of a circle onto a Circle –Symmetry Transformations.

UNIT – III:

Complex Integrals: Cauchy Integral Theorem: Rectifiable Curves-Complex Integrals-The Case of Smooth Curves-Cauchy's Integral Theorem-The Key Lemma proof of Cauchy's Integral Theorem-Application to the Evaluation of Definite Integrals Cauchy's Integral Theorem for a system of Contours. Cauchy's Integral Formula –Morera's Theorem – Cauchy's Inequalities.

UNIT-IV:

Power Series: The Cauchy-Hadamard Theorem – Taylor Series. The Uniqueness Theorem for Power series-Expansion of an Analytic Function in a power series –Liouvill'es Theorem. The Uniqueness Theorem for Analytic functions-A Points and Zeros-Weirstrass' Double Series Theorem-Substitution of One Power Series into Another- Division of Power series.

Scope and Standard as in Chapters 3,5,7,8 and 10 of **" Introductory Complex Analysis" by Richard A. Silverman Dover Publications, Inc. (1972). New York**

References : 1 Complex Variables - . Schaum outline series, 2/E by Speigel
2. An Introductions to Complex Analysis, by C.L. Siegel :North Holland.

Course outcomes:

1. Decide when and where a given function is analytic .
2. Understand the Mobius Transformation.
3. Describe basic properties of complex integration and having the ability to compute such integrals.
4. Understand Power series and expansion of analytic function.

AMA 106: DISCRETE MATHEMATICS
(Common with paper MA 106 of Branch I (B) Mathematics)

The aim of the discrete mathematics is the study of mathematical structure that are fundamentally discrete rather than continuous.

Course Objectives:

1. To learn Normal Forms-Disjunctive-Conjunctive Principal Disjunctive, Principal Conjunctive Normal Forms.
2. Understand predicate calculus.
3. To study the Algebraic systems such as Lattices,Boolean Algebra and Boolean functions
4. To introduce basic concepts of graph theory

UNIT –I :
Normal Forms-Disjunctive-Conjunctive Principal Disjunctive, Principal Conjunctive Normal Forms –Ordering and Uniqueness of Normal Forms. The theory of Inference for the statement Calculus-Rules of inferences – Consistency of Premises-Automatic Theorem proving(Sections 1.3 and 1.4 of Chapter 1)

UNIT – II:
The predicate calculus-Inference Theory of the Predicate Calculus(Sections 1.5 and 1.6 of Chapter 1)

UNIT – III:
Lattices and Boolean Functions: Lattices as partially Ordered sets-Lattices as Algebraic Systems –Boolean Algebra-Boolean Functions- Minimization. (Sections 4.1 , 4.2,4.3 and 4.4 of Chapter 4)

UNIT-IV:
Finite – State Machines-Basic Concepts of Graph Theory –Basic Definitions-Paths-Reach ability, and Connectedness-Matrix Representation of Graphs-Trees (Section 4.6 of Chapter 4 and Section 5.1 of Chapter)

Scope and Standard as in the book " **Discrete Mathematical Structures With Applications To Computer Science" by Tremblay, J.P&Manohar, R-Published by McGraw-Hill International Edition -1987 Edition**

References : 1. Discrete Mathematics & Graph Theory by BhavanariSatyanarana&

2. Mathematical Foundation of Computer Science, by Bhavanari Satyanarayana, T.V. Pradeep Kumar, SK. Mohiddin Shaw, BS Publications, Hyderabad.2016.

Course Outcomes:

1. Use standard Normal Forms-Disjunctive-Conjunctive Principal Disjunctive
2. Discuss Inference Theory of the Predicate Calculus
3. Understand Lattices and Boolean Functions.
4. Understand basic concepts of graph theory.

Audit Course: Human Values and Professional Ethics – I
(Common with paper of Branch I(B) Mathematics)

Course objectives:

1.The main objectives of promotion of Ethics and Human values are as under:

2. To create awareness, conviction & commitment to values for improving the quality of life through education, and for advancing social and human well being.

Unit – I

Definition and Nature of Ethics- Its relation to Religion, Politics, Business, Legal, Medical and Environment.Need and Importance of Professional Ethics - Goals - Ethical Values in various Professions.

Unit- II

Nature of Values- Good and Bad, Ends and Means, Actual and potential Values, Objective and Subjective Values, Analysis of basic moral concepts- right, ought, duty, obligation, justice, responsibility and freedom, Good behavior and respect for elders.

Unit- III

Ahimsa (Non-Violence), Satya (Truth), Brahmacharya (Celibacy), Asteya(Non possession) and Aparigraha(Non- stealing). Purusharthas(Cardinal virtues)-Dharma (Righteousness), Artha(Wealth), Kama(Fulfillment Bodily Desires), Moksha(Liberation).

Unit – IV

Bhagavad Gita- (a) Niskama karma. (b) Buddhism- The Four Noble Truths - Aryaastangamarga, (c) Jainism- mahavratas and anuvratas. Values Embedded in Various Religions, Relirious Tolerance, Gandhian Ethics.

Unit – V

Crime and Theories of punishment- (a) Reformative, Retributive and Deterrent. (b) Views on manu and Yajnavalkya.

15. Text book for Intermediate logic, Ethics and Human Values , board of Intermediate
16. Education & Telugu Academic Hyderabad
17. I.C Sharma Ethical Philosophy of India. Nagin&coJulundhar.

Course outcomes:

1. Morals, Values and Ethics, Integrity, Work Ethic, Service Learning, Civic Virtue, Respect for others, Living Peacefully, Caring, Sharing, Honesty, Courage, Cooperation, Commitment, Empathy, Self Confidence character, Spirituality, Case study.
2. Human values are the virtues that guide us to take into account the human element when we interact with other human beings.
3. It will be used for respect, acceptance, consideration, appreciation, listening, openness, affection, empathy, and love towards other human beings.

SECOND SEMESTER (EVEN)

AMA 201: MATHEMATICAL MODELLING

Course Objectives:

1) Enable students understand how mathematical models for ODE of first order, second order and system of linear differential equations are formulated, solved and interpreted.
2) Make students appreciate the power and limitations of mathematics in solving practical real-life problems.
3) Equip students with the basic mathematical modeling skills.

UNIT –I

Mathematical modeling through ordinary differential equations of first order.

UNIT-II

Mathematical Modeling through system of ordinary differential equations of first order

UNIT: III

Mathematical Modeling through ordinary differential equations of second order

UNIT IV :

Mathematical Modeling through difference equations : Basic Theory of Linear Difference Equations with constant coefficients- Mathematical Modeling through difference equations in Economics and Finance- Mathematical Modeling through difference Equations in Population Dynamics and Genetics.

Mathematical Modeling Through partial Differential Equations : mass-Balance Equations – Momentum Balance Equations.

Scope and standard as in Chapter 2, Chapter 3, Chapter 4, sections 5.2 to 5.4 Chapters 5 and Sections 6.2 and 6.3 of Chapters 6 in **" Mathematical Modelling" by J.N. Kapur, Wiley Eastern Limited(1988)**

References : 1. Mathematical Modeling –Applications, Issues and analysis – by Vimal K Mishra, ANE Book Publishers –New Delhi
2. Mathematical Modeling by Meerscharet M. Elsevier India Pvt Ltd.

Course Outcomes:

1) Understand what a mathematical model is and explain the series of steps involved in a mathematical modeling process.

2) Identify some simple real-life problems that can be solved using mathematical models, model the problem, solve the resulting problem, and interpret the solution.
3) Acquire basic mathematical modeling skills that will enable them carry out simple modeling tasks individually or as a group.
4) State and explain the different classifications of mathematical models stating examples in each class.

AMA 202: PARTIAL DIFFERENTIAL EQUATIONS

(Common with paper MA 202 of Branch I (B) Mathematics)

This course is designed to strengthen the fundamental knowledge of P.D.Es which lead to understand the real world problems.

Course Objectives:

1. To provide methods to find solutions of O.D.Es and P.D.Es
2. To find integral surface passing through given surface.
3. To explain methods to solve Linear P.D.Es with constant and Variable coefficients.
4. To discuss the boundary value problems and Laplace's Equation.

UNIT –I:
Differential Equations in more than two variables : Methods of solutions of dx/P =dy/Q = dz/R-Orthogonal trajectories of a system of curves on surface-Pfaffian differential forms and equations in Three variables . (Sections 3,4,5 and of Chapter 1)

UNIT – II:
Partial Differential Equations of the First order: Partial Differential equations-Origins of first order partial differential equations-Cauchy's problems for first order equations-Linear equations of first order-Integral surfaces passing through a given curve –Surfaces orthogonal to a given system of surfaces-Charpit's method.(Sections 1,2,3, 4,5,6 and 10 of Chapter 2)

UNIT – III:
Partial Differential Equations of the Second order: The Origin of second order equations – Linear partial differential with constant coefficients-Equations with variable coefficients.(Sections 1,4 and 5 of Chapter 3)

UNIT-IV:
Laplace's Equations : Elementary solution of Laplace's equation-Families of equipotential surfaces-Boundary value problems – Separation of variables.(Sections 2,3,4 and 5 of Chapter 4)

Scope and Standard as in **" Elements of Partial Differential Equations" by IAN Sneddon** Chapter 1: Section 1 to 6, Chapter 2: Sections 1,2,4,5,6,10 Chapter 3: Sections 1,4,5, chapter 4: Sections 2,3,4,5, Chapter 5: Sec2, Chapter 6: Section 3 and 4.

Reference :

1. Ordinary and Partial Differential Equations by M.D. Raisinghania.
2. Advanced Differential Equations by M.D.Raisinghania, S. Chand Company Limited, New Delhi, 2021.
3. An elementary course to P.D.E by T.Amarnath, Second Edition, Narosa publishing house.

Course outcomes:

Students will be able to

1. solve Pfaffian differenrial equations and find orthogonal trajectories of a curve.

. Analyze the origin of first order PDEs and Integral surfaces passing through a given curve

2. Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit's method.
3. Apply various methods to solve Partial Differential Equations of the Second order.
4. Obtain equipotential surfaces using Laplace's equation.

Course outcomes:

Students will be able to

Analyze the origin of first order PDEs and Integral surfaces passing through a given curve

1. Identify linear and nonlinear PDE and solve nonlinear PDE by Charpit's method.
2. Apply Variables separable methods to solve Laplace Equation in cylindrical or spherical coordinates.
3. Obtain equipotential surfaces using Laplace's equation.
4. Understand the importance of partial differential equations in geometry, physics and other subjects.

AMA 203(A): TOPOLOGY
(Common with paper MA 203 A of Branch I(B) Mathematics)

Topological concepts play important role in the development of modern mathematics and it has large applications in theoretical physics.

Course Objectives:

1. To study basic concepts of Metric spaces.
2. Introduce the basic definitions and standard examples of topological spaces.
3. Define and illustrate a variety of topological properties such as compactness, connectedness and separation axioms.
4. To study the Hausdorff space and normal spaces.

UNIT –I :
Metric spaces:-open sets-closed sets- convergence-completeness and Baire's theorem-Continuous mappings – Cauchy's Inequality and MinKowskisInequality- Euclidean and Unitary Spaces

UNIT – II:
Topological Spaces, definition & examples-open bases and open sub bases- compact spaces

UNIT – III:
Product of spaces-Trychonoff's theorem and loally compact spaces-compactness for Metric spaces.

UNIT-IV:
Separation $-T^1$ space and Hausdorff spaces –completely regular spaces and Normal spaces –Urysohn's lemma- Tietze extension theorem-Urysohn's imbedding theorem –
Connected spaces.

Articles 9 to 13,16,17,18,21 to 29 and 31 of Chapters II,III,IV,V,andVI of **Introduction to Topology and Modern Analysis" by G.F. Simmons of MC Graw Hill Publishing company, ltd**.

Reference:

1. 'Topology' by K.ChandraSekharaRao, Narosa Publications
2. "Topology" by J.P. Chauhan, J.N. Sharma, Krishna Publications
3. "General Topology" by M.G. Murdeshwar, new age International

publications

Course Outcomes:

Upon completion of this course, the student will be able to:

1. Understand to construct topological spaces from metric spaces and using general properties of neighborhoods, open sets, closed sets, basic and sub-basis.
2. Understand Topological Spaces, definition & examples.
3. Know the concepts connectedness, compactness, and Hausdorff property and their general characteristics.
4. Understand the Countability axioms, the separation axioms and normal spaces. And also the classical theorems such as the Uryshon lemma, the Tietze extension theorem.

CO4	2	1	3	2	1				1	1		

AMA 203 (B) MAGNETO HYDRO DYNAMICS

Course Objectives:

Magneto hydrodynamics has been successfully applied to a number of astrophysical problems (e.g., to problems in Solar and Magnetosphere Physics), as well as to problems related to laboratory physics, especially to fusion devices. This module gives an introduction to classical magneto hydrodynamics. Students will get familiar with the system of magnetohydrodynamic equations and main theorems that follow from this system (e.g., conservation laws, anti-dynamo theorem). They will study the simplest magnetic equilibrium configurations, propagation of linear waves, and magneto hydrodynamic stability.

UNIT-I :

Three dimensional flows – Introduction – Sources, Sinks and Doublet – Images in a rigid infinite plane –Images in solid sphere – axisymmetric flows – Stroke's stream function – some special forms of the stream function for axisymmetric irrotational motion.

UNIT-II:

Two dimensional flows – Meaning of two dimensional flow – Use of Cylindrical polar co-ordinates – The complex potential for two dimensional, Irrotational Incompressible flow – complex velocity potentials for standard two dimensional flows – examples – Two dimensional Image systems – The Milne-Thomson Circle Theorem – The theorem of Blassius.

UNIT-III:

Magneto Hydro Dynamics: Nature of MHD – Maxwell's Electro magnetic field equations – Medium at rest – Medium in motion – The equation of motion of a conducting fluid – Rate of flow of change – Simplification of the Electro magnetic field equations – The magnetic Reynold's number – Alfven's theorem.

UNIT-IV:

The magnetic body force – Ferraro's Law of Isorotation – The magneto hydrodynamic waves – A more detailed Investigation of Alfven Waves – Laminar flow – of a viscous conducting liquid between parallel walls in a transverse field.

Standard and treatment as in Articles 4.1 to 4.5 of Chapter 4, Articles 5.1 to 5.9 of Chapter 5, Articles 9.1 to 9.10,9.12.1 and 9.14 of Chapter 9 of **"TEXT BOOK OF FLUID DYNAMICS" by F. Chorlton, CBS Publications and Distributors, Delhi, 1985**.

Course Outcomes:

1. Understanding the basic concepts and the equations of flow of viscous fluids.
2.Understanding the electromagnetic induction mechanism which has its origin in the movement of fluids that are good electrical conductors
3. Ability to translate a magnetic hydrodynamic problem in an appropriate mathematical form.
4. Ability to interpret the solutions of the equations established in physical terms.

AMA 204: (A) ADVANCED COMPLEX ANALYSIS

(Common with paper MA 204(A) of Branch I(B) Mathematics)

Course Objectives:

1. To explain Laurent Series, poles and singular points.
2. To understand Residue theorem and its applications.
3. To discuss Laplace's equation, Harmonic functions and Dirichlet problem.
4. To analyse infinite product and Partial Fraction Expansions.

UNIT –I:

Laurent Series-Singular Points: Laurent Series-Laurent's Theorem-Poles and Essential Singular points-Behavior at an Essential Singular point. Picard's Theorem-Behavior at infinity.

UNIT – II:

The Residue Theorem and its Applications: The Residue Theorem-Residues at infinity-Jordan's Lemma-Evaluation of Definite Integrals – The Argument principal-The Theorems of Rouche and Hurwitz-Local Behavior of Analytic Mappings-The Maximum Modulus principle and Schwarz's Lemma.

UNIT – III:

Harmonic Functions: Laplace's Equations-Conjugate Harmonic Functions-Poisson's integral. Schwartz's Formula-The Dirichlet problem.

Conformal Mapping: General Principles of Conformal Mapping –Mapping of the Upper Half-Plane onto a Rectangle –The Schwarz-Christoffel Transformation.

UNIT-IV:

Infinite product and Partial Fraction Expansions: Preliminary Results- Infinite Products-Weierstrass' Theorem –Mittage – Leffer's Theorem – The gamma Functions –Cauchy's Theorem on Partial Fraction Expansions.

Scope and Standard as in **" Introductory Complex Anlaysis" by Richard A. Silverman, Dover Publications, Inc. New York (1972)** Chapter 11 to 15.

Reference:

1. Fundamentals of Complex Analysis- Edward B. Saff, Arthur David Snider, Pearson

Education

2. Foundations of Complex Analysis by S. Ponnusamy- Narosa Publications.

Course Outcomes:

1. To learn Laurent Series-Singular Points.
2. Explain the basic properties of complex integration and compute such integrals.
3. Learn topics of contemporary Advanced complex analysis in particular spaces of holomorphic functions, entire functions, harmonic functions and conformal mapping functions.
4. Understand the Infinite product and Partial Fraction Expansions.

CO4	2	3	3	1	1				1	1		

AMA 204 :(B): NON LINEAR ANALYSIS

(Common with paper MA 204 (C) of Branch I (B) Mathematics)

Course Objectives:

1. Analyse and describe Fixed point theory, Banach's Contraction Principle, Schavder's theorem, Krasnoselski's theorems and its applications.
2. Define linear operators, normed spaces.
3. Explain Spectoral theorem and properties of bounded linear operators.
4. To study the Compact Linear operators in normed spaces and their Spectrums

UNIT-I

Fixed point theory and Applications :Banach's Contraction principle (Theorem 4.1.1 of text Book 1) – its applications (Theorem 8.1.1 and Theorem 8.2.4 of text book 1. Schavder's fixed point theorem (Theorem 4.3.10 of text book 1)- its application (Theorem 8.1.3 of text book 1). Krasnoselskii's fixed point theorem (Theorem 4.3.16 of text book 1) – its application to integral equations (theorem 8.2.3 of text book 1)

UNIT-II

Approximation Theory: Approximation in Normed spaces- Uniqueness, strict convexity-uniform approximation- chebyshev polyamines- Approximation in Hilbert space-splines. (Chapter 6 of text book 2)

UNIT-III

Spectral Theory of Linear Operators in Normed Spaces : Spectral Theory in Finite Dimensional Normed Spaces- Basic concepts spectral properties of Bounded linear operators-Further properties of Resolvent and spectrum- Use of Complex Analysis in spectral Theory – Banach algebras –Further properties of Banach algebras. (Chapter 7 of text book 2)

UNIT-IV

Compact Linear operators in Normed spaces and their Spectrums : Compact linear operators on Normed Spaces- Further of Compact linear operators –Spectral properties of compact linear operators on normed spaces – Further spectral properties of compact linear

operators –Operator equations involving compact linear operators –Further theorems of fredholm type – Fredholm alternative (Chapter 8 of text book 2)

Text Book:

1. **Mohan C. Joshi and Remendar K. Bose – Some topics in Nonlinear functional Analysis, Wiley Eastern Limited 1985, New Delhi.**
2. **Ervin Kreyszig:- Introductory Functional Analysis with Applications, John Wiley & sons. Inc., 1978, New York.**

Course Outcomes:

1) Explain fixed point theory and its applications by well known theorems.
2) Analyse the approximations in Normed spaces.
3) Use of complex analysis in spectral theory and Banach algebras.
4) Evaluation of spectral theory in normed spaces.

CO/PO	PO

AMA 205: MEASURE AND INTEGRATION

(Common with paper MA 205 of Branch I(B) Mathematics)

Course Objectives

1. To acquire basic knowledge of measure Theory.
2. To understand the Riemann integtal and lebesgue integral of a bounded function.
3. To analyze the differentiation of monotone functions of bounded variation.
4. To study the Classical Banach Spaces.

UNIT –I :

Lebesgue Measure: Introduction, Outer measure, Measurable sets and Lebesgue measure, a non measurable set, Measurable functions, Little wood's three principles

UNIT – II:

The Lebesgue Integral: The Riemann integral, the Lebesgue integral of a bounded function over a set of finite measure, the integral of a non negative function, the general Lebesgue integral , convergence in measure.

UNIT – III:

Differentiation and Integration: Differentiation of Monotone functions –Functions of bounded variations-Differentiation of an integral – Absolute continuity –Convex functions.

UNIT-IV:

The Classical Banach Spaces: The $\boldsymbol{L^P}$ Spaces, The MinKowski and Holder inequalities, Convergence and completeness, Approximation in $\boldsymbol{L^P}$,Bounded linear functional on the $\boldsymbol{L^P}$ Spaces.

Syllabus and Scope and Standard as in **" Real Analysis" by H.L. Royden, Prentice Hall of India private limited, New Delhi,2001-Third edition**. Chapter 3, Chapter 4, Chapter 5, and Chapter 6.

Reference:

1. Principles of Mathematical Analysis, Third Edition by Walter Rudin.
2. A Real Analysis by H.L.ROYDEN, III ED., Peasion publishers.
3. Measure theory by P.R. HALMOS, 1974. Spingerverlag.
4. Measure theory by V.I.BOGACHVE, 1997, Spingerverlag.

Course Outcomes:

To document insight in modern theory of integration as a tool in advanced analysis and in statistics.

1. Compute Lebesgue measures.
2. Compute Lebesgue integrals of bounded functions over a set of finite measure
3. Solving the Differentiation and Integration of Monotone functions.
4. Understand the $\boldsymbol{L^P}$ Spaces, the MinKowski and Holder inequalities, Convergence and completeness

CO4	3	1	3	3	2				1	1		

AMA 206: MATHEMATICAL STATISTICS
(Common with the paper MA 206 of Branch I(B) Mathematics)

Course objectives:

1. To introduce basic concepts of statistics and the probability set functions.
2. To study the Binomial, Poisson, Gamma, chi-square, normal distribution.
3. Explain stochastic convergence
4. To explain the objective of Point estimation-Measures of quality of estimations.

UNIT –I :

The probability set function –Random variables –The probability density function –The distribution function-Mathematical expectations-Some special mathematical expectations – Chebyshev inequality. Conditional probability –Marginal and conditional distributions-The Correlation coefficient-Stochastic Independence.

UNIT – II: The Binomial, Poisson, Gamma, chi-square normal distribution. Distributions of functions of Random variables –Sampling theory- Transformation of Variables of Discrete type-Transformation of Variables of the continues type.

UNIT – III:
The t and F Distributions – Distribution of order statistics –The moment –generating function Technique-The Distribution of X and Limiting distribution –Stochastic convergence-Limiting moment generating function-The central limit theorem –Some theorems on Limiting Distribution.

UNIT-IV:
Point estimation-Measures of quality of estimations-confidence intervals for means-confidence intervals for difference of Means-confidence intervals for variances.
A Sufficient statistics for a parameters- The Rao –Blackwell theorem-The Rao Cramer's inequality.

Syllabus and Scope as in **" Introduction to Mathematical Statistics" by Robert V. Hogg Allen T. Craig, Macmillan publishing co., Inc., New York -1978,** section 1.4,1.5,1.6,1.7,1.9,1.10,1.11, of chapter 1, chapter 2, sections 3.1 to 3.4 of chapter 3, sections 4.1 to 4.4, 4.6 to 4.8 of chapter 4, chapter 5, sections 6.1 to 6.5 of chapter 6, section 10.1, 10.2 chapter 10, section 11.1 of chapter 11.

References : 1. Mathematical Statistics by J.N. Kapur, H.C. Saxena- S. Chand Publications

3. Fundamentals of mathematical Statistics by S.C.Gupta and V.K.Kapoor, 11th edition S.Chand and sons, New Delhi
4. Probability and Statistics for engineers and scientists by Walpole Myers and Keying ye, ninth edition, Pearson Publications

Course outcomes:

1. To learn the fundamental concepts of statistics and techniques required for data analysis.
2. Apply the knowledge of Binomial, Poisson, Gamma, chi-square, normal distribution in solving various problems,.
3. To explain stochastic convergence
4. To discuss measures of quanlity of estimations

Audit Course –II :HUMAN VALUES AND PROFESSIONAL ETHICS – II

(Common with paper of Branch I(B) Applied Mathematics)

Unit – I

Value Education – Definition – relevance to present day - Concept of Human Values – self introspection – Self esteem, Family values –Components, structure and responsibilities of family- Neutralization of anger – Adjustability – Threats of family life – Status of women in family and society – Caring for needy and elderly – Time allotment for sharing ideas and concerns.

Unit – II

Medical ethics – Views of Charaka, Sushruta and Hippocratus on moral responsibility of medical practitioners. Code of ethics for medical and health care professionals, Euthanasia, Ethical obligation to animals, Ethical issues in relation to health care professionals and patients. Social justice in health care, human cloning, problems of abortion. Ethical issues in genetic engineering and Ethical issues raised by new biological technology or knowledge.

Unit -III.

Business ethics – Ethical standards of business-Immoral and illegal practices and their solutions.Characterics of ethical problems in management, ethical theories, causes of unethical behavior, ethical abuses and work ethics

Unit - IV.

Environmental ethics-Ethical theory man and nature-Ecological crisis, Pest control, Pollution and Waste,Climate change, Energy and Population, Justice and Environmental health.

Unit - V.

Social ethics-Organ trade, Human trafficking, Human rights violation and social disparities, Feminist ethics, Surrogacy/Pregnancy. Ethics of media-Impact of Newspapers, Television, Movies and Internet.

Books for study:

1. John S Mackenjie: A manual of ethics.
2. “The Ethics of Management” By Larue Tone Hosmer, Richard D. Irwin Inc.

3. “Management Ethics – integrity at work’ by Joseph A. Petrick and John F. Quinn,Response Books: New Delhi.
4. “Ethics in Management: by S.A. Sherlekar, Himalaya Publishing House.
5. Harold H. Titus: Ethics for Today
6. Maitra, S.K: Hindu Ethics
7. William Lilly: Introduction to Ethics
8. Sinha: A Manual of Ethics
9. Manu: Manu Dharma Sastra or the Institute of Manu: Comprising the Indian System of Duties: Religious and Civil (ed.) G.C.Haughton.
10. SusrutaSamhita: Tr.KavirajKunjanlal, KunjalalBrishagratha, Chowkamba Sanskrit series, Vol I, II and III, Varnasi, Vol I OO, 16-20, 21-32 and 74-77 only.
11. CarakaSamhita: Tr.Dr.Ram Karan Sarma and VaidyaBhagavan Dash, Chowkambha Sanskrit Series office, Varanasi I, II, III Vol I PP 183-191.
12. Ethics, TheoryandContemporarty Issues, Barbara Mackinnon, Wadsworth/Thomson Learning, 2001.
13. Analyzing Moral Issues, Judith A. Boss, Mayfield Publishing Company, 1999.
14. An Introduction to Applied Ethics (Ed.) John H.Piet and Ayodhya Prasad, Cosmo Publications.
15. Text book for Intermediate logic, Ethics and Human Values, board of Intermediate Education & Telugu Academic Hyderabad.
16. I.C Sharma Ethical Philosophy of India. Nagin& co Julundhar.

THIRD SEMESTER (ODD)

AMA 301 CONTINUUM MECHANICS
Course Objectives:

1) The purpose of the course is to expose the students to the basic elements of continuum mechanics in a sufficiently rigorous manner.
2) To provide advanced treatment of the fundamental, unifying concepts of the mechanics of continua such as mechanics of viscous fluids, two dimensional flows.

UNIT I:
Kinematics of Fluids in motion (Chapter 2).

UNIT-II
Equations of motion of a Fluid (Chapter 3)

UNIT: III
Some Three –Dimensional Flows(Chapter 4)

UNIT IV :
Some two –Dimensional Flows. (Sections 5.1 to 5.9 of Chapter 5) Scope and standard as in the book **" Text Book of Fluid Dynamics" by F. Chorlton, C.B.S Publishers and Distributors , Delhi, 1985**

References : 1. D.S. Chandrasekharaiah and L. Debnatha Continuum Mechanics – Academic Press -1994
2. A.J.M. Speneer : Continuum Mechanics Long Man, 1980
3. Y. C. Feng, A first Course in Continuum Mechanics – Prentice Hall (2nd Edition) 1997

Course Outcomes:

1) Be able to describe motion, deformation and forces in a continuum.
2) Be able to derive equations of motion and conservation laws for a continuum.
3) Understand constitutive models for fluids and viscoelastic solids.
4) Formulate and solve specific technical problems of displacement, strain and stress.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2	2	3	1	1				1	1		
CO2	3	1	3	3	2				1	1		
CO3	1	1	2	2	3				1	1		
CO4	2	3	1	3	1				1	1		

AMA 302: FUNCTIONAL ANALYSIS

(Common with paper MA 302 of Branch I (A) Mathematics)

Functional analysis is one of the primary branches of mathematics mainly dealing with a variety of metrics' and linear operators.

Course Objectives:

1) Define and illustrate several normed spaces.
2) Introduce linear operators and derive their properties.
3) Elaborate basic theorems like open and closed mapping theorem, implicit function theorem and spectral theorem.

UNIT –I :

The definitions and some examples –continuous –linear transformations-the Hahn-Banach Theorem.

UNIT – II:

Natural imbedding of N in N**-Open mapping theorem –Conjugate of an Operator.

UNIT – III:

Definition and Simple Properties –Orthogonal Complements- Orthonormal sets – Conjugate spaces-Adjoint of an Operator.

UNIT-IV:

Self adjoint operators –Normal and Unitary Operators-Projection –Spectral theorem.
Scope and Standard as in Sections 46 to 51 of Chapter 9, section 52 to 59 of chapter 10, section 62 of chapter 11 of **" Introduction to Topological and Modern analysis by G.F. Simmons McGraw Hill Book Company**.

References:

1. " Foundations of Functional Analysis" by S. Ponnyusamy-Narosa Publications
2. " Text book of Functional Analysis – A Problem oriented Approach" by V.K. Krishnan-Prentice Halls of India Publishers
3. " Functional Analysis" by B.V. Limaye New age International Publishers

Course Outcomes:

1) Work with different distance metrics and normed spaces,understand continuous linear transformations and the Hahn-Banach Theorem.
2) Comprehend the Open mapping theorem and Closed graph theorem.
3) Construct orthonormal sets and conjugate spaces.
4) Understand the relevance of self-adjoint operators, normal, unitary operators and projections.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	3	2	3	2	2				1	1

CO4	2	3	1	3	1				1	1		

Generic Elective
AMA 303(A): DIFFERENTIAL GEOMETRY
(Common with paper MA 303(A) of Branch I (A) Mathematics)

The aim of the course is to provide knowledge of the geometry of curves and surfaces. The course integrates concepts from different parts of mathematics, such as linear algebra, calculus and differential equations. It also provides intuitive examples for many concepts in linear algebra, calculus and differential equations. These examples are fundamental to physics and mechanics: they play a role in our understanding of the movements of particles and the theory of relativity.

Course Objectives:

1. Define surfaces and their properties
2. Explain local intrinsic properties of a surface
3. Study geodesic equations of conformal mapping
4. Discuss lines of curvature and parallel surfaces

UNIT –I :

The Theory Space Curves: Introductory remarks about space curves –Definitions –Arc length-Tangent, normal, and binormal –Curvature and torsion of a curve given as the intersection of two surfaces –Contact between curves and surfaces-Tangent surface, involutes and evolutes.(Sections 1 to 7 of Chapter 1).

UNIT – II:

The Metric: Local Intrinsic Properties of a Surface: Definitions of a Surface- Curves on a surface-Surfaces of revolution –Helicoids- Metric-Direction Coefficients-Families of curves –Isometric correspondence –Intrinsic properties. (Sections 1 to 9 of Chapter 11).

UNIT – III:

Geodesics-Canonical Geodesic Equations-Normal Property of geodesics –Existence theorems-Geodesic parallels-Geodesic curvature-Gauss-Bonnet theorem –Gaussian curvature-Surfaces of constant curvature –Conformal mapping-Geodesic mapping (Sections 10 to 20 of Chapter 11).

UNIT-IV:

The second Fundamental Form: Local non – intrinsic properties of a surface: The second fundamental form-principal curvatures –Lines of curvature -Developables associated with

space curves-Developables associated with curves on surfaces –Minimal surfaces-Ruled surfaces-The fundamental equations of surface theory –Parallel surfaces. (Sections 1 to 10 Chapter III).

Scope and Standard as in Sections and chapters as specified above of the book **" An Introduction to Differential Geometry" of T.J Willmore, Oxford University Press, Thirteenth Impression, 1997.**

References: 1. A first course in Differential Geometry- D. Soma sundaram – Narosa Publications.

Course Outcomes:

After completing this course, students should be able to

1. Define space curves , curvature and torsion of a curve.
2. Parameterize surfaces and isometric correspondence.
3. Understand geodesic curves and conformal mapping.
4. calculate and analyse curvature of surfaces in different settings.

CO/PO	PO

CO4	1	1	2	3	2				1	1		

AMA 303 (B): Mathematical Methods

Course Objectives:

This course develops a student's proficiency in working with mathematical methods, and it investigates some applications to problems in economics, management and related areas. The course also develops the student's understanding of the theoretical concepts behind these methods.

UNIT –I:

Laplace's wave and Heat Conduction equation, Laplace equation, Wave equation, Heat Conduction equation

UNIT –II:

Applications of Laplace equation to boundary value problems –Applications of Electric circuit –Applications to dynamics, applications to beans Applications to heat conduction equation –Applications to wave equations.

UNIT –III:

Integral Equations: introduction –relation between differential and integral equations – The green's function –linear equations in cause and effect –the influence function (chapter-3 section 3.1 to 3.11)

UNIT –IV:

Fredholm equation with separable kernel –illustrative examples –Hilbert schemed theory – iterative methods for solving equations of second kind –The Neumann series – Fredholm.

TEXT BOOKS

1. Stand as an integral equations by Dr.J.K Goyal Gupta 1st edition. Pragathi prakasam part-2 units 2&3

2. Stand as in methods of applied mathematics by franciesB.Hilbrand ,second edition ,prentice hall of india 1960.

Course Outcomes: After completing this course, students should be able to

1. Knows and can use: a) concepts, results and methods from real analysis of single-variable functions related to limits, continuity, differensiation, integration and differential equations. b) concepts, results and methods related to systems of linear

equations. c) numerical methods for solving equations, integrals and differential equations.

2. Knows some engineering applications of mathematics.

CO3	2	2	1	2	3				1	1		
CO4	2	3	1	3	1				1	1		

AMA 304: CLASSICAL MECHANICS

(Common with paper MA 304 of Branch I (B) Mathematics)

Course Objectives:

1) To provide basic knowledge in mechanics to solve a mechanical problem.

2) To understand the concepts of Lagrange's equation and Hamiltonian principle.

3) To discuss Hamilton's equations of motion and principle of least action.
4) To understand canonical transformations.

UNIT –I :

D'Alembert's Principle and Lagrange's Equations: Some Definitions-Classification of Dynamical System-Some Examples of Constraints Virtual Displacement-Principle of Virtual Work –Generalised Force in Holonomic System-Mathematical Expression for the principle of Virtual work-D'Alember's principle-Lagrange's Equations for a Holonomic system-Velocity-dependent potential –Lagrange's Equations of Motion for conservative , Non-holonomic system-physcial Significance of 1 –Harmonic Oscillator.

UNIT – II:

Variational Principle and Lagrange's Equations:Variational Principle-Calculus of Variations-Hamilton Principle-Derivation of Hamilton's Principle from Lagrange's Equations-Derivation of Lagrange's Equations from Hamilton's Principle –Extension of Hamilton's Principle –Hamilton's Principle for Non-conservative, Non-holonomic System –Generlised Force in Dynamic system-Hamilton Principle for Conservative-Non holonomic System -Lagrange's Equations for Non –conservative –Holonomic System – Cyclic or lgnorable Coordinates –Conservation Theorem-Conservation of Linear Momentum in Lagrangian Formulation-Conservation of Angular Momentum in Lagrangian Formulation –Conservation of Angular Momentum –Conservation of Energy in Lagrangian Formulation.

UNIT – III:

Hamilton's Equations of Motion: Derivation of Hamilton's Equations of Motion (using Lagrange's Equations)-Routh's Procedure-Equations of Motion-Derivation of Hamilton's Equations from Hamilton's Principle –Principle of Least Action-Distinction between Hamilton's Principle and Principle of Least Action.

UNIT-IV:

Canonical Transformations: Canonical Coordinates and Canonical Transformations –The necessary and Sufficient Condition for a Transformation to be Canonical –Examples of Canonical Transformations-Properties of Canonical Transformulations- Infinitesimal Contact Transformation-Relation between Infinitesimal Contact Transformation and Poissson's Bracket-Hamilton Jacob Theory –Hamilton-Jacobi equations for Hamilton's Principle Function.

Syllabus and treatment as in the Book **" Classical Mechanics" by C.R. MONDAL Prentice Hall of India PrivateLimited, New Delhi, 110001,2001**, Chapter 1,2,4 and 5.

References: 1. Classical Mechanics by Goldstein Herbert, Charles P Poole, John safiko-Pearson India

2. Introduction to Classical Mechanics by Takwale R. Puranik P, Mc. GrawHill Education

Course Outcomes:

1) Understand D' Alembert's Principle and simple applications of the Lagrangian Formulation.
2) Derive the Lagrange's Equation from Hamilton's Principle.
3) Study the concept of the Equations of Motion and the Equivalent One-Dimensional Problems.
4) Distinguish the concept of the Hamilton Equations of Motion and the Principle of Least Action.

SKILL DEVELOPMENT COURSE

AMA305: MAT-LAB
(Common with paper MA 305 of Branch I (B) Mathematics)

Course Objectives:

1. Getting started with MATLAB
2. To create Matrices.
3. To learn 2D and 3D Plotting Techniques.
4. To know how to write programs to solve algebraic & Transcendental Equations

UNIT-I (Basics of MATLAB)

Getting Started with MATLAB- Different windows-Mathematical Operators and Mathematical functions-Creating matrices and arrays- Matrix algebra-Linear algebra concepts-plotting techniques- 2-D plotting-Subplot- 3-D plotting

UNIT-II (MATLAB Programming)

M-files-Script files-Relational operators-conditional statements-Numerical solutions to algebraic and transcendental equations- Solution of Simultaneous Algebraic Equations.

Syllabus and treatment as in the Book:
Getting Started with MATLAB – A Quick Introduction for Scientists and Engineers, Rudra Pratap, Oxford University Press.

References:
1. Engineering Problem solving with MATLAB, D.M.Etter, Printice-Hall
2. MATLAB Programming for Engineers. (4th ed.), Stephen J. Chapman, Cl Engineering.

3. MATLAB: Demystified -Basic Concepts and Applications, K K.Sarma, Vikas Publishing House Pvt Lt.

Course Outcomes:

1. Understand the mathematical operations & functions.
2. Write a program to addition & multiplication matrices.
3. Understand the 2-D plotting and 3-D plotting techniques.
4. Solve algebraic and transcendental equations.

MATLAB Practicals:

1. Basic 2D-plots

2. Basic 3D-plots

3. Bi-section method

4. False position method

5. Newton Raphson method

6. Creation and operations on Matrices

7. Gauss Elimination method

8. Gauss Jordan method

Open Elective (Other Departments)

AMA 306 A: BUSINESS MATHEMATICS -1
(Common with paper MA 306 of Branch I(A) Mathematics)

The Business mathematics contains Investments, Interest, Annuities, Mortgages, Cost, Revenue, Profit, supply and demand, Mathematical Modelling, and optimization,etc.

Course Objectives:

1. To understand the basic concepts of Mathematics.
2. To calculate percentages- profit and loss.
3. To solve Linear equations.
4. To understand Conversion of one Number System to Another.

Unit - I
Number- H.C.F. and L.C.M. of Numbers - Decimal Fractions.

Unit - II
Surds and Indices – Percentage - Profit and loss.

Unit - III
Linear Equations in Two Variables – Ratio and Proportion- Variation.

Unit -IV
Number System: Types of Number Systems – Conversion of Decimal Number to Binary Number and Vice versa -Conversion of Decimal numbers to Octal numbers and Vice versa - Conversion of Hexadecimal number into Decimal number and Vice versa - Binary Arithmetic.

Scope and Standard Treatment as in Chapters 1,2,3,9,10,11,31,12 of"**OBJECTIVEARITHMETIC" , by R.S.AGGARWAL , S.Chand and Company**.
Scope and Standard Treatment as in Chapter 1 of "**BUSINESS MATHEMATICS", by P.R.VITTAL , MARGHAM PUBLICATIONS.**

Course Outcomes:

1. Apply the knowledge in mathematics (algebra, matrices, calculus) in solving business problems.
2. Analyse and demonstrate mathematical skills required in mathematically intensive areas in Economics and business.
3. Explain the concepts and use equations, formulae and mathematical expressions and relationships in a variety of contexts
4. Understand The Binary Octal , Octal, Decimal and Hexadecimal Systems.

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12

CO4	1	2	2	3	2				1	1		

AMA 306 B: Fundamentals of Mathematical Statistics

(Common with paper MA B: 306 of Branch I (A) Applied Mathematics)

Course Objectives

1. To introduce basic concepts of statistics and Correlation
2. To know the significance of regression lines.
3. Importance of test of significance.
4. To enable to solve linear equations by Matrix method etc

.

UNIT - I

Correlation analysis: measuring and significance of correlation –types of correlation; important methods of Studying correlation –scatter diagram methods, Karl Pearson's coefficient of correlation, and Rank correlation Coefficient –Coefficient of Determination.

UNIT -II

Regression analysis: Meaning and significance of regression lines, regression equations, Coefficient of regression, standard error of the estimate.

UNIT- III

Test of Significance: (small sample sets only) –t, X2 and F tests and their applications

UNIT - IV

Elements of matrix algebra: Elementary operations –rank of matrix –inverse of a matrix – solutions of linear equations by matrix method and Cramer's rule.

References:

1." Gupta, S.P".Statistical Methods.

2. “Hooda R.P” Statistical for business Economics, Macmillan, New Delhi.

3.Statistical Methods Concepts, applications and computation by Aggarwal YP Sterling Publications.

Course outcomes:

1. To learn the fundamental concepts of statistics and correlation analysis
2. To analyse regression lines.
3. To explain tests of significance
4. To solve liner equations by matrix methods

CO/PO	PO											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	3	2	3	2	3				1	1

CO3	1	2	1	2	3				1	1		
CO4	2	3	2	3	1				1	1		

FOURTH SEMESTER

AMA 401: NUMBER THEORY

(Common with the paper MA 401 of Branch (B) Mathematics)

Course Objectives:

1. Identify certain number theoretic functions and their properties
2. Explain the Arithmetical Functions.
3. Understand the concept of a congruence and use various results related to Congruence including the Chinese Remainder Theorem.
4. Discuss Quadratic Residues and its Applications.

UNIT –I:

Arithmetical Functions and Dirichlet Multiplication: Introduction-The Mobius function μ (n)-The Euler totient function $\emptyset$ (n) –A relation connection $\emptyset$ and μ -A product formula for $\emptyset$ (n) - The Dirichlet product of arithmetical functions –Dirichlet inverses and the Mobius inversion formula-The Mangoldt function Λ(n) –Multiplicative functions-Multiplicative functions and Dirichlet multiplication-The inverse of a completely multiplicative function-Liouville's Function λ(n)-the divisor functions $\sigma_\propto$(n) – Generalized convolutions –Formal power series –The Bell series of an arithmetical function –Bell series and Dirichlet multiplications –Derivatives of arithmetical functions-The Selberg identity .

UNIT – II:

Averages of Arithmetical Functions : Introduction –The big oh notation Asymptotic equality of functions-Euler's summation formula –Some elementary asymptotic formulas-The average order of d(n)-The average order of the divisor functions $\sigma_\propto$(n)-The average

order of $\emptyset$ (n) -An application to the distribution of lattice points visible from the origin- The average order of μ (n) and of Λ(n) - Another identity for the partial sums of a Dirichlet product.

UNIT – III:

Congruences: Definition and basic properties of congruences-Residue classes and complete residue systems-Linear congruences –Reduced residue systems and the Euler-Fermat theorem- Polynomial congruences modulo p.Langranage's theorem-Applications of Lagarange's theorem-Simultaneous linear congruences – The Chinese remainder theorem – Applications of the Chinese remainder theorem –Polynomial congruences with prime power moduli- The Principle of cross-classification- A decomposition property of reduced residue systems.

UNIT-IV:

Quadratic Residues and the Quadratic Reciprocity Law: Quadratic residues-Lengendre's symbol and its properties –Evaluation of (-1|p) and (2|p) –Gauss' lemma-The quadratic reciprocity law –Applications of the reciprocity law –The Jacobi symbol

Primitive Roots: The exponent of a number mod m. Primitive roots –Primitive roots and reduced residue systems –The nonexistence of primitive roots mod 2^{α} for $\propto \geq 3$.

Scope and Standard as in chapter 2, Chapter 3, Chapter 5, Sections 9.1 to 9.7 of Chapter 9 and Sections 10.1 to 10.3 of chapter 10 by **Tom. M. Apostal , " Introduction to Analytical Number Theory" Springer International Student Edition** .

Course outcomes:

1. Understand arithmetical Functions.
2. Use functions Φ(n), $\amalg$(n), Λ(n).
3. Understand the definitions of congruences, residue classes and least residues
4. Apply legendary polynomial and application of reciprocity law.

CO/PO	PO

AMA 402: FLUID DYNAMICS

Course Objectives:

1) Prepare a foundation to understand the motion of fluid and develop concept, models and techniques which enables to solve the problems of fluid flow.
2) Explain Navier –Stokes Equations
3) Analyse the Laminar Boundary Layer in incompressible flow.
4) To Analytic solutions of the Boundary layer equations

UNIT –I

Dynamics of Real fluids- Introduction-Equations of motion for viscous flow .

UNIT-II

Some exact solutions of the Navier –Stokes Equations –Very slow motion

UNIT- III

The Laminar Boundary Layer in incompressible flow -Introduction - The Boundary layer equations.

UNIT IV:

Analytic solutions of the Boundary layer equations

Scope and standard as in chapter 5, sections 6.1,6.2, 6.3.1 to 6.3.4 of Chapter 6 of **" Modern Fluid Dynamics" (Volume I, Incompressible Flow) by N. Curle and H.J Davies, D. Van Nostrand Company Ltd., London, 1968.**

References: 1. Foundations of Fluid Mechanics by S.W. Yuan – Prenctice Hall of India PVT Ltd, New Delhi.
2. An Introduction to Fluid Dynamics by Batchelor G.K., Cambridge Mathematical Library.

Course Outcomes:

1) Be familiar with continuum model of fluid flow and classify fluid/flows based on physical properties of a fluid/flow along with Eulerian and Lagrangian descriptions of fluid motion.
2) Derive and solve equation of continuity, equations of motion, vorticity equation, equation of moving boundary surface, pressure equation and equation of impulsive action for a moving inviscid fluid.
3) Understand Boundary layer Equations.
4) Solve Analytic Boundary layer equations .

Generic Elective

AMA 403(A) GRAPH THEORY

(Common with the paper MA 403(A) of Branch (B) Mathematics)

Course Objectives:

3. To introduce the fundamental concepts of graph theory
4. To Study the properties of Trees and Connectivity.
3. To explain Eulerian graphs and Hamiltonian graphs
4. To apply Euler Tours and Hamilton cycles in real life .

UNIT –I :

Graphs &Subgraphs: Graphs and simple Graphs-Isomorphism-Incidence and adjacency Matrices-Sub graphs-Vertex Degrees-Paths ad connection –Cyles-Shortest path-Problem-Sperner's Lemma

UNIT – II:

Trees: Trees-Edges and Bonds-Cut vertices, cayley's Formula –Applications-Connected problem

UNIT – III:

Connectivity-Connectivity –Blocks-Application Construction of Reliable communications Networks.

UNIT-IV:

Euler Tours and Hamiltonian Cycles: Euler Tours – Hamilton cycles Application –Chinese Postman Problem –Travelling Salesman Problem .

Scope and standard as in chapters 1 to 4 **" Graph Theory with application" J.A. Bondy and U.S.R. Murthy, M.C. Millan Press**

Rererences : 1. Discrete Mathematics & Graph Theory, by SatyanarayanaBhavanari, K. Syam Prasad, PHI Pvt Ltd, New Delhi Second Edition,2014
2. Mathematical Foundation of Computer Science by SatyanarayanaBhavanari, T. V. Pradeep Kumar, Sk. Mohiddin Shaw, BS Publications, Hyderabad,2016.
3. Graph Theory with applications to Engineering and Computer Science – NarsinghDeo
4. First look at Graph Theory- John Clark Derek Allaw Holton.
5. Introduction to Graph Theory- Robin . J. Wilson
6. Introduction to Graph Theory- Douglas B. West
7. Graph theory with applications to engineering and computer science by Narsing Deo, PHI
8.Discrete mathematics for computer scientists and Mathematics by J.L.Mott, A.Kandel and T.P.Baker, Prentice Hall of India

Course outcomes:

1. Able to define basic concepts of graphs
2. Utilize the Algorithms to find the shortest path, Optimal tree from a given graph.
3. construct reliable communication network.
4. Understand the concepts of practical problems like Chinese postman problem and travelling salesman problem

CO/PO	PO

CO4	3	1	1	2	3				1	1		

AMA 403 (B) APPROXIMATION THEORY
(Common with the paper MA 403 (B) of Branch I (B) Mathematics)

Course Objectives:

Main objective to teach students many important results on several useful topics including metric spaces.

1) To learn about metric spaces, normed linear spaces, innerproduct spaces, convexity.
2) Describe the existence and unicity of best approximation, characterization of the solution.
3) Description of Algorithms like Polya's Algorithm and Weierstrass Theorem.
4) Discretization Errors in general and Algebraic Polynomials.

UNIT –I :
Nomenclature-Metric spaces-Normed linear space-Inner product spaces-convexity

UNIT – II:
Existence and Unicity of Best approximation-Convex functions-System of Equations with one unknown –Characterization of the solution –The special case n=n+1.

UNIT – III:
Polya's Algorithm-Ascent Algorithm –Descent Algorithm –Interpolation-Weierstrass Theorem.

UNIT-IV:
General linear Families –The Unicity Problem –Discretization Errors: General and Algebraic Polynomials-Markoff and Bernstein inequalities –Remes Algorithm.

Scope and standard as in sections 1 to 7 of chapter 1, sections 1 to 8 of chapter 2, sections 1 to 8 of chapter 3 of "**Introduction to Approximation Theory, E.W. Cheney, "McGraw Hill Book Company.**

References : 1. Fundamentals of Approximation Theory by H.N. Mhaskar-Narosa Publications.
2. Approximation theory and methods, M.j.d. Powell , Cambridge University Press.

Course Outcomes:

1) Know the Basic concepts of Metric spaces And Normed Linear space.
2) Knows existence and uniqueness theorems for the best approximations in various Banach spaces.
3) Knows Bernstein's lethargy theorem and its practical and theoretical implications.
4) Be able to use and analyze the basic methods for polynomial approximations.

AMA 404: OPERATIONS RESEARCH FOR INDUSTRY COMMUNITY DEVELOPMENT

(Common with the paper MA 404 of Branch (B) Mathematics)

Course Objectives:

1) To understand Linear Programming Methods
2) To solve Linear programming problem through Dynamic Programming.
3) To introduce game theory.
4) To analyze Critical path method and program Evaluation and Review Technique.

UNIT –I:

Linear programming: Graphical Method-Simplex Method-Big M Method-Two phase method -Transportation Problem-(Sections 2.4 and 2.5.1, 2.5.2, 2.5.4 of chapter 2,sections 3.2, 3.3 and 3.4 of chapter 3).

UNIT – II:

Dynamic programming: Introduction –Capital Budgeting problem –Reliability improvement problem –Stage coach problem –Optimal subdividing problem –Solution Linear programming Problem through Dynamic Programming (Chapter 8)

UNIT-III:

Game Theory: Introduction -Game with Pure Strategies-Game with Mixed Strategies – Dominance property-Graphical Methods for 2xn and mx2 Games –Linear programming approach to Game Theory (Chapter 12)

UNIT-IV:

Project Management: Guidelines for Network Construction –Critical Path Method (CPM) –Program Evaluation and Review Technique (PERT) (Sections 10.3,10.4 and 10.6 of Chapter 10)
Scope and standard as "OPERATIONS RESEARCH" By pannerselvam, R. published by Prentice Hall of India, New Delhi, 2002Edition.

References: 1. Introduction to Management Sceicne " Operation Research" by Manmohan . P.K. Gupta, Kantiswarup, Sultan Chand & Sons Publishing house.
2. Operations Research –Theory and Applications by J.K. Sharma- Macmillan Publishers, India.
3. Operations Research –by Gupta, Prem Kumar, Hira S. Chand Publishers

Course Outcomes:

1) Formulate some real life problems into Linear Programming Problems.
2) Understand Dynamic Programming.
3) Solve the problems of Game with pure Strategies and Mixed Strategies.
4) Construct Reliable Networks.

MULTI DISCIPLINARY COURSE /PROJECT WORK

MA 405: COMPUTER ORIENTED NUMERICAL METHODS
(Common with paper AMA 405 of Branch I (A) Applied Mathematics)

Course objectives:

1. To provide the knowledge of the C-Language.
2. To make use of commands and operations.
3. To familiarize the ways of solving complicated mathematical problems numerically.
4. To learn writing programs in C to solve integral and Differential Equations

.

UNIT-I:
Fundamentals of C language:
UNIT-I:
Fundamentals of C language:
Constants, Variables, and Data Types –Operators and Expressions –Decision making and Branching: Introduction – Decision making with if Statement –Simple if Statement –The if Else Statement –Nesting of if Else Statements –The Else if Ladder –The Switch Statement – The Operator –The Go to Statement
Decision making and loops: The WHILE Statement – the DO Statement –the FOR Statement – Jumps in LOOPS, Arrays: One dimensional arrays –Two dimensional arrays –Multidimensional arrays.

UNIT –II:
Numerical Integration- – Trapezoidal rule – Simpsons rules – Numerical solution by ODEs by Picard – Euler modified method – Range-Kutta Methods.
.

1. Scope and Standard Programming in ANSI C" by E. Balaguruswamy(Sixth edition) Mc. Graw Hill Edition, India.
2. Scope and standard books Information Technology and Numerical methods fot Atul Kahate

Reference:

1. Numerical Methods: Problems and solutions, M.K. Jain, R.K. Jain, SRK Iyengar- New age International Publications
2. Let us "C"- Kanetkar BPB Publications
3. The "C" Programming Language- Kerghan, Brian W, Riechie Dennis M PHI Publisher.

Course outcomes:

1. Gain Knowledge in C-Language
2. Able to use commands and operations of C.
3. Solve integration and ODE problems by numerical methods
4. Write the programming to solve problems in numerical methods.

Practicals:

1. Trapezoidal rule

2. Simpson's $1/3^{rd}$ rule

3. Simpson's $3/8^{th}$ rule

4. Picard's Method

5. Euler method

6. Modified Euler method

7. Range-Kutta Method

8. Milne's Simpson's method

.

Open Elective (Other Departments)

AMA 406: BUSINESS MATHEMATICS-II
(Common with paper MA 406 of Branch I(B) Mathematics)

Course Objectives:

1. To understand the basic concepts of Mathematics
2. To have a proper understanding of alligations and mixtures.
3. To solve algebraic Quadratic equations.
4. To understand the given data with data interpretation.

UNITI

Time and Work – pipes &cisterns-Time and distance

UNIT-II

Alligation or Mixture- Simple Interest – Compound Interest

UNIT-III

Algebraic Quadratic equations – series-Arithmetic and Geometric Progressions

UNIT-IV

Data Interpretation- Pie chart-Bar Diagram-Line graphs

1.Scope and Standard Treatment as in Chapters 15,16,17,20,21,22,32,33,41,42,43. Of **"OBJECTIVE ARITHMETIC" , by R.S.AGGARWAL , S.Chand and Company.**
2.Scope and Standard Treatment as in Chapter 1 of "**BUSINESS MATHEMATICS**", **by P.R.VITTAL , MARGHAM PUBLICATIONS.**

References:

1. Quick Arithmetic by Ashish Aggarwal S.Chand
2. Quantitative Aptitude for competitive Examinations bu Dr. R.S. Aggarwal

Course Outcomes:

- Able to solve problems on Time and work, Distance
- Understand the mixtures and also learn to calculate the Simple interest and compound interest.
- Find roots of Algebraic equations and sum and terms of given series.
- Analyse the data from charts and graphs..

AMA 406(B): BASIC MATHEMATICS FOR SOCIAL SCIENCES (EE)
(Common with paper MA 305 (C) of Branch I (A) Mathematics)

Course Objectives:

1. Understand the basic concepts of a vector space and linear transformations.
2. Study Taylor and Maclaurin's series.
3. Discuss methods of integration to find length,area and volume of regions.
4. Introduce the Numerical Techniques to find roots of equations and solutions of linear equations.

UNIT –I :

Linear Algebra : Matrices-Rank of a matrix, Elementary transformations of a matrix, Inverse of a Matrix, System of linear equations, Linear transformations, Eigen values and Eigen vectors. Vector Analysis-Definition of a vector, Vector addition, Vector manipulation – Scalar product, Vector ; Orthogonal components manipulation-Scalar product, Vector product; Orthogonal components of a vector, Differentiation of vectors.

UNIT – II:

Differential Calculus : Limits and Continuity, Differentiation of functions, Successive differentiation, Leibnitz's theorem for nth derivative, Taylor's and Maclaurin's series, Applications to maxima and minima of functions, partial differentiation, Euler's theorem.

UNIT – III:

Integral Calculus: Introduction, Integration –by substitution, by parts, by partial fractions: Definite integrals, Applications to areas, length, and volumes.
Differential Equations: Equations of 1 st order and 1st degree.

UNIT-IV:

Numerical Methods –I Computer arithmetic, Representation of numbers, computer errors in representing numbers, Finding roots of equations-Bisection, Newton, and Secant methods; Interpolation and Numerical differentiation- Polynomial interpolation, Newton-Gregory forward interpolation, Backward differences; Numerical integration-Trapezoidal and Simpson's rules Elements of matrix algebra-elementary operations – rank of matrix-inverse of a matrix-solutions of linear equations by matrix method and Cramer's rule .

6. Numerical Methods:Problems and solutions M.K.Jain, R.K.Jain, SRK.Iyengar, Newage International publications

Course Outcomes:

1. Understand the concepts of vector spaces with bases, algebra of Transformations and orthogonal components.
2. Understand the concepts of Limit, continuity &differentiation of functions.
3. Apply Integrals to find areas, length & volume of regions.
4. Apply the numerical Techniques to solve differential equations &Algebraic equations.

PROGAMME: M.Sc.,(MATHEMATICS & APPLIED MATHEMATICS)
SRI VENKATESWARA UNIVERSITY::TIRUPATI
S.V.U.COLLEGE OF SCIENCES
DEPARTMENT OF MATHEMATICS
Question papers for both mathematics &applied mathematics

B-236-01-01

M.sc. DEGREE, EXAMINATIONS

FIRST SEMESTER

BRANCH:-Mathematics

MA 101: Paper I: ALGEBRA

(Under the CBCS & Non CBCS w.e.f.2017-2018)

(Regular/Supplementary)

Time:3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. All questions carry **equal** marks. 4X5=20

1. State and prove Cayley's theorem

2. Let $\sigma = (1\ 5\ 3)\ (1\ 2)$, $\tau = (1\ 6\ 7\ 9)$. compute $\sigma\ \tau\ \sigma^{-1}$?

3. Let $n=\Pi_{j=1}^{k} P_{fi}\ p_j$ distinct primes. Then find the number of non isomorphic abelian groups of order n is $\Pi_{j=1}^{k} |P(F_j)|$?

4. If the order of a finite group G is divisible by a prime number p, then prove that G has an element of order p.

5. Prove that f:R→S be a homomorphism of a Ring R into a Ring S. Then prove that Ker f ={0} if and only if f is one-one

6. Prove that in a nonzero commutative ring with unity, an ideal M is maximal if and only if R/M is a field.

7. Define Euclidian domain, prove that ring of Gaussian integers in Euclidian domain.

8. If f(x), g(x) ∈ R[x], then prove that C (fg) =C (f).C(g).

SECTION-B

Answer **ALL** questions. All questions carry **equal** marks 4X15=60

B-236-01-01

UNIT – I

9. Let G be a finite group order of p^n, where p is prime and n>o. Then prove that

a) G has a nontrivial center Z?

b) Z∩N is a nontrivial for any nontrivial normal subgroup N of G?

OR

10 a) If a permutation $\sigma \in S_n$ is a product of r transpositions and also a product of s transpositions. Then prove that r and s are either both even or both odd.

b) Prove that A_n, n>4 , is the only nontrivial normal subgroup of S_n.

UNIT – II

11. State and prove Fundamental theorem of finitely generated abelian groups.

(OR)

12. State and prove first Sylow theorem

UNIT – III

13 a) State and prove fundamental theorem of Homomorphism.

b) If D is a division ring that show that $R \neq D_n$ has no trivial ideals.

(OR)

14. a) Let R be Boolean ring then show that each prime ideal P=R is maximal.

b) Let R be a commutative principal ideal domain with each identity in which each ideal is prime then show that R is a field

UNIT – IV

15. Prove that Every PID is a UFD, but converse need not be true.

(OR)

1006330

B-236-01-02

M.Sc. DEGREE EXAMINATIONS, AUGUST - 2021

FIRST SEMESTER

BRANCH : MATHEMATICS/APPLIED MATHEMATICS

MA - 102 : Paper - II : REAL ANALYSIS

(Under CBCS & Non - CBCS w.e.f. 2016-2017)

(Common to Supplementary candidates also i.e., who appeared in 2015 and earlier 90 marks)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **Four** questions. All questions carry **equal** marks. **(4×5=20)**

1. If P* is a refinement of P, then show that $L(P,f,\alpha)\le L(P^*,f,\alpha)$ and $U(P^*,f,\alpha)\le U(P,f,\alpha)$.

2. Let $f\in R$ on [a,b]. For $a\le x\le b$, put $F(x)=\int_a^x f(t)dt$. Then prove that F is continuous on [a, b].

3. Show that there exists a real continuous function on the real line which is nowhere differentiable.

4. If K is a compact metric space, if $f_n\in C(K)$ for n = 1,2,3..... and if $\{f_n\}$ converges uniformly on K then prove that $\{f_n\}$ is equicontinuous on K.

5. For what values of m and n is the integral $\int_0^1 x^{m-1}(1-x)^{n-1}\log x\,dx$ convergent?

6. Test for convergence the integral $\int_0^a \frac{x\tan^{-1}x}{\left(1+x^4\right)^{\frac{2}{3}}}dx$.

7. Show that Z = f (x^2y) where f is differentiable, satisfies $x\left(\frac{\partial z}{\partial x}\right)=2y\left(\frac{\partial z}{\partial y}\right)$.

8. Find the maxima and minima of the function $f(x,y)=x^3-y^3-3x-12y-20$.

SECTION - B

Answer **All** questions. All questions carry **equal** marks. (4×15=60)

UNIT - I

9. Show that $f \in R(\alpha)$ on [a,b] if and only if for every $\epsilon > 0$ there exists a partition P such that $U(P,f,\alpha) - L(P,f,\alpha) < \epsilon$.

(OR)

10. State and prove the fundamental theorem of calculus.

UNIT - II

11. State and prove that Cauchy's Criterian condition for uniform convergence.

(OR)

12. If K is compact, if $f_n \in C(K)$ for n = 1,2,3....., and if $\{f_n\}$ is pointwise bounded and equicontinuous on K, then prove that

i. $\{f_n\}$ is uniformly bounded on K.

ii. $\{f_n\}$ contains a uniformly convergent subsequence.

UNIT - III

13. Show that $\int_0^1 x^{m-1}(1-x)^{n-1}dx$ exists iff m,n are both true.

(OR)

14. Show that $\int_0^{\pi/2} \sin x \log(\sin x)dx$ converges to the value by $\log 2 - 1 (or) \log(2/e)$.

UNIT - IV

15. If (a,b), be a point of the domain of definition of a function f, such that

i. f_x is continuous at (a,b)

ii. f_y exists at (a,b), then prove that f is differentiable at (a,b).

(OR)

16. State and Prove Young's Theorem.

[Total No. of Pages : 2

B-236-01-03

M.Sc. DEGREE EXAMINATIONS, AUGUST - 2021

FIRST SEMESTER

BRANCH : MATHEMATICS/APPLIED MATHEMATICS

MA - 103 : Paper - III : ORDINARY DIFFERENTIAL EQUATIONS

(Under CBCS and Non - CBCS w.e.f. 2016-2017)

(Common to Supplementary candidates also i.e., who appeared in 2015 and earlier 90 marks)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **Four** questions. All questions carry **equal** marks. **(4×5=20)**

1. Find the normal form of Bessel's equation $x^2y'' + xy' + (x^2 - p^2)y = 0$.
2. Find the eigen values and eigen functions for the equation $y'' + \lambda y = 0$ with boundary condition $y(0) = y(\pi) = 0$.
3. Find a power series solution for the differential equation $y' + y = 1$.
4. Locate and classify the singular points on the x axis for the equations $x^2y'' + (2-x)y' = 0$.
5. Show that $(n+1)P_{n+1}(x) = (2n+1)xp_n(x) - nP_{n-1}(x)$.
6. Show that $\frac{d}{dx}[j_0(x)] = -j_1(x)$.
7. Calculate the first four terms by the successive approximation for the initial problem $y' = x + y, y(0) = 1$.
8. Show that $f(x,y) = xy^2$ satisfies a lipschitz condition on any rectangle $a \le x \le b$ and $c \le y \le d$.

SECTION - B

Answer **All** questions. All questions carry **equal** marks. **(4×15=60)**

UNIT - I

9. i) State the prove Sturm separation theorem.

   ii) Let u(x) be any non trivial solution of $u'' + q(x)u = 0$ where q(x) > 0 where q(x) > 0 for all $x > 0$. If $\int_1^\infty q(x)\,dx = \infty$, then show that u(x) has infinitely many zeros on the positive x-axis.

(OR)

10. If $y(x)$ is a non trivial solution of $y'' + q(x)y = 0$, show that y(x) has an infinite number of positive zeros if $q(x) > k/x^2$ for some $k > 1/4$ and only a finite number if $q(x) < \frac{1}{4}x^2$.

UNIT - II

11. Find the two independent Frobenius series solutions of the equation $xy'' + 2y' + xy = 0$.

(OR)

12. Find the solution of Gauss hypergeometric equation $x(1-x)y'' + [c-(a+b+1)x]y' - aby = 0$ where a,b,c are constant at the point $x = 0$.

Unit - III

13. Derive the Rodrigue's formula for legendre's polynomials.

(OR)

14. Show that $\int_0^1 x j_p(\lambda_m(x))\, j_p(\lambda_n(x))\, dx = \begin{cases} 0 & \text{if } m \neq n \\ \frac{j_{p+1}(\lambda_n)^2}{2} & \text{if } m = n \end{cases}$

UNIT - IV

15. State and prove Picard's theorem.

(OR)

16. Let f(x,y) be a continuous function that satisfies a lipschitz condition $|f(x_1, y_1) - f(x_1, y_2)| \leq k|y_1 - y_2|$ on a strip defined by $a \leq x \leq b$ and $-\infty < y < \infty$. If (x_0,y_0) is any point of the strip, then prove that the initial value problem $y' = f(x,y), y(x_0) = y_0$ has one and only one solution y = y(x) on the interval $a \leq x \leq b$.

B-236-01-03 A

B-236-01-03 B

FIRST SEMESTER

BRANCH:-Mathematics/Applied Mathematics

MA/AMA 103 (B): PAPER III—LINEAR ALGEBRA

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. Suppose F is the field of complex numbers and A=$\begin{bmatrix} -1 & i \\ i & 3 \\ 1 & 2 \end{bmatrix}$

2. Consider the system of equations $x_1 - x_2 + 2x_3 = 1$
$2x_1 + 2x_3 = 1$
$x_1 - 3x_2 + 4x_3 = 2.$
Does this system have a solution? If so, describe explicitly all solutions.

3. Define Linearly dependent and Linear Independent. Give examples?

4. Let T be the (unique) linear operator on C^3 for which $T\epsilon_1$, = (1, 0, i), $T\epsilon_2$ = (0, 1, I), $T\epsilon_3$ = (i, 1, 0). Is T invertible?.

5. Find a projection E which projects R^2 onto the subspace spanned by (1, - 1) along the subspace spanned by (1,2).
6. How many possible Jordan forms are there for a 6 X 6 complex matrix with characteristic polynomial $(x + 2)^4 (x - 1)^2$?
7. Let f be the bilinear form on R^2 defined by $f((z_1, y_1), (x_2, y_2) = x_1y_1 + x_2y_2$.
Find the matrix off in each of the following bases: {(l, 0) ,(0,1)} { ((1, -1), (1, 1)}, {(l, 2),(3,4)}
8. Find a matrix in 0(3, C) whose first row is (2i, 2i, 3).

SECTION B

Answer All questions. Each question carries 15 Marks. 4X15=60

UNIT-I

9. a) Suppose F is the field of rational numbers, and A=$\begin{bmatrix} 2 & -1 & 3 & 2 \\ 1 & 4 & 0 & -1 \\ 2 & 6 & -1 & 5 \end{bmatrix}$

B-236-01-03 B

We shall perform a finite sequence of elementary row operations on A.

b) Find row reduced matrix which is row equivalent to A=$\begin{bmatrix} i & -(1+i) & 0 \\ 1 & -2 & 1 \\ 1 & 2i & -1 \end{bmatrix}$.

OR

10. a) Prove that an elementary matrix is invertible.

b) . Let us find the inverse of A=$\begin{bmatrix} 1 & \frac{1}{2} & \frac{1}{3} \\ \frac{1}{2} & \frac{1}{3} & \frac{1}{4} \\ \frac{1}{3} & \frac{1}{4} & \frac{1}{5} \end{bmatrix}$.

UNIT-II

11 .a) Let T be the linear operator on R^2 defined by $T(x_1, x_2) = (x_1, 0)$. We showed that the matrix of T in the standard ordered basis $\mathcal{B}=\{\epsilon_1,\epsilon_2\}$ is $[T]_{\mathcal{B}}=\begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}$.

b) Let V be a finite-dimensional vector space over the field F, and let W be a subspace of V. Then dim W + dim W^0 = dim V.

OR

12. Prove that S is any subset of a finite-dimensional vector space V, then $(S^O)^O$ is the subspace spanned by S.

UNIT-III

13. State and prove Primary Decomposition Theorem.

OR

14. Let A be the complex matrix A=$\begin{bmatrix} 2 & 0 & 0 & 0 & 0 & 0 \\ 1 & 2 & 0 & 0 & 0 & 0 \\ -1 & 0 & 2 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 & 2 & 0 \\ 1 & 1 & 1 & 1 & 2 & 0 \\ 0 & 0 & 0 & 0 & 1 & -1 \end{bmatrix}$ Find the Jordan form for A.

UNIT-IV

15. Let V be a finite-dimensional vector space over a field of characteristic zero, and let f be a symmetric bilinear form on V. Then there is an ordered basis for V in which f is represented by a diagonal matrix.

OR

16. Let f be a non-degenerate bilinear form on a finite dimensional vector space V. The set of all linear operators on V which preserve f is a group under the operation of composition.

B-236-01-04 A

M.Sc. DEGREE, EXAMINATIONS

FIRST SEMESTER

BRANCH:-Mathematics/Applied Mathematics

MA/AMA 104 (A): PAPER IV— NUMERICAL METHODS

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. Find the real root of the equation using Newton's Raphson method.

2. i) Write the first and second approximation formulae of the method of false position.

   ii) Define Algebraic and Transcendental functions.

3. Define forward differences.

4. Show that $\Delta^2 = \delta^2 E$

5. Use Gauss elimination
$$2x + y + z = 10,$$
$$3x + 2y + 3z = 18,$$
$$x + 4y + 9z = 16.$$

6. Explain briefly the power function. Write the formula of Trapezoidal rule.

7. Write the formula of Simpson's 3/8 rule.

8. Write the iterative formula of Modified Euler's method.

SECTION B

Answer All questions. Each question carries 15 Marks. **4X15=60**

UNIT-I

9. Find a real root of the equation f(x) = x3 – x – 1 = 0 using Bisection method.

(OR)

B-236-01-04 A

10. Using iteration method, find the real root of the equation

$$1 - x + \frac{x^2}{(2!)^2} - \frac{x^3}{(3!)^2} + \frac{x^4}{(4!)^2} - \cdots = 0.$$

UNIT-II

11. The population of a town in the decimal census was as given below. Estimate the population for the year 1951 using Newton's backward difference interpolation formula.

Year	Population (in thousands)
1921	46
1931	66
1941	81
1951	93
1961	101

(OR)

12) Using Stirling's formula to find U_{32} from the following table:

U_{20} = 14.035, U25 = 13.674, U30 =13.257,

U_{35} = 12.734, U40 = 12.089, U45 = 11.309.

UNIT-III

13. Solve the system

$$5x - 2y + z = 4,$$
$$7x + y - 5z = 8,$$
$$3x + 7y + 4z = 10.$$

Using (i) Gauss elimination and (ii) Gauss – Jordan Methods.

(OR)

14. Use the iterative method to find the largest eigen value and the corresponding eigen vector of the matrix A = $\begin{bmatrix} 1 & 3 & -1 \\ 3 & 2 & 4 \\ -1 & 4 & 10 \end{bmatrix}$.

UNIT-IV

15. Using this rule, evaluate I = $\int_0^1 \frac{1}{1+x}\, dx$. with h = 1/6, (simpson's 1/3 rule).

(OR)

16. Use the Runge-Kutta method to solve $10\frac{dy}{dx} = x^2 + y^2$, y(0) = 1for the interval $0 < x \leq 0.4$ With h = 0.1.

B-236-01-04-B

M.Sc. DEGREE, EXAMINATIONS

FIRST SEMESTER

BRANCH:-Mathematics/Applied Mathematics

MA/AMA 104 (B): PAPER IV (B) — LATTICE THEORY

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. Let K be the set of all circles of a plane. Define a relation $k_1 \leqq k_2$, for $k_1, k_2 \in K$ iff the circle k_1 is contained in the k_2. Show that K is partially orders ordered set with respect to the relation '$\leqq$'

2. Every sub chain of a partly ordered subset satisfying the maximum (minimum) condition has a greatest (least) element.

3. For any elements a, b of a lattice $a \cap b = a \cup b$ if and only if, a = b.

4. Find all lattices of at most six elements and draw their diagrams.

5. Show that the subset lattice of every set is complete.

6. Every order preserving mapping of a complete lattice into itself has a fix element.

7. A group G is called a generalized cyclic group if every finite subset of G generates a cyclic subgroup. We shall prove that the subgroup lattice of every group of this type is distributive.

8. For the elements x, y, z of a distributive lattice $x \cap z = y \cap z$ and $x \cup z = y \cup z$ imply$x = y$.

SECTION B

Answer All questions. Each question carries 15 Marks. **4X15=60**

UNIT-I

9 (a) Show that Every (non-void) finite partly – ordered set can be represented by a diagram.

B-236-01-04-B

(b) State and prove KURATOWSKI – ZORN lemma.

(Or)

10. (a) Let φ be an order isomorphism of the partly ordered set $p_1$onto the partly ordered set p_2. If a subset R_1 of P_1has an infimum in P_2, the set $R_2 = \{\varphi(x)\}_{x\in R1}$ will have an infimum in $P_2, inf_{P_2} R_2 = \varphi\ (inf_{P_1} R_1)$. The corresponding statement for suprema also holds.

(b) A partly ordered set can satisfy both the maximum and minimum conditions

if and only if, every one of its sub chains is finite.

UNIT-II

11. (a) Every lattice has the following property For any elements a, b of the lattice, a ∩ b = b if, and only if, b ∪ a = a?

(b) With respect to the ordering $a \leqq b \Leftrightarrow a \cap b = a\ (a, b \in L)$, every finite subset

$\{a_1, . ., an\}$ of the lattice L has an infimum and a supremum, namely,

$\inf_L \{a_1, . . . , an\} = \bigcap_{j=1}^{n} a_j$, aj, sup L $\{a_1, ...,a_n\} = \bigcup_{j=1}^{n} a_j$

(Or)

12. (a) Every lattice has at most one minimal and one maximal element; these elements are at the same time the least and greatest element of that lattice.

(b) In a lattice satisfying the maximum condition, every one of its elements can be represented as the meet of a finite number of meet-irreducible elements.

UNIT-III

13. (a) I f a lattice satisfies both the maximum and the minimum condition (in particular, if it is of finite length), it is complete.

(b) If we affix bound elements to a conditionally complete lattice, we obtain a complete lattice.

(or)

14. (a) Let φ be a closure operation of a complete lattice L. The set Z_φ of the $\varphi -$ closed elements of L is itself a complete lattice with respect to the ordering in L; that is, for every subset R of Z_φ, $inf_{Z_\varphi} R = \inf_L R$, $sup_{Z_\varphi} R = \varphi\ (sup_L\ R)$.

(b) I f the pair of mappings σ, τ establishes a Galois connection between the partly ordered sets S, and T, then $\tau\sigma$ is a closure operation of S, and $\tau\sigma$ is a closure operation of T . If S and T are complete lattices, then the set Z_S of the $\sigma\tau$ - closed elements of S as well as

B-236-01-04-B

the set Z_T of the $\sigma\tau$ -closed elements of T are likewise complete lattices, and σ is a dual isomorphism of Z_s onto Z_r, while τ is a dual isomorphism of Z_r onto Z_s.

UNIT-IV

15. (a) The dual, every sub lattice and every homomorphic image of a distributive lattice is likewise a distributive lattice.

(b) A lattice L is modular if and only if, every triplet a, b, c of L satisfies the equation

$$a \cup \big(b \cap (a \cup c)\big) = (a \cup b) \cap (a \cup c)$$

(or)

16. (a) A lattice is modular if and only if, every triplet of elements a, b, c ($a \leqq c$) has a median. In fact, if $a \leqq c$, then $(a \cap b) \cup (b \cap c) \cup (c \cap a) = (a \cap b) \cup (b \cap c) \cup a = a \cup (b \cap c)$ and $(a \cup b) \cap (b \cup c) \cup (c \cup a) = (a \cup b) \cap (b \cup c) \cap a = (a \cup b) \cap c$.

(b) A lattice is distributive if and only if, it has no sub lattice isomorphic with either one of the lattices.

M.Sc. DEGREE EXAMINATIONS, AUGUST -2021

FIRST SEMESTER

BRANCH : MATHEMATICS/APPLIED MATHEMATICS

Paper - V : COMPLEX ANALYSIS

(Under CBCS & Non - CBCS w.e.f. 2017-2018)

Time : 3 Hours **Max. Marks :80**

SECTION - A

Answer any **Four** questions. **All** questions carry **equal** marks. **(4×5=20)**

1. Show that the function $f(z) = e^x(\cos y + i \sin y)$ is analytic in the whole plane and hence find $f'(z)$.
2. Find the entire linear transformation with fixed point $1+2i$ carrying the point i into the point - i.
3. Define a Möbius Transformation. Show that the set M of all Möbius Transformations is a group of transformations.
4. Find the *Möbius* transformation which carries the points $-1, i, 1+i$ into the points $0, 2i, 1-i$.
5. Evaluate the integral $\int_L x dz$, where L is the line segment joining the point z = 0 to the point z = 2 +i.
6. If f(z) is analytic on a domain G and if G contains the circle $\gamma_\rho : |z - z_0| = \rho$ and its interior, then show that $f(z_0) = \frac{1}{2\pi}\int_0^{2\pi} f(z_0 + \rho e^{i\theta}) d\theta$, that is, the value of f(z) at the point z_0 equals the average of its values on the circle γ_ρ with centre z_0.
7. Find the radius of convergence of the power series $\sum_{n=1}^{\infty} \frac{n!}{n^n} Z^n$.
8. Expand the function $f(Z) = \frac{z}{z+2}$ in a Taylor series at the point Z = 1.

M.Sc. DEGREE, EXAMINATIONS
FIRST SEMESTER
BRANCH:-Mathematics/Applied Mathematics
MA/AMA 106: PAPER VI — DISCRETE MATTHEMATICS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time : 3 hours

Max. Marks : 80

SECTION – A

Answer any FOUR questions.

All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Obtain conjunctive normal form $((P \to Q) \wedge \neg P) \to \neg Q$.

2. Determine whether the conclusion $C: P$ follows logically from the premises $H_1 : P \to Q$ and $H_2 : \neg Q$.

3. Symbolize the statement "All men are giants".

4. Show that $(x)(P)(x) \to Q(x)) \wedge (x)(Q(x) \to R(x)) \Rightarrow (x)(p(x) \to R(x))$.

5. Draw the diagram of lattice (S_{24}, D).

6. Define Sublattice. Prove that every closed interval of a lattice is a sublattice.

7. If $S_i \equiv S_j$ then show that $\delta(S_j, x) = \delta(S_j, x)$ for any input sequence "x".

8. Define adjacency matrix, path matrix of a graph with examples.

[P.T.O.]

SECTION – B

Answer ALL questions,

All questions carry equal marks.

(Marks : $4 \times 15 = 60$)

9. (a) Obtain sum-of-products canonical form of $P \to ((P \to Q) \wedge \neg(\neg Q \vee \neg P))$.

(b) Obtain product of sum canonical form of $(P \wedge Q \wedge R) \vee (P \wedge R \wedge Q) \vee (\neg P \wedge \neg Q \wedge \neg R)$.

Or

10. (a) Show that $R \to S$ can be derived from the premises $P \to (Q \to S)$, $\neg R \vee P$, and Q.

(b) Show that $S(\neg Q \wedge (P \to Q)) \to \neg P$.

11. (a) Indicate free and bound variable in the expression $(x)(p(x) \wedge R(x)) \to (x)P(x) \wedge Q(x)$.

(b) Find the truth values of $(x)(p(x) \vee Q(x))$, where $P(x) : x = 1 Q(x) : x = 2$ and the universe of discourse is {1, 2}.

Or

12. (a) Show that $(\exists x)M(x)$ follows logically from the premises $(x)(Hx) \to M(x)$ and $(\exists x)H(x)$.

(b) Show that $(x)(P(x) \vee Q(x)) \Rightarrow (x)P(x) \vee (\exists x)Q(x)$.

13. (a) Show that a lattice is distributive if and only if $(a * b) \oplus (b * c) \oplus (c * a) = (a \oplus b) * (c \oplus a)$.

(b) State and prove Modular inequalities.

Or

14. (a) Use the Karnaugh map representation to find a minimal sum-of-products expression of the function $f(a, b, c, d) = \sum(0,1, 2, 3, 13, 15)$.

(b) Obtain the sum-of-products canonical form of the Boolean expression $x, x_2' + x_3$.

15. (a) Let S be any state in a finite state machine and x, y be any words. Then show that $\delta(S, xy) = \delta(\delta(S, x), y)$ and $\lambda(s, xy) = \lambda(\delta(S, x)\, y)$.

(b) Let S_i, S_j^{ES} show that $S_j^{k+1} \equiv S_j$ if and only if $S_i^k \equiv S_j$ and for all $a \in T$, $\delta(S_i, a)^k \equiv \delta(S_j, a)$.

Or

16. (a) In a simple digraph $G = \langle V, E \rangle$ prove that every node of the diagraph lies in Exactly one strong component.

(b) Show that a simple diagraph is strongly connected if and only if there is a cycle in G which includes each node at least once and no isolated node.

M.A. DEGREE EXAMINATION, AUGUST -2021

FIRST SEMESTER

BRANCH - PHILOSOPHY

Paper - I : HUMAN VALUES AND PROFESSIONAL ETHICS - I

(New Regulation w.e.f 2016-2017)

(Common for all courses i.e M.A./M.Sc./M.Com./M.L.I.Sc. and M.Ed.)

Time : 3 Hours Max. Marks : 80

PART - A

Answer any FIVE of the following. Each question carries 4 marks. (5×4=20)

1. Moral Imagination.
2. Nature of values.
3. Tolerance.
4. Civic virtues.
5. Empathy.
6. Autonomy.
7. Satkdryavdda.
8. Niskama Karma
9. Reformative.
10. Compensation.

PART - B

Answer ALL Questions. Each question carries 12 marks. (5×12=60)

11. a) Write an essay on nature and subject - matter of Ethics.

(OR)

b) Write an essay on definition, characteristics, importance and types of values.

12. a) Are Values in nature subjective or objective - discuss.

(OR)

b) Define good and bad and elucidate characteristics of good and bad.

13. a) Write an essay on justice, responsibility and freedom in human values.

(OR)

b) Define and describe Brahmacharya, Aparigraha, and Moksha.

14. a) Write an essay on the Five Great Vows (Mahāvratas) of Jainism.

(OR)

b) Define and describe Aparigraha, Dharma, and Artha.

15. a) Explain the Impact of Religion on Values and Behaviour at work place.

(OR)

b) What is the purpose of Criminal Justice? Write briefly on Reformative and Retributive theories of punishment.

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021

SECOND SEMESTER

Branch : MATHEMATICS

Paper I MA 201 : GALOIS THEORY

(Under CBCS & Non-CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **FOUR** questions. All questions carry equal marks. (4X5=20)

1. Let $f(x)=a_0+a_1x+.....+a_{n-1}x^{n-1}+x^n \in z[x]$ be a monic polynomial. If f(x) has a root $a \in Q$, then prove that $a \in Z$ and a/a_0

2. Show that $\phi_p(x)=1+x+.....+x^{p-1}$ is irreducible over Q, where P is a prime.

3. Let $f(x) \in F[x]$ be a polynomial of degree ≥ 1 with α as a root. Show that α is a multiple root if, and only if, $f'(\alpha)=0$

4. Let F be a finite field, show that the number of elements of F is P^n for some positive integer n, where P is the characteristic of F.

5. If C and R are respectively the fields of complex numbers and the field of real numbers, show that $[C:R]=2$

6. Let E be a finite separable extension of a field F, and let $H<G(E/F)$ prove that $G(E/E_H)=H$, *and* $[E:E_H]=|G(E/E_H)|$

7. Show that the polynomial $x^7-10x^5+15x+5$ is not solvable by radicals.

8. Show that it is impossible to construct a cube with a volume equal to twice the volume of a given cube by using ruler and compass only.

b) Solve the integral equation $\int_0^\infty f(x)\cos\lambda x dx = e-\lambda$.

(OR)

10. a) Solve $\frac{\int \partial u}{\partial t} = \frac{\partial 2u}{\partial x2}$ 0<x<6, t>0 subject to condtions $u_x(0,t)=u_x(6,t)=0$, $u_x(x,0)=2$

b) Find the steady of tempataure u(x,y) in a long square bar of side Π when one face is kept at constant temparature u_0 and other faces at zero temperature. Assume that u(x,y) is bounded.

11.Let f;R-→S be a homomorphism of a ring into a ring S with Kernel N. Then prove that

R/N ≃ Imf.

(OR)

12. State and prove Gauss lemma.

13. Given the points (0,0) ($\frac{\pi}{2}$, 0) and ($\pi, 0$) satisfying the function $Y = Sin\ x$ ($0 \leq x \leq \pi$), determine the value of $Y\left(\frac{\pi}{6}\right)$ using the cubic spline approximation.

(OR)

14. Solve the boundary – value problem$y'' - 64y + 10 = 0;\ Y(0) = Y(1) = 0$ by the Finite- Difference Method. Compute the value of$Y(0.5)$ and compare it with the true value.

15. Explain about Arrays and write the program to the matrix multiplication?

(OR)

16. Write a program (i) To calculate standard deviation.

(ii) To calculate the roots of the quadratic equation.

SECTION - B

Answer **ALL** questions. Each question carries 15 marks. (4×15=60)

9. a) State and prove Eisenstein criterion.

   b) Let $F \subseteq E \subseteq K$ be fields. If $[K : E] < \infty$ and $[E : F] < \infty$, then prove that

      i) $[K:F] < \infty$

      ii) $[K:F] = [K:E][E:F]$

(OR)

10. a) Let E be an extension field of F, and let $u \in E$ be algebraic over F. Let $p(x) \in F[x]$ be a polynomial of the least degree such that $p(u) = 0$. Then prove that.

      i) p(x) is irreducible over F.

      ii) If $g(x) \in F[x]$ is such that g(u)=O, then $p(x) / g(x)$

      iii) There is exactly one monic polynomial $p(x) \in F[x]$ of least degree such that $p(u) = 0$

   b) Let E be an algebraic extension of a field F, and let $\sigma : F \to L$ be an embedding of F into an algebraically closed field L. Then prove that σ can be extended to an embedding $\eta : E \to L$

11. a) Let K be a splitting field of the polynomial $f(x) \in F[x]$ over a field F. If E is another splitting field of f(x) over F, then prove that there exists an isomorphism $\sigma : E \to K$, that is identity as F.

   b) Show that the splitting field of $f(x) = x^4 - 2 \in Q[x]$ over Q is $Q(2^{1/4}, i)$ and its degree of extension is 8.

(OR)

12. Let E be a finite extension of a field F. Then prove the following are equivalent:

      i) $E = F(\alpha)$, for some $\alpha \in E$

      ii) There are only a finite number of intermediate fields between F and E.

13. a) State and prove Dedikind's lemma.

   b) Let H be a finite subgroup of the group of automorphisms of a field E. Then prove that $[E : E_H] = |H|$

(OR)

14. a) Show that the Golois group of $x^4 - 2 \in Q[x]$ is the octic group (=group of symmetries of a square)

b) State and prove fundamental theorem of algebra.

15. Prove that $\phi_n(x) = \prod (x - \omega)$, ω primitive n^{th} root in C, is an irreducible polynomial of degree $\phi(n)$ in $Z[x]$

(OR)

16. Let K be the subset of R consisting of numbers constructible from Q. Then prove that K is a subfield containing square roots of all non-negative numbers in K by proving the necessary lemmas.

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021

SECOND SEMESTER

Branch : MATHEMATICS/APPLIED MATHEMATICS

Paper II MA 202 : PARTIAL DIFFERENTIAL EQUATIONS

(Under CBCS & Non-CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks : 100**

SECTION - A

Answer any **FOUR** questions. All questions carry equal marks. **(4×5=20)**

1. Solve $4y^2z^2dx+16z^2x^2dy+36x^2y^2dz=0$
2. Show that the differential equation $(y^2+yz)dx+(xz+z^2)dy+(y^2-xy)dz=0$ is integrable.
3. Eliminate arbitrary function f from $z=xy+f(x^2+y^2)$
4. Find the general solution of linear partial differential equation $y^2p-xyq=x(z-2y)$
5. Find a particular integral of the equation $(D^2-D')z=2y-x^2$
6. Find the general solution of $\frac{\partial^2 z}{\partial x^2}-4\frac{\partial^2 z}{\partial y^2}=e^{2x+3y}$
7. Define equipotential surface.
8. Write interior Neumann problem.

SECTION - B

Answer **ALL** questions. Each question carries 15 marks. **(4×15 =60)**

9. a) Show that a necessary and sufficient condition that there exists between two functions u(x, y) and V(x,y) a Relation F(u, v)=0, not involving x or y explicitly is that $\frac{\partial(u,v)}{\partial(x,y)}=0$

b) Is the equation $(y^2+xz)dx+(x^2+yz)dy+3y^2dz=0$ integrable? If so, find its solution.

(OR)

10. a) Find the integral curves of the equation $\frac{dx}{x+z}=\frac{dy}{y}=\frac{dz}{y^2+z}$

b) Verify that the equation $yz(y+z)dx+xz(x+z)dy+xy(x+y)dz=0$ is integrable and find its primitive.

11. a) Find the general solution of the differential equation $x^2\frac{\partial z}{\partial x}+y^2\frac{\partial z}{\partial y}=(x+y)z$

b) Find the equation of the integral surface of the differential equation $2y(z-3)p+(2x-z)q=y(2x-3)$ which passes through the circle $z=0,\ x^2+y^2=2x$

(OR)

12. a) Find the surface which intersects the surfaces of the system $z(x+y)=c(3z+1)$ orthogonally & which passes through the circle $x^2+y^2=1;\ z=1$

b) Find the complete integral of $(p^2+q^2)y=qz$

13. a) Find a particular integral of the equation $(D^2-D^1)z=A\cos(lx+my)$ where A, l, m are constants.

b) Solve the equation $r-s+2q-z=x^2y^2$

(OR)

14. a) Reduce the equation $\frac{\partial^2 z}{\partial x^2}+y^2\frac{\partial^2 z}{\partial y^2}=y$ to canonical form.

b) Reduce the equation $\frac{\partial^2 z}{\partial x^2}+2\frac{\partial^2 z}{\partial x\partial y}+\frac{\partial^2 z}{\partial y^2}=0$ to canonical form.

15. Show that the surfaces $(x^2+y^2)^2-2a^2(x^2-y^2)+a^4=c$ can form a family of equipotential surfaces, and find the general form of the corresponding potential function.

(OR)

16. Find the potential function $\varphi=(x, y, z)$ in the region $0\le x\le a\ 0\le y\le b, 0\le z\le c$ satisfying the conditions:

i) $\varphi=0$ on $x=0, x=a, y=0, y=b, z=0$

ii) $\varphi=f(x, y)$ on $z=c, 0\le x\le a, 0\le y\le b$

SECOND SEMESTER

Branch : MATHEMATICS/APPLIED MATHEMATICS

Paper III MA 203 : TOPOLOGY

(Under CBCS & Non-CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **FOUR** questions. All questions carry **Equal** marks. **(4×5=20)**

1. Let x be a metric space. Show that a subset F of x is closed if, and only if its compliment F' is open.
2. If a convergent sequence is a metric space has infinitely many distinct points, prove that its limit is a limit point of the set of the points of the sequence.
3. Define a topological space. Let x be any infinite set and let T be the set of all subsets of x together with the empty set ϕ show that $\{x, T\}$ is a topological space.
4. Let x be a second countable space. Prove that any open base for x has a countable subclass which is also an openbase.
5. Prove that any closed subspace of a compact space is compact.
6. Show that a topological space is compact if every basic open cover has a finite subcover.
7. Show that a topological space T_1-space if, and only if, each point is a closed set.
8. Prove that any continuous image of a connected space is connected.

SECTION - B

Answer **ALL** questions. Each question carries 15 marks. **(4×15=60)**

9. a) Show that every non-empty open set on the real line is the union of a countable disjoint class of open intervals.

   b) Show that each closed sphere is a closed set in a metric space.

(OR)

b) Let x and y be metric spaces and let f be a mapping of x into y. Prove that f is continuous if, and only, if $f^{-1}(G)$ is open in x, whenever G is open in y.

11. a) Let x be a topological space. Prove that any closed subset of x is the disjoint union of its set of isolated points and its set of limit points.

b) Let x be a non-empty set, and let there be given a "closure" operation which assigns to each subset A of x a subset $\bar{A}$ of x in such a manner that (i) $\bar{\phi} = \phi$, ii) $A \subset \bar{A}$, iii) $\bar{\bar{A}} = \bar{A}$, and iv) $\overline{A \cup B} = \bar{A} \cup \bar{B}$. If a "closed" set A is defined to be one for which $A = \bar{A}$, then prove that the class of all complements of such sets is topology on x whose closure operation is precisely that intially given.

(OR)

12. a) State and prove Lindelof's theorem.

b) Let x be a non-empty set, and let S be an arbitrary class of subsets of x. Show that S can serve as an open subbase for a topology on x.

13. a) State and prove the Heine-Borel theorem.

b) State and prove Labesgue's covering Lemma.

(OR)

14. a) Prove that any continuous mapping of a compact metric space into a metric space is uniformly continuous.

b) Show that a closed subspace of a complete metric space is compact if, and only if, it is totally bounded.

15. State and prove the Tietze-Extension theorem.

(OR)

16. a) Let x be a topological space. If $\{A_i\}$ is a non-empty class of connected subspaces of x such that $\bigcap_i A_i$ is non-empty, then prove that $A = \bigcup_i A_i$ is also a connected subspace of x.

b) Let x be a Hausdorff space. If x has an open base whose sets are also closed, then prove that x is totally disconnected.

M.Sc. DEGREE, EXAMINATIONS
SECOND SEMESTER
BRANCH:-Mathematics/Applied Mathematics
MA/AMA 203 B: PAPER III — SEMI GROUP THEORY
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time : 3 Hours **Max. Marks :80**

SECTION - A

Answer any **FOUR** questions. All questions carry equal marks. **(4×5=20)**

1. If S is a Semigroup and X=S′ then show that there is a monomorphism $\rho: S \to \Im(x)$
2. If E is an equivalence on a semigroup S then prove that E^b is the largest congruence on S contained in E.
3. If G is a group, then show that $\rho \circ \sigma = \sigma \circ \rho$ for any two congruence ρ, σ on G.
4. Show that the relations Z and R commute.
5. If M is a O-minimal ideal of S, then prove that either $M^2=\{0\}$, or, M is a O-simple Semigroup.
6. Prove that Se is a O-minimal left ideal.
7. Show that N_p is a normal Subgroup of G.
8. Show that the lattice of congruences on a completely O-simple semigroup S is Semimodular.

SECTION - B

Answer **ALL** questions. Each question carries 15 marks. **(4×15 = 60)**

9. a) Prove that a Semigroup S with zero is a O-group if, and only if, $aS = Sa = S$, $\forall a \in S / \{0\}$

b) i) Let $(E, \leq)$ be a lower semi lattice. Then prove that $(E, \wedge)$ is a commutative semigroup of idempotents and $a \leq b$ if, and only if $a \wedge b = a$, $\forall\ a, b \in E$

ii) Let $(E, \bullet)$ be a commutative semigroup of idempotents. Then prove that the relation $\leq$ on E defined by $a \leq b$ if, and only if, ab=a is a partial order on E with respect to which E is a lower semilattice. In $(E, \leq)$, show that the meet of a and b is their product ab.

(OR)

10. a) If R is a relation on a set X, then prove that $R^e = [R \cup R^{-1} \cup 1_x]^\infty$

b) If ρ is a congruence on a semigroup S, then show that S/ρ is a semigroup with respect to the operation defined by $(a\ \rho)(b\rho) = (ab)\rho$ and the mapping $\rho^{\#} : S \to S/\rho$ defined by $x\rho^{\#} = x\rho$, $x \in S$ is a homomorphism.

If $\phi : S \to T$ is a homomorphism, where S and T are semigroups, then prove that the relation $\ker\phi = \phi \circ \phi^{-1} = \{(a, b) \in S \times S : a\phi = b\phi\}$ is a congruence on S and there is a monomorphism $\alpha : S / \ker\phi \to T$ such that $ran(\alpha) = \text{ran}\,\phi$

11. a) Let G be a group with identity element e.

i) If N is a normal subgroup of G, then show that $\rho_N = \{(a, b) \in G \times G : ab^{-1} \in N\}$ is a congruence on G. For each g in G the ρ_N-class $g\rho_N$ coincides with the coset N_g.

ii) If ρ is a congruence on G, then show that $N = e\rho$ is a normal subgroup of G and $\rho = \rho_N$

iii) If M, N are normal subgroups of G, then show that $\rho_M \wedge \rho_N = \rho_{M \wedge N}$, $\rho_M \circ \rho_N = \rho_{MN}$

b) Show that a modular lattice is semimodular.

(OR)

12. a) If S is a periodic semigroup, then show that $D = J$

b) State and prove Green's theorem.

13. State and prove Ree's theorem.

(OR)

14. a) If S is Completely O-simple, then prove that S is regular.

b) If S is a regular semigroup with zero in which every non-zero idempotent is primitive, then prove that S is a O-direct union of completely O-simple semigroups.

15. a) Let ρ be a proper congruence on a completely O-simple semigroup $S = \mu^{\circ}[G, I, \Omega, P]$ and let i, j, λ, μ be such that $\rho_{\lambda i}, \rho_{\lambda j}, \rho_{\mu i}, \rho_{\mu j}$ are all non-zero. If either $(i, j) \in \rho_1$, or, $(\lambda, \mu) \in \rho_{\Omega}$, then prove that $q_{\lambda\mu ij} \in N_{\rho}$

b) If the elements (a, i, λ) and (b, j, μ) of S are such that $(a, i, \lambda)\rho(b, j, \mu)$ then prove that $(i, j) \in \rho_I$.

(OR)

16. a) If ρ and σ are congruences on $S = \mu^{\circ}[G, I, \Omega, \rho]$ then show that $\rho \cap \sigma = [N_{\rho} \cap N_{\sigma}, \rho_I \cap \sigma_1, \rho_{\Omega} \cap \sigma_{\Omega}]$

$\rho \vee \sigma = [N_{\rho} N_{\sigma}, \rho_1 \vee \sigma_1, \rho_{\Omega} \wedge \sigma_{\Omega}]$

b) If S is a finite congruence-free semigroup without O and if $|S| > 2$, then prove that S is a simple group.

[Total No. Of Pages : 3 B-236-02-04(a)

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021

SECOND SEMESTER

Branch : MATHEMATICS/APPLIED MATHEMATICS

Paper IV MA 204 (A) : ADVANCED COMPLEX ANALYSIS

(Under CBCS & Non-CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **FOUR** questions. All questions carry equal marks. **(4×5=20)**

1. Expand the function $f(z)=\frac{z^2-2z+5}{(z-2)(z^2+1)}$ on the annulus $|<|Z|<2$.

2. Find the singular points and investigate the behaviour at infinity of the function $f(z)=\frac{1}{z-z^3}$

3. Find the residues of the function $f(z)=\frac{1}{z(1-z^2)}$ at all its isolated singular points and at infinity (if infinity is not a limit point of singular points.)

4. Find the number of zeroes of the polynomial $Z^7-5Z^4+Z^2-2$ inside the unit circle $|Z|=1$

5. Find the conjugate harmonic function $v(x, y)$ corresponding to $u(x, y)=x^2-y^2+x$ on the domain $|z|<\infty$

6. State and prove Uniqueness theorem for conformal mappings.

7. If an entire function f(z) has no zeros, then prove that f(z) is of the form $f(z)=e^{g(z)}$, where g(z) is an entire function

8. Prove that the gamma function satisfies the relation $\sqrt{\pi}\Gamma(2z)=2^{2z-1}\Gamma(z)\Gamma(z+\frac{1}{2})$

SECTION - B

Answer **ALL** questions. Each question carries 15 marks. (4×15=60)

9. a) Show that the coefficients of the Laurent series $f(z)=\sum_{n=-\infty}^{\infty} a_n (z-z_0)^n, r<|z-z_0|<R$ are given by the formula $a_k=\frac{1}{2\pi i}\int_{r_p}\frac{f(z)}{(z-z_0)^{k+1}}dz, k=0,\pm1,\pm2,$ ..... where r_p is any circle $|z-z_0|=p, r<p<R$

b) Expand the function $f(z)=\frac{1}{(z-a)(z-b)}, 0<|a|<|b|$ is a Laurent series on the annulus $|a|<|z|<|b|$

(OR)

10. a) Let f(z) be a single-valued analytic function defined on the domain $D: 0<|z-z_0|<R$. Then prove that z_0 is a regular point of f(z) if, and only if, f(z) is bounded in some deleted neighbourhood of z_0.

b) Find the singular point and investigate the behaviour at infinity of the function $f(z)=\text{Tan}z$

11. State and prove Residue theorem.

(OR)

12. a) Evaluate the integral $I=\int_0^{\infty} e^{-\pi x}\frac{Sinax}{Sin\pi x}dx, a>0$

b) State and prove maximum modulus principle.

13. a) Prove that a necessary and sufficient condition for a function $f(z)=u(x,y)+iv(x,y)$ to be analytic on a domain G is that its real part u(x, y) and imaginary part $v(x,y)$ be conjugate harmonic functions on G.

b) Find the analytic function $f(z)=u(x,y)+iv(x,y)$ given that $u(x,y)=x^2-y^2+2$

(OR)

14. State and prove Dirichlet problem for a disk.

15. Prove that the infinite product $\prod_{n=1}^{\infty}(1+\nu_n)$ converges if, and only if, the infinite series $\sum_{n=1}^{\infty}\log(1+\nu_n)$ converges.

(OR)

16. Expand the function Sec Z in partial fractions.

---

b) State and prove Green's theorem.

13. State and prove Ree's theorem.

(OR)

14. a) If S is Completely O-simple, then prove that S is regular.

b) If S is a regular semigroup with zero in which every non-zero idempotent is primitive, then prove that S is a O-direct union of completely O-simple semigroups.

15. a) Let ρ be a proper congruence on a completely O-simple semigroup $S = \mu^{\circ}[G, I, \Omega, P]$ and let i, j, λ, μ be such that $\rho_{\lambda i}, \rho_{\lambda j}, \rho_{\mu i}, \rho_{\mu j}$ are all non-zero. If either $(i, j) \in \rho_I$, or, $(\lambda, \mu) \in \rho_\Omega$, then prove that $q_{\lambda \mu i j} \in N_\rho$

b) If the elements (a, i, λ) and (b, j, μ) of S are such that $(a, i, \lambda)\rho(b, j, \mu)$ then prove that $(i, j) \in \rho_I$.

(OR)

16. a) If ρ and σ are congruences on $S = \mu^{\circ}[G, I, \Omega, P]$ then show that $\rho \cap \sigma = [N_\rho \cap N_\sigma,\ \rho_I \cap \sigma_I,\ \rho_\Omega \cap \sigma_\Omega]$

$\rho \vee \sigma = [N_\rho N_\sigma,\ \rho_I \vee \sigma_I,\ \rho_\Omega \wedge \sigma_\Omega]$

b) If S is a finite congruence-free semigroup without O and if $|S| > 2$, then prove that S is a simple group.

M.Sc. DEGREE EXAMINATIONS, OCTOBER -2021

SECOND SEMESTER

Branch : MATHEMATICS/APPLIED MATHEMATICS

Paper : V MA-205-MEASURE AND INTEGRATION

(Under CBCS & Non CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks 80**

SECTION - A

Answer any **Four** questions. Each question carry **equal** marks. **(4×5=20)**

1. If E is measurable set then $\overline{E}$ is also measurable.
2. Show that every Borel set is measurable.
3. Let f and g be integrable over E. Show if $f \leq g$ almost every where, that $\int_E f \leq \int_E g$.
4. Show that if f is integrable over E, then so is $|f|$.
5. State monotone convergence theorem.
6. Define a convex function. Let ϕ be a convex function. Let ϕ is bounded from below.
7. Define normal linear space with suitable example.
8. State and prove Holder inequalities.

SECTION - B

Answer **All** questions. Each question carries 15 marks. **(4×15=60)**

9. a) Define a countably additive measure. If M is a contably additive measure defined for all subsets in a σ Algebra, prove that $mA \leq mB$ whenever A and B are subsets in the σ Algebra with $A \subset B$.

   b) Show that if the outer measure of a set E=0 then E is measurable.

(OR)

10. a) For any countable collection $\{A_n\}$ of sets of real numbers, prove that

$$m^*\left(\bigcup_{n=1}^{\infty} A_n\right) \leq \sum_{n=1}^{\infty} m^*(A_n).$$

b) Prove that the collection of measurable sets of real numbers is a σ-algebra and that every set with outer measure zero is measurable.

11. a) Let f be defined on a measurable set E with an E finite. Then show that f is measurable on E if and only if $\inf_{f \leq \psi} \int_E \psi(x)dx = \sup_{f \geq \phi} \int_E \phi(x)dx$ for all simple functions ϕ and ψ.

b) State and prove lebesgue convergence theorem.

(OR)

12. a) Let $\{f_n\}$ be an increasing sequence of non negative measurable functions, and let $f = \lim f_n$ a.e. Then prove that $\int f = \lim \int f_n$.

b) State and prove the Fatou's Lemma and deduce the monotone convergence theorem.

13. a) Let f be an increasing real valued function on an interval [a,b]. Prove that f is differentiable almost everywhere, the derivative f' is measurable and that

$$\int_a^b f'(x)dx \leq f(b) - f(a)$$

b) Let f be integrable on [a,b] such that : $\int_a^x f(t)dt = 0$ for all $x \in [a,b]$. Then prove that $f(t) = 0$ a.e. in [a,b].

(OR)

14. a) If f is bounded and measurable on [a,b] and $F(x) = \int_a^x f(t)dt + F(a)$ then show that $F'(x) = f(x)$ for almost all x in [a,b].

b) State and prove jensen inequality.

15. a) State and prove Minkowski inequality.

b) Let X be a normed linear space. Then every convergent sequence in X is Cauchy. Moreover, a Cauchy sequence in X converges if it has a convergent subsequence.

(OR)

16. a) Let E be a measurable set and $1 < p < \alpha$. Suppose F is a family of functions in $L^p(E)$ that is bounded in $L^p(E)$ in the sense that there is a constant M for which $\| f \|_p \leq M$ for all fin F. Then the family F is uniformly integrable over E.

b) Let E be a measurable set and $1 \leq p \leq \infty$, then the subspace of simple function in $L^p(E)$ is dense in $L^p(E)$.

B- 236-02-06

M.Sc. DEGREE, EXAMINATIONS
SECOND SEMESTER
BRANCH:-Mathematics/Applied Mathematics
MA/AMA 206 PAPER VI — MATHEMATICAL STATISTICS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All question carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define a random variable. Let $f(x) = \frac{1}{x^2}$ $1 < X < \infty$

$= 0$ elsewhere

be the probability density function X. If $A_1 = \{X / 1 < X < 2\}$ and $A_2 = \{X / 4 < X < 5\}$ find $P(A_1 \cup A_2)$ and $P(A_1 \cap A_2)$.

2. Define the conditional probability density function of the random variable Y given the random variable X. Let $f(X, Y) = 2$ *for* $0 < X < 1$, *and* $0 < Y < X$

$= 0$ otherwise

Find the conditional density function of X given Y.

3. If $N(x) = \int_{-\infty}^{x} \frac{1}{\sqrt{2\pi}} e^{-w^2/2} dw$, Show that $N(-x) = 1 - N(x)$.

4. Let X have the p.d.f. given by $f(X) = 1$, $0 < X < 1$

$= 0$, *elsewhere*

Show that the random variable $Y = -2 \ln x$ has a chi-square distribution. Find the degrees of freedom of this distribution.

[P.T.O.]

5. Let X_1, X_2 be a random sample from a distribution having the p.d.f.

$f(x) = e^{-x}, 0 < x < \infty$

$= 0,$ *otherwise*

Show that $Z = X_1 / X_2$ has on F distribution.

6. Let $\overline{X}$ be the mean of a random sample of size 5 from a normal distribution with $\mu = 0$ and $\sigma^2 = 125$. Determine C so that $P_r(\overline{X} < c) = 0.90$.

7. Let the observed value of the mean $\overline{X}$ of a random sample of size 20 from a distribution that is $n(\mu, 80)$ be 81.2.

Find a 95 percent confidence internal for μ.

8. Write about confidence intervals with suitable examples.

SECTION – B

Answer FOUR questions. Choosing ONE from each unit. Each question carries 20 marks.

(Marks : $4 \times 15 = 60$)

9. (a) Let X have the p.d.f. $f(x) = 2(1-x), \ 0 < X < 1$

$= 0,$ *elsewhere*

Find $E(6X + 3X^2)$.

(b) In a log of 50 light bulbs, there are a bad bulbs. An inspector examines 5 bulbs which are selected at random and without replacement. Find the probability of atleast 1 defective bulb among the 5.

Or

10. (a) If the correlation coefficient ρ of X and Y exist. Show that $-1 \le \rho \le 1$.

(b) If $f(x_1, x_2) = e^{-x_1 - x_2}; \ 0 < x_1 < \infty, \ 0 < x_2 < \infty$

$= 0$, elsewhere

is the joint probability density function of the random variables X_1 and X_2. Show that X_1 and X_2 are stochastically independent and that $E(e^{t(x_1 + x_2)}) = (1-t)^{-2}, t < 1$.

11. (a) Define the gamma distribution and derive its mean and variance.

(b) Let X have a poisson distribution with parameter m. If m is an experimental value of a random variable having a gamma distribution with $\alpha = 2; \beta = 1$, compute $P_r(X = 0, 1, 2)$.

Or

12. (a) Find the mean and variance of a chi-square distribution.

(b) If X is $\psi(5)$ determine the constants c and d so that $P_r(c < X < d) = 0.95$ and $P_r(X < c) = 0.025$.

13. (a) Obtain the distributions of $\overline{X}$ and ns^2/σ^2 of a random sample of size n.

(b) Define a t-distribution. Derive its p.d.f.

Or

14. (a) State and prove the central limit theorem in the modified form by making suitable assumptions let $\overline{X}$ denote the mean of a random sample of size 75 from the distribution with the p.d.f.

$f(x) = 1, \ 0 < x < 1$

$= 0, elsewhere$

Find $(0.45 < X < 0.55)$

(b) Explain the concept of stochastic convergence. Let S_n^2 denote the variance of a random sample of size n from a distribution that is $n(\mu, \sigma^2)$, prove that $n.S_n^2/(n-1)$ converges stochastically to σ^2.

15. (a) Let a random sample of size 17 from the normal distribution $n(\mu, \sigma^2)$ yield $\overline{X} = 4.7$ and $s^2 = 5.76$. Determine 90 percent confidence interval from μ.

(b) State and prove Roo-Cramer inequality.

Or

16. (a) Obtain the confidence interval for the difference $\mu_1 - \mu_2$ between the means of two normal distributions $N(\mu_1, \sigma^2)$ and $N(\mu_2, \sigma^2)$ with σ^2 known.

(b) State and prove Rao – Blackwell theorem.

B-101-02-07

P.G. DEGREE EXAMINATION — APRIL/MAY 2018

SECOND SEMESTER

HUMAN VALUES AND PROFESSIONAL ETHICS – II

(Common paper for M.A./M.Sc./M.Com./M.Ed./M.Lisc etc)

(w.e.f. 2016-2017)

Time : 3 hours Max. Marks : 80

SECTION - A

Answer any FIVE of the following. Each question carries 4 marks.

(Marks : 5 × 4 = 20)

1. Adjustability
2. Caring for needy and elderly
3. Ethical obligation to animals
4. Ethical issues raised by new biological knowledge
5. Ethical theories
6. Causes of unethical behavior
7. Ecological crisis
8. Pest control
9. Organ trade
10. Human trafficking.

SECTION - B

Answer ALL questions. Each question carries 12 marks.

(Marks : 5 × 12 = 60)

11. (a) Describe the relevance of value education to present study.

Or

(b) Explain the status of women in family and society in detail.

[P.T.O.]

12. (a) Describe the views of Charaka, Sushruta and Hippocrates on moral responsibility of medical practitioners.

Or

(b) Explain the ethical issues in relation to health care professionals and patients.

13. (a) Write on ethical standards of Business, immoral and illegal practices and their solutions.

Or

(b) Describe the characteristics of ethical problems in management.

14. (a) Write an essay on pollution and waste.

Or

(b) Explain the causes and consequences of climate change.

15. (a) Explain the human rights violation and social disparities.

Or

(b) Describe the ethics of Media in detail.

B-236-03-01

M.Sc. DEGREE EXAMINATION — NOVEMBER/DECEMBER 2018

THIRD SEMESTER

Mathematics

MA - 301 : Paper I — COMMUTATIVE ALGEBRA

(Under CBCS & non-CBCS w.e.f 2017-2018)

Time : 3 hours Max. Marks : 80

SECTION - A

Answer any FOUR questions.

All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define prime and maximal ideals with examples.
2. Let N and U be ideals in a ring R with $N \subset U$. Then prove that U/N is an ideal in R/N and $(R/N)(U/N) \cong R/U$.
3. Let M be a module and N a submodule. Then prove that the ascending (descending) chain condition holds in M if and only if it holds in both N and $M-N$.
4. Prove that an R-module M satisfying the descending chain condition is direct sum of a finite number of indecomposable submodules.
5. In a ring R having only one maxima ideal M. Then prove that every idempotent e is either 0 or 1.
6. Let R be a ring with identity. Prove that the intersection $\mathfrak{T}$ of all the maximal ideals in R is the set of all elements a in R such that $1+xa$ is a unit for every x in R.
7. Prove that in a ring with *a.c.c.* every irreducible ideal is primary.
8. If R is a noetherian domain and if M is an ideal of R different from R, then prove that $\bigcap_n m^n = (0)$.

SECTION - B

Answer ALL questions. All questions carry equal marks.

(Marks : $4 \times 15 = 60$)

9. If N and L are submodules of an R-module M, then $(L+N)-N \cong L-(L \cap N)$. If L is a subring of a ring R, and N is an ideal in R, then the residue class ring. $L/L \cap N$ is isomorphic with the subring $(L+N)/N$ of the residue class ring R/N.

Or

10. Let U be an ideal different from R. Then prove that is prime if and only if R/U has no zero divisors. If R has an identity, U is maximal if and only if R/U is a field .

[P.T.O.]

11. If a module has a composition series then prove that any two composition series are equivalent.

Or

12. Prove that if M is completely reducible so is every submodule. if L and N are submodules such that $L \subset N$, then every complement of N is contained in a complement of L and if every complement of L contains a complement of N, then M is completely reducible.

13. Prove that a ring with identity R which satisfies the descending chain condition is the direct sum of noetherian primary rings and this decomposition is unique.

Or

14. Prove that in a ring R satisfying the d.c.c every ideal A-all the elements of which are nilpotent is nilpotent.

15. Let R be a ring and let A be an ideal of R admitting an irredundant primary representation $A = U_i Q_i$ prove that for A to be its own radical it is necessary and sufficient that all Q_i be prime ideals.

Or

16. Given a noetherian ring R and two ideals M and A of R prove that the intersection $\bigcap_n (A + M^n)$ is the intersection of those primary components Q_i of a whose radical P_i satisfies the relation $M + P_i \neq R$.

M.Sc. DEGREE EXAMINATION — NOVEMBER/DECEMBER 2018.

THIRD SEMESTER

Branch — Mathematics/Applied Mathematics

MA-302 : Paper II — FUNCTIONAL ANALYSIS

(Under CBCS & Non-CBCS w.e.f. 2017-2018)

Time : 3 hours

Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define Normed Linear Space. Prove that norm is continuous function.

2. State and prove Minkowski's inequality.

3. If T is an operator and T^* is its conjugate then prove that $\|T^*\| = \|T\|$.

4. Show that a linear subspace of a normed linear space is closed if it is weekly closed.

5. Define a Hilbert space. If x and y any two vectors in a Hilbert space then show that $|(x, y)| \leq \|x\| \cdot \|y\|$.

6. State and prove Bessel's inequality.

7. If T is an operator on H for which $(Tx, x) = 0$ for all x, then show that $T = 0$.

8. If T is normal then the M_i's are pairwise orthogonal.

SECTION – B

Answer ALL questions. All questions carry equal marks.

(Marks : $4 \times 15 = 60$)

9. Let N and N' be Normed linear space and T a linear transformation of N into N'. Show that the following conditions on T are equivalent to one another :

   (a) T is continuous.

   (b) T is continuous at the origin in the sense that $x_n \to 0 \Rightarrow T(x_n) \to 0$.

   (c) There exists a real number $k \geq 0$ with the property $\|T(x)\| \leq k\|x\|$ for every $x \in N$.

   (d) If $S = \{x : \|x\| \leq 1\}$ is the closed unit sphere in N, then its image $T(S)$ is a bounded set in N'.

Or

10. State and prove Hahn-Banach theorem.

11. (a) State and prove closed graph theorem.

(b) If P is projection on a Banach space B, and if M and N are its range and null space, then prove that M and N are closed linear subspaces of B such that $B = M \oplus N$.

Or

12. State and prove Uniform Boundedness theorem.

13. (a) If M is a proper closed linear subspace of a Hilbert space H, then prove that there exists a non-zero vector Z_0 in H such that $Z_0 \perp M$

(b) If B is a complex Banach space whose norm satisfies the parallelogram law and if an inner product is defined on B by $4(x, y) = \|x + y\|^2 - \|x + y\|^2 + i\|x + iy\|^2 - i\|x - iy\|^2$ then prove that B is a Hilbert space.

Or

14. (a) If M is a closed subspace of a Hilbert space H, then prove that $H = M \oplus M^{\perp}$.

(b) Explain the Gram-Schmidt's orthogonalization process.

15. (a) If T is an operator on H for which $(Tx, x) = 0$ for all x, then prove that $T = 0$.

(b) Show that $\|T^*\| = \|T\|$ where T^* is an adjoint operator of T.

Or

16. State and prove Spectral theorem.

B-236-03-03 A

M.Sc. DEGREE EXAMINATION — NOVEMBER/DECEMBER 2018.

THIRD SEMESTER

Branch — Mathematics/Applied Mathematics

MA 303 : Paper III (A) : DIFFERENTIAL GEOMETRY (G.E)

(Under C.B.C.S. and Non-CBCS w.e.f. 2017-18)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Obtain the equations of the circular helix $r = (a\cos u, a\sin u, bu) - \infty < u < \infty$ where $a > 0$, referred to 's' as parameter and show that the length of one complete turn of the helix is $2\pi c$, where $c = \sqrt{(a^2 + b^2)}$.

2. Show that the length of the common perpendicular d of the tangents at two near points distances apart is approximately given by $d = \frac{k\tau s^3}{12}$.

3. Find the co-efficient of the direction which makes an angles $\frac{1}{2}\pi$ with the direction whose coefficients are (l, m).

4. A helicoid is generated by the screw motion of staright line skew to the axis. Find the curve coplanr with the axis which generates the same helicoid.

5. To Calculate circumference of a geodesic circle of small radius r and to see show it differs from the Euclidean formula $2\pi r$.

6. Prove that very point of a surface has a neighbourhood which is convex and simple.

7. Prove that except for the plane the right helicoid is the only ruled surface which is minimal.

8. Prove that a surface which E, F, G, L, M, N are non zero constants is necessarily a circular cylinder.

SECTION – B

Answer ALL questions. All questions carry equal marks.

(Marks : $4 \times 15 = 60$)

9. Show that the oscillating plane at P has in general three point constant with the curve at P.

Or

11. A helicoid is generated by the screw motion of a straight line which meets the axis at an angle 'α'. Find the orthogonal trajectories of the generators. Find also the metric of the surface referred to genarators and their orthogonal trajectories as parametric curves.

Or

12. Find a surface of revolution which is isometric with a region of the right helicoid.

13. State and prove tissot's theorem.

Or

14. Find the geodesics on a surface of revolution given by $\bar{r} = (g(u)\cos v, g(u)\sin v, f(u))$.

15. Prove that a necessary and sufficient that a curve on a surface be a line of curvature is that the surface normals along the curve form G developable.

Or

16. Prove that a necessary and sufficient condition for a surface to be developable is that its Gaussian curvature shall be zero.

B-236-03-03

B

M.sc. DEGREE, EXAMINATIONS

THIRD SEMESTER

BRANCH:-Mathematics

MA 303 B: Paper III: ALGEBRAIC CODING THEORY

(Under the CBCS & Non CBCS w.e.f.2017-2018)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. All questions carry **equal** marks. 4X5=20

1. Define binary code and Block code. List all words of length 3?

2. Modify C_1={00,01,10,11} by (i) repeating each code word three times

   (ii) by adding a third digit to each code word so that number of each code word is even?

3. Define linear code. Give an example for linear Code and not a linear code?

4. List the cosets of the linear code C= {0000, 1011, 0101, 1110}?

5. If $0 \leq t \leq n$ and if v is a words of length n,then prove that the number of words of length n of distance at most t from v is precisely ?

6. Find an upper bounds for the size or dimension of a linear codes with the values n=8,d=3 & n=23,d=27 ?

7. Represent each code word C with the polynomials a) C={000,001,010,011}

   b)C ={0000,0001,1110}

8. Let $g(x) = 1+x^2+x^3$ let the generator of a linear cyclic code of length 7. Find the message polynomial corresponding to the code words C(x); $x^2+x^4+x^5$, $x+x^2+x^4$, $x^2+x^3+x^4+x^6$.

SECTION-B

Answer **ALL** questions. All questions carry **equal** marks 4X15=60

UNIT – I

9. a) Let C be a code word of length 3. Add a parity check digit to the codewords in the code and use the resulting code C to answer the following questions

i) If 1101 is received can we detect an error?

B-236-03-03 B

ii) If 1101 is received what codewords were most likely to have been transmitted?

iii) Is any word of length 4 that is not in the code, closest to a unique codeword?

b) Let $|M|=2$, $n=3$ and $C=\{000,111\}$. If $v=000$ transmitted, when will IMLD conclude this correctly, and when will IMLD incorrectly conclude that 111 was sent?

OR

10. **a)**Define Hamming weight and Hamming distance. Let $u=01011$, $v=11010$,$w=01100$ compare the following pair of quantities**:**

i) ut(u+w),and wt(v)= wt(w)

ii) d (v. w),and d(v, u)+d(u,w)

b) Suppose $p=.90$, $|M|=3$, $n=4$, and $C= \{0000, 1010, 0111\}$,For each v in C, we compute øp(C, v) ?

UNIT – II

11. **a)** Show that $C= \{0000, 1100, 0011, 1111\}$ is a linear code that its distance is d=2?

b) Explain the following terms with examples i) Linear Independent set

ii) Basis

iii) Dimension

OR

12. **a**) Test for Linear Independence and find Basis

$S= \{110,011,101,111\}$.

b) Find a generator matrix for the code $C= \{0000, 1110, 0111\}$ by using the REF.

UNIT – III

13. a) Compute the upper bound for the size or dimension k of a linear code C of length n=6 and distance d=3 ?

b) Let n=23 with t=3 show that it is a linear perfect code?

OR

14. a) Explain the Hamming Code. Find the generator matrix in standard form for a Hamming code of length 15, then encode the message 11111100000?

b) Explain for Algorithm of IMLD for C_{24}? Also decode w=101111101111, 010010010010?

UNIT – IV

15. a) Write out the Hamming code of length 7 generated by the matrix G and then represent this code by polynomials.

$$G = \begin{bmatrix} 1000111 \\ 0100110 \\ 0010101 \\ 0001011 \end{bmatrix}$$

b) Define Cyclic Code. Find the generator polynomial for the smallest linear cyclic code containing that word. 010101.

OR

16. a) Let C be the linear cyclic code of length n=7 with generator polynomial $g(x)= 1+x+x^3$ of degree n–k =3.Find a basis for C ?

b)For n=6, Factor $1+x^6$ into irreducible factors $1+x^6 =(1+x^3)^2=(1+x)^2(1+x+x^2)^2$ then find the generators of proper cyclic codes of length 6?

B–236–03–03

M.Sc. DEGREE EXAMINATION — NOVEMBER/DECEMBER 2018.

THIRD SEMESTER

Branch — Mathematics/Applied Mathematics

MA – 304: Paper IV — CLASSICAL MECHANICS

(Under CBCS and Non-CBCS w.e.f. 2

B-236-03-04

Time : 3 hours

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : 4 × 5 = 20)

1. A particle of mass m moves in a plane. Find its equations in Cartesian co-ordinates.

2. Derive the equation motion for a simple pendulum of length and mass of bob m by using Lagrange's Equation.

3. Explain the Hamilton's principle for conservative non-holonomic system.

4. Explain conservation of angular Momentum.

5. A particle is sliding down a frictionless inclined plane of angle θ. Use Lagrange's equation for non-Holonomic systems to find the equations of motion.

6. Prove that $\frac{dH}{dt} = \frac{\partial H}{\partial t}$, where H is Hamiltonian function.

7. Prove that Lagrange's bracket is canonical invariant.

8. If u, v are constant of motion $[u, v]$ is also a constant of motion.

SECTION – B

Answer ALL questions. All questions carry equal marks.

(Marks : 4 × 15 = 60)

9. A uniform rod, of mass 3 m and length $2l$ has its middle point fixed and a mass m attached at one Extremity. The rod when in horizontal position is set rotating about a vertical axis through its centre with an angular velocity equal to $\sqrt{(2ng/l)}$. Show that the heavy end of the rod will fall till the inclination of the rod to the vertical is $\cos^{-1}[\sqrt{(n^2+1)} - n]$ and will then rise again.

Or

10. (a) Prove that in a simple dynamic system T + V = Constant.

    (b) Prove that the total kinetic energy of a system of particles about any point 'o' is equal to the kinetic energy of the center mass assuming total mass acting at it plus

11. (a) Derive Lagrange's Equations for non-conservative Holonomic system.

(b) Show that the shortest curve between two points in a plane is straight line.

Or

12. (a) Find the curve for which the surface of revolution is minimum.

(b) A uniform hop is rolling down on an inclined plane with out slipping. Find its motion.

13. (a) Explain Routh's procedure.

(b) Derive Hamilton's Equations from Hamilton's principle.

Or

14. The principle of least action states that $\Delta A = O$ on the actual path as compared with some neighbouring paths provided H, the Hamiltonian is constant through out the actual path. Here Δ denotes a variation in A with time. Prove this theorem.

15. State and prove Poincare theorem.

Or

16. State and prove Jacobi's identity of Poisson's brackets.

B-236-03-04

B-236-

03-05

M.sc. DEGREE, EXAMINATIONS

THIRD SEMESTER

BRANCH:-Mathematics

MA/AMA 305: Paper 5: MATLAB

(Regular)

Time: 2 Hours **Max. Marks: 50**

SECTION-A

Answer any **TWO** questions. All questions carry **equal** marks. 2X5=10

1. Calculate the following quantities

(i) $3\frac{\sqrt{5}-1}{(\sqrt{5}+1))^2}$ -1

(ii) $e^{\pi\sqrt{163}}$

2. Find the valve of (i) $\sin^2\frac{\pi}{6}+\cos^2\frac{\pi}{6}$

3. i) Define algebraic and transcendental equations.

ii) Using bisection method solve the equation x^3-x-4=0

4. Solve the following system of linear equations by Gauss-Jordan method.

$2x_1+4x_2-6x_3=-4$

$x_1+5x_2+3x_3=10$

$x_1+3x_2+2x_3=5$

SECTION-B

Answer any **TWO** questions. All questions carry **equal** marks. 2X20=40

5).a) Create upper triangular matrix with following command:

A= diag (1:6) + diag (7:11,1) + diag (12:15,2).

b) Plot the parametric curve x(t) = t,

y(t) = $e^{-t/2}$ sin t for 0 < t < $\frac{\pi}{2}$ using ezplot.

OR

6) a) Find the solution of the following set of linear algebraic equations given below:

$$x + 2y + 3z = 1$$
$$3x + 2y + 4z = 1$$
$$2x + 3y + 3z = 2$$

b) Solve the matrix equation in MATLAB

$$-3x + 8y + 4z = 20$$
$$5x + 3y + 2z = 10$$
$$2x + 4y - 9z = 9$$

7) a) (i) How can you create , write and save a script file.

(ii) Write a function file Crossprod to compute the cross product of two vectors u and v.

b) Using the Newton-Raphson method solve the equation. $Sin\ x = 1 - x$.

OR

8) a) Solve the following system of linear equations by Gauss-Jordan method

$$2x_1 + 4x_2 - 4x_3 = 12$$
$$x_1 + 5x_2 - 5x_3 - 3x_4 = 18$$
$$2x_1 + 3x_2 + x_3 + 3x_4 = 8$$
$$x_1 + 4x_2 - 2x_3 + 2x_4 = 8.$$

b) Using Gauss- Seidel method. Solve the following system of linear equations.

$$4x + y - z = 13$$
$$x - 5y - z = -8$$
$$2x - y - 5z = -2.$$

B-236-03-06 A

M.Sc. DEGREE EXAMINATION — NOVEMBER/DECEMBER 2018

THIRD SEMESTER

Branch — Mathematics/Applied Mathematics
Open Electives

Paper VI — BUSINESS MATHEMATICS-I

(Under CBCS and Non-CBCS w.e.f. 2017-2018)

Time : 3 hours Max. Marks : 80

PART - A

Answer any FOUR questions.

All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. If $47.2506 = 4A + \frac{7}{B} + 2C + \frac{5}{D} + 6E$, then find the value of $5A + 3B + 6C + D + 3E$.

2. What is the unit digit in $(3157)^{754}$?

3. Evaluate 45% of 280 + 28% of 450.

4. If $abc = 1$ then $\frac{1}{1+a+b^{-1}} + \frac{1}{1+b+c^{-1}} + \frac{1}{1+c+a^{-1}} = 1$.

5. If $4a = 5b$ and $8b = 9c$, then find $a : b : c$.

6. Two numbers are in the ratio of 3 : 5. If each number is increased by 10, the ratio becomes 5 : 7, then find the numbers.

7. Convert the decimal number 44_{10} into octal.

8. Conversion 14_{10} of decimal into binary.

PART - B

Answer ALL questions.

Each question carry equal marks.

(Marks : $4 \times 15 = 60$)

UNIT – I

9. (a) Find the H.C.F and L.C.M of 1.5, 3, 0.6.

   (b) Find the L.C.M of 15, 18, 24, 27, 56.

Or

[P.T.O.]

10. Evaluate

(a) $869 \times 738 + 869 \times 262$

(b) What is the unit digit in $3^{57} \times 6^{41} \times 7^{63}$.

UNIT – II

11. By selling 100 pens a shopkeeper gains the selling price of 20 pens. Find his gain percent.

Or

12. Rs. 395 are divided among A, B and C in such a manner that B gets 25% more than A and 20% more than C. Find the share of A?

UNIT – III

13. Solve $\frac{3x-y+1}{3} = \frac{2x+y+2}{5} = \frac{3x+2y+1}{6}$.

Or

14. (a) If a : b = 1 : 3, b : c = 5 : 7 and c : d = 9 : 8. Find a : b : c : d.

(b) On dividing a sum of Rs. 832 between A and B in the ratio $\frac{1}{3} : \frac{1}{5}$, then find their shares.

UNIT – IV

15. (a) Convert $(190)_{10}$ into hexa decimal.

(b) Covert $(B5)_{16}$ into decimal.

Or

16. (a) How to convert of decimal into binary with examples.

(b) Add $111100_2 + 011111_2$.

B-236-03-06 A

B-236-03-06 B

M.Sc. DEGREE, EXAMINATIONS

THIRD SEMESTER

BRANCH:-Mathematics/Applied Mathematics

Open Elective (Other Departments)

MA/AMA 306 (B): PAPER VI-- Fundamentals of Mathematical Statistics

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. If Z = aX+bY and r is the correlation coefficient between X and Y, show that

$\sigma Z^2 = a^2\sigma_x^2+b^2\sigma_y^2+2ab\sigma_x\sigma_Y$

2. The joint probability distribution of X and Y is given below

X / Y	-1	+1
0	1/8	3/8
1		

Find the correlation coefficient between X and Y?

3. Define i) line of regression ii) Regression coefficient?

4. Given $f(x,y)=xe^{-x(y+1)}$; $x\geq 0$, $y\geq 0$ Find the regression curve of y on X.

5. Deduce formula for t-test. Discuss the conditions to use t-test.

6. What are the conditions to apply X^2 –test?

7. Solve the system of equations by the matrix method: $x_1 + x_2 + x_3 = 2$; $4x_1 – x_2 + 2x_3 = -6$;
$3x_1 + x_2 + x_3 = -18$.

8. Solve the equations $2x + y –z = 1$; $x – y + z = 2$; $5x + 5y – 4z = 3$ by Cramer's rule.

SECTION B

Answer All questions. Each question carries 15 Marks. 4X15=60

UNIT-I

9 .Show that the correlation coefficient r is independent of a change of scale and origin the variables.

OR

10. Ten competitors in a musical test were ranked by the three judges x,y and z in the following order :

Rank by x	1	6	5	10	3	2	4	9	7	8
Rank by y	3	5	8	4	7	40	2	1	6	9
Rank by z	6	4	9	8	1	2	3	10	5	7

Using the rank correlation method, discuss which pair of judges has the nearest approach to common likings in music.

UNIT-II

11. a) Obtain the regression equation of Y on X for the following distribution

$$f(x,y) = \frac{y}{(1+x)^4} e^{\left(-\frac{y}{(1+x)^1}\right)} \quad ; x,y \geq 0$$

b) 3. Find the most likely price in Bombay corresponding to the price of Rs.70 at Calcutta from the following:

	Calcutta	Bombay
Average price	65	67
Standard deviation	2.5	3.5

Correlation coefficient between the prices of commodities in the two cities is 0.8.

OR

12. Obtain the regression equation of Y on X for the following distribution

a) $f(x,y)=\frac{9}{2}\cdot\frac{1+x+y}{(1+x)^4(1+y)^4}$; x,y≥0

b) $f(x,y)=\frac{9}{5}(x+3y)e^{-x-2y}$; x,y≥0 **B-236-03-06**

B

UNIT-III

13 (a). A random sample of 10 boys had the following I.Q's: 70, 120, 110, 101, 88, 83, 95, 98, 107 and 100. Do these data support the assumption of a population mean I.Q of 100 ?

(b). to examine the hypothesis that the husbands are more intelligent than the wives, an investigator took a sample of 10 couples and administered them a test which measures the I.Q. the results as follows:

Husbands	117	105	97	105	123	109	86	78	103	107
Wives	106	98	87	104	116	95	90	69	108	85

Test the hypothesis with a reasonable test at the level of significance of 0.05.

OR

14 (a) Pumpkins were grown under two experimental conditions. Two random samples of 11 and 9 pumpkins, show the sample standard deviations of their weights as 0.8 and 0.5 respectively. Assuming that the weight distributions are normal, test hypothesis that the true variances are equal.

(b) A pair of dice are thrown 360 times and the frequency of each sum is indicated below :

Sum	2	3	4	5	6	7	8	9	10	11	12
Frequency	8	24	35	37	44	65	51	42	26	14	14

Would you say that the dice are fair on the basis of the chi-square test at 0.05. level of significance ?

UNIT-IV

15. Find the inverse of $A = \begin{matrix} -2 & 1 & 3 \\ 0 & -1 & 1 \\ 1 & 2 & 0 \end{matrix}$ using elementary row operations.

Or

16. Test for consistency the set of equations and solve them if they are consistent.

x+2y+2z = 2; 3x-2y-z = 5; 2x-5y+3z = -4; x+4y+6z = 0

B-236-03-06 B

B-236-04-01

M.Sc. DEGREE EXAMINATION — SEPTEMBER 2020

FOURTH SEMESTER

Mathematics/Applied Mathematics

MA 401 Paper I — NUMBER THEORY

(Under CBCS and Non-CBCS w.e.f. 2017-18)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define the Euler function ϕ and Mobius function μ. Prove that $\phi(n) = n. \sum_{d/n} \frac{\mu(d)}{d}$.
2. If f and g are multiplicative arithmetic functions, prove that their Dirichlet product $f * g$ is also multiplicative.
3. Prove that $\sum_{n \le x} d(n) = x \log x + (2c-1)x + 0(\sqrt{x})$ where C is Euler's constant.
4. If $x \ge 1$, prove that $\sum_{n \le x} \frac{1}{n^s} = \frac{x^{1-s}}{1-s} + J(s) + 0(x^{-s})$ if $s > 0$, $s \ne 1$.
5. State and prove Fermatt's theorem.
6. State and prove Little Fermatt's theorem.
7. Determine whether 219 is a quadratic residue or non-residue mod 383.
8. If P and Q are odd +ve integers. Then prove that $(m/p)(n/p) = (mn/p)$.

SECTION – B

Answer FOUR questions. Choosing ONE from each Unit.

Each question carries 15 marks.

(Marks : $4 \times 15 = 60$)

9. (a) If 'α' has a Dirichlet inverse 'α^{-1}' then the equation

$$G(x) = \sum_{n \le x} \alpha(n).\ F\left(\frac{x}{n}\right)$$ if and only if

$$F(x) = \sum_{n \le x} \alpha^{-1}(n).\ G\left(\frac{x}{n}\right).$$

(b) State and prove generalized Mobius inverse formula.

Or

[P.T.O.]

10. (a) If $n \geq 1$, then prove that

$$\log(n) = \sum_{d/n} \Lambda(d)$$

(b) Let f and g are any two arithmetical functions then prove that

(i) $(f+g)' = f' + g'$

(ii) $(f * g)' = f' * g + f * g'$

(iii) $(f^{-1})' = -f' * (f * f)^{-1}$.

11. State and prove Euler's summation formula.

(a) Write Euler's constant (C)

(b) Write Riemann-Zeta function $J(s)$.

Or

12. (a) If $x \geq 2$ then prove that $\log[x] ! = x\log x - x + 0(\log x)$ and hence prove that $\sum_{n \leq x} \Lambda(n)\left[\frac{x}{n}\right] = x\log x - x + 0(\log x)$.

(b) If $x \geq 1$ and $\alpha > 0$, $\alpha \neq 1$, show that $\sum_{n \leq x} \sigma_\alpha(x) = \frac{J(\alpha+1)}{\alpha+1} x^{\alpha+1} + 0(x^\beta)$ where $\beta = Max\{1, \alpha\}$.

13. State and prove Legrange's theorem and prove that $(p-1)! \equiv -1 (\text{mod } p)$, any prime '$p$'.

Or

14. (a) Prove that the congruence is an equivalence relation.

(b) If $a \equiv b (\text{mod } m)$ and $\alpha \equiv \beta (\text{mod } m)$, then prove that

(i) $ax + \alpha y \equiv bx + \beta y (\text{mod } m)$ $\forall$ integers $x \times y$

(ii) $a\alpha \equiv b\beta (\text{mod } m)$

(iii) $a^n \equiv b^n \ (\text{mod } m)$ for every +ve integers 'n'

(iv) $f(a) \equiv f(b) (\text{mod } m)$ for every polynomial 'f' with integer co-efficients.

15. (a) State and prove Euler's criterian.

(b) If $m \equiv n (\text{mod } p)$ then $(m/p) = (n/p)$.

Or

16. (a) Given $m \geq 1$, $(a, m) = 1$. Let $f = \exp_m(a)$ then β we have

(i) $a^k \equiv a^h \pmod{m}$ if and only if

$k \equiv h \pmod{f}$

(ii) $a^k \equiv 1 \pmod{m}$ if and only if

$k \equiv 0 \pmod{f}$, in particular $f / \phi(m)$

(b) Let 'x' be an odd integer if $\alpha \geq 3$, we have ${}_x\phi(2^\alpha)/2 \equiv 1 \pmod{2^\alpha}$, so there are no primitive roots mod 2^α.

B-236-04-02

M.sc. DEGREE, EXAMINATIONS
THIRD SEMESTER
BRANCH:-Mathematics
MA 402: Paper II: BANACH ALGEBRAS
(Regular)

(Under CBCS & Non-CBCS w.e.f 2017-2018)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Show that the set G of regular elements of a Banach algebra A is an openset.

2. If O is the only topological divisor of zero in a commutative Banach algebra A, then show that $A = C$.

3. If f_1 and f_2 are multiplicative functionals on A with the same null space M, show that $f_1 = f_2$.

4. If x is a normal element in a B^*-algebra, then show that $\|x^2\| = \|x\|^2$.

5. If X is a compact Hausdorff space, then show that every closed ideal in $\mathcal{C}(X)$ is the intersection of the maximal ideals which contain it.

6. Let X be a compact Hausdorff space and A a Banach subalgebra of $\mathcal{C}(X)$. If f is a real function in A which is regular in $\mathcal{C}(X)$, then show that it is also regular in A.

7. State Brouwer's fixed point theorem and Schauder's fixed point theorem. Define contraction mapping.

8. Define the terms :
   (a) Lattice
   (b) Boolean algebra.

[P.T.O.]

SECTION – B

Answer ALL questions. Each question carries 15 marks.

(Marks : $4 \times 15 = 60$)

9. (a) Define a topological divisor of zero in a Banach algebra A. Show that

   (i) The subset Z of topological divisors of zero in A is a subset of S, the set of singular elements in A and

   (ii) The boundary of S is a subset of Z.

   (b) Let A be a Banach algebra. For $x \in A$, define the spectrum $\sigma(x)$ of x and show that $\sigma(x)$ is non empty.

Or

10. (a) Define the spectral radius $r(x)$ of an element x of a Banach algebra and show that

$$r(x) = \lim \left\| x^n \right\|^{\frac{1}{n}}$$

   (b) If I is a proper closed two-sided ideal in A, then show that the quotient algebra A/I is a Banach Algebra.

11. (a) Prove that the maximal ideal space $\mathfrak{M}$ of a commutative Banach algebra is a compact Hausdorff space.

   (b) If A is self-adjoint and if $\left\| x^2 \right\| = \left\| x \right\|^2$, for every x in A, prove that the Gelfand mapping $x \to \hat{x}$ is an isometric isomorphism of A onto $C(\mathfrak{M})$.

Or

12. State and prove Gelfand-Neumark theorem.

13. (a) Let X be a compact Hausdorff space. Show that to each non-empty closed set F in X there corresponds a proper closed ideal $I(F)$ in $\mathcal{C}(X)$, defined by

$$I(F) = \{f : f \in \mathcal{C}(X) \text{ and } f(F) = 0\}$$

   (b) Let A be a commutative C^*-algebra of operators on H, and $\mathfrak{M}$ its space of maximal ideals. Then prove that the Gelfand mapping $T \to \hat{T}$ is an isometric *-isomorphism of A onto $C(\mathfrak{M})$.

Or

14. (a) Let A be a commutative C^*-algebra of operators on H. If an operator T in A is regular in $B(H)$, then prove that it is also regular in A, and therefore the spectrum of T as an operator on H equals its spectrum as an element of A.

(b) Let N be a normal operator on H, A the commutative C^*-algebra generated by N, and $\mathfrak{M}$ the space of maximal ideals in A. Then prove that the mapping $\hat{N}$ in $\mathfrak{C}(\mathfrak{M})$ which corresponds to N under the Gelfand mapping is a homeomorphism of $\mathfrak{M}$ onto $\sigma(N)$.

15. State and prove Picard's theorem on the existence and uniqueness of solutions of first order differential equations.

Or

16. Define an Boolean ring $(B, +, *)$ and a Boolean algebra $(B, \wedge, \vee)$. If $(B, +, *)$ is a Boolean ring, show that the algebraic structure $(B, \wedge, \vee)$, where $x \wedge y = xy$ and $x \vee y = x + y + xy$ is a Boolean algebra.

B-236-04-03 A

M.Sc. DEGREE EXAMINATION — SEPTEMBER 2020

FOURTH SEMESTER

Mathematics/Applied Mathematics

MA 403(A) Paper III — GRAPH THEORY

(Under CBCS and Non-CBCS w.e.f 2017-18)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Show that if G is simple then $\varepsilon \leq \left(\frac{V}{2}\right)$.

2. Define the terms walk, trial, path and cycle in a graph G.

3. Prove that in a tree, any two vertices are connected by a unique path.

4. Prove that if G is connected, then $\varepsilon \geq V - 1$.

5. Show that if G is simple and $\delta \geq \frac{V}{2}$, then $k' = \delta$.

6. If G is 2-connected, then any two vertices of G lie on a common cycle.

7. Prove that, let G be a simple graph with $V \geq 3$. If $C(G)$ is complete, then G is Hamiltonian.

8. Prove that a connected graph has an eular trial if and only if it has atmost two vertices of odd degree.

SECTION – B

Answer ALL questions. Each question carries 15 marks.

(Marks : $4 \times 15 = 60$)

9. Explain Dijkstra's algorithm.

Or

10. (a) Prove that a graph is bipartite if and only if no odd cycles.

    (b) Show that if $\delta \geq 2$, then G contains cycle.

[P.T.O.]

11. Briefly explain Kruskal's algorithm with suitable example.

Or

12. (a) A vertex V of a tree G is a cut vertex of G if and only if $d(V) > 1$.

(b) Prove that $T(K_n) = n^{n-2}$.

13. A graph with $V \geq 3$ is 2-connected if and only if any two vertices of G are connected by atleast two internally-disjoint paths.

Or

14. Prove that the graph $H_{m,n}$ is m-connected.

15. Prove that if G is a simple graph with $V \geq 3$ and $\delta \geq V/2$ then G is Hamiltonian.

Or

16. Let G be a simple graph with degree sequence $(d_1, d_2, ..., d_v)$ where $d_1 \leq d_2 \leq ..... \leq d_v$ and $V \geq 3$. Suppose that there is no value of m less $V/2$ for which $d_m \leq m$ and $d_v - m < V - m$. Then G is Hamiltonian.

Generic Elective – IV

MA404 Paper IV — OPERATIONS RESEARCH FOR INDUSTRY AND COMMUNITY DEVELOPMENT

(Under CBCS and Non-CBCS w.e.f 2017-2018)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Solve the L.P. problem graphically:

Max $Z = 6x_1 + 8x_2$

Subject to $x_1 + 2x_2 \leq 12$

$x_1 + x_2 \leq 10$; $x_1, x_2 \geq 0$.

2. Find the initial basic feasible solution by using Least-Cost method of the following transportation problem.

	To			Supply
From	2	7	4	5
	3	3	1	8
	5	4	7	7
	1	6	2	15
Demand	8	9	18	

[P.T.O]

FOURTH SEMESTER

Branch — Mathematics

Generic Elective – IV

MA 404 Paper IV — OPERATIONS RESEARCH FOR INDUSTRY AND COMMUNITY DEVELOPMENT

(Under CBCS and Non-CBCS w.e.f 2017-2018)

Time : 3 hours

Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Solve the L.P. problem graphically:

Max $Z = 6x_1 + 8x_2$

Subject to $x_1 + 2x_2 \leq 12$

$x_1 + x_2 \leq 10$; $x_1, x_2 \geq 0$.

2. Find the initial basic feasible solution by using Least-Cost method of the following transportation problem.

	To			Supply
From	2	7	4	5
	3	3	1	8
	5	4	7	7
	1	6	2	15
Demand	8	9	18	

[P.T.O]

3) What are the basic features of a dynamic programming problem.

4) Define dynamic programming problem.

5) How do you solve a game when

(a) Saddle point exists and

(b) Saddle point does not exists

6) Given an algorithm to determine mixed strategies in a 2×2 game?

7) Explain various basic steps in PERT/CPM techniques.

8) What are the estimates used in PERT ?

SECTION – B

Answer FOUR questions, choosing ONE for each Unit.

Each question carries 15 marks.

(Marks : $4 \times 15 = 60$)

9. Solve the following L.P.P. by Simplex method:

Max $Z = 10x_1 + 5x_2$

Subject to $4x_1 + 5x_2 \leq 100$;

$5x_1 + 2x_2 \leq 125$; $x_1, x_2 \geq 0$.

10) Use Penalty method to

Maximize $Z = 3x_1 + 2x_2 + 3x_3$

subject to

$2x_1 + x_2 + x_3 \leq 2$;

Or $3x_1 + 4x_2 + 2x_3 \geq 8$,

$x_1, x_2, x_3 \geq 0$ (-)

11) Using dynamic programming solve the reliability problem with following, data.

Mi	$i=1$		$i=2$		$i=3$	
	R	C	R	C	R	C
1	0.6	2	0.8	3	0.7	1
2	0.7	4	0.8	5	0.8	2
3	0.9	5	0.9	6	0.9	3

Or

12) Use Dynamic programming to solve the following L.P.P.

Max $Z=3x_1+7x_2$

Subject to the constraints $x_1+4x_2 \leq 8$;

$x_2 \leq 2$; $x_1, x_2 \geq 0$.

13) For the following two person zero sum game find the strategy of each player and the value of the game :

$$\begin{array}{c} \\ A \end{array} \begin{array}{c} \begin{array}{ccc} B & & \end{array} \\ \begin{pmatrix} 8 & -3 & 7 \\ 6 & -4 & 5 \\ -2 & 2 & -3 \end{pmatrix} \end{array}$$

Or

14) solve the following ~~Or~~ 3X3 game by linear programm

player B

$$\text{player A} \begin{bmatrix} 1 & -1 & -1 \\ -1 & -1 & 3 \\ -1 & 2 & -1 \end{bmatrix}$$

15. The following table gives the activities in a construction project and time duration:

Activity	Preceding activity	Normal time (days)
1–2	–	20
1–3	–	25
2–3	1–2	10
2–4	1–2	12
3–4	1–8, 2–3	5
4–5	2–4, 3–4	10

(a) Draw the activity network of the project.

(b) Find the total float and free float for each activity.

(c) Determine the critical path and project duration.

~~(OR)~~

16) Tasks A, B, C, ..., H, I constitute a project. The notation x<y means that the task x must be finished before y can begin. With this notation. A<D, A<E, B<F, D<F, C<G, C<H, F<I, G<I. Draw the graph to represent the sequence of tasks and find the minimum time of completion of the project, when the time (in days) of completion of each ~~project~~ task is as follows:

Task :	A	B	C	D	E	F	G	H	I
Time :	8	10	8	10	16	17	18	14	9

M.sc. DEGREE, EXAMINATIONS

FORTH SEMESTER

BRANCH:-Mathematics

MA/AMA 405: Paper V: COMPUTER ORIENTED NUMERICAL METHODS

(Regular)

Time: 2 Hours **Max. Marks: 50**

SECTION-A

Answer any **TWO** questions. All questions carry **equal** marks. 2X5=10

1. Write the difference between while and do while loops.

2. Explain If else statement with syntax.

3. Evaluate $\int_0^1 \cos\theta \, dx$ using h=0.2.

4. Let $\frac{dy}{dx}$= $3x^2+1$, where y (1) =2

Find y (2) by Euler's method using i)h=0.5 and ii) h=0.25

SECTION-B

Answer any **TWO** questions. All questions carry **equal** marks. 2X20=40

5 a) Explain for loop with syntax and example.

b) Explain switch statement with example.

OR

6. a) write difference string handling functions in C-Language. Explain with an example

b) Explain two dimensional arrays with examples.

7. a) The velocity of a train which starts from rest is given by the following table, the time table being reckoned in minimum from the start and the speed in Km/h

t	0	2	4	6	8	10	12	14	16	18	20
V(t)	0	10	18	25	29	32	20	11	5	2	0

Estimate approximately, the total distance run in 20 min.

b) Using Simpsons 3/8 rule evaluate the definite integral $\int_0^{0.3}(1-8x)^{1/2}$ dx.

OR

8. Write a program to calculate the solution of first order differential equation $y^1=f(x, y)$ by using the fourth order Runge- Kutta method.

B-236-04-06A

M.Sc. DEGREE, EXAMINATIONS

FOURTH SEMESTER

BRANCH:-Mathematics/Applied Mathematics

Open Elective (Other Departments)

MA/AMA 406: PAPER VI A-BUSINESS MATHEMATICS-II

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

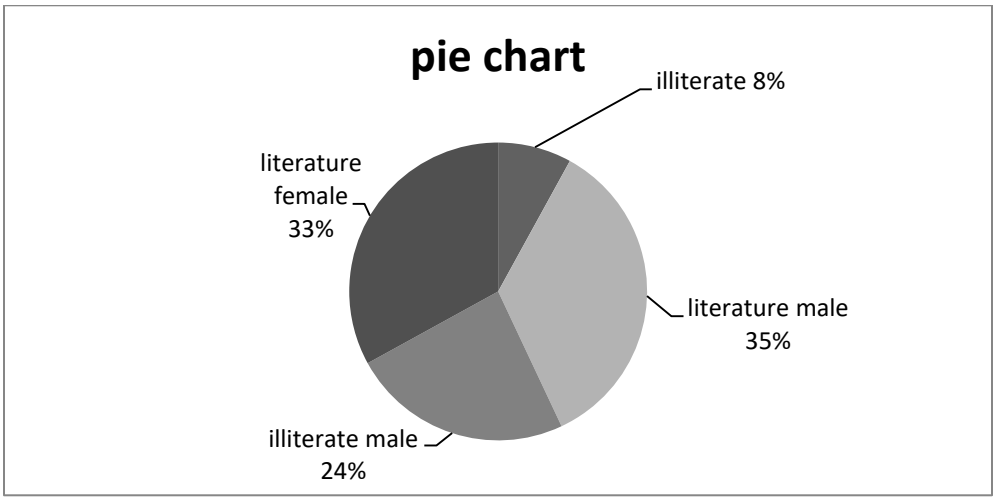
Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. Worker A takes 8 hours to do in a job. Worker B takes 10 hours to do same job .how long should it take both A and B working together but independently, to do the same job?

2. Two pipes can fill a tank in 10 hours & 12 hours respectively while a third pipe empties the full tank in 20 hours. If all the three pipes operate simultaneously, in how much time fill the tank do filled?

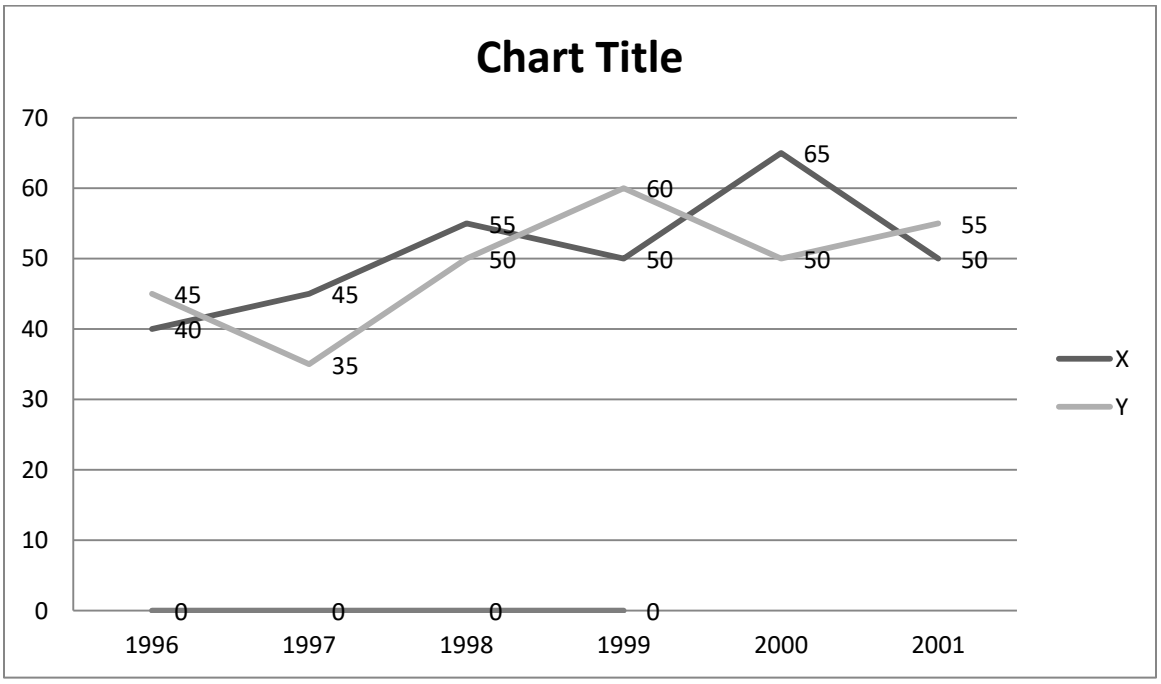


3. In what ratio must rice at Rs 9.30 per kg lie mixed with rice at Rs 10.80 per kg so that the mixture be worth Rs 10 per kg?

4. Find the compound interest on Rs 16000 at 20%per annum for 9 months compounded quarterly?

5. Solve $15x^2-28=x$

6. Find the sum of the series 2+5+8+……+182 ?



7. The following pie chart shows the percentage of literate and illiterate males and females in a city?

Total number = 2, 50,000

What is the difference between the number of literate males and literate females?

8. If the income of two companies we equal in 1999 then wheat was ratio of expenditure of company X to the company Y in 1999?

SECTION B

Answer All questions. Each question carries 15 Marks. 4X15=60

UNIT-I

9. a)**.** 45 Men can complete a work in 16 days. 6 days after day started working 30 Maximum Men joined then. How many days will they now take two complete the remaining work?

b) 2 Pipe can fill a cistern in 14 hrs & 16 hrs respectively. The pipes are opened simultaneously and it is found that due to leakage in the bottom. At took 32 mins more to fill the cistern. When the cistern is full, in what time will the leak empty it?

(OR)

10 a) While covering a distance of 24 Km, A man noticed that after walking 1 hrs&40 mins, The distance covered by him was 5/7 of the remaining distances. What was his speed in meters per second?

b) A train is leaves Meerut at 5A.M.and reaches Delhi at 9A.M. and that train leaves Delhi at7A.M. and reaches Meerut at 10:30.A.M. at what time do the two trains cross each other?

UNIT-II

11 a).How many Kg of Wheat Costing Rs 8 per Kg must be mixed with 36 kg of rice costing Rs 5.40 per kg. So that 20% gain may be affined by selling the mixture at Rs 7.20 per Kg.?

b) A can contains a mixture of two liquids A and B in the ratio 7:5 .When 9 liters of mixture are drawn off and the can filled with B the ratio of A and B becomes 7:9. How many liters of liquid A was contained by the can initially?

(OR)

12. a) An amount of Rs.1,00,000/- is invested in two types of shares. The first yield an interest of 9% per annum and the second 11% per annum of the total interest at the end of year is 9 ¾ % .Then find the amount of invested in each share ?

b) A person lent out a certain some on simple interest and the same some on compound interest at a certain rate of interest per annum. He noticed that the ratio between the

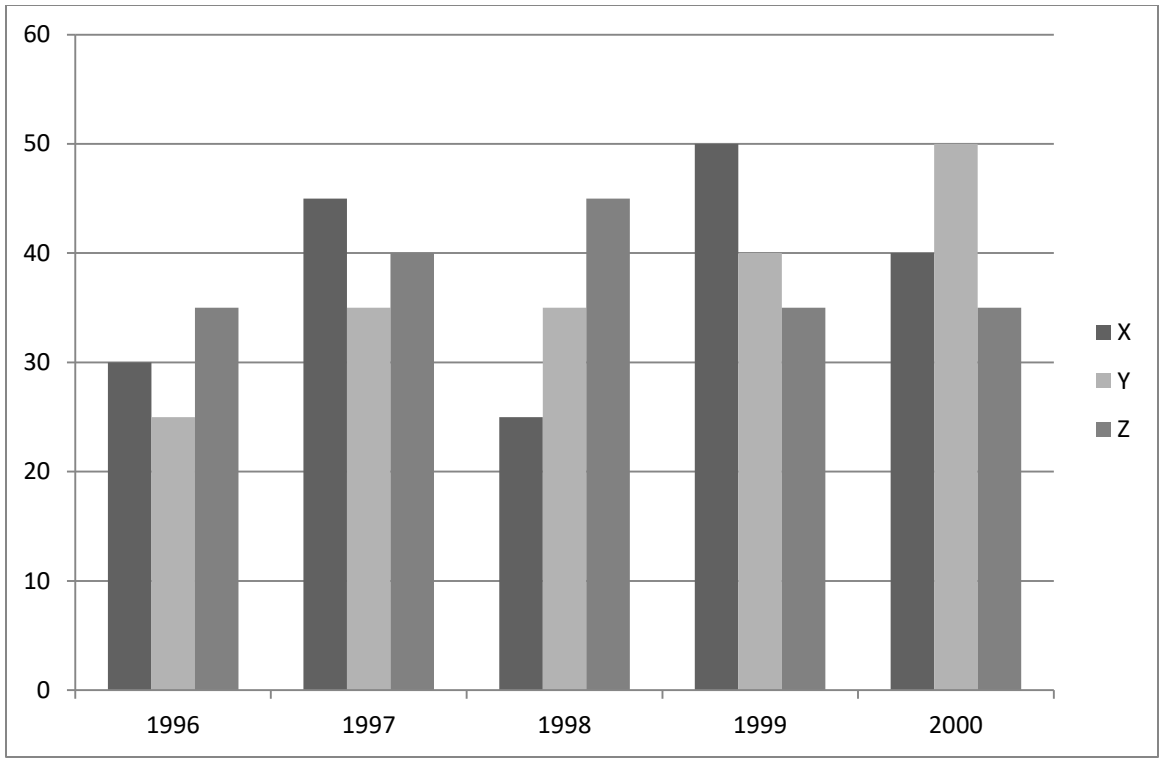
difference of compound interest and simple interest of 3 years and that of 2 years 25:8. Find the rate of interest per annum?

UNIT-III

13. a) Solve: $\sqrt{25-x^2}=(x-1)$

b) The sum of the roots of the equations $5x^2+ (p+q+r) x+pqr$, is equal to zero. What is the value of $(p^3+q^3+r^3)$?

(OR)



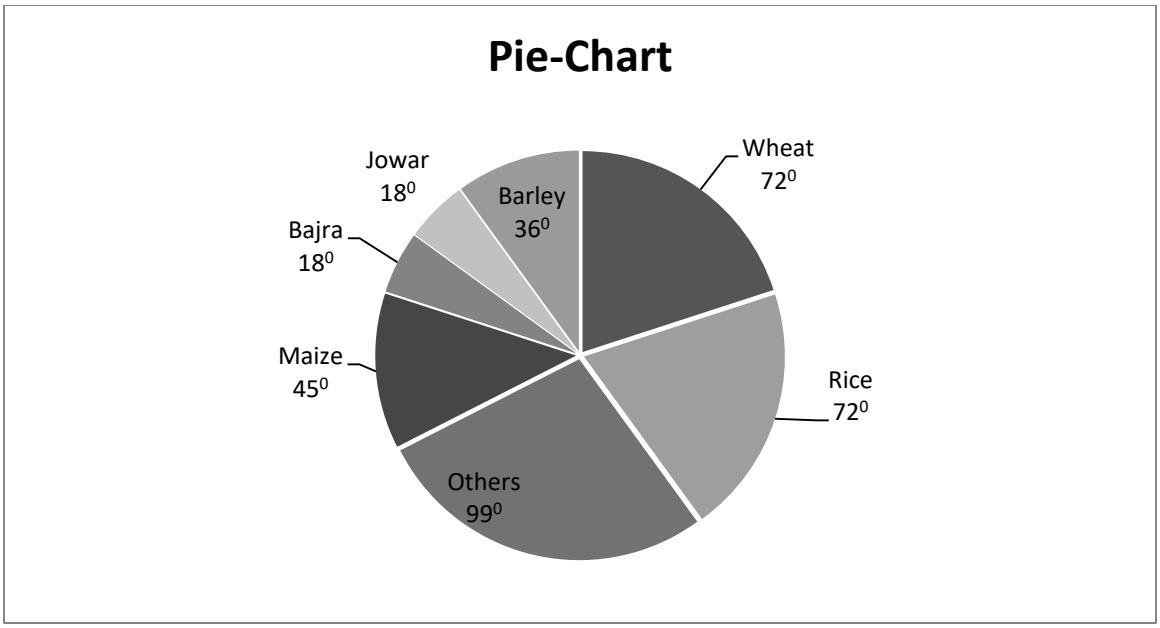
14 a) Find three numbers in A.P. whose sum is 15 and product is 80.

b) If the 4th and 9th terms of a G.P.be 54 and 13122 respectively, find the first term,common ratio and its 6th term.

UNIT-IV

15 . The bar graph provide below gives the data of the production of paper(In Lakhs Tonnes) by three different companies X,Y and Z over the years .

Study the graph and answer the questions that below



i) What is the ratio of the average production of company X in the period 1998-2000 to the average production of company Y in this same period?

ii) What is the percentage increase in the production of the Company Y from 1996-1999.?

iii) Which company attains the maximum average production for five years?

(OR)

16) The Pie chart provided below gives the distribution of land (in a village) under various food crops. Study the pie chart carefully and answer the given questions that follow. Distribution of areas (in acres) under various food crops?

(i) Which combination of three crops contributes to 50% of the total area under the food crops?

(ii) if the total area under Jowar wan 1.5 million acres then what was area (in million area)

(iii) if the production of wheat in 6 times that of barley, then what is the ratio between the yield per acre of wheat and barley?

FOURTH SEMESTER

BRANCH:-Mathematics/Applied Mathematics

Open Elective (Other Departments)

MA/AMA 406: PAPER VI B - BASIC MATHEMATICS FOR SOCIAL SCIENCES (EE)

(Common with paper AM 406 (B) of Branch I(A) Mathematics)

(Under the CBCS & Non CBCS w.e.f.2021-2022)

(Regular/Supplementary)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. **All** questions carry equal marks. 4X5=20

1. If $A = \begin{bmatrix} 3 & 2 & 2 \\ 1 & 3 & 1 \\ 5 & 3 & 4 \end{bmatrix}$, find the matrix B such that $AB = \begin{bmatrix} 3 & 4 & 2 \\ 1 & 6 & 1 \\ 5 & 6 & 4 \end{bmatrix}$.

2. Find the Eigen values and Eigen vectors of the matrix $\begin{bmatrix} 1 & 1 & 3 \\ 1 & 5 & 1 \\ 3 & 1 & 1 \end{bmatrix}$.

3. Prove that the right- bisectors of the sides of a triangle concur at its circumcentre.

4. Given $R_1 = 5\ I - 2\ J + 4\ K$ and $R_2 = I + 3\ J + 7\ K$, find the magnitude and direction cosines of the vectors $R_1 + R_2$ and $2R_1 - R_2$.

5. Find the nth derivative of $\dfrac{x}{(x-1)(2x+3)}$.

6. Show that $\sin x(1+\cos x)$ is a maximum when $x = \dfrac{\pi}{3}$.

7. Integrate i) $\int \sin^4 x \cos^2 x\, dx$. ii) $\int_0^\infty \dfrac{x^2}{(1+x^2)^{7/2}}\, dx$.

8. Solve the differential equation $(y^2 - 2xy)\, dx = (x^2 - 2xy)\, dy$.

SECTION B

Answer All questions. Each question carries 15 Marks. **4X15=60**

UNIT-I

9. Solve the following system of equation by matrix method

$x_1 + x_2 + x_3 = 1, x_1 + 2x_2 + 3x_3 = 6, x_1 + 3x_2 + 4x_3 = 6.$

(OR)

10. If A and C are non-singular matrices, then show that $\begin{bmatrix} A & 0 \\ B & C \end{bmatrix}^{-1} = \begin{bmatrix} A^{-1} & 0 \\ -c^{-1}BA^{-1} & c^{-1} \end{bmatrix}$

Hence find inverse of $\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 2 & 0 & 0 \\ 3 & 0 & 4 & 0 \\ 0 & 1 & 0 & 3 \end{bmatrix}$.

UNIT-II

11. A line makes angles $\alpha, \beta, \gamma, \delta$ with Diagonals of a cube, prove that $\cos^2\alpha + \cos^2\beta + \cos^2\gamma + \cos^2\delta = 4/3$. (OR)

12. Show that the volume of the tetrahedron ABCD is $\frac{1}{6}\left[\overrightarrow{AB}, \overrightarrow{AC}, \overrightarrow{AD}\right]$.

Hence find the volume of the tetrahedron formed by the points $(1,1,1), (2,1,3), (3,2,2)$ *and* $(3,3,4)$.

UNIT-III

13. Expand $e^{\sin x}$ by Maclaurin's series or otherwise upto the term containing x^4.

(OR)

14. Using Taylor's theorem, prove that $x - \frac{x^3}{6} < \sin x < x - \frac{x^3}{6} + \frac{x^5}{120}$, *for* $x > 0$.

UNIT-IV

15. Evaluate $\int_0^{\pi/2} \log\sin x \, dx.$ (OR)

16. Solve $(y\,dx + x\,dy)\, x\cos(y/x) = (x\,dy - y\,dx)\, y\sin(y/x)$.

M.Sc. DEGREE EXAMINATIONS, AUGUST - 2021

FIRST SEMESTER

BRANCH - APPLIED MATHEMATICS

AM - 101 : Paper - 1 : METHODS OF APPLIED MATHEMATICS

(Under CBCS & Non - CBCS w.e.f. 2016-2017)

(Common to Supplementary candidates also i.e., who appeared in 2015 and earlier 90 marks)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **Four** questions. All questions carry **equal** marks. **(4×5=20)**

1. State and prove Change of Scale property.
2. Show that $\int_0^\infty \frac{\sin cox \cos wx}{w} dw = \frac{\pi}{2}, 0 \le x < 1$.
3. Find the finite sine transform of $f(x) = 1 - \frac{\cos n\pi}{n^2\pi^2}$.
4. Find $f(x)$, if $\overline{f_c(p)} = \frac{\cos\left(\frac{2p\pi}{3}\right)}{(2p+1)^2}$ if $0 < x < 1$.
5. State and prove Cayley's theorem.
6. Prove that a group of order P^n is nilpotent.
7. State and Prove Gauss Lemma.
8. Define Euclidean domain and give two examples.

SECTION - B

Answer **All** questions. All questions carry **equal** marks. **(4×15=60)**

UNIT - I

9. a) State and prove the parseval's identity for Fourier series.

   b) Solve the integral equation $\int_0^\infty f(x)\cos \lambda x dx = e^{-\lambda}$.

(OR)

10. a) Find the Fourier cosine transform of e^{-t^2}

b) Express the function $f(x)=\begin{cases}\cos x \text{ if } 0<x<\pi \\ 0 \quad \text{if } x\le 0 \text{ or } x\ge\pi\end{cases}$ as Fourier integral.

UNIT - II

11. Solve $\frac{\partial u}{\partial t}=\frac{\partial^2 u}{\partial x^2}, 0<x<6, t>0$, subject to conditions $u_x(0,t)=u_x(6,t)=0, u(x,0)=2x$.

(OR)

12. Find the steady temperature u(x,y) in a long square bar of side π when one face is kept at constant temperature u_0 and the other faces at zero temperature. Assume that u(x,y) is bounded.

UNIT - III

13. i) State and prove Burnside theorem.

ii) Let G be a group. If G is solvable, the prove that every subgroup of G and every homomorphic image of G are solvable. Conversely, if N is normal subgroup of G such that N and G/N are solvable, then prove that G is solvable.

(OR)

14. Prove that the Alternating group A_n is simple if $n > 4$. Consequently, prove that S_n is not solvable if $n > 4$.

UNIT - IV

15. a) Prove that Every Euclidean domain is a UFD.

b) Show that $Z\left[\sqrt{-6}\right]$ is not Euclidean domain.

(OR)

16. Let R be a unique factorization domain. Then the polynomial ring R[x] over R is also unique factorization domain.

M.Sc. DEGREE, EXAMINATIONS
FIRST SEMESTER
BRANCH:-Mathematics/Applied Mathematics
MA/AMA 103 B: PAPER III — VISCOUS FLOWS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time : 3 Hours *Max. Marks : 80*

Section-A

Answer any **FOUR** questions (4×5=20 marks)

Each question carries **5** marks.

1. Write about the stress and strain.
2. Verify the following invariant for two dimensional stress components.

$$\left(\sigma_{x'x'} - \sigma_{y'y'}\right)^2 + 4\sigma^2 x'y' = \left(\sigma_{xx} - \sigma_{yy}\right)^2 + 4\sigma_{xy}$$

3. Write about fundamental equations of the flow of viscous incompressible fluids.
4. Derive the equation of continuity in the vector form.
5. Write about plane poiseuille flow.
6. Explain the applications of the parallel flow theory.
7. Write about momentum integral theorems for the boundary layer.
8. Explain about the laminar boundary layer.

Section-B

Answer **all** questions

Each question carries 12 marks (4×12=48 marks)

9. Derive the relation between stress and rate of strain for an incompressible fluid.

OR

10. Let the new coordinate system (x', y') be detained from the original coordinate system (x,y) by a rotation through an angle 45°. Verify the invariants to the rates of strain for a rectilinear flow with a linear velocity profile i.e. u = ay, v = 0.

11. Derive Navier - stokes equations for viscous incompressible fluid in vector form.

OR

12. Derive the equation of state of perfect gas.

13. Discuss the flow between concentric rotating cylinders.

OR

14. Explain the Hagen - Poiseuille flow through a pipe.

15. Discuss the boundary layer on a surface with pressure gradient.

OR

16. a) Derive Blasius solution of a incompressible fluid past a thin flat plate.

    b) Based on the von karman integral relation determine the local frictional coefficient c_f for flow over a flat plats.

B-238-01-04 B

FIR

M.Sc. DEGREE, EXAMINATIONS
FIRST SEMESTER
BRANCH:-Applied Mathematics
AMA 104: PAPER IV — BOUNDARY VALUE PROBLEMS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. All questions carry **equal** marks. 4X5=20

(1) Test the Stability of the critical point (0,0) of the system

$x_1' = 2x_1 + 4x_2$

$x_2' = 3x_1 + 5x_2$

(2) Prove that all the solutions of $x' = A(t)x$ where $A(t)$ is an $n \times n$ continuous matrix on $[0, \infty)$ and x is an n-vector are stable iff they are bounded

(3) If $x' = A(t)x$ is uniformly stable, $B(t)$ is an $n \times n$ continuous matrix for $t \geq t_0$ and $\int_{t_0}^{\infty} \|B(t)\| dt < \infty$ Prove that $x' = (A(t) + B(t))x$ is uniformly stable

(4) Find the Zero Stability of the First approximation the zero system

$x_1' = 7x_1 + 2\sin x_2 - x_2^2$

$x_2' = e^{x_1} - 3x_2 - 1 + \frac{5}{2}x_1^2$

(5) Show that Lotka-Volterra two species mutalism system

$x_1' = x_1(2 - 3x_1 + 2x_2)$

$x_2' = x_2(1 + 4x_1 - 6x_2)$ is global asymptotically stable.

(6) State & prove Bihari's inequality ?

(7) Find the normal equation of Bessel's equation $t^2x'' + tx' + (t^2 - p^2)x = 0$ and also show that if $0 \leq p < \frac{1}{2}$ then every interval of the length π contains atleast one zero of the solution $J_p(t)$ of Bessels equation

(8) If $p = \frac{1}{2}$ then every zero of the $J_p(t)$ is at a distance of π from the successive zero

SECTION-B

Answer All questions Each Question carries 15 marks $4 \times 15 = 60$

(9) Test the Stability based on first approximation of the zero solution of the system $x_1' = -2x_1 + 8\sin^2 x_2$
$x_2' = x_1 - 3x_2 + 4x_1^2$

(OR)

(10) Define maximal, minimal, upper & lower solutions of initial value problem $x' = f(t, x), x(t_0) = x_0$

(11) Prove that the system $x' = A(t)x$ is respectively stable if $\|\phi(t)\| \leq M$, $\phi''(t) \leq M$, for some positive constant M and $t \geq t_0$

(OR)

(12) Discuss the nature of the critical point (0,0) of the two dimensional system of $u'' + 2ku' + q^2u = 0$ where k & q are positive constant

(13) Test for Stability based on first approximation of the zero solution $x_1' = -7x_1 + 2\sin x_2 - x_2^2$
$x_2' = e^{x_1} - 3x_2 - 1 + \frac{5}{2}x_1^2$

(OR)

(14) If the positive numbers a_i, b_{ij} $(i, j = 1, 2)$ satisfies the inequalities $\frac{b_{12}}{b_{22}} < \frac{a_1}{a_2} < \frac{b_1}{b_2}$ holds then prove that the Comprehensive system
$x_1' = x_1(a_1 - b_{11}x_1 - b_{12}x_2)$
$x_2' = x_2(A_2 - b_{21}x_1 - b_{22}x_2)$ where a_i, b_{ij}, are positive constants.

(15) State & prove Bihari's inequality

(OR)

(16) State & prove Sturm's separation theorem.

Total No. of Pages : 2

B-238-02-01

M.Sc. DEGREE EXAMINATIONS, OCTOBER - 2021

SECOND SEMESTER

Branch : APPLIED MATHEMATICS

AM 201 Paper I : MATHEMATICAL MODELING

(Under CBCS & Non-CBCS w.e.f. 2016-2017)

Time : 3 Hours **Max. Marks : 80**

SECTION - A

Answer any **FOUR** questions. All questions carry **Equal** marks. **(4×5=20)**

1. Discuss population growth model.
2. Find the orthogonal trajectories of the family of curves $x^2 + y^2 - 2ax = 0$.
3. Discuss the Domar first debt model.
4. Show that the model represented by

   $\frac{dx}{dt} = x(12 - 4x - 3y), \frac{dy}{dt} = y(30 - 6x - 5y)$ $x \geq 0,\ y \geq 0$ has no position of equilibrium and that only the second species will survive.
5. Obtain the curves of pursuit when $k = 1,\ k > 1$.
6. Give a model for rectilinear motion.
7. Give a brief account on cob web model.
8. Write equation of continuity for heat flow.

SECTION - B

Answer **ALL** questions. Each question carries **20** marks. **(4×15 =60)**

9. a) Discuss the diffusion of glucose in the blood stream.

   b) Explain simple Harmonic Motion.

(OR)

10. a) Formulate a mathematical model for motion of a rocket and explain it.

b) Find the orthogonal trajectories of the families of curve $r = a(1+\cos\theta)$.

11. a) Discuss the modification of the Prey-Predator model when, the predator population is harvested at a constant rate h_1.

b) Formulate and discuss Leontief's open closed dynamical systems for inter-industry relations.

(OR)

12. a) Derive samuelson's investment model.

b) Explain Richardson's model for Arm's race.

13. a) Find the central force F(r) if the orbit of an ellipse with centre of force coinciding with the centre of ellipse.

b) Formulate a mathematical model of circular motion and motion of satellite.

(OR)

14. a) Discuss the motion of a particle on a smooth or rough vertical wire.

b) Solve, $\frac{d^2y}{dt^2}+\frac{dy}{dt}(\alpha L+\beta)+\alpha\beta Ly+\alpha\beta u=\alpha\beta G$ for mixed proportionate derivative stabilization policy and discuss the stability of the solution.

15. a) Solve the difference equation, $x_{t+2}-4x_{t+1}+4x_t=0$ and discuss the behaviour of each solution.

b) Formulate and discuss a mathematical model for Hardy weinberg law.

(OR)

16. a) Derive Euler's equation of motion for inviscid flow.

b) Write diffusion equation in spherical polar and cylindrical polar coordinates.

SECOND SEMESTER
BRANCH:-Applied Mathematics
AMA 203 B: PAPER III — MAGNETO HYDRO DYNAMICS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time : 3 Hours *Max. Marks : 80*

Section-A

Answer any ~~five~~ four questions (4×5=~~25~~ 20 marks)

Each question carries **5** marks.

1. Write about sources and sinks
2. Find the velocity potential at p due to the doublet at 0 and find velocity components at p in spherical polar coordinates.
3. Write about uniform flow past a fixed infinite circular cylinder.
4. Show that the complex potential at p is $w = be^{i\alpha}(z - z_1)^{-1}$ in the case of line doublets.
5. State and explain Maxwell's electromagnetic field equations.
6. Write about Magnetohydrostatics.
7. Write about Fluid in motion.
8. Derive the velocity amplitudes of the reflected and transmitted waves.

Section-B

Answer **one** questions from each unit

Each question carries ~~12½~~ 15 marks 4×15=60 (~~4×12½=50~~ marks)

Unit-I

9. a) Write about the image of a doublet in a sphere when the axis of the doublet passes through the centre of the sphere.

   b) Show that the stream function ψ is not a harmonic function.

OR

10. State and prove weiss's sphere theorem.

Unit-II

11. Show that for irrotational incompressible two - dimensional flow, $\phi(x,y), \Psi(x,y)$ are harmonic functions and the families of curves ϕ = constant and Ψ = constant intersect orthogonally

OR

12. a) State and prove the Milne - Thomson's circle theorem.

    b) Write about the Magnus effect.

Unit-III

13. State and prove Altven's theorem.

OR

14. a) Write about the magnetic Reynolds number

    b) Write about Rate of Flow of charge.

Unit-IV

15. State and prove Ferraro's law of iso rotation.

OR

16. Show that the magnetic energy of the pert urbed field is equal to the kinetic energy of the motion.

B–238–03–01

M.Sc., DEGREE EXAMINATION — NOVEMBER/DECEMBER, 2018.

THIRD SEMESTER

Branch — APPLIED MATHEMATICS

AM – 301 : Paper I — CONTINUM MECHANICS

(Under CBCS and Non-CBCS w.e.f. *2017-2018*)

Time : 3 hours Max. Marks : 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define stream lines. Determine the equation of stream lines if $\overline{q} = x\bar{i} - y\bar{j}$.

2. For an incompressible fluid $q = (wy, wx, o)$ Discuss the Nature of the flow.

3. Derive the condition at a boundary of two inviscid immiscible Fluids?

4. Explain pitot tube.

5. Explain Stoke's Stream function.

6. Obtain stream function ψ for a uniform line source along $\overline{oz}$.

7. Discuss the flow due to a uniform line doublet at 'o' of strength μ per unit length Its axis being along $\overline{ox}$.

8. Discuss the uniform flow past a fixed infinite circular cylinder.

SECTION – B

Answer ALL questions. All questions carry equal marks.

(Marks : $4 \times 15 = 60$)

9. (a) Derive the equation of Continuity.

   (b) At the point in an incompressible fluid having spherical polar co-ordinates (r, θ, ψ) the velocity components are $(2Mr^{-3}\cos\theta, Mr^{-3}\sin\theta, o)$ where M is a constant show that the velocity is of the potential kind. Find the velocity potential and the equations of the streamlines.

Or

10. (a) Explain the conditions at rigid boundary.

    (b) Discuss general analysis of fluid motions.

[P.T.O.]

11. (a) Prove that the pressure at 'p' in moving inviscid fluid is independent of the orientation of 'δA'.

(b) Discuss Bernoulli's equation.

Or

12. (a) Discuss the case of steady motion under conservation body forces

(b) Explain ventury tube?

13. (a) If $r^n S_n(\theta, \psi)$ is a Harmonic function, then prove that $r^{-(n+1)} S_n(\theta, \psi)$ is also Harmonic function.

(b) Discuss doublet is a uniform stream.

Or

14. State and prove Weiss's sphere theorem.

15. (a) Discuss the flow for which $W = z^2$.

(b) State and prove the Milne – Thomson circle theorem.

Or

16. State and prove Blasius theorem.

B-238-03-03 B

M.Sc. DEGREE, EXAMINATIONS
THIRD SEMESTER
BRANCH:-Applied Mathematics
AMA 303 B : PAPER III — MATHEMATICAL METHODS
(Under the CBCS & Non CBCS w.e.f.2021-2022)

Time: 3 Hours **Max. Marks: 80**

SECTION-A

Answer any **FOUR** questions. All questions carry **equal** marks. 4X5=20

1) Find the deflection of a vibrating string of unit length having fixed endpoint with initial velocity zero and initial deflection $f(x) = k(\sin x - \sin 2x)$

2) write about heat conduction equation.

3) Derive the equation of the circuit.

4) show that the sum of the temperatures at any two points equidistant from the centre is always $100^{\circ}c$, a constant.

5) Define: Green's function and mention some of its important properties.

6) classify the integral equations. convert the initial value problem $y'' + y = 0$, $y(0) = 0$ $y'(0) = 1$ into an integral equation.

7) write about a Fredholm integral equation of the first kind.

8) write about neumann series.

Question No.	Sub No. if any	Section-B 4×15=60	Allotment of Marks for each question
		Answer one Question from each Unit.	
		Unit-I	
9)		A tightly stretched string with fixed end points $x=0$ and $x=l$ is initially in a position given by $y=y_0 \sin^3(\pi x/l)$. If it is released from rest from this position, find the displacement $y(x,t)$.	
		(OR)	
10)		A homogeneous rod of conducting material of length 100cm has its ends kept at zero temperature and the temperature initially is $u(x,0)=\begin{cases} x, & 0 \le x \le 50 \\ 100-x, & 50 \le x \le 100 \end{cases}$. Find the temperature $u(x,t)$ at any time.	
		Unit-II	
11)		Solve the following boundary value problem $\frac{\partial u}{\partial t} = \alpha^2 \frac{\partial^2 u}{\partial x^2}$, $0<x<l$, $\frac{\partial u(0,t)}{\partial x}=0$, $\frac{\partial u(l,t)}{\partial x}=0$, $u(x,0)=x$.	
		(OR)	
12)		Obtain the solution of the radio equation $\frac{\partial^2 v}{\partial x^2} = Lc \frac{\partial^2 v}{\partial t^2}$ appropriate to the case when a periodic e.m.f voltage is applied at the end $x=0$ of the line.	

ion	Sub No. if any		Allotment of Marks for each question
		Unit-III	
13)		Solve by the method of successive approximations the integral equation $y(x) = 1 + \lambda \int_0^1 (1-3x\xi)\, y(\xi)\, d\xi$.	
		or	
14)		Farmer Solve the integral equation $y(x) = 1 + \int_0^x y(t) \sin(x-t)\, dt$.	
		Unit-IV	
15)		Find the iterated kernels for the kernel $k(x,t) = x - t$ in $(0,1)$	
		or	
16)		Determine the resolvent kernel associated with $k(x,\xi) = x$ in the interval $(0,1)$ in the form of a power series in λ, obtaining the first three terms.	

B-238-04-02

M.Sc. DEGREE EXAMINATION — SEPTEMBER 2020.

FOURTH SEMESTER

Branch : Applied Mathematics

AM 402 Paper II : FLUID DYNAMICS

(Under CBCS and Non-CBCS w.e.f. 2017-2018)

Time : 3 hours

Max. Marks 80

SECTION – A

Answer any FOUR questions. All questions carry equal marks.

(Marks : $4 \times 5 = 20$)

1. Define viscosity with example.

2. Define viscid and inviscid flow with suitable examples.

3. Obtain with the usual notation the governing equations of motion for a steady incompressible flow through an arbitrary cross section under a constant pressure gradient.

4. Obtain with the usual notation, Helmholtz's equation for the verticity vector $\vec{w}$ in a real fluid.

5. State and explains the significance of the boundary layer characteristics.

6. Show with the usual notation that, for the Blasius solution $\int_0^\infty (f^1 - f^{1^2})dy = f^{11}(0)$.

7. Define and explain the importance of the Van-Mises transformation.

8. Define the displacement thickness and give its physical significance.

SECTION – B

Answer ALL question. Each question carries equal marks.

(Marks : $4 \times 15 = 60$)

9. With the usual notation obtain Navier – Stokes equations for a viscous fluid.

Or

10. Define circulation. Obtain an expression for the rate of circulation in a viscous fluid deduce the corresponding expression for an ideal fluid and state its significance.

11. Discuss completely Hagen – Poiseuille Flow, through a circular pipe.

Or

12. Discuss the steady viscous flow through an arbitrary cylinder under constant press gradient. Using this idea discuss the flow through a tube of elliptic cross-section.

13. With the usual notation obtain Von – Karman's momentum integral equation for steady two dimensional incompressible boundary layers.

Or

14. With the usual notation obtain:
    (a) Momentum integral equation.
    (b) Kinetic – energy integral equation.

15. (a) Write a short note on for the flow near to the stagnation point of a cylinder.
    (b) Show with the usual notation that the rate of energy dissipation ϕ is approximate to $\mu\left(\frac{\partial u}{\partial y}\right)^2$ within the boundary layer.

Or

16. Obtain Blasius equation for the steady flow parallel to a semi-infinite flat plate.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF MICROBIOLOGY

Course

M.Sc. MICROBIOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as

per NEP-2020

About the Department

The Department of Microbiology emerged from the Sri Venkateswara University post graduate Centre, Kavali during 2005. Since 2010, the Department of Microbiology was to transferred College of Sciences, Sri Venkateswara University, Tirupati. The department presently runs Four academic programmes M.Sc. Microbiology (Regular & Self-Supporting), M.Sc. Industrial Microbiology (Self-supporting) and Doctoral Programme. The present intake in each Masters programme is 24. The post graduate programme is under Choice Based Credit Course in four semesters with 16 theory papers, 7 practicals and one project work. The Department has taken special interest in encouraging the students to take up pure, applied and strategic Ph.D research programmes at local and national level to restore the environmental quality and development of indigenous microbial technology. Several students of this department have been gainfully employed and are working in several leading National & International laboratories, Industries, research Institution and colleges.
The research activities of the Department are also well recognized and a number of projects funded by agencies such as UGC, DST, ICMR etc., The thrust areas identified are Molecular Microbial Ecology, Proteomics, DNA Bar-coding, EnvironmentalBiotechnology etc.,The department of Microbiology has developed and transformed itself into a progressive department with upto date laboratory equipments, reference books. The department conducts various activities like Saturday meets, Research Seminars and training programmes for the CSIR-UGC, SLET, NET, GATE examinations. On an average 4 - 6 out of 24 students of each course qualifying these examinations every year.The department has strong rapport with potential employers and the opportunities of employment are routinely displayed.With respect to service the faculty has an exemplary record of participation in National & International Organization and editing professional Journals. The research outcomes of the department are well evidenced by publication of several research papers in peer reviewed national and international Journals with good impact factor. The Department also excels in extra curricular activities too. The department regularly organizes national level seminars, symposia and workshops. It is not only the effect of the faculties for all such success but it is the team spirit and the excellence of the post graduate and Doctoral students too. Students of Microbiology are self sustained and receive individual fellowships including DST inspire Fellowship, Rajiv Gandhi National Fellowship, University Research Fellowship. From all these progresses and growth it is well envisaged that the members of Microbiology Department are well sustained to outrival the competitive scientific World.

Vision

***Upgradation of the Knowledge in theory and research activities in order to keep pace with the* global *scientific progress and to meet the requirements of the society and for the development of the Country*.**

Mission

***The mission of the department of microbiology is to educate and train students in the discipline of microbiology and to expand their scientific knowledge through research*.**

Choice Based Credit System (CBCS):

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates.

Department Objectives

- To offer courses within National Education Policy (NEP-2020) to enhance the intellectual foundation and preparation of students for life in a complex, dynamic technological world
- To prepare students careers in clinical and Pharma industries and for careers in basic, environmental and biomedical research
- To prepare students (M.Sc. and Ph.D.) with in-depth knowledge and research skills for professional careers in Microbiology
- To enhance opportunities for research and scholarship for faculty members as well as undergraduate and graduate students
- To preserve, add to, evaluate and transmit knowledge in the field of Microbiology
- To serve the society by promoting science
- To promote the sustainable goals of the country

Program Specific Outcomes

PSO-1: Equips capacity to venture into a career in bio based industries as scientists or technologists in the division of production, research and developmental settings.

PSO-2: Demonstrate the concepts and research approach for their higher career in the field of microbiology and develop their scientific interest.

PSO-3: Administer skill sets to understand the rationales behind various regulatory/legal bodies governing the R&D in the industry.

PSO-4: Exhibit in-depth practical oriented knowledge to students in various thrust areas of microbiology, so as to meet the global demands of industry and academia.

PSO-5: Ability to designs aids in developing solutions for complex problems with appropriate consideration to the public health and safety, and the cultural, societal, and environmental considerations.

Programme Objectives

- The broad goal of the teaching of post graduate students in microbiology is to provide an understanding of the natural history of infectious diseases in order to deal with the etiology, pathogenesis, laboratory diagnosis, treatment and control of infections in the community
- Develop core competencies in microbiology: structure and function, information flow, energy transfer and evolution
- Manipulate bacteria genetically to address biological questions
- To offer hands on training on biofertilizers production, and to impart knowledge on various technologies of composting and waste water treatment methods

Program Outcomes

This program will help post graduates to:

PO1: Have Knowledge and technical skills associated with microbiology laboratory for delivering quality clinical investigations.

PO2: Perform safe use of basic laboratory glassware and equipment including the cell counter, microscope, centrifuge, incubator, Hot air oven, autoclave, colorimeter, and laminar air flow.

PO3: Perform advanced molecular microbial methods including Polymerase Chain reaction, site directed mutagenesis, SDS-PAGE, agarose gel electrophoresis, western blotting, southern blotting, transformation ,transduction, conjugation and AMES test etc,

PO4: Conduct routine clinical laboratory procedures within acceptable quality control parameters in bacteriology, virology, mycology, parasitology and immunology.

PO5: Learn Problem solving techniques in identification and correction of pre analytical, post analytical & analytical variables.

PO6: Demonstrate technical skills, social behavior and professional awareness for functioning effectively as a microbiology technician.

PO7: Maintain and operate laboratory equipment utilizing appropriate quality control and safety procedures.

PO8: Identify the impact of laboratory tests in a global and environmental context.

PO9: Perform as a leader/team member in diverse professional and industrial research areas.

PO10: Use the fundamentals of research process to complete and present research studies that enrich the all areas of advanced research.

PO11: Gain practical knowledge through internship at various industries.

PO12: Ability to inculcate an attitude of enquiry towards developing innovative ability and enhancing entrepreneurship skills.

Program Educational Objectives

The Program Educational Objectives (PEOs) for the M.Sc. Microbiology program describes the accomplishments that post graduates are expected to attain within two years after post graduation:

PEO-1: To exhibit ability to pursue careers in the industry, agriculture, and applied research where microbial systems are increasingly employed.

PEO-2: To address the increasing need for skilled scientific manpower, contributing to application, advancement and impartment of knowledge in interdisciplinary areas related to Microbiology and life sciences.

PEO-3: To exhibit excellent professional skills, communication skills and ethical attributes as an effective team member in a competitive global environment

PEO-4: To demonstrate right mixes of innovative ability, equipped with entrepreneurship abilities contributing to self and national development.

PEO-5: The graduates will be cognizant and responsive to the societal needs and will possess the initiative and critical acumen required to continuously improve their knowledge through life long learning.

- All CORE Papers are Mandatory
- Generic Elective - Choose any one
- Project Work –In house/Research institutes, National laboratories, Central Universities

- Multi-disciplinary course is Mandatory.
- Skill based course Mandatory
- Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study
- Interested students may register for MOOC with the approval of the concerned DDC

FIRST SEMESTER

MB - 101: INTRODUCTORY MICROBIOLOGY

Course Learning Objective

1. To provide information on microscopy and staining materials that helps to observe microorganism.
2. To provide detailed knowledge on isolation, cultivation and enumeration of microorganisms.
3. To provide in depth knowledge about classification and taxonomy of microorganisms.
4. To provide information on prokaryotic and eukaryotic microorganisms.

UNIT – I

History and Scope of Microbiology - Discovery of microorganisms and development of microbiology - Contributions of pioneers- Prokaryotic and Eukaryotic microorganisms - Origin and evolution of microorganisms. Distinguishing of different microorganisms-Scope and relevance of Microbiology - Future of Microbiology.

Microbial Structure - Microscopy – principles and applications of light microscope-Bright field- Dark-field, Phase – contrast, Fluorescent, Scanning and Transmission electron microscopes, Confocal microscopy, Scanning tunneling microscope. Preparation of microbiological samples for microscopy-simple and differential staining, special and structural staining. Negative contrast staining for virus samples. Preparation of tissues for thin sectioning (fixation, dehydration, infiltration, embedding and sectioning).

Physical and Chemical methods of sterilization and disinfection : Heat, radiation, pH, atmospheric pressure, filters, various chemical agents, safety precautions. The concept of containment facility.

UNIT – II

Microbiological media: Types of media-natural and synthetic; autotrophic, heterotrophic and prototrophic media; basal, defined, complex, enrichment, selective, differential, maintenance and transport media.

Isolation, cultivation and enumeration of microorganisms : Isolation from different natural sources. Approaches for obtaining pure cultures. Cultivation of aerobes and

anaerobes. Continuous, batch, synchronous broth and stock cultures. Enumeration / measurement of growth of microorganisms.

Maintenance and preservation of microbial cultures : Repeated sub-culturing, sterile soil/sand preservation, glycerol-deep freezing, oil overlay, drying methods, freeze-drying.

UNIT-III

Microbial Taxonomy: Classification of microorganisms – introduction – Hackel's three kingdom concept – Whittaker's five kingdom concept – three domain concept of Carl Woese. Basis of microbial classification. Concepts, nomenclature and taxonomic ranks; major characteristics used in Taxonomy – morphological, physiological and metabolic, ecological, numerical taxonomy; genetic and molecular classification systems; the kingdoms of organisms and phylogenetic trees. Characteristics of prokaryotes and eukaryotic cells.

UNIT – IV

Prokaryotic microorganisms:

Brief outlines on discovery, nature, origin, evolution, morphology and structure, composition, reproduction and other characteristics of Bacteria (Eubacteria) Spirochetes, Rickettsias, Chlamydias, Pseudomonads, Acetic acid bacteria, Mycloplasmas, Cyanobacteria, Archaebacteria, Actinomycetes (Actinobacteria).

Eukaryotic microorganisms:

Fungi : Classification, structure, composition, reproduction and other characteristics of fungal divisions – *Zygomycota, Ascomycota, Basidiomycota* and *Deuteromycota* and slime and water molds. General characteristics and importance of fungi – *Saccharomyces, Candida, Pichia, Pencillium, Neurospora, Rhizopus, Aspergillus, Agaricus, Cryptococcus, Fusarium, Trichoderma, Claviceps.*

Algae : Classification, structure, reproduction and other characteristics of algal divisions. Characteristics of *Chlorella, Senedesmus, Gelidiella* and *Gracellaria.* Economic importance of algae, phytoplantanic microalgae.

Protozoan parasites : Classification, morphology and structure, reproduction and other characteristics of pathogenic protozoa like *Entamoeba, Plasmodium, Leishmania, Cryptosporidium, Trichomonas, Taxoplasma, Trypanosoma, Giardia.*

Courses Learning Out Comes

1. Be able to know the microbial structure, sterilization and disinfection techniques
2. Be able to know the maintainence and preservation of microbial culture.
3. Be able to know nomenclature, taxonomic trends and major characteristics used in taxonomy.
4. Be able to know the discovery, classification, structure and importance of prokaryotes, fungi, algae and protozoa.

Suggested Books:

1. Brock Biology of Microorganisms. 2020, 16th ed. Madigan et al., Prentice-Hall International, Inc.
2. Microbiology. 2017. 10th ed. Prescott et al. Wm. C. Brown Publ.
3. Principles of Microbiology. 1996. 2nd ed. R.A. Atlas. Wm.C. Brown. Publ.
4. Foundations in Microbiology. 2017. 10th ed. K. Talaro and A. Talaro. Wm. C. Brown Publ.
5. Microbiology. 2016. 5th ed. Pelczar et al. Tata McGram-Hill Publ. Company Ltd.
6. General Microbiology, 2019.2nd by S.B. Sullia, Oxford and IBH Publishers.
7. General Microbiology, 1999.5thed by Stainer et al., Macmillan Educational Ltd.
8. Instant Notes in Microbiology. 2002. J. Nicklin et al. Viva Books Pvt. Ltd.
9. Microorganisms, Biotechnology and Disease : Students Book. 1997 by Pauline Lourie and Susanwells. Cambridge University Press.
10. Introductory Mycology. 2007. 4th ed. Alexopoulos et al., John Wiley and Sons.
11. Introductory Phychology by H.D. Kumar. 2nd ed. 1999. East West Press.

MB - 102: MICROBIAL PHYSIOLOGY

Course Learning Objective

1. To provide insights in to nutrition and microbial growth.
2. To know the concepts of bioenergetics, photosynthesis and carbon metabolisms.
3. To provide in depth information about aerobic and anaerobic respiration and lipid metabolism.
4. To provide detailed information on protein, nucleic acids and secondary metabolisms.

UNIT – I

Nutrition : Elemental nutrient requirements of microbes; nutritional groups of bacteria; autotrophy-photoautotrophy and bacterial photosynthesis; chemoautotrophy and autotrophic metabolism; heterotrophy – photoheterotrophy and chemoheterotrophy, heterotrophic metabolism in bacteria; nutritional mutants and their use in metabolic studies.

Uptake and Transport of nutrients in microbes – Structural organization of plasma membrane in relation to transport, types and mechanisms of transport (passive, simple, facilitated, active, chemical modification) with reference to sugars, amino acids and ions; methods for studying of transport, coupling of transport of ions and metabolites to ATP/proton gradient.

Microbial Growth: building of macromolecules from elemental nutrients, supramolecules, cell components and cells; cell cycle in microbes and generation times; batch culture phases and importance of each phase, continuous cultures, synchronous culture, factors influencing the microbial growth.

Nature and properties of spores – Physiology and biochemistry of sporulation and germination of spores.

UNIT – II

The concepts of microbial metabolism, primary and secondary metabolism and their significance.

Bioenergetics : Concepts of free energy and thermodynamic principles in biology, energy transformation, ATP cycle, standard free energy of hydrolysis of phosphate compounds, energy transducers, redox potentials, free energy changes in redox reactions.

Photosynthesis : Oxygenic and anoxygenic photosynthesis, photosynthetic pigments, basic photochemistry of PS I and PS II and photosynthetic electron transport; modes of CO_2 fixation, halobacterial photosynthesis, sulphur, nitrogen and iron assimilating bacteria. Chloroplast mediated electron transport; chemolithotrophic electron transport systems. Biolumenescence.

Carbohydrate metabolism : Pathways underlying the utilization of different sugars (EMP, ED, HMP and phosphoketolase) in microorganisms, gluconeogenesis; synthesis of peptidoglycans and glycoproteins.

UNIT – III

Aerobic respiration : TCA cycle – intracellular location and reactions of the cycle, amphibolic nature of the cycle, energetics of the cycle; the glyoxalate cycle. Mechanisms of substrate-level phosphorylation; respiratory electron transport in mitochondria and bacteria along with its components (carriers); mechanism of oxidative phosphorylation, uncouplers, inhibitors;

Anaerobic respiration : nature of fermentation, the relationship of oxygen to growth and fermentation, biochemical mechanisms of lactic acid, ethanol, butanol, citric acid and acetone fermentations, study of fermentations, relationships between fermentation and energy production; nitrate and sulphate respiration.

Lipid metabolism: Biosynthesis of triacyl glycerols, phospholipids and glycolipids; oxidation of saturated and unsaturated fatty acids; microbial metabolism of aromatic and aliphatic hydrocarbons.

UNIT – IV

Protein metabolism: Assimilation of inorganic nitrogen and sulphur, biochemistry of nitrogen fixation; hydrolysis of proteins-exo-and endo-proteinases, outlines of biosynthesis

and catabolism of amino acids in microbes (deamination, decarboxylation and transamination reactions). Urea cycle.

Nucleotide metabolism : biosynthesis of bases, nucleosides and nucleotides including deoxyribonucleotides, regulation of nucleotide synthesis; break down of nucleic acids – exo- and endo-nucleases (RNases and DNases) and phosphodiesterases, salvage pathways; catabolism of purines and pyrimidines.

Secondary metabolism : Utilization of secondary metabolites for production of vitamins, toxins (aflotoxin and corynebacterial), hormones (GA), and antibiotics (penicillin and streptomycin).

Microbial toxins and extra cellular enzymes : Exo-and endotoxins: physiology of toxin production; mode of action of toxins and extra cellular enzymes and their importance in pathogen virulence and pathogenesis.

Course Learning Out Comes

1. Be able to know about the nutrition and microbial growth.
2. Be able to know about photosynthesis and carbon fixation.
3. Be able to know in depth details about aerobic and anaerobic respiration.
4. Be able to know in depth about various pathways in protein and nucleotide metabolisms.

Suggested Books:

1. Microbial Physiology and Metabolism. 1999, by D.R. Caldwell. Wm.C. Brown Publ.
2. Microbial Physiology. 2011, 4th ed. by A.G. Moat & J.W. Foster. Wiley-Liss.
3. Principles of Biochemistry. Lehinger. 2021.8th edition
4. Foundations in Microbiology. 2021. by K. Talaro & A. Talaro, Wm. C. Brown Publ.11th edition
5. Microbiology. 2017. By Prescott et al. Wm. C. Brown Publ.
6. Molecular Cell Biology. 2016 – by Lodish et al.8th edition
7. General Microbiology, 1999 by Stainer et al., Macmillan Educational Ltd.

CO-PO Mapping Matrix/Programme Articulation Matrix

	1	1	2	3	2	2	-	-	-	1
	2	2	2	2	2	2	-	-	-	1

MB – 103: BIOCHEMISTRY

Course Learning Objective

1. To provide basic concepts of chemistry in life.
2. To provide in depth information on lipids and amino acids.
3. To provide in depth information on proteins and catalytic proteins.
4. To provide in depth information in nucleic acids, hormones and vitamins.

UNIT – I

Basic concepts of Chemistry of life : The major elements of life and their primary characteristics; atomic bonds and molecules – bonding properties of carbon, covalent and non-covalent bonds, Vander waals forces; polarity, hydrophilic and hydrophobic interactions; asymmetry of carbon compounds and cis-trans isomerism; electron transfer and oxidation/reduction; functional groups of organic compounds; hydrogen ion concentration of biological systems; Brownsted – Lowry acids and bases; ionization and titration of acids; dissociable biological compounds and physiological buffer systems.

Carbohydrates : Classification of carbohydrates; outline structure and properties of important mono-, di-and oligosaccharides and their identification and analysis; structure, occurrence and biological importance of structural polysaccharides (cellulose, chitin, agar, alginic acids, pectins, proteoglycans, sialic acids, blood group polysaccharides, bacterial cell wall polysaccharides).

UNIT – II

Lipids: Building blocks of lipids. Classification of lipids. Fatty acids-physico-chemical properties, separation, distribution in nature characterization and saponification and iodine number. Nomenclature, outline structures, properties and functions of glycerides, neutral lipids (waxes, fats, oils, phospholipids, sphingolipids and glycolipids. Steroids – plant sterol, ergosterol, stigmasterol, cholesterol. Lipoproteins-classification, composition and importance. Salient features of bacterial lipids.

Amino acids : Classification, structure, physico-chemical properties, acid-base behaviour of amino acids.

Peptides : Characteristics of peptide bond, peptides of non-protein origin, properties and functions of peptides, determination of amino acid composition and sequence in peptides, chemical synthesis of peptides, peptides profiling.

UNIT – III

Proteins : Classification, properties and biological functions of proteins; structural organization of proteins – primary, secondary, tertiary and quaternary; Ramachandran's plot; proteins denaturation and renaturation (ribonuclease); structure-function relationships of certain proteins – myoglobin, hemoglobin, collagen; chaperones.

Catalytic proteins(enzymes) : Classification, nomenclature, composition and structure, enzymes as biocatalysts, outlines of purification and assay of enzymes, kinetics of enzyme catalyzed reactions, factors influencing enzyme catalyzed reactions, regulation of enzyme activity – activators and inhibitors and mechanism of action of enzymes (chymotrypsin). Regulatory enzymes – allosteric enzymes. Isoenzymes, conzymes, ribozymes, abzymes.

UNIT – IV

Nucleic acids : Types and their composition, structures of purines, pyrimidines, modified bases, nucleosides, nucleotides and polynucleotides; properties of bases and functions of nucleotides; types and structural polymorphism of DNA and RNA; denaturation and renaturation of nucleic acids, factors influencing hybridization, cot values.

Hormones and Growth regulators : Classification, outline structures and functions of major animal and plant hormones.

Vitamins : Discovery and outline chemistry of fat soluble (A,D,E and K) and water soluble (riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine folic acids and ascorbic acid) vitamins and their role in body functions.

Porphyrins and other pigments : Classification, structures and biological functions of porphyrins, brief account of haemoglobin and chlorphylls, cytochromes, xanthophylls and carotenoids of microorganisms.

Course Learning Out Comes

1. Be able to identify and analyze carbohydrates and lipids.
2. Be familiar with behavior of amino acids and structure functional relationships of proteins and their profiling.

3. Be able to know the separation methods such as centrifugation and Electrophoresis.

Suggested Books :

1. Principles of Biochemistry, Lehninger, 8th edition, 2021 by Nelson and Cox (Worth).
2. Biochemistry, Stryer 9th edition, W.H. Freeman, 2019.
3. Microbial Physiology and Metabolism. 1995, by D.R. Caldwell. Wm.C. Brown Publ.
4. Microbial Physiology. 1999, 3rd ed. By A.G. Moat & J.W. Foster. Wiley-Liss.
5. Foundations in Microbiology. 1996. By K. Talaro & A. Talaro, Wm. C. Brown Publ.

CO_4	3	2	2	2	2	2	1	-	-	-	1	1

MB – 104: BIOPHYSICS & BIOSTATISTICS

Course Learning Objective

1. Gives insights on electrochemical and spectroscopy concepts.
2. Provides indepth knowledge on separation techniques such as centrifugation, electrophoresis and chromatography.
3. Give detailed information on interval date, proportion data and count data.
4. Provide knowledge on statistical basis of biological assays and design of experiments.

UNIT – I

Electrochemcial techniques (Principles and applications): Redox reactions; pH and Clarke oxygen electrodes; biosensors.

Cell sorting and Flow cytometry (Principles and applications):

Radioisotope techniques - Nature and types of radioactivity, half-life of isotopes; detection and measurement of radioactivity-GM counter, liquid scintillation counter, gama-ray counter, Cerenkov counting and autoradiography; quenching and quench correction; laboratory safety measures in handling isotopes; biological uses of radioisotopes.

Spectroscopy : Electromagnetic spectrum of light; simple theory of light absorption by biomolecules; Beer's – Lambert law; transmittance; extinction co-efficient; light sources; monochromators; types of detectors; working principle and applications of visible, UV-visible, IR, Raman, ESR, mass, plasma emission, atomic absorption, and NMR spectrophotometry; fluorimetry and flame photometry; ORD and CD; X-ray diffraction and X-ray crystallography.

Amino acid and nucleotide sequencers: Basic principle, functioning and applications of amino acid and nucleotide sequencers.

UNIT – II

Centrifugation: Simple theory of preparative and analytical centrifuges and rotors; sedimentation analysis; differential, rate-zonal and equilibrium density gradient centrifugations. Applications – isolation of cells, subcellular organelles, viruses and macromolecules.

Electrophoresis (Principles and applications) : Types of electrophoresis – paper, gel (starch, acrylamide and agarose) disc, vertical, horizontal submarine, gradient, 2-dimentional, pulse-field and capillary; isoelectrofocussing; isolation and analysis of gel separated molecules – recovery of molecules from paper/gels; Southern, Northern and Western blottings.

Chromatography: Principle/simple theory and applications of partition, adsorption, ion-exchange, gel permeation and affinity chromatography based techniques – paper, thin-layer, column, GLC, HPLC, FPLC.

UNIT – III

Introduction: Definition of statistics: population and universe, the sample and population, statistical inference; parameter and statistics.

Interval Data: Mean, mode, median and standard deviation. Concept of probability – classical and frequency definitions; axiones of probability; addition and multiplication theorems (statements only); conditional probability-Baye's theorem (statement only); simple applications. Binomial, Poisson and Normal distributions (definitions and uses only).

Uncertainties in estimation of mean, comparison of means and variances – t, F, and Z tests.

Proportion data: examples of proportion data; (MPN, sterility testing of medicines, animal toxicity, therapeutic trial of drugs and vaccines, animal toxicity, infection and immunization studies) statistical treatment to proportion data. Chi-square test, goodness of fit.

Count data: examples of count data (bacterial cell count, radioactivity count, colony and plaque counts) statistical treatment to count data: Poisson distribution, standard error, confidence limits of counts.

UNIT – IV

Analysis of variance: Analysis of variance: Introduction, procedure and tests for one-way and two-way classified data. Multiple comparisons. Analysis of CRD, RBD and LSD. Factorial experiments- main effects and interaction in a 2^2 design, Duncan's Multiple Range Test.

Correlation and regression, formulae and application. Fitting straight line through a series of points. Fitting of exponential curves. Standard curve and interpolation of unknown Y-values. Multiple linear regression, logistic regression.

Statistical basis of biological assays: Response-Dose metameter. Delusion Assays, Direct and indirect assays. Quantal Responses, Probit, logit, LD_{50}, ED_{50}, PD_{50} – Standard line interpolation assay, parallel assay (4 point, 6 point assays), slope ratio assay.

Design of Experiments – Multiple comparison tests, Dunken's, Tukey's, Scheffic's, Dunnelt's etc.

Probit Analysis

Multiple Regression, Logistic regression

Discriminate Analysis

Clinical trails – Phase I, Phase II etc.

Clinical trails (meaning and importance only).

Course Learning Out Comes

1. Be able to know the principal, instrumentation and applications of spectroscopy, amino acid ,nucleotide sequencers.
2. Be able to know principle, methods and applications of separation techniques.
3. Be able to gain knowledge on basic concepts in statistics.
4. Be able to design the experimental and statistical basics of biological assays.

Suggested Books :

1. Practical Biochemistry: Principles and Techniques 1995, 4th ed. by K. Wilson and J. Walker, Cambridge University Press.
2. Modern Experimental Biochemistry. 1993. 2nd ed. by R.F. Boyer. The Benjamin Cummings Publ. Company.
3. Physical Biochemistry: Applications to Biochemistry and Molecular Biology, 1982, 2nd ed. by David Freifelder. W.H. Freeman and company.
4. Introduction to Practical Biochemistry. 2000. by S.K. Sawhney and Randhir Singh (eds). Narosa Publ. House.
5. Biochemical Methods for Agricultural Sciences. 1992 by S. Sadasivam and A. Manikam. Wiley Eastern Ltd.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Knowledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Teamwork	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning
CO_1	3	2	2	2	2	2	2	-	-	-	1	1
CO_2	3	2	2	2	2	2	1	-	-	-	1	1
CO_3	3	2	2	2	3	2	2	-	-	-	1	1
CO_4	3	2	2	2	2	2	2	-	-	-	1	1

PRACTICAL:

MB – 105: INTRODUCTORY MICROBIOLOGY & MICROBIAL PHYSIOLOGY:

1. Microbiological laboratory safety measures
2. Sterilization methods - Wet method, Dry method, Filters. Evaluation of alcohol effectiveness, Phenol coefficient method
3. Preparation of different media for cultivation of bacteria & fungi
4. Plating techniques – streak plate, spread plate methods
5. Enumeration of Bacteria by serial dilution, viable count
6. Qualitative tests for identification of Carbohydrates, amino acids, nucleic acids
7. Quantitative tests for Protein, glucose, glycine, bilirubin, cholesterol, Inorganic phosphorous
8. Determination of activity of – Peroxidase and Polyphenol oxidase in plant tissues.
9. Purification and study of Acid Phosphatase from potato tubers: Extraction of enzyme; effect of substrate concentration; enzyme concentration; temperature; pH on enzyme activity.
10. Determination of Bacterial growth curve
11. Determination of effect of temperature on bacterial growth
12. Determination of effect of pH on bacterial growth
13. Determination of effect of salt on bacterial growth
14. Determination of growth of fungi
15. Determination of concentration of cyanobacterial pigments
16. Determination of concentration of oligodynamic action
17. Determination of activity of microbial hydrolytic enzymes like amylases, lipases and proteases.
18. Demonstration of aerobic and anaerobic respiration in microbes.
19. Demonstration of Microbial fermentation
20. Demonstration of microbial toxins

PRACTICAL: MB – 106: BIOCHEMISTRY & BIOPHYSICS AND BIOSTATISTCS:

1. Calculating Mean, Mode Median
2. Problems related to T test & F test & Z test
3. Problems related ANOVA
4. Measurement of pH
5. Micrometry for cell size determination
6. Cell counting by Haemocytometer
7. Beer's Law
8. Determination of λ max for coloured solutions
9. Determination of DNA & RNA by UV spectrophotometry
10. Determination of nucleic acid Bases by UV spectrometry
11. Paper chromatography for separation of amino acids / pigments
12. TLC for separation of lipids / amino acids
13. Dialysis
14. Separation of proteins by SDS-PAGE
15. Separation of DNA by Agarose gel electrophoresis
16. Isolation of chloroplasts by sucrose density gradient centrifugation
17. Determination of concentration of green/yellow pigments by spectrophotometry

SECOND SEMESTER

MB - 201: MOLECULAR BIOLOGY

Course Learning Objective

1. Gives basic concepts in genetics of bacteria and fungi
2. Provides in depth knowledge on genetic recombination
3. Gives overall picture about DNA replication and transcription
4 .Provides in depth information about RNA biosynthesis and gene regulation

UNIT – I

Genetic notations, conventions and terminology

Nucleic acids as genetic information carriers – experimental evidences.

Modern concept of gene – Gene structure, co-linearity and polypeptide, one gene – one enzyme, protein polypeptide or product concepts; types of genes.

Genetics of Bacteria and Fungi : *E. coli, Bacillus, Streptomyces, Sacchromyces,* Filamentous fungi *(Neurospora).*

Gene transfer mechanisms in bacteria : Transformation, conjugation, sexduction and transduction (generalized, abortive, contrasduction, specialized,) and gene mapping. Role of Rec gene products.

Genome diversity : Viruses – linear, circular and dividend genomes of RNA and DNA viruses. Prokaryotes – nucleoid and chromosome organization, genome evolution in microbes, phylogenetic trees. Eukaryotes – chromosome organization / structure, histones, nucleosomes, genome complexity, chromosomal banding. Organelle genomes. Genetic mapping of genomes.

Plasmids : bacterial and yeast plasmids, purification, properties, detection, transfer, replication an curing, significance / importance.

Transposal / mobile genetic elements : Prokaryotes – (IS elements, composite and complex transposons), mechanisms of transposition and importance – Eukaryotes (Yeast, Drosophila and Maize) – retrotransposons, retroelements. Exploitation of transposable elements in genetics.

UNIT – II

Mutations : Types, mutagens and molecular mechanisms of mutation, isolation and analysis of mutants, significance of mutants.

Genetic recombination : General of homologous recombination, site specific recombination, transposition; illegitimate recombination and artificial recombination.

Genetics of viruses : Prokaryotic virus (phages) – Benzer's studies on r-II region of T4 and complementation, recombination in bacteriophages (T2), uses of phages in microbial genetics, Eukaryotic viruses-recombination and reassortment, cross-and multiplicity reactivation, complementation, phenotypic mixing, ploidy, DI particles, transduction of genes by retroviruses, evolution of viruses (influenza, HIV, herpesviruses).

UNIT-III

DNA replication : general principles, various modes of replication. Continuous and discontinuous synthesis, relation between cell cycle and DNA synthesis, replication fork and enzymology of DNA replication in prokaryotes and eukaryotes, replication of ssDNA, retroviruses and their unique mode of DNA synthesis, inhibitors of DNA replication.

DNA damage and repair : types of DNA damage-deamination, oxidative damage, alkylation and pyrimidine dimers; repair pathways – mismatch, short patch repair, nucleotide/base, excition repair, recombination repair and SOS system.

Transcription (RNA biosynthesis) : Types of RNA and their role, organization of protein and RNA (rRNA, tRNA, 5 sRNA) encoding transcription units (promoters and regulatory

elements) and their transcription in prokaryotes and eukaryotes, polycistronic and monocistronic mRNAs. Types of RNA polymerases. Promoters and other regulatory elements and transcription factors, events of transcription. Maturation and processing of different RNAs : methylation, processing of rRNA; capping, polyadenylation, splicing and editing of mRNA; processing and modification of tRNA. Catalytic RNAs (ribozymes). Inhibitors of transcription. *Invitro* transcription systems.

UNIT – IV

Translation (Protein biosynthesis) : Central dogma theory and flow of genetic information, genetic code and its elucidation, structure and composition of prokaryotic and eukaryotic ribosomes, structural features of rRNA, mRNA and tRNA in relation to function, steps of protein biosynthesis (activation of amino acids, initiation, elongation, termination) in prokaryotes and eukaryotes; post-translational modification of proteins and their sorting and targeting; regulation of translation; inhibitors of protein biosynthesis; invitro translation systems.

Regulation of gene expression : An overview on levels of regulation, terminology and operon concepts, enzyme induction and repression; positive and negative regulation in *E. coli*- lac and ara operons; regulation by attenuation – his and trp operons; antitermination – N protein and nut sites in Lambda phage. Organization and regulation of nif and nod gene expression in bacteria; gal operon in yeast. Global regulatory responses-heat shock response, stringent response and regulation by small molecules such as cAMP and PPGPP.

DNA binding proteins : Enhancer sequences and control of transcription. Identification of protein – binding sites on DNA, control of transcription by interaction between RNA polymerases and promoter region, use of alternate sigma factors, controlled termination attenuation and anti termination.

Course Learning Out Comes

1. Be able to gain knowledge on genome diversity and gene transfer mechanisms,.
2. Be able to gain information on mutations and gene transfer mechanisms
3. Be able to gain in depth-knowledge on DNA and biosynthesis

4. Be able to understand about positive and negative gene regulation

Suggested Books:

1. Microbial Genetics by S.R. Maloy et al. 1994
2. Molecular Genetics of Bacteria, 5th ed. 2010. J.W. Dale. Wiley Publ.
3. Bacterial and Bacteriophage Genetics. 4th ed. 2000. By E.A. Birge. Springer.
4. Principles of Molecular Virology. 6th ed. 2015. By A. Cann. Academic Press.
5. Modern Genetic Analysis by Griffith.1999
6. Genetics by Gardner. Principles of Genetics, Goudner,2006,12th
7. Molecular Cell Biology.2021, 9rd ed. by Lodish et al. Scientific American books, W.H. Freeman and Company.
8. Molecular Biology. 1983.3rd, by David Freifelder, Narosa Publ. House.
9. Text Book of Molecular Biology. 2009, by Sivarama Sastry et al, Macmillan India Ltd.
10. Advanced Molecular Biology : A Concise Reference. 2018.3rd, by R.M. Twyman. Viva Books Pvt. Ltd.
11. Instant notes in Molecular Biology, 2000.2nd. by P.C. Turner et al. Viva Books Pvt. Ltd.
12. Genes VIII. 1997. by B. Lewin. Oxford University Press. The Biochemistry of nucleic acids. 1992, 11th ed. by Adams et al, Chapman and Hall. Gene IX Benjamin Lewin 9th 2007
13. Biochemistry. 1995 by L. Stryer. W.H. Freeman and Co.Biochemistry,2021, 9th ed. by G.L. Zubay. W.C.B. Publ.
14. Microbial Genetics. 1983. 3rd, by David Freifelder. Narosa Publ. House.
15. Biochemistry and Molecular Biology. 2009.4th, by W.H. Elliott & D.C. Elliott. Oxford University Press.
16. Molecular biology of the Gene. 2018, 5th ed. Watson et al, Addison Wesley Longman.
17. Schaums Outlines – Molecular and Cell Biology. 2011 (revised). W.D. Stansfield et al., McGraw-Hill

Publ.

MB - 202: RECOMBINANT DNA TECHNOLOGY

Course Learning Objective

1. Gives basic concepts in genetic engineering tools
2. Provides in depth knowledge on molecular tools
3. Gives overall picture about transgnics
4 .Provides in depth information about proteome and genomes microbiology

UNIT – I

Scope and importance of recombinant DNA technology / genetic engineering.

Genetic Engineering tools : Vectors- types, plasmids, transposons, bacterial and animal virus based vectors, bacterial and yeast artificial chromosomes; **enzymes-**restriction endonucleases, different DNA and RNA polymerases ligases, nucleases, kinases, nucleotidyl transferases, alkaline phosphatase; **oligonucleotides-** linkers, homopolymer tails, primers, promoters; **cloning and expression hosts –** *E.coli Bacillus, Agrobacterium,* yeast and plant and animal cell cultures.

Cloning strategies : Generation of DNA molecules, attachment to vectors, delivery of recombinant molecules into host cells, screening and identification of positives clones – antibiotic, nucleic acid and protein based approaches. Construction and screening of cDNA and genomic DNA libraries.

UNIT – II

DNA sequencing : Chemical method of Maxum and Gilbert, Sanger's dideoxy chain termination and primer walking methods. Automated sequencing. Sequence assembly. Genome sequencing and physical mapping of genomes.

Site-directed mutagenesis : Different approaches and its potential in changing genes.

Molecular diagnostics : Preparation of DNA and RNA probes, nucleic acid hybridization, factors influencing hybridization and their applications; PCR-principles, factors affecting PCR, different types of PCR and their applications and limitations; profiling of nucleic acids by DNA fingerprinting, RFLP, RAPD and AFLP.

UNIT – III

Transgenic plants : Construction of plant cell expression vector with desired genes, biological and physical approaches for delivering genes into plant tissues, identification and regeneration of transformed tissues to transgenics. Transgenic plants as bioreactors.

Transgenic animals : Construction of animal cell expression vectors and delivering of genes into cultured animal cells. Production and use of transgenic animals (mice, sheep/goat, cow).

UNIT – IV

Microbial genomics and proteomics : DNA microarray – printing of oligonucleotides and PCR products on glass slides. Whole genome analysis for global pattern of gene expression using fluorescent labeled cDNA or end labeled RNA. Analysis of single nucleotide polymorphisms using DNA chips. **Proteome analysis-**two-dimentional analysis of total cellular proteins, isolation and sequence analysis of individual protein spots by mass spectroscopy. Protein microarray, advantages and disadvantages of DNA and protein microarray.

Applications and implications of genetic engineering in biology, agriculture, medicine and industry.

Course Learning Out Comes

1. Be able to gain knowledge on genetic engineering tools,.
2. Be able to gain details on molecular tools
3. Be able to gain in depth-knowledge on transgenic plants
4. Be able to understand about ‘omics”

Suggested Books:

1. Principles of Gene Manipulation : An introduction to genetic engineering. 1994. 5th ed. Old and Primrose. Blackwell Scientific Publ.7th 2006.

2. Molecular Biotechnology. 1994. Glick and Pasternak. Panima Publ.
3. Recombinant DNA. 1992. 2nd ed. J.D. Watson et al. Freeman and Co.
4. Protein expression : A Practical Approach by S.J. Higgins and B.D. Hames (eds). Oxford University Press.
5. Functional Genomics : A Practical Approach. 2000, by S.P. Hunt and R. Liveey (eds.). Oxford University Press.
6. DNA Microarrays : A Practical Approach by M. Schena (ed.). Oxford University Press.
7. Molecular biology and Biotechnology. 2002. 4th ed. by J.M. Walker and R. Rapley, Panima.
8. Manual of Industrial Microbiology and Biotechnology, second edition., ed. by Demain, A.L., Editor in Chief, 1999, ASM Press.
9. Recombinant DNA and Biotechnology : A guide for Teachers : 2nd ed. H. Kreuzer and A. Massey. ASM Press.
10. Recombinant DNA and Biotechnology : A guide to students : 2nd ed. H. Kreuzer and A. Massey. ASM Press.
11. Basic Biotechnology, 2001. 2nd ed. by C. Ratledge & B. Kristiansen. Cambridge University Press.
12. Molecular Cloning, 2001. Vol. I-III by Sambrook and Russel, CSH Press.
13. Current Protocols in Molecular Biology, 2000. Ausbel et al.
14. Genome analysis. 2000. 4 Vols. CSH Press.

MB - 203: IMMUNOLOGY

Course Learning Objective

1. Gives a detailed information on cells and organs of the immune system.
2. Gives in depth knowledge about Antigen-antibody interaction.
3. Provides the details on immuno pathology.
4. Gives central concepts in transplantation and transfusion immunology.

UNIT – I

History : Historical perspective of Immunology, milestones in immunology.

Cells and Organs of the Immune system : Hematopoiesis, Lymphoid cells, stem cells, Mononuclear cells, Granulocytes, Mast cells, Dendritic cells. Lymphoid organs – Primary and Secondary lymphoid organs.

Types of immunity : Innate immunity and adaptive immunity, comparative immunity, Immune dysfunction and its consequences.

Immune responses to infectious diseases : Viral, bacterial, protozoan and other parasitic diseases.

UNIT – II

Antigens : types, properties, study of antigenicity, immunogenicity versus antigenicity, factors influencing immunogenicity. Epitopes, haptens, mitogens, superantigens. Viral and bacterial antigens.

Antibodies : Basic and fine structure of Immunoglobulins, classes and biological activities of Immunoglobulins, Antigenic determinants – Iso, allo and idiotypes. Immunoglobulin super family, antibody diversity, organization and expression of immunoglobulin genes. Production of polyclonal antibodies-animals, additives, adjuvants, routes, dose, collection and preservation of antisera, purification of immunoglobulins, quantitative and qualitative analysis of immunoglobulins.

Monoclonal antibodies : Hybridoma technology – principle and production of monoclonal antibodies, advantages and disadvantages over polyclonal antibodies, application of monoclonal antibodies.

Recombinant antibodies : Production and their advantages over conventional antibodies.

Antigen and Antibody interactions : Affinity, Avidity, Cross reactivity.

***In vivo* serological reactions :** Phagocytosis, Opsonization, Neutralization, Protection tests.

***In vitro* serological tests :** Precipitation tests in liquid and semisolid media, single and double immuno diffusion tests. Immuno electrophoresis tests (Rocket, counter current). Agglutinations tests-HA and HI, latex agglutination. Complement fixation tests, Labeled antibody based tests – Enzyme linked immunosorbent assays (ELISA), Western blotting, Radio immuno assay (RIA), Immunoflurescent and Immuno specific electron microscopy. Infectivity neutralization test. The relative advantages and disadvantages and their applications in Microbiology.

UNIT – III

Humoral immune response : Primary and secondary immune responses, induction, regulation of the immune effector response.

Cell mediated immune response : Induction and mechanism, antibody-dependent cell mediates cytotoxicity (ADCC).

Immune effector mechanisms : Cytokines, Lymphokines, Chemokines and their classification, properties and functions.

Complement cascade system : Complements nomenclature, classification, complement components, functions, activation, regulation, biological consequences, complement deficiencies.

Hypersensitive and Allergic reactions : Classification, types I, II, III and IV.

Immunopathology : Immunodefficiencies – Primary immunodeficiency (genetic) diseases due to B cell, T-cell and combined defects (Hypogamma globulinemia, SCID, ADA) phagocyute and complement defects. Autoimmune diseases – Autoimmunity, induction, mechaniss of tissue damage in autoimmunity. Autoimmune diseases – Organ specific (Autoimmune anemias, Autoimmune thyroid diseases, Diabetes mellitus, Multiple sclerosis), Systemic autoimmune diseases (Rheumatoid arthritis, Systemic lupus erythematousus) and their therapy.

UNIT-IV

Major histocompatability complex (MHC) : Organization and Inheritance of HMC, cellular distribution of HMC molecules, regulations of HMC expression, MHC-immune responsiveness, disease susceptibility, MHC restriction, HLA antigens-Class I, II, III and their functions, Murine antigens and its functions.

Transfusion Immunology : Blood cell components, blood group systems in human and in animals, Rh typing, transfusion reactions, diseases associated with blood transfusion – Hemolytic anemias, Erythroblastosis featalis.

Transplantation Immunology : Transplantation antigens, types of transplants, Graft versus host reactions – immunological basis of graft rejection mechanism, prevention of graft rejection, clinical manifestations of graft rejection, Immunosuppressive therapy of allograft response, clinical transplantation.

Tumor immunology : Cancer and the Immune system, tumor specific antigens, tumors of the immune system, immune response to tumors, cancer immunotherapy.

Vaccinology : Type of immunization procedures, active and passive immunization, designing of vaccines, classical and novel/modern approaches for the production of vaccines, purified macromolecules as vaccines, Recombinant – vector vaccines, DNA vaccines, Synthetic peptide vaccines, Multivalent sub-unit vaccines, uses of vaccines, benefits of vaccination, mass immunization programmes.

Course Learning Out Comes

1. Be able to describe immunology basics.
2. Be able to understand the theoretical principles of *in vitro* selogical tests.
3. Be able to explain allergic reactions.
4. Be able to explain immunization procedure and immunization programmes.

Suggested Books:

1. Immunology. 2000. 4th edition. J. Kuby. W.H. Freeman and Company.
2. Immunology. 1996. 4th edition. I. Roitt, J. Brostoff and David Male. Mosby publications.
3. Fundamental Immunology. 1992. 2nd edition. R.M. Coleman, M.F. Lombard and R.E. Sicard. Wm. C. Brown Publishers.
4. Immunology. 1997. 3rd edition. R.M. Hyde. B.I. Waverly Pvt. Ltd.
5. Immunology. 1995. 4th edition. I.R. Tizard. Saunders College Publishing.
6. Immunology – The Science of self and non-self discrimination. 1982. Jon Klein. John Wiley and Sons.
7. Immunology – An illustrated outline. 1986. David Male. Churchill Living Stone.
8. Viruses that affect immune system. 1991. H.Y. Fan, I.S.Y. chen, N. Rosenberg and W. Sugden. American Society for Microbiology.
9. Immunobiology : The immune system in health and disease, 1994. C.A. Janeway, Jr., P. Travers. Current biology Ltd.

MB - 204: MEDICAL MICROBIOLOGY

Course Learning Objective

1. Provides information on infections and pathogenesis.
2. Helps to learn chemotherapy principle.
3. Be able to explain the symptoms of bacterial infections.
4. Be able to explain the symptoms of viral, fungal and parasitic diseases.

UNIT – I

Principles of Medical Microbiology: Historical developments Classification of medically important microorganisms. Normal microbial flora of human body: Origin of normal flora; Infectious diseases.

Infection: Sources of infection for man; vehicles or reservoirs of infection. Exogenous infection: 1) Patients 2) carriers – (Healthy; convalescent; contact; paradoxical and chronic) 3) Infected animals (zoonosis) 4) Soil endogenous infection. Mode of spread of infection: 1) Respiratory 2) skin 3) Wound and burn infection 4) Venereal infections 5) Alimentary tract infection 6) Arthorpod-borne blood infections 7) Laboratory infections. Nosocomial infections: common types of hospital infections, their diagnosis and control.

Pathogenesis: Adhesion in various hosts, cell damage, release of pathogens, Transmissibility, infectivity and Virulence. Opportunistic pathogens and True pathogens. Toxigenicity: Invasiveness, other aggressins (Hyaluronidase), coagulase, fibrinolysins or kinase, depolymerizing enzymes, (mucinase, lipases, proteases, nucleases, collagenase, neuraminidase). Organotropism, variation and virulence.

UNIT – II

Microbial Toxins: Types of microbial toxins, Endotoxins, Exotoxins, LC_{50} of toxins, Effective dose of toxins, Assay of toxins, Mechanism of action of Diphtheria, Cholera, Staphylococcal toxin and Clostridial neurotoxins. Virulence and virulence factors of microbial toxins. Signs and symptoms of microbial intoxication.

Diagnostic methods: Collection, transport and preliminary processing of clinical samples. Clinical, microbiological, immunological and molecular diagnosis of microbial diseases.

Principle of Chemotherapy: Chemotherapeutic agents, Mechanism of action of antimicrobial agents, Synthetic compounds and antibiotics and their assay in body fluids, drug resistance, Mechanisms of drug resistance, MDR. Various methods of drug susceptibility testing. Brief account on available vaccines and schedules, passive prophylactic measures.

UNIT – III

Bacterial diseases: Symptoms, diagnosis , treatment and prevention of the diseases caused by *Staphylococcus, Streptococcus, Pneumococcus, Neisseria, Corynebacterium, Bacillus, Clostridium, Actinomycete, Rickettsiae, Chlamydiae, Mycoplasma, Enterobacteriacea, Vibrios, Yersinia; Haemophilus; Bordetella, Brucella; Mycobacteria, Spirochetes; Salmonella* species.

UNIT – IV

Viral diseases: Virus-host interactions at cellular and organism levels. Common diseases caused by Poxviruses; Herpes virus; Adeno viruses; Picorna viruses; Orthomyxo viruses; Paramyxo viruses; Arbo viruses, Rhabdo viruses, Hepatitis viruses; Oncogenic viruses; Human Immuno deficiency viruses (HIV/AIDS). Prion diseases – Kuru, CJD disease and GSS syndrome.

Fungal diseases: Diseases caused by dermatophytes, dimorphic fungi and opportunistic fungal pathogens. Description and classification of pathogenic fungi and their laboratory diagnosis.

Parasitic diseases: Disease caused by parasites like *Entamoeba, Plasmodium, Trichomonas, Leishmania* and *Toxoplasma, Giardia, Wuchereria, Dracunculus.*

Course Learning Outcomes

1. Be able to explain about various infections.
2. Be able to understand the diagnostic methods.
3. Be able to explain the symptoms of bacterial infections.
4. Be able to explain the symptoms of viral, fungal and parasitic diseases.

Suggested Books:

1. Ananthanarayan R, Panikar CKJ (2000). Textbook of Microbiology. 2013. 9th Edition. Orient Longman Ltd.
2. Warren Levinson (2014).Review of Medical Microbiology and Immunology. Mc Graw Hill education
3. Bailey & Scott's (2013). Diagnostic Microbiology (13th Edition), Published by: Mosby.
4. Color atlas and Text book of Diagnostic microbiology (6th Edition), 2005, edited by: Eimer W Koneman, published by: Lippinctt.
5. Subash CP (2000). Text Book of Medical Parasitology, by published by : All India Publishers & Distributors. 1st edition.
6. Jayaran Paniker C.K, Text Book of Medical Parasitology (7th Edition), 2013, by Published by: Jaypee Brothers.

PRACTICALS:

MB: 205 - Molecular Biology and Recombinant DNA Technology

Course Learning Objective

1. Gives hands on experience in important molecular methods.
2. Provides hands on experience on PCR and Recombinant DNA techniques .
3. Will gain knowledge in bio informatics and molecular biology information

1. Isolation of Genomic DNA from microbes, plant/animal tissues.
2. Isolation of plasmids from Bacteria.
3. Curing of plasmids.
4. Competent cell preparation.
5. Bacterial transformation.
6. Bacterial transduction.
7. Bacterial Conjugation.
8. Mapping of bacterial genes by conjugation / transformation (problems).
9. Side directed mutagenesis
10. AMES test.
11. Screening and isolation of streptomycin mutant resistant bacteria by gradient plate technique.
12. Lethality curve construction.
13. Study of DNA methylation
14. Study of DNA repair
15. Invitro transcription assay
16. Setting of Genetic Engineering laboratory
17. Restriction enzyme analysis of plasmids
18. Recovery of DNA from gels – Electroelution and extraction of DNA from low melting agarose gels.
19. Southern blotting.
20. Western blotting for heterologous gene expression
21. Polymerase chain reaction
22. Induction of enzyme (Beta galactosidase) in Bacteria

23. Calculation of proportion of bases in nucleic acids, number of turns in DNA, length and Mol. Wts. of DNA, Tm values and buoyant densities of DNAs and DNA replication times

Course Learning Outcomes

1. Able perform DNA and plasmid isolations.
2. Be able to amplify the given gene.
3. Be able to gain practical knowledge about molecular tools.
4. Be able to create a chimeric molecule.
5. Be able to perform bioinformatics tools in genomics.

MB: 206 - Immunology and Medical Microbiology

Course Learning Objective

1. Gives hands on experience in Immuno precipitation test.
2. Provides hands on experience on various ELISA methods.
3. Will gain knowledge in immune globulins.
4. Gives hands on experience on blood related tests.
5. Given knowledge on virus cultivation.
6. Provides hands on experience on various diagnostic tests.

1. Purification of immune globulins
2. Electrophoretic separation of normal and immune serum.
3. Ouchterlony double Immuno diffusion
4. Single radial Immuno diffusion
5. Immuno precipitation test
6. Rocket Immuno electrophoresis
7. Counter current Immuno electrophoresis
8. Isolation & Identification of Rosettee cells.
9. Dot ELISA
10. Sandwich ELISA
11. Antigen Capture ELISA
12. Antibody Capture ELISA
13. ASO titre.
14. Complement fixation test
15. Widal Test
16. VDRL Test
17. Total counting of RBC & WBC
18. Differential count of WBC
19. Hemoglobin estimation
20. Latex agglutination test
21. Blood typing and Rh determination
22. Identification of pathogenic organisms based on HIV& DOT-BLOT test

Course Learning Outcomes

1. Able performs various immune precipitations tests.
2. Be able to perform various types of ELISA methods.
3. Be able to gain practical knowledge about immunoglobulin's and their separation.
4. Be able to perform widal, VDRL and types.
5. Be able to perform various staining procedures.
6. Be able to identify blood cell types.

THIRD SEMESTER

MB – 301: BACTERIOLOGY AND VIROLOGY

Course Learning Objective

1. Gives basics concepts on animal & plant virus cultivation.
2. Provides in depth knowledge on properties and purification of Viruses
3. Gives outlines on nomenclature and classification of viruses.
4. Give in-depth understanding on viral genomes and their replication.

UNIT – I

Domain Eubacteria – morphological types – cell walls, Gram positive – Gram negative eubacteria – L-forms, cell wall synthesis, antigenic properties – capsule – types, composition and function, cell membranes – structure – composition – properties.

Domain Archaea : The unique characteristics, habitats, cell wall structure, membrane structure, pigments, genome, unique enzymes, evolutionary significance.

UNIT – II

Structure and function of flagella – flagella – pili – gas vesicles – chromosomes, carboxysomes, magnetosomes and phycobolisomes – nucleoid – cell division – endospores structure, formation and germination.

Reserve food materials – polyhydroxybutyrate – polyphosphate granules – oil droplets – cyanophycin granules and sulphur inclusions.

UNIT – III

Taxonomy : Classification of bacteria according to the Bergey's manual of systematic bacteriology. Domain Archaea, Domain Eubacteria-kingdoms, classes, orders/groups. Phylogenetic relationships among different bacteria.

UNIT-IV

Plant pathogenic bacteria – Characteristics of *Xanthomonas, Pseudomonas, Agrobacterium, Corynebacterium, Erwinia, Xylella.*

Characteristics of nonpathogenic / beneficial bacteria : *Rhizobium, Azospirillum, Azotobacter, Cyanobacteria (Nostoc, Anabaena, Spirulina), Nitrosomonas, Nitrobacter, Frankid, Klebsiella, Zymomonas, Nocardia, Streptomyces, Acetobacter, Lactobacillus, Streptococcus, Leuconostoc, Serratia, pseudomonas, Alcaligenes, Bacillus, Thiobacillus, Desulfovibrio Methylophilus, Methylococcus.*

UNIT – V

History of Virology : Discovery of viruses and development of Virology (contribution of pioneers). Nature, origin and evolution of viruses. New emerging viruses.

Isolation and cultivation of viruses : Animal viruses - experimental animals, embryonated eggs, animal cell cultures-primary and secondary cell cultures. Plant viruses - experimental plants and tissue cultures. Infectivity assay methods of viruses- physical, serological and chemical approaches. Assay and maintenance of viruses, qualitative and quantitative analysis of viruses.

UNIT – VI

Purification of viruses : Extraction of viruses from tissues, clarification, concentration of viruses in clarified extracts by physical and chemical methods, further purification of viruses by rate zonal / equilibrium density gradient centrifugation, approaches and criteria of virus purity, quantification and preservation of purified virus preparations.

Properties of viruses : Biological characteristics of viruses, host-range, transmission (vector and non-vector), virus stability. Physical-morphology and structure, sedimentation, electrophoretic mobility, buoyant density. Biochemical – chemical composition, nucleic acids, proteins, enzymes, lipids, carbohydrates, polyamines, cations. Antigenic nature of viruses.

Architecture of viruses : Morphology, structure and composition of viruses-Principles of virus structure- Icosahedral, helical and binal symmetry.

UNIT-VII

Nomenclature and classification of viruses : Criteria used for naming and classification of viruses. Current ICTV classification of viruses of bacteria, plants, animals, humans, algae, fungi and protozoans. Major characteristics of the virus families / genera / groups.

Sub-viral agents : Characteristics of sub-viral agents – Viroids, Satellite viruses, Satellite nucleic acids and Prions.

UNIT – VIII

Viral genomes : Diversity of viral genomes – DNA genome – linear and circular, single stranded and double stranded. RNA genomes – positive and negative, linear and circular, single and double stranded, partite of viral genomes – mono, bi, tri and multipartite genomes.

Replication of viruses : Outlines of replication of viruses – approaches to study replication of viruses, replication strategies of viruses – Baltimore strategies of viral genome replication and expression. Replication of viruses like MS_2, T_4, Lambda, Phi X-174, M_{13}, TMV, cauliflower mosaic virus, geminivirus, parvovirus, polio, HIV, Influenza, reovirus, SV-40 and poxviruses.

Prevention and Control of viruses : The infection control policyaseptic techniques, cleaning and disinfection, protective clothing, isolation; Prevention – sanitation, vector control, vaccines and immunization; Control- chemoprophylaxis, chemotherapy (antiviral drugs, Interferon therapy), efficacy of infection control.

Course Learning Outcomes

1. Be able to explain about bacteria and viruses cultivation method.
2. Be able to describe properties of viruses and bacteria
3. Be able to classify the viruses according to ICTV and Bergey's manual
4. Be able to conversant with viral genome diversity and control of viruses.

Suggested Books:

1. Virology: 1994. 3rd ed. Frankel-Conrat et al, Prentice-Hall.
2. Fundamental Virology, 1996. 3rd ed. B.N. Fields et al. Lippincott-Raven.
3. Principles of Virology : 2000. by S.J. Flint et al., ASM Press.
4. Introduction to Modern Virology. 1994. 4th ed. Primrose and Dimmock. Blackwell Scientific Publ.
5. Principles of Molecular Virology. 2005. 4th ed. A. Cann. Academic Press.
6. Basic Virology, 1999. By Waginer and M. Hewlett, Blackwell Science Publ.
7. Plant Virology, 4th ed. 2001 by R. Hull (R.E.F. Matthews). Academic Press.
8. Applied Plant Virology. 1985. D.G.A. Walkey. Heinemann Publications.
9. Bergey's Manual of Systamatic Bacteriology, Vol. 1-4, 1st Edition.
10. Bergey's Manual of Determinative Bacteriology, 2000. 9th ed. by J.G. Holt et al. Lippincott Williams and Wilkins.
11. Fundamental Principles of Bacteriology by A.J. Salle.
12. Biology of Microorganisms by T.D. Brock, and M.T. Madigan, Prentice Hall Int., Inc.

13. General Microbiology by Stainer et al., 1999. Macmillan Educational Ltd.
14. Microbiology. 1999. 3rd ed. Prescott et al. Wm. Co. Brown Publ.
15. Principles of Microbiology. 1997. 2nd ed. R.M. Atlas. Wm. C. Brown. Publ.
16. Foundations in Microbiology. 1996. 2nd ed. K. Talaro and A. Talaro. Wm. C. Brown Publ.
17. Biology of the prokaryotes. 1998. By J.L. Lengeler et al., Blackwell Science Publ.
18. General Microbiology, 1999 by S.B. Sullia, Oxford and IBH Publishers.
19. Fields Virology. 1996. B.N. Fields, D.M. Knipe and P.M. Howley. Lippincott-Raven Publishers.
20. Encyclopedia of Virology. 1994. R.G. Webster and Allan Granoff (Eds). Vol I,II,III. Academic
Press.

MB – 302: AGRICULTURAL MICROBIOLOGY

Course Learning Objective

1. To provide in-depth information about plant –microbe interactions
2. To give information on principles of plant pathology
3. To give knowledge on symptoms, epidemiology / disease cycle of various plant diseases
4. To provide in-depth knowledge about various organisms for practical applications.

UNIT – I

Microbes and Plant interactions : Rhizosphere-microbial flora, rhizosphere influence on plant growth, plant pathogens and rhizophere; ectotrophic and endotrophic microrrhizal associations and importance; phyllosphere- ecology of phyllosphere flora and importance. Spermosphere

Nitrogen fixation : Ecology and biology of non-symbiotic and symbiotic nitrogen fixers, infection and nodulation, associative symbiosis, mechanism of nitrogen fixation, role of nitrogenase and hydrogenase, methods for evaluation of biological nitrogen fixation, significance of nitrogen fixation.

Biofertilizers : Cultivation and mass production of *Rhizobium* and *Azotobacter*, phosphate solubilizing bacteria, blue-green algae, carrier based inoculants. Methods of application.

UNIT – II

Decomposition of waste agricultural products : Microbiology and biochemistry of decomposition of cellulose, hemi-cellulose, starch, pectin, lignin, chitin. Factors governing the decomposition.

Microbial pesticides for biocontrol of pests and pathogens : Introduction, useful microbes (bacteria, fungi and viruses), production, formulation, economics, safety, advantages and disadvantages.

Principles of Plant Pathology : Brief history and development of plant pathology (contributions of pioneers). Types of plant diseases and their significance. Symptoms of plant diseases. Basic procedures in the diagnosis of plant diseases. Host-pathogen interactions-virulence factors of pathogens and defense mechanisms of plants against pathogens.

Environmental effects on disease development and disease epidemiology. Control of plant diseases by various approaches.

UNIT – III

Plant diseases : Symptoms, etiology, epidemiology / disease cycle and control measures with reference to the following : **Fungal :** damping of seedlings, *Phytopthora* root and stem rots, downy mildew of grapes, powdery mildew of cucurbits, rust of groundnut, *Fusarium* wilts, red rot of sugarcane, tikka disease of groundnut, blast disease of rice. **Bacterial :** Citrus canker, blight of rice, angular leaf spot of cotton. **Viral and viroid –** rice tungro, sugarcane mosaic/ streak, potato leaf roll and spindle tuber viroid diseases, tomato/tobacco leaf curl, okra yellow vein mosaic, yellow mosaic of grain legumes, pigeon pea sterility mosaic, peanut bud and stem necrosis, citrus tristeza and yellow mosaic, papaya ringspot, banana bunchy top. **Phytoplasmal :** Little leaf of brinjal.

UNIT – IV

Diseases of animals (symptoms, etiology, pathogenesis, epidemiology and prevention and control) : Poultry : Viral-New castle, infectious bursal, Marek's, egg drop syndrome, avian influenza, infectious laryngotrachites; Bacterial – Avian pasteurellosis, salmonellosis; Fungal – Aspergillosis, Aflotoxicosis.

Fish : Viral – infectious pancreatic necrosis, viral haemorrhagic septicemia, infectious haemorrhagic necrosis, Bacterial-*Pseudomonas, Chondrococcus, Vibrio,* Nocardial infections.

Prawn : Viral-Monodon baculovirus, yellow head, white spot diseases; Bacterial – *vibrio* sp. and *Pseudomonas* sp. caused diseases; Fungus- Larval mycosis caused by *Fusarium* sp., Red disease caused by mycotoxins; Protozoa – *Microsporidia, Zoothamnium* caused diseases.

Mulberry and Silkworm diseases : Mulberry: Fungal – Leaf spot, powdery mildew, rust; bacterial blight. **Silkworm:** Viral-Nuclear polyhedrosis, cytoplasmic polyhedrosis; Bacterial – Septicemia, Sotto; Fungal- White and green muscardine, aspergillosis; protozoan- pebrine.

Course Learning Outcomes

1. Be able to acquaint themselves plant –microbe interaction
2. Be able to understand the microbial -.plant pathogens
3. Be able to gain knowledge on various viral,bacterial and fungal .diseases on plants

4. Be able to know about diseases of poultry, fish ,prawn and silkworm .

Suggested Books:

1. Agricultural Microbiology. 2001. By G. Rangasamy and Bagyaraj. Printice Hall.
2. Biofertilizers in Agriculture and Forestry. 1995. By N.S. Subba Rao.
3. Plant Pathology, 1996 by G.N.Agrios. A.P.
4. Diseases of Crop Plants by Rangasami and A. Mahadevan. Printice-Hall.
5. Soil Microbiology and Plant Growth. 1995. By N.S. Subba Rao.
6. Diseases of Poultry,1995 by Calneck et al.
7. Hand book of Sericulture Technologies, 2001, 2nd edition by S.B. Dandin et al., Central Silk Board, Mysore.

MB – 303: a) INDUSTRIAL MICROBIOLOGY

Course Learning Objectives

1. To give information on industrial applications of microorganisms
2. To know about industrial production of various value added products
3. To provide information on microbial transformations
4. To provide in depth information on microbial production of recombinant molecules

UNIT – I

Industrial application of microorganisms : Bacteria, fungi, their characteristics and industrial products.

Screening of microbes for products : Primary and secondary screening, detection and assay of products by physico-chemical and biological assays.

Industrial strains : strategies for selection and improvement, maintenance, preservation and containment of recombinant organisms.

Bioreactors : Types and their designs and working principles, agitation, aeration, antifoam, pH and temperature controls, cleaning and sterilization, variations in fermenter design – Batch and continuous (Flow-through) fermenters, Feed-back fermenters, Tubular fermenters, membrane fermenters. Fluidized bed, packed bed bioreactor, solid state fermentations.

Inoculum and media : Inoculum preparation, substrates for fermentation media; solid state, surface and submerged fermentations. Batch and continuous fermentations, direct, dual or multiple fermentations, scale-up of fermentations and fermentation economics. Fermentation kinetics, fermentation type reactions. Computer control of fermentation processes.

Immobilization of cells and enzymes techniques : Techniques and supports – Adsorption, covalent linkage, entrapment and cross-linkage, their advantages and disadvantages, applications-microbial fermentations with immobilized cells/enzymes.

UNIT – II

Downstream processing : a multistage operation, solid-liquid separation, release of intracellular components, concentration of biological products, purification by chromatography, product formulation, monitoring of downstream processing, process integration.

Process economics : The starting point, cost estimates, process design, design exercise, capital cost estimates, the operating cost estimates.

Industrial production of ethanol, citric acid, lactic acid, acetic acid, glutamic acid, lysine, acetone, butanol, fructose syrup, vitamins C and B12, biocatalysis (microbial enzymes), antibiotics like pencillins, tetracyclines, aminoglycosides, steroids and hormones, biosurfactants, microbial lipids, xanthan gums.

Biofuels (ethanol, methane, hydrogen) : Microbial groups involved in biogas production and interaction among them, factors affecting biogas production, design of digester, feed stocks, uses of spent slurry.

UNIT - III

Commercial production of useful products (ethanol) from starch, cellulose and lignin.

Production of bacterial, yeast and mold cultures for food fermentation and their applications.

Microbial transformations : Types of bioconversion reactions, biotransformation of steroids, Application of microbial systems / processes in plastic, petroleum, mining and mineral processing industries. Microbial leaching of minerals (copper, uranium), factors affecting leaching and leaching processes, microbial mining and metal recovery.

Patenting : concept and its composition and protection of right and their limitation and intellectual property rights (IPR); patenting biotechnology inventions.

UNIT – IV

Microbial production of recombinant molecules: Requirement of recombinant molecules in pharmaceutical, health, agricultural and industrial sectors and in research / diagnostic labs. Rationale for the design of vectors for oven expression of recombinant proteins; selection of suitable promoter sequences, ribosome binding sites, transcription terminator, fusion protein tags, purification tags, protease cleavage sites and enzymes, reporter/marker genes, plasmid copy number, inducible expression systems. Over expression conditions, production of inclusion bodies, solubulisation of insoluble proteins. Purification protocols and up-scaling. Determination of purity and activity of over expressed proteins. Experiments using model systems : *E. coli*, Yeast, Baculovirus and *Agrobacterium.*

Course Learning Outcomes

1. Be able to know about microbes and bioreactors
2. Be able to understand the process economics and down stream processing
3. Be able to understand about patenting
4. Be able to gain in depth idea about recombinant therapeutic molecules

Suggested Books:

1. Principles of Fermentation Technology. 1997 by P.F. Stanbury et al. Aditya Books Ltd.
2. Basic Biotechnology, 2001. 2nd ed. ed by C. Ratiedge & B. Kristiansen, Cambridge University Press.
3. Manual of Industrial Microbiology and Biotechnology, Second edition. 1999. A.L. Demain, Editor in Chief, ASM Press.

MB – 303: b) DOWN STREAM PROCESSING TECHNOLOGY

Course Learning Objective

1.To give detailed knowledge about upstream and down stream processing

2.To give information on various separation processes

3.To give information on membrane separation and enrichment operations

4.To understand the various technologies such as dialysis,crystallization etc.,

UNIT-I

Processing: Industrial fermentations: Importance of upstream processing (USP) and downstream processing (DSP). Role of downstream processing in industrial fermentation process.

Downstream processing during fermentation:

1) Growth and product formation during fermentation.
2) Concept of primary (growth associated) and secondary (growth non-associated) metabolites and their control, kinetics of growth and product fermentation (growth rate, yield coefficient, efficiency etc.).
3) Production, Recovery, Assay and Applications of (a) Vitamin C (b) Antibiotics (cycloheximide, tetracyclins) (c) Microbial enzymes (Penicillin acylase, Chitinasa, Lipase) (d) Recombinant and synthetic vaccines.

Distillation and various finishing steps: crystallization, drying. Inclusion bodies and the role of genetic engineering in DSP. Economics of downstream processing.

UNIT-II

Physico- chemical basis of bio-separation processes: Recent development in product isolation, one step purification, reverses microcellular extraction, on line membrane separation. Primary separation and recovery process – cell disruption methods for intracellular products, removable of insoluble biomass separation techniques, flocculation and sedimentation and filtration methods.

UNIT-III

Membrane separation: Membrane based separation – micro and ultrafiltration theory, design and configuration of membrane separation and applications of equipment used.

Enrichment operation: Precipitation methods – salts, organic solvents, polymers, extractive separations, aqueous two-phase extraction, supercritical extraction, *in situ* product removal and integrated bioprocessing.

UNIT-IV

Separation and product resolution: Fractionation of downstream processed products by using different technologies – electrophoresis (1D and 2D gels), chromatography – (Paper, TLC, absorption, Ion exchange, Gel filtration, Affinity chromatographic separation, GC, HPLC, FPLC and Chromato focusing electrophoretic separations). Dialysis, crystallization, super liquid extraction, foam based separation.

Suggested Books:

1) Ratiedge C and Kristiansen B (2001) Basic biotechnology 2nd ed. Ed by Cambridge University press.
2) Demain AL (1999) Manual of industrial microbiology and biotechnology, Second edition. Editor in Chief, ASM Press.
3) Crueger W and Crueger A (2000) Biotechnology: A textbook of industrial microbiology. Second edition, Ed. Panima Publishing corporation.
4) M. J. Waites (2001) Industrial microbiology: An introduction by Blackwell Science.
5) Prescott and Dunn's industrial microbiology (1999) Fourth edition, Edition by Gerald Reed. CBS Publishers and distributors.
6) Colin Ratledg and Jorn Kristiansen (2001) Basic biotechnology editor (second edition). By Cambridge university press.
7) Laurence R. Weatherley (2013) Engineering Processes for Bioseparations. By Elsevier.
8) Ronald W. Rousseau (2009) Handbook of Separation Process Technology. wiley.
9) Michael C. Flickinger. (2013) Downstream Industrial Biotechnology: Recovery and Purification. By wiley.
10) Harker JH, Backhurst JR, Richardson JF (2013) Chemical Engineering, Volume 2.By Butterworth HeinemannRatiedge C and Kristiansen B (2001) Basic biotechnology 2nd ed. Ed. by Cambridge University press.

Course Learning Outcomes

1. Be able to produce and assay the various industrial products
2. Be familiar with various physic-chemical methods involved in bio separation process
3. Be acquint themselves with enrichment operations and membrane separations
4. Be able to carry out separation and product resolution

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO1 Knowledge	**PO2** Analysis	**PO3** Design	**PO4** Development	**PO5** Modern Tools	**PO6** Society	**PO7** Environment	**PO8** Ethics	**PO9** Teamwork	**PO10** Communication	**PO11** Programme Management	**PO12** Lifelong Learning
CO1	3	2	2	2	2	2	2	-	-	-	1	1
CO2	3	1	2	1	2	2	1	-	-	-	1	1
CO3	3	2	2	2	3	1	2	-	-	-	1	1
CO4	3	2	2	2	2	2	2	-	-	-	1	1

MB – 304: PRACTICALS: Bacteriology and Virology and Agricultural Microbiology

Course Learning Objective

1. To provide in depth knowledge on plant –microbe interaction
2. To acquaint microbial -.plant pathogens
3. To provide information on various viral, bacterial and fungal diseases on plants
4. To provide information about diseases of poultry, fish ,prawn and silkworm

1.Hanging drop experiment for bacterial motility.

2. Microbiological staining techniques – Simple, Gram negative, spore, capsular, acid fast and Lactophenol-cotton blue staining.

3. Isolation of bacteriophages from sewage water.

4. Cultivation of viruses in embryonated Chicken eggs: different routes of virus inoculation – Yolk sac, Allontoic and Chorio Allontoic Membrane (CAM)

5.Isolation and enumeration of bacteria,actinomycetes and fungi from agricultural soil

6.Isolation of nitrogen fixing bacteria from legume root nodule

7.Enumeration of rhizospheric and non rhizospheric population bacteria

8.Isolation of antagonistic fluorescent pseudomads from soil

9.Microscopic observation by root colonization by VAM fungi

10.Isolation of Azospillum from grass roots

11.Isolation of Azatobacter from rice fields

12.Isolation of Anabena from azolla plants

13.Isolation and enumeration of Phosphate solubilizers

14.Field Visit and Herbarium preparation of Local Plant-disease specimens

15. Demonstration of different bioferlizers and biopesticides types,formulation and application methods.

Course Learning Outcomes

1. Be able to acquaint themselves plant –microbe interaction
2. Be able to understand the microbial -.plant pathogens
3. Be able to gain knowledge on various viral, bacterial and fungal .diseases on plants
4. Be able to know about diseases of poultry, fish , prawn and silkworm

MB – 305: FOOD MICROBIOLOGY

Course Learning Objective

1. To provide knowledge on quality control of food products.
2. To provide in depth knowledge about food poisoning and fermentation product.
3. To understand the about fermentation technology concepts.
4. To given concentrate knowledge on microbials application modern technology.

UNIT – I

Food as substrate for microorganisms : Microorganisms important in food microbiology – Molds, Yeasts and Bacteria- General characteristics-classification and importance. Principles of food preservation. Asepsis-Removal of microorganisms, (anaerobic conditions, high temperatures, low temperatures, drying). Factors influencing microbial growth in food-Extrinsic and intrinsic factors; Chemical preservatives and Food additives. Canning, processing for Heat treatment-D, Z, and F values and working out treatment parameters.

UNIT – II

Contamination and spoilage : Cereals, sugar products, vegetables, fruits, meat and meat products, Milk and Milk products- Fish and sea foods- poultry- spoilage of canned foods. Detection of spoilage and characterization.

Food-borne infections and intoxications : Bacterial and nonbacterial- with examples of infective and toxic types- *Brucella, Bacillus, Clostridium, Escherichia, Salmonella, Staphylococcus, Vibrio, Yersinia;* Nematodes, protozoa, algae, fungi and viruses. Food borne outbreaks-laboratory testing procedures; Prevention Measures- Food sanitation in manufacture and retail trade, Food control agencies and its regulations, Plant sanitation-Employee's Health standards- waste treatment – disposal – quality control.

UNIT – III

Food fermentations : bread, cheese, vinegar, fermented vegetables, fermented dairy products; Experimental and Industrial production methods. Spoilage and defects of fermented dairy products – oriental Fermented foods, their quality standards and control.

UNIT – IV

Food produced by Microbes : Microbial cells as food (single cell proteins)- mushroom cultivation. Bioconversions- production of alcohol-fermented beverages- beer and wine. Genetically modified foods.

Steroid conversion : Industrial Enzymes production- amylases, proteinases, cellulases, aminoacid production- glutamic acid and lysine productions. Hazard analysis and critical control points (HACCP).

Course Learning Outcomes

1. Be able to understand presentation methods.
2. Be able to understand the food infections and microbial sancer.
3. To gain knowledge on Fermentation process.
4. Be able to know the advantages and biofuels and microbial frerapeulic compounds.

Suggested Books:

1. Food Microbiology: Fundamentals and Frontiers. 4th ed. 2012. ed by M.P. Doyle et al., ASM Press..
2. Food Microbiology: 3rd ed. 2007. Adams, M.R. and Moss M.O. Royal Society of Chemistry Publication, Cambridge.
3. Food Microbiology: 4th ed., 1988. Frazier WC and Westhoff Dc. Tata McGraw Hill Publishing Company Ltd., New Delhi.
4. Principles of Fermentation Technology. 2nd Edition : 1999. Stanbury, PF., Whitekar, A and Hall, S.J. Pergamon Press.
5. Basic Food Microbiology: 2nd ed.1989. Banwart, GJ. CBS Publishers and Distributors, Delhi.

6. Food poisoning and Food Hygiene: 7th ed. 2007. Hobbs BC and Roberts D. Edward Arnold (A division of Hodder and Stoughton) London.
7. Dairy Microbiology: 3rd ed. 2002. Robinson RK., Elsevier Applied Sciences, London.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO1 Knowledge	**PO2** Analysis	**PO3** Design	**PO4** Development	**PO5** Modern Tools	**PO6** Society	**PO7** Environment	**PO8** Ethics	**PO9** Teamwork	**PO10** Communication	**PO11** Programme Management	**PO12** Lifelong Learning
CO1	3	2	2	2	2	1	2	-	-	-	1	1
CO2	3	2	2	1	2	2	1	-	-	-	1	1
CO3	3	1	2	2	3	2	2	-	-	-	1	1
CO4	3	2	2	2	2	2	2	-	-	-	1	1

MB – 306: a) BIOINFORMATICS AND COMPUTERS

Course Learning Objective

1.To give information on Networking of computers

2.To provide indepth knowledge on databases and tools

3.To provide knowledge on operating systems

4.To give detailed knowledge on MS-office techniques

UNIT – I

Internet and Biologist : Internet basics, getting onto the internet, e-mail, file transfer protocols, gopher, the world-wide web, browsing and down loading from sites.

Networking of computers, need and advantages, an overview of International and Indian networks – Virtual Library-I: Searching MEDLINE; Pubmed. Virtual Library II: Science Citation Index and current awareness services; Virtual Library III: Electronic Journal; International and Indian Networks- NICNET, INFLIBNET, AGRIS.

Information Networks: WWW, HTTP, HTML, URLs, EMB net, NCBI net, Virtual tourism.

UNIT-II

Databases and Tools: Primary information resources- Protein and genomic information resources-Biological databases; primary, secondary and composite protein sequence databases, structure classification databases, DNA sequence databases, specialized genomic resources; DDBJ, Gen Bank and EMBL public DNA sequence databases; SWISSPROT Database, information retrieval from biological databases; the NCBI data model. Submitting DNA sequences to the Database and updating.

Sequence analysis : Wisconsin GCG, DNASIS, DNASTAR, CLONE MANAGER packages for nucleotide sequence analysis; sequence alignment and database searching; practical aspects of multiple sequence alignment.

Phylogenetic analysis: Phylogenetic models; multiple alignment procedures (CLUSTAL, ALIGN, PHYLIP); tree building methods and trees evaluation; rooting trees, phylogenetics software.

Predictive methods using nucleotide and protein sequences : Detection regulatory elements in the DNA; physical properties of proteins based on sequences, different protein

structural motifs RNA binding domains and folding classes; Transcription factors and their DNA binding.

UNIT – III

Basics of personal computer and its components. Concept of programming Languages. Hardware and Software. The idea of operating systems.

Disk Operating Systems (DOS)- Simple commands to create directories and handle files. DOS based software for creating biological databases-dBASE,

Windows-98 operating system – Starting Windows, Desk Top items, folders and files, explorer, notepad and word pad and their applications. Features of Windows 2000

Microsoft Office - 2000 : Introduction and facilities available. Shortcut Bar; customizing toolbars; using common office techniques-starting an office application.

UNIT – IV

Microsoft Word : Starting a new document, opening existing documents, saving, closing, and printing documents, moving and copying text, proofing the documents, working with multiple documents. Creating and editing work documents; formatting documents; working the tabs, tables and columns; working with long documents; working with graphics; formatting shortcuts; streamlining repetitive work.

Microsoft Excel : Introducing Excel Worksheet, formatting and printing worksheets, workbooks, functions and formulae, excel graphics, creating databases. Solving simple statistical problems and curve fitting using Excel.

Microsoft Power point : Creating presentations, working with slides, showing slide shows, creating an organization charts and graphs, printing a presentation.

Course Learning Outcomes

1.Be able to give familiarize with various networking tools

2.Be able to acquaint themselves with construction of phylogenetic trees

3. Be able to learn basics of computers

4.Be able to create excel worksheets and slide shows

Suggested Books:

1. Biostatistics by Daniel.
2. Campbell R.C. 1974 : Statistics for Biologists, Cambridge University Press, Cambridge.

3. Statistics made simple – Do it yourself on PC. 2001. By K.V.S. Sarma. Printice Hall of India Publ.
4. An introduction to Biostatistics. 1997. Third Edition. P.S.S. Sundar Rao and J. Richard, Prentice-Hall of India Pvt. Ltd., New Delhi.
5. Fundamentals of Biostatistics. 1994. First Edition. Irfan A. Khan and Atiya Khanum, Ukaaz Publications.
6. Biostatistics. 1996. First Edition. P.N. Arora and P.K. Malhan, Himalaya Publishing House.
7. Statistics for Biologists. 1980. D.J. Finney.
8. Statistics and Experimental design : An Introduction for Biologists and Biochemists. 1994. 3rd edition. G.M. Clarke. Edward Arnald Publications.
9. Statistical methods. 1967. 6th edition. Snedecor and Cochran, Oxford Press. 1967.
10. Elements of Computer Science, 1998. S.K. Sarkar, A.K. Gupta. S. Chand & Company (Chapters – 1,2,9,12,14).
11. Microsoft Office. 1997. Stultz. Office 2000 – The Basics and beyond, 2000. A Lan Neibauer. Tata Mc Graw-Hill Publishing Comp. Part I, II, III, IV, V.

CO_4	3	2	2	2	2	2	2	-	-	-	1	1

MB – 306: b) Microbial genomics and proteomics

Course Learning Objective

1. To give information on biological sequences
2. To provide in depth knowledge on functional and structural genomics
3. To provide knowledge on functional proteomics
4. To give detailed knowledge on microarray

Unit-I

Introduction to microbial genomics - sequencing genomes – first generation DNA sequencing – shot gun sequencing – second generation DNA sequencing – third and fourth generation DNA sequencing

Biological sequences as information – DNA, RNA and protein as informative molecules – general characteristics of microbial genomes – genome assembly – genome annotation – identification of an open reading frame in a genome.

Microbial genomes size and content – small genomes and large genomes – genomes of organelles – symbionts and organelles – eukaryotic microbial genomes an introduction: genomes of microbial parasites – the yeast genome.

Unit-II

Functional genomics: microarrays and transcriptomes – gene chips and gene expression and its applications – RNA sequence analysis – methods in proteomics – comparative genomics and proteomics – the interactome.

Culture independent studies of microorganisms – metagenomics: principles and applications – steps in construction of a metagenomes – examples of metagenomic studies – metagenomics as a tool to reveal the vast microbial diversity.

Unit III

Functional proteomics :Molecular analysis of gene expression (RTPCR)., CRISPR (CRISPR/Cas9)- Mechanism and applications.: Gene functions through protein interactions: Identification of Protein–Ligand Interactions. Combining yeast two-hybrid and phage display

data, Detecting Interactions with Protein Fragment Complementation Assays. Mass Spectrometry for Protein–Protein Interaction Mapping: Overview, Identification of substrates for E. coli GroEL, Studying the transcriptome and proteome of Escherichia coli and Saccharomyces cerevisiae.

Unit IV

Protein microarrays: overview, principle, limitations; Protein microarray Manufacturing technology, solid supports, different formats, experimental approach and detection, peptidomics; Microarray for protein-carbohydrate interaction (phage display technology); protein domain microarray; protein biochips; Antibody microarray; protein microarray for drug discovery

Course Learning Outcomes

1. Be able to give familiarize with microbial genomes
2. Be able to acquaint themselves with metagenomics
3. Be able to learn basics of protein identification method
4. Be able to gain knowledge on drug discovery

Suggested readings:

1. Madigan M.T., Bender K.S., Buckley D.H., Sattley W.M. and Stahl D.A. (2017) Brock Biology of Microorganisms, 15th Edn. (Global Edn.) Pearson Education.

2. Sanders E.R. and Miller J.H. (2010) I Microbiologist: A discovery based course in Microbial Ecology and Molecular Evolution, ASM press.

3. Fraser C.M., Read T. and Nelson K.E. (2004) Microbial Genomes, Springer.

4. Highlander S.K., Rodriguez-Valera F. and White B.A. (2015) Encyclopedia of Metagenomics: Environmental Metagenomics, Springer Science.

5. Dale J.W. and von Schantz M. (2007) From Genes to Genomes: Concepts and Applications of DNA Technology, 2nd Edn. Wiley publishers.

6.Protein Microarrays, edited by Mark schena, Jones and Bartlet pblisher, 2005.

7.Microbial Functional Genomics, Jizhong Zhou, Dorothea K. Thompson, Ying Xu, James M. Tiedje, A John Wiley & Sons, Inc., Publication, 2004.

8.Microarrays for an Integratiul J. But. Kho and Atte, Published in India by Ane Books, 2003.

9.Gene Cloning and DNA analysis An Introduction, Sixth Edition, T. A. Brown, Wiley Blackwell publications, A John Wiley & Sons, Inc., Publication, 2010.

FOURTH SEMESTER:

MB - 401: MOLECULAR CELL BIOLOGY AND TECHNOLOGY

Course Learning Objective

1. To provide information on signaling mechanisms.
2. To gives detailed information on cancer biology.
3. To provide in depth information about culture media.
4. To gives information on transgenic technology.

UNIT – I

Cell cycles : Bacterial and eukaryotic cell cycles, molecular basis of cell cycle regulation, progress through the cell cycle. Prokaryotic and eukaryotic cell signaling mechanisms : eukaryotic cell-to-cell signaling, endocrine signaling, cyclins. Prokaryotic signaling : Quorum sensing and bacterial pheromones. Intracellular signaling. Signaling pathways. Cell cycle and growth regulation.

UNIT – II

Molecular Biology of tissue transformation and tumerogenesis in plants and animals : Terminology, experimental approaches to study transformation and tumerogenesis. **Plants :** induction of crown gall by *Agrobacterium.* **Animals :** types of tumors, physical, chemical and biological carcinogens, chromosomal changes induced by carcinogens, oncogenes (v-onc, c-onc), antioncogenes and their products, induction of tumors by DNA and RNA viruses, regulation of gene expression by oncogene products; role of oncogene products in signal transduction.

Cancer : Biology of human cancer, Growth of cells, Cell transformation. Oncogenes and Chromosome , Translocation, Amplification of Oncogenes in Tumors, Tumor Suppressor Genes, Role of Oncogenes and Tumor Suppressor Genes in the Pathogenesis of Neoplasms. Oncogene and proto-oncogene functions

UNIT – III

Cell culture media – Components of the medium, physical, chemical and metabolic functions of media. Role of serum and supplements, serum-free media, features and

specifications of MEM, DHEM, RPMI and Ham's medium. Role of antibiotics in media. Cell viability and cytotoxicity. Dye exclusion and inclusion tests, colonigenic assay, macromolecular estimation, MTT based assay. **Primary culture** – Mechanical and enzymatic mode of disaggregation. Cell lines – Definite and continuous cell lines, characterization, authentication, maintenance and preservation of cell lines.

UNIT- III

In vitro fertilization – Concept of superovulation, collection, maintenance, and maturation of oocytes, fertilization of oocytes. Cloning – Concept of nuclear transfer, nuclear reprogramming and creation of Dolly. **Transgenic animals** – Retroviral, microinjection, and engineered embryonic stem cell method of transgenesis. Application of transgenic animals – Biopharming, disease models, functional knockouts. **Gene therapy** – *Ex vivo* and *in vivo* gene therapy methods, and their applications. Application of animal cell culture - Vaccine production, specialized cell types. Concepts of tissue engineering – Skin, liver, kidney, blader and heart.

Course Learning Outcomes

1. Able to understand the cell cycle and quorum sensing
2. Able to acquire with carcinogens and oncogenes.
3. Be able to acquaint with cell cultures media and cell lines.
4. Be able to acquaint themselves with transgenic animal production technology.

Suggested Books:

1. Molecular Cell Biology. 6th ed. 2007 by Lodish et al. Scientific American books, W.H. Freeman and Company.
2. Molecular Biology. 4th ed. 2008, by David Freifelder, Narosa Publ. House.
3. Text Book of Molecular Biology. 1994, by Sivarama Sastry et al, Macmillan India Ltd.
4. Advanced Molecular Biology : A Concise Reference. 1998, by R.M. Twyman. Viva Books Pvt. Ltd.
5. Instant notes in Molecular Biology,2nd ed. 2000. by P.C. Turner et al. Viva Books Pvt. Ltd.
6. Schaums Outlines – Molecular and Cell Biology. 1997. W.D. Stansfield et al., McGraw-Hill Publ.

7. Oncogenes. 1990. G.M. Cooper. Jones and Bartlett Publishers, Boston.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Knowledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Teamwork	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning

MB - 402: ENVIRONMENTAL MICROBIOLOGY

Course Learning Objective

1. To provide overview of microbial ecology.
2. To give in-depth information about soil microbiology.
3. To give knowledge about aquatic microbiology.
4. To provide information about waste treatment methods.

UNIT – I

Brief account of the habitat for microorganisms : soil, water and atmosphere. General description of soil, water, air. Physical and chemical factors influencing the distribution of microbial flora.

Populations and communities interactions : Population interactions (commensalisms, synergism, mutalism, competition, ammensalism, predation, parasitism), microbial population and community dynamics, microbial growth in open and closed environments, the kinetic principles of competition between microbial populations.

Extremophiles – acidophilic, alkalophilic, thermophilic, barophilic and osmophilic microbes – mechanisms and adoption. Halophiles – membrane variation – electron transport – application of thermophiles and extremophiles.

Methods in microbial ecology : Enrichment and isolation methods, microbial activity measurements.

UNIT – II

Soil Microbiology : Diversity of microorganisms (bacteria, fungi, algae, viruses), their distribution and abundance, methods of isolation and estimation, beneficial and antagonistic interactions among microorganisms. Survival of soil-borne pathogens.

Organic matter in soil : Nature, synthesis and decomposition. Humus formation in the soil.

Microbiology and ecological significance of ammonification, nitrification and denitrification : microbes involved, biochemistry of the above processes, factors influencing the processes.

Bio-geo-chemical cycles : Carbon, hydrogen, oxygen, nitrogen, phosphorus, sulphur and iron. Microbiological transformation of phosphorus, sulfur and iron.

UNIT – III

Aerobiology : Microbes and microbial propagules in air. Methods for microbial analysis of air. Brief account of air-borne transmission of microbes – viruses, bacteria and fungi, their diseases forcasting and preventive measures.

Aquatic Microbiology : Water ecosystems – types – fresh water (ponds, lakes, streams) – marine habitats (esturies, mangroves, deepsea, hydrothermal vents, saltpans, coral reefs). Zonations of water ecosystems- upwelling – eutrophication – food chain. Potability of water. Sampling and microbial assessment of water quality. Water purifications – sanitary quality of water. Municipal water treatment, filtration. Disinfection of water by heat, solar energy, UV and gamma radiation, ultra sound, ozone and chlorine. Brief account of major water-borne diseases and their control measures.

UNIT – IV

Waste treatment : Wastes – Solids and liquids and their characterization : Liquid wastes : microbial diversity and treatments- physical, chemical, biological – aerobic – anaerobic-primary-secondary tertiary. Solid waste treatment: saccharification-gassification – composting, utilization of solid wastes – food (SCP, mushroom, yeast) fuel (ethanol, methanol), fertilizers (composting). Liquid waste treatment – trickling – activated sludge-oxidation pond – oxidation ditch. Subterranean microbes and bioremediation. Treatment of industrial fermentation unit effluents.

Positive and negative roles of microbes in environment : Bioremediation, biodegradation of recalcitrant compounds – lignin – pesticides; bioaccumulation of metals and detoxification – biodeterioration – of paper – leather, wood, textiles – metal corrosion – mode of deterioration – organisms involved – its disadvantages – mode of prevention. GMO and their impact.

Course Learning Outcomes

1. Be able to acquaint with microbial communities and their interaction.
2. Be able to know about bio geochemical cycle.
3. Be able to understand the water borne diseases and their control measure.
4. Be able to understand the solid waste management.

Suggested Books :

1. Extremophiles, by B.N. Johri, 2000. Springer Verlag., New York.
2. Microbial Diversity, by D. Colwd, 1999. Academic Press.
3. Manual of Environmental Microbiology, second edition, by C.J. Hurst, Editor in Chief, 2002. ASM Press.
4. Microbial ecology: Fundamentals and Applications. 1998. Atlas, RM & Barta, R.
5. Aerobiology. 1997. By Tilak.
6. Environmental Microbiology by Ralph Mitechell.
7. Bioremediation Principles by Eweis.
8. Techniques in Microbial Ecology by Buruage.
9. Soil Microbiology and Plant Growth, 1995 by N.S. Subba Rao.
10. Soil Microbiology by Alexander. 2nd ed. 2011.
11. Environmental Microbiology. 1981 by W.P. Grant and P.E. Long.

CO_4	3	2	2	1	2	2	2	-	-	-	1	1

MB - 403: a) PHARMACEUTICAL MICROBIOLOGY

Course Learning Objective

1. To provide overview antimicrobial agents.
2. To give in-depth information about antibiotic action with the celll.
3. To give knowledge about production of pharmaceuticals.
4. To provide information about GLPs .

UNIT-I

Antibiotics and synthetic antimicrobial agents: Antibiotics and synthetic antimicrobial agents(Aminoglycosides, lactams, tetracyclines, ansamycins, macrolid antibiotics) Antifungal antibiotics, antitumor substances. Peptide antibiotics, Chloramphenicol, Sulphonamides and Quinolinone antimicrobial agents. Chemical disinfectants, antiseptics and preservatives.

Mechanism of action of antibiotics: Mechanism of action of antibiotics (inhibitors of cell wall synthesis, nucleic acid and protein synthesis)Molecular principles of drug targeting.

Drug delivery system in gene therapy, Bacterial resistance to antibiotics, Mode of action of bacterial killing by quinolinones, Bacterial resistance to quionolinones, Mode of action of non – antibiotic antimicrobial agents. Penetrating defenses – How the antimicrobial agents reach the targets (cellular permeability barrier, cellular transport system and drug diffusion).

UNIT-II

Microbial production and Spoilage of pharmaceutical Products

Microbial contamination and spoilage of pharmaceutical products (sterile injectibles, non injectibles, ophthalmic preparations and implants) and their sterilization. Manufacturing procedures and in process control of pharmaceuticals. Other pharmaceuticals produced by microbial fermentations (Streptokinase, Streptodornase).New vaccine technology, DNA vaccines, synthetic peptide vaccines, multivalent subunit vaccines. Vaccine clinical trials.

UNIT-III

Regulatory practices, biosensors and applications in Pharmaceuticals

Financing R&D capital and market outlook. IP, BP, USP. Government regulatory practices and policies, FDA perspective. Reimbursement of drugs and biologicals, legislative perspective. Rational drug design. Immobilization procedures for pharmaceutical applications (liposomes). Macromolecular, cellular and synthetic drug carriers. Biosensors in Pharmaceuticals. Application of microbial enzymes in pharmaceuticals.

UNIT-IV

Quality Assurance and Validation

Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP) in

pharmaceutical industry.Regulatory aspects of quality control.Quality assurance and quality management in pharmaceuticals ISO, WHO and US certification.Sterilization control and sterility testing (heat sterilization, D value, z value, survival curve, Radiation, gaseous and filter sterilization).Chemical and biological indicators.Design and layout of sterile product manufacturing unit.Designing of Microbiology laboratory,Safety in microbiology laboratory.

Course Learning Outcomes

1. Be able to acquaint with antibiotics
2. Be able to know antimicrobials action.
3. Be able to understand the production of pharmaceuticals
4. Be able to understand the quality assurance.

MB - 403: b) INDUSTRIAL BASED MICROBIAL CELAN TECHNOLOGY

Course Learning Objective

1. To provide overview of organic wastes.
2. To give in-depth information biomining
3. To give knowledge biopesticides.
4. To provide information bioremediation

UNIT – I

Scope of microbial agents in industry - regarding clean environment – waste water and effluent treatment – aerobic biological treatment, carbon oxidizers, filamentous carbon oxidizers, nitrifiers, dinitrifiers. Anaerobic waste-water treatment – hydrolytic bacteria, acetogenic bacteria, methanogenic bacteria.

Compositing of solid organic wastes – *Agaicus bisporus, Bacillus stearothermophilus, Thermus sp., Fungi – Rhizomucor Pusillus.* Ensiling – to preserve the material with a minimum loss of nutritional value, commercial, microbial inoculants, *Pediococcus sp.,Sstreptococcus sp.,* some *Lactobacillus sp*. Biodegradation of Xenobiotics, Bioremediation – basic principle, biodegrade or detoxify contaminating compounds in situ, metal sequester – *Geobacter metallireducens,* radiation resistance bacteria – *Deinococcus radiodurans.*

UNIT – II

Biomining (mineral leaching) – conventional mineral mining – metal ores, *Thiobacillus ferroxidans, Leptosirillum ferroxidans,* Microbial desulphurization of coal – S*ulfolobus acidocaldarium.*

Bioinsecticides – control of insects by use of microbial pathogens - bacteria, fungi, protozoa and viruses – *Bacillus thuringiensis, Pythium, Oligandrum, Ampelomyces quiqualis,* Baculo viruses.

UNIT – III

Biopesticides – Introduction and importance of biopesticides, types of biopesticides, bioinsecticides – biofungicides – biobactericides – bionematicides – bioherbicides. Important bioinsecticides- Bt, NPV, fungal bioinsecticides (Beauveria, Metarhizium, Verticillium, Paecilomyces, Nomuraea. Mass production – formulation – application for the control of insect pests. Important biofungicides – Trichoderma, Gliocladium, *Pseudomonas fluorescens*, mass production – formulation – use in agriculture for the control of crop diseases. Biobactericide - *Agrobacterium radiobacter*, use in control of crown gall disease. Bionematicides- Verticillium, Trichoderma, control of root knot nematodes. Bioherbicides - Phytophthora , Colletotricum, advantage for the use of biopesticides – Problems in commercialization and efficacy – commercial products of biopesticides.

UNIT – IV

Bioremediation – Bioremediation definition, concept – rationale – kinds of pollution – organic, inorganic in soil, water and air – remediation by bacteria, fungi and green plants. Processes of bioaccumulation and biomagnification – microbial remediation by natural attenuation – biostimulation – bioaugmentation – application of immobilized microbes in soil decontamination.Use of genetically engineered microorganisms and bioremediation – Biodegradation of organic compounds – humification and polymerization reaction – biotransformation of metal and metal compounds – phyto-remediation use of green plants to remove pollutants – Phyto-extraction – induced phyto-extraction and continuous phyto-extraction – phyto-degradation – rhizofiltration – phyto-stabilisation – phytovolatisation of metals – phyto-remediation of organic – bioavailability and uptake – biotransformation and compartmentalization.

Course Learning Outcomes

1. Be able to acquaint various bacteria involved in composting
2. Be able to know about mineral leaching.
3. Be able to understand the production of bioinsecticides and bio fungicides
4. Be able to understand the biomagnification.

Suggested Books :

1. Microbial Technology by J.H. Peppler and D. Perlman.
2. Microbial Enzymes & Biotechnology by W.M. Fogarty and C.T. Kelly.
3. Industrial Microbiology, 1999 by L.E. Casida, Jr. New Age International Publ.
4. Industrial Microbiology. 1984. A.H. Patel. Macmilan India Limited.
5. Industrial Microbiology by B.M. Miller and W. Litsky.
6. Microbial Biotechnology – Fundamentals of Applied Microbiology. 1995. by Alexander N.

MB – 404: PRACTICAL: MOLECULAR CELL BIOLOGY & CELL TECHNOLOGY AND ENVIRONMENTAL MICROBIOLOGY.

Course Learning Objective

1. To provide hands on experience with the techniques used in molecular cell biology.
2. To give hands on experiments techniques used in Environmental Microbiology.

1. MTT assay
2. Trypan blue dye exclusion test
3. Agrobacterium mediated transformation
4. Culturing of HeLaS3 cells insuspension.
5. Humus estimation in the soil
6. Determination of organic matter of soil
7. Contact slide technique
8. Ammonification in soil
9. Nitrification in soil
10. Denitrification in soil
11. Isolation of antibiotic producing microorganisms from soil
12. Most Probable Number Test for coliforms
13. Quantitative analysis of water for microbial numbers (SPC)
14. Membrane filter method for detection of coliforms in water
15. Effect of heavy metals on the growth of bacteria
16. Microbial interrelationships (Synergism and Antagonism)

Course Learning Outcomes

1. Be able to perform techniques in molecular cell biology independently.
2. Be able to perform techniques in environmental microbiology.

MB - 405: Project

Course Learning Objective

1. To acquatic themselves to identify and collect scientific Research Problem formula in microbiology.

Practical experience in locating, collecting and interpreting the scientific information for the purpose of M.Sc., Microbiology project work. Students work individually under faculty / scientist supervision in Laboratories, Research labs, National Institutions to perform the procedures and record the results and present the project work at the end of the fourth semester. The project work of the student will be evaluated by seeing the performance of presentation and interpretation of the results.

Course Learning Outcomes

1. Be able to design and a research problem analyzes the results.

MB-406: a) BIOETHICS, BIOSAFETY AND INTELLECTUAL PROPERTY RIGHTS

Course Learning Objective

1. To give information on ethics.
2. To give in-depth information about containment.
3. To give knowledge about regulatory affairs of pharmaceuticals.
4. To provide information about Intellectual rights .

UNIT – I

Bioethics – Introduction to Bioethics, solid and ethical issues related industrial genetically manipulated microorganisms (GMM).

UNIT – II

Biosafety – Definition, biosafety consideration, types of containments, personal practices, primary and secondary containment barriers (biosafety levels 1, 2, 3, 4), containment for production activities, practical consideration, possible hazards from industrial production and use of pathogens.

UNIT – III

Biosafety for human health and environment - Use of genetically modified microorganisms and their release in to the environment, special procedures for recombinant DNA based products. Regulatory affairs – regulatory requirements for drugs and biologics.

UNIT – IV

Intellectual property rights – Importance of Intellectual property, history of patent concept, composition of a patent, general patent information – patent laws, patentable subject matter, apply for patent, requirements for patentability, issuance of a patent, infringement of a patent. Obtain patent protection – applying for patent protection, patent prosecution, appeals and interference proceedings, applying for foreign patent protection. Patent laws in US, India and other countries.

Course Learning Outcomes

1. Be able to acquaint various ethical issues related to recombinant bacteria
2. Be able to know about various biosafety levels
3. Be able to understand the production of GMO is use
4. Be able to understand about patenting

Suggested Books :

1. Intellectual property rights on Biotechnology. K. Singh BCII, New Delhi.
2. Biotechnologies in developing countries present and future. 1993. A. Sasson. UNESCO Publishers.

MB-406: b) MICROBIAL PRODUCTION OF ALCOHOLIC BEVERAGES

Course Learning Objective

1. To give information on role of microorganisms in brewing
2. To give in-depth information about fermentation process
3. To give knowledge about various types of whiskies.
4. To provide information about vinegar production process

UNIT – I

History, scope and Industrial important of Beverages. Types of Beverages and their significance in the society. Brewing microbiology – Microorganisms related to Beverages, their isolation, identification and small scale culturing, pure culture techniques, Microbial metabolism and nutrition, genetics of Microbial organisms, magnitude of the brewing industry.

UNIT – II

Elements of the Brewing process – Ingredients – Malt, Adjuncts, water, Hops, yeast, miscellaneous additives. Different process of Bear Brewing – Malting, Brewing, Mashing, Hop addition. Fermentation – Primary, continuous fermentation, aging and finishing. Pure culture of yeast – quality, source, maintenance of pure culture, pure culture propagation, evaluation of yeast produced, microscopic and serological tests, test fermentations, recycled yeast, separation, collection and storage. Microbial contamination. Fermentation requirements – Carbohydrates, nitrogen compounds, inorganic ions, vitamins, polyphenols, Hop compounds, lipids oxygen, yeast.

UNIT – III

Distilled Beverage Alcohol – commercial Important of alcohol, whiskey – Raw materials, mashing and conversion, fermentation, distillation, types of whiskey – Bourbon whiskey, Rye whiskey, corn whiskey, Light whiskey, Tennessee whiskey. Canadian whiskey, scotch whiskey, Irish whiskey, Vodka, Gin, By-product recovery in whiskey synthesis, Rum, Tequila, Cordials and Liqueurs, Congeners.

Wine production – production of grape must, wine fermentation, traditional spontaneous wine fermentation, use of starter cultures, continuous wine fermentation, secondary wine fermentation, post – fermentation treatments.

UNIT – IV

Cider production – apple juice extraction, composition of apple juice, cider fermentation, cider maturation. Vinegar production – Vinegar fermentation, alcohol fermentation, acetic acid fermentation, methods of acetification in vinegar manufacture, traditional surface method trickle generators, submerged methods, finishing processes, process developments.

Course Learning Outcomes

1. Be able to acquaint with various bevarges
2. Be able to know about various beverage production process
3. Be able to understand the production of bevarages
4. Be able to understand about cidar productions

Suggested Books:

1. Molecular Biotechnology : Principles and Applications of recombinant DNA. 1994. by B.R. Glick and J.J. Pastermak. Panima Publ. Corporation.
2. Microbial Biotechnology; Fundamentals of Applied Microbiology. 1995. A.N. Glazer and H. Nikaido. W.H. Freeman and Company.
3. Biotechnology : A test Book of Industrial Microbiology. Second edition, 2000. Ed. W.Crueger & A.Crueger.Panima Publishing corporation.
4. Industrial Microbiology : An Introduction by M.J. Waites et al. Blackwell Science. 2001.
5. Microbial Technology by J.H. Peppler and D. Perlman.
6. Manual of Industrial Microbiology and Biotechnology, Second edition. 1999. A.L. Demain, Editor in Chief, ASM Press

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF MICROBIOLOGY

Course

M.Sc. INDUSTRIAL MICROBIOLOGY

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per NEP-2020

About the Department

The Department of Microbiology emerged from the Sri Venkateswara University post graduate Centre, Kavali during 2005. Since 2010, the Department of Microbiology was to transferred College of Sciences, Sri Venkateswara University, Tirupati. The department presently runs Four academic programmes M.Sc. Microbiology (Regular & Self-Supporting), M.Sc. Industrial Microbiology (Self-supporting) and Doctoral Programme. The present intake in each Masters programme is 24. The post graduate programme is under Choice Based Credit Course in four semesters with 16 theory papers, 7 practicals and one project work. The Department has taken special interest in encouraging the students to take up pure, applied and strategic Ph.D research programmes at local and national level to restore the environmental quality and development of indigenous microbial technology. Several students of this department have been gainfully employed and are working in several leading National & International laboratories, Industries, research Institution and colleges.

The research activities of the Department are also well recognized and a number of projects funded by agencies such as UGC, DST, ICMR etc., The thrust areas identified are Molecular Microbial Ecology, Proteomics, DNA Bar-coding, EnvironmentalBiotechnology etc.,The department of Microbiology has developed and transformed itself into a progressive department with upto date laboratory equipments, reference books. The department conducts various activities like Saturday meets, Research Seminars and training programmes for the CSIR-UGC, SLET, NET, GATE examinations. On an average 4 - 6 out of 24 students of each course qualifying these examinations every year.The department has strong rapport with potential employers and the opportunities of employment are routinely displayed.With respect to service the faculty has an exemplary record of participation in National & International Organization and editing professional Journals. The research outcomes of the department are well evidenced by publication of several research papers in peer reviewed national and international Journals with good impact factor. The Department also excels in extra curricular activities too. The department regularly organizes national level seminars, symposia and workshops. It is not only the effect of the faculties for all such success but it is the team spirit and the excellence of the post graduate and Doctoral students too. Students of Microbiology are self sustained and receive individual fellowships including DST inspire Fellowship, Rajiv Gandhi National Fellowship, University

Research Fellowship. From all these progresses and growth it is well envisaged that the members of Microbiology Department are well sustained to outrival the competitive scientific World.

Vision: To build a global standard in microbiology research and teaching, and to be a guiding light worthy of emulating.

Mission: To provide wholesome experience and knowledge to students to develop into exemplary leaders of the future in academic and outside arena.

- To pursue and promote world-class research and training at the frontiers of microbiology
- To move up through International & national alliances and collaborative initiatives to excel globally in Microbiology and Biotechnology research and education.

CHOICE BASED CREDIT SYSTEM (CBCS):

The CBCS provides an opportunity for the students to choose courses from the prescribed courses comprising core, elective/minor or skill-based courses. The courses can be evaluated following the grading system, which is considered to be better than the conventional marks system. Grading system provides uniformity in the evaluation and computation of the Cumulative Grade Point Average (CGPA) based on student's performance in examinations which enables the student to move across institutions of higher learning. The uniformity in evaluation system also enables the potential employers in assessing the performance of the candidates

Program Specific Outcomes

PSO-1: Equips capacity to venture into a career in bio based industries as scientists or technologists in the division of production, research and developmental settings.

PSO-2: Demonstrate the concepts and research approach for their higher career in the field of microbiology and develop their scientific interest.

PSO-3: Administer skill sets to understand the rationales behind various regulatory/legal bodies governing the R&D in the pharmaceutical industry.

PSO-4: Exhibit in-depth practical oriented knowledge to students in various thrust areas of industrial microbiology, so as to meet the global demands of industry and academia.

PSO-5: Ability to designs aids in developing solutions for complex problems with appropriate consideration to the public health and safety, and the cultural, societal, and environmental considerations.

Programme Objectives

- To produce competent microbiologists who can employ and implement their knowledge gained from this programme in applications which will profoundly influence different fields viz. pharmaceutical, biotech, food, wine and beverages industries.
- The programme will provide students with the knowledge and skill base that would enable them to undertake further studies in microbiology/industrial microbiology and related areas or in multidisciplinary areas that involve microbiology, biochemistry, biotechnology and molecular biology and help develop a range of generic skills that are relevant in enhancing entrepreneurship skills among students
- The Master's Programme in Microbiology will address the increasing need for skilled scientific manpower with an understanding of research ethics involving microorganisms

to contribute to application, advancement and impartment of knowledge in the field of microbiology

- To impart basic understanding on molecular and cellular mechanism of all living organisms including industrially important microorganisms.

Programme Outcomes

PO-1: Grasp of basic and advanced knowledge on various domains of Microbiology.

PO-2: Ability to integrate technologies through an inter-disciplinary learning habit.

PO-3: Demonstrate an independent thinking ability.

PO-4: Ability to communicate effectively.

PO-5: Equipped with laboratory skills in microbiology.

PO-6: Awareness of the impact of biosolutions in a global, economic, environmental, and societal context.

PO-7: Understanding of professional and ethical responsibility.

PO-8: Ability to design and conduct experiments, as well as to analyze and interpret scientific data.

PO-9: Awareness of contemporary issues that can be mitigated or supported through life science know how and industrial microbiology skills.

PO-10: Recognition of the need for, and an ability to engage in life-long learning.

Program Educational Objectives

The Program Educational Objectives (PEOs) for the M.Sc. Industrial Microbiology program describe accomplishments that post graduates are expected to attain within two years after post graduation:

PEO-1: To exhibit ability to pursue careers in the industry, agriculture, and applied research where microbial systems are increasingly employed.

PEO-2: To address the increasing need for skilled scientific manpower, contributing to application, advancement and impartment of knowledge in interdisciplinary areas related to industrial Microbiology.

PEO-3: To exhibit excellent professional skills, communication skills and ethical attributes as an effective team member. in a competitive global environment

PEO-4: To demonstrate right mixes of innovative ability, equipped with entrepreneurship abilities contributing to self and national development.

PEO-5: The post graduates will be cognizant and responsive to the societal needs and will possess the initiative and critical acumen required to continuously improve their knowledge through life long learning.

4	Project Work	IMB-405	Field Trip/ Industrial Tour Report / Dissertation	6	04	20	80	100
5	Open Elective	IMB-406	a) Bioethics, Biosafety and Intellectual property rights b) Microbial Production of Alcoholic beverages.	6	04		100	100
Total				36	24	80	520	600
7	Audit Course** (Self-Study)		**Online courses from MOOCs / NPTEL**	0	-	100	-	-

- All CORE Papers are Mandatory
- Generic Elective - Choose any one
- Project Work –In house/Research institutes, National laboratories, Central Universities
- Multi-disciplinary course is Mandatory.
- Skill based course Mandatory
- Open Electives are for the Students of other Departments. Minimum One paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self study
- Interested students may register for MOOC with the approval of the concerned DDC

FIRST SEMESTER

IMB - 101: INTRODUCTORY MICROBIOLOGY

Course Learning Objective

1. To provide information on Microscopy and staining materials that helps to observe microorganism.
2. To provide detailed knowledge on Isolation, cultivation and enumeration of microorganisms.
3. To provide in that knowledge about classification and taxonomy of microorganisms.
4. To information on prokaryotic eukaryotic microorganisms.

UNIT – I

History and Scope of Microbiol–gy - Discovery of microorganisms and development of microbiol–gy - Contributions of pioneers- Prokaryotic and Eukaryotic microorgani–ms - Origin and evolution of microorganisms. Distinguishing of different microorganisms-Scope and relevance of Microbiol–g dentture of Microbiology.

Microbial Struct–re - Microscopy – principles and applications of light microscope-Bright field- Dark-field, Phase – contrast, Fluorescent, Scanning and Transmission electron microscopes, Confocal microscopy, Scanning tunneling microscope. Preparation of microbiological samples for microscopy-simple and differential staining, special and structural staining. Negative contrast staining for virus samples. Preparation of tissues for thin sectioning (fixation, dehydration, infiltration, embedding and sectioning).

Physical and Chemical methods of sterilization and disinfection : Heat, radiation, pH, atmospheric pressure, filters, various chemical agents, safety precautions. The concept of containment facility.

UNIT – II

Microbiological media: Types of media-natural and synthetic; autotrophic, heterotrophic and prototrophic media; basal, defined, complex, enrichment, selective, differential, maintenance dentify port media.

Isolation, cultivation and enumeration of microorganisms : Isolation from different natural sources. Approaches for obtaining pure cultures. Cultivation of aerobes and anaerobes. Continuous, batch, synchronous broth and stock cultures. Enumeration / measurement of growth of microorganisms.

Maintenance and preservation of microbial cultures : Repeated sub-culturing, sterile soil/sand preservation, glycerol-deep freezing, oil overlay, drying methods, freeze-drying.

UNIT-III

Microbial Taxonomy: Classification of microorganisms – introduction – Hackel's three kingdom concept – Whittaker's five kingdom concept – three domain concept of Carl Woese. Basis of microbial classification. Concepts, nomenclature and taxonomic ranks; major characteristics used in Taxonom dentify tryical, physiological and metabolic, ecological, numerical taxonomy; genetic and molecular classification systems; the kingdoms of organisms and phylogenetic trees. Characteristics of prokaryotes and eukaryotic cells.

UNIT – IV

Prokaryotic microorganisms:

Brief outlines on discovery, nature, origin, evolution, morphology and structure, composition, reproduction and other characteristics of Bacteria (Eubacteria) Spirochetes, Rickettsias, Chlamydias, Pseudomonads, Acetic acid bacteria, Mycloplasmas, Cyanobacteria, Archaebacteria, Actinomycetes (Actinobacteria).

Eukaryotic microorganisms:

Fungi : Classification, structure, composition, reproduction and other characteristics of fungal divisions – *Zygomycota, Ascomycota, Basidiomycota* and *Deuteromycota* and slime and water molds. General characteristics and importance of fungi – *Saccharomyces, Candida, Pichia, Pencillium, Neurospo dentify opus, Aspergillus, Agaricus, Cryptococcus, Fusarium, Trichoderma, Claviceps.*

Algae : Classification, structure, reproduction and other characteristics of algal divisions. Characteristics of *Chlorella, Senedesmus, Gelidiella* and *Gracellaria.* Economic importance of algae, phytoplantanic microalgae.

Protozoan parasites : Classification, morphology and structure, reproduction and other characteristics of pathogenic protozoa like *Entamoeba, Plasmodium, Leishmania, Cryptosporidium, Trichomonas, Taxoplasma, Trypanosoma, Giardia.*

Courses Learning Out Comes

1. Be able to know the microbial structure, sterilization disinfection techniques.
2. Be able to know they maintain and preservation of microbial culture.
3. Be able to know nomenclature taxonomic read and major characteristics uses in taxonomy.
4. Be able to know the discovery, classification, structure and importance of Prokaryotic, fungi, algae and protozoa.

Suggested Books:

1. Brock Biology of Microorganisms. 199^{7,} 8th ed. Madigan et al., Prentice-Hall International, Inc.
2. Microbiology. 199$^{9.}$ 3rd ed. Prescott et al. Wm. C. Brown Publ.
3. Principles of Microbiology. 199$^{7.}$ 2nd ed. R.A. Atlas. Wm.C. Brown. Publ.
4. Foundations in Microbiology. 199$^{6.}$ 2nd ed. K. Talaro and A. Talaro. Wm. C. Brown Publ.
5. Microbiology. 199$^{6.}$ 5th ed. Pelczar et al. Tata McGram-Hill Publ. Company Ltd.
6. General Microbiology, 1999 by S.B. Sullia, Oxford and IBH Publishers.
7. General Microbiology, 1999 by Stainer et al., Macmillan Educational Ltd.
8. Instant Notes in Microbiology. 1999. J. Nicklin et al. Viva Books Pvt. Ltd.
9. Microorganisms, Biotechnology and Disease : Students Book. 1997 by Pauline Lourie and Susanwells. Cambridge University Press.
10. Introductory Mycology. 199$^{6.}$ 4th ed. Alexopoulos et al., John Wiley and Sons.
11. Introductory Psychology by H.D. Kuma$^{r.}$ 2nd ed. 1999. East West Press.

IMB - 102: MICROBIAL PHYSIOLOGY

Course Learning Objective

1. To provide insights in to nutrition, microbial growth.
2. To know concepts of biogenetics, photosynthesis and carbon metabolisms.
3. To provide in depth information about aerobic and anaerobic respiration and lipid metabolism.
4. To provide detailed information on protein, nucleic acid, secondary metabolisms.

UNIT – I

Nutrition : Elemental nutrient requirements of microbes; nutritional groups of bacteria; autotrophy-photoautotrophy and bacterial photosynthesis; chemoautotrophy and autotrophic metabolism; heterotrophy – photoheterotrophy and chemoheterotrophy, heterotrophic metabolism in bacter dentify tonal mutants and their use in metabolic studies.

Uptake and Transport of nutrients in microbes – Structural organization of plasma membrane in relation to transport, types and mechanisms of transport (passive, simple, facilitated, active, chemical modification) with reference to sugars, amino acids and ions; methods for studying of transport, coupling of transport of ions and metabolites to ATP/proton gradient.

Microbial Growth: building of macromolecules from elemental nutrients, supramolecules, cell components and cells; cell cycle in microbes and generation times; batch culture phases and importance of each phase, continuous cultures, synchronous culture, factors influencing the microbial growth.

Nature and properties of spores – Physiology and biochemistry dentify tion and germination of spores.

UNIT – II

The concepts of microbial metabolism, primary and secondary metabolism and their significance.

Bioenergetics: Concepts of free energy and thermodynamic principles in biology, energy transformation, ATP cycle, standard free energy of hydrolysis of phosphate compounds, energy transducers, redox potentials, free energy changes in redox reactions.

Photosynthesis: Oxygenic and anoxygenic photosynthesis, photosynthetic pigments, basic photochemistry of PS I and PS II and photosynthetic electron transport; modes of CO_2 fixati dentify tryrial photosynthesis, sulphur, nitrogen and iron assimilating bacteria. Chloroplast mediated electron transport; chemolithotrophic electron transport systems. Biolumenescence.

Carbohydrate metabolism : Pathways underlying the utilization of different sugars (EMP, ED, HMP and phosphoketolase) in microorganisms, gluconeogenesis; synthesis of peptidoglycans and glycoproteins.

UNIT – III

Aerobic respiration : TCA cycle – intracellular location and reactions of the cycle, amphibolic nature of the cyc dentify tics of the cycle; the glyoxalate cycle. Mechanisms of substrate-level phosphorylation; respiratory electron transport in mitochondria and bacteria along with its components (carriers); mechanism of oxidative phosphorylation, uncouplers, inhibitors;

Anaerobic respiration : nature of fermentation, the relationship of oxygen to growth and fermentation, biochemical mechanisms of lactic acid, ethanol, butanol, citric acid and acetone fermentations, study of fermentations, relationships between fermentation and energy production; nitrate and sulphate respiration.

Lipid metabolism: Biosynthesis of triacyl glycerols, phospholipids and glycolipids; oxidation of saturated and unsaturated fatty acids; microbial metabolism of aromatic and aliphatic hydrocarbons.

UNIT – IV

Protein metabolism: Assimilation of inorganic nitrogen and sulphur, biochemistry of nitrogen fixation; hydrolysis of proteins-exo-and endo-proteinases, outlines of biosynthesis and catabolism of amino acids in microbes (deamination, decarboxylation and transamination reactions). Urea cycle.

Nucleotide metabolism : biosynthesis of bases, nucleosides and nucleotides including deoxyribonucleotides, regulation of nucleotide synthesis; break down of nucleic acids – exo-and endo-nucleases (RNases and DNases) and phosphodiesterases, salvage pathways; catabolism of purines and pyrimidines.

Secondary metabolism: Utilization of secondary metabolites for production of vitamins, toxins (aflotoxin and corynebacterial), hormones (GA), and antibiotics (penicillin and streptomycin).

Microbial toxins and extra cellular enzymes: Exo-and endotoxins: physiology of toxin production; mode of action of toxins and extra cellular enzymes and their importance in pathogen virulence and pathogenesis.

Course Learning Out Comes

1. Be able to know about the nutrition and microbial growth.
2. Be able to know about photosynthesis and carbon.
3. Be able to know in depth details about aerobic and anaerobic respiration.
4. Be able to know in depth about various pathways in protein and nucleotide metabolisms.

Suggested Books:

1. Microbial Physiology and Metabolism. 1995, by D.R. Caldwell. Wm.C. Brown Publ.
2. Microbial Physiology. 199[9,] 3rd Ed. by A.G. Moat & J.W. Foster. Wiley-Liss.
3. Principles of Biochemistry. Lehinger. 2000.
4. Foundations in Microbiology. 1996. by K. Talaro & A. Talaro, Wm. C. Brown Publ.
5. Microbiology. 2000. By Prescott et al. Wm. C. Brown Publ.
6. Molecular Cell Biology. 2000 – by Lodish et al.
7. General Microbiology, 1999 by Stainer et al., Macmillan Educational Ltd.

CO_4	3	2	2	2	2	2	2	-	-	-	1	1

IMB – 103: BIOCHEMISTRY

Course Learning Objective

1. To provide basic concepts of chemistry in life.
2. To provide in depth information lipids and amino acids.
3. To provide in depth information on proteins and catalytic proteins.
4. To provide in depth information in nucleic acids, hormones and vitamins.

UNIT – I

Basic concepts of Chemistry of life : The major elements of life and their primary characteristics; atomic bonds and molecules – bonding properties of carbon, covalent and non-covalent bonds, Vander waals forces; polarity, hydrophilic and hydrophobic interactions; asymmetry of carbon compounds and cis-trans isomerism; electron transfer and oxidation/reduction; functional groups of organic compounds; hydrogen ion concentration of biological systems; Brownsted – Lowry acids and bases; ionization and titration of acids; dissociable biological compounds and physiological buffer systems.

Carbohydrates : Classification of carbohydrates; outline structure and properties of important mono-, di- and oligosaccharides and their identification and analysis; structure, occurrence and biological importance of structural polysaccharides (cellulose, chitin, agar, alginic acids, pectins, proteoglycans, sialic acids, blood group polysaccharides, bacterial cell wall polysaccharides).

UNIT – II

Lipids: Building blocks of lipids. Classification of lipids. Fatty acids-physico-chemical properties, separation, distribution in nature characterization and saponification and iodine number. Nomenclatu dentifyline structures, properties and functions of glycerides, neutral lipids (waxes, fats,

oils, phospholipids, sphingolipids and glycolipids. Steroids – plant sterol, ergosterol, stigmasterol, cholesterol. Lipoproteins-classification, composition and importance. Salient features of bacterial lipids.

Amino acids : Classification, structu dentisico-chemical properties, acid-b dentifyiour of amino acids.

Peptides : Characteristics of peptide bond, peptides of non-protein origin, properties and functions of peptides, determination of amino acid composition and sequence in peptides, chemical synthesis of peptides, peptides profiling.

UNIT – III

Proteins : Classification, properties and biological functions of proteins; structural organization of proteins – primary, secondary, tertiary and quaternary; Ramachandran's plot; proteins denaturation and renaturation (ribonuclease); structure-function relationships of certain proteins – myoglobin, hemoglobin, collagen; chaperones.

Catalytic proteins(enzymes) : Classification, nomenclature, composition and structure, enzymes as biocatalysts, outlines of purification and assay of enzymes, kinetics of enzyme catalyzed reactions, factors influencing enzyme catalyzed reactions, regulation of enzyme activity – activators and inhibitors dentify nism of action of enzymes (chymotrypsin). Regulatory enzymes – allosteric enzymes. Isoenzymes, conzymes, ribozymes, abzymes.

UNIT – IV

Nucleic acids : Types and their composition, structures of purines, pyrimidines, modified bases, nucleosides, nucleotides and polynucleotides; properties of bases and functions of nucleotides; types and structural polymorphism of DNA and RNA; denaturation and renaturation of nucleic acids, factors influencing hybridization, cot values.

Hormones and Growth regulators : Classification, outline structures and functions of major animal and plant hormones.

Vitamins : Discovery and outline chemistry of fat soluble (A,D,E and K) and water soluble (riboflavin, pantothenic acid, niacin, pyridoxine, biotin, cobalamine folic acids and ascorbic acid) vitamins and their role in body functions.

Porphyrins and other pigments : Classification, structures and biological functions of porphyrins, brief account of haemoglobin and chlorphylls, cytochromes, xanthophylls and carotenoids of microorganisms.

Course Learning Out Comes

1. Be able to identify and analyze carbohydrates and lipids.

2. Be familiar with behavior of amino acids and structure functional relationships of proteins and their profiling.
3. Be able to Isolation centrifugation, Electrophoresis.

Suggested Books:

1. Principles of Biochemistry, Lehninge[r,] 3rd edition, 2000 by Nelson and Cox (Worth).
2. Biochemistry, Stry[er] 5th edition, W.H. Freeman, 2001.
3. Microbial Physiology and Metabolism. 1995, by D.R. Caldwell. Wm.C. Brown Publ.
4. Microbial Physiology. 199[9,] 3rd ed. By A.G. Moat & J.W. Foster. Wiley-Liss.
5. Foundations in Microbiology. 1996. By K. Talaro & A. Talaro, Wm. C. Brown Publ.

CO_4	3	2	2	2	2	2	1	-	-	-	1	1

IMB – 104: BIOPHYSICS & BIOSTATISTICS TECHNIQUES

Course Learning Objective

1. Gives in sights on electrochemical and spectroscopy concepts.
2. Provide in depth knowledge on separation techniques such as centrifugation, electrophoresis and chromatography.
3. Give detailed information on interval date, proportion data and count data.
4. Provide knowledge on statistical basis of biological assays and design of experiments.

UNIT – I

Electrochemcial techniques (Principles and applications): Redox reactions; pH and Clarke oxygen electrodes; biosensors.

Cell sorting and Flow cytometry (Principles and applications):

Radioisotope techniq–es - Nature and types of radioactivity, half-life of isotopes; detection and measurement of radioactivity-GM counter, liquid scintillation counter, gama-ray counter, Cerenkov counting and autoradiography; quenching and quench correction; laboratory safety measures in handling isotopes; biological uses of radioisotopes.

Spectroscopy : Electromagnetic spectrum of light; simple theory of light absorption by biomolecules; Beer's – Lambert law; transmittance; extinction co-efficient; light sources; monochromators; types of detectors; working principle and applications of visible, UV-visible, IR, Raman, ESR, mass, plasma emission, atomic absorption, and NMR spectrophotometry; fluorimetry and flame photometry; ORD and CD; X-ray diffraction and X-ray crystallography.

Amino acid and nucleotide sequencers: Basic principle, functioning and applications of amino acid and nucleotide sequencers.

UNIT – II

Centrifugation: Simple theory of preparative and analytical centrifuges and rotors; sedimentation analysis; differential, rate-zonal and equilibrium density gradient centrifugations. Applications – isolation of cells, subcellular organelles, viruses and macromolecules.

Electrophoresis (Principles and applications) : Types of electrophoresis – paper, gel (star dentify mide and agarose) disc, vertical, horizontal submarine, gradient, 2-dimentional, pulse-field and capilla dentifsing; isolation and analysis of gel separated molecules – recovery of molecules from paper/gels; Southern, Northern and West dentifyings.

Chromatography: Principle/simple theory and applications of partition, adsorption, ion-exchange, gel permeation and affinity chromatography based techniques – paper, thin-layer, column, GLC, HPLC, FPLC.

UNIT – III

Introduction: Definition of statistics: population and universe, the sample and population, statistical inference; parameter and statistics.

Interval Data: Mean, mode, median and standard deviation. Concept of probability – classical and frequency definitions; axiones of probability; addition and multiplication theorems (statements only); conditional probability-Baye's theorem (statement only); simple applications. Binomial, Poisson and Normal distributions (definitions and uses only).

Uncertainties in estimation of mean, comparison of means and variances – t, F, and Z tests.

Proportion data: examples of proportion data; (MPN, sterility testing of medicines, animal toxicity, therapeutic trial of drugs and vaccines, animal toxicity, infection and immunization studies) statistical treatment to proportion data. Chi-square test, goodness of fit.

Count data: examples of count data (bacterial cell count, radioactivity count, colony and plaque counts) statistical treatment to count data: Poisson distribution, standard error, confidence limits of counts.

UNIT – IV

Analysis of variance: Analysis of variance: Introduction, procedure and tests for one-way and two-way classified data. Multiple comparisons. Analysis of CRD, RBD and LSD. Factorial experiments- main effects and interaction in a 2^2 design, Duncan's Multiple Range Test.

Correlation and regression, formulae and application. Fitting straight line through a series of points. Fitting of exponential curves. Standard curve and interpolation of unknown Y-values. Multiple linear regression, logistic regression.

Statistical basis of biological assays: Response-Dose metameter. Delusion Assays, Direct and indirect assays. Quantal Responses, Probit, logit, LD_{50}, ED_{50}, PD_{50} – Standard line interpolation assay, parallel assay (4 point, 6 point assays), slope ratio assay.

Design of Experiments – Multiple comparison tests, Dunken's, Tukey's, Scheffic's, Dunnelt's etc.

Probit Analysis

Multiple Regression, Logistic regression

Discriminate Analysis

Clinical trails – Phase I, Phase II etc.

Clinical trails (meaning and importance only).

Course Learning Out Comes

1. Be able to know the principal function and applications of spectroscopy, amino acid nucleotide sequences.
2. Be able to know principle, function and applications of separation techniques.
3. Be able to gain knowledge on basic concepts in statistics.
4. Be able to design the experimental and statistical basics of biological assays.

Suggested Books :

1. Practical biochemistry : Principles and Techniques 199[5,] 4th Ed. by K. Wilson and J. Walker, Cambridge University Press.
2. Modern Experimental Biochemistry. 199[3.] 2nd Ed. by R.F. Boyer. The Benjamin Cummings Publ. Company.
3. Physical Biochemistry : Applications to Biochemistry and Molecular Biology, 198[2,] 2nd Ed. by David Freifelder. W.H. Freeman and company.
4. Introduction to Practical Biochemistry. 2000. by S.K. Sawhney and Randhir Singh (eds). Narosa Publ. House.
5. Biochemical Methods for Agricultural Sciences. 1992 by S. Sadasivam and A. Manikam. Wiley Eastern Ltd.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Knowledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning
CO_1	3	2	2	2	2	2	2	-	-	-	1	1
CO_2	3	2	2	2	2	2	1	-	-	-	1	1
CO_3	3	2	2	2	3	2	2	-	-	-	1	1
CO_4	3	2	2	2	2	2	2	-	-	-	1	1

PRACTICAL:

IMB – 105: INTRODUCTORY MICROBIOLOGY & MICROBIAL PHYSIOLOGY:

1. Microbiological laboratory safety measures
2. Sterilization methods - Wet method, Dry method, Filters. Evaluation of alcohol effectiveness, Phenol coefficient method
3. Preparation of different media for cultivation of bacteria & fungi
4. Plating techniques – streak plate, spread plate methods
5. Enumeration of Bacteria by serial dilution, viable count
6. Qualitative tests for identification of Carbohydrates, amino acids, nucleic acids
7. Quantitative tests for Protein, gluco dentifcine, bilirubin, cholesterol, Inorganic phosphorous
8. Determination of activity of – Peroxidase and Polyphenol oxidase in plant tissues.
9. Purification and study of Acid Phosphatase from potato tubers: Extraction of enzyme; effect of substrate concentration; enzyme concentration; temperature; pH on enzyme activity.
10. Determination of Bacterial growth curve
11. Determination of effect of temperature on bacterial growth
12. Determination of effect of pH on bacterial growth
13. Determination of effect of salt on bacterial growth
14. Determination of growth of fungi
15. Determination of concentration of cyanobacterial pigments
16. Determination of concentration of oligodynamic action
17. Determination of activity of microbial hydrolytic enzymes like amylases, lipases and proteases.
18. Demonstration of aerobic and anaerobic respiration in microbes.
19. Demonstration of Microbial fermentation
20. Demonstration of microbial toxins

PRACTICAL:

IMB – 106: BIOCHEMISTRY & BIOPHYSICS AND BIOSTATISTCS:

1. calculating Mean, Mode Median
2. Problems related to T test & F test & Z test
3. Problems related ANOVA
4. Measurement of pH
5. Micrometry for cell size determination
6. Cell counting by Haemocytometer
7. Beer's Law
8. Determination of λ max for coloured solutions
9. Determination of DNA & RNA by UV spectrophotometry
10. Determination of nucleic acid Bases by UV spectrometry
11. Paper chromatography for separation of amino acids / pigments
12. TLC for separation of lipids / amino acids
13. Dialysis
14. Separation of proteins by SDS-PAGE
15. Separation of DNA by Agarose gel electrophoresis
16. Isolation of chloroplasts by sucrose density gradient centrifugation
17. Determination of concentration of green/yellow pigments by spectrophotometry

SECOND SEMESTER

IMB - 201: MOLECULAR BIOLOGY

Course Learning Objective

1. Gives basic concepts in genetics of bacteria and fungi
2. Provides in depth knowledge on genetic recombination
3. Gives overall picture about DNA replication and transcription
4 .Provides in depth information about RNA biosynthesis and gene regulation

UNIT – I

Genetic notations, conventions and terminology

Nucleic acids as genetic information carriers – experimental evidences.

Modern concept of gene – Gene structure, co-linearity and polypeptide, one gene – one enzyme, protein polypeptide or product concepts; types of genes.

Genetics of Bacteria and Fungi : *E. coli, Bacillus, Streptomyces, Sacchromyces,* Filamentous fungi *(Neurospora).*

Gene transfer mechanisms in bacteria : Transformation, conjugation, sexduction and transduction (generalized, abortive, contrasduction, specialized,) and gene mapping. Role of Rec gene products.

Genome diversity : Viruses – linear, circular and dividend genomes of RNA and DNA viruses. Prokaryotes – nucleoid and chromosome organization, genome evolution in microbes, phylogenetic trees. Eukaryotes – chromosome organization / structure, histones, nucleosomes, genome complexity, chromosomal banding. Organelle genomes. Genetic mapping of genomes.

Plasmids : bacterial and yeast plasmids, purification, properties, detection, transfer, replication an curing, significance / importance.

Transposal / mobile genetic elements : Prokaryotes – (IS elements, composite and complex transposons), mechanisms of transposition and importance – Eukaryotes (Yeast, Drosophila and Maize) – retrotransposons, retroelements. Exploitation of transposable elements in genetics.

UNIT – II

Mutations : Types, mutagens and molecular mechanisms of mutation, isolation and analysis of mutants, significance of mutants.

Genetic recombination: General of homologous recombination, site specific recombination, transposition; illegitimate recombination and artificial recombination.

Genetics of viruses : Prokaryotic virus (phages) – Benzer's studies on r-II region of T4 and complementation, recombination in bacteriophages (T2), uses of phages in microbial genetics, Eukaryotic viruses-recombination and reassortment, cross-and multiplicity reactivation, complementation, phenotypic mixing, ploidy, DI particles, transduction of genes by retroviruses, evolution of viruses (influenza, HIV, herpesviruses).

UNIT-III

DNA replication : general principles, various modes of replication. Continuous and discontinuous synthesis, relation between cell cycle and DNA synthesis, replication fork and enzymology of DNA replication in prokaryotes and eukaryotes, replication of ssDNA, retroviruses and their unique mode of DNA synthesis, inhibitors of DNA replication.

DNA damage and repair : types of DNA damage-deamination, oxidative damage, alkylation and pyrimid dentifmers; repair pathways – mismatch, short patch repair, nucleotide/base, excition repair, recombination repair and SOS system.

Transcription (RNA biosynthesis) : Types of RNA and their role, organization of protein and RNA (rRNA, tRNA, 5 sRNA) encoding transcription units (promoters and regulatory elements) and their transcription in prokaryotes and eukaryotes, polycistronic and monocistronic mRNAs. Types of RNA

polymerases. Promoters and other regulatory elements and transcription factors, events of transcription. Maturation and processing of different RNAs : methylation, processing of rRNA; capping, polyadenylation, splicing and editing of mRNA; processing and modification of tRNA. Catalytic RNAs (ribozymes). Inhibitors of transcription. Invitro transcription systems.

UNIT – IV

Translation (Protein biosynthesis) : Central dogma theory and flow of genetic information, genetic code and its elucidation, structure and composition of prokaryotic and eukaryotic ribosomes, structural features of rRNA, mRNA and tRNA in relation to function, steps of protein biosynthesis (activation of amino acids, initiation, elongation, termination) in prokaryotes and eukaryotes; post-translational modification of proteins and their sorting and targeting; regulation of translation; inhibitors of protein biosynthesis; invitro translation systems.

Regulation of gene expression : An overview on levels of regulation, terminology and operon concepts, enzyme induction and repression; positive and negative regulation in *E. coli*- lac and ara operons; regulation by attenuation – his and trp operons; antitermination – N protein and nut sites in Lambda phage. Organization and regulation of nif and nod gene expression in bacteria; gal operon in yeast. Global regulatory responses-heat shock response, stringent response and regulation by small molecules such as cAMP and PPGPP.

DNA binding proteins : Enhancer sequences and control of transcription. Identification of protein – binding sites on DNA, control of transcription by interaction between RNA polymerases and promoter region, use of alternate sigma factors, controlled termination attenuation and antitermination.

Course Learning Out Comes

1. Be able to gain knowledge on genome diversity and gene transfer mechanisms,.
2. Be able to gain information on mutations and gene transfer mechanisms
3. Be able to gain in depth-knowledge on DNA and biosynthesis
4. Be able to understand about positive and negative gene regulation

Suggested Books:

1. microbial Genetics by S.R. Maloy et al. 1994
2. Molecular Genetics of Bacteri[a,] 3rd ed. 1998. J.W. Dale. Wiley Publ.

3. Bacterial and Bacteriophage Genetics, 4th ed. 2000. By E.A. Birge. Springer.
4. Principles of Molecular Virology, 4th ed. 2004. By A. Cann. Academic Press.
5. Modern Genetic Analysis by Griffith.
6. Genetics by Gardner.
7. Molecular Cell Biology. 1995, 3rd Ed. by Lodish et al. Scientific American books, W.H. Freeman and Company.
8. Molecular Biology. 1995, by David Freifelder, Narosa Publ. House.
9. Text Book of Molecular Biology. 1994, by Sivarama Sastry et al, Macmillan India Ltd.
10. Advanced Molecular Biology : A Concise Reference. 1998, by R.M. Twyman. Viva Books Pvt. Ltd.
11. Instant notes in Molecular Biology, 1998. by P.C. Turner et al. Viva Books Pvt. Ltd.
12. Genes VIII. 1997. by B. Lewin. Oxford University Press. The Biochemistry of nucleic acids. 1992, 11th Ed. by Adams et al, Chapman and Hall.
13. Biochemistry. 1995 by L. Stryer. W.H. Freeman and Co.Biochemistry, 1998, 4th Ed. by G.L. Zubay. W.C.B. Publ.
14. Microbial Genetics. 1995, by David Freifelder. Narosa Publ. House.
15. Biochemistry and Molecular Biology. 1997, by W.H. Elliott & D.C. Elliott. Oxford University Press.
16. Molecular biology of the Gene. 1998, 5th ed. Watson et al, Addison Wesley Longman.
17. Schaums Outlines – Molecular and Cell Biology. 1996. W.D. Stansfield et al., McGraw-Hill Publ.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Knowledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning

IMB - 202: RECOMBINANT DNA TECHNOLOGY

Course Learning Objective

1. Gives basic concepts in genetic engineering tools
2. Provides in depth knowledge on molecular tools
3. Gives overall picture about transgenics
4. Provides in depth information about proteome and genomes microbiology

UNIT – I

Scope and importance of recombinant DNA technology / genetic engineering.

Genetic Engineering tools : Vectors- types, plasmids, transposons, bacterial and animal virus based vectors, bacterial and yeast artificial chromosomes; **enzymes-**restriction endonucleases, different DNA and RNA polymerases ligases, nucleases, kinases, nucleotidyl transferases, alkaline phosphatase; **oligonucleotides-** linkers, homopolymer tails, primers, promoters; **cloning and expression hosts –** *E.coli Bacillus, Agrobacterium,* yeast and plant and animal cell cultures.

Cloning strategies : Generation of DNA molecules, attachment to vectors, delivery of recombinant molecules into host cells, screening and identification of positives clones – antibiotic, nucleic acid and protein based approaches. Construction and screening of cDNA and genomic DNA libraries.

UNIT – II

DNA sequencing : Chemical method of Maxum and Gilbert, Sanger's dideoxy chain termination and primer walking methods. Automated sequencing. Sequence assembly. Genome sequencing and physical mapping of genomes.

Site-directed mutagenesis : Different approaches and its potential in changing genes.

Molecular diagnostics : Preparation of DNA and RNA probes, nucleic acid hybridization, factors influencing hybridization and their applications; PCR-principles, factors affecting PCR, different types of

PCR and their applications and limitations; profiling of nucleic acids by DNA fingerprinting, RFLP, RAPD and AFLP.

UNIT – III

Transgenic plants : Construction of plant cell expression vector with desired genes, biological and physical approaches for delivering genes into plant tissues, identification and regeneration of transformed tissues to transgenics. Transgenic plants as bioreactors.

Transgenic animals : Construction of animal cell expression vectors and delivering of genes into cultured animal cells. Production and use of transgenic animals (mice, sheep/goat, cow).

UNIT – IV

Microbial genomics and proteomics : DNA microarray – printing of oligonucleotides and PCR products on glass slides. Whole genome analysis for global pattern of gene expression using fluorescent labeled cDNA or end labeled RNA. Analysis of single nucleotide polymorphisms using DNA chips. **Proteome analysis-**two-dimentional analysis of total cellular proteins, isolation and sequence analysis of individual protein spots by mass spectroscopy. Protein microarray, advantages and disadvantages of DNA and protein microarray.

Applications and implications of genetic engineering in biology, agriculture, medicine and industry.

Course Learning Out Comes

1. Be able to gain knowledge on genetic engineering tools,.
2. Be able to gain details on molecular tools
3. Be able to gain in depth-knowledge on transgenic plants
4. Be able to understand about 'omics"

Suggested Books:

1. Principles of Gene Manipulation: An introduction to genetic engineering. 199$^{4.}$ 5th ed. Old and Primrose. Blackwell Scientific Publ.
2. Molecular Biotechnology. 1994. Glick and Pasternak. Panima Publ.
3. Recombinant DNA. 199$^{2.}$ 2nd ed. J.D. Watson et al. Freeman and Co.

4. Protein expression: A Practical Approach by S.J. Higgins and B.D. Hames (eds). Oxford University Press.
5. Functional Genomics: A Practical Approach. 2000, by S.P. Hunt and R. Liveey (eds.). Oxford University Press.
6. DNA Microarrays: A Practical Approach by M. Schena (ed.). Oxford University Press.
7. Molecular biology and Biotechnology. 200$^{2.}$ 4th Ed. by J.M. Walker and R. Rapley, Panima.
8. Manual of Industrial Microbiology and Biotechnology, second edition., Ed. by Demain, A.L., Editor in Chief, 1999, ASM Press.
9. Recombinant DNA and Biotechnology: A guide for Teachers : 2nd ed. H. Kreuzer and A. Massey. ASM Press.
10. Recombinant DNA and Biotechnology: A guide to students : 2nd ed. H. Kreuzer and A. Massey. ASM Press.
11. Basic Biotechnology, 200$^{1.}$ 2nd Ed. by C. Ratledge & B. Kristiansen. Cambridge University Press.
12. Molecular Cloning, 2001. Vol. I-III by Sambrook and Russel, CSH Press.
13. Current Protocols in Molecular Biology, 2000. Ausbel et al.
14. Genome analysis. 2000. 4 Vols. CSH Press.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO$_1$ Know ledge	**PO$_2$** Analysis	**PO$_3$** Design	**PO$_4$** Development	**PO$_5$** Modern Tools	**PO$_6$** Society	**PO$_7$** Environment	**PO$_8$** Ethics	**PO$_9$** Team work	**PO$_{10}$** Communication	**PO$_{11}$** Programme Management	**PO$_{12}$** Lifelong Learning
CO$_1$	3	2	2	2	2	1	2	-	-	-	1	1
CO$_2$	3	2	2	1	2	2	1	-	-	-	1	1

CO$_4$	3	2	2	2	2	1	2	-	-	-	1	1

IMB - 203: IMMUNOLOGY

Course Learning Objective

1. Give detailed information on cells and organs of the immune system.
2. Give in depth knowledge about Antigen-antibody interaction.
3. Provides the details on immune pathology.
4. Gives central concepts in transplantation and transfusion immunology.

UNIT – I

History: Historical perspective of Immunology, milestones in immunology.

Cells and Organs of the Immune system: Hematopoiesis, Lymphoid cells, stem cells, Mononuclear cells, Granulocytes, Mast cells, Dendritic cells. Lymphoid organs – Primary and Secondary lymphoid organs.

Types of immunity: Innate immunity and adaptive immunity, comparative immunity, Immune dysfunction and its consequences.

Immune responses to infectious diseases: Viral, bacterial, protozoan and other parasitic diseases.

UNIT – II

Antigens: types, properties, study of antigenicity, immunogenicity versus antigenicity, factors influencing immunogenicity. Epitopes, haptens, mitogens, superantigens. Viral and bacterial antigens.

Antibodies: Basic and fine structure of Immunoglobulins, classes and biological activities of Immunoglobulins, Antigenic determinants – Iso, allo and idiotypes. Immunoglobulin super family, antibody diversity, organization and expression of immunoglobulin genes. Production of polyclonal antibodies-animals, additives, adjuvants, routes, dose, collection and preservation of antisera, purification of immunoglobulins, quantitative and qualitative analysis of immunoglobulins.

Monoclonal antibodies: Hybridoma technology – principle and production of monoclonal antibodies, advantages and disadvantages over polyclonal antibodies, application of monoclonal antibodies.

Recombinant antibodies: Production and their advantages over conventional antibodies.

Antigen and Antibody interactions: Affinity, Avidity, Cross reactivity.

***In vivo* serological reactions:** Phagocytosis, Opsonization, Neutralization, Protection tests.

***In vitro* serological tests:** Precipitation tests in liquid and semisolid media, single and dou dentimuno diffusion tests. Immuno electrophoresis tests (Rocket, counter current). Agglutinations tests-HA and HI, latex agglutination. Complement fixation tests, Labeled antibody based tests – Enzyme linked immunosorbent assays (ELISA), Western blotting, Ra dentimuno assay (RIA), Immunoflurescent dentimuno specific electron microscopy. Infectivity neutralization test. The relative advantages and disadvantages and their applications in Microbiology.

UNIT – III

Humoral immune response: Primary and secondary immune responses, induction, regulation of the immune effector response.

Cell mediated immune response: Induction and mechanism, antibody-dependent cell mediates cytotoxicity (ADCC).

Immune effector mechanisms: Cytokines, Lymphokines, Chemokines and their classification, properties and functions.

Complement cascade system: Complements nomenclature, classification, complement components, functions, activation, regulation, biological consequences, complement deficiencies.

Hypersensitive and Allergic reactions: Classification, types I, II, III and IV.

Immunopathology : Immunodefficiencies – Primary immunodeficiency (genetic) diseases due to B cell, T-cell and combined defects (Hypogamma globulinemia, SCID, ADA) phagocyute and complement defects. Autoimmune diseases – Autoimmunity, induction, mechaniss of tissue damage in autoimmunity. Autoimmune diseases – Organ specific (Autoimmune anemias, Autoimmune thyroid diseases, Diabetes mellitus, Multiple sclerosis), Systemic autoimmune diseases (Rheumatoid arthritis, Systemic lupus erythematousus) and their therapy.

UNIT-IV

Major histocompatability complex (MHC) : Organization and Inheritance of HMC, cellular distribution of HMC molecules, regulations of HMC expression, MHC-immune responsiveness, disease susceptibility, MHC restriction, HLA antigens-Class I, II, III and their functions, Murine antigens and its functions.

Transfusion Immunology : Blood cell components, blood group systems in human and in animals, Rh typing, transfusion reactions, diseases associated with blood transfusion – Hemolytic anemi dentify osis featalis.

Transplantation Immunology : Transplantation antigens, types of transplants, Graft versus host reactions – immunological basis of graft rejection mechanism, prevention of graft rejection, clinical manifestations of graft rejection, Immunosuppressive therapy of allograft response, clinical transplantation.

Tumor immunology : Cancer and the Immune system, tumor specific antigens, tumors of the immune system, immune response to tumors, cancer immunotherapy.

Vaccinology : Type of immunization procedures, active and passive immunization, designing of vaccines, classical and novel/modern approaches for the production of vaccines, purified macromolecules as vaccines, Recombinant – vector vaccines, DNA vaccines, Synthetic peptide vaccines, Multivalent sub-unit vaccines, uses of vaccines, benefits of vaccination, mass immunization programmes.

Course Learning Out Comes

1. Able to describe immunology basics.
2. Able to theoretical principles of invitro selogical tests.

3. Able to explain allergic reactions.
4. Able to explain immunization procedure and immunization programmes.

Suggested Books:

1. Immunology. 200$^{0.}$ 4th edition. J. Kuby. W.H. Freeman and Company.
2. Immunology. 199$^{6.}$ 4th edition. I. Roitt, J. Brostoff and David Male. Mosby publications.
3. Fundamental Immunology. 199$^{2.}$ 2nd edition. R.M. Coleman, M.F. Lombard and R.E. Sicard. Wm. C. Brown Publishers.
4. Immunology. 199$^{7.}$ 3rd edition. R.M. Hyde. B.I. Waverly Pvt. Ltd.
5. Immunology. 199$^{5.}$ 4th edition. I.R. Tizard. Saunders College Publishing.
6. Immunology – The Science of self and non-self discrimination. 1982. Jon Klein. John Wiley and Sons.
7. Immunology – An illustrated outline. 1986. David Male. Churchill Living Stone.
8. Viruses that affect immune system. 1991. H.Y. Fan, I.S.Y. chen, N. Rosenberg and W. Sugden. American Society for Microbiology.
9. Immunobiology : The immune system in health and disease, 1994. C.A. Janeway, Jr., P. Travers. Current biology Ltd.

IMB - 204: MEDICAL MICROBIOLOGY

Course Learning Objective

1. Provides information on infections and pathogenesis.
2. Helps to clean chemotherapy principle.
3. Be able to explain the symptoms of bacterial infections.
4. Be able to explain the symptoms of viral, fungal and parasitic diseases.

UNIT – I

Principles of Medical Microbiology: Historical developments Classification of medically important microorganisms. Normal microbial flora of human body: Origin of normal flora; Infectious diseases.

Infection: Sources of infection for man; vehicles or reservoirs of infection. Exogenous infection: 1) Patients 2) carriers – (Healthy; convalescent; contact; paradoxical and chronic) 3) Infected animals (zoonosis) 4) Soil endogenous infection. Mode of spread of infection: 1) Respiratory 2) skin 3) Wound and burn infection 4) Venereal infections 5) Alimentary tract infection 6) Arthorpod-borne blood infections 7) Laboratory infections. Nosocomial infections: common types of hospital infections, their diagnosis and control.

Pathogenesis: Adhesion in various hosts, cell damage, release of pathogens, Transmissibility, infectivity and Virulence. Opportunistic pathogens and True pathogens. Toxigenicity: Invasiveness, other aggressins (Hyaluronidase), coagulase, fibrinolysins or kinase, depolymerizing enzymes, (mucinase, lipases, proteases, nucleases, collagenase, neuraminidase). Organotropism, variation and virulence.

UNIT – II

Microbial Toxins: Types of microbial toxins, Endotoxins, Exotoxins, LC_{50} of toxins, Effective dose of toxins, Assay of toxins, Mechanism of action of Diphtheria, Cholera, Staphylococcal toxin and Clostridial neurotoxins. Virulence and virulence factors of microbial toxins. Signs and symptoms of microbial intoxication.

Diagnostic methods: Collection, transport and preliminary processing of clinical samples. Clinical, microbiological, immunological and molecular diagnosis of microbial diseases.

Principle of Chemotherapy: Chemotherapeutic agents, Mechanism of action of antimicrobial agents, Synthetic compounds and antibiotics and their assay in body fluids, drug resistance, Mechanisms of drug resistance, MDR. Various methods of drug susceptibility testing. Brief account on available vaccines and schedules, passive prophylactic measures.

UNIT – III

Bacterial diseases: Symptoms, diagnosis , treatment and prevention of the diseases caused by *Staphylococcus, Streptococcus, Pneumococcus, Neisseria, Corynebacterium, Bacillus, Clostridium, Actinomycete, Rickettsiae, Chlamydiae, Mycoplasma, Enterobacteriacea, Vibrios, Yersinia; Haemophilus; Bordetella, Brucella; Mycobacteria, Spirochetes; Salmonella* species.

UNIT – IV

Viral diseases: Virus-host interactions at cellular and organism levels. Common diseases caused by Poxviruses; Herpes virus; Adeno viruses; Picorna viruses; Orthomyxo viruses; Paramyxo viruses; Arbo viruses, Rhabdo viruses, Hepatitis viruses; Oncogenic viruses; Human Immuno deficiency viruses (HIV/AIDS). Prion diseases – Kuru, CJD disease and GSS syndrome.

Fungal diseases: Diseases caused by dermatophytes, dimorphic fungi and opportunistic fungal pathogens. Description and classification of pathogenic fungi and their laboratory diagnosis.

Parasitic diseases: Disease caused by parasites like *Entamoeba, Plasmodium, Trichomonas, Leishmania* and *Toxoplasma, Giardia, Wuchereria, Dracunculus.*

Course Learning Out Comes

1. Be able to explain about various infections.
2. Be able to understand the diagnostic methods.
3. Be able to explain the symptoms of bacterial infections.
4. Be able to explain the symptoms of viral, fungal and parasitic diseases.

Suggested Books :

1. Ananthanarayan R, Panikar CKJ (2000). Textbook of Microbiology. 201[3.] 9th Edition. Orient Longman Ltd.

2. Warren Levinson (2014).Review of Medical Microbiology and Immunology. Mc Graw Hill education
3. bailey & Scott's (2013). Diagnostic Microbiology (13th Edition), Published by: Mosby.
4. Color atlas and Text book of Diagnostic microbiology (6th Edition), 2005, edited by: Eimer W Koneman, published by: Lippinctt.
5. Subash CP (2000). Text Book of Medical Parasitology, by published by : All India Publishers & Distributors. 1st edition.
6. Jayaran Paniker C.K, Text Book of Medical Parasitology (7th Edition), 2013, by Published by: Jaypee Brothers.

PRACTICALS:

IMB: –205 - Molecular Biology and Recombinant DNA Technology

Course Learning Objective

1. Gives hands on experience in important molecular methods.
2. Provides hands on experience on PCR and Recombinant DNA techniques .
3. Will gain knowledge in biosinformatics and molecular biology information

1. Isolation of Genomic DNA from microbes, plant/animal tissues.
2. Isolation of plasmids from Bacteria.
3. Curing of plasmids.
4. Competent cell preparation.
5. Bacterial transformation.
6. Bacterial transduction.
7. Bacterial Conjugation.
8. Mapping of bacterial genes by conjugation / transformation (problems).
9. Side directed mutagenesis
10. AMES test.
11. Screening and isolation of streptomycin mutant resistant bacteria by gradient plate technique.
12. Lethality curve construction.
13. Study of DNA methylation
14. Study of DNA repair
15. Invitro transcription assay
16. Setting of Genetic Engineering laboratory
17. Restriction enzyme analysis of plasmids
18. Recovery of DNA from gels – Electroelution and extraction of DNA from low melting agarose gels.
19. Southern blotting.
20. Western blotting for heterologous gene expression
21. Polymerase chain reaction
22. Induction of enzyme (Beta galactosidase) in Bacteria
23. Calculation of proportion of bases in nucleic acids, number of turns in DNA, length and Mol. Wts. of DNA, Tm values and buoyant densities of DNAs and DNA replication times

Course Learning Outcomes

1. Able perform DNA and plsmid isolations.
2. Be able to amplify the given gene.
3. Be able to gain practical knowledge about molecular tools.
4. Be able to create a chimeric molecule.
5. Be able to perform bioinformaticstools in genomics.

IMB: –206 - Immunology and Medical Microbiology

Course Learning Objective

1. Gives hands on experience in Immuno precipitation test.
2. Provides hands on experience on various ELISA methods.
3. Will gain knowledge in immunoglobulins.
4. Gives hands on experience on blood related tests.
5. Given knowledge on virus cultivation.
6. Provides hands on experience on various diagnostic tests.

1. Purification of immunoglobulins
2. Electrophoretic separation of normal and immunoserum.
3. Ouchterlony double Immuno diffusion
4. Single radial Immuno diffusion
5. Immuno precipitation test
6. Rocket Immuno electrophoresis
7. Counter current Immuno electrophoresis
8. Isolation & Identification of Rosettee cells.
9. Dot ELISA
10. Sandwich ELISA
11. Antigen Capture ELISA
12. Antibody Capture ELISA
13. ASO titre.
14. Complement fixation test
15. Widal Test
16. VDRL Test
17. Total counting of RBC & WBC
18. Differential count of WBC
19. Hemoglobin estimation
20. Latex agglutination test
21. Blood typing and Rh determination
22. Identification of pathogenic organisms based on HIV& DOT-BLOT test

23. Hanging drop experiment for bacterial motility.
24. Microbiological staining techniques – Simple, Gram negative, spore, capsular, acid fast and Lactophenol-cotton blue staining.
25. Isolation of bacteriophages from sewage water.
26. Cultivation of viruses in embryonated Chicken eggs: different routes of virus inoculation – Yolk sac, Allontoic and Chorio Allontoic Membrane (CAM).

Course Learning Outcomes

1. Able performs various immune precipitations tests.
2. Be able to perform various types of ELISA methods.
3. Be able to gain practical knowledge about immunoglobulin's and there separation.
4. Be able to perform widal, VDRL and types.
5. Be able to perform various staining procedures.
6. Be able to identify blood cell types.

THIRD SEMESTER

IMB - 301: BASICS OF INDUSTRIAL MICROBIOLOGY

Course Learning Objective

1. To give indepth information about industrially important microorganisms.
2. To prove information about recombinant molecular in pharmaceutical, health, agricultural and industrial sectors.
3. To helps to understand the role of microorganisms in various industries.
4. To gain concepts in Bioremediation.

UNIT – I

Definition and scope of Industrial Microbiology – Historical development – chronological order of outstanding scientific achievements, concepts and practices of microbiology proceeded to Industrial Microbiology.

UNIT – II

Industrially important microorganisms – Introduction to industrially important microorganisms – Bacteria, fungi, actinomycetes, microalgae, viruses – culture techniques, collection isolation, identification, maintenance of microorganisms. Generally regarded as safe (GRAS) microorganism dentifyeria, Yeasts, Filamentous fungi, Industrial strains, improvement of strains and study of strain stability.

UNIT – III

Industrial fermenters – types of fermenters, designing, operation uses and their auxiliary equipments, limitations imposed by the fermenters on the ways which microorganisms can be cultivated on an Industrial scale.

Fermentation – simple and complex media, media formulation, carbon sources, nitrogen sources, water, minerals, vitamins and growth factors, precursors, inducers and elicitors, inhibitors, cell permeability modifiers, oxygen, antifoams, animal and plant cell culture media, maintenance cell culture media.

UNIT-IV

Role of microorganisms in various industries – Food – yeast, mushroom, microalgae and food spoilage organisms. Pharmaceuticals – production of aminoacids, antibiotics, diagnostic proteins, enzymes, hormones, vaccines, vitamins and role of transformed microorganisms in pharmaceuticals. Agriculture –

Biofertilizers, biopesticides, biocontrol of microbial pathogens. Industrial enzymes-microbial enzymes, application in food, leather, textile, paper, detergent industries, role of transformed microorganisms in enzymes production. Bioremediation-pesticides, fungicides, preservatives, waste recycling, industrial effluent treatment. Dairy – important microbes in dairy and dairy products. Conventional and recombinants microorganisms involved in the production of ethanol, aminoacids, organic acids – Methanogens and methylotrops.

Course Learning Out Comes

1. Be able to assess "GRAS"
2. Be able to have clear cut about the production of recombinant molecules.
3. Be conversant with Biofertilizer, Biopesticides and microbial enzymes.
4. Be able to gain the concepts in waste recycling and industrial efficient.

Suggested Books:

1. Industrial Microbiology. 2001. M.J. Waites et al., Blackwell Science.
2. Industrial Microbiology. 1999. L.E. Casida, Jr. New Age International Publ.
3. Industrial Microbiology. B.M. Miller and W. Litsky.
4. Industrial Microbiology. 1984. A.H. Patel. Macmilan India Limited.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning
CO_1	3	2	2	2	2	1	2	-	-	-	1	1
CO_2	3	2	2	2	2	2	1	-	-	-	1	1
CO_3	3	2	2	2	3	2	2	-	-	-	1	1
CO_4	3	1	2	1	2	2	2	-	-	-	1	1

IMB – 302: BIOPROCESSING OF INDUSTRIAL MICROORGANISMS

Course Learning Objective

1. Give elaborate knowledge on Health care products.
2. Provide in depth knowledge about microbial antibodies and recombinant products.
3. Provide detailed knowledge about organic acids and enzymes.
4. Gives in depth knowledge on oxidative transformation.

UNIT – I

Introduction to Bioprocesses – Historical development and scope of bioprocessing technology, traditional and modern applications of bioprocessing, intergrated bioprocess and various unit operations involved in bioprocessing (upstream and down stream), generalized process flow sheets.

UNIT – II

Fermentation processes – Aerobic and anaerobic fermentation processes and their application in the microbial industry, solid-substrate fermentation slurry fermentation and their applications, whole cell immobilization, behaviour of microbes in different reactors – air lift, fluidized, batch, continuous fed batch condition.

Fermentation media design – Design and usage of various commercial fermentation media – Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media – filter and air. Control of chemical and physical conditions – agitation, heat transfer, mass transfer. Fermenter control and monitoring, operating modes.

UNIT – III

Screening – Primary and secondary screening of microorganisms used in fermentation, detection and assay of fermentation products – physical and clinical assays – titration and gravimetric analysis, turbidity analysis and cell-yield determinations, spectrophotometric assays, chromatographic partition assays, GC

assays, Biological assays, diffusion assays, turbidimetric and growth assays, End-point determination assays, metabolic assays, enzymatic assays, stock cultures – working and primary stocks.

UNIT – IV

Scale-up of fermentation, increasing product yields, Dual or multiple fermentation, continuous fermentation and late nutrient additions.

Kinetics of microbial growth and product formation – Kintetic models for microbial growth, phases of cell growth in batch cultures, Microbial growth and non growth associated product formation kinetics – (Primary and secondary). Substrate and product inhibition on cell growth and product formation. Fermentation Economics-Market potential, fermentation and product recovery costs, process appraisal.

Course Learning Out Comes

1. Be able to understand the sources of microbes for the production of health care products.
2. Be able to understand Microbial products.
3. Be able to have detailed idea about organic acids and enzymes.
4. Be able to have clear idea about dairy products and fermented products.

Suggested Books:

1. Biotechnology: A text book of Industrial. Ed. W. Cruger & A. Cruger. Second Edition 2000.
2. Principles of Fermentation Technology. 1997. P.E. Stanbury et al., Pergamon Press.
3. Microbial Biotechnology: Fundamentals of Applied Microbiology. 1995. A.N. Glazer et al., Freeman and Company.
4. Fermentation: A Practical approach. 1990. B. McNiel and L.M. Harvey. IRL Press.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning

CO_2	3	1	2	2	2	2	1	-	-	-	1	1
CO_3	3	2	2	2	3	2	2	-	-	-	1	1
CO_4	3	2	2	1	2	2	2	-	-	-	1	1

IMB – 303: a) PHARMACEUTICAL MICROBIOLOGY

Course Learning Objective

1. To give information on Pharmaceutical of microorganisms
2. To know about Pharmaceutical production of various value added products
3. To provide information on Pharmaceutical Microbiology transformations
4. To provide in depth information on microbial production of recombinant molecules

UNIT – I

Animal Cell Culture: Scope of animal cell culture, principles and methodology of animal cell cultures, physical chemical and metabolic function of the constituents of culture media and reagents, primary, secondary and continuous cell lines, stem cell and embryonic cell isolation and culture, organ culture. Sub culturing, maintenance and preservation of cell cultures.

Transgenesis for improvement of traits and use of animals as bioreactors for production of proteins of pharmaceuticals value, marker assisted selection and genetic improvement of livestock, Germplasm, maintenance and Biodiversity.

Industrial importance of animal cell culture products – viral vaccines for human and animal use, production of interferon, interleukins, retroviruses and adenoviruses and produced for use in gene therapy, large scale production of Bio-Insecticides – Baculoviruses, NPV, GV, cell cultures used for diagnostic assay system, therapeutics.

UNIT – II

Plant cell culture – Embryo culture, meristem culture, callus culure, anther culture, protoplast culture, cell suspension, spore culture, protoplast isolation culture and fusion regeneration and somatic hybridization and regeneration of plants.

Scope of plant cell culture – Major sources of pharmaceuticals, dyes, food colours and flavours, enzymes, polysaccharides, fragrances, insecticides, herbicides, products of secondary metabolites. Production of Shikonim and culturing of Microalgae. Industrial advantages and disadvantages of plant tissue culture – Cell and organ differentiation – Clonal propagation or micropropagation. Application of cell culture for mutant selection, production of secondary

metabolites, transformations, production of transgenic plants for herbicide resistance, insect resistance and disease resistance, nutritional quality improvement, as bioreactors for vaccines.

UNIT – III

Historical review of the involvement of microbiology with pharmaceutical practice, the impact of microorganisms in pharmaceutical device manufacture, microbial contamination control in pharmaceutical manufacturing, implementation of Rapid Microbiological Methods(RMM) for pharmaceutical laboratories, the broader picture of microorganisms and pharmaceutical manufacturing: Challenges, Solutions and Pharmacopoeial guidance.

UNIT – IV

Drug targeting principles: Targeting, Principles and its importance in therapeutics, Methods in drug targeting, advantages and disadvantages in targeting, protein and peptide based drug delivery systems.

The drug development process: Drug Discovery the impact of genomics and related technologies upon drug discovery. Delivery of Biopharmaceuticals-Oral delivery systems – Pulmonary delivery – Nasal, transmucosal and transdermal delivery systems.

Immunopharmacology: The interferon family, cytokines as Biopharmaceuticals. TNF – therapeutic aspects. Haemopoietic growth factors, Growth factors, Hormones of therapeutic interest, Blood products, therapeutic enzymes and Nucleic acid therapeutics.

Course Learning Out Comes

1. Be able to know about microbes and bioreactors
2. Be able to understand the process economics and down stream processing
3. Be able to understand about patenting
4. Be able to gain in depth idea about recombinant therapeutic molecules

Suggested Books:

1. Tim Sandle, (2011)Selection of Microbiological Culture Media and Testing Regimes
2. Sandy Rubio,(2011) Validation of Microbiological Methods by Business Horizons;
3. Masakazu Tsuchiya,(2010)Bacterial Endotoxins Test by bioprocess awards

11. Gary Walsh (2013) Pharmaceutical Biotechnology: Concepts and Applications. By wiley.
12. Fowler MW, Warren GS, Murray Moo-Young (2013) Plant Biotechnology: Comprehensive Biotechnology Second Supplement. Elsevier.
13. John M. Davis (2011) Animal Cell Culture: Essential Methods. By Wiley.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning
CO_1	3	2	2	1	2	2	2	-	-	-	1	1
CO_2	3	1	2	2	2	1	1	-	-	-	1	1
CO_3	3	2	1	2	3	2	2	-	-	-	1	1
CO_4	3	2	2	2	2	2	2	-	-	-	1	1

IMB – 303: b) DOWNSTREAM PROCESSING

Course Learning Objective

1. To gives detailed knowledge about upstream and downstream processing during vitamins, Antibodies, Microbial enzymes and Recombinant and synthetic vaccines.
2. To gives information on various separation processes.
3. To gives information on membrane separation & enrichment operations.
4. To understands the various technologies (such as chromatography, chromate focusing, electrophored C, Dialysis and crystallization methods) used for tradition of downstream processed production.

UNIT – I

Processing – Industrial fermentation – Importance of upstream processing (USP) and Downstream processing (DSP). Role of Downstream processing in industrial fermentation processes, problems and requirements of bioproduct purification. Cell harvesting – broth conditioning, sedimentation, centrifugation, filtration. Cell disruption – mechanical and non-mechanical. Product recovery – Chromatography and dialysis. Distillation and various finishing steps-crystallization, drying. Inclusion bodies and the role of genetic engineering in DSP. Economics of downstream processing.

UNIT – II

Physico – chemical basis of bio-separation processes. Recent development in product isolation – one step purification, reverse microcellular extraction on line membrane separation. Primary separation and recover process – cell disruption methods for intracellular products, removable of insoluble, biomass separation techniques, products flocculation and sedimentation, centrifugation and filtration methods.

UNIT – III

Membrane separations – membrane based separation – micro and ultrafiltration, theory, design and configuration of membrane separation and applications of equipments used.

Enrichment operations – Precipitation methods – salts, organic solvents, polymers, extractive separations, aqueous two-phase extraction, supercritical extraction in situ product removal, integrated bioprocessing.

UNIT – IV

Separation, product resolution, fractionation of downstream processed products by using different technologies – electrophoresis (1D, 2D, gels), chromatography – (Paper, TLC, Absorption, Iox exchange, Gel filtration, Affinity chromatographic separation, GC, HPLC, FPLC, Chromato focusing

electrophoretic separations). Dialysis, crystallization, super liquid extraction foam based separation. Study the above process with suitable industrial products.

Course Learning Out Comes

1. Be able to produce and assay the various Industrial products.
2. Be familiar with various physics-chemical methods involved in bio-seperation process.
3. Be acquint themselves with enrichment operations and membrane seperations.
4. Be able to carry out separation and product resolution.

Suggested Books:

1. Basic Biotechnology, 2001. 2nd ed. ed by C. Ratiedge & B. Kristiansen, Cambridge University Press.
2. Manual of Industrial Microbiology and Biotechnology, Second edition. 1999. A.L. Demain, Editor in Chief, ASM Press.
3. Biotechnology : A test Book of Industrial Microbiology. Second edition, 2000. Ed. W.Crueger & A.Crueger.Panima Publishing corporation.
4. Industrial Microbiology : An Introduction by M.J. Waites et al. Blackwell Science. 2001.
   Prescott & Dunn's Industrial Microbiology. Fourth edition, 1999.Edited by Gerald Reed. CBS Publishers and distributors.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning
CO_1	3	2	2	2	2	2	2	-	-	-	1	1
CO_2	3	1	2	1	2	2	1	-	-	-	1	1

CO_4	3	2	2	2	2	2	2	-	-	-	1	1

IMB- 304: PRACTICALS: Basics of Industrial Microbiology and Bioprocessing of Industrial Microbiology

Course Learning Objective

1. Gives knowledge on various isolation procesures.
2. Give knowledge about staining methods.

1. Isolation, identification and culturing of industrially important microbes – Bacteria, yeast, filamentous fungi from different natural sources.
2. Formulation different simple and complex fermentation media.
3. Production of organic acid from different microbial organism.
4. Production of microbial enzymes and confirmation tests.
5. Estimation of biomass.
6. Estimation of substrate product analysis.
7. Study of growth substrate utilization and product formation – Flask cultures.

Course Learning Out Comes

1. Be isolation, identification and culturing of industrially important microbes.
2. Be formulation different simple and complex fermentation media.
3. Be growth substrate utilization and product formation – flask cultures.

IMB – 305: INDUSTRIAL FOOD MICROBIOLOGY

Course Learning Objective

1. To provide knowledge on quality control of food products.
2. To provide indepth knowledge about food poisoning and fermentation product.
3. To understand the about fermentation technology concepts.
4. To given concentrate knowledge on microbials application modern technology.

UNIT – I

Food infected by microbes – Types of foods, microorganisms infects various foods. Molds, yeast and bacteria and their important in food microbiology. Extrinsic and Intrinsic factors influencing microbial growth in food. Removal of microorganism from food – Asepsis – Anaerobic conditions, high and low

temperatures, drying. Principles of food preservation – chemical preservatives and food additives. Canning, processing for heat treatment and working out treatment parameters.

UNIT – II

Microbial Food contamination and spoilage of - cereals vegetables, fruits; meat, milk, sugar and their products. Fish, sea foods, poultry, canned foods. Detection of spoilage and their characterization. Food-borne infections – Bacterial infective and toxic types, *Brucella*, *Bacillus*, *Clostridium*, *Escherichia*, *Salmonella*, *Staphylococcus*, *Vibrio*, *Yersinia*. Non-bacterial – Protozoa, algae, nematodes, fungi and viruses. Food borne outbreaks – laboratory testing procedures, prevention and control measures.

UNIT – III

Food made by microbes – Cheese, bread, Vinegar, fermented Vegetables and dairy products, experimental and industrial production methods, spoilage and defects of fermented dairy products. Fermented foods, their quality and standards. Microbial cells as food – single cell proteins, yeast mushroom, algae, bacterial insecticides, legume inoculants.

UNIT – IV

Microbial enzymes as fermented products – Industrial enzymes production – Amylases – Fungal and bacterial analyses; proteolytic enzymes – Fungal and bacterial proteases; Pectinases, Invertage, other enzymes. Bioconversions – Production of alcohol, fermented beverages – bear and wine, genetically modified foods – Hazard analysis and critical control points (HACCP).

Course Learning Out Comes

1. Be able to understand presentation methods.
2. Be able to understand the food infections and microbial sancer.
3. To gain knowledge on Fermentation process.
4. Be able to know the advantages and biofuels and microbial frerapeulic compounds.

Suggested Books:

1. Food Microbiology: Fundamentals and frontiers. 2001. 2nd Ed. M.P. Doyle et al., ASM Press.
2. Food Microbiology. 1995. M.R. Adams and M.O. Moss. Royal Society of Chemistry Publication, Cambridge.
3. Food Microbiology. 1988. Frazier WC and Westhoff Dc. Tata Mc Graw Hill Publishing Company.
4. Dairy Microbiology. 1990. Robinson R.K. Elsevier Applied Sciences London.

5. Microbial enzymes & Biotechnology. W.M. Fogarty and C.T. Kelly.

IMB – 306: a) COMPUTATIONAL BIOLOGY

Course Learning Objective

1. Gives knowledge on Design and application of biotechnology.
2. Give deep understanding about product recovery.
3. Gives knowledge of industrial products.
4. Provides detailed information on microbial teaching.

UNIT – I

Introduction : Definition of statistics : population and universe, the sample and population, statistical inference; parameter and statistics.

Interval Data : Mean, mode, median and standard deviation. Concept of probability – classical and frequency definitions; axiones of probability; addition and multiplication theorems (statements only); conditional probability-Baye's theorem (statement only); simple applications. Binomial, Poisson and Normal distributions (definitions and uses only).

Uncertainties in estimation of mean, comparison of means and variances – t, F, and Z tests.

Proportion data : examples of proportion data; (MPN, sterility testing of medicines, animal toxicity, therapeutic trial of drugs and vaccines, animal toxicity, infection and immunization studies) statistical treatment to proportion data. Chi-square test, goodness of fit.

Count data : examples of count data (bacterial cell count, radioactivity count, colony and plaque counts) statistical treatment to count data: Poisson distribution, standard error, confidence limits of counts.

Analysis of variance : Analysis of variance : Introduction, procedure and tests for one-way and two-way classified data. Multiple comparisons. Analysis of CRD, RBD and LSD. Factorial experiments- main effects and interaction in a 2^2 design, Duncan's Multiple Range Test.

UNIT – II

Correlation and regression, formulae and application. Fitting straight line through a series of points. Fitting of exponential curves. Standard curve and interpolation of unknown Y-values. Multiple linear regression, logistic regression.

Statistical basis of biological assays : Response-Dose metameter. Delusion Assays, Direct and indirect assays. Quantal Responses, Probit, logit, LD_{50}, ED_{50}, PD_{50} – Standard line interpolation assay, parallel assay (4 point, 6 point assays), slope ratio assay.

Design of Experiments – Multiple comparison tests, Dunken's, Tukey's, Scheffic's, Dunnelt's etc.
Probit Analysis
Multiple Regression, Logistic regression
Discriminate Analysis
Clinical trails – Phase I, Phase II etc.
Clinical trails (meaning and importance only).

UNIT – III
Basics of personal computer and its components. Concept of programming Languages. Hardware and Software. The idea of operating systems.

Disk Operating Systems (DOS)- Simple commands to create directories and handle files. DOS based software for creating biological databases-dBASE,

Windows-98 operating system – Starting Windows, Desk Top items, folders and files, explorer, notepad and word pad and their applications. Features of Windows 2000

Microsoft Office - 2000: Introduction and facilities available. Shortcut Bar; customizing toolbars; using common office techniques-starting an office application.

Microsoft Word: Starting a new document, opening existing documents, saving, closing, and printing documents, moving and copying text, proofing the documents, working with multiple documents. Creating and editing work documents; formatting documents; working the tabs, tables and columns; working with long documents; working with graphics; formatting shortcuts; streamlining repetitive work.

Microsoft Excel: Introducing Excel Worksheet, formatting and printing worksheets, workbooks, functions and formulae, excel graphics, creating databases. Solving simple statistical problems and curve fitting using Excel.

Microsoft Power point: Creating presentations, working with slides, showing slide shows, creating an organization charts and graphs, printing a presentation.

UNIT – IV

Internet and Biologist : Internet basics, getting onto the internet, e-mail, file transfer protocols, gopher, the world-wide web, browsing and down loading from sites.

Networking of computers, need and advantages, an overview of International and Indian networks – Virtual Library-I: Searching MEDLINE; Pubmed. Virtual Library II: Science Citation Index and current awareness services; Virtual Library III: Electronic Journal; International and Indian Networks- NICNET, INFLIBNET, AGRIS.

Information Networks: WWW, HTTP, HTML, URLs, EMB net, NCBI net, Virtual tourism.

Databases and Tools: Primary information resources- Protein and genomic information resources- Biological databases; primary, secondary and composite protein sequence databases, structure classification databases, DNA sequence databases, specialized genomic resources; DDBJ, Gen Bank and EMBL public DNA sequence databases; SWISSPROT Database, information retrieval from biological databases; the NCBI data model. Submitting DNA sequences to the Database and updating.

Sequence analysis : Wisconsin GCG, DNASIS, DNASTAR, CLONE MANAGER packages for nucleotide sequence analysis; sequence alignment and database searching; practical aspects of multiple sequence alignment.

Phylogenetic analysis: Phylogenetic models; multiple alignment procedures (CLUSTAL, ALIGN, PHYLIP); tree building methods and trees evaluation; rooting trees, phylogenetics software.

Predictive methods using nucleotide and protein sequences : Detection regulatory elements in the DNA; physical properties of proteins based on sequences, different protein structural motifs RNA binding domains and folding classes; Transcription factors and their DNA binding.

Course Learning Out Comes

1. Be able to gain knowledge on strain improvement.
2. Be able understand the whole broth processing.
3. Gain knowledge on production of industrial products.
4. Be able to understand on efficient trident process.

Suggested Books:

1. Biostatistics a foundation for analysis in the field of health sciences by Daniel.2013, 10th edition.
2. Campbell R.C. 1989: Statistics for Biologists, 3rd edition. Cambridge University Press, Cambridge.
3. Statistics made simple – Do it yourself on PC. 2001. By K.V.S. Sarma. Printice Hall of India Publ.
4. An introduction to Biostatistics. 2012. 5th Edition. P.S.S. Sundar Rao and J. Richard, Prentice-Hall of India Pvt. Ltd., New Delhi.
5. Fundamentals of Biostatistics. 1994. First Edition. Irfan A. Khan and Atiya Khanum, Ukaaz Publications.
6. Biostatistics. 2012. First Edition. P.N. Arora and P.K. Malhan, Himalaya Publishing House.
7. Statistics for Biologists. 1980. D.J. Finney.
8. Statistics and Experimental design : An Introduction for Biologists and Biochemists. 1994. 3rd edition. G.M. Clarke. Edward Arnald Publications.
9. Statistical methods. 1989. 8th edition. Snedecor and Cochran, Oxford Press.
10. Elements of Computer Science, 2010. S.K. Sarkar, A.K. Gupta. S. Chand & Company (Chapters – 1,2,9,12,14).

IMB – 306: b) INDUSTRIAL BIOTECHNOLOGY

Course Learning Objective

1. Gives knowledge on Design and application of biotechnology.
2. Give deep understanding about product recovery.
3. Gives knowledge of industrial products.
4. Provides detailed information on microbial teaching.

UNIT - I

Raw materials used as media for industrial fermentations. Development of inocula for industrial fermentations. Isolation, preservation and strain improvement of industrially-important microorganisms. Bioreactor - Designing and appliaction of a biofermentor. Aerobic and anaerobic reactors. Aeration, agitation and sterilization of fermentors. Surface, submerged, batch and continuous fermentations. Scale-up of fermentations.

UNIT - II

Bioprocessing - Recovery of particulates, product isolation, extraction, precipitation, chromatography, centrifugation, membrane separation, electrophoresis, distillation, use of resins super-critical fluid extraction, whole broth processing, online processing integrated product separation, and purification.
Single cell protein (SCP) - production from cellulose and sewage. Food from microorganisms – edible mushrooms and cultivation of mushrooms (button).

Commercial production of cheese, yogurt, production of flavoring components.

Biofuels – Methane, hydrogen, alcohol (gasohol).

UNIT - III

Industrial production of (1) antibiotics - streptomycin, penicillin, cephalosporin, and tetracyclin, (2) biomass of *Bacillus megaterium*, *Acinetobacter cerificans, Candida utilis* using hydrocarbons, (3) organic acids - citric acid, lactic acid, (4) amino acids - L-lysine, (5) enzymes - amylases, proteases and laccases, stabilization of enzymes, (6) vaccines - rabies, FMD vaccine, hepatitis B, (7) alcohol - ethanol and butanol. Esterification of biofuels, Steroid transformations.

UNIT - IV

Microbial leaching - Organisms of leaching, chemistry of microbial leaching, commercial process. immobilization of cells - methods, applications, advantages and disadvantages. Recombinant DNA products - interferon.

Fermentation economics - Market potential, some effects of legislation on production of antibiotics and recombinant proteins, plant and equipment, continuous culture, recovery costs, water usage and recycling, effluent treatment.

Course Learning Out Comes

1. Be able to gain knowledge on strain improvement.
2. Be able understand the whole broth processing.
3. Gain knowledge on production of industrial products

Suggested Books:

1. Principles of fermentation technology (2nd edition) by STANBURY, WHITAKER & HALL.
2. Biotechnology: A Text Book of Industrial microbiology 2nd edition by CRUEGER. & CRUEGER
3. Microbial Technology Vol I by PEPPLER & PEARLMAN (Editors).
4. Microbial Technology Vol II by PEPPLER & PEARLMAN (Editors).
5. Microbial enzymes and bioconversions by ROSE.
6. Microbial Biotechnology: Fundamentals of Applied Microbiology (2nd edition) by GLAZER & NIKAIDO.
7. Prescott & Dunn's Industrial Microbiology 4th edition Editor REED.
8. Biotechnology Vol III. DELLWEG (Editor).
9. Concepts in Biotechnology by BALASUBRAMANIAN, BRYCE, DHARMALINGAM, GREEN & JAYARAMAN.
10. Immobilized cells: Principles and Application by TAMPION & TAMPION.
11. Industrial Microbiology by THOMA.
12. Methods in Food and Dairy Microbiology by DILIELLO.
13. Industrial Microbiology by CASIDA.
14. Industrial Microbiology by MILLER & LITSKY.
15. Microbiology: A Laboratory Manual by CAPPUCCINO & SHERMAN.

FOURTH SEMESTER:

IMB - 401: ANIMAL AND PLANT CELL CULTURE

Course Learning Objective

1. To provide hands on experience with the techniques used in plant cells.
2. To give hands on experiments techniques used in Animal cells.

UNIT – I

Animal cell culture – scope of animal cell culture – Industrial importance of animal cell culture products – viral vaccines for human and animal use, production of interferon, interleukins, retroviruses and adenoviruses are produced for use in gene therapy, large scale production of Bio-Insecticides – Baculoviruses, NPV, GV, cell cultures used for diagnostic assay system, therapeutics.

UNIT – II

Production of animal cell culture – primary and secondary cell cultures of different tissues – kidney, embryo, fibroblasts. Cell lines – types of cell lines – Human, Animal insect cell lines. Principles and methodology of animal cell cultures, subculturing, maintenance and preservation of cell cultures, Biology of the cultured cell, culture environment – preparation of media, Tissue and Primary culture – isolation of the tissue, primary culture, cell lines and cell types, cloning and selection of specific cell types, physical and chemical methods of cell separation , induction of differentiation and study of transformed phenotype, other specialized techniques.

UNIT – III

Plant cell culture – scope of plant cell culture – major sources of pharmaceuticals, dyes, food colours and flavours, enzymes, polysaccharides, fragrances, insecticides, herbicides, products of secondary metabolites. Production of Shikonin and culturing of Microalgae. Industrial advantages and disadvantages of plant tissue culture – Cell and organ differentiation – Clonal propagation or micropropagation – production Artificial seeds and Virus free seeds – Somaclonal variation – cross barriers – other uses of tissue culture such as endosperm and nucellus cultures, germplasm storage including cryopreservation – Application of cell culture for mutant selection, production of secondary metabolites, transformations – Plant tissue culture technology – equipment requirements for plant tissue culture – cleaning procedures, laboratory working procedures – Aseptic techniques and use of antibiotics – Environmental factors for tissue growth and development-different type of tissue culture media and their constituents – different cell culture plating techniques .

UNIT-IV

Plant tissue culture types – embryo culture, meristem culture, callus culture, anther culture, protoplast culture, cell suspension, spore culture, protoplast culture, regeneration and somatic hybridization – Protoplasts isolation, culture, purification, viability and regeneration of plants, protoplast fusion and somatic hybridization, cytoplasmic hybrids or cybrids, genetic modification of protoplasts. Gene transfer methods in plants – target cell for transformation, vectors for gene transfer, gene transfer techniques for *Agrobacterium,* selectable and scoreable markers, agroinfection and gene transfer, physical delivery methods or DNA mediated gene transfer methods- PEG stimulated, microinjection, microinjection, micro projectile or particle gun, electroporation. Production of Transgenic plants – transgenic plants for crop improvement, molecular farming, transgenic to study regulated gene and their expression- production of edible vaccines, viral CP mediated and insect resistance transgenic plants.

Course Learning Out Comes

1. Be able to perform techniques in animals and plants.
2. Be able to perform techniques in animals and plants microbiology

Suggested Books :

1. Culture of Animal cells – A manual of Basic technique. Third edition. 1995. R.I. Freshney. A.R. Liss. Inc., New York.
2. Animal cell culture – Practical approach Ed. John R.W. Master. Oxford.
3. Methods in Biology. Vol. 57. Animal cell culture methods. Ed. Jenni. P. Cell Mather and David Barnes. Academic Press.
4. An Introduction to Plant tissue culture. 2000. M.K. Razdan. Oxford & IBH Publishing House.

CO_4	3	2	2	2	2	2	2	-	-	-	1	1

IMB - 402: INDUSTRIAL BASED MICROBIAL CLEAN TECHNOLOGY

Course Learning Objective

UNIT – I

Scope of microbial agents in industry - regarding clean environment – waste water and effluent treatment – aerobic biological treatment, carbon oxidizers, filamentous carbon oxidizers, nitrifiers, dinitrifiers. Anaerobic waste-water treatment – hydrolytic bacteria, acetogenic bacteria, methanogenic bacteria.

Compositing of solid organic wastes – *Agaicus bisporus, Bacillus stearothermophilus, Thermus sp., Fungi – Rhizomucor Pusillus.* Ensiling – to preserve the material with a minimum loss of nutritional value, commercial, microbial inoculants, *Pediococcus sp.,Sstreptococcus sp.,* some *Lactobacillus sp*. Biodegradation of Xenobiotics, Bioremediation – basic principle, biodegrade or detoxify contaminating compounds in situ, metal sequester – *Geobacter metallireducens,* radiation resistance bacteria – *Deinococcus radiodurans.*

UNIT – II

Biomining (mineral leaching) – conventional mineral mining – metal ores, *Thiobacillus ferroxidans, Leptosirillum ferroxidans,* Microbial desulphurization of coal – S*ulfolobus acidocaldarium.*

Bioinsecticides – control of insects by use of microbial pathogens - bacteria, fungi, protozoa and viruses – *Bacillus thuringiensis, Pythium, Oligandrum, Ampelomyces quiqualis,* Baculo viruses.

UNIT – III

Biopesticides – Introduction and importance of biopesticides, types of biopesticides, bioinsecticides – biofungicides – biobactericides – bionematicides – bioherbicides. Important bioinsecticides- Bt, NPV, fungal bioinsecticides (Beauveria, Metarhizium, Verticillium, Paecilomyces, Nomuraea. Mass production – formulation – application for the control of insect pests. Important biofungicides – Trichoderma, Gliocladium, *Pseudomonas fluorescens*, mass production – formulation – use in agriculture for the control of crop diseases. Biobactericide - *Agrobacterium radiobacter*, use in control of crown gall disease. Bionematicides- Verticillium, Trichoderma, control of root knot nematodes. Bioherbicides - Phytophthora , Colletotricum, advantage for the use of biopesticides – Problems in commercialization and efficacy – commercial products of biopesticides.

UNIT – IV

Bioremediation – Bioremediation definition, concept – rationale – kinds of pollution – organic, inorganic in soil, water and air – remediation by bacteria, fungi and green plants. Processes of bioaccumulation and biomagnification – microbial remediation by natural attenuation – biostimulation – bioaugmentation – application of immobilized microbes in soil decontamination.Use of genetically engineered microorganisms and bioremediation – Biodegradation of organic compounds – humification and polymerization reaction – biotransformation of metal and metal compounds – phyto-remediation use of green plants to remove pollutants – Phyto-extraction – induced phyto-extraction and continuous phyto-extraction – phyto-degradation – rhizofiltration – phyto-stabilisation – phytovolatisation of metals – phyto-remediation of organic – bioavailability and uptake – biotransformation and compartmentalization.

Course Learning Out Comes

Suggested Books:

1. Microbial Technology by J.H. Peppler and D. Perlman.
2. Microbial Enzymes & Biotechnology by W.M. Fogarty and C.T. Kelly.
3. Industrial Microbiology, 1999 by L.E. Casida, Jr. New Age International Publ.
4. Industrial Microbiology. 1984. A.H. Patel. Macmilan India Limited.
5. Industrial Microbiology by B.M. Miller and W. Litsky.
6. Microbial Biotechnology – Fundamentals of Applied Microbiology. 1995. by Alexander N.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning

CO_4	3	2	2	1	2	2	2	-	-	-	1	1

IMB - 403: a) INDUSTRIAL PRODUCTION OF MICROBIAL PRODUCTS

Course Learning Objective

UNIT – I

Health care products – Pharmaceuticals-sources of drugs-Microbial based-antibiotics, vitamins, steroids, ergot alkaloids, vaccines, Recombinant therapeutic proteins, DNase, Erythropoietin, Hormones – Cytokines – Interferons, Interleukins I, II, Tissue plasminogen activator (tPA) – Human growth hormone (somatotrophin), Insulin, Tumor necrosis factor (TNF), collagen, Bacteriophages as therapeutic agents.

UNIT – II

Production of Antibiotics from - Penicillin, Cephalosporin, Streptomycin – Vitamins from *Streptomycin sp*., *Bacillus sp*., *Priopionibacterium sp*.- Steroids from *Rhizopus sp.*, *Cunning hamella sp*. – Vaccines, BCG, Anthrax, conventional and recombinant vaccines of viral, bacterial – Insulin, *E.coli*. through Recombinant DNA technology.

UNIT – III

Production of organic acids – Lactic acid – *Lactobacillus sp.* , Citric acid – *Aspergillus niger* and Alpha ketoglutaric acid, Gluconi acid – *Aspertillus niger*, *Acetobacter sp*., *Pseudomonas sp*., Fumaric acid – *Rhizopus nigricans,* Itaconic acid – *Aspergillus terreus*, Kojc acid – *Aspergillus sp*., Gibberllic acid – *Gibberella sp.*, *Agaricus sp*., *Phallus sp*., *Boletus sp*., *Grifola sp*. Amino acids – Production of L-Lysine, Glutamic acid.

Production of enzyme – Proteases, Amylases pectic enzymes; Production of solvents – Acetone, Butyl alcohol, glycerol; Production of fuels –Methane, Ethanol, Hydrogen, Hydrocarbons; Recovery of minerals – golden microorganism, Recovery of oil.

UNIT – IV

Microbial oxidative transformationof substrate – Vinegar, *Acetabactor sp., Saccharomyces sp.* Dairy products – production of buffer – *Lactococcus sp.*, Yoghurt – *Streptococcus sp., Lactobacillus sp.*, Cheese – *Lactococcus sp., Streptococcus sp.* Probiotics – *Lactobacillus sp., Bifidobacterium bifidum Saccharomyces boulardii, Salmonella enteritidis, Lactobacillus salivarius.* Microbial fermented products of meat, fish, plant (Bread sauer kraut, soyabean coffee, cocoa, tea).

Course Learning Out Comes

Suggested Books:

1. Microbial Biotechnology – Fundamentals of Applied Microbiology. 1995. by Alexander N.
2. Microbial Biotechnology; Fundamentals of Applied Microbiology. 1995. A.N. Glazer and H. Nikaido. W.H. Freeman and Company
3. Basic Biotechnology, 2001. 2nd ed. ed by C. Ratiedge & B. Kristiansen, Cambridge University Press.
4. Manual of Industrial Microbiology and Biotechnology, Second edition. 1999. A.L. Demain, Editor in Chief, ASM Press.
5. Biotechnology : A test Book of Industrial Microbiology. Second edition, 2000. Ed. W.Crueger & A.Crueger.Panima Publishing corporation.
6. Industrial Microbiology : An Introduction by M.J. Waites et al. Blackwell Science. 2001.
7. Prescott & Dunn's Industrial Microbiology. Fourth edition, 1999.Edited by Gerald Reed. CBS Publishers and distributors.

IMB - 403: b) INDUSTRIAL MICROBIAL TECHNOLOGY

Course Learning Objective

UNIT – I

Industrial important microorganisms – isolation of cultures, screening of cultures for their activity, microbial cultures preservation and inoculum development. Fermentation – small-scale liquid fermentations, small-scale solid fermentations, Anaerobic fermentation, continuous culture. Improvement of fermentations, cell and enzyme immobilization, microbial strain improvement by nonrecombinant and recombinant methods, selection of raw materials and development of various media for industrial fermentation processes, small-scale bioreactors, scale-up of Microbial processes.

UNIT – II

Downstream process – Isolation and identification of small molecules, purification and characterization of proteins, Bioprocess simulation, Industrially used microorganisms, molecular biology and genetics – Genetics of *Bacillus sp., Clostridia sp.,* Filamentous fungi, C*orynebacteria sp.,* Streptomyces and non-streptomyces. Actinomycetes, *Saccharomy cervisiae.*

Microbial organisms used in - Recombinant DNA technology for industrial application – Recombinant application of Streptomyces, Thermophiles, Zygosaccharomyces, *E.coli* – Expression of G-protein-couples receptors, over expression of proteins, enzymes, aromatic compounds, biodegradable polymer (polyhydroxy alkanoates).

UNIT – III

Microbial organisms in Environmental clean technology – Bioprospecting, Bioremidiation, Biopesticides, Biomarkers, Bioreporters, Biofilms, Biocorrosion, Microbial biodiversity, release of recombinant microorganisms.

UNIT – IV

Biosynthesis of Microbial secondary metabolites – Antibiotic biosynthesis, streptomycete secondary metabolite biosynthesis, Bacteriocins production. Biosafety, Bioethics and Intellectual property rights, Quality assurance and quality control, Economics of Industrial Microbial technology, future of Industrial microbial technology.

Course Learning Out Comes

Suggested Books:

1. Industrial Microbiology, 1999 by L.E. Casida, Jr. New Age International Publ.
2. Industrial Microbiology. 1984. A.H. Patel. Macmilan India Limited.

IMB- 404: PRACTICALS: ANIMAL AND PLANT CELL CULTURES AND INDUSTRIAL BASED MICROBIAL CLEAN TECHNOLOGY

1. Antibiotics and study of their role in microbial inhibition.
2. Collection and study of antibiotics sensitivity by invitro.
3. Isolation of Bacteriophages from sewage and soil.
4. Biodegradation of human hairs and animal fur by using the actinomycetes.
5. Set up and demonstrate the ethanol production in the lab.
6. Isolation and identification of polymeric material degrading organisms.
7. Preparation of bread in the lab.
8. Plant tissue culture techniques- meristem, embryo, protoplast
9. Secondary metabolites production from plant cell cultures.
10. Assessment of immune diagnostic kits.
11. Immuno flurocence technique.
12. Immuno blot Analysis of antigens and allergens.
13. *In vitro* analysis for antibacterial properties
14. Antibiotic assay preservative test
15. Bioburden Testing
16. Interferon, interleukin assay.
17. Microbial Limit test (MLT)
18. Bacterial Endotoxins Test

IMB – 405 : Practical : Field Trip / Industriel Tour Report / Project :

Course Learning Objective

1. Give practical experience in locating, collecting and interpretent the scientific, information.

Practical experience in locating, collecting and interpreting the scientific information for the purpose of MSc., Industrial Microbiology field trip/industrial tour report. The student works individually, under faculty/Scientist supervision in laboratories, Research labs, Industries, National Institutes to perform the procedures, record the results and present the project work at the end of the Fourth Semester. The project work of the student will be evaluated by seeing the performance of presentation and interpretation of the results.

Course Learning Out Comes

1. Able to design procedures, record research methodology and interpret the research.

IMB- 406: a) BIOETHICS, BIOSAFETY, INTELLECTUAL PROPERTY RIGHTS

Course Learning Objective

UNIT – I

Bioethics – Introduction to Bioethics, solid and ethical issues related industrial genetically manipulated microorganisms (GMM).

UNIT – II

Biosafety – Definition, biosafety consideration, types of containments, personal practices, primary and secondary containment barriers (biosafety levels 1, 2, 3, 4), containment for production activities, practical consideration, possible hazards from industrial production and use of pathogens.

UNIT – III

Biosafety for human health and environment - Use of genetically modified microorganisms and their release in to the environment, special procedures for recombinant DNA based products. Regulatory affairs – regulatory requirements for drugs and biologics.

UNIT – IV

Intellectual property rights – Importance of Intellectual property, history of patent concept, composition of a patent, general patent information – patent laws, patentable subject matter, apply for patent, requirements for patentability, issuance of a patent, infringement of a patent. Obtain patent protection – applying for patent protection, patent prosecution, appeals and interference proceedings, applying for foreign patent protection. Patent laws in US, India and other countries.

Course Learning Out Comes

Suggested Books:

1. Intellectual property rights on Biotechnology. K. Singh BCII, New Delhi.
2. Biotechnologies in developing countries present and future. 1993. A. Sasson. UNESCO Publishers.

CO-PO Mapping Matrix/Programme Articulation Matrix

	PO_1 Know ledge	**PO_2** Analysis	**PO_3** Design	**PO_4** Development	**PO_5** Modern Tools	**PO_6** Society	**PO_7** Environment	**PO_8** Ethics	**PO_9** Team work	**PO_{10}** Communication	**PO_{11}** Programme Management	**PO_{12}** Lifelong Learning

CO_4	3	2	2	2	2	2	2	-	-	-	1	1

IMB- 406: b) MICROBIAL PRODUCTION OF ALCOHOLIC BEVERAGES.

Course Learning Objective

UNIT – I

History, scope and Industrial important of Beverages. Types of Beverages and their significance in the society. Brewing microbiology – Microorganisms related to Beverages, their isolation, identification and small scale culturing, pure culture techniques, Microbial metabolism and nutrition, genetics of Microbial organisms, magnitude of the brewing industry.

UNIT – II

Elements of the Brewing process – Ingredients – Malt, Adjuncts, water, Hops, yeast, miscellaneous additives. Different process of Bear Brewing – Malting, Brewing, Mashing, Hop addition. Fermentation – Primary, continuous fermentation, aging and finishing. Pure culture of yeast – quality, source, maintenance of pure culture, pure culture propagation, evaluation of yeast produced, microscopic and serological tests, test fermentations, recycled yeast, separation, collection and storage. Microbial contamination. Fermentation requirements – Carbohydrates, nitrogen compounds, inorganic ions, vitamins, polyphenols, Hop compounds, lipids oxygen, yeast.

UNIT – III

Distilled Beverage Alcohol – commercial Important of alcohol, whiskey – Raw materials, mashing and conversion, fermentation, distillation, types of whiskey – Bourbon whiskey, Rye whiskey, corn whiskey, Light whiskey, Tennessee whiskey. Canadian whiskey, scotch whiskey, Irish whiskey, Vodka, Gin, By-product recovery in whiskey synthesis, Rum, Tequila, Cordials and Liqueurs, Congeners.

Wine production – production of grape must, wine fermentation, traditional spontaneous wine fermentation, use of starter cultures, continuous wine fermentation, secondary wine fermentation, post – fermentation treatments.

UNIT – IV

Cider production – apple juice extraction, composition of apple juice, cider fermentation, cider maturation. Vinegar production – Vinegar fermentation, alcohol fermentation, acetic acid fermentation, methods of acetification in vinegar manufacture, traditional surface method trickle generators, submerged methods, finishing processes, process developments.

Course Learning Outcomes

Suggested Books:

1. Molecular Biotechnology: Principles and Applications of recombinant DNA. 1994. by B.R. Glick and J.J. Pastermak. Panima Publ. Corporation.
2. Microbial Biotechnology; Fundamentals of Applied Microbiology. 1995. A.N. Glazer and H. Nikaido. W.H. Freeman and Company.
3. Biotechnology: A test Book of Industrial Microbiology. Second edition, 2000. Ed. W.Crueger & A.Crueger.Panima Publishing corporation.
4. Industrial Microbiology: An Introduction by M.J. Waites et al. Blackwell Science. 2001.
5. Microbial Technology by J.H. Peppler and D. Perlman.
6. Manual of Industrial Microbiology and Biotechnology, Second edition. 1999. A.L. Demain, Editor in Chief, ASM Press

SRI VENKATESWARA UNIVERSITY :: TIRUPATI

SVU COLLEGE OF SCIENCES

DEPARTMENT OF PHYSICS

Syllabus for M.Sc. PHYSICS Choice Based

Credit System (CBCS)

Amended as per NEP-2020

(the Academic Year **2023 – 24**)

About the Department

The Department of Physics, Sri Venkateswara University, was established in 1954 with B.Sc. and B.Sc. (Hons) degree courses. Two year M.Sc. degree course was started in 1959. To meet the growing demands of the society and to keep pace with reputed institutions in the country and abroad, the Department has innovative specializations in M.Sc. Physics such as Applied Spectroscopy, Condensed Matter Physics, Electronics, Photonics, Solar Energy Physics and Vacuum and Thin film Physics. The department has also started M.Sc. Electronics course in 1998. At Present the department has 7 Professors, 1 Associate Professor and 1 Assistant Professor.The research work in the Department of Physics was initiated in 1957 and since then, there has been significant progress in the areas of Atmospheric Science, Condensed Matter Physics, Microelectronics, Solar Energy, Solid State Spectroscopy, Photonics and Thin Films. In recognition of these efforts, the department has received research funding from UGC, CSIR, DST, ISRO, DNES, DoE, DRDO and DAE-BRNS. The Department was selected for UGC - CAS and DST- FIST programmes and was able to procure several sophisticated instruments like XRD, ATR-FTIR, UV-Vis-NIR spectrophotometer, FLS-980-Florescence spectrometer, SEM with EDS, Micro-Raman, Vibrating Sample Magnetometer (VSM), Liquid Nitrogen Plant,etc., for student training and advanced research activities. The UGC has set up UGC-SVU Center for MST Radar applications to promote research activities on Atmospheric research. This was further supported by the ISRO in the form of an Advanced Center for Atmospheric Sciences (ACAS). The advances made so far in basic and applied research are well recognized both in the country and abroad. The Department organizes National and International Conferences/Seminars/Workshops on regular basis. The faculty members of the Department have several collaborative research programmes with national and International institutions. Many of the faculty members of the Department are regularly invited as visiting Professors and visiting researchers by overseas Universities/ Institutes in India and abroad.

Vision

To inculcate certain specific enabling skill sets to prepare the students to take up challenges in any one or more functional domains viz. (i) Academics; (ii) Basic and Applied Research; (iii) Research & Development; (iv) Engineering & Technology and (v) Industry.

Mission

To bring out professionals having knowledge of basic laws of nature together with strong fundamentals in the core area of physics viz. Classical Mechanics, Quantum Mechanics, Condensed Matter Physics, Electromagnetism, Computational Physics, Statistical Physics, Spectroscopy, Photonics, Thin film Technology and Solar Energy Physics, Electronics, Atomic and Nuclear Physics and advanced level topics such as High Energy Physics, Nanotechnology, Nonlinear Optics, etc.

Program Specific Out comes: At the end of the program, the student will be able to:

PSO1	Understand the basic and advance concepts of different branches of physics.
PSO2	Perform and design experiments in the areas of electronics, atomic, nuclear, Condensed matter, and computational physics.
PSO3	Apply the concepts of physics in specialized areas of condensed, nuclear, renewable energies, particle physics, etc. in industry, academia, research and day to day life.

Program Objectives :

- P1. To impart quality education in physics through well designed courses in theoretical and experimental physics
- P2. to enable the students in acquiring knowledge in the specialized thrust areas such as Applied spectroscopy, Condensed Matter Physics , Electronics, Photonics, Solar energy Physics and Vacuum and thin film physics
- P3.To develop abilities and skills that encourage research and development activities
- P4. to inculcate scientific bent of mind and attitude relevant to science such as concern for efficiency, accuracy and precision, objectivity and integrity.

Program Out comes:

At the end of the program, the student will be able to:

PO1	Apply the scientific knowledge to solve the complex physics problems.
PO2	Identify, formulate, and analyze advanced scientific problems reaching substantiated Conclusions using first principles of mathematics, physical, and natural sciences.
PO3	Design solutions for advanced scientific problems and design system components or processes that meet the specified needs with appropriate attention to health and safety risks, applicable standards, and economic, environmental, cultural and societal consideration.
PO4	Use research-based knowledge and methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Create, select, and apply appropriate techniques, resources, and modern scientific Tools to complex physics problems with an understanding of the limitations.
PO6	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the Professional scientific practice.
PO7	Understand the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Apply ethical principles and commit to the norms of scientific practice.

PO9	Function effectively as an individual, and as a member or leader in diverse teams, And in multidisciplinary settings.
PO10	Communicate effectively on scientific activities with the Scientific/Engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective representations, and give And receive clear instructions.
PO11	Demonstrate knowledge and understanding of the scientific principles and apply These to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Recognize the need for, and have the preparation and ability to engage in independent And life-long learning in the broadest context of scientific cand technological change.

Program Educational Objectives: At the end of the program, the student will be able to:

PEO1	Apply principles of basic scientific concepts in understanding, analysis, and prediction of physical systems.
PEO2	Develop human resource with specialization in theoretical and experimental Techniques required for career in academic, research and industry.
PEO3	Engage in lifelong learning and adapt to changing professional and societal needs.

DEPARTMENT OF PHYSICS

TWO YEAR M.Sc. COURSE IN PHYSICS (2021-2022)

SCHEME

Semester -I

S.No	Components of Study	Title of the Course	Title of the Paper	Credit Hrs /Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	PHY101	1.ClassicalMechanicsandTheoryof Relativity	6	4	20	80	100
2.		PHY102	2.Solid State Physics	6	4	20	80	100
3.	**Compulsory Foundation**	PHY103(a)	1.Analogand Digital Electronics	6	4	20	80	100
		PHY103(b)	2.ComputationalMethods & C Language					
		PHY103(c)	3.Sensors and Transducers					
4.	**Elective Foundation**	PHY104(a)	1.Atomic and Molecular Physics	6	4	20	80	100
		PHY104(b)	2.Optical, Micro wave and Satellite Communications					
		PHY104(c)	3.Computer Architecture and Networking					
5.	**Practical-I**	PHY105	Paper1&3 (General Lab)	6	4	--	100	100
6.	**Practical-II**	PHY106	Paper3 &4 (Electronics Lab)	6	4	--	100	100
	Total			36	24	80	520	600
7.	Audit Course (Human values & Ethics I)			0	0	100	0	0

*All core papers are Mandatory

- Compulsory Foundation choose one paper.

- Elective Foundation–Choose one paper.
- Auditcourse-100Marks (Internals) Zero Credits under self-study.
- Interested students may register for MOOC with the approval of the concerned DDC but it will be considered for the award of the grade as open elective only giving extra credits.

Semester -II

S.No	Components of Study	Title of the Course	Title of the Paper	Credit Hrs/ Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	PHY201	1. Statistical Mechanics	6	4	20	80	100
2.		PHY202	2.EM Theory, Lasers & Modern Optics	6	4	20	80	100
3.	**Compulsory Foundation**	PHY203(a)	1.NuclearPhysics	6	4	20	80	100
		PHY203(b)	2.ICfabrication Techniques					
		PHY203(c)	3.AdvancedMicroprocessors and its Applications					
4.	**Elective Foundation**	PHY204(a)	1.Mathematical Physics	6	4	20	80	100
		PHY204(b)	2.Introductionto VLSI design					
		PHY204(c)	3.MaterialScience For Industrial Applications					
5.	**Practical-I**	PHY205	Paper1&3 (General Lab)	6	4	--	100	100
6.	**Practical-II**	PHY206	Paper3&4 (Electronics Lab)	6	4	--	100	100
	Total			36	24	80	520	600
7.	Audit Course (Human values & Ethics II)			0	0	100	0	0

*All core papers are Mandatory

- Compulsory Foundation choose one paper.
- Elective Foundation–Choose one paper.
- Auditcourse-100Marks (Internals)Zero Credits under self-study.
- Interested students may register for MOOC with the approval of the concerned DDC but it will be considered for the award of the grade as open elective only giving extra credits.

Semester -III

S.No	Components of Study	Title of the Course	Title of the Paper	Credit Hrs/Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**MandatoryCore**	PHY301	1.IntroductoryQuantumMechanics	6	4	20	80	100
2.		PHY302	2.Physics of Semiconductor Devices	6	4	20	80	100
3.	**Generic Elective**	PHY303(a)	1.Applied Spectroscopy	6	4	20	80	100
		PHY303(b)	2.Condensed Matter Physics					
		PHY303(c)	3.Embedded Systems					
4.	**Practicals**	PHY304	Elective Lab	6	4	--	100	100
5.	**Skill Oriented Course**	PHY305	Advances in Physics	6	4	10	90(T40+P50)	100
6.	**Open Elective**	PHY306(a)	1.Basic Spectroscopic Techniques	6	4	20	80	100
		PHY306(b)	1. Nano materials and Devices					
	Total			36	24	90	510	600

*All core papers are Mandatory

- Generic Elective– Choose two
- Core papers and Generic Electives opted paper held Practical-I
- Skill Oriented Course is Mandatory. Relevant society along with practical (10marksinternal40 final theory& 50 for practical's).
- Open Electives are for the students of other Departments. Minimum one paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self-study.
- Interested students may register for MOOC with the approval of the concerned DDC.

Semester -IV

S.No	Components of study	Title of the Course	Title of the Paper	Credit Hrs/Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	PHY401	1.AdvancedQuantumMechanics	6	4	20	80	100
2.		PHY402	2.PhysicsofAdvanced Materials	6	4	20	80	100
3.	**Generic Elective**	PHY403(a)	1.Photonics	6	4	20	80	100
		PHY403(b)	2.SolarEnergy-Thermal and Photovoltaic Properties					
		PHY403(c)	3.VacuumandThinFilm Technology					
4.	**Practicals**	PHY404	Elective Lab	6	4	--	100	100
5.	**Multi Disciplinary Course/ Project Work**	PHY405	Advanced Characterization Techniques	6	4	10	90(T40 +P 50)	100
6.	**Open Elective**	PHY406(a)	1.Wireless Communications	6	4	20	80	100
		PHY406 (b)	2. Vacuum Technology & Applications					
	Total			36	24	90	510	600

*All core papers are Mandatory

- Generic Elective –Choose two
- Core papers and Generic Electives opted paper held Practical-II.
- Project Work-Collaboration with various firms/companies/societies.
- Multi-Disciplinary Course is Mandatory. Circle formation with other subjects/ Dept. of Arts / Commerce.
- Open Electives are for the students of other Departments. Minimum one paper should be opted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self-study.
- Interested students may register for MOOC with the approval of the concerned DDC.

(Mandatory Core)

PHY-101	CLASSICALMECHANICS AND THEORY OF RELATIVITY	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Classical Mechanics and theory of relativity** is to train the students of M.Sc. in the Lagrangian and Hamiltonian formalisms and relativity theory so that they can use these in the modern branches of physics such as Quantum Mechanics, Quantum Field Theory, Condensed Matter Physics, Astrophysics, etc.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the necessity of Action, Lagrangian, and Hamiltonian formalism.
CO2	Used' DAlambertprincipleandcalculusofvariationstoderivetheLagrangeequationsof motion.
CO3	Describe the motion of a mechanical system using Lagrange-Hamilton formalism.
CO4	Apply essential features of a relativity problem (like motion under central force, periodic motions) to set up and solve the appropriate physics problems.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	2	1	1	-	2	2	2	2
CO2	3	2	2	2	2	1	1	-	2	2	2	2
CO3	3	2	2	2	2	1	1	-	2	2	2	2
CO4	3	2	2	2	1	1	1	-	2	2	2	2

PHY101:Classical Mechanics and Theory of Relativity

UNIT–I: Lagrangian Mechanics and Hamiltonian Mechanics

Newtonian mechanics of one and many particle systems: Conservation laws: Constraints and their classification: Degrees of freedom: Generalized coordinates: Principle of virtual work, D' Alemberts principle: Lagrange's equations of motion.

Applications: Inclined plane, Linear harmonic oscillator and simple pendulum: Hamiltonian principle: Lagrange's equation from Hamilton's principle: Hamilton's equation of motion: Applications: Simple pendulum, Compound pendulum.

UNIT–II: Canonical Transformations and Hamilton – Jacobi Theory

Canonical Transformations; generating function; properties: Condition for transformation to be canonical; Illustration of canonical transformation: Poisson - Brackets; Canonical equations in terms of Poisson -Bracket notation. Lagrange-Brackets and their properties.

The Hamiltonian - Jacobi equation; one dimensional harmonic oscillator; Action Angle variables: Kepler problem in action angle variables

UNIT–III: Motion in a Central Force Field

Reduction to the equivalent one body problem; Motion in a central force field: Conditions for closed orbits: Inverse square law of forces: Kepler’s laws of planetary motion; Rutherford scattering.

Rotations – Space and body fixed axes: Angular momentum and Torque; Eulerian angles– Euler’s equations of a rigid body: Motion of symmetrical top; Expression for slow and fast precessions; Larmour precision; Examples of Gyroscope.

UNIT–IV: Special Theory of Relativity

Introduction – Postulates of Special Theory of Relativity – The principle of constancy of light – The Lorentz transformations. Relativistic Kinematics: The velocity transformations–The transformations for the acceleration of a particle. Relativity Optics: The aberration of the of the light from stars – The Doppler effect.

Relativistic Mechanics: The mass of a moving particle – The relativistic dynamics of a single particle –Applications of relativistic dynamics of a single particle: Motion in electric field – Motion in a magneticfield–Experimentalverificationofthevariationofmasswithvelocity–

Bucherer'sexperiment-Transformation of momentum and force.

Books for Study

1. Classical Mechanics by N.C. Rana and P.S. Joag Tata Mc- graw Hill(1991).
2. Classical Mechanics by H.Goldstein, AddiWesely,(1980).
3. Classical Mechanics by J.C.Upadyaya, Himalaya Publishing House(2014).
4. Classical Mechanics by Gupta, Kumar and Sharma, Pragati Edition,(2019).
5. Classical dynamics of particles and systems by J.B.Marion, Thomson Books/ cole,(2004).
6. Introduction to Classical Mechanics by R.G. Takwale and P.S.Puranik, Tata Mc-grawHill,(2008).
7. Theory of Relativity by W.Pauli, Dover Publications,(2013).
8. Introduction to the theory of relativity by P.G.Bergmann, Dover Publications(1977).
9. Introductory Relativity by W.G.V. Rosser, London Butterworths,(1967).

(Mandatory Core)

PHY-102	Solid State Physics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level solid state physics

Course Objectives: The aim and objective of the course on **Solid State Physics** is to expose the students of M.Sc. class to the topics like elastic constants, lattice vibrations, dielectric properties, energy band theory and transport theory so that they are equipped with the techniques used in investigating the sea aspects of the matter in condensed phase.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain in-depth knowledge about the formation of various crystal structure vaper forming calculations on their elemental parameters.
CO2	Differentiate between various lattice types based on their lattice dynamics and then explain thermal properties of crystalline solids.
CO3	Understand the electron motion in periodic solids and origin of energy bands in semiconductors.
CO4	To explain the basic transport theory for understanding the transport phenomenon in solids

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	1	2	2	2	1	2
CO2	2	2	2	2	2	2	2	2	2	2	2	2
CO3	2	2	1	2	1	2	2	2	1	2	1	2
CO4	2	2	1	2	2	2	1	2	1	2	2	2

PHY102:Solid State Physics

UNIT–I: Crystallography, Lattice Energies and Lattice Vibrations

Bravais lattices–Reciprocal lattice –X-ray diffraction –structural factor.

Origin of chemical binding in ionic and van der Waals crystals – Elastic properties – Stress and strain –Elastic moduli - Lattice energy calculations for ionic and van der Waals crystals – Lattice vibrations: Mono and diatomic one dimensional infinitely long lattices–Quantization of lattice vibrations–Phonons

–Properties.

UNIT– II: Transport Phenomena and Band Theory

Concept of electrical and thermal resistivity – Expression for thermal and electrical conductivities for metals – Lorenz number - Different scattering mechanisms – Matheissens rule- Distribution function -Formulation of Boltzmann transport equation– Relaxation time approximation.

Sommerfeld model – its consequences – electron-lattice interaction (Quantitative only) – Bloch function -Motion of electron in periodic potential –Kronig - Penny model – Formation of energy bands in solids –Brillouin zones–Concept of effective mass –Distinction between metals, insulators and semiconductors.

UNIT–III: Semi conduct or Physics

Intrinsic and extrinsic semiconductors–Expression for position of Fermi levels and carrier concentrations – Variation of Fermi level with temperature – np product – Carrier mobility, conductivity and their variation with temperature – Direct and indirect band gap semiconductors – Differences and examples –Hall effect - Continuity equation – Drift and Diffusion – Einstein relation – Generation, Recombination and life time of non-equilibrium carriers – Heyness- Schockley experiment – Determination of life time, diffusion length of minority charge carriers.

UNIT–IV: Super conductivity

Concept of zero resistance–Magnetic behavior–Distinction between a perfect conductor and superconductor–Meissnereffect–Isotopeeffect–Specificheatbehavior–Two-fluidmodel–

Expression for entropy difference between normal and superconducting states – London's equations –Penetration depth – BCS theory –Josephson junctions – SQUIDS and its applications - Applications ofsuperconductors –High $T_C$superconductors–Preparation– Properties.

Books for Study

1. Solid State Physics, C.Kittel, Edition:8th 2012, John Wiley & Sons.
2. Solid State Physics, A.J.Dekkar, Edition: 1st,2000.Macmillan India Ltd.
3. Solid State Electronic Devices, B.G.Streetman. Edition 7th,2018,Pearson Education India
4. Elementary Solid State Physics, M.Ali Omar,1993,Addison-Wesley.
5. Solid State Physics, M.A.Wahab, Edition:3rd, 2020,NarosaPublishingHouse.
6. HighTC Super conductivity, C.N.R.Rao and S.V.Subramanyam, world scientific publishing company,1989
7. Solid State Physics, S.O.Pillai.Edition:6th,2009, New Academic Science Ltd
8. Solid State Physics, S.L.Kakani and C.Hemarajan, Edition: 4th,2005,Sultan Chand andSons
9. Electrons in Solids, Richard H.Bube,Edition 3rd,1992 Elsevier,
10. Solid State Physics by R.K. Puri V.K. Babbar Edition: 1st 2017. S.Chand.

(Compulsory Foundation)

PHY-103(a)	Analog and Digital Electronics	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about electronics

Course Objectives: The aim and objective of the course on **Analog and Digital Electronics** is to introduce the students of M.Sc. class to the formal structure of the subject and to equip them with the knowledge of semiconductor physics, basic circuit analysis, first-order non linear circuits, OPAMP based analog circuits and introduction to digital electronics so that they can use these in various branches of physics as per their requirement.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand working of Different Semiconductor devices (Construction, Working Principles and V-I characteristics) and their applications.
CO2	Explain the construction and working of Operational amplifiers and applications
CO3	Design Digital circuits and their applications.
CO4	Understand the working of various analog communication techniques

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	1	2	2	1	2	1	2	2	2
CO2	3	3	2	1	2	2	1	2	1	2	2	2
CO3	2	2	3	2	2	2	1	2	1	2	2	2
CO4	3	3	2	1	2	2	1	2	1	2	2	2

(Compulsory Foundation)

PHY103(a): Analog and Digital Electronics

UNIT–I: Introduction to Electronic Devices:

Field Effect Transistor (FET): Structure and working of JFET, Characteristics, and parameters of JFET. Advantages of FET over BJT. FET as switch and Amplifier-Application of FET as voltage variable resistor. Structure of MOSFET, depletion type and enhancement type, MOSFET Characteristics, MOSFET as variable resistor, Concept of CMOS. Structure, working and Characteristics of UJT. Application of UJT as a Relaxation oscillator.

UNIT–II: Operational Amplifiers:

Block diagram of a typical Op-Amp, differential Amplifier, Comparator open loop configuration, inverting and non-inverting amplifiers. Op-amp with negative feedback, voltages hunt feedback, effect of feedback on closed loop gain, input resistance, output resistance, CMRR, frequency response, slewrate.

Instrumentation Amplifier, integrator and differentiator. Wave form generators (Square and triangle). Filters (Low pass, high pass and Band pass). Analog to Digital data converters (ADC)and Digital to Analog conversion (DAC).

UNIT–III: Digital Electronics

Combinational Logic: Multiplexers, Decoder, Demultiplexer, Data selector, Multiplexer, Encoder. Sequential Logic: Flip–Flops, A1-bit memory, The RS Flip-Flop, JK Flip – Flop, JK Master Slave Flip–Flops, T Flip-Flop, D Flip-Flop, Shift Registers, Serial-in Serial-out, Serial-in Parallel-out, Parallel-in Serial-out, Parallel-in Parallel-out Registers. Asynchronous and Synchronous Counters.

UNIT–IV: Communication Electronics

Introduction to Modulation (AM & FM), Sampling Theorem, Low pass and Band pass signals, PAM, Channel BW for a PAM signal. Natural sampling, Flat-top sampling. Signal recovery through holding. Quantization of signals, PCM transmission, Quantization of noise, Differential PCM, Delta Modulation, Adaptive Delta modulation CVSD. Signal to noise ratio in PCM and Delta Modulations.

Books for Study

1. Micro Electronics by Milliman and Halkias.TMH Publications
2. OP-Amps & Linear Integrated Circuits, by Ramakanth A.Gayakwad,PHI,2ndEdition,1991.
3. Digital Systems by Ronald J. Tocci, 6th Edition, PHI, 1999.
4. Digital Principles and Applications by A.P. Malvino and Donald P.Leach, Tata McGraw-Hill, New Delhi, 1993.
5. Principles of Communications by Taub and Schilling, Mc-GrawHill Publication.
6. Electronic Devices and Circuit Theory by Robert Boylested and Louis Nashdsky–Jose Kanedy & Division. PHI, New Delhi, 1991
7. Electronic Principles by Malvino, 6th Ed.TMH, 2017
8. Linear Integrated circuits by Roy Choudhry, Pearson,2018
9. Op-Amps – D.K. Mahesh, PHI

(Compulsory Foundation)

PHY-103(b)	Computational Methods and C language	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Computational Methods and C language** is to familiarize the students of M.Sc. students with the numerical methods used in computation and programming using any high level language such as C,etc., so that they can use these in solving simple physics problems.

Course Outcomes: At the end of the course, the student will be able to

CO1	Apply basics knowledge of computational physics in solving the physics problems.
CO2	Programme with the C or any other high-level language.
CO3	Use various numerical methods in solving physics problems.
CO4	Analyze the outcome of the algorithm/program graphically.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

C O3	3	3	3	2	2	1	1	2	1	2	2	2
CO4	3	3	3	3	2	2	2	2	2	2	2	2

(Compulsory Foundation)

PHY103(b):Computational Methods & C Language

UNIT–I:(a) Fundamentals of C language

C character set–Identifiers and keywords–Constants–Variables–Datatypes–Declarations of variables–Declaration of storage class–Defining symbolic constants–Assignment statement. Operators: Arithmetic operators–Relational operators–Logic operators–Assignme nt operators–Increment and decrement operators–Conditional operators.

(b) Expressions and I/O statements: Arithmetic expressions–Precedence of arithmetic operators–Type converters in expressions–Mathematical(library) functions–Data input and output -Get char and put char functions– Scan f– Print f–Simple programs.

(c) Control statements: If-Else statement – Switch statement – The? operator – GO TO – While, Do-while, FOR statements – BREAK and CONTINUE statements.

UNIT–II:(a) Arrays

One dimensional and two-dimensional arrays – Initialization – Type declaration – Inputting and outputting of data for arrays– Programs of matrices addition, subtraction and multiplication.

(b) User Define functions: The form of C functions – Return values and their types – Calling a function – Category of functions. Nesting of functions. Recursion. ANSI C functions –Function declaration. Scope and lifetime of variables in functions.

(c) Pointers: Accessing the address of variable. Declaration and Initialization of pointer variables. Accessing the value of the variable through its pointer. Pointer Expressions- Pointers and Arrays – Pointers and structures.

UNIT– III: Linear and non-linear equations

(a) Solution of Algebraic and transcendental equations – Bisection, Falsi position and Newton-Rhapson methods– Basic principles– Formulae–Algorithms.

(b) Simultaneous equations: Solutions of simultaneous linear equations – Gauss elimination and Gauss-Seidel iterative methods -Basic principles –Formulae–Algorithms

UNIT–IV:(a) Interpolations

Concept of linear interpolation – Finite differences – Newton's and Lagrange's interpolation formulae –Principles and Algorithms Curve fitting – regression – Least square fitting – Linear and quadratic**.**

(b) Numerical differentiation and integration: Numerical differentiation –algorithm for

evaluation of first order derivatives using formulae based on Taylor's series – Numerical integration– Trape zooidal and Simpson's1/3 rule – Formulae–Algorithms.

(c) Numerical solution of ordinary differential equations: Euler, method, Fourth order Runga-Kutta Method.

Books for Study

1. Programming with 'C'–Byron Gottfried, 4th Edition, Tata Mc Graw Hill, 2010.
2. Programming in 'C' –Balaguruswamy,8th Edition, Tata Mc Graw-Hill,1990.
3. Numerical Methods, E. Balaguru swamy, Tata Mc GrawHill,1999.
4. Computer oriented numerical methods–Raja Raman,4th Edition, PHILearning,2018.
5. Let Us C, Yeswanth Kanetkar,17th Edition, Infinity Science Press, 2008.

(Compulsory Foundation)

PHY-103©	Sensors and Transducers	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on Sensors and Transducers is to familiarize the students of M.Sc. students with the various electronic sensors used in the industry and to understand the working principles of the sensors so that they can design and use them in industry or in real time applications.

Course Outcomes: At the end of the course, the student will be able to

CO1	Apply basics knowledge of sensors and transducers in understanding the measurement systems.
CO2	Study and understanding of various types of sensors
CO3	Study and understanding of various types of Transducers
CO4	Analyze the outcome of the signal conditioners like filters, detectors and amplifiers

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	2	3	2	3	2
CO2	3	3	3	1	2	1	1	1	3	2	3	2
CO3	3	3	3	2	2	1	1	2	1	2	2	2
CO4	3	3	3	3	2	2	2	2	2	2	2	2

(Compulsory Foundation)

PHY103(c):Sensors and Transducers

UNIT–I: General Introduction to sensors/transducers

Definition of a transducer/sensor. Role of a transducer in a generalized measurement system. Classification of transducers. Classification of transducers. Significant parameters of transducer. Temperature scales. Mechanical temperature sensors. Platinum resistance thermometer. Thermistors. Thermocouples.

UNIT–II: Displacement and strain transducers

Displacement transducers- Variable resistance, inductance and capacitance. Linear voltage differential Transformer (LVDT) Strain- Definition, Principal of working of strain gauges. Gauge factor. Types of strain gauges. Materials for strain gauges. Temperature compensation. Application

UNIT–III: Opto-electronic transducers

Photoemission tube. Photomultiplier cell. Photo conductive cell. Photo voltaic cell (solar cell). Photodiode, Photo–transistor, Photo FET, Light emitting diode. Liquid crystal display. Opto electronic couplers. Laser diode.

UNIT–IV: Single conditioners (Filters, Detectors & Amplifiers)

Filters – Integrators, Differentiators and active filters. Detectors Peak Detectors sample and _hold circuits. Phase sensitive detector and precision rectifiers, Amplifiers– chopper stabilized DC amplifiers. Instrumentation amplifiers. Logarithmic and anti-logarithmic amplifiers Isolation amplifiers, Lock in amplifiers.

Books for Study

1. Instrumentation Measurement Analysis, NakraandChaudary,4th Edition, TataMcGraw-Hill,1985.
2. Instrumentation- Devices and Systems, Rangan, Mani and Sharma,2nd Edition, Tata Mc GrawHill,1983.
3. A course in Electrical and Electronic Measurements and Instrumentation, AK Sawhney, 4th Edition, Dhanpat Rai & Company, 2016.
4. Instrumental Methods of Analysis, Willard, Meritt, Dean and Seattle,7th Edition, Van Nostr and,1981.
5. Hand Book of Biomedical Instrumentation, RS Khandpur,3rd Edition, Tata Mc Graw-Hill,1987.
6. Fundamentals of Electronic Devices, David A. Bell, 5th Edition, Oxford University Press,2008.
7. An introduction to Operational amplifiers, SV Subramanyam,2nd Edition, Macmillan India,1980.

(ElectiveFoundation)

PHY-104(a)	Atomic and Molecular Physics	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level spectroscopy

Course Objectives: The aim and objective of the course on **Atomic and Molecular Physics** for the students of M.Sc. Physics is to equip them with the knowledge of Atomic, Rotational, Vibrational, Raman, and Electronic spectra.

Course Outcomes: At the end of the course, the student will be able to

CO1	Have the basic knowledge of different atomic models, quantum nos and atomic spectra.
CO2	Understand the classical/quantum description of effect of magnetic field and Electric field on spectral lines.
CO3	Know the different types of rotation of the molecules and rotational constants and intern structure of the molecules.
CO4	Study the vibrational spectra of molecules and applications of vibrational spectra of molecules and applications of vibrational spectra

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2
CO2	2	2	3	3	2	1	2	2	2	3	1	1
CO3	2	2	3	3	2	1	2	2	2	3	1	3
CO4	2	2	3	3	2	1	2	2	2	3	1	3

(ElectiveFoundation)

PHY104(a): Atomic and Molecular Physics

UNIT-I: Atomic Spectra

Introduction: Hydrogen atom (one electron atom) - quantum numbers- Spectra of hydrogen atom- Spectra of alkali elements- Fine structure-Elements with more than one valence electron-Forbidden transitions and selection rules- Vector atom model– Spin-orbit interaction energy-Stern-Gerlach experiment-Experimental setup to demonstrate S-G **-** Coupling schemes- Spectral terms and term symbols based on electron configuration - LS coupling - JJ coupling- Interaction energies in LS and JJ couplings - Hund's rule of multiplicity- Pauli's exclusion principle-Equivalent and non-equivalent electronic systems.

UNIT-II: Zeeman and Stark Effects

Introduction: Zeeman effect- Normal and anomalous Zeeman effects - Experimental details – Magnetic moment of atom and Lande's 'g'-factor - Zeeman effect in sodium atom - Lande g-formula for LS and JJcouplings-Paschen-Backeffect-Splittingofsodiumlinesandselectionrules-Starkeffect-Experimental details - Weak and strong field effects – linear and quadratic Stark effects-Width of spectral lines.

UNIT-III: Diatomic Molecular Spectroscopy–Rotational Energies

Introduction–Rotational, vibrational, electronic spectra of diatomic molecules–types of molecules–Linear, symmetric top, asymmetric top and spherical top molecules –Rotational spectra of a diatomic molecule as rigid rotator– Energy levels and spectra of non-rigid rotor –Intensity of rotational lines-Rotational spectra of polyatomicmolecule–Rotationalanalysisofelectronicspectra-Evaluation of rotational constants-Effect of iso topic substitution on rotational levels–Stark splitting of rotational lines–Stark modulated microwave spectrometer – Applications of rotational spectroscopy

UNIT-IV: Diatomic Molecular Spectroscopy –Vibrational Spectra

Introduction–Vibrational spectra of diatomic molecule–Diatomic molecule as simple harmonic oscillator–An harmonic oscillator–Energy levels and spectrum– Molecule as vibrating rotator – PQR branches – progressions and sequences –Vibrational analysis of electronic spectra-Deslander's table–Evaluation of vibrational constants–Morse potential energy curve
– Frank-Condon principle – Intensity distribution in absorption and emission spectra -Effect of isotopic substitution on vibrational bands–IR spectrometer–FTIR spectroscopy–Principle–Interferometer arrangement–advantages- Applications of vibrational spectroscopy

(ElectiveFoundation)

Books for Study

1. Introduction to Atomic Spectra, H.E. White, McGraw-Hill Kogakusha. Ltd., New Delhi (1934).
2. Elements of Spectroscopy by Gupta, Kumar, Sarma, Pragati Prakasan,(2012).
3. Fundamentals of Molecular Spectroscopy, C.N. Banwell and E.M. Mc Cash, Tata McGraw-Hill Publishing Company Ltd., New Delhi.(1994).
4. Spectroscopy, Volume I and III, B.P. Straughan and S. Walker, John Wiley & Sons Inc., New York. (1976).
5. Introduction to Molecular Spectroscopy, G.M.Barrow, Mc Graw-Hill Book company, Inc., New York. (1962).
6. Spectra of Diatomic Molecules, G. Herzberg, D. Van Nostr and Company Inc, New York,(1950).
7. Molecular Spectroscopy, J.M.Brown, Oxford Science Publications, Oxford.(1998).
8. Molecular Structure and Spectroscopy, G. Aruldhas, Prentice- Hall of India, Pvt., New Delhi,(2005).

PHY-104(b))	Optical, Microwave and Satellite Communications	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Basic Electronics

Course Objectives: The aim and objective of the course on Optical, Microwave and Satellite Communications for the students of M.Sc. Physics is to equip them with the knowledge of Optical, microwave and satellite Communications.

Course Outcomes: At the end of the course, the student will be able to

CO1	understand microwave communication system
CO2	Understand functioning of Radar systems
CO3	Study different digital modulation techniques
CO4	Differentiate losses in optical fiber link and state transmission characteristics of optical fiber

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2
CO2	2	2	3	3	2	1	2	2	2	3	1	1
CO3	2	2	3	3	2	1	2	2	2	3	1	3
CO4	2	2	3	3	2	1	2	2	2	3	1	3

(ElectiveFoundation)

PHY104(b): Optical, Microwave and Satellite Communications

UNIT– I: Microwave Communications

Advantages and Disadvantages of microwave transmission, loss in free space, propagation of microwaves, atmospheric effects on propagation, Fresnelz one problem, ground reflection, fading Sources, Detectors, components, antennae used in MW communication systems.

UNIT–II: **Radar Systems**

Radar block diagram and operation, radar frequencies, pulse considerations. Radar range equation, derivation of the radar range equation, minimum detectable signal, receiver noise, Signal to noise ratio, Integration of radar pulses, Radar cross section, Pulse repetition frequency, Antenna parameters, System Losses and propagation losses, Radar transmitters, receivers, Antennas, Displays.

UNIT-III: Digital Communications

Digital Communications: Principles of digital communications, digital radio, frequency shift keying, phase shift keying, quadrature amplitude modulation.

UNIT–IV: **Optical and Satellite Communications**

Optical Communications: Optical transmitter and receiver for analog and digital communications, coherent and non-coherent detection, signal to noise ratio, error rate, coding, synchronization and equalization in optical data transmission.

Satellite Communications: Orbital satellites, geo stationary satellites, orbital patters, look angles, orbital spacing, satellite systems, Link modules.

Books for Study

1. Microelectronics by Jacob Millman, 2nd Edition, Mc Graw-Hill International Book Co., New Delhi, 1990.
2. Optoelectronics: Theory and Practice, edited by Allen Chappel, 11th Edition, Mc Graw Hill, International Book Co., New York,1978.
3. Microwaves" by K.C. Gupta,2nd Edition, Wiley Eastern Limited, New Delhi,1979.
4. Advanced Electronics Communications Systems by Wayne Tomasi, 6th Edition, Prentice Hall,1998.

(Elective Foundation)

PHY-104(C)	Computer Architecture and Networking	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Basic Physics and Electronics

Course Objectives: The aim and objective of the course on Computer Architecture and Networking for the students of M.Sc. Physics is to equip them with the knowledge of Computer architecture and working and also various networking protocols.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand basics of logic circuits and computer functional blocks
CO2	Know machine instructions and assembly languages
CO3	Comprehend I/O organization
CO4	Appreciate differences between different memory devices

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2

CO4	2	2	3	3	2	1	2	2	2	3	1	3

PHY104(c):Computer Architecture and Networking

UNIT– I: Logic Circuits

Logic functions – synthesis of logic functions – Minimization of logic - Synthesis with NAND and NOR gates – Implementation of Logic gates – Flip-Flops – Registers and shift registers – counters – decoders – multiplexers – PLDs – sequential circuits. Basic structure of computers: Functional units – Basic operational concepts – Bus structures performance – Multi processors and multi computers.

UNIT–II: Machine Instructions and programs

Numbers, arithmetic operations and characters – memory locations and address, operations – Instructions and instruction sequencing–addressing modes–assembly language–basic input/output operations–subroutines–encoding of machine instruction. Instructions–assembly languages–O/I operations-registers and addressing–instructions–assembly language –instructionsof68000andIntelPentium.

UNIT–III: Input/output organization

Accessing I/O devices – interrupts – direct memory access – buses 240 interface circuits – standard I/O interface.

UNIT– IV: Memory System

Concepts semiconductor RAM memories – Randomly memories - cache memories performance considerations – virtual memories – memory management requirements – secondary storage arithmetic: addition and subtraction of signed numbers – design of fast adders – multiplication of positive numbers–signed oper and multiplication–fast multiplication–integer division –floating point numbers and operations.

Books for Study

1. Hamacher CV ranesic Z and Zaky S. Computer Organization, 5th Edition, Mc Graw Hill 2002.
2. Stallings W. Computer Organization and Architecture6th Edition, Pearson Education2003
3. Mano MM, Computer System Architecture 3rd Edition Phi 1993
4. Yarbrough J.M. Digital Logic Applications and Design, Thomas Learning1997
5. Heuring VP and Jordan HF Computer Systems Design and Architecture, Pearson Education 1977

(Mandatory Core)

PHY201	**Statistical Mechanics**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level statistical mechanics

Course Objectives: The aim and objective of the course on **Statistical Mechanics** is to equip the M.Sc. student with the techniques of statistical ensemble theory so that he/she can use these to understand the macroscopic properties of the matter in bulk in terms of its microscopic constituents.

Course Outcomes: At the end of the course, the student will be able to

CO1	Use ensemble theory to explain the behavior of Physical systems
CO2	Understanding
CO3	Explain the statistical behavior of Bose-Einstein and their applications.
CO4	Fermi –Dirac Statistics & Fluctuations

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	-	1	-	-	-	-	-	1	1	-	-	-
CO2	3	3	3	1	3	2	1	2	2	1	1	1
CO3	3	3	3	1	2	2	1	2	2	1	1	1
CO4	3	3	3	1	2	2	1	2	2	1	1	1

PHY201: Statistical Mechanics

UNIT-I: Ensembles

Phase space – Concept of ensembles – Types of ensembles - Ensemble average -Liouville's Theorem – Microcanonical ensemble: ideal gas – Gibb's paradox and its resolution – Entropy and probability – Canonical ensemble – Ideal gas in canonical ensemble –Grand canonical ensemble–Ideal gas in grand canonical ensemble– Comparison of various ensembles.

UNIT–II: Partition Functions

Canonical partition function – Molecular partition function – Transnational partition function – Rotational partition function – Vibrational partition function – Electronic and Nuclear partition functions – Applications of Rotational partition function – Applications of vibrational partition function to solids

UNIT–III: Maxwell –Boltzmann and Bose –Einstein Statistics

Maxwell-Boltzmann distribution- Distribution of velocities–Experimental verification-Calculation of mean values–Equipartition energy- Bose–Einstein distribution, Bose–Einstein condensation, Black body radiation and the Planck's radiation law - Dulong and Petit's law - Einstein and Debye's theories of heat capacities - Liquid helium – Two fluid model of liquid helium II– Super fluid phase of ^{3}He.

UNIT–IV: Fermi –Dirac Statistics & Fluctuations

Fermi - Dirac distribution – Electrons in metals – Thermionic emission – Magnetic susceptibility of free electrons – White dwarfs – Fluctuations in ensembles, On sagar's one dimensional and reciprocal rotations and their applications to thermos electric phenomena, Kelvin's first and second equations: One dimensional random walk–Random walk and Brownian motion.

Books for Study

1. Statistical Mechanics by B.K. Agarwal, Melvin Eisner- Publisher John Wiley & Sons,1988
2. Statistical Mechanics and properties of Matter by ESR Gopal–Publishers Ellis Horwood, 1974
3. Statistical and Thermal Physics by F. Reif-Publisher WavelandPress,2009
4. Elementary Statistical Mechanics by C.Kittel-Dover Publications, 2012
5. Statistical Physics by Bhattacharjee, Allied Publishers Limited,2000
6. Thermal Physics by Kittel and Kremer –W.H. Freeman and Company, 1980

(Mandatory Core)

PHY- 202	Electromagnetic Theory, Lasers and Modern Optics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level optics and Lasers

Course Objectives: Course Objectives: The aim and objective of the course on Electromagnetic Theory, Lasers and Modern Optics is to expose the M.Sc. students to the basics of the challenging research field of optical fibres and their use in nonlinear optics.

Course Outcomes : At the end of the course, the student will Analyze the propagation of light in optical fiblbe able to

CO1	Understand the electro statistics and magneto statistics and also the properties of propagation of electromagnetic radiation in different media
CO2	Know about the properties of laser beam and the working of different lasers and applications
CO3	Describe the fourier analysis in optics problems and to understand the concept of holography
CO4	Analyze the propagation of light in optical fibers and to know the various applications of optical fibers

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	-	1	-	1	-	1	-	3	-	1
CO2	3	2	1	1	1	1	-	1	-	3	-	1
CO3	2	2	-	1	-	1	-	1	-	3	-	1
CO4	3	2	1	1	1	-	-	1	-	3	-	1

PHY202: Electromagnetic Theory, Lasers and Modern Optics

UNIT– I: Electromagnetic Theory

Electromagnetic radiation; Introduction to electrostatics and magnetostatics–Electro dynamics: emf – electromagnetic induction – Maxwell's equations in differential and integral forms- Retarded potentials – Radiation from moving point charge and oscillating dipoles –Linear antenna–Radiation resistance –electric quadrupole radiation - Lienard –Wiechert potentials.

General wave equation – Propagation of light in isotropic dielectric medium – Dispersion – Propagation of light in conducting medium- skin depth–Reflection and refraction at the boundary of a dielectric interface– Fresnel's equations– Propagation of light in crystals-Double refraction.

UNIT–II: Lasers and Non-Linear Optics

Introduction to lasers – Spontaneous and stimulated emission – Laser beam properties – Einstein coefficients – Population inversion – Pumping schemes – Losses in laser radiation – Threshold condition for laser oscillation – Laser cavity - Q factor– different experimental methods – Rubylaser- Ga Aslaser -He-Nelaser–Argon ionlaser– CO_2laser–Laser applications.

Basic Principles – Origin of optical nonlinearity - Harmonic generation – Second harmonic generation–Phase matching condition–Third harmonic generation–Optical mixing–Parametric generation of light – Parametric light oscillator – Frequency up conversion – Self focusing of light -Guided wave optics-Pulse compression -Optical solutions.

UNIT–III: Holography and Fourier Optics

Introduction to Holography – Basic theory of Holography – Recording and reconstruction of Hologram–Diffuse object illumination– Speckle pattern–Frene land Fourier transform Holography– Applications of Holography.

Introduction to Fourier optics – Two dimensional Fourier transforms – Transforms of Dirac-delta function – The convolution integral – convolution theorem- Spectra and correlation – Parsevel's formula–Apodization–Array theorem– Fourier methods in diffraction- Fraunhouffer diffraction of single slit, double slit and transmission grating using Fourier method.

UNIT–IV: Fiber Optics

Total internal reflection - Optical fiber modes and configuration – Single mode fibers – Graded index fiber structure – Fiber materials and fabrication – Mechanical properties of fibers – Fiberoptic cables – Attenuation – Signal distortion on optical wave guides - Erbium doped fiber amplifiers – Solitons in optical fibers - Block diagram of fiber optic communication system - Applications of optical fibers in communication and medicine.

Books for Study

1. Introduction to Electro dynamics, D.J. Griffiths, Prentice-Hall, India, 2015
2. Electromagnetics, B.B. Laud, Wiley-Eastern, New Delhi, 2011
3. Introduction to Modern Optics, G.R. Fowels,2012
4. Lasers and their Applications, M.J. Beesly, Taylor andFrancis,1976
5. Lasers and Non-Linear Optics, B.B. Laud, Wiley Eastern Ltd.,1983
6. Optics, E.Hecht, Addison Wiley,1974
7. Optical Fiber Communications, G. Keiser, Mc Graw HillBook, 2000

(Compulsory Foundation)

PHY-203(a)	Nuclear Physics	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Nuclear Physics** is to familiarize the students of M.Sc. class to the basic aspects of Nuclear Physics like static properties of nuclei, radioactive decays, nuclear forces, nuclear models, and nuclear reactions so that they are equipped with the techniques used in studying these things.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the basics of nuclear forces and their characteristics and also about various nuclear models
CO2	Know the various types of nuclear reactions and nuclear decay system
CO3	Understand the basic principles in nuclear accelerators and rectors and also their applications
CO4	Describe the various elementary particles and their conservation layers.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	1	2	1	1	2	1	2	2	2

CO3	3	3	1	1	2	1	1	2	1	2	2	2
CO4	3	3	1	1	2	1	1	2	1	2	2	2

PHY203 (a): Nuclear Physics

UNIT– I: Nuclear Forces and Models

Nuclear Forces: Characteristics of nuclear forces –Ground state of Deuteron–Proton–Proton scattering– Neutron – Proton scattering–Meson theory of nuclear forces.

Nuclear Models: Introduction–The liquid drop model–Bethe-Weizacker semi-empirical binding energy equation and its applications – Nuclear shell model – Energy levels and calculation of angular momentum– Collective model.

UNIT–II: Nuclear Reactions and Decays

Nuclear Reactions: Types of nuclear reactions–Compound nuclear reactions–Nuclear cross section–Resonance theory– Briet Wigner formula.

Nuclear Decays: Nuclear transformations–Radioactivedecay–Alphadecay–Gamow'stheory–Betadecay–Fermi theory–Selection rules – Interaction of gamma radiation with matter–Photo electric effect

–Compton scattering–Pair production.

UNIT–III: Nuclear Accelerators and Reactors

Nuclear Accelerators: Introduction – Linear accelerators – Drift tube and Wave guide accelerators –Low energy circular accelerators–Cyclotron and Betatron–High energy circular accelerators–Synchrotron and Microtron.

Nuclear Reactors: Nuclear fission and fusion reactions – Nuclear chain reactions – Four factor formula –The critical size of a reactor – General aspects of reactor design – Classification of reactors – Power reactors (elementary aspects only).

UNIT–IV: Elementary Particles

Discovery and classification of elementary particles–Types of interactions –Conservation laws–Iso-spin, parity, charge conjugation – Time reversal – CPT theorem – Properties of leptons, mesons and baryons – Elementary particle symmetries (SU_2 and SU_3 symmetries) – Quark model – Search for Higg's particle –elementary ideas.

Book for Study

1. Nuclear Physics, Irving Kaplan, Narosa Pub. (1998).
2. Nuclear Physics, Theory and experiment–P.R. Roy and B.P. Nigam, New Age Int.1997.
3. Atomic and Nuclear Physics (Vol.2), S.N. Ghoshal, S. Chand & Co.(1994).
4. Nuclear Physics, D.C. Tayal, Himalaya Pub.(1997).
5. Atomic and Nuclear Physics, R.C. Sharma, K. Nath & Co., Meerut(2007).
6. Nuclei and Particles, E.Segre, WA Benjamin. Inc., (1965).
7. Introduction to Nuclear Physics, H.A. Enge, Addison Wesley(1975).
8. Introduction to Nuclear Physics, K.S. Krane, John Wiley & Sons(1988).

(Compulsory Foundation)

PHY-203(b)	IC fabrication Techniques	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **IC fabrication Techniques** is to familiarize the students of M.Sc. class to the basic aspects of IC fabrication, different techniques in preparing and processing of IC technology and deposition techniques.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand and compare crystal growth and Epitaxial deposition techniques
CO2	Understand structure and process of oxidation
CO3	Study the diffusion processes
CO4	Understand vacuum deposition techniques

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	1	2	1	1	2	1	2	2	2
CO2	3	3	1	1	2	1	1	2	1	2	2	2
CO3	3	3	1	1	2	1	1	2	1	2	2	2
CO4	3	3	1	1	2	1	1	2	1	2	2	2

PHY 203 (b): IC Fabrication Techniques

UNIT– I: IC Fabrication Technology

Wafer preparation: Silicon crystal growth, Wafer orientation, Sawing and polishing, Crystal orientation, Doping of crystals during growth.

Epitaxial deposition: Introduction theory, Growth of an Epitaxial layer, evaluation of Epitaxial layers.

UNIT– II: Oxidation

Introduction, equipment for thermal oxidation, oxidation process, oxide evaluation, recent advances in oxidation technology, oxide thickness determination, oxidation function, redistribution of dopant atoms during thermal oxidation, anodic oxidation.

UNIT-III: Impurity

Introduction and redistribution, the idea of diffusion, diffusion process, diffusion analysis, ion implementation,

UNIT–IV: Photomasking

Introduction – generation of photomask. Metallization: Metallization of requirements, vacuum deposition, deposition techniques, vacuum deposition cycle.

Books for Study

1. Instrumentation Measurement and Analysis by Nakra and Choudary, 4th Edition, Tata Mc Graw-Hill, 1985.
2. Instrumentation–Devices and Systems by Rangan, Sarma and Mani, 2nd Edition, Tata Mc Graw-Hill, 1997.
3. Measurement of Systems Applications and Design by Earnest O.Doeblin, 7th Edition, Mc Graw-Hill,1990.
4. A course in Electrical; and Electronic Measurements and Instrumentation by A.K. Sawhney, 3rd Edition, Dhanpat Rai &Company, 2016.
5. Electronic Instrumentation and Measurements Techniques, Cooperand Albert D.Helfriek, 3rd Edition, Pearson India Education, 2016.
6. Applied Electronics by G.K. Mithal, 20th Edition, Khanna Publishers, 1997.
7. Principles of Industrial Instrumentation by D.Patranabis,Tata Mc Graw-Hill,1976.

(CompulsoryFoundation)

PHY-203(c)	Advanced Microprocessors and Its Applications	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: **The aim and objective of the course on Advanced Microprocessors and Its Applications** is to familiarize the students of M.Sc. class to the basic aspects of micro processors and different programming and interfacing techniques.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understanding of microprocessor architecture and evaluation
CO2	Develop skill of writing programs in ALP for various applications of 8085 & 8051
CO3	Interface various peripherals with 8085 & 8051.
CO4	Understanding interrupts and direct memory access

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

(CompulsoryFoundation)

PHY203(c): Advanced Micro processors and Its Applications

UNIT–I: Microprocessors and its Architecture

Internal microprocessor architecture, Real mode and protected modes of memory addressing, Memory paging.

Addressing modes-Data addressing modes, program memory – addressing modes, Stack - memory addressing modes.

Instruction Set - Data movement instruction, Arithmetic and logic Instruction, Program control instructions, Assembler details.

UNIT–II: Programming the Micro processor

Modular programming, using the keyboard and video display, Data conversions.

Hardware Specifications - Pin - outs and the pin functions, clock - generator (8284A), Bus buffering and latching, Bus timing, Ready and Wait state, Minimum mode versus maximum mode.

UNIT–III: Memory Interface

Memory devices, Address decoding,8088and80188 (8-bit) memory interface, 8086,80186, 80286and 80386 (16-bit) memory interface.

Basic I/O Interface - Introducing to I/interface, I/O port address decoding, 8255,8279, 8254, ADC and DAC (excluding multiplexed display& keyboard displayusing8255).

UNIT–IV: Interrupts

Basic interrupt processing, Hardware interrupts, expanding the interrupt structure,8259APIC.

Direct Memory Access-Basic DMA operation, 8237DMAcontroller.

Bus Interface -PCI bus.

(ElectiveFoundation)

PHY204(a)	**Mathematical Physics**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level mathematics

Course Objectives: The aim and objective of the course on **Mathematical Physics** is to equip the M.Sc. Students with the mathematical techniques that he/she needs for understanding theoretical treatment in different courses taught in this class and for developing a strong background if he/she chooses to pursue research in physics as a career.

Course Outcomes: At the end of the course, the student will able to

CO1	Understand the basics and applications of special functions in all the branches of Physics.
CO2	Use Fourier series and transformations as an aid for analyzing physical problems.
CO3	Apply integral transform to solve mathematical problems of Physics interest.
CO4	Formulate and express a physical law in terms of complex variables and simplify it by use of coordinate transforms.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	1	1	2
CO2	3	3	2	2	-	1	1	-	2	1	1	2
CO3	3	3	2	2	-	1	1	-	2	1	1	2
CO4	3	3	2	2	-	1	1	-	2	1	1	2

(ElectiveFoundation)

PHY204(a): Mathematical Physics

UNIT-I: Special Functions

Beta and Gamma Functions – Definitions and properties – Evaluation of integrals, Legendre, Bessel and Hermite differential equations– Solutions– Generating functions– Orthogonal properties of Legendre, Bessel and Hermite Functions (Proof not necessary)–Recurrence relations– (Proof for Legendre polynomials only).

UNIT-II: Integral Transforms

Fourier Transforms: Properties of Fourier transforms – Fourier sine and cosine transforms-Power in Fourier series **–** Modulation theorem, Fourier transform of impulse function, Constants, Unit step function and Periodic functions.

Laplace Transforms: Definition and notation – Properties of Laplace transforms – Laplace transforms of Dirac delta function and periodic functions (Square wave, sawtooth wave and triangular wave) –Inverse Laplace transforms– properties– Solution of linear differential equations with constant coefficients - Applications to LCR circuits and resonance of simple pendulum.

UNIT-III: Numerical Techniques

Solution of an equation – Bisection method, Regular False method, Newton – Rhapson method Solutions of simultaneous– Gauss elimination method and Gauss-Seidel method–Interpolations - Newton's interpolation and Lagrange's interpolation, Curve fitting – Method of Least squares. Numerical differentiation and integration – Trapezoidal rule and Simpson's 1/3 rule – Solutions of differential equations– Euler's method and Runga-kutta Methods.

UNIT–IV: Complex Variables

Functions– Complex differentiation- Analytic function-Cauchy–Riemann equations –Derivatives of elementary functions – Singular points and classification. Complex integration - Cauchy's theorem – Integrals of special functions – Cauchy's integral formula – Taylor's and Lorentz theorem (statements only) – Residues, calculations of residues - Residue theorem – evaluation of definite integrals.

(ElectiveFoundation)

Books for Study

1. Mathematical physics, B.D. Gupta,4th edition, Vikas publishing house,2010
2. Mathematical physics, B.S. Rajput, Pragati Prakashan Meerut, 2017
3. Special Functions for Scientists and Engineers, W.W. Bell, DoverPublications,2013
4. Laplace Transforms, Murray Spiegle, Schaum's outlineseries, Mc Graw Hill, International Book Company, NY, 2005
5. Applied Mathematics for Engineers, Louis A. Pipes, Lawrence R. Harvill, Courier Corporation, 2014
6. Theory and Properties of Complex Variables, Schaum's outlineseries, Murray R. Spiegel, Seymour Lipschutz, John J. Schiller, Dennis Spellman, Mc Graw-Hill, 1976
7. Complex Variables and Applications, Brown and Churchill, Mc Graw–Hill,2013
8. Applied Fourier analysis, Hweipiao Hsu, UnitechDivision,1984
9. An Introduction to Mathematical Physics, Suresh Chandra, Mohit Kumar Sarma Alpha Science International, 2013.

(Elective Foundation)

PHY204(b)	**Introduction to VLSI design**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level mathematics

Course Objectives: The aim and objective of the course on is to equip the M.Sc. Students with the **Introduction to VLSI design** that he/she needs for understanding theoretical treatment in different courses taught in this class and for developing a strong background if he/she chooses to pursue research in physics as a career.

Course Outcomes: At the end of the course, the student will able to

CO1	Demonstrate a clear understanding of CMOS fabrication flow and technology scaling.
CO2	Analyze CMOS based logic circuit
CO3	Realize logic circuits with different design styles
CO4	Understand Front & Back end design aspects of simple VLSI Digital circuits

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	1	1	2
CO2	3	3	2	2	-	1	1	-	2	1	1	2
CO3	3	3	2	2	-	1	1	-	2	1	1	2
CO4	3	3	2	2	-	1	1	-	2	1	1	2

PHY 204 (b): Introduction to VLSI Design

UNIT-I: **An Overview of VLSI and Logic Design with MOSFET**

Complexity and Design, Basic concepts, Ideal switches and Boolean operations, MOSFETs as switches, Basic logics gates in CMOS, Complex logic gates in CMOS, Transmission Gate circuits, Clocking and data flow control.

UNIT-II: Physical Structure and Fabrication of CMOS ICs

Integrated Circuit layers, MOSFETs, CMOS layers, Designing FET arrays, Overview of silicon processing, Material growth and deposition, Lithography, The CMOS process flow, Design rules.

UNIT-III: **Elements of Physical Design and Electrical Characteristics of MOSFETs**

Basic concepts, Layout of basic structures, Cell concepts, FET sizing and the unit transistor, Physical design of logic gates, Design hierarchies, MOS physics, nFET current-voltage equations, FET RC model, pFET characteristics, Modeling of small MOSFETs.

UNIT-IV: **Electronic analysis of CMOS logic gates**

DC characteristics of the CMOS inverter, Inverter switching characteristics, Power dissipation, DC characteristics: NAND and NOR gates, NAND and NOR transient response, Analysis of complex logic gates, Gate design for transient performance, Transmission gates and pass transistors.**Designing High-speed CMOS Logic Networks**- Gate delays, Driving Large capacitive loads, Logical effort, Bi CMOS drivers.

Book for Study

PHY -204 (c)	Materials Science for Industrial Applications	L-5,T-1,P-0	4Credits

Pre-requisite: Course on Particle Physics

Course Objectives: The aim and objective of the course on Materials Science for Industrial Applications is to expose the students of M.Sc. students to experimental aspects of different equipment and methods used in the fields of Industrial applications

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand various experimental techniques for describing interaction of organic materials
CO2	Use error analysis for experimental data.
CO3	Knowledge about the different types of the Liquid crystals
CO4	Apply the knowledge of phase transformations for various applications

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	-	-	2	-	1	-	-	1	-	1	1	1
CO2	-	-	-	3	-	-	-	3	1	1	1	1
CO3	-	-	1	2	3	-	1	3	2	2	2	2
CO4	-	-	1	3	3	1	1	2	2	2	2	2

PHY 204 (c): Materials Science for Industrial Applications

UNIT– I: Organic materials and their properties

Introduction - polymerization mechanism. Structure and properties of polymers. Strengthening of polymers. Behavior of polymers. Deformation of polymers and their industrial use. Ceramic Materials: Introduction– Classification of ceramic. Structure of ceramics. Polymorphism. Properties of ceramic and their applications.

UNIT–II: Liquid Crystals

Introduction–classification, oriental order, Elasticity, magnetic effects, optical properties – applications.

Ferroelectrics: General properties of ferro electric materials. Theories of ferroelectricity. Thermo dynamic of Ferro electric transitions. Magnetic Materials: Classification. The domain structure. Soft and hard magnetic materials, Ferrites, ceramic magnets.

UNIT–III: Phase diagrams and phase transformation

The Phase rules. Unary and binary phase diagrams. Typical phase diagrams- coper-zinc systems. Iron-carbon system. Other applications of phase diagrams. Phase transformation. Nucleation and growth. Nucleation kinetics. Martensic transformation.

UNIT–IV: Thin films

Theories of thin film nucleation and growth. Thin film preparation – Rf sputtering. Chemical vapor deposition. Thickens measurements. Electrical and optical properties of thin films Applications.

Super conductivity: Messier Effect. The critical field. Theories of super conductivity. Tunneling and Josephson effect. High Tc super conductors. Application of super conductors.

Books for Study

1. Introduction to Solid State Physics, Charles Kittel VII edition, John Wiley & Sons.
2. Solid State Physics, A.J. Dekker, Mc Millan Publications.
3. Solid State Physics, M.A. Wahab, Narosa Publishing House.
4. Fundamentals of Solid State Physics, Saxena, Gupta, Saxena, Pragathi Publications, Meerut.
5. Solid State Physics, R.L. Singhal, Kedar Nath Ram Nath & Co.Pub.
6. Science of Engineering Materials, C.M. Srivastsava and C.Srinivasan, New Age Inter. Pub.
7. Crystal Growth, B.R. Pamplin, Pergmon Press.
8. Crystal Growth from High Temperature Solutions, D. Elwell and H.J. Scheel, Academic Press.

(MandatoryCore)

PHY-301	Introductory Quantum Mechanics	L-5,T-1,P-0	4Credits

Pre-requisite: Basic knowledge of wave mechanical quantum Mechanics

Course Objectives: The aim and objective of the course on **Introductory Quantum Mechanics** is to introduce the students of M.Sc. class to the formal structure of the subject and to equip them with the techniques of vector spaces, angular momentum, perturbation theory, and scattering theory so that they can use these in various branches of physics as per their requirement.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the need for quantum mechanical formalism and its basic principles.
CO2	Appreciate the importance and implication of vector spaces, Dirac Ket Bra notations, eigen value problem.
CO3	Understand the need of approximate methods in solving problems
CO4	Understanding scattering theory and its importance.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	2	2	1	1	2	3	2	2
CO2	3	2	2	2	2	2	1	1	2	2	2	2
CO3	3	2	2	2	2	2	1	2	1	3	2	2
CO4	3	2	2	2	2	2	2	2	2	2	2	2

(MandatoryCore)

PHY 301: Introductory Quantum Mechanics

UNIT-I: Formulation and Simple Problems

Wave particle duality – Wave functions in coordinate and momentum representation- Postulates of quantum mechanics -Linear vector space: Hilbert space - Dirac's Bra and Ket notations-Hermitian operators and their properties-Matrix representation of an operator-Unitary operators-Unitary transformation - The Kronicker Delta and Dirac delta functions- Eigen values and Eigen functions for finite potential well and step barrier–Quantum mechanical tunneling.

UNIT-II: Quantum Dynamics and Simple Problems

Equations of motion - Schrodinger Picture- Heisenberg Picture- Interaction Picture-EquivalenceofvariousPictures-PoissonandCommutationbrackets-TheirProperties-EigenvaluesandEigenfunctionsforSimpleharmonicoscillator-Polynomial method and abstract operator method in one dimension- Eigen values and Eigen functions for a free particle and particle in a box in three dimensions.

UNIT-III: Approximate Methods

Time independent perturbation theory for non-degenerate levels: Perturbed harmonic oscillator, Normal Helium atom, Stark effect of the plane rotator. First order perturbation theory for degenerate levels: First order Stark effecting in hydrogen atom; Time dependent perturbation theory: Transition to continuum (Fermi Golden rule).

WKB approximation – Turning points and connecting formulae: Application to potential barrier. Variational methods.

UNIT-IV: Scattering Theory

Introduction: classical theory of scattering - Quantum theory of scattering - Method of partial wave analysis- Scattering by a perfectly rigid sphere- Greens function in scattering theory -Born approximation-Validity of Born approximation-optical theorem.

(MandatoryCore)

Books for Study

1. Quantum Mechanics: Concepts and Applications by Nouredine Zettili, Wiley, Ed.,2021
2. Introduction to Quantum Mechanics by David J.Griffiths and Darrell F.Schoeter, Third Ed., Cambridge University Press India PvtLtd.,2018.
3. Quantum Mechanics: G. Arul das PHI learning private limited Second edition, 2018
4. Quantum Mechanics: S.L. Kakani and H.M. Chandalia Sultan Chand and, Sons First Edition, 2004
5. Advanced Quantum Mechanics: B.S. Rajput, Pragati prakasan,2019
6. Quantum Mechanics: V.K. Thankappan, New Age International(P)Ltd., Publishers,1993

8. Quantum Mechanics: S.L. Gupta, V. Kumar, H.V. Sharma and R.C. Sharma, Jai Prakash Nath and Company, 2007
9. An Introduction to Quantum Mechanics, P.T. Mathews Mc Graw Hill Publishing Company, 1974

(MandatoryCore)

PHY -302	Physics of Semiconductor devices	L-5,T-1,P-0	4Credits

Pre-requisite: Course on general Physics

Course Objectives: The aim and objective of the course on **Physics of Semiconductor devices** is to expose the students of M.Sc. students to experimental aspects of different semiconductor devise technologies, characterization and fabrication.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand various experimental techniques for semiconductor junctions and interfaces
CO2	Use I-V characteristics to understand the function of devices
CO3	Apply the knowledge of Junction transistors for various applications
CO4	To get familiarization with Power Devices and Semi conductor Technology

Mapping of course out comes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	-	-	2	-	1	-	-	1	-	1	1	1
CO2	-	-	-	3	-	-	-	3	1	1	1	1
CO3	-	-	1	2	3	-	1	3	2	2	2	2
CO4	-	-	1	3	3	1	1	2	2	2	2	2

(MandatoryCore)

PHY302: Physics of Semi conductor Devices

UNIT-I: Junctions and Interfaces

p-n Junctions: Descriptionofp-nJunctionaction–Junctioninequilibrium-applicationofbias–energy band diagrams. Abrupt junction – calculation of the built-in Voltage- electric field and potential distributions – Expression for Depletion layer capacitance, Static I-V characteristics of p-n junction diodes: Ideal diode model- Derivation of ideal diode equation. Real diodes – Carrier generation – recombination in the junction depletion region, I-V characteristics of Real Diodes.

Electrical breakdown inp-njunctions: Zener and Avalanche breakdown inp-njunctions, Distinction between the Zener and Avalanche breakdown.

UNIT-II: Junction Diodes

Majority carrier diodes: Tunnel diode- I-V characteristics, equivalent circuits as an oscillator and amplifier. Backward diode, Schottky barrier diode-operation and applications.

Microwave devices: Varactor diode- basic principle, equivalent circuit, Figure of merit and applications.p-i-ndiodeoperationanditsapplications.Transferred-electrondevices-Gunneffect devices- domain formation- modes of operation. Avalanche Transit devices: IMPATT diode, TRAPATT diode, BARITT diode.

UNIT-III: Junction Transistors

Bipolar junction transistors: Principle of operation- Analysis of the ideal diffusion transistor – Calculation of terminal currents, DC parameters. Ebers- Moll Equations–Four regions of operation of a bipolar transistor. Real transistors -- carrier recombination in the Emitter-Base junction depletion region – Effect of collector bias variation, avalanche multiplication in the collector – base junction and base resistance. Basic Structures and the operating principle of MOSFET, I-V characteristics of an ideal MOSFET, Charge Coupled Devices (CCD)-principle of operation.

UNIT–IV: Power Devices and Semi conductor Technology

Power rectifiers and Thyristors: Power rectifiers, Thyristors, Some special thyristor structures, Bidirectional thyristors, Field-controlled thyristor. Technology of Semiconductor Devices: Crystal growth and Wafer preparation, Methods of p-njunction formation, Growth and deposition of dielectric layers, Planar technology, Masking and lithography, Pattern definition, Metal deposition techniques.

(MandatoryCore)

Books for Study

1. Introduction to Semi conductor Materials and Devices by M.S. Tyagi, John Wiley & Sons (Asia) Pte. Ltd., Singapore, 2000.
2. Microwave Devices and circuits by SAMUELY. LIAO, Prentice-Hall of India,1999.
3. Microwave and Radar Engineering by M. Kulkarni, UMESH publications, New Delhi,1999.
4. Physics of Semiconductor Devices by S.M.Sze, 3rdEdition, Oct.2006,JohnWiley
5. Solid State Electronic Devices by B.G. Streetman, PHI, New Delhi, 2006

(GenericElective)

PHY-303 (a)	Applied Spectroscopy	L-3,T-1,P-2	4 Credits

Pre-requisite: Understanding of graduate level spectroscopy

Course Objectives: The aim and objective of the course on Applied Spectroscopy
For the students of M.Sc. Physics is to equip them with the knowledge of Atomic, Rotational, Vibrational, Raman, and Electronic spectra.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the rotational and vibrational spectra of di molecules and their applications in structure determinations.
CO2	Know the Raman effect and its use in the structural analysis of various molecules.
CO3	Have the knowledge about various spectrophotometer and the functioning of various parts in SPECTRO PHOTOMETER.
CO4	Understand the basic concepts of fluorescence and phosphorescence their applications in different fields

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2
CO2	2	2	3	3	2	1	2	2	2	3	1	1
CO3	2	2	3	3	2	1	2	2	2	3	1	3
CO4	2	2	3	3	2	1	2	2	2	3	1	3

(GenericElective)

PHY303(a): Applied Spectroscopy

UNIT-I: Molecular Spectroscopy

Introduction – Rotational and vibrational structure of electronic bands of diatomic molecules – Fortrat diagram – General relations – Combination relations for $^1\square$- $^1\square$ and $^1\square$ – $^1\square$ bands – Evaluation of rotational constants with reference to above transitions. Isotope effect in electronic spectra of diatomic molecules – Vibrational effect and rotational effect. Potential energy curves - Dissociation energy and pre-dissociation energy - Vibrations of polyatomic molecules: CO_2 and H_2O.

UNIT-II: Raman Spectroscopy

Introduction – Theory of Raman Scattering – Rotational Raman Spectra – Vibrational Raman Spectra–Mutual Exclusion Principle Laser Raman Spectroscopy Sample Handling Techniques – Polarization of Raman Scattered Light – Single Crystal Raman Spectra – Raman Investigation of Phase Transitions – Resonance Raman Scattering – Structure Determination using FTIR and Raman Spectroscopy. Fourier Transform (FT) Raman Spectroscopy and its additional advantages over the conventional Raman Spectroscopy - Surface enhanced Raman Scattering-Coherent Anti-Stokes Raman Spectroscopy.

UNIT–III: Spectro photometry

Introduction – Beer's law – Absorptivity – UV and visible absorption –Instrumentation – Essential parts of spectrophotometer – Gratings and prisms – Radiant energy sources – Filters – Photosensitive detectors – Barrier layer cells – Photo emissive cells – Photomultiplier tubes – Relationship between absorption in the visible and UV region and molecular structure – IR Spectrophotometry – Fourier Transform Infrared (FTIR) Spectrometer – Molecular structure – Qualitative and Quantitative analysis–Importance of photography in the spectro chemical analysis.

UNIT-IV: Fluorescence and Phosphorescence Spectroscopy

Introduction – Normal and Resonance Fluorescence – Intensities of Transitions – Non-radiative decay of fluorescent molecules – Phosphorescence and the nature of the triplet state – Population of the tripletstate–DelayedFluorescence–Excitationspectra–Experimentalmethods–Emission life time measurements–Time resolved emission spectroscopy –Applications of Fluorescence and Phosphorescence.

Books for Study

1. Molecular spectra and Molecular Structure Vol. I, G. Herzberg,2nd Ed, Van. Nostr and (1950).
2. Fundamentals of Molecular Spectroscopy, C.N. Banwell, Tata McGraw-Hill,(1983).
3. Spectroscopy Straughan and Walker(Vol.2 &3),John Wiley & Sons, (1976).

10. Basic Principles of Spectroscopy by R. Chang, Mic Graw Hill,1971.
11. Principles of Fluorescence Spectroscopy, Joseph R. Lakowicz- Plenum Press, (1983).

(GenericElective)

PHY-303(b)	Condensed Matter Physics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level solid state physics

Course Objectives: The aim and objective of the course on **Condensed Matter Physics** is to expose the students of M.Sc. class to the topics like elastic properties, thermal properties, Fermi surface studies and photoluminescence so that they are equipped with the knowledge on the matter in condensed phase.

Course Outcomes: At the end of the course, the student will be able to

CO1	They gain knowledge on elastic properties of solids and its importance.
CO2	Differentiate they gain knowledge on specific heat and Thermal importance.
CO3	Understand the importance of Fermi surface in electrical properties of Solids.
CO4	Gain knowledge on photoconductivity and its origin

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	1	2	2	2	1	2

CO3	2	2	1	2	1	2	2	2	1	2	1	2
CO4	2	2	1	2	2	2	1	2	1	2	2	2

(GenericElective)

PHY303(b): Condensed Matter Physics

UNIT-I: Elastic Properties of Solids

Lattice as a homogeneous and continuous medium - Analysis of stress and strain tensors – Hooke's law - Elastic compliances and stiffness constants– Elastic energy density – Reduction in the number independent elastic constants in cubic crystals–Cauchy's relations–Bulk modulus and compressibility – Elastic waves in cubic crystals – Formulation and solution of wave equations along [100], [110] and [111] directions – Experimental determination of elastic constants – Pulse-echo technique.

UNIT-II: Thermal Properties of Solids

Quantum theory of lattice vibrations – Properties of phonons – Lattice specific heat at low temperatures – Einstein and Debye models – Born cut-off procedure – Inelastic scattering of neutrons by phonons–Experimental study of dispersion curves–Inadequacy of harmonic model – Anharmonicity – Thermal expansion – Gruneisen parameter- Lattice thermal conductivity – Elementary kinetic theory– Role of U and N processes.

UNIT-III: Energy bands and Fermi Surfaces

Energy band calculations: Plane Wave method and Augmented Plane Wave (APW) method. Importance of Fermi surface – Characteristics of Fermi surface – Construction of Fermi surface - Quantization of electron orbits - Experimental study of Fermi surface: Anomalousskin effect – Cyclotron resonance – de Haas van Alphen effect.

UNIT-IV: Photo conductivity and Luminescence

Excitons: Weakly bound and tightly bound – Photoconductivity – Simple model – Influence of traps – Space charge effects – Determination of photoconductivity. Luminescence – Various types–Thermo luminescence, Electroluminescence, Photoluminescence, Cathodoluminescence and Chemiluminescence-Excitation and emission–Decay mechanisms –Applications

Books for Study

1. Solid State Physics, C. Kittel, Edition:8 th 2012, John Wiley & Sons.

CO4	2	2	3	3	2	1	2	2	2	3	1	3

(GenericElective)

PHY303(c): Embedded Systems

UNIT-I: Introduction to Embedded Systems

Embedded systems in today's world – examples of Embedded systems – Microprocessors and Micro controllers – Microchip and PIC microcontroller – Introduction to PIC micro controllers using the 12 series.

Architecture of 16F84A – Memory organization – in 16F84A – Timing generation – Power-up and Reset functions in 16F84A.

UNIT-II: Hardware Details of 16F84A

Parallel ports: Basic idea – Technical challenge – connecting to the parallel port – Parallel ports of PIC16F84A – Clock oscillator – Power supply – Interrupts – Timers and counters – watch dog timer– Sleep mode.

UNIT-III: Assembler and Assembler Programs

Basic idea – PIC 16 series instruction set and ALU – Assemblers and Assembler format – creating simple programs– Adopting a development environment– Building structured programs – Flow control: Branching and Subroutines – Generating time delays and intervals –Logical instruction– Arithmetic instructions.

UNIT-IV: PIC Microcontroller PIC16F873A

Block diagram and CPU– Memory and memory maps–Interrupts–Oscillator, Reset and Power supply– Parallel ports.PIC16F87XATimer0andTimer1–16F87XATimer2, Comparator and PR2 register–capture/Compare/PWM(CCP) Module–Pulse width modulation–ADC module.

Interface: LED displays– Liquid crystal displays–Sensors–Actuators.

Books for Study

1. Designing Embedded Systems with PIC Micro controllers: Principles and Applications by Tim Wilmshurst, First Edition, 2007, Newnes– Elsevier– Publishers.
2. Micro controllers: Theory and Applications by Ajay V. Deshmukh, Tata McGraw-Hill, New Delhi, 2005.
3. Designing with PIC Microcontrollers by JohnB. Peatman, Pearson Education,Inc.,1998.
4. The 8051 Micro controller and Embedded systems, by Mahammad Ali Mazidi and Janice Gillispie Mazidi, Pearson Education Asia, Pvt.Ltd.,2000.

(Skill Oriented Course)

PHY – 305	Advances in Physics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level physics

Course Objectives: The aim and objective of the course on **Advances Physics** for the students of M.Sc. Physics is to equip them with the knowledge of Nano technology, MEMS and remote sensing.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the concepts of nanotechnology
CO2	Physical and chemical techniques of nanomaterial synthesis
CO3	Concepts of Nano materials and Nano devices
CO4	Basics of remote sensing and understanding the concepts of Geographical Information system

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2
CO2	2	2	3	3	2	1	2	2	2	3	1	1
CO3	2	2	3	3	2	1	2	2	2	3	1	3
CO4	2	2	3	3	2	1	2	2	2	3	1	3

PHY305: Advances in Physics

UNIT–I: Nano Technology

Introduction to Nanomaterials– Zero, One- and Two-Dimensional Nanostructures-Quantum confinement-Density of states and Dependence of dimensionality–Properties of Nanomaterials –Carbon Nanotubes, Fullerenes, Graphene.

Synthesis of Nanomaterials–Physical Techniques: Ball Milling–Plasma Arc Deposition–Inert Gas Condensation –Pulsed Laser Deposition– Molecular Beam Epitaxy.

Chemical Techniques: Hydro thermal synthesis– Sol-Gel Process–Chemical Vapor Deposition.

Applications: Single Electron Transistor – Solar Cells–Light Emitting Diodes.

UNIT–II: Micro and Nano devices

Micro electro mechanical systems (MEMS): Introduction to MEMS, Basic MEM structure.

Applications of MEMS: Pressure sensors, Accelerometers Mass flow sensors.

Nanodevices: Quantum well and quantum dot devices: Infrared Detectors-Quantum Dot Lasers.

Carbon nano tube emitters-Photoelectrical cells - Plasmons propagation in wave guides.

UNIT–III: 8051 Micro controllers

Introduction of Microprocessors and Micro controllers, Micro controller: 8051 Internal Architecture, Register Structure, I/O pins, Memory Organization, 8051 Addressing modes. 8051 Assembly Language Programming Tools. 8051 Instruction set: Data Transfer Instructions, Arithmetic instructions, Logical instructions, Boolean Variable Manipulation Instructions-Bit Addressability, Single-Bit instructions, Program Branching Instructions-Jump, Loop, and Call instructions, Rotate Instructions, Stack Pointer.

UNIT -IV: Remote Sensing

Definition of remote sensing; introduction to concepts and systems; Electromagnetic radiation; electromagnetic spectrum; image characteristics; remote sensing systems; remote sensing platform; Sources of remote sensing information; Advantages of remote sensing. Application of Remote sensing in Environmental Management, Natural resource management–forest resources, water resources, land resources and mineral resources.

Books for Study

1. Nano structures and Nanomaterials: Synthesis, Properties and Application by Guozliong Cao, Imperial College Press (2004).
2. Introduction to Nano technology, By Charles P. Poole, Jr and Frank J. Owens, Willey India(2006).
3. An Introduction to Micro electro mechanical Systems Engineering by Nadim Maluf, Artech House Publishers, 2004
4. Nanomaterials Synthesis Properties and Applications, by Alen. S. Edelstein and Robert C. Cammarata, 1998.
5. The 8051 Micro controller and Embedded systems, by Mahammad Ali Mazidi and Janice Gillispie Mazidi, Pearson Education Asia, Pvt.Ltd.,2000.
6. Floyd F. Sabins Jr., Remote Sensing Principles and interpretation, by W.H. Free man and Company, 2nd Ed., New York, 1987.
7. T.M. Lilles and &R .W. Kiefer, Remote Sensing and Image Interpretation', by John Wiley & Sons, New York, 1994.
8. An Introduction to GIS by Ian Heywoodetal., Addision Wesley, Longmont Limited, England, 2011.

(Open Elective)

PHY – 306 (a)	Basic Spectroscopic Techniques	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level spectroscopy

Course Objectives: The aim and objective of the course on **Basic Spectroscopic Techniques** for the students of M.Sc. Physics is to equip them with the knowledge of Atomic, Rotational, Vibrational, Raman, and Electronic spectra.

Course Outcomes: At the end of the course, the student will be able to

CO1	Have the basic knowledge of Bohr's-Sommer feld Quantum theory of hydrogen like atom
CO2	Understand classical/quantum description of electronic spectra of atom and molecules
CO3	Use microwave and Raman Spectroscopy for analysis of known molecules
CO4	Correlate infrared spectroscopic information of known molecules with their physical description

Mapping of course out comes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	3	2	2	1	1	2	2	3	1	2
CO2	2	2	3	3	2	1	2	2	2	3	1	1
CO3	2	2	3	3	2	1	2	2	2	3	1	3
CO4	2	2	3	3	2	1	2	2	2	3	1	3

PHY 306 (a): Basic Spectroscopic Techniques

UNIT I: Fundamentals of Spectroscopy

Introduction - Interaction of Electromagnetic radiation with matter - Spectra of Hydrogen atom-quantum numbers -Forbidden transitions and selection rules- Spectroscopic transition between two stationary states - Absorption and emission of a photon - Einstein A and B coefficients - Line shape functions -Spectral broadening mechanisms-Spin or bit interaction energy-Stern-Gerlach experiment-L Scoupling– JJ coupling – Hund's rule of multiplicity - Pauli's exclusion principle - Rotational and vibrational spectra of different molecules-Energy expressions**.**

UNIT– II: Spectro photometry

Introduction – Beer's law – Absorptivity – UV and visible absorption –Instrumentation – Essential partsofspectrophotometer–Gratingsandprisms–Radiantenergysources–Filters–Photosensitivedetectors
– Barrier layer cells – Photo emissive cells – Photomultiplier tubes – Relationship between absorption in the visible and UV region and molecular structure – IR Spectrophotometry – Fourier Transform Infrared (FTIR)Spectrometer–Molecularstructure–QualitativeandQuantitativeanalysis–Importance of photography in the spectrochemical analysis.

UNIT–III: Colorimeters, spectrophotometers and microscopes

Colorimeter – Principle - Applications of colorimeters in analytical and biomedical purposes Spectrophotometer-Principle and working with block diagram–Salient features of individual blocks–Specifications and operation of spectrophotometers– Applications of spectrophotometers to chemical analysis Electron microscope – Transmission electron microscope - Principle and working with block diagram –Salient features of individual blocks – Scanning electron microscope - Principle and working with block diagram– Description of individual blocks–Applications of electron microscopes.

UNIT–IV: Resonance spectrometers and Mass Spectrometer

Electron spin resonance–theory–ESR spectrometer–Principle and working with block diagram–Experimental

techniques–Salient features of individual blocks– Applications of ESR.

Nuclear magnetic resonance–theory–NMR spectrometer-Principle and working with block diagram– Experimental techniques–Description of individual blocks– Applications of NMR.

Mossbauereffect–theory–Mossbauerspectrometer–PrincipleandworkingofMossbauerspectrometer -Experimental methods–Explanation of block diagram– Applications of Mossbauer studies.

Books for Study

1. Introduction to Atomic Spectra, H.E. White, Mc Graw- Hill Kogakusha. Ltd., New Delhi (1934).
2. Elements of Spectroscopy by Gupta, Kumar, Sarma, Pragati Prakasan,2012.
3. Spectrochemical Analysis, L. H. Ahrens and S.R. Tayler, Addison-Wesley, London, 1961.
4. Instrumental methods of Chemical analysis by Chatwal and Anand, Himalaya Publisher,2003
5. Spectroscopy by B.K. Sarma, Goel publishing House, Meerut,1993.
6. Spectroscopy VolI by Straughan and Walker, John Wileyand Sons,1976
7. Basic principles of Spectroscopy by Raymond Chang,Mic Graw Hill,1971
8. Molecular Structure and Spectroscopy by G. Aruldas, Prentice Hall of India,2001

(Open Elective)

PHY-306(a)	Nanomaterials and Devices	L-5,T-1,P-0	4Credits

Pre-requisite: Condensed matter physics

Course Objectives: The aim and objective of the course on **Physics of Nano-materials** is to familiarize the students of M.Sc. to the various aspects related to preparation, characterization and study of different properties of nanomaterials so that they can pursue this emerging research field as career.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understanding the basics of nanomaterials
CO2	Acquire knowledge of basic approaches to synthesize the nanaomaterials
CO3	Understand the physical and chemical properties of carbon nano tubes and nano structured materials.
CO4	Introduction to nanodevices

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	2	2	-	1	2	1	1	2	2	3
CO2	1	2	2	2	-	2	2	1	1	2	2	3
CO3	1	2	2	2	-	2	2	1	1	2	2	3
CO4	1	2	2	2	-	2	2	1	1	2	2	3

PHY 306 (b): Nanomaterials and DevicesUNIT-1: Introduction to Nanomaterials

Introduction to Nanomaterials-Zero, One and Two Dimensional Nanomaterials Quantum confinement, Density of states, Dependence of dimensionality–Physical and chemical properties.

UNIT–II: Synthesis of Nanomaterials

Introduction to Bottom –up and Top-down approaches

Ball milling –Inert Gas condensation – Physical vapor deposition -, Molecular Beam Epitaxy – Sputtering – Pulsed laser Deposition –Chemical vapor deposition - Sol Gel – Hydrothermal Synthesis

UNIT-III: Nano –Carbon

Carbon molecules: Nature of the carbon bond –New Carbon structure –carbon clusters – Smallcarbon clusters –Discovery of C_{60}–Structure of $C_{60}$and its properties –Synthesis of buckyballs and Applications.

Carbon Nanotubes: Fabrication –Structure -Electrical Properties – Mechanical properties – Applications of carbon Nanotubes

Graphene: Fabrication–Structure–ElectricalProperties–Mechanicalproperties–Applications.

UNIT–IV: Nano Devices

Introduction–Nanofabrication–Photo-Lithography–Patterntransfer–Introduction to MEMS –Single Electron Transistor–Solar Cells–Light Emitting diodes–Gas Sensors-Micro batteries –Field emission display devices –Fuel Cells.

Books for Study

1. Nano materials: Synthesis, operties and Applications–Edited by A.S. Edelstein and R.C. Cammarata, Institute of Physics Publishing, 2002.
2. Introudction to Nano technology–Charles P.Poole Jrand Frant J. Owens, Wiley Inter science, 2003.
3. Nano practices from Theroy to Applications edited by Gunter Schmid, Wiley VCH, 2004.
4. Nano electronics and Nano systems by K. Glosekotter and J. Dienstuthi (Springer), 2004.

(MandatoryCore)

PHY401:AdvancedQuantumMechanics

PHY- 401	**Advanced Quantum Mechanics**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Preliminary course of Quantum Mechanics

Course Objectives: The aim and objective of the course on **Advanced Quantum Mechanics** is to introduce the M.Sc. students to the formal structure of the subject and to equip him/her with the concept of identical particles, angular momentum. Relativistic quantum mechanics and Quantum field theory so that he/she can use these in various branches of physics as per his/her requirement.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the concept of identifiable particles
CO2	Understand the Orbital Angular momentum spin angular momentum and general angular momentum and their importance in spectroscopy
CO3	Give the significance of Klein Gordon and Dirac equation and explain the existence of antiparticles.
CO4	Apply the symmetries principles in calculating the conserved currents and charges.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	1	1	1	1	2	2	1	2	2
CO2	2	2	3	1	1	1	-	1	2	1	2	2
CO3	2	2	2	2	1	1	1	1	2	1	2	2
CO4	2	2	2	2	1	1	1	2	2	1	2	2

UNIT-I: Identical Particles and Molecules

Identical particles- Indistinguishability of Identical particles- Construction of Symmetric and Anti-symmetric wave functions for two and three particle systems - Pauli's Exclusion Principle-Hydrogen molecule-Spin-orbit interaction-Ortho and Parahydrogen-Spin statistics connection.

UNIT-II: Angular Momentum

(MandatoryCore)

PHY401:AdvancedQuantumMechanics

Introduction: Motion in Central Potential, Orbital Angular momentum –L_x, L_y,L_z,L^2,L^+ and L^- Operators -Commutation rules for angular momentum - Eigen values and Eigen functions of $L_z$and L^2 - Angular momentum in general - Allowed values of angular momentum J - Eigen valuesof J+and J-angular momentum matrices - Addition of angular momenta and Clebsh-Gorden co-efficients: Clebsh–Gorden co-efficient for J_1=J_2=1/2andJ_1=1,J_2=1/2-spinangular momentum and Pauli's spin matrices.

UNIT-III: Relativistic Quantum Theory

Klein – Gorden Equation – KG equation in Co-variant form- Probability Density and Probability Current Density – Inadequacies of K.G. Equation – Dirac's Relativistic Equation for a Free Particle -Dirac`s Matrices – Dirac`s Equation in Co-variant form –Plane wave solution – Negative Energy States–Spin Angular Momentum-Existence.

UNIT-IV: Quantization of Wave Fields

Concept of Field-Method of Canonical Quantization: Lagrangian Formulation of Field, Hamilton Formulation of Field -Second Quantization –Field equation – Quantization of Non-relativistic Schrodinger equation – Commutation and Anti-Commutation Relations, The N-representation-System of Fermions and Bosons– Creation and Annihilation.

(MandatoryCore)

PHY401:AdvancedQuantumMechanics

Books for Study

1. Quantum Mechanics: Concepts and Applications by Nouredine Zettili ,Wiley, Ed.,2021
2. Introduction to Quantum Mechanics by David J. Griffith sand Darrel lF.Schoeter, Third Ed., Cambridge University Press India PvtLtd.,2018.
3. Quantum Mechanics: G. Aruldas PHI learning private limited Second edition, 2018
4. Quantum Mechanics: S.L. Kakani and H.M. Chand alia Sultan Chand and, Sons First Edition, 2004
5. Advanced Quantum Mechanics: B.S. Rajput, Pragati prakasan,2019
6. Quantum Mechanics: V.K. Thankappan, New Age International(P)Ltd., Publishers,1993
7. A Text book of Quantum Mechanics :P.M. Mathews and K.Venkatesan, Tata Mc Graw Hill Publishing Company, 2008
8. Quantum Mechanics :S.L. Gupta, V. Kumar, H.V.Sharma and R.C.Sharma, Jai Prakash Nath and Company, 2007
9. An Introduction to Quantum Mechanics, P.T. Mathews Mc Graw Hill Publishing Company, 1974

(MandatoryCore)

PHY402:Physicsof AdvancedMaterials

PHY - 402	Physics of Advanced materials	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level solid state physics

Course Objectives: The aim and objective of the course on Physics of Advanced materials is to expose the students of M.Sc. class to the topics like crystal growth, dielectric properties, ferromagnetic properties and functional materials, concepts and applications, so that they are equipped with the investigating the matter in the condensed phase.

Course Outcomes: At the end of the course, the student will be able to

CO1	Gain in-depth knowledge about the formation of various crystal Growth techniques
CO2	Understand the properties dielectric and ferroelectric materials
CO3	Understand different on Ferro and Anti ferro and ferro magnetism and their applications
CO4	Study functional materials

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	1	2	2	2	1	2
CO2	2	2	2	2	2	2	2	2	2	2	2	2
CO3	2	2	1	2	1	2	2	2	1	2	1	2
CO4	2	2	1	2	2	2	1	2	1	2	2	2

UNIT-I: Crystal Growth and Imperfections in Crystals

Crystal growth: Nucleation and growth – Homogeneous and heterogeneous nucleation – Classification of crystal growth techniques–Melt growth: Bridgman, Czochralski techniques.

Imperfections: Classification of imperfections–Point defects–Schottky and Frenkel defects-Expressions for equilibrium defect concentrations – Colour centres –Production of colour centres – Line defects – Dislocations – Edge and Screw dislocations – Burger vector –Estimation of dislocation densities –Ordered phases of matter-Translational and orientational order

(MandatoryCore)

PHY402:Physicsof AdvancedMaterials

UNIT-II: Dielectrics and Ferroelectrics

Dielectrics: Introduction–Di polemoment– various types of polarization–Electronic, ionic and orientational polarization–Langevin's theory–Lorentz field–Clausius-Mosotti equation– Measurement of dielectric constant– Applications of dielectrics.

Ferroelectrics: Piezo-, Pyro- and ferroelectric crystals– Spontaneous polarization – Classification and properties of ferroelectrics - Ferroelectric domains – Oxygen ion displacement theory –Applications of ferroelectrics.

UNIT- III: Ferromagnetism and Anti-ferromagnetism

Ferromagnetism: Introduction – Weiss molecular field theory – Temperature dependence of spontaneousmagnetization–Heisenbergmodel–Exchangeinteraction–Ferromagneticdomains– Magneticbubbles–Blochwall –Thickness and energy–Ferromagnetic spin waves–Magnons– Dispersion relations.

Anti-ferro magnetism: Introduction–Twosublatticemodelofanti-ferromagnetism– Ferrimagnetism-Ferrites – Structure– Applications– Multiferroics

UNIT- IV: Functional Materials

Amorphous semiconductors: Band structure – Electronic conduction – Optical absorption – Applications. Liquid crystals: Classification– Orientational order and inter molecular forces– Magnetic effect– Optical properties– Applications.

Polymers: Classification–Structuralpropertycorrelation–Molecularweight–Crystallineinpolymers– Applications.

(MandatoryCore)

PHY402:Physicsof AdvancedMaterials

Books for Study

1. Solid State Physics, C. Kittel, Edition:8th 2012, John Wiley & Sons.
2. Solid State Physics, A.J. Dekkar, Edition: 1st, 2000.Macmillan India Ltd.
3. Solid State Physics, M.A. Wahab, Edition:3rd, 2020, Narosa Publishing House.
4. Fundamentals of Solid State Physics, Saxena, Gupta, Saxena, Edition: 31st,2019, Pragathi
5. Solid State Physics, R.L. Singhal, 2018, Kedar Nath,Ram Nath & Co. Publications, Meerut.
6. Science of Engineering Materials and carbon nanotubes, C.M. Srivastsava and C.Srinivasan, Edition:3rd,2010 New Age Inter. Pub.
7. Crystal Growth, B.R. Pamplin,1977, Pergmon Press.
8. Crystal Growth from High Temperature Solutions, D.Elwell and H.J .Scheel, 1975, Academic Press.

(GenericElective)

PHY403(a):Photonics

PHY -403 (a)	Photonics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level optics and Lasers

Course Objectives: Course Objectives: The aim and objective of the course on **Photonics** is to expose the M.Sc. students to the basics of the challenging research field of optical fibers and their use in integrated optics and photonic crystals.

Course Outcomes: At the end of the course, the student will be able to

CO1	In depth knowledge on different lasers and their application
CO2	Importance of Fiber optics and their components in communication and sensors
CO3	Significance and role of wage guides and optics in integrated optics
CO4	Advances in photonic crystals, circuits and applications with respect to conventional devices.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7e	PO8	PO9	PO10	PO11	PO12
CO1	2	2	-	1	-	1	-	1	-	3	-	1
CO2	3	2	1	1	1	1	-	1	-	3	-	1
CO3	2	2	-	1	-	1	-	1	-	3	-	1
CO4	3	2	1	1	1	-	-	1	-	3	-	1

UNIT–I: Laser systems, Properties and Applications

General description, structure, excitation mechanism and working of CO_2, Argonion, Free-electron, Dye, Nd: YAG, Optical parametric oscillator, semiconductor and erbium doped fiber lasers.

Laser beam line width, frequency stabilization, divergence and coherence. Q-Switching and Methods of Q-switching. Mode locking and methods of mode locking. Frequency doubling and phase conjugation.

Laser applications in isotopic separation, velocity measurements, interferometry and speckle metrology.

(GenericElective)

PHY403(a):Photonics

UNIT- II: Fiber Optic Components and Sensors

Connector principles, Fiber end preparation, Splices, Connectors, Source coupling, Distribution networks, Directional couplers, Star couplers, Switches, Fiber optical isolator, Wavelength division multiplexing, Time division multiplexing, Fiber Bragg gratings. Advantage of fiber optic sensors, Intensity modulated sensors,

Mach-Zehnder interferometer sensors, Current sensors, Chemical sensors –Fiber optic rotation sensors. Optical biosensors: Fluorescence and energy transfer sensing, molecular beacons and optical geometries of bio-sensing, Bio-imaging, Biosensing.

UNIT- III: Integrated Optics

Introduction – Planar wave guide – Channel wave guide – Y-junction beam splitters and couplers – FTIR beam splitters–Prism andgratingcouplers–Lenswaveguide–Fabricationofintegratedopticaldevices

- Integrated photodiodes – Edge and surface emitting laser – Distributed Bragg reflection and Distributed feed back lasers -Wave guide array laser.

UNIT-IV: Photonic Crystals

Basics concepts, Theoretical modeling of photonic crystals, Features of photonic crystals, Methods of fabrication, Photonic crystal optical circuitry, Nonlinear photonic crystals, Photonic crystal fibers, Photonic crystals and optical communications, Photonic crystal sensors.

(GenericElective)

PHY403(a):Photonics

Books for Study

1. Lasers: Principles and applications by J.Wilson and J.F.B. Hawkes, Prentice, Hall of India, New Delhi,1996.
2. Laser fundamentals, W.T. Silf vast, Foundation books, New Delhi,1999.
3. Fiber Optic Communication, Joseph C.Palais, Pearson Education Asia, India,2001
4. Introduction To Fibre Optics, A.Ghatak And K.Thyagarajan, Cambridge University Press , NewDelhi,1999
5. Optical Guided Wave Signal Devices, R. Syms And J. Cozens.Mc graw Hill,1993.
6. Optical Electronics, AGhatak and K. Thyagarajan, Cambridge University Press, New Delhi,1991
7. Fundamentals of Photonics, B.E.A. Sale hand M.C.Teich, John Willy and Sons,1991
8. Nanophotonics, P.N.Prasad, Wiley Interscience,2003.

(GenericElective)

PHY- 403 (b)	Solar Energy–Thermal and Photo voltaic Properties	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level semiconductor physics

Course Objectives: The aim and objective of the course on Solar Energy–Thermal and Photovoltaic

Properties is to expose the M.Sc. students to the basics of solar energy.

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand the thermal and light components of solar energy, basic concepts and measurement of solar radiation.
CO2	Learn the theoretical aspects of solar collectors, performance evaluation and application.
CO3	Know the concepts of solar cells, types and fabrication procedures of source solar cells.
CO4	Provide knowledge on cell efficiency measurements.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	-	1	-	1	2	1	2	3	2	2
CO2	2	2	1	2	1	1	1	1	1	3	1	1
CO3	3	2	-	2	1	1	2	1	1	3	1	1
CO4	2	2	-	2	1	1	2	1	1	3	1	1

(GenericElective)

PHY403(b): Solar Energy–Thermal and Photo voltaic Properties

UNIT-I: Basic Concepts of Solar Energy

Introduction - Distribution of solar radiation – Solar Constant, Zenith Angle, Air Mass, Standard Time, Local Apparent Time, Equation of Time, Declination, Hour Angle, Azimuth Angles (all definitions only). Radiation Measurement using Pyranometer and Pyrheliometer–Principle and working.

Kirchoff's law – Solar transmittance, absorptance, emittance and reflectance – Their relation. Selective coatings - Methods of Preparation of coatings - Measurement of solar absorptance and emittance of a selective surface.

UNIT- II: Solar Thermal Collectors

Introduction, Collector types - Flat plate collector (FPC), Evacuated tube collector – Energy balance equation and efficiency, Definitions of collector overall heat loss coefficient, collector efficiency factor, collector heat-removal factor and collector flow factor, Temperature distribution in FPC - Testing of FPC, solar water heating - natural and forced circulation type; Concentrating collectors, types, single axis and two-axis tracking – Performance of Linear parabolic trough concentrator, Applications - Space heating, Air heater - Configurations - Drier - Principle and working; Energy storage - Sensible heat storage- liquid and pebble-bed storage, Thermo chemical storage.

UNIT–III: Solar Cells

Photovoltaic effect – Equivalent circuit of solar cell - Definitions of cell parameters, Type of cells, Crystalline silicon (c-Si), Float zone and Czochrolski methods - Wafer to cell formation steps**,** Poly-Siwafer growth methods – EFG, Web, Heat exchange method, Amorphous Si cells. Thin film cells –Advantages and limitations – CdTe/ CdS, CuInGaSe2/CdS and Ga Ascells – Configurations and structures

– Fabrication of these cells - I-V characteristics and spectral response - Multijunction cells - Quantum dot, Dyesensitized and Perovskite cells.

UNIT–IV: Solar Photo voltaic Systems

Photovoltaic (PV) Module assembly - Description of steps involved in the fabrication of solar module -Performance of module – I-V Characteristics, Modules design for different current and

voltages – Module protection - Use of bypass and blocking diodes, Solar PV system - Components – PV Array, battery, invertor and load. Bifacial solar modules – Advantages over mono-facial cells; Applications of solar PV systems–Stand-alone system–Design methodologies, Hybrid system–Types and issues, Grid connected systems.

Books for Study

1. Solar Energy Utilization, G.D. Rai, KhannaPublishers,1987.
2. Solar Energy-Fundamentals, Design, Modelling and Applications, G.N.Tiwari, Narosa Publications, 2005.
3. Solar Energy-Principles of Thermal Energy Collection & Storage, S.P. Sukhatme, Tata Mc-Graw Hill Publishers, 1999.
4. Science and Technology of Photo voltaics, P.Jayarama Reddy , CRC Press(Taylor & Francis Group, Leiden, Netherlands) & BS Publications,2009.
5. Solar Photovoltaics-Fundamentals, Technologies and Applications, Chetan Singh Solanki, PHIL earning Pvt. Ltd.,2015.

(GenericElective)

PHY-403 (c)	Vacuum and Thin Film Technology	L-3,T-1,P-2	4Credits

Pre-requisite: course in Condensed Matter Physics

Course Objectives: The main objective of the course on vacuum and thin film technology is to introduce the basic and advanced concepts in the field of vacuum and thin films. The students are not only exposed to theoretical concepts but also have hands-on training in the preparation of thin films. The students also are exposed to various industrial applications of vacuum and thin films

Course Outcomes: At the end of the course, the student will be able to

CO1	Basic theoretical concepts of the kinetic theory of gases applicable to vacuum technology and also the principles and construction of various vacuum pumps and gages.
CO2	Design and construction of various techniques for the preparation of thin films
CO3	Theoretical aspects to understand the growth and properties of thin films
CO4	Various industrial applications of thin films

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	**2**	2	3	1	2	1	3	2	3	3
CO3	2	3	3	3	3	1	2	1	3	2	3	3
CO3	2	2	2	2	2	1	1	1	1	2	1	2
CO4	3	3	3	3	3	1	1	1	3	3	3	3

(GenericElective)

PHY403(c): Vacuum and Thin Film Technology

UNIT-I: Basics of Vacuum

Fundamentals of kinetic theory applicable to vacuum technology -Vacuum pumps: Rotary pump - Roots pump – Sorption pump – Diffusion pump -Turbo molecular pump – Cryogenic pump - Vacuum Gauges: Pirani gauge - Penning gauge - Hot cathode ionization gauge – Bayard –Alpert gauge –Quadruple mass spectrometer - Pump combinations – Design of vacuum systems – Leaks and Leak detection-Applications of vacuum.

UNIT- II: Preparation of Thin Films

Physical Methods: Vacuum evaporation -Resistive heating- Electron beam evaporation-Co-evaporation-Epitaxial deposition: Pulsed laserablation- Molecular beam epitaxy. Sputtering-Glow discharge-DC and RF sputtering-Reactive sputtering-Magnetron sputtering
- Chemical methods: Electroplating – Spray pyrolysis – Chemical vapor deposition (CVD) -Sol-gel– Spin coating.
Measurement of film thickness -Multiple beam interferometer (MBI) methods – Quartz crystal thickness monitor -Stylus profiler.

UNIT-III: Properties of Thin Films

Transport Properties of Thin Films**:** Metallic Films: Sources of resistivity in metallic conductors – sheet resistance and temperature coefficient of resistance of thin films – Influence of thickness on the resistivity of structurally perfect thin films – Fuchs Sondhemier theory – Annealing and agglomeration - Optical Properties -Reflection and transmission by single film and multi layer films -Optical absorption– Determination of optical constants by Ellipsometry.

UNIT-IV : Applications of Thin Films

Photolithography-PatternGeneration-Thinfilmresistors–Thinfilmcapacitors–Thinfilmdiodes and transistors – Thin film solar cells - Thin film micro batteries – Thin film Gas sensors –Reflection and antireflection coatings - Optical filters - Transparent conducting oxide coatings -Hard coatings -Tribological coatings.

Books for Study

1. Vacuum Technology, A. Roth, North-Holland,1986.
2. Vacuum Science and Technology, V.Vasudeva Rao, T.B. Ghosh and K.L.Chopra, Allied Publications,1998.
3. Handbook of Thin Film Technology, L.I. Maissel and R.L.Glang, Mc Graw HillBookCo.,1970.
4. Thin Film Phenomena, K.L. Chopra, Mc Graw Hill Book Co., New York,1969.
5. Vacuum Deposition on to Webs, Films and Foils, Charles A. Bishop, Elsevier, London,2011.
6. The Materials Science of Thin Films, M.Ohring, Academic Press, New York,1992.
7. The User's Guide to Vacuum Technology, J.F. O'Henlon, John Wiley & Sons, 2003.

(Multidisciplinary Course)

PHY-405	Advanced characterization techniques	L-3,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level chemistry and physics

Course Objectives: The aim and objective of the course on Advanced characterization Techniques is to familiarize the M.Sc. students with the basics of the recently emerging research field of dynamics of Structures, Spectra and properties of various instruments

Course Outcomes: At the end of the course, the student will be able to

CO1	Describe various Instrumentation – Essential parts of spectrophotometer.
CO2	Understand theoretical techniques Resonance Spectrometers and Mass Spectrometer
CO3	Understand use of various spectroscopic techniques and their application to the various fields of physics.
CO4	Understand the Advanced Spectroscopic and Microscopic Techniques

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	2	2	1	2	1	2	2	1	2
CO2	2	2	1	2	2	2	2	-	2	2	1	2
CO3	2	2	1	2	1	2	2	-	2	2	1	2
CO4	2	2	1	2	2	2	2	-	2	2	1	2

PHY405: Advanced Characterization Techniques

UNIT–I: Spectrophotometry

Introduction – Beer's law – Absorptivity – UV and visible absorption –Instrumentation – Essential parts of spectrophotometer–IR Spectrophotometry–Fourier Transform Infrared(FTIR) Spectrometer–Molecular structure – Qualitative and Quantitative analysis–Raman Spectroscopy – Qualitative and Quantitative analysis. Fourier Transform (FT) Raman Spectroscopy and its additional advantages over the conventional Raman Spectroscopy,

UNIT–II: Resonance Spectrometers and Mass Spectrometer

Electron Spin Resonance (ESR)–Principle–ESR spectrometer–Working Principle with block diagram – Applications of ESR. Nuclear Magnetic Resonance (NMR) – Principle – NMR spectrometer – Working Principle with block diagram – Experimental techniques –. Basic concepts of NQR spectra: Half integral and integral spins, Instrumentation, Super regenerative oscillator, applications of NQR. Mossbauer effect
– theory – Mossbauer spectrometer – Principle and working of Mossbauer spectrometer – Experimental methods with block diagram– Applications of Mossbauer studies.

UNIT–III: Advanced Spectroscopic and Microscopic Techniques

Spectroscopic Techniques: Energy Dispersive Spectroscopy, X-ray Photo Electron Spectroscopy, X ray Fluorescence Spectroscopy and Auger Electron Spectroscopy, Secondary Ion Mass Spectrometry.
Imaging Techniques: Scanning Electron Microscopy, Transmission Electron Microscopy, Atomic Force Microscopy,
Diffraction Techniques: X-Ray diffraction –Laue method–Powder method.

Books for Study

1. Elements of X-ray Diffraction, B.D. Cullity,3rd Ed., Pearson Education Ltd.,2014.
2. Methods of Surface Analysis, Techniques and Applications, J.M. Walls Cambridge
3. University Press, 1990.
4. X-ray Structure Determination, H.Stout and LH.Jenson, Macmillan, London,1968.
5. Instrumental Methods of Analysis, Willard Merritt, Dean Settle, CBS publishers,
6. New Delhi,1986
7. Spectroscopy, B.P. Straughan and S.Walker, John Wiley & Sons Inc.,NewYork,1976.
8. Spectroscopy, G.Chatwal and S.Anand, Himalaya Pub.,2002.
9. Spectroscopy, B.K. Sharma, Goel Publishers House, Meerut,1975.
10. Basic principles of Spectroscopy by Raymond Chang, Mic Graw Hill,1971
11. Molecular Structure and Spectroscopy by G.Aruldas, Prentice Hall of India,2001

(OpenElective)

PHY-406 (a)	Wireless Communications	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level chemistry and physics

Course Objectives: The aim and objective of the course on Wireless Communications is to familiarize the M.Sc. students with the basics of the recently emerging mobile technologies.

Course Outcomes: At the end of the course, the student will be able to

CO1	understand the basics of digital modulation techniques
CO2	Understand various coding and error correction techniques
CO3	Know GSM mobile communication standards, its architecture, logical channels, advantages and limitations.
CO4	Familiarize with optical and satellite communication techniques

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	2	2	1	2	1	2	2	1	2
CO2	2	2	1	2	2	2	2	-	2	2	1	2
CO3	2	2	1	2	1	2	2	-	2	2	1	2
CO4	2	2	1	2	2	2	2	-	2	2	1	2

(OpenElective)

PHY 406 (a): Wireless Communications

UNIT– I: Base Band Data Transmission

Digital Modulation techniques: BPSK, QPSK, DPSK, QASK, BFSK, MSK, M-ary techniques. Base band binary data transmission system – Inter symbol interference – Nyquist pulse shapingcriteria–linecoding,pulseshaping,andscramblingtechniques,Detectionoferrorprobability.

UNIT–II: Codes for Error Detection and Correction

Linear block codes, Convolutional codes. Encoding, Decoding of convolutional codes, State, Tree and Trellis diagrams. Maximum likelihood – Viter by algorithm, Burst error correction - Inter leaving techniques–Block and convolutional inter leaving, Types of ARQ.

UNIT–III: Introduction to Wireless Communication Systems

Global system for mobile (GSM): cellular concept, system design. Transmission system, receiving system; frequency re-use; Spread spectrum modulation; Multiple access techniques as applied to wireless communications; 1G,2G, 3G wireless networks.

UNIT–IV: Satellite and Optical Communications

Introduction Satellite systems: Orbiting satellites, satellite frequency bands, communication satellite system-modulation and multiple access format-satellite systems in India, Satellite receiving systems, G/T ratio, satellite uplink and down link analysis. Applications to communications and remote sensing. Introduction to Optical communications systems: Optical fibers, sources and detectors, analog and digital systems.

Books for Study

1. Modern Digital and Analog communication system by B.P. Lathi: .Oxford 3rd ed.,2011
2. Digital Communications Fundamentals and Applications by Bernard Sklar, Sklar Person Education, 2008
3. Principles of Communication Systems: Taub & Schilling, Tata Mc Graw-Hill,1991
4. Principles of Communication, R.E.Ziemer, WH Tranter Fifth Edition John Wiley (fifth module)
5. Wayne Tomoasi: Morden Electronic Communication Systems. Person Education/PHI,2014
6. John G Proakis: Digital Communication. MGH
7. Digital Communication Techniques Simon, Hindey Lindsey PHI
8. Communication Systems :Simon Haykin, John Wiley & Sons. Pvt. Ltd.
9. Digital and Analog Communication System : KSam Shanmugam. John Wiley
10. Communication Systems Engineering: Proakis, Pearson Education
11. Digital & Analog Communication System– Leon W Couch, Pearson Education/PHI.
12. Introduction to statistical Signal Processing with Applications MD Srinath, P.K. Rajasekaran, RE. Viswnathan PHI
13. Analog and Digital Communication MS Roden PHI
14. Digital modulation and coding. Wilson, Pearson Education
15. Applied coding and information Theory forengineers, Wells, Pearson education.

(OpenElective)

PHY-406 (b)	Vacuum Technology and applications	L-3,T-1,P-2	4Credits

Pre-requisite: course in Condensed Matter Physics

Course Objectives: The main objective of the course on vacuum technology and applications is to introduce the basic and advanced concepts in the field of vacuum technology. The students are not only exposed to theoretical concepts but also have hands-on training in the construction of various vacuum pumps, vacuum measuring gauges, and thin film preparation techniques. The students also are exposed to various industrial applications of vacuum and thin films

Course Outcomes: At the end of the course, the student will be able to

CO1	Basic theoretical concepts of the kinetic theory of gases applicable to vacuum technology and also the principles and construction of various vacuum pumps and gages for the production and measurement of vacuum
CO2	Design and construction of various components for the construction of vacuum systems for the preparation of thin films
CO3	Various techniques used for the growth of thin films
CO4	Various industrial applications of vacuum technology and thin films

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	2	3	1	2	1	3	2	3	3
CO3	2	3	3	3	3	1	2	1	3	2	3	3
CO3	2	2	2	2	2	1	1	1	1	2	1	2
CO4	3	3	3	3	3	1	1	1	3	3	3	3

(OpenElective)

406 (b) Vacuum Technology and Applications

UNIT-I: **Basics of Vacuum**

Vacuum – definition – Units of Vacuum – Vacuum ranges - Kinetic theory of gases related to vacuum -Physical parameters at low pressures–Vacuum components- Applications of vacuum – Vacuum metallurgy – Freeze drying – Vacuum in electrical applications – Space simulators– Leaks and detection of leaks– Pressure test– Halogen leak detector– Mass spectrometric leak detection.

UNIT-II: **Production and Measurement of Vacuum**

Classification of vacuum pumps – Rotary pump – Roots pump – Sorption pump – Diffusion pump– Turbo-molecular pump–Ion pump – Cryogenic pump.

Classification of vacuum gauges – McLeod gauge – Pirani gauge – Ionization gauges – Penning gauge – Bayard Alpert gauge – Measurement of partial pressure –Residual gas analyzer – Pump combinations– Construction of high vacuum coating system.

UNIT-III : **Preparation of Thin Films**

Physical Methods- Vacuum evaporation - Resistive heating - Electron beam evaporation -Co-evaporation.

Epitaxial deposition-Pulsed laserablation- Molecular beamepitaxy.

Sputtering - Glow discharge - DC and RF sputtering - Reactive sputtering - Magnetron sputtering

Chemical methods: Electroplating – Spray pyrolysis – Chemical vapour deposition (CVD) -Sol-gel– Spin coating.

UNIT-IV : **Applications of Thin Films**

Photolithography-Pattern generation- Thin film resistors – Thin film capacitors – Thin film diodes and transistors – Thin film solar cells - Thin film micro batteries – Thin film gas sensors – Reflection and antireflection coatings - Optical filters - Transparent conducting oxide coatings - Hard coatings-Tribological coatings.

Books for Study

1. Vacuum Technology, A.Roth, 3rd Edition, North-Holland Publications,2012.
2. Vacuum Science and Technology, V.V. Rao, T.B. Ghosh and K.L.Chopra, 3rdEditions, Allied Publications, 2008.
3. Handbook of Thin Film Technology, L.I. Maissel and R.L. Glang, Mc Graw Hill Book Co., 1970.
4. Thin Film Phenomena, K.L. Chopra, Mc Graw Hill Book Co., New York,1969.
5. Vacuum Deposition on to Webs, Films and Foils, Charles A. Bishop, Elsevier, London, 2015
6. The Materials Science of Thin Films, M.Ohring, Academic Press, New York,1992.
7. The User's Guide to Vacuum Technology, J.F.O'Henlon, John Wiley & Sons, 2003.

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF PHYSICS

Course

M.Sc. INSTRUMENTATION

Choice Based Credit System (CBCS)

Academic Year 2023 – 24

Amended as per

NEP-2020

About the Department

The Department of Physics, Sri Venkateswara University, was established in 1954 with B.Sc. and B.Sc. (Hons) degree courses. Two year M.Sc. degree course was started in 1959. To meet the growing demands of the society and to keep pace with reputed institutions in the country and abroad, the Department has innovative specializations in M.Sc. Physics such as Applied Spectroscopy, Condensed Matter Physics, Electronics, Photonics, Solar Energy Physics and Vacuum and Thin film Physics. The department has also started M.Sc. Electronics course in 1998. At Present the department has 7 Professors, 1 Associate Professor and 1 Assistant Professor.The research work in the Department of Physics was initiated in 1957 and since then, there has been significant progress in the areas of Atmospheric Science, Condensed Matter Physics, Microelectronics, Solar Energy, Solid State Spectroscopy, Photonics and Thin Films. In recognition of these efforts, the department has received research funding from UGC, CSIR, DST, ISRO, DNES, DoE, DRDO and DAE-BRNS. The Department was selected for UGC - CAS and DST- FIST programmes and was able to procure several sophisticated instruments like XRD, ATR-FTIR, UV-Vis-NIR spectrophotometer, FLS-980-Florescence spectrometer, SEM with EDS, Micro-Raman, Vibrating Sample Magnetometer (VSM), Liquid Nitrogen Plant,etc., for student training and advanced research activities. The UGC has set up UGC-SVU Center for MST Radar applications to promote research activities on Atmospheric research. This was further supported by the ISRO in the form of an Advanced Center for Atmospheric Sciences (ACAS). The advances made so far in basic and applied research are well recognized both in the country and abroad. The Department organizes National and International Conferences/Seminars/Workshops on regular basis. The faculty members of the Department have several collaborative research programmes with national and International institutions. Many of the faculty members of the Department are regularly invited as visiting Professors and visiting researchers by overseas Universities/ Institutes in India and abroad.

Vision:

To achieve excellence in analytical and electronic instruments through quality education and training and to logically translate the proven research ideas into a reliable and effective, simple, elegant and handy instruments and gadgets

Mission

To enhance the teaching-learning process by implementing innovative practices to create globally competent researchers

To strengthen research culture providing sustainable solutions in the domain of analytical instruments, electronic instruments for the benefit of research and industry.

To inculcate professional ethics and entrepreneurial attitude for addressing needs of industry and society.

Program Specific Outcomes: At the end of the program, the student will be able to:

PSO1	Understand the basic and advance concepts of different branches of Instrumentation, Industrial and Electronics.
PSO2	Perform and design experiments in the areas of Instrumentation, electronics, atomic and Controlling Circuits
PSO3	Apply the concepts of Instrumentation in specialized areas of Sugar Industries, Irrigation methods in Agriculture, renewable energies, Controlling Circuits etc. in industry, academia, research and day to day life.

Program Objectives:

- P1.To develop analytical skills covering both scientific and technical domains.
- P2. To develop in depth understanding of the instrumentation technologies.
- P3. To gain practical, hands-on experience in different sensors and instrumentation
- P4. To logically translate the proven research ideas into a reliable and effective but simple, elegant and handy instruments and gadgets.

Program Outcomes: At the end of the program, the student will be able to:

PO1	Apply principles of basic engineering concepts in understanding and analysis of instruments
PO2	Identify, formulate, and analyze advanced engineering problems reaching substantiated conclusions using first principles of mathematics and basics of engineering.
PO3	Design solutions for advanced engineering problems and design system components to meet the specified needs with appropriate attention to health and safety risks, applicable standards, and economic, environmental, cultural and societal consideration.
PO4	Use research based knowledge and methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
PO5	Create, select, and apply appropriate techniques, resources, and modern scientific Tools to complex physics problems with an understanding of the limitations
PO6	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional scientific practice.
PO7	Understand the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
PO8	Apply ethical principles and commit to the norms of scientific practice.
PO9	Function effectively as an individual, and as a member or leader in diverse teams,

	And in multidisciplinary settings
PO10	Communicate effectively on scientific activities with the scientific/Engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective representations, and give and receive clear instructions
PO11	Demonstrate knowledge and understanding of the scientific principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
PO12	Recognize the need for, and have the preparation and ability to engage in independent And life-long learning in the broadest context of scientific and technological change

Program Educational Objectives: At the end of the program, the student will be able to:

PEO1	Apply principles of basic scientific concepts in understanding, analysis, and prediction of Instrumentation and Electronic systems.
PEO2	Develop human resource with specialization in theoretical and experimental Techniques required for career in academic, research and industry.
PEO3	Engage in lifelong learning and adapt to changing professional and societal needs.

SRI VENKATESWARAUNIVERSITY::TIRUPATI

DEPARTMENT OF INSTRUMENTATION

TWO YEAR M.Sc. COURSE IN INSTRUMENTATION (2021-2022)

COURSE STRUCTURE AND EXAMINATION

SCHEME

Semester -I : OVERVIEW

S.No	Components of Study	Title of the Course	Title of the Paper	Credit Hrs/ Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	INS – 101	1.Introduction to Instrumentation and Control System	6	4	20	80	100
2.		INS – 102	2. Analog Devices and Industrial Electronics	6	4	20	80	100
3.	**Compulsory Foundation**	INS - 103(a)	1. Digital Techniques and Principles of Communications	6	4	20	80	100
		INS - 103(b)	2. Power Electronics					
		INS - 103(c)	3. Industrial Product Instrumentation					
4.	**Elective Foundation**	INS - 104 (a)	1. Programming in "C"	6	4	20	80	100
		INS - 104 (b)	2. Renewable Sources of Energy					
		INS -104 (c)	3. Opto Electronics					
5.	**Practical –I**	INS - 105	Paper 1& 3 (Analog and Digital Electronics Lab)	6	4	--	100	100
6.	**Practical-II**	INS – 106	Paper 3 &4 (" C " Programs Lab)	6	4	--	100	100
	Total			36	24	80	520	600
7.	Audit Course			0	0	100	0	0

*All core papers are Mandatory

- Compulsory Foundation choose one paper.
- Elective Foundation – Choose one paper.
- Audit course-100 Marks (Internals) Zero Credits under self-study.
- Interested students may register for MOOC with the approval of the concerned DDC butit will be considered for the award of the grade as open elective only giving extra credits.

Semester – II: OVERVIEW

S.No	Components of Study	Title of theCourse	Title of the Paper	Credit Hrs/ Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	INS – 201	1.Industrial Instrumentation	6	4	20	80	100
2.		INS – 202	2. Electronic Instrumentation	6	4	20	80	100
3.	**Compulsory Foundation**	INS - 203(a)	1. Sensors and Signal Conditioners	6	4	20	80	100
		INS - 203(b)	2.Network Analysis					
		INS - 203(c)	3. Spectroscopic Instrumentation					
4.	**Elective Foundation**	INS - 204(a)	1.Microprocessors and Interfacing	6	4	20	80	100
		INS - 204(b)	2. Robotics					
		INS - 204(c)	3. Electronic Measurement Instruments					
5.	**Practical -I**	INS – 205	Paper 1& 3 (Transducers Lab)	6	4	--	100	100
6.	**Practical-II**	INS – 206	Paper 3 & 4 (Microprocessors Lab)	6	4	--	100	100
	Total			36	24	80	520	600
7.	Audit Course			0	0	100	0	0

*All core papers are Mandatory

- Compulsory Foundation choose one paper.
- Elective Foundation – Choose one paper.
- Audit course-100 Marks (Internals) Zero Credits under self-study.
- Interested students may register for MOOC with the approval of the concerned DDC butit will be considered for the award of the grade as open elective only giving extra credits.

Semester – III: OVERVIEW

S.No	Components of Study	Title of the Course	Title of the Paper	Credit Hrs/ Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	INS – 301	1.Analytical Instrumentation	6	4	20	80	100
2.		INS – 302	2.Digital Signal Processing	6	4	20	80	100
3.	**Generic Elective**	INS - 303(a)	1. Biomedical Instrumentation	6	4	20	80	100
		INS - 303(b)	2. Micro Electro Mechanical Systems					
		INS - 303(c)	3. Instrumentation for Environmental Science					
4.	**Practicals**	INS – 304	Analytical Instrumentation Lab	6	4	--	100	100
5.	**Skill Oriented Course**	INS – 305	Microcontrollers and Interfacing	6	4	10	90 (T40 +P50)	100
6.	**Open Elective**	INS - 306(a)	1. Computer Architecture and Organization	6	4	20	80	100
		INS - 306(b)	1. Industrial Organization and Management					
	Total			36	24	90	510	600

*All core papers are Mandatory

- Generic Elective – Choose two
- Core papers and Generic Electives opted paper held Practical-I
- Skill Oriented Course is Mandatory. Relevant society along with practical (10marksinternal 40 final theory & 50 for practical's).
- Open Electives are for the students of other Departments. Minimum one paper should beopted. Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self-study.
- Interested students may register for MOOC with the approval of the concerned DDC.

Semester – IV: OVERVIEW

S.No	Components of study	Title of the Course	Title of the Paper	Credit Hrs/ Week	No. of Credits	IA Marks	Sem End Marks	Total
1.	**Mandatory Core**	INS - 401	1.Introduction to VLSI Circuits	6	4	20	80	100
2.		INS – 402	2.Embedded Systems and Real time Operating Systems	6	4	20	80	100
3.	**Generic Elective**	INS - 403(a)	1. Programmable Logic Controllers	6	4	20	80	100
		INS - 403(b)	2.Computational Mathematics					
		INS - 403(c)	3. Electrical Engineering Materials					
4.	**Practicals**	INS – 404	VLSI Lab	6	4	--	100	100
5.	**Multi Disciplinary Course/ Project Work**	INS – 405	Project Work	6	4	--	--	100
6.	**Open Elective**	INS - 406(a)	1. Agro Based Instrumentation	6	4	20	80	100
		INS - 406(b)	2.Industrial Automation					
	Total			36	24	90	510	600

*All core papers are Mandatory

- Generic Elective – Choose two
- Core papers and Generic Electives opted paper held Practical-II.
- Project Work- Collaboration with various firms/companies/societies.
- Multi-Disciplinary Course is Mandatory. Circle formation with other subjects/Dept. ofArts/Commerce.
- Open Electives are for the students of other Departments. Minimum one paper should be opted.Extra credits may be earned by opting for more number of open electives depending on the interest of the student through self-study.
- Interested students may register for MOOC with the approval of the concerned DDC.

(MandatoryCore)

INS-101	INTRODUCTION TO INSTRUMENTATION AND CONTROL SYSTEM	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Instrumentation

Course Objectives:

- To study the basic principles of Instrumentation System
- To study the basic concepts of Control System
- To study the time response analysis
- Root Locus, Frequency Response Analysis, Routh stability

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand fundamentals of Instrumentation system
CO2	• Understand and design open loop and closed loop control system
CO3	• Understand time response analysis
CO4	• Design and Analysis of Root Locus ,Frequency Response Systems

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	-	1	1	-	2	2	-	1
CO2	3	2	1	2	-	1	1	-	2	2	1	2
CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	1	2	-	1	1	-	2	2	1	-

(MandatoryCore)

Core – 1: INS-101	Introduction to Instrumentation and Control System

UNIT:I: INSTRUMENTS AND THEIR CLASSIFICATION

Typical applications of instrument systems, Functional elements of instrumentationand measuring Systems. Input elements (Transducers and Electrodes), Intermediateelements (Signal conditioning) and Output elements (Data display and storage)

(a) Order of Instruments: Zero, First, Second and nth order Instruments.

(b)Null &Deflection, Manual & Automatic, Self-generating & Power operated. Proximity &Non proximity types.

(c) Analogue and Digital Types.

ERRORS AND UNCERTAINTIES

Introduction to errors and uncertainties in the measurement Performance parameters of instruments.Propagation of uncertainties in measurement.

STATIC PERFORMANCE PARAMETERS (CHARACTERISTICS)

Accuracy,Precision,Resolution,Threshold, Sensitivity, Linearity, Hysterises, Dead band.Backlash, Drift, Span. Impedance loading and Matching.Specifications of an Instrument.

UNIT –II: INTRODUCTRION TO CONTROL SYSTEMS

(a).Basic components of a control system, Open-loop and closed-loop control system and their differences.

(b).Classifications of control systems. Linear & non-linear time –invariant & time varying continuous & sampled data and digital.

(c).Effects of feedback on overallgain, stability, sensitivity, bandwidth and noise

UNIT – III: T IME RESPONSE ANALASIS AND STABILITY CRITERIA

(a). Standard test signals.Time response of first and second order systems Transient and steady state response. Time domain specifications. Steady state errors and error coefficients.

(b). Concept of stability. Necessary condition for stability. Hurwitz stability Criterion.Routh stability criterion. Relative stability analysis.

UNIT – IV

FREQUENCY RESPONSE ANALYSIS AND STABILITY CRITERIA

Frequency domain specifications. Bode diagrams. Phase margin and gain margains.

Polar plots Nyquist plot. Applications of Nyquist criterion to find the stability.

Books For Study:

1. A course in Electrical and Electronic Measurements and Instrumentation ByA.K. Sawhney
2. Electronic Instrumentation and Measurement Techniques, Cooper and Albert D.Helfriek
3. Principles of Industrial Instrumentation by D. Patranabis
4 Modern control systems engineering by Ogata
5. Instrumentation measurement and Analysis – Nakra&Chaudhry
6. Instrumentation – Devices and systems – Rangan,Sarma& Mani
7. Control Systems Engineering – Nagrath and Gopal
8. Automatic Control Systems – Benjamin C.Kuo
9. Control systems –Nagoorkani.

(MandatoryCore)

INS-102	Analog Devices and Industrial Electronics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Analog Devices and Industrial Electronics

Course Objectives:

- To study basic electronic circuits.
- To study the basics of operational amplifiers
- To understand the concepts of transistors, UJT,SCR and thyristers
- The main objective of this course is to introduce and expose the students to various electronic circuits and design operational amplifiers for various applications.

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand and describe specifications, features and capabilities of electronic devices.
CO2	• Understand the basics of operational amplifiers and their applications
CO3	• Understand fundamental of semiconductors and power devices
CO4	• Select appropriate device for circuit operation.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	1	2	1	-	2	-	1	-
CO2	3	3	2	1	2	2	2	-	-	-	1	-
CO3	3	3	2	2	1	2	2	-	1	-	1	-
CO4	3	3	2	1	2	2	1	-	-	-	1	-

(MandatoryCore)

Core – 2: INS-102	Analog Devices and Industrial Electronics

UNIT-I

a. Electronic Devices:

Introduction to semiconductors. General semiconductor devices -Diodes, Transistor, Field Effect Transistor (FET), MOSFET, Zener diodes Special semi conductor devices - Tunnel diode, Varactor diodes,

b. Power supplies and Regulation (DC and AC)

Rectifiers - Half wave, Full wave, Bridge, Voltage Multipliers, Filters -inductance. LC. Pi, and T sections. Basic DC voltage regulation- Two terminal and three terminal voltage regulators,. Switch mode regulated Power supplies (SMPS)- AC voltage regulation- Step voltage regulation and Servo voltage regulation, Constant voltage transformer, UPS.

UNIT-II

a. Operational amplifiers:

Introduction to operational amplifiers,. Characteristics of ideal and real operational amplifiers, Op amp configurations - Inverting, Non-inverting, current and voltage- followers, Differential amplifiers and comparators,.Virtual ground and Miller effect.

b. Applications of Operational amplifiers:

Addition, Subtraction, Scale changing (Multiplication and Division) Integration and Differentiation. Waveform generators: Wein Bridge Oscillator and Multi vibrators, Precision Rectifiers, Instrumentation Amplifiers, Active filters.

UNIT-III

Thyristors and Related Power Devices

Thyristor turn and off methods, Thyristor ratings, SCR half wave rectifier, SCR full wave rectifier, Light activated silicon controlled rectifier (LASCR), Shockley diodes, TRIAC power control circuit, UJT Full wave phase control circuit, Programmable UJT, Silicon controlled switch (SCS), Gate turn off thyristors (GTO), Gate drive Circuits.

UNIT-IV

Industrial Applications

Relays, Reed relay, Solid state relay, UJT/SCR time delay relay, AC time delay relay , Precision long time

delay relay, Integrated circuit timers (.555 timers), Electronic resistance welding types of resistance welding, AC welder circuits, Industrial heating, skin effect, High frequency power source for induction heating, Dielectric heating, applications, comparison between dielectric and induction heating, Resistance heating.

Books For Study:

1. Fundamentals of Electronic Devices by David A. Bell
2. Operational Amplifiers and Linear Integrated Circuits by RamakanthGaekwad
3. Electronic devices and Circuits by G.K. Mithal
4. Thyristors and applications - M. Rammurthy, East-West Press, 1977.
5. Electronic Measurements and Instrumentation – Dr. Rajendra Prasad
6. Operational Amplifiers and Linear Integrated Circuits by Robert F. Coughlin and Frederick F. Driscoll
7. Operational Amplifier characteristics and applications by Robert G. Irvine
8. Semiconductor circuits : Linear and Digital by Marlin, Restenbalt
9. An introduction to Operational Amplifiers by SV Subramanyam
10. Industrial electronics by S.Biswas, DhanpatRai, India
11. Industrial and Power Electronics - G.K. Mithal and Maneesha Gupta, Khanna, 2003.
12. Integrated Electronics - J. Millman and C.C Halkias, McGraw Hill, 1972.
13. Electronic Devices and circuits - Theodore. H.Bogart, Pearson Education, 2003.

INS-103(a)	Digital Techniques and Principles of Communications	L-5,T-1,P-6	4Credits

Pre-requisite: Basic knowledge about Digital Techniques

Course Objectives:

- To teach theory and working of FET and MOSFET
- To teach Op-amp basics
- To teach flip-flops, registers, counters, interfacing with analog devices
- To teach communication electronics

Course Outcomes: At the end of the course, the student will be able to

CO1	• Learn working and applications of FET and MOSFET.
CO2	• Learn the basics of op-amps.
CO3	• Learn the importance of digital electronics.
CO4	• Learn the process of communication and its importance.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	2	1	-	1	-	1	-

CO3	2	2	3	2	2	-	1	-	1	-	1	-
CO4	3	3	2	2	2	-	1	-		2	1	-

(Compulsory Foundation)

Compulsory Foundation: INS-103(a)	Digital Techniques and Principles of Communications

UNIT–I: Introduction to ElectronicDevices:

Field Effect Transistor (FET): Structure and working of JFET, Characteristics, and parameters of JFET.AdvantagesofFEToverBJT.FETasswitchandAmplifier-ApplicationofFETasvoltage variable resistor. Structure of MOSFET, depletion type and enhancement type, MOSFETCharacteristics,MOSFET as variable resistor,Conceptof CMOS.Structure,working and Characteristics of UJT. Application of UJT as a Relaxation oscillator.

UNIT–II: Operational Amplifiers:

Block diagram of a typical Op-Amp, differential Amplifier, Comparator open loop configuration,invertingandnon-invertingamplifiers.Op-ampwithnegativefeedback,voltageshuntfeedback, effect of feedback on closed loop gain, input resistance, output resistance, CMRR, frequency response, slew rate. InstrumentationAmplifier,integratoranddifferentiator.Waveformgenerators(Squareandtriangle). Filters (Low pass, high pass and Band pass). Analog to Digital data converters (ADC)andDigital to Analog conversion (DAC).

UNIT–III: Digital Electronics

Combinational Logic: Multiplexers, Decoder,Demultiplexer,Dataselector,Multiplexer,Encoder. Sequential Logic: Flip–Flops, A1-bit memory, The RS Flip-Flop, JK Flip – Flop, JKMaster Slave Flip–Flops, T Flip-Flop, D Flip-Flop, Shift Registers, Serial-in Serial-out, Serial-inParallel-out,Parallel-inSerial-out,Parallel-inParallel-outRegisters.AsynchronousandSynchronousCounters.

UNIT–IV: Communication Electronics

Introduction to Modulation (AM & FM), Sampling Theorem, Low pass and Band pass signals, PAM, Channel BW for a PAM signal. Natural sampling, Flat-top sampling. Signal recovery through holding. Quantization of signals, PCM transmission, Quantization of noise, Differential PCM, Delta Modulation, Adaptive Delta modulation CVSD. Signal to noise ratio in PCM and Delta Modulations.

Books for Study

1. Micro Electronics by Milliman and Halkias.TMH Publications
2. OP-Amps&LinearIntegratedCircuits,byRamakanthA.Gayakwad,PHI,2ndEdition,1991.
3. DigitalSystems byRonald J. Tocci,6th Edition,PHI, 1999.
4. DigitalPrinciplesandApplicationsbyA.P.MalvinoandDonaldP.Leach,TataMcGraw-Hill, New Delhi, 1993.
5. PrinciplesofCommunications byTaub andSchilling,Mc-GrawHillPublication.
6. ElectronicDevicesandCircuitTheorybyRobertBoylestedandLouisNashdsky–JoseKanedy&Division.PHI,New Delhi, 1991
7. ElectronicPrinciples byMalvino, 6th Ed.TMH, 2017
8. Linear Integrated circuitsbyRoyChoudhry, Pearson,2018
9. Op-Amps – D.K. Mahesh, PHI

NS-103(b)	Power Electronics	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Power Electronics

Course Objectives:

□□□□□□□□□□□□□□□□To understand the operation, characteristics and performance parameters of

- Single phase and three phase controlled rectifiers.
- To study the operation, switching techniques and basic topologies of DC-DC
- Switching regulators.
- To learn the different inverter to understand the harmonic reduction methods.

Course Outcomes: At the end of the course, the student will be able to

CO1	• Students will be able to understand the working of FET, JFET, MOSFET.
CO2	□□□□□Understand working of Controlled Rectifiers, Inverters and DC to DC converters.
CO3	□□□□Understand the inverters
CO4	• Understand the Working of AC/DC Drives.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	2	1	1	-	-	2	-	1
CO2	3	3	3	1	2	1	-	-	-	2	-	1
CO3	3	3	3	2	2	1	1	-	-	2	-	1
CO4	3	3	3	-	-	2	-	-	-	2	-	1

Compulsory Foundation: INS-103(b)	Power Electronics

UNIT I

Study of switching devices: Frame, Driver and snubber circuit of SCR, TRIAC, BJT, IGBT, MOSFET, Commutation circuits for SCR. Step-down and step-up chopper, Time ratio control and current limit control Buck, boost, buck- boost converter, concept of Resonant switching - SMPS.

UNIT II

Converters: Half controlled and fully controlled converters, single phase dual converters – power factor Improvements.

Three Phase Converters – Half controlled and fully controlled converters. Design of SCR based DC power circuits including UJT as triggering device AC power control using SCR-UJT & TRIAC-DIAC like universal speed controller fan regulator. Design of SCR/TRIAC based AC power control circuits including UJT/DIAC as a triggering device.

UNIT III

AC to AC Controllers: On Off controller, Single phase AC voltage controllers–single and three phase cycloconverters.

Inverters: Single phase and three phase (both 1200 mode and 1800 mode) inverters – Series resonant inverter - Current source inverter. UPS

UNIT IV

Motors: Working principle, Types of AC motors and Characteristics of AC motors. DC motors working principle, types and characteristics. Stepper motors.

AC Motor Drives: Concept & requirement of drives, Current fed & Voltage fed drives, rotor resistance control & v/f control of AC motors.

DC Motor Drives: DC Drives for brushed/brushless motors

Industrial Applications: Induction & dielectric heating process block diagram, merits/demerits and applications of power electronics in traction.

Books For Study:

1. M.H. Rashid, ‗Power Electronics: Circuits, Devices and Applications‘, Pearson Education, 4th Edition, 2013.

2. P.S. bimbhra, ―Power Electronics‖, Khanna publishers, 13th reprint, 2004.

3. Alok Jain, ―Power Electronics & its applications‖, PENRAM International Publishing (India) Pvt. Ltd, 2nd Edition, 2008.

INS-103©	Industrial Product Instrumentation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Industrial Product Instrumentation

Course Objectives:

- Learn the basics of instrumentation design
- Lear the hardware design
- Learn the digital design
- Learn the PCB design

Course Outcomes: At the end of the course, the Student will be able to

CO1	Design the instruments
CO2	Learn the hardware design
CO3	Learn the digital design
CO4	Learn the PCB design

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	-	1	2	1	1
CO2	3	3	3	1	2			-	-	-	1	1
CO3	3	3	3	2	2			-	-	-	1	1
CO4	3	3	3					-	2	-	1	1

Compulsory Foundation: INS-103(c)	Industrial Product Instrumentation

Unit - I:

Introduction: Stages in product design - Market survey, Product Specifications (Electrical, Mechanical, Environmental), R&D and Engineering Prototypes, Pilot Production Batch, Environmental testing, Documentation, Manufacturing. Electronic Products Classification- Consumer, Industrial and Military. Their peculiarities in terms of Cost/performance ratio and Reliability. Reliability- Bath tub curve, Measures taken (at Component and Product level and various soldering techniques including Surface Mount Technology) to improve reliability. Fundamentals of Communication System Design, criteria for selection of frequency bands, requirements of Voice and Multimedia Applications

Unit - II

Hardware designs- Analog

Analog Signal Conditioning- Factors affecting choice of OPAMPs in signal conditioning applications. Need for Instrumentation Amplifiers- Case study. Error budget analysis with Case study. ADCs- Interpretation of ADC specifications from design view point. Considerations in selecting References (Vref for ADC).DACs- Interpretation of DAC specifications from design view point.

Unit – III

Hardware design- Digital

Interface examples for- LED, HB LED, LCD, Keyboard, Touch Screen. Microcontrollers - Comparative study of different Microcontroller Architectures, Factors affecting choice of Microcontroller for particular application with Case study of one application. Introduction to buses and protocols used in Electronic Products- I2C, SPI.

UNIT - IV

PCB design and EMI/EMC

PCB Design practices for Analog and Mixed signal circuits- Ground Loops, Precision circuits, shielding and guarding. PCB Design Practices for High Speed Digital Circuits, Signal integrity and EMC. EMI/EMC testing standards and compliance.

Text Books

1. Bernhard E. Bürdek, ―History,Theory, Practice of Product Design‖, Springer Science, 1st edition, 2005.
2. Paul Horowitz, ―Art of Electronics‖, Cambridge University Press, 3rd edition, 2015.
3. Howard Johnson, Martin Graham, ―High-speed Digital design- A Handbook of Black Magic‖, Prentice Hall Publication, 1st edition, 1993.
4. Proakis and Salehi, ―Contemporary Communication Systems Using Matlab‖, Wadsworth Publishing Co Inc, 3rd edition, 2011.
5. G. PahlandW.Beitz J. Feldhusen and K.-H. Grote, ―Engineering Design - A Systematic Approach‖, Springer, 3rd edition, 2007.
6. Tim Williams, ―EMC for Product Designers‖, Elsevier, 4th edition, 2007.

Books For Study

1. David Bailey, ―Practical Radio Engineering and Telemetry for Industry‖, Elsevier, 1st Edition 2003.
2. Bernard Sklar , ―Digital Communication‖ , Pearson Education, 2nd Edition, 2001.
3. Pressman , ―Software Engineering - A Practitioner's Approach‖ McGraw-Hill Higher Education, 8th Edition, 2014.
4. DomineLeenaerts ,Johan van der Tang , Cicero S. Vaucher , ―Circuit Design for RF Transceivers ‖ Springer, 2001 Edition, 2011.

INS-104(a)	Programming in "C"	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Programming in "C"

Course Objectives:

- To teach basic principles of 'C' language.
- To teach basic Programs in 'C' Language.
- To teach simple Array Programs in 'C' Language.
- To teach file management using 'C' language

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand the basic principles of C language.
CO2	• Understand To teach basic Programs in C Language.
CO3	• Understand the simple Array Programs in C Language.
CO4	• Understand the File management and Linked List Programs.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	2	2	-	-	2	1	-	1
CO2	3	2	3	3	-		2	-	2	1	-	1
CO3	3	2	3	3	2		-	-	2	-	-	1
CO4	3	2	3	3	-	2		-	2	-	-	1

Elective Foundation: INS-104(a)	Programming in "C"

UNIT-1

a. Overview of computers: Overview of computer system, people, procedures, data, information, hardware-operations of computing, hardware categories, software application software and system software, developments in computer technology, types of programming languages, algorithms, flow charts.

B. Overview of C: History of C, importance of C, basic structure of C programs, programming style.

UNIT-II

a. Constants, Variables and Data Types: Character set, C tokens, keywords and identifiers, constants, variables, data types, declaration of variables, declaration storage classes, assigning values to variables, defining symbolic constants, declaring a variable as Constant and volatile, Overflow and underflow of data.

b. Operators and Expressions: Introduction to operators, arithmetic operators, relational operators, logical operators, assignment operators, increment and decrement operators, conditional operators, bit wise operators, special operators, arithmetic expressions, reading and writing a character, formatted input and output.

c. Decision Making and Looping: IF and Else IF statements, SWITCH statements, WHILE, DO-WHILE and FOR statements. C programs covering all the above aspects.

UNIT-III

a. Arrays and Strings: Introduction to arrays, initialization of One dimensional array and two dimensional arrays, declaring and initializing string variables, reading and writing strings, string handling functions.

b. User Defined Functions: need for user-defined functions, definition of functions, return values and their types, function calls and declarations, arguments but no return values, no arguments no return values, nesting of functions, passing arrays to functions, passing strings to functions.

UNIT- IV

a. Structures and Pointers: Defining a structure, declaring structure variables, structure initialization, copying and comparing structure variables, arrays of structures, understanding pointers, declaring pointer variables, initialization of pointer variables, pointer expressions.

b. File Management and Linked Lists: Defining and opening a file, closing a file, input/output operations on files, and concepts of Single Linked Lists.

Books For Study

1. Programming with C" by K.R. Venugopalprasad, Tata McGraw Hill
2. Programming in C by E. Balaguruswamy, Tata McGraw Hill
3. "Data structures through C" by YeshwanthKanitkar, BPB Publications (2003)
4. Programming in ANSI C - E. Balaguruswamy.
5. Let us C - YeshwanthKanitkar.
6. Data Structures using C - A.M. Tanenbaum and others.
7. "C programming "by Dennis Ritche, PHI Publishers.

INS - 104(b))	Renewable Sources of Energy	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Renewable Sources of Energy

Course Objectives:

- To teach the different energy sources
- To teach the importance of Solar energy
- To teach the usage of wind energy
- To teach the importance of bio-mass energy

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand about different energy sources
CO2	• Learn the importance of Solar energy
CO3	• Learn the usage of wind energy
CO4	• Learn the importance of bio-mass energy

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	3	2	2	1	1	-	2	-	-	-
CO2	3	3	3	3	-	1	2	-	1	2	-	-
CO3	3	3	3	3	-	1	2	-	1	-	-	-
CO4	3	3	3	3	-	1	2	-	2	2	-	-

Elective Foundation: INS-104(b)	Renewable Sources of Energy

Unit - 1:

INTRODUCTION TO ENERGY STUDIES

Introduction, Energy science and Technology, Forms of Energy, Importance of Energy Consumption as Measure of Prosperity, Per Capita Energy Consumption, Roles and responsibility of Ministry of New and Renewable Energy Sources, Needs of renewable energy, Classification of Energy Resources, Conventional Energy Resources , Non-Conventional Energy Resources, World Energy Scenario, Indian Energy Scenario.

SOLAR ENERGY

Introduction, Solar Radiation, Sun path diagram, Basic Sun-Earth Angles, Solar Radiation Geometry and its relation, Measurement of Solar Radiation on horizontal and tilted surfaces, Principle of Conversion of Solar Radiation into Heat, Collectors, Collector efficiency, Selective surfaces, Solar Water Heating system , Solar Cookers , Solar driers, Solar Still, Solar Furnaces, Solar Greenhouse. Solar Photovoltaic, Solar Cell fundamentals, Characteristics, Classification, Construction of module, panel and array. Solar PV Systems (stand-alone and grid connected), Solar PV Applications. Government schemes and policies.

Unit - 2:

WIND ENERGY

Introduction, History of Wind Energy, Wind Energy Scenario of World and India. Basic principles of Wind Energy Conversion Systems (WECS), Types and Classification of WECS, Parts of WECS, Power, torque and speed characteristics, Electrical Power Output and Capacity Factor of WECS, Stand alone, grid connected and hybrid applications of WECS, Economics of wind energy utilization, Site selection criteria, Wind farm, Wind rose diagram.

Unit - 3:

BIOMASS ENERGY

Introduction, Biomass energy, Photosynthesis process, Biomass fuels, Biomass energy conversion technologies and applications, Urban waste to Energy Conversion, Biomass Gasification, Types and application of gasifier, Biomass to Ethanol Production, Biogas production from waste biomass, Types of biogas plants, Factors affecting biogas generation, Energy plantation, Environmental impacts and benefits, Future role of biomass , Biomass programs in India.

Unit - 4:

HYDRO POWER AND OTHER RENEWABLE ENERGY SOURCES

Hydropower: Introduction, Capacity and Potential, Small hydro, Environmental and social impacts. Tidal Energy: Introduction, Capacity and Potential, Principle of Tidal Power, Components of Tidal Power Plant,

Classification of Tidal Power Plants. Ocean Thermal Energy: Introduction, Ocean Thermal Energy Conversion (OTEC), Principle of OTEC **5** system, Methods of OTEC power generation. Geothermal Energy: Introduction, Capacity and Potential, Resources of geothermal energy.

Books For Study

1. Sukhatme. S.P., Solar Energy, Tata McGraw Hill Publishing Company Ltd., New Delhi, 1997.

2. B. H. Khan, Non-Conventional Energy Resources, , The McGraw Hill

3. Twidell, J.W. & Weir, A. Renewable Energy Sources, EFN Spon Ltd., UK, 2006.

4. S. P. Sukhatme and J.K. Nayak, Solar Energy – Principles of Thermal Collection and Storage, Tata McGraw-

Hill, New Delhi.

5. Garg, Prakash, Solar Energy, Fundamentals and Applications, Tata McGraw Hill.

INS-104(C)	Opto Electronics	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Basic Opto Electronics

Course Objectives:

- To teach the fundamentals of laser and their applications
- To teach the different optical sources and detectors
- To teach the oprtical components and instruments
- To teach the basics of optical fibres and its applications

Course Outcomes: At the end of the course, the student will be able to

CO1	• Learn fundamentals of laser and their applications
CO2	• Know the different optical sources and detectors
CO3	• Understand the oprtical components and instruments
CO4	• Learn the basics of optical fibres and its applications

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	2	2	1	1	-	2	1	-	-
CO2	3	2	-	3	2	1	2	-	2	1	-	-
CO3	3	2	-	3	2	1	2	-	2	1	-	-
CO4	3	2	-	3	2	1	2	-	2	1	-	-

(Elective Foundation)

Elective Foundation: INS-104(c)	Opto Electronics

Unit I:

Laser Fundamentals: Properties of laser, Laser modes- axial and transverse, single mode operation. Frequency stabilization.Mode locking, Mode hopping, Q-switching techniques.

Laser Types: Doped insulator lasers, Semiconductor lasers, Gas lasers, Liquid Dye lasers.

Laser safety: Biological effects, safety standards, risk of exposure, laser hazard classification and assessment, laser safety system, safe industrial laser laboratory, laser eye protection, laser accidents.

Applications of Laser: Biomedical, process, etc

Unit II:

Optical sources: Electromagnetic spectrum, types of spectra- line, band and continuous light sources, radiometry and photometry, natural sources, incandescent lamp, gas discharge lamp. Light-emitting diodes electroluminescent process, choice of LED materials, LED structures, infrared sources, semiconductor laser.

Optical detectors: Thermal detectors and Quantum detectors, bolometer, Photodiodes- PIN and avalanche photodiodes, phototransistors, photo multipliers, photovoltaic, IR detectors, Solar cells, CCD devices.

Unit III:

Optical components Filters: absorption filters and interference filter, gratings- equation of diffraction grating, resolving power, concave grating, volume diffraction grating, holographic grating. Lenses, Polarizer and Beam splitters, Monochromator

Optical instruments: Eye, telescopes, microscopes, optical projection systems, cameras, basic principles of Holography, OTDR, polarimeter.

Unit IV:

Optical Fiber and Their properties: Ray theory, wave guiding principles, Theory of optical wave propagation, Types and classification of optical fibers, optical fiber mode, single mode fiber, special fiber, fiber materials, fiber fabrication, transmission characteristics of fiber, absorption losses, scattering losses, dispersion, polarization, nonlinear

phenomena

Optical Fiber Measurements: Measurement of attenuation, dispersion, refractive index profile of fiber and cut off wavelength, numerical aperture, OTDR, Measurement of flow, pressure, Temperature, displacement, acceleration and fluid level vibration measurement.

Books For Study

1. J. Wilson, ―Optoelectronics‖, Prentice-Hall of India.3rd Edition, 1988.
2. ―Electro-Optical Instrumentation: Sensing and Measuring with Lasers‖, Pearson Education, Inc., 1st Edition, 2004.
3. Opto Electronic Devices – Li, Xun-Hardback-374.
4. Optical Electronics – Ajoy Ghatak, K.Thyagarajan.

(MandatoryCore)

INS-201	**Industrial Instrumentation**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level Industrial Instrumentation

Course Objectives:

- To teach the introduction in Process Instrumentation .
- To teach the Instrumentation in Iron and Steel Industries.
- To teach the Instrumentation in Petrochemical, Pharmacy
- To teach Thermal Power Stations.

Course Outcomes: At the end of the course, the student will be able to

CO1	• learn the introduction in Process Instrumentation .
CO2	• learn To teach the Instrumentation in Iron and Steel Industries.
CO3	• learn the Instrumentation in Petrochemical.
CO4	• know the Instrumentation in Pharmacy and Thermal Power Stations.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	-	3	2	1	1	1	-	1	-
CO2	3	3	3	1	3	-	1	1	-	1	-	-
CO3	3	3	3	-	2	-	1	-	-	-	-	-
CO4	3	3	3	-	2	2	1	1	-	-	1	-

(Mandatory Core)

Core – 1: INS-201	Industrial Instrumentation

UNIT – I

Introduction to Process Instrumentation: Elements of Process Instrumentation - Switches, Valves, Gauges, Converters, transmitters, actuators, relays. Process Instrumentation Diagrams - Familiarization.

Instrumentation in Iron & Steel Industries: Description of the process, Measurement hardware, Valves, Controllers and displays, Computer Applications and Typical control systems as applied to the iron and steel industries.

UNIT – II

Instrumentation in Petrochemical Industries: Control of Distillation Towers, Refrigeration units, Steam boilers, Furnaces, Centrifuges, Crystallizers, Heat exchangers, Pumps, Compressors, and Evaporators as applied to the petrochemical industry.

UNIT – III

Instrumentation in Pharmaceutical Industries : Description of the process, Measurement hardware, Valves, Controllers and displays, Computer Applications and Typical control systems as applied to the Pharmaceutical industries.

UNIT – IV

Instrumentation in Thermal Power Stations : Description of the process, Measurement hardware, Valves, Controllers and displays, Computer Applications and Typical control systems as applied to the Thermal Power Stations.

Books For Study

1. Industrial Instrumentation – K. Krishnaswamy.
2. Industrial Instrumentation – Donald P. Eckman.
3. Industrial Instrumentation – Umesh Rathore.
4. Industrial Instrumentation – K. Krishnaswamy, S. Vijaychitra.
6. Process Instrumentation — Liptak
7. Process Instrumentation & control Handbook - Mithal
8. Instrumentation in Industries - H.E. Soison
9. Programmable Logic Controllers – John Webb – Maxwell Macmillan International

(MandatoryCore)

INS- 202	Electronic Instrumentation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Electronic Instrumentation

Course Objectives:

- To teach Analogue Measuring Instruments
- To teach. Principle, operation and construction and details of analog and digital measuring instrumentation
- To teach designof function generator, square wave generator and digital multi meter
- To teach Spectrum Analyzers, Frequency Synthesizers, Digital tachometer, Digital watt meter

  Digital Capacitance meter

Course Outcomes: At the end of the course, the student will be able to

CO1	• Learn about analogue Measuring Instruments
CO2	• Learn • Principle, operation and construction and details of analog and digital measuring instrumentation.
CO3	• analyze and design function generator, square wave generator and digital multi meter.
CO4	• Learn Spectrum Analyzers, Frequency Synthesizers, Digital tachometer, Digital watt meter Digital Capacitance meter

Mapping of course outcomes with the program outcomes												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	-	2	1	1	-	**1**	1	**-**	-
CO2	3	2	2	1	2	1	-	-	**1**	1	**-**	-
CO3	3	3	3	-	2	1	2	-	**1**	1	-	-
CO4	3	2	3	2	3	-	2	-	**1**	1	-	-

(Mandatory Core)

Core – 2: INS-202	Electronic Instrumentation

UNIT-I: Analogue Measuring Instruments

(a). Principle, Operation and constructional details of moving coil moving iron - induction type dynamometer type of DC meters Thermal type and rectifier type of meters. Errors and their compensation - extension of ranges of DC and AC meters -Ohmmeters - series type - shunt type meters – Meggers.

(b). Cathod Ray Oscilloscopes, D.C. and A.C. Millie/Micro voltmeters Precision rectifier types. Nano ammeter (usingop.amp). Analogue frequency meter. Analogue phase meter, impedance, L, C, R Bridges, Q meters and Distortion factor meters

UNIT-II: Digital Measuring Instruments: (Basic principle, design and working with suitable block/circuit diagrams)

a) Digital frequency meter.

b) Digital volt meter.

c) Digital multimeters.

d) Digital phase meter.

e) Digitizing Oscilloscopes, Storage oscilloscope and Sampling Oscilloscopes.

UNIT-III: Waveform Generators: (Basic principle, design and working with suitable block/circuit diagrams)

(a) A.F. Sine/Square wave Generator.

(b) R.F. Signal Generator.

(c) Standard signal Generator.

(d) Function Generator.

UNIT – IV: Special Instruments: (Basic principle, design and working with suitable block/circuit diagrams)

(a) Spectrum Analyzers

(b) Frequency Synthesizers

(c) Digital tachometer

(d) Digital watt meter

(e) Digital Capacitance meter

Books For Study:

1. Principle of Electronic Instrumentation – De Sa, Elsevier Science
2. Electronic Instrumentation and Measurements – H. S. Kalsi
3. Electrical and Electronic Measurements and Instrumentation – J. K. Gupta.
4. Electronic Instruments and Instrumentation Technology – M.M.S. Anand.
5. Electronic Instrumentation and Measuring Techniques. — Cooper
6. Electronic Instrumentation — Kalsi
7. Electronic Measurements and Instrumentation. — Oliver & Cage
8. Instrumentation Devices and Systems. — Rangan, Sarma and Mani
9. A Course in Electrical and Electronic Measurements and Instrumentation. by AK Sawhney

(CompulsoryFoundation)

INS-203(a)	Sensors and Signal Conditioners	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level in Sensors and Signal Conditioners

Course Objectives:

- To study the basic principles sensors and transducers
- To study the basic concepts of Signal Conditioners and Recorders
- To study Temperature transducer , flow transducer and level sensors
- To teach Pressure Transducers,d Manometers and Elastic transducers

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand fundamentals of sensor/Transducers
CO2	• Understand the concept of Signal Conditioners.
CO3	• Understand the concepts Temperature transducer , flow transducer and level sensors
CO4	• Learn Pressure Transducers, Manometers and Elastic transducers

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	1	2	1	2	-	-	2	2	-
CO2	3	3	2	1	2	1	1	-	1	-	2	-
CO3	3	3	2	1	2	1	2	-	-	-	2	-
CO4	3	3	2	1	2	1	1	-	-	2	2	-

(Compulsory Foundation)

Compulsory Foundation: INS-203(a)	Sensors and Signal Conditioners

UNIT-I: INTRODUCTION TO SENSORS \ TRANSDUCERS.

Definition of a transducers\sensor.Role of transducers.Characteristics of transducers.Significant parameters of a transducer.Selection of a transducer.Classification of transducers.Linearization of transducers.

UNIT-II: SIGNAL CONDITIONERS: Precision Rectifier, Logarithmic Amplifier, Anti Logarithmic Amplifier, Active filters, DC to DC converters, Chopper Stabilized Amplifier, Phase Sensitive detector.

OPTO-ELECTRONIC TRANSDUCERS

Photoelectric effect.Photo emissive tube and photomultiplier tubes.Photoconductive and photovoltaic cells.Photo diodes and photo transistor. Light Dependent Resistors.

UNIT – III:

(a) TEMPERATURE TRANSDUCERS

Mechanical Temperature sensors.Resistance type temperature sensors.Platinum resistance thermometer.Thermocouples.Solid state sensors.Radiation type sensors – optical pyrometers.Calibration of thermometers.

(b) FLOW TRANSDUCERS

Flow characteristics. Obstruction meters-Venturi meter and orifice meters.Turbine flow measuring devices.

(c) LEVEL SENSORS

Diaphragm level sensor.Differential pressure level sensor.Laser level sensor. Level gauges.

UNIT-IV: DISPLACEMENT, STRAIN AND PREESSURE TRANSDUCERS

Displacement transducers-Variable resistance, inductance and capacitance.Linear Voltage Differential Transformer (LVDT).Strain-definition. Principle of working of strain gauges. Gauge factor. Types of strain gauges.Materials for strain gauges. Temperature compensation.Applications.

Manometers.Elastic transducers - Diaphragms, Bellows, Bourdon or helical tubes.Electrical pressure transducers – variable resistance, inductance and capacitance.Piezoelectric pressure transducer.Pressure calibration.

Books For Study:

1. Sensors and Transducers – D.Patranabis
2. Inteligent Sensor Systems 1996 Edition by John Bringnell, Neil White, Taylor & Francis.
3. Sensors and Transducers – Principle and Applications – R. Y. Borse
4. Modern Sensors Handbook 2007 Edition by Pavel Ripka, Aloisk Tipek, ISTE LTD.
5. Instrumentation Measurement Analysis – Nakra and Chaudhry
6. Instrumentation – Devices and Systems – Rangan, Mani and Sharma
7. A Course in Electrical and Electronic Measurements and Instrumentation A.K.Sahany
8. Hand Book of Bio-Medical Instrumentation – R.S. Khandpur (TMH)
9. 9.Process Measurement and Analysis – B.G. Liptak

(CompulsoryFoundation)

INS-203(b)	Network Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level

Course Objectives:

- To teach different Network theorems
- To teach Laplace Transform in the Network Analysis
- To teach The concept of complex frequency
- To teach Resonance in series and parallel circuits

CourseOutcomes: At the end of the course, the student will be able to

CO1	• Under stand different Network theorems
CO2	• Lear the use of Laplace Transform in the Network Analysis
CO3	• Under stand the concept of complex frequency
CO4	• Learn the concepts in Resonance in series and parallel circuits

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	-	2	1	1	-	-	2	2	-
CO2	3	3	2	1	2	1	1	-	1	2	2	1
CO3	3	3	2	-	-	1	1	-	-	2	2	-
CO4	3	3	2	1	2	1	1	-	1	2	2	1

(Compulsory Foundation)

Compulsory Foundation: INS-203(b)	Network Analysis

UNIT-I

Network theorems: Thevenin‘s theorem, Norton‘s theorem, Super position theorem, Reciprocity theorem, Millman theorem, Maximum Power Transfer theorem.

Signal representation - Impulse, step, pulse and ramp function, waveform synthesis.

UNIT-II

Laplace Transform in the Network Analysis: Initial and Final conditions, Transformed impedance and circuits, Transform of signal waveform. Transient analysis of RL, RC, and RLC networks with impulse, step, exponential, pulse and sinusoidal inputs, use of initial and final value theorems. Networks with transformed impedance and dependent sources.

UNIT-III

The concept of complex frequency - Network functions for the one port and two port - driving point and transfer functions - Poles and Zeros of network functions and their locations and effects on the time and frequency domain. Restriction of poles and zeros in the driving point and transfer function. Time domain behavior from the pole - zero plot.Frequency response plots - Magnitude and phase plots, Plots from s-plane phasors, Bode plots - phase margin and gain margin.Parameters of two-port network – impedance, admittance, transmission and hybrid - Conversion formulae.Attenuators – propagation constant, types of attenuators – T, π and Balanced.

UNIT-IV

Resonance in series and parallel circuits- resonant frequency- bandwidth - Q factor, Selectivity. Coupled circuits, single tuned and double tuned circuits, coefficient of coupling, Image Impedance, Characteristic impedance and propagation constant.Introduction to filters- Filter approximations - poles of the Butterworth, Chebyshev and inverse Chebyshev functions, expression for transfer function of Butterworth Low pass filter, design for 2nd order and 3rd order low pass Butterworth filters, Bessel-Thomson response.

Books For Study:

1. Circuits and Network Analysis,3/e, TMH: Sudhakar and S. P. Shyam Mohan
2. Network Analysis – M.E.Van Valkenburg, T.S.Rathore
3. Network Analysis And Synthesis – B.Somanathan Nair, S.R.Deepa.
4. Network Analysis and Synthesis – Ravish R. Singh.

INS-203(c)	Spectroscopic Instrumentation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Spectroscopy

Course Objectives:

- To study the basics of Molecular Spectroscopy
- To study the basics of RAMAN Spectroscopy
- To study the basics of Spectrophotometry
- To study the basics of Fluorescence and Phosphorescence Spectroscopy

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand the basics of Molecular Spectroscopy
CO2	• Understand the basics of RAMAN Spectroscopy
CO3	• Understand the basics of Spectrophotometry
CO4	• Understand the basics of Fluorescence and Phosphorescence Spectroscopy

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	-	1	2	-	-
CO2	3	3	-	2	2	1	1	-	-	2	2	-
CO3	3	3	2	1	2	1	1	-	-	2	-	-
CO4	3	3	1	-	2	1	1	-	1	2	2	-

(Compulsory Foundation)

Compulsory Foundation: INS-203(c)	Spectroscopic Instrumentation

UNIT-I

Molecular Spectroscopy:

Introduction, Rotational structure of electronic bands of diatomic molecules, Fortrat diagram, General relations, Combination relations for $^1\Sigma$ - 1Σ and $^1\Sigma - ^1\pi$ bands Evaluation of rotational constants with reference to above transition.SSIsotope effect in electronic spectra of diatomic molecules.Potential energy curves and dissociation energy and pre-dissociation energy.

UNIT-II

Raman Spectroscopy:

Introduction, Theory of Raman Scattering, Rotational Raman Spectra, Vibrational Raman Spectra, Mutual Exclusion Principle, Laser Raman Spectroscopy, Schematic diagram of Laser Raman Spectrometer, description, Applications, Sample Handling Techniques, Polarization of Raman Scattered Light, Single Crystal Raman Spectra Raman Investigation of Phase Transitions, Resonance Raman Scattering, Structure Determination.

UNIT-III

Spectrophotometry :

Introduction – Beer's law, Absorptivity, UV and visible absorption, Instrumentation, Essential parts of spectrophotometer, Gratings and prisms, Radiant energy sources, Filters, Photosensitive detectors, Barrier layer cells, Photo emissive cells Photomultiplier tubes, Relationship between absorption in the visible and UV region and molecular structure, IR spectrophotometry, Fourier Transform Infrared (FTIR) Spectrometer, Principle, description of the Spectrophotometer, Advantages of FTIR over convention IR spectrophotometer, Applications.

UNIT - IV

Fluorescence and Phosphorescence Spectroscopy:

Introduction – Normal and Resonance Fluorescence, Intensities of Transitions, Non-radiative decay of fluorescent molecules, Phosphorescence and the nature of the triplet state, Population of the triplet state, Delayed Fluorescence, Excitation spectra Schematic diagram of Fluorescence Spectrometer description, Applications of Fluorescence and Phosphorescence.

Text books:

1. Principles of Fluorescence Spectroscopy, Joseph R.Lakowicz - Plenum Press, 1983
2. Molecular Spectroscopy, N.C.Crabb and P.W.B.King
3. Light Scattering in Solids, M Cardona, G Guntherodt - 1975 - Springer-Verlag
4. Noble Lecture of SirC.V.Raman

Books For Study:

1. Elements of Spectroscopy, Gupta, Kumar and Sharma
2. Elements of Diatomic Molecular Spectra, H. Dunford
3. Problems in Spectroscopy, S.V.J. Lakshman
4. Basic Principles of Spectroscopy, R. Chang

INS-204(a)	**Microprocessors and Interfacing**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level Microprocessors

Course Objectives:

- To teach principles of Microprocessor.
- To teach topics including internal architecture of microprocessor 8085 and 8086, their memory organization.
- Interfacing of data converts, memory and I/O Devices
- Programmable peripheral Interfacing Device

Course Outcomes: At the end of the course, the student will able to

CO1	• learn assembly programming language
CO2	• demonstrate the knowledge of addressing modes, instruction sets.
CO3	• able to analyze and design assembly level programmes and timing diagrams.
CO4	• able to analyze programmable peripheral devices, 8255, 8257/8237, 8259.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9		PO11	PO12
CO1	3	3	2	2	-	-	-	-	2	-	1	1
CO2	3	3	2	2	-1	-	1	-	2	-	1	-
CO3	3	3	2	-	1	1	1-	-	2	-	1	-
CO4	3	3	2	2	2	1	1	-	2	-	1	2

(Elective Foundation)

Elective Foundation: INS-204(a)	**Microprocessors and Interfacing**

UNIT-I

Introduction to Microprocessor: Overview of a basic microcomputer structure and operation, Ideal microprocessor, Microprocessor technology-Bipolar and MOS, Microprocessor evolution and types

UNIT-II

8086 / 8088 Microprocessor Family: Overview of 8086 Microprocessor family.
Architecture of 8086/8088 Microprocessor - Architecture of Intel 8086/8088, Addressing modes. Detailed instruction set of Intel 8086/8088. Interrupts, Assembler Directives.

UNIT- III

Interfacing of data converts, memory and I/O Devices: Interfacing 8-bit D/A converter and A/D converts, Software controlled successive approximation A/D converter using ADC, Memory interfacing, DMA data transfer, serial data transfer, interfacing to Alphanumeric display.

UNIT-IV

Programmable peripheral Interfacing Device: programmable Keyboard/display interface(8279), Programmable Peripheral Interface(8255), Programmable Interval Timer(8253), Programmable Interrupt Controller(8259), Synchronous Data Communication Device(8251).

Books For Study:

1. Microprocessors and Interfacing Programming and Hardware --- Douglas V Hall
2. The Intel Microprocessors 8086/8088. 80186/80187. 80286. 80386. 80486. Pentium Processors - Architecture. Programming and interfacing. PHI, B.B. Brey
3. Advanced Microprocessors and Interfacing – Badri Ram.
4. Microprocessors and Interfacing Devices - Rupender Singh, Sarika Jain.
5. Introduction to Microprocessor/Microcontrollers-B.RAM.
6. The 8086/8088 Microprocessors : Programming. Interfacing Software. Hardware and Applications - Walter A. Triebel. Avatar Singh. PHI Edition.
7. Microprocessors, PC Hardware and Interfacing – N.Mathivannan, PHI
8. Advanced Microprocessor & Peripherals – Architecture, Programming & Interfacing – A.K.Ray&K.M.Bhurchandi , TMH.

INS-204(b)	**Robotics**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite: Understanding of graduate level in Robotics

Course Objectives:

The goal of the Robotics course is to familiarize the students with the concepts and techniques in robot manipulator control, enough to evaluate, chose, and incorporate robots in engineering systems

Course Outcomes: At the end of the course, the student will able to

CO1	To develop the student's knowledge in various robot structures and their workspace.
CO2	• To develop student's skills in performing spatial transformations associated with rigid body motions.
CO3	To develop student's skills in perform kinematics analysis of robot systems.
CO4	• To provide the student with knowledge of the singularity issues associated with the operation

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	-	2	1	-	-
CO2	3	3	2	2	2	1	1	-	2	1	-	-
CO3	3	3	2	2	2	1	1	-	2	1	-	-
CO4	3	3	2	2	2	1	1	-	2	1	-	-

(Elective Foundation)

Elective Foundation: INS-204(b)	Robotics

UNIT-I

Brief History, Types of robots, Overview of robot subsystems, resolution, repeatability and accuracy, Degrees of freedom of robots, Robot configurations and concept of workspace, Mechanisms and transmission, End effectors and Different types of grippers, vacuum and other methods of gripping. Pneumatic, hydraulic and electrical actuators, applications of robots, specifications of different industrial robots.

UNIT-II

Rotation matrices, Euler angle and RPY representation, Homogeneous transformation matrices, Denavit-Hartenbergnotation,representation of absolute position and orientation in terms of joint parameters, direct kinematics.

Inverse Kinematics, inverse orientation, inverse locations, Singularities, Jacobian, Trajectory Planning: joint interpolation, task space interpolation, executing user specified tasks.

UNIT-III

Static force analysis of RP type and RR type planar robots, Dynamic analysis using Lagrangian and Newton-Euler formulations of RR and RP type planar robots, , Independent joint control, PD and PID feedback, actuator models, nonlinearity of manipulator models, Computed torque control, force control, hybrid control.

UNIT-IV

Sensors and controllers: Internal and external sensors, position, velocity and acceleration sensors, proximity sensors, force sensors, laser range finder. Robot vision: image processing fundamentals for robotic applications, image acquisition and preprocessing. Segmentation and region characterization object recognition by image matching and based on features

Books For Study:

1. Introduction to Robotics – Analysis, Control, Applications – Saeed B. Niku.
2. Introduction to Robotics – Mechanics and Control - John J. Craig.
3. Robotics and Control – R.K. Mittal, I.J.Nagrath.
4. Robotics for Engineers – Kailash Chandra Mahajan, Prashant Kumar Pattnaik, Raghvendra Kumar.

(Elective Foundation)

INS -204 (c)	Electronic Measurement Instrumentation	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level Electronic Measurement Instrumentation

Course Objectives:

- To teach Static and Dynamic characteristics of instruments,
- To teach Signal Converters: I To P / P To I Converter
- To teach Electronic Instruments for Measuring Basic Parameters
- To teach Instrument for Generation and Analysis of Waveforms

CourseOutcomes: At the end of the course, the student will be able to

CO1	• Learn the static and Dynamic characteristics of instruments,
CO2	• Learn the signal Converters: I To P / P To I Converter
CO3	• Understand the electronic Instruments for Measuring Basic Parameters
CO4	• Understand the Instrument for Generation and Analysis of Waveforms

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	-	-	-	-	1	1	-
CO2	3	2	2	3	2	-	-	-	1	-	1	-
CO3	3	2	1	2	3	-	1	-	2	2	-	-
CO4	3	2	1	3	3	1	1	-	2	-	2	-

(Elective Foundation)

Elective Foundation: INS-204(c)	Electronic Measurement Instruments

Unit I:

Static and Dynamic characteristics of instruments, dead zone, hysteresis, threshold, resolution, input & output impedance, loading effects, fundamentals of measurements, Types of Error, Statistical Analysis, Probability of Errors, Limiting Errors, calibration of instruments, traceability, calibration report & certification.

DC bridges: Wheatstone bridge and Kelvin bridge design, bridge sensitivity, errors in bridge circuits, null type and deflection type bridges, current sensitive and voltage sensitive bridges, applications of DC bridges

Unit II:

Signal Converters: I To P / P To I Converter, Temperature to Voltage Converter, Conversion To Frequency, Period, or Time Duration, Measurement of Phase Difference Using X-OR and SR Flip-Flop Method, Measurement of Active And

Reactive Power of Supply Line, Lock-in Amplifiers, Variable Oscillators, Direct Sensor Microcontroller Interfacing.

Isolation Techniques: Transformer Isolation, Optical Isolation, Digital Techniques For Optical Isolation, Hall-Effect Principle and Measurement of Displacement, Current And Power Using Hall Sensors, Amplifications of Low Level Signals, Guarding, Shielding.

Unit III:

Electronic Instruments for Measuring Basic Parameters: Amplified DC meter, AC Voltmeter, True-RMS responding Voltmeter, Electronic multi-meter, Digital voltmeter, Vector Voltmeter.

Digital Instruments: Block diagram, principle of operation, Accuracy of Measurement Digital Multimeter, Kilo Watt Hour meter, Phase meter, Digital Tachometer, Ultrasonic Distance meter, Digital Thermometer, DSO, Frequency meter.

Unit IV:

Instrument for Generation and Analysis of Waveforms: Introduction, The Sine Wave Generator, Frequency Synthesized Signal Generator, Frequency Divider Generator, Signal Generator Modulation, Sweep Frequency Generator, Pulse and Square Wave Generator, Function Generator, Wave Analyzers, Harmonic Distortion Analyzer, Spectrum Analyzer.

Books For Study:

1. Helfrick Albert D., Cooper W. D., "Modern Electronic Instrumentation and Measurement Techniques", Prentice Hall India, 2nd Edition, 2008.

2. Sawhney A. K., "A Course in Electrical and Electronics Measurements and Instrumentation", DhanpatRai& Sons, 11th Edition, 2005.

3. Kalsi H. S., "Electronic Instrumentation", Tata McGraw-Hill Education, 3rd Edition, 2010.

4. Bell David A., "Electronic Instrumentation and Measurements", Pearson Education, 3rd Edition, 2013.

INS-301	Analytical Instrumentation	L-5,T-1,P-0	4Credits

Pre-requisite: Basic knowledge of Analytical Instrumentation

Course Objectives:

- To introduce the basic concept of qualitative and quantitative analysis of given sample.
- To study various spectroscopic techniques and its instrumentation.
- To study the concept of separation science and its applications.
- To study the concept of industrial analyzers and its application.

Course Outcomes: At the end of the course, the student will be able to

CO1	• The Students get will be versed with the principles, construction and working of various analytical instruments..
CO2	• Students get details information about the applications of analytical techniques in medicine, industry etc.
CO3	• Understand the Polarographs
CO4	• Understand the NMR and ESR Spectrometers

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	2	2	1	-	2	1	-	-
CO2	3	2	2	2	2	2	1	-	-	2	2	-
CO3	3	2	2	2	2	2	1	-	-	-	-	-
CO4	3	2	2	2	2	2	2	-	2	2	-	1

(Mandatory Core)

Core – 1: INS-301	Analytical Instrumentation

UNIT –I:

COLORIMETERS AND SPECTROPHOTOMETERS

(a) Colorimeter – Principle and working with a block diagram. Salient features of individual blocks. Specifications of a colorimeter. Applications of colorimeters to analytical and biomedical purposes.

(b) Spectrophotometer – Principle and working with a block diagram. Salient features of individual blocks. Specifications and operation of spectrophotometer. Types of Spectrophotometers - Ultraviolet, Visible and Infrared. Applications of spectrophotometers.

ATOMIC ABSORPTION AND RAMAN SPECTROMETERS

a) Atomic absorption spectrometer – Principle and working with a block diagram. Salient features of individual blocks. Applications.

b) Raman Spectrometer – Principle and working with a block diagram. Salient features of individual blocks. Applications of Raman spectrometer.

UNIT –II

CONDUCTIVITY BRIDGES, PH METERS AND POLAROGRAPHS

a) Conductivity bridge – Principle and working of a conductivity bridge with a block diagram. Salient features of individual blocks. Applications of conductivity bridges.

b) pH Meters – Principle and working with a block diagram. Salient features of individual blocks. Types of pH meters. Applications of pH meters in chemical and industrial fields.

c) Polarograph – Principle and working with a block diagram. Salient features of individual blocks. Characteristics of dropping mercury electrode. Polarogram. Pulse polarograph. Application of Polographs in chemical and Industrial fields.

UNIT – III

RESONANCE AND MASS SPECTROMETERS

a) Nuclear magnetic resonance spectrometer – Principle and working with suitable schematic/block diagrams. Experimental arrangement. Salient features of individual blocks. NMR spectrum. Applications of NMR spectrometer.

b) Electron spins resonance spectrometer – Principle and working with a block diagram. Experimental arrangement. Salient features of individual blocks. Applications of ESR spectrometer.

c) Mossbauer Spectrometer – Experimental arrangement. Salient features of individual blocks. Sources, absorbers and detectors. Mossbauer spectrum. Applications of Mossbauer spectrometer.

d) Mass spectrometer – Principle and working. Description of individual blocks of experimental arrangement. Applications of Mass spectrometer.

UNIT – IV

ELECTRON MICROSCOPES

a) Transmission electron microscope – Principle and working with a block diagram. Salient features of individual blocks.

b) Scanning electron microscope – Principle and working with a block diagram. Description of individual blocks. Applications of electron microscopes.

THERMAL ANALYSERS

Thermo gravimetric and Differential Thermal analyzers – Principle and working with schematic diagram.Description of individual blocks.Applications.

CHROMATOGRAPHS

Chromatographs – Gas and liquid chromatographs: Principle and working with a block diagram. Applications.

Books For Study:

1. Hand Book of Analytical Instruments – R.S.Khandpur
2. Instrumental Methods of - Dr.S.Ravi Sankar
3. Advanced Instrumentation Techniques – Dr.S.Ravichandran, Dr.Naredndra Mulchand Gowekar
4. A Hand Book of Instrumental Methods of Analysis – Dr.Gokul S. Talele, Prof. Hitesh V. Shahare.
5. .Instrumental Methods of Analysis – Willard, Merrit& Dean
6. .Instrumental Methods of Analysis – Chatwal & Anand
7. .Principles of Instrumental Analysis – Skoog
8. .Industrial Instrumentation – Soisson

INS -302	Digital Signal Processing	L-5,T-1,P-0	4Credits

Pre-requisite: Basic knowledge of Digital Signal Processing

Course Objectives:

- To teach the basic elements of Digital Signal Processing
- To teach the analysis of discrete-time systems
- To teach discrete Fourier Transform
- To teach design of digital IIR filters:

Course Outcomes: At the end of the course, the student will be able to

CO1	• Gain knowledge on the basic elements of Digital Signal Processing
CO2	• Learn the analysis of discrete-time systems
CO3	• Understand the discrete Fourier Transform
CO4	• Learn design of digital IIR filters:

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	2	-	1	1	1	-
CO2	3	2	1	3	2	1	-	-	1	1	-	1
CO3	3	2	1	2	3	2	1	-	2	2	-	-
CO4	3	2	1	3	3	1	1	-	-	2	2	2

(Mandatory Core)

Core – 2: INS-302	Digital Signal Processing

Unit I:

Introduction, signals and systems

Basic elements of Digital Signal Processing (DSP), analog to digital conversion (ADC), comparison between DSP and Analog Signal Processing (ASP) with applications of DSP. Discrete-time signals and systems. Classification of signals, sampling process/theorem, aliasing effect and reconstruction, classification of systems, input-output description of systems, Block-digram representation of discrete-time systems.

Unit II:

Analysis of discrete-time systems

Linear convolution, causality and stability of discrete time systems, autocorrelation, crosscorrelation, z-transform and its properties, solving difference equations and analysis of discrete-time systems in zdomain, transfer function, pole-zero plot. Implementation of discrete-time systems: Structures for the realization, Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) structures.

Unit III:

Discrete Fourier Transform (DFT)

Discrete Fourier transform (DFT), properties of DFT, symmetry properties, circular convolution, linear filtering methods based on DFT, Frequency analysis of signals using DFT, Efficient computation of DFT, Fast Fourier Transform (FFT) algorithms: radix-2 decimation-in-time (DIT) and decimation-infrequency (DIF)FFT algorithms.

Unit IV:

Design of digital IIR filters:

IIR filter design by Approximation of Derivatives, IIR filter design by impulse invariance, IIR filter design by bilinear transformation, Characteristics of commonly used analog filters (Butter worth and Chebyshev), Frequency transformations, comparison of IIR & FIR filters.

Design of dital FIR filters:

Symmetric and antisymmeric FIR filters, Design of linear phase FIR Digital Filters using Windows, Design of linear phase FIR Digital Filters by Frequency Sampling method.

Books For Study:

1. A. V. Oppenheim and R. W. Schafer, “Discrete Time Signal Processing”, Pearson Education.
2. J. G. Proakis and D. J. Manolakis, “Digital Signal Processing: Principles, Algorithms and Applications”, PHI, 2000.
3. P. Ramesh Babu, “Digital Signal Processing”, Sci- Tech Publications.
4. A. Nagoor Kani, “ Digital Signal Processing”, Mc Graw Hill Publications, 2nd Edition.
5. B. Porat, “A Course in Digital Signal Processing”, J. Wiley and Sons.
6. J. R. Johnson, “Introduction to Digital Signal Processing”, PHI.
7. Rabiner, Gold, “Theory and Applications of Digital Signal Processing”, TMH.
8. S. K. Mitra, “Digital Signal Processing-A Computer Based Approach”, MGH

INS-303 (a)	Biomedical Instrumentation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Biomedical Instrumentation

Course Objectives:

- To make student understand the identification, classification, and working principle of various Biomedical Instruments used for Bio-potential measurement and application.
- To make students understand these instruments in diagnosis, therapeutic treatment and imaging fields.

Course Outcomes: At the end of the course, the student will be able to

CO1	• Identify various Bio-potential and their specification in terms of amplitude and frequency.
CO2	• Decide the applications of therapeutic instruments for treatment purpose.
CO3	• Decide the applications of therapeutic instruments for treatment purpose.
CO4	• Understand applications of imaging instruments and the modalities involved in each technique.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	2	1	1	-	2	1	-	-
CO2	3	2	3	3	-	1	2	-	2	1	-	-
CO3	3	2	3	3	2	-	2	-	2	1	-	-
CO4	3	2	3	3	-	-	2	-	2	1	-	-

(Generic Elective)

Generic Elective : INS-303(a)	Biomedical Instrumentation

UNIT-I

a. Human Physiological Systems, Bio Potentials and Electrodes:

Introductions, Cells And their Structure, Transport of ions Through Cell Membrane, Resting and Action Potentials, Bioelectric Potentials, Physiological Systems of Human Body, Electrodes Biomedical Instrumentation System.

b. Bio Signal Acquisition and Recording:

Physiological Signal Amplifiers, Isolation Amplifiers, Pre Amplifiers, Line Driving Amplifiers, Characteristics of Recording System, Electrocardiography (ECG), Electroencephalography (EEG), Electromyography (EMG), Electro- Retinography (ERG), Electro Oculography (EOG), Accuracy in Recording

UNIT - II

a. Physiological Assist Devices:

Introduction, Pacemakers, Defibrillators, Nerve and Muscle Stimulators, Heart Lung Machine, Kidney Machine

b. Special Equipment:

Blood Cell Counter, Audiometer, Digital Thermometer, X Ray. Machine, Radiography and Fluoroscopy, Image Intensifies, Angiography

UNIT - III

a. Bio Telemetry:

Elements of Biotelemetry Systems, Design of aBiotelemetry System Radio telemetry System, Uses Of Biotelemetry

b. Operation Theatre Equipment:

Introduction, Surgical Diathermy Ventillators, Anaesthesia Machine, Cardiac Output Measurement, Pulmonary Function Analyzer, Oxymeters.

UNIT-IV

a. Safety Instrumentation:

Radiation Safety Instrumentation: Dosimeters, Radiation Alarm, Physiological Effects due to 50 Hz Frequency, Micro Shock and Macro Shock, Hospital Architecture.

b. Advanced Biomedical Instrumentation:

Lasers iln Biomedical Instrumentation, Endoscopes, Cryogenic Surgery, Computer Tomography Scanner (CT), Applications, Thermography, Applications, Ultrasonic Image Forming Systems, Applications, Magnetic Resonance Imaging (MRI), Positron
Emission Tomography.

Books For Study:

1. Biomedical Instrumentation and Measurement by Harry E. Thomas
2. Hand book of Biomedical Instrumentation by R.S. Khandpur
3. Biomedical Instrumentation & Measurements by Leslie Cromwell, Fred J. Waibell, Erich A.Pfeiffer.
4. Hand Book of Bio medical Engineering by Jacob Klime
5. Bio Medical Electronics by Joseph Duboy
6. Transducers for Bio medical Measurements by Richards SC Cobbold
7. Bio medical Instrumentation by M. Arumugam
8. Biomedical Instruments, Theory and Practice by Welkowitz and Dentsch
9. Biological Engineering by Schwan
10 . Biomedical Engineering systems by Clines and Mulism

INS-303(b)	Micro Electro Mechanical Systems	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Micro Electro Mechanical Systems

Course Objectives:

- To teach the fundamentals of MEMS
- To teach Scaling laws in miniaturization
- To teach topics including Micro system Fabrication and design
- To teach Microsystem Design - Design considerations

CourseOutcomes: At the end of the course, the student will be able to

CO1	• Basic structure of MEMS and design
CO2	• Learn Scaling laws in miniaturization
CO3	• Analyze applications of MEMS and their importance as sensors
CO4	• Understand the Microsystem Design and its considerations

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	1	-	-	2	-	-
CO2	3	2	2	2	2	2	2	-	2	-	2	-
CO3	3	2	2	2	1	2	2	-	-	2	-	-
CO4	3	2	2	2	2	2	1	-	1	-	2	-

(Generic Elective)

Generic Elective : INS-303(b)	Micro Electro Mechanical Systems

UNIT-I

MEMS and Microsystems – Applications – Multidisciplinary nature of MEMS – principles and examples of Micro sensors and micro actuators – micro accelerometer - meters Micro grippers – micro motors - micro valves – micro pumps – Shape Memory Alloys.

UNIT-II

Scaling laws in miniaturization - scaling in geometry, scaling in rigid body dynamics, the trimmer force scaling vector, scaling in electrostatic and electromagnetic forces, scaling in electricity and fluidic dynamics, scaling in heat conducting and heat convection.

UNIT-III

Micro System fabrication – photo lithography – Ion implantation- Diffusion – Oxidation – Chemical vapour deposition – Etching- Overview of Micro manufacturing – Bulk micro manufacturing – Surface micro machining – LIGA process – Materials for MEMS – silicon – silicon compounds – silicon piezo resistors – GaAs – polymers.

UNIT-IV

Microsystem Design - Design considerations – Selection of signal transduction – Process design – Design of a silicon die for a micro pressure sensor – Microsystem packaging - three levels of micro system packaging – interfaces in micro system packaging.

Books For Study:

1. Micro Electro Mechanical System Design – James J. Allen
2. MICRO ELECTRO MECHANICAL SYSTEMS – DR.P.ELAMURUGAN.
3. Micro Electro Mechanical Systems – Dr. T. Kamatchi, Dr. G. Veera Senthil Kumar, K. Meenakshi Sundar, R. Karthick.
4. Micro Electronic and Mechanical Systems – Zheng Yun Man

INS-303 (c)	Instrumentation for Environmental Science	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Instrumentation in Environmental Science

Course Objectives:

- To teach the necessity of instrumentation and control for environment
- To teach Ground water monitoring
- To teach Air pollution
- To teach Air monitoring. Flow monitoring Rain water harvesting

Course Outcomes: At the end of the course, the student will be able to

CO1	• Learn necessity of instrumentation & control for environment
CO2	• Gain knowledge in Ground water monitoring and waste water monitoring
CO3	• Learn the effects of air pollution
CO4	• Understand air monitoring. Flow monitoring and Rain water harvesting

Mapping of course outcomes with the program outcomes

CO3	3	2	3	3	2	-	-	-	2	1	1	-
CO4	3	2	3	3	2	1	2	-	2	1	1	-

(Generic Elective)

Generic Elective: INS-303(c)	Instrumentation for Environmental Science

UNIT I

a.Introduction: Necessity of instrumentation & control for environment, sensor requirement for environment. Instrumentation methodologies: Ultraviolet analyzers, total hydrocarbon analyzers using flame ionization detector, Gas chromatography in environmental analysis, photo ionization, portable & stationary analytical instruments.

b.Quality of water: Standards of raw & treated water, sources of water & their natural quality, effects of water quality. Water quality parameters: Thermal conductivity, detectors, Opacity monitors, pH analyzers & their application, conductivity analyzers & their application. Water treatment: Requirement of water treatment facilities, process design.

UNIT II

a.Ground water monitoring: Level measurement in ground water monitoring wells, laboratory analysis of ground water samples, instrumentation in ground water monitoring, instrumentation in assessment of soil & ground water pollution.

b.Waste water monitoring: Automatic waste water sampling, optimum waste water sampling locations, and waste water measurement techniques. Instrumentation set up for waste water treatment plant. Latest methods of waste water treatment plants.

UNIT III

Air pollution: definitions, energy environment relationship, importance of air pollution,air pollution from thermal power plant, their characteristics & control. Air sampling methods &equipments, analytical methods for air pollution studies. Control of air pollution.

UNIT IV

a. Air monitoring: measurement of ambient air quality.

b. Flow monitoring: Air flow measurement, gas flow, non-open channel flow measurement,open channel waste water flow measurement.

c. Rain water harvesting: necessity, methods, rate of NGOs municipal corporation, Govt.,limitations. Quality assurance of storage water.

Books For Study:

1. Walter J. Weber (Jr.), ―Physicochemical Processes: For Water Quality Control John Wiley & Sons, 1st Edition, 1972.
2. M. N. Rao& H. V. N. Rao, ―Air pollution engineering‖ McGraw Hill Higher Education, 1st Edition, 1989.
3. Wark& Warner, "Air pollution control technology‖, Pearson, 3rd Edition, 1997.
4. Randy D. Down, ―Environmental Instrumentation & Analysis Handbook‖,Wiley, 1st Edition, 2004.

(SkillOrientedCourse)

INS – 305	Microcontrollers and Interfacing	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Microcontrollers

Course Objectives:

- To make the student to understand the fundamentals of microcontroller.
- To teach addressing modes, Instructions and programming in 8051
- To teach 8051 Memory and I/O device Interfacing
- To teach Interfacing DAC / ADC with 8051 Microcontroller

CourseOutcomes: At the end of the course, the student will be able to

CO1	• .Uunderstand the fundamentals of microcontroller.
CO2	• Understand . **a**ddressing modes, Instructions and programming in 8051
CO3	• Understand 8051 Memory and I/O device Interfacing. Interrupts and Timer/counters, .
CO4	• Learn8051 Memory and I/O device Interfacing

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	-	1	-	-	2	2	-	-
CO2	3	2	3	3	2	1	2	-	2	2	-	-
CO3	3	2	3	3	-	1	-	-	2	2	-	-
CO4	3	2	3	-	2	1	2	-	2	2	-	-

(Skill Oriented Course)

Skill Oriented: INS-305	Microcontrollers and Interfacing

UNIT-I

a. Introduction to Microcontrollers

Introduction, Microcontrollers and Microprocessors Embedded versus external Memory devices, 8 bit and!6 bit micro controllers,CISC and RISC processors, Harvard and Von Newmann Architectures, commercial microcontroller devices

b.8051 Microcontroller

Introduction, MCS-51 architecture, Registers in MCS 51 , Pin description, connections, I/O ports and Memory Organization

UNIT –II

a. Addressing modes, Instructions and programming in 8051

Addressing modes, Instruction set, Instructions and simple programs, Assembly language programming, Development systems and tools

b. Interrupts, Timer/counters, . Serial communication and Parallel Communication

Interrupts - Interrupts in MCS-51 -Timers and counters – Communications – Serial and Parallel.

UNIT III

a. 8051 Memory and I/O device Interfacing:

Memory Interfacing – Program and data memory, I/O Interfacing – LED, relays, Keyboard, LCD, Seven Segment Display, Stepper Motor.

b. Interfacing DAC / ADC with 8051 Microcontroller:

Interfacing DAC – 0808 with 8051 and its simple programming.

Interfacing ADC – 0809 with 8051 and its simple Programming.

BOOKS FOR REFERENCE

1. Microcontrollers Architecture, Programming, Interfacing and System Design- Raj
2. The 8051 Microcontroller and Embedded Systems – Mazidi and Mazidi, PHI,2000.
3. The 8 051 Microcontroller, Kenneth Ayala
4. Microcontrollers (Theory & Applications)-A. V. Deshmuk, WTMH, 2005.
5. Design with PIC Microcontrollers - John B. Peatman, Pearson Education, 2005.
6. Programming and Customizing the PIC Microcontroller – Myke Predko.
7. The 8051 Microcontroller and Embedded Systems – Muhammad Ali Mazidi, Janice Gillispie Mazidi, Rolin D. Mokinlay.
8. Microcontroller(ARM) and Embedded Systems – Raghunandan G. H.
9. MicroProcessors and Microcontrollers – Sunil Mathur, Jeebananda Panda.

(OpenElective)

INS – 306 (a)	Computer Architecture and Organization	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Computer Architecture and Organization

Course Objectives:

- To teach basics of Computer Architecture and block diagram
- To teach the Micro Programmed Control
- To teach the The Memory System and Input-Output Organization
- To teach thePipeline And Vector Processing

Course Outcomes: At the end of the course, the student will be able to

CO1	Understand internal block diagram of computer
CO2	know the Micro Programmed Control and organization of computer
CO3	Know The Memory System and Input-Output Organization
CO4	Know thePipeline And Vector Processing

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	2	1	1	-	2	1	-	
CO2	3	2	3	3	2	1	2	-	2	1	1	-
CO3	3	2	3	3	2	1	2	-	2	1	-	-
CO4	3	2	-	3	2	1	2	-	2	1	-	-

(Open Elective)

Open Elective: INS – 306 (a)	Computer Architecture and Organization

UNIT I

a. Basic structure of Computers: Computer Types, Functional unit, Basic Operational concepts, Bus structures, Performance, multiprocessors and multi computers.

b. Register Transfer Language And Micro operations: Register Transfer language. Register Transfer Bus and memory transfers, Arithmetic Micro-operations, logic micro operations, shift micro operations, Arithmetic logic shift unit. Instruction codes.Computer Registers Computer instructions - Instruction cycle.Memory -Reference Instructions.Input - Output and Interrupt. STACK organization. Instruction formats. Addressing modes

UNIT II

a. Micro Programmed Control: Control memory, Address sequencing, microprogram example, design of control unit Hard wired control. Micro programmed control

b. Computer Arithmetic: Addition and subtraction, multiplication Algorithms, Division Algorithms, Floating - point Arithmetic operations. Decimal Arithmetic unit Decimal Arithmetic operations.

UNIT III

a. The Memory System: Basic concepts semiconductor RAM memories. Read only memories Cache memories performance considerations, Virtual memories secondary storage. Introduction to RAID.

b. Input-Output Organization: Peripheral Devices, Input-Output Interface, Asynchronous data transfer Modes of Transfer, Priority Interrupt Direct memory Access, Input -Output Processor (IOP) Serial communication; Introduction to peripheral component, Interconnect (PCI) bus. Introduction to standard serial communication protocols like RS232, USB, and IEEE1394.

UNIT IV

a. Pipeline And Vector Processing: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Vector Processing, Array Processors.

b. Multi Processors: Characteristics or Multiprocessors, Interconnection Structures, Inter processor Arbitration. Inter Processor Communication and Synchronization Cache Coherence. Shared Memory Multiprocessors.

Books For Study:

1. Computer Systems Architecture -'M.Moris Mano, Illrd Edition, PHI/Pearson.
2. Computer Organization - Car Hamacher, ZvonksVranesic, SafeaZaky, McGraw Hill.
3. Computer Organization and Architecture - William Stallings Sixth Edition, Pearson.
4. Structured Computer Organization - Andrew S. Tanenbaum, 4th Edition Pearson.
5. Fundamentals or Computer Organization and Design, -SivaraamaDandamudi
6. Computer Organization and Architecture (Designing for Performance) – William Stallings.
7. Computer Organization and Architecture – A.P.Godse, Dr.D.A.Godse.
8. Computer Organization and Architecture – R. Senthilnathan, A.Pagalavan, R.Vijayabaskar.
9. computer architecture and organization – Nicholas p carter

(OpenElective)

INS-306(b)	Industrial Organization and Management	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level in Industrial Organization and Management

Course Objectives:.

- To give the basics Industrial Management and Business organization
- To teach the Quality, Inspection and Environment Management :
- To teach the Production Planning, Inventory Control and Supply Chain Management:
- To teach Human Resources Management

Course Outcomes: At the end of the course, the student will be able to

CO1	Learn the basics Industrial Management and Business organization
CO2	Learn the Quality, Inspection and Environment Management
CO3	Learn the Production Planning, Inventory Control and Supply Chain Management
CO4	Learn the Human Resources Management

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	2	1	2	-	1	2	1	-
CO2	3	2	2	2	3	2	2	-	1	2	-	-
CO3	3	3	-	2	3	2	2	-	1	2	1	-
CO4	3	2	3	2	3	2	2	-	1	2	-	-

(Open Elective)

Open Elective: INS – 306(b)	**Industrial Organization and Management**

Unit I:

Industrial Management and Business organization:

Definition of business, characteristics and classifications, objectives, types of business organizationscharacteristics, levels of management, characteristics and objectives. Hierarchical structure and organization of group, Functions of management- *forecasting, organizing, directing, motivating planning, co-ordinating, controlling, communication, leadership etc.*

Developing Business environment: SWOT analysis, BCG Matrix, Porter's 5 forces of competition. Management techniques for developing strategy viz., Balanced score card, Performance Management and analysis techniques viz. Ishikawa diagrams, Business process Re-engineering

Unit II:

Quality, Inspection and Environment Management :

Quality Circles/ Forums, Quality Objectives, use of Statistical Process Control, Introduction to ISO 9000 Inspection: objectives, Principles, standards, Qualities of inspector, Role of R & D, Innovation, Business expansion, Diversion, Mergers and Takeovers Environmental pollution:- ecology, factors causing pollution, effect of pollution on human health, Air pollution control, sources of pollution water pollution and control, solid waste management

Environmental norms: ISO 14000

Unit III:

Production Planning, Inventory Control and Supply Chain Management:

Manufacturing Excellence, Outsourcing, Production planning techniques, Purchase and Inventory Management, inventory control using Economic Order Quantity, Minimum Order Quantity, Ordering T. E. Instrumentation Syllabus 2015 Course (Credit Base) Level, store keeping, Finished goods, semi finished goods, raw material handling and storage, Value

Addition, Supply Chain concepts and management for leveraging profit

Unit IV:

Human Resources Management:

Manpower planning, Human Resources: exploiting true potential, Staff training and development, Motivation, Selection and training of manpower, Appraisal and increments management, Leadership skills, Delegation and development for growth. Objectives and Job Descriptions/ Role Summary

Books For Study:

1. Business Poly – Azar Kazmi
2. Resisting Intellectual property – Halbert, Taylor & Francis – 2007 – PHI
3. Management in Engineering- Gail Freeman- Bell and James Balkwill (PHI).
4. The New Era of Management – R. L. Daft, THOMSON (India Edition)
6. Modern Economic Theory- Dewett K. K.
7. Elementary Economic Theory- Dr. R. D. Gupta.
8. Business organization and Management- M.C. Shukla.T.E.

INS- 401	Introduction to VLSI Circuits	L-5,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level in Introduction to VLSI Circuits

Course Objectives:

- To make the student familiar with VLSI system design aspects
- To teach the physical Structure and Fabrication of CMOS ICs.
- To teach the elements of Physical Design and Electrical Characteristics of MOSFETs
- To teach the electronic analysis of CMOS logic gates

Course Outcomes: At the end of the course, the student will be able to

CO1	• Understand the fundamentals of VLSI systems
CO2	• Learn the physical Structure and Fabrication of CMOS ICs.
CO3	• Understand the elements of Physical Design and Electrical Characteristics of MOSFETs
CO4	• Understand the electronic analysis of CMOS logic gates

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	-	1	1	1	-	2	1	2	-
CO2	3	2	3	-	1	1	1	-	2	1	2	-
CO3	3	2	2	2	1	1	1	-	2	1	2	-
CO4	3	3	2	2	1	1	1	-	2	1	2	-

(Mandatory Core)

Core – 1: INS-401	INTRODUCTION TO VLSI CIRCUITS

UNIT-I

An Overview of VLSI and logic and Design with MOSFETs: Complexity and Design, Basic concepts, Ideal switches and Boolean operations, MOSFETs as switches, Basic logic gates in CMOS, Complex logic gates in CMOS.

UNIT-II

Physical Structure and Fabrication of CMOS ICs: Integrated circuit layers, MOSFETs, CMOS layers, Designing FET arrays, Overview of silicon processing, Material growth and deposition, Lithography.

UNIT-III

Elements of Physical Design and Electrical Characteristics of MOSFETs: Basic Concepts, Layout of basic structures, cell concepts, FET sizing and the unit transistor, Physical design of logic gates, Design hierarchies, MOS physics, nFET current-voltage equations, pFET characteristics.

UNIT-IV:

Electronic analysis of CMOS logic gates: DC characteristics of the CMOS inverts, inverter switching characteristics, power dissipation, DC characteristics: NAND and NOR gates, NAND and NOR transient response, Transmission gates and pass transistor.

Books For Study:

1. John P. Uyemura, “Introduction to VLSI circuits and Systems”,Johnwiley and sons.
2. VLSI - W. Wolf.
3. VLSI Fabrication Principles (Sillicon and Gallium Arsenide) – Sorab K Ghandhi
4. VLSI Design – K.Lal Kishore, V.S.V.Prabhakar
5. S.K.Ghandhi,”VLSI Fabriction principles”, 2/e, John Wiley and sons.
6. S.M.Sze,”VLSI Technology”,2/e mcGraW-Hill,1988.
7. VLSI Physical Design Automation – Sadiq M Sait, Habib Youssef.
8. VLSI Technology & Design – V.S.Bagad.

INS - 402	Embedded Systems and Real Time Operating Systems	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Embedded Systems

Course Objectives:

- To teach the basics of o embedded systems and pic microcontroller
- To teach the concepts of ARM processors and architecture of ARM 7
- To teach the real time operating systems and concepts
- To teach the RTOS application domains

Course Outcomes: At the end of the course, the student will be able to

CO1	Learn the basics of o embedded systems and pic microcontroller
CO2	Understand the concepts of ARM processors and architecture of ARM 7
CO3	Learn the real time operating systems and concepts
CO4	Understand the RTOS application domains

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2	1	2	1	-	2	2	1	-
CO2	3	2	2	2	2	2	2	-	2	2	2	-
CO3	3	2	-	2	1	2	2	-	1	2	1	-
CO4	3	2	-	2	2	2	1	-	1	2	2	-

(Mandatory Core)

Core – 2: INS-402	Embedded Systems and Real time Operating Systems

UNIT-I: Introduction to Embedded systems: Introduction, Application areas, Categories of embedded systems, Overview of embedded systems architecture, Specialities of embedded systems, Recent trends, Hardware architecture, Software architecture, Application software, Communication software, core platform development, development tools.

The PIC Microcontroller : Introduction: PIC microcontroller features, PIC Architecture, Program memory, Addressing Modes, Instruction set, Instruction Format, Byte-Oriented Instructions, Bit-Oriented Instructions, Literal Instructions,Control Instructions (CALL and GOTO),Destination Designator

UNIT-II: Introduction to ARM processors, architecture of ARM 7, registers, current program status register, pipeline, exceptions, interrupts and vector table. Instruction set: Data processing instructions, arithmetic, Logic, branch, load-store instructions, software interrupt instructions, PSR instructions, loading constants.

Applications: Programming the flash memory using JTAG, working with audio codec (AC97), JPEG encoder, MP3 decoder, ADC, DAC, LCD, Stepper motor, seven segment displays, Relays and Opto- isolators..

UNIT-III: Real Time Operating Systems and Concepts: Introduction,Types of operating systems, Typical real time applications, Hard Vs Soft real-time systems, Real time operating systems(RTOS),Architecture of the kernel, Task and task scheduler, Interrupt service routines, Management Function calls of Semaphores, Mutex, , Message Queues, Event registers, Pipes, Signals, Timers. Memory management, Priority inversion problem. Embedded Operating Systems: Real time operating systems, hand held operating systems.

UNIT-IV: RTOS APPLICATION DOMAINS

RTOS for Image Processing - Embedded RTOS for voice over IP - RTOS for fault Tolerant Applications - RTOS for Control Systems.

RFID systems:RFID system, RFID applications RFID Tag, RFID Reader, applications development using RFID

Books For Study:

1. Real Time systems-black book, Dr.K.V.K.K. Prasad, Dreamtech Publishers
2. ARM system Developer's Guide-Andrew N.SLOSS, Domic Symes and Chris Wright, Morgan Kaufman Pubs.
3. J B Peatman, Design with PIC Microcontrollers, Prentice Hall.
4. RTOS Designing embedded systems-J.Ganssle, Newnes, 1999
5.Real Time Systems, C.M. Krishna, Kang, G.Shin, McGraw Hill, 1997
6. PIC Microcontroller by H.W Huang, Delmar CENGAGE Learning, 2007.

INS -403 (a)	Programmable Logic Controllers	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level Programmable Logic Controllers

Course Objectives:

- To teach Process Dynamics and Process Control Action
- To teach Process Controllers and Tuning
- To teach Analysis of Control Loop
- To teach Multivariable Control and Intelligent Controllers

Course Outcomes : At the end of the course, the student will be able to

CO1	Learn Process Dynamics and Process Control Action
CO2	Learn Process Controllers and Tuning
CO3	Learn Analysis of Control Loop
CO4	Learn Multivariable Control and Intelligent Controllers

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	1	2	1	1	-	-	3	-	1
CO2	3	2	1	1	1	1	-	-	-	3	-	1
CO3	3	2	2	1	2	1	-	-	-	3	-	1
CO4	3	2	1	1	1	2	-	-	-	3	-	1

(Generic Elective)

Generic Elective: INS-403(a)	Programmable Logic Controllers

Unit I

a.Process Dynamics: Dynamic elements in a control loop, Dead time processes and smith predictor compensator. Inverse response behavior of processes and compensator. Dynamic behavior of first and second order systems. Interacting and non-interacting systems.

b.Process Control Action: Elements of process control, Controller Principle, Process Characteristics, Control system parameters, discontinuous, continuous and composite controller modes/actions (P,I,D,PI,PD and PID).

Unit II

a.Process Controllers and Tuning: General features, construction and working of Pneumatic, Hydraulic and Electronic controller. Process reaction curve method, Zigler- Nichols method, Cohencoon correction for quarter amplitude, Frequency response method, Relay based tuning.

b.Control Schemes: Feedback, feedforward, cascade, ratio, split range, selective control, adaptive control, and model based control.

Unit III

a.Analysis of Control Loop: Steady state gain, Process gain, Valve gain, Process time constant, Variable time Constant, Transmitter gain, Linearisinga equal percentage valve, Variable pressure drop. Analysis of Flow Control, Pressure Control, Liquid level Control, Temperature control, SLPC-features, faceplate, functions, MLPC- features, faceplate,

functions, SLPC and MLPC comparison.

b.Scaling: Types of scaling, examples of Scaling.

Unit IV

a.Multivariable Control: Block diagram analysis of multivariable systems, Interaction, Tuning of Multivariable controllers, relative gain analysis, Decoupler design.

b.Intelligent Controllers:

Step analysis method for finding first, second and multiple time constants and deadtime. Model Based controllers: Internal Model control, Smith predictor, optimal controller, Model Predictive controller, Dynamic matrix controller (DMC).Self Tunning Controller. Basic concept Fuzzy logic systems – Artificial

Neural networks

Books For Study:

1. Donald Eckman, ―Automatic Process Control‖, Wiley Eastern Limited, 1st Edition, 1966
2. Thomas E Marlin, ―Process Control- Designing processes and Control Systems for Dynamic Performance, McGraw-Hill International Editions, 1st Edition , 1995.
3. F.G.Shinskey, ―Process control Systems‖, TATA MCGRAW HILL, 3rd Edition, 1988.
4. Krishna Kant, ―Computer Based Industrial Control‖, Prentice hall of India, 2nd Edition, 2010.
5. B Liptek, ―Instrument engineers handbook‖, Chilton book Co, 1st Edition, 1969.
6. P.W.Murrill, ―Fundamentals of Process Control‖, International Society of Automation, 1st Edition, 2000.

7. Considine, ―Process/Industrial Instruments and Controls Handbook‖, McGraw-Hill Professional, 5th Edition, 1999.
8. T.J.Ross, Fuzzy Logic with Engineering Applications, Wiley, 3rd Edition, 2011.
9. P.W.Murrill, ―Applications concepts of Process control‖, International Society of Automation, 3rd edition, 2012.
10. B.Waynebequette, ―Process Control:Modeling, Design and Simulation‖, Prentice hall of India, 1st Edition, 2002.
11. Stephanopoulos George, ―Chemical Process Control‖, Prentice hall of India, United States Edition, 1983.

NS- 403 (b)	Computational Mathematics	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Computational Mathematics

Course Objectives:

- To teach the basics of Special Functions and their importance in different fields
- To teach the fundamentals of Integral Transforms and its applications in communications
- To teach the different numerical techniques and their applications
- To teach the complex Variables and their importance

Course Outcomes: At the end of the course, the student will be able to

CO1	Learn the basics of Special Functions and their importance in different fields
CO2	Learn the fundamentals of Integral Transforms and its applications in communications
CO3	Understand the different numerical techniques and their applications
CO4	Understand the complex Variables and their importance

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	-	1	-	1	2	-	2	3	-	-
CO2	2	2	1	2	1	1	1	-	1	-	-	-
CO3	3	2	-	2	1	1	2	-	1	3	-	-
CO4	2	2	-	2	1	1	2	-	1	-	-	-

(Generic Elective)

Generic Elective: INS-403(b)	Computational Mathematics

UNIT - I: Special Functions

Beta and Gamma Functions – Definitions and properties – Evaluation of integrals, Legendre, Bessel and Hermite differential equations – Solutions – Generating functions – Orthogonal properties of Legendre, Bessel and Hermite Functions (Proof not necessary) – Recurrence relations – (Proof for Legendre polynomials only).

UNIT - II: Integral Transforms

Fouriers Transforms: Properties of Fourier transforms – Fourier sine and cosine transforms- Power in Fourier series **–** Modulation theorem, Fourier transform of impulse function, Constants, Unit step function and Periodic functions.

Laplace Transforms: Definition and notation – Properties of Laplace transforms – Laplace transforms of Dirac delta function and periodic functions (Square wave, sawtooth wave and triangular wave) – Inverse Laplace transforms – properties – Solution of linear differential equations with constant coefficients - Applications to LCR circuits and resonance of simple pendulum.

UNIT - III: Numerical techniques

Solution of an equation – Bisection method, Regular False method, Newton - Rhapson method - Solutions of simultaneous – Gauss elimination method and Gauss-Seidel method - Interpolations - Newton's interpolation and Lagrange's interpolation, Curve fitting – Method of Least squares. Numerical differentiation and integration – Trapezoidal rule and Simpson's 1/3 rule – Solutions of differential equations - Euler's method and Runga-Kutta Methods.

UNIT – IV: Complex Variables

Functions – Complex differentiation - Analytic function - Cauchy – Reimann equations –Derivatives of elementary functions – Singular points and classification. Complex integration - Cauchy's theorem – Integrals of special functions – Cauchy's integral formula – Taylor's and Lorentz theorem (statements only) – Residues, calculations of residues - Residue theorem – evaluation of definite integrals.

Books For Study:

1. Functions for Scientists and Engineers, W.W. Bell, D.Van Nostrand Company, London (1968)
2. Fourier Analysis, Hsu P Jewi, Unitech Division
3. Laplace Transforms by Murray Spiegle, Schaum's outline series, McGraw Hill, International Book Company, New York.
4. Applied Mathematics for Engineers, Pipes and Harval, Third Edition, McGraw Hill Books Co.

INS-403 (c)	Electrical Engineering Materials	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Electrical Engineering Materials

Course Objectives:

- To teach the concepts of bonding and different crystal systems
- To teach different polarizations and importance of dielectrics
- To teach the basics of semiconductors and their importance in devices
- To teach the shape memory alloys and its importance

Course Outcomes: At the end of the course, the student will be able to

CO1	Learn the concepts of bonding and different crystal systems
CO2	Understand the concepts different polarizations and importance of dielectrics
CO3	Learn the basics of semiconductors and their importance in devices
CO4	Learn the basics of shape memory alloys and its importance

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	**3**	2	3	1	2	-	3	2	3	-
CO3	3	3	3	-	3	1	-	-	3	-	3	-
CO3	3	2	-	2	2	1	1	-	1	2	1	-
CO4	3	3	-	3	-	1	1	-	3	-	3	-

(Generic Elective)

Generic Elective: INS-403(c)	Electrical Engineering Materials

UNIT I:

Atomic bonding, crystallinity, Miller Indices, X-ray crystallorgraphy, structural imperfections, crystal growth.Free electron theory of metals, factors affecting electric conductivity of metals, thermal conductivity of metals, heat developed in current Carrying conductors, thermoelectric effect, super conductivity.

UNIT II:

Polarization mechanism and dielectric constant, behavior of polarization under impulse and frequency switching, dielectric loss, spontaneous polarization, piezoelectric effect. Origin of permanent magnetic dipoles in materials, classifications of magnetism.

UNIT III:

Energy band theory, classification of materials using energy band theory, Hall effect, drift and diffusion currents, continuity equation, P-N diode, volt-amp equation and its temperature dependence.

UNIT IV:

Special purpose materials, Nickel iron alloys, high frequency materials, permanent magnet materials, Feebly magnetic materials, Ageing of a permanent magnet, Effect of impurities.

Books For Study:

1. Ian P. Hones, 'Material Science for Electrical & Electronics Engineers', Oxford University Press
2. K. M. Gupta – Electrical Engineering Materials, Umesh Publication, 2nd edition 2003

(MultidisciplinaryCourse)

INS-405	Project Work	L-3,T-1,P-0	4Credits

Pre-requisite: Understanding of graduate level

Course Objectives: .

- To train the students for independent thinking, planning and execution of any selected problem.
- To take-up a simple problem with an aim, plan the experiment, take the measurements, discuss the results and give the conclusion.
- To motivate the students towards the research
- To motivate them towards new innovations

Course Outcomes: At the end of the course, the student will be able to

CO1	• Get the experience of working on a problem independently with planning and execution.
CO2	• Develop skills related to presentation of data, analysis discussion of the results and draw conclusions
CO3	• Learn the importance of research for development and self sustaining
CO4	• Understand the need of the society

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	2	2	1	2	-	2	-	-	3

INS405: Project Work

INS-406 (a)	Agro Based Instrumentation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Agro Based Instrumentation

Course Objectives:

- To create awareness of Properties of Soil.
- To study the concept of flow diagram of Sugar Plant.
- To study the role of Irrigation System .
- To study about SCADA and DMA

Course Outcomes: At the end of he course, the student will be able to

CO1	• Understand the Properties of Soil.
CO2	• Understand the concept of flow diagram of Sugar Plant.
CO3	• Understand the role of Irrigation System .
CO4	• Understand the working of SCADA and DMA in agriculture.

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	1	2	2	-	-	-	2	2	-1	-

(Open Elective)

Open Elective: INS-406(a)	Agro Based Instrumentation

Unit I:

Necessity of instrumentation & control for agriculture, engineering properties of soil:

fundamental definitions & relationships, index properties of soil, permeability & seepage analysis, shear strength, Mohr's circle of stress, active & passive earth pressures, stability & slopes, Sensors: introduction to sonic anemometers, hygrometers, fine wire thermocouples, open & close path gas analyzers, brief introduction to various bio-sensors.

Unit – II

Flow Diagrams: Flow diagram of sugar plant & instrumentation set up for it, flow diagram of fermenter & control (batch process),flow diagram of dairy industry & instrumentation set up for it, juice extraction-control process - instrumentation set up.

Unit – III

Irrigation systems: necessity, irrigation methods: overhead, centre pivot, lateral move, micro irrigation systems & it's performance, comparison of different irrigation systems, soil moisture measurement methods: resistance based method, voltage based method, thermal based method, details of gypsum block soil moisture sensor, irrigation scheduling, irrigation efficiencies, design considerations in irrigation channels.

Unit IV:

Application of SCADA for DMA

Application of SCADA for DAM parameters & control, irrigation control management upstream & down - stream control systems, green houses & instrumentation: ventilation, cooling & heating, wind speed, temperature & humidity, rain gauge carbon dioxide enrichment measurement & control.

Automation in earth moving equipments & farm equipments

Application of SCADA & PLC in packing industry and cold storage systems, implementation of hydraulic, pneumatic & electronics control circuits in harvesters cotton pickers, tractor etc. classification of

Books For Study:

1. Patranabis, ―Principles of Industrial Instrumentation‖, Tata McGraw-Hill, 2nd Edition 2005.
2. Bella Liptek, ―Instrument engineers handbook‖, Chilton book Co., NY, 1st Edition, 1969.
3. C. D. Johnson, ―Process Control Instrumentation Technology‖, Prentice hall of India, 8th Edition, 2009.
4. B.A.Wills, **"**Wills' Mineral Processing Technology‖, Butterworth-Heinemann, 8th Edition, 2015.
5. Microprocessor – Based Agri Instrumentation – Krishna Kant.
6. Advanced Agricultural Instrumentation – William G. Gensler

INS-406 (b)	Industrial Automation	L-3,T-1,P-2	4Credits

Pre-requisite: Understanding of graduate level in Agro Based Instrumentation

Course Objectives:

- To make the students understand the fundamentals of automation and various automation systems used in industry such as PLC, DCS, and SCADA.
- Students should understand the working of these systems and should be able to determine hardware and software requirements of SIS and SIL.
- They should further understand how to design any application based on these systems.
- To make the students understand the fundamentals of Open loop and Closed loop controls

Course Outcomes: At the end of the course, the student will be able to

CO1	• Define automation, it's importance, expectations from automation and applications in industry.
CO2	• Uderstand the working of these systems and should be able to determine hardware and software requirements of SIS and SIL.
CO3	• Understand evolution and architecture of DCS, hierarchical control in DCS, programming DCS
CO4	• Understand the fundamentals of Open loop and Closed loop controls

Mapping of course outcomes with the program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	2	3	-	2	-	3	1	-	-
CO3	2	3	3	3	3	1	-	-	3	2	-	-
CO3	2	2	2	2	2	-	1	-	1	1	-	-
CO4	3	3	3	3	3	-	-	-	3	3	-	-

(Open Elective)

Open Elective: INS-406(b)	Industrial Automation

Unit I:

Introduction: Overview, OSI reference model, Transmission media : Copper cable, Coaxial cables, Twisted-pair cable, Connector standards, Earthing/grounding, Fiber-opticcable components, Fiber-optic cable parameters

Open control network: RS-232 overview, RS-232 interface standard, RS-232 troubleshooting, Typical RS-232 problems, RS-485 overview, The RS-485 interface standard, RS-485 troubleshooting Current loop and RS-485 converters overview, TCP/IP overview, Internet layer protocols (packet transport), Modbus overview, Modbus protocol structure, Modbus troubleshooting

Unit II:

Network at different level: AS-I, CAN, Devicenet, Industrial Ethernet overview, Profibus PA/DP/FMS overview, Foundation Fieldbus overview, The physical layer and wiring rules, HART overview, Introduction to HART and smart instrumentation.

Safety Instrumented System (SIS): Need for safety instrumentation- risk and risk reduction methods, hazards analysis. Process control systems and SIS. Safety Integrity Levels (SIL) and availability. Introduction to the international functional safety standard IEC61508

Unit III:

Automation Fundamentals: Automation and its importance, automation applications, expectations of automation. Process and factory automation. Types of plant and control – categories in industry, open loop and close loop control functions, continuous processes, discrete processes, and mixed processes. Automation hierarchy – large control system hierarchy, data quantity & quality and hierarchical control. Control system architecture – evolution and current trends, comparison of different architectures.

Unit IV:

Distributed Control System (DCS): Introduction to DCS. Evolution of DCS, DCS flow sheet symbols, architecture of DCS. Controller, Input and output modules, Communication module, data highway, local I/O bus, Workstations, Specifications of DCS. Introduction of Hierarchical control of memory: Task listing, Higher and Lower computer level task. Supervisory computer tasks DCS configuration. Supervisory

computer functions, Control techniques, Supervisory Control Algorithm. DCS & Supervisory computer displays, advanced control Strategies, computer interface with DCS. DCS. System integration with PLCs computer: HMI, Man machine interface sequencing, Supervisory control, and
integration with PLC, personal computers and direct I/O, serial linkages, network linkages, link between networks. Introduction to DCS Programming, Function Block Diagram method for DCS programming.

Books For Study:

1 Samuel M. Herb, ―Understanding Distributed Processor Systems for Control‖, International Society of Automation Publication, 1st Edition, 1999.

2. Thomas Hughes, ―Programmable Logic Controller‖, International Society of Automation Publication, 4th Edition, 2004

3. Stuart A. Boyer, ―SCADA supervisory control and data acquisition‖, International Society of Automation Publication, 4th Edtion, 2009.

4.Gruhn and Cheddie, ―Safety Shutdown Systems‖, International Society of Automation,

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FIRST SEMESTER

Paper : I: INS -101:Introduction to Instrumentation and Control System

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Explain the typical applications of Instrument systems?

2.Write a brief note on the performance parameters of instruments i.e.

i) Accuracy ii) Precision

3. Explain the basic components of a control system?

4. Explain the classification of control systems

5. Discuss in detail transient response

6.What is meant by stability explain about relative and absolute stability of a control system.

7. Write a brief note on Bode plot?.

8.Discuss about Polar plot?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9.a) Explain the Functional elements of Instrumentation and Measuring Systems with neat block diagram.

(OR)

b) Discuss about errors and uncertainties in the measurement of performance parameter of instruments.

10. a) Write about open loop and closed loop systems with neat diagram and explain it with suitable

Examples?

(**OR)**

b) Write briefly about effect of feed back on Overall gain, Stability, Sensitivity, Bandwidth and noise.

11. a) Discuss about Time response of first order systems with neat block diagram?

(OR)

b) Explain about concept of stability and necessary condition for stability?

12. a) Explain about Phase margin and Gain margin with neat sketch?

(OR)

b) Write about Nyquist criterion to find stability with suitable example?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FIRST SEMESTER

Paper : I: INS -102:Analog Devices and Industrial Electronics

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Write a brief note on Semi conductor materials.

2. Explain the working of a two pin and a three pin voltage regulators.

3. Write about differential amplifier and a comparator with circuits?

4. Describe the constructional features of a Wein Bridge Oscillator with neat sketch.

5. Explain the working of Gate Turn Off Thyristors (GTO) and its salient features.

6. Write a short note on Shockley diodes.

7. State and explain the AC time delay relay and solid state relays with neat circuit diagram.

8**.** State and explain the Sink effect?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. a) Discuss the inversion layer formation in MOSFET and explain its characteristics

. **(OR)**

b) Explain the working principle of SMPS unit using relevant sketches. Write down some of its salient features.

10. a) Write down the characteristics idal and real amplifier. Discuss about the working of voltage and current follower with neat sketeches.

(**OR)**

b) Explain the various mathematical operations that can be performed using operational amplifier with the help of relevant sketches.

11. a) Draw the circuit diagram of SCR full wave rectifier. Explain the operation with wave forms.

(OR)

b) Describe the construnction of programmable UJT and explain its operational Mechanism with neat diagrams.

12. a) Draw the characteristics and explain the operations of UJT / SCR time delay relays.

(OR)

b) Explain the working of a 555 timer with block diagram and also mention some of its applications with relevant sketeches.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FIRST SEMESTER

Paper : I: INS -103(a):Digital Techniques and Principles of Communications

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Give various number systems used in Digital Electronics?
2. What is a Logic Gate? Give a brief account of AND, OR and NOT logic gates?
3. Draw a circuit diagram of a 4 bit Ripple Counter?
4. Explain programme array logic
5. How can frequency modulation be generated from phase modulation?
6. What is quantization? Write PCM system?
7. What is a Satellite? Write the differences between Active and Passive Satellites?
8. Write a note on transponders

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. (a). State De Morgan's Theorems of Boolean Algebra and prove them?

(OR)

(b). Illustrate and describe the working of J-K Master/Slave Flip Flop Circuit? Give its Truth Table?

10. (a). Discuss the applications of shift registers

(OR)

(b). Draw the circuit diagram of a Programmable Logic Array and explain its operation?

11. (a). Write the comparison between amplitude modulation, frequency modulation and phase modulation

(OR)

(b). Write in detail sampling theorem

12. (a). Write the advantages of Geostationary satellite

(OR)

(b). Explain the classification of satellites

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FIRST SEMESTER

Paper : I: INS -104(a):Programming in "C"

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Discuss about the significance of flow charts in Computer Programming?
2. Explain briefly about constants and varaibles and write a C program for finding the Sum of the Squares of the natural numbers using for statement?
3. What is the difference between Over flow and Under flow of Data?
4. Write about bitwise and conditional operators in "C" with examples?
5. Write a brief note on string handling functions?
6. Explain the importance of user – defined functions?
7. What is structure in C? Explain the structure initialization?
8. Write about the concepts of single linked lists

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. (a). Explain the organization of a computer system with relevant examples?

(OR)

(b). Discuss about the basic structure of "C" program with examples and also its key words?

10. (a). What is an operator? Explain briefly about the different type of operators with examples and also mention the their hierarchy in "C" program.

(OR)

(b).Example briefly about the different type of Decision making and looping statements with examples?

11. (a). What is an array? How to initialize 1 D and 2 D arrays? Write a C program for computing two given (3×3) matrix multiplication?

(OR)

(b). What is pointer? Explain about user defined functions and how they are different from library functions?

12. (a). Write a program in C for declaration of pointers and structures in “C”

(OR)

(b). Discuss about the file management and I/O operation on files in “C” language with examples.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION SECOND SEMESTER

Paper : I: INS -201:INDUSTRIAL INSTRUMENTATION

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Write a brief note on Elements of Transmitters in Process Instrumentation ?

2. Discuss about the valves and controllers in Iron and Steel Industry?

3. Write a brief note Steam Boilers in Petrochemical Industry?

4. Give a detailed note Heat Exchangers in Petrochemical Industry?

5. Briefly discuss about Measurement Heard ware in Pharmaceutical Industry?

6. Give a detailed note on Controllers and Displays in Pharmaceutical Industry?

7. Write a short note on Valves and Controllers in Thermal Power Stations?

8. Explain Computer Applications in Thermal Power Stations?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. a)Write in detail about the Valves, Guages, Converters, actuators and relays

(OR)

b) Explain the Instrumentation process in Iron and Steel Industry?

10. a) Explain the Instrumentation process in Petrochemical Industry ?

(**OR)**

b) Explain in detailed about the Furnaces in and Centrifuges in Petrochemical Industry with neat

sketch.

11. a) Explain the Instrumentation process in Pharmaceutical Industry?

(OR)

b) Explain briefly about the Measurement Heard ware and Valves in Pharmaceutical Industry with neat sketch?

12. a) Explain in detailed about Instrumentation in Thermal Power Station?

(OR)

b) Explain briefly about controller and Displays in Thermal Power Station with neat sketch?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION SECOND SEMESTER

Paper :II: INS -202:ELECTRONIC INSTRUMENTATION

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Discuss the extension of ranges in DC meter

2. Write the working of analog phase meter

3. What are the types of digital measuring instruments? Describe them briefly?

4. Discuss the principle and working of Digital voltmeter?

5. Write theworking of square wave generator

6. Write the various elements and their working in function generator

7.Explain the functioning of digital watt meter

8.Explain briefly Digital Capacitance meter with a diagram?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. a) What are Analog and Digital Measuring Instruments? Explain the principle and construction and operation of dynamometer type of DC meter?

(OR)

b) What are the types of Cathode Ray Oscilloscope (CRO)? Explain the working principle of dual beam CRO with a neat block diagram?

10. a) Illustrate Digital Phase Meter with a neat diagram and write its applications.

(OR)

b) Draw a neat sketch of digital storage Oscilloscope (DSO) and explain its working in

details.

11. a) Design a RF signal generator and explain its principle and working.

(OR)

b) Explain signal generator with neat diagram and write its working principle. What are the applications of signal generator?

12.a) Illustrate the principle and working of a spectrum analyzer. Discuss two important applications.

(OR)

b) Explain the working principle and functioning of Digital tachometer with a neat circuit diagram.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION SECOND SEMESTER

Paper :III: INS -203(a):Sensors and Signal Conditioners

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Define "Passive" and "Active" Transducer and give an example of each?
2. Write the importance of transducer
3. Discuss the functioning of logarithmic transducer
4. Write the difference between photo conductive and photo voltaic cell.
5. What is Thermocouple? How Thermocouple can be used to measure temperature?
6. Write the working of differential pressure level sensor
7. Describe the functioning of variable resistance transducer
8. Write the various elements and their working in electrical transducer

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. a). What is a Transducer? Classify the transducers according to their characteristics and applications?

(OR)

b). Discuss the linearization of transducers

10. (a). Describe in detail the working of phase sensitive detector

(OR)

(b).Discuss the principle and working of photomultiplier tube

11. a) Write a working and importance of Platinum Resistance Thermometer.

(OR)

b) Write the differences between the Venturi meter and Orifice meter?

12. a) With neat diagram explain the principle and working of linear voltage differential transformer

(LVDT).

(OR)

b) Discuss the functioning of various elements in Strain Gauge with neat diagram and explain its uses.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION SECOND SEMESTER

Paper : IV: INS -204(a):MICROPROCESSORS AND INTERFACING

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Discuss briefly about Overview of a basic microcomputer structure?

2.Write the microprocessor technology in bipolar junction trnsistor

3.Discuss about Addressing Modes in 8086 Microprocessor?

4. Write about Instruction Sets in 8086 Microprocessor?

5. Explain about Successive approximation A/D Converter?

6. Discuss about Serial Data Transfer?

7. Write about Programmable Peripheral Interface (8255)?

8. Discuss about Programmable Interrupt Controller (8259)?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

09. (a) Give a detailed account on the Microprocessor technology in MOS

(OR)

(b) Describe about detailed Microprocessor Evolution and types?

10. (a) Explain about the Architecture of 8086 Microprocessor?

(**OR)**

(b) Explain in detailed about the Interrupts in 8086 Microprocessor?

11. (a) Describe in detail about Interfacing 8 bit D/A converter?

(OR)

(b) Write about DMA data transfer with suitable example?

12. (a) Give a detailed account on Programmable Keyboard/ Display Interface (8279) with neat sketch?

(OR)

(b) Describe about Programmable Interval Timer (8253) with neat sketch?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION THIRD SEMESTER

Paper : I: INS -301:Analytical Instrumentation

TIME: 3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Discuss the principle of calorimeter
2. Write the applications of atomic absorption spectrometer
3. Write a brief note on applications of Conductivity bridges?
4. Write some applications of Polarographs in chemical and industrial fields?
5. Write the principle of NMR and its importance .
6. Write the salient features of individual blocks in electron spin resonance spectrometer
7. Sketch the block diagram of transmission electron microscope and name the various elements
8. Discuss the applications of gas chromatography

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. (a). Explain the working of UV – Visible Spectrophotometer with a neat block diagram and also mention its applications?

(OR)

(b).Write the principle and working of Raman spectrometer and discuss its applications

10. (a). Explain the principle and working of Conductivity bridge with block diagram?

(OR)

(b). Discuss the salient features of various blocks in a polarograph and write the working of polorograph with diagram?

11. (a). Draw the block diagram of nuclear magnetic resonance spectrometer and explain its

working?

(OR)

(b). Explain the principle and working of Mass Spectrometer with relevant block diagrams and write its applications

12. (a). with neat diagram write the principle and working of scanning electron microscope and discuss its applications

(OR)

(b). Describe the working principle of Thermo Gravimetric Analyzers with the help of relevant diagrams?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION THIRD SEMESTER

Paper : II: INS -302:Digital Signal Processing

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. What are the differences between DSP and ASP?

2. write and prove the sampling process theorem?

3. Give a short note on causality and stability of the discrete time signals?

4. Explain the Z – transfer function and its properties?

5. Explain circular convolution and its properties?

6. What is decimation in frequency. Explain it?

7. Comparison of IIR and FIR filters?

8. Difference between symmetric and Anti - symmetric FIR filters?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

09. (a) Draw the block diagram of a typical DSP system. Explain the function of each block?

(OR)

(b) Describe the advantages and disadvantages of DSP? Write the applications of DSP?

10. (a) Construct the block diagram of discreate time system and Explain it in detailed?

(OR)

(b) Determine the Z transform of unit step sequence?

11. (a) Find the 4 – point DFT of the sequence x(n) = cos (nπ) / 4 ?

(OR)

(b) Derive the relation between DFT and Z transform?

12.(a) Describe the matched Z transform technique for IIR filter design?

(OR)

(b) Design the linear phase FIR digital filter by frequency sampling method?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION THIRD SEMESTER

Paper :III: INS -303(a):BIOMEDICAL INSTRUMENTATION

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. What are the basic bioelectrical signals/parameters and mention each of its frequency range?
2. Write a note on electroencephalography
3. What is a pacemaker? What are the different modes of operation of Cardiac Pacemakers?
4. Write the working of blood cell counter
5. Discuss the working of anaesthesiamechine
6. Write the operation of oxymeter
7. Write about dosimeter
8. Discuss the advantages of ultrasonic image forming systems

SECTION – B

Answer ALL questions. Each Question carries 15 marks (4x15 = 60)

9.(a) With neat sketch explain the Physiological Systems of Human Body?

(OR)

(b) What are the Characteristics of EMG signal? Compare the signal characteristics of ECG and EMG with neat sketches?

10.(a) Explain the Nerve and Muscle Stimulators with the help of a neat sketch?

(OR)

(b) Explain the working of X- Ray Machine with the help of a neat diagram?

11.(a).Write the design of biotelemetry system and radio telemetry system

(OR)

(b) Write the working of pulmonary analyzer

12. (a) With neat sketch explain the Computer Tomography Scanner (CT)

(OR)

(b) Explain the working of Magnetic Resonance Imaging (MRI) with the help of a neat diagram?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION THIRD SEMESTER

Paper : V: INS -305:MICROCONTROLLERS AND INTERFACING

TIME:2 Hours **Max.Marks:40**

SECTION - A

Answer any four of the following. Each Question carries 4 marks. **(4x4=16)**

1. Write the differences between embedded versus external memory devices
2. Explain 8 bit and 6 bit micro controllers
3. Discuss the addressing modes in 8051 micro controller
4. Write about interrupts in MCS-51 timers
5. Discuss memory interfacing in 8051
6. Write the interfacing of 0809 with 8051

SECTION – B

Answer **ALL** questions. Each Question carries 8 marks **(3x8 =24)**

7**.** (a) Write about Harvard and Von Newmann architectures in microcontroller devices

(OR)

(b) Explain the pin structure and memory organization in 8051 Microcontroller?

8**. (**a) Write the instructions and programming in 8051 microcontroller

(OR)

(b) Explain in detail serial and parallel communication

9 (a) What is stepper motor in Microcontroller? Discuss the interfacing of stepper motor to 8051 Microcontroller with neat diagram?

(**OR)**

(b) Draw circuit diagram and explain the interfacing of 8 bit ADC to 8051 Microcontroller?

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION THIRD SEMESTER

Paper :VI: INS -306:COMPUTER ARCHITECTURE AND ORGANIZATION

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Briefly explain the processor function with block diagram?

2. Define Micro-Operation with example and Give the Micro instruction format?

3. What are the differences between the hardwired control organization and micro programmed control organization?

4. Briefly explain about Algorithms and Flowcharts with exaples?

5.Write a short note on I / O control method?

6. What is meant by Virtual memory and explain it with diagram?

7. Describe the concept of pipelining and give the basic structure of the pipeline processor?

8. Write the importance of shared memory multiprocessors

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

09**.** (a)Discuss in detail multiprocessors and multi computers

(OR)

(b) Write in detail with examples logic micro operations and shift micro operations

10 **.**(a)What is micro programming? What are the advantages and disadvantages of micro programming?

(OR)

(b) Briefly explain about Arithmetic operations with suitable example?

11. (a) Discuss in detail read only memories and cache memories performances in computers

(OR)

(b) Write the input and output organization in computer

12. (a)Discuss with suitable examples: RISC pipe line Vector processing and Array processing?

(OR)

(b) Discuss in detail aboutmulti processor with block diagram and write it's characteristics?

MODEL QUESTION PAPER

M.Sc. DEGREE EXAMINATION - APRIL/DECEMBER

FOURTH SEMESTER

Branch - Instrumentation

Paper 1 –INS -401: INTRODUCTION TO VLSI CIRCUITS

(Under NEP w.e.f.2021-2022)

Time: 3 hours Max Marks: 80

SECTION -A

Answer any FOUR questions. Each question carries 5 Marks. (Marks: 4 x 5 = 20)

1. Explain the overview of design steps involved in the fabrication of VLSI circuits.
2. Explain the design and applications logic gates in circuits.
3. What is a MOSFET? Explain the working of MOSFET?
4. Explain the concept of Lithography.
5. Write a note on FET sizing and unit Transistors.
6. Explain in detail the FET RC model.
7. Write a brief note on power dissipation.
8. Give the working of pass transistor

SECTION -B

Answer ALL questions. Each question carries 15 Marks. (Marks: 4 x 15 =60)

9. (a) Explain MOSFETs as switches with a neat diagram.

(Or)

(b) Draw a neat sketch and explain basic logic gates in CMOS.

10. (a) Discuss briefly the concept of CMOS layers in detail.

(Or)

(b) Explain the overview of materials growth and their deposition in VLSI Technology.

11. (a) Write briefly on layout basic structured sequences.

(Or)

(b) Explain briefly the n – FET current and voltage equation with a neat diagram.

12. (a) Draw a neat diagram and explain briefly the DC characteristics of the CMOS inverter.

(Or)

(b) Discuss briefly the Designing of High Speed CMOS logic Networks.

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FOURTH SEMESTER

Paper : II: INS -402:EMBEDDED SYSTEMS AND REAL TIME OPERATING SYSTEMS

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. What is general purpose system and embedded system. Explain it with block diagram?

2. What are the differences between microprocessor and PIC microcontroller?

3. Write the evaluation of ARM processors?

4. Explain the applications of relays with ARM processor?

5. Explain about hard and soft real time systems?

6. What is the need of Task communication?

7. What are the differences between GPOS and RTOS?

8. What is image processing. Explain it with the help of a neat sketch ?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

09. (a) Explain the difference between Embedded Systems and General Computing Systems with the help of a neat block diagram?

(OR)

(b) Explain the PIC microcontroller architecture with neat block diagram

10. (a) Explain the instruction set of ARM 7 with suitable block diagram?

(OR)

(b) What is meant by Flash memory and write its applications?

11. (a) What is kernel and describe it's architecture with neat block diagram?

(OR)

(b) Write a detailed note on interrupt service routines in RTOS with suitable block diagram?

12. (a) Write the role of RTOS for fault tolerant applications

(OR)

(b) Discuss in detail RFID systems and their applications development using these systems

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FOURTH SEMESTER

Paper :III: INS -403(a):PROGRAMMABLE LOGIC CONTROLLERS

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. Write the functioning of dynamic elements in control loop

2. Briefly explain composite controller modes

3. Write the general features of process contoller

4. Give a brief account of model based control

5.Write about steady state gain

6.Discuss in detail Liquid level control

7.Write the design of decoupler

8.Write in brief about artificial neural networks

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

9. (a) Write the working of interacting and non- interacting systems

(OR)

(b) Write the characteristics of process control

10. (a) Discuss in detail Zingler and Nichols method

(OR)

(b) Write the overview of control schemes

11. **(**a) Write in detail the analysis of flow control and pressure control

(OR)

(b) Explain the comparison of SLPC and MLPC

12. (a) Give the overview of multivariable systems

(OR)

(b) Write about model based controller and optimal controller

MODEL QUESTION PAPER

M.Sc., DEGREE EXAMINATIONS- 2022

Branch: INSTRUMENTATION FOURTH SEMESTER

Paper : VI: INS -406(a):AGRO BASED INSTRUMENTATION

TIME:3 Hours **Max.Marks:80**

SECTION - A

Answer any **FOUR** of the following. Each Question carries 5 marks. **(4x5=20)**

1. List the properties of soil and explain any two properties of soil in detail?

2. Write in brief about bio sensor

3. List out any 4 equipment's used in sugar industry/ Explain in detail about any one of it?

4. Explain the working of fermenter in sugar industry

5. Explain soil moisture measurement method?

6. What are the factors affecting the selection of irrigation system?

7. List out the different sensors & instruments used for monitoring green house environment?

8. Write a short notes on ventilation systems used in green house environment?

SECTION – B

Answer **ALL** questions. Each Question carries 15 marks **(4x15 = 60)**

09. (a) Write in detail the working of sonic anemometer and hygrometer and its usage in agriculture

(OR)

(b) Discuss in detail, Open and Close path gas analyzers with a neat sketch?

10. (a) Draw the flow diagram of a diary industry and instrumentation set up and Explain it?

(OR)

(b) Write in detail juice extraction process and instrumentation

11. (a) Compare surface and micro methods of irrigation based on their advantages and disadvantages?

(OR)

(b) Discuss in detail soil moisture methods

12.(a) Explain the application of SCADA for DAM control?

(OR)

(b) Explain the application of PLC and SCADA in packing industry with neat sketch?

SRI VENKATESWARA UNIVERSITY: TIRUPATI

S.V.U COLLEGE OF SCIENCES

DEPARTMENT OF PHYSICS

Course

M.Sc. ELECTRONICS

Choice Based Credit System (CBCS)

Academic Year 2023 – 24s

Amended as per NEP-

2020

About the Department

The Department of Physics, Sri Venkateswara University, was established in 1954 with B.Sc. and B.Sc. (Hons) degree courses. Two year M.Sc. degree course was started in 1959. To meet the growing demands of the society and to keep pace with reputed institutions in the country and abroad, the Department has innovative specializations in M.Sc. Physics such as Applied Spectroscopy, Condensed Matter Physics, Electronics, Photonics, Solar Energy Physics and Vacuum and Thin film Physics. The department has also started M.Sc. Electronics course in 1998. At Present the department has 7 Professors, 1 Associate Professor and 1 Assistant Professor.The research work in the Department of Physics was initiated in 1957 and since then, there has been significant progress in the areas of Atmospheric Science, Condensed Matter Physics, Microelectronics, Solar Energy, Solid State Spectroscopy, Photonics and Thin Films. In recognition of these efforts, the department has received research funding from UGC, CSIR, DST, ISRO, DNES, DoE, DRDO and DAE-BRNS. The Department was selected for UGC - CAS and DST- FIST programmes and was able to procure several sophisticated instruments like XRD, ATR-FTIR, UV-Vis-NIR spectrophotometer, FLS-980-Florescence spectrometer, SEM with EDS, Micro-Raman, Vibrating Sample Magnetometer (VSM), Liquid Nitrogen Plant,etc., for student training and advanced research activities. The UGC has set up UGC-SVU Center for MST Radar applications to promote research activities on Atmospheric research. This was further supported by the ISRO in the form of an Advanced Center for Atmospheric Sciences (ACAS). The advances made so far in basic and applied research are well recognized both in the country and abroad. The Department organizes National and International Conferences/Seminars/Workshops on regular basis. The faculty members of the Department have several collaborative research programmes with national and International institutions. Many of the faculty members of the Department are regularly invited as visiting Professors and visiting researchers by overseas Universities/ Institutes in India and abroad.

Vision

To inculcate certain specific enabling skill sets to prepare the students to take up challenges in any one or more functional domains viz. (i) Academics; (ii) Basic and Applied Research; (iii) Research & Development; (iv) Engineering & Technology and (v) Industry.

Mission

To bring out professionals having knowledge of basic laws of nature together with strong fundamentals in the core area of Electronic viz. Analog Integrated Circuits, Digital Integrated Circuits, Programming in C, Python, Matlab, Mathematical methods of Signal and System Analysis, Optical, wireless and satellite communications, Advanced Microprocessors and Microcomputers, Embedded controllers, Semiconductor Materials and Devices, Signal and Image Processing, VHDL, VLSI circuits, Industrial Electronics, Control Systems, Data Communications and Networking, Microwaves, etc.

Program Specific Outcomes: Attheend oftheprogram,thestudent willbeableto:

PSO1	Understandthebasicandadvancedconceptsofdifferentbranchesof Electronics.
PSO2	Performanddesignexperimentsintheareasofelectronics,Microcontrollers, Communications, Semiconductors Devices, and Programming.
PSO3	Applythe conceptsof electronics in specialized areasof VLSI technology, VHDL, Communications,etc.in industry,academia, research anddaytodaylife.

Program Objectives:

- P1. To develop analytical skills covering both scientific and technical domains.
- P2. To develop in depth understanding of the advanced technologies in Electronics.
- P3. To gain practical, hands-on experience in different integrated circuits and Controllers
- P4. To translate the proven research ideas logically into a reliable and effective but simple, elegant and advanced electronic systems.

Program Outcomes: At the end of the program, the student will be able to:

PO1	Apply the scientific knowledge to solve the complex physics problems.
PO2	Identify,formulate,andanalyzeadvancedscientificproblemsreachingsubstantiated Conclusions using first principles of mathematics, physical, and natural sciences.
PO3	Design solutions for advanced scientific problems and design system components or processes that meet the specified needs with appropriate attention to health and safety risks, applicable standards, and economic, environmental, cultural and societal consideration.
PO4	Use research-based knowledge and methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid Conclusions.
PO5	Create, select, and apply appropriate techniques, resources, and modern scientific Tools to complex physics problems with an understanding of the limitations.
PO6	Applyreasoninginformedbythecontextualknowledgetoassesssocietal,health,safety,legalandculturalissues,andtheconsequentresponsibilitiesrelevanttothe Professional scientific practice.
PO7	Understand the impact of the scientific solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Apply ethical principles and commit to the norms of scientific practice.
PO9	Function effectively as an individual, and as a member or leader in diverse teams, And in multidisciplinary settings.
PO10	Communicate effectively on scientific activities with the Scientific/Engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective representations, and give And receive clear instructions.
PO11	Demonstrate knowledge and understanding of the scientific principles and apply These to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Recognize the need for, and have the preparation and ability to engage in independent And life-long learning in the broadest context of scientific and technological change.

Program Educational Objectives: At the end of the program, the students will beable to:

PEO1	Apply principles of basic scientific concepts in understanding, analysis, and prediction of physical systems.
PEO2	Develop human resource with specialization in theoretical and experimental Techniques required for career in academic, research and industry.
PEO3	Engage in lifelong learning and adapt to changing professional and societal needs.

SRIVENKATESWARAUNIVERSITY : TIRUPATI

DEPARTMENTOFPHYSICS

TWO YEAR M.Sc. COURSE IN ELECTRONICS (2021-2022) SCHEME

Semester – I

Sl. No	Components of Study	Course code	Title of the Paper	Instruction hours per week	Credits	Internal Assess-ment Marks	End Semester Exams Marks	Total Marks
1.	Core-Theory	ELE-101	Analog Integrated Circuits and Applications	6	4	20	80	100
2.	Core-Theory	ELE-102	Digital Integrated Circuits and Applications	6	4	20	80	100
3.	Compulsory Foundation	ELE-103 (a)	Programming in C with data structures	6	4	20	80	100
		ELE-103 (b)	Python Programming					
		ELE-103 (c)	Programming in Matlab					
4.	Elective Foundation	ELE-104 (a)	Mathematical Methods of Signal & System analysis	6	4	20	80	100
		ELE-104 (b)	Optical Communications					
		ELE-104 (c)	Wireless communications					
5.	Core-Practical	ELEP-105	Analog and Digital IC's (Lab)	6	4	20	80	100
6.	Core-Practical	ELEP-106	Programming in C (Lab)	6	4	20	80	100
			Total:	36	24	120	480	600

All Core papers are Mandatory

Compulsory Foundation – Choose one paper

Elective Foundation – Choose one paper

Semester – II

Sl. No	Components of Study	Course code	Title of the Paper	Instruction hours per week	Credits	Internal Assess-ment Marks	End Semester Exams Marks	Total Marks
1.	Core-Theory	ELE-201	Advanced Microprocessors and Microcomputers	6	4	20	80	100
2.	Core-Theory	ELE-202	Digital Communications	6	4	20	80	100
3.	Compulsory Foundation	ELE-203(a)	Semiconductor Materialsand Devices	6	4	20	80	100
		ELE-203(b)	Sensors and Transducers					
		ELE-203(c)	Atmospheric and Space Instrumentation Techniques					
4.	Elective Foundation	ELE-204 (a)	Control Systems	6	4	20	80	100
		ELE-204 (b)	Medical Instrumentation					
		ELE-204 (c)	Data Mining and Information Security					
5.	Core-Practical	ELEP-205	8086 Microprocessor (Lab)	6	4	20	80	100
6.	Core-Practical	ELEP-206	Digital Communications (Lab)	6	4	20	80	100
			Total:	36	24			600

All Core papers are Mandatory

Elective Foundation – Choose one paper

Semester – III

Sl. No	Core/Elective	Course code	Title of the Paper	Instruction hours per week	Credits	Internal Assessment Marks	End Semester Exams Marks	Total Marks
1.	Core-Theory	ELE-301	Digital Signal Processing	6	4	20	80	100
2.	Core-Theory	ELE-302	Digital system Design-VHDL	6	4	20	80	100
3.	Generic Elective	ELE-303(a)	Microcontrollers and Applications	6	4	20	80	100
		ELE-303(b)	Computer organization					
		ELE-303(c)	Digital Image Processing					
4.	Core-Practical	ELEP-304	Digital Signal Processing (Lab)	6	4	20	80	100
5.	Skill Oriented Course	ELE-305	Peripheral interface controllers VHDL &Microcontrollers (Lab) (Hands on training)	6	4	10	90 (40+50)	100
6.	Open Elective	ELE-306 (a)	Microprocessors, PC Hardware and Interfacing	6	4	20	80	100
		ELE-306 (b)	Satellite Communications					
			Total:	36	24	110	490	600

All Core papers are Mandatory

Generic Elective - Choose one paper

Skill Oriented Course is Mandatory (10 marks for Internal, 40 marks for final theory, & 50 marks for Practicals)

Semester – IV

Sl. No	Core/Elective	Course code	Title of the Paper	Instruction hours per week	Credits	Internal Assessment Marks	End Semester Exams Marks	Total Marks
1.	Core-Theory	ELE-401	Advanced CommunicationSystems	6	4	20	80	100
2.	Core-Theory	ELE-402	Introduction to VLSI circuits	6	4	20	80	100
3.	Generic Elective	ELE-403(a)	Data Communications and Networking	6	4	20	80	100
		ELE-403(b)	Industrial Electronics					
		ELE-403 (c)	EMI and EMC					
4.	Core-Practical	ELEP-404P	Communication (Lab)	6	4	---	100	100
5.	**Multi Disciplinary Course/ Project work**	ELE-405	Internet of Things/ Project Work	6	4	20	80	100
6.	**Open Elective**	ELE-406 (a)	Embedded systems with PIC Microcontrollers	6	4	20	80	100
		ELE-406 (b)	Microwaves					
			Total:	36	24	80	520	600

All Core papers are Mandatory

Generic Elective - Choose one paper

MultiDisciplinary Course/Project is Mandatory

(MandatoryCore)

ELE-101	ANALOG INTEGRATED AND APPLICATIONS	L-5,T-1,P-0	4Credits

Pre-requisite: Understandingofgraduatelevel Electronics

Course Objectives: The aim and objective of the course on Analog Integrated Circuits and Applications is to train thestudents of M.Sc. in the Voltage Regulators and Signal generators, Nonlinear Circuits, Amplifiers, and Phase-Locked Loops, A-D and D-A Converters, Op. Amp. Applications used in the Industry.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	UnderstandthenecessityofAction, Voltage regulators and Signal generators.
CO2	Used' Nonlinear Circuits, Amplifiers, and Phase-Locked Loops in various applications.
CO3	DescribetheA-D and D-A Convertersin different applications.
CO4	ApplyessentialfeaturesofOp. Amp. Applications used in the Industry.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO3	3	3	2	-	2	1	1	-	2	2	-	-
CO4	3	2	3	2	-	1	1	-	2	2	1	-

ELE-101 ANALOG INTEGRATED CIRCUITS AND APPLICATIONS

UNIT-1 : Voltage Regulators and Signal generators

Linear regulators, Linear regulator applications, Switching regulators, Monolithic Switching Regulators, Sine, Triangular, Sawtooth wave form generators, Multivibrators, Monolithic timers, Monolithic waveform generators, V-F and F-V converters.

UNIT-II: Nonlinear Circuits, Amplifiers, and Phase-Locked Loops

Voltage comparators, Comparator applications, Schmitt Triggers, Precision Rectifiers, Analog Switches, Peak detectors, Sample- and Hold Amplifiers, Log/Antilog Amplifiers, Analog multipliers, Phase-Locked Loops, Monolithic PLLs.

UNIT-III : A-D and D-A Converters

Performance Specifications, D-A conversion Techniques – Weighted Resistor DACs, Voltage mode R-2R ladder DAC, Bipolar DACs, Multiplying DAC applications.

A-D conversion Techniques– DAC based A-D conversion, Successive-Approximation ADC, Flash Converters, Integrating Type Converters.

UNIT – IV: Op Amp Applications

Summing Amplifier, Voltage to current converter, Current to Voltage converter, Integrator, Differentiator, Instrumentation Amplifier. Active Filters- First order filters, Second order Filters, Higher Order Filters, Switched Capacitor Filters.Oscillators: Principles and types of Oscillators.

Books for study:

1. Sergio Franco, “Design with Operational Amplifiers and Analog Integrated Circuits”, 3/e, TMH, 2002 (UNIT-I to UNIT-III)

2. Ramakanth A. Gayakwad, OP-Amps & Linear Integrated Circuits, PHI, 2nd Edition, 1991.

3. J. Michael Jacob, “Application and Design with Analog Integrated Circuits” 2/e, PHI, 1996.

4. D. Roy Choudhury and Shail Jain, “Linear Integrated Circuits”, New Age International (P) Limited, 1991.

5. R.F. Coughlin and F.F. Driscoll, “Operational Amplifiers and Linear Integrated Circuits”, PHI, 1992.

6. D.K. Anvekar and B.S. Sonde, “Electronic Data Converters: Fundamentals & Applications”, TMH, 1994.

7. A.D. Helfric and W.D. Cooper, “Modern Electronic Instrumentation and Measurement Techniques”, PHI, 1996.

(MandatoryCore)

ELE-102	Digital Integrated Circuits and Applications	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduatelevel Digital Electronics

Course Objectives: The aim and objective of the course on Digital Integrated Circuits and Applications is toexpose the students of M.Sc.class to the topics like Flip-Flops, Counters and Registers, IC Logic families, Semiconductor Memories, Digital Instruments so that they are equipped with the digital integrated circuits and applications in the present days.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Gainin-depthknowledge abouttheFlip-Flops, Counters and Registers and their symbolsused in digital integrated circuits and their function.
CO2	Differentiatevarious IC Logic families usedDigital circuits.
CO3	Understand the various semiconductor memories such as RAMs and ROMs, Programmable Logic devices and development software.
CO4	To explain the basic function of various digital instruments such as DVMs, MP based Ramp type DVM, Digital multimeters, Frequency meter, Phase meter, capacitance meter and their Automation.

CO3	3	3	2	2	1	2	2	-	1	-	1	-
CO4	3	3	2	2	2	2	1	-	-	-	1	2

ELE-102 DIGITAL INTEGRATED CIRCUITS AND APPLICATIONS

UNIT – I :Flip-Flops, Counters and Registers

NAND and NOR gate latches, Clocked signals and Clocked flip-flops, Clocked S-C, J-K, and D-FFs, D-latches, asynchronous inputs, timing considerations, one shot.

Ripple counters, Counters with MOD numbers$<2^N$, Changing the MOD number, IC asynchronous counters, Asynchronous down counter, Propagation delay in ripple counters, Synchronous counters, Presettable counters, 74193 counter, Synchronous counter design, Shift register counter. IEEE/ANSI Symbols.

UNIT – II : IC Logic families

Digital IC terminology, TTL logic family, TTL series characteristics, Improved TTL series, TTL loading and fan-out, other TTL characteristics, Connecting TTL outputs together, tristate TTL, ECL family, MOS digital ICs & Characteristics, CMOS logic & characteristics, Bilateral switch, TTL driving CMOS and vice-versa, Low voltage technology.

UNIT – III : Semiconductor Memories

RAM architecture, Static RAM, Dynamic RAM (DRAM), DRAM structure, and operation, DRAM Read/Write cycles, DRAM refreshing, Expansion of word size and capacity.

Programmable Logic Devices- Basic idea, PLD architecture (PROM), PAL, PLAs, Applications of a programmable Logic Device – GAL 16V 8A, Programming PLDs, Development software.

UNIT – IV: Digital Instruments

Dual slope Integrating Type DVM, Integrating Type DVM, Continuous Balance DVM, 3-1/2 digit, Resolution and sensitivity of Digital meters, General specification of DVM, MP based Ramp type DVM, Digital multimeters, Digital Frequency meter, Digital measurement of time and frequency, Digital PH meter, Automation in Digital Instruments, Digital Phase meter, Digital capacitance meter, IEEE 488 Bus.

Books for study:

1. Ronald J.Tocci, “Digital Systems-Principles and Applications”, 6/e, PHI, New Delhi, 1999.
2. H.S. Kalsi, “Electronic Instrumentation”, TMH, 1995. (Unit-IV)
3. Herbert Taub and Donald Schilling, “Digital Integrated Electronics”, McGraw Hill, 1985.
4. S.K. Bose, “Digital Systems”, 2/e, New Age International (P) Limited, 1992.
5. D.K. Anvekar and B.S. Sonde, “Electronic Data Converters: Fundamentals & Applications”, TMH, 1994.
6. A.P. Malvino and D.P. Leach, “Digital Principles and Applications”, TMH, 1991.

ELE-103(a)	Programming in C with Data structures	L-5,T-1,P-6	4Credits

Pre-requisite: Basicknowledgeabout Software fundaments

Course Objectives: The aimandobjective ofthe course on**Programming in C with Data structures**isto introduce thestudents of M.Sc. class to the fundamentals of C Language, Arrays, Structures, Unions and Bit Fields, Ques, Trees and their applications so that they can use the Computer Language in writing the programs for various applications.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understand the fundamentals of C Language such as Expressions and I/O Statements, Operators and control statements.
CO2	Explainthe arrays, User Define Functions,Pointers and their applications
CO3	Understand about Declaration of structure, Stack and Recursion and theirapplications.
CO4	Understand the Linked Lists, Trees, different Algorithms, and their Applications. They are able to write the programs in controlling devices.

CO4	3	3	2	2	2	2	1	-		2	1	-

EL*E*-103(a) PROGRAMMING IN C WITH DATA STRUCTURES

UNIT – I: Fundamentals of C language

C character set – Identifiers and keywords – Constants – Variables – Data types – Declarations of variables Declaration of storage class – Defining symbolic constants Assignment statement

Operators: Arithmetic operators – Relational operators – Logic operators – Assignment operators – Increment and decrement operators – Conditional operators

Expressions and I/O Statements: Arithmetic expressions – Precedence of arithmetic operators Type converters in expressions – Mathematical (library) functions – Data input and output – The getchar and putchar functions – Scanf-Printif –Simple programs
Control Statements: If-Else statement – Switch statement – The ? Operator – GOTO –While, Do-while, FOR statements – BREAK and CONTINUE statements.

UNIT –II : Arrays

One dimensional and two dimensional arrays – Initialization Type declaration –Inputting and outputting of data for arrays – Programs of matrices addition, subtraction and multiplication

User Define Functions: The form of C functions- Return values and their types –Calling a function – Category of functions, Nesting of functions, Recursion, ANSI C functions – Function declaration, Scope and life time of variables in functions.

Pointers : Accessing the address of variable Declaration and Initialization of pointer variables, Accessing the value of the variable through its pointer-Pointer Expressions – Pointers and Arrays – Pointers and structures.

UNIT – III: Structures, Unions and Bit Fields

Declaration of structure, Initializing a structure, Functions and structures, Arrays of structures, Arrays within a structure, Structures within a structure, Pointers and structures, Unions, Bit Fields, Typedef, Enumerations.

The Stack- Representing stacks in C, Example: Infix, Postfix, and Prefix.
Recursion- Recursive definition and Processes, Recursion in C, The Towers of Hanoi Problem.

UNIT – IV: Queues and Lists

Linked Lists, Lists in C - Trees- Binary Trees, Binary Tree Representations, Example: The Huffman Algorithm, Representing Lists as Binary Trees, Trees and their Applications.

Books for study:

1. D. Ravichandran, “Programming in C”, New Age International (P) Limited, 1996.)
2. Y. Langsam, M.J. Augenstein and A.M. Tenenbaum, “Data Structures using C and C++” 2/e, Pearson Education, Inc., 1996.
3. Balaguruswamy, “Programming in ‘C’, TataMcGraw Hill.
4. R. Kruse, C.L. Tondo, and B. Leung, “Data Structures & Program Design in C” 2/e, Pearson Education, Inc., 1997.
5. T. Sudha and B. Poornima, “C programming with Data structures”, Anmol Publications Pvt. Ltd., 2005.
6. Byron Gottfried, Programming with ‘C’ , Tata McGraw Hill
7. Rajaraman ,Computer oriented numerical methods .
8. YeswanthKanetkar ,Let Us C .
9. K.R. Venugopal Prasad, Programming with C

ELE-103(b)	Python Programming	L-5,T-1,P-0	4Credits

Pre-requisite: Understandingofgraduatelevel Programming Fundamentals.

CourseObjectives: Theaimandobjectiveofthecourseon **Python Programming** istofamiliarize the students of M.Sc. students with the fundamentals of Python Language, Object and Classes, Functions and Modules, I/O and Error Handling,etc.,sothattheycanusetheseinsolvingsimple and difficult problems.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understand the basics of Dynamic Types, Conventions, String Operations, Operators, Loop, Lists and functions.
CO2	Learn about Object and Classes in Python and comparewith anyother high-level language.
CO3	UseFunctions and Modulesin solving various problems.
CO4	Understand I/O and Error Handling in Python, solve the problems.

CO4	3	3	3	-	-	2	-	-	2	2	-	1

ELE-103(b) Python Programming

UNIT – I:**Introduction to Python Programming Language:**

Introduction to Python Language,Strengths and Weaknesses, IDLE, Dynamic Types, Naming Conventions, String Values, String Operations, String Slices, String Operators, Numeric Data Types, Conversions, Control Flow and Syntax, Indenting, The if Statement, Relational Operators, Logical Operators, True or False,Bit Wise Operators,The while Loop, break and continue,The for Loop, Lists,Tuples,Sets,Dictionaries,Sorting Dictionaries,Copying Collections, In Functions.

UNIT –II :Object and Classes :

Classes in Python, Principles of Object Orientation, Creating Classes, Instance Methods, File Organization, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes.

UNIT –III : Functions and Modules :

Introduction, Defining Your Own Functions, Parameters, Function Documentation, Keyword andOptional Parameters, Passing Collections to a Function, Variable Number of Arguments, Scope, Functions - "First Class Citizens", Passing Functions to a Function, Mapping Functions in a Dictionary, Lambda, Modules, Standard Modules – sys,□Standard Modules – math,□Standard Modules – time,ThedirFunction**.**

UNIT –IV :I/O and Error Handling In Python :

Introduction, Data Streams,□Creating Your Own Data Streams, Access Modes, Writing Data to a File, Reading Data From a File, Additional File Methods, Using Pipes as Data Streams, Handling IO Exceptions, Working with Directories, Metadata, Errors, Run Time Errors, The Exception Model, Exception Hierarchy, Handling Multiple Exceptions.

Books for Study:

1. Mike, Dive into Python
2. Mark Lutz ,Learning Python, 4th Edition
3. Mark Lutz, Programming Python, 4th Edition

ELE-103(c)	Programming in Matlab	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduate level electronics

CourseObjectives: Theaimandobjectiveofthecourseon Programming in Matlabistofamiliarize the M.Sc. students with the Mat lab Environment, Control Flow Instructions, Structured Data Types, Plotting in Mat lab,Handle Graphics for Manipulating Plots, Writing the programs in solving the problems for various applications.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Applybasicsknowledgeof various instructions in Matlab and script files.
CO2	Study and understanding of various control flow instructions.
CO3	Study and understanding of various Structured Data Types
CO4	AnalyzetheoutcomeofthePlotting in Mat lab,Handle Graphics for Manipulating Plots, Writing the programs in solving the problems for various applications.

ELE-103(c) PROGRAMMING IN MATLAB

UNIT –I :Mat lab Environment

Defining Variables, Functions, Display Formats, Saving the Variables Stored in Memory, Predefined Variables, Complex Numbers, Matrices and Vectors, Strings, Input and Output Statements, Plotting in Mat lab, Mat Lab Help Facilities and Mat Lab Script Files.

UNIT –II:Control Flow

IF –END, IF – ELSE- END, ELSE IF, SWITCH –CASE, FOR Loops, WHILE Loops, General Structure of a Function, Scope of Variables, Passing Parameters, Global Variables, The RETURN Statement, Nar gin and nargout, Recursive Function.

UNIT-III : Structured Data Types

Introduction, Arrays in Mat lab, Addressing Arrays, Examples of Using Arrays, Designing Mat lab Functions to Handle Array Inputs, Dynamic Arrays, Cell Arrays, Structures

UNIT-IV : Plotting in Mat lab

Basic Two – Dimensional Plots, Line Styles, Markers, and Colors, Plot Color, Plotting Grid, The AXIS Command, Placing Text on a Plot, Modifying Text with Tex Commands, Obtaining Numerical values from a plot, Various Mat lab 2 –D Plot Types, Handle Graphics for Manipulating Plots.

Books for Study

1. Marc E. Herniter,Programming in MATLAB, Vikas Publishing House, 2001.
2. Paratap R: Getting Started with MATLAB: A Quick Introduction for Scientists & Engineers, 2010.

ELE-104(a)	Signals and System Analysis	L-5,T-1,P-0	4Credits

Pre-requisite: Understandingof graduatelevels Mathematical analysis

Course Objectives: The aim and objective of the course on Signals and System Analysis for the students of M.Sc. Electronics to equip them with the knowledge of Signals and Systems, Fourier Series Representation of Periodic Signals, Laplace and Z- Transforms for analysis.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	Havethebasicknowledgeof different Continuous-Time and Discrete-Time Signalsand systems and their properties.
CO2	Understand the *Fourier Series Representation of Periodic Signals*and their properties.
CO3	Know the Properties, Analysis and Characterization of LTI systems using the Laplace transforms.
CO4	Study the Properties of the Z- Transform, Analysis and Characterization of LTI systems using the z-transforms.

Mappingof courseoutcomeswiththeprogramoutcomes

CO2	3	2	3	3	-	2	2	-	2	1	-	1
CO3	3	2	3	3	2	2	-	-	2	-	-	1
CO4	3	2	3	3	-	2	2	-	2	-	-	1

ELE-104 (a): SIGNALS& SYSTEM ANALYSIS

UNIT – I: Signals and Systems

Continuous-Time and Discrete-Time Signals, Transformations of the Independent Variable, Exponential and Sinusoidal Signals, The unit Impulse and Unit Step functions, Continuous-Time and Discrete-Time Systems, Basic System Properties.

Linear Time-Invariant Systems- Discrete-Time LTI systems, Continuous-Time LTI systems, Properties of Linear Time-Invariant Systems, Casual LTI Systems described by differential and difference equations.

UNIT – II: Fourier Series Representation of Periodic Signals

A Historical perspective, The response of LTI systems to complex exponentials, Fourier Series representation of Continuous-time periodic signals, Convergence of the Fourier series, Properties of Continuous-Time Fourier Series, Fourier Series representation of Discrete-Time periodic signals, Properties of Discrete-Time Fourier series.

Continuous-Time Fourier Transform- Representation of aperiodic signals: The Continuous-Time Fourier Transform, The Fourier Transform for Periodic signals, Properties of the Continuous-Time Fourier Transform, The Convolution property, The multiplication property.

UNIT – III: Laplace Transforms

Laplace Transform, the region of Convergence for Laplace Transforms, The inverse Laplace transform, Geometric evaluation of the Fourier Transform from the Pole-Zero plot, Properties of the Laplace Transform, Analysis and Characterization of LTI systems using the Laplace transform.

UNIT – IV: Z-transform

the Z-transform, The region of convergence for the Z-transform, The inverse Z-transform, Geometric evaluation of the Fourier Transform from the Pole-Zero plot, Properties of the Z- Transform, Analysis and Characterization of LTI systems using the z-transforms, System function algebra and block diagram representations, The Unilateral z-Transform.

Books for study:

1. A.V. Oppenheim, A.S. Willsky, “Signals & Systems”, 2/e, Pearson Education, Inc., 1997.
2. R.E. Ziemer, W.H. Tranter and D.R. Fannin, “Signals and Systems – Continuous and Discrete”, 4/e, Pearson Education, Inc., 2001.

6. P.RameshBabu, Signal and Systems, Scitech Publishers, 2018.

PLE-104(b)	OpticalCommunications	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevelBasic Electronics

Course Objectives: The aim and objective of the course on OpticalCommunicationsforthestudentsofM.Sc. Electronics toequipthemwiththeknowledgeof Optical Communications.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	understand optical fibers and waveguides used in communication system
CO2	Understand **Attenuation and wave propagation in Optical Fibers**.
CO3	Study different types sources and detectors used in Optical Communication system.
CO4	Differentiate losses in optical fiber link and state transmission characteristics of optical fiber

CO4	3	3	3	3	2	1	2	-	2	2	-	-

ELE-104 (b): OPTICAL COMMUNICATIONS

UNIT – I

Introduction, Measurement of Information, Channel Capacity, Communication System Architecture, Basic Optical Communication System, Advantage of Optical Communication System.

Step-index Fibers, Graded Index Fibers, Modes & Rays, Stab Wave guide.

UNIT – II

Attenuation in Optical Fibers: Introduction, Absorption, Scattering, Very Low Loss Materials, All Plastic & Polymer-Clad-Silica Fibers.

Wave Propagation:Wave propagation in Step-Index & Graded Index Fiber, Overall Fiber Dispersion-Single Mode Fibers, Multimode Fibers, Dispersion-Shifted Fiber, Dispersion, Flattened Fiber, Polarization.

UNIT – III

Source & Detectors: Design & LED's for Optical Communication, Semiconductor Lasers for Optical Fiber Communication System, Semiconductor Photodiode Detectors, Avalanche Photodiode Detector & Photo multiplier Tubes

UNIT – IV

Optical Fiber Communication System: Telecommunication, Local Distribution Series, Computer Networks, Local Data Transmission & Telemetry, Digital Optical Fiber Communication System-First Generation, System-Second Generation Future System.Data Communication Networks – Network Topologies, Mac Protocols, Analog System.Advanced Multiplexing Strategies – Optical TDM, Sub carrier Multiplexing, WDM Network.

Books for study:

2. F. T. S. Yu ,Optical Information Processing, Wiley, Newyork, 1983
3. John M. Senior, Optical Fiber Communications, PHI, 2009.
4. Gerd Keiser, Optical Fiber Communications, McGraw-Hill Education, 2010

ELE-104(c)	Wireless Communications	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevelchemistryandphysics

Course Objectives: The aim and objective of the course on Wireless Communicationsis to familiarize the M.Sc. students with the basics of the recently emergingmobile technologies.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	understand the basics of digital modulation techniques
CO2	Understand various coding and error correction techniques
CO3	Know GSM mobile communication standards, its architecture, logical channels, advantages and limitations.
CO4	Familiarize with optical and satellite communication techniques

CO4	3	2	1	2	2	-	-	-	2	2	-1	-

ELE-104 (c): WIRELESS COMMUNICATIONS

Unit – I: Base band data transmission

Digital Modulation techniques: BPSK, QPSK, DPSK, QASK, BFSK, MSK, M-ary techniques. Base band binary data transmission system – Inter symbol interference – Nyquist pulse shaping criteria – line coding, pulse shaping, and scrambling techniques. Detection of error probability: Gaussian probability function – properties – error function complementary – error function.

Unit – II: Codes for error detection and correction

Parity check coding, Linear block codes, Cyclic codes, Convolutional codes. Encoding, Decoding of convolutional codes, State, Tree and Trellis diagrams. Maximum likelihood – Viterby algorithm, Sequential decoding Burst error correction - Interleaving techniques – Block and convolutional interleaving, Types of ARQ, Performance of ARQ. Comparison of coded and uncoded system.

Unit – III: Introduction to wireless communication

Global system for mobile (GSM): cellular concept, system design. Transmission system, Receiving system; frequency re-use; channel interference and system capacity. wireless networking: 1G, 2G, 3G wireless networks, traffic routing: wireless data service.

Unit – IV :Spread Spectrum Modulation

Introduction, Spread spectrum modulation; modulation performance in fading and multipath channel; multiple access techniques as applied to wireless communications.

Books for study:

1.B.P. Lathi, Modern Digital and Analog communication system, Oxford 3rd edition, 2018.

2. Bernard Sklar, Digital Communications Fundamentals and Applications, Pearson Education, 2009.
3. Wayne Tomoasi, Electronic communication Systems, Pearson Education, 2014.
4. Jochen H. Schiller, Mobile Communications, Pearson Education, 2010.
5. William C. Y. Lee,Wireless and Cellular Communications, McGraw-Hill, 2009.
6. Ramjee Prasad, OFDM for Wireless Communications Systems, Artech House, Universal Personal Communications, 2004.

ELE-201	AdvancedMicroprocessorsand Microcomputers	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevel Electronics

Course Objectives: **The aim and objective of the course on AdvancedMicroprocessorsand Microcomputers**is to familiarize thestudents of M.Sc. class to the basic aspects of microprocessors and different programming and interfacing techniques.

CourseOutcomes: Attheend ofthecourse,the studentwill be able to

CO1	Understanding of microprocessor architecture and evaluation
CO2	Develop skill of writing programs in ALP for various applications of 8086 Microprocessor
CO3	Interface various peripherals with 8086.
CO4	Understanding interrupts and direct memory access

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	1	1	-	1	2	-	-

CO4	3	3	1	-	2	1	1	-	1	2	2	-

ELE-201: ADVANCED MICROPROCESSORS AND MICROCOMPUTERS

UNIT – I: Microprocessors and its Architecture

Internal 8086 microprocessor architecture, Real mode and protected modes of memory addressing, Memory paging.

Addressing modes- Data addressing modes, program memory-addressing modes, Stack-memory addressing modes.

Instruction Set- Data movement instructions, Arithmetic and logic instructions, Program control instructions, Assembler details.

UNIT – II: Programming the Microprocessor

Modular programming, using the keyboard and video display, Data conversions.

Hardware Specifications- Pin-outs and the pin functions, clock-generator (8284A), Bus buffering and latching, Bus timing, Ready and Wait state, Minimum mode versus maximum mode.

UNIT – III: Memory Interface

Memory devices, Address decoding, 8088 and 80188 (8-bit) memory interface, 8086, 80186, 80286 and 80386 (16-bit) memory interface.

Basic I/O Interface- Introduction to I/O interface, I/O port address decoding, 8255, 8279, 8254, ADC and DAC (excluding multiplexed display & keyboard display using 8255).

UNIT – IV: Interrupts

Basic interrupt processing, Hardware interrupts, expanding the interrupt structure, 8259A PIC.

Direct Memory Access- Basic DMA operation, 8237 DMA controller.

Bus Interface- PCI bus, **Advanced Microprocessors-** 80186, 80188 and 80286 Microprocessors;

Books for study:

1. B.B. Brey, “The Intel Microprocessors 8086/8088, 80186/80188, 80286, 80386, 80486, Pentium and Pentium pro processor architecture, programming, and interfacing”, 4/e, PHI, 1999.
2. Douglas V.Hall, “Microprocessors and Interfacing, Programming and Hardware”, 2/e, McGraw Hill International Edition, 1992.
3. Muhammad Ali Mazidi and Janice GillispieMazidi, “The 80x86 IBMPC and Compatible Computers (Volumes I & II)”, 2/e, Prentice-Hall, Inc., 1998.
4. Walter A. Triebel and Avatar Singh, “Software, Hardware and Applications”, PHI, 1995.
5. Yu Cheng Lin and Glenn A. Gibson, “Microcomputer systems: The 8086/8088 Family Architecture, Programming and Design”, PHI, 1992.
6. K.J. Ayala, “The 8086 Microprocessor: Programming & Interfacing the PC”, Penram International Publishing (India) Pvt. Ltd.,1995.
7. K.M. Bhurachandi and A.K. Ray, Advanced Microprocessors and Peripherals ,McGraw Hill, 2017.

ELE- 202	Digital Communications	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduatelevel electronics

Course Objectives: The aim and objective of the course on Digital Communications is to expose the M.Sc. students to the basics of the Digital Modulation Techniques, Information theory and coding, Spread Spectrum modulation.

CourseOutcomes: At theend ofthe course, thestudent will be ableto

CO1	Understandthe electro statistics and magneto statistics and also the properties of propagation of electromagnetic radiation in different media
CO2	Know about the properties of laser beam and the working of different lasers and applications
CO3	Describe the fourier analysis in optics problems and to understand the concept of holography
CO4	Analyze the propagation of light in optical fibers and to know the various applications of optical fibers

ELE-202 DIGITAL COMMUNICATIONS

UNIT – I: Random Variables and Processes

Probability, Random variables, Cdf, Pdf, Relation between probability and probability density, Average value and variance of a random variable, The Gaussian Probability density, The error function, Mean and Variance of the sum of the random variables, Correlation between random variables, Central Limit theorem, Error probability, Random processes, Autocorrelation, The complementary Error Function.

UNIT-II: Digital -Modulation Techniques

BPSK, DPSK, QPSK, M-ary PSK, QASK, BFSK, M-ary FSK, MSK, Baseband signal receiver, Matched filter and probability of error, Coherent reception, Correlation, PSK, FSK, Non-coherent detection of FSK, Differential PSK, QPSK.

UNIT – III: Information Theory and Coding

Discrete messages, The concept of amount of information, Average information, Entropy, Information rate, Coding to increase average information per bit, Shannon's theorem, Capacity of a Gaussian channel, Efficiency of Orthogonal Signal transmission, Coding, Parity check bit coding for error detection, Coding for error detection and correction, Block codes, Block codes- coding and decoding, Convolutional Coding, Decode a Convolutional code, Probability of error of Convolutional codes.

UNIT – IV: Spread-spectrum modulation

Spread-spectrum overview, Pseudo-Noise sequences, Direct-sequence spread-spectrum systems, Frequency Hopping Systems, Synchronization.

Encryption and Decryption- Models, Goals, and Early Cipher Systems, The Secrecy of a Cipher System, Practical Security, Stream Encryption, Public Key Cryptosystems.

Books for study:

1. Taub and Schilling, “Principles of Communication Systems”, 2/e, TMH, 1991. (UNITs I-III)
2. Bernard Sklar, “Digital Communications: Fundamentals and Applications”, 2/e, Pearson Education, Inc., 2001 (UNIT - IV).
3. Simon Haykin, “Communication Systems”, 3/e, John Wiley & Sons (Asia) Pte. Ltd., 1994.
4. Harold Kolimbiris, “Digital Communications Systems”, Pearson Education, Inc., 2000.
5. K. Sam Shanmugam, “Digital and Analog Communications Systems”, John Wiley & Sons (Asia) Pte. Ltd., 2000.
6. Gary M. Miller and Jeffrey S. Beasley, “Modern Electronic Communication”, 7/e, PHI, 2003.

ELE-203(a)	Semiconductor Materials and devices	L-5,T-1,P-0	4Credits

Pre-requisite: Courseon semiconductor materials

CourseObjectives: Theaimandobjectiveofthecourseon**Semiconductor Materials and devices**is to expose the students of M.Sc. to experimental aspectsofdifferent semiconductor devise technologies, characterization and fabrication.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understandvariousexperimentaltechniquesforsemiconductor junctions and interfaces, I-V characteristics to understand the function of devices.
CO2	To understand the function of Solid State Microwave devices.
CO3	To understand the various Power semiconductor devices and their applications
CO4	To get familiarization with Optoelectronic Devices and their properties.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	1	3	3	1	1	-	-	2	2	2

ELE-203(a) SEMICONDUCTOR MATERIALS AND DEVICES

UNIT-I: Semiconductor Devices

Principle of operation, Fabrication methods and doping profiles, Analysis of the ideal diffusion transistor, Real transistors, Static I-V characteristics, Charge control equations, The diffusion transistor at high frequencies, the drift transistor, high frequency performance.

Junction and MOS Field Effect Transistors- Principle of operation, Static I-V characteristics of the idealized model, JFET structures, Semiconductor surfaces, C-V characteristics of the MOS capacitor, the Si-SiO_2 system, Basic structures and the operating principle of MOSFET, Current-Voltage characteristics.

UNIT-II: Solid State Microwave Devices

Varactor diodes, PIN diodes, Tunnel diodes, Transferred Electron Devices (TEDs) – GUNN diode, Avalanche Transit Time Devices – IMPATT diode, TRAPATT diode, BARITT diodes.

UNIT-III: Power Semiconductor Devices

Schockley diode, Thyristor, Light Activated Silicon Controlled Rectifier (LACSR), Silicon Controlled Switch, GTO, IGBT, MCT, ETO, RCT, DIAC, TRIAC.

UNIT-IV: Optoelectronic Devices

Solar Cells – Photovoltaic effect, GaAs solar cells, Thin film solar cells, Photo detectors, Photo diode, Avalanche photo diode, LEDs, LED materials and their structures, Semiconductor Lasers – p-n junction laser, Hetero junction laser, Laser diode materials, fabrication and structures.

Books for study:

1. M.S. Tyagi, “Introduction to Semiconductor Materials and Devices”, John Wiley & Sons (Asia) Pte. Ltd., 2000. (UNIT-I& UNIT-IV)
2. M. Kulkarni, “Microwave and Radar Engineering”, Umesh Publications, 3/e, 2003. (UNIT – II)
3. Alok Jain, “Power Electronics and Its Applications”, Penram International Publishing (India) Pvt. Ltd., 2002. (UNIT-III)
4. Samuel Y. Liao, “Microwave Devices and Circuits”, 3/e, PHI, 1998.
5. Ben G. Streetman and Sanjay Banerjee, “Solid State Electronic Devices”, Pearson Education, Inc., 2000.
6. S.M. Sze, “Physics of Semiconductor Devices”, 2/e, John Wiley & Sons (Asia) Pte. Ltd., 2004.
7. Jasprit Singh, “Semiconductor Devices: Basic Principles” John Wiley & Sons (Asia) Pte. Ltd., 2004.

ELE-203(b)	SensorsandTransducers	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduatelevel electronics/physics

CourseObjectives: Theaimandobjectiveofthecourseon**SensorsandTransducers** istofamiliarize the students of M.Sc. with the various electronic sensors used in the industry and to understand the working principles of the sensors so that they can design and use them in industry or in real time applications.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Applybasicsknowledgeofsensors and transducersinunderstanding the measurement systems.
CO2	Study and understanding of various types of Displacement and Strain Transducers
CO3	Study and understanding of various types of Pressure transducers
CO4	Study and understanding of Opto -Electronic Transducers

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	3	3	3	2	2	2	-	2	-	1	1

ELE- 203(b) SENSORS AND TRANSDUCERS

UNIT-I

Definition of a transducer/sensor, Role of a transducer in a generalized measurement system, Classification of transducers, Characteristics of transducers. Significant parameters of a transducer.

Temperature sensors: Temperature scales, Mechanical temperature sensors, Resistance type temperature sensors,Platinum resistance thermometer, Thermisters, Thermocouples.,Solid state sensors, Quartz thermometer, Radiation type sensors - Optical pyrometers, Calibration of thermometers

UNIT-II

Displacement and Strain Transducers: Displacement transducers - Variable resistance, inductance and capacitance. Linear voltage differential Transformer (LVDT) Strain -Definition, Principle of working of strain gauges, Gauge factor, Types of strain gauges, Materials for strain gauges. Temperature compensation.

UNIT-III

Pressure transducers: Manometers, Elastic transducers - Diaphragms, Bellows, Bourdon or helical tubes, Electrical pressure transducers - Variable resistance, inductance and capacitance. Piezoelectric pressure transducer, Vibrating element pressure sensors, Pressure calibration.

UNIT-IV

Opto -Electronic Transducers: Photoemission tube, Photomultiplier tube, Photoconductive cell, Photovoltaic cell (solar cell). Photodiode, Photo-transistor, Photo FET, Light emitting diode, Liquid crystal display, Optoelectronic couplers. Laser diode

Books for study:

1. B.C. Nakra and K.K. Chaudary, Instrumentation Measurement Analysis, Mc Graw Hill, 3/e.
2. C. **Rangan**,. G **Sarma**,. V.S.V. **Mani**, Instrumentation - Devices and Systems, TMH, New Delhi 2017.
3. A.K, Sawhney, A course in Electrical and Electronic Measurements and Instrumentation, DhanpatRai Publishers, 2012.
4. Willard, Merritt, Dean and Settle,Instrumental Methods of Analysis,CBS Publishers & Distributors, 2004.

ELE-203(c)	**Atmospheric and space instrumentation techniques**	**L-3,T-1,P-2**	**4Credits**

Pre-requisite: Understandingof graduatelevel electronics/physics

Course Objectives: The aim and objective of the course on**Atmospheric and space instrumentation techniques**is to familiarize thestudents of M.Sc. class to the basic aspects of atmospheric instrumentation techniques and their use for measurement of atmospheric parameters.

CourseOutcomes: Attheend ofthecourse,the studentwill be able to

CO1	Understanding of Dynamics atmospheric structure
CO2	Understand the various elements in the atmosphere.
CO3	Understanding of various Ground Based Instruments for the Measurement of atmospheric elements.
CO4	Enrich the measurement techniques such as Radars.

Mappingofcourseoutcomeswiththeprogramoutcomes

ELE-203 (c) ATMOSPHERIC AND SPACE INSTRUMENTATION TECHNIQUES

UNIT – I

Evolution of the planetary Atmosphere, Structure, Composition, Chemistry and Dynamics of the earth's atmosphere.

UNIT – II

Automatic weather station, temperature, humidity, radiation and wind measurements, lightning detector. Measurements of aerosols and trace gases: microtops, aerosol sample collection, ion chromatography,0_3,CO,NO_x and SO_2 measurements, CH4 measurements with Flame lonisation Detector.

UNIT – III

Ground Based Instruments for the Measurement of Temperature, Pressure, Humidity, Wind Speed & Direction, Rainfall Rate Ground Based (Remote Sensing type) – Meteorological Radars, Clear Air Radars, Lidar&Sodar –Air Bone Instruments- Radiosonde,RawinSonde, Rocket Sonde –Satellite Instrumentation (Space Borne Instrument).

UNIT – IV

Radar Meteorology: Basic Meteorology – Radar – Principles and Technology – Propagation Scattering and Attenuation of Microwaves in the lower Atmosphere –Weather Radar Signal Processing and Display – Phenomena Observed by Weather Radar – Operational Weather Radar –Observation of Precipitating Systems – Estimation of Precipitation.

Books for study:

1.WMO: Guide to Instruments and Methods of Observation, WMO No 8,2018

2. Heard D: Analytical Techniques for Atmospheric Measurement, 1st edition,2006

3. Paratap R: Getting Started with MATLAB: A Quick Introduction for Scientists & Engineers, 2010

4. https://www.wmo.int/pages/prog/www/IMOP/CIMO -Guide.html

ELE-204(a)	**Control Systems**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite:Understandingofgraduatelevel electronics

Course Objectives: The aim and objective of the course on **Control Systems**is to equiptheM.Sc.Studentswiththe signals for controlling the systems in real life.

CourseOutcomes: At theend ofthecourse,the studentwillable to

CO1	Understand the basics and applications of**open loop and closed loop ,Mathematical modelling of dynamic systems**.
CO2	Know the *Transient and steady-state response analyses*in control systems.
CO3	Understanding of Root Locus analysis.
CO4	Design the control systems using frequency response.

CO4	3	3	2	2	2	1	1	-	2	-	1	2

ELE-204(a) CONTROL SYSTEMS

UNIT – I: Introduction to Control Systems

Examples of Control Systems, Closed-loop control versus Open-loop control.

Mathematical modeling of dynamic systems- Transfer function and impulse-response function, automatic control systems, modeling in state space, State-space representation of dynamic systems, Electrical and Electronic systems, Signal flow graphs.

UNIT – II: Transient and steady-state response analyses

First-order and second-order systems, Routhe's stability criterion, Effects of Integral and derivative control actions on system performance, Steady-state errors in unity-feedback control systems.

UNIT – III: Root-Locus analysis

Root-Locus plots, General rules for constructing Root Loci, Positive-feedback Systems.

Control systems design by the Root-Locus method- Preliminary design considerations, Lead and Lag compensations, Lag-Lead compensation.

Frequency–Response analysis- Bode diagrams, Polar plots, Log-Magnitude-versus-Phase plots, Nyquist stability criterion, Stability analysis, Relative stability.

UNIT –I V: Control System Design by Frequency Response

Lead compensation, Lag Compensation, Lead-Lag Compensation.

PID Controls- Tuning rules for PID controllers, Modifications of PID control schemes, Two degrees of freedom control, Zero placement approach to improve Response characteristics.

Books for study:

1. K. Ogata, "Modern Control Engineering", 4/e, PHI, 2003.
2. D. Roy Choudhury, "Modern Control Engineering", PHI, 2005.
3. B.C. Kuo, "Automatic Control Systems", 7/e, PHI, 1995.
4. I J Nagrath, and Dr. M Gopal, Control Systems, New Age International (P) Ltd., Publishers 2008.

ELE-204(b)	**Bio-Medical Instrumentation**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite:Understandingofgraduatelevel electronics

Course Objectives: The aim and objective of the course on Bio-Medical Instrumentation is to equiptheM.Sc.StudentswiththeBio Signal Acquisition and Recording, Physiological Assist Devices, Bio Telemetry, advanced bio-medical instruments.

CourseOutcomes: At theend ofthecourse,the studentwillable to

CO1	Understanding of Bio-signal analysis and recording.
CO2	**Understanding of Physiological Assist Devices such as** Pacemakers, Defibrillators, Nerve and Muscle Stimulators, Heart Lung Machine, Kidney Machine and **Special Equipment**.
CO3	Use of Biotelemetry and **Operation Theatre Equipment**
CO4	Understanding of safety and **Advanced Biomedical Instrumentation techniques.**

ELE-204(b) BIO-MEDICAL INSTRUMENTATION

UNIT-I

Human Physiological Systems, Bio Potentials and Electrodes: Introduction, Cells and their Structure, Transport of ions Through Cell Membrane, Resting and Action Potentials, Bioelectric Potentials, Physiological Systems of Human Body, Electrodes Biomedical Instrumentation System.

Bio Signal Acquisition and Recording:Physiological Signal Amplifiers, Isolation Amplifiers, Pre Amplifiers, Line Driving Amplifiers, Characteristics of Recording System, Electrocardiography (ECG), Electroencephalography (EEG), Electromyography (EMG), Electro- Retinography (ERG), Electro Oculography (EOG), Accuracy in Recording

UNIT - II

Physiological Assist Devices: Introduction, Pacemakers, Defibrillators, Nerve and Muscle Stimulators, Heart Lung Machine, Kidney Machine.

Special Equipment: Blood Cell Counter, Audiometer, Digital Thermometer, X Ray. Machine, Radiography and Fluoroscopy, Image Intensifies, Angiography.

UNIT - III

Bio Telemetry: Elements of Biotelemetry Systems, Design of aBiotelemetry System, Radio telemetry System, Uses of Biotelemetry.

Operation Theatre Equipment: Introduction, Surgical Diathermy Ventillators, Anaesthesia Machine, Cardiac Output Measurement, Pulmonary Function Analyzer, Oxymeters.

UNIT-IV

Safety Instrumentation:Radiation Safety Instrumentation: Dosimeters, Radiation Alarm, Physiological Effects due to 50 Hz Frequency, Micro Shock and Macro Shock, Hospital Architecture.

Advanced Biomedical Instrumentation: Lasers in Biomedical Instrumentation, Endoscopes, Cryogenic Surgery, Computer Tomography Scanner (CT), Applications, Thermography, Applications, Ultrasonic Image Forming Systems, Applications, Magnetic Resonance Imaging (MRI), PositronEmission Tomography.

Books for study:

1. Biomedical Instrumentation and Measurement by Harry E. Thomas
2. Hand book of Biomedical Instrumentation by R.S. Khandpur
3. Biomedical Instrumentation & Measurements by Leslie Cromwell, Fred J. Waibell, Erich A.Pfeiffer
4. Hand Book of Bio medical Engineering by Jacob Klime
5. Bio Medical Electronics by Joseph Duboy
6. Transducers for Bio medical Measurements by Richards SC Cobbold
7. Bio medical Instrumentation by M. Arumugam
8. Biomedical Instruments, Theory and Practice by Welkowitz and Dentsch
9. Biological Engineering by Schwan
10. Biomedical Engineering systems by Clines and Mulism

ELE-204(c)	Data Mining and Information Security	L-5,T-1,P-0	4Credits

Pre-requisite: Courseonelectronics/Statistics

CourseObjectives: Theaimandobjectiveofthecourseon Data Mining and Information Security is to expose the students of M.Sc. students to theoretical and experimental aspectsof Data mining and analysis, network security, Cryptographytechniques.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understand Data warehousing components
CO2	Understanding of Data mining metrics, data mining tasks, and exploratory Data Analysis.
CO3	KnowledgeabouttheSecurity Trendsand different algorithms.
CO4	Applytheknowledgeof Cryptographytechniquesfor Digital Signatures and Authentication Protocols.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO2	3	2	2	3	2	-	-	-	1	-	1	-
CO3	3	2	1	2	3	-	1	-	2	2	-	-
CO4	3	2	1	3	3	1	1	-	2	-	2	-

ELE-204(c): DATA MINING AND INFORMATION SECURITY

UNIT-I

Data warehousing components: Introduction, Access tools, Data Marts, Data Mining data warehousing, Industry, Methodology. Classical Techniques, Statistics, Neighborhoods, clustering, The classics, Nearest Neighbor, Tree Network and Rules, Neural Network – Rule Induction.

UNIT-II

Basic Data Mining Taks, classification, regression, time series analysis, prediction, clustering, summarization, association rules, sequence discovery. Data mining versus knowledge discovery in data bases. The development of data mining issues. Data mining metrics, social implications of data mining, data mining from a data base perspective. Exploratory Data Analysis.

UNIT-III

Security Trends-The OSI architecture-Security Attacks-Security Services –Security Mechanisms- A Model for Network Security Classical Encryption Techniques,Symmetric Cipher Model, Substitution Techniques Transportation Techniques, Rotor Machines –Steganography. Public-Key Encryption and Hash Functions Introduction to Number TheoryPrime Numbers – Fermat's and Euler's Theorems, Testing for Primality – The Chinese Remainder Theorem, Discrete Logarithms.

UNIT-IV

Public-key Cryptography and RSA: Principles of Public-Key Cryptosystems, The RSA Algorithm, Digital Signatures and Authentication Protocols**:** Digital Signatures, Authentication Protocols-Digital Signature Standard Authentication Applications **:**Kerberos-X.509 Authentication Service, Public Key Infrastructure .

Books for study:

1. Margaret H. Dunham, Data Mining – Introductory and Advanced Topics, Pearson Education, 2006.
2. John W Tuekey), Exploratory Data Analysis, Addison-Wesley, 1997.
3. Edward R. Tufte, Visual Display of Quantitative Information, Graphics Press USA, 2001.
4. William Stallings, Cryptography and Network Security: Principles and Practices,7/e, Pearson Education, 2017.

ELE-301	Digital Signal Processing	L-5,T-1,P-0	4Credits

Pre-requisite: Basicknowledgeof Signals

Course Objectives: The aim and objective of the course on **Digital Signal Processing**is to introducethe students of M.Sc. class to the formal structure of the subject and to equip them with thetechniques of Sampling of Continuous-Time signals, Structures for Discrete-time systems,Discrete Fourier Transform,Architecture of TMS320C5X processorso thattheycan usethesein various branches of Electronics as per their requirement.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understandtheneedfor Sampling of Continuous-Time signals anditsbasicprinciples.
CO2	Understand the need of Structures for Discrete-time systems
CO3	Understandthe need of Discrete Fourier Transform methods in solving problems
CO4	Understanding the Architecture of TMS320C5X processor, assembly language instructions and its importance.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO3	3	2	2	2	2	2	1	-	-	-	-	-
CO4	3	2	2	2	2	2	2	-	2	2	-	1

ELE-301: DIGITAL SIGNAL PROCESSING

UNIT – I: Sampling of Continuous-Time signals

Periodic sampling, Frequency-domain representation of sampling, Reconstruction of a band limited signal from its samples, Discrete-Time processing of continuous-time signals, Continuous-Time processing of discrete-time signals, Changing the sampling rate using discrete-time processing, Multirate signal processing, Digital processing of analog signals.

UNIT – II: Structures for Discrete-time systems

Block diagram representation of linear constant-coefficient difference equations, Signal flow graph representation of linear constant- coefficient difference equations, Basic structures for IIR systems, Basic network structures for FIR systems, Overview of finite-precision numerical effects, The effects of coefficient quantization.

Filter design techniques- Design of discrete-time IIR filters from Continuous-time filters, Design of FIR filters by windowing, Examples of FIR filter design by the Kaiser Window method, Optimum approximations of FIR filters.

UNIT – III: The Discrete Fourier Transform

Representation of periodic sequences: the discrete Fourier series, The Fourier transform of periodic signals, Sampling the Fourier transform, Fourier representation of Finite-domain sequences: The discrete Fourier transform, Linear convolution using the discrete Fourier transform.

Computation of the Discrete Fourier Transform- Efficient computation of the discrete Fourier transform, The Goertzed Algorithm, Decimation-in-time FFT algorithms, Decimation-in-frequency FFT algorithms, Practical considerations, The Chirp Transform algorithm.

UNIT – IV: Architecture of TMS320C5X

Bus structure, Central Arithmetic Logic Unit(CALU), Auxiliary Register ALU, Index Register, Auxiliary Register Compare Register, Block Move Address Register, Block Repeat Registers, Parallel Logic Unit, Memory-Mapped Registers, Program Controllers.

TMS320C5X Assembly Language Instructions- Assembly Language Syntax, Addressing modes, Load/Store instructions, Addition/Subtraction instructions, Move instructions, Multiplication instructions, The NORM instruction, Program control instructions, Peripheral control.

Books for study:

1. Alan V. Oppenheim, Ronald W. Shafer and John R. Buck, “Discrete-Time Signal Processing”, 2/e, Pearson Education, Inc., 2000. (UNIT- I to UNIT-III)
2. B. Venkataramani and M. Bhaskar, “Digital Signal Processors: Architecture, Programming and Applications”, TMH, 2002. (UNIT-IV)
3. Sanjit K. Mitra, “Digital Signal Processing: A Computer Based Approach”, TMH, 1998.
4. Johnny R. Johnson, “Introduction to Digital Signal Processing”, PHI, 2000.
5. John G. Proakis, Dimitris G. Manolakis, “Digital Signal Processing, Principles, Algorithms and Applications” 3/e, PHI, 2000.
6. Boaz Porat, “A Course in Digital Signal Processing”, John Wiley & Sons (Asia) Pte. Ltd., 1997.
7. D.J. Defatta, J.G. Luca and W.S. Hodgkiss, “Digital Signal Processing: A System Design Approach”, John Wiley & Sons (Asia) Pte. Ltd., 1995.
8. Texas Instruments TMS 320C5X User’s Guide, 1997.
9. P. Ramesh Babu, Digital Signal Processing,6/e, Scitech Publications (India) Pvt Ltd , 2015.
10. A.NagurKani, Digital Signal Processing, 2/e, Tata McGraw-Hill Education India, 2012.

ELE -302	Digital system design – VHDL	L-5,T-1,P-0	4Credits

Pre-requisite: Courseon graduate level electronics

CourseObjectives: Theaimandobjectiveofthecourseon Digital System Design – VHDL is to expose the students of M.Sc. to experimental aspectsofVerlog Hardware Descriptive language and Model simulation.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understandvarious**Basic Language Elements**and model analysis.
CO2	Understand Data flow and structural modeling.
CO3	Apply the knowledge **Subprograms, Overloading, Packages and Libraries**for various applications
CO4	To get familiarization with Advanced features for Model simulation

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	1	3	3	1	1	-	-	2	2	2

ELE-302: DIGITAL SYSTEM DESIGN – VHDL

UNIT – I

Basic terminology, Entity declaration, Architecture body, Configuration declaration, Package declaration, Package body, Model analysis, Simulation.

Basic Language Elements- Identifiers, Data objects, Data types, Operators.Entity declaration, Architecture body, Process statement, Variable assignment statement, Signal assignment statement, Wait statement, If statement, Case statement, Null statement, Loop statement, Exit statement, Next statement, Assertion statement, Report statement, other sequential statements, Multiple processes, Postponed processes.

UNIT –II: Data Flow Modelling

Concurrent signal assignment statement, Concurrent versus sequential signal assignment, Delta delay revisited, Multiple drivers, Conditional signal assignment statement, selected signal assignment statement, The unaffected value block statement, concurrent assertion statement, Value of a signal.

Structural Modeling- Component declaration, Component instantiation, Resolving signal values.

UNIT – III

Generics, Configuration specification, Configuration declaration, Default binding rules, Conversion functions, Direct instantiation, Incremental binding.

Subprograms and Overloading- Subprograms - Subprogram overloading, Operator overloading, Signatures, Default values for parameters.

Packages and Libraries- Package declaration, Package body, Design file, Order of analysis, Implicit visibility, Explicit visibility.

UNIT – IV: Advanced Features

Entity statements, Generate statements, Aliases, Qualified expressions, Type conversions, Guarded signals, Attributes, Aggregate targets, More on block statements, Shared variables, Groups, More on ports.

Model Simulation- Simulation – Writing a Test Bench, Dumping results into a text file – Reading vectors from a text file – A test bench example – Initializing a memory.

Book s for study:

1. J. Bhasker, “VHDL primer”, 3/e, Addison Wesley Longman (Singapore) Pte.Ltd., 2000.
2. ZainalabedinNavabi, “VHDL– Analysis and Modeling of Digital Systems”, McGraw-Hill International Editions, 1998.
3. Joseph Pick,“VHDL – Techniques, Experiments, and Caveats”, McGraw-Hill International, 96.
4. John P. Uyemura, “Introduction to VLSI circuits and Systems”, John Wiley & Sons (Asia) Pte. Ltd., 2003.

ELE-303(a)	Microcontrollers and Applications	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevel basic processors

Course Objectives: The aim and objective of the course on Microcontrollers and Applications forthestudentsofM.Sc. electronics istoequipthemwiththeknowledgeof microcontrollers and other processors used in the industry.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	Understand about the basic functions and structure of Microcontrollers such as 8051.
CO2	Get familiarized with 8051 controllers
CO3	understand about the basic Atmel microcontrollers and programming
CO4	Understanding of PIC 16F8XXflash microcontrollers and their interfacing with I/O devices for industrial applications

Mappingof courseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	2	3	3	2	1	2	-	2	1	1	-

ELE-303(a) MICROCONTROLLERS AND APPLICATIONS

UNIT - I :**Introduction to Microcontrollers**

Microcontrollers and Microprocessors, Embedded versus External Memory Devices, 8-bit and 16-bit Microcontrollers, CISC & RISC processors.

8051 Microcontrollers– MCS-51 architecture, Registers in MCS-51, 8051 pin description, pin connections, Parallel I/O ports and Memory organization.

UNIT – II: 8051 addressing modes, instructions and programming

8051 addressing modes, Instruction Set, Assembly language Programming tools, Development Systems and Tools.

MCS—51 Interrupts, Timer/Counters, and Serial communications- Interrupts in MCS-51, Timers and Counters, Serial Communication.

UNIT - III :**Design with Atmel Microcontrollers**

Atmel Microcontrollers, Architectural overview of Atmel 89C51 and Atmel 89C2051, Pin description of 89C51, and 89C2051, Using Flash Memory devices ATMEL 89CXX and 89C20XX, Power saving options.

Applications- Waveform generation- Sine, Square, Pulse, Ramp, Staircase, Pulse Width Measurement, Frequency Counter.

UNIT – IV: **PIC 16F8XX Flash Microcontrollers**

Pin diagram of 16F8XX, STATUS Register, OPTION_REG Register, Power Control Register, PIC 16F8XX program memory, data memory, Data EEPROM and Flash Program EEPROM, Interrupts in 16F877, I/O ports and Timers.

Interfacing and Industrial Applications of Microcontrollers- Interfacing of Keyboard, 7-segment LED, LCD, ADC, and DAC, Optical Rotary shaft encoder, LVDT, Angular speed measurement, Digital thermometer, load cell.

Books for Study:

1. Ajay V. Deshmukh, “Microcontrollers: Theory and Applications”, Tata Mc Graw-Hill, New Delhi, 2005.
2. M.A. Mazidi and J.G. Mazidi, “The 8051 Microcontrollers and Embedded Systems”, Pearson Education, Inc., 2002.
3. K.J. Ayala, “The 8051 Microcontroller Architecture, Programming & Applications”, 2/e, Penram International Publishing (India) Pvt. Ltd.,1996.
4. John B. Peatman, “Designing with PIC Microcontrollers”, Pearson Education, Inc., 1998.
5. MykePredko, “Programming and Customizing the 8051 Microcontroller”, TMH, 1999.
6. Raj Kamal, Microcontrollers: Architecture, Programming, Interfacing and System Design, Pearson Education, 2009.

ELE-303(b)	Computer Organization	L-5,T-1,P-0	4Credits

Pre-requisite: Understandingof graduatelevelElectronics/Computer Science

Course Objectives: The aim and objective of the course on **Computer Organization**forthestudentsofM.Sc. Electronics istoequipthemwiththeknowledgeof Basic Structure of Computers, Mircrooperations and Pipeline Processing.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	Understand basics of structures of Computers.
CO2	Know Register Transfer language and micro operations
CO3	Understand Microprogrammed control, Computer Arithmetic and Memory system.
CO4	Input-OutputOrganization, Pipeline and Vector Processing.

Mappingof courseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	2	2	1	1	-	2	1	-	-

CO3	3	2	-	3	2	1	2	-	2	1	-	-
CO4	3	2	-	3	2	1	2	-	2	1	-	-

ELE-303(b): COMPUTER ORGANIZATION

UNIT-I

BASIC STRUCTURE OF COMPUTERS: Computer Types, Functional unit, Basic operational concepts, Bus structures, Software, Performance, multiprocessors and multi computers. Data Representation, Fixed Point Representation, Floating – Point Representation, Error Detection codes.

UNIT-II

REGISTER TRANSFER LANGUAGE AND MICROOPERATIONS: Register Transfer language, Register Transfer Bus and memory transfers, Arithmetic Mircrooperatiaons, logic micro operations, shift micro operations, Arithmetic logic shift unit, Instruction codes, Computer Registers, Computer instructions– Instruction cycle Memory – Reference Instructions, Input – Output and Interrupt. STACK organization. Instruction formats, Addressing modes, DATA Transfer and manipulation, Program control, Reduced Instruction set computer.

UNIT –III

MICRO PROGRAMMED CONTROL: Control memory, Address sequencing, microprogram example, design of control unit, Hard wired control, Microprogrammed control.

COMPUTER ARITHMETIC : Addition, subtraction, multiplication and Division Algorithms Floating – point Arithmetic operations, Decimal Arithmetic unit, Decimal Arithmetic operations.

THE MEMORY SYSTEM : Basic concepts, semiconductor RAM memories, Read-only memories, Cache memories performance considerations, Virtual memories secondary storage, Introduction to RAID.

UNIT-IV

INPUT-OUTPUT ORGANIZATION: Peripheral Devices, Input-Output Interface, Asynchronous data transfer, Modes of Transfer, Priority Interrupt Direct memory Access, Input –Output Processor (IOP) Serial communication; Introduction to peripheral component Interconnect (PCI) bus, Introduction to standard serial communication protocols like RS232, USB, IEEE1394.

PIPELINE AND VECTOR PROCESSING : Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Vector Processing, Array Processors.

Books for study:

1. Computer Organization – Carl Hamacher, ZvonksVranesic, SafeaZaky, 5/e, McGraw Hill.
2. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson/PHI.
3. Computer Organization and Architecture – William Stallings 6/e, Pearson/PHI.
4. Structured Computer Organization – Andrew S. Tanenbaum, 4th Edition, PHI/Pearson.
5. Fundamentals or Computer Organization and Design, – SivaraamaDandamudi, Springer Int.
6. Computer Architecture a quantitative approach, John L. Hennessy and David A. Patterson, 4/e, Elsevier
7. Computer Architecture: Fundamentals and principles of Computer Design, Joseph D. Dumas II, BS Publication.

ELE-303(c)	Digital Image Processing	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevel electronics

Course Objectives: The aim and objective of the course on Digital Image Processingfor the studentsofM.Sc. Electronics is toequipthemwiththeknowledgeofimage processing systems and applications.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	understand about the Fundamentals of Image Processing
CO2	Get familiarized with Image enhancement.
CO3	Understand about the Image Segmentation and Feature Analysis.
CO4	Understand about the Multi Resolution Analysis and Compressions.

Mappingof courseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	2	2	1	-	-	2	1	1	-

CO3	3	2	3	3	2	-	-	-	2	1	1	-
CO4	3	2	3	3	2	1	2	-	2	1	1	-

ELE-303(c): DIGITAL IMAGE PROCESSING

Unit-I: Fundamentals of Image Processing

Introduction – Steps in image processing systems – Image acquisition – Sampling and Quantization – Pixel relationships – Color fundamentals and models, File formats, Image operations – Arithmetic, Geometric and Morphological.

Unit-II: Image Enhancement

Spatial Domain: Gray level Transformations – Histogram processing – Spatial filtering smoothing and sharpening. Frequency Domain: Filtering in frequency domain – DFT, FFT, DCT – Smoothing and sharpening filters –Homomorphic Filtering.

Unit-III: Image Segmentation and Feature Analysis

Detection of Discontinuities – Edge operators – Edge linking and Boundary Detection – Thresholding – Region based segmentation – Morphological Watersheds – Motion Segmentation, Feature Analysis and Extraction.

Unit-IV: Multi Resolution Analysis and Compressions

Multi Resolution Analysis: Image Pyramids – Multi resolution expansion – Wavelet Transforms. Image compression: Fundamentals – Models – Elements of Information Theory – Error free compression – Lossy Compression –Compression Standards.

Applications of Image Processing:Image classification – Image recognition – Image understanding – Video motion analysis – Image fusion –Steganography – Digital compositing – Mosaics – Colour Image Processing.

Books for Study

1. Rafael C. Gonzalez and Richard E. Woods, Digital Image Processing, 2nd Edition, Pearson Education, 2003.
2. Anil K. Jain, Fundamentals of Digital Image Processing, Pearson Education, 2003.
3. Milan Sonka, Vaclav Hlavac and Roger Boyle, Image Processing, Analysis and Machine Vision, 2ndEdition, Thomson Learning, 2001

ELE-305	Peripheral interface controllers	L-2, T-0, P-0	4credits

Pre-requisite: Understandingof graduatelevel Electronics

Course Objectives: The aim and objective of the course on **Peripheral interface controllers**forthestudentsofM.Sc. Electronics istoequipthemwiththeknowledge PIC microcontrollers used in the industry.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	understand about the basics of **Assembler and Assembler Programs**
CO2	Get familiarized with PIC microcontrollers and interfacing I/O devices.

Mappingof courseoutcomeswiththeprogramoutcomes

CO1	3	2	3	2	2	1	-	-	2	1	1	-
CO2	3	2	3	3	2	1	2	-	2	-	1	-

ELE-305: PERIPHERAL INTERFACE CONTROLLERS

Unit - I: Assembler and Assembler Programs

Basic idea – PIC 16 series instruction set and ALU – Assemblers and Assembler format – creating simple programs – Adopting a development environment – Building structured programs – Flow control: Branching and Subroutines – Generating time delays and intervals – Logical instruction – Arithmetic instructions.

Unit - II: PIC Microcontroller PIC 16F873A

Block diagram and CPU – Memory and memory maps – Interrupts – Oscillator, Reset and Power supply – Parallel ports.

PIC 16F87XA Timer 0 and Timer 1 – 16F87XA Timer 2, Comparator and PR2 register – capture/Compare/PWM (CCP) Module – Pulse width modulation – ADC module.

Interface: LED displays – Liquid crystal displays –Sensors –Actuators.

Books for Study

1. Designing Embedded Systems with PIC Microcontrollers: Principles and Applications by Tim Wilmshurst, First Edition, Newnes – ElsevierPublishers, 2007.

2.PIC Microcontroller and Embedded Systems by Muhammad Ali Mazidi, Rolind D. Mckinlayznd Danny Causey, Pearson Education, 2011.

ELE-306(a)	Microprocessors, PC hardware and interfacing	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduatelevelspectroscopy

Course Objectives: The aim and objective of the course on **Microprocessors, PC hardware and interfacing** forthestudentsofM.Sc. Electronics is toequipthemwiththeknowledgeofAtomic,Rotational,Vibrational,Raman, andElectronicspectra.

CourseOutcomes: At theend ofthecourse, thestudent willbe ableto

CO1	Havethebasicknowledgeof8086 Based system design and peripheral interfaces
CO2	Understand the Motherboard of IBM PC
CO3	Understand with Peripherals
CO4	Understand about I/O Serial and Parallel ports.

Mappingof courseoutcomeswiththe program outcomes

CO4	3	2	-	3	2	1	2	-	2	1	-	-

ELE-306(a) MICROPROCESSORS, PC HARDWARE AND INTERFACING

UNIT-I: 8086 Based system design and peripheral interfaces

Pins and signals, Basic system components, interfacing memory, interfacing I/O devices, interfacing data converters, interfacing stepper motor, interrupts, direct memory access, parallel I/O methods, programmable peripheral interface (8255A), priority interrupt controller (8259A), direct memory access controller(8237), programmable interval timer (8254), serial I/O.

UNIT- II :The Motherboard of IBM PC

Motherboard Components, Microprocessor, Support Chips, Memory, Support Functions, I/O buses, System Resources, Interrupt Requests, DMA Channels, I/O Addresses, Utilization of System Resources, ROM BIOS Services, Drives: Principles of Magnetic Storage, Floppy Disk Drive, Hard Disk Drive, IDE Interface, CD – ROM Drive

UNIT- III :Peripherals

Video Display System: CRT Display, Video Adapter, Graphics Accelerators, LCD Monitor, Video Programming, Keyboard, Mouse, Printer, I/O Buses:ISA Bus, MCA bus, EISA Bus, Local Buses, VL Bus, PCI Bus, AGP.

UNIT-IV: PARALLEL AND SERIAL PORTS

Parallel Port: Standard Parallel port, IEEE1824 standard, Enhanced Parallel port, Enhanced Capabilities Port, Serial Port: Pins and Signals of Serial port, BIOS serial port services, UART, Universal Serial Bus: Features of USB, USB system, USB Transfer, USB controller.

Books for Study

1. Microprocessors, PC Hardware and Interfacing by N. Mathivanan, PHI.
2. B.B. Brey, “The Intel Microprocessors 8086/8088, 80186/80188, 80286, 80386, 80486, Pentium and Pentium pro processor architecture, programming, and interfacing”, 4/e, PHI, 1999.
3. Douglas V.Hall, “Microprocessors and Interfacing, Programming and Hardware”, 2/e, McGraw Hill International Edition, 1992.
4. Muhammad Ali Mazidi and Janice GillispieMazidi, “The 80x86 IBMPC and Compatible Computers (Volumes I & II)”, 2/e, Prentice-Hall, Inc., 1998.
5. Walter A. Triebel and Avatar Singh, “Software, Hardware and Applications”, PHI, 1995.
6. Yu Cheng Lin and Glenn A. Gibson, “Microcomputer systems: The 8086/8088 Family Architecture, Programming and Design”, PHI, 1992.

7. K.J. Ayala, “The 8086 Microprocessor: Programming & Interfacing the PC”, Penram International Publishing (India) Pvt. Ltd.,1995.

ELE-306(b)	Satellite Communications	L-5,T-1,P-0	4Credits

Pre-requisite: Graduate level Electronics

Course Objectives: The aim and objective of the course on Satellite Communicationsis tofamiliarize the students of M.Sc. to the various aspects related to**Satellite Communication**sothattheycanpursuethisemergingresearchfieldascareer.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understanding the basics of Satellite Communication
CO2	AcquireknowledgeofMultiple Access Techniques
CO3	Understand theSatellite Orbits and Inclination.
CO4	Understanding of Satellite systems, Indian satellites and applications

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	3	2	3	2	2	-	1	2	-	-

ELE-306(b) :SATELLITE COMMUNICATIONS

UNIT- I : Principles of Satellite Communication

Synchronous Satellites, International Regulation and Frequency CoordinationSatellite Frequency Allocations and Band Spectrum, General and Technical Characteristics of a Satellite Communication System Advantages of Satellite Communication, Advent of Digital Satellite Communication, Modem and Codec, General Link Design Equations, System Noise Temperature, C/N and G/T ratio, Atmospheric and Ionospheric Effects on Link Design, Uplink Design, Complete Link Design, Interference Effects on Complete Link Design, Earth Station Parameters.

UNIT- II: Multiple Access Techniques

Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA), Demand Assignment TDMA (DATDMA), Process Gain and Jam Margin, Direct Sequence Spread Spectrum Techniques, PN Sequency, DS –CDMA, Frequency Hopping Spread Spectrum Communication System (FM-SS), Frequency Hopping Spread Spectrum Code Division Multiple Access (FH-SS CDMA), Synchronization, Application of Spread Spectrum Techniques, Hybrid Systems

UNIT- III: Satellite Orbits and Inclination

Introduction, Synchronous Orbit, Orbital Parameters, Satellite Location With Respect to the Earth, Look Angles, Earth Coverage and Slant Range, Eclipse Effects, Satellite Placement in Geostationary Orbit, Station Keeping, Satellite Stabilization, Earth Station Design Requirement, Earth Station Subsystems, Monitoring and Control, Frequency Coordination, Small Earth Station, Very Small Aperture Terminals (VSATs), Mobile and Transport Earth Stations.

UNIT IV: Satellite systems, Indian satellites and applications

Types of satellite systems, Characteristics of satellite systems, Satellite system infrastructures, Call setup, INSAT satellites, IRS satellite program.

Introduction to Satellite Applications, Satellite Application–Different Areas, Satellite Television, Telephone Services via Satellite, Data Communication Services, Satellites for Earth Observation, Satellites for Weather Forecast, Satellites for Scientific Studies, Satellites for Military Applications.

Books for Study:

1. Dr. D.C. Agrawal “Satellite communications”, 5/e, Khanna Publishers, 2002. (UNIT-V)
2. Wayne Tomasi, “Electronic Communication Systems: Fundamentals through Advanced”, 4/e, Pearson Education, Inc., 2001.
3. M.Richharia, “Satellite Communications Systems”, 2/e, Macmillan Press Ltd., 1999.
4. Partt, Bostian and Allnutt, “Satellite Communications”, 2/e, John Wiley & Sons, 2003.
5. MonojitMitra, Satellite Communication, PHI, 2010.

ELE- 401	Advanced Communication Systems	L-5,T-1,P-0	4Credits

Pre-requisite: Preliminarycourseof Communication systems

CourseObjectives: Theaimandobjectiveofthecourseon**Advanced Communication Systems**is tointroduce the M.Sc. students to equip him/her with the Cellular Concept, Mobile Radio propagation and channel coding, Multiple Radio Access, Multiple Division Techniques, Optical and Satellite communications

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understand the Cellular concept.
CO2	Understand the Mobile Radio propagation and channel coding
CO3	Understand the Multiple Radio Access, Multiple Division Techniques, Channel Allocation.
CO4	Know theOptical, Satellite communications and their applications.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO4	3	3	2	2	1	1	1	-	2	1	2	-

ELE-401: ADVANCED COMMUNICATION SYSTEMS

UNIT – I : Cellular Concept

History of cellular systems, Characteristic and fundamentals of cellular systems, cellular system infrastructure, cell area, signal strength and cell parameters, capacity of a cell, frequency reuse, Co-channel interference, Cell splitting and sectoring.

UNIT – II: Mobile Radio propagation and channel coding

Types of radio waves, propagation mechanisms, Free-space propagation, Pathloss, Slow and Fast Fading, Doppler effect, Delay spread, Inter symbol interference, co-channel Interference, Coherence Bandwidth, Linear Block codes, Cyclic and Convolutional codes, Interleaves, Turbo codes, ARQ Techniques.

UNIT –III: Multiple Radio Access, Multiple Division Techniques, Channel Allocation

Multiple Radio Access Protocols, Contention-based protocols, Concepts and models of FDMA, TDMA, and CDMA, Modulation Techniques, Static versus Dynamic allocation, Fixed channel allocation schemes, Dynamic and other channel allocation schemes, Allocation in specialized system structure, Channel modeling, Modeling for handoff calls.

UNIT - IV :**Optical and Satellite communications**

History of optical fibers, Optical fibers versus Metallic cable Facilities, Electromagnetic spectrum, Optical fiber communications system block diagram, Fiber types, Light propagation, Propagation of light through an optical fiber, Optical fiber configurations, Acceptance angle and Acceptance cone, Losses in optical fiber cables, Optical fiber system link budget.

Satellite systems, Indian satellites and applications- Types of satellite systems, Characteristics of satellite systems, Satellite system infrastructures, Call setup, INSAT satellites, IRS satellite program, Satellite applications.

Books for Study:

1. Dharma PrakashAgrawal and Quing-An Zeng, “Introduction to wireless and Mobile Systems” Vikas Publishing House Pvt. Ltd., 2003.(UNIT–I to UNIT–III).
2. Wayne Tomasi, “Electronic Communication Systems: Fundamentals through Advanced”, 4/e, Pearson Education, Inc., 2001. (UNIT –IV)
3. Dr. D.C. Agrawal “Satellite communications”, 5/e, Khanna Publishers, 2002. (UNIT-IV).
4. William Stallings, “Wireless Communications and Networking”, PHI, 2003,
5. M.Richharia, “Satellite Communications Systems”, 2/e, Macmillan Press Ltd., 1999.
6. Partt, Bostian and Allnutt, “Satellite Communications”, 2/e, John Wiley & Sons, 2003.

ELE-402	**Introduction to VLSI Circuits**	**L-5,T-1,P-0**	**4Credits**

Pre-requisite:Understandingofgraduatelevel Semiconductor materials

Course Objectives: The aim and objective of the course is to equipthe students of M.Sc.withthe**Introduction to VLSI Circuits** thathe/sheneedsforunderstandingtheoreticaltreatmentindifferentcoursestaughtinthisclassandfordeveloping astrongbackgroundif he/she chooses to pursueresearch inphysics asacareer.

CourseOutcomes: At theend ofthecourse,the studentwillable to

CO1	Demonstrate a clear understanding of CMOS fabrication flow and technology scaling.
CO2	Analyze CMOS based logic circuit
CO3	Realize logic circuits with different design styles
CO4	Analysis of CMOS Logic Circuits and Designing High-speed CMOS Logic Networks.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO1	3	3	2	2	2	1	1	-	2	1	-	-
CO2	3	3	2	2	2	1	1	-	2	1	-	-
CO3	3	3	2	2	2	1	1	-	2	1	-	-
CO4	3	3	2	2	2	1	1	-	2	1	-	-

ELE-402: INTRODUCTION TO VLSI CIRCUITS

UNIT - I :**An Overview of VLSI and Logic Design with MOSFETs**

Complexity and Design, Basic concepts, Ideal switches and Boolean operations, MOSFETs as switches, Basic logics gates in CMOS, Complex logic gates in CMOS, Transmission Gate circuits, Clocking and data flow control.

UNIT – II: Physical Structure and Fabrication of CMOS ICs

Integrated Circuit layers, MOSFETs, CMOS layers, Designing FET arrays, Overview of silicon processing, Material growth and deposition, Lithography, The CMOS process flow, Design rules.

UNIT - III :**Elements of Physical Design and Electrical Characteristics of MOSFETs**

Basic concepts, Layout of basic structures, Cell concepts, FET sizing and the unit transistor, Physical design of logic gates, Design hierarchies, MOS physics, nFET current-voltage equations, FET RC model, pFET characteristics, Modeling of small MOSFETs.

UNIT – IV: **Analysis of CMOS logic gates**

DC characteristics of the CMOS inverter, Inverter switching characteristics, Power dissipation, DC characteristics: NAND and NOR gates, NAND and NOR transient response, Analysis of complex logic gates, Gate design for transient performance, Transmission gates and pass transistors.

Designing High-speed CMOS Logic Networks- Gate delays, Driving Large capacitive loads, Logical effort, BiCMOS drivers.

Books for Study:

1. John P. Uyemura, “Introduction to VLSI circuits and Systems”, John Wiley & Sons (Asia) Pte. Ltd., 2003.

2. S.K. Ghandhi, “VLSI Fabrication principles”, 2/e, John Wiley & Sons (Asia) Pte. Ltd., 2003.

3.S.M. Sze, “VLSI Technology”, 2/e, McGraw-Hill, 1988.

4.N.H.E. Weste and K. Eshraghian, “Principles of CMOS VLSI design”, Pearson Education, Inc., 1999.

5.Yuan Taur and T.H. Ning, “Fundamentals of Modern VLSI devices”, Cambridge University Press, 1998.

6.R.L. Geiger, P.E. Allen and N.R. Strader, “VLSI design Techniques for Analog and Digital Circuits”, McGraw-Hill, 1990.

7.Douglas A. Pucknell and Kamran Eshraghian, Basic VLSI Design, PHI, 1995.

ELE-403(a)	Data Communications and Networking	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingofgraduatelevelelectronics/Networking.

Course Objectives: The aim and objective of the course on **Data Communications and Networking** is to expose the M.Sc. students to the Basic concepts Networking, Multiplexing, Data Link Protocols, LAN, ISDN, SONET used in the Communication electronics.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understand the basic conceptsnetworks and Transmission of digital data.
CO2	Know the different types of Multiplexing and Data link protocols.
CO3	Understand the various types of local area networks.
CO4	Understand the ISDN, ATM, SONET and related frames and protocols.

Mappingofcourseoutcomeswiththeprogramoutcomes

CO4	3	2	1	1	1	2	-	-	-	3	-	1

ELE-403 (a) DATA COMMUNICATIONS AND NETWORKING

UNIT – I: Basic concepts

Line configuration, Topology, Transmission mode, Categories of networks.

OSI Model: Functions of the layers, TCP/IP protocol suite

Transmission of digital data: Interfaces and modems, digital data transmission, DTE-DCE interface, other interface standards, modems, 56K modem, cable modem.

UNIT –II: Multiplexing

FDM, WDM, TDM, Multiplexing applications: Telephone system, DSL, FTTC.

Data link control: Line discipline, Flow control, Error control.

Data link protocols: Asynchronous and synchronous protocols, Character-oriented and bit-oriented protocols, Link access procedures.

UNIT – III: LAN

Project 802, Ethernet, Token bus, Token ring, FDDI.

Switching: Circuit switching, Packet switching, Message switching.

PPP: PPP layers, LCP, Authentication, NCP.

UNIT – IV: ISDN

Services, Subscriber access to the ISDN, ISDN layers, Broad band ISDN.

X.25: X.25 layers, Other protocols related to X.25.

Frame Relay: Operation, Layers, Congestion control, Leaky Bucket algorithm, Traffic control, other features.

ATM: Design goals, ATM architecture, Switching, Switching fabrics, ATM layers, Service classes, ATM applications.

SONET/SDH: Physical configuration, SONET layers, SONET frame.

Books for study:

1. Behrousz A. Forouzan, “Data Communications and Networking”, 2/e, TMH, 2000.
2. William Stallings, “Data and Computer Communications”, 5/e, PHI, 2000.
3. Andrew S. Tanenbaum, “Computer Networks”, PHI, 3/e, 1999.
4. Leon-Garcia &IndraWidjaja, “Communication Networks”, TMH, 2000.
5. Douglas E. Commer, “Computer Networks and Internets”, Addison Wesley Longman (Singapore) Pte.Ltd., 2/e,2000.
6. Uyless Black, “Computer Networks”, PHI, 2/e, 1999.

ELE-403(b)	Industrial Electronics	L-3,T-1,P-2	4Credits

Pre-requisite: Understandingof graduatelevel electronics

CourseObjectives: The aimandobjectiveofthecourseon**Industrial Electronics** is to expose the M.Sc.students to the basics of Solid state devices, Power and optoelectronic devices, I/O devices and Robots.

CourseOutcomes: Atthe end ofthecourse, thestudent willbeable to

CO1	UnderstandtheSolid State Devices Used in Industrial Logic Circuits.
CO2	Know the use of Solid state Devices in Power electronics.
CO3	Understand input and output devices such as sensors and drives.
CO4	Know the Types of robotsand their function in the Industry.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	-	1	-	1	2	-	2	3	-	-
CO2	2	2	1	2	1	1	1	-	1	-	-	-
CO3	3	2	-	2	1	1	2	-	1	3	-	-
CO4	2	2	-	2	1	1	2	-	1	-	-	-

ELE-403(b): INDUSTRIAL ELECTRONICS

UNIT- I: Solid State Devices Used in Industrial Logic Circuits

Introduction, relay logic, typical logic circuits, relay logic used to control a pneumatic cylinder, using relay logic to determine robot program for inserting studs into taillights for automobiles, solid state devices used for logic, solid state logic blocks,solid state logic equivalent to the cougar taillight assembly circuit, connecting inputs to solid state logic devices, outputs for logic circuits, solid state relays, comparison of solid state logic and relay logic, solid state and relay logic circuits to control part bins for robotic automated workcells.

UNIT- II: Power electronics

Silicon controlled rectifiers (SCRs), TRIACs, power transistors, insulated –gate bipolar transistors, junction field –effect transistors (J –FETs), solid –state devices used for firing circuits, unijunction transistor (UJT), programmable unijunction transistors, using a DIAC to provide a pulse for thyristors, other solid state devices used as triggers, light –activated solid state devices, photoelectronics, lasers, and fiber optics, optoelectronic devices, optoisolators and optointerupters, optodevices used for displays.

UNIT- III:Input and Output Devices

Temperature sensors, pressure sensors, flow sensors, density and viscosity sensors, level sensors, position sensors, motion sensors, PH sensors, humidity sensors, solenoid valves, proportional valves, relays, contactors, and motor starters, variable frequency drives, dc drives, stepper motors, linear stepper motors, servomotors.

UNIT- IV: Robots and others motion control systems

Types of robots, types of robot control, types of robot programs, computer numerical control (CNC) machines, basic parts of a robot system, other types of robot actuators, input and output signals for robots, input circuits for robot signals, output circuits for robot signals, input and output modules, data communications for industrial electronics, network architectures, data formats, protocols and standards, parts and media of the physical layer, typical network topologies

Books for study:

1. Thomas E. Kissel,Industrial Electronics, 3/e, PHI, 2003.
2. A.K, Sawhney, A course in Electrical and Electronic Measurements and Instrumentation, DhanpatRai Publishers, 2012.

ELE-403 (c)	EMI & EMC	L-3,T-1,P-2	4Credits

Pre-requisite:graduate levelcoursein Physics/Electronics.

Course Objectives: The main objective of the course on **EMI & EMC**isto introduce the basic conceptsof EMI environment, Standards, Specifications of EMI, Grounding and Shielding techniques applicable in the Industry.

CourseOutcomes: At theend ofthe course, thestudent will be ableto

CO1	Understanding of EMI Environment.
CO2	Know the Specifications, Standards, Limits of EMI.
CO3	Know the Grounding principles and Bonding guidelines.
CO4	Understanding the theory of Shielding, Need of Gaskets and their properties, Basic Filter Component Characteristics and guidelines.

Mappingofcourseoutcomeswiththeprogramoutcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	**3**	2	3	1	2	-	3	2	3	-
CO3	3	3	3	-	3	1	-	-	3	-	3	-
CO3	3	2	-	2	2	1	1	-	1	2	1	-
CO4	3	3	-	3	-	1	1	-	3	-	3	-

ELE-403 (c) EMI & EMC

Unit-I: EMI Environment

Sources of EMI, conducted and radiated EMI, Transient EMI, EMI – EMC definitions and unit parameters. EMI Coupling Principles conducted Radiated and Transient Coupling, Common impedance Ground Coupling, Radiated Common Mode and Ground loop coupling, Radiated Differential mode coupling, near field cable to cable to coupling, Power mains and power supply coupling.

Unit-II: EMI Specification / Standards / Limits

Units of specification, Civilian standards, Military standards. EMI Measurement Open area test site (OATS) – OATS measurements – Measurement of RE, RS, and Test site – Antennas – Measurement precautions – TEM cell – Measurements using TEM cell – Reverberating chamber.

Unit-III: Grounding Technique and Bonding

Grounding Principles – Precautions – Measurement of ground resistance – System grounding for EMC – Single-Point, Multi-Point and Hybrid Grounds, Bonding Shape and material for bond strap – Guidelines for good bonds.

Unit-IV: Shielding and Electrical Gaskets and Filtering

Transmission Line Theory of Shielding, Absorption Loss, Reflection Loss, Shielding Effectiveness, Shielding Materials, Apertures in Shielded Walls, Waveguide below Cut-off, The Need for Gaskets, Common Gaskets Material Use, Properties and Characteristics of RF Gaskets, Common-Mode and Differential-Mode Filtering, Basic Filter Component Characteristics, Filtering Guidelines.

Books for Study

1. Henry W. Ott, Noise Reduction Techniques in Electronic System.
2. V.P. Kodali, Engineering EMC Principles, Measurements and Technologies.
   Bernhard Keiser, Principles of Electromagnetic Compatibility.

ELE-405	Internet of Things	L-3,T-1,P-0	4Credits

Pre-requisite: Understandingof graduatelevel electronics/computer science

Course Objectives: The aim and objective of the course on **Internet of Things** is to familiarize the M.Sc. students with the basics and Characteristics of IoT, IoT development boards, Wireless Technologies, data handling and analysis, Applications of IoT.

CourseOutcomes: At theend ofthe course, thestudent willbe ableto

CO1	Understanding of the basics and Characteristics of IoT, IoT development boards.
CO2	Know the Wireless Technologies.
CO3	Know the data handling and analysis of the data.
CO4	The use of IoT for Automation, Management, Logistics, Agriculture, Health and Lifestyle, Industry.

Mappingof courseoutcomeswiththeprogramoutcomes
